APPENDIX

F

HAZARD RANKING

The provisions contained in this appendix are not mandatory unless specifically referenced in the adopting ordinance or legislation of the jurisdiction.

User notes:

About this appendix: Appendix F is intended to be a companion to the specific requirements of Chapters 51 through 67, which regulate the storage, handling and use of all hazardous materials classified as either physical or health hazards. These materials pose diverse hazards, including instability, reactivity, flammability, oxidizing potential or toxicity; therefore, identifying them by hazard ranking is essential. This appendix lists the various hazardous material categories that are defined in this code, along with the NFPA 704 hazard ranking for each.

ICC code development note: Code change proposals to this appendix will be considered by the IFC Code Development Committee during the 2024 (Group A) Code Development Cycle.

SECTION F101—GENERAL

F101.1 Scope. Assignment of levels of hazards to be applied to specific hazard classes as required by NFPA 704 shall be in accordance with this appendix. The appendix is based on application of the degrees of hazard as defined in NFPA 704 arranged by hazard class as for specific categories defined in Chapter 2 of the *California Fire Code* and used throughout.

F101.2 General. The hazard rankings shown in Table F101.2 have been established by using guidelines found within NFPA 704. As noted in Section 4.2 of NFPA 704, there could be specific reasons to alter the degree of hazard assigned to a specific material; for example, ignition temperature, flammable range or susceptibility of a container to rupture by an internal combustion explosion or to metal failure while under pressure or because of heat from external fire. As a result, the degree of hazard assigned for the same material can vary when assessed by different people of equal competence.

The hazard rankings assigned to each class represent reasonable minimum hazard levels for a given class based on the use of criteria established by NFPA 704. Specific cases of use or storage may dictate the use of higher degrees of hazard in certain cases.

TABLE F101.2—FIREFIGHTER WARNING PLACARD DESIGNATIONS BASED ON HAZARD CLASSIFICATION CATEGORIES

HAZARD CATEGORY	DESIGNATION
Combustible liquid II	F2
Combustible liquid IIIA	F2
Combustible liquid IIIB	F1
Combustible dust	F3 or F2[a]
Combustible fiber	F3
Cryogenic flammable	F4, H3
Cryogenic oxidizing	OX, H3
Explosive	R4
Flammable solid	F2
Flammable gas (gaseous)	F4
Flammable gas (liquefied)	F4
Flammable liquid IA	F4
Flammable liquid IB	F3
Flammable liquid IC	F3
Organic peroxide, UD	R4
Organic peroxide I	F4, R3
Organic peroxide II	F3, R3
Organic peroxide III	F2, R2
Organic peroxide IV	F1, R1
Organic peroxide V	None
Oxidizing gas (gaseous)	OX
Oxidizing gas (liquefied)	OX

102162101

TABLE F101.2—FIREFIGHTER WARNING PLACARD DESIGNATIONS BASED ON HAZARD CLASSIFICATION CATEGORIES—continued

HAZARD CATEGORY	DESIGNATION
Oxidizer 4	OX4
Oxidizer 3	OX3
Oxidizer 2	OX2
Oxidizer 1	OX1
Pyrophoric gases	F4
Pyrophoric solids, liquids	F3
Unstable reactive 4D	R4
Unstable reactive 3D	R4
Unstable reactive 3N	R2
Unstable reactive 2	R2
Unstable reactive 1	None
Water reactive 3	W3
Water reactive 2	W2
Corrosive	H3, COR
Toxic	H3
Highly toxic	H4

a. F3 = Finely divided solids, typically less than 75 micrometers (μm) (200 mesh), that pose an elevated risk of forming an ignitable dust cloud, such as finely divided sulfur, *the California Electrical Code* Group E dusts (for example, aluminum, zirconium and titanium) and bisphenol A. F2 = Finely divided solids less than 420 μm (40 mesh) that pose an ordinary risk of forming an ignitable dust cloud.
F—Flammable category.
R—Reactive category.
H—Health category.
W—Special hazard: water reactive.
OX—Special hazard: oxidizing properties.
COR—Corrosive.
UD—Unclassified detonable material.
4D—Class 4 detonable material.
3D—Class 3 detonable material.
3N—Class 3 nondetonable material.

SECTION F102—REFERENCED STANDARDS

F102.1 General. See Table F102.1 for standards that are referenced in various sections of this appendix. Standards are listed by the standard identification with the effective date, standard title, and the section or sections of this appendix that reference the standard.

TABLE F102.1—REFERENCED STANDARDS

STANDARD ACRONYM	STANDARD NAME	SECTIONS HEREIN REFERENCED
CEC—25	*California Electrical Code*	Table F101.2
NFPA 704—22	*Identification of the Hazards of Materials for Emergency Response*	F101.1, F101.2

APPENDIX

G

CRYOGENIC FLUIDS—WEIGHT AND VOLUME EQUIVALENTS

This appendix is for information purposes and is not intended for adoption.

User notes:

About this appendix: Appendix G gives the fire code official and registered design professional a ready reference tool for the conversion of the liquid weight and volume of cryogenic fluid to their corresponding volume of gas and vice versa and is a companion to the provisions of Chapter 55 of this code.

SECTION G101—GENERAL

G101.1 Scope. This appendix is used to convert from liquid to gas for cryogenic fluids.

G101.2 Conversion. Table G101.2 shall be used to determine the equivalent amounts of cryogenic fluids in either the liquid or gas phase.

TABLE G101.2—WEIGHT AND VOLUME EQUIVALENTS FOR COMMON CRYOGENIC FLUIDS

CRYOGENIC FLUID	WEIGHT OF LIQUID OR GAS		VOLUME OF LIQUID AT NORMAL BOILING POINT		VOLUME OF GAS AT NTP	
	Pounds	Kilograms	Liters	Gallons	Cubic feet	Cubic meters
Argon	1.000	0.454	0.326	0.086	9.67	0.274
	2.205	1.000	0.718	0.190	21.32	0.604
	3.072	1.393	1.000	0.264	29.71	0.841
	11.628	5.274	3.785	1.000	112.45	3.184
	10.340	4.690	3.366	0.889	100.00	2.832
	3.652	1.656	1.189	0.314	35.31	1.000
Helium	1.000	0.454	3.631	0.959	96.72	2.739
	2.205	1.000	8.006	2.115	213.23	6.038
	0.275	0.125	1.000	0.264	26.63	0.754
	1.042	0.473	3.785	1.000	100.82	2.855
	1.034	0.469	3.754	0.992	100.00	2.832
	0.365	0.166	1.326	0.350	35.31	1.000
Hydrogen	1.000	0.454	6.409	1.693	191.96	5.436
	2.205	1.000	14.130	3.733	423.20	11.984
	0.156	0.071	1.000	0.264	29.95	0.848
	0.591	0.268	3.785	1.000	113.37	3.210
	0.521	0.236	3.339	0.882	100.00	2.832
	0.184	0.083	1.179	0.311	35.31	1.000
Oxygen	1.000	0.454	0.397	0.105	12.00	0.342
	2.205	1.000	0.876	0.231	26.62	0.754
	2.517	1.142	1.000	0.264	30.39	0.861
	9.527	4.321	3.785	1.000	115.05	3.250
	8.281	3.756	3.290	0.869	100.00	2.832
	2.924	1.327	1.162	0.307	35.31	1.000
Nitrogen	1.000	0.454	0.561	0.148	13.80	0.391
	2.205	1.000	1.237	0.327	30.43	0.862
	1.782	0.808	1.000	0.264	24.60	0.697
	6.746	3.060	3.785	1.000	93.11	2.637
	7.245	3.286	4.065	1.074	100.00	2.832
	2.558	1.160	1.436	0.379	35.31	1.000

INTERNATIONAL CODE COUNCIL®

ANY UNAUTHORIZED REPRODUCTION OR DISTRIBUTION IS A VIOLATION OF THE FEDERAL COPYRIGHT ACT AND THE LICENSE AGREEMENT, AND SUBJECT TO CIVIL AND CRIMINAL PENALTIES THEREUNDER.

TABLE G101.2—WEIGHT AND VOLUME EQUIVALENTS FOR COMMON CRYOGENIC FLUIDS—continued

CRYOGENIC FLUID	WEIGHT OF LIQUID OR GAS		VOLUME OF LIQUID AT NORMAL BOILING POINT		VOLUME OF GAS AT NTP	
	Pounds	Kilograms	Liters	Gallons	Cubic feet	Cubic meters
LNG[a]	1.000	0.454	1.052	0.278	22.968	0.650
	2.205	1.000	2.320	0.613	50.646	1.434
	0.951	0.431	1.000	0.264	21.812	0.618
	3.600	1.633	3.785	1.000	82.62	2.340
	4.356	1.976	4.580	1.210	100.00	2.832
	11.501	5.217	1.616	0.427	35.31	1.000

For SI: 1 pound = 0.454 kg, 1 gallon = 3.785 L, 1 cubic foot = 0.02832 m^3, °C = [(°F) – 32]/1.8, 1 pound per square inch atmosphere = 6.895 kPa.
a. The values listed for liquefied natural gas (LNG) are "typical" values. LNG is a mixture of hydrocarbon gases, and no two LNG streams have exactly the same composition.

G101.2.1 Use of the table. To use Table G101.2, read horizontally across the line of interest. For example, to determine the number of cubic feet of gas contained in 1.0 gallon (3.785 L) of liquid argon, find 1.000 in the column entitled "Volume of Liquid at Normal Boiling Point." Reading across the line under the column entitled "Volume of Gas at NTP" (70°F and 1 atmosphere/14.7 psia), the value of 112.45 cubic feet (3.184 m^3) is found.

G101.2.2 Other quantities. If other quantities are of interest, the numbers can be multiplied or divided to obtain the quantity of interest. For example, to determine the number of cubic feet of argon gas contained in a volume of 1,000 gallons (3785 L) of liquid argon at its normal boiling point, multiply 112.45 by 1,000 to obtain 112,450 cubic feet (3184 m^3).

APPENDIX

H

HAZARDOUS MATERIALS MANAGEMENT PLANS AND HAZARDOUS MATERIALS INVENTORY STATEMENTS (SEE SECTIONS 5001.5.1 AND 5001.5.2)

SECTION H1—SCOPE

H1.1 Scope. *Hazardous materials inventory statements (HMIS) and hazardous materials management plans (HMMP) which are required by the fire chief, pursuant to Chapter 50, shall be provided for hazardous materials in accordance with Appendix H.*

Exceptions:

1. *Materials which have been satisfactorily demonstrated not to present a potential danger to public health, safety or welfare, based upon the quantity or condition of storage, when approved.*
2. *Chromium, copper, lead, nickel and silver need not be considered hazardous materials for the purposes of Appendix H unless they are stored in a friable, powdered or finely divided state.*

Proprietary and trade secret information shall be protected under the laws of the state or jurisdiction having authority.

SECTION H2—HAZARDOUS MATERIALS INVENTORY STATEMENTS (HMIS)

H2.1 When Required. *A separate HMIS shall be provided for each building, including its appurtenant structures, and each exterior facility in which hazardous materials are stored.*

The hazardous materials inventory statement shall list, by hazard class, all hazardous materials stored. The hazardous materials inventory statement shall include the following information for each hazardous material listed:

1. *Hazard class.*
2. *Common or trade name.*
3. *Chemical name, major constituents and concentrations if a mixture. If a waste, the waste category.*
4. *Chemical Abstract Service number (CAS number) found in 29 Code of Federal Regulations (C.F.R.).*
5. *Whether the material is pure or a mixture, and whether the material is a solid, liquid or gas.*
6. *Maximum aggregate quantity stored at any one time.*
7. *Storage conditions related to the storage type, temperature and pressure.*

H2.2 Changes to HMIS. *An amended HMIS shall be provided within 30 days of the storage of any hazardous materials which changes or adds a hazard class or which is sufficient in quantity to cause an increase in the quantity which exceeds 5 percent for any hazard class.*

SECTION H3—HAZARDOUS MATERIALS MANAGEMENT PLAN (HMMP)

H3.1 General. *Applications for a permit to store hazardous materials shall include an HMMP standard form or short form in accordance with Section H3.3 and shall provide a narrative description of the operations and processes taking place at the facility. See Figure A-H-1.*

H3.2 Information Required. *The HMMP standard form shall include the information detailed in Section H3.2.*

H3.2.1 General Information. *General information, including business name and address, emergency contacts, business activity, business owner or operator, SIC code, number of employees and hours, Dunn and Bradstreet number, and signature of owner, operator or designated representative.*

H3.2.2 General site plan. *A general site plan drawn at a legible scale which shall include, but not be limited to, the location of buildings, exterior storage facilities, permanent access ways, evacuation routes, parking lots, internal roads, chemical loading areas, equipment cleaning areas, storm and sanitary sewer accesses, emergency equipment and adjacent property uses. The exterior storage areas shall be identified with the hazard class and the maximum quantities per hazard class of hazardous materials stored. When required by the chief, information regarding the location of wells, flood plains, earthquake faults, surface water bodies and general land uses within 1 mile (1.609 km) of the facility boundaries shall be included.*

H3.2.3 Building floor plan. *A building floor plan drawn to a legible scale which shall include, but not be limited to, hazardous materials storage areas within the building and shall indicate rooms, doorways, corridors, means of egress and evacuation routes. Each hazardous materials storage facility shall be identified by a map key which lists the individual hazardous materials, their hazard class and quantity present for each area.*

H3.2.4 Hazardous materials handling. *Information showing that activities involving the handling of hazardous materials between the storage areas and manufacturing processes on site are conducted in a manner to prevent the accidental release of such materials.*

H3.2.5 Chemical capability and separation. *Information showing procedures, controls, signs or other methods used to ensure separation and protection of stored materials from factors which could cause accidental ignition or reaction of ignitable, reactive or incompatible materials in each area.*

H3.2.6 Monitoring program. *Information including, but not limited to, the location, type, manufacturer's specifications, if applicable, and suitability of monitoring methods for each storage facility when required.*

INTERNATIONAL CODE COUNCIL®

Copyright © 2025 ICC. ALL RIGHTS RESERVED. Accessed by Mary Tse (mary.tse@sfgov.org), (San Francisco Bureau of Fire Prevention) Order Number #102162101 on Jan 30, 2026 04:54 PM (CST) pursuant to License Agreement with ICC. No further reproduction, no further reproductions by any third party, or distribution authorized. Single user only, copying and networking prohibited. ANY UNAUTHORIZED REPRODUCTION OR DISTRIBUTION IS A VIOLATION OF THE FEDERAL COPYRIGHT ACT AND THE LICENSE AGREEMENT, AND SUBJECT TO CIVIL AND CRIMINAL PENALTIES THEREUNDER.

102162101

H3.2.7 Inspection and recording keeping. *Schedules and procedures for inspecting safety and monitoring and emergency equipment. The permittee shall develop and follow a written inspection procedure acceptable to the chief for inspecting the facility for events or practices which could lead to unauthorized discharges of hazardous materials. Inspections shall be conducted at a frequency appropriate to detect problems prior to a discharge. An inspection check sheet shall be developed to be used in conjunction with routine inspections. The check sheet shall provide for the date, time and location of inspection; note problems and dates and times of corrective actions taken; and include the name of the inspector and the countersignature of the designated safety manager for the facility.*

H3.2.8 Employee training. *A training program appropriate to the types and quantities of materials stored or used shall be conducted to prepare employees to safely handle hazardous materials on a daily basis and during emergencies. The training program shall include:*

1. *Instruction in safe storage and handling of hazardous materials, including maintenance of monitoring records;*
2. *Instruction in emergency procedures for leaks, spills, fires or explosions, including shutdown of operations and evacuation procedures; and*
3. *Record-keeping procedures for documenting training given to employees.*

H3.2.9 Emergency response. *A description of facility emergency procedures is to be provided.*

H3.3 HMMP Short Form—(Minimal Storage Site). *A facility shall qualify as a minimal storage site if the quantity of each hazardous material stored in one or more facilities in an aggregate quantity for the facility is 500 pounds (227 kg) or less for solids, 55 gallons (208.2 L) or less for liquids, or 200 cubic feet (5.7 m^3) or less at NTP for compressed gases and does not exceed the threshold planning quantity as listed in 40 C.F.R., Part 355, Sections 302 and 304. The applicant for a permit for a facility which qualifies as a minimal storage site is allowed to file the short form HMMP. Such plan shall include the following components:*

1. *General facility information,*
2. *A simple line drawing of the facility showing the location of storage facilities and indicating the hazard class or classes and physical state of the hazardous materials being stored,*
3. *Information describing that the hazardous materials will be stored and handled in a safe manner and will be appropriately contained, separated and monitored, and*
4. *Assurance that security precautions have been taken, employees have been appropriately trained to handle the hazardous materials and react to emergency situations, adequate labeling and warning signs are posted, adequate emergency equipment is maintained, and the disposal of hazardous materials will be in an appropriate manner.*

SECTION H4—MAINTENANCE OF RECORDS

H4.1 *Hazardous materials inventory statements and hazardous materials management plans shall be maintained by the permittee for a period of not less than three years after submittal of updated or revised versions. Such records shall be made available to the fire chief upon request.*

FIGURE A-H-1—SAMPLE FORMAT
HAZARDOUS MATERIALS MANAGEMENT PLAN (HMMP) INSTRUCTIONS

SECTION I—FACILITY DESCRIPTION

1.1 Part A

1. *Fill out Items 1 through 11 and sign the declaration.*
2. *Only Part A of this section is required to be updated and submitted annually, or within 30 days of a change.*

1. 2 Part B—General Facility Description (Site Plan)

1. *Provide a site plan on 8 $^1/_2$-by 11-inch (215 mm by 279 mm) paper, using letters on the top and bottom margins and numbers on the right and left side margins, showing the location of all buildings, structures, chemical loading areas, parking lots, internal roads, storm and sanitary sewers, wells, and adjacent property uses. Indicate the approximate scale, northern direction and date the drawing was completed.*
2 *List all special land uses within 1 mile (1.609 km).*

1.3 Part C—Facility Storage Map (Confidential Information)

1. *Provide a floor plan of each building on 8 $^1/_2$ by 11-inch (215 mm by 279 mm) paper, using letters on the top and bottom margins and numbers on the right and left side margins, with approximate scale and northern direction, showing the location of each storage area. Mark map clearly "Confidential—Do not disclose" for trade-secret information as specified by federal, state and local laws.*
2. *Identify each storage area with an identification number, letter, name or symbol.*
3. *Show the following:*
    - *3.1. Accesses to each storage area.*
    - *3.2. Location of emergency equipment.*
    - *3.3. The general purpose of other areas within the facility.*
    - *3.4. Location of all aboveground and underground tanks to include sumps, vaults, below-grade treatment systems, piping, etc.*

No further reproduction, no further reproductions by any third party, or distribution authorized. Single user only, copying and networking prohibited. ANY UNAUTHORIZED REPRODUCTION OR DISTRIBUTION IS A VIOLATION OF THE FEDERAL COPYRIGHT ACT AND THE LICENSE AGREEMENT, AND SUBJECT TO CIVIL AND CRIMINAL PENALTIES THEREUNDER.

102162101

4. *Map key. Provide the following on the map or in a map key or legend for each storage area:*
   - 4.1. *A list of hazardous materials, including wastes.*
   - 4.2. *Hazard class of each hazardous waste.*
   - 4.3. *The maximum quantity for hazardous materials.*
   - 4.4. *Include the contents and capacity limit of all tanks at each area and indicate whether they are above or below ground.*
   - 4.5. *List separately any radioactives, cryogens and compressed gases for each facility.*
   - 4.6. *Trade-secret information shall be listed as specified by federal, state and local laws.*

SECTION II—HAZARDOUS MATERIALS INVENTORY STATEMENT (HMIS)

2.1 Part A—Declaration

Fill out all appropriate information.

2.2 Part B—Inventory Statement

1. *You must complete a separate inventory statement for all waste and nonwaste hazardous materials. List all hazardous materials in alphabetical order by hazard class.*

2. ***Inventory Statement Instructions:***

Column Information Required

1. *Provide hazard class for each material.*
2. *Nonwaste. Provide the common or trade name of the regulated material. Waste. In lieu of trade names, you may provide the waste category.*
3. *Provide the chemical name and major constituents and concentrations, if a mixture.*
4. *Enter the chemical abstract service number (CAS number) found in 29 C.F.R. For mixtures, enter the CAS number of the mixture as a whole if it has been assigned a number distinct from its constituents. For a mixture that has no CAS number, leave this item blank or report the CAS numbers of as many constituent chemicals as possible.*
5. *Enter the following descriptive codes as they apply to each material. You may list more than one code, if applicable.*
   - *P = Pure*
   - *M = Mixture*
   - *S = Solid*
   - *L = Liquid*
   - *G = Gas*
6. *Provide the maximum aggregate quantity of each material handled at any one time by the business. For underground tanks, list the maximum volume [in gallons (liters)] of the tank.*
   - 6.1. *Enter the estimated average daily amount on site during the past year.*
7. *Enter the units used in Column 6 as:*
   - *LB = Pounds*
   - *GA = Gallons*
   - *CF = Cubic Feet*
8. *Enter the number of days that the material was present on site (during the last year).*
9. *Enter the storage codes below for type, temperature and pressure.*

   Type
   - *A = Aboveground Tank*
   - *B = Belowground Tank*
   - *C = Tank inside Building*
   - *D = Steel Drum*
   - *E = Plastic or Nonmetallic Drum*
   - *F = Can*
   - *G = Carbon*
   - *H = Silo*
   - *I = Fiber Drum*
   - *J = Bag*
   - *K = Box*
   - *L = Cylinder*
   - *M = Glass Bottle or Jug*
   - *N = Plastic Bottles or Jugs*
   - *O = Tote Bin*
   - *P = Tank Wagon*

ANY UNAUTHORIZED REPRODUCTION OR DISTRIBUTION IS A VIOLATION OF THE FEDERAL COPYRIGHT ACT AND THE LICENSE AGREEMENT, AND SUBJECT TO CIVIL AND CRIMINAL PENALTIES THEREUNDER.

102162101

Q = Rail Car
R = Other

Temperature

4 = Ambient
5 = Greater than Ambient
6 = Less than Ambient, but not Cryogenic [less than -150°F (-101.1°C)]
7 = Cryogenic conditions [less than -150°F (-101.1°C)]

Pressure

1 = Ambient (Atmospheric)
2 = Greater than Ambient (Atmospheric)
3 = Less than Ambient (Atmospheric)

10. *For each material listed, provide the Superfund Amendments and Reauthorization Act (SARA) hazard class as listed below. You may list more than one class. These categories are defined in 40 C.F.R. 370.3.*

Physical Hazards

F = Fire
P = Sudden Release of Pressure
R = Reactivity

Health Hazards

I = Immediate (Acute)
D = Delayed (Chronic)

11. ***Waste Only.*** *For each waste, provide the total estimated amount of hazardous waste handled throughout the course of the year.*

SECTION III—SEPARATION AND MONITORING

3.1 Part A—Aboveground

Fill out Items 1 through 6, or provide similar information for each storage area shown on the facility map. Use additional sheets as necessary.

3.2 Part B—Underground

1. *Complete a separate page for each underground tank, sump, vault, below-grade treatment system, etc.*
2. *Check the type of tank and method(s) that applies to your tank(s) and piping, and answer the appropriate questions. Provide any additional information in the space provided or on a separate sheet.*

SECTION IV—WASTE DISPOSAL

Check all that apply and list the associated wastes for each method checked.

SECTION V—RECORDING KEEPING

Include a brief description of your inspection procedures. You are also required to keep an inspection log and recordable discharge log, which are designed to be used in conjunction with routine inspections for all storage facilities or areas. Place a check in each box that describes your forms. If you do not use the sample forms, provide copies of your forms for review and approval.

SECTION VI—EMERGENCY-RESPONSE PLAN

1. *This plan should describe the personnel, procedures and equipment available for responding to a release or threatened release of hazardous materials that are stored, handled or used on site.*
2. *A check or a response under each item indicates that a specific procedure is followed at the facility, or that the equipment specified is maintained on site.*
3. *If the facility maintains a more detailed emergency-response plan on site, indicate this in Item 5. This plan shall be made available for review by the inspecting jurisdiction.*

SECTION VII—EMERGENCY RESPONSE TRAINING PLAN

1. *This plan should describe the basic training plan used at the facility.*
2. *A check in the appropriate box indicates the training is provided or the records are maintained.*
3. *If the facility maintains a more detailed emergency-response training plan, indicate this in Item 4. This plan shall be made available for review by the inspecting jurisdiction.*

102162101

APPENDIX I

FIRE PROTECTION SYSTEMS—NONCOMPLIANT CONDITIONS

The provisions contained in this appendix are not mandatory unless specifically referenced in the adopting ordinance or legislation of the jurisdiction.

User notes:

About this appendix: Appendix I, which was developed by the ICC Hazard Abatement in Existing Buildings Committee, is intended to provide the fire code official with a list of conditions that are readily identifiable by the inspector during the course of an inspection utilizing this code. The specific conditions identified in this appendix are primarily derived from applicable NFPA standards and pose a hazard to the proper operation of the respective systems. While these do not represent all of the conditions that pose a hazard or otherwise may impair the proper operation of fire protection systems, their identification in this adoptable appendix will provide a more direct path for enforcement by the fire code official.

ICC code development note: Code change proposals to this appendix will be considered by the IFC Code Development Committee during the 2024 (Group A) Code Development Cycle.

SECTION I101—NONCOMPLIANT CONDITIONS

I101.1 General. This appendix is intended to identify conditions that can occur where fire protection systems are not properly maintained or components have been damaged. This appendix is not intended to provide comprehensive inspection, testing and maintenance requirements, which are found in NFPA 10, NFPA 25 and NFPA 72. Rather, it is intended to identify problems that are readily observable during fire inspections.

I101.2 Impaired conditions requiring immediate action. The following conditions indicate noncompliant and impaired fire protection systems. An impaired system(s) shall require immediate action by the building owner to return the fire protection system back to service:

1. Valves in the shut or closed position:
    - 1.1. Water supply valves, such as in riser rooms, yards and vaults.
    - 1.2. Water supply floor control valves in multiple-story buildings.
    - 1.3. Fuel supply valves for fire pumps.
    - 1.4. Commercial kitchen hood suppression valves.
2. Impaired fire alarm systems:
    - 2.1. Fire alarm systems with no power (primary or secondary).
    - 2.2. No active communication path to the supervising/remote station (unless the system is local).

I101.3 Noncompliant conditions requiring component replacement. The following conditions shall be deemed noncompliant and shall cause the related component(s) to be replaced to comply with the provisions of this code:

1. Sprinklers having any of the following conditions:
    - 1.1. Signs of leakage.
    - 1.2. Paint or other ornamentation that is not factory applied.
    - 1.3. Evidence of corrosion including, but not limited to, discoloration or rust.
    - 1.4. Deformation or damage of any part.
    - 1.5. Improper orientation of sprinkler.
    - 1.6. Empty glass bulb.
    - 1.7. Sprinklers manufactured prior to 1920.
    - 1.8. Replacement sprinklers that do not match existing sprinklers in orifice size, K-factor temperature rating, coating or deflector type.
    - 1.9. Sprinklers for the protection of cooking equipment that have not been replaced within one year.
2. Water pressure and air pressure gauges.
    - 2.1. Installed for more than 5 years and have not been tested to within 3 percent accuracy.
    - 2.2. Indicating zero pressure.

I101.4 Noncompliant conditions requiring component repair or replacement. The following shall be deemed noncompliant conditions and shall cause the related component(s) to be repaired or replaced to comply with the provisions of this code:

1. Sprinkler and standpipe system piping and fittings having any of the following conditions:
    - 1.1. Signs of leakage.
    - 1.2. Evidence of corrosion.
    - 1.3. Misalignment.
    - 1.4. Mechanical damage.

102162101

2. Sprinkler piping support having any of the following conditions:
    2.1. Materials resting on or hung from sprinkler piping.
    2.2. Damaged or loose hangers or braces.
3. Class II and Class III standpipe systems having any of the following conditions:
    3.1. No hose or nozzle, where required.
    3.2. Hose threads incompatible with fire department hose threads.
    3.3. Hose connection cap missing.
    3.4. Mildew, cuts, abrasions and deterioration evident.
    3.5. Coupling damaged.
    3.6. Gaskets missing or deteriorated.
    3.7. Nozzle missing or obstructed.
4. Hose racks and cabinets having any of the following conditions:
    4.1. Difficult to operate or damaged.
    4.2. Hose improperly racked or rolled.
    4.3. Inability of rack to swing 90 degrees (1.57 rad) out of the cabinet.
    4.4. Cabinet locked, except as permitted by this code.
    4.5. Cabinet door will not fully open.
    4.6. Door glazing cracked or broken.
5. Portable fire extinguishers having any of the following conditions:
    5.1. Broken seal or tamper indicator.
    5.2. Expired maintenance tag.
    5.3. Pressure gauge indicator in “red.”
    5.4. Signs of leakage or corrosion.
    5.5. Mechanical damage, denting or abrasion of tank.
    5.6. Presence of repairs such as welding, soldering or brazing.
    5.7. Damaged threads.
    5.8. Damaged hose assembly, couplings or swivel joints.
6. Fire alarm and detection control equipment, initiating devices and notification appliances having any of the following conditions:
    6.1. Corroded or leaking batteries or terminals.
    6.2. Smoke detectors having paint or other ornamentation that is not factory applied.
    6.3. Mechanical damage to any fire alarm equipment, devices or appliances.
    6.4. Tripped fuses.
    6.5. Fire alarm systems not in “normal” (no alarm, supervisory or trouble) state.
7. Fire department connections having any of the following conditions:
    7.1. Fire department connections are not visible or able to be accessed from the fire apparatus access road.
    7.2. Couplings or swivels are damaged.
    7.3. Plugs and caps are missing or damaged.
    7.4. Gaskets are deteriorated.
    7.5. Check valve is leaking.
    7.6. Identification signs are missing.
8. Fire pumps having any of the following conditions:
    8.1. Pump room temperature is less than 40°F (4.4°C).
    8.2. Ventilating louvers are not freely operable.
    8.3. Corroded or leaking system piping.
    8.4. Diesel fuel tank is less than two-thirds full.
    8.5. Battery readings, lubrication oil or cooling water levels are abnormal.

APPENDIX

J BUILDING INFORMATION SIGN

The provisions contained in this appendix are not mandatory unless specifically referenced in the adopting ordinance or legislation of the jurisdiction.

User notes:

About this appendix:	Appendix J provides design, installation and maintenance requirements for a Building Information Sign (BIS), a fire service tool to be utilized in the crucial, initial response of firefighters to a structure fire. The BIS placard is designed to be utilized within the initial response time frame of an incident to assist firefighters in their tactical sizing up of a situation as soon as possible after arrival on the scene of a fire emergency. The BIS design is in the shape of a fire service Maltese Cross and includes five spaces (the four wings plus the centerpiece of the cross symbol) in which information is placed about the tactical considerations of construction type and hourly rating, fire protection systems, occupancy type, content hazards and special features that could affect tactical decisions and operations.
ICC code development note:	Code change proposals to this appendix will be considered by the IFC Code Development Committee during the 2024 (Group A) Code Development Cycle.

SECTION J101—GENERAL

J101.1 Scope. New buildings shall have a building information sign(s) that shall comply with Sections J101.1.1 through J101.7. Existing buildings shall be brought into conformance with Sections J101.1 through J101.9 when one of the following occurs:

1. The fire department conducts an annual inspection intended to verify compliance with this section, or any required inspection.
2. A change in use or occupancy has occurred.

Exceptions:

1. Group U occupancies.
2. One- and two-family dwellings.

J101.1.1 Sign location. The building information sign shall be placed at one of the following locations:

1. On the entry door or sidelight at a minimum height of 42 inches (1067 mm) above the walking surface on the address side of the building or structure.
2. On the exterior surface of the building or structure on either side of the entry door, not more than 3 feet (76 mm) from the entrance door, at a minimum height of 42 inches (1067 mm) above the walking surface on the address side of the building or structure.
3. Conspicuously placed inside an enclosed entrance lobby, on any vertical surface within 10 feet (254 mm) of the entrance door at a minimum height of 42 inches (1067 mm) above the walking surface.
4. Inside the building's fire command center.
5. On the exterior of the fire alarm control unit or on the wall immediately adjacent to the fire alarm control unit door where the alarm panel is located in the enclosed main lobby.

J101.1.2 Sign features. The building information sign shall consist of all of the following:

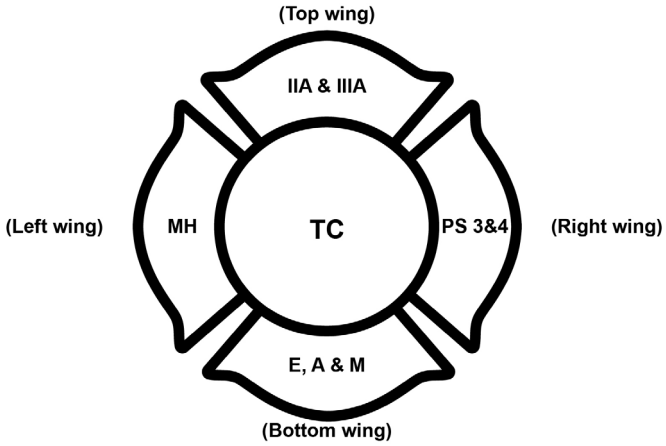
1. White reflective background with red letters.
2. Durable material.
3. Numerals shall be Roman or Latin numerals, as required, or alphabet letters.
4. Permanently affixed to the building or structure in an approved manner.

J101.1.3 Sign shape. The building information sign shall be a Maltese cross as shown in Figure J101.1.3.

INTERNATIONAL CODE COUNCIL®

Copyright © 2025 ICC. ALL RIGHTS RESERVED. Accessed by Mary Tse (mary.tse@sfgov.org), (San Francisco Bureau of Fire Prevention) Order Number #102162101 on Jan 30, 2026 04:54 PM (CST) pursuant to License Agreement with ICC. No further reproduction, no further reproductions by any third party, or distribution authorized. Single user only, copying and networking prohibited. ANY UNAUTHORIZED REPRODUCTION OR DISTRIBUTION IS A VIOLATION OF THE FEDERAL COPYRIGHT ACT AND THE LICENSE AGREEMENT, AND SUBJECT TO CIVIL AND CRIMINAL PENALTIES THEREUNDER.

FIGURE J101.1.3—EXAMPLE OF COMPLETED BUILDING INFORMATION SIGN



J101.1.4 Sign size and lettering. The minimum size of the building information sign and lettering shall be in accordance with the following:

1. The width and height shall be 6 inches by 6 inches (152 mm by 152 mm).
2. The height or width of each Maltese cross wing area shall be $1^1/_8$ inches (29 mm) and have a stroke width of $^1/_2$ inch (12.7 mm).
3. The center of the Maltese cross, a circle or oval, shall be 3 inches (76 mm) in diameter and have a stroke width of $^1/_2$ inch (12.7 mm).
4. All Roman numerals and alphabetic designations, shall be $1^1/_4$ inches (32 mm) in height and have a stroke width of $^1/_4$ inch (6.4 mm).

J101.2 Sign designations. Designations shall be made based on the construction type, content, hazard, fire protection systems, life safety and occupancy. Where multiple designations occur within a classification category, the designation used shall be based on the greatest potential risk.

J101.3 Construction type (top wing). The construction types shall be designated by assigning the appropriate Roman numeral, and letter, placed inside the top wing of the Maltese cross. The hourly rating provided is for the structural framing in accordance with Table 601 of the *California Building Code*.

CONSTRUCTION TYPE	FIRE-RESISTANCE RATING
IA—Noncombustible	3 hours
IB—Noncombustible	2 hours
IIA—Noncombustible	1 hour
IIB—Noncombustible	0 hours
IIIA—Noncombustible/combustible	1 hour
IIIB—Noncombustible/combustible	0 hours
IV—Heavy timber (HT)	HT
VA—Combustible	1 hour
VB—Combustible	0 hours

J101.4 Fire protection systems (right wing). The fire protection system shall be designated by determining its level of protection and assigning the appropriate designation to the right wing of the Maltese cross. Where multiple systems are provided, all shall be listed:

AS Automatic sprinkler system installed throughout

CES Chemical extinguishing system and designated area

CS Combination sprinkler and standpipe system

DS Dry sprinkler system and designated areas

FA Fire alarm system

FP Fire pump

FW Fire wall and designated areas

PAS Pre-action sprinkler system and designated floor

INTERNATIONAL CODE COUNCIL®

ANY UNAUTHORIZED REPRODUCTION OR DISTRIBUTION IS A VIOLATION OF THE FEDERAL COPYRIGHT ACT AND THE LICENSE AGREEMENT, AND SUBJECT TO CIVIL AND CRIMINAL PENALTIES THEREUNDER.

102162101

PS Partial automatic sprinkler system, and designated floor

S Standpipe system

NS No system installed

J101.5 Occupancy type (bottom wing). The occupancy of a building or structure shall be designated in accordance with the occupancy classification found in Section 302.1 of the *California Building Code* and the corresponding designation shall be placed in the bottom wing of the Maltese cross. Where a building or structure contains a mixture of uses and occupancies, all uses and occupancies shall be identified.

A Assembly

B Business

E Educational

F Factory or Industrial

H High Hazard

I Institutional

M Mercantile

R Residential

J101.6 Hazards of content (left wing). The hazards of building contents shall be designated by one of the following classifications as defined in NFPA 13 and the appropriate designation shall be placed inside the left wing of the Maltese cross:

LH Light hazard

MH Moderate hazard

HH High hazard

J101.7 Tactical considerations (center circle). The center circle shall include the name of the local fire service and, where required, the letters "TC" for "tactical considerations." Where firefighters conduct preplan operations, a unique situation(s) for tactical considerations shall be identified and the information provided to the fire dispatch communications center to further assist firefighters in identifying that there is special consideration(s) for this occupancy. Special consideration designations include, but are not limited to:

1. Impact-resistant drywall.
2. Impact-resistant glazing, such as blast or hurricane-type glass.
3. All types of roof and floor structural members including but not limited to post-tension concrete, bar joists, solid wood joists, rafters, trusses, cold-formed galvanized steel, I-joists and I-beams; green roof with vegetation, soil and plants.
4. Hazardous materials (such as explosives, chemicals, plastics).
5. Solar panels and DC electrical energy.
6. HVAC system; and smoke management system for pressurization and exhaust methods.
7. Other unique characteristic(s) within the building that are ranked according to a potential risk to occupants and firefighters.

J101.8 Sign classification maintenance, building information. Sign maintenance shall comply with each of the following:

1. Fire departments in the jurisdiction shall define the designations to be placed within the sign.
2. Fire departments in the jurisdiction shall conduct annual inspections to verify compliance with this section of the code and shall notify the owner, or the owner's agent, of any required updates to the sign in accordance with fire department designations and the owner, or the owner's agent, shall comply within 30 days.
3. The owner of a building shall be responsible for the maintenance and updates to the sign in accordance with fire department designations.

J101.9 Training. Jurisdictions shall train fire department personnel on Sections J101.1 through J101.8.

SECTION J102—REFERENCED STANDARDS

J102.1 General. See Table J102.1 for standards that are referenced in various sections of this appendix. Standards are listed by the standard identification with the effective date, standard title, and the section or sections of this appendix that reference the standard.

102162101

APPENDIX

K

CONSTRUCTION REQUIREMENTS FOR EXISTING AMBULATORY CARE FACILITIES

The provisions contained in this appendix are not mandatory unless specifically referenced in the adopting ordinance or legislation of the jurisdiction.

User notes:

About this appendix: Appendix K was created with the intent to provide jurisdictions with an option for assessing minimum fire and life safety requirements for buildings containing ambulatory care facilities. While this appendix is written with the intent to apply retroactive minimum standards, it is recognized that the ambulatory care requirements are relatively recent additions to the *California Building Code*. For that reason, these requirements are presented as an appendix so that the adopting authority can exercise judgment in the adoption and application of this section. This appendix would also be useful for those local and state jurisdictions that are specifically focused on ensuring the safety of existing ambulatory care facilities by providing minimum criteria that could be used to bring older facilities into compliance with the current standards at the discretion of the adopting jurisdiction. The technical requirements are based on the current *California Building Code* language, which is consistent with the overall concept of the current federal requirements.

ICC code development note: Code change proposals to this appendix will be considered by the IFC Code Development Committee during the 2024 (Group A) Code Development Cycle.

SECTION K101—GENERAL

K101.1 Scope. The provisions of this chapter shall apply to existing buildings containing ambulatory care facilities in addition to the requirements of Chapter 11. Where the provisions of this chapter conflict with either the construction requirements in Chapter 11 or the construction requirements that applied at the time of construction, the most restrictive provision shall apply.

K101.2 Intent. The intent of this appendix is to provide a minimum degree of fire and life safety to persons occupying and existing buildings containing ambulatory care facilities where such buildings do not comply with the minimum requirements of the *California Building Code*.

SECTION K102—FIRE SAFETY REQUIREMENTS FOR EXISTING AMBULATORY CARE FACILITIES

K102.1 Separation. Ambulatory care facilities where the potential exists for four or more care recipients to be incapable of self-preservation at any time, whether rendered incapable by staff or staff has accepted responsibility for a care recipient already incapable, shall be separated from adjacent spaces, corridors or tenants with a fire partition installed in accordance with Section 708 of the *California Building Code*.

K102.2 Smoke compartments. Where the aggregate area of one or more ambulatory care facilities is greater than 10,000 square feet (929 m^2) on one story, the story shall be provided with a smoke barrier to subdivide the story into not fewer than two smoke compartments. The area of any one such smoke compartment shall be not greater than 22,500 square feet (2092 m^2). The travel distance from any point in a smoke compartment to a smoke barrier door shall be not greater than 200 feet (60 960 mm). The smoke barrier shall be installed in accordance with Section 709 of the *California Building Code* with the exception that smoke barriers shall be continuous from an outside wall to an outside wall, a floor to a floor, or from a smoke barrier to a smoke barrier or a combination thereof.

K102.2.1 Refuge area. Not less than 30 net square feet (2.8 m^2) for each nonambulatory care recipient shall be provided within the aggregate area of corridors, care recipient rooms, treatment rooms, lounge or dining areas and other low-hazard areas within each smoke compartment. Each occupant of an ambulatory care facility shall be provided with access to a refuge area without passing through or utilizing adjacent tenant spaces.

K102.2.2 Smoke barriers. Smoke barriers shall be constructed in accordance with Sections 422 and 709 of the *California Building Code*.

Exceptions:

1. Smoke barriers shall be permitted to terminate at an atrium enclosure in accordance with Section 404.6 of the *California Building Code*.
2. *Smoke barriers* shall be continuous from an outside wall to an outside wall, a floor to a floor, a smoke barrier to a smoke barrier or a combination thereof.

K102.2.3 Opening protectives. Openings in smoke barriers shall be protected in accordance with Section 716 of the *California Building Code*. Opening protectives shall have a minimum fire protection rating of $^1/_3$ hour.

Exception: Existing wired glass vision panels in doors shall be permitted to remain.

K102.2.4 Penetrations. Penetrations of smoke barriers shall comply with the *California Building Code*.

Exception: Approved existing materials and methods of construction.

K102.2.5 Joints. Joints made in or between smoke barriers shall comply with the *California Building Code*.

Exception: Approved existing materials and methods of construction.

INTERNATIONAL CODE COUNCIL®

Copyright © 2025 ICC. ALL RIGHTS RESERVED. Accessed by Mary Tse (mary.tse@sfgov.org), (San Francisco Bureau of Fire Prevention) Order Number #102162101 on Jan 30, 2026 04:54 PM (CST) pursuant to License Agreement with ICC. No further reproduction, no further reproductions by any third party, or distribution authorized. Single user only, copying and networking prohibited. ANY UNAUTHORIZED REPRODUCTION OR DISTRIBUTION IS A VIOLATION OF THE FEDERAL COPYRIGHT ACT AND THE LICENSE AGREEMENT, AND SUBJECT TO CIVIL AND CRIMINAL PENALTIES THEREUNDER.

102162101

K102.2.6 Duct and air transfer openings. Penetrations in a *smoke barrier* by duct and air-transfer openings shall comply with Section 717 of the *California Building Code*.

Exception: Where existing duct and air-transfer openings in smoke barriers exist without smoke dampers, they shall be permitted to remain. Any changes to existing smoke dampers shall be submitted for review and approved in accordance with Section 717 of the *California Building Code*.

K102.2.7 Independent egress. A means of egress shall be provided from each smoke compartment created by smoke barriers without having to return through the smoke compartment from which means of egress originated.

K102.3 Automatic sprinkler system. An automatic sprinkler system shall be provided in ambulatory care facilities where required by Sections K102.3.1 and K102.3.2.

K102.3.1 Types IIB, IIIB and VB construction. An automatic sprinkler system shall be provided throughout the entire floor containing an ambulatory care facility in Type IIB, IIIB and VB construction where either of the following conditions exist at any time:

1. Four or more care recipients are rendered incapable of self-preservation.
2. One or more care recipients that are rendered incapable of self-preservation are located at other than the level of exit discharge serving such a facility.

In buildings where ambulatory care is provided on levels other than the level of exit discharge, an automatic sprinkler system shall be installed throughout the entire floor where such care is provided, all floors below and all floors between the level of ambulatory care and the nearest level of exit discharge, including the level of exit discharge.

K102.3.2 High-rise buildings. In high-rise buildings containing ambulatory care facilities, an automatic sprinkler system shall be provided throughout the entire floor containing an ambulatory care facility where either of the following conditions exist at any time:

1. Four or more care recipients are rendered incapable of self-preservation.
2. One or more care recipients that are rendered incapable of self-preservation are located at other than the level of exit discharge serving such a facility.

In buildings where ambulatory care is provided on levels other than the level of exit discharge, an automatic sprinkler system shall be installed throughout the entire floor where such care is provided, all floors below and all floors between the level of ambulatory care and the nearest level of exit discharge, including the level of exit discharge.

K102.4 Automatic fire alarm system. Fire areas containing ambulatory care facilities shall be provided with an electronically supervised automatic smoke detection system installed within the ambulatory care facility and in public use areas outside of tenant spaces, including public corridors and elevator lobbies.

Exception: Buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1, provided that the occupant notification appliances will activate throughout the notification zones upon sprinkler waterflow.

K102.5 Waste and linen chutes. In ambulatory care facilities, existing waste and linen chutes shall comply with Sections K102.5.1 through K102.5.5.

K102.5.1 Enclosures. Chutes shall be enclosed with 1- hour *fire-resistance-rated* construction. Opening protectives shall be in accordance with Section 716 of the *California Building Code* and have a fire protection rating of not less than 1 hour.

K102.5.2 Chute intakes. Chute intakes shall comply with Section K102.5.2.1 or K102.5.2.2.

K102.5.2.1 Chute intake direct from corridor. Where intake to chutes is direct from a *corridor*, the intake opening shall be equipped with a chute-intake door in accordance with Section 716 of the *California Building Code* and have a fire protection rating of not less than 1 hour.

K102.5.2.2 Chute intake via a chute-intake room. Where the intake to chutes is accessed through a chute-intake room, the room shall be enclosed with 1-hour fire-resistance-rated construction. Opening protectives for the intake room shall be in accordance with Section 716 of the *California Building Code* and have a *fire protection rating* of not less than $^{3}/_{4}$ hour. Opening protectives for the chute enclosure shall be in accordance with Section K102.5.1.

K102.5.3 Automatic sprinkler system. Chutes shall be equipped with an approved automatic sprinkler system in accordance with Section 903.2.11.2.

K102.5.4 Chute discharge rooms. Chutes shall terminate in a dedicated chute discharge room. Such rooms shall be separated from the remainder of the building by not less than 1-hour fire-resistance-rated construction. Opening protectives shall be in accordance with Section 716 of the *California Building Code* and have a fire protection rating of not less than 1 hour.

K102.5.5 Chute discharge protection. Chute discharges shall be equipped with a self-closing or automatic-closing opening protective in accordance with Section 716 of the *California Building Code* and have a *fire protection rating* of not less than 1 hour.

SECTION K103—INCIDENTAL USES IN EXISTING AMBULATORY CARE FACILITIES

K103.1 General. Incidental uses associated with and located within existing ambulatory care facilities required to be separated by Section 422 in the *California Building Code*, and that generally pose a greater level of risk to such occupancies, shall comply with the

INTERNATIONAL CODE COUNCIL®

Copyright © 2025 ICC. ALL RIGHTS RESERVED. Accessed by Mary Tse (mary.tse@sfgov.org), (San Francisco Bureau of Fire Prevention) Order Number #102162101 on Jan 30, 2026 04:54 PM (CST) pursuant to License Agreement with ICC. No further reproduction, no further reproductions by any third party, or distribution authorized. Single user only, copying and networking prohibited. ANY UNAUTHORIZED REPRODUCTION OR DISTRIBUTION IS A VIOLATION OF THE FEDERAL COPYRIGHT ACT AND THE LICENSE AGREEMENT, AND SUBJECT TO CIVIL AND CRIMINAL PENALTIES THEREUNDER.

102162101

provisions of Sections K103.2 through K103.4.2.1. Incidental uses in ambulatory care facilities required to be separated by Section 422 of the *California Building Code* are limited to those listed in Table K103.1.

TABLE K103.1—INCIDENTAL USES IN EXISTING AMBULATORY CARE FACILITIES

ROOM OR AREA	SEPARATION AND/OR PROTECTION
Furnace room where any piece of equipment is over 400,000 Btu per hour input	1 hour or provide automatic sprinkler system
Rooms with boilers where the largest piece of equipment is over 15 psi and 10 horsepower	1 hour or provide automatic sprinkler system
Refrigerant machinery room	1 hour or provide automatic sprinkler system
Hydrogen fuel gas rooms, not classified as Group H	1 hour in ambulatory care facilities
Incinerator rooms	2 hours and provide automatic sprinkler system
Laboratories not classified as Group H	1 hour or provide automatic sprinkler system
Laundry rooms over 100 square feet	1 hour or provide automatic sprinkler system
Waste and linen collection rooms with containers with total volume of 10 cubic feet or greater	1 hour or provide automatic sprinkler system
Storage rooms greater than 100 square feet	1 hour or provide automatic sprinkler system
Stationary storage battery systems having a liquid electrolyte capacity of more than 50 gallons for flooded lead-acid, nickel cadmium or VRLA, or more than 1,000 pounds for lithium-ion and lithium metal polymer used for facility standby power, emergency power or uninterruptible power supplies	1 hour in ambulatory care facilities

For SI: 1 square foot = 0.0929 m^2, 1 pound per square inch (psi) = 6.9 kPa, 1 British thermal unit (Btu) per hour = 0.293 watts, 1 horsepower = 746 watts, 1 gallon = 3.785 L.

K103.2 Occupancy classification. Incidental uses shall not be individually classified in accordance with Section 302.1 of the *California Building Code*. Incidental uses shall be included in the building occupancies in which they are located.

K103.3 Area limitations. Incidental uses shall not occupy more than 10 percent of the building area of the story in which they are located.

K103.4 Separation and protection. The incidental uses listed in Table K103.1 shall be separated from the remainder of the building or equipped with an automatic sprinkler system, or both, in accordance with the provisions of that table.

K103.4.1 Separation. Where Table K103.1 specifies a fire-resistance-rated separation, the incidental uses shall be separated from the remainder of the building in accordance with Section 509.4.1 of the *California Building Code*.

K103.4.2 Protection. Where Table K103.1 permits an automatic sprinkler system without a fire-resistance-rated separation, the incidental uses shall be separated from the remainder of the building by construction capable of resisting the passage of smoke in accordance with Section 509.4.2 of the *California Building Code*.

K103.4.2.1 Protection limitation. Except as otherwise specified in Table K103.1 for certain incidental uses, where an automatic sprinkler system is provided in accordance with Table K103.1, only the space occupied by the incidental use need be equipped with such a system.

SECTION K104—MEANS OF EGRESS REQUIREMENTS FOR EXISTING AMBULATORY CARE FACILITIES

K104.1 Size of doors. The required capacity of each door opening shall be sufficient for the occupant load thereof and shall provide a minimum clear opening width of 28 inches (711 mm). Where this section requires a minimum clear opening width of 28 inches (711 mm) and a door opening includes two door leaves without a mullion, one leaf shall provide a minimum clear opening width of 28 inches (711 mm). In ambulatory care facilities, doors serving as means of egress from patient treatment rooms shall provide a minimum clear opening width of 32 inches (813 mm). The maximum width of a swinging door leaf shall be 48 inches (1219 mm) nominal. The minimum clear opening height of doors shall be 80 inches (2032 mm).

Exceptions:

1. Door openings to storage closets less than 10 square feet (0.93 m^2) in area shall not be limited by the minimum clear opening width.
2. The width of door leaves in revolving doors that comply with Section 1010.3.1 shall not be limited.
3. The maximum width of door leaves in revolving doors that comply with Section 1010.3.2 shall not be limited.
4. Exit access doors serving a room not larger than 70 square feet (6.5 m^2) shall have a door leaf width of not less than 24 inches (610 mm).
5. Door closers and door stops shall be permitted to be 78 inches (1980 mm) minimum above the floor.

K104.2 Corridor and aisle width. Corridor width shall be as determined in Section 1005.1 and this section. The minimum width of corridors and aisles that serve gurney traffic in areas where patients receive care that causes them to be incapable of self-preservation shall be not less than 72 inches (1829 mm).

ANY UNAUTHORIZED REPRODUCTION OR DISTRIBUTION IS A VIOLATION OF THE FEDERAL COPYRIGHT ACT AND THE LICENSE AGREEMENT, AND SUBJECT TO CIVIL AND CRIMINAL PENALTIES THEREUNDER.

102162101

K104.3 Existing elevators. Existing elevators, escalators, dumbwaiters and moving walks shall comply with the requirements of Sections K104.3.1 and K104.3.2.

K104.3.1 Elevators, escalators, dumbwaiters and moving walks. Existing elevators, escalators, dumbwaiters and moving walks in ambulatory care facilities required to be separated by Section 422 of the *California Building Code* shall comply with *California Code of Regulations, Title 8, Division 1, Chapter 4, Subchapter 6, Elevator Safety Orders.*

K104.3.2 Elevator emergency operation. Existing elevators with a travel distance of 25 feet (7620 mm) or more above or below the main floor or other level of a building and intended to serve the needs of emergency personnel for firefighting or rescue purposes shall be provided with emergency operation in accordance with *California Code of Regulations, Title 8, Division 1, Chapter 4, Subchapter 6, Elevator Safety Orders.*

SECTION K105—REFERENCED STANDARDS

K105.1 General. See Table K105.1 for standards that are referenced in various sections of this appendix. Standards are listed by the standard identification with the effective date, standard title, and the section or sections of this appendix that reference the standard.

TABLE K105.1—REFERENCED STANDARDS

STANDARD ACRONYM	STANDARD NAME	SECTIONS HEREIN REFERENCED

102162101

APPENDIX

L REQUIREMENTS FOR FIREFIGHTER AIR REPLENISHMENT SYSTEMS

The provisions contained in this appendix are not mandatory unless specifically referenced in the adopting ordinance or legislation of the jurisdiction.

User notes:

About this appendix:	Appendix L provides for the design, installation and maintenance of permanently installed firefighter breathing air systems in buildings designated by the jurisdiction. Breathing air is critical for firefighting operations. Historically, fire departments have supplied air bottles by means of a "bottle brigade," whereby firefighters manually transport air bottles up stairways, which is an extraordinarily firefighter-intensive process and takes firefighters away from their primary mission of rescue and firefighting. Technology now exists to address the issue using in-building air supply systems. Firefighter breathing air systems were introduced in the late 1980s and are now required in a number of communities throughout the United States. The system has been called a "standpipe for air" and consists of stainless steel, high-pressure piping that is supplied by on-site air storage or fire department air supply units. Air filling stations are then strategically located throughout the building, allowing firefighters to refill breathing air cylinders inside the fire building, negating the required "bottle brigade," and making more firefighters available for search, rescue and fire suppression operations.
ICC code development note:	Code change proposals to this appendix will be considered by the IFC Code Development Committee during the 2024 (Group A) Code Development Cycle.

SECTION L101—GENERAL

L101.1 Scope. Firefighter air replenishment systems (FARS) shall be provided in accordance with this appendix. The adopting ordinance shall specify building characteristics or special hazards that establish thresholds triggering a requirement for the installation of a FARS. The requirement shall be based on the fire department's capability of replenishing firefighter breathing air during sustained emergency operations. Considerations shall include:

1. Building characteristics, such as number of stories above or below grade plane, floor area, type of construction and fire-resistance of the primary structural frame to allow sustained firefighting operations based on a rating of not less than 2 hours.
2. Special hazards, other than buildings, that require unique accommodations to allow the fire department to replenish firefighter breathing air.
3. Fire department staffing level.
4. Availability of a fire department breathing air replenishment vehicle.

SECTION L102—DEFINITIONS

L102.1 Definitions. For the purpose of this appendix, certain terms are defined as follows:

FIREFIGHTER AIR REPLENISHMENT SYSTEM (FARS). A permanently installed arrangement of piping, valves, fittings and equipment to facilitate the replenishment of breathing air in self-contained breathing apparatus (SCBA) for firefighters engaged in emergency operations.

SECTION L103—PERMITS

L103.1 Permits. Permits shall be required to install and maintain a FARS. Permits shall be in accordance with Sections L103.2 and L103.3.

L103.2 Construction permit. A construction permit is required for installation of or modification to a FARS. The construction permit application shall include documentation of an acceptance and testing plan as specified in Section L105.

L103.3 Operational permit. An operational permit is required to maintain a FARS.

SECTION L104—DESIGN AND INSTALLATION

L104.1 Design and installation. A FARS shall be designed and installed in accordance with Sections L104.2 through L104.15.3.

L104.2 Standards. Firefighter air replenishment systems shall be in accordance with Sections L104.2.1 and L104.2.2.

L104.2.1 Pressurized system components. Pressurized system components shall be designed and installed in accordance with ASME B31.3.

L104.2.2 Air quality. The system shall be designed to convey breathing air complying with NFPA 1989.

L104.3 Design and operating pressure. The minimum design pressure shall be 110 percent of the fire department's normal SCBA fill pressure. The system design pressure shall be marked in an approved manner at the supply connections, and adjacent to pressure gauges on any fixed air supply components. Pressure shall be maintained in the system within 5 percent of the design pressure.

L104.4 Cylinder refill rate. The FARS shall be capable of refilling breathing air cylinders of a size and pressure used by the fire department at a rate of not less than two empty cylinders in 2 minutes.

INTERNATIONAL CODE COUNCIL®

Copyright © 2025 ICC. ALL RIGHTS RESERVED. Accessed by Mary Tse (mary.tse@sfgov.org), (San Francisco Bureau of Fire Prevention) Order Number #102162101 on Jan 30, 2026 04:54 PM (CST) pursuant to License Agreement with ICC. No further reproduction, no further reproductions by any third party, or distribution authorized. Single user only, copying and networking prohibited. ANY UNAUTHORIZED REPRODUCTION OR DISTRIBUTION IS A VIOLATION OF THE FEDERAL COPYRIGHT ACT AND THE LICENSE AGREEMENT, AND SUBJECT TO CIVIL AND CRIMINAL PENALTIES THEREUNDER.

102162101

L104.5 Breathing air supply. Where a fire department mobile air unit is available, the FARS shall be supplied by an external mobile air connection in accordance with Section L104.14. Where a fire department mobile air unit is not available, a stored pressure air supply shall be provided in accordance with Section L104.5.1. A stored pressure air supply shall be permitted to be added to a system supplied by an external mobile air connection provided that a means to bypass the stored pressure air supply is located at the external mobile air connection.

L104.5.1 Stored pressure air supply. A stored pressure air supply shall be designed based on Chapter 24 of NFPA 1901 except that provisions applicable only to mobile apparatus or not applicable to system design shall not apply. A stored pressure air supply shall be capable of refilling not less than 50 empty breathing air cylinders of a size and pressure used by the fire department.

L104.5.2 Retrofit of external mobile air connection. A FARS not initially provided with an external mobile air connection due to the lack of a mobile air unit shall be retrofitted with an external mobile air connection where a mobile air unit becomes available. Where an external mobile air connection is provided, a means to bypass the stored pressure air supply shall be located at the external mobile air connection. The retrofit shall be completed not more than 12 months after notification by the fire code official.

L104.6 Isolation valves. System isolation valves that allow access for the fire department shall be installed on the system riser to allow piping beyond any air cylinder refill panel to be blocked.

L104.7 Pressure relief valve. Pressure relief valves shall be installed at each point of supply and at the top or end of every riser. The relief valve shall meet the requirements of CGA S-1.3 and shall not be field adjustable. Pressure relief valves shall discharge in a manner that does not endanger personnel who are in the area. Valves, plugs or caps shall not be installed in the discharge of a pressure relief valve. Where discharge piping is used the end shall not be threaded.

L104.8 Materials and equipment. Pressurized system components shall be listed or approved for their intended use and rated for the maximum allowable design pressure in the system. Piping and fittings shall be stainless steel.

L104.9 Welded connections. Piping connections that are concealed shall be welded.

L104.10 Protection of piping. System piping shall be protected from physical damage in an approved manner.

L104.11 Compatibility. Fittings and connections intended to be used by the fire department shall be compatible with the fire department's equipment.

L104.12 Security. Connections to a FARS shall be safeguarded from unauthorized access in an approved manner.

L104.13 Fill stations. Firefighter air replenishment fill stations shall comply with Section L104.13.1 through L104.13.3.

L104.13.1 Location. Fill stations for refilling breathing air cylinders shall be located as follows:

1. Fill stations shall be provided at the fifth floor above and below the ground level floor and every third floor level thereafter.
2. On floor levels requiring fill stations, one fill station shall be provided adjacent to a required exit stair at a location designated by the fire code official. In buildings required to have three or more exit stairs, additional fill stations shall be provided at a ratio of one fill station for every three s*tairways*.

L104.13.2 Design. Fill stations for breathing air cylinders shall be designed to meet the following requirements:

1. A pressure gauge and pressure-regulating devices and controls shall be provided to allow the operator to control the fill pressure and fill rate on each cylinder fill hose.
2. Valves controlling cylinder fill hoses shall be slow-operating valves.
3. A separate flow restriction device shall be provided on each fill hose.
4. A method shall be provided to bleed each cylinder fill hose.
5. The fill station shall be designed to provide a containment area that fully encloses any cylinder being filled and flexible cylinder fill hoses, and directs the energy from a failure away from personnel. Fill stations shall be designed to prohibit filling of cylinders that are not enclosed within the containment area.

   Exception: Where required or approved by the fire chief, fill stations providing for the direct refilling of the firefighters' breathing air cylinders using Rapid Intervention Crew/Company Universal Air Connection (RIC/UAC) fittings shall be used in lieu of cylinder fill stations that utilize containment areas.

L104.13.3 Cylinder refill rate. Fill stations shall be capable of simultaneously filling two or more empty breathing air cylinders equivalent to those used by the fire department to the cylinders' design pressure within 2 minutes.

L104.14 External mobile air connection. An external mobile air connection shall be provided for fire department mobile air apparatus where required by Section L104.5 to supply the system with breathing air.

L104.14.1 Location. The location of the external mobile air connection shall have access for mobile air apparatus and approved by the fire code official.

L104.14.2 Protection from vehicles. A means of vehicle impact protection in accordance with Section 312 shall be provided to protect mobile air connections that are subject to vehicular impact.

L104.14.3 Clear space around connections. A working space of not less than 36 inches (914 mm) in width, 36 inches (914 mm) in depth and 78 inches (1981 mm) in height shall be provided and maintained in front of and to the sides of external mobile air connections.

INTERNATIONAL CODE COUNCIL®

No further reproduction, no further reproductions by any third party, or distribution authorized. Single user only, copying and networking prohibited. ANY UNAUTHORIZED REPRODUCTION OR DISTRIBUTION IS A VIOLATION OF THE FEDERAL COPYRIGHT ACT AND THE LICENSE AGREEMENT, AND SUBJECT TO CIVIL AND CRIMINAL PENALTIES THEREUNDER.

102162101

L104.15 Air monitoring system. An approved air monitoring system shall be provided. The system shall automatically monitor air quality, moisture and pressure on a continual basis. The air monitoring system shall be equipped with not less than two content analyzers capable of detecting carbon monoxide, carbon dioxide, nitrogen, oxygen, moisture and hydrocarbons.

L104.15.1 Alarm conditions. The air monitoring system shall transmit a supervisory signal when any of the following levels are detected:

1. Carbon monoxide exceeds 5 ppm.
2. Carbon dioxide exceeds 1,000 ppm.
3. An oxygen level below 19.5 percent or above 23.5 percent.
4. A nitrogen level below 75 percent or above 81 percent.
5. Hydrocarbon (condensed) content exceeds 5 milligrams per cubic meter of air.
6. The moisture concentration exceeds 24 ppm by volume.
7. The pressure falls below 90 percent of the maintenance pressure specified in Section L104.3.

L104.15.2 Alarm supervision, monitoring and notification. The air monitoring system shall be electrically supervised and monitored by an approved supervising station, or where approved, shall initiate audible and visual supervisory signals at a constantly attended location.

L104.15.3 Air quality status display. Air quality status shall be visually displayed at the external mobile air connection required by Section L104.14.

SECTION L105—ACCEPTANCE TESTS

L105.1 Acceptance tests. Upon completion of the installation, a FARS shall be acceptance tested to verify compliance with equipment manufacturers' instructions and design documents. Oversight of the acceptance tests shall be provided by a registered design professional. Acceptance testing shall include all of the following:

1. A pneumatic test in accordance with ASME B31.3 of the complete system at a minimum test pressure of 110 percent of the system design pressure using oil free dry air, nitrogen or argon shall be conducted. Test pressure shall be maintained for not less than 24 hours. During this test, all fittings, joints and system components shall be inspected for leaks. Defects in the system or leaks detected shall be documented and repaired.
2. A cylinder-filling performance test shall be conducted to verify compliance with the required breathing air cylinder refill rate from the exterior mobile air connection and, where provided, a stored air pressure supply system.
3. The air quality monitoring system shall be tested to verify both of the following conditions:
   3.1. Visual indicators required by Section L104.15.1 function properly.
   3.2. Supervisory signals are transmitted as required by Section L104.15.2 for each sensor based on a sensor function test.
4. Connections intended for fire department use shall be confirmed as compatible with the fire department's mobile air unit, SCBA cylinders and, where provided, RIC/UAC connections.
5. Air samples shall be taken from not less than two fill stations and submitted to an approved gas analysis laboratory to verify compliance with NFPA 1989. The FARS shall not be placed into service until a written report verifying compliance with NFPA 1989 has been provided to the fire code official.

SECTION L106—INSPECTION, TESTING AND MAINTENANCE

L106.1 Periodic inspection, testing and maintenance. A FARS shall be continuously maintained in an operative condition and shall be inspected not less than annually. Not less than quarterly, an air sample shall be taken from the system and tested to verify compliance with NFPA 1989. The laboratory test results shall be maintained on site and readily available for review by the fire code official.

SECTION L107—REFERENCED STANDARDS

L107.1 General. See Table L107.1 for standards that are referenced in various sections of this appendix. Standards are listed by the standard identification with the effective date, standard title, and the section or sections of this appendix that reference the standard.

TABLE L107.1—REFERENCED STANDARDS

STANDARD ACRONYM	STANDARD NAME	SECTIONS HEREIN REFERENCED

102162101

APPENDIX

M

HIGH-RISE BUILDINGS—RETROACTIVE AUTOMATIC SPRINKLER REQUIREMENTS

The provisions contained in this appendix are not mandatory unless specifically referenced in the adopting ordinance or legislation of the jurisdiction.

User notes:

About this appendix: Appendix M was created with the intent to provide an option for adoption by jurisdictions that choose to require existing high-rise buildings to be retrofitted with automatic sprinklers. Modern fire and building codes require complete automatic fire sprinkler protection and a variety of other safety features in new high-rise construction. Many older high-rise buildings lack automatic sprinkler protection and other basic fire protection features necessary to protect the occupants, emergency responders and the structure itself. Without complete automatic sprinkler protection, fire departments cannot provide the level of protection that high-rise buildings demand. Existing high-rise buildings that are not protected with automatic sprinklers represent a significant hazard to occupants and firefighters, and can significantly impact a community's infrastructure and economic viability in the event of a fire loss.

ICC code development note: Code change proposals to this appendix will be considered by the IFC Code Development Committee during the 2024 (Group A) Code Development Cycle.

SECTION M101—SCOPE

M101.1 Scope. An automatic sprinkler system shall be installed in all existing high-rise buildings in accordance with the requirements and compliance schedule of this appendix.

SECTION M102—WHERE REQUIRED

M102.1 High-rise buildings. An automatic sprinkler system installed in accordance with Section 903.3.1.1 shall be provided throughout existing high-rise buildings.

Exceptions:

1. Airport traffic control towers.
2. Open parking structures.
3. Group U occupancies.
4. Occupancies in Group F-2.

SECTION M103—COMPLIANCE

M103.1 Compliance schedule. Building owners shall file a compliance schedule with the fire code official not later than 365 days after receipt of a written notice of violation. The compliance schedule shall not exceed 12 years for an automatic sprinkler system retrofit.

102162101

APPENDIX

N

INDOOR TRADE SHOWS AND EXHIBITIONS

The provisions contained in this appendix are not mandatory unless specifically referenced in the adopting ordinance or legislation of the jurisdiction.

User notes:

About this appendix:	Appendix N was created to address the hazards that are associated with larger, more complex trade shows and exhibitions. Although many of these requirements are already included in various locations in this code, some of the more important items, such as requirements for covered booths and multiple-level booths, are not. The intent is to have the requirements covering these events in a single location with pointers to other locations within this code, which makes it easier for those organizing exhibitions and individual exhibitors who are unfamiliar with the fire code to locate the requirements that are applicable to them.
ICC code development note:	Code change proposals to this appendix will be considered by the IFC Code Development Committee during the 2024 (Group A) Code Development Cycle.

SECTION N101—GENERAL

N101.1 Scope. Indoor trade shows and exhibitions with temporary vendor displays or booths within any indoor occupancy classification shall be in accordance with this appendix and all other applicable requirements of this code.

Compliance with this appendix is not required where Section N101.1.1 or N101.1.2 is applicable.

N101.1.1 Nonsprinklered buildings. In a building that is not equipped throughout with an automatic sprinkler system, the aggregate exhibit area must be less than 1,500 square feet (139 m^2) of floor area and meet both of the following conditions:

1. The exhibit area does not include any covered or multiple-level exhibits or booths.
2. Not fewer than two remote exits or exit access doors in compliance with Chapter 10 are provided.

N101.1.2 Sprinklered buildings. In a building that is equipped throughout with an automatic sprinkler system with a minimum design density of ordinary hazard Group 1, the aggregate exhibit area must be less than 4,500 square feet (418 m^2) of floor area and meet both of the following conditions:

1. The exhibit area does not include any covered or multiple-level exhibits or booths.
2. Not fewer than two remote exits or exit access doors in compliance with Chapter 10 are provided.

N101.2 Permit required. An operational permit for trade shows and exhibitions shall be required as set forth in Section 105.5.15.

N101.3 Application. A permit application for a trade show or exhibition shall be submitted to the fire code official prior to the start of the event in a time frame established by the jurisdiction. The application shall include documentation that identifies all of the following:

1. The means of egress.
2. The locations and widths of exits and aisles.
3. The locations of exit signs.
4. The total square footage (square meters) of spaces.
5. The location and arrangement of all booths and cooking equipment.
6. The location of all fire protection equipment.
7. The type and location of any heating and electrical equipment, where applicable.
8. The location of any covered or multiple-level booths.
9. Construction documents for any covered or multiple-level booths.
10. The storage locations and quantities of any highly combustible goods.
11. The location and type of any vehicle displays, where applicable.

SECTION N102—DEFINITIONS

N102.1 Definitions. For the purpose of this appendix, certain terms are defined as follows:

COOKING. Heating food products to a temperature of 145°F (63°C) or higher by baking, braising, boiling, frying or grilling.

COVERED BOOTH. An exhibit that has an obstruction placed over the exhibit above floor level that resembles a roof, canopy, tent or other obstruction, other than vertical signs or banners.

MULTIPLE-LEVEL BOOTH. An exhibit that has a second level or tier constructed on top of the exhibit or portion of the exhibit that is open to the public, or includes a live load above the exhibit area floor level.

102162101

SECTION N103—PUBLIC SAFETY FOR EVENTS

N103.1 Fire safety and evacuation plan. A fire safety and evacuation plan shall be provided in accordance with Section 404.2.

Exception: Where the fire code official determines that the nature of the exhibition, display or the activities therein does not pose an increased hazard to public safety.

N103.2 Fire watch personnel. Where, in the opinion of the fire code official, it is essential for public safety in a trade show or exhibition, either because of the number or persons present or because of the nature of the performance, exhibition, display or activity, the owner or owner's authorized agent shall provide one or more fire watch personnel in accordance with Section 403.11.1.

N103.3 Crowd managers. Where events involve a gathering of more than 1,000 people, trained crowd managers shall be provided in accordance with Section 403.11.3.

SECTION N104—INTERIOR FINISH AND DECORATIVE MATERIALS

N104.1 General. Interior finish, interior trim, furniture, furnishings and decorative materials, including decorative vegetation, used in exhibition areas shall comply with the requirements of this section and Chapter 8.

N104.2 Interior wall and ceiling finish. The materials used for interior wall and ceiling finish of exhibit booths and displays in exhibition areas shall comply with one of the following:

1. Where the building is not equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1, the wall and ceiling finish materials are required to be Class A in accordance with Section 803.
2. Where the building is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1, the wall and ceiling finish materials are required to be not less than Class B in accordance with Section 803.

SECTION N105—MULTIPLE-LEVEL BOOTHS

N105.1 Construction documents. Construction documents for all multiple-level booths shall be stamped by a registered design professional and shall be submitted with the permit application to the fire code official or the building code official, as appropriate.

N105.2 Structural design. Multiple-level booths shall be designed and constructed in accordance with Chapter 16 of the *California Building Code*.

N105.3 Means of egress. Upper levels of multiple-level booths with an occupant load greater than 10 persons shall have not fewer than two exits or exit access that are separated in accordance with Section 1007.1.1.

N105.4 Automatic sprinkler systems. An approved automatic sprinkler system in accordance with Section 903.3.1.1 shall be provided in multiple-level booths exceeding 400 square feet (37.2 m^2) in floor area per level.

N105.5 Inspection. Inspection to verify that multiple-level booths are constructed in accordance with the construction documents and structural design details required by this section shall be approved by the building code official.

N105.6 Fire alarm and detection. Each multiple-level booth with a floor area exceeding 120 square feet (11.1 m^2) on any level shall be provided with an approved fire alarm system in accordance with Section 907.2.

SECTION N106—COVERED BOOTHS

N106.1 Automatic sprinkler systems. An approved automatic sprinkler system in accordance with Section 903.3.1.1 shall be provided in covered booths exceeding 100 square feet (9.3 m^2) in floor area per level.

N106.2 Fire alarm and detection. Each covered booth with a floor area exceeding 120 square feet (11.1 m^2) on any level shall be provided with an approved fire alarm system in accordance with Section 907.2.

SECTION N107—DISPLAY AND STORAGE OF HAZARDOUS AND COMBUSTIBLE MATERIALS

N107.1 Hazardous materials. The display of hazardous materials shall comply with Section 314 and Chapters 50 through 67. The storage of hazardous materials in indoor trade shows and exhibition areas shall be prohibited.

N107.1.1 Display near exit. The display of hazardous materials within 5 feet (1524 mm) of an *exit* shall be prohibited.

N107.2 Storage of combustible materials. Storage of combustible materials shall comply with Section 315.

N107.3 Vehicles. The display of liquid- or gas-fueled vehicles, boats or other motor craft in indoor trade shows and exhibition areas shall comply with Sections 314.4 and N107.3.1 through N107.3.3.

N107.3.1 Batteries in vehicles. Vehicle batteries shall be rendered inoperable. Batteries in liquid- and gas-fueled vehicles shall be disconnected. Batteries in electric vehicles shall be rendered inoperable by the removal of fuses or other approved methods but shall not be required to be disconnected.

N107.3.2 Vehicle fuel. Vehicle fuel shall comply with Sections N107.3.2.1 through N107.3.2.4.

N107.3.2.1 Fueling within the structure. Vehicles shall not be fueled or defueled within the structure.

N107.3.2.2 Vehicle fuel tanks. Vehicle fuel tanks shall contain not more than one quarter of the tank capacity or 5 gallons (18.93 L) of fuel, whichever is less.

N107.3.2.3 Vehicle fuel systems. Vehicle fuel systems shall be inspected for leaks prior to the vehicle being brought into the structure.

ANY UNAUTHORIZED REPRODUCTION OR DISTRIBUTION IS A VIOLATION OF THE FEDERAL COPYRIGHT ACT AND THE LICENSE AGREEMENT, AND SUBJECT TO CIVIL AND CRIMINAL PENALTIES THEREUNDER.

102162101

N107.3.2.4 Vehicle fuel tank openings. Vehicle fuel tank openings shall be locked and sealed to prevent the escape of vapors.

N107.3.3 Obstruction by vehicles. Vehicles shall not be located in such a manner that they obstruct a means of egress.

N107.3.4 Gas-powered vehicles. Compressed natural gas (CNG), liquefied petroleum gas (LPG) or hydrogen-powered vehicles present in indoor trade shows and exhibition areas shall comply with Sections N107.3.4.1 through N107.3.4.3.

N107.3.4.1 Shutoff valves. Shutoff valves shall be closed and the engine shall be operated until it stops. Valves shall remain closed until the vehicle is removed.

N107.3.4.2 Battery hot lead. The hot lead of the battery shall be disconnected.

N107.3.4.3 Dual-fuel vehicles equipped to operate on gasoline. Dual-fuel vehicles equipped to operate on gasoline as well as on CNG, LPG or hydrogen shall comply with Section 3108.14.

N107.3.5 Competitions or demonstrations. Competitions or demonstrations using any type of vehicle shall comply with Section 3108.14.5.

N107.4 Fueled equipment other than vehicles. Fueled equipment other than vehicles shall comply with Section 313.

N107.5 LP-gas containers. Liquefied petroleum (LP) gas containers shall comply with Sections N107.5.1 through N107.5.5 and Chapter 61.

N107.5.1 LP-gas containers exceeding 12 pounds (5 kg) of water capacity. The use of LP-gas containers exceeding 12 pounds (5 kg) of water capacity shall be prohibited.

N107.5.2 Where more than one LP-gas container is present in the same area. Where more than one LP-gas container is present in the same area, cylinders shall be separated from each other by a minimum of 20 feet (6096 mm).

N107.5.3 Equipment for LP-gas containers. Equipment for LP-gas containers, including tanks, piping, hoses, fittings, valves, tubing and other related components, shall be approved and shall comply with Chapter 61 and with the applicable requirements of the *International Fuel Gas Code*.

N107.5.4 Securing of LP-gas containers. Portable LP-gas containers shall be securely fastened in place to prevent unauthorized movement.

N107.5.5 Spare LP-gas containers. Spare LP-gas containers not connected to an approved appliance shall be stored in a location and manner approved by the fire code official.

N107.6 Cooking and open-flame devices. All cooking equipment and any open-flame devices shall comply with the requirements of Section 308 of this code and with Chapter 5 of the *California Mechanical Code*. Cooking equipment shall be separated from combustible material display or storage by a horizontal distance of not less than 5 feet (1524 mm).

SECTION N108—MEANS OF EGRESS

N108.1 Means of egress from the indoor trade show or exhibition area. Means of egress from the indoor trade show or exhibition area shall comply with Chapter 10 and with Sections N108.2 and N108.3.

N108.2 Design of means of egress. The design of means of egress shall take into consideration the exhibit layout and the anticipated crowd movement during the event.

N108.3 Aisles and corridors. Aisles and corridors within the exhibit area shall be kept free of obstructions when the public is present. Storage of any kind in aisles or corridors within the exhibit area is not permitted.

SECTION N109—REFERENCED STANDARDS

N109.1 General. See Table N109.1 for standards that are referenced in various sections of this appendix. Standards are listed by the standard identification with the effective date, standard title, and the section or sections of this appendix that reference the standard.

102162101

APPENDIX

O

VALET TRASH AND RECYCLING COLLECTION IN GROUP R-2 OCCUPANCIES

The provisions contained in this appendix are not mandatory unless specifically referenced in the adopting ordinance or legislation of the jurisdiction.

User notes:

About this appendix: Appendix O provides for valet trash and recycling collection services in Group R-2 occupancies. These collection services are formally defined in Section 202 as "Valet Trash Collection," which includes recycling. Occupants receiving this service place trash and recyclables in the corridor outside their residence for pickup by a collection service on a regularly scheduled basis in accordance with restrictions, as prescribed by this appendix.

ICC code development note: Code change proposals to this appendix will be considered by the IFC Code Development Committee during the 2024 (Group A) Code Development Cycle.

SECTION O101—SCOPE

O101.1 Scope. Valet trash collection in Group R-2 occupancies shall comply with this appendix.

SECTION O102—CONTAINERS

O102.1 General. Containers used for valet trash collection shall comply with Sections O102.2 through O102.5.

O102.2 Integrity. Valet trash or recycling materials shall be stored in containers that are of liquid-tight construction and equipped with lids. Lids shall be in the fully closed position.

O102.3 Height. Containers shall not exceed 30 inches (762 mm) in height.

O102.4 Capacity and limit. Individual containers shall not exceed 2.0 cubic feet (15 gallons; 56.8 L) in capacity. Only one trash or recycling container per dwelling unit or sleeping unit shall be permitted to be placed outside the dwelling unit or sleeping unit at one time. Trash and recycling containers shall not be placed outside a dwelling unit or sleeping unit at the same time.

O102.5 Construction materials. Containers and lids used for valet trash collections shall be constructed entirely of noncombustible materials or of materials that meet a peak rate of heat release not exceeding 300 kW/m^2 when tested in accordance with ASTM E1354 at an incident heat flux of 50 kW/m^2 in the horizontal orientation.

SECTION O103—CONTAINER LOCATION

O103.1 General. Placement of containers used for valet trash collection outside a dwelling unit or sleeping unit shall comply with Sections O103.2 and O103.3.

O103.2 Minimum means of egress width. Containers used for valet trash collection shall not obstruct the minimum required egress width.

O103.3 Stairways. Containers used for valet trash collection shall not be placed on stair risers, within minimum required stairway landing dimensions or anywhere in an interior exit stairway.

SECTION O104—ADDITIONAL REQUIREMENTS

O104.1 Time limits. Filled containers used for valet trash or recycling services shall not be placed outside a dwelling unit for more than 6 hours within any 24-hour period. Empty approved containers used for valet trash or recycling services shall not remain in a corridor for more than 12 continuous hours in a 24-hour period.

O104.2 Collection rules. The property owner or manager shall have written valet service rules, hours and penalties provided to all tenants and occupants. The property owner or manager shall be responsible for implementing, monitoring and enforcing all valet trash collection rules. A copy of the rules shall be provided to the fire code official upon request.

O104.3 Suspension of service. The fire code official has the authority to order the suspension of valet trash collection that is not in compliance with this appendix.

102162101

APPENDIX

P

TEMPORARY HAUNTED HOUSES, GHOST WALKS AND SIMILAR AMUSEMENT USES

The provisions contained in this appendix are not mandatory unless specifically referenced in the adopting ordinance.

SECTION P101—GENERAL

P101.1 Scope. *These regulations shall apply to temporary haunted houses, ghost walks or similar amusement uses, where decorative materials and confusing sounds and/or visual effects are present and shall be in accordance with this Appendix.*

P101.2 Permits. *An operational permit shall be required for haunted houses, ghost walks or similar amusement uses in accordance with Appendix P101.2.*

P101.2.1 Permit documents. *The permit application shall include a dimensioned site plan and floor plan.*

A site plan showing the following:

1. *The proximity of the event building(s) to other structures or hazardous areas.*
2. *The path of travel from the event building or area to the public way.*
3. *The location of exterior evacuation assembly points.*

A floor plan showing the following:

1. *Dimensions of the area being used (include total square footage, width and types of exits, aisles or interior exit pathways, etc.).*
2. *The path of travel shall include the layout of any mazes, mirrors or other display items that may confuse the egress paths.*
3. *A brief description of what will be depicted in each room or area along the walk or course, including the type of special effects to be utilized.*
4. *Location of exits, exit signs and emergency lighting.*
5. *Location of electrical panel(s) and light switches.*
6. *Identification of what the normal or prior use of the structure(s) being used is (i.e., auditorium, school, church, etc.).*
7. *Accessible egress routes.*
8. *When required, areas of refuge.*
9. *When required by Section 907.2.12, fire alarm panel location, manual fire alarm boxes and horn/strobe locations.*
10. *Portable fire extinguisher locations.*
11. *The location and fuel capacity of all generators.*

SECTION P102—DEFINITIONS

P102.1 DECORATIVE MATERIALS. *All materials used for decorative, acoustical or other effect (such as curtains, draperies, fabrics, streamers and surface coverings) and all other materials utilized for decorative effect (such as batting, cloth, cotton, hay stalks, straw, vines, leaves, trees, moss and similar items), including foam plastics and other materials containing foam plastics.*

P102.2 HAUNTED HOUSE. *A temporary building or structure, or portion thereof, which contains a system that transports passengers or provides a walkway through a course so arranged that the means of egresses are not apparent due to theatrical distractions, not visible due to low illumination, are disguised or are not readily available due to the method of transportation through the building or structure.*

P102.3 GHOST WALKS. *Similar to haunted houses and may include both indoor and outdoor areas where the means of egresses are similarly not readily identifiable.*

SECTION P103—GENERAL REQUIREMENTS

P103.1 Allowable structures. *Haunted houses, ghost walks and similar amusement uses shall only be located in structures that comply with the provisions for Special Amusement Areas in accordance with the California Building Code.*

P103.2 Tents or membrane structures. *Tents and membrane structures may be used when in compliance with all applicable requirements of this regulation and when the total floor area of the tent is less than 1,000 square feet and the travel distance to an exit from any location is less than 50 feet.*

P103.3 Fire evacuation plans. *A fire safety and evacuation plan that complies with Section 404 of this code shall be submitted.*

P103.4 Staffing. *The event shall be adequately staffed by qualified person(s) to control the occupant load and assist patrons in exiting should an evacuation become necessary. Staffing level shall be determined upon review of plans and may be increased at the discretion of the Fire Code Official.*

P103.5 Occupant load. *Maximum occupant load shall be in accordance with Chapter 10, Table 1004.1.1. A sign stating maximum occupancy shall be posted in a visible location near the entrance. The attendant(s) shall control the flow of patrons so as not to exceed this limit.*

INTERNATIONAL CODE COUNCIL®

Copyright © 2025 ICC. ALL RIGHTS RESERVED. Accessed by Mary Tse (mary.tse@sfgov.org), (San Francisco Bureau of Fire Prevention) Order Number #102162101 on Jan 30, 2026 04:54 PM (CST) pursuant to License Agreement with ICC. No further reproduction, no further reproductions by any third party, or distribution authorized. Single user only, copying and networking prohibited. ANY UNAUTHORIZED REPRODUCTION OR DISTRIBUTION IS A VIOLATION OF THE FEDERAL COPYRIGHT ACT AND THE LICENSE AGREEMENT, AND SUBJECT TO CIVIL AND CRIMINAL PENALTIES THEREUNDER.

102162101

P103.6 Exits. *Exiting shall be in accordance with Chapter 10 and this section.*

1. *Two exits shall be provided from each room with an occupant load of 50 or more. Required exit doors shall swing in the direction of egress.*
2. *Illuminated exit signs shall be provided at each exit serving an occupant load of 50 or more.*
3. *Exit doors serving an occupant load of 50 or more shall not be provided with a latch or lock unless it is panic hardware.*
4. *When tents or membrane structures are approved for use, curtains shall not be allowed to cover the exits.*
5. *Emergency lighting shall be provided in exit pathways.*
6. *Exhibits and decorative materials shall not obstruct, confuse or obscure exits, exit pathways, exit signs or emergency lights.*
7. *Additional exit pathway markings, such as low level exit signs and directional exit path markings, may be required.*

P103.7 Fire protection. *Haunted houses and ghost walks shall be provided with fire protection systems in accordance with Appendix P103.7.*

Exception: *When the total floor area of haunted houses or indoor portions of ghost walks are less than 1,000 square feet and the travel distance to an exit is less than 50 feet.*

P103.7.1 Fire sprinkler protection. *An automatic fire sprinkler system shall be required for haunted houses and indoor portions of ghost walks. Fire sprinkler systems shall be in accordance with Section 903.*

P103.7.2 Fire detection systems. *An approved automatic fire detection system shall be provided in accordance with Section 907.2.12, as required for amusement buildings.*

P103.7.3 Alarm. *Activation of any single smoke detector, the fire sprinkler system or other automatic fire detection device shall be in accordance with Section 907.2.12.1.*

P103.7.4 Emergency voice alarm. *Provide an emergency voice/alarm communication system in accordance with Section 907.2.12.3, as required for amusement buildings.*

P103.7.5 Portable fire extinguishers. *Fire extinguishers shall have a minimum 2A-10B:C rating. Fire extinguishers shall be properly mounted and shall be visible and accessible at all times. Clearly identify locations with signs or reflective tape. Fire extinguishers shall be located within 50 of feet travel distance from anywhere in the building.*

P103.8 Electrical. *When required, a permit shall be obtained from the local building official.*

P103.8.1 Extension cords. *Extension cords shall be UL listed and shall be appropriate for the intended use.*

P103.8.2 Power strips. *Only UL listed power strips with overcurrent protection shall be used when the number of outlets provided is inadequate. Power strips shall be plugged directly into the outlet, and shall not be plugged into one another in series.*

P103.8.3 String lighting. *Manufacturer's installation guidelines shall be followed for the maximum allowable number of string lights that can be connected. When connecting string lights together, the total amperage of all string lights shall be calculated to ensure that they do not exceed the amperage for the extension cord and circuit.*

P103.8.4 Protection. *All extension cords and power strips shall be adequately protected from foot traffic.*

P103.8.5 Portable generators. *When portable generators are utilized, they shall be diesel fuel type and located a minimum of 20 feet away from all structures.*

P103.9 Decorative materials. *Interior wall, ceiling and floor finishes shall be Class A rated in accordance with the California Building Code.*

P103.9.1 Flame retardant. *All decorative materials shall be both inherently flame retardant and labeled as such, or shall be treated with a listed flame-retardant material. If the material is treated by the user, a container and receipt will serve as proof.*

P103.9.2 Flame test. *Testing shall be done in accordance with Section 803.5 of this code, as referenced from the California Code of Regulations, Title 19, Division 1, Article 3, Section 3.21(a) and (b). Proof of testing shall be provided.*

P103.9.3 Placement of decorative materials. *Decorative materials, props and/or performer platforms shall not obstruct, confuse or obscure exits, exit signs, exit pathways, emergency lighting or any component of fire protection systems and equipment (i.e. fire extinguishers, fire alarm systems, fire sprinklers, etc.) inside or outside the building.*

P103.10 Smoke generators. *Use of smoke-generating equipment may be restricted if determined to be incompatible with smoke alarm(s). Care and consideration shall be used with respect to smoke generator and smoke alarm locations. Smoke generator and smoke alarm locations shall be approved by the fire department.*

P103.11 Display of motor vehicles. *Display of motor vehicles shall be in accordance with Section 3104.18 of this code.*

P103.12 Inspections. *A fire and life safety inspection shall be conducted by the fire department prior to the start of the event.*

P103.13 Signs. *"NO SMOKING" signs shall be conspicuously posted at the main entrance and throughout the exhibit.*

P103.14 Prohibited areas. *Inside storage or use of flammable and/or combustible liquids, gases and solids shall be prohibited. Open flames shall be prohibited.*

P103.15 Maintenance. *Good housekeeping shall be maintained at all times throughout exhibit and exit pathways.*

APPENDIX

Q

COMMUNITY WILDLAND-URBAN INTERFACE (WUI) FIRE HAZARD EVALUATION FRAMEWORK

Wildland-Urban Interface (WUI) fire spread has significant impact on communities well beyond the loss of structures, including community evacuation and incident response. Pre-fire planning and hazard mitigation impact how the fire develops, how the life safety of residents and first responders is impacted during evacuations, and the extent of structural and infrastructure losses. There is a need to document pre-fire hazard in a way that assesses the fire impact beyond potential structural losses.

This appendix contains a preliminary Community WUI Fire Hazard Evaluation Framework as a suggested methodology to begin to support communities at risk in the identification of their unique hazards and to provide common metrics for comparisons between communities. This preliminary framework includes information on community size, population and fuels; on notification and evacuation; and on the community infrastructure and firefighting response potential. Aspects of this framework may already be included in various community-level documents, such as Community Wildfire Protection Plans or evacuation plans. Development of a standard framework will (1) consolidate relevant WUI fire hazard and planning information in one place, and (2) allow for cross-community comparisons.

The evaluation required to implement this framework will support pre-fire hazard assessment and during-fire response operations. An increased understanding of fire-evacuation, fire-structural response and fire-defensive actions relationships is needed to assess the overall community WUI fire hazard. The quantification of these relationships will enable communities to optimize the community-level response to WUI fire hazards in a more integrated approach and result in increased life safety and reduced losses.

Definitions

The Community WUI Hazard Evaluation Framework presented here is intended for communities as small as a few hundred to tens of thousands of residents. The methodology is not intended for the documentation of single residences or large cities. It is intended to provide a community with an overview of the overall WUI fire-related hazards and to enable the authority having jurisdiction (AHJ) to compare the relative hazards and preparedness levels of different communities. The information collected can be used by first responders and community and county officials to prioritize hazard mitigation within and around the community and to develop "tabletop" responses to different WUI fire scenarios. In the event of an actual WUI fire, the information collected could be used by first responders and local officials to safely evacuate civilians, to reduce the risk of first responder injuries and to enhance fire containment. The following are definitions and uses of the different components of the Community WUI Fire Hazard Evaluation Framework. This framework may be expanded to include additional characteristics that are not specifically listed in this preliminary version.

Community

In the sense of WUI fire hazard, the community should be viewed in the context of evacuation arteries rather than jurisdictional boundaries. As such, the community may have parts that are incorporated or unincorporated. Community size is reported in acres, and the community boundary selected for this hazard evaluation can be provided for use in a geographic information system (GIS) layer in a number of formats, including but not limited to shapefile, geodatabase or Geo-Package. A topographic overview of the area (community) is used to describe the general conditions using one or more of the following key words: flat terrain, rolling hills, moderate slopes, valleys, steep slopes and/or plateau.

Information about prevailing weather patterns, such as localized winds or significant wind events (strength and direction), should also be included in the community profile.

Fuels

The fuels section is intended to provide an overview of the structural, vegetative and other fuels present in the community. This is not a parcel-level assessment; however, if defensible space assessment data is available, it can be aggregated and utilized within this framework to provide higher resolution assessment of community fire hazard. Structure density is a simple metric to capture structure-to-structure spacing and provide insight on the potential structure-to-structure fire spread. For uniform communities, a representative structure separation distance (SSD) may be sufficient, whereas nonuniform communities will be better described using a histogram of SSD. The age of structures may also be a factor in structure vulnerability due to changes in building codes associated with structure hardening. Similarly, a community that was built over a short period of time can be represented by a single value representing the decade of construction, while a community that grew and expanded over long periods will be better represented by a histogram of structure ages.

A database such as LANDFIRE[1] can provide the vegetative fuel type and fuel loading throughout the community. This data will be limited by the age of the last LANDFIRE overflight and the 100 feet (30 meters) pixel spatial resolution.

Natural and artificial fuel breaks, including fuel treatments within and around the community, should be represented in a geospatial format and should include the year the vegetative fuel treatment was conducted. Fuel treatments should also include any logging activities in the area surrounding the community. Fire history in and around the community will describe the last time the community

102162101

experienced direct impacts from fire. Shapefiles of the fuel treatments and fire history will allow for spatial documentation of this data. Fuel treatments and fire history should be documented at least 10 miles (16 km) out from the edge of the community. Local conditions (e.g., fuel, topography, weather, evacuation routes) may require documentation well beyond 10 miles (16 km). The last large fire in the area of the community perimeter, together with the vegetative fuel loading, will provide information on the potential energy content of the vegetative fuels in the event of a short- or long-term drought.

The documentation of other community hazards, such as hazmat or high fuel load facilities (e.g., fixed propane tanks, hazardous material storage and use facilities, ammunition facilities lumber yards, pallet storage, tire storage), is important as they can affect civilians and first responder safety during evacuations, fire containment and mop-up activities. The information should be provided in the form of a GIS layer and may then be used by first responders to develop "tabletop" responses for emergency preparedness, and to direct response actions during a WUI fire event.

Population

The population of the selected community will impact, among other factors, the minimum time required for evacuation. Population and population density, expressed as the number of residents per acre, are both important metrics that provide information that can be used for evacuation assessment. The permanent to transient population density ratio is intended to capture the fraction of the community that may be visiting for tourism and may not be aware of community evacuation and other fire related activities.

Notification

The notification section of the Community WUI Hazard Evaluation is designed to capture the presence and type of mass-notification tools available to emergency managers. It should be noted that reliance on individual notification methods may result in limited notifications. If a Reverse 911 system is in place, the percentage of the community that will potentially receive the notifications from this system will estimate the number of residents that may require different notification(s). Sirens or other fixed notification systems with power backup should also be listed in this section along with the fraction of the population covered by these systems. Additional notification systems that don't require phone or internet are also captured in this section, since WUI events frequently result in power outages or other service interruptions.

Evacuation

This section of the Community WUI Hazard Evaluation is not intended to replace a full community evacuation study or act as a community evacuation plan. The primary purpose of this section is to compute, given a number of assumptions, a Minimum Throughput Time (MTT), to provide an initial idealized order of magnitude time to be considered in the early stages of evacuation pre-planning. This information can be of value to first responders and community emergency planning personnel, as it may potentially highlight critical evacuation bottlenecks inside or outside the community.

The MTT concept is a traffic engineering calculation of roadway capacity to provide an initial lower bound for planning community evacuation. The MTT is intended for isolated and partly isolated interface and intermix communities rather than a city setting with large populations and complex evacuation routes. A community should consider a detailed evacuation study to further enhance the community evacuation plan. There is a significant body of work associated with developing dynamic evacuation models.[2]

The MTT considers two significant factors: bottlenecks within and beyond town, and the total number of vehicles that must be accommodated. Bottlenecks slowing traffic throughput may be located within or outside of jurisdictional boundaries. Bottlenecks occurring well beyond the evacuating community may cause ripple effects significantly impacting community evacuation. In identifying the population for computing the MTT, consideration should be given to neighboring settlements/communities that may share the same evacuation route(s). The MTT should consider the minimum number of traffic lanes (i.e., 8 lanes merging into 2 lanes should be treated as 2 lanes) available for evacuation, the community population and the average speed limit of the egress routes. Contraflow, the implementation of reverse direction traffic flow, may be considered here, along with provisions for first responder access to the community. The computed Minimum Throughput Time (MTT) does not account for any of the numerous potential hindrances to evacuation traffic, such as road accidents, reduced speed due to smoke obscuration, merging of traffic in town to feed the primary arteries, large vehicles that occupy more space than cars and have reduced maneuverability, or fire activity impacts, such as burn overs, causing evacuation lane(s) closures and potential slowdowns associated with traffic redirections.

The evacuation section is also used to identify vulnerabilities of egress arteries including vegetative fuel setbacks as well as any hazardous material facilities which might affect evacuation. Fuel setback information, collected in 0.15 miles (0.25 km) increments along egress routes, presented in the form of a histogram and a GIS layer, could help identify vulnerable spots that may potentially impact evacuation and identify candidate locations for fuel treatments.

The presence of a Community Evacuation Plan, the presence and capacity of safety zones and other large crowd assembly areas, and whether evacuation drills are performed will contribute to the community evacuation preparedness overview. The number of hospitals and senior care facilities and their total capacity will provide further information to assess overall community evacuation needs.

2. An example of a framework which includes coupled fire and evacuation considerations, as well as background on the individual model components, is provided in Ronchi et al. (2019) "An open multi-physics framework for modelling WUI fire evacuations," Safety Science 118:868-880.

102162101

Infrastructure / COOP / COG

The locations and needs of key facilities for maintaining continuity of operations (COOP) and continuity of government (COG), such as police, fire, EMS, hospitals, government buildings, cell towers, water sources, water provider infrastructure, electrical utility key infrastructure and natural gas key infrastructure should be listed and incorporated in this part of the evaluation framework.

Infrastructure characteristics, particularly related to water supply and electric utilities, can impact response and potential pre-fire hazard reduction. The public water system dependence on power supply, including the availability of backup power sources (i.e., generator backup) will provide insight into the resilience of the water system. The location of power lines (i.e., above or below ground) can impact evacuation, as downed power lines can impact evacuation and mobility throughout the community.

Firefighting Response

The type of fire department, whether volunteer, career, or combined, may impact the likely availability and response time of first responder resources. The density of firefighting (ff) responders, as a ratio of the number of personnel on shift to the number of structures (number of ffs/number of structures) will provide information on the maximum possible coverage by the local resources.

In this section, mutual aid resources should be counted only if mutual aid agreements are in place and can ensure rapid deployment. Mutual aid response is captured through a histogram in 1-, 2-, 3- and 4-hour travel times. This may also be approximated using a geographic radius of distance from the community. The purpose of this information is to provide insight into the minimum response times by mutual aid.

NOTICE OF PUBLIC HEARING
LAND USE AND TRANSPORTATION COMMITTEE
BOARD OF SUPERVISORS OF THE CITY AND COUNTY OF SAN FRANCISCO

NOTICE IS HEREBY GIVEN THAT the Board of Supervisors of the City and County of San Francisco's Land Use and Transportation Committee will hold a public hearing to consider the following proposal and said public hearing will be held as follows, at which time all interested parties may attend and be heard:

Date: **Monday, February 23, 2026**

Time: **1:30 p.m.**

Location: **Legislative Chamber, Room 250, located at City Hall**
1 Dr. Carlton B. Goodlett Place, San Francisco, CA 94102

Subject: **File No. 251247.** Ordinance repealing the existing San Francisco Fire Code in its entirety and enacting a new San Francisco Fire Code consisting of the 2025 California Fire Code and portions of the 2024 International Fire Code, together with amendments specific to San Francisco, including provisions for fees for permits, inspections, and various City services, with an operative date of January 1, 2026; adopting findings of local conditions pursuant to California Health and Safety Code, Section 17958.7; directing the Clerk of the Board of Supervisors to forward San Francisco's amendments to the California Building Standards Commission and State Fire Marshal; and making environmental findings.

If the legislation passes, the following new fees shall be established under the Fire Code:

- **Operational Permit Filing Fee**. $153 per hour.
- **Consolidation of Operational Permits Fee**. $95 for each activity added to the original permit.
- **Plan Review Fees**. $153 per hour.
- **Field Inspection Fee**. $153 per hour.
- **Pre-Application Plan Review Fee**. $612 plus additional fees of $153 per hour when the time spent for review exceeds two hours for research and two hours to meet with Fire Department personnel.
- **Re-Inspection of Violation Fees**. $306 plus additional fees of $153 if the time exceeds one hour.
- **Re-Inspection of Violation Fees**. $288 for each re-inspection.
- **High-Rise Inspection Fee**. $15.67 per 1,000 square feet of gross floor area.
- **Referral Fees**. $153 per hour.
- **Overtime Fee**. $164 per hour for every hour a Fire Department employee works outside of their normal schedule.
- **Water Flow Request Fee**. $153.
- **Water Flow Test Fee**. $459.

- **False Alarm Fees**. $250 for each false fire alarm to which the Department responds after the first two false fire alarms at that address within any calendar year. The Fire Department shall charge a service fee of $500 for each false fire alarm to which the Department responds after the first five false fire alarms at that address within any calendar year.
- **Residential Apartment/Hotel Inspection Fee**. $188.
- **On-Site Inspections and Consultations**: $153 per hour.
- **Administrative Hearing Referral Fee**. $153.
- **Administrative Hearing Fee**. $432.
- **Administrative Hearing Re-Inspection Fee**. $153.

The Fire Code official may collect fees as required by the San Francisco Municipal Code for services by other City departments pertinent to the issuance of permits required by this Code.

The Fire Department's Operational Permit fees shall also be added, as follows:

TYPE OF PERMIT:
- **Additive Manufacturing**: $436;
- **Aerosol Products, Regulated Activities**: $436;
- **Amusement Buildings, Operations**: $436;
- **Aviation Facilities, Regulated Activities**: $436;
- **Aviation Facilities, Aircraft Refueling Vehicle**: $436;
- **Battery System, Operation**: $436;
- **Carnivals and Fairs, Operation**: $436;
- **Cellulose Nitrate Film, Regulated Activities**: $436;
- **Combustible Dust-Producing Operations**: $436;
- **Combustible Fiber, Regulated Activities**: $436;
- **Compact Food Vendor Carts**: $95
- **Compressed Gas, Regulated Activities**$436;
- **Conditional Use**: $95
- **Covered Mall Buildings, Operation**: $436;
- **Cryogenic Fluids, Regulated Activities**: $436;
- **Cutting and Welding, Operation**: $436;
- **Dry Cleaning Plant, Operation**: $436;
- **Energy Storage Systems**: $436;
- **Exhibits and Trade Shows, Operation**: $436;
- **Explosives, Regulated Activities**: $436;
- **Fire Hydrants and Valves**: $436;
- **Firefighter Air Systems, Maintenance**: $436;
- **Floor Finishing**: $436;
- **Flammable or Combustible Liquids, Regulated Activities**: $436;
- **Fruit and Crop Ripening**: $436;
- **Fumigation and Thermal Insecticidal Fogging**: $436;
- **Hazardous Materials, Regulated Activities**: $436;
- **Hazardous Production Materials (HPM) Facilities**: $436;
- **High-Piled Storage**: $436;
- **Hot Work Operations, Regulated Activities**: $436;
- **Indoor Cannabis Cultivation**: $436
- **Industrial Ovens**: $436;
- **Liquid- or gas-fueled vehicles or equipment in assembly buildings**: $436;
- **Liquefied Petroleum Gases, Regulated Activities**: $436;

- **Lithium Batteries**: $436;
- **Live Audience, Production Facility, Studio, Sound Stage**: $436;
- **Lumberyards and Woodworking Plants**: $436;
- **Magnesium Processing**: $436;
- **Miscellaneous Combustible Storage**: $436;
- **Mobile Food Preparation Vehicles**: $436;
- **Mobile Fueling-Dispensing**: $436;
- **Mobile Fueling Location(each)**: $436;
- **Mobile Fueling of hydrogen-fueled vehicles**: $436;
- **Motor Fuel-Dispensing Facilities**: $436;
- **Open Burning**: $436;
- **Open Flame and Candles in Assembly Areas**: $436;
- **Open Flame and Torches - Wildfire Risk Area**: $436;
- **Organic Coating, Manufacturing**: $436;
- **Outdoor Assembly event**: $436;
- **Place of Assembly**: $436;
- **Plant Extraction Systems**: $436;
- **Private fire hydrant - Remove, use, or operate**: $436;
- **Pyrotechnic Special Effects Material**: $436;
- **Pyroxylin Plastics**: $436;
- **Refrigeration Equipment**: $436;
- **Repair Garages and Motor Fuel Dispensing Facilities:** $436;
- **Rooftop Heliports**: $436;
- **Spraying or dipping - Operational**: $436;
- **Temporary Membrane Structures and Tents**: $436;
- **Tire Rebuilding Plants**: $436; and
- **Waste Handling, Regulated Activities**: $436.

The Fire Department's Plan Review fees shall also be established as noted below:

- **Value of $1 to $2,000**: $90.29 for the First $1,000 or less, plus $86.9038 for each additional $1,000 or fraction thereof, to and including $2.000;
- **Value of $2,001 to $50,000**: $179-21 for the First $2,000 or less, plus $16.7832 for each additional $1,000 or fraction thereof, to and including $50.000;
- **Value of $50,001 to $200,000**: $1,003.52 for the First $50,000 or less, plus $6.7315 for each additional $1,000 or fraction thereof, to and including $200,000;
- **Value of $200,001 to $500,000**: $2,037.26 for the First $200,000 or less, plus $3.1393 for each additional $1,000 or fraction thereof, to and including $500,000;
- **Value of $500,001 to $1,000,000**: $3,000.95 for the First $500,000 or less, plus $2.0955 for each additional $1,000 or fraction thereof, to and including $1,000,000;
- **Value of $1,000,001 to $5,000,000**: $4,072.99 for the First $1,000,000 or less, plus $1.5931 for each additional $1,000 or fraction thereof, to and including $5,000,000;
- **Value of $5,000,001**: $10,593.25 for the First $5,000,000 or less, plus $0.8033 for each additional $1,000 or fraction thereof.

The Fire Department Field Inspection fees shall be established, based on the following formula:

- Value of $0 to $10,000: $153 for one hour;
- Value of $10,001 to $50,000: $306 for two hours;
- Value of $50,001 to $500,000: $459 for three hours;

- Value of $500,001 to $5,000,000: $765 for five hours;
- Value of $5,000,001 to $10,000,000: $1,530 for ten hours;
- Value of $10,000,001 to $25,000,000: $3,060 for twenty hours; and
- Value of $25,000,000 or more: $4,590 for thirty hours.

Other Fire Department Field Inspection fees shall be established, as follows:

- New Fire Alarm Systems: $306 for two hours;
- New Sprinkler Systems: $459 for three hours; and
- New Gaseous Suppression Systems: $306 for two hours.

These initial minimum inspection fees cover all inspections up to the hours specified above. If the inspections for the new system exceed the hours specified above, additional hourly fees will be assessed:

A Record of 5-Year Inspection and Testing of Water-Based Automatic Extinguishing Systems filing fee will be established with a value of $125.

A Record of Annual Inspecting & Testing of Fire Alarm & Fire Detection Systems filing fee will be established with a value of $75.

In accordance with Administrative Code, Section 67.7-1, persons who are unable to attend the hearing on this matter may submit written comments. These comments will be added to the official public record in this matter and shall be brought to the attention of the Board of Supervisors. Written comments should be addressed to Angela Calvillo, Clerk of the Board, City Hall, 1 Dr. Carlton B. Goodlett Place, Room 244, San Francisco, CA, 94102 or sent via email (bos@sfgov.org). Information relating to this matter is available with the Office of the Clerk of the Board or the Board of Supervisors' Legislative Research Center (https://sfbos.org/legislative-research-center-lrc). Agenda information relating to this matter will be available for public review on Friday, February 20, 2026.

For any questions about this hearing, please contact the Assistant Clerk for the Land Use and Transportation Committee:

John Carroll (john.carroll@sfgov.org ~ (415) 554-4445)

EXM-4015207#

City and County of San Francisco
Human Services Agency (HSA) Funding Opportunity Request for Proposals (RFP) #1227 Temporary Respite Caregiver Support Program

The San Francisco Human Services Agency (SFHSA) announces its intent to seek proposals from nonprofit organizations interested in providing respite care to unpaid family members, family of choice, and/or individuals (e.g., friends) who are caregivers to older adults and adults with disabilities as defined in this RFP.

Applicants may elect to apply for respite care as a lead agency with collaborative partnership(s) in place. Applicants must clearly identify roles of all partnerships if named in the proposal.

Proposals must be for respite care only. Other types of caregiver support services such as community education, caregiver support, service information, etc., are not eligible for funding through this RFP, as these services are available through existing Family Caregiver Support Services programs.

This is an existing, fully enrolled program. All proposers must agree to work closely with DAS in the event of a grantee change in order to ensure a smooth programmatic transition and a minimum of service and client disruption.

RFP packets are available on the Internet on or after **Wednesday, February 18, 2026 at https://sfcitypartner.sfgov.org/pages/Events-BS3/event-search.aspx** and type **RFP 1227** in the "Event Name" and select "See Attachments" in the Bid Package. For further information, contact Tara.Alvarez@sfgov.org and HSARFP@sfgov.org. Initial due date for responses is **Monday , April 6, 2026 by 3:00pm.**

The Pre-Proposal Conference will be held via teleconference. Proposers are encouraged to call in on **Wednesday, February 25, 2026 at 10:00am.** The Microsoft Teams number is listed below:

EXM-4014670#

NOTICE OF PUBLIC HEARING BOARD OF SUPERVISORS OF THE CITY AND COUNTY OF SAN FRANCISCO LAND USE AND TRANSPORTATION COMMITTEE MONDAY FEBRUARY 23, 2026 - 1:30 PM Legislative Chamber, Room 250, City Hall 1 Dr. Carlton B. Goodlett Place, San Francisco. CA 94102

NOTICE IS HEREBY GIVEN THAT the Board of Supervisors of the City and County of San Francisco's Land Use and Transportation Committee will hold a public hearing to consider the following proposal and said public hearing will be held as follows, at which time all interested parties may attend and be heard: **File No. 251247**. Ordinance repealing the existing San Francisco Fire Code in its entirety and enacting a new San Francisco Fire Code consisting of the 2025 California Fire Code and portions of the 2024 International Fire Code, together with amendments specific to San Francisco, including provisions for fees for permits, inspections, and various City services, with an operative date of January 1, 2026; adopting findings of local conditions pursuant to California Health and Safety Code, Section 17958.7; directing the Clerk of the Board of Supervisors to forward San Francisco's amendments to the California Building Standards Commission and State Fire Marshal; and making environmental findings.

If the legislation passes, the following fees shall be established under Fire Code: • Operational Permit Filing Fee. $153 per hour. • Consolidation of Operational Permits Fee. $95 for each activity added to the original permit. • Plan Review Fees. $153 per hour. • Field Inspection Fee. $153 per hour. • Pre-Application Plan Review Fee. $612 plus additional fees of $153 per hour per hour when the time spent for review exceeds two hours for research and two hours to meet with Fire Department personnel. • Re-Inspection of Violation Fees. $306 plus additional fees of $153 if the time exceeds one hour. • Re-Inspection of Violation Fees. $288 for each re-inspection. • High-Rise Inspection Fee. $15.67 per 1,000 square feet of gross floor area. • Referral Fees. $153 per hour. • Overtime Fee. $164 per hour for every hour a Fire Department employee works outside of their normal schedule. • Water Flow Request Fee. $153. • Water Flow Test Fee. $459. • False Alarm Fees. $250 for each false fire alarm to which the Department responds after the first two false fire alarms at that address within any calendar year. The Fire Department shall charge a service fee of $500 for each false fire alarm to which the Department responds after the first five false fire alarms at that address within any calendar year. • Residential Apartment/Hotel Inspection Fee. $188. • On-Site Inspections and Consultations: $153 per hour. • Administrative Hearing Referral Fee. $153. • Administrative Hearing Hearing Fee. $432. • Administrative Hearing Re-Inspection Fee. $153.

The fire code official may collect fees as required by the San Francisco Municipal Code for services by other City departments pertinent to the issuance of permits required by this code.

JANUARY 27, 2026
SAN FRANCISCO PUBLIC UTILITIES COMMISSION
NOTICE OF RESULT OF PUBLIC HEARING

In accordance with San Francisco Charter section 16.112, on January 11, 2026, the San Francisco Public Utilities Commission posted notice that it would hold a public hearing to consider a resolution to adopt the proposed schedules of rates of the San Francisco Public Utilities Commission Power Enterprise for CleanPowerSF power service in San Francisco, which will become effective on March 1, 2026.

The San Francisco Public Utilities Commission heard this matter at its regularly scheduled meeting on Tuesday, January 27, 2026, at 1:30 p.m. in Room 400, City Hall, 1 Dr. Carlton B. Goodlett Place, San Francisco, CA and via teleconference.

Summary of Determination

The item was presented for consideration by Matthew Freiberg, Rates Manager, and approved on January 27, 2026, by roll call vote as follows:

Affirmative (Yes):
President Joshua Arce, Vice President Stephen Leveroni, Commissioner Avni Jamdar, Commissioner Kate Stacy, and Commissioner Meghan Thurlow
Dissenting (No): None
Absent: None
Abstain: None

A copy of the January 11, 2026, public hearing notice is available at: **https://www.sfpuc.gov/sites/default/files/about-us/Public-notices/NOPH-AdoptCleanPowerSF-CCA.pdf**

CIVIL

SUMMONS
(CITACION JUDICIAL)
CASE NUMBER *(Número del Caso)*:
CVPS2408127

NOTICE TO DEFENDANT *(AVISO AL DEMANDADO)*: ABEL HERNANDEZ, AN INDIVIDUAL DBA R & D BUILDING MAINTENANCE; DOES 1 TO 20

YOU ARE BEING SUED BY PLAINTIFF *(LO ESTÁ DEMANDANDO EL DEMANDANTE)*: COACHELLA VALLEY COLLECTION SERVICE

NOTICE! You have been sued. The court may decide against you without your being heard unless you respond within 30 days. Read the information below.

You have 30 CALENDAR DAYS after this summons and legal papers are served on you to file a written response at this court and have a copy served on the plaintiff. A letter or phone call will not protect you. Your written response must be in proper legal form if you want the court to hear your case. There may be a court form that you can use for your response. You can find these court forms and more information at the California Courts Online Self-Help Center (*www.courtinfo.ca.gov/selfhelp*), your county law library, or the courthouse nearest you. If you cannot pay the filing fee, ask the court clerk for a fee waiver form. If you do not file your response on time, you may lose the case by default, and your wages, money, and property may be taken without further warning from the court.

There are other legal requirements. You may want to call an attorney right away. If you do not know an attorney, you may want to call an attorney referral service. If you cannot afford an attorney, you may be eligible for free legal services from a nonprofit legal services program. You can locate these nonprofit groups at the California Legal Services Web site (*www.lawhelpcalifornia.org*), the California Courts Online Self-Help Center (*www.courtinfo.ca.gov/selfhelp*), or by contacting your local court or county bar association. **NOTE:** The court has a statutory lien for waived fees and costs on any settlement or arbitration award of $10,000 or more in a civil case. The court's lien must be paid before the court will dismiss the case.

¡AVISO! *Lo han demandado. Si no responde dentro de 30 días, la corte puede decidir en su contra sin escuchar su versión. Lea la información a continuación.*

*Tiene 30 DÍAS DE CALENDARIO después de que le entreguen esta citación y papeles legales para presentar una respuesta por escrito en esta corte y hacer que se entregue una copia al demandante. Una carta o una llamada telefónica no lo protegen. Su respuesta por escrito tiene que estar en formato legal correcto si desea que procesen su caso en la corte. Es posible que haya un formulario que usted pueda usar para su respuesta. Puede encontrar estos formularios de la corte y más información en el Centro de Ayuda de las Cortes de California (*www.sucorte.ca.gov*), en la biblioteca de leyes de su condado o en la corte que le quede más cerca. Si no puede pagar la cuota de presentación, pida al secretario de la corte que le dé un formulario de exención de pago de cuotas. Si no presenta su respuesta a tiempo, puede perder el caso por incumplimiento y la corte le podrá quitar su sueldo, dinero y bienes sin más advertencia.*

*Hay otros requisitos legales. Es recomendable que llame a un abogado inmediatamente. Si no conoce a un abogado, puede llamar a un servicio de remisión a abogados. Si no puede pagar a un abogado, es posible que cumpla con los requisitos para obtener servicios legales gratuitos de un programa de servicios legales sin fines de lucro. Puede encontrar estos grupos sin fines de lucro en el sitio web de California Legal Services, (*www.lawhelpcalifornia.org*), en el Centro de Ayuda de las Cortes de California, (*www.sucorte.ca.gov*) o poniéndose en contacto con la corte o el colegio de abogados locales. AVISO: Por ley, la corte tiene derecho a reclamar las cuotas y los costos exentos por imponer un gravamen sobre cualquier recuperación de $10,000 ó más de valor recibida mediante un acuerdo o una concesión de arbitraje en un caso de derecho civil. Tiene que pagar el gravamen de la corte antes de que la corte pueda desechar el caso.*

The name and address of the court is *(El nombre y dirección de la corte es)*: SUPERIOR COURT OF CALIFORNIA, 3255 E. TAHQUITZ CANYON WAY, PALM SPRINGS, CA 92262

ORDER TO SHOW CAUSE FOR CHANGE OF NAME
Case No. CNC-26-560404

Superior Court of California, County of SAN FRANCISCO
Petition of: MICHELLE LEE MEDEROS AND GERRIT JAN DE VYNCK for Change of Name

TO ALL INTERESTED PERSONS:

Petitioner MICHELLE LEE MEDEROS AND GERRIT JAN DE VYNCK filed a petition with this court for a decree changing names as follows:

GAEL FELIX DE VYNCK to GAEL MEDEROS DE VYNCK

The Court orders that all persons interested in this matter appear before this court at the hearing indicated below to show cause, if any, why the petition for change of name should not be granted. Any person objecting to the name changes described above must file a written objection that includes the reasons for the objection at least two court days before the matter is scheduled to be heard and must appear at the hearing to show cause why the petition should not be granted. If no written objection is timely filed, the court may grant the petition without a hearing.

Notice of Hearing:
Date: MARCH 3, 2026, Time: 9:00 A.M., Dept.: 103N, Room: 103N

The address of the court is 400 MCALLISTER STREET, SAN FRANCISCO, CA 94102 (To appear remotely, check in advance of the hearing for information about how to do so on the court's website. To find your court's website, go to www.courts.ca.gov/find-my-court.htm.)

A copy of this Order to Show Cause must be published at least once each week for four successive weeks before the date set for hearing on the petition in a newspaper of general circulation, printed in this county: SAN FRANCISCO EXAMINER

Date: JANUARY 16, 2026

GOVERNMENT

NOTICE OF PUBLIC HEARING BOARD OF SUPERVISORS OF THE CITY AND COUNTY OF SAN FRANCISCO LAND USE AND TRANSPORTATION COMMITTEE MONDAY FEBRUARY 23, 2026 - 1:30 PM Legislative Chamber, Room 250, City Hall 1 Dr. Carlton B. Goodlett Place, San Francisco. CA 94102

NOTICE IS HEREBY GIVEN THAT the Board of Supervisors of the City and County of San Francisco's Land Use and Transportation Committee will hold a public hearing to consider the following proposal and said public hearing will be held as follows, at which time all interested parties may attend and be heard: **File No. 251247**. Ordinance repealing the existing San Francisco Fire Code in its entirety and enacting a new San Francisco Fire Code consisting of the 2025 California Fire Code and portions of the 2024 International Fire Code, together with amendments specific to San Francisco, including provisions for fees for permits, inspections, and various City services, with an operative date of January 1, 2026; adopting findings of local conditions pursuant to California Health and Safety Code, Section 17958.7; directing the Clerk of the Board of Supervisors to forward San Francisco's amendments to the California Building Standards Commission and State Fire Marshal; and making environmental findings.

If the legislation passes, the following fees shall be established under Fire Code: • Operational Permit Filing Fee. $153 per hour. • Consolidation of Operational Permits Fee. $95 for each activity added to the original permit. • Plan Review Fees. $153 per hour. • Field Inspection Fee. $153 per hour. • Pre-Application Plan Review Fee. $612 plus additional fees of $153 per hour per hour when the time spent for review exceeds two hours for research and two hours to meet with Fire Department personnel. • Re-Inspection of Violation Fees. $306 plus additional fees of $153 if the time exceeds one hour. • Re-Inspection of Violation Fees. $288 for each re-inspection. • High-Rise Inspection Fee. $15.67 per 1,000 square feet of gross floor area. • Referral Fees. $153 per hour. • Overtime Fee. $164 per hour for every hour a Fire Department employee works outside of their normal schedule. • Water Flow Request Fee. $153. • Water Flow Test Fee. $459. • False Alarm Fees. $250 for each false fire alarm to which the Department responds after the first two false fire alarms at that address within any calendar year. The Fire Department shall charge a service fee of $500 for each false fire alarm to which the Department responds after the first five false fire alarms at that address within any calendar year. • Residential Apartment/Hotel Inspection Fee. $188. • On-Site Inspections and Consultations: $153 per hour. • Administrative Hearing Referral Fee. $153. • Administrative Hearing Fee. $432. • Administrative Hearing Re-Inspection Fee. $153.

The fire code official may collect fees as required by the San Francisco Municipal Code for services by other City departments pertinent to the issuance of permits required by this code.

The Fire Department's Operational Permit fees shall also be added, as follows: TYPE OF PERMIT: • Additive Manufacturing: $436; • Aerosol Products, Regulated Activities: $436; • Amusement Buildings, Operations: $436; • Aviation Facilities, Regulated Activities: $436; • Aviation Facilities, Aircraft Refueling Vehicle: $436; • Battery System, Operation: $436; • Carnivals and Fairs, Operation: $436; • Cellulose Nitrate Film, Regulated Activities: $436; • Combustible Dust-Producing Operations: $436; • Combustible Fiber, Regulated Activities: $436; • Compact Food Vendor Carts: $95 • Compressed Gas, Regulated Activities$436; • Conditional Use: $95 • Covered Mall Buildings, Operation: $436; • Cryogenic Fluids, Regulated Activities: $436; • Cutting and Welding, Operation: $436; • Dry Cleaning Plant, Operation: $436; • Energy Storage Systems: $436; • Exhibits and Trade Shows, Operation: $436; • Explosives, Regulated Activities: $436; • Fire Hydrants and Valves: $436; • Firefighter Air Systems, Maintenance: $436; • Floor Finishing: $436; • Flammable or Combustible Liquids, Regulated Activities: $436; • Fruit and Crop Ripening: $436; • Fumigation and Thermal Insecticidal Fogging: $436; • Hazardous Materials, Regulated Activities: $436; • Hazardous Production Materials (HPM) Facilities: $436; • High-Piled Storage: $436; • Hot Work Operations, Regulated Activities: $436; • Indoor Cannabis Cultivation: $436 • Industrial Ovens: $436; • Liquid- or gas-fueled vehicles or equipment in assembly buildings: $436; • Liquefied Petroleum Gases, Regulated Activities: $436; • Lithium Batteries: $436; • Live Audience, Production Facility, Studio, Sound Stage: $436; • Lumberyards and Woodworking Plants: $436; • Magnesium Processing: $436; • Miscellaneous Combustible Storage: $436; • Mobile Food Preparation Vehicles: $436; • Mobile Fueling-Dispensing: $436; • Mobile Fueling Location(each): $436; • Mobile Fueling of hydrogen-fueled vehicles: $436; • Motor Fuel-Dispensing Facilities: $436; • Open Burning: $436; • Open Flame and Candles in Assembly Areas: $436; • Open Flame and Torches – Wildfire Risk Area: $436; • Organic Coating, Manufacturing: $436; • Outdoor Assembly event: $436; • Place of Assembly: $436; • Plant Extraction Systems: $436; • Private fire hydrant - Remove, use, or operate: $436; • Pyrotechnic Special Effects Material: $436; • Pyroxylin Plastics: $436; • Refrigeration Equipment: $436; • Repair Garages and Motor Fuel Dispensing Facilities: $436; • Rooftop Heliports: $436; • Spraying or dipping – Operational: $436; • Temporary Membrane Structures and Tents: $436; • Tire Rebuilding Plants: $436; • Waste Handling, Regulated Activities: $436.

The Fire Department's Plan Review fees shall also be established as noted below: • Value of $1 to $2,000: $90.29 for the First $1,000 or less, plus $86.9038 for each additional $1,000.00 or fraction thereof, to and including $2.000.00; • Value of $2,001 to $50,000: $179-21 for the First $2,000 or less, plus $16.7832 for each additional $1,000.00 or fraction thereof, to and including $50.000.00; • Value of $50,001 to $200,000: $1,003.52 for the First $50,000 or less, plus $6.7315 for each additional $1,000.00 or fraction thereof, to and including $200,000.00; • Value of $200,001 to $500,000: $2,037.26 for the First $200,000 or less, plus $3.1393 for each additional $1,000.00 or fraction thereof, to and including $500,000.00; • Value of $500,001 to $1,000,000: $3,000.95 for the First $500,000 or less, plus $2.0955 for each additional $1,000.00 or fraction thereof, to and including $1,000,000.00; • Value of $1,000,001 to $5,000,000: $4,072.99 for the First $1,000,000 or less, plus $1.5931 for each additional $1,000.00 or fraction thereof, to and including $5,000,000.00; • Value of $5,000,001: $10,593.25 for the First $5,000,000 or less, plus $0.8033 for each additional $1,000.00 or fraction thereof.

The Fire Department Field Inspection fees shall be established, based on the following formula: • Value of $0 to $10,000: $153 for one hour; • Value of $10,001 to $50,000: $306 for two hours; • Value of $50,001 to $500,000: $459 for three hours; • Value of $500,001 to $5,000,000: $765 for five hours; • Value of $5,000,001 to $10,000,000: $1,530 for ten hours; • Value of $10,000,001 to $25,000,000: $3,060 for twenty hours; • Value of $25,000,000 or more: $4,590 for thirty hours.

Other Fire Department Field Inspection fees shall be established, as follows: • New Fire Alarm Systems: $306 for two hours; • New Sprinkler Systems: $459 for three hours; • New Gaseous Suppression Systems: $306 for two hours; and These initial minimum inspection fees cover all inspections up to the hours specified above. If the inspections for the new system exceed the hours specified above, additional hourly fees will be assessed:

A Record of 5-Year Inspection & Testing of Water-Based Automatic Extinguishing Systems filing fee will be established with a value of $125.

A Record of Annual Inspecting & Testing of Fire Alarm & Fire Detection Systems filing fee will be established with a value of $75.

In accordance with Administrative Code, Section 67.7-1, persons who are unable to attend the hearing on this matter may submit written comments. These comments will be added to the official public record in this matter and shall be brought to the attention of the Board of Supervisors. Written comments should be addressed to Angela Calvillo, Clerk of the Board, City Hall, 1 Dr. Carlton B. Goodlett Place, Room 244, San Francisco, CA, 94102 or sent via email (bos@sfgov.org). Information relating to this matter is available with the Office of the Clerk of the Board or the Board of Supervisors' Legislative Research Center (https://sfbos.org/legislative-research-center-lrc). Agenda information relating to this matter will be available for public review on Friday, February 20, 2026.

For any questions about this hearing, please contact the Assistant Clerk for the Land Use and Transportation Committee: John Carroll (john.carroll@sfgov.org ~ (415) 554-4445)

SAN FRANCISCO PORT COMMISSION NOTICE OF HEARING

Notice is hereby given to the general public that the San Francisco Port Commission intends to hold a PUBLIC HEARING on the following items and on other matters on **Tuesday, February 24, 2026, beginning at 3:15 p.m. or later at the Ferry Building, 1 Ferry Building, Second Floor, San Francisco, CA 94111.** The final agenda will be posted on the Port's website at least 72 hours prior to the meeting. Additional information may be found on the Port's website: sfport.com. Notice is hereby given that on February 24, the San Francisco Port Commission will consider a resolution to amend the Port's Harbor Traffic Code by (1) modifying the prohibition of overnight parking on Port streets within the Pier 70 Special Use District, and (2) establishing a metered on-street parking zone on 19th Street between Georgia Street and Illinois Street within the Pier 70 Shipyard. Written comments can be emailed to Jenica Liu, Commission Affairs Manager: jenica.liu@sfport.com.

It is strongly recommended that persons submit their comments in writing in advance of the hearing. Written comments may be submitted via email directly to the Port staff associated with the Port Commission hearing item listed above.

Persons may stream the live meeting: https://sfgovtv.org/sfgovtv-live-events and may offer public comment virtually during the meeting by dialing 415-655-0001, entering the Participant Code posted in the agenda, and when prompted, press *3 to be added to the public comment queue.

Persons who are unable to attend the scheduled Commission hearing may submit written comments to the individuals listed for each item above via email or at the Port of San Francisco, Pier 1, The Embarcadero, Suite 1400, San Francisco, CA 94111. Comments received by 9:30 a.m. on the day of the hearing will be made a part of the official record and will be brought to the attention of the Commission.

NOTICE OF PUBLIC HEARING BOARD OF SUPERVISORS OF THE CITY AND COUNTY OF SAN FRANCISCO LAND USE AND TRANSPORTATION COMMITTEE MONDAY FEBRUARY 23, 2026 - 1:30 PM Legislative Chamber, Room 250, City Hall 1 Dr. Carlton B. Goodlett Place, San Francisco. CA 94102

NOTICE IS HEREBY GIVEN THAT the Board of Supervisors of the City and County of San Francisco's Land Use and Transportation Committee will hold a public hearing to consider the following proposal and said public hearing will be held as follows, at which time all interested parties may attend and be heard: **File No. 251247**. Ordinance repealing the existing San Francisco Fire Code in its entirety and enacting a new San Francisco Fire Code consisting of the 2025 California Fire Code and portions of the 2024 International Fire Code, together with amendments specific to San Francisco, including provisions for fees for permits, inspections, and various City services, with an operative date of January 1, 2026; adopting findings of local conditions pursuant to California Health and Safety Code, Section 17958.7; directing the Clerk of the Board of Supervisors to forward San Francisco's amendments to the California Building Standards Commission and State Fire Marshal; and making environmental findings.

If the legislation passes, the following fees shall be established under Fire Code: • Operational Permit Filing Fee. $153 per hour. • Consolidation of Operational Permits Fee. $95 for each activity added to the original permit. • Plan Review Fees. $153 per hour. • Field Inspection Fee. $153 per hour. • Pre-Application Plan Review Fee. $612 plus additional fees of $153 per hour per hour when the time spent for review exceeds two hours for research and two hours to meet with Fire Department personnel. • Re-Inspection of Violation Fees. $306 plus additional fees of $153 if the time exceeds one hour. • Re-Inspection of Violation Fees. $288 for each re-inspection. • High-Rise Inspection Fee. $15.67 per 1,000 square feet of gross floor area. • Referral Fees. $153 per hour. • Overtime Fee. $164 per hour for every hour a Fire Department employee works outside of their normal schedule. • Water Flow Request Fee. $153. • Water Flow Test Fee. $459. • False Alarm Fees. $250 for each false fire alarm to which the Department responds after the first two false fire alarms at that address within any calendar year. The Fire Department shall charge a service fee of $500 for each false fire alarm to which the Department responds after the first five false fire alarms at that address within any calendar year. • Residential Apartment/Hotel Inspection Fee. $188. • On-Site Inspections and Consultations: $153 per hour. • Administrative Hearing Referral Fee. $153. • Administrative Hearing Hearing Fee. $432. • Administrative Hearing Re-Inspection Fee. $153.

The fire code official may collect fees as required by the San Francisco Municipal Code for services by other City departments pertinent to the issuance of permits required by this code.

The Fire Department's Operational Permit fees shall also be added, as follows: TYPE OF PERMIT: • Additive Manufacturing: $436; • Aerosol Products, Regulated Activities: $436; • Amusement Buildings, Operations: $436; • Aviation Facilities, Regulated Activities: $436; • Aviation Facilities, Aircraft Refueling Vehicle: $436; • Battery System, Operation: $436; • Carnivals and Fairs, Operation: $436; • Cellulose Nitrate Film, Regulated Activities: $436; • Combustible Dust-Producing Operations: $436; • Combustible Fiber, Regulated Activities: $436; • Compact Food Vendor Carts: $95 • Compressed Gas, Regulated Activities$436; • Conditional Use: $95 • Covered Mall Buildings, Operation: $436; • Cryogenic Fluids, Regulated Activities: $436; • Cutting and Welding, Operation: $436; • Dry Cleaning Plant, Operation: $436; • Energy Storage Systems: $436; • Exhibits and Trade Shows, Operation: $436; • Explosives, Regulated Activities: $436; • Fire Hydrants and Valves: $436; • Firefighter Air Systems, Maintenance: $436; • Floor Finishing: $436; • Flammable or Combustible Liquids, Regulated Activities: $436; • Fruit and Crop Ripening: $436; • Fumigation and Thermal Insecticidal Fogging: $436; • Hazardous Materials, Regulated Activities: $436; • Hazardous Production Materials (HPM)

A0000007318645

Facilities: $436; • High-Piled Storage: $436; • Hot Work Operations, Regulated Activities: $436; • Indoor Cannabis Cultivation: $436 • Industrial Ovens: $436; • Liquid- or gas-fueled vehicles or equipment in assembly buildings: $436; • Liquefied Petroleum Gases, Regulated Activities: $436; • Lithium Batteries: $436; • Live Audience, Production Facility, Studio, Sound Stage: $436; • Lumberyards and Woodworking Plants: $436; • Magnesium Processing: $436; • Miscellaneous Combustible Storage: $436; • Mobile Food Preparation Vehicles: $436; • Mobile Fueling-Dispensing: $436; • Mobile Fueling Location(each): $436; • Mobile Fueling of hydrogen-fueled vehicles: $436; • Motor Fuel-Dispensing Facilities: $436; • Open Burning: $436; • Open Flame and Candles in Assembly Areas: $436; • Open Flame and Torches – Wildfire Risk Area: $436; • Organic Coating, Manufacturing: $436; • Outdoor Assembly event: $436; • Place of Assembly: $436; • Plant Extraction Systems: $436; • Private fire hydrant - Remove, use, or operate: $436; • Pyrotechnic Special Effects Material: $436; • Pyroxylin Plastics: $436; • Refrigeration Equipment: $436; • Repair Garages and Motor Fuel Dispensing Facilities: $436; • Rooftop Heliports: $436; • Spraying or dipping – Operational: $436; • Temporary Membrane Structures and Tents: $436; • Tire Rebuilding Plants: $436; • Waste Handling, Regulated Activities: $436.

The Fire Department's Plan Review fees shall also be established as noted below: • Value of $1 to $2,000: $90.29 for the First $1,000 or less, plus $86.9038 for each additional $1,000.00 or fraction thereof, to and including $2.000.00; • Value of $2,001 to $50,000: $179-21 for the First $2,000 or less, plus $16.7832 for each additional $1,000.00 or fraction thereof, to and including $50.000.00; • Value of $50,001 to $200,000: $1,003.52 for the First $50,000 or less, plus $6.7315 for each additional $1,000.00 or fraction thereof, to and including $200,000.00; • Value of $200,001 to $500,000: $2,037.26 for the First $200,000 or less, plus $3.1393 for each additional $1,000.00 or fraction thereof, to and including $500,000.00; • Value of $500,001 to $1,000,000: $3,000.95 for the First $500,000 or less, plus $2.0955 for each additional $1,000.00 or fraction thereof, to and including $1,000,000.00; • Value of $1,000,001 to $5,000,000: $4,072.99 for the First $1,000,000 or less, plus $1.5931 for each additional $1,000.00 or fraction thereof, to and including $5,000,000.00; • Value of $5,000,001: $10,593.25 for the First $5,000,000 or less, plus $0.8033 for each additional $1,000.00 or fraction thereof.

The Fire Department Field Inspection fees shall be established, based on the following formula: • Value of $0 to $10,000: $153 for one hour; • Value of $10,001 to $50,000: $306 for two hours; • Value of $50,001 to $500,000: $459 for three hours; • Value of $500,001 to $5,000,000: $765 for five hours; • Value of $5,000,001 to $10,000,000: $1,530 for ten hours; • Value of $10,000,001 to $25,000,000: $3,060 for twenty hours; • Value of $25,000,000 or more: $4,590 for thirty hours.

Other Fire Department Field Inspection fees shall be established, as follows: • New Fire Alarm Systems: $306 for two hours; • New Sprinkler Systems: $459 for three hours; • New Gaseous Suppression Systems: $306 for two hours; and These initial minimum inspection fees cover all inspections up to the hours specified above. If the inspections for the new system exceed the hours specified above, additional hourly fees will be assessed:

A Record of 5-Year Inspection & Testing of Water-Based Automatic Extinguishing Systems filing fee will be established with a value of $125.

A Record of Annual Inspecting & Testing of Fire Alarm & Fire Detection Systems filing fee will be established with a value of $75.

In accordance with Administrative Code, Section 67.7-1, persons who are unable to attend the hearing on this matter may submit written comments. These comments will be added to the official public record in this matter and shall be brought to the attention of the Board of Supervisors. Written comments should be addressed to Angela Calvillo, Clerk of the Board, City Hall, 1 Dr. Carlton B. Goodlett Place, Room 244, San Francisco, CA, 94102 or sent via email (bos@sfgov.org). Information relating to this matter is available with the Office of the Clerk of the Board or the Board of Supervisors' Legislative Research Center (https://sfbos.org/legislative-research-center-lrc). Agenda information relating to this matter will be available for public review on Friday, February 20, 2026.

For any questions about this hearing, please contact the Assistant Clerk for the Land Use and Transportation Committee: John Carroll (john.carroll@sfgov.org ~ (415) 554-4445)

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate
Date: Wednesday, March 4, 2026 5:29:34 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Hi John,

I'm planning on speaking on the sprinkler mandate at the Land Use Committee meeting. I suspect it's too for you to share a copy of my presentation (attached) so I plan on bringing copies to be passed out. How many should I bring?

Thanks,

Bob

Kozma, R., *Make the World a Better Place: Design with Passion, Purpose, and Values.* Wiley & Sons, 2023

Statement on File No. 251247 by Robert Kozma

Hello, my name is Robert Kozma. I am speaking on behalf of myself and many of my neighbors at the Summit, 999 Green St., in District 3. We want people to live in fire safe buildings. And we want to strengthen the Fire Code.

We agree with the purpose of the Code: to save lives; the lives of firefighters, our neighbors' lives, our own. We want a fire safe building that saves lives.

Installing sprinklers is one way to do that. But there are other means of making buildings fire safe and saving lives. These alternative means can be listed, categorized, measured and objectively judged to be quantifiably equivalent, using nationally recognized standards, such as the National Fire Protection Association 101 Standards (https://www.nfpa.org/codes-and-standards/nfpa-101-standard-development/101).

Section 1103.5.4.4 of the San Francisco Fire Code allows for the use of these alternative means and standards. Yet there is no publicly stated mechanism in place for doing that. Consequently, this vital section of the Code is inoperable.

We propose language that strengthens this section to make it the primary approach to achieving fire safety. It puts the emphasis on saving lives, rather than on a particular way to do that, and it gives the people who live in these unique, legacy buildings the ability, in collaboration with fire prevention engineers and the Fire Marshal, to choose the approach that works best in their situation from among quantifiably equivalent means to reduce the risk to themselves and to fire fighters.

FILE NO. 251247

San Francisco Fire Code
Proposed friendly amendment: Alternative Technical Equivalency wording

1103.5.4. [For SF] Automatic Sprinkler System for Existing High-Rise Buildings

All existing residential high-rise buildings shall be equipped with an automatic sprinkler system in accordance with Section 903.3.1.1 where any of the following conditions apply:
. . .

Any existing high-rise ~~not exempted from this section~~ that does not provide an automatic sprinkler system throughout the residential occupancy is out of compliance and subject to immediate code enforcement action unless 1) the high-rise is exempt from this section or 2) the high-rise successfully demonstrates safety equivalence through the procedure and criteria set in Sec. 1103.5.4.4. The owner shall maintain the sprinkler system in accordance with Title 19 of the California Code of Regulations.
. . .

Sec. 1103.5.4.4. Authority of Fire Official.

The Fire Marshal ~~may approve~~ shall establish a procedure and acceptance criteria for modifications and alternate methods~~, and~~ materials and fire safe community practices by which a building can present ~~it is clearly evident~~ evidence, independently and professionally derived, that a reasonable degree of fire safety is currently provided or will be achieved within the timeframe of the Code. In such cases, the Fire Marshal ~~may~~ shall:

1. ~~Consider~~ Evaluate alternative protection can be shown using ~~based on~~ nationally recognized, quantifiable, performance-based standards (such as NFPA 101 A), principles, and tests, and generally recognized and well-established methods of fire protection. If the agreed upon conditions specified by this process are not met within the agreed upon timeframe or are not subsequently maintained, the requirement for a automatic sprinkler system in accordance with Section 903.3.1.1 and elaborated on in this Section 1103.5.4 will automatically go into effect.

2. Waive specific individual requirements if it can be shown that such requirements are not physically possible, require disproportionate effort, or pose an undue hardship with little increase in life safety and that a practical alternate cannot be provided; and

3. Grant necessary extensions of time when it can be shown that the specific time periods are not physically practical or pose an undue hardship. The granting of an extension of time for compliance may be approved by the Fire Marshal based on the showing of good cause and on approval of an acceptable, systematic, progressive plan of correction.

For purposes of this Section 1103.5.4.4, the determination of "undue hardship" shall include, but not limited to, consideration of the building owner's financial hardship and whether compliance with the automatic sprinkler requirements in Sections 1103.5.4 through 1103.5.4.5.3 would result in the displacement of residents from their homes.

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate
Date: Monday, March 2, 2026 6:16:44 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Lawrence Edelman

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

Blueprint

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed,
Adrian Chu

BY NEIGHBORS FOR A BETTER SF

Blueprint

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed,
Trim Wellbeloved

BY NEIGHBORS FOR A BETTER SF

Blueprint

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed,
Janet Fong

BY NEIGHBORS FOR A BETTER SF

Blueprint

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

BY NEIGHBORS FOR A BETTER SF

Blueprint

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Mary Macpherson

BY NEIGHBORS FOR A BETTER SF

Blueprint

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

BY NEIGHBORS FOR A BETTER SF
Blueprint

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed
Ann Dykstra

BY NEIGHBORS FOR A BETTER SF
Blueprint

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed
Robert Noelke

BY NEIGHBORS FOR A BETTER SF **Blueprint**

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Blueprint

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Blueprint

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed
Massimo LoPorto

Subject: Proposed amendments to sprinkler mandate requirements for pre-1975 residential high-rises

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear John,

In advance of the Monday, February 23rd hearing for the Board of Supervisors' Land Use and Transportation Committee, Russian Hill Neighbors is submitting a letter in support of the proposed amendments to Sprinkler Mandate.

Please see the attached letter for more details.

Sincerely,

Stephanie Falkenstein

Stephanie Falkenstein, President

RUSSIAN HILL
NEIGHBORS

February 19, 2026

Department of Land Use & Transportation

Attention: John Carroll John.Carroll@sfgov.org

Regarding: Proposed amendments to the 2022 mandate regarding sprinkler requirements for pre-1975 residential high-rises

Dear Land Use and Transportation Committee:

We are writing in support of the proposed legislation to delay implementation dates and incorporate hardship exemptions for the 2022 Sprinkler Retrofit Mandate. Many of our members have relayed serious concerns about fire sprinkler requirements for certain residential high-rise buildings constructed pre-1975. There are approximately twenty such buildings in Russian Hill.

In addition, we support the parallel establishment of an advisory council to undertake a fresh and comprehensive review of alternative approaches to reach a more practical balance among fire safety goals and cost and displacement concerns. We are unaware of any other jurisdiction that has adopted a comparable mandate to the one proposed. The previous 2016 report by the Budget and Legislative Analyst referenced potential alternative approaches that could be updated as a starting point.

We appreciate your support for these efforts.

Sincerely,

Stephanie Falkenstein, President
Russian Hill Neighbors

Date: Wednesday, February 18, 2026 8:45:19 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Message:

Re: “Fire Sprinkler Retrofit Requirement File 251247”

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting financial consequences for thousands of San Francisco residents who can’t afford its financial and physical effects.

No affected homeowners or building owners were consulted when this legislation was passed and they are now faced with hundreds of thousands of dollars in costs and dislocation from their homes during installation due to asbestos abatement and construction noise and debris that will continue for many months. Where will these people go and how will they afford it?

Already, the effect of this mandate is having a dramatic effect on homeowner property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this mandate is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask that the Board of Supervisors amend the proposed new fire code to limit the requirement until a building undergoes a major renovation, extend the compliance deadlines, and create an unbiased committee to determine practical fire safety

alternatives to the installation of fire sprinklers in these buildings.

Thank you.

Akriti Gupta

The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

Chris Radich <rad.fam3@gmail.com> Mon, Nov 10, 2025, 12:50 PM

to Board.of.Supervisors

Dear Board of Supervisors,

I am writing today as a very concerned owner and resident of a condominium unit in a pre-1975 concrete high-rise structure. First, I request you support Supervisor Sherrill's new fire code proposal for the period 2026-2028. The modifications proposed by Supervisor Sherrill provides affected buildings with additional time for permitting and infrastructure installation. Such relief is necessary to allow thoughtful compliance with the sprinkler mandate. Please note that the January 1, 2035 for full sprinkler installation remains unchanged.

The current fire sprinkler mandate was passed without notice or consultation with the impacted residents and properties. As currently written, the Fire Sprinkler Retrofit legislation imposes an unreasonable physical and financial hardship on residents. No other city or state has similar retroactive sprinkler requirements Those municipalities that considered similar legislation reversed course after critically assessing the unreasonable financial and physical burdens placed on building residents. As discussion on this mandate moves forward, I urge your support for exempting Class Type 1, fire-resistant buildings from the Fire Sprinkler mandate.

I thank you in advance for your consideration of this matter.

Respectfully,

Chris Radich
1835 Franklin Street
San Francisco, 94109

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Message:

Re: “Fire Sprinkler Retrofit Requirement File 251247”

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting financial consequences for thousands of San Francisco residents who can’t afford its financial and physical effects.

No affected homeowners or building owners were consulted when this legislation was passed and they are now faced with hundreds of thousands of dollars in costs and dislocation from their homes during installation due to asbestos abatement and construction noise and debris that will continue for many months. Where will these people go and how will they afford it?

Already, the effect of this mandate is having a dramatic effect on homeowner property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this mandate is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask that the Board of Supervisors amend the proposed new fire code to limit the requirement until a building undergoes a major renovation, extend the compliance deadlines, and create an unbiased committee to determine practical fire safety

alternatives to the installation of fire sprinklers in these buildings.

Thank you.

Michael Lavigne

The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Ann DeBellevue

Message to the Supervisors

From your constituent Ammala Block

Email ammala@pm1sf.com

Message:

Re: “Fire Sprinkler Retrofit Requirement File 251247”

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting financial consequences for thousands of San Francisco residents who can’t afford its financial and physical effects.

No affected homeowners or building owners were consulted when this legislation was passed and they are now faced with hundreds of thousands of dollars in costs and dislocation from their homes during installation due to asbestos abatement and construction noise and debris that will continue for many months. Where will these people go and how will they afford it?

Already, the effect of this mandate is having a dramatic effect on homeowner property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this mandate is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask that the Board of Supervisors amend the proposed new fire code to limit the requirement until a building undergoes a major renovation, extend the compliance deadlines, and create an unbiased committee to determine practical fire safety

alternatives to the installation of fire sprinklers in these buildings.

Thank you.

Ammala Block

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Meghan Hilbert

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate
Date: Tuesday, February 17, 2026 10:34:34 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Michelle Conrad

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate
Date: Tuesday, February 17, 2026 4:47:38 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

To the SF Board of Supervisors,

We are homeowners at 66 Cleary Court and are writing again to respectfully request an exception or alternative compliance pathway under the retroactive sprinkler mandate. We understand this mandate was passed with good intentions, and we support fire safety, but based on our experiences living here, it may cause more harm than good in a building like ours.

To our knowledge, no other city or state has implemented a comparable retroactive requirement of this scale. Many have reconsidered similar mandates after confronting the same feasibility and displacement concerns.

66 Cleary Court is built with reinforced concrete and protected steel; each dividing wall is approximately 8 inches of solid concrete. In SF's own 2016 analysis, only approximately 4% of residential fires occurred in non-combustible concrete buildings. This data shows that not all buildings carry the same level of risk. Applying a blanket retrofit requirement across very different high-rises doesn't account for those differences, particularly in reinforced concrete high-rises designed for compartmentation and containment.

Our greatest hazard is water, not fire.

Our unit alone has had three major water leaks in the past three years, each requiring tens of thousands of dollars in repairs, with the most recent occurring this week. This is not isolated. Insurance industry data (The Hartford, multi-year analysis) identifies accidental water discharge and sprinkler leakage among the leading causes of building water damage, with high-rises at disproportionate risk: a leak on an upper floor cascades downward through multiple units.

A single sprinkler head can release 20–40 gallons of water per minute. Even a short accidental activation can flood a unit quickly. The NFPA recorded over 30,000 unintentional activations in 2015 alone, with damage estimated at $1,000+ per minute of discharge. In a building like ours, where water already causes serious damage, adding an extensive network of sprinklers will increase the chance of serious water damage, mold, displacement, and increased insurance costs.

There are other serious impacts as well:

- **Financial and housing impact:** Our residents cannot absorb this level of assessment.

Many are elderly and on fixed incomes, and we do not have the ability to finance six-figure costs. For some, this could mean losing their homes. Costs of this magnitude also make units harder to sell. We are already seeing listings in affected buildings sit on the market as buyers hesitate over large, uncertain assessments and long construction timelines.

- **Vulnerable residents:** Relocation would be extremely difficult for many of our neighbors, particularly those who are elderly or require medical assistance.

- **Asbestos and construction disruption:** Drilling through concrete walls will disturb asbestos-containing materials, requiring hazmat remediation, extending timelines and costs significantly.

- **Ceiling height:** With only eight-foot ceilings, there isn't much room to work with. Adding pipes and supports would lower the ceiling height even more, especially for taller residents.

- **Citywide scale:** Ours is one of over 120 buildings facing this mandate simultaneously. That could mean tens of thousands of San Francisco residents displaced at once.

We are not asking to be purely exempt from fire safety. We are asking for solutions that make sense for our building, and the proposed mandate does not. Please help us stay in our homes.

Respectfully,

Thomas Barber & Belle Chuang

Dear Board of Supervisors:

I am the owner of a studio in the historic Hamilton building in the Tenderloin. The Hamilton is affected by the proposed fire sprinkler retrofit requirement in the updated 2022 fire code, even though it is a Class 1A construction, fire-resistant building built with non-combustible materials like reinforced concrete, steel and plaster.

This mandate will result in a significant hardship to me as a government employee and a recipient of down payment assistance loan from the Mayor's Office of Housing. As such, I am on a fixed income and below the city's median income. The Fire Code rules would require property owners to install sprinkler systems that could cost as much as $300,000 per homeowner and displace thousands of residents. No other city or state has similar retroactive sprinkler requirements, and many have revised this requirement after trying to implement it. When the City passed the mandate in 2022, they did so without any proper outreach to owners and residents in my building and community. They also did so without updated estimates on the financial burden to residents or the effects of displacement, lead or asbestos remediation.

I respectfully request that you vote to pass the proposed new fire code with the five-year extensions to the compliance deadlines. This will allow the City and homeowners like me much needed time to thoroughly understand and address the impact of the fire sprinkler mandate. However, it is not ultimately the solution I'm seeking to mitigate the crushing effects of the sprinkler mandate itself - essentially a $2 billion tax on condo, co-op and apartment building owners. While passing the current code is a good first step, I'm also asking for further investigation into alternate solutions to the mandate.

Thank you:

Victoria Pons

Subject: Fire Sprinkler Retrofit Requirement – File 251347

Dear Members of the San Francisco Board of Supervisors & Land Use Committee Members,

I am a 75-year-old single condominium owner in a 1963 high-rise subject to the City's retroactive fire sprinkler mandate.

Our building is constructed of concrete, with radiant heat throughout every unit and asbestos ceilings. Because of these conditions, the estimated cost to each of our 150 owners is approximately **$300,000 per unit** — a catastrophic amount that many simply cannot finance. Seniors living on fixed incomes may lose their homes.

I am one of the fortunate seniors who worked for more than 30 years and saved carefully for a modest, frugal retirement. This mandate would profoundly and permanently alter those plans.

If required to proceed:

- My retirement savings would be cut nearly in half.
- I could not recoup the $300,000 by selling; my property value has already declined by more than 25% following press about the mandate, and sales in our building have effectively stopped.
- During construction, I would need to relocate, and finding affordable temporary housing in San Francisco would be extremely difficult.
- After completion, ceiling heights would be reduced from 8 feet to approximately 7 feet 1 inch to accommodate the sprinklers — further diminishing property values.
- With such losses, purchasing another home in the Bay Area would likely be out of reach. I could lose my home of 15 years and the community I have built here.

This is not an investment property. It is my home.

I respectfully ask you to vote in favor of the proposed fire code amendment that includes five-year extensions to the compliance deadlines. The extension is a necessary first step — though not a final solution — for the thousands of residents facing similar consequences.

When this mandate was passed in 2023, there was no meaningful outreach to homeowners and no updated analysis of financial hardship or displacement since 2016. I urge you to commission that analysis now so future decisions are informed by a full understanding of their impact.

I worked for three decades to secure a modest retirement in the city I love. I am simply

asking for the opportunity to remain in my home.

Respectfully,
Ramona Joy Rideout
66 Cleary Court, Apt 1401

SUBJECT: Fire Sprinkler Retrofit Requirement File 251247

Dear sirs/madams:

I am a longtime owner at 66 Cleary Court, condominiums built in 1963. I purchased my condominium – #1201 – in December 1986, and lived there for over 30 years. In 2019, my husband and I moved to Napa Valley due to deteriorating living conditions in San Francsico, then COVID, and I rented my condominium to others. I learned not long ago of the fire sprinkler mandate to retrofit Cleary Court. I could not object more vehemently. This letter updates my two previous communications to various San Francisco officials, beginning December 10, 2025.

While I absolutely want all residents and firemen (and police officers) to be safe at work and at home, this is an absurdly expensive solution to address a very rare problem – at least at Cleary Court. While I cannot speak to the appropriateness of the fire sprinkler mandate for other residences, I strongly believe this ham-handed approach is not necessary for Cleary Court.

Here is why:

1. There have been just two fires at Cleary Court since 2012, so an average of one every 6-1/2 years. Looking online for records of fires at Cleary Court, I see just two: One on July 25, 2012, and another on August 16, 2025. (Note I called for fire records at 415-920-2933 and spoke with Charlie: he noted that fire records were digitized in 2010 and many records were lost in the 1989 earthquake, so records are not complete. I have since filled out a Fire Report Request form and sent it to FireRequests@sfgov.org. Their reply confirms information is only available from 2010 on.)

2. This Joseph Eicher building is made of heavy concrete. "…The architectural firm of Jones + Emmons designed the 18-story high rise building located at 66 Cleary Court. This structure consists of 15 stories of living space and 3 levels for tenant parking. The building features 150 units, mostly 3 bedroom homes ranging in size from 1,100-1,200 square feet. All units feature radiant heat, private balconies or terraces **as well as 8-inch thick, load bearing concrete walls** that help minimize

noise between units…" (See: https://www.eichlerforsale.com/cathedral-hill-eichler/) In fact, I further understand that Cleary Court is a Class 1, fire-resistant building built with non-combustible materials like protected steel, in addition to reinforced concrete.

3. Concrete is one of the most fire-resistance construction materials available. This addresses my AI question asking "Is concrete fire resistant?" "…Conclusion: While not completely indestructible, concrete is one of the most fire-resistant construction materials available, providing significant protection by not burning and slowing the spread of fire. Its durability in a fire depends on the specific mix and conditions, but its resistance is far superior to many other building materials."

4. Furthermore, from an owner's perspective, the anticipated, staggering cost of up to $300,000 is likely to be untenable for most owners and puts them at risk of losing their homes. This is true of those who purchased their units decades ago and are now retired and on fixed incomes – and is particularly onerous for them. However, it is also true for younger residents, who perhaps are now working for Meta or AI companies where a $300,000 bite out of a $500,000 salary is still A LOT! This is an EXTRAORDINARY expense for any homeowner, anywhere! This of course includes Cleary Court, where the deteriorating livability of San Francisco in the past few years under previous city leadership has dramatically cut real estate values. (Think of this for YOU, dear reader: how would you feel if this vast expenditure were in front of you?)

5. Moreover, that huge cost is not even the end of the expenses. According to various reports, residents would need to move out of their homes while the retrofit work was underway. So regardless of whether one lived in one's unit or rented it out, there are numerous additional costs associated with this project – making a bad situation even worse. According to "Rental Market Trends" for San Francisco on Zumper.com (https://www.zumper.com/rent-research/san-francisco-ca) as of January 2026, the average cost of one-bedroom housing is $3,500 per month, and the average cost of a two-bedroom is $4,920. So assuming the need for housing during the fire sprinkler retrofit for, say three to six months, the additional cost ranges from $10,500 to $29,520, Moreover, that is at today's rental prices, not those in the future and/or when rental demand spikes due to this project as thousands of similarly impacted San Francisco residents are displaced.

6. In fact, house values in San Francisco have gone down significantly in the past few years, while costs and special assessments have gone up dramatically. Our Cleary Court neighbors sold their home several years ago for $1.2 million – now condominiums are on the market for 25% less! And the fire sprinkler mandate, if implemented, is sure to cause many more sales, and at declining prices, as owners – angry, upset, scared, and panicking – try to sell and get out before values fall even further or the home sales market is glutted. This is WRONG on so many levels. To receive a possible charge for $300,000 for a home that might sell for $800,000-$900,00 (and with minimal perceived added value for that $300,000) is truly a disservice to homeowners who purchased in good faith a San Francisco home they could afford.

I am sure many owners at Cleary Court would prefer to risk a highly unlikely fire rather than lose their home, equity, financial security, and well-being due to this well-intentioned, but very misguided solution to a problem that rarely exists, at least at Cleary Court. It should also be noted that Cleary Court owners paid not long ago over $33,000 for a variety of repairs, plus several thousand dollars last year for balcony repairs. Furthermore, I now understand updating the fire alarm system, an imminent requirement in 2026 also imposed by the city, will cost each owner another $7,450! And this despite the fact that the building already has hard-wired fire alarms that are extremely loud (as I remember from the regular fire drills held in the building).

6. Owners affected by this mandate have not had meaningful or sufficient input on this matter. This may be wrong – and I hope it is. But I understand that the many owners impacted by this mandate were not consulted on this issue – and apparently outreach to affected parties was minimal at best. If true, this is wrong on many levels: that owners and voters who elected San Francisco officials to act on their behalf and in residents' best interests did not participate in discussions on this major mandate. Rather, it seems that city officials and/or related employees – perhaps those in power in the past – have made a spectacularly expensive decision, unilaterally, without necessary input from their constituents and neighbors who will bear the financial brunt of their decisions. In fact, at $300,000 per unit, the cost to retrofit Cleary Court is $45 million dollars! Even at half that, the cost is outrageous!

7. Mayor Lurie was elected for change – to make the city vibrant once again, and to reduce the cost of living, bureaucracy and complexity of city government. San Franciscans, particularly those of us who pay the city's hefty tax bills and other costs, want and deserve to live in the beautiful place we once knew – an affordable city with safe and clean streets where those who work hard can get ahead. I read the Mayor is doing good job on those voter mandates – bravo! – and I hope the Board of Supervisors shares these goals. However, the cost of this fire sprinkler ordinance goes completely in the wrong direction of these objectives – bringing back the despair of recent years and now the risk of displacement and financial insolvency or ruin for many homeowners.

It is for all these reasons that I respectfully request this fire sprinkler mandate be terminated, once and for all.

Sincerely,

Jill Matousek Turner

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate
Date: Tuesday, February 17, 2026 12:21:43 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Michael Krummenacker

Message:

Re: “Fire Sprinkler Retrofit Requirement File 251247”

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting financial consequences for thousands of San Francisco residents who can’t afford its financial and physical effects.

No affected homeowners or building owners were consulted when this legislation was passed and they are now faced with hundreds of thousands of dollars in costs and dislocation from their homes during installation due to asbestos abatement and construction noise and debris that will continue for many months. Where will these people go and how will they afford it?

Already, the effect of this mandate is having a dramatic effect on homeowner property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this mandate is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask that the Board of Supervisors amend the proposed new fire code to limit the requirement until a building undergoes a major renovation, extend the compliance deadlines, and create an unbiased committee to determine practical fire safety

alternatives to the installation of fire sprinklers in these buildings.

Thank you.

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisors,

I am the owner of a studio apartment in the Hamilton building in the Tenderloin. My building is affected by the proposed fire sprinkler retrofit requirement in the updated 2022 fire code, even though it is a Class 1A construction, fire-resistant building constructed with non-combustible materials like reinforced concrete, steel and plaster.

The Fire Code rules would require property owners to install sprinkler systems that could cost as much as $300,000 per homeowner, as well as displacing residents while work is done. When the City passed the mandate in 2022, they did so without any proper outreach to owners and residents in my building and community. They also did so without updated estimates on the financial burden to residents or the effects of displacement, lead or asbestos remediation.

This mandate would result in an overwhelming hardship to me personally. I live on a very modest fixed income and simply could not handle the cost of installing a sprinkler system. I have lived in San Francisco for 60 years, but would be forced to sell my property (no doubt at a loss) and abandon the city that has been my home for decades. I am hoping that all of you, as Supervisors, will support long-term residents who make up the community and have contributed to the life of the city over the years.

I am requesting that you vote to pass the proposed new fire code with the five-year extensions to the compliance deadlines. This will allow the City and homeowners like me the necessary time to understand and address the impact of the fire sprinkler mandate. Most importantly, I'm also asking for further investigation into alternate solutions to the mandate.

Thank you for your consideration,

Susan Pasley

Message:

Re: “Fire Sprinkler Retrofit Requirement File 251247”

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting financial consequences for thousands of San Francisco residents who can’t afford its financial and physical effects.

No affected homeowners or building owners were consulted when this legislation was passed and they are now faced with hundreds of thousands of dollars in costs and dislocation from their homes during installation due to asbestos abatement and construction noise and debris that will continue for many months. Where will these people go and how will they afford it?

Already, the effect of this mandate is having a dramatic effect on homeowner property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this mandate is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask that the Board of Supervisors amend the proposed new fire code to limit the requirement until a building undergoes a major renovation, extend the compliance deadlines, and create an unbiased committee to determine practical fire safety

alternatives to the installation of fire sprinklers in these buildings.

Thank you.

Mitchell Smith

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear San Francisco Supervisors,

I am the owner of a studio condominium in the historic Hamilton building in the Tenderloin. The Hamilton is affected by the proposed fire sprinkler retrofit requirement in the updated 2022 fire code, even though it is a Class 1A fire-resistant structure built with non-combustible materials such as reinforced concrete, steel, and plaster.

I am 62 years old and expect to retire within the next couple of years. Like many long-time San Francisco residents, I will soon be living on a fixed retirement income. The financial impact of this mandate is therefore deeply concerning to me personally. Estimates suggest that required sprinkler retrofits could cost as much as $300,000 per homeowner or more, creating an overwhelming financial burden and potentially displacing many residents who have worked for decades to remain in this city.

When the mandate was adopted in 2022, many property owners and residents in buildings such as mine were not fully aware of the potential financial consequences, nor were there updated estimates regarding the true costs, possible displacement, or remediation issues such as lead or asbestos. As someone approaching retirement, unexpected costs of this magnitude could significantly affect my ability to remain in my home and maintain financial stability in the years ahead.

I respectfully request that you support passage of the proposed fire code update that includes the five-year extensions to the compliance deadlines. This extension would provide homeowners, residents, and the City the time necessary to fully evaluate the real impacts of the mandate and to explore practical alternative approaches that maintain safety while avoiding severe financial hardship.

Thank you for your consideration and for your service to the residents of San Francisco.

Sincerely,
Stephen Dalton

Message:

Re: “Fire Sprinkler Retrofit Requirement File 251247”

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting financial consequences for thousands of San Francisco residents who can’t afford its financial and physical effects.

No affected homeowners or building owners were consulted when this legislation was passed and they are now faced with hundreds of thousands of dollars in costs and dislocation from their homes during installation due to asbestos abatement and construction noise and debris that will continue for many months. Where will these people go and how will they afford it?

Already, the effect of this mandate is having a dramatic effect on homeowner property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this mandate is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask that the Board of Supervisors amend the proposed new fire code to limit the requirement until a building undergoes a major renovation, extend the compliance deadlines, and create an unbiased committee to determine practical fire safety

alternatives to the installation of fire sprinklers in these buildings.

Thank you.

Ave Seltsam

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate
Date: Monday, February 16, 2026 10:10:50 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Nicholas Noriega

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Angela Hussein

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Alexandria Garcia

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Christina Enriquez

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate
Date: Monday, February 16, 2026 10:26:43 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Ken Campbell

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate
Date: Monday, February 16, 2026 9:10:34 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Anne Fung

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Cheri Galecki

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

James Courtis

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate
Date: Sunday, February 15, 2026 10:42:55 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Joe Napolitano

To: The SF Board of Supervisors and Mayor Lurie

I am writing to you regarding the Fire Sprinkler Retrofit requirement. I am a single woman close to retirement and I am living in my dream home. I saved all my life to be able to buy a place that I feel happy and safe in. I do consider myself rich in the things that matter – a comfortable, happy home in a welcoming and close-knit community. However, I am definitely not wealthy enough to be able to absorb a $200,000+ assessment to cover the cost of the fire sprinkler retrofit plus the possible costs of having to move out during the installation.

I do understand the concern for fire safety, however, is this one solution right for all affected buildings? It does not seem as if other considerations were taken into account when drafting this proposal. Physical safety is of course, important, however, this greatly affects people's financial well-being and ability to afford and stay in their own homes. It truly is a hardship for all income levels. And I am personally worried and scared how this will affect my home, my neighbors and my future.

I encourage you to amend the fire sprinkler mandate for high-rise residential buildings and collaborate with homeowners, tenants and their representatives to find an alternative, noninvasive solution that will protect residents and visitors.

Best,

Suzee Barrabee
999 Green Street

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Rita Schmid

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Dorian Faust

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Cédric Tchante

Message to the Supervisors

From your constituent Nora Rooney

Email norarooney26@gmail.com

Message:

Re: “Fire Sprinkler Retrofit Requirement File 251247”

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting financial consequences for thousands of San Francisco residents who can’t afford its financial and physical effects.

No affected homeowners or building owners were consulted when this legislation was passed and they are now faced with hundreds of thousands of dollars in costs and dislocation from their homes during installation due to asbestos abatement and construction noise and debris that will continue for many months. Where will these people go and how will they afford it?

Already, the effect of this mandate is having a dramatic effect on homeowner property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this mandate is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask that the Board of Supervisors amend the proposed new fire code to limit the requirement until a building undergoes a major renovation, extend the compliance deadlines, and create an unbiased committee to determine practical fire safety

alternatives to the installation of fire sprinklers in these buildings.

Thank you.

Nora Rooney

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate
Date: Wednesday, February 11, 2026 10:36:56 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Chuck Heaver

Message:

Re: “Fire Sprinkler Retrofit Requirement File 251247”

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting financial consequences for thousands of San Francisco residents who can’t afford its financial and physical effects.

No affected homeowners or building owners were consulted when this legislation was passed and they are now faced with hundreds of thousands of dollars in costs and dislocation from their homes during installation due to asbestos abatement and construction noise and debris that will continue for many months. Where will these people go and how will they afford it?

Already, the effect of this mandate is having a dramatic effect on homeowner property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this mandate is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask that the Board of Supervisors amend the proposed new fire code to limit the requirement until a building undergoes a major renovation, extend the compliance deadlines, and create an unbiased committee to determine practical fire safety

alternatives to the installation of fire sprinklers in these buildings.

Thank you.

Jay Elliott

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We live at 1000 North Point St. (Fontana East) #1708. Our building is concrete-rebar construction with three elevators. There is a concrete fire escape stairs at the east and west ends of building. Each elevator lobby has easy access to south concrete walkways to these fire escape stairs. All apartments are constructed with steel (not wood) and Sheetrock and front doors are fire-rated composite.
The mandatory SFFD retrofit was improperly done without giving residents the opportunity for required input. If our building is forced to do such mandatory work our association fees will be beyond our means and force us out. Additionally, we will likely then be unable to sell our unit, therefore be unable to buy another place to live.
Last, if we had to move out for 1-3 months during unit retrofit our income will not cover hotel in addition to monthly Fontana East Assessments. Please consider senior citizens that may become homeless if this mandate is not stopped.
Regards, Bryan and Marina Tullis

Date: Tuesday, February 10, 2026 7:05:50 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I am given to understand Cathedral Hill Tower at 1200 Gough Street is listed on a group of properties in support of a pending measure that would mandate sprinkler systems in residential properties of the type that includes Cathedral Hill Tower. That is not correct. We are not in support of the measure. As a 65 year old concrete structure with two interior stairs that are separated from the rest of the building by two-hour fire-rated walls, CHT is opposed to any measure that mandates retrofitting buildings like CHT with full building sprinklers. There are other preventative measures we believe that can address fire alert and prevention without bankrupting owners and this building. We look forward to continuing this dialogue on this very important topic and intend on attending the February 9 meeting if I am able to at 1:30pm.

Concerned 1200 Gough Resident and Registered San Francisco Voter

Subject: Fire Sprinkler Retrofit Requirement File 251247 — 1200 Gough Street Owner
Date: Monday, February 9, 2026 12:06:22 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear [Recipient Name],

My name is Marc de Latour. I am a lifelong Bay Area native and a resident owner at 1200 Gough Street.

I am writing to express my strong opposition to the current sprinkler mandate. This requirement places an undue financial burden on hardworking San Francisco homeowners during an already fragile condo market.

Requiring every unit in a reinforced concrete building to undergo extensive drilling is impractical and unnecessary. Our building has a low fire failure due to its three-foot-thick concrete walls and the absence of nearby flammable vegetation. The current mandate lacks the nuance necessary to distinguish between high-risk wood structures and low-risk concrete buildings. We can't nanny every possible outcome that makes the financial realities of existing in capitalism untenable.

As tax-paying homeowners already struggling with the cost of living in this city, we ask that you reconsider this mandate. It needs to be rethought to reflect the structural realities of different buildings and the financial impact on residents.

Best regards,

Marc de Latour

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Subject: Fire Sprinkler Retrofit Requirement File 251247; 1200 Gough, Owner
Date: Sunday, February 8, 2026 7:07:04 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors,

As a 20 year owner and 24 year resident at 1200 Gough, I'm surprised and incredulous to understand the Fire Commissioner's intention to include our building in the above mandate. In addition to a concrete exterior and core, our unit's walls are almost entirely solid concrete (making hanging anything challenging), with two separate concrete/steel staircases; there is a fire hose on each floor and all units have large balconies for additional escape, as well as 24/7 door personnel and security cameras, smoke detectors and annunciators.

Risk is a personal and communal choice, and whilst as a risk-averse person myself, I may go to greater efforts to avoid personal and financial threats than my neighbor, I am comfortable living in my building knowing that if my neighbor happens to have a kitchen fire, it will not spread to other units before it is detected by our smoke detectors, by the smell, or sight in such a densely populated building. The concrete will slow any spread. The risk, however, of water damage from sprinklers automatically being deployed mistakenly does concern me.

Of course, disaster can strike, for example my great great grandmother owned a boarding house on 2nd Street in 1906...it burned down, as did much of that part of the city with stretched resources and wood buildings. I myself was completing my nursing degree in NYC on 9/11/2001 when two jets hit the Twin Towers...these are both once in a generation or two freak catastrophes which no amount of safeguarding could have prevented. In a building such as 1200 Gough, can you imagine anything short of the above scenarios which would cause the entire building to be engulfed in flames given the composition and current safeguards? ***I would invite you to come tour our building and individual units to understand exactly why a sprinkler mandate makes no sense in our building***...a fire cannot spread between units, short of an explosion that involved jet fuel, etc.

With so much low hanging fruit causing so much risk to residents on our very sidewalks, I hope this board realizes it's constituency would benefit enormously both physically and psychologically if the city would focus upon removing and arresting the impaired drug addicts and dealers on the blocks around our building, the ones who light regular fires on sidewalks, in bushes and in playgrounds, light our trash bin at our bus stop on fire, break into cars, access electricity from street lights, and threaten and sometimes assault us as we walk in our neighborhood, as well as defecate, leave needles and garbage absolutely everywhere...this is

not how this neighborhood has always been, and the fact that when we report it to police or 311 we do not get response adds insult upon injury. Project Homeless Connect and the Oasis Hotel have both brought this to our neighborhood, and have zero accountability to us.

In the mean time, please rescind this onerous, impossible mandate for our building...it makes no sense.

Thank you,

Kristen Fenech

Message:

Re: “Fire Sprinkler Retrofit Requirement File 251247”

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting financial consequences for thousands of San Francisco residents who can’t afford its financial and physical effects.

No affected homeowners or building owners were consulted when this legislation was passed and they are now faced with hundreds of thousands of dollars in costs and dislocation from their homes during installation due to asbestos abatement and construction noise and debris that will continue for many months. Where will these people go and how will they afford it?

Already, the effect of this mandate is having a dramatic effect on homeowner property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this mandate is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask that the Board of Supervisors amend the proposed new fire code to limit the requirement until a building undergoes a major renovation, extend the compliance deadlines, and create an unbiased committee to determine practical fire safety

alternatives to the installation of fire sprinklers in these buildings.

Thank you.

Usha and John Burns

Subject:	Fire Sprinkler Retrofit Requirement File 251247 — 1200 Gough Street Owner
Date:	Sunday, February 8, 2026 2:02:30 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors,
I've lived at 1200 Gough Street for 25 years in a high rise apartment. My wife's dad was a fireman. He was nervous about us living above the 7th floor (max reach for a ladder truck) and we always reassured him of our safety because our building is concrete, including interior walls, with two fully separate fire escape stairs with metal staircases. This is the safest possible set up in case of a fire, much more resilient than modern buildings that the city permits today and which are only required to have 2 hour rated materials surrounding their fire escapes.

I understand that our building (Cathedral Hill Tower) at 1200 Gough is listed as supporting this new requirement to install interior sprinklers on our building. Let me be clear, we do not support this.
The ordinance is unnecessary and a poor use of resources at a time when street conditions that the city has let deteriorate mean many buildings are vulnerable to fires lit by those in our streets intent on arson.

In our neughborhood multiple small fires are called in weekly, many lit next to buildings. We feel very fortunate that our building has a completely inflammable concrete exterior and 24 hour staff with video surveillance. Poor St Marks church nearby is not so lucky and has suffered major damage to its front doors.

What the city and the fire chief should be doing is addressing the urgent problem of street fires before people are seriously hurt instead of this effort which further demoralizes condo owners at a tough time to be a condo owner in SF. Two weeks ago I called in a street fire that I watched start - an accelerant was used and twenty foot flames kept up next to a multi story building. The fire dept responded promptly but no one ever followed up with me to ask for facts or conduct an investigation to hold people responsible. How many dangerous acts of arson will go uninvestigated before there is a serious incident? Why are we spending so much time and money on a much more remote risk while the city burns in front of us. Let's not replicate Emperor Nero.

Please:
1. act promptly to clarify in writing that 1200 Gough is not subject to this ordinance.
2. Amend the ordinance to only apply to buildings where the cost benefit truly justified such an expensive and risky retrofit.
3. Prioritize police and fire collaborating to arrest and prosecute those lighting dangerous fires on our streets. Confiscate accelerants found on the street and interdict those buying them with the intent of arson.

Sincerely,

Michael
1200 Gough Street

Message to the Board of Supervisors and Mayor

From your constituent Yvonne Lin

Email yglin@alum.mit.edu

Reduce SF Spending, get the Budget in Order.

Message:

Dear Mayor Lurie,

As we enter the budget cycle I thank you for instructing departments to cut $500M from their budgets. I support deeper cuts and urge you to go deeper this year. Overspending compounds yearly.

Dear Supervisors,

I fully support the Mayor right-sizing the San Francisco budget and urge you to do what is best for San Franciscans by holding budgets down.

We need real budget reform right now. Please resist the pressure to favor special interests over the deep need of residents for relief from the onerous pressure of the bloated SF budget.

Every dime of the $1.5BILLION going to non-profits should be justified. There is likely $1B in savings right there.

Protect public safety, get rid of the waste.

Sincerely,

From:	Ju Ran Yang

Subject:	Mandatory fire Sprinkler
Date:	Saturday, February 7, 2026 5:27:05 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I have been living my place for over 35 years and my step father has been living this home for 45 years. This mandatory fire sprinkler makes us loosing our sleep since last year.
We are possibly loosing our home in the future for financial difficulties.

If not revised, this mandate requires that:
• By January 1, 2027, we must provide permit-ready drawings for the sprinkler installation, meaning that we will have to engage fire safety consultants right away to prepare plans, meet with the fire department and building inspectors, and negotiate water and power supply with the PUC and PG&E. This will cost approximately $30,000-$75,000 next year.
By January 1, 2031, each building must have installed the system-mandated infrastructure, including plumbing, pumps, backup power, and connections to water and power. An estimate of this work is in the range of $1-$3 million per building. There would also be ongoing costs for maintaining the system and providing power 24x7.
• By January 1, 2035 each building must have installed the mandated sprinklers n every unit. An estimate of the cost of this last step is in the range of $100,000 to $300,000 per unit. As a concrete building, with 3 bedroom units, we can expect our costs to be on the high end of the range.
• In a building like ours with concrete 8' tall ceilings, code-required earthquake brackets for holding sprinkler pipes below the ceiling, we would mean we will have 11" minimum soffits to cover the sprinkler pipes in corridors and inside units. his would bring our ceiling heights in these soffit locations to 7" which is below the height required by code to be considered "Living space".
• Temporary relocation wilikely be needed due to the construction and the required asbestos and lead remediation involved.

Please help us
Find a better solution.
Thank you.

Dear Board of Supervisors,

I am given to understand Cathedral Hill Tower at 1200 Gough Street is listed on a group of properties in support of a pending measure that would mandate sprinkler systems in residential properties of the type that includes Cathedral Hill Tower. That is not correct. We are not in support of the measure.

As a 65 year old concrete structure with two interior stairs that are separated from the rest of the building by two-hour fire-rated walls, CHT is opposed to any measure that mandates retrofitting buildings like CHT with full building sprinklers. There are other preventative measures we believe that can address fire alert and prevention without bankrupting owners and this building. We look forward to continuing this dialogue on this very important topic and intend on attending the February 9 meeting at 1:30pm.

Thank you very much,

Alison Stanley, Cathedral Hill Tower

To: The SF Board of Supervisors and Mayor Lurie

I am writing to plead with you to do two things:

1. Accept the 5 year delay in at least the first two deadlines for the Fire Sprinkler Retrofit requirement, and
2. Take the time to hold TAC meetings and get a BLA report on this mandate.

As a Board member and President of the 2200 Pacific HOA for the past 5 years, I am acutely aware of how distraught homeowners and tenants are about this fire sprinkler mandate. Why might this issue be such an extreme crisis for them?

1. Most of them are on fixed income. Those homeowners who are younger, stretched to afford a unit in our building. Both of these groups **cannot afford the cost of a sprinkler mandate**. Among those who are between these two age groups, few can afford the $200-300K per unit cost for the sprinkler mandate. After all, they already have to pay for property taxes, their mortgage, HOA dues (which are higher for older buildings), insurance, utilities, and other high costs of living.
2. Because of the **lead and asbestos** in our building all residents would have to **move out for the fire sprinkler retrofit,** which is likely to take 1 year or more. That represents additional housing expenses on top of the cost of the sprinkler retrofit. It's also unbelievably daunting to many of our oldest residents who have expected to never have to move from their homes which they have always planned to stay in for the rest of their lives.
3. This sprinkler mandate represents the **third massive fire system expense that the SFFD has imposed on our building in the last 5 years** or so!
    1. First we were required by SFFD to update our main fire alarm system, and elevate all fire alarm pull stations **in 2019-2022** in order to be allowed to update our aging elevator machinery.
    2. **Now we are in the middle replacing that brand new system** and spending $1.3 million to comply with the City-mandated upgrade to our fire alarm sounders to meet the new code for 75 decibels at every potential sleeping location and to also install an ERRCS system to boost fire fire-fighter radio transmission capability, and
    3. **Now also** SFFD and the City are requiring this fire sprinkler mandate.
4. Our building has **concrete floors and concrete ceilings, which are among the most fire safe construction types**. Our ceilings are just 8 feet above the floors. **Fire sprinklers with the required earthquake brackets would force a 14" drop** in our ceiling height in both the corridors and in the individual units. That means our **ceiling heights would be 6'10", which is below code for "living spaces"**. (Code height for most living spaces is 7'6".) The sprinkler mandate is completely unreasonable because of this.
5. Even if it is structurally feasible, which is not a certainty, **drilling holes throughout our structural concrete** is a risk to our buildings, as would be the potential leaks from extensive additional fire water piping.

This mandate is not justified by the safety record in the 126 buildings on your fire sprinkler retrofit list. Over the last 60 years, there has only been on fire in these buildings that caused any injury, and zero deaths.

This mandate is being pushed by "Labor" and is effectively a form of extortion, given the lack of safety record to justify its exorbitant expense. **It's one of the most extreme examples of how the City of San Francisco is unaffordable.** No other city in the country has such a mandate.

Please don't do this to the residents in my building and the other 125 buildings in the city impacted by the mandate.

Thank you for your thoughtful consideration of all the facts and the human impact this unaffordable measure will have.

Re: “Fire Sprinkler Retrofit Requirement File 251247”

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting financial consequences for thousands of San Francisco residents who can’t afford its financial and physical effects.

No affected homeowners or building owners were consulted when this legislation was passed and they are now faced with hundreds of thousands of dollars in costs and dislocation from their homes during installation due to asbestos abatement and construction noise and debris that will continue for many months. Where will these people go and how will they afford it?

Already, the effect of this mandate is having a dramatic effect on homeowner property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this mandate is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask that the Board of Supervisors amend the proposed new fire code to limit the requirement until a building undergoes a major renovation, extend the compliance deadlines, and create an unbiased committee to determine practical fire safety

alternatives to the installation of fire sprinklers in these buildings.

Thank you.

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Date: Friday, February 6, 2026 3:35:56 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors,

I am writing to express my concern and opposition to the sprinkler retrofit mandate, which affects 126 buildings throughout the city and approximately 15,000 city residents. I am one of those who would be affected. A public school teacher, I own a studio apartment in the Hamilton in the Tenderloin, one of these affected buildings.

I ask you to reverse this mandate or to create an exemption for these buildings unless they undertake a *major* systemic renovation. Even before the costs of relocating during a sprinkler retrofit are calculated, the estimated expense for these retrofits is between $10,000 and a staggering $300,000 per unit . These added expenses would probably lead to me having to lose my home. I am a 35-year resident of San Francisco who has been working as a teacher in San Francisco Unified since 1998. I have scrimped and saved and led a life of careful financial responsibility, including by making use of the Mayor's Office of Housing program in order to buy my condo. My condo is a significant part of the plan I have been building to enable me to teach in this city and to live in this city on retirement, probably continuing to serve the school district as an overqualified substitute teacher.

Then just sell the condo and leave, you might say, perhaps? This retrofit mandate increases the risk that property values will continue to decrease in my building. They have already fallen by over 30% since the pandemic, a reflection of the frequently appalling conditions in a neighborhood that has suffered city neglect. A resident of another building shared at a December 11 meeting on this sprinkler mandate that three sales of units in his building had fallen through in recent weeks due to the requirement to disclose the possibility of this astronomically expensive mandate. Decline in property values directly impacts city tax revenue—many of us already negotiated to have our property value lowered and thus pay lower taxes last year. On top of that, I don't even know what would happen to my MoHCD Downpayment Assistance Loan in these circumstances.

This regulation was mandated without a transparent process, no feasibility studies, and with

no homeowner input. Why don’t homeowners and taxpayers have a say in this? Instead, only building unions have been given the opportunity to weigh in on these requirements. Further, a 2016 study for the Board of Supervisors, which indicated there would be financial hardship and provided alternatives, did not appear to have been considered in the decision-making

Please vote, at the very least, to extend the timeline for the mandate, to reverse this mandate or to create the exemption noted above.

Thank you for your time,
Jennifer L. Moffitt

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Hello to my Board of Supervisors,

I'm writing to you to express my concern and opposition to the sprinkler retrofit mandate. This affects 126 buildings throughout the city and app 15,000 City residents. I own a one-bedroom apartment in the historic Hamilton building in the Tenderloin, one of these affected buildings.

I ask you to reverse this mandate or to create an exemption for these buildings unless they undertake a *major* renovation. Even before the adjacent costs are calculated, the estimated minimum expense will be tens (and maybe even hundreds) of thousands of dollars for my unit to have sprinklers in every room. As a homeowner in the Tenderloin, this added expense and construction is onerous, and may lead to my having to leave my home during the construction. And where am I to go?

Additionally, property values continue to decrease in my building due to this situation that lurks in the background. Who wants to buy a property that comes with this time bomb of disruption and expense? Values in the building have already fallen over 30% since the pandemic, a reflection of the conditions in a vulnerable neighborhood that has already borne the brunt of City neglect. This decline directly impacts the City's property tax revenue, and that should matter to you.

Finally, I'm deeply concerned that this regulation was mandated without a transparent process, no feasibility studies, and with no homeowner input. Why don't homeowners and taxpayers have a say in this? Instead, only building unions have been given the opportunity to weigh in on these requirements. So it seems clear who pulled the weight with the Board that voted in this ordinance.

Please, I urge you to either reverse this mandate or create the exemption I noted.

Thank you,
Gary W. Routt

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Thomas McCarthy

Good morning, Board of Supervisors,

I'm reaching out to check on the status of the City & County of San Francisco security upgrades at,

- DPH campus
- ZSFG campus
- SFPUC various sites
- County jails
- SFPD facilities
- Juvenile Justice analog camera upgrade
- And various other sites within the City of County of our lovely city.

If you're exploring other technologies, I'd be glad to share information on additional solutions, including a patented shooter detection system with active shooter intelligence. Please review the SDS Outdoor Sensor attachment. There is an indoor version.

Shooter Detection Systems is actively deployed across a wide range of large-scale SLED and critical infrastructure environments, including:

- A major international airport in the Los Angeles area
- A large city government in Maryland
- State deployments in Wisconsin, Rhode Island, and Delaware
- Major municipal implementations in cities such as Boston and Lakeland
- Large port authorities in both South Carolina and North Carolina
- Significant enterprise and public-sector environments in the NY and Chicago market

These deployments span municipal buildings, transportation hubs, ports, and other high-traffic public facilities, and they reflect both indoor and outdoor use cases where rapid detection and automated response are critical.

For context, Everon Solutions LLC is a national security and fire/life-safety provider with:

- 100+ locations nationwide
- Two company-owned, UL-listed monitoring centers

We support a wide range of services across enterprise and public-sector environments.

I am given to understand Cathedral Hill Tower at 1200 Gough Street is listed on a group of properties in support of a pending measure that would mandate sprinkler systems in residential properties of the type that includes Cathedral Hill Tower. **That is not correct. We are not in support of the measure.**

As a 65-year-old concrete structure with two interior stairs that are separated from the rest of the building by two-hour fire-rated walls, CHT is opposed to any measure that mandates retrofitting buildings like CHT with full building sprinklers. There are other preventative measures we believe that car address fire alert and prevention without bankrupting owners and this building. We look forward to continuing this dialog on this very important topic and intend on attending the February 9 meeting if possible at 1:30PM.

Date:	Thursday, February 5, 2026 1:44:05 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Members of the Board of Supervisors,

My name is Tracy Chen, one of the residents at 66 Cleary Ct, San Francisco. I am writing to respectfully express my concerns regarding the sprinkler retrofit requirement File 251247. I fully understand and support the importance of fire safety and protecting our community. Public safety is a shared responsibility, and I deeply appreciate the City's efforts to keep residents safe. However, I sincerely hope the Board will consider the significant financial burden this requirement places on hardworking families like mine.

We are a family of four with two young children—one three years old and one one year old. I am a full-time nurse works in San Francisco, caring for patients and serving our community on the front lines of healthcare, and my husband also works full-time. As first-generation immigrants, we have worked tirelessly to build a stable life in the San Francisco Bay Area. We have been working hard for more than 13 years in the Bay Area to finally build and afford our new home. This home represents decades of sacrifice, perseverance, and commitment to this community.

San Francisco is more than just where we live—it is our home. We love this city and the Bay Area, and we have invested our time, energy, and dreams into building our lives here. Yet, the cost of living continues to rise at an overwhelming pace. Between housing costs, childcare, food, healthcare, transportation, insurance, and other essential daily expenses, many families like ours are already stretched to our financial limits.

The substantial cost of a sprinkler retrofit represents a serious financial hardship. For working families, immigrants, young parents, seniors on fixed incomes, and middle- or low-income households, this mandate could force an impossible decision between complying with the requirement and meeting basic living needs. It also risks accelerating displacement, pushing long-term residents and essential workers out of San Francisco at a time when our city needs stable, committed community members more than ever.

Beyond individual families, this requirement may also have broader community consequences—reducing housing stability, increasing financial stress, and weakening the diversity and workforce that make San Francisco strong. Policies meant to improve safety should not unintentionally cause housing insecurity or force families to leave the city they love.

We do not want to move. We do not want to start over elsewhere. After more than 13 years of hard work in the Bay Area, we want to stay, contribute, serve our community, and raise our children here in San Francisco.

I respectfully urge the Board to consider flexible and compassionate solutions, such as extended or phased deadlines, income-based financial assistance, grants, low-interest loans, tax credits, or alternative compliance options that still uphold safety goals. A balanced approach could protect residents while also recognizing the financial realities of long-term, hardworking families.

Thank you for your time, your service, and your dedication to the people of San Francisco. I deeply appreciate your consideration and sincerely hope for a thoughtful, humane, and community-centered approach to this issue.

Sincerely,
Tracy Chen

Subject: Fire Sprinkler Retrofit Requirement File 251247-1200 Gough Street Owner
Date: Thursday, February 5, 2026 1:40:47 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear [Recipient Name],

I am writing to clarify that Cathedral Hill Tower, located at 1200 Gough St., has been incorrectly listed as supporting a pending measure that would mandate sprinkler systems in residential properties of its type. We do not support this measure.

Cathedral Hill Tower is a 65-year-old concrete building featuring two interior stairwells separated by two-hour fire-rated walls. I am opposed to any mandate requiring buildings like ours to undergo full sprinkler retrofitting. There are alternative preventative measures available that address fire safety and alerts without causing the irreparable financial disaster this mandate would impose on our owners.

I look forward to further dialogue on this critical topic and intend to attend the meeting on February 9 at 1:30.

Best regards,

Lisa Fox

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Anthony Day

To: The SF Board of Supervisors and Mayor Lurie

I am writing to you regarding the Fire Sprinkler Retrofit requirement. I am a single woman close to retirement and I am living in my dream home. I saved all my life to be able to buy a place that I feel happy and safe in. I do consider myself rich in the things that matter – a comfortable, happy home in a welcoming and close-knit community. However, I am definitely not wealthy enough to be able to absorb a $200,000+ assessment to cover the cost of the fire sprinkler retrofit plus the possible costs of having to move out during the installation.

I do understand the concern for fire safety, however, is this one solution right for all affected buildings? It does not seem as if other considerations were taken into account when drafting this proposal. Physical safety is of course, important, however, this greatly affects people's financial well-being and ability to afford and stay in their own homes. It truly is a hardship for all income levels. And I am personally worried and scared how this will affect my home, my neighbors and my future.

I encourage you to amend the fire sprinkler mandate for high-rise residential buildings and collaborate with homeowners, tenants and their representatives to find an alternative, noninvasive solution that will protect residents and visitors.

Best,

Suzee Barrabee

To: The SF Board of Supervisors and Mayor Lurie

I am writing to plead with you to do two things:

1. Accept the 5 year delay in at least the first two deadlines for the Fire Sprinkler Retrofit requirement, and
2. Take the time to hold TAC meetings and get a BLA report on this mandate.

As a Board member and President of the 2200 Pacific HOA for the past 5 years, I am acutely aware of how distraught homeowners and tenants are about this fire sprinkler mandate. Why might this issue be such an extreme crisis for them?

1. Most of them are on fixed income. Those homeowners who are younger, stretched to afford a unit in our building. Both of these groups **cannot afford the cost of a sprinkler mandate**. Among those who are between these two age groups, few can afford the $200-300K per unit cost for the sprinkler mandate. After all, they already have to pay for property taxes, their mortgage, HOA dues (which are higher for older buildings), insurance, utilities, and other high costs of living.
2. Because of the **lead and asbestos** in our building all residents would have to **move out for the fire sprinkler retrofit,** which is likely to take 1 year or more. That represents additional housing expenses on top of the cost of the sprinkler retrofit. It's also unbelievably daunting to many of our oldest residents who have expected to never have to move from their homes which they have always planned to stay in for the rest of their lives.
3. This sprinkler mandate represents the **third massive fire system expense that the SFFD has imposed on our building in the last 5 years** or so!
    1. First we were required by SFFD to update our main fire alarm system, and elevate all fire alarm pull stations **in 2019-2022** in order to be allowed to update our aging elevator machinery.
    2. **Now we are in the middle replacing that brand new system** and spending $1.3 million to comply with the City-mandated upgrade to our fire alarm sounders to meet the new code for 75 decibels at every potential sleeping location and to also install an ERRCS system to boost fire fire-fighter radio transmission capability, and
    3. **Now also** SFFD and the City are requiring this fire sprinkler mandate.
4. Our building has **concrete floors and concrete ceilings, which are among the most fire safe construction types**. Our ceilings are just 8 feet above the floors. **Fire sprinklers with the required earthquake brackets would force a 14" drop** in our ceiling height in both the corridors and in the individual units. That means our **ceiling heights would be 6'10", which is below code for "living spaces"**. (Code height for most living spaces is 7'6".) The sprinkler mandate is completely unreasonable because of this.
5. Even if it is structurally feasible, which is not a certainty, **drilling holes throughout our structural concrete** is a risk to our buildings, as would be the potential leaks from extensive additional fire water piping.

This mandate is not justified by the safety record in the 126 buildings on your fire sprinkler retrofit list. Over the last 60 years, there has only been on fire in these buildings that caused any injury, and zero deaths.

This mandate is being pushed by "Labor" and is effectively a form of extortion, given the lack of safety record to justify its exorbitant expense. **It's one of the most extreme examples of how the City of San Francisco is unaffordable.** No other city in the country has such a mandate.

Please don't do this to the residents in my building and the other 125 buildings in the city impacted by the mandate.

Thank you for your thoughtful consideration of all the facts and the human impact this unaffordable measure will have.

Hi John,
We live in a high-rise apartment located at 1200 California Street. Our building is a nonprofit HOA in San Francisco and has been designated for fire sprinkler retrofitting. We are writing to request that you support amending the fire sprinkler mandate for high-rise residential buildings as well as collaborate with the 126 affected buildings' residents (more than 9,800 units) for an alternative, noninvasive solution that will protect residents and visitors.
Personally, we are extremely distressed that we closed escrow on our apartment in late 2023 without **any disclosure** that the SF Board of Supervisors passed this sprinkler ordinance. We would NOT have purchased this apartment nor any other high-rise apartment affected by this extraordinary mandate. The **covert** nature of this edict will potentially place unreasonable physical and financial hardships on us (as well as our neighbors).
As a member of a nonprofit HOA, our building's resources are limited and our budget is specifically based on actual annual expenses. Annual increases to our HOA budget are limited by state law yet the sprinkler mandate and its **significant** financial impact to each of us would further burden our HOA's ability to budget and pay for these new assessments. The financial obligation for this single undertaking will likely limit the financial health and well-being of the 1200 California Street community for years and also result in an inability to maintain our building as needed. Additional costs will mount since we'll likely need to seek temporary housing elsewhere during the retrofitting process all the while paying our mortgage, monthly HOA plus the financial responsibility of this special assessment. We are both retired and rely on our social security pensions that provide us a fixed income.
The affordability concerns that we have are also shared by most residents in San Francisco, not only because of the direct cost of compliance but because of the effect this will have on thousands of rental units and apartments throughout the City. We appreciate that the Mayor aims to make San Francisco more affordable and livable; however, this mandate will have severe negative impacts on this goal and will continue to drive tax paying citizens out of the City.
Respectfully,
Glenn and Chris Etow

To: <SauterStaff@sfgov.org>, <mandelmanstaff@sfgov.org>, <daniel.lurie@sfgov.org>

Dear Supervisor Sauter, Supervisor Mandelman, and Mayor Lurie,

I am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with my building's Board and management on other feasible life safety measures that will protect our residents and visitors. I am not opposed to fire safety measures. In fact, I welcome a dialog with you and your team on ideas for implementing financially reasonable, practical, and effective measures that would improve fire safety in my building.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on me and my neighbors.

If the code is not changed, this increase in expense will seriously jeopardize my ability to continue owning my condo at a time when the housing market in San Francisco has still not recovered from covid. Since covid (right when I purchased my property), my property value has dropped by almost 25% and has remained there. This ordinance would be a huge financial burden for me, especially as I have also had to take a significant pay cut this year due to the challenging job market.

Bonnie

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate
Date: Wednesday, February 4, 2026 6:31:46 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

To Board of Supervisors

From Geoffrey (age 81) and Patricia (age 78) Brooks

We have lived very safely in the Comstock High Rise building since 2010.

The expense of retrofitting would be devastating to us financially as this requires us to move out and find alternative accommodation during the process when it happens.

The expense (we have heard numbers of ~ $2 million per apartment) is outrageous given that there could be only an incremental improvement in fire safety…given the buildings concrete and glass construction … The Comstock already has an outstanding fire safety record, and all the fire suppression systems installed during construction (to code) are in working order and routinely checked by the SFFD. We have regular emergency fire drills.

Another big issue with our apt is that we have a heated floor system through out. This would likely be damaged when the ceiling of Unit 505 directly below us is removed for installation - an additional cost for us from retrofitting…

One needs to ask what is the benefit to cost ratio for this seemingly unnecessary expense to the owners …. If there would actually be a marginal improvement in safety, which we would doubt…

Hopefully in an age when the Board of Supervisors is trying to eliminate wasteful R&R which add to the expense of building and maintaining property in the great city of San Francisco; this unnecessary piece of “retro” engineering will be tabled!

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I live in apartment 9A at 2200 Pacific Avenue in San Francisco. My building is concrete, with metal wall supports, eight foot ceilings, and fire sprinkled hallways; in other words, quite fire proof, as are many buildings on your list of buildings potentially requiring retrofits.

In the past 60 years, there have been no lives lost to fires in these buildings—four injuries caused by an electric scooter fire is the sum total of incidents. Does this record justify the enormous costs and displacements you would cause by the potential new requirements?

Our building, like many of the period, has eight foot ceilings. If the requirement that every room have fire sprinklers goes into effect, we would either have pipes running across every ceiling, or our ceilings would be of substandard (less than seven feet) height. In addition, it would be impossible to remain in the apartment while these modifications are installed. Do you really ask that all the tenants in all 126 buildings, many of whom are in my age group (I am 81), must relocate or become homeless for some months?

I have owned a house with a required sprinkler system in every room, and over a fifteen year period, had three incidences where the system developed a leak, causing damage to floors, walls, and furniture. With a retrofit system, I suspect there would be potentially more problems than with one installed as part of an initial build.

Do these potential problems and costs really outweigh the fact that no major injuries and no loss of life has been demonstrated where there are no universal fire sprinklers, but where many other fire safety features exist, such as fireproof building materials, hallway sprinklers, alarms, etc.?

Than you for your consideration.

Sylvia Hughes

Subject:	Fire Sprinkler Retrofit Requirement File 251247 Request to Amend the fire Sorinkler Retrofit Requirement
Date:	Wednesday, February 4, 2026 12:45:07 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisors,

I am writing as a homeowner at 66 Cleary Ct. in an older San Francisco high-rise to urge you to amend the fire sprinkler retrofitting requirement and work with affected properties on more practical and affordable life-safety measures.

This mandate was passed without any consultation with residents or building owners and imposes an extreme financial and physical burden. The estimated cost of up to **$300,000 per unit** is simply unaffordable for most homeowners and would force many of us into serious financial hardship.

In addition, the construction required to install such a system would likely necessitate temporary relocation and could cause long-term disruption to our homes and community.

I strongly support fire safety, but this ordinance is not a reasonable or sustainable solution. Please reconsider this mandate and collaborate with building representatives to develop feasible, cost-effective safety measures that achieve the same goals without devastating residents financially.

Thank you for your attention and for considering the impact this requirement will have on long-term San Francisco homeowners.

Sincerely,

Karen Llamas

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Lillian Lachman

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Ken Eggers

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Date: Tuesday, February 3, 2026 8:07:25 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I am given to understand Cathedral Hill Tower at 1200 Gough Street is listed on a group of properties in support of a pending measure that would mandate sprinkler systems in residential properties of the type that includes Cathedral Hill Tower. That is not correct. We are not in support of the measure. As a 65 year old concrete structure with two interior stairs that are separated from the rest of the building by two-hour fire-rated walls, CHT is opposed to any measure that mandates retrofitting buildings like CHT with full building sprinklers. There are other preventative measures we believe that can address fire alert and prevention without bankrupting owners and this building. We look forward to continuing this dialogue on this very important topic.

TO: **Board.of.Supervisors@sfgov.org** *(via email: 1) for the record, 2) in anticipation of February 9, 2026, meeting, and 3) to share with interested parties)*

SUBJECT: Fire Sprinkler Retrofit Requirement File 251247

Dear sirs/madams:

I am a longtime owner at 66 Cleary Court, #1201, condominiums built in 1963. I purchased my condominium in December 1986, and lived there for over 30 years. In 2019, my husband and I moved to Napa Valley due to deteriorating living conditions in San Francsico, then COVID, and I rented my condominium to others. I learned not long ago of the fire sprinkler mandate to retrofit Cleary Court. I could not object more vehemently. This letter updates my letter to various San Francisco officials, dated December 10, 2025.

While I absolutely want all residents and firemen (and police officers) to be safe at work and at home, this is an absurdly expensive solution to address a very rare problem – at least at Cleary Court. While I cannot speak to the appropriateness of the fire sprinkler mandate for other residences, I strongly believe this ham-handed approach is not necessary for Cleary Court.

Here is why:

1. There have been just two fires at Cleary Court since 2012, so an average of one every 6-1/2 years. Looking online for records of fires at Cleary Court, I see just two: One on July 25, 2012, and another on August 16, 2025. (Note I called for fire records again today at 415-920-2933 and spoke with Charlie: he noted that fire records were digitized in 2010 and many records were lost in the 1989 earthquake, so records are most likely not complete. I have since filled out a Fire Report Request form and sent it to FireRequests@sfgov.org for the years 2000-2026 [year-to-date], when I understand information is available.)

2. This Joseph Eicher building is made of heavy concrete. "…The architectural firm of Jones + Emmons designed the 18-story high rise building located at 66 Cleary Court. This structure consists of 15 stories of living space and 3 levels for tenant parking. The building features 150 units, mostly 3 bedroom homes ranging in size from 1,100-1,200 square feet. All units feature radiant heat, private

balconies or terraces **as well as 8-inch thick, load bearing concrete walls** that help minimize noise between units…" (See: https://www.eichlerforsale.com/cathedral-hill-eichler/)

3. Concrete is one of the most fire-resistance construction materials available. This addresses my AI question asking "Is concrete fire resistant?" "…Conclusion: While not completely indestructible, concrete is one of the most fire-resistant construction materials available, providing significant protection by not burning and slowing the spread of fire. Its durability in a fire depends on the specific mix and conditions, but its resistance is far superior to many other building materials."

4. Furthermore, from an owner's perspective, the anticipated, staggering cost of $300,000 is likely to be untenable for most owners and puts them at risk of losing their homes. This is true of those who purchased their units decades ago and are now retired and on fixed incomes. It is also true for younger residents, who perhaps are now working for Meta or AI companies where a $300,000 bite out of a $500,000 salary is still A LOT! This is an EXTRAORDINARY expense for any homeowner. This includes Cleary Court, where the deteriorating livability of San Francisco in the past few years under previous city leadership has dramatically cut real estate values. (Think of this for YOU, dear reader: how would you feel if this vast expenditure were in front of you?)

5. Moreover, that huge cost is not even the end of the expenses. According to various reports, residents would need to move out of their homes while the retrofit work was underway. So regardless of whether one lived in one's unit or rented it out, there are numerous additional costs associated with this project – making a bad situation even worse. According to "Rental Market Trends" for San Francisco on Zumper.com (https://www.zumper.com/rent-research/san-francisco-ca) as of January 2026, the average cost of one-bedroom housing is $3,500 per month, and the average cost of a two-bedroom is $4,920. So assuming the need for housing during the fire sprinkler retrofit for, say three to six months, the additional cost ranges from $10,500 to $29,520 – and that is at today's rental prices, not those in the future or if demand spikes due to this project.

6. In fact, house values in San Francisco have gone down significantly in the past few years, while costs and special assessments have gone up dramatically. Our Cleary Court neighbors sold their home several years ago for $1.2MM – now condominiums are on the market for 25% less! And the fire sprinkler mandate, if implemented, is sure to cause many more sales, and at declining prices, as owners – angry, upset, scared, and panicking – try to sell and get out before values fall even further or the home sales market is glutted. This is WRONG on so many levels. To receive a possible charge for $300,000 for a home that might sell for $800,000-$900,00 (and with minimal perceived added value) is truly a disservice to homeowners who purchased in good faith a San Francisco home they could afford.

I am sure many owners at Cleary Court would prefer to risk a highly unlikely fire rather than lose their home, equity, financial security, and well-being due to this well-intentioned, but very

misguided solution to a problem that rarely exists, at least at Cleary Court. It should also be noted that Cleary Court owners paid not long ago over $33,000 for a variety of repairs, plus several thousand dollars last year for balcony repairs. And I now understand updating the fire alarm system, an imminent requirement in 2026, will cost each owner another $7,450! And this despite the fact that the building has hard-wired fire alarms that are extremely loud (as I remember from the regular fire drills held in the building).

6. Owners affected by this mandate may not have had meaningful or sufficient input on this matter. This may be wrong – and I hope it is. But I understand that the many owners impacted by this mandate were not consulted on this issue. If true, this is wrong on many levels: that owners and voters who elected San Francisco officials to act on their behalf and in residents' best interests did not participate in discussions on this major mandate. Rather, it seems that city officials and/or related employees have made a spectacularly expensive decision, unilaterally, without necessary input from their constituents and neighbors who will bear the financial brunt of the decisions. In fact, at $300,000 per unit, the cost to retrofit Cleary Court is $45 million dollars! Even at half that, the cost is outrageous!

7. Mayor Lurie was elected for change – to make the city vibrant once again, and to reduce the cost of living, bureaucracy and complexity of city government. San Franciscans, particularly those of us who pay the city's hefty bills, want and deserve to live in the beautiful place we once knew – an affordable city with safe and clean streets where those who work hard can get ahead. I read the Mayor is doing good job on those voter mandates – bravo! – and I hope the Board of Supervisors share these goals. However, the cost of this fire sprinkler ordinance goes completely in the wrong direction of these objectives – bringing back the despair of recent years and now the risk of displacement and financial insolvency or ruin for many homeowners.

It is for all these reasons that I respectfully request this fire sprinkler mandate be terminated, once and for all.

Sincerely,

Jill Matousek Turner

Message to the Supervisors

From your constituent Leslie Rogers

Email leslietrogers@gmail.com

Message:

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting consequences for thousands of San Francisco residents who can ill afford its financial and physical effects.

No affected homeowners or building owners were consulted or asked for input when this legislation was passed and are now faced with hundreds of thousands in costs and face dislocation from their homes due to asbestos abatement and construction noise and debris that will continue for many months. This is also having a dramatic effect on property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask the Board of Supervisors to amend the proposed new fire code to limit the requirement until a building undergoes a major renovation. If that's not possible then the proposed deadlines must be extended and an unbiased study should be undertaken to determine practical alternatives to the installation of fire sprinklers in these buildings.

Thank you!

Leslie Rogers

Subject: Fire Sprinkler Retrofit Requirement File 251247
Date: Tuesday, February 3, 2026 4:59:04 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear San Francisco Board of Supervisors:

I have been a condominium owner and resident at 66 Cleary Court in San Francisco since 2002.

I am writing to request that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on myself and our residents.

If the code is not changed, my husband and I will be financially, physically and emotionally impacted (e.g., by having to relocate during an extended period of construction), and (2) the burden of expense this will cost us is unacceptable. I simply won't be able to afford living in San Francisco any longer. Both my partner and I have lived in SF for over 40 years.

Please reconsider the hardship that this will incur on so many people in my building. As I look forward to retiring in SF in the next couple of years, this will make it impossible for me to do so.

Respectfully, John Bansavich and Matthew Stimson, 66 Cleary Court, Unit 303, SF CA

Subject: Fire Sprinkler Retrofit Requirement File 251247 — 1200 Gough Street Owner
Date: Tuesday, February 3, 2026 7:07:54 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Board of Supervisors-

I understand that Cathedral Hill Tower at 1200 Gough Street is listed as part of a group of properties that would be subject to a pending measure that would mandate sprinkler systems in residential properties. Cathedral Hill Tower is incorrectly included in this list because our building does not need the mandated sprinkler system. Cathedral Hill Tower is a 65-year-old concrete structure with two interior stairs that are separated from the rest of the building by two-hour fire-rated walls.

The unit owners and I oppose any measure that mandates retrofitting buildings like CHT with full building sprinklers. There are other preventative measures we believe that can address fire alert and prevention without bankrupting owners and this building.

Thank you.

Best,

Cheryl

Message to the Supervisors

From your constituent Joyce Chan

Email jmch888@aol.com

Message:

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting consequences for thousands of San Francisco residents who can ill afford its financial and physical effects.

No affected homeowners or building owners were consulted or asked for input when this legislation was passed and are now faced with hundreds of thousands in costs and face dislocation from their homes due to asbestos abatement and construction noise and debris that will continue for many months. This is also having a dramatic effect on property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask the Board of Supervisors to amend the proposed new fire code to limit the requirement until a building undergoes a major renovation. If that's not possible then the proposed deadlines must be extended and an unbiased study should be undertaken to determine practical alternatives to the installation of fire sprinklers in these buildings.

Thank you!

Joyce Chan

Subject: Smart, Measured Reforms to the Sprinkler Retrofit Mandate
Date: Tuesday, February 3, 2026 7:40:21 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Kathleen Hall

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Christian Elbeck

Date: Tuesday, February 3, 2026 9:52:44 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Alina Karelina

Message to the Supervisors

From your constituent Christina Orth

Email cmorth.90@gmail.com

Message:

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting consequences for thousands of San Francisco residents who can ill afford its financial and physical effects.

No affected homeowners or building owners were consulted or asked for input when this legislation was passed and are now faced with hundreds of thousands in costs and face dislocation from their homes due to asbestos abatement and construction noise and debris that will continue for many months. This is also having a dramatic effect on property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask the Board of Supervisors to amend the proposed new fire code to limit the requirement until a building undergoes a major renovation. If that's not possible then the proposed deadlines must be extended and an unbiased study should be undertaken to determine practical alternatives to the installation of fire sprinklers in these buildings.

Thank you!

Christina Orth

Subject: Please Repeal the Retrofit Sprinkler Requirement
Date:2025-11-08 08:26
From: Derek Hetzler <hetzlerd@sonic.net>
To: Board.of.Supervisors@sfgov.org
Cc: Kaela Colwell <kaelacolwell@gmail.com>

Dear Supervisors,

I am writing to request that you please amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors. The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on our residents. If this comes to bear, we will no longer be able to afford living in San Francisco.

On top of that, disruption caused by installing sprinklers is enormous. My building, as most older high-rise buildings, has asbestos. Sprinklers cannot be installed without disturbing asbestos. It is not safe to live in an environment where asbestos is disturbed, thus I - and most of your other constituents affected by this sprinkler retrofit requirement - will have to find and pay for a temporary home.

Derek & Kaela Hetzler

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Esteemed Supervisors:

I'm writing to request that you reject the current proposal to update the Fire Sprinkler code originally to have become effective on 1/1/2026. A more reasonable solution would include a provision for building-by-building review of each of the 126 buildings affected by the ordinance, assessing the fire risk for each building, and permitting exemptions for buildings in which the cost of retrofitting far outweighs the risk.

I ask you to consider:

- I purchased my 480 sq ft studio condo in the Tenderloin in 2002 via the Mayor's Office on Housing' Down Payment Assistance Program (DALP)

- I am now a senior citizen living on a fixed income.

- A sprinkler retro fit will trigger asbestos and lead paint remediation, forcing me to move out of my condo.

- I am unable to afford renting a second home in SF for the duration of the work.

- Approving this legislation will effectively force me into homelessness or to leave SF, as it likely will for many of the 9,800 residents of the 126 affected buildings, worsening the city's current housing crisis.

Additional considerations:

- My building at 631 O'Farrell Street was built in 1929 of concrete and steel.

- The only wood in the building consists of door and window frames, doors, and internal condo contents, significantly decreasing the risk of fire spread beyond a single unit.

- The most recent fire in the building was 50 years ago, was contained in a single unit, and resulted in no injuries.

Finally:

- As an owner of a unit in the building I was never properly noticed by the city.

- I'm told that the SF DWP does not currently have the infrastructure in my neighborhood to provide sufficient water volume/pressure for sprinklers in every room of a 21 story building, forcing the Home Owners Association to remediate city infrastructure deficits, and hence, significantly increasing cost.

For these reasons, please vote to send this legislation back for review and redrafting.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully but firmly urge the Mayor and the Board of Supervisors to adopt a clear, measured, and evidence-based approach to San Francisco's high-rise sprinkler retrofit requirement.

While we support effective fire-safety measures, the current mandate applies a one-size-fits-all solution that fails to account for significant differences in building design, structural feasibility, and resident circumstances. As written, the policy imposes disproportionate burdens on many existing residential high-rises and creates serious unintended consequences that threaten housing stability and affordability for thousands of San Franciscans.

In some buildings, compliance costs may reach as high as $300,000 per condominium unit. When combined with extensive and disruptive construction, these costs create an untenable situation for many residents, particularly seniors, fixed-income households, and long-term homeowners. For many, compliance is not financially possible. Without reform, the mandate risks forcing widespread displacement and directly contradicts the City's stated goals of preventing displacement and preserving existing housing.

We respectfully request that the City legislatively establish a formal Technical Advisory Committee composed of independent experts, including structural engineers, architects, fire-safety professionals, and housing experts, to evaluate the technical feasibility, financial impact, and real-world consequences of the sprinkler retrofit requirement.

We further request that implementation and enforcement of the mandate be delayed until the committee completes its analysis and publicly releases its findings, allowing policymakers to act based on data, practicality, and equity.

Fire safety and housing affordability must advance together. Without a measured and informed approach, this mandate risks causing significant harm to residents and the City's housing stock. We urge the City to act responsibly and urgently to protect both public safety and housing stability.

Dear Board of Supervisors,

Thank you so much for your attention to this matter. The residents of 66 Cleary Court greatly appreciate any effort to amend the fire sprinkler retrofitting requirement for older high-rise buildings in our city. We are confident a more financially viable solution can be found that will not price residents out of their homes. We know for a fact residents in our community will face homelessness if this retrofitting goes forward. This is an unacceptable trade off.

We have dozens and dozens of lower income families and seniors living in our building. The required retrofitting will put an untenable financial burden on these residents, myself included. I have spent the last 25 years as a nonprofit fundraiser, giving back to those in our community who need it most. I've committed myself to a life of service which is not easy to do in a city as expensive as San Francisco. I saved for 18 years to buy my apartment four years ago, but if these fire sprinkler requirements go through, I will lose all of the equity I have built in my home and be forced to sell. This will absolutely devastate me financially. Please do not let this happen to people who have worked so hard to stay in the city. We love San Francisco and have fought so hard to live here.

We understand fire safety is a real concern for the residents of our building, and in other high rise apartment buildings across the city. With strong strategic leaders such as yourselves, I'm confident you can find another way to prioritize safety without wiping residents out financially.

Thank you,
Lindsay Robinson

Dear Supervisors -

I am writing to ask for your support and assistance to REPEAL the Fire Sprinkler Retrofit Requirement which will bankrupt and displace some 15,000 San Franciscans in the next few months. If you cannot do this, at least support a YES VOTE on February 9 to EXTEND and EXEMPT implementation in as many cases as possible.

Nearly ten thousand SF families - retirees like me and young working families like my neighbors - face losing their housing and/or life savings due to the $300,000+ contribution from each household required by the BOS and the SFFD, for sprinkler retrofit of pre-1975 high rises at our expense.

Although this was passed in 2022, we were never given any notification that this was happening until a few weeks ago, contrary to Sunshine Act requirements. We are mostly seniors, living in our condos on our life savings with no income other than Social Security. The Social Security is our mortgage payment. If we deplete our life savings for sprinklers, we have no money for food and medicine. The BOS will consider, on February 9, action to delay the expense for three years but this may not help us all. The very existence of this legislation makes it impossible for us to sell our unit in order to survive on income. (No one buys under these circumstances.) And yet we would still have to pay - and face additional $20,000-$30,000 expenses for lodging during the 2 - 3 months of installation.

A Technical Advisory Committee (TAC) could be formed as part of the Feb. 9 action to EXEMPT individual buildings for structure and water access appropriate to even qualify for participation. This proposal would EXTEND implementation for three years in order to evaluate each of the 126 potential buildings, comprising 9,000 units, nearly 3,000 of which are condos. During this time we would not be able to sell our unit or borrow against it because of the pending $300,000 charge. We could only declare insolvency and have our mortgages foreclosed.

The prospect of nine thousand families losing their housing because of this dilemma has not yet alarmed anyone. We need your help in managing this requirement immediately, before the crisis happens.

Sincerely yours,

Eve R. Meyer

Thank you, Tomio & Tita!

Quick update on my friend in the condo with what I earlier referred to as “early”Alzheimer’s. Another friend in the building told me this morning that our mutual friend with Alzheimer’s has been ringing her bell on a nightly basis, asking if her parents still live there.

She will need to move into a memory care facility soon, which she can only afford by selling her condo. Due to the sprinkler mandate it either won’t sell, or will sell at a greatly reduced price.

Thank you for your help!

To Supervisors Sherrill & Sauter,

Thank you for your leadership and advocacy on behalf of residents in the buildings affected by the sprinkler retrofit mandate. I am one of those residents, and I truly appreciate your work in securing the three-year extension, which has provided a critical financial reprieve for many homeowners.

That said, I am concerned that the extension has also created serious unintended hardships that deserve urgent attention.

As you know, the announcement of the mandate has effectively frozen sales in the 126 affected buildings. Adding three more years to this uncertainty risks deepening that freeze, with devastating financial consequences for many residents. I hope your office is also hearing from realtors and lenders, who are seeing firsthand how this has disrupted the market.

I have seen these impacts directly in my own building. A young family on my floor was preparing to move to the suburbs when news of the ordinance broke. Since then, they have been unable to sell their unit, leaving their plans, finances, and future in limbo.

Even more troubling is the situation of a neighbor who is in the early stages of Alzheimer's disease. As her condition progresses, she will almost certainly need to sell her unit and move into memory care—likely well before the three-year extension expires. Under the current conditions, she may be unable to find a buyer at all, or may be forced to sell at a steep loss, potentially leaving her without sufficient funds to pay for the care she will need.

These are not isolated cases. For thousands of residents across the 126 buildings, the ordinance risks causing severe financial harm, and in some cases, financial ruin.

I respectfully ask: what solutions are being considered to address these unintended consequences, particularly for residents facing time-sensitive life events such as illness, relocation, or family needs?

Thank you for your continued service and for considering the real-world impacts of this policy. I appreciate your attention and would welcome any guidance or next steps your office can share.

Sincerely,
Ramona Rideout

Please, hear me out. I am 90 years old and have been living in the Bay Area since 1986. This is the first home I have ever owned here and have loved it and this historic building ever since I moved into it in 1998. It is a 15 story solid concrete Eichler building. I live on a fixed income and this mandate to install sprinklers in our apartments is going to wipe me out financially, probably require me to sell my home of 27 years at a loss (if it is even saleable) and force me to leave San Francisco. I am certain that there are many others in my circumstances who will experience the same fate if this measure proceeds.

I understand that the major concern is safety, but I contend that the record does not show that a solid concrete building like ours is the sort of construction that requires this extreme measure. This is not a Victorian apartment complex built from wood.

Please think about the impact on me and many others and reconsider going forward on this mandate.

Thank you,

Judith Kneeter

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I'm writing to ask that you reconsider the unfunded mandate that sprinklers be installed in old high-rise buildings.

Like many good ideas -- how about undergrounding all of the ugly overhead wires on city streets? -- it would be wonderful to have, but the costs are prohibitive. Forcing sprinklers to be retrofitted into an old building imposes an unfair burden on apartment owners, not only financially but also logistically, since the apartments have to be vacated for the work to be done.

Please don't make living in SF even more unaffordable than it already is.

Respectfully,
Len Shustek

Date:	Friday, January 30, 2026 10:10:43 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Members of the Board of Supervisors and other involved parties,

I'm writing to urge you to amend the fire sprinkler retrofitting requirement for older high-rise buildings. Please work with our buildings on feasible life safety measures that protect residents without imposing devastating financial and logistical hardship.

This mandate was passed without consulting those it most affects. For many of us, the costs — estimated at up to $300,000 per unit — would be financially ruinous. I own a unit in one of these concrete buildings. The retrofit would not only make my home partially uninhabitable during construction but would also permanently alter its structure and livability.

My husband and I are starting a family this year. Navigating this project as a young and growing family would be a major challenge, potentially forcing us to consider leaving a city that we dearly love.

I support improving fire safety, but this blanket mandate isn't the answer. I ask that you reconsider the implementation and collaborate on alternative safety measures that achieve the same goals without destroying the homes and finances of long-term residents.

Thank you for listening and for protecting both safety *and* livability in our city.

Sincerely,
Emily Shenfield

Subject: Humble please re: Fire Sprinkler Retrofit Requirement File 251247
Date: Friday, January 30, 2026 11:19:30 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Hello,

I am writing today to make a humble plea regarding Fire Sprinkler Retrofit Requirement File 251247 being imposed upon residents and owners of the 125 buildings affected in the City.

My name is Denise Miura, and I represent my mother-in-law Shigeko Miura, who owns unit #1107 of 66 Cleary Court in the Western Addition district. This was my in-laws' home since 1980 until 2013 when Shigeko, who had suffered from dementia since 2010, had to be transferred to an assisted living facility, as her caregiving needs exceeded our capacity to continuing caring for her.

As of 2016, we have been renting out her unit. Residual rent is relatively modest, after paying steadily rising Homeowner Association dues and property taxes, and having to reduce rent significantly in 2020 due to the Covid pandemic. Still, we are very fortunate and grateful for the income, as it definitely contributes to paying for her expensive care.

I have since learned of the potential for EACH unit of our building to be assessed up to $300,000 to address fire safety measures. Such expected exorbitant amounts poses a HUGE strain on our ability to pay and will likely force us to sell her unit. After paying the fire safety costs and taxes, any net sum that remains to help pay her continuing caregiving expenses will likely be quickly exhausted. She will no longer have the steady stream of rental income, such as it is.

I wrote last month to request, respectfully, that the Board take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our building on alternative and feasible life safety measures that will protect our residents and visitors.

I understand the fire sprinkler mandate, though well-intentioned, was passed without any notice to or discussion with the affected buildings in the City and places an unreasonable and undue financial hardship on our owners, to say nothing of what will happen to residents, who may lose their homes.

Thank you very much for your attention to helping us keep our properties and homes from exceptionally higher possible expenses...

Stay safe,
Denise Miura

Date:	Friday, January 30, 2026 11:59:55 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors:

My name is David Boley. My wife and I are writing in regard to the sprinkler mandate which was passed by the San Francisco Board of Supervisors in 2022.

My wife and I moved to Fontana East five years ago to be close to our son and grandchildren. The apartment is expensive, but the move was within our pension budget. Our HOA fees keep rising as expected due to inflation and other city requirements such as the recently installed fire alarms in sleeping areas and the exterior updates. However, the special sprinkler mandate, which has been reported to cost $250,000 to $300,000 per unit, will not be affordable on our income. We have a mortgage on the apartment, so walking away is not an option.

Also, my wife and I were living in our apartment in 2022 when the mandate was passed. There was no notice to the residents who will be affected before the vote was taken. There was no meeting or opportunity to express our concerns.

In addition, a large number of residents will need to relocate during sprinkler installation due to asbestos, lead paint, and construction dust causing a huge impact on housing availability and cost. Where will we go and who will pay for our relocation?

The mandate was passed without determining if the city owned infrastructure can provide sufficient water. Also, a statistical study should have been completed to determine the probability of harm versus the cost of the remedy. How many people in San Francisco have died or been injured in the past 20 years in concrete high-rise buildings? The fire department would have these statistics.

We urge the board to rethink this mandate, especially as it applies to steel and concrete buildings that have steel and concrete exits. There have been multiple fire alarms due to system malfunctions, and we have always been able to exit the building using the concrete and steel stairways near our apartment. If there was an actual fire, the same protected stairway would continue to be accessible. The new fire alarms in each apartment will notify residents in sufficient time to escape the building via these protected exits. We also have a fire extinguisher and fire blankets in our apartment. All stoves are electric, not natural gas, and there are sprinklers in each storage area and in the garage.

This issue is an extreme conundrum for us. This mandate is causing extreme stress and anxiety that is more detrimental to our health than the chance of a fire. Our savings account is designated for possible assisted living or other long-term care. We never imagined that the City of San Francisco would expect us to choose between our San Francisco home and possible future custodial care.

In summary, we would like this mandate to be cancelled. If the fire department personnel believes that improvements in fire safety are important for our building, then we should have a discussion with all stakeholders about fire safety measures that are more cost effective than sprinklers in each apartment. Thank you kindly for taking this matter into consideration.

Respectfully,

David and Ellen Boley

Dear Members of the Board of Supervisors,

I am writing to request that you **amend the fire sprinkler retrofitting requirement for older high-rise buildings** and work with our communities on more feasible safety measures that still protect residents and visitors.

The current sprinkler mandate was passed without consultation with affected residents and imposes an **unreasonable financial and logistical burden** on those of us who live in these buildings.

On a personal level, this mandate would have a devastating impact on my family. I'm raising **two children under the age of four** here in San Francisco, and as anyone living here knows, raising young kids in this city is already incredibly challenging and expensive. Facing an additional **cost of up to $300,000 per unit**, along with the possibility of **temporary relocation** during construction, would make it impossible for us to remain in our home and in the city we love.

I fully support the goal of improving fire safety, but this measure, as written, would **displace families, burden working parents, and accelerate the exodus of middle-class residents from San Francisco.** There must be a more balanced approach, one that ensures safety without forcing residents out of their homes.

Please reconsider and **amend this code** so that it only applies when a building undergoes major renovation or expansion, and work with building owners and residents on achievable, cost-effective safety improvements.

Thank you for your attention to this matter and for your service to our city.

Sincerely,
Adelina Martiniuc

Date: Friday, January 30, 2026 3:48:34 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Carol Solfanelli

Subject: FIRE SPRINKLER RETROFIT REQUIREMENT FILE 25 Seven 251247
Date: Friday, January 30, 2026 5:36:21 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

To the Board of Supervisors:

Let me start by stating that I am not opposed to fire safety, however I am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings.

The fire sprinkler mandate places an unreasonable physical and financial hardship on me and my neighbors. Per The San Francisco Standard on November 20 (**San Francisco wanted to protect condo owners from fires. It might displace them instead**), the Budget and Legislative Analyst estimated $113,000 to $300,000 *per unit in 2016* - over nine years ago. Our building has many elderly residents and people living on limited incomes. Don't let our ZIP code fool anyone into thinking we are a wealthy community here. On top of the cost, what will the disruption entail? Will we and our elderly neighbors have to move out during all this? With the current lack of affordable housing, where will everyone go and how much will we have to pay in rent (on top of our mortgage)? Additionally, the condo market is relatively soft right now. If we wish to sell and must disclose the potential for hundreds of thousands of dollars in work required watch that market get softer.

As noted in the San Francisco Chronicle on November 17 (**Sprinkler shock: Owners of S.F. high-rise condos stunned by $300K mandate**) of the apartment fires in 2022, the vast majority were not in buildings that would be impacted by the sprinkler ordinance. I recognize that no one wants to be perceived as against safety, but you can't retrofit every building on the backs of owners living in expensive San Francisco. We already went through the requirement of installing improved smoke detectors and fire alarms in our building. My 815 sq. ft. condo has three extremely loud horns within 12 feet of one another. Two of them are back-to-back on a thin wall. Overkill?

Rather than impose this expensive and disruptive mandate (which was passed without any notice to or discussion with the affected buildings), I prefer you work with my building's Board of Directors and Property Manager on other feasible life safety measures that will protect our residents and visitors. We welcome a dialog on ideas for implementing financially reasonable, practical, and effective measures that would improve fire safety in my building.

Thank you for your time and consideration.

Warm regards,
Joanne Hurley

I am a native San Franciscan, 33 years in North Beach. Spending billions on an unneeded extension of the (little-used already) Central Subway is insane, when Public Surface Transit - the busses and street cars that so many of us use - is on a fiscal cliff. More funding for BART to run all night would put us into the ranks of a major world city, would it not?
$1.4 Billion - All so "a convention goer can get to Fisherman's Wharf in ten minutes to eat a bowl of clam chowder"?!?

- *Nadya Williams*

- *Why Minneapolis?*

Because the city is precisely Minnesota's 5th Congressional District of Somali-American Muslim Woman, Representative Ilhan Omar. So, "This is what you get folks when you voted for her." Think she'll be reelected when she runs again in 2027??

Hello,

I am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors. The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on our residents.

As a longtime resident of 66 Cleary Court, I am deeply concerned about the burden this would place on homeowners like myself. I'm sure none of you would want to face a similar situation — being required to make such an enormous and life-altering expenditure on your home, especially with little notice or discussion. It is unreasonable to think that everyone has $300K available for fire safety measures, let alone the cost of relocating during the work.

66 Cleary Court is high-rise condominium complex built with cement walls. The risk of a fire spreading thoughout the building is little to none. In fact, just a few months ago, there was a kitchen fire in one of the units which did not spread past the individual unit.

I ask that you consider how deeply this initiative affects the people who call these buildings home. I strongly support practical fire safety improvements, but I urge you to modify this requirement to balance safety with fairness and financial reality.

Thank you for your time and for considering the real-world impact this mandate will have on residents like myself.

Sheryl Squires

To Members of the San Francisco Board of Supervisors,
We live in a high-rise apartment that we also own located at 1200 California Street. Our building is a nonprofit HOA in San Francisco and has been designated for fire sprinkler retrofitting. We are writing to request that you take action to amend the fire sprinkler mandate for high-rise residential buildings and that you collaborate with the 126 affected buildings' residents (more than 9,800 units) for an alternative, noninvasive solution that will protect residents and visitors.
Personally, we are extremely distressed that we closed escrow on our apartment in late 2023 without **any** notice that the SF Board of Supervisors passed this sprinkler ordinance. We would NOT have purchased this apartment nor any other high-rise apartment affected by this extraordinary mandate. The covert nature of this decree will potentially place unreasonable physical and financial hardships on us (as well as our neighbors).
As a member of a nonprofit HOA, our building's resources are limited and our budget is specifically based on actual annual expenses. Annual increases to our HOA budget are limited by state law yet the sprinkler mandate and its **significant** financial impact to each of us would further burden our HOA's ability to budget and pay for these new assessments. The financial obligation for this single undertaking will likely limit the financial health and well-being of the 1200 California Street community for years and also result in an inability to maintain our building as needed. Additional costs will mount since we'll likely need to seek temporary housing elsewhere during the retrofitting process all the while paying our mortgage, monthly HOA plus the financial responsibility of this special assessment. We are both retired and rely on our social security pensions that provide us a fixed income.
The affordability concerns that we have are also shared by most residents in San Francisco, not only because of the direct cost of compliance but because of the effect this will have on thousands of rental units and apartments throughout the City. We appreciate that you and the Mayor wish to make San Francisco more affordable and livable; however, this mandate will have severe negative impacts on this goal and continue to drive tax paying citizens out of the City.
Respectfully,
Glenn and Chris Etow

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Dona Crowder

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors, I am a retired 95 year old College professor living in my apartment/condominium at 66 Cleary court with my partner Johnny Hong. I am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our building on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on our residents.

If the code is not changed and we are faced to make the changes described it will negatively impact my finances [The truth is I do not have such funds as required and it would bankrupt me]. In addition at my age it is impossible for me to relocate while such renovations take place both physically and fiscally.

We are aware that these decisions to change the code are intended to add to the safety of San Francisco residents but it seems not to have been well thought out. Can the board of supervisors please revisit this and instead of causing extreme and damaging hardship adjust the code to accommodate people such as we are at 66 Cleary Court.

Respectfully, Daniel Glicksburg

I'm the current Board Chair of the HOA behind 1200 Gough Street, Cathedral Hill Tower. We are a 138 residential unit tower that is all concrete (interior walls inclusive) and was constructed in the 1960s. We have watched the developments around the fire code with some alarm, particularly the blanket nature of its applicability and speed to market for intended compliance. We are currently implementing the existing in-unit anunciators that are also required. Given the concrete structure of this building and 8' interior ceilings, we have concerns whether the structure can even support a full building sprinkler system retroactively applied, and while cost is not a primary driver against safety of owners/residents, it cannot be ignored if the implementation of a sprinkler system means a measurable % of owners would simply choose to walk away from their units, leading to potential foreclosures and unprecedented stress on the financial viability of the HOA as a going concern. A 65 year old property such as this is already undergoing significant upkeep as a matter of course, and we believe fire safety via full sprinklers needs a more nuanced discussion on a building by building basis with the fire marshal and the City/County of SF to determine when/if such a system is required. We look forward to continuing this dialogue and on behalf of the actively engaged voters in these 138 units, will be actively participating in the process on this issue.

Kind Regards,

Jason Russell

Dear Sirs/Madames,

I am given to understand Cathedral Hill Tower at 1200 Gough Street is listed on a group of properties in support of a pending measure that would mandate sprinkler systems in residential properties of the type that includes Cathedral Hill Tower. That is absolutely not true. A measure like this would cause an impossible expense on a 65 year old building that has 22 floors of concrete. We would not be able to cover the expense nor sell the unit given the mandate. Please reconsider this as it is not possible for Cathedral Hill Tower owners and there are other measures that could be taken.

Warm regards,
Hugo Yang (unit 20 D in Cathedral hill tower)

Subject: SF Condo Fire Sprinkler Mandate
To: <SauterStaff@sfgov.org>

Dear Supervisor Sauter,

I am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with my building's Board and management on other suitable proposals. I am a resident of Pine Terrace at 1001 Pine St.

I was surprised when the recent article appeared in the Chronicle, but assumed it did not apply to our building, as we have two interior stairwells that are made of thick poured concrete and ostensibly meet the 2 hour fire rating standard. However, I was livid when I received an email from our Board president that it *does* apply to us.

When I bought my studio condo unit in the building in December of 2020, I bought into this building largely *because* it is quite resistant to fire. It's a tensioned concrete slab building with subterranean parking (the parking areas were later retrofitted with sprinklers). Even the walls between the units are ferrocement on metal framing (not wood), leading me to believe that this is already quite a firesafe building.

The only reason I can discern from the publicly available information for why this ordinance applies to us is that one stairwell is truly interior, but the other–also interior–stairwell, is accessed from an exterior landing at the end of each hall on our 14 floor building. It's an unusual arrangement. If my supposition is correct, then it seems far smarter and more cost-efficient to mandate fire doors at the stairwell access points for a building that otherwise seems to comply with the requirement. From a policy standpoint, it would seem prudent to allow for more building-by-building assessments to determine the right solutions to balance

cost and safety.

I find it impossible to believe that the existing ordinance would substantially increase safety in a meaningful way in our building. I was not opposed and promptly paid the special assessment to upgrade the fire alarm system in our building a few years ago (a $4K bill in my case) and would have no opposition to the relatively modest cost to mandate fire doors or even extend the existing sprinkler system to the stairwells, since our building already has a sprinkler system.

However, the cost of installing a full sprinkler system in the building would likely run well into the millions, if not tens of millions, of dollars for this 161 unit, 14-story building. Furthermore, with short eight foot ceilings throughout floors separated by tensioned concrete slabs, I don't know how this would even be accomplished in a practicable way.

After years of renting rooms in the city making well below the median salary, I eventually went to grad school and worked my way into a great career. I bought my condo for $560K and now make a base salary of $160K. My studio condo is tight for two, but affordable, and my partner is planning to move in next year. However, I could never afford the years of monthly assessments to pay for this proposed work–even if it came in at the low end of the published estimate.

After living here for 13 years, I've made a great and stable life in San Francisco that I've worked hard and long to attain and contributed to several successful SF-based startups over the course of those years, as I still am today. But the reality is that, if I had to sell at a significant loss, in this real estate market and nearing 40 years old, I would most likely move out of the city. At a time when the city badly needs more housing, adding this onerous and ill-conceived blanket policy strikes me as backwards.

It's my hope that the city supervisors will work out an amendment to this policy that contains the cost and recognizes that a one-size fits all solution isn't the right way forward.

Thank you,
Cory

Hello San Francisco Board of Supervisors,

I am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on our residents.

As someone who has family who lost their house to fire, I fully support fire safety, but to make such sweeping changes without considering the financial impact is extraordinarily difficult.

I have lived in San Francisco for 8 years and at 66 Cleary Court for three. We moved while pregnant with my first child and are now happily expecting our second.

My husband and I want to raise our children in this fantastic city, but the anticipated costs associated with this code would make that unlikely. We love living at 66 Cleary Court with its cement walls and beautiful design. Retrofitting the entire building as outlined in the code and then each additional charge for units would be prohibitive and exorbitantly expensive.

I urge you to consider other life safety measures, to establish common sense exemption guidelines, and to support San Francisco families.

Best,

Evan Rahman

Date: Monday, February 2, 2026 2:24:43 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I am given to understand Cathedral Hill Tower at 1200 Gough Street is listed on a group of properties in support of a pending measure that would mandate sprinkler systems in residential properties of the type that includes Cathedral Hill Tower. **That is not correct. We are not in support of the measure.**

As a 65 year old concrete structure with two interior stairs that are separated from the rest of the building by two-hour fire-rated walls, CHT is opposed to any measure that mandates retrofitting buildings like CHT with full building sprinklers. There are other preventative measures we believe that can address fire alert and prevention without bankrupting owners and this building.

I am 64 years old, was diagnosed with breast cancer and absolutely cannot afford the cost associated with a project that can be addressed fire safety in other ways given the structure of our building.

We look forward to continuing this dialogue on this very important topic and intend on attending the February 9 meeting if I am able to at 1:30pm or if it is rescheduled.

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Subject:	Fire Sprinkler Retrofit Requirement File 251247 - Please revisit this mandate!
Date:	Monday, February 2, 2026 5:09:00 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Hello Office of the Mayor,

I am writing to express serious concern about the proposed fire sprinkler mandate for pre-1975 high-rise condominiums. I support better fire safety, but the ordinance in its current form would create severe financial and social harm for thousands of residents.

Estimated retrofit costs range from $113,000 to $300,000 per unit, which could translate into thousands of dollars in new monthly HOA fees or loan payments. These retrofits require opening walls, ceilings, and sometimes surrounding streets, which means major disruption and likely displacement for many residents.

The ordinance also provides no plan for where displaced residents will go, even though thousands could be forced out during construction. Many affected homeowners are seniors, fixed-income residents, and long-time community members who cannot absorb six-figure costs or months of displacement. This risks pushing vulnerable people out of their homes and undermining property values.

There are also fairness and process issues. Homeowners bear the full cost even though lower-cost alternatives, such as upgraded fire-resistant doors or partial sprinkler systems, were not fully evaluated. The proposal has moved forward without an updated independent cost-benefit analysis and with limited public input.

I respectfully urge you to pause the ordinance and pursue a more balanced approach. A new independent study, real financial relief or hardship protections, and a clear relocation plan are essential. The city should fully consider safer and more affordable alternatives before imposing costs that many residents cannot withstand.

Thanks for your consideration.

Best regards,
Midori Okubo

Subject: Sprinkler Mandate
Date: Saturday, November 29, 2025 12:46:36 AM

I'm writing to protest the potential San Francisco high rise sprinkler mandate. I'm a third generation San Francisco native who lives in one of these buildings. 1835 Franklin St 502 I has been my home for 60 years and now I'm potentially faced with two to three hundred thousand dollars expense to put a sprinkler system in that might not even be feasible to install to the suggested specifications. I really don't understand how San Francisco can continuously make decision that affects thousands of homeowners without considering the consequences and hardship that all these new ordinances put on homeowners. This city is so expensive to live in already and now it potentially forces more people out of their homes which is totally opposite of affordable housing. I'm all for safety of the people, but we must take a closer look into this proposed mandate to see if it really applies to all the buildings on the list. If the city is willing to foot the bill and deal with thousands of homeowners be displaced during constriction, then I might have a different opinion. I strongly feel that this mandate be voted down for the good of the people.
Thanks,
Louis Saroni III

Message to the Board of Supervisors, Mayor, and Planning Commission

Email	rubykuma@duck.com
From your constituent	Laura Robertson
Subject	Oppose the 25-Story Proposal
Message:	Dear Mayor Lurie, Board of Supervisors, and the Planning Commission:

I urge you to exercise your full authority to reject the proposed 25-story tower at 15 Marina Blvd. This project is not merely an "outlier"; it is a direct assault on the integrity of San Francisco's legislative process and the safety of its residents.

The following reasons provide City Hall to strike down this proposal:

1. A Breach of Public Trust and Legislative Intent
The developer recently stated they have been "working on this project for years." This admission confirms a deliberate attempt to circumvent the public process. While our community and this Board worked in good faith to attempt compromises within the Family Zoning Plan, the developer waited in the wings to subvert those 40-foot height limits just hours after the Board of Supervisors voted as a whole to pass the plan.

2. Unresolved Public Safety Risks - The Marina district is a high-hazard liquefaction zone. Proposing a structure of this unprecedented scale on unstable landfill is a matter of public safety, not just "neighborhood character." We request an immediate, independent seismic and geotechnical audit to

determine if this "beast" meets the strict Objective Safety Standards required by the state, which cannot be waived by SB 330. A 25-story scale creates a risk that no amount of engineering can fix, as it would interfere with emergency evacuation routes for the entire district during a disaster.

3. Defense of Local Democracy - By allowing this project to move forward, the City is effectively rendering the Board’s recent vote on the Family Zoning Plan meaningless. We ask that the City Attorney review the vesting status of this application to ensure the developer is not illegally bypassing the local laws that were active at the time of their filing.

We stand with Mayor Lurie and Supervisor Sherrill in their initial pushback. We now ask for that pushback to become a formal, legal stand. Do not let "streamlining" become a mandate for dangerous, undemocratic development.

Thank you.

Message:

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting consequences for thousands of San Francisco residents who can ill afford its financial and physical effects.

No affected homeowners or building owners were consulted or asked for input when this legislation was passed and are now faced with hundreds of thousands in costs and face dislocation from their homes due to asbestos abatement and construction noise and debris that will continue for many months. This is also having a dramatic effect on property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask the Board of Supervisors to amend the proposed new fire code to limit the requirement until a building undergoes a major renovation. If that's not possible then the proposed deadlines must be extended and an unbiased study should be undertaken to determine practical alternatives to the installation of fire sprinklers in these buildings.

Do you guys GET IT??!!! Do not pontificate about

affordability and how working and middle class people can't make it in the city, then overreach and pass a mandate that will seriously BURDEN SF building owners and homeowners. WE ARE NOT TECHIES AND FINANCE BROS WITH $200k PER YEAR SALARIES! Many of us are on FIXED INCOMES! Your Trumpian actions will surely force many of us out of our homes! STOP THIS NOW!

Thank you!

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting consequences for thousands of San Francisco residents who can ill afford its financial and physical effects.

No affected homeowners or building owners were consulted or asked for input when this legislation was passed and are now faced with hundreds of thousands in costs and face dislocation from their homes due to asbestos abatement and construction noise and debris that will continue for many months. This is also having a dramatic effect on property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask the Board of Supervisors to amend the proposed new fire code to limit the requirement until a building undergoes a major renovation. If that's not possible then the proposed deadlines must be extended and an unbiased study should be undertaken to determine practical alternatives to the installation of fire sprinklers in these buildings.

Thank you!

Melissa Aurand

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

To whom it may concern,

I am given to understand Cathedral Hill Tower at 1200 Gough Street is listed on a group of properties in support of a pending measure that would mandate sprinkler systems in residential properties of the type that includes Cathedral Hill Tower. That is not correct. We are not in support of the measure. As a 65 year old concrete structure with two interior stairs that are separated from the rest of the building by two-hour fire-rated walls, CHT is opposed to any measure that mandates retrofitting buildings like CHT with full building sprinklers. There are other preventative measures we believe that can address fire alert and prevention without bankrupting owners and this building. We look forward to continuing this dialogue on this very important topic and intend on attending the February 9 meeting if I am able to at 1:30pm.

Kind regards,
Randel Martindale

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

Message to the Supervisors

From your constituent Laura Higbie

Email lhigbie@hotmail.com

Message:

Re: “Fire Sprinkler Retrofit Requirement File 251247”

Dear Supervisors and Mayor Lurie,

Everyone cares about fire safety, but the sprinkler retrofit requirement is not a thoughtful safety measure. It is nonsense legislation with devasting financial consequences for thousands of San Francisco residents who can’t afford its financial and physical effects.

No affected homeowners or building owners were consulted when this legislation was passed and they are now faced with hundreds of thousands of dollars in costs and dislocation from their homes during installation due to asbestos abatement and construction noise and debris that will continue for many months. Where will these people go and how will they afford it?

Already, the effect of this mandate is having a dramatic effect on homeowner property values, which will translate into lower property taxes for the City.

If the Board of Supervisors believes that this mandate is absolutely necessary, then the City should come up with funds to pay for this rather than force its middle-class residents living on fixed incomes to pay for it.

In the absence of funding from the City, we ask that the Board of Supervisors amend the proposed new fire code to limit the requirement until a building undergoes a major renovation, extend the compliance deadlines, and create an unbiased committee to determine practical fire safety

alternatives to the installation of fire sprinklers in these buildings.

Thank you.

Laura Higbie

We respectfully urge the Mayor and Board of Supervisors to adopt a clear and measured approach to San Francisco's high-rise sprinkler retrofit requirement for buildings.

While we support effective, reasonable fire-safety measures, this one-size-fits-all mandate fails to account for critical differences among buildings and has unintended consequences that threaten housing stability and affordability for thousands of San Franciscans. The high financial costs (as high as $300K per condo) and construction work needed to implement the sprinkler retrofit could un-necessarily displace thousands of residents.

We respectfully request that you:

• Legislatively establish an official Technical Advisory Committee consisting of subject matter experts such as structural engineers, architects and others to examine the feasibility of the sprinkler retrofit mandate on impacted buildings.

• Delay implementation and enforcement of the sprinkler retrofit mandate until the Technical Advisory Committee officially releases its findings.

Fire safety and housing affordability must advance together. Without reforms, the sprinkler retrofit mandate risks displacing thousands of residents while imposing costs that far exceed any realistic possibility for many buildings.

Signed

James Hirsch

I live in apartment 9A at 2200 Pacific Avenue in San Francisco. My building is concrete, with metal wall supports, eight foot ceilings, and fire sprinkled hallways; in other words, quite fire proof, as are many buildings on your list of buildings potentially requiring retrofits.

In the past 60 years, there have been no lives lost to fires in these buildings—four injuries caused by an electric scooter fire is the sum total of incidents. Does this record justify the enormous costs and displacements you would cause by the potential new requirements?

Our building, like many of the period, has eight foot ceilings. If the requirement that every room have fire sprinklers goes into effect, we would either have pipes running across every ceiling, or our ceilings would be of substandard (less than seven feet) height. In addition, it would be impossible to remain in the apartment while these modifications are installed. Do you really ask that all the tenants in all 126 buildings, many of whom are in my age group (I am 81), must relocate or become homeless for some months?

I have owned a house with a required sprinkler system in every room, and over a fifteen year period, had three incidences where the system developed a leak, causing damage to floors, walls, and furniture. With a retrofit system, I suspect there would be potentially more problems than with one installed as part of an initial build.

Do these potential problems and costs really outweigh the fact that no major injuries and no loss of life has been demonstrated where there are no universal fire sprinklers, but where many other fire safety features exist, such as fireproof building materials, hallway sprinklers, alarms, etc.?

Than you for your consideration.

Dear Supervisors Melgar, Chen and Mahmood,

We're writing on behalf of the Gateway Tenants Association (GTA) and for the residents within the almost 1200 highrise apartments at The Gateway Apartments & Townhomes. We are four rent-controlled 22- and 25-story apartment buildings built over three blocks in the mid-to-late 1960s as part of the Embarcadero - Lower Market (Golden Gateway) Redevelopment Plan, along with 58 townhomes built atop the three-level podium at our base.

The sprinkler mandate passed by a previous Board of Supervisors in 2023 received very little public review and has implications not well thought through. Today there's debate about the unit cost of adhering to the new sprinkler mandate, but we believe all acknowledge there would be considerable displacement involved. **In fact, we believe this would far surpass the likely displacement of rent-controlled residents that the City estimates might occur with the recently-adopted Family Zoning Plan.**

Other important considerations:
• Cost of inserting a sprinkler system into existing concrete buildings while dealing with hazardous materials remediation and the required public notices.
• Uneven capacity of the City water systems to support the addition of sprinklers in areas which may already be at capacity, e.g., when enclosing a Noe Valley sunroom in 2011, one of us was told the water supply in the street was inadequate to support even the one additional sprinkler required.

We support the amendments introduced by Supervisor Danny Sauter and Supervisor Stephen Sherrill, in collaboration with both Mayor Daniel Lurie and the Fire Department, to extend both the Step 1 and Step 2 deadlines by five years. We understand that this extension allows more time to discuss the exemption process and definition of undue hardship.

Finally, at some point within our lifetimes a major earthquake may occur, which could cause major damage and displacement in many buildings subject to the sprinkler retrofit mandate. The ensuing need for capital improvements would be an ideal time in which to incorporate sprinklers or the most modern fire suppression technology available at that time. We urge that this also be considered during the extension.

Thank you for considering our concerns.

Sincerely,

Madeleine Trembley

Subject: Please Amend the High-Rise Fire Sprinkler Mandate
Importance: High

We are writing to urge each of you to pass legislation to amend the fire sprinkler mandate for existing residential high-rise buildings and to consider the severe financial and personal hardships that residents like us will face under the current requirement.

We fully support fire safety in our city. Our building, *The Nob Hill* at 1170 Sacramento Street, has complied with all previous fire-safety mandates, but this particular requirement goes far beyond what homeowners can, and should, reasonably bear.

Our building, like so many others in the City, has managed its finances prudently but has not prepared for such a capital expense. This mandate will create a significant hardship for all owners (financially and emotionally as we

will be required to fund this work through either a significant special assessment or increased HOA fees and find temporary housing for an extended period while the work is completed).

Please help create a pathway that protects safety while also protecting residents from unmanageable costs and disruption.

Thank you for your thoughtful consideration.

Roger Greer and Constance Moore

Dear Board of Supervisors,

I am writing as an owner of Cleary 66 Ct. to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings like ours and consider other feasible life safety measures for their residents. We are writing to express our deep concern that if this mandate is enforced without amendment, the consequences, not only for my household but also my neighbors', will be severe and immediate.

1. Family Disruption: As an immigrant family of four with two elementary-aged children, any construction lasting more than one month would be profoundly difficult. We do not have families or relatives we can go to. Especially that our children are placed in two different public schools in the city by SFUSD. This extended project would force a non-ideal relocation to us, creating a disruptive change to our crucial daily routines and our children's schooling, in addition to the significant unbudgeted costs and major logistical challenges. It would be a very undesirable situation for any family, especially those with children. Children would no longer have a safe and stable home which would be bad for their well-being.

2. Financial Burden and Extreme Hardship: This unfunded mandate will impose an unforeseen and unrealistic capital assessment on fixed-income residents and modest savers. Our monthly HOA fees have already escalated by nearly 50% in the last four years, which has already been difficult. Not that there has been no support on that, but imposing a multi-thousand dollar per-unit cost of this retrofit would place an extreme and unsustainable financial hardship on our fixed incomes and limited savings, compounding the stress we already face from the rising cost of essential expenditures. If the city chooses to proceed with this mandate, we strongly request the immediate establishment of a robust financial incentive or rebate program to make compliance feasible, as we lack the final resources to absorb this cost otherwise.

We are committed to safety but request to amend the fire code immediately. We seek alternative, feasible life safety measures that protect residents without compromising the stability of our community. Thank you for taking action to prevent this hardship.

Sincerely,
Tristan & Sharon
Parents/66 Cleary Ct owners

Dear San Francisco Supervisors,

I am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

As a senior with my medical conditions, it would be a significant health hardship for me to even begin to think of the idea to have to relocate (temporarily or permanently) for such a renovation to occur here at 66 Cleary Court. The stress alone would exasperate my current medical conditions.

It is widely understood that moving is considered one of the most traumatic events in a person's life. A temporary move would double this traumatic event since it would require the initial moving out and then moving back in. Not to mention, at this time it is not known exactly when in the future I would be required to move. But I would be further up in my years and most likely my health situation would possibly have advanced.

Being that we are in San Francisco, the financial cost would be exorbitant to perform the following:

- If I were to decide to sell, I would lose in the sale as this retrofit would not only make it extremely difficult to sell my condo in a timely manner but I would have to significantly reduce the sale price to even generate any buyer interest and/or I would have to pay the assessment price for the retrofit as part of the sale.
- Selling or temporarily relocating during construction, results in the following expenses:
    - The hundreds of thousands of dollars for the assessment cost I shall be required to pay as a condo owner at 66 Cleary Court
    - Moving & packing/unpacking expense to move out/in (split move expense if I am required to store some belongings)
    - Having lived at 66 Cleary Court for 20 years, temporary housing, which we all know is skyrocketing in San Francisco, would be egregiously more per month

than my current monthly living expenses (especial on a month-to-month lease as there would be no guarantee on the exact timeframe that I would need to vacate my condo).

- Utility expenses for both temporary housing and my permanent residence
- Temporary storage for furniture/belongings of a 3-bedroom condo
- As a person that does not drive, I may have added transportation expenses if I am not able to secure temporary residency near my doctors, grocery, etc.

I am sure there are more expenses I am not thinking of at this moment; however, I am also concerned with the effects on all the residents living here at Cleary Court. This type of financial expense could ruin livelihoods. Some people live paycheck to paycheck. I fear how many tenants would need to walk away from or sell their condos, which not only would ruin their lives but the long-term effect/burden for anyone remaining at Cleary Court should there be too many vacant units resulting in the loss of ongoing basic Home Owners Association dues for general maintenance.

Please take into consideration the above forementioned and make the honorable decision that maintains livelihoods for the residents of 66 Cleary Court and the other impacted buildings in our beautiful city that is San Francisco, which includes these older buildings.

Sincerely,

Mercedes Barberis

Subject: Fire Sprinkler Mandate
Date: Thursday, January 22, 2026 8:03:06 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisors,

I'm a longtime resident of a mid-1960s high-rise building that is home to many senior citizens. I request that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on alternative and affordable fire safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to, or discussion with, the affected buildings. It will add an onerous physical and financial hardship on our residents. If the code is not amended, my neighbors and I will incur costly special assessments that impose a significant financial burden on most of us who are living on fixed incomes. We will also be forced to relocate during a long construction period at a high additional cost, with major inconvenience and disruption to our lives.

Living in San Francisco is very expensive, but I love living in the City and don't want to move away. Please help us by alleviating this impending and unnecessary mandate.

From: John Hopkins
To: Board of Supervisors (BOS)
Subject: Fire Sprinkler Retrofit Requirement File 251247
Date: Friday, January 23, 2026 1:35:32 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

PLEASE HELP! The fire sprinkler mandate places an unreasonable physical and financial hardship on the majority of our 150 residents living in moderate priced housing.

We are a 70 and 74 yr old retired couple who have spent over 50 yrs contributing to our San Francisco community and supporting those in need. We moved into our condo building expecting to fully live out our retirement in the city we have loved since first coming here in 1973. We expected our (rare) middle class, moderate priced condo that we purchased would allow us to live out our final years comfortably (and modestly) given the high cost of living in San Francisco. We are shocked at the heartless decision and complete disregard for people's economic situation and the huge costs to our savings and well-being. Especially for seniors living on rapidly diminishing fixed income.

This law is a devastating blow to our retirement income. The anticipated $300,000.00 cost (and even a $50,000 cost) for this system wipes out a major part of our retirement savings. We will be forced to sell our condo at a major reduction ($300k less) and move out of the city which so many of our friends and community have been forced due to the high cost of living and lack of affordable housing. The hardship created by this requirement is huge and being driven from our home and loosing half of our retirement savings at this stage of life is devastating. Mentally it is very depressing as we have no other income or children to support us. We will have at least 9 years of our retirement savings wiped out in addition to a huge tax bill for taking out and depleting a major portion of our 401k savings.

We understand the concern for safety, however, a building with 18" cement walls, floors and ceiling will not burn down. Our units are composed of entire glass walls and sliding doors with a balcony off of every room. Surely some concessions should be made for the construction design and feasibility of our building and unlikelihood of being trapped inside due to hard wired smoke detectors in every unit and easy access out of our units onto balconies from every room. There have been a couple fires in the building and each of them easily extinguished, contained within one unit with no impact outside the individual unit where they started.

We understand more feasible mitigation efforts are being proposed to add additional life saving measures to our building. We implore you to consider less expensive options considering our buildings particular design instead of a blanket black and white policy. This measure will have a major impact on our seniors lives and the mental health and anguish this impact is having on us at this stage of our lives. We are completely distraught and implore you to show some compassion for our middle class and senior community faced with this insurmountable cost and loss of our home.

Sincerely,

John Hopkins

Hi BOS:

My wife and I purchased a small unit at Fontana East and only recently found out about a fire sprinkler mandate. The building we bought into has many current fire enhancements including multiple exterior exit routes and sprinklered common areas. Requiring that the fire sprinkler meet the standard as though the building was built new today is unimaginable and economically unfair.

For one the ceiling heights will not accommodate unplanned/ not originally designed piping, major holes will need to be drilled through cast in place concrete walls, meter upgrades and pipe runs vertically through the structure will all cause more impacts than benefits.

This impact will cause people to have to move out, and the cost will be beyond outrageous. I can see this costly easily $200,000 for our unit plus all the associated common changes, fees, permits and inspections. We can not afford to do this, we are already stretching ourselves in order to live in such an expensive city.

I know that it is common for sprinklers or other changes to be required when a homeowner does a major remodel but in this case we are planning to tear up the building. I have never heard of this overreach by the authorities in any place in the world. I guess San Francisco has a reputation for excess regulation and overreach by the public sector and I suppose this is the proof.

I would prefer if the Board was to reconsider this mandate and remove it entirely.

Sincerely,

JOHN MERTEN

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

My wife and I have lived at 1200 California Street in San Francisco since 2008 in a 26 story high rise made out of reenforced concrete. Each floor has two exists onto an external concrete staircases on opposite sides of the floor open to the air. Each floor has steel fire exit doors to greatly reduce the likelihood of smoke and flames from going into the stair case. We have a variety of fire protection systems that are fully functional and are making significant capital cost upgrades in next two years. We have had no fire incidents I am aware of since we moved in. We are retired on fixed income.

We object to the pending fire ordinances fir high rise buildings that requires sprinklers in each unit. This is very expensive and unnecessary. We will not have use of our apartment for months.

Thanks,
Bob

Subject: Sprinkler Mandate Update
Date: Friday, January 23, 2026 5:32:38 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Hello, as a shareholder at Fontana East, we are extremely disappointed to hear of a potential mandate to install sprinkler systems in every unit across 22 buildings.

To say that lives will be disrupted is a gross understatement. It would not be surprising if a large number of residents are forced to leave the city, not only because of the construction disruption but also the cost that buildings will levy on residents, making potential unit sales difficult at best and driving down the value of the properties, at least in the short term. Some residents literally may have nowhere to go or may be physically unable to move.

We urge you to reconsider this project in the interest of fairness to all whose lives will change, and highly likely not for the better, as a result of this mandate.

Thank you.

Dear Board of Supervisors,

I am a longtime San Francisco resident and bought a studio in Cathedral Hill Tower for what I thought would be my retirement in the city I love. I am not rich, and the fire sprinkler retrofit requirement may imperil my ability to remain in the city given the massive expense required to retrofit sprinklers in an already-constructed concrete building. I want to forward this to you and ask that you consider revising this requirement so that it doesn't force people like me out of their homes in the city.

Thank you.

James Ruggiero

Fire Marshal Law-

At the recent Fire Commission Meeting and in our meeting with Chief Crispen, you and Chief Crispin stated that approximately 70 buildings have submitted documents indicating they will comply with the retroactive installation of automatic fire sprinklers pursuant to the 2022 San Francisco fire code. I understand our property at **1200 Gough Street** is included on that list.

I would like to be clear that our building is opposed to the imposition of this requirement and ask that you NOT imply that we are supportive and have the means to comply with the regulation. This form was merely returned to you to meet the reporting deadline and was not intended to confirm that we were in a position to comply, as no research or plan had been developed at that time. If there is a form that we need to complete to remove our building from this list, please advise.

Please confirm receipt of this request and let me know if you have any questions. As stated several times publicly and privately, our building is not opposed to fire safety measures. In fact, we welcome a dialog with you and your team on ideas for implementing financially reasonable, practical and effective measures that would improve fire safety in our building. After all, these are our homes.

-James Ruggiero

Subject: Sprinkler Regualtions
Date: Saturday, January 24, 2026 10:12:13 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

My name is Susan Fisch and my husband and I are senior citizens living in D3. I am writing to you on behalf of the proposed sprinkler requirements for older apartment buildings. To require that every apartment install sprinkler systems in every room of their apartment is just ludicrous. The cost for the installation could be as much as $300,000 or more for us, and that doesn't even take into consideration the cost involved in having to move out of our apartment while the installation is taking place. Where would we go? What would we do with our furniture? We are senior citizens living on a fixed income, like many of our neighbors. Although we might not be financially ruined, there are neighbors in our building who would be, as well as seniors in many other neighborhoods . It is clear that the unions are supporting this measure because they stand to make millions of dollars for their members. To believe that the union support is motivated solely because of their concern for our safety is too incredulous to be believed. And to give them voting power on the TAC is a conflict of interest that is just staggering .

Many US cities (including Los Angeles and San Diego) has looked at similar regulations, only to ultimately refuse to implement them (we have done the research on this subject). Throwing senior citizens out of our homes because of your concern for our safety is ridiculous, and you know that. Allowing the unions to decide what happens to us is an abomination . Is passing this measure the political legacy that you want? Is this your version of upholding San Francisco values – causing over 10,000 people to potentially lose our homes and be forced out on the street?

Dear San Francisco Board of Supervisors,
As a co-owner of a unit in 66 Cleary Court, I am adding my voice and concern over the questionable rules adopted requiring fire sprinkler systems in the older condominium and apartment buildings. While building safety ought to be a major concern, how it is implemented is also of great concern.

Our unit would be one of those impacted to absorb incredibly great costs, vacant tenancy and a host of other problems that will worsen housing availability and affordability unless less severe restrictions are considered and adopted.

Please listen to those of us who understand the problems and re-work the retrofit requirements to not cause such undue harm.

Thank You,
Gerald Kay,

SF Board of Supervisors,

We am writing to request that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings. The initial fire sprinkler mandate was passed with little discussion or assessment of its feasibility and cost. We hope that this email arrives in time for you to consider some alternatives.

My wife and I will retire this year and had hoped to age in place in our apartment. But this mandate to install sprinklers in our apartment will cost us far more than we can afford, and burden us with staggering debt. According to the latest estimates, installing sprinklers in our merged apartment will cost us $500,000 to $600,000! We would be forced to take out loans that would take years to pay down. Otherwise, we may need to sell our apartment, but the sprinkler assessment would then pass to a buyer and make it far more difficult to sell our unit. Finally, the construction itself would also take several months to complete, forcing us to find alternative housing.

All our residents want our building to be safe. We have complied with all the previous mandates the Fire Department has implemented to make our building safer, including recent updates to our alarm and first responder communication systems. However, the requirements of this mandate go beyond what is affordable.

Unfunded mandates of this scope add to the burdens that make San Francisco unlivable for most people. Please, on behalf of ourselves and other apartment dwellers in San Francisco, reconsider this requirement. We urge you to amend or reconsider the fire sprinkler retrofitting mandate for older high-rise buildings and to consider other feasible safety measures to protect our residents.

Thank you,

Peter Nuth

Dear Supervisors and Mr. Mayor,

I am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on our residents.

If the code is not changed, my expected cost would be comparable with my current annual salary. Relocating during the retrofit, and the cost associated with that, would also be an expensive hardship. In short, I'd probably have to move out and take a considerable loss on my property value.

Further, the demographics in our building skew to a more senior population. Many people face health issues and/or live on fixed incomes. For this group, the assessed cost may be prohibitive to their retaining their ownership, and even if they can absorb the cost, relocation to an accommodating temporary home, for some, may be infeasible.

We have recently had a meeting at Fort Mason with Supervisors Sherril and Sauter and the mayor's representative wherein many very germane opinions were voiced by residents. I hope that you may be able to review recordings. At the time of the meeting, the supervisors and the mayor's representative in attendance were very supportive of our position. It is very disappointing to hear that the mayor himself may have reversed course. I sincerely hope that he will reconsider.

Thank you very much for your consideration.

Regards,

Michael Tognarelli

Subject: RE: Fire Sprinkler Retrofit Requirement File 251247
Date: Saturday, January 24, 2026 3:38:49 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Members of the San Francisco Board of Supervisors,

I am writing as a homeowner at **Fontana East** to state in the strongest possible terms my **opposition to the proposed sprinkler retrofit mandate** for existing high-rise condominium buildings. This mandate is not only financially devastating but raises serious questions about fairness, legality, and government overreach.

1. The Proposed Mandate Would Impose Financial Hardship of an Unprecedented Scale

Retrofit estimates for buildings like Fontana East run into the **tens of millions of dollars**, translating into **hundreds of thousands of dollars per unit**—costs that would be pushed entirely onto homeowners.
This is not a "minor improvement" or a manageable assessment. It is a **catastrophic financial blow**.

Many of our residents are seniors, long-term owners, and individuals living on fixed or moderate incomes. A mandate of this magnitude would effectively force them out of their homes. This is **displacement via legislation**, and it is unacceptable.

2. Legal and Equity Concerns

The City must seriously consider whether it is **legally defensible** to require:

- Individual homeowners to fund a massive infrastructure project they did not cause
- Retroactive compliance on buildings that met all codes at the time of construction
- Mandates so burdensome that they threaten property ownership and housing stability

Such a law could be subject to legal challenge under:

- **Takings Clause concerns** (imposing extreme costs without compensation)
- **Due process concerns** (retroactive burdens without necessity or reasonable justification)
- **Equity and discrimination concerns** (disproportionate impact on seniors and fixed-income residents)

Other cities that attempted similar mandates were forced to revise or abandon them once the financial and legal implications became clear.

3. Massive Construction Intrusion and Health Risks

A building-wide retrofit of this scale requires:

- Opening ceilings and walls in every single unit
- Weeks of construction per residence
- Potential exposure to asbestos or other legacy materials
- Disruption for residents who work from home or have health issues

This is not simply an upgrade. It is a **multi-year, highly invasive construction project** taking place literally inside people's homes.

4. Fontana East Already Has Strong Fire-Safety Systems

Fontana East is a fire-resistive building with:

- A monitored fire alarm system
- Concrete construction
- Fire-rated walls and corridors
- Established emergency procedures
- HOA oversight and professional management

The City has **not demonstrated** that sprinkler retrofits would produce a safety benefit significant enough to justify forcing homeowners into financial ruin.

5. The Mandate Will Harm, Not Protect, the Community

If enacted, this mandate will:

- Cause **foreclosures and forced sales**
- Depress property values
- Drive out long-time San Franciscans
- Increase HOA delinquencies
- Destabilize an essential segment of the housing market

6. Reasonable Alternatives Exist

We urge the City to consider alternatives that provide safety without financial destruction:

- Performance-based evaluations
- Fire-alarm and smoke-control enhancements
- Partial retrofits
- Exemptions or waivers for buildings with strong fire-safety records
- Financial assistance or city-supported grant programs

The proposed sprinkler mandate is financially impossible, legally questionable, and socially harmful. It places an unbearable burden on residents and threatens the stability of communities like Fontana East.

I strongly urge you to **withdraw or substantially revise** this proposal and commit to a fair and economically realistic fire-safety strategy—one that protects lives **without destroying livelihoods**.

Thank you for your immediate attention to this critical issue.

Sincerely,
Ashley Marriott

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisors,

In his recent State of the City address, Mayor Daniel Lurie made it clear: making San Francisco affordable is his top priority. However, the current fire sprinkler mandate (File #251247) does the exact opposite.

I live in one of the impacted buildings. We are being told to prepare for assessments that could reach $300,000 per unit. For the many in my building , this is not a "safety upgrade"—it is an eviction notice. You cannot claim to support housing stability while legislating the mass displacement of long-term residents.

We urge you to support the Mayor's proposal to delay this mandate and thoroughly re-evaluate its necessity.

Sincerely,

Jenny Gelbard

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors.
My name is Vic Scafani and I live at one of the high-rise residential buildings, the Fontana East, 1000 North Point St.,
where you are requiring a fully sprinkler-equipped system to be installed. The building here is primarily constructed of lots of concrete, steel, and drywall.
Even the doors are all fire-rated. It appears that there wasn't a stick of wood used anywhere during the construction. Everywhere one looks,
all one sees is concrete, steel and drywall. In addition, the Building recently completed the installation of a fire alarm system. I can appreciate
the Board's well intentioned interest in fire safety, however, this ordinance, if not altered, will certainly push me and countless neighbors
out of our homes, as it is very expensive and not to mention, very intrusive. I would have to sell at a loss, up to $300K. I can't afford to stay here.
Not only the increased HOA dues, moving expenses, renting a new residence, and all at the same time, the expenses continue here, while the
work is being performed. I definitely can't afford the huge HOA increase, and I can't afford to pay for two residences at the same time.
Please find a better solution to this situation, that still addresses fire safety, but that does not displace me out of my home, possibly even out of
the City that I love, the City where I was born, where I work, where I vote, where I pay lots of taxes, where my friends and family are, and where
I have lived all my life. Please do the right thing and protect us all from this unnecessary financial and personal hardship.

Sincerely,
Vic Scafani

Fire Sprinkler Retrofit Requirement File 251247

Dear all,
I am an owner and resident of 1835 Franklin Street, a building that will be affected by the fire sprinkler retrofitting requirement (San Francisco Fire Code. Sections 1103.5.4 through 1103.5.4.5.4)
I am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high- rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors. The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on all of us in the building.
We all understand the safety of fire sprinklers, but the retrofitting for our building is extremely expensive and creates logistical problems that our community is unprepared to deal with at this time.
I hope you consider this request to amend the sprinkler retrofitting requirement, it would be greatly appreciated by our community here on Franklin Street.
Thank you,

Renata Weigl

Dead board of supervisors,

I am a resident of one of the older high-rise buildings affected by the enacted fire sprinkler retrofitting requirement. I am writing to respectfully request that you take action to amend this mandate and work collaboratively with affected properties to develop feasible life-safety measures that protect both residents and visitors.

The current fire sprinkler requirement was implemented without prior notice or consultation with impacted buildings. As a result, it places an unreasonable physical and financial burden on residents—many of whom may not be able to afford the significant costs or disruptions involved.

I urge you to consider alternative safety solutions and engage directly with building representatives and residents to create a more practical and equitable path forward.

To the Members of the Board of Supervisors:

Please help and show some compassion and care for both working, middle class people and retired seniors on fixed retirement income. The reckless mandate for sprinklers is a major financial blow for those who cannot afford a huge assessment and whose only major investment (like most Americans) is in their home.

We (like many of those effected) cannot afford this cost and will be extremely hurt financially. Those of us seniors living on fixed incomes would have major changes to our standard of living, forced to find new housing (probably an RV for us) and possible bankruptcy. We will be driven out of our city and community that we have loved and contributed to for decades.

Show some understanding of the nuances in individual buildings regarding this matter and the alternatives to more gradually implement this change. Not everyone can afford $300,00 or even $50,000. The cost quoted by trade associations is a complete joke. The cost will be a huge sum of money which many of us do not have. It is cruel to expect people to come up with this amount of money. How do you expect retired seniors and middle-class people to afford this? Unlike what some may think, not all San Franciscans have deep pockets. This is an enormous amount of money which is impossible for us to absorb.

We are only able to afford to live here because we live on a reverse mortgage. This mandate will completely uproot us from our home, lose most everything we have in our condo in a city that offers no other affordable options to us.

We beg you for your help in keeping us in our homes and city we love. This is a major crises for us that is inflicting major stress and uncertainty into our lives. Please be reasonable and look at the major impact this will have on so many.

Subject: Fire Sprinkler Retrofit Requirement File 251247
Date: Sunday, January 25, 2026 7:59:44 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear San Francisco Board of Supervisors,

I am writing as a **San Francisco resident and shareholder at Fontana East** (1000 North Point Street, San Francisco, CA 94109) to express my **strong opposition** to the proposed mandate requiring existing high-rise residential buildings like ours to be fully sprinkler-equipped.

I urge the Board to oppose a one-size-fits-all sprinkler retrofit mandate for older, low-risk high-rise buildings. The requirement would create **substantial** and **unnecessary financial hardship** for us, and potentially permanently displace long-term homeowners, seniors, and families in our tight-knit community. In light of **San Francisco's ongoing housing affordability crisis**, imposing **additional high, involuntary costs** on homeowners is the last thing we need.

The significant financial and personal burdens of a full sprinkler retrofit in buildings like Fontana East are not justified by the marginal safety benefit, especially given our building's inherent structure.

- **Low-Risk Construction and Proven Safety:** Fontana East is a **concrete and steel structure** with a **proven safety record**. This construction type provides superior **fire resistance and compartmentalization**, already mitigating fire risk effectively alongside existing robust safety systems (e.g., alarms, fire doors). A **gallery** on every floor that runs the length of the structure provides ample opportunity to **escape fire zones**.

- **Targeting the Wrong Risk Profile:** A mandate that fails to differentiate between high-risk structures and robust, fire-resistant buildings like ours is **inefficient public policy**. The focus should be on high-risk buildings, or on retrofits during significant renovations, where costs and disruption can be managed.

- **Exorbitant and Disproportionate Costs:** The necessary special assessments for shareholders to cover **permits, infrastructure (water, backup generators), and sprinkler installation** are on the order of $1,000s/month, **financially unsustainable** for us and particularly others on fixed incomes, forcing them out of their homes.

- **Major Personal Disruption and Relocation:** The installation requires **invasive work** in every unit, necessitating the removal and replacement of ceilings. This will require **us to relocate for an extended period**, incurring substantial personal expense and emotional stress on top of the financial assessment.

Imposing this mandate without considering the actual risk profile and the extraordinary impact on existing homeowners is unreasonable and only **exacerbates San Francisco's housing affordability plight.** Please reconsider this proposal and exempt existing, low-risk, concrete

and steel high-rise residential buildings like Fontana East from this sweeping mandate.

Thank you,

Members of the Board of Supervisors,

I am a unit owner at 1200 Gough Street (Cathedral Hill Tower). I am writing regarding **File 251247** to express my deep concern over the retroactive fire sprinkler mandate as it is currently structured.

A comprehensive feasibility study must take place before this mandate is adopted or enforced. As a resident making ends meet, the cost to our building represents a staggering financial burden that many of us simply cannot absorb. The City must acknowledge that for many of us, this mandate is not just a safety measure, but a financial crisis that threatens our ability to remain in our homes.

At the recent Fire Commission Meeting and in our meeting with Chief Crispin, it was stated that approximately 70 buildings have submitted documents indicating they will comply with the retroactive installation of automatic fire sprinklers. I understand our property at 1200 Gough Street is included on that list.

I would like to be clear that our building is **opposed to the imposition of this requirement** and ask that you **NOT imply that we are supportive and have the means to comply**. Our previous filing was merely to meet a reporting deadline and was not intended to confirm we are in a position to comply, as no research or plan had been developed at that time. If there is a form needed to remove our building from this "compliance" list, please advise.

Please confirm receipt of this request. As stated several times, our building is not opposed to fire safety measures. In fact, we welcome a dialog on implementing financially reasonable, practical, and effective measures that would improve safety without displacing residents from their homes.

Sincerely,

Nawid Jamali 1200 Gough Street, Unit 7C

Fire Marshal Law

At the recent Fire Commission Meeting and in our meeting with Chief Crispen, you and Chief Crispin stated that approximately 70 buildings have submitted documents indicating they will comply with the retroactive installation of automatic fire sprinklers pursuant to the 2022N San Francisco fire code. I understand our property at **1200 Gough Street** is included on that list.

I would like to be clear that our building is opposed to the imposition of this requirement and ask that you NOT imply that we are supportive and have the means to comply with the regulation. This form was merely returned to you to meet the reporting deadline and was not intended to confirm that we were in a position to comply, as no research or plan had been developed at that time. If there is a form that we need to complete to remove our building from this list, please advise.

Please confirm receipt of this request and let me know if you have any questions. As stated several times publicly and privately, our building is not opposed to fire safety measures. In fact, we welcome a dialog with you and your team on ideas for implementing financially reasonable, practical and effective measures that would improve fire safety in our building. After all, these are our homes.

I am a resident of 1200 California Street. **I am pleading with you to realistically review** the fire sprinkler mandate for high rise buildings.

I feel the city is creating a huge NEW problem now while its residents are dealing with many more serious issues.
San Francisco is not affordable for most residents - most major cities are not.

This new rule totally ignores the actual cost and feasibility of installing this many sprinklers. The cost is unknown in 2025. No one in the city has done an accurate and current study of this project.
No need to has visited one of the 126 buildings and walked through all the issues and problems.
The city cannot provide enough water pressure to make this system work effectively - especially in buildings at the top of Nob Hill.

No one is considering the disruption to daily life while these repairs are performed.
No one is considering where older people like me will live while this is happening.

The very tight limits of the Davis-Stirling rules prevent budgeting enough money for these projects in the time line specified.

If you survey the residents involved, you will find out what a trauma and problem this is becoming. we are the ones who have stayed in the city, paid our taxes and rooted for our leaders to do the right things to save San Francisco and its reputation.

We need COMMON SENSE and empathy from our government officials.
This is clearly missing here.

It is time for a realistic review of this proposal and some real leadership from the Board of Supervisors.

Please do not disappoint us.

Board of Supervisors,

My wife, Elizabeth, and I reside in the Royal Towers at 1750 Taylor Street and have been residents of the Bay area for over forty years. We also are retired and rely on fixed income and investments to support ourselves.

The Sprinkler Retrofit Requirement File 251247 in its current form would cause serious hardship for us. It would strain our limited financial resources, cause very serious issues with respect to relocating during any construction and be extremely disruptive to our day-to-day life as well as our future plans. It is highly likely that we would have to relocate out of San Francisco.

We strongly request that you consider revoking the Sprinkler Retrofit Requirement File 251247. Feel free to contact us if you would like any additional information. Thank you.

To Supervisors Sherrill & Sauter,

Thank you for your leadership and advocacy on behalf of residents in the buildings affected by the sprinkler retrofit mandate. I am one of those residents, and I truly appreciate your work in securing the three-year extension, which has provided a critical financial reprieve for many homeowners.

That said, I am concerned that the extension has also created serious unintended hardships that deserve urgent attention.

As you know, the announcement of the mandate has effectively frozen sales in the 126 affected buildings. Adding three more years to this uncertainty risks deepening that freeze, with devastating financial consequences for many residents. I hope your office is also hearing from realtors and lenders, who are seeing firsthand how this has disrupted the market.

I have seen these impacts directly in my own building. A young family on my floor was preparing to move to the suburbs when news of the ordinance broke. Since then, they have been unable to sell their unit, leaving their plans, finances, and future in limbo.

Even more troubling is the situation of a neighbor who is in the early stages of Alzheimer's disease. As her condition progresses, she will almost certainly need to sell her unit and move into memory care—likely well before the three-year extension expires. Under the current conditions, she may be unable to find a buyer at all, or may be forced to sell at a steep loss, potentially leaving her without sufficient funds to pay for the care she will need.

These are not isolated cases. For thousands of residents across the 126 buildings, the ordinance risks causing severe financial harm, and in some cases, financial ruin.

I respectfully ask: what solutions are being considered to address these unintended consequences, particularly for residents facing time-sensitive life events such as illness, relocation, or family needs?

Thank you for your continued service and for considering the real-world impacts of this policy. I appreciate your attention and would welcome any guidance or next steps your office can share.

Sincerely,
Ramona Rideout

As a San Francisco resident and shareholder at Fontana East, I strongly urge the Board of Supervisors to reject a one-size-fits-all sprinkler retrofit mandate for older, low-risk high-rise buildings like Fontana East. This building is a concrete and steel structure with a proven safety record. The proposed requirement would create extreme financial hardship for me and for many other residents, potentially displacing long-term homeowners, many of whom are seniors. It will make units in this building virtually unsalable.

As an octogenarian and longtime resident of this building, the cost of a sprinkler retrofit would cause me personal and financial hardship. The associated costs would include obtaining permits, installing water and backup generator infrastructure, and adding sprinklers in every living space. These costs would be enormous and would be an undue burden on me and many other long-term residents. This project would likely necessitate special assessments for all shareholders and could require *temporary relocation* during ceiling and system installations. The costs and prospect of temporary relocation could cause many of us to seek another residence, and where could we go in the current San Francisco market?

I would like to know if San Francisco or any of its agencies has made an actual study of the frequency of and damage caused by fire in any steel and concrete high-rise building. Without such evidence, the effect of the retrofit requirement would clearly cause harm to residents with out any showing of a need for the requirement.

I respectfully ask the Board to reject this unnecessary and costly mandate.

Marian Halley

Dear Board of Supervisors

As a 60+ year San Francisco resident, shareholder of Fontana East, and small property owner, I strongly urge you to oppose a one-size-fits-all sprinkler retrofit mandate for older, low-risk high-rise buildings like ours.

Like Fontana West, our building is a proven safe, concrete and steel structure. This mandate would create extreme financial hardship for many residents, potentially displacing long-term homeowners, seniors, and families. If we have to move out of our unit for an extended period of time, we will increase the need for temporary rental housing in San Francisco. If we move outside of San Francisco, there's a chance we may not return.

As someone who has worked in San Francisco for many years, I have seen firsthand how city policies can impact the lives of working families. This mandate would worsen an already depressed condo real estate market, devaluing our homes and undermining the stability of long-term residents. All of this is being done without clear cost data, relocation planning or phased alternatives. Please consider a more targeted approach that addresses actual risk, rather than imposing a costly burden on safe buildings and their long-standing residents.

Sincerely,

Joyce Chan, 1000 North Point Street, San Francisco, CA 94109

Date: Tuesday, January 27, 2026 2:48:47 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

To the San Francisco Board of Supervisors:

I write to you as President of the Board of Directors for the Comstock Apartment Corporation to address the problems the proposed Sprinkler Mandate will cause for them; and for you to take into consideration when you vote on February 9.2026.

The better part of a majority of our residents are seniors (my wife and I are 80 years old). Most are retired and live on their retirement funds; as to be expected in this age group, many suffer from the types of illnesses and physical restrictions one encounters in this population. The potential requirement of retrofitting sprinklers in their apartments (their homes) resulting from compliance with the Sprinkler Mandate, will cause major disruption, both physical and financial, into their lives.

Financial Issues:

As a cooperative apartment, each resident pays a monthly assessment for the operation and maintenance of the building; and to build reserves for future repairs. These assessments which begin at $1500 a month and rise by as much as a factor of 2x, depending on the size and location of their apartment; and are subject to yearly increases (this year by 7.5%). Installation of sprinklers and associated plumbing will trigger special assessments needed to pay for this work.

As a cooperative apartment, each resident is a shareholder in the corporation and a lessee of their apartment, making them essentially their own landlord; there is no developer or non-resident owner of the building. As a necessary result of the sprinkler retrofit, each resident must vacate their apartment, pay to move and store their furnishings and rent another place to live as the construction in the apartment progresses. The resident will still be financially responsible for their assessments, regular and special.

As each supervisor can empathize, based upon their own or family members' circumstances, this financial burden, at a senior age, may well determine the future of their lives; money spent to allow the retrofit will come from the same budget as assisted living and health needs.

Health Issues:

The need to move and relocate will impact those tenants with existing health issue and those with physical limitations, as each will need to find new housing that accommodates their limitations and all will need to live in some proximity with their doctors, which with San Francisco's housing shortage will be difficult. There is also the attendant mental strain arising from locating new housing, the financial costs and disruption to their lives that this will

impose on them. Many residents have lived at the Comstock for several decades and do not have the resources to manage all of this; even to younger and healthy owners, this will be a daunting task.

On behalf of my residents, I ask this governing Board to take these inevitable hardships into the balance of weighing, modifying, considering exemptions and adopting this legislation.

Very truly yours,

Neil R. Bardack
President of the Board of Directors
The Comstock Apartment Corporation

To: San Francisco Board of Supervisors;

I hope you will take time to read this and carefully reconsider the impact of the retrofit of fire sprinklers in our city.
I am greatly and particularly concerned about the mandate to retrofit our sprinkler system at Royal Towers at 1750 Taylor Street.
With great respect for the good intentions of the Board of Supervisors, the consequences of displacement and construction seem beyond reasonable and perhaps not fully considered.
I urge you to immediately pass legislation amending the San Francisco fire code regarding the current fire sprinkler retrofit mandate in high-rise residential buildings.
Asking residents to leave their homes for extended periods of time while at the same time their belongings remain at risk during any construction process is a burden that should never be imposed upon us, especially when all alternatives have not been duly considered.
The negative financial hardship for many residents is onerous and impossible to bear.
We have owned our unit in this building for over 40 years. Unfortunately, the cost of complying with this mandate, both in financial and physical terms, will be devasting. The full extent of the mandate implementation costs are currently unknown but could certainly be $250,000 or more per apartment and the construction process would require me to relocate for an unknown period. Already we are aware of what the many difficulties in getting buyers for apartments in our building because of the uncertainty related to this mandate.
All our residents want our building to be safe. We have complied with all the previous mandates the Fire Department has implemented to make our building safer, including recent updates to our alarm and first responder communication systems. However, the requirements of this mandate go beyond what is affordable and reasonable.
I am asking you for your support in providing relief from this mandate.
Sincerely yours,
Joan Silber
owner in Royal Towers, 1750 Taylor

Subject:	Repeal or Amend Fire Sprinkler Ordinance
Date:	Tuesday, January 27, 2026 3:27:08 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Mayor Lurie and Supervisors Sauter, Sherrill and Mandelman,

I hope you appreciate the looming housing crisis posed by fire sprinkler ordinance SFC11035.4 and will take action to repeal or amend it. I live at 850 Powell Street a 9-story building (126 feet tall) at the corner of Sacramento Street at the edge of Chinatown. It was built in 1923 with the 1906 earthquake and fires very much in mind to the best standards with a steel frame, and poured concrete walls, floors and ceilings. We have ample fire escapes, alarms and fire sprinklers installed throughout our hallways, as well as in multiple rooms in our units. I support *reasonable* changes to our building to support increased fire life safety, but it's incomprehensible how this ordinance would substantively increase the level of safety in our building relative to the extreme cost it would take to retrofit the entire building of 40 units to add sprinklers in every room. Proponents of the ordinance include the pipefitters unions and companies who would stand to benefit financially from the misery it would cause to thousands of residents living in the affected San Francisco buildings. They have not demonstrated why this ordinance is needed. Aaron Peskin was behind this ordinance, and we all know about his anti-housing track record!

This ordinance would be financially devastating to me and to many other retirees as well as younger people living in our building. I understand that the ordinance covers over 120 buildings with nearly 10,000 apartments. We simply cannot afford to bear the expected $200k-$300k cost per unit to retrofit our building with additional fire sprinklers AND pay the cost of living elsewhere for an unknown amount of time (many months at least!) while demolition and construction to our apartments is being done. Plus, displacing thousands of residents from 10,000 units during the construction will only exacerbate the city's current housing crisis by flooding the rental market with current residents needing alternative housing. This would significantly drive-up rents while depressing condo property values.

I urge you to amend or repeal this ill-conceived ordinance and instead work with your constituents to find more practical ways to safeguard our homes from the possible threat of fire.

Sincerely,

Greg McCurdy

Subject:	Strong Objection to Fire Sprinkler Retrofit Requirement File 251247
Date:	Tuesday, January 27, 2026 6:31:01 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors,

I am once again writing this email to voice my urgent objection to the fire sprinkler retrofitting requirement for older high-rise buildings. My husband and I, along with our 5-year old daughter have lived here happily for the last seven years. Our neighborhood is a wonderful, family-friendly place with great schools and local businesses we love to support.

The estimated cost for each unit based on the proposed mandate is between $200,000 - $300,000, or an additional monthly cost of $3,000/month for nine consecutive years. I work in healthcare at Sutter CPMC Van Ness, while my husband is currently laid off and searching for a job. Neither of us work in an industry that even remotely allows us to bear this additional monthly burden.

Additionally, as our family would be forced to move out for at least 6 months due to potential construction, we would be in dire straits given the struggles to find and pay for alternate housing. This may result in us being forced to relocate out of SF, which would be devastating to us and the community we've created here, as we've always planned to plant roots in SF for generations to come.

I urge you to please consider the ramifications of such an extreme mandate on thousands of local residents and families. As our elected supervisor, I trust that you work for the well-being of local families who love and want to continue to make SF a wonderful place to live. Please amend this mandate. We look forward to working together with our buildings to enact more feasible, and even more effective safety measures.

Thank you,
Lois Chen

Subject: Please revisit sprinkler mandate

I am writing to express serious concern about the proposed fire sprinkler mandate for pre-1975 high-rise condominiums. I support better fire safety, but the ordinance in its current form would create severe financial and social harm for thousands of residents.

Estimated retrofit costs range from $113,000 to $300,000 per unit, which could translate into thousands of dollars in new monthly HOA fees or loan payments. These retrofits require opening walls, ceilings, and sometimes surrounding streets, which means major disruption and likely displacement for many residents.

The ordinance also provides no plan for where displaced residents will go, even though thousands could be forced out during construction. Many affected homeowners are seniors, fixed-income residents, and long-time community members who cannot absorb six-figure costs or months of displacement. This risks pushing vulnerable people out of their homes and undermining property values.

There are also fairness and process issues. Homeowners bear the full cost even though lower-cost alternatives, such as upgraded fire-resistant doors or partial sprinkler systems, were not fully evaluated. The proposal has moved forward without an updated independent cost-benefit analysis and with limited public input.

Sincerely, Susan Roos

66 Cleary Court

I respectfully urge you to pause the ordinance and pursue a more balanced approach. A new independent study, real financial relief or hardship protections, and a clear relocation plan are essential. The city should fully consider safer and more affordable alternatives before imposing costs that many residents cannot withstand.

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

To the San Francisco Board of Supervisors:

I am writing to urge you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate places an unreasonable physical and financial hardship on our residents.

If the code is not changed, I don't know how I and my fellow residents will be able to afford the cost, which I am told could be as high as $300,000 per unit. And how would I be able to live if I have pipes hanging only 7 feet above my floor? What will happen if I have to sell my unit to move to a Senior Community? Who would buy such a unit?

I understand that this measure is an attempt to improve fire safety, but it is unreasonable and unworkable.

I have always felt that San Francisco was a great place to live and I loved being here.

But this measure, if not amended, shows that the Board of Supervisors give no thought to the consequences their mandates have on San Franciscans.

Please do not let this mandate remain as it is. Please amend the fire sprinkler retrofitting requirement.

Subject: Repeal or Amend Fire Sprinkler Ordinance SFC11035.4
Date: Wednesday, January 28, 2026 3:54:32 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Mayor Lurie and Supervisors Sauter, Sherrill and Mandelman,

I am wring to request that you repeal or amend SFC11035.4.

I live at 850 Powell Street a 9-story building (126 feet tall) at the corner of Sacramento Street at the edge of Chinatown. It was built in 1923 with the 1906 earthquake and fires very much in mind to the best standards with a steel frame, and poured concrete walls, floors and ceilings. We have ample fire escapes, alarms and fire sprinklers installed throughout our hallways, as well as in multiple rooms in our units. I support *reasonable* changes to our building to support increased fire life safety, but it's incomprehensible how this ordinance would substantively increase the level of safety in our building relative to the extreme cost it would take to retrofit the entire building of 40 units to add sprinklers in every room.

Please be advised that when I purchased the condo, I asked the inspector about earthquake safety and he stated that 850 Powell was one of the best build condo buildings in San Francisco on some of the safest ground. I will never forget him stating that if 850 Powell collapsed, all of SF would probably be gone.

Proponents of the ordinance include the pipefitters unions and companies who would stand to benefit financially from the misery it would cause to thousands of residents living in the affected San Francisco buildings. They have not demonstrated why this ordinance should apply to 850 Powell.

I understand that the ordinance covers over 120 buildings with nearly 10,000 apartments. It is a blanket ordinance that is being applied whether or not it is truly required.

This ordinance would be financially devastating to me, retirees as well as younger people living in our building. We simply cannot afford to bear the expected $200k-$300k cost per unit to retrofit our building with additional fire sprinklers AND pay the cost of living elsewhere for an unknown amount of time (many months at least) while demolition and construction to our units is being done. Plus, displacing thousands of residents from 10,000 units during the construction will only exacerbate the city's current housing crisis by flooding the rental market with current residents needing alternative housing. This would significantly drive-up rents while depressing condo property values.

I urge you to amend or repeal this ill-conceived ordinance and work with your constituents to find more practical ways to safeguard our homes from the possible threat of fire.

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisors,

I hope this finds each and all of you doing well.

I am writing to express my concern and opposition to the sprinkler retrofit mandate which affects 126 buildings throughout the city and approximately 15,000 city residents.

I am one of those who would be affected. I am a retired senior living on a fixed income and own a small apartment in the Hamilton in the Tenderloin, one of the affected buildings.

I respectfully ask you to reverse this mandate or to create an exemption for these buildings unless they undertake a "major" systemic renovation.

Even before the costs of relocating during a sprinkler retrofit are calculated, the estimated expense for these retrofits is between $10,000 and
$300,000 per unit. These added expenses would very likely lead to my having to leave my home.

Also, this retrofit mandate increases the risk that property values will continue to decrease in my building. They have already fallen by over 30% since the pandemic, a reflection of the appalling conditions in a neighborhood that has suffered city neglect.

This regulation was mandated without a transparent process, no feasibility studies, and with no homeowner input.

Why don't homeowners and taxpayers have a say in this? Instead, only building unions have been given the opportunity to weigh in on these requirements.

Further, a 2016 study for the Board of Supervisors which indicated there would be financial hardship and provided alternatives, did not appear to have been considered in the decision-making process.

Please discuss this matter as a board and either reverse this mandate or create the exemption noted above.

Thank you for your consideration and for your service to the residents of our city,

Linda Mantel

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors,

I am writing as an owner of Cleary 66 Ct. to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings like ours and consider other feasible life safety measures for their residents. We are writing to express our deep concern that if this mandate is enforced without amendment, the consequences, not only for my household but also my neighbors', will be severe and immediate.

1. Family Disruption: As an immigrant family of four with two elementary-aged children, any construction lasting more than one month would be profoundly difficult. We do not have families or relatives we can go to. Especially that our children are placed in two different public schools in the city by SFUSD. This extended project would force a non-ideal relocation to us, creating a disruptive change to our crucial daily routines and our children's schooling, in addition to the significant unbudgeted costs and major logistical challenges. It would be a very undesirable situation for any family, especially those with children. Children would no longer have a safe and stable home which would be bad for their well-being.

2. Financial Burden and Extreme Hardship: This unfunded mandate will impose an unforeseen and unrealistic capital assessment on fixed-income residents and modest savers. Our monthly HOA fees have already escalated by nearly 50% in the last four years, which has already been difficult. Not that there has been no support on that, but imposing a multi-thousand dollar per-unit cost of this retrofit would place an extreme and unsustainable financial hardship on our fixed incomes and limited savings, compounding the stress we already face from the rising cost of essential expenditures. If the city chooses to proceed with this mandate, we strongly request the immediate establishment of a robust financial incentive or rebate program to make compliance feasible, as we lack the final resources to absorb this cost otherwise.

We are committed to safety but request to amend the fire code immediately. We seek alternative, feasible life safety measures that protect residents without compromising the stability of our community. Thank you for taking action to prevent this hardship.

Sincerely,
Tristan & Sharon

To the Board of Supervisors,
I am a homeowner at 66 Cleary Court condominiums in San Francisco. The fire sprinkler retrofit requirement would cause undo financial hardship for both me and my husband. Please consider grandfathering this mid-century building as an exemption to the new requirement. Our building is concrete. There is very low risk of being engulfed in flames.

Subject: Urgent Concerns Regarding Sprinkler Mandate – 999 Green Street

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Land Use Committee Members,

I am a San Francisco homeowner and a resident of **The Summit at 999 Green Street**, an existing residential high-rise. I am writing to express serious concern about the proposed fire sprinkler mandate as it is currently drafted.

For buildings like ours, the mandate would impose **extraordinary cost, disruption, and potential displacement**, with a particularly harsh impact on elderly residents and those on fixed incomes. While life safety must remain the priority, a one-size-fits-all requirement does not adequately account for the realities of older, well-built residential towers or for nationally recognized, performance-based alternatives that can achieve equivalent life safety outcomes.

I strongly urge you to support **meaningful extensions to the compliance timeline** and to ensure the Fire Code provides a **clear, workable path for alternative, performance-based compliance** where full sprinkler retrofits would create undue hardship with limited incremental safety benefit.

Thank you for your attention to this critical issue affecting many San Francisco residents.

Sincerely,

Enrico

Subject: SF High Rise Sprinkler Mandate Feb 9 2026 Hearing

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

My wife and I have lived at 1200 California Street in San Francisco since 2008 in a 26 story high rise made out of reenforced concrete. Each floor has two exists onto an external concrete staircases on opposite sides of the floor open to the air. Each floor has steel fire exit doors to greatly reduce the likelihood of smoke and flames from going into the stair case. We have a variety of fire protection systems that are fully functional and are making significant capital cost upgrades in next two years. We have had no fire incidents I am aware of since we moved in. We are retired on fixed income.

We object to the pending fire ordinances for high rise buildings that requires sprinklers in each unit. This is very expensive and unnecessary. We will not have use of our apartment for months.

Thanks,
Bob

Date:	Tuesday, January 27, 2026 6:31:04 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors,

I am once again writing this email to voice my urgent objection to the fire sprinkler retrofitting requirement for older high-rise buildings. My husband and I, along with our 5-year old daughter have lived here happily for the last seven years. Our neighborhood is a wonderful, family-friendly place with great schools and local businesses we love to support.

The estimated cost for each unit based on the proposed mandate is between $200,000 - $300,000, or an additional monthly cost of $3,000/month for nine consecutive years. I work in healthcare at Sutter CPMC Van Ness, while my husband is currently laid off and searching for a job. Neither of us work in an industry that even remotely allows us to bear this additional monthly burden.

Additionally, as our family would be forced to move out for at least 6 months due to potential construction, we would be in dire straits given the struggles to find and pay for alternate housing. This may result in us being forced to relocate out of SF, which would be devastating to us and the community we've created here, as we've always planned to plant roots in SF for generations to come.

I urge you to please consider the ramifications of such an extreme mandate on thousands of local residents and families. As our elected supervisor, I trust that you work for the well-being of local families who love and want to continue to make SF a wonderful place to live. Please amend this mandate. We look forward to working together with our buildings to enact more feasible, and even more effective safety measures.

Thank you,
Lois Chen

Date: Thursday, January 22, 2026 10:45:21 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors,

I am reaching out once again to emphasize the importance of this issue to myself, my family, and thousands of local San Francisco residents.

As a concerned resident, I am writing this email to voice my urgent objection to the fire sprinkler retrofitting requirement for older high-rise buildings. I currently reside in one of the potentially impacted buildings with my wife and 5-year old daughter -- we've lived here for the last seven years. If allowed to proceed, this mandate would cause an enormous financial burden that we as a family cannot possibly bear. The estimated cost for each unit is between $200,000 - $300,000, or an additional monthly cost of $3,000/month for nine consecutive years. This is well beyond our means, particularly as I have been recently laid off from work (to be frank, it would be well beyond our means even if I maintained employment). Further, our family would be forced to move out for at least 6 months due to potential construction, leading to struggles to find alternate housing, uprooting our daughter, and more.

I urge you to please consider the ramifications of such an extreme mandate on thousands of local residents and families. I request that this mandate be amended, and that you work together with our buildings to enact more feasible safety measures.

Thank you,
Julian Chen

I would like to submit the following comment to the land use committee regarding the proposed sprinkler mandate for older buildings:

I question whether the advocates for the sprinkler mandate actually care about real people's lives because they are on the cusp of imposing a requirement that will cause immense financial pain and disruption to the lives of thousands of people, versus the hypothetical possibility of saving lives at some point in the future. Who's to say that the burdens of the cost of the mandate and the disruption to the lives of those affected will not result in financial distress, depression, and illness that causes multiple premature deaths?

We, as a society, need to make rational decisions in the name of safety and preventing deaths. Why is it that we don't require older model cars to be retrofitted with the latest safety equipment - air bags, back-up cameras, and AI sensors? Why don't we just make it illegal to drive these "unsafe" vehicles? We do so because in the case of the automobile, common sense has prevailed. We do so because it would be economically irrational to impose this mandate in the name of safety. Similarly, we should not require older buildings to be retrofitted with sprinklers. This mandate is not justifiable given the cost and disruption to people's lives.

We supposedly live in a democracy, with a government of the people, by the people, and for the people. But the people most affected by this mandate do not have a vote in the matter and are simply at the mercy of bureaucrats and supervisors, mostly in other parts of the City, who will neither pay for the sprinkler retrofit nor incur the disruption in their lives. **One of my concerns is that the unions whose members will make a fortune installing sprinklers will donate thousands of dollars into the campaign coffers of all the supervisors to buy their votes on this issue.**

It's just so easy to impose these mandates on others in the name of saving lives, when you personally will not have to pay for it or live with the disruption. If you actually care about people's lives right now, not hypothetical lives in the futures, then please listen to us and do not abuse your power and authority by mandating this sprinkler retrofit.

Sincerely yours,

Subject: Request to revisit Fire Sprinkler Mandate for unaffordability
Date: Thursday, January 22, 2026 8:00:40 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I am writing to ask for the Board to revisit the San Francisco fire code provisions requiring a full sprinkler retrofit in existing high-rise residential buildings. As currently drafted, this mandate would impose extraordinary financial and logistical burdens on residents like me—and risks unintended consequences for the long-term livability of our city.

I have made my home in the Royal Towers building for 30 years and have survived 2 fires in the building unscathed – one of which was across the hall from me. Yet, the projected cost of compliance—potentially $250,000 or more per unit—combined with the disruption of an extended, mandatory relocation, puts that future in doubt. These costs are still not fully known, creating real uncertainty in the housing market; we are already seeing buyers hesitate because of the open-ended liability associated with this mandate.

Everyone in our community wants a safe building. We, in the Royal Towers, have consistently complied with prior Fire Department requirements, including significant recent upgrades to our alarm and first-responder communication systems. As mentioned above, we have had 2 fires, but the existing system has met the need. So, not only is the retrofit unnecessary, but it also goes far beyond what is financially feasible for most residents.

Unfunded mandates of this magnitude place an unsustainable burden on homeowners and undermine the goal of keeping San Francisco a place where people can afford to live and remain rooted. I am asking for your support in pursuing a more balanced approach—one that maintains safety while providing relief from requirements that are simply out of reach for the people who call these buildings home, including me.

As a retired long-term condominium owner, I am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings, and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

Your web-site states you are *"committed to addressing San Francisco's **affordability challenges, which he identifies as a critical issue for families** and local businesses. His approach emphasizes gradual, **data-driven changes to policies that impact affordability, ensuring they are effective and sustainable. He believes in proposing policies, evaluating their impact, and refining them as necessary. Stephen will always listen to his constituents to better understand their needs and perspectives."***

The fire sprinkler mandate was apparently passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on myself and our residents.

If the code is not changed, it may be necessary to temporarily relocate for an extended period during construction (added expense), determine if I can secure the funds for the special anticipated $300,000 assessment money the HOA will need to use for the project. A special assessment and temporary relocation will increase expenses and potentially make my continued living in San Francisco **unafordable**, and result in the sale of my unit at a reduced market rate.

Many of my neighbors purchased in our building years ago and have paid off our mortgages so we could afford living in San Francisco. This may **not** be possible because of this mandate.

Dear Supervisors,

I am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

Installation will cause dust and possibly even asbestos to be circulated throughout the building. I have asthma and am elderly. My husband is 81 and also has asthma. Dust and possibly asbestos could be hazardous to our health so we will be forced to move our furniture and vacate our premises until all sprinklers are installed and an asbestos company can certify that the air is safe.

My property value during installation will be lowered. The process will interfere with my quiet enjoyment during the latter years of my life.

Furthermore, the efficacy of sprinkler amelioration of damages and life savings is arguable. The water damage from sprinklers can be worse than a fire as they go off automatically all over the building even when the fire has been put out. If the fire is big, the sprinklers will not be able to snuff it out to save lives. Even fire fighters have explained to me that the value of sprinkler systems is debatable.

Alarms save more lives than sprinklers.

Please reconsider.

Sincerely,
Isobel Sturgeon

Dear Mayor Daniel Lurie and SF Board of Supervisors:

We are very sadden with regards to the Mandatory Sprinkler Upgrades. If these Upgrades are approved, we will have to sell our home. We have lived here at 66 Cleary Court for over 50 years. We were first Renters, and then fortunate enough to save to purchase.

Installation of the Sprinklers: Because of the cost, $100,000 to $300,000 will overwhelm our present retirement funds. Have the Board of Supervisors explored any other "outside funding?"

We worked our whole life to retire at 66 Cleary Court. Jeane worked and retired with the City and County of San Francisco as a Clerk Typist 1426 and Secretary 1446. Then I, myself was able to purchase a small coin laundromat in North Beach, and later a second small laundromat in the Mission District.

We were both born and raised in San Francisco. I went to school at Bessie Carmichael Elementary (SOMA), Everett Junior High School (Mission District), Washington High School (Richmond District) and City College of SF (Ingleside).
Jeane, my Wife was raised in Chinatown and North Beach, went to Jean Parker Elementary, Francisco Jr. High School, Galileo High School, and to City College of SF.

We have been retired since we were 65 years of age. We will be 80 years old soon and want to spend the rest of our retirement years here at Cleary

Court. *We desperately need your help!!! Put yourself in "our position" pushing 80 years old, with no children with no options!*

Thank you all, especially Mayor Dan Lurie and the SF Board of Supervisors!

Sincerely,

Willie and Jeane Yee

Good afternoon:

I am sending this letter to you to urge each of you to work together to pass legislation to amend the fire sprinkler mandate for existing high rise residential buildings. The financial and personal hardships that would result from this would be devastating to people like me.

I absolutely support fire safety in our city. My condo building The Nob Hill at 1170 Sacramento Street has complied with all
previous fire safety mandates but this particular mandate goes beyond what homeowners can reasonably bear. Not only the huge financial hardship but the stress and angst of trying to move out and find temporary housing in a city that is
already dealing with a housing shortage is not realistic.

We have managed our finances well but we would still have to levy a considerable special assessment which, for many of us
fixed income folks, would be devastating.

Please help to create a solution that would protect safety but at the same time would protect San Francisco residents from unmanageable costs and incredible disruption.

Thank you for your consideration.

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Hello SF Board of Supervisors,

Thank you for all the work that you do for San Francisco. I am a huge advocate for the work you do.

I'm emailing you to ask for your help to revise the language on the sprinkler mandate in the updated Fire Code.

While I greatly appreciate the need for fire safety, and believe it is a high priority for our city, the language in the fire code requiring sprinklers in every room in every building built before 1975 will cause massive financial hardship for everyone in my building.

The immense forecasted cost of permits, construction, and relocation amounts to more than my entire net worth, and will cause me to have negative equity in my home - which took me years to afford a down payment.

I speak for all of the affected residents when I say that we encourage the need for high safety standards, but it shouldn't be at such a massive involuntary cost. This update to the fire code significantly affects housing affordability, which continues to be one of the biggest problems in SF.

If possible, we would like you to work with our elected officials to change the language in the fire code to require installing sprinklers in the event of a structural renovation, at which time it would be an incremental cost, rather than requiring homeowners in buildings that are already extremely fire-safe.

Thank you for all that you do and for your attention to this matter.

Best,

Jay Aurora

January 21, 2026

Dear Board of Supervisors,

I am writing to request you amend the fire sprinkler retrofitting requirement for older high-rise buildings.
It is important to work with these buildings on other feasible life safety measures that will protect residents and visitors.
For 66 Cleary Court, the fire sprinkler mandate was passed without any notice to or discussion with the affected building and places an unreasonable physical and financial hardship on our residents.

If the code is not changed, the cost for 66 Cleary Court will be extremely expensive and estimated to possibly cost $300,000 per unit. Relocation while the work is done will be disruptive and costly.

We had a special assessment just a few years ago of over $33,000 with more repairs needed and another assessment will be needed. for fire sirens.
The burden of paying the estimated cost for fire sprinkler system will be prohibitive and some owners may have to sell and move while the cost for a new buyer could be $1.5 million dollars per unit.

Please reconsider and work with the homeowner associations to come up with other options or alternatives.

About 66 Cleary Court: Built by Joseph Eichler in 1963, 66 Cleary Court features 150 condominiums.
Each unit features 3-bedrooms and range between 1100-1200 square feet. The building features concrete walls.

Urging you to meet with these older building management and homeowners' associations to come up with alternatives and options for fire safety.

Thank you,

Marjorie Kay, co-owner of unit 1407 in 66 Cleary Court

Subject: Fire Sprinkler legislation
Date: Wednesday, January 21, 2026 4:03:51 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Please include my email in the file for the Fire Code Meeting Monday February 2, 2026.

Dear Supervisors:

The purpose of my email is to ask you to support changing the current legislation to install sprinklers in 126 high rise condo buildings.

The current legislation is extraordinarily misguided and will do catastrophic harm to the condo owners affected, especially seniors and families with children who are financially barely hanging on to their homes and their lives in San Francisco.

I would love to hear from all of you telling me how you expect me, a 79 year old retired city worker and condo owner at 66 Cleary Court to sell my 3 bedroom condo for market value with a $300,000 fire sprinkler bill hanging over the property. It will never happen!

Exactly where will I, a single woman, find the money to pay for end of life care in a live-in situation. I am a cancer survivor and have had open heart surgery.

Are any of you Supervisors ready to welcome into your homes any of the people who will inevitably lose their homes as a result of this legislation being enforced?

Please consider the human cost to this legislation and work to update the language that will help both condo owners and San Francisco.

Supervisors who do not have one of these buildings in your district might wonder if voters in your district have friends or relatives in the building affected. I would guess that with126 buildings and over 1000 units that this

legislation affects people citi wide indirectly if not directly

The thing I love about San Francisco is that everyone, rich or poor, thinks and talks about the politics of the city, no matter where they live. When the Supervisors do something extraordinarily foolish like passing this fire sprinkler legislation without input from the residents it is talked about throughout the city, not just the halls of city hall.

YOU ARE ALL BEING WATCHED!

IF THIS GROSSLY MISGUIDED LEGISLATION IS NOT CHANGED IMMEDIATELY YOU CAN KNOW FOR SURE THERE WILL BE A LARGE BLOCK OF VOTERS WORKING TO VOTE YOU OUT OF OFFICE!

Sincerely,

Carole Isaacs

My husband and I sold our house 15 years ago to move into a co-op with amenities that would make our lives easier in our retirement years. Of course maintenance fees have risen due to higher insurance rates as well as ongoing building upkeep, but we'd planned for these types of expenses. What we hadn't expected was the fire department requirement that speakers be installed in every room that could be considered a sleeping space, which included the living room. It was costly, disruptive and messy, but it's gotten done without us having to move.

This new "requirement," however, would require that we empty our units and vacate them for an indefinite period of time and at an unknown cost. Most of us in the building are retirees. My husband has Alzheimers, and I'm stretched to the breaking point without this added to my burden. How do you expect us to come up with the funds to have the work done, manage removing everything from our apartment and find another place to live while our apartments are torn apart? And selling the apartment has been made impossible by buyers' knowledge that this is something that the city is planning to inflict on the building.

Please stop unions from making the decisions of what's best for the city. Please don't force us to move out of our homes and make us incur a financial burden that we can't manage.

Respectfully, Francesca Passalacqua

Supervisors:

I live at 1835 Franklin Street, a 1960's 15-story building that has sprinklers in the three floors of garages at the bottom of the building, but not in each apartment. The building has fire hoses and fire extinguishers on each floor (where there are three apartments on each floor) and smoke detectors and soon-mandated fire horns in each apartment.

It is essential that you take action to repeal the fire sprinkler retrofitting requirement that you passed for older high-rise buildings, such as ours.

THIS MANDATE (REQUIRING SPINKLERS IN **EACH** APARTMENT), WHICH I UNDERSTAND WAS PASSED WITHOUT ANY NOTICE TO, OR DISCUSSION WITH, THE AFFECTED BUILDINGS, WILL LEAD TO UNBEARABLE COSTS FOR OUR BUILDING'S LONGTERM (AND MANY SENIOR) RESIDENTS (SUCH AS MYSELF) AND MAY RESULT IN BUILDINGS, SUCH AS OURS, NOT BEING ABLE TO MEET THE EXPENSIVE REQUIREMENT, WITH THE POSSIBLE RESULT OF AN HOA BANKRUPTCY AND THE BUILDING BEING TORN DOWN.

I also understand that this mandate is being aggressively pushed by the San Francisco Building Trades Council (which I attempted to copy above). I do not like to attribute motives to people I do not know, but it sure sounds like this aggressive push is related more to trying to force more SF labor jobs than being worried about the residents that will be forced to abandon their homes, much less whether there really is a need for such a mandate

(which I believe there is not for a building like ours). If my supposition is correct, this is disgraceful, and even more disgraceful if the Board presses this issue for political purposes. If so, shame on you!

I hope you will listen to the voices of the buildings involved here and not extraneous political voices.

Please consider an immediate repeal of this retrofitting requirement.

Sincerely,

Barry Abbott

Dear Supervisors, Please don't require the mandated sprinkler retrofit update in this legislation. My wife and I are living off of social security and savings and the added financial burden will be difficult to bear. Thank you for your consideration. Mark Anderson

Re: The Sprinkler Mandate

Please, hear me out. I am 90 years old and have been living in the Bay Area since 1986. This is the first home I have ever ownedhere and have loved it and this historic building ever since I moved into it in 1998. I live on a fixed income and this mandate to install sprinklers in our apartments is going to wipe me out financially, probably require me to sell my home of 27 years at a loss (if it is even saleable) and force me to leave San Francisco. I am certain that there are many others in my circumstances who will experience the same fate if this measure proceeds.

I understand that the major concern is safety, but I contend that the record does not show that a solid concrete building like ours is the sort of construction that requires this extreme measure. This is not a Victorian apartment complex built from wood.
Please think about the impact on me and many others and reconsider going forward on this mandate.

Thank you,

Judith Kneeter

This is a request that the Board of Supervisors take action to rescind the fire sprinkler retrofitting requirement for older high-rise buildings. Instead we ask you and the Fire Department to work with these buildings on other feasible life safety measures that will protect our residents and visitors.

Our understanding is that the fire sprinkler mandate was passed without any notice to or discussion with the affected buildings. Implementing the requirement as it stands would place an unreasonable physical and financial hardship on us and all residents of our 150-unit building at 66 Cleary Court and many similarly affected buildings and people.

The cost estimates we have heard for retrofitting sprinklers to our reinforced concrete building - between $200,000 and $300,000 before additional costs such as temporary relocation - would impose a very substantial financial burden on us - both retired and in our late 70s and early 80s. We imagine this is equally or more true for many other residents in the building on fixed incomes - and those young families who have chosen our building because it is among the few in the city with relatively affordable family size (3br, 2ba) units. The effects would be even more costly and disruptive if the retrofit requires temporarily vacating our unit.

We are already having to absorb a hefty special assessment to fund the $1,000,000+ upgraded fire alarm system, needed to comply with another recent fire code update. We urge the Board of Supervisors to rescind the retrofit requirement to spare us a substantially more burdensome mandate.

Best regards,

Subject: Request for Reconsideration of Fire Sprinkler Retrofitting Requirement.

Dear Supervisor

I am reaching out to discuss the current fire sprinkler retrofitting requirement for older high-rise buildings and its impact on our residents. The mandate was implemented without prior notification or consultation with affected buildings, resulting in significant challenges for our community. I recently discovered that the mandatory fire sprinkler project may necessitate residents to vacate their units, posing a particular hardship for those with elderly family members, such as my 93-year-old uncle. Additionally, the financial burden associated with this project is substantial, with estimated costs ranging from $200,000 to $300,000 per unit in our building. As someone with limited income, obtaining a loan for this expense is not a viable option. The prospect of losing my home due to the financial strain caused by the fire sprinkler mandate has been keeping me up at night. I implore you to explore alternative solutions that would ensure the safety of our residents without imposing such overwhelming financial obligations. Your assistance in addressing this matter is greatly appreciated. Thank you for your attention to this urgent issue.

Warm regards,

Hello,

Please take action and amend the fire sprinkler retrofitting requirement for older high-rise buildings in SF. Please work with our building, The Comstock, located at 1333 Jones St SF CA 94109 on other feasible safety measures.

The fire sprinkler mandate was passed without any notice or discussion. It will place an unreasonable physical and financial hardship on me! I am retired. I can not afford an increase in my monthly assessments, much less a large special assessment. This is causing me as well as my neighbors stress and concern. Some of my neighbors are homebound and already under financial stress to meet their medical needs. The thought that we may need to vacate our homes is horrific and would cause great physical and emotional harm. Please amend this requirement.

Regards,
David Henbest

Subject:	Fire Sprinkler Retrofit Requirement File 251247 – Affordability and Feasible Alternatives
Date:	Wednesday, January 21, 2026 1:37:17 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors,

I am writing to respectfully urge you to reconsider the current fire sprinkler retrofit requirement for older high-rise residential buildings and to work collaboratively with affected buildings to identify alternative, feasible life safety measures that protect residents and visitors without imposing disproportionate financial hardship.

I fully support the goal of fire safety. However, the sprinkler mandate was adopted without prior notice to or meaningful discussion with the buildings most affected. As written, it places an extraordinary financial and physical burden on residents like myself. I am currently without income, and the prospect of large special assessments, permanent increases in monthly assessments to The Comstock, and related moving expenses is simply not financially viable for me and threatens my ability to live in this city I call home (since 1994).

Affordability must be a central consideration. Many residents in these buildings are seniors, retirees, or individuals on fixed or limited incomes. The cumulative cost of compliance threatens housing stability for people who have lived in and contributed to these communities for decades. A safety policy that unintentionally displaces residents or creates severe financial distress undermines its broader public purpose.

It is also important to note that The Comstock is a concrete high-rise building, which is inherently less susceptible to fire than other forms of construction. Given this reality, I respectfully ask that the City consider tailored approaches for concrete buildings and explore alternative safety enhancements that meaningfully reduce risk without requiring full sprinkler retrofitting.

I am encouraged by the growing coalition of affected buildings, now representing the majority of units subject to this mandate, and by the shared request that affordability be given serious weight. I hope you will take this opportunity to amend the ordinance in a way that balances safety, equity, and economic reality.

Thank you for your time, your public service, and your thoughtful consideration of the real-world impact this requirement has on residents like me.

Respectfully,
Cloud Force

Resident at The Comstock

Dear members of the San Francisco Board of Supervisors,

We are aware that the Board of Supervisors is considering the enforcement of the city ordinance to require installation of fire sprinklers in multi-story apartment buildings in San Francisco. This ordinance will reduce the equity in our unit at 66 Cleary Ct by more than 30%, and will seriously jeopardize our chances for retirement (we are both 71 yrs old). I am sure there are other less drastic measures to ensure fire safety of our building that will not result in reducing the equity in our unit by 1/3. Please, please, please consider an exemption for our building not to ruin our prospects for retirement.

Thank you.

Alex and Marianna Sefanov

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors:

We are writing to urge you to oppose the fire sprinkler mandate that is currently being considered.

We live in a cooperative building where every unit is owner-occupied. When we purchased our unit 20 years ago, we gutted the unit and built a home that has elaborate and complex architecturally designed ceilings, floor-to-ceiling bookcases and cabinetry, tapestries that hang from the ceiling to cover windows, floor-to-ceiling columns and arches, and other architectural features that cost hundreds of thousands of dollars to construct, none of which could be replaced if the ceilings were removed and/or lowered or other changes were required to accommodate a sprinkler system. In short, our home would be destroyed, would no longer be our home, and would diminish in value significantly.

Our building is very well-protected from injury or damage resulting from a fire. We have a state-of-the art fire detection system, including existing sprinklered hallways, fire escapes in the hallways, sprinklered units near fire escapes, and multiple fire alarms. Our home has six interior alarms, the exterior hallway has multiple alarms and sprinklers, and interior sprinklers as proposed would be unnecessary.

Further, the work required to add pumps, supply lines, interior sprinklers and related equipment would be exorbitantly expensive (estimated at hundreds of thousands of dollars per unit), as well be disruptive to our lives. We are both 72 years old and our retirement funds would be impacted by a project of this magnitude. The project would be quite extensive as it calls for opening ceilings and rebuilding interiors at a high cost and also would require us to locate and incur the additional expense of alternative housing in a city that already suffers from an insufficient supply of housing.

Additionally, if a sprinkler were to malfunction in a unit, or activate due to a stovetop fire, for example, significant water damage could occur. And, if this were to occur in a unit on a higher floor, our unit could be damaged from water leaking from above. Water damage can be more serious than fire damage since fire damage can be contained whereas water will always find a way to flow downward.

We are gravely concerned that this work is unnecessary and excessive for this building and will cause financial and emotional hardship to the residents.

Therefore, we suggest that a better approach would be an exemption for buildings that are not undergoing major renovations. There is no need to destroy homes that are not undergoing

renovation. Please do not succumb to pressure from sprinkler installers and labor unions who do not care about San Francisco residents. Instead, please take a common-sense approach and exempt buildings until such time that they undergo major renovations.

Thank you for your consideration.

John and Pamela O'Banion
1201 California Street, Unit 701
San Francisco, CA 94109

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisors:
We are writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high rise buildings and to work on finding other feasible life safety measures that will protect our residents and visitors.

We are retired seniors and have lived in our present apartment building for 40 years. It has been estimated by our building board of directors that if the mandate is not revoked or amended, it will cost EACH apartment unit in our building $300,000 or more to comply with the mandate as written. This plus expenses to be incurred by the residents to move to temporary housing for several months when work is being done to comply.

As retired seniors with limited income and resources for everyday living as is, this imminent unreasonable expense as required by the mandate to convert this old residential building (ironically originally constructed as a low income housing) and to make it like a newly built high rise building requirement does not make sense. This entire concrete building and each apartment may have to be severely demolished and reconstructed to fulfill the mandate and may not be livable due to identified foreseeable problems associated with the retrofitting of the sprinklers.

If the Sprinkler Retrofitting Mandate is not revoked, we will not be able to afford paying for the retrofitting and reconstruction project . Plus the upkeep of the retrofitting changes. We will be forced out of our apartment to join the homeless in San Francisco . Our apartment may not even be saleable due to the high cost of reconstruction ,retrofitting and maintenance fees. And we foresee the Home Association go bankrupt with such a big expense that will be passed on to the homeowners.

The above matter is causing us extreme anxiety , stress and uncertainty about what will happen to us if we are forced to leave our present residence because of unaffordabilty with the required mandate …sadly , in probably our last decade of life …aggravating our existing health issues!

We appeal to all the supervisors of the board to put themselves in our shoes and position in life facing this unaffordable , expensive mandate on our building if not revoked .We plead for more reasonable and affordable alternative recommendations than the mandate as it is written .

Thank you for listening to our plea and sharing our stress on this matter.

Sincerely,

Amando and Nancy Santos

Dear Supervisors,

I am writing to request you take action to amend the fire sprinkler retrofit requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on our residents. I will need to move out of my apartment and find temporary living quarters for an extended period of time. This will be difficult and costly. The actual cost of the retrofit is astronomical and my share will be a huge expense for me that was completely unexpected.

Thank you,
Charlene Lebowitz

Dear Supervisors:

I am writing to express my strong opposition to the proposed sprinkler retrofit mandate.

Whether it's a public policy issue or a personal matter, I evaluate the pros and cons of an issue by both balancing interests and considering the impact on those affected.

None of us can or would argue with general public safety and certainly not with the benefit of fire safety. I always look for proportionality, and I know that you do the same.

However, the proposed mandate brings a sledgehammer approach to what should be a more nuanced, reasoned decision making process.

In summary, my opposition is based at least in part on the following:

- We already live in a safe building here at 1170 Sacramento Street (our building has at least two annual, mandatory fire inspections, with SFFD personnel entering each unit to test smoke alarms; we have two separate stairwells for exiting our building; we have staff monitoring our building 24/7; each floor has fire extinguishers in every hallway; and ours is a concrete building).

- Implementation of the mandate will cause occupants to incur tremendous expense (special assessments, relocation costs) with an accompanying reduction in value to our units until mandated improvements are completed (in other words beyond the life expectancy of many of us).

- This sprinkler mandate will create fear in a mostly senior population of occupants, creating massive uncertainty about where they can live, whether they can afford to live here, and where to relocate to if they can't live here?

This scorched earth proposal lacks common sense (neither the City nor its citizens have unlimited resources), and it demands a reasoned reconsideration of the proposed mandate to insure that the damage caused by its implementation doesn't exceed any hoped for benefit of the misguided legislation.

Thank you for your consideration.

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Hello everyone,

I am writing to express serious concern about the proposed fire sprinkler mandate for pre-1975 high-rise condominiums. I support better fire safety, but the ordinance in its current form would create severe financial and social harm for thousands of residents.

Estimated retrofit costs range from $113,000 to $300,000 per unit, which could translate into thousands of dollars in new monthly HOA fees or loan payments. These retrofits require opening walls, ceilings, and sometimes surrounding streets, which means major disruption and likely displacement for many residents.

The ordinance also provides no plan for where displaced residents will go, even though thousands could be forced out during construction. Many affected homeowners are seniors, fixed-income residents, and long-time community members who cannot absorb six-figure costs or months of displacement. This risks pushing vulnerable people out of their homes and undermining property values.

There are also fairness and process issues. Homeowners bear the full cost even though lower-cost alternatives, such as upgraded fire-resistant doors or partial sprinkler systems, were not fully evaluated. The proposal has moved forward without an updated independent cost-benefit analysis and with limited public input.

I respectfully urge you to pause the ordinance and pursue a more balanced approach. A new independent study, real financial relief or hardship protections, and a clear relocation plan are essential. The city should fully consider safer and more affordable alternatives before imposing costs that many residents cannot withstand.

Thank you

To: <Board.of.Supervisors@sfgov.org>

To the Members of the San Francisco Board of Supervisors:

I am writing to request that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and that you work with our buildings on other feasible life safety measures that will protect our residents and visitors.

This fire sprinkler mandate was passed without any notice to us and without any discussion of its feasibility and cost. It places an unreasonable physical and financial hardship on me and my neighbors.

This is another blow to the affordability issue that all residents in San Francisco face, not only because of the direct cost of compliance but because of the effect this will have on thousands of rental units and apartments throughout the City.

The financial strain this mandate imposes might impel the potential for the necessity of selling this apartment, and more importantly the inconvenience and deprivation of its use when required are significant considerations.

I sincerely hope that you carefully consider all aspects of your decisions, ensuring that the owner's concerns are duly taken into account.

Respectfully,

Sandra N. Bosley - Owner Unit #504, Royal Towers, 1750 Taylor St., San Francisco, CA 94133

To the Members of the San Francisco Board of Supervisors:

I am writing to request that you amend the fire sprinkler retrofitting requirement for older high-rise buildings. Please work with our building's management team and consultants on other feasible life safety measures that will protect us and our visitors.

This fire sprinkler mandate surprised us all. It places an unreasonable physical and financial hardship on me and my neighbors. It is estimated that it will cost each of us between $200,000 and $300,000 to place sprinklers in our apartments. I have done a lot of work in my apartment and above the ceiling is an extensive array of beams, columns, piping, electrical conduits, etc. that need to be navigated, as well as, the recessed lighting cans. Additionally, I note that the structural flooring in our building is concrete, which is not flammable. And, the building is actually two buildings bridged by an elevator core. I do think the fire marshall should analyse each building before determining what is needed, if anything, to limit fire spread and to limit damage from fire suppression systems that go off in error.

As a city planning professional in another city, I am amazed time and again at the steps that San Francisco takes to limit construction of new housing units, impose drawn out approvals for renovation of older units and require "improvements" that add to the cost of housing in the City. Imposing wide reaching mandates for expensive retrofits without consultation with owners and property managers is another example of this heavy handedness.

I know that our building management team would be pleased to work with you to find a less costly way to address the fire marshall's concerns. Please take the time to work with them.

Thank you for your service to the City and its residents.

Sincerely,

Alice Steiner

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I am writing regarding the proposed fire sprinkler retrofit mandate.
The cost of the mandate is currently unknown, but could be as high as $250,000 and require relocation of residents.
All residents of the Royal Towers want our building to be safe and do comply with all previous mandates. We all want our building to be safe. And we have an excellent staff that insures our safety.
Mayor Lurie has done a good job to help restore San Francisco for residents as well as help restore San Francisco as a place tourists and conventions want to visit.
This proposed mandate goes well beyond appropriate safeguards and will make selling/buying units in high rises very difficult. This is not good for San Francisco and its future.
I hope you will consider how negatively this will affect us and find a solution that answers your concerns as well as addresses the lives of high rise residents.
Thank you.

Subject: Re: Fire Sprinkler Mandate

Lauren,

Thank you for your email to me. I appreciate that you are addressing the issue. However, a 3-year pause is simply not enough. In the meantime, we are all in limbo, not knowing the status of our homes — will there be incredibly high assessments, will people abandon their homes, will the HOA declare bankruptcy, etc.? And right now, our homes are not salable as buyers do not want to purchase with such uncertainty. The financial and emotional stress of waiting is simply not an acceptable solution. We need the mandate to be overturned in its entirety. Otherwise, thousands of homeowners are in limbo not knowing the fate of our homes and our lives.

Thank You,
Rich Weissman

Hello,

We are writing to share an update on the sprinkler retrofit mandate passed in 2023 by a previous Board of Supervisors and the steps we are actively taking in response to concerns raised by many San Francisco residents.

We have heard loud and clear that the current mandate is widely unaffordable and not feasible for many buildings. In response, Supervisor Stephen Sherrill and Supervisor Danny Sauter, alongside Mayor Daniel Lurie introduced amendments to the Fire Code to extend the preliminary compliance deadline by **three years**. This extension is an important **first step**, and

we acknowledge that it does not resolve the underlying issue of undue hardship.

Here is what we are doing now:

1. Extending the preliminary deadline - The proposed Fire Code amendments would push the Department of Building Inspection permit application deadline out by three years offering immediate relief while our offices continue to work on longer-term solutions.

2. Clarifying exemptions and hardship standards - Moving forward, our top priority is to establish a clear and consistent exemption process for buildings where compliance is structurally infeasible, and to define what constitutes "undue hardship" under the Fire Code. Residents deserve predictability, fairness, and transparency.

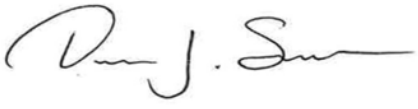
3. Requiring transparency and analysis - We are submitting a joint letter of inquiry to the San Francisco Public Utilities Commission requesting a feasibility analysis of the mandate — an analysis that should have been done before the policy was adopted. We intend to make the findings public as soon as they are available.

4. Ongoing communication with residents - Last week, we held a very well-attended community meeting where residents shared their frustration with the lack of information leading up to this mandate. We are committed to ensuring that no further actions are taken without clear, timely communication to affected residents and property owners.

We have been working closely with the Fire Department leadership to align on the path forward to provide transparency and clarity. We want to thank the Fire Department leadership for listening and engaging on this critical issue. If you live in a building affected by this mandate and need assistance navigating the process, please contact our offices at **SherrillStaff@sfgov.org and SauterStaff@sfgov.org**. Our teams are ready to help.

Thank you for continuing to share your experiences and concerns. Your feedback is directly shaping the work ahead, and we look forward to continuing this conversation as the legislation moves forward.

Sincerely,



Stephen Sherrill
District 2 Supervisor

Subject: Fire Sprinkler Mandate

Dear Mayor Lurie,

I have been a big supporter of yours. I talk to everyone about the wonderful job you are doing in cleaning up the city, bringing down crime and making the city safer, dealing with the homeless/drug/mentally ill problem, bringing businesses back to the city, helping fill empty office buildings, revitalizing retail and empty retail space, and making us proud to be San Franciscans after many years of neglect. But I am deeply disappointed in the actions you have taken relative to the fire sprinkler mandate in larger residential buildings in the city. It is a highly destructive move and hurts tens of thousands of people who live in the city and will be forced to leave their homes.

I am a homeowner at 66 Cleary Court, San Francisco CA 94109. I have owned my condo for over 15 years, being in the tech industry. The building was built in 1963 of approximately 150 units. The new ordinance now mandates the installation of fire sprinklers into all units. I understand that the costs per unit may range up to $300,000 per homeowner. This amount would represent well over one-third of the value of my unit. It is unreasonable for us to think

this is a positive step. It just makes no sense and is way beyond the budget for homeowners. And, the project will force people to leave their homes for half a year while the work is underway, which is unreasonable for most people. Additionally, we have 8' tall ceilings, and the code-required earthquake brackets for holding the sprinkler pipes below the ceiling would mean we will have 11" minimum soffits to cover the sprinkler pipes in corridors and inside our units. This would bring our ceiling heights in these places to 7'1", which is below the height required by code to be considered a "living space."

I fear that this would cause the building to go into bankruptcy as so many people would not be in a position to pay for the mandated sprinkler system, and it would make our units no longer "living space." It would ruin the building as homeowners would default and flee, unable to pay for the system and unable to sell, leaving the building heavily vacant and in default, and losing the tax base.

And this will apply to many, many buildings in the city, impacting tens of thousands of people. You want to improve the city? This does just the opposite. Our city will force thousands of working, tax-paying homeowners to abandon their properties, leaving empty units in many of the larger structures. It's insane. A realtor friend of mine told me that it now makes units in larger buildings without sprinklers **unsalable and unrentable**. Why would you want to do this? It's truly insane.

Please reconsider and remove the mandate. The ordinance is simply too much of a burden and will destroy our city. Let's get back to your wonderful of improving the city, not destroying it.

Thank you,
Rich Weissman

Dear San Francisco Board of Supervisors:

I am a homeowner of a condominium unit at 66 Cleary Court, San Francisco. I am respectfully requesting you to take action to amend the fire sprinkler retrofitting requirement for older highrise buildings and work with our building on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places a devastating physical and financial hardship on our residents, many of whom are elderly and living on a fixed income. I am such a resident. I can say, without exaggeration, that this costly mandate will bankrupt me and that of our homeowners association. It will cost millions to upgrade our concrete building to your specifications. Each unit will be assessed about $300,000. We will have to move out for at least 6 months for the work to be done. Be aware there are also many young families at our building, which provides 3 bedroom, 2 bath units, a godsend to many who can't afford single family homes. I doubt any of us, retirees or young families, can afford this mandate. What good are fire sprinklers if residents stand to lose their homes? Can you imagine the housing and financial insecurity the residents will face? And how will this disaster affect the city of San Francisco? Surely the Board of Supervisors is not aiming to ruin the financial and physical well being of our residents? But that is exactly what will happen, if we are forced to comply.

With utmost urgency, I plead with the Board to amend the sprinkler mandate by working with the affected buildings to come up with a more reasonable solution. I pray that practicality and wisdom will prevail.

Most Sincerely,

Christina Jong
Homeowner of 66 Cleary Court
San Francisco

All Members of the Board of Supervisors,

I am writing to request you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings. I urge you to work with these buildings on other feasible life safety measures that will protect residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings/residents and places an unreasonable physical and financial hardship on residents. Retrofitting would require residents to move out of their homes for several months. In addition to the enormous cost of retrofitting (which is expected to be more than $250k for each unit), residents will have substantial additional expenses of moving, storage of all furniture and belongings as well as the expense of a rental apartment or hotel. Many, if not most of the residents in our building are elderly (including me and my husband).

I urge you to reconsider this mandate.

Sincerely,
Anne Gunderson

Dear Supervisor,

I am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on our residents.

If the code is not changed, we and our neighbors who are almost all senior citizens and for the most part live on our social security and IRAs would have to relocate for an extended and uncertain period and at a staggering cost. Given our ages and financial situations, many of us would be unable to return to our homes.

Thank you for your consideration of those of us who have downsized to apartments to cut our costs and still be able to live in San Francisco.

Best regards,

Edward Lebowitz

Dear Members of the Board of Supervisors,

As a 73-year-old resident, my husband and I have made our condominium at 2200 Pacific Avenue the place we plan to call home for whatever years we have left. The thought of being forced out because of the fire sprinkler retrofit mandate is heartbreaking. The estimated $200,000–$300,000 cost per unit, plus months away from home during construction, is far beyond what we can manage on fixed incomes. With full compliance required by January 1, 2035, the work would probably happen when we are nearing 80—the disruption and stress at that stage of life would be devastating.

Fire safety matters enormously to me, and I would never want to see it compromised. Our building has responsibly met every past requirement, including the substantial and expensive recent overhaul of the central fire alarm system, complete with new wiring and better notification capabilities. Piling this huge additional mandate on top of those earlier efforts feels overwhelming and disproportionate.

For minimal extra protection—remember, in more than six decades across all affected buildings, there has been only one fire-related death, from an electric scooter battery—this policy could uproot thousands of us, erode housing affordability, depress property values, and make San Francisco's housing challenges even worse. Simpler, targeted steps like requiring secure, fireproof storage for e-bikes and scooters would deliver real safety improvements without punishing residents so severely.

It was disheartening to hear that the thoughtful "major renovation" trigger exemption, already prepared by the City Attorney, is no longer moving forward. Requiring sprinklers only when a building undergoes major renovation would strengthen safety over time while sparing current owners crushing financial and personal hardship.

I earnestly ask you to amend the mandate to restore this major renovation trigger—or consider a full reversal if that is what it takes. A solution like this would honor fire safety while protecting the well-being, proportionality, and affordability that so many San Franciscans need. I would welcome any opportunity to discuss a fair path forward.

Sincerely,

Nesya Gurdus

Hello

I hope you're well. I live in San Francisco in a mid-century high-rise Eichler and am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on our me and other residents in our building. Not only will it require us to relocate during the extended period of construction, for many of us the astronomical cost associated with this mandate will cause an extreme hardship.

There has got to be another way to improve fire safety in San Francisco and also take into consideration the unique situation with older high-rise buildings.

Thank you for the work you do for all of us and for your attention to this matter.

Eliza Lape

Dear Board of Supervisors and SF City Officials,

The current mandate to add fire sprinklers to every sleeping space in every apartment in every older high-rise building in San Francisco places an impossible burden on nearly everyone concerned. This will likely cost about $250,000 per apartment, and will require the residents to move out of their apartments, and remove their furniture, during the installation. This is simply not doable.

- Most residents of these 126 or so buildings will not be able to afford to pay for the project.
- Most residents will not be able to find a nearby temporary place to live.

If this mandate remains in place, the following scenario is most likely to occur:

- Many residents of these buildings will not be able to afford to stay.
- Many residents will not be able to find other housing in San Francisco.
- Many residents of these apartment buildings will move out of San Francisco.
- The owners of many of these buildings will not be able to meet the mandate.
- The owners will thus sell the buildings for non-residential use or leave them empty.
- San Francisco housing will become so tight that only the very wealthy can afford to remain.
- The vibrancy of San Francisco will thus be further reduced.

We all value safety, but there is a trade-off where the extra level of safety is not worth the cost. I would be safer moving around in San Francisco wrapped in a suit of bubble wrap and armor, but that's not reasonable. Neither is this current mandate regarding fire sprinklers.

Even the Fire Marshall had to go back 30 years to give an example of someone losing their life in a high rise fire in San Francisco. The Fire Department can continue to site building owners where there is a real risk to public safety, but let's eliminate the blanket ruling as it stands. Many of these buildings have taken a number of measures that make the risk of a serious fire very small. Let's focus on the few where the highest risk remains.

Please take action to amend the mandatory fire sprinkler retrofitting requirement for older high-rise buildings immediately.

Dear Members of the Board of Supervisors,

I am writing as a San Francisco property owner regarding the proposed Fire Code adoption and the **Fire Sprinkler Retrofit Requirement (File 251247)**.

I fully support the goal of improving fire and life safety in San Francisco's housing stock. However, as currently structured, the sprinkler retrofit mandate places an extraordinary and disproportionate financial burden on owners and residents of existing multifamily and condominium buildings—many of which were built decades ago and were never designed to accommodate full sprinkler systems without major structural disruption.

For many buildings, compliance would require invasive construction, displacement of residents, and costs that can reach tens or even hundreds of thousands of dollars per unit. These costs will inevitably be passed on to residents through increased housing costs or, in some cases, force sales and displacement—outcomes that directly conflict with the City's stated housing stability and affordability goals.

While I appreciate the proposed extensions to interim deadlines, the **final compliance deadline of January 1, 2035 remains unchanged**, and the underlying mandate remains intact. The current proposal does not meaningfully address feasibility, proportionality, or economic hardship for existing residential buildings.

I respectfully urge the Board to:

- Consider alternative life-safety measures for existing buildings that provide meaningful protection without full sprinkler retrofits where infeasible;
- Allow broader hardship exemptions and realistic compliance pathways;
- Ensure that any final adopted code avoids unintended consequences such as resident displacement, loss of housing stock, or severe financial harm to owners and homeowners' associations.

San Francisco can and should improve safety while also protecting housing stability and recognizing the practical limitations of older buildings. I strongly encourage you to continue working with stakeholders to modify this mandate in a way that balances safety, equity, and feasibility.

Thank you for your time, consideration, and public service.

Thanks,

Subject: Concern about fire sprinkler ordinance!!
To: Fire.Commission@sfgov.org

Hello -

I am resident of the Comstock building in Nob Hill. It is a lovely, well-maintained building with a wonderful resident community.

We are DEEPLY alarmed and distressed by the fire sprinkler ordinance. While I applaud fire safety, I implore you to please reconsider the huge negative impact this is going to have on our community and our lives.

The special assessment fee that will be required to pay for this is very significant (potentially hundreds of thousands of dollars per person!). I, and most my neighbors, would be FORCED TO SELL our homes and move out if this sprinkler ordinance holds. (Many of my neighbors are retirees who are on a fixed income). Many residents have called this building home for several decades. It would be a devastating loss to our homes and our community.

Fire safety is a laudable goal, but please, PLEASE reconsider - this will cause us to lose our homes. Our building is all concrete with multiple staircase exits - I do not fear for our safety in case of fire.

Thank you,
Jennifer

FIRE SPRINKLER RETROFIT REQUIREMENTS file 251247

To the Members of the San Francisco Board of Supervisors:

My wife and I are residents of 1750 Taylor Street, San Francisco. We write to request that you amend the fire sprin retrofitting requirement for older high-rise buildings and that you work with our building and others to create alternative, feasible, and rational life safety measures that will protect residents and visitors. Incidentally, this fire sprinkler mandate was passed without any notice to us and without any discussion of its feasibility and cost. Botto line, it will place an unreasonable physical and financial hardship on us and our neighbors.

In a time when the City is facing the challenge of providing and maintaining housing that is affordable, this propos solution here is counter intuitive. We have lived in our apartment for decades and chose to stay in the City becau of family. We are retired and live on what would be considered in this era and place as a modest income. So, the cost of the proposed ordinance would cost us approximately $300,000 plus and require us to vacate our apartmen with our furnishings for several months while retrofitting was done. As two septuagenarians, nearing our 80's, this prospect is daunting. Moreover, this direct ***cost will impact all rental units and apartments throughout the Ci***

Our City simply cannot create and maintain a wholesome and economically diverse community by continuing to a regulatory burdens designed with good intentions but imposing conditions, the cost of which far exceed the dange for which they were created. Let's acknowledge that the balancing act for resolving this issue demands reasonab solutions!

Thank you for considering our views.

Sincerely,

Karen and Bill Prezant
1750 Taylor Street, Apt. 602
San Francisco, CA. 94133

Hi Board of Supervisors,

I'm a San Francisco resident in a building affected by the 2023 fire sprinkler retrofit mandate. I'm writing to ask you to reverse or cancel this mandate entirely. As written, it places an unreasonable financial burden on homeowners and families, and we should not be forced to pay for an unfunded retrofit like this.

My wife and I have two young kids, and we're extremely concerned about the cost and disruption. We're also worried this will directly impact our ability to sell our apartment this Spring, since buyers will factor in the uncertainty and the potential for large special assessments and construction.

We support fire safety, but this mandate is not a reasonable or workable requirement for existing residential buildings. It will create financial hardship, force difficult decisions for families, and destabilize homeowners and HOAs across the city.

Please confirm whether the Board is taking steps to repeal/cancel the mandate, and what the process and timeline would be.

Best,
Henrik Thorenfeldt

Dear Board of Supervisors,

I am writing out of fear regarding the Fire Sprinkler Retrofit Requirement File 251247. I live at 66 Cleary Court, one of the buildings effected by the code introduction.

The cost associated with this would be catastrophic for our family. My daughter had a spontaneous brain bleed three years ago at age 22. She is now a disabled dependent at age 25 with life-threatening seizures. She must be near a trauma one hospital, such as Zuckerberg. As you can imagine, the financial impact of this ongoing medical crisis leaves little to no extra income. It is inconceivable that we could pay the kind of costs outlined for this project. It is a hardship we could not bear and there must be some other way to meet reasonable objectives of this requirement.

I have been a resident of San Francisco since 1991 and have worked at Boys & Girls Clubs of San Francisco since 1999, My long-time residency and contributions to the city should be taken into consideration. This mandate is scary, unreasonable and will absolutely break our family and my daughters' recovery.

Joni Lachman

Dear Members of the Board of Supervisors,

I am writing to request that you **amend the fire sprinkler retrofitting requirement for older high-rise buildings** and work with our communities on more feasible safety measures that still protect residents and visitors.

An extension is not a solution, and framing it as a "first step" misses the real issue. The correct first step is to **repeal the mandate**, do the necessary research, gather accurate reports, evaluate financial and structural impacts, and only then consider thoughtfully designed policy.

This mandate, *even with an extension,* creates severe uncertainty that is actively harming residents. Owners who want or need to sell their condos cannot do so under these conditions. Others are left in prolonged fear, unsure whether they will ultimately be able to afford to stay in their homes. This level of uncertainty is not abstract; it affects people's mental health, financial stability, and ability to plan their lives.

Most of us are already living through a period of significant national uncertainty. My honest question is: **why is the City choosing to add more instability and anxiety for its residents?** Poorly thought-through mandates, even when well-intentioned, push people out of their homes and keep families awake at night worrying about their future.

If you believe this board is better than what we are seeing at the federal level, then it must be held to a higher standard. Acting responsibly means not introducing policies that create chaos before understanding their consequences.

Unless this issue can be fully and definitively resolved within a month, which does not appear realistic, the only responsible action is to **repeal the mandate**, conduct proper analysis, assess affordability impacts, consult affected residents, and then return with a policy that is fair, feasible, and clearly justified.

Anything short of repeal continues to impose unnecessary fear and instability on people who simply want to live safely and securely in their homes.

I urge you to do the right thing: repeal the mandate, do the homework, and then come back with a solution that reflects careful thought rather than rushed enforcement.

Thank you for your time and consideration.

Sincerely,
Adelina Martiniuc

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Members of the Board of Supervisors,

I am writing to request that you **amend the fire sprinkler retrofitting requirement for older high-rise buildings** and work with our communities on more feasible safety measures that still protect residents and visitors.

The current sprinkler mandate was passed without consultation with affected residents and imposes an **unreasonable financial and logistical burden** on those of us who live in these buildings.

On a personal level, this mandate would have a devastating impact on my family. I'm raising **two children under the age of four** here in San Francisco, and as anyone living here knows, raising young kids in this city is already incredibly challenging and expensive. Facing an additional **cost of up to $300,000 per unit**, along with the possibility of **temporary relocation** during construction, would make it impossible for us to remain in our home and in the city we love.

I fully support the goal of improving fire safety, but this measure, as written, would **displace families, burden working parents, and accelerate the exodus of middle-class residents from San Francisco.** There must be a more balanced approach, one that ensures safety without forcing residents out of their homes.

Please reconsider and **amend this code** so that it only applies when a building undergoes major renovation or expansion, and work with building owners and residents on achievable, cost-effective safety improvements.

Thank you for your attention to this matter and for your service to our city.

Sincerely,
Adelina Martiniuc

Subject: SUBJECT: SPRINKLER MANDATE
Date: Tuesday, January 20, 2026 1:48:03 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear All:

Let me begin at the end, the end of the meeting a couple weeks ago at Fort Mason. After the presentation, a woman near me said, “Where will I go? I’m a retired teacher ninety-one years old on pension. A nice, gray-haired woman, kindly – and terrified.

I’m almost her age I’M A VETERAN, A SIX YEAR VIETNAM ERA NATIONAL GUARD RESERVIST, and I’m wondering: where will I go if I am forced out of my apartment? I have to continue paying the mortgage. And taxes. Where do I live. Where do I store my clothes, my furnishings? Who is coming to pack me up? When can I pack up? I’m busy with full-time work, surviving.

Let’s see, per month: $5,000 mortgage, $2,000 homeowners, ADDITIONAL EXPENSES, probably $1,000 to store items, $3,000 10-year assessment to pay for what work the mandate decrees, $4,000 to pay rent somewhere, maybe in the East Bay, and so far we’re at $15,000 a month AN ADDITIONAL $8,000 A MONTH. I can’t pay it. I have to move.

Okay, I’ll sell. To whom? People know about the mandate, and it has wrecked the real estate market in my beloved city. Oh, I might find a real estate scalper or two, a buyer who’ll try lowballing me. And the city’s contribution to help me and my neighbors: not a dime. This mandate is so cruel, essentially saying to apartment owners: You’re all Rich. Well, that’s wrong. I’m not, and most of my neighbors, friends, family members, people I know are not. The mandate is so blind. The city weeps.

San Francisco never passed a law like this. No other city has passed a law like this. No notice, no judicial review, no information, no input from people most involved: the residents. Nobody asked me if I wanted this, and I am somebody. I’ve heard the way it was done is illegal. Citizens have rights.

The reason for this brutal assault on our lives and civil rights is for a sprinkler. Most if not all authoritative opinion is that there is no overwhelming need for tearing up our city for it – other cities have used options that did not bury their citizens in grief and fear.

Solution: cancel the mandate. Now. Let the real estate market recover. Come up with a workable solution that fits the government budget. We pay plenty in taxes; use that money.

Find a safety remedy that doesn’t entail tearing buildings apart. Other cities have.

Sell bonds. The city issues bonds all the time to house poor people – do that for us, tax-paying citizens of SF. The way this mandate is structured is that only people who are unlucky enough to have certain property is hurt. This is a city- and county-wide issue that should be paid by all of the citizens, and only if they desire it.

THE MANDATE MUST BE CANCELLED / NOTHING SHORT OF THAT WORKS.

CITIZENS SHOULDN'T LIVE IN FEAR AND ANGER BECAUSE OF A DECISION THAT WAS MADE IN THE DARK AND NO CITIZEN VOTE TAKEN.

TEARING UP OUR BUILDINGS AND DESTROYING OUR LIVES SHOULD NOT BE DONE ON AN EMERGENCY THAT DOESN'T EXIST. WE HAVE NO FIRE EMERGENCY.

Respectfully,

Max Isaacman

Dear Members of the San Francisco Board of Supervisors,

I'm a 90 year old retiree, and recent widow, writing to request that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and that you work with our building on other feasible life safety measures that will protect our residents and visitors.

This fire sprinkler mandate was passed without any notice to us and without any discussion of its feasibility and cost. It places an unreasonable physical and financial hardship on me and my neighbors.

Apparently, the cost to me for just my small two bedroom unit will be somewhere between $200,000 and $300,000 plus the cost of moving out for several months while the work is done which would be an unbearable hardship at this stage in my life - and I just broke my arm to boot... I think I only paid around $450,000 for my unit in the first place!

This is another blow to the affordability issue that all residents in San Francisco face, not only because of the direct cost of compliance but because of the effect this will have on thousands of rental units and apartments throughout the City. I am alarmed and worried about how I would deal with any of this...

Sincerely,

Diane

Dear President Mandelman and Supervisors:

As the owner of Unit 17A at 1200 Gough Street, I'm concerned about the future of my home if this legislation is not amended. And as the President of the *Cathedral Hill Neighborhood Association,* I'm also concerned about the impact on my neighborhood.

Cathedral Hill includes dozens of concrete high-rise residential buildings built after Redevelopment, both condominium and rent-controlled apartment buildings. These buildings have traditionally had larger percentages of senior residents, but in recent years, we've seen new young owners and tenants move into our neighborhood. Cathedral Hill is a middle-income neighborhood with moderately priced housing in San Francisco. For new buyers, it may be their first opportunity to become a homeowner, and for many seniors, it is their final residence. Constructed from the mid-1960s through the mid-1970s, these buildings were engineered to last for one hundred years, so they have forty to fifty years of useful life left.

Unfortunately, while we are all committed to maintaining and upgrading systems in our buildings, we cannot transform these older towers to equal modern construction standards.

For example, the estimated costs for installing fire sprinklers for my building are between 16 and 42 million dollars. There has been discussion that pushing out the deadline for compliance with this legislation is a solution to the problems associated with complying with it ten or fifteen years from now. In fact, condo Boards are dealing right now with panicked owners, reluctant buyers and concerned lenders. Considering the price point of these units, the age of the buildings and the cost of the fire sprinkler installation, mandating compliance would shorten the life of the buildings and result in the unnecessary loss of thousands of moderately priced homes.

Other cities in California are dealing with these same issues. Most have not adopted the Fire Code, or have adopted it with amendments, which is a path SF urgently needs to pursue.

I look forward to further discussions with you on this matter.

Best regards,

/s/

Marlayne Morgan, President
Cathedral Hill Neighborhood Association

Dear Board of Supervisors,

My HOA has notified me of the recent changes to the fire code.
While I understand that continuous evolution of safety standards is important, I wanted to put the advantages and costs in perspective.

First off, there appears to have been only 2 fatalities due to one fire in a large concrete building of SF in the past 50 years (Cathedral Hill Hotel Fire).
Other multi unit residences were primarily wooden and described as having cluttered and "hoarder" conditions according to news articles. Such conditions can obviously exacerbate the risk regardless of safety infrastructure.

On any given day, this makes the risk of a fatality due to fire about 3000 less than a fatality in a motor accident, being in a car, public transport, or crossing the road (based on yearly fatalities nationwide, and the US population).

On the other hand, 9800 units affected by this ordinance will incur 3 billion in costs for the renovation, not counting displacement costs, and how these projects often take twice as long and significantly more expensive as they start going.

The costs of the upgrade seem to grotesquely outweigh the risks due to fire, especially for concrete buildings.

Aside from the exorbitant costs for the retrofit, it is not even clear that it can be done while maintaining compliance with other parts of the code, such as the height of the ceilings for the space to be considered "livable".

I wanted to request for you to please take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and collaborate with our buildings on other feasible life safety measures that will protect our residents and visitors.
For example, we already have fire hoses available on every floor.

If the code is not amended, just speaking for myself, it will absolutely force me out of San Francisco and force me to sell at a loss, because I will not be able to absorb the costs of the installation and additional costs of living elsewhere while the project is happening. We already had one such project done 3 years ago. Another TWO projects are already in the process - upgrading the safety of balconies and putting fire alarms into every unit -
another fire department requirement, even though our current central alarm is already extremely loud...

We are already going through a lot of hardships and doing our best to keep up.

So this is an extremely small chance of harm in the fire (far less than chance of harm due to leaving the house) versus the certainty of a severe financial struggle and in some cases, financial ruin.

Thank you for your consideration,

Aleksey

Honorable supervisors,

I am writing you regarding the retrofitting requirement under the Fire Code for high-rise SF buildings. I hope that this requirement could ne eliminated or softened. As it stands the requirement is to provide sprinklers in all rooms of our apartment building. To do this would be a tremendous financial burden to our building making it very likely impossible for us to remain in our apartment (an assessment of $300,000 and the need to vacate my apartment and remove all furnishings for two to three months). Our building has been working with the First Department, PG&E, and various contractors to determine feasibility and approximate cost.

No other community in California, or as far as I have been able to determine, any state has adopted this regulation. It was passed without any notice to us and without any consideration of feasibility or cost and needs to be reconsidered. Perhaps there are other possible measures that our building and other similar ones could take that would protect the building residents without the very great cost, and I am sure that our group of buildings would work with the Board and the Fire Department to find those solutions. The building has proven to be fire safe over the 60 years of its life and we have complied with the latest requirement of placing horns in each room in the apartment,

We ask you please to remove the fire sprinkler retrofitting requirement for older high-rise buildings .

We thank you for your consideration of this matter.

Hello City Officials,

I am writing to urge you to pass legislation amending the San Francisco fire code regarding the current fire sprinkler retrofit mandate in high-rise residential buildings, taking into consideration the financial and other hardships residents like me will face if this is implemented.

I have lived in my highrise for several years and hope to remain here for years to come.

Unfortunately, the cost of complying with this mandate, on all levels will be devastating. The full extent of the mandate implementation costs are currently unknown but could certainly be in excess of $300,000 or more per apartment and the construction process would require me to relocate for an unknown period. At this stage of my life I don't have the time or health to be displaced from my home.

Just how much time was put into the feasibility of this issue. You're asking the impossible. Although, I am not interested in selling my unit. Potential buyers are fleeing from making offers in my building disrupting the natural local real estate market.

We all want our building to be safe and have complied with all the previous mandates the Fire Department has implemented to make our building safer, including recent updates to our alarm and first responder communication systems. However, the requirements of this mandate go beyond what is affordable.

Unfunded mandates of this scope add to the burdens that make San Francisco unaffordable for most people. I am asking you for your support in reversing this mandate.

Sincerely,
Carlyse CIOCCA

Our dear members of the SF Board of Supervisors,

Please take into consideration the very high expected cost and loss of housing during retrofitting older residential buildings in SF for water based fire sprinkler projects. We realize the safety of SF residents is the reason for this upgrade but it comes with unexpected consequences. Many residents will have to abandon their residences due to being unable to afford this upgrade and thus having to sell their properties at a personal loss in income. Many of us are elderly are expected to reside in our multi-unit homes for the remainder of our days.

Please do not support this particular proposal to add sprinkler systems to older structures at the cost of having residents forced to abandon their home at a loss.

New technology has been in the news that demonstrates it is possible to use sound waves to douse flames. Please consider other alternatives to use in fire fighting.

Sincerely,
Donna Coit

To the Members of the San Francisco Board of Supervisors:

I am writing to request that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and that you work with our buildings on other feasible life safety measures that will protect our residents and visitors.

This fire sprinkler mandate was passed without any notice to us and without any discussion of its feasibility and cost. It places an unreasonable physical and financial hardship on me and my neighbors.

This is another significant blow to the affordability issue that all residents in San Francisco face, not only because of the direct cost of compliance, but because of the effect this will have on thousands of rental units and apartments throughout the City.

If the current code for this retrofitting requirement stays as written, I will have no chose other than to sell my unit (which will be very difficult given what lies ahead) and relocate to another state. The cost of living in San Francisco is already very expensive and by adding this totally unnecessary retrofitting requirement, it will make it nearly impossible for young people to move to this city…and that is what is needed. For new buildings, I believe the code is appropriate, but not for 30-50 year old building made basically of steel and concrete. Our building at 1750 Taylor Street has always complied with any requirements the city has mandated. However, this current code is economically unfeasible and a disaster for all the tenants in our building.

Thank you for letting me address you.

Dear Supervisors:

I am writing to request you to pass the new Fire Code introduced by Supervisor, Stephen Sherrill, which will give the residents of my building (and over 100 other buildings) more time to work on solutions to the massive problems we're facing due to the fire sprinkler retrofitting requirement for older high-rise buildings.

While we are grateful for the extra time which we will be allowed if this Fire Code passes, we are still extremely concerned about the ultimate effect of this Code over the next 10 years. Each owner will face hundreds of thousands of dollars in retrofitting expenses. How many owners will be able to afford such a huge expense? In addition, we will need to vacate our units for weeks or months for the required work to be done. Where will we go?

It seems that the wishes of the San Francisco Building Trades Council are being prioritized over the needs of the residents of these older buildings.

If the code is not changed, I do not foresee being able to continue to afford living here. Also, selling my unit to a new owner will be practically impossible because of the extra cost involved in complying with the Fire Code. The cost estimate for retrofitting all 150 units in my building is $45 million dollars! It might be less expensive to just tear down the whole building and start over! With the housing shortage situation in our City, I am sure you do not want more people to lose their homes.

I appreciate the Fire Department’s concern for our safety, but there must be a way to accomplish this goal without such drastic measures which will create major disruption and hardship to me and all the residents of our building, plus thousands of other S.F. residents.

Thank you for your consideration of our situation.

Sincerely,

Richard K. Wiersba

Esteemed SF Board of Supervisors,

This message requests that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate places an unreasonable physical and financial hardship on our residents, and it was passed without any discussion, with or notice to, the affected buildings and

Our condominium at 66 Cleary Ct has been owned by our family for 3 generations. The retrofitting requirement is both a huge financial and physical hardship for members of our family. The retrofitting will require certain ceiling heights in our building and condominium to be lowered to 7'1". Such a low ceiling will cause significant problems for the tallest member of our family.

Our 15 story building is made out of concrete and already is quite safe from fire. It is obvious that better solutions than a blanket sprinkler mandate can be found. Instead of forcing us to relocate while obtrusive sprinklers are installed, please let our building owners stay in our homes and work with the fire department on better prevention measures. Working together we will all be safer.

Sincerely,

Joan Eaton

Dear Board of Supervisors,

I am writing to express serious concern about the proposed fire sprinkler mandate for pre-1975 high-rise condominiums. I support better fire safety, but the ordinance in its current form would create severe financial and social harm for thousands of residents.

Estimated retrofit costs range from $113,000 to $300,000 per unit, which could translate into thousands of dollars in new monthly HOA fees or loan payments. These retrofits require opening walls, ceilings, and sometimes surrounding streets, which means major disruption and likely displacement for many residents.

The ordinance also provides no plan for where displaced residents will go, even though thousands could be forced out during construction. Many affected homeowners are seniors, fixed-income residents, and long-time community members who cannot absorb six-figure costs or months of displacement. This risks pushing vulnerable people out of their homes and undermining property values.

There are also fairness and process issues. Homeowners bear the full cost even though lower-cost alternatives, such as upgraded fire-resistant doors or partial sprinkler systems, were not fully evaluated. The proposal has moved forward without an updated independent cost-benefit analysis and with limited public input.

I respectfully urge you to pause the ordinance and pursue a more balanced approach. A new independent study, real financial relief or hardship protections, and a clear relocation plan are essential. The city should fully consider safer and more affordable alternatives before imposing costs that many residents cannot withstand.

Thanks in advance for your consideration.
Best regards
Nuria Simo Vila

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Hello,

I'm reaching out because I am concerned about the fire sprinkler retrofitting requirement for older high-rise buildings. I live in a building that will be impacted by this requirement and it would place an unreasonable hardship on me and my family. It would be impossible for us to relocate for an extended period during construction, and to pay for the cost of the construction (estimated at $300k for our unit). The current proposal to push out the deadline does not solve this problem or provide any relief. If the code is not changed, we will likely have to sell our condo and leave the city entirely, despite this condo having been in our family for 2 generations. I just had a daughter this summer and was looking forward to raising her in the city and showing her everything San Francisco has to offer. But we are not wealthy and this requirement would make staying here impossible whether it goes into effect this year or 3 years from now.

I am especially frustrated that this mandate was passed without any notice or discussion with the community, but we - the people - will have to bear the pain of its cost. As if San Francisco is not an expensive enough city to live in. Please amend this requirement and work with the community on other feasible life safety measures. As a new mother, I understand fire safety is important. But this requirement will hurt my family more than it will help.

Please take action to amend this requirement as soon as possible, as every day that this looms over our heads has brought more stress and anxiety to me and my family.

Thank you,
-Heather Murphy

Subject:	Urgent! Please revisit sprinkler mandate — SEVERE Hardship for condo residents.
Date:	Tuesday, January 20, 2026 7:36:56 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear City Official,
I'm writing to raise significant concerns about the proposed requirement to install fire sprinklers in all pre-1975 high-rise condominiums. While I strongly support improving fire safety, the ordinance as drafted would impose extreme financial and personal hardship on thousands of homeowners.
Current estimates place the retrofit costs between $113,000 and $300,000 per unit. For many buildings, that would translate into huge monthly HOA increases or large loan obligations—burdens that many residents simply cannot shoulder. The work itself is highly invasive, often involving opening concrete walls and ceilings and, in some cases, construction in surrounding streets. This level of disruption could force residents out of their homes for extended periods. Yet the proposal includes no relocation strategy or plans for how to accommodate the potentially thousands of people who may be temporarily displaced.
A large share of the affected homeowners are seniors, individuals on fixed incomes, and long-term residents who have deep ties to their communities. Saddling them with six-figure costs or lengthy displacement risks pushing vulnerable people out of stable housing and damaging property values across entire buildings.
There are also serious issues of fairness and due diligence. The ordinance places the entire financial burden on homeowners even though lower-cost safety improvements—such as enhanced fire-rated doors or limited-area sprinkler systems—have not been thoroughly explored. The proposal has been advanced without a current, independent cost-benefit study and with only minimal opportunity for community input.
For these reasons, I respectfully urge you to halt the ordinance in its current form and take a more balanced, responsible approach. A fresh independent analysis, meaningful financial assistance or hardship protections, and a concrete relocation plan are essential. The city should fully examine safer, more affordable options before adopting a policy that many residents simply cannot afford to comply with.

Subject: Mandatory sprinkler installation

Dear Board of Supervisors,
Please consider revisiting the mandatory installation of sprinkler systems in older buildings. In my building alone, they are estimating a price of between $100,000 and $300,000 per unit, probably the higher cost for our building. I am retired and on a budget and there is absolutely no way that my wife and I can afford this. I can appreciate that you want to save our lives in case of a fire. How about the heart attack that you may give someone with not only the cost that we would incur, but also the necessity of having to move for not only the installation but also the asbestos abatement. Please try to come up with another solution. Thank you.

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I am writing to urge you to pass legislation to amend the fire sprinkler mandate in high rise residential buildings and take into consideration the financial and other hardships residents like me will face. I want my building at 850 Powell Street to be safe. We have been willing and able to comply with all the previous mandates the Fire Department has required to make our buildings safe, but the current mandate is beyond what we can do.

We have recently undertaken a major, expensive project to install hard wired fire alarm sounders in our building. We continue to improve our fire escape systems, install new hoses and fire extinguishers according to the current requirements. Each unit in our building with access to a fire escape has a sprinkler head to improve our chances of escape. Our building is over 100 years old and hasn't experienced any fires in all that time. The building is constructed of steel and concrete, rendering it much safer from fires than many buildings.

The proposed work would be immensely expensive, much more than estimated and would be unaffordable for many, if not all, of the building residents, who will have a difficult time selling, if able to at all, and at a great loss. Plus, everyone would need to find another place to live during the renovations required, adding to the expense and difficulties. It's not even clear that the city's water system would be able to support the needed water supply and would certainly place great strain on the electrical requirements for the pumps.

I appreciate the intention of making our building safer, but it comes at too high a price, making the location unaffordable for my wife and me, and affecting my ability to sell the condo at a price permitting me to relocate within the city. I feel safe with all the existing safety measures and think this proposal is unneeded.

The primary impetus seems to be the trade unions, whom I generally support, and who want the workload required, but not so much from the fire department and its experts. Other cities have found ways to limit this enormous undertaking, Chicago with a fire safety rating for each building to determine which are safe enough already. I support the need for delay and consideration of alternatives and hope you will, too, whether or not you have any affected buildings in your district.

Thank you for your service and consideration,
David

To the Board of Supervisors:
I understand that you will be considering changes to the current Fire Sprinkler Retrofit Requirement at an upcoming February meeting. I urge you to please consider this requirement with common sense, compassion and also a concern for the reputation of the city of San Francisco as a city where building requirements make it too expensive for investment.
I live in a 74-unit building that is very well-maintained on all levels. We have extensive protection against the risk of fire, including existing sprinklered common areas, sprinklered units near fire escapes and multiple fire alarms. Adding additional sprinklers as proposed would be exorbitantly expensive as well as disruptive to the lives of residents, many of whom are elderly. The subject work is quite extensive (it calls for opening ceilings and rebuilding interiors) and would require residents to find alternative housing during the installation. In addition to the pressure on housing in a city that already suffers from insufficient supply, the work could very well impact property values negatively and result in lower property tax income to the city.
The changes that are proposed to the existing ordinance do not make sense either. Consider the following impact of the proposed changes:
1. Proposing a 3 year postponement of requirements—what about those residents who are currently trying to sell their units? Do they wait 3 years until requirements are known? Do they sell at a lower price since estimates now hover around $300,000 per unit to do the work? Current estimates have already depressed values.
2. Using cheaper alternatives—really??? Do we all really want our homes to be made unattractive because of cheap materials? Or does cheaper mean that the sprinklers will have to be replaced sooner and more often?
3. Providing financial help to those unable to pay for the sprinklers—what about their having to find a place to stay while the work is being done? Where will that be?
Finally, think hard about how this ordinance confirms in everyone’s mind once again that San Francisco isn’t about helping business or real estate
developers by SETTING BUILDING REQUIREMENTS THAT AREN’T REQUIRED ANYWHERE ELSE.
Thank you for your attention to this matter.
Sincerely,
Karen Rose

Hello,

I am writing to formally object to the proposed fire sprinkler mandate included in the current fire code amendments.

I respectfully request that this objection be entered into the official record and associated directly with the proposed code. I oppose the mandate due to its significant financial burden, questionable cost-effectiveness, and the unintended consequences it may have on existing buildings, property owners, and housing affordability.

While fire safety is critically important, a one-size-fits-all sprinkler requirement does not adequately account for the wide variation in building types, existing safety measures, or the real-world impacts of retrofitting. The proposed mandate would impose substantial costs without clear evidence that these costs are justified by proportional safety benefits.

I urge the Committee to reconsider this mandate and explore alternative, more flexible approaches that enhance safety without creating excessive hardship for property owners and residents.

Thank you for your consideration and for including this objection in the official record.

Sincerely,

Roxana Salehoun

Board of Supervisors,

I am writing to request that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and to work with our buildings on other feasible, evidence-based life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on me. While I fully support safety measures that are necessary and grounded in evidence, there is simply no justification for this requirement as currently written.

At 79 years of age, if the code is not changed, I am deeply concerned about the financial impact this proposal would have on me. The projected cost to retrofit our building would increase my monthly homeowner fees by approximately **$3000 per month** for nine years. Some have suggested that this dollar amount is exaggerated; **it is not**. These figures are based on actual projections in our city of San Francisco (including “the last mile” where homeowners are responsible ????) and reflect the true cost of compliance.

Such an increase would be devastating to my retirement savings and, frankly, may make it impossible for me to remain in my home. This home is deeply special to me—it is a source of comfort and stability and represents the security I worked a lifetime to build and hope to pass on to my children. This mandate could make that impossible.

Thank you for your attention to this matter and for your consideration of **the real-world impact** this code would have on me and my fellow homeowners.

Sincerely,

RoJean DeChantal

Dear Supervisors,

We are writing to request that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on us.

The drop in our ceiling heights that would be required by the mandate would leave us with seven-foot ceilings, which are not an acceptable living space. Also, since our building has both lead and asbestos, we would be forced to move out of our apartment, store all of our furniture and find new housing. All of this would be extremely expensive and challenging.

It is not clear to us how the City can impose a requirement of this magnitude (that disrupts our lives financially, physically and emotionally) without a close consultation with the people who are affected by it.

We strongly urge you to amend this mandate and consider other safety measures.

Thank you.

Sincerely,
Greg Oldham and Bai Park

To: Board of Supervisors (BOS); Carroll, John (BOS)
Subject: Fire Sprinkler Retrofit Requirement - File 251247 - Objection to Sprinkler Mandate
Date: Monday, January 19, 2026 7:54:27 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

To whom it may concern:
I urge Mayor Lurie, the San Francisco Board of Supervisors, and the San Francisco Fire Administration to reconsider the currently contemplated fire sprinkler retrofitting requirement for older high-rise buildings. The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship and loss on owners and residents. If the mandate is not retracted or significantly amended, it will have catastrophic economic consequences for me and similarly situated unit owners and tenants of affected buildings. Among other things:

1. I will be subject to a special assessment of $200,000 - $300,000. This is not only a hugely disproportionate and unbearable expense, but it casts an untenable cloud on my unit, destroying its market value;
2. I will be required to move out of my unit for 6 to 12 months or more for the required major construction work, thereby imposing further unreasonable expense; and
3. Major modifications will be made to my unit, resulting in lowered 7-foot ceilings, which will make my unit uninhabitable and unmarketable.

Owners and occupants in these buildings cannot withstand these devastating impacts. While fire safety is clearly important, the current fire sprinkler mandate poses unreasonable financial and physical burdens at a time when the City of San Francisco should be focused on increasing the housing supply and reducing the cost of occupancy. This sprinkler mandate for older buildings is absolutely contrary to the goal of encouraging increased supply and affordability of housing and seems to be designed to satisfy the desires of organized labor by creating unnecessarily expensive retrofitting work. Less onerous fire safety alternatives are available and should be considered to balance the financial hardships to be suffered by building occupants.
Please support the reconsideration of these onerous sprinkler retrofitting requirements and work with the representatives of over 125 affected buildings to arrive at a more reasonable approach that is consistent with the City's housing goals. At worst, existing buildings should be exempt from the mandate unless they voluntarily undertake a major renovation.
Respectfully,

Jeffrey R. Patterson

Dear Board Members:

My husband and I are owners at 2200 Pacific, #7F, San Francisco, California 94115. We were recently advised of the City's intent to retrofit the sprinkler system in our building (2200 Pacific as above referenced). I am writing to strongly request that you take action to amend the fire sprinkler requirement for older high rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on us.

If the code is not changed it will place an exorbitant cost on me and other owners of anywhere from an additional $1,300.00 to $3,000.00 per month for nine (9) years or a special assessment of $200,000.00 over a nine (9) year period. The value of my condo and other condos will drop in market value by the cost of this mandate and will be hard to sell with this mandate in place for the next nine (9) years or during the nine (9) years. We will be forced to move out for six (6) months having to incur the cost of storage for our furniture together with substitute lodging while the work is being done and there will be hazardous waste remediation all over the building. Housing is already scarce in San Francisco for obtaining substitute housing for people residing in the building full time. We intend to retire there. Our ceiling heights would drop as much as 14" where sprinkler pipes run, leaving us with 7-foot clearance or lower. Again, this affects everyday living together with re-sale value. Substantial coring of our structural slabs and structural walls will be a concern for the integrity of the building. There will be enhanced risk of water damage throughout the building.

The justification for this extreme mandate does not exist. I am advised that in the last 60 years there has been only one death attributable to fire in another high rise and this was unrelated to any sprinkler system and was caused by an electric scooter.

I cannot impress upon you the importance of reversing this mandate. Thousands of people will be impacted in a negative manner for no reasonable reason whatsoever. Please take action on this matter. Please feel free to contact me if I may be of any further assistance. Please keep me advised of all progress on this matter and what the game plan is for the future.

Subject: Sprinkler mandate for older high-rise buildings
Date: Sunday, January 18, 2026 7:05:26 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisors:

I write to ask you to take action to nullify the proposed sprinkler mandate for pre-1975 12+-story residential buildings in the City.

I am 78 years old and own/live in one of the affected buildings. Many of my neighbors are older, and less mobile, than I am. Our building is of concrete construction and is compliant with all current fire safety requirements.

The cost of the proposed retrofitting - up to $300,00 per unit - would be impossible for many owners who have limited, if any, savings and live on fixed incomes.

In addition to the extreme burden of the retrofit cost, there would be the extreme hardship of having to move during the sprinkler installation. Remaining in place during installation is not an option in buildings that would need asbestos and lead removal.

A sudden rush of hundreds, if not thousands, of displaced City residents would clog the already stressed SF rental market and cause rents - even assuming availability of units - to soar above already high levels.

When we add, for many of the affected population, the physical and emotional stresses of moving, this mandate could do more harm than good to the majority of residents of the affected buildings.

We all want to keep our firefighters safe. We all want to remain safe in our homes. We don't want to lose our homes in the process. Please work with us to find a viable alternative to the blanket sprinkler mandate.

Respectfully,

Ellen Shapiro
2200 Pacific Avenue

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Members of the Board of Supervisors,

I am writing urgently to ask that you amend the fire sprinkler retrofitting requirement for older high-rise buildings. This mandate places an unbearable financial and personal burden on residents like me while offering little real safety benefit.

My spouse and I are senior citizens living at 2200 Pacific Avenue, and this is our lifelong home. We cannot afford the enormous cost— hundreds of thousands of dollars per unit—nor could we endure being forced out for months during construction. We are at a loss of how to find and afford any temporary housing. For us, this could very well mean losing our homes entirely.

The reality is that this mandate would devastate San Francisco homeowners and renters alike—driving people out, lowering property values, and worsening the city's housing crisis—while doing almost nothing to improve safety. In sixty years, there has been only one fire-related death in any of the affected buildings, and that was caused by an electric scooter. A far more effective and reasonable step would be to require safe, fireproof storage areas for e-bikes and similar devices.

Please, do not let this unnecessary and destructive policy harm thousands of San Franciscans. We need a practical, balanced approach that protects safety without destroying our homes and our financial security.

Sincerely,

Benjamin Gurdus

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I am writing to request that you take immediately and decisive action to amend the fire sprinkler retrofitting requirement in our City for older high-rise buildings, and work with our building on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on myself, my family and our community of homeowners.

If this code remains unchanged, the physical and financial toll on us will be severe. Our property values will plummet, and our building will transform into a dark and empty shell of its former self.

Among the numerous negative impacts this mandate will have on our property, the most significant is physical. Our current floor-to-ceiling heights of 8’-0” will drop by up to 14” to accommodate sprinkler pipes throughout our individual units. This will result in finished ceiling heights of 6-‘8”, making them unlivable.

I urge you to reassess this mandate and explore a more reasonable path towards ensuring safety while preserving our property values.

Thank you for your consideration in this matter.

Hi,

I am writing to request that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on me.

If the code is not changed, this will greatly impact our living situation, forcing us to move out of the building we have loved for so long. We would not be able to pay for the estimated cost and subsequent increase in Rent/HOA fees.

In addition to the financial hardship we would face, our ceiling heights would drop as much as 14" wherever the sprinkler pipes run, including all over our units, leaving us with 7' or lower ceilings, which is not even considered "living space" by code.

I urge you to amend the fire sprinkler requirement.

Best,
Alexa Karp

Dear Members of the San Francisco Board of Supervisors,

San Francisco's reputation has always rested on its resilience, creativity, and ability to balance safety with livability. After several difficult years, the City is finally showing real signs of economic renewal—downtown activity is improving, investment is cautiously returning, and residents are beginning to regain confidence. A sweeping, mandatory sprinkler-retrofit requirement for older residential buildings at this fragile stage could unintentionally reverse that progress and send an unsettling message to homeowners and investors alike: that even stable, code-compliant properties may face large, unfunded mandates at any time.

Economic and Housing-Market Concerns:

The retrofit costs projected for mid-sized condominium buildings—often $200,000 per unit or more—are simply unmanageable for many ordinary San Franciscans. These buildings are not normally owned by the very wealthy; they shelter retirees, middle-income families, and long-term residents who have invested carefully to remain in San Francisco. Owners already shoulder increasing special assessments, especially in older buildings. Sudden, uncompensated costs triggered by the mandate would cause real hardship, pushing some owners to sell below value and others into debt they cannot sustain. Meanwhile, prospective buyers would be discouraged.

The City already faces one of the tightest and most expensive housing markets in the nation. Large-scale retrofits would disrupt and dislocate both owners and tenants, removing units from service during construction and adding pressure to an already strained rental market. Landlords facing steep retrofit expenses would have little choice but to seek rent increases or sell their properties, deepening the affordability crisis.

Questionable Cost–Benefit Balance:

Fire safety is essential, yet data show that fatalities have largely occurred in specific high-risk structures (SRO hotels and mixed-use

buildings) not in owner-occupied condominiums with modern alarms, smoke detectors, and safe egress. Mandating sprinklers across every older residential building would deliver minimal incremental safety benefit at an enormous collective cost. Targeted enforcement, improved alarm systems, and focused retrofits in truly high-risk structures would achieve far greater safety at far lower economic and social cost.

Protecting San Francisco's Reputation and Recovery:

At a time when San Francisco is striving to attract residents, visitors, and business investment, new mandates that appear financially punitive risk undermining confidence in San Francisco's governance and housing stability. The City's credibility depends on balanced, data-driven policy that recognizes both safety and economic sustainability.

For all the foregoing reasons, I respectfully urge the San Francisco Board of Supervisors to reconsider a blanket sprinkler mandate.

Respectfully,
Meriel Lindley (69 years old)

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisors,

I am writing as a San Francisco homeowner affected by the mandatory fire sprinkler retrofit mandate for existing residential buildings.

Many of us attended the recent public meeting on 12/11/2025 and shared thoughtful, informed concerns about the real financial, structural, and logistical impacts of this mandate. Unfortunately, it has become clear that despite these concerns, there is little willingness among the Board to reconsider the policy or even allow a basic exemption for buildings that are not undergoing major renovations.

This mandate places an extraordinary burden on owners of older buildings, often without delivering proportional safety benefits, while exempting many other risk factors. A straightforward exemption tied to “major renovations” would be a reasonable, balanced solution, yet this option now appears to be off the table for political reasons rather than practical ones.

I am especially disappointed that labor interests appear to be driving this decision more than the voices of residents and property owners who will bear the consequences. San Francisco should not be used as a test case for a national policy at the expense of its own residents.

I urge you to support overturning the sprinkler retrofit mandate or, at minimum, allowing an exemption for existing buildings unless they apply for permits for major renovations. This would protect safety while avoiding unnecessary financial harm.

Thank you for your time and consideration.

Sincerely,
Nahal Farhi

Hi,

We've received a series of updates from our Board that the city has mandated fire sprinklers to be installed in our building and condo units. For us, the cost of this is absolutely prohibitive as is the disruption, and diminishment of the quality of our living quarters.

It would require us to outlay hundreds of thousands of dollars, would force us to move out for many months for the work to be completed including asbestos abatement, and would greatly diminish the quality of our living space as our condo would all have unsightly sprinklers running through our 8' high in-unit ceilings given the concrete nature of our structure.

Our building is all concrete and historically this type building has had little risk over the last half century. I frankly see this requirement by the city as missing the real world impact on people actually living here. I think a much more limited approach can achieve much of what may be needed.

Please note, that we are currentlCompose y complying with mandates for a current Fire Alarm upgrade, the ERRCS (Emergency Radio Responder Communication System) upgrade, lobby sprinkler additions, restrictions for EV charging, and the facade inspections and repairs. This is already too much!

Login - Sign in to Yahoo

Sign in to access the best in class Yahoo Mail, breaking local, national and global news, finance, sports, music...

If this mandate isn't rescinded for SF, we plan to sell our unit and leave the city. Even with moving, our property value will drop dramatically given the large cost increase, massive family disruption, and expected diminishment in the visual quality of our interiors. This demand by the city is a losing proposition for us but at least we won't have to live through it.

I know that you are all trying to improve safety, but in this instance, given our type of building together with cost and impact, it is missing the bigger practical picture for people who live and love the city.

Please rescind! Thank you,
Jay and Elise Rossiter

Subject: Egregious City Mandate for Installation of Sprinkler Systems
Date: December 1, 2025 at 6:28:28 PM GMT
To: Board.of.Supervisors@sfgov.org

Dear Supervisors:

We are owner/residents of Unit 6A at 2200 Pacific Avenue, a solid concrete and steel building constructed in 1962. We have owned our property since 2013.

We are deeply concerned about the city's mandate requiring the installation of a sprinkler system in our building for the following reasons:

1. Our HOA board estimates the cost for each homeowner at $1,300 - $3,300 per month for nine years, or very large special assessments, amounting to more than $200K per unit, over those nine years.

2. Substantial coring of our structural slabs and structural walls is a real concern for the integrity of our building.

3. Many new sprinkler water pipes all over our building will add to the risk of water damage, which is the number one concern for high rise insurers.

4. The justification for a sprinkler system simply does not exist. There has been one life lost in the last 60 years in the 125 buildings affected by this extreme mandate, due to fire, and that fire was caused by an electric scooter.

In addition to these concerns, given that we might have to move out of the building for six months, because of asbestos abatement during construction, we would be incurring huge additional expenses finding a rental in a tight housing market.

All of this is needless regulatory overreach, and we urgently request you put a stop to this totally unnecessary sprinkler mandate.

Respectfully,

Richard Royse
Rocky Blumhagen

2200 Pacific Avenue #6A

Subject: Amend or Rescind Retrofit Sprinkler Ordinance
Date: November 22, 2025 at 3:37:01 PM PST
To: Daniel Lurie <daniel.lurie@sfgov.org>, Stephen Sherrill <sherrillstaff@sfgov.org>, Danny Sauter <SauterStaff@sfgov.org>, Rafael Mandelman <mandelmanstaff@sfgov.org>, FireAdministration@sfgov.org

I am writing to urge you to pass legislation to rescind or amend the fire sprinkler mandate in high rise residential buildings and take into consideration the financial and other hardships residents like me will face.

My building is safe. All high-rises are constructed of non-combustible building material such as concrete or steel. 1835 Franklin, my building, is concrete. We have one-hour fire rated walls between units and the hallways. We have two exit stairwells, both of them two-hour fire rated. We comply with numerous mandates the Fire Department requires including inspection of the fire alarm system, inspection of the fire pump that service the sprinklers already in our building, inspection of fire hoses, annual fire drills. We do not allow charging of electric cars or e-bikes. We diligently monitor for compliance.

In addition to monitoring the safety provisions already in place, we are in the process of installing fire horns in each units' sleeping areas to comply with SFFC Section 1103.7.6.1 - Fire Alarm Sleeping Area Retrofit requirement.

I call your attention to the fact mentioned in The City's Budget and Legislative Analyst report dated November 21, 2016. Of 252 two-alarm or greater residential fires from 2004 to 2016, vast majority (87%) were in wood framed buildings. Not in non-combustible high-rises. My high-rise is safe.

Retrofit Sprinkler Ordinance, as currently written, is vast over reach. It was not crafted by thinking people who considered impacts to occupants

(owners and renters), property values, and the larger community. Disruption caused by installing sprinklers is enormous. My building, as most older high-rise buildings, has asbestos. Sprinklers cannot be installed without disturbing asbestos. It is not safe to live in an environment where asbestos is disturbed, thus I - and most of your other constituents affected by this sprinkler retrofit requirement - will have to find and pay for a temporary home.

New pressurized water source and fire pump will have to be installed. That is a tremendous expense. In 1835 Franklin's zero lot line situation, we would be challenged to find a location for a fire pump without eliminating parking. We are already down to only one parking spot per each Homeowner. To eliminate a couple of parking stalls will be a legal nightmare for our HOA and an additional expense.

I am a Senior living within financial constraints. If my building is required to be sprinkler retrofitted, I will not be able to continue to stay in my current home at 1835 Franklin. I request that you:

1. educate yourself on the wide-ranging negative impacts of this sprinkler retrofit requirement.
2. educate yourself on current life safety provisions already in place
3. be aware that high-rises recently have, or are currently funding life safety enhancement of fire horn additions in our homes
4. read the Budget and Legislative Analyst report of 2016
5. be an advocate for your constituents, not entities that will financially benefit from this requirement.

Sincerely,

(Gloria) Yumi Westland
1835 Franklin St. #101

RE: Sprinkler Mandate Relief Request FILE 251247

Dear Members of the Board of Supervisors,

I serve as President of the board of our homeowners' association at 1750 Taylor Street, at the corner of Green Street, in San Francisco. Our building is one of the 126 buildings that are required to retroactively install fire sprinklers in all the apartments in our buildings because of a change in the fire code in 2022. Our building is a 24-floor, concrete and steel structure built in 1962 that has 68 apartments and approximately 100 residents. We have two enclosed fire stairways, we have complied with all the previous mandates the Fire Department has implemented to make our building safer, including recent updates to our alarm and first responder communication systems, and we continue to pass our annual fire inspections.

I spoke in the public comments portion of the most recent Fire Commission meeting as well as in the Town Hall meeting on December 9, 2025 with the Fire Chief, Fire Marshal and Supervisors Sherrill and Sauter. In addition, over the past several months I've separately met or spoken directly with the Fire Chief, the Fire Marshal, and Supervisors Sherrill, Sauter and Mandelman, as a member of a coalition of 29 owner-occupied buildings affected by this mandate. In all these meetings we have tried to explain the issues all our buildings face in implementing this mandate, which include massive costs as well as the need for residents to relocate during an extended construction process. I am writing to urge you to amend the San Francisco fire code to eliminate this burden on our residents and the more than 10,000 other affected residents in San Francisco. The cost of complying with this mandate, both in financial and physical terms, will be devasting to our residents as well as those in the other affected buildings. These apartments are our homes, and we want our homes and our buildings to be safe. However, unfunded mandates of this scope add to the burdens that make San Francisco unaffordable for most people. I am asking for your support in providing us relief from this mandate.

To give you an idea of the financial burden we face, the costs associated with implementing this mandate for just our building are huge. These include the cost of the necessary infrastructure as well as the cost to

install sprinklers in each room in every apartment. While this may seem like an exaggeration, I can assure you it's not. Here's how those figures are determined.

> **Infrastructure Costs:** The estimate of the cost to install the necessary infrastructure in our building to support the sprinklers we are required to install in each apartment is **$1.5M to $2.0M**. This is based on an actual proposal from our fire safety engineering firm and the known costs of installing our existing backup power supply (which will have to be duplicated), plus estimates of the cost to replace our electrical transformer and running new plumbing to the water supply in Green Street. We have been told by the Fire Department that we would have to connect to the city water supply in the middle of Columbus Avenue, four blocks downhill from our building, with pumps and backup power installed in an underground vault there. I can't attempt to estimate the additional cost associated with that requirement, so I haven't tried to guess.
>
> **Per-Apartment Costs:** We have obtained an estimate from a contractor who has remodeled many apartments in our building on what it would cost to install sprinklers in the apartments in our building. His estimate is $100 per square foot, equating to an average of $200,000 to $250,000 per apartment, at least $15.5 million total for the whole building.
>
> **Combined Costs:** As noted above, the combined cost for our building to comply with the sprinkler mandate is **$15M to $20M** (excluding the cost associated with connecting to the water supply on Columbus Avenue). This equates to an **average cost PER APARTMENT of $220,000 to $300,000**. To have the necessary funds to cover these costs we will have to increase the monthly per-apartment assessment our building collects to cover the expenses of operating and maintaining our building. If we were to start a separate monthly assessment for these costs on January 1, 2026, with the target of collecting the appropriate amount of funds by the required completion date of January 1, 2035, that would mean **each owner, on average, would have their assessment increase by $1,800 to $2,500 per month for 120 months**. This doesn't consider any inflationary increases in the costs. In some cases, this increase is more than 100% of an owner's current monthly payment.

I have lived in our apartment for over 13 years. We love living in San Francisco and had intended to remain in our apartment for the rest of our lives. However, we are unable to afford the financial cost and disruption that will be caused by this mandate and will now have to consider the possibility of selling our apartment. That is a difficult thing to do because of the uncertainty caused by the mandate. A realtor who has sold many apartments in our building has told us that there are no buyers willing to

assume the future financial obligation imposed by this mandate and the need to vacate the apartment for an extended period. The overhang of this mandate will extend for the next 10+ years unless it can be eliminated or mitigated in some significant way.

I would also like to take this opportunity to dispel a misunderstanding that seems to be circulating and to point out a concern that we have about exemptions, both of which arise from comments made in the most recent Fire Commission meeting:

1. The Fire Marshal indicated that this retroactive sprinkler mandate was required because the 2018 national fire code made it a requirement. This is just not the case. The 2018 fire code provided, in its appendix M, the requirements to enforce the mandate <u>if</u> a local jurisdiction chose to adopt it. The 2022 California fire code also adopted Appendix M as a guideline, <u>should a local jurisdiction choose to adopt it</u>. Only San Francisco made this choice. To quote the wording in California's Appendix M "The provisions contained in this appendix are not mandatory unless specifically referenced in the adopting ordinance or legislation of the jurisdiction. <u>Appendix M was created with the intent to provide an option for adoption by jurisdictions</u> that choose to require existing high-rise buildings to be retrofitted with automatic sprinklers" (emphasis mine).

2. The Fire Marshal mentioned that he has granted certain exemptions to the mandate. However, there is no clarity on the process of granting or denying requests for exemptions and what sort of things might make a building eligible for an exemption. For example, both the Fire Marshal and the Fire Chief mentioned exemptions for financial hardship. This cannot work on an owner-by-owner basis because the infrastructure necessary to feed the system must be installed and paid for by the entire building, not owner by owner. Therefore, a financial hardship exemption would have to be granted on a building-wide basis. How is that to be determined? With all respect to the Fire Marshal, one person shouldn't have the power to grant or deny exemptions to a mandate like this, which is how the fire code is currently written, especially when there are no written criteria on what situation makes a building eligible for an exemption. The possibility of exemptions should never be suggested without specific criteria that buildings could use to determine whether they would qualify. This would save the time, money and grief spent trying to guess whether a building would win the exemption lottery. Why not eliminate the mandate and commission a new study (or revise the 2016 study commissioned by the Board of Supervisors) to determine whether this mandate actually makes sense and, if so, how its implementation would be funded and what specific criteria for exemptions would apply?

Unfunded mandates of this scope add to the burdens that make San Francisco unaffordable for most people. I am asking again for your support in relief of this mandate.

Thank you,

Dear San Francisco Supervisors,

I'm an 82 year old longtime resident of a 60-year old, 17-story building that is home to many senior citizens. I request that you take action to amend the SF Fire Code's sprinkler retrofit requirement for older high-rise buildings and work with our buildings to develop other feasible life safety measures that will protect our residents and guests.

The fire sprinkler mandate was passed without any notice to, or discussion with, the affected buildings. It will place unreasonable and onerous physical and financial hardships on our residents. If you don't amend the Fire Code to provide relief, my neighbors and I will incur very large special assessments that will impose a huge financial burden on those of us living on fixed incomes. We will also be forced to relocate during a long construction period at a high additional cost, with major inconvenience and disruption to our lives. Many of us will be unable to afford this. Many of us will be unable to find alternative housing. Don't allow our already challenging lives to become even more difficult.

Please help us out!

Ronald Ludwig

I am writing to urge you to promptly pass legislation to amend the fire sprinkler mandate in high rise residential buildings and take into consideration the financial and other hardships residents like us will face. We want our building to be safe. We have been willing and able to comply with all the previous mandates the Fire Department has required to make our buildings safe but the current mandate is beyond what we can do. It is completely unreasonable.

We are in a small, seven story building, and don't understand how the ordinance, that is apparently intended to cover buildings over 12 stories, has been construed to apply to our building.

It would cost an enormous amount of money to install sprinklers, and require us to move out. I understand the ordinance prohibits requiring owners/residents to move out, but this is a true catch-22 because the only way to do this expensive, unnecessary installation is to require us to move out.

Please act immediately to solve this problem. We can't understand why the fire marshal is insisting that these exorbitant requirements should apply. We also support union labor, but this is not a solution to union labor issues. Is this a "progressive" way to impose another tax on city residents, and to get us to move out of the city?

The legislation should be amended, not simply extended, which will do us and all the rest of the affected families no good at all. It just kicks the explosive bomb down the road.

Dear Ladies and Gentlemen,

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on our residents.

If the code is not changed, I estimate that I will have to pay $250,000 to $300,000 and I would have to move out of the building for 6 to 9 months. Furthermore, no one has demonstrated the need for these upgrades.....to my knowledge there has never been a fire in a high rise building in SF since I moved here in 1985. Moving forward with this mandate will result in long-term chaos in the city. Many residents will suffer from the displacement, and many homeowners will find this to be unaffordable.

Thank you for your consideration.....and please amend the fire sprinkler retrofitting requirement for older high-rise buildings.

Subject: Strong Objection to Fire Sprinkler Retrofit Requirement (File 251247)
Date: Thursday, January 22, 2026 10:45:24 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors,

I am reaching out once again to emphasize the importance of this issue to myself, my family, and thousands of local San Francisco residents.

As a concerned resident, I am writing this email to voice my urgent objection to the fire sprinkler retrofitting requirement for older high-rise buildings. I currently reside in one of the potentially impacted buildings with my wife and 5-year old daughter -- we've lived here for the last seven years. If allowed to proceed, this mandate would cause an enormous financial burden that we as a family cannot possibly bear. The estimated cost for each unit is between $200,000 - $300,000, or an additional monthly cost of $3,000/month for nine consecutive years. This is well beyond our means, particularly as I have been recently laid off from work (to be frank, it would be well beyond our means even if I maintained employment). Further, our family would be forced to move out for at least 6 months due to potential construction, leading to struggles to find alternate housing, uprooting our daughter, and more.

I urge you to please consider the ramifications of such an extreme mandate on thousands of local residents and families. I request that this mandate be amended, and that you work together with our buildings to enact more feasible safety measures.

Thank you,
Julian Chen

I would like to submit the following comment to the land use committee regarding the proposed sprinkler mandate for older buildings:

I question whether the advocates for the sprinkler mandate actually care about real people's lives because they are on the cusp of imposing a requirement that will cause immense financial pain and disruption to the lives of thousands of people, versus the hypothetical possibility of saving lives at some point in the future. Who's to say that the burdens of the cost of the mandate and the disruption to the lives of those affected will not result in financial distress, depression, and illness that causes multiple premature deaths?

We, as a society, need to make rational decisions in the name of safety and preventing deaths. Why is it that we don't require older model cars to be retrofitted with the latest safety equipment - air bags, back-up cameras, and AI sensors? Why don't we just make it illegal to drive these "unsafe" vehicles? We do so because in the case of the automobile, common sense has prevailed. We do so because it would be economically irrational to impose this mandate in the name of safety. Similarly, we should not require older buildings to be retrofitted with sprinklers. This mandate is not justifiable given the cost and disruption to people's lives.

We supposedly live in a democracy, with a government of the people, by the people, and for the people. But the people most affected by this mandate do not have a vote in the matter and are simply at the mercy of bureaucrats and supervisors, mostly in other parts of the City, who will neither pay for the sprinkler retrofit nor incur the disruption in their lives. **One of my concerns is that the unions whose members will make a fortune installing sprinklers will donate thousands of dollars into the campaign coffers of all the supervisors to buy their votes on this issue.**

It's just so easy to impose these mandates on others in the name of saving lives,

when you personally will not have to pay for it or live with the disruption. If you actually care about people's lives right now, not hypothetical lives in the futures, then please listen to us and do not abuse your power and authority by mandating this sprinkler retrofit.

Sincerely yours,

Kim Beleson

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Chair Melgar and Honorable Supervisors,

The Fire Code is about saving lives; saving the lives of our fire fighters; the lives of my neighbors; my wife's life; my own. My neighbors and I are committed to saving lives by strengthen buildings and the communities that live in them, so that fires are eliminated and lives are saved.

Installing sprinklers is one way to do that. But there are other ways to strengthen buildings and empower communities to eliminate fires and save lives. These alternative means can be listed, categorized, measured and objectively judged to be quantifiably equivalent, using nationally recognized, performance-based standards.

Section 1103.5.4.4.1 of the proposed Code currently allows for the use of these alternative means and standards. But this approach should be the core of the mandate rather than an exception.

Strengthening this section to make it the primary approach to achieving fire safety puts the emphasis on saving lives, rather than a particular way to do that, and it gives the communities in the affected buildings the ability to work with fire prevention engineers and the Fire Marshal to choose from among quantifiably equivalent, performance-based ways to reduce the risk to fire fighters and themselves.

Please use the Code to empower building communities to use national standards to choose the means that best work for their unique situation form among quantitatively equivalent alternatives that reduce fire risk and save lives.

Attached is a proposal from our community at The Summit, 999 Green St. to strengthen Section 1103.5.4.4 and to allow its application across the unique and diverse set of buildings to which the mandate applies.

Re: FILE NO. 251247

Alternative Compliance via Engineered Life Safety Systems and Active Fire Safety Communities
A Proposal

Residents of The Summit, 999 Green St.

ABSTRACT

The purpose of the San Francisco Fire Code is to save lives: the lives of our fire fighters, our neighbors, ourselves. There are alternative means of achieving life safety in a building and these are quantifiable. In response to the disproportionate effort, expense and hardship of installing sprinklers in older buildings, we propose to build on Fire Code Section 1103.5.4.4, using nationally recognized, quantifiable, performance-based standards, principles, and tests, such as National Fire Protection Association (NFPA) 101A, to provide a technically equivalent, performance-based, alternative compliance model that allows a building to establish a calculated safety equivalency to full sprinkler installation. The proposal integrates building-specific Engineered Life Safety System upgrades with an active-community Fire Safety Management Plan to provide a four-point **Performance-Based Approach** to equivalent fire safety with proportionate effort and minimum cost and hardship.

1. We propose alternative wording that strengthens and clarifies Fire Code Section 1103.5.4.4 to provide technically equivalent approach to fire safety for buildings that commit to Engineered Life Safety System (ELSS) building upgrades and a rigorous, periodically certified Fire Safety Management Plan (FSMP).
2. Participating buildings hire a Fire Protection Engineer (FPE) to conduct an Engineered Life Safety System assessment, using nationally recognized standards, such as NFPA 101A, to list its current fire safety features related to fire detection and alarms, communication, smoke control and management, compartmentation, firefighter support Infrastructure, and egress improvements and make agree to upgrades if necessary.
3. Each building also works with the FPE to design a Fire Safety Management Plan that engages the building community in developing verifiable fire safety practices in four core areas: fire prevention procedures, system maintenance testing, emergency response procedures, and documentation and performance monitoring.
4. Each building will undergo a third-party audit and recertification every three years to prove the FSMP is active, with a snap-back sprinkler mandate for persistent failure to do so.

This four-point, performance-based program not only creates fire safe buildings without the undue hardship of sprinkler installation, at far less cost and disruption of lives, but also builds fire-safe communities that enhance San Francisco's preparedness and resilience in a wide range of emergencies.

Re: FILE NO. 251247

Alternative Compliance via
Engineered Life Safety Systems and Active Fire Safety Communities
A Proposal
Residents of The Summit, 999 Green St.

Out of a concern for both life safety and the disproportionate effort and the undue hardship required by the impending fire sprinkler mandate, especially for elderly residents and those with fixed income, we—a group of three dozen residents at 999 Green St.—are compelled to offer a proposal to achieve technically-equivalent life safety at a potentially lower cost and considerably less disruption.

Performance-Based Approach to Section 1103.5.4.4
In response to this disproportionate effort and the undue hardship, we propose to build on Fire Code Section 1103.5.4.4, using nationally recognized, quantifiable, performance-based standards, principles, and tests, such as National Fire Protection Association (NFPA) 101A, to provide a technically equivalent, performance-based, alternative compliance model that allows a building to establish a calculated safety equivalency to full sprinkler installation. The proposal integrates building-specific Engineered Life Safety System upgrades with an active-community Fire Safety Management Plan to provide a four-point **Performance-Based Approach** to equivalent fire safety with proportionate effort and minimum cost and hardship.

Our proposal combines performance-based assessments with building-specific Engineered Life Safety System (ELSS) upgrades and an active community Fire Safety Management Plan (FSMP) to provide building-appropriate and certified equivalent fire safety without the undue hardship of sprinkler retrofits. The proposed approach encourages buildings to adopt a proactive, life safety upgrade plan and build a certified fire safety resident community. When staff and residents are trained, organized and supported by the right building systems, they can prevent fires from happening, as well as stop and/or quickly contain them if they do occur. And they also facilitate safe evacuation of the building.

We propose this four-point, performance-based alternative that achieves safety equivalency without the invasive and potentially-displacing cost of retrofitting sprinkler systems:

1. Codify the "ELSS/FSMP" Alternative into the Fire Code. With the attached wording (presented as a friendly amendment), we propose to strengthen, clarify and reduce the ambiguity of Fire Code Section 1103.5.4.4, by which the Fire Marshal approves modifications. The suggested language would codify a procedure by which a building can quantitatively assess its life safety features and a criteria by which life safety equivalence is determined so that they can confidently invest in engineered life safety upgrades and a community fire safety management plan to achieve a technical life-safety equivalence for the building. In this way, 1103.5.4.4 alternatives for these uniquely-designed historic buildings become normal part of the compliance process, rather than treating modifications as rare exceptions. Thus the Code would provide buildings an alternative path to achieve life safety equivalence by implementing Engineered Life Safety System (ELSS) upgrades and maintaining a rigorous, periodically certified Fire Safety Management Plan (FSMP) that complements the building upgrade with verified active-community fire safety training and practices.

2. ELSS Building Assessment. Each building is unique. A "one-size-fits-all" mandate ignores the superior fire-resistance qualities of certain legacy buildings. A building interested in applying for a 11.3.5.4.4 alternative, would hire a Fire Protection Engineer (FPE) to assess the building using nationally recognized, quantifiable, performance-based standards, such as NFPA 101A, to examine the fire safety features of their building and make recommendations related to such features as: fire suppression, detection and alarm, compartmentation and fire resistance, means of egress, smoke control and management, Fire Department access and operations, and management and human factors. The FPE would audit existing passive protections (fire-rated walls, stairwell pressurization) and recommend targeted upgrades—such as heat detectors in mechanical/electrical rooms or stairwell pressurization systems—that achieve calculated safety equivalency.

3. Active-Community FSMP. Each building will also work with the FPE to design a Fire Safety Management Plan that engages the building community in comprehensive fire safety practices. Aligning with the NFPA 550 Fire Safety Concepts Tree, this plan prioritizes "Preventing Fire Ignition" over merely "Managing Fire Impact." To be approved the Plan would need to demonstrate community proficiency in four core areas: fire prevention procedures, system maintenance testing, emergency response procedures, and documentation and performance monitoring.

Features of an approved Plan might be the implementation of a schedule of certified training for staff and residents, with signed compliance, moving beyond simple pamphlets to active drills. The Plan might implement certain practices as part of community bylaws, such as the prohibition of open-flame grills and rigorous control of e-mobility battery charging. And the Plan might implement floor captains and evacuation assistance protocols for disabled residents.

4. Recertification and Enforcement To ensure long-term compliance, this is not a one-time arrangement. To maintain its life safety equivalency, the building would need to undergo a third-party audit and recertification every three years to prove the FSMP is active. And failure to maintain the training logs, equipment standards, or structural integrity required by the plan will result in the revocation of the alternative status.

Limitations of Fire Sprinklers

Fire sprinklers have been proven to save lives and property, which is why they are included in both the current and proposed San Francisco Fire Code. But fire sprinklers also have limitations.

Their biggest limitation is that they are reactive not proactive: Fire sprinklers do not prevent fires from happening. Nor do they close the door behind a panicked evacuee when a fire happens. They don't check to see if the neighbor next door is okay or help them down the stairs, if needed. And sprinklers present their own risk of significant collateral water damage. Also, they may foster passive, complacent residents: "Why do anything about fire safety when the sprinklers that cost so much have us covered?"

Because of these limitations, the sprinkler mandate in older buildings represents a disproportionate effort for their safety return and their significant associated cost and disruptive installation represents an undue hardship for residents. This four-point performance-based program leverages the prospect of a sprinkler mandate to build and activate resident communities that achieve goals of the Fire Code: prevent fires, save lives, reduce injuries and limit property damage. It empowers people working together to address the limitations of fire sprinklers, at far less cost, intrusion and disruption of lives. In addition, the social capital created through this coordinated community approach enhances preparedness for other emergencies, helping San Francisco become a safer and more resilient city.

FILE NO. 251247

San Francisco Fire Code
Proposed friendly amendment: Alternative Technical Equivalency wording

1103.5.4. [For SF] Automatic Sprinkler System for Existing High-Rise Buildings

All existing residential high-rise buildings shall be equipped with an automatic sprinkler system in accordance with Section 903.3.1.1 where any of the following conditions apply:
. . .

Any existing high-rise ~~not exempted from this section~~ that does not provide an automatic sprinkler system throughout the residential occupancy is out of compliance and subject to immediate code enforcement action unless 1) the high-rise is exempt from this section or 2) the high-rise successfully demonstrates safety equivalence through the procedure and criteria set in Sec. 1103.5.4.4. The owner shall maintain the sprinkler system in accordance with Title 19 of the California Code of Regulations.
. . .

Sec. 1103.5.4.4. Authority of Fire Official.

The Fire Marshal ~~may approve~~ shall establish a procedure and acceptance criteria for modifications and alternate methods~~, and~~ materials and fire safe community practices by which a building can present ~~it is clearly evident~~ evidence, independently and professionally derived, that a reasonable degree of fire safety is currently provided or will be achieved within the timeframe of the Code. In such cases, the Fire Marshal ~~may~~ shall:

1. ~~Consider~~ Evaluate alternative protection can be shown using ~~based on~~ nationally recognized, quantifiable, performance-based standards (such as NFPA 101 A), principles, and tests, and generally recognized and well-established methods of fire protection. If the agreed upon conditions specified by this process are not met within the agreed upon timeframe or are not subsequently maintained, the requirement for a automatic sprinkler system in accordance with Section 903.3.1.1 and elaborated on in this Section 1103.5.4 will automatically go into effect.

2. Waive specific individual requirements if it can be shown that such requirements are not physically possible, require disproportionate effort, or pose an undue hardship with little increase in life safety and that a practical alternate cannot be provided; and

3. Grant necessary extensions of time when it can be shown that the specific time periods are not physically practical or pose an undue hardship. The granting of an extension of time for compliance may be approved by the Fire Marshal based on the showing of good cause and on approval of an acceptable, systematic, progressive plan of correction.

For purposes of this Section 1103.5.4.4, the determination of "undue hardship" shall include, but not limited to, consideration of the building owner's financial hardship and whether compliance with the automatic sprinkler requirements in Sections 1103.5.4 through 1103.5.4.5.3 would result in the displacement of residents from their homes.

Dear Members of the Board of Supervisors,

As a 73-year-old resident, my husband and I have made our condominium at 2200 Pacific Avenue the place we plan to call home for whatever years we have left. The thought of being forced out because of the fire sprinkler retrofit mandate is heartbreaking. The estimated $200,000–$300,000 cost per unit, plus months away from home during construction, is far beyond what we can manage on fixed incomes. With full compliance required by January 1, 2035, the work would probably happen when we are nearing 80—the disruption and stress at that stage of life would be devastating.

Fire safety matters enormously to me, and I would never want to see it compromised. Our building has responsibly met every past requirement, including the substantial and expensive recent overhaul of the central fire alarm system, complete with new wiring and better notification capabilities. Piling this huge additional mandate on top of those earlier efforts feels overwhelming and disproportionate.

For minimal extra protection—remember, in more than six decades across all affected buildings, there has been only one fire-related death, from an electric scooter battery—this policy could uproot thousands of us, erode housing affordability, depress property values, and make San Francisco's housing challenges even worse. Simpler, targeted steps like requiring secure, fireproof storage for e-bikes and scooters would deliver real safety improvements without punishing residents so severely.

It was disheartening to hear that the thoughtful "major renovation" trigger exemption, already prepared by the City Attorney, is no longer moving forward. Requiring sprinklers only when a building undergoes major renovation would strengthen safety over time while sparing current owners crushing financial and personal hardship.

I earnestly ask you to amend the mandate to restore this major renovation trigger—or consider a full reversal if that is what it takes. A solution like this would honor fire safety while protecting the well-being, proportionality, and affordability that so many San Franciscans need. I would welcome any opportunity to discuss a fair path forward.

Sincerely,

Nesya Gurdus
Resident and Owner 2200 Pacific Avenue San Francisco, CA

Subject: Egregious City Mandate for Installation of Sprinkler Systems
Date: December 1, 2025 at 6:28:28 PM GMT
To: Board.of.Supervisors@sfgov.org

Dear Supervisors:

We are owner/residents of Unit 6A at 2200 Pacific Avenue, a solid concrete and steel building constructed in 1962. We have owned our property since 2013.

We are deeply concerned about the city's mandate requiring the installation of a sprinkler system in our building for the following reasons:

1. Our HOA board estimates the cost for each homeowner at $1,300 - $3,300 per month for nine years, or very large special assessments, amounting to more than $200K per unit, over those nine years.

2. Substantial coring of our structural slabs and structural walls is a real concern for the integrity of our building.

3. Many new sprinkler water pipes all over our building will add to the risk of water damage, which is the number one concern for high rise insurers.

4. The justification for a sprinkler system simply does not exist. There has been one life lost in the last 60 years in the 125 buildings affected by this extreme mandate, due to fire, and that fire was caused by an electric scooter.

In addition to these concerns, given that we might have to move out of the building for six months, because of asbestos abatement during construction, we would be incurring huge additional expenses finding a rental in a tight housing market.

All of this is needless regulatory overreach, and we urgently request you put a stop to this totally unnecessary sprinkler mandate.

Respectfully,

Richard Royse
Rocky Blumhagen

Hi,

We've received a series of updates from our Board that the city has mandated fire sprinklers to be installed in our building and condo units. For us, the cost of this is absolutely prohibitive as is the disruption, and diminishment of the quality of our living quarters.

It would require us to outlay hundreds of thousands of dollars, would force us to move out for many months for the work to be completed including asbestos abatement, and would greatly diminish the quality of our living space as our condo would all have unsightly sprinklers running through our 8' high in-unit ceilings given the concrete nature of our structure.

Our building is all concrete and historically this type building has had little risk over the last half century. I frankly see this requirement by the city as missing the real world impact on people actually living here. I think a much more limited approach can achieve much of what may be needed.

Please note, that we are currentlCompose y complying with mandates for a current Fire Alarm upgrade, the ERRCS (Emergency Radio Responder Communication System) upgrade, lobby sprinkler additions, restrictions for EV charging, and the facade inspections and repairs. This is already too much!

Login - Sign in to Yahoo

Sign in to access the best in class Yahoo Mail, breaking local, national and global news, finance, sports, music...

If this mandate isn't rescinded for SF, we plan to sell our unit and leave the city. Even with moving, our property value will drop dramatically given the large cost increase, massive family disruption, and expected diminishment in the visual quality of our interiors. This demand by the city is a losing proposition for us but at least we won't have to live through it.

I know that you are all trying to improve safety, but in this instance, given our type of building together with cost and impact, it is missing the bigger practical picture for people who live and love the city.

Please rescind! Thank you,
Jay and Elise Rossiter

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisors,

I am writing as a San Francisco homeowner affected by the mandatory fire sprinkler retrofit mandate for existing residential buildings.

Many of us attended the recent public meeting on 12/11/2025 and shared thoughtful, informed concerns about the real financial, structural, and logistical impacts of this mandate. Unfortunately, it has become clear that despite these concerns, there is little willingness among the Board to reconsider the policy or even allow a basic exemption for buildings that are not undergoing major renovations.

This mandate places an extraordinary burden on owners of older buildings, often without delivering proportional safety benefits, while exempting many other risk factors. A straightforward exemption tied to “major renovations” would be a reasonable, balanced solution, yet this option now appears to be off the table for political reasons rather than practical ones.

I am especially disappointed that labor interests appear to be driving this decision more than the voices of residents and property owners who will bear the consequences. San Francisco should not be used as a test case for a national policy at the expense of its own residents.

I urge you to support overturning the sprinkler retrofit mandate or, at minimum, allowing an exemption for existing buildings unless they apply for permits for major renovations. This would protect safety while avoiding unnecessary financial harm.

Thank you for your time and consideration.

Sincerely,
Nahal Farhi

Dear Members of the San Francisco Board of Supervisors,

San Francisco's reputation has always rested on its resilience, creativity, and ability to balance safety with livability. After several difficult years, the City is finally showing real signs of economic renewal—downtown activity is improving, investment is cautiously returning, and residents are beginning to regain confidence. A sweeping, mandatory sprinkler-retrofit requirement for older residential buildings at this fragile stage could unintentionally reverse that progress and send an unsettling message to homeowners and investors alike: that even stable, code-compliant properties may face large, unfunded mandates at any time.

Economic and Housing-Market Concerns:

The retrofit costs projected for mid-sized condominium buildings—often $200,000 per unit or more—are simply unmanageable for many ordinary San Franciscans. These buildings are not normally owned by the very wealthy; they shelter retirees, middle-income families, and long-term residents who have invested carefully to remain in San Francisco. Owners already shoulder increasing special assessments, especially in older buildings. Sudden, uncompensated costs triggered by the mandate would cause real hardship, pushing some owners to sell below value and others into debt they cannot sustain. Meanwhile, prospective buyers would be discouraged.

The City already faces one of the tightest and most expensive housing markets in the nation. Large-scale retrofits would disrupt and dislocate both owners and tenants, removing units from service during construction and adding pressure to an already strained rental market. Landlords facing steep retrofit expenses would have little choice but to seek rent increases or sell their properties, deepening the affordability crisis.

Questionable Cost–Benefit Balance:

Fire safety is essential, yet data show that fatalities have largely occurred in specific high-risk structures (SRO hotels and mixed-use

buildings) not in owner-occupied condominiums with modern alarms, smoke detectors, and safe egress. Mandating sprinklers across every older residential building would deliver minimal incremental safety benefit at an enormous collective cost. Targeted enforcement, improved alarm systems, and focused retrofits in truly high-risk structures would achieve far greater safety at far lower economic and social cost.

Protecting San Francisco's Reputation and Recovery:

At a time when San Francisco is striving to attract residents, visitors, and business investment, new mandates that appear financially punitive risk undermining confidence in San Francisco's governance and housing stability. The City's credibility depends on balanced, data-driven policy that recognizes both safety and economic sustainability.

For all the foregoing reasons, I respectfully urge the San Francisco Board of Supervisors to reconsider a blanket sprinkler mandate.

Respectfully,
Meriel Lindley (69 years old)

Hi,

I am writing to request that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on me.

If the code is not changed, this will greatly impact our living situation, forcing us to move out of the building we have loved for so long. We would not be able to pay for the estimated cost and subsequent increase in Rent/HOA fees.

In addition to the financial hardship we would face, our ceiling heights would drop as much as 14" wherever the sprinkler pipes run, including all over our units, leaving us with 7' or lower ceilings, which is not even considered "living space" by code.

I urge you to amend the fire sprinkler requirement.

Best,
Alexa Karp

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I am writing to request that you take immediately and decisive action to amend the fire sprinkler retrofitting requirement in our City for older high-rise buildings, and work with our building on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on myself, my family and our community of homeowners.

If this code remains unchanged, the physical and financial toll on us will be severe. Our property values will plummet, and our building will transform into a dark and empty shell of its former self.

Among the numerous negative impacts this mandate will have on our property, the most significant is physical. Our current floor-to-ceiling heights of 8’-0” will drop by up to 14” to accommodate sprinkler pipes throughout our individual units. This will result in finished ceiling heights of 6-‘8”, making them unlivable.

I urge you to reassess this mandate and explore a more reasonable path towards ensuring safety while preserving our property values.

Thank you for your consideration in this matter.

Dear Members of the Board of Supervisors,

I am writing urgently to ask that you amend the fire sprinkler retrofitting requirement for older high-rise buildings. This mandate places an unbearable financial and personal burden on residents like me while offering little real safety benefit.

My spouse and I are senior citizens living at 2200 Pacific Avenue, and this is our lifelong home. We cannot afford the enormous cost— hundreds of thousands of dollars per unit—nor could we endure being forced out for months during construction. We are at a loss of how to find and afford any temporary housing. For us, this could very well mean losing our homes entirely.

The reality is that this mandate would devastate San Francisco homeowners and renters alike—driving people out, lowering property values, and worsening the city's housing crisis—while doing almost nothing to improve safety. In sixty years, there has been only one fire-related death in any of the affected buildings, and that was caused by an electric scooter. A far more effective and reasonable step would be to require safe, fireproof storage areas for e-bikes and similar devices.

Please, do not let this unnecessary and destructive policy harm thousands of San Franciscans. We need a practical, balanced approach that protects safety without destroying our homes and our financial security.

Sincerely,

Benjamin Gurdus

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board Members:

My wife and I are owners at 2200 Pacific, #7F, San Francisco, California 94115. We were recently advised of the City's intent to retrofit the sprinkler system in our building (2200 Pacific as above referenced). I am writing to strongly request that you take action to amend the fire sprinkler requirement for older high rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on us.

If the code is not changed it will place an exorbitant cost on me and other owners of anywhere from an additional $1,300.00 to $3,000.00 per month for nine (9) years or a special assessment of $200,000.00 over a nine (9) year period. The value of my condo and other condos will drop in market value by the cost of this mandate and will be hard to sell with this mandate in place for the next nine (9) years or during the nine (9) years. We will be forced to move out for six (6) months having to incur the cost of storage for our furniture together with substitute lodging while the work is being done and there will be hazardous waste remediation all over the building. Housing is already scarce in San Francisco for obtaining substitute housing for people residing in the building full time. We intend to retire there. Our ceiling heights would drop as much as 14" where sprinkler pipes run, leaving us with 7-foot clearance or lower. Again, this affects everyday living together with re-sale value. Substantial coring of our structural slabs and structural walls will be a concern for the integrity of the building. There will be enhanced risk of water damage throughout the building.

The justification for this extreme mandate does not exist. I am advised that in the last 60 years there has been only one death attributable to fire in another high rise and this was unrelated to any sprinkler system and was caused by an electric scooter.

I cannot impress upon you the importance of reversing this mandate. Thousands of people will be impacted in a negative manner for no reasonable reason whatsoever. Please take action on this matter. Please feel free to contact me if I may be of any further assistance. Please keep me advised of all progress on this matter and what the game plan is for the future.

Hello,

I am writing to formally object to the proposed fire sprinkler mandate included in the current fire code amendments.

I respectfully request that this objection be entered into the official record and associated directly with the proposed code. I oppose the mandate due to its significant financial burden, questionable cost-effectiveness, and the unintended consequences it may have on existing buildings, property owners, and housing affordability.

While fire safety is critically important, a one-size-fits-all sprinkler requirement does not adequately account for the wide variation in building types, existing safety measures, or the real-world impacts of retrofitting. The proposed mandate would impose substantial costs without clear evidence that these costs are justified by proportional safety benefits.

I urge the Committee to reconsider this mandate and explore alternative, more flexible approaches that enhance safety without creating excessive hardship for property owners and residents.

Thank you for your consideration and for including this objection in the official record.

Sincerely,

Roxana Salehoun

Subject: The San Francisco Fire Code Hearing at the Land Use and Transportation Committee Meeting on February 2, 2026

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Committee Members,

I write in support of the amendments to the San Francisco Fire Code being put forward by Supervisors Sherrill and Sauter in collaboration with Mayor Lurie and the Fire Department.

I am a resident of 999 Green Street, one of the 126 buildings in San Francisco affected by the sprinkler mandate. I am 84 years old and on a fixed income. I have been informed that implementation of the sprinkler mandate is going to cost me about $200,000 as my unit's share. In addition, I will have to relocate for many months while the work is carried out.

My concern is that this mandate was imposed without notifying affected residents to give them the opportunity to participate in a community decision which was going to impose undue hardship on all concerned. Furthermore, it is my understanding that the mandate was imposed without any consideration of infrastructure constraints or the impact of the associated costs on residents; and without any cost-benefit analysis of this option compared to other much less expensive alternatives for achieving the same savings in fire-related deaths.

In this respect, I applaud the proposed amendments to the fire code put forward to your Committee by Supervisors Sherrill and Sauter in collaboration with Mayor Lurie and the Fire Department. These changes will enable initiation of the infrastructure and impact studies and cost-benefit analyses that were not done earlier.

As conceded by the proponents of these amendments, this is an important first step, allowing an extra three years for the necessary studies to be conducted and providing the opportunity for community input. However, the amendments themselves do not go far enough in solving all the problems still facing the affected residents, especially seniors. These include prohibitive costs, relocating by the thousands in a tight rental market and lack of freedom to sell their homes to move into assisted living, as required, because of the stigma attached to their buildings. These problems can only be solved by the eventual modification or revocation of the sprinkler mandate, in exchange for the implementation of less expensive and less intrusive alternatives for the equivalent reduction in fire-related deaths identified in the impact studies.

Sincerely,

Phillip Shirvington

Dear Mr. Carroll,

We are writing to request that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on us.

The drop in our ceiling heights that would be required by the mandate would leave us with seven-foot ceilings, which are not an acceptable living space. Also, since our building has both lead and asbestos, we would be forced to move out of our apartment, store all of our furniture and find new housing. All of this would be extremely expensive and challenging.

It is not clear to us how the City can impose a requirement of this magnitude (that disrupts our lives financially, physically and emotionally) without a close consultation with the people who are affected by it.

We strongly urge you to amend this mandate and consider other safety measures.

Thank you.

Sincerely,
Greg Oldham and Bai Park

Dear Mr. Carroll,

I am writing to request that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and to work with our buildings on other feasible, evidence-based life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on me. While I fully support safety measures that are necessary and grounded in evidence, there is simply no justification for this requirement as currently written.

At 79 years of age, if the code is not changed, I am deeply concerned about the financial impact this proposal would have on me. The projected cost to retrofit our building would increase my monthly homeowner fees by approximately **$3000 per month** for nine years, Some have suggested that this dollar amount is exaggerated; **it is not**. These figures are based on actual projections in our city of San Francisco (including "the last mile" where homeowners are responsible ????) and reflect the true cost of compliance.

Such an increase would be devastating to my retirement savings and, frankly, may make it impossible for me to remain in my home. This home is deeply special to me—it is a source of comfort and stability and represents the security I worked a lifetime to build and hope to pass on to my children. This mandate could make that impossible.

Thank you for your attention to this matter and for your consideration of **the real-world impact** this code would have on me and my fellow homeowners.

Sincerely,

Board of Supervisors Meeting
January 6th, 2026

Public Comment:

Hi, my name is Zach Sharpe and I work for Luminalt Solar, a woman owned local solar installer that has been based in San Francisco for 22 years. As you know, just weeks ago, our City was hit with multiple massive power outages, affecting 130,000 residents, in some places for up to 72 hours. These outages left our residents cold, in the dark, and scared because their home security systems and their health care equipment, such as CPAP machines, didn't work. Many of our residents weren't just inconvenienced, they were less safe.

Hundreds of Luminalt clients, however, only experienced the outage for a fraction of a second as their solar and battery systems instantly went into backup mode and began powering their home's loads, keeping them safe and resilient during these outages. With clean electrons that have the side benefits of helping San Francisco accomplish it's climate goals while also helping its residents keep their ever-increasing electricity bills low, our systems kept residents safe and resilient during these outages.

While this solution so obviously benefits San Franciscans, solar and storage has been facing immense headwinds from every level of government. As bad as those headwinds are at the federal and state level, we are being hit the hardest right here at home. Local San Francisco Fire code has made installing batteries so overly complex and costly that San Francisco has the reputation for being the most difficult place to install home storage batteries in the country (if you don't believe me, just ask Google AI or ChatGPT).

We fully understand that the Fire Department takes an extremely conservative approach when determining their interpretations of fire code with the goal of safety. We agree that safety is the most important goal, full stop. That is why we don't think that limiting who can make their homes safe and resilient to only the wealthiest in our City is not good policy. To give an example, solar installations only need one solar inverter. However, if a home requires multiple batteries, multiple solar inverters are required, which increases the project cost by thousands of dollars and provides literally zero additional safety. After countless requests, the Fire Dep has never explained their reasoning on this stance.

We understand that the 2025 Fire Code will be given to you in the next week or so. We ask that you keep the safety and resiliency of our residents in mind as you review it. There are other planned interpretations of the fire code that will continue to strangle solar and battery systems, like requiring 3' clearance around all

skylights. This will severely limit the number of solar panels we can fit on roofs, yet again making battery backup systems less effective.

At a time when tens of thousands of people are losing grid power, the City shouldn't be the main impediment to residents becoming more safe and resilient.

At a time when the City is pushing the transition to electric appliances, we should also be helping our residents be more resilient, not simply more dependent on PG&E's grid.

And at a time when many cities and states, including our own, are turning their back on their climate commitments, San Francisco should be a beacon of progress and innovation.

In the past, the City has met the moment through programs such as GoSolarSF, and I know we have it in us as a City to do better on this topic. I look forward to working with the Board of Supervisors, the Mayor, and the Fire Department to make solar and storage more accessible to San Franciscans.

Thank you,

Zach Sharpe, Luminalt Solar

To:

Mayor Dan Lurie

Board of Supervisors

Re: Fire Life-Safety Requirements for High-Rise Concrete Buildings and Consideration of Alternatives to Full Sprinkler Retrofits

Dear Mayor Lurie and Members of the Board

I am writing to highlight important considerations regarding proposed or potential sprinkler retrofit mandates for older high-rise concrete residential buildings in San Francisco. While life safety remains a top priority, it is equally essential to evaluate **building-specific risk**, **historic performance**, and **feasible alternative compliance pathways**—particularly when retrofit costs pose serious financial burdens for homeowners and undermine the city's affordable housing goals.

Historical Fire Safety Performance of High-Rise Concrete Buildings

Mid- and late-20th-century concrete residential high-rises have virtually no record of fire-related fatalities in San Francisco—or nationwide—due to their inherent fire-resistive construction and robust compartmentalization.

These buildings, by design, do not behave like the low-rise wood-frame homes where nearly **80% of U.S. residential fire fatalities occur**. They

do not burn the same, they do not spread fire the same, and they do not present even remotely similar occupant risk profiles.

The Problem with One-Size-Fits-All Mandates

Imposing a blanket sprinkler requirement on older concrete towers—structures with decades of safe performance—ignores both risk and reality. It forces homeowners, many of whom are seniors or moderate-income residents, into **six-figure special assessments** for retrofits that are neither technically justified nor financially survivable.

The result would be predictable:

<!--[if !supportLists]--> <!--[endif]-->displacement,

<!--[if !supportLists]--> <!--[endif]-->forced sales,

<!--[if !supportLists]--> <!--[endif]-->upward pressure on HOA dues, and

<!--[if !supportLists]--> <!--[endif]-->the erosion of naturally occurring affordable housing—precisely the housing stock San Francisco can least afford to lose.

Key attributes contributing to High-Rise Concrete Residential Building fire resistant performance include:

1. Non-Combustible Construction

Concrete shear walls, slabs, and columns do not burn, contribute fuel, or release toxic smoke. This inherently limits fire spread and decreases flashover potential.

2. Effective Compartmentalization

Older high-rise buildings were often designed with robust compartmentation:

- 1–2-hour fire-rated walls and floors
- Solid-core unit entry doors
- Enclosed stairwells
  These features slow fire spread and protect means of egress even without sprinklers.

*Sprinklers, while extremely effective in combustible construction, provide **marginal incremental benefit** in this very specific building category, as confirmed by decades of real-world outcomes.*

3. Documented Low Fatality Rates*

National fire statistics consistently show:

- **Very few fire deaths occur in high-rise residential buildings with non-combustible construction.**
- The overwhelming majority of residential fire deaths occur in **low-rise, wood-frame homes** due to rapid fire growth and structural vulnerability.
- In many cities—including San Francisco—there is **no historical record of a fire fatality** in certain categories of reinforced concrete residential towers built to mid-century code standards.

This empirical history is critical. Mandating disruptive, costly sprinklers in buildings with decades-long records of life-safety performance raises legitimate questions about **risk-proportionality** and **cost effectiveness**.

Challenges of Retrofitting Sprinklers in Older Concrete High-Rises

Older concrete structures face uniquely complicated retrofit issues:

- Core drilling through structural elements.
- Limited vertical shaft space for new risers
- Extensive ceiling demolition and unit-by-unit access
- Potential need for major water service upgrades, new fire pumps, and seismic bracing

These engineering and construction challenges translate into **very high per-unit costs**, which can lead to substantial **special assessments** for homeowners—including seniors, long-term residents, and low- or moderate-income households.

In a city already facing severe affordability pressures, these retrofit expenses can unintentionally contribute to displacement and loss of economic diversity.

Alternatives to Full Sprinkler Retrofit in High-Rise Concrete Buildings

Given the proven life-safety track record of these structures and the disproportionate financial impact of sprinkler requirements, San Francisco should consider **equivalent or enhanced performance-based alternatives**, including:

1. Enhanced Early Detection & Alarm Systems

Modernizing building-wide fire alarm systems—combined with in-unit smoke and heat detection—can improve response times without intrusive physical retrofits.

2. Smoke Control & Pressurization Improvements

Upgrading stairwell pressurization systems, improving corridor ventilation, and sealing penetrations can significantly reduce smoke migration—the factor most often associated with fire injuries.

3. Fire-Resistant Door Upgrades

Ensuring all dwelling unit doors have proper fire ratings, self-closing mechanisms, and intact seals can maintain effective compartmentalization—one of the strongest life-safety features of mid-century concrete towers.

4. Emergency Communications Systems

Improved public address systems and clearer emergency instructions support safer and more orderly evacuations or “defend in place” strategies.

5. Targeted Sprinklering in High-Risk Areas

Rather than full-building systems, sprinklers may be installed in:

- Compactor rooms
- Mechanical/electrical rooms
- Basements or storage areas
- Trash chutes
- Building lobbies or common areas

This targeted approach addresses the highest ignition-risk zones while controlling cost.

6. Performance-Based Fire Engineering Analysis

In lieu of prescriptive sprinkler requirements, independent fire protection engineers can:

- Model building-specific risk.
- Assess evacuation timelines, smoke movement, and fire growth.
- Demonstrate that existing construction plus enhanced detection meets or exceeds safety objectives.

California codes already allow such **Alternative Means and Methods (AM&M)** submittals when appropriate.

Preserving Affordability While Maintaining Safety

San Francisco's commitment to fire safety must be matched with a commitment to housing stability. Requiring costly, technically challenging retrofits in buildings with no historical pattern of fatalities risks:

- Exacerbating affordability challenges
- Forcing homeowners into financial hardship
- Undermining the preservation of naturally occurring affordable housing
- Creating pressure to convert or redevelop older buildings, reducing socio-economic diversity.

A balanced approach—one that recognizes proven building performance and considers modern, less intrusive safety enhancements—is essential.

Conclusion

High-rise concrete buildings have decades-long records of protecting life through robust construction and compartmentalization. Mandating full sprinkler retrofits without acknowledging this record, or without considering less burdensome alternatives, risks imposing unnecessary financial strain on homeowners and diminishing San Francisco's

affordable housing stock.

I urge policymakers and stakeholders to consider a **performance-based, risk-informed approach** that maintains safety standards while protecting the city's residents from untenable costs. However, any consideration of citywide sprinkler retrofit mandates must be grounded in **evidence, engineering principles, and financial reality**—not assumptions borrowed from entirely different building types.

Thank you for your attention to this critical matter. I would welcome the opportunity to discuss the technical and policy considerations in greater detail.

Sincerely,
Carole Bonina
66 Cleary Court Unit 1503
cbonina@aol.com

* DATA APPENDIX: Fire Risk, Building Performance & Historical Outcomes

Below is a data-driven summary to support the arguments above. All figures are drawn from NFPA, U.S. Fire Administration, and widely reported municipal data.

---

1. Residential Fire Fatalities by Building Type

U.S. Fatalities by Building Type (NFPA)

Building Category	Share of U.S. Residential Fire Fatalities	Notes
One- and Two-Family Wood-Frame Homes	**~70–75%**	Highest fuel load, fastest fire spread, older houses often lack alarms.
Low-Rise Apartments (Under 7 Stories)	~20–25%	Often wood or lightweight construction with limited compartmentation.

High-Rise Apartments (7+ Stories)	**<2–3%**	Overwhelmingly noncombustible construction; fatalities extremely rare.

Key Point:
High-rise buildings, especially concrete ones, represent only a tiny fraction of national fatalities.

---

2. The Fire Performance of Concrete High-Rises

Core structural features explaining the safety record:

- Noncombustible structure
- One- to two-hour floor and wall assemblies
- Highly compartmentalized unit layouts
- Enclosed, fire-rated stairs.
- Limited pathways for horizontal fire spread.

Historical Outcomes

- NFPA analyses show **zero reported fire deaths in many pre-1990 concrete high-rises with full compartmentation**.
- Many cities report *no fatal fires in these buildings for decades*.

In other words—these buildings already perform at or above modern life-safety objectives without sprinklers.

---

3. Why Sprinkler Systems Show Greatest Effectiveness in Combustible Construction

Sprinklers are transformative in:

- Wood-frame multifamily buildings
- Single-family homes
- Buildings with lightweight or truss construction prone to collapse

But in heavy concrete structures:

- Fire growth is slower.
- Flashover is delayed or prevented.

- Structural failure risk is minimal.
- Containment within the originating unit is nearly always achieved.

Sprinklers offer **diminishing returns** when the building itself already suppresses, or limits fire spread.

---

4. Financial Impact: Hazard to AFFORDABILITY, Not Just Safety

Typical Retrofit Cost Ranges (Industry Estimates)

Building Type	Cost Per Unit (Typical)	Notes
Pre-1970 Concrete High-Rise	**$30,000–$90,000+ per unit**	Complex coring, limited riser space, significant finish restoration.
Buildings Requiring Water Service Upgrades	**+ $500,000–$2.5M**	New service laterals, pumps, seismic bracing.

Affordability Impact

- Special assessments of $40k–$100k can force homeowners into **distress sales**.
- HOAs may face insolvency if multiple owners cannot pay assessments.
- Naturally Occurring Affordable Housing (NOAH) buildings become financially nonviable.

This contradicts San Francisco's stated housing stability goals.

---

5. Alternative Measures & Their Proven Effectiveness

Fire Fatalities by Primary Cause (NFPA)

Cause	Share of Fatalities	Mitigation
Smoke inhalation	~40–50%	**Smoke control, door upgrades**
Lack of early		**Modern alarms, interconnected**

detection	~25%	**detection**
Impaired mobility	15%	**Defend-in-place strategies work best in concrete buildings**
Fire growth/materials	Remainder	More limited in concrete structures

The data shows that improving detection and limiting smoke spread often saves more lives than sprinklers in noncombustible high-rises.

To:

Mayor Dan Lurie

Board of Supervisors

Re: Fire Life-Safety Requirements for High-Rise Concrete Buildings and Consideration of Alternatives to Full Sprinkler Retrofits

Dear Mayor Lurie and Members of the Board

I am writing to highlight important considerations regarding proposed or potential sprinkler retrofit mandates for older high-rise concrete residential buildings in San Francisco. While life safety remains a top priority, it is equally essential to evaluate **building-specific risk**, **historic performance**, and **feasible alternative compliance pathways**—particularly when retrofit costs pose serious financial burdens for homeowners and undermine the city's affordable housing goals.

Historical Fire Safety Performance of High-Rise Concrete Buildings

Mid- and late-20th-century concrete residential high-rises have virtually no record of fire-related fatalities in San Francisco—or nationwide—due to their inherent fire-resistive construction and robust compartmentalization.

These buildings, by design, do not behave like the low-rise wood-frame homes where nearly **80% of U.S. residential fire fatalities occur**. They

do not burn the same, they do not spread fire the same, and they do not present even remotely similar occupant risk profiles.

The Problem with One-Size-Fits-All Mandates

Imposing a blanket sprinkler requirement on older concrete towers—structures with decades of safe performance—ignores both risk and reality. It forces homeowners, many of whom are seniors or moderate-income residents, into **six-figure special assessments** for retrofits that are neither technically justified nor financially survivable.

The result would be predictable:

- displacement,
- forced sales,
- upward pressure on HOA dues, and
- the erosion of naturally occurring affordable housing—precisely the housing stock San Francisco can least afford to lose.

Key attributes contributing to High-Rise Concrete Residential Building fire resistant performance include:

1. Non-Combustible Construction

Concrete shear walls, slabs, and columns do not burn, contribute fuel, or release toxic smoke. This inherently limits fire spread and decreases flashover potential.

2. Effective Compartmentalization

Older high-rise buildings were often designed with robust compartmentation:

- 1–2-hour fire-rated walls and floors
- Solid-core unit entry doors

- Enclosed stairwells
  These features slow fire spread and protect means of egress even without sprinklers.

*Sprinklers, while extremely effective in combustible construction, provide **marginal incremental benefit** in this very specific building category, as confirmed by decades of real-world outcomes.*

3. Documented Low Fatality Rates*

National fire statistics consistently show:

- **Very few fire deaths occur in high-rise residential buildings with non-combustible construction.**
- The overwhelming majority of residential fire deaths occur in **low-rise, wood-frame homes** due to rapid fire growth and structural vulnerability.
- In many cities—including San Francisco—there is **no historical record of a fire fatality** in certain categories of reinforced concrete residential towers built to mid-century code standards.

This empirical history is critical. Mandating disruptive, costly sprinklers in buildings with decades-long records of life-safety performance raises legitimate questions about **risk-proportionality** and **cost effectiveness**.

Challenges of Retrofitting Sprinklers in Older Concrete High-Rises

Older concrete structures face uniquely complicated retrofit issues:

- Core drilling through structural elements.
- Limited vertical shaft space for new risers

- Extensive ceiling demolition and unit-by-unit access
- Potential need for major water service upgrades, new fire pumps, and seismic bracing

These engineering and construction challenges translate into **very high per-unit costs**, which can lead to substantial **special assessments** for homeowners—including seniors, long-term residents, and low- or moderate-income households.

In a city already facing severe affordability pressures, these retrofit expenses can unintentionally contribute to displacement and loss of economic diversity.

Alternatives to Full Sprinkler Retrofit in High-Rise Concrete Buildings

Given the proven life-safety track record of these structures and the disproportionate financial impact of sprinkler requirements, San Francisco should consider **equivalent or enhanced performance-based alternatives**, including:

1. Enhanced Early Detection & Alarm Systems

Modernizing building-wide fire alarm systems—combined with in-unit smoke and heat detection—can improve response times without intrusive physical retrofits.

2. Smoke Control & Pressurization Improvements

Upgrading stairwell pressurization systems, improving corridor ventilation, and sealing penetrations can significantly reduce smoke migration—the factor most often associated with fire injuries.

3. Fire-Resistant Door Upgrades

Ensuring all dwelling unit doors have proper fire ratings, self-closing mechanisms, and intact seals can maintain effective compartmentalization—one of the strongest life-safety features of mid-century concrete towers.

4. Emergency Communications Systems

Improved public address systems and clearer emergency instructions support safer and more orderly evacuations or “defend in place” strategies.

5. Targeted Sprinklering in High-Risk Areas

Rather than full-building systems, sprinklers may be installed in:

- Compactor rooms
- Mechanical/electrical rooms
- Basements or storage areas
- Trash chutes
- Building lobbies or common areas

This targeted approach addresses the highest ignition-risk zones while controlling cost.

6. Performance-Based Fire Engineering Analysis

In lieu of prescriptive sprinkler requirements, independent fire protection engineers can:

- Model building-specific risk.
- Assess evacuation timelines, smoke movement, and fire growth.

- Demonstrate that existing construction plus enhanced detection meets or exceeds safety objectives.

California codes already allow such **Alternative Means and Methods (AM&M)** submittals when appropriate.

Preserving Affordability While Maintaining Safety

San Francisco's commitment to fire safety must be matched with a commitment to housing stability. Requiring costly, technically challenging retrofits in buildings with no historical pattern of fatalities risks:

- Exacerbating affordability challenges
- Forcing homeowners into financial hardship
- Undermining the preservation of naturally occurring affordable housing
- Creating pressure to convert or redevelop older buildings, reducing socio-economic diversity.

A balanced approach—one that recognizes proven building performance and considers modern, less intrusive safety enhancements—is essential.

Conclusion

High-rise concrete buildings have decades-long records of protecting life through robust construction and compartmentalization. Mandating full sprinkler retrofits without acknowledging this record, or without considering less burdensome alternatives, risks imposing unnecessary financial strain on homeowners and diminishing San Francisco's affordable housing stock.

I urge policymakers and stakeholders to consider a **performance-based, risk-informed approach** that maintains safety standards while protecting the city's residents from untenable costs. However, any consideration of citywide sprinkler retrofit mandates must be grounded in **evidence, engineering principles, and financial reality**—not assumptions borrowed from entirely different building types.

Thank you for your attention to this critical matter. I would welcome the opportunity to discuss the technical and policy considerations in greater detail.

Sincerely,
Carole Bonina
66 Cleary Court Unit 1503
cbonina@aol.com

* **DATA APPENDIX: Fire Risk, Building Performance & Historical Outcomes**

Below is a data-driven summary to support the arguments above. All figures are drawn from NFPA, U.S. Fire Administration, and widely reported municipal data.

---

1. Residential Fire Fatalities by Building Type

U.S. Fatalities by Building Type (NFPA)

Building Category	Share of U.S. Residential Fire Fatalities	Notes
One- and Two-Family Wood-Frame Homes	**~70–75%**	Highest fuel load, fastest fire spread, older houses often lack alarms.
Low-Rise Apartments (Under 7 Stories)	~20–25%	Often wood or lightweight construction with limited compartmentation.
High-Rise Apartments (7+ Stories)	**<2–3%**	Overwhelmingly noncombustible construction; fatalities extremely rare.

Key Point:
High-rise buildings, especially concrete ones, represent only a tiny fraction of national fatalities.

---

2. The Fire Performance of Concrete High-Rises

Core structural features explaining the safety record:

- Noncombustible structure
- One- to two-hour floor and wall assemblies
- Highly compartmentalized unit layouts
- Enclosed, fire-rated stairs.
- Limited pathways for horizontal fire spread.

Historical Outcomes

- NFPA analyses show **zero reported fire deaths in many pre-1990 concrete high-rises with full compartmentation**.
- Many cities report *no fatal fires in these buildings for decades*.

In other words—these buildings already perform at or above modern life-safety objectives without sprinklers.

---

3. Why Sprinkler Systems Show Greatest Effectiveness in Combustible Construction

Sprinklers are transformative in:

- Wood-frame multifamily buildings
- Single-family homes
- Buildings with lightweight or truss construction prone to collapse

But in heavy concrete structures:

- Fire growth is slower.
- Flashover is delayed or prevented.
- Structural failure risk is minimal.
- Containment within the originating unit is nearly always achieved.

Sprinklers offer **diminishing returns** when the building itself already suppresses, or limits fire spread.

---

4. Financial Impact: Hazard to AFFORDABILITY, Not Just Safety

Typical Retrofit Cost Ranges (Industry Estimates)

Building Type	Cost Per Unit (Typical)	Notes
Pre-1970 Concrete High-Rise	**$30,000–$90,000+ per unit**	Complex coring, limited riser space, significant finish restoration.
Buildings Requiring Water Service Upgrades	**+ $500,000–$2.5M**	New service laterals, pumps, seismic bracing.

Affordability Impact

- Special assessments of $40k–$100k can force homeowners into **distress sales**.
- HOAs may face insolvency if multiple owners cannot pay assessments.
- Naturally Occurring Affordable Housing (NOAH) buildings become financially nonviable.

This contradicts San Francisco's stated housing stability goals.

---

5. Alternative Measures & Their Proven Effectiveness

Fire Fatalities by Primary Cause (NFPA)

Cause	Share of Fatalities	Mitigation
Smoke inhalation	~40–50%	**Smoke control, door upgrades**
Lack of early detection	~25%	**Modern alarms, interconnected detection**
Impaired mobility	15%	**Defend-in-place strategies work best in concrete buildings**
Fire growth/materials	Remainder	More limited in concrete structures

The data shows that improving detection and limiting smoke spread often saves more lives than sprinklers in noncombustible high-rises.

From: Sook Choi
To: SherrillStaff; Board of Supervisors (BOS)
Subject: I oppose SF fire sprinkler mandate
Date: Thursday, December 11, 2025 3:27:50 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisor Sherrill and Board of Supervisors,

I have been a San Francisco resident in the building located at 2200 Pacific Avenue for over 40 years, and I write to request your support to oppose the fire sprinkler retrofitting requirement for this building and similar older residential buildings.

Our group of residents are committed to pragmatic and effective safety measures that will continue to protect us and our neighbors.

The current mandate is not feasible or pragmatic, as it would cost each unit around **$300,000+** to implement. This is cost prohibitive for most residents in the building, including myself.

Importantly, there is truly no need for this mandate to be required retroactively in this particular building located at 2200 Pacific Avenue for the reasons identified below:

1. The building at 2200 Pacific Avenue is a concrete building which has 1-2 hours fire resistance. This is a building with 24-hour security personnel / doorman and there would be ample time for the fire department to respond to any smoke detectors / fire alarms.

2. The building has upgraded to a new fire alarm, smoke detector, and electrical system that encompasses new alarm equipment in the lobby and garage. We also have new speakers in the hallways/corridors and additional smoke detectors in the common areas including corridors. This is sufficient to pick up on any potential fires and to alert residents/visitors, and, given the presence of 24-hour onsite security personnel, the fire department would be called in a timely manner to address any real-time fire concerns.

3. In a building like ours with concrete 8' tall ceilings, code-required earthquake brackets for holding sprinkler pipes, means 11-14" deep soffits to cover the pipes in corridors and inside units. The new "ceiling height" would be 7' or below, which is *lower* than the height required by code to be considered "living space".

4. This places undue burden on the building residents. In addition to the substantial financial burden, residents of our building (whether renters or homeowners) would be forced to essentially move out of our units, with our belongings, for a minimum of 6 months (probably more, given typical construction delays). This mandate affecting 100+ apartment buildings, condos and co-ops all over the city, would displace residents looking for temporary housing while construction is completed. Housing is already scarce in San Francisco. Many renters and homeowners may not come back to their original units.

I respectfully request that 2200 Pacific Avenue be exempted from the fire sprinkler retrofitting mandate. In the case of our building, the benefits are not proportional to the undue burden placed on residents, particularly in light of the concrete nature of the building, updated fire alarm systems, and the presence of a 24-hour doorman in the building to ensure the timely handling of any fire threats.

Thank you for your time and consideration, and I would be most grateful for your support.

Sincerely,

Sook Choi

SF Board of Supervisors

I am writing to request that you take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our building on other feasible life safety measures that will protect our residents and visitors. The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on me.

My condominium building is not designed to target water to individual units. It was built in 1964. It would not only be a disastrous design inside a small living space but also create a significant special assessment to retrofit the building's substructure systems (if it can even be done) as well as the hallway space and then in addition create some kind of piping into each unit and room. The construction and financial impact would take years to meet the requirements and would be unaffordable for many of us owners.

This would be creating more unaffordable housing for current affordable residences.
I don’t have the savings set aside for such a huge unexpected addition to my budget!

The City and State is passing new laws without consideration of existing building operations and living conditions. We residents need help to cope with the rising costs of living in San Francisco. Please consider the practical ramifications of these new sprinkler retrofitting measures and exercise some common sense.

Thank you for your assistance and support.
Sincerely,
Marian Li

Subject: High Rise Sprinkler Mandate!
Date: Friday, December 12, 2025 2:34:07 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I am a 75 year old resident in Fontana East living with my 82 year old husband. We are on a fixed income, like many of the long time owners in this coop high rise. Original owners paid in the neighborhood of $29,000 for our apartments. We are not among the ultra-rich. Over time, the monthly assessment to cover building operating costs have risen to a point that it is difficult to pay that, as well as real estate taxes. Those two items alone represent a major chunk of our available funds.

Fontana East invested very recently in a new fire safety system. This is a concrete building. The new system is perfectly adequate. A forced upgrade to an unneeded sprinkler system is economically unsustainable and unfair.
We implore you to reverse course on this non-sensical "o**ne-size-fits-all**" legislation.

With gratitude for your attention and consideration.

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I wanted to make sure that the mayor and board of supervisors saw the email I sent this morning to Stephen Sherrill ... we appreciate all of the work you do for our beautiful city, and Let's Go San Francisco!

Here's the text:

Dear Supervisor Sherrill,

We have lived at 1896 Pacific Avenue for nearly 11 years ... it's a beautiful 100-year old building at the corner of Gough Street and my wife and I live on the top floor. I am nearly 82 and my wife is nearly 79.

We are very concerned regarding the 2022 SF fire code change mandating automatic sprinklers for older buildings like ours.

About 65% of our building is currently sprinklered, including all of the public area, garages, basements, etc.

Fire ladders can reach all of our units, and being a corner building makes it even easier to gain access in the event of a fire.

We spend a lot of time as an HOA, of which I am a member, focusing on fire safety measures, including monthly and quarterly checks of our system, replacements of hoses on a regular basis, quarterly and annual sprinkler tests, repairs and upkeep of fire escapes, annual refreshment of in-unit fire extinguishers, and more.

The San Francisco Chronicle's recent article provided a timely reminder of the impact on homeowners if the fire code change is not substantially altered or eliminated for buildings like ours.

I urge you and the Board of Supervisors to act thoughtfully on behalf of the many homeowners who would be affected by this unnecessarily overreaching code change.

We appreciate all that you do for our district and for the city as a whole ... many

thanks!

Subject:	SF High Rise Sprinkler Mandate
Date:	Saturday, December 13, 2025 5:15:07 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Good morning,

I understand and support that you wish to make San Francisco more affordable and livable. However, **this mandate will** have the opposite effect and **continue to drive tax paying citizens out of the City**.

No other city has this onerous requirement.

Please take action to drastically amend or delete the fire sprinkler mandate for high-rise residential buildings. Please collaborate with the 126 affected buildings/residents on other feasible life safety measures that will protect our residents and visitors as well or better.

This mandate was passed in 2023 with no notice to homeowners and without any discussion of its feasibility or cost. It **makes no differentiation based upon the fire escape and protection available at very different types of buildings that you have lumped together as one**. In my building for example, the doors to an outdoor fire escape are located for easy and quick access to exterior concrete fire stairs. A sprinkler system would have negligible benefit.

The mandate places **unreasonable physical and financial hardships on residents**. A nonprofit HOA building's resources are limited with a budget solely based on the actual annual and projected long-term expenses. Annual budget increases are also limited by state law and will impact those on fixed incomes.

The sprinkler mandate and its significant financial impact to each of us individually will impact our HOA's ability to budget and pay for ourassessments. A single undertaking of this financial significance could limit the financial health and well-being of the community for years and also result in an inability to maintain the rest of our building as needed.

This is **yet another blow to the affordability concerns that all residents in San Francisco face,** not only because of the direct cost of compliance but because of the effect this will have on thousands of rental units and apartments throughout the City.

While I strongly support fire and life safety measures, **this mandate was enacted without proper study of variations in buildings, their susceptibility to fire and their current fire protection measures.** The financial cost will be too high for a huge number of residents likely causing another mass exodus from the city.

Thank you for hearing my concern. **Please stop this mandate!!!**

Sincerely,
Mitchell G. Cihomsky

Subject:	Failure to Notify Owners Subject to Fire Code Section 1103.5.4
Date:	Monday, December 15, 2025 8:38:38 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

San Francisco Fire Commission:

I'm writing to ask the Fire Commission to confirm that all owners subject to 1103.5.4. [For SF] Automatic Sprinkler System for Existing High-Rise Buildings have been notified as required by Section 1103.5.4.3. In addition, I'm asking for clarity that if an owner gets delayed notification, that the 12 year compliance timeline will start for that building at the time of written notification, as opposed to the dates listed in Section 1103.5.4.5.

Background:

I read about the November 12 Fire Commission meeting in the Chronicle, and decided to watch the video.

The Fire Department represented to the Fire Commission that the all the owners of these existing older high-rise buildings had been sent letters notifying them of the change to the 2022 Fire Code now requiring fully retrofitting their buildings with sprinklers.

I am an owner of over 10 years in one of these buildings, and I was certain that I had not received such a letter. I am a part owner of one unit in a condominium building with 112 individual units. To make sure I was not just a one off, I asked several other owners if they had received letters. No one remember having received a letter from the Fire Department.

I read the Fire Code. And sure enough, Section 1103.5.4.3. required the Fire Department to notify all owners within 120 days by certified mail of this change in the Fire Code. That would have been by April 30, 2023, over 2 1/2 years ago.

Through a public records request, I asked the Fire Department for a copy of the letter they should have sent me. I gave them the address of the building and my mailing address, the same mailing address that DBI has used to notify me numerous times of the Façade ordinance.

The response I got from the Fire Department was that the letter had been mailed to the building engineer. Letters were not sent to any of the owners in our building. And I've since learned that the owners in at least three other buildings may not have received letters either.

Conclusion:

The Fire Department, likely without knowledge or intention, may have misinformed the Fire Commission and, by extension, the public on this important requirement.

Therefore, I have two requests of the Fire Commission.

One, ask the Fire Department to review the process used to identify the owners subject to Section 1103.5.4, determined what went wrong that all owners were not notified, and identify by building the number of owners that have and have not been mailed the required Notification Letters.

And two, clarity that if an owner gets delayed notification, that the 12 year compliance timeline will start for that building at the time of written notification, as opposed to the dates listed in Section 1103.5.4.5.

Let me know if you would like additional information.

Sincerely,

Anna Abeyta

Subject:	Amend/Repeal the SF Older High-Rise Sprinkler Mandate
Date:	Monday, December 15, 2025 4:03:28 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisors and Mr. Mayor,

I am writing to request you to take action to amend the fire sprinkler retrofitting requirement for older high-rise buildings and work with our buildings on other feasible life safety measures that will protect our residents and visitors.

The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship on our residents.

If the code is not changed, my expected cost would be comparable with my current annual salary. Relocating during the retrofit, and the cost associated with that, would also be an expensive hardship. In short, I'd probably have to move out and take a considerable loss on my property value.

Further, the demographics in our building skew to a more senior population. Many people face health issues and/or live on fixed incomes. For this group, the assessed cost may be prohibitive to their retaining their ownership, and even if they can absorb the cost, relocation to an accommodating temporary home, for some, may be infeasible.

We have recently had a meeting at Fort Mason with Supervisors Sherril and Sauter and the mayor's representative wherein many very germane opinions were voiced by residents. I hope that you may be able to review recordings. At the time of the meeting, the supervisors and the mayor's representative in attendance were very supportive of our position. It is very disappointing to hear that the mayor himself may have reversed course. I sincerely hope that he will reconsider.

Thank you very much for your consideration.

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear San Francisco Board of Supervisors, Mayor Laurie and other officials:

I am a homeowner, longtime resident and registered voter who lives in a nonprofit HOA located in the City of San Francisco. I am writing to request that you take action to amend the fire sprinkler mandate for high-rise residential buildings and that you collaborate with the residents of the approximately 126 affected buildings/residents in amending this mandate.

I and a group of about 150 registered voters in my building and several thousand other voters in more than 100 other buildings will be actively watching and reacting to how you vote and act on this request. This is a critical issue for ***several thousand*** San Francisco residents who are likely to follow this issue and how you and others vote on it more closely than we have ever followed any issue in San Francisco over our many years and, in some cases, lifetimes spent living here. If this mandate is continued, most of us will be displaced from our homes and many will have to sell because we cannot afford the work required.

In this email, I will assume you are familiar with the unaffordable cost to both the city and homeowners of the work required by this mandate. It is virtually impossible from an affordability standpoint for either the city or us residents to complete this work as required in the amendment.

We agree with and support all reasonable fire and safety requirements from the city of San Francisco. But there is a point where the cost and unreasonableness of the requirements are excessive and this is clearly one of those cases.

We hope to have your support in changing the mandate.

Thank you and best to you and your families during the holidays!

Attachments:	BOFP SF Retrofit Cost 12-16-2025.pdf

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Good morning,

I write to update the members of the Board of Supervisors on upcoming legislation that will be introduced, today, amending the fire code. This legislation will delay certain deadlines, within the overall 12-year implementation period.

We **support delaying internal deadlines** and **establishing a technical advisory committee (TAC)**, which many of you are familiar with, in the context of inclusionary zoning. This is an important step to ensure stakeholder and expert input, not to mention effective coordination between city agencies.

It should also be noted that some outrageous numbers are floating around causing very real concern for condo owners. These numbers were circulated by a luxury home builder, who ironically, doesn't build with union wages, benefits, or standards. One would think those numbers would be far less than our estimates, but alas they are inflated.

In the attachment to this email, you will see a rebuttal letter referencing Item 2 (Black Mountain Construction) and Item 1 (National Statement from NFSA).

Feel free to visit www.firesafesf.org to learn more about this important issue.

Finally, thanks for your time and public service. We can work collaboratively to advance public safety policy that saves lives and engages stakeholders in a meaningful way.

Best,

Rudy

To Whom It May Concern:

I am a licensed California C-16 Fire Protection contractor with direct experience designing and installing automatic fire sprinkler systems throughout San Francisco and the greater Northern California region.

I have been asked to respond to the letter attached as *Item 2* which provides a cost analysis of a fire sprinkler retrofit. Also linked below as *Item 1* is an analysis from the NFSA that provides an alternative cost analysis of a fire sprinkler retrofit.

I submit this statement to formally disagree with both analyses, not because either is necessarily "wrong" but because both are attempting to provide per-unit and per-square foot pricing for something that simply cannot be broken down to such a basic level. Retrofit sprinkler installations are extremely project-specific and vary greatly based on building type, existing water supply, access conditions, unit size, and more.

These installations are performed using CPVC or steel piping systems and can be installed surface-mounted or with minimally concealed routing, with targeted penetrations coordinated to limit finish disturbance. Labor and material costs at these levels reflect efficient system layouts, code-compliant coverage, and standard installation practices routinely employed by licensed C-16 contractors, and most often result in values near, to even within, the range of **approximately $10–$20 per square foot**, or **$15,000–$30,000 per dwelling unit**, presented by the NFSA.

By contrast, the estimates in Item 2—approaching **$100 per square foot** and **$200,000–$225,000 per unit**—conflate the fire sprinkler scope to the far opposite end of the spectrum with extensive selective demolition, framing alterations, full ceiling and wall reconstruction, and unrelated mechanical, electrical, and plumbing modifications. Such work is not intrinsic to sprinkler installation, nor is it typically required to achieve compliance with applicable retrofit sprinkler mandates. Presenting bundled general construction scope as sprinkler retrofit cost materially misrepresents the true cost of the work.

We can't outright deny that the price *could be* upwards of $200k/unit, but it's only going to be extreme edge cases where the situation is a large building that has very few units, and/or needs major infrastructure upgrades that are not common but necessary to accommodate the

fire sprinkler retrofit. We also can't outright state that the NFSA estimates are not on the very low end, achievable in the right circumstance, yes, but are on the opposite end of the spectrum edge cases. The vast majority of retrofits fall somewhere in-between.

For purposes of public policy, regulatory evaluation, and owner decision-making, it is critical that fire sprinkler retrofit costs be assessed based on the actual scope of fire protection materials, labor, and installation methods, rather than expanded construction scenarios that do not reflect standard practice or extreme best-case scenarios.

Item 1: https://nfsa.org/2025/11/21/national-fire-sprinkler-association-san-francisco-retrofit-cost-projections-are-wildly-inflated-and-out-of-step-with-real-world-data/

Item 2: attached letter from Black Mountain

BLACK MOUNTAIN
CONSTRUCTION

September 2, 2025

Renn Rhodes and Daniel McClain
Royal Towers San Francisco

Re: Royal Tower Auto Sprinkler Mandate

Dear Renn and Daniel,

Thank you for reaching out regarding the City's retroactive automatic fire sprinkler mandate. As you can imagine, estimating the cost of installing fire sprinklers in existing, non-sprinklered units involves a wide range of variables. That said, I've outlined below my best estimates based on two different scenarios for your reference.

Using your example—our current project at Apartment 305, 1750 Taylor—as a baseline: this particular unit is undergoing a full gut remodel. This type of project allows for significant efficiencies, as we would be able to design the mechanical, electrical, plumbing systems, special architectural elements, and the required fire sprinklers in coordination, as if the unit were new construction.

In this scenario, the fire sprinkler portion of the project would cost approximately **$50,000**, or roughly **$23 per square foot**, based on the unit's 2,190 square feet. The remaining project costs are allocated to finishes and other scopes of work.

However, retrofitting a unit where no other construction is taking place presents a far more complex and costly challenge. Installing sprinklers in an occupied or finished unit brings many unknowns, as we must carefully work around existing systems and finishes—many of which may need to be removed and reinstalled.

BLACK MOUNTAIN
CONSTRUCTION

The following are examples of additional scope items involved in a retrofit:

1. Unit protection
2. Selective demolition
3. Miscellaneous mechanical modifications
4. Miscellaneous electrical modifications
5. Miscellaneous plumbing modifications
6. Drywall and ceiling framing
7. Painting
8. Cleaning
9. Additional supervision and general requirements

Given these complexities, I estimate that a retrofit in a similarly sized 2,190 square foot unit would cost between **$200,000 to $225,000**, or approximately **$100 per square foot**.

Please don't hesitate to reach out if you have any further questions or would like to discuss this in more detail. I'm happy to assist.

Best regards,

Jeff Woods, Founder & President
Black Mountain Construction

Subject: San Francisco Sprinkler Mandate
Date: Tuesday, December 16, 2025 6:07:18 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Board of Supervisors,

We are writing regarding the sprinkler mandate recently reported in the *San Francisco Standard*.

We respectfully urge the Board to reconsider the mandate or to expand the exemption criteria. Our building in Telegraph Hill falls near the margin of the current requirements, and while it may qualify for an exemption, we feel the mandate itself imposes an undue burden on homeowners.

The financial, logistical, and emotional costs of compliance are significant. Retrofitting could require tens of thousands of dollars per household, along with major disruption to daily life. For many residents—including my husband and me—this level of expense is unsustainable. We have lived in San Francisco since 2012, invested in our home, and contributed to the community. Yet after experiencing multiple layoffs in recent years, as well as other required safety expenditures such as upgraded electrical panels and alarm systems, we are already struggling. If forced to absorb this additional cost, we may have no choice but to leave the city altogether.

We urge the Board to weigh the real impact this mandate will have on long-term residents and to consider broader exemptions that protect homeowners from financial displacement.

Thank you for your attention and consideration.

Sincerely,
John Messinger and Brian Fenn
150 Lombard St, #305

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

To the San Francisco Board of Supervisors and the San Francisco Fire Commission:

I am writing regarding the high rise fire sprinkler mandate. Please amend the fire sprinkler retrofitting requirement for older high-rise buildings. This mandate will create an enormous hardship on hundreds of San Francisco citizens including ourselves. We retired and bought our 'forever home' condo on Lombard Street in 2022 and no disclosure about these sprinklers was made.

This retrofit would require us to relocate and take a loss on our property, likely bankrupting us. We just went through a very large expense of replacing fire warning horns. The estimated cost for this new mandate would make it impossible for us to stay in our home.

We recognize that a life should not be measured in dollars but what are the costs of disrupting our lives, and those of many others, in such a major way?

Thank you.

Christopher and Sepi Wood

From:	Michael Liao
To:	Board of Supervisors (BOS)
Cc:	Commission, Fire (FIR)
Subject:	Petition Regarding Proposed Sprinkler System Mandate for Older Condo Buildings
Date:	Tuesday, December 16, 2025 8:15:43 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Members of the San Francisco Board of Supervisors,

I am writing to express concerns about the recent proposal to mandate the installation of sprinkler systems in older condominium buildings within the city.

As a homeowner at Telegraph Landing North, located under Telegraph Hill, it remains unclear whether this mandate will apply to our building and, if so, to what extent. However, it is evident that implementing such a mandate without financial subsidies or a clear plan to address potential loss-of-use of affected spaces would place an enormous and burdensome task on homeowners.

Many of us in older buildings cannot bear the cost of unplanned structural upgrades. These buildings were not designed to accommodate modern safety technologies, and retrofitting them presents significant challenges. The financial strain aside, some buildings simply cannot be safely altered without unknown consequences. While I understand and appreciate the city's desire to increase safety, this proposal, in practice, may create more harm than good, placing homeowners under undue stress and potentially leading to greater complications than it seeks to prevent.

Additionally, this proposal appears to have been introduced with minimal public disclosure or community input. Given the weight of its potential impact, I respectfully urge the Board of Supervisors to reconsider or delay this mandate until more thorough consultation and planning can take place.

This issue is not a matter of subjective preference but rather one of practical feasibility. The burden of such a mandate is simply too great for existing owners and residents to bear.

Thank you for your consideration.

Sincerely,

Michael Liao

Subject: Amend the sprinkler retrofit rule, PLEASE
Date: Wednesday, December 17, 2025 1:26:27 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisors and Commissioners:

We are writing to express our great concern regarding the current sprinkler retrofit rule. My wife and I are retired and have lived in our 9-story building for 36 years. During that time there has never been a single incident involving fire in the building. A sprinkler retrofit will be highly disruptive, requiring us to relocate for months or years. It will also be a huge financial hardship to relocate and simultaneously pay rent, our existing mortgage, and a reported $100,000-300,000 in construction costs. With its low concrete ceilings, our unit is ill-designed to accommodate any significant new water infrastructure. Moreover, such infrastructure risks new damage due to incidental water leaks from the new water system. We strongly support amending the rules to trigger a sprinkler retrofit only when a major renovation to the building is undertaken (which is the normal standard used by other cities nationwide). While we support the need to save lives, there are better alternative approaches in this case than retrofitting sprinklers in our building.

Sincerely,

Robert and Janis Harrer

Subject:	Unreasonable Fire Sprinkler Mandate for Older High-Rise Buildings
Date:	Thursday, December 18, 2025 10:13:10 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I urge Mayor Lurie, the San Francisco Board of Supervisors, and the San Francisco Fire Administration to reconsider the currently contemplated fire sprinkler retrofitting requirement for older high-rise buildings. The fire sprinkler mandate was passed without any notice to or discussion with the affected buildings and places an unreasonable physical and financial hardship and loss on owners and residents. If the mandate is not retracted or amended, it will have catastrophic economic consequences for me and similarly situated unit owners and tenants of affected buildings. Among other things:

1. I will be subject to a special assessment of $200,000 - $300,000. This is not only a hugely disproportionate and unbearable expense, but it casts an untenable cloud on my unit, destroying its market value.
2. I will be required to move out of my unit for 6 to 12 months or more for the required major construction work, thereby imposing further unreasonable expense; and
3. Major modifications will be made to my unit, resulting in lowered 7-foot ceilings, which will make my unit uninhabitable and unmarketable.

I and all other owners and occupants in these buildings cannot withstand these devastating impacts. While fire safety is clearly important, the current fire sprinkler mandate poses unreasonable financial and physical burdens at a time when the City of San Francisco should be focused on increasing the housing supply and reducing the cost of occupancy. This sprinkler mandate for older buildings is absolutely contrary to the goal of encouraging increased supply and affordability of housing and seems to be designed to satisfy the desires of organized labor by creating unnecessarily expensive retrofitting work. Less onerous fire safety alternatives are available and should be considered to balance the financial hardships to be suffered by building occupants. Please support the reconsideration of these onerous sprinkler retrofitting requirements and work with the representatives of over 125 affected buildings to arrive at a more reasonable approach that is consistent with the City's housing goals. At worst, existing buildings should be exempt from the mandate unless they voluntarily undertake a major renovation.

Respectfully,

Jeffrey R. Patterson

Subject:	The Mayor"s Sprinkler Mandate Proposal
Date:	Wednesday, December 17, 2025 12:07:08 PM
Attachments:	An Equivalent Fire Safety Proposal 12-17-25.docx

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Chair Melgar and Supervisors Chen and Mahmood,

We appreciate the Mayor's effort to respond to the concerns of many of us in legacy buildings throughout the city who are faced with the huge implications of the sprinkler mandate.

However, we agree with Supervisor Sherrill that merely pushing this down the road doesn't solve anyone's problems.

The mandate certainly needs studying. But to have it hanging over our heads, even if deferred, gives owners and tenants no relief. Indeed, it's going to make condos potentially worth $200-$300K less. If anyone in any of the buildings wanted to sell their condo, they would have to disclose the mandate and potential buyers would ask for a credit. In addition, the assumption could be made that the building is not fire safe as it is! That could further erode value. Finally, if the mandate holds after the study, the price of installing the sprinklers will only be higher in 2030.

In an attempt to address the legitimate fire safety concerns of the mandate as well as the legitimate concerns of many owners and tenants it would affect, my fellow residents and I at 999 Green, have developed an alternative version of the mandate that we believe resolves the issue.

In the attached 2-page document, we propose to put Fire Code Section 1103.5.4.4 up front of the sprinkler mandate and provide an alternative compliance model with a Performance-Based Design that achieves calculated Safety Equivalency. The proposal integrates building-specific Engineered Life Safety System upgrades with an active-community Fire Safety Management Plan to provide a four-point **Performance-Based Approach** to equivalent fire safety, with proportionate effort and minimum hardship.

We believe this four-point, performance-based program not only creates fire safe buildings without the undue hardship of sprinkler installation, at far less cost and disruption of lives, but also builds fire-safe communities that enhance San Francisco's preparedness and resilience in a wide range of emergencies.

Please consider this as you take up the sprinkler mandate of the Fire Code update. And we would be glad to elaborate on our proposal at the meeting in which you take up this issue. Please keep us informed of that date.

Warm regards,

Bob Kozma

Alternative Compliance via

Active Fire Safety Communities and Engineered Life Safety Systems

A Proposal

Residents of The Summit
999 Green St.

ABSTRACT

In response to the disproportionate effort of sprinkler installation for the safety benefit achieved in older buildings and the undue hardship of high costs, we propose to build on Fire Code Section 1103.5.4.4 and provide an alternative compliance model with a Performance-Based Design that achieves calculated Safety Equivalency. The proposal integrates building-specific Engineered Life Safety System upgrades with an active-community Fire Safety Management Plan to provide a four-point **Performance-Based Approach** to equivalent fire safety with proportionate effort and minimum hardship.

1. Strengthen Fire Code Section 1103.5.4.4 to provide an opt-out-first approach to fire safety for buildings that commit to Engineered Life Safety System (ELSS) building upgrades and a rigorous, periodically certified Fire Safety Management Plan (FSMP).
2. Participating buildings hire a Fire Protection Engineer (FPE) to conduct an Engineered Life Safety System assessment to list its current fire safety features and agree to make recommended upgrades related to fire detection and alarms, communication, smoke control and management, compartmentation, firefighter support Infrastructure, and egress improvements.
3. Each building also works with the FPE to design a Fire Safety Management Plan that engages the building community in developing verifiable fire safety practices in four core areas: fire prevention procedures, system maintenance testing, emergency response procedures, and documentation and performance monitoring.
4. Each building will undergo a third-party audit and recertification every three years to prove the FSMP is active, with a snap-back sprinkler mandate for persistent failure to do so.

This four-point, performance-based program not only creates fire safe buildings without the undue hardship of sprinkler installation, at far less cost and disruption of lives, but also builds fire-safe communities that enhance San Francisco's preparedness and resilience in a wide range of emergencies.

Alternative Compliance via
Active Fire Safety Communities and Engineered Life Safety Systems
A Proposal

A Group of Residents at The Summit
999 Green St.

The high cost and resident dislocation required by the impending fire sprinkler mandate, especially for elderly residents and those with fixed income, compels us—a group of more than two dozen residents at 999 Green St.—to offer a proposal to achieve the same fire risk reduction at a much lower cost.

Limitations of Fire Sprinklers

Fire sprinklers have been proven to save lives and property, which is why they are included in both the current and proposed San Francisco Fire Code. However, fire sprinklers have limitations.

Their biggest limitation is that they are reactive not proactive: Fire sprinklers do not prevent fires from happening. Nor do they close the door behind a panicked evacuee when a fire happens. They don't check to see if the neighbor next door is okay or help them down the stairs, if needed. And sprinklers present a risk of their own: Significant collateral water damage. Also, they may foster passive, complacent residents: "Why worry—or do anything—about fire safety when that sprinkler system we paid so much for has us covered?"

Because of these limitations, the sprinkler mandate in older buildings represents a disproportionate effort for their safety return and their significant associated cost and disruptive installation represents an undue hardship for residents. In some cases, an elderly owner on fixed income may have to sell their condo at a loss because they can't afford the installation assessment or a tenant may have to move because they can't afford an allowed compensatory rent increase.

Performance-Based Approach to Section 1103.5.4.4

In response to this disproportionate effort and the undue hardship, we draw upon on Fire Code Section 1103.5.4.4 to propose the alternative compliance of a Performance-Based Alternative that achieves calculated Safety Equivalency. Our proposal combines building-specific Engineered Life Safety System (ELSS) upgrades with an active community Fire Safety Management Plan (FSMP) to provide building-appropriate and certified equivalent fire safety without the undue hardship of sprinkler retrofits.

Our proposal encourages buildings to adopt a proactive, life safety upgrade plan and build a certified fire safety resident community. When staff and residents are trained, organized and supported by the right building systems, they can prevent fires from happening, as well as stop and/or quickly contain them if they do occur. And they also facilitate to the safe evacuation of the building.

We propose this four-point, performance-based alternative that achieves safety equivalency without the invasive and potentially-displacing cost of retrofitting sprinkler systems:

1. Codify the "Active Community/ELSS" Alternative. We propose strengthening Fire Code Section 1103.5.4.4, which currently allows the Fire Marshal to approve modifications, to formalize a "Certified Active Fire Safety Community" compliance option. Rather than treating modifications as rare exceptions, the Code should provide a formal opt-out path for buildings that implement Engineered Life

Safety System (ELSS) building upgrades (short of sprinklers) and maintain a rigorous, periodically certified Fire Safety Management Plan (FSMP) that complements the building upgrade with verified active-community fire safety training and practices.

2. ELSS Building Assessment. Each building is unique. A "one-size-fits-all" mandate ignores the superior fire-resistance ratings of certain legacy buildings. The Engineered Life Safety System assessment of each building would examine the fire safety features of a particular building and make recommendations related to: Enhanced Detection and Alarms; Emergency Voice/Communication; Smoke Control and Smoke Management, Compartmentation and Passive Measures; Firefighter Support Infrastructure; and Egress Improvements.

- **The Mechanism:** The building shall retain a licensed Fire Protection Engineer (FPE) to conduct a Performance-Based Design assessment.
- **The Audit:** The FPE will audit existing passive protections (fire-rated walls, stairwell pressurization) and recommend targeted upgrades—such as heat detectors in mechanical/electrical rooms or stairwell pressurization systems—that achieve calculated safety equivalency.

3. Active-Community FSMP. Each building will also work with the FPE to design a Fire Safety Management Plan that engages the building community in comprehensive fire safety practices. Aligning with the NFPA 550 Fire Safety Concepts Tree, this plan prioritizes "Preventing Fire Ignition" over merely "Managing Fire Impact." This plan must demonstrate community proficiency in four core areas: fire prevention procedures, system maintenance testing, emergency response procedures, and documentation and performance monitoring.

- **Mandatory Training and verification:** The building must implement a schedule of certified training for staff and residents, with signed compliance, moving beyond simple pamphlets to active drills.
- **Risk Reduction:** Implementation of strict community bylaws, such as the prohibition of open-flame grills and rigorous control of e-mobility battery charging.
- **Emergency Response:** Establishment of floor captains and evacuation assistance protocols for disabled residents.

4. Recertification and Enforcement To ensure long-term compliance, this is not a one-time exemption.

- **The Cycle:** The building must undergo a third-party audit and recertification every three years to prove the FSMP is active.
- **The Consequence:** Failure to maintain the training logs, equipment standards, or structural integrity required by the plan will result in the revocation of the alternative status.

This four-point performance-based program leverages the prospect of a sprinkler mandate to build and activate resident communities that achieve goals of the Fire Code: prevent fires, save lives, reduce injuries and limit property damage. It empowers people working together to address the limitations of fire sprinklers, at far less cost, intrusion and disruption of lives. In addition, the social capital created through this coordinated community approach enhances preparedness for fire and other emergencies, helping San Francisco become a safer and more resilient city.
