ARTICLE 19F: PROHIBITING SMOKING IN ENCLOSED AREAS, CERTAIN UNENCLOSED
24 **AREAS, AND SPORTS STADIUMS**

24

25

1 **SEC. 1009.20. FINDINGS.**

2 (a) The United States Surgeon General's ~~1986~~ 2006 Report on the Health
3 Consequences of Involuntary Smoking reports the following:

4 (1) Smoking is the single greatest preventable cause of disease and death.

5 (2) Secondhand smoke contains hundreds of chemicals known to be toxic or
6 carcinogenic (cancer causing), including formaldehyde, benzene, vinyl chloride, arsenic, ammonia,
7 and hydrogen cyanide.

8 (3) Children exposed to secondhand smoke are at an increased risk for sudden
9 infant death syndrome (SIDS), acute respiratory infections, ear problems, and more severe asthma.
10 Smoking by parents causes respiratory symptoms and slows lung growth in their children.

11 (4) Concentrations of many cancer-causing and toxic chemicals are higher in
12 secondhand smoke than in the smoke inhaled by smokers.

13 (5) Breathing secondhand smoke for even a short time can have immediate adverse
14 effects on the cardiovascular system and interferes with the normal functioning of the heart, blood, and
15 vascular systems in ways that increase the risk of a heart attack.

16 (6) The scientific evidence indicates that there is no risk-free level of exposure to
17 secondhand smoke.

18 (7) Short exposures to secondhand smoke can cause blood platelets to become
19 stickier, damage the lining of blood vessels, decrease coronary flow velocity reserves, and reduce heart
20 rate variability, potentially increasing the risk of a heart attack.

21 (8) Secondhand smoke contains many chemicals that can quickly irritate and
22 damage the lining of the airways. Even brief exposure can result in upper airway changes in healthy
23 persons and can lead to increased and more frequent asthma attacks in children who already have
24 asthma.

1 (9) (1) Involuntary smoking Secondhand smoke is a cause of disease, including
2 lung cancer, in healthy nonsmokers.

3 (10) (2) The children of parents who smoke compared with the children of
4 nonsmoking parents have an increased frequency of respiratory infections, increased
5 respiratory symptoms, and slightly smaller rates of increase in lung function as the lung
6 matures.

7 (11) (3) ~~The simple separation of smokers and nonsmokers within the same air space~~
8 ~~may reduce, but does not eliminate, the exposure of nonsmokers to environmental smoke.~~ Eliminating
9 smoking in indoor spaces protects nonsmokers from exposure to secondhand smoke. Separating
10 smokers from nonsmokers, cleaning the air, and ventilating buildings cannot eliminate exposure of
11 nonsmokers to secondhand smoke.

12 (b) The California Air Resources Board issued a report in January 2006 that identified
13 secondhand smoke as a toxic air contaminant with no safe level of exposure. Secondhand smoke has
14 joined benzene, arsenic, and diesel exhaust on the Toxic Air Contaminant list. According to the report:

15 (1) Each year in California, secondhand smoke is linked to: (A) 400 additional lung
16 cancer deaths a year in nonsmokers; (B) 3,600 deadly heart attacks; and, (C) 31,000 asthma attacks in
17 children.

18 (2) Health effects causally associated with exposure to secondhand smoke include
19 (A) breast cancer in younger, primarily premenopausal women; (B) asthma induction and exacerbation
20 in children and adults; (C) pre-term delivery; and (D) altered vascular properties associated with risk
21 for heart attack.

22 (3) Concentrations of secondhand smoke in some outdoor locations can reach levels
23 as high as indoor locations, depending on the number of cigarettes being smoked and wind conditions.

24
25

1 (4) According to the 2002-2004 California Student Tobacco Survey, 49 percent of
2 youths reported being exposed to secondhand smoke from someone smoking in the same room during
3 the previous seven days. According to the 2002 California Tobacco Survey, 11.9 percent of non-
4 smoking Californian indoor workers reported having been exposed to secondhand smoke at work
5 within the past two weeks, with 64.7 percent exposed on a daily basis.

6 (5) In 2005, 13.9 percent of San Francisco adults were smokers, including 7.5
7 percent who were daily smokers and 6.4 percent who were occasional smokers. "Occasional smokers"
8 are smokers who do not smoke on a daily basis.

9 (c) The 2003 Final Report on Tobacco Control Successes prepared by the Cancer
10 Prevention and Control Program at the University of California, San Diego, for the California
11 Department of Health Services found:

12 (1) 15.6 percent of Latinos, 11.3 percent of Asians, 9.5 percent of African
13 Americans, and 10.4 percent of Whites were exposed to secondhand smoke in indoor workplaces within
14 two weeks of answering the survey.

15 (2) In the home setting, African American children and adolescents were found to
16 have the highest rate of exposure (14.3 percent) to secondhand smoke compared to 5.7 percent of
17 Asians/Pacific Islanders, 8.5 percent of Latinos and 10.9 percent of Whites.

18 (3) Residents living in multi-unit housing complexes can be exposed to secondhand
19 smoke that seeps from neighboring units through doorways, electrical sockets, cracks in the sealing,
20 shared ventilation systems, holes in wall plates and subfloor assemblies for electrical wiring, plumbing,
21 and ductwork.

22 (d)-(b) The Board of Supervisors finds and declares:

23 (1) Nonsmokers have no adequate means to protect themselves from the
24 damage inflicted upon them by secondhand smoke~~when they involuntarily inhale tobacco smoke.~~

1 (2) Regulation of smoking in public places is necessary to protect the health,
2 safety, welfare, comfort, and environment of nonsmokers.

3 ~~(e)~~ It is, therefore, the intent of the Board of Supervisors, in enacting this Article, to
4 protect ~~the nonsmokers~~ from ~~secondhand environmental tobacco~~-smoke and to eliminate smoking,
5 as much as possible, in public places, and certain residential settings.

7 a multi-unit housing complex must post a notice in the building lobby, common mailbox area,
8 or common elevator for a period of not less than ten days, advising that a tenant has been
9 observed smoking in a portion of the building where smoking is prohibited under San
10 Francisco Health Code Article 19F, and requesting that all tenants refrain from smoking in
11 those areas. If there is no common building lobby, common mailbox area or common elevator,
12 then the owner may provide notice to tenants in another reasonable manner. If the owner
13 knows the identity of the tenant who was smoking in a prohibited area, ~~As the owner or~~
