1 [Administrative Code - Short-Term Residential Rentals]

2  
3 **Ordinance amending the Administrative Code to revise the Residential Unit Conversion**  
4 **Ordinance to: limit short-term rental of a Residential Unit to no more than 60 days per**  
5 **calendar year; require Hosting Platforms to verify that a Residential Unit is on the City**  
6 **Registry prior to listing, remove a listing once a Residential Unit has been rented for**  
7 **Tourist or Transient Use for more than 60 days in a calendar year, and provide certain**  
8 **usage data to the Planning Department; revise the definition of Interested Parties who**  
9 **may enforce the provision of Chapter 41A through a private right of action to include**  
10 **Permanent Residents residing within 100 feet; amend the private right of action**  
11 **provisions to allow for a private right of action against Hosting Platforms and create an**  
12 **additional private right of action against Owners, Business Entities, and Hosting**  
13 **Platforms under certain circumstances; and provide for criminal penalties against**  
14 **Hosting Platforms in violation of this Chapter 41A; and affirming the Planning**  
15 **Department's determination under the California Environmental Quality Act.**

16 **NOTE:** **Unchanged Code text and uncodified text** are in plain Arial font.  
17 **Additions to Codes** are in *single-underline italics Times New Roman font*.  
18 **Deletions to Codes** are in ~~*strikethrough italics Times New Roman font*~~.  
19 **Board amendment additions** are in double-underlined Arial font.  
20 **Board amendment deletions** are in ~~strikethrough-Arial font~~.  
21 **Asterisks (\* \* \* \*)** indicate the omission of unchanged Code  
22 subsections or parts of tables.

23 Be it ordained by the People of the City and County of San Francisco:

24 Section 1. Environmental Findings. The Planning Department has determined that the  
25 actions contemplated in this ordinance comply with the California Environmental Quality Act

1 (California Public Resources Code Sections 21000 et seq.). Said determination is on file with  
2 the Clerk of the Board of Supervisors in File No. 150295 and is incorporated herein by  
3 reference. The Board affirms this determination.

4  
5 Section 2. The Administrative Code is hereby amended by revising Sections 41A.4,  
6 41A.5 and 41A. 6, to read as follows:

7 **SEC. 41A.4. DEFINITIONS.**

8 Whenever used in this Chapter 41A, the following words and phrases shall have the  
9 definitions provided in this Section:

10 \* \* \* \*

11 **Complaint.** A complaint submitted to the Department, *or to the Department and the City*  
12 *Attorney on the same day,* alleging a violation of this Chapter 41A and that includes the  
13 Residential Unit's address, including unit number, date(s) and nature of alleged violation(s),  
14 and any available contact information for the Owner and/or resident of the Residential Unit at  
15 issue.

16 \* \* \* \*

17 **Director.** The Director of the Planning Department, *or his or her designee.*

18 \* \* \* \*

19 **Interested Party.** A Permanent Resident of the building in which the Tourist or  
20 Transient Use is alleged to occur, any homeowner association associated with the Residential  
21 Unit in which the Tourist or Transient Use is alleged to occur, ~~the Owner of the Residential~~  
22 ~~Unit in which the Tourist or Transient Use is alleged to occur,~~ *a Permanent Resident of a property*  
23 *within 100 feet of the property containing the Residential Unit in which the Tourist or Transient Use is*  
24 *alleged to occur,* the City and County of San Francisco, or any non-profit organization exempt  
25 from taxation pursuant to Title 26, Section 501 of the United States Code, which has the

1 preservation or improvement of housing as a stated purpose in its articles of incorporation or  
2 bylaws.

3 \* \* \* \*

4 **Short-Term Residential Rental.** A Tourist or Transient Use where all of the following  
5 conditions are met:

6 (a) the Residential Unit is offered for Tourist or Transient Use by the Permanent  
7 Resident of the Residential Unit;

8 (b) the Permanent Resident is a natural person;

9 (c) the Permanent Resident has registered the Residential Unit and maintains good  
10 standing on the Department's Short-Term Residential Rental Registry; and

11 (d) the Residential Unit: is not subject to the Inclusionary Affordable Housing Program  
12 set forth in Planning Code Section 415et seq.; is not a residential hotel unit subject to the  
13 provisions of Chapter 41, unless such unit has been issued a Permit to Convert under Section  
14 41.12; is not otherwise ~~a~~ designated as a below market rate or income-restricted Residential  
15 Unit under City, state, or federal law; and no other requirement of federal or state law, this  
16 Municipal Code, or any other applicable law or regulation prohibits the permanent resident  
17 from subleasing, renting, or otherwise allowing Short-Term Residential Rental of the  
18 Residential Unit.

19 **Short-Term Residential Rental Registry or Registry.** A database of information  
20 maintained by the Department that includes a unique registration number for each Short-Term  
21 Residential Rental and information regarding Permanent Residents who are permitted to offer  
22 Residential Units for Short-Term Residential Rental. Only one Permanent Resident per  
23 Residential Unit may be included on the Registry at any given time. The Registry shall be  
24 available for public review to the extent required by law, except that, to the extent permitted by  
25

1 law, the Department shall redact any Permanent Resident names and street and unit numbers  
2 from the records available for public review.

3 \* \* \* \*

4 **SEC. 41A.5. UNLAWFUL CONVERSION; REMEDIES.**

5 (a) **Unlawful Actions.** Except as set forth in subsection 41A.5(g), it shall be unlawful  
6 for

7 (1) any Owner to offer a Residential Unit for rent for Tourist or Transient Use;

8 (2) any Owner to offer a Residential Unit for rent to a Business Entity that will  
9 allow the use of a Residential Unit for Tourist or Transient Use; or

10 (3) any Business Entity to allow the use of a Residential Unit for Tourist or  
11 Transient Use.

12 (b) **Records Required.** The Owner and Business Entity, if any, shall retain and make  
13 available to the Department records to demonstrate compliance with this Chapter 41A upon  
14 written request as provided herein. ~~Any Permanent Resident offering his or her Primary Residence~~  
15 ~~as a Short-Term Residential Rental shall retain and make available to the Department records to~~  
16 ~~demonstrate compliance with this Chapter 41A, including but not limited to records demonstrating~~  
17 ~~Primary Residency, the number of days per calendar year he or she has occupied the Residential Unit,~~  
18 ~~and the number of days per calendar year, with dates and duration of each stay, the Residential Unit~~  
19 ~~has been rented for Short-Term Residential Rental Use.~~

20 (c) **Determination of Violation.** Upon the filing of a written Complaint that an Owner  
21 or Business Entity has engaged in an alleged unlawful Conversion or that a Hosting Platform  
22 is not complying with the requirements of subsections (g)(4)(A), (C), or (D), the Director shall  
23 take reasonable steps necessary to determine the validity of the Complaint. The Director may  
24 independently determine whether an Owner or Business Entity may be renting a Residential  
25 Unit for Tourist or Transient Use in violation of this Chapter 41A or whether a Hosting Platform

1 has failed to comply with the requirements of subsections (g)(4)(A), (C), or (D). To determine if  
2 there is a violation of this Chapter 41A, the Director may initiate an investigation of the subject  
3 property or Hosting Platform's allegedly unlawful activities. This investigation may include, but  
4 is not limited to, an inspection of the subject property and/or a request for any pertinent  
5 information from the Owner, Business Entity, or Hosting Platform, such as leases, business  
6 records, or other documents. The Director shall have discretion to determine whether there is  
7 a potential violation of this Chapter 41A and whether to conduct an administrative review  
8 hearing as set forth below. Notwithstanding any other provision of this Chapter 41A, any  
9 alleged violation related to failure to comply with the requirements of the Business and Tax  
10 Regulations Code shall be enforced by the Treasurer/Tax Collector under the provisions of  
11 that Code.

12 (d) **Civil Action.**

13 (1) The City may institute civil proceedings for injunctive and monetary relief, including  
14 civil penalties, against an Owner, Business Entity, or Hosting Platform for violations of this Chapter  
15 41A under any circumstances, without regard to whether a Complaint has been filed or the Director  
16 has made a determination of a violation through an administrative review hearing as set forth in this  
17 Chapter 41A.

18 (2) Private Rights of Action.

19 (A) Following the filing of a Complaint and the determination of a violation  
20 by the Director through an administrative review hearing as set forth in this Chapter 41A, the City  
21 may institute civil proceedings for injunctive and monetary relief against a Hosting Platform for  
22 violation of subsection (g)(4)(A) or the City or any other Interested Party may institute civil  
23 proceedings for injunctive and monetary relief against an Owner, ~~or~~ Business Entity, or Hosting  
24 Platform.

1                    (B) An Interested Party may institute a civil action for injunctive and monetary  
2 relief against an Owner, Business Entity, or Hosting Platform if:

3                    (i) The Interested Party has filed a Complaint with the Department;

4                    (ii) 60 days have passed since the filing of the Complaint;

5                    (iii) The Director has not made a written determination pursuant to  
6 subsection 41A.6(a) that there is no violation of this Chapter 41A or basis for an investigation for an  
7 unlawful activity;

8                    (iv) After such 60-day period has passed, the Interested Party has  
9 provided 30 days' written notice to the Department and the City Attorney's Office of its intent to initiate  
10 civil proceedings; and

11                    (v) The City has not initiated civil proceedings by the end of that 30-day  
12 notice period.

13                    (3) In addition, Civil Penalties. If the City or an Interested Party is the prevailing party  
14 in any civil action under this subsection (d), an Owner or Business Entity in violation of this  
15 Chapter 41A or a Hosting Platform in violation of subsection (g)(4)(A), (C), or (D) may be liable  
16 for civil penalties of not less than \$250 or more than \$1,000 per day for the period of the  
17 unlawful activity.

18                    (4) Costs and Attorneys' Fees. If the City or any other the Interested Party is the  
19 prevailing party, the City or the Interested Party shall be entitled to the costs of enforcing this  
20 Chapter 41A, including reasonable attorneys' fees pursuant to an order of the Court.

21                    (5) Any monetary award obtained by the City ~~and County of San Francisco~~ in such  
22 a civil action shall be deposited in the Department to be used for enforcement of Chapter 41A.  
23 The Department, through the use of these funds, shall reimburse City departments and  
24 agencies, including the City Attorney's Office, for all costs and fees incurred in the  
25 enforcement of this Chapter 41A.

1 (e) **Criminal Penalties.** Any Owner or Business Entity who rents a Residential Unit for  
2 Tourist or Transient Use in violation of this Chapter 41A or a Hosting Platform who provides a  
3 listing for a Residential Unit for Tourist or Transient Use in violation of subsections (g)(4)(A), (C), or  
4 (D) without correcting or remedying the violation as provided for in subsection 41A.6(b)(7)  
5 shall be guilty of a misdemeanor. Any person convicted of a misdemeanor hereunder shall be  
6 punishable by a fine of not more than \$1,000 or by imprisonment in the County Jail for a  
7 period of not more than six months, or by both. Each Residential Unit rented for Tourist or  
8 Transient Use shall constitute a separate offense.

9 \* \* \* \*

10 (g) **Exception for Short-Term Residential Rental.**

11 (1) Notwithstanding the restrictions set forth in this Section 41A.5, a Permanent  
12 Resident may offer his or her Primary Residence as a Short-Term Residential Rental if:

13 (A) ~~The Permanent Resident occupies the Residential Unit for no less than 275~~  
14 ~~days out of the calendar year in which the Residential Unit is rented as a Short-Term Residential~~  
15 ~~Rental or, if the Permanent Resident has not rented or owned the Residential Unit for the full preceding~~  
16 ~~calendar year, for no less than 75% of the days he or she has owned or rented the Residential Unit~~ The  
17 Residential Unit is rented for Tourist or Transient Use for no more than 60 days during any calendar  
18 year;

19 (B) The Permanent Resident maintains records for two years  
20 demonstrating compliance with this Chapter 41A, including but not limited to information  
21 demonstrating Primary Residency, ~~the number of days per calendar year he or she has occupied the~~  
22 ~~Residential Unit,~~ the number of days per calendar year the Residential Unit has been rented as  
23 a Short-Term Residential Rental, and compliance with the insurance requirement in  
24 Subsection (D). These records shall be made available to the Department upon request;

25 \* \* \* \*

1                   (3) **Short-Term Residential Rental Registry Applications, Fee, and**  
2 **Reporting Requirement.**

3                   (A) **Application.** Registration shall be for a two-year term, which may be  
4 renewed by the Permanent Resident by filing a completed renewal application. Initial and  
5 renewal applications shall be in a form prescribed by the Department. The Department shall  
6 determine, in its sole discretion, the completeness of an application. Upon receipt of a  
7 complete initial application, the Department shall send mailed notice to the owner of record of  
8 the Residential Unit, any Permanent Resident of the building in which the Residential Unit is located,  
9 any homeowners' association associated with the Residential Unit, and any individual or neighborhood  
10 association that has requested notification regarding Registry applications for the property on which  
11 the Residential Unit is located, informing them ~~owner~~ that an application ~~to the Registry~~ for the unit  
12 has been received. ~~If the Residential Unit is in a RH 1(D) zoning district, the Department shall also~~  
13 ~~send mailed notice to any directly associated homeowner association that has previously requested~~  
14 ~~such notice.~~

15               Both the initial application and any renewal application shall contain information  
16 sufficient to show that the Residential Unit is the Primary Residence of the applicant, that the  
17 applicant is the unit's Permanent Resident, and that the applicant has the required insurance  
18 coverage and business registration certificate. In addition to the information set forth here, the  
19 Department may require any other additional information necessary to show the Permanent  
20 Resident's compliance with this Chapter 41A. Primary Residency shall be established by  
21 showing the Residential Unit is listed as the applicant's residence on at least two of the  
22 following: motor vehicle registration; driver's license; voter registration; tax documents  
23 showing the Residential Unit as the Permanent Resident's Primary Residence for home  
24 owner's tax exemption purposes; or utility bill. A renewal application shall contain sufficient  
25 information to show that the applicant is the Permanent Resident ~~and has occupied the unit for at~~

1 ~~least 275 days of each of the two preceding calendar years.~~ Upon the Department's determination  
2 that an application is complete, the unit shall be entered into the Short-Term Residential  
3 Rental Registry and assigned an individual registration number.

4 (B) **Fee.** The fee for the initial application and for each renewal shall be  
5 \$50, payable to the Director. The application fee shall be due at the time of application.  
6 Beginning with fiscal year 2014-2015, fees set forth in this Section may be adjusted each  
7 year, without further action by the Board of Supervisors, as set forth in this Section. Within six  
8 months of ~~the operative date of this ordinance~~ February 1, 2015 and after holding a duly noticed  
9 informational hearing at the Planning Commission, the Director shall report to the Controller  
10 the revenues generated by the fees for the prior fiscal year and the prior fiscal year's costs of  
11 establishing and maintaining the registry and enforcing the requirements of this Chapter 41A,  
12 as well as any other information that the Controller determines appropriate to the performance  
13 of the duties set forth in this Chapter. After the hearing by the Planning Commission, but not  
14 later than August 1, 2015, the Controller shall determine whether the current fees have  
15 produced or are projected to produce revenues sufficient to support the costs of establishing  
16 and maintaining the registry, enforcing the requirements of this Chapter 41A and any other  
17 services set forth in this Chapter and that the fees will not produce revenue that is significantly  
18 more than the costs of providing such services. The Controller shall, if necessary, adjust the  
19 fees upward or downward for the upcoming fiscal year as appropriate to ensure that the  
20 program recovers the costs of operation without producing revenue that is significantly more  
21 than such costs. The adjusted rates shall become operative on July 1.

22 (C) **Reporting Requirement.** To maintain good standing on the  
23 Registry, the Permanent Resident shall submit a report to the Department on January 1 of  
24 each year regarding the number of days the Residential Unit or any portion thereof has been  
25 rented as a Short-Term Residential Rental since either initial registration or the last report,

1 whichever is more recent, and any additional information the Department may require to  
2 demonstrate compliance with this Chapter 41A.

3 **(4) Requirements for Hosting Platforms.**

4 **(A) Notice to Users of Hosting Platform.** All Hosting Platforms shall  
5 provide the following information in a notice to any user listing a Residential Unit located  
6 within the City and County of San Francisco through the Hosting Platform's service. The  
7 notice shall be provided prior to the user listing the Residential Unit and shall include the  
8 following information: that Administrative Code Chapters 37 and 41A regulate Short-Term  
9 Rental of Residential Units; the requirements for Permanent Residency and registration of the  
10 unit with the Department; and the transient occupancy tax obligations to the City.

11 **(B)** A Hosting Platform shall comply with the requirements of the  
12 Business and Tax Regulations Code by, among any other applicable requirements, collecting  
13 and remitting all required Transient Occupancy Taxes, and this provision shall not relieve a  
14 Hosting Platform of liability related to an occupant's, resident's, Business Entity's, or Owner's  
15 failure to comply with the requirements of the Business and Tax Regulations Code. A Hosting  
16 Platform shall maintain a record demonstrating that the taxes have been remitted to the Tax  
17 Collector and shall make this record available to the Tax Collector upon request.

18 **(C)** Prior to listing a Residential Unit within the City to be rented for Tourist or  
19 Transient Use, a Hosting Platform shall verify with the Planning Department that the Residential Unit  
20 is listed on the Registry. A Hosting Platform shall not provide any such listing unless the listing  
21 includes a registration number and the Hosting Platform has verified that the Residential Unit is listed  
22 on the Registry. Additionally, if a Hosting Platform has information that a Residential Unit has been  
23 rented for Tourist or Transient Use for more than 60 days within a calendar year, the Hosting Platform  
24 shall immediately remove such listing from its platform.

1                                    (D) Reporting Requirement. A Hosting Platform that collects data indicating  
2 whether a Residential Unit has been rented for a given day, shall submit a quarterly report to the  
3 Department indicating the number of nights a Residential Unit in the City was rented for Tourist or  
4 Transient Use. This report shall include the street address, including unit number, of the Residential  
5 Unit and the number of days, with dates and duration of stay, the Residential Unit was rented for  
6 Tourist or Transient Use.

7            Any violation of a Hosting Platform's responsibilities under subsections (g)(54)(A), (C) or  
8 (D) shall subject the Hosting Platform to the administrative penalties and enforcement  
9 provisions of this Chapter 41A, including but not limited to payment of civil penalties of up to  
10 \$1,000 per day for the period of the failure to comply, with the exception that a violation  
11 related to failure to comply with the requirements of the Business and Tax Regulations Code  
12 shall be enforced by the Treasurer/Tax Collector under that Code.

13            (5) The exception set forth in this subsection (g) provides an exception only to  
14 the requirements of this Chapter 41A. It does not confer a right to lease, sublease, or  
15 otherwise offer a residential unit for Short-Term Residential Use where such use is not  
16 otherwise allowed by law, a homeowners association agreement or requirements, any  
17 applicable covenant, condition, and restriction, a rental agreement, or any other restriction,  
18 requirement, or enforceable agreement. All Owners and residents are required to comply with  
19 the requirements of Administrative Code Chapter 37, the Residential Rent Stabilization and  
20 Arbitration Ordinance, including but not limited to the requirements of Section 37.3(c).

21 Additionally, this Chapter 41A shall not be construed as precluding an otherwise lawful application to  
22 conduct a Tourist or Transient Use where such use is permitted or conditionally permitted under the  
23 Planning Code.

24            \* \* \* \*

25            **SEC. 41A.6. PROCEDURES FOR DETERMINING ADMINISTRATIVE PENALTIES.**

1           (a) **Notice of Complaint.**

2           (1) Within 30 days of the filing of a Complaint and upon the Director's  
3 independent finding that there may be a violation of this Chapter 41A, the Director shall notify  
4 the Owner by certified mail that the Owner's Residential Unit is the subject of an investigation  
5 for an unlawful use and provide the date, time, and place of an administrative review hearing  
6 in which the Owner can respond to the Complaint. If the Director finds there is no violation of  
7 this Chapter or basis for an investigation for an unlawful activity, the Director shall so inform  
8 the complainant within 30 days of the filing of the Complaint.

9           (2) If the Complaint concerns the failure of a Hosting Platform to comply with the  
10 requirements of subsections 41A.5 (g)(4)(A), (C), or (D), within 30 days of the filing of the  
11 Complaint and upon the Director's independent finding that there may be a violation of this  
12 Chapter, the Director shall notify the Hosting Platform by certified mail that the Hosting  
13 Platform is the subject of an investigation for failure to comply with the requirements of that  
14 subsection and provide the date, time, and place of an administrative review hearing in which  
15 the Hosting Platform can respond to the Complaint.

16           \* \* \* \*

17           (c) **Imposition of Penalties for Violations and Enforcement Costs.**

18           (1) **Administrative Penalties.** If the Hearing Officer determines that a violation  
19 has occurred, an administrative penalty shall be assessed as follows:

20           (A) For the initial violation, not more than four times the standard hourly  
21 administrative rate of \$121.00 for each unlawfully converted unit, or for each identified failure  
22 of a Hosting Platform to comply with the requirements of subsections 41A.5(g)(4)(A), (C), or  
23 (D), per day from the notice of Complaint until such time as the unlawful activity terminates;

24           (B) ~~f~~For the second violation by the same Owner(s), Business Entity, or  
25 Hosting Platform, not more than eight times the standard hourly administrative rate of \$121.00

1 for each unlawfully converted unit, or for each identified failure of a Hosting Platform to comply  
2 with the requirements of subsections 41A.5 (g)(4)(A), (C), or (D), per day from the day the  
3 unlawful activity commenced until such time as the unlawful activity terminates; and

4 (C) ~~f~~For the third and any subsequent violation by the same Owner(s),  
5 Business Entity, or Hosting Platform, not more than twelve times the standard hourly  
6 administrative rate of \$121.00 for each unlawfully converted unit or for each identified failure  
7 of a Hosting Platform to comply with the requirements of subsections 41A.5 (g)(4)(A), (C), or  
8 (D) per day from the day the unlawful activity commenced until such time as the unlawful  
9 activity terminates.

10 (2) **Prohibition on Registration and Listing Unit(s) on Any Housing**  
11 **Platform.** In the event of multiple violations, the Department shall remove the Residential  
12 Unit(s) from the Registry for one year and include the Residential Unit(s) on a list maintained  
13 by the Department of Residential Units that may not be listed on any Hosting Platform until  
14 compliance. Any Owner or Business Entity who continues to list a Residential Unit in violation  
15 of this section shall be liable for additional administrative penalties and civil penalties of up to  
16 \$1,000 per day of unlawful inclusion. Any Hosting Platform that continues to list a Residential Unit  
17 in violation of this subsection and subsection 41A.5(g)(4)(C) shall be liable for additional  
18 administrative and civil penalties of up to \$1,000 per day of unlawful inclusion.

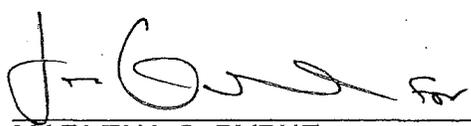

19 \* \* \* \*

20  
21 Section 3. Effective Date. This ordinance shall become effective 30 days after  
22 enactment. Enactment occurs when the Mayor signs the ordinance, the Mayor returns the  
23 ordinance unsigned or does not sign the ordinance within ten days of receiving it, or the Board  
24 of Supervisors overrides the Mayor's veto of the ordinance.

**LEGISLATIVE DIGEST**  
**(Substituted 4/21/2015)**

[Administrative Code – Short-Term Residential Rentals]

**Ordinance amending the Administrative Code to revise the Residential Unit Conversion Ordinance to: limit short-term rental of a Residential Unit to no more than 60 days per calendar year; require Hosting Platforms to verify that a Residential Unit is on the City Registry prior to listing, remove a listing once a Residential Unit has been rented for Tourist or Transient Use for more than 60 days in a calendar year, and provide certain usage data to the Planning Department; revise the definition of Interested Parties who may enforce the provision of Chapter 41A through a private right of action to include Permanent Residents residing within 100 feet; amend the private right of action provisions to allow for a private right of action against Hosting Platforms and create an additional private right of action against Owners, Business Entities, and Hosting Platforms under certain circumstances; and provide for criminal penalties against Hosting Platforms in violation of this Chapter 41A; and affirming the Planning Department's determination under the California Environmental Quality Act.**

Existing Law

Under Chapter 41A of the San Francisco Administrative Code, renting a residential unit for less than a 30-day term is prohibited unless it is offered by the Permanent Resident of the unit, who registers the unit with the Planning Department and otherwise meets the requirements, described in Chapter 41A, for renting the unit as a Short-Term Residential Rental.

Chapter 41A defines a Short-Term Residential Rental as a rental for less than 30 days where the unit: is offered by the Permanent Resident of the unit who is a human being, not a company; has been registered on the Planning Department's Registry; is not subject to the City's Inclusionary Affordable Housing Program; is not a residential hotel unit; is not otherwise designated as a below market rate or income-restricted unit under any law; and is not otherwise prohibited by a law or regulation from being subleased or rented as a rental for less than 30-days.

Under existing law, Short-Term Residential Rentals are limited to 90 days per year for unhosted rentals (meaning the Permanent Resident is not in the unit when the unit is rented) and are unlimited for hosted rentals (which is when the Permanent Resident continues to reside in the unit during the rental period). This requirement states that the Permanent Resident must reside in the unit for no less than 275 days out of the calendar year.

These limitations are designed to prohibit Owners, Business Entities that may own residential units, and other people, including tenants, from converting rental units from residential use to tourist use (also referred to as transient or hotel use).

Existing law also regulates "Hosting Platforms", which are individuals or businesses that provide a means for a person to advertise their Residential Unit for short-term rent. Existing law requires these Hosting Platforms to provide notice to users of the City's regulation of short-term residential rentals.

Chapter 41A is administered and enforced by the Planning Department. Chapter 41A requires the Planning Department to make the Registry available for public review, but directs the Department to redact any Permanent Resident's names to the extent permitted by law. Once the Planning Department receives a completed application for the Registry, it sends a notice by mail to the owner of the Residential Unit.

If someone suspects that a Residential Unit is being offered as a short-term rental in violation of Chapter 41A, he or she may file a Complaint with the Planning Department. After a Complaint has been filed with the Planning Department and the Planning Director has held an administrative review hearing and determined that a tenant, Owner, Business Entity that owns the unit, or a Hosting Platform (this is defined as usually meaning an online advertising platform) has violated Chapter 41A, the City may sue any violator for injunctive and monetary relief, including damages, civil penalties, and attorneys' fees.

Additionally, the Code provides for a private right of action, which allows an Interested Party to sue a violator who is not a Hosting Platform (meaning they can sue an owner, tenant, or Business Entity that owns or leases the unit) for injunctive and monetary relief, including damages, civil penalties (of up to \$1000 per day for the days of violation), and attorneys' fees. Interested Party is defined as a Permanent Resident of the building, the Owner of the unit, any homeowners' association linked to the unit, or a housing non-profit.

Existing law provides for misdemeanor criminal penalties against an Owner (meaning tenant or owner) or Business Entity (owner) who violates Chapter 41A and unlawfully rents a unit as a short-term rental.

#### Amendments to Current Law

The proposed ordinance limits the number of days that unit can be rented as a Short-Term Residential Rental to 60 days per calendar year, regardless of whether the rental is hosted or unhosted.

The proposed legislation would add new requirements for Hosting Platforms. Hosting Platforms would be required to verify that a unit in the City is registered with the Planning Department before it can be listed for short-term rental. A Hosting Platform would also be required to remove a listing once it knew the unit had been rented for short-term rental for more than 60 days within a calendar year. Hosting Platforms would be required to submit a quarterly report to the Planning Department, indicating the number of nights a unit in the City has been rented as a short-term rental.

The proposed ordinance would remove the owner of the Residential Unit at issue from the definition of Interested Party (meaning those who can sue to enforce the requirements of Chapter 41A through a private right of action). But, it would expand the definition to include a Permanent Resident (which could be an owner or tenant) of a property within 100 feet of the Residential Unit where the violation is allegedly occurring.

The proposed amendments would direct the Planning Department to redact the street and unit numbers of any residences included in the Registry (as well as Permanent Residents' names) from records available for public review, to the extent permitted by law.

The proposed legislation provides that the City may enforce the requirements of Chapter 41A against an Owner (which under the proposed legislation and existing law is defined as including a tenant), Business Entity, or Hosting Platform through filing a lawsuit at any time.

Both existing law and the proposed ordinance allow any other Interested Party to file a lawsuit against an Owner (again, meaning property owner or tenant) or Business Entity who has violated Chapter 41A and seek damages, injunctive relief, civil penalties, and attorneys' fees after the Planning Director has made a determination that a violation has occurred. The proposed legislation would also allow an Interested Party to sue a Hosting Platform for violations of Chapter 41A.

The proposed legislation amends the Code to add an additional private right of action. This would allow Interested Parties to file a lawsuit to enforce the requirements of Chapter 41A without first waiting for the Planning Director to make a final determination of violation under one set of circumstances. Specifically, an Interested Party may file a lawsuit against an Owner (property owner or tenant), Business Entity, or Hosting Platform who is allegedly violating Chapter 41A if:

- The Interested Party has filed a Complaint with the City;
- 60 days have passed since the Complaint was filed and the Planning Director has not made a determination that there is no violation of Chapter 41A or no basis for an investigation;
- After the 60-day period passes, the Interested Party notifies the City of its intent to file a lawsuit; and
- The City does not file its own lawsuit by the end of the 30-day notice period.

Under this second, new private right of action, if the City files its own lawsuit, the Interested Party may not (although they may wait until after the Director finds a violation and file a lawsuit then). If the Interested Party prevails, it can get damages, an injunction, costs including attorneys' fees, and civil penalties.

The proposed legislation would allow for misdemeanor criminal penalties against a Hosting Platform, as well as an Owner (meaning tenant or owner) or Business Entity (owner), who violates the requirements of Chapter 41A.

#### Background Information

In October 2014, Administrative Code Chapter 41A and the Planning Code were amended to allow Short-Term Residential Rentals, beginning in February 2015. Prior to those amendments, rental of residential units for less than 30-day terms was prohibited City-wide under both Chapter 41A and the Planning Code.

This version of the legislation was introduced as substitute legislation on April 21, 2015. It differs from the version of the ordinance introduced on April 14, 2015 in that the prior version would have prohibited short-term rentals of "in-law" units created under Planning Code Sections 207.3 and 715.1, which were recently enacted to allow legalization of illegal accessory dwelling units.

Additionally, the substitute legislation requires the Planning Department to send mailed notice to the property owner, any Permanent Resident of the building, any homeowners' association associated with the Residential Unit, and any individual or neighborhood association that has requested notification, when a completed application for the Registry has been received. The prior version, and current law, only require the Planning Department to notify the owner of the Residential Unit.

Planning Commission Recommendation: Approval with Modification**

Dear Ms. Calvillo, Mayor Lee and Supervisors,

On April 23, 2015, the Planning Commission conducted a duly noticed public hearing at a regularly scheduled meeting to consider proposed amendments to Chapter 41A of the Administrative Code relating to Short-Term Rentals. At the hearing, the Planning Commission reviewed all three proposed ordinances and recommended approval with modification.

The Department determined that the proposed amendments are not defined as a project under CEQA Guidelines Section 15378 and 15060(c) (2) because they do not result in a physical change in the environment.

Please find attached documents relating to the actions of the Planning Commission. If you have any questions or require further information please do not hesitate to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Aaron D. Starr", with a long horizontal flourish extending to the right.

*Recommendation:* **Recommend Approval with Modifications**

**RECOMMENDING THAT THE BOARD OF SUPERVISORS ADOPT WITH MODIFICATIONS THE THREE PROPOSED ORDINANCES THAT WOULD AMEND CHAPTER 41A OF THE ADMINISTRATIVE CODE; AND MAKING ENVIRONMENTAL FINDINGS, AND FINDINGS OF CONSISTENCY WITH THE GENERAL PLAN, AND THE EIGHT PRIORITY POLICIES OF PLANNING CODE, SECTION 101.1.**

WHEREAS, on October 7, 2014, Supervisors Kim and Breed introduced a proposed Ordinance (hereinafter "Kim" ordinance) under Board of Supervisors (hereinafter "Board") File Number 141036, which would amend the Administrative Code, Chapter 41A, to prohibit certain residential units that have been the subject of an Ellis Act eviction from use as short-term residential (hereinafter STR) rentals and provide for private rights of action to enforce the requirements of this Chapter; and

WHEREAS, on April 14, 2015, Supervisor Campos introduced a proposed Ordinance (hereinafter "Campos" ordinance) under Board File Number 150295, amending the Administrative Code, Chapter 41A, to revise the Residential Unit Conversion Ordinance to: limit short-term rental of a Residential Unit to no more than 60 days per calendar year; require Hosting Platforms to verify that a Residential Unit is on the City Registry prior to listing, remove a listing once a Residential Unit has been rented for Tourist or Transient Use for more than 60 days in a calendar year, and provide certain useage data to the Planning Department; prohibit short-term rental of certain "in-law" units; revise the definition of Interested Parties who may enforce the provision of Chapter 41A through a private right of action to include Permanent Residents residing within 100 feet; amend the private right of action provisions to allow for a private right of action against Hosting Platforms and create an additional private right of action against Owners, Business Entities, and Hosting Platforms under certain circumstances; and provide for criminal penalties against Hosting Platforms in violation of this Chapter 41A; and

WHEREAS, on April 14, Mayor Edwin Lee and Supervisor Farrell introduced a proposed Ordinance (hereinafter “Mayoral” ordinance) under Board File Number 150364 amending the Administrative Code, Chapter 41A, to revise the Residential Unit Conversion Ordinance to limit short-term rental of a Residential Unit to no more than 120 days per calendar year; revise the definition of Interested Parties who may enforce the provisions of the Administrative Code, Chapter 41A, through a private right of action to include Permanent Residents residing within 100 feet of the Residential Unit; create an additional private right of action under certain circumstances; and direct the Mayor to create an Office of Short-Term Residential Rental Administration and Enforcement staffed by the Planning Department, Department of Building Inspection, and Tax Collector’s Office; and

WHEREAS, The Planning Commission (hereinafter “Commission”) conducted a duly noticed public hearing at a regularly scheduled meeting to consider the proposed Ordinances on April 23, 2015; and,

WHEREAS, the three proposed Ordinances have been determined not to be a project under the California Environmental Quality Act Section 15060(c) and 15378; and

WHEREAS, the Planning Commission has heard and considered the testimony presented to it at the public hearing and has further considered written materials and oral testimony presented on behalf of Department staff and other interested parties; and

WHEREAS, all pertinent documents may be found in the files of the Department, as the custodian of records, at 1650 Mission Street, Suite 400, San Francisco; and

WHEREAS, the Planning Commission has reviewed the proposed Ordinances.

MOVED, that the Planning Commission hereby recommends that the Board of Supervisors **approve with modifications** the proposed ordinances.

The Planning Commission adopted the following recommendations regarding the three proposed Ordinances:

1. Remove the distinction between hosted and un-hosted rentals, per the Campos and Mayoral ordinances. **PASSED**

AYES: Fong, Johnson, Moore, Richards, and Wu  
NOES: Antonini, Hillis  
ABSENT: none

2. Prohibit units that have been subject to an Ellis Act Eviction within the last 5 years from registering on the STR registry, per the Kim ordinance. **PASSED**

AYES: Fong, Hillis, Johnson, Moore, Richards, and Wu  
NOES: Antonini  
ABSENT: none

3. Allow the City to institute civil proceedings against a Hosting Platform, Business Entity, or Owner at any time, per all three ordinances. **PASSED**  
AYES: Antonini, Fong, Hillis, Johnson, Moore, Richards, and Wu  
NOES: none  
ABSENT: none
4. Allow private right of action for non-profits as outlined in the Kim ordinance. **PASSED**  
AYES: Fong, Hillis, Johnson, Moore, Richards, and Wu  
NOES: Antonini  
ABSENT: none
5. Add "Permanent Resident or owner residing within 100 feet" to the definition of Interested Party per the Campos ordinance and the Mayoral ordinance. **PASSED**  
AYES: Antonini, Fong, Hillis, Johnson, Moore, and Wu  
NOES: none  
ABSENT: Richards
6. Prohibit Hosting Platforms from listing any unit that did not maintain good standing on the City's STR registry, per the Campos ordinance. **FAILED**  
AYES: Moore, Richards, and Wu  
NOES: Antonini, Fong, Hillis, and Johnson  
ABSENT: none
7. Add a provision to the STR law directing the Mayor to set up a STR Office that would be staffed by the Planning Department, Department of Building Inspection and The Tax Collector's office, per the Mayoral ordinance. **PASSED**  
AYES: Antonini, Fong, Hillis, and Johnson  
NOES: Moore, Richards, and Wu  
ABSENT: none
8. Make the maximum number of nights a unit can be used as a hosted or un-hosted STR at 120 days. Adjust as needed if future studies can confirm the point where such use would incentive the illegal conversion of residential units to fulltime tourist use, per the changes proposed in the Mayoral ordinance. **PASSED**  
AYES: Antonini, Fong, Hillis, and Johnson  
NOES: Moore, Richards, and Wu  
ABSENT: none
9. Remove the provision in the Administrative Code that requires an Administrative Hearing if a violation is found. This modification was proposed by the Planning Department. **PASSED**  
AYES: Antonini, Fong, Hillis, Johnson, Moore, Richards, and Wu

NOES: none  
ABSENT: none

10. Remove the provision in the Administrative Code that allows cross-examination of witnesses during the Administrative Hearing. This modification was proposed by the Planning Department. **PASSED**

AYES: Antonini, Fong, Hillis, Johnson, Moore, Richards, and Wu  
NOES: none  
ABSENT: none

11. Do not Require Hosting Platforms to report quarterly to the Planning Department the number of nights the Residential Unit was occupied as a Short-Term Residential Rental, per the Campos ordinance. **PASSED**

AYES: Antonini, Fong, Hillis, and Johnson  
NOES: Moore, Richards, and Wu  
ABSENT: none

12. Do not remove "the Owner of the Residential Unit in which the Tourist or Transient Use is alleged to occur" from the definition of Interested Party, per the Campos ordinance. **PASSED**

AYES: Antonini, Fong, Hillis, Johnson, Moore, and Richards  
NOES: Wu  
ABSENT: none

13. Do not allow private rights of action for any Interested Party after 90 days if the Department has not instituted civil action, as proposed in the Campos ordinance. **PASSED**

AYES: Antonini, Fong, Hillis, and Johnson  
NOES: Moore, Richards, and Wu  
ABSENT: none

14. Do not prohibit units that have been approved under Section 207.3 of 715.1 of the Planning Code from being used as a STR, per the Campos ordinance. **PASSED**

AYES: Antonini, Fong, Hillis, Johnson, Moore, Richards, and Wu  
NOES: none  
ABSENT: none

15. Do require noticing to "*any Permanent Resident of the building in which the Residential Unit is located, any homeowners' association associated with the Residential Unit, and any individual or neighborhood association that has requested notification regarding Registry applications for the property on which the Residential Unit is located,*" informing them that an application to the Registry for the unit has been received, per the most recent version of the Campos ordinance introduced on 4/21/15. **PASSED**

AYES: Antonini, Fong, Hillis, Johnson, Moore, Richards, and Wu

NOES: none

ABSENT: none

In addition, the Planning Commission considered and recommended further study on the following issues, but did not take action on them.

1. Allowing Private Right of Action against Hosting Platforms, per the Campos Ordinance;
2. The 135 day timeline for Private Rights of Action, per the Mayoral Ordinance;
3. Prohibiting Interested Parties from receiving Civil Penalties, per the Mayoral Ordinance; and
4. Allowing a different number of days for Hosted and Non-hosted rentals.

## **FINDINGS**

Having reviewed the materials identified in the preamble above, and having heard all testimony and arguments, this Commission finds, concludes, and determines as follows:

1. Generally, the Commission supports efforts to amend the law now that the City has a better understanding of STR and now that implementation of the STR program has begun. The Commission continues to believe that STRs should be allowed within a reasonable regulatory structure. Many of the proposed amendments in these three ordinances would add regulation that enables limited STR while seeking to protect the public interest by minimizing the potential effects on neighborhoods and the housing stock. The proposed amendments generally increase the City's capacity for enforcement either by adding additional resources, data for checks and balances or more easily verified limits. However, some proposed changes would undermine the City's enforcement ability and rights the rights of landlords.
2. The Commission finds that removing the distinction between hosted and un-hosted rentals is a great improvement to the current law. Without this change, enforcement of the law would continue to be compromised as the Planning Department has not identified an effective method to determine if a rental is truly hosted or not. Further, the distinction between hosted and un-hosted rentals creates an avenue to operate a fulltime bed and breakfast type use in their home without public notice or Planning Commission review.
3. Paramount to the Commission's recommendations is protecting the existing housing stock for San Francisco's residents and workers. An Ellis Act Eviction, by its very nature, is the property owner's statement that they are exiting the rental market. The existing and proposed versions of the law seek to keep the unit as primarily residential by limiting STR to the occupant of the unit. An owner move-in eviction is another eviction type that would allow the owner to move in and engage in STR. By allowing STR in owner-move in evictions; the owners' rights to STR are maintained. Removing the capacity for STR in the circumstance of Ellis Act Eviction removes a potential enforcement problem and removes the incentive to evict tenants when STRs may be more lucrative.

4. The Commission finds that the proposed Ordinance increases the Department's enforcement powers and gives the City more power in prosecuting the most egregious cases by allowing the City to take immediate action against repeat offenders.
5. The Commission finds that the proposed ordinances increases the Department's enforcement capacity by allowing non-profits that have in their bylaws a focus on housing the ability to go after some of the city more vulnerable housing, including units where an Ellis Act Eviction has occurred within the last five years and in buildings with three or more rent-controlled units.
6. The Commission finds that including in the definition of Interested Party "residents and owners within 100" of the unit in questions allows those most directly impacted by STR to initiate civil proceedings once the Department has found a violation.
7. The Commission finds that prohibiting Hosting Platforms from listing any unit that did not maintain good standing on the City STR registry would diminish the City's role in enforcing its own laws.
8. The Commission finds that increasing the limit on STRs for individual properties to 120 days would not incentivize the conversion of rental housing to short-term rentals; however, should more data become available that provides further insight on this issue, this limit should be reconsidered.
9. The Commission finds that the City should pursue improved data collection and technologic solutions to inform policy-makers and assist with enforcement, and explore collaboration with other city agencies that may provide better information across hosting platform types rather than requiring Hosting Platforms to provide quarterly report to the City on the number of nights units listed on their serves are rented.
10. The Commission finds that unit owners have an inherent interest in the unit that they own and therefore should not be removed from the definition of Interested Party.
11. The Commission finds that allowing any Interested Party to initiate civil proceedings before the Planning Department has determined if a violation has occurred could open up the entire process for abuses. Further, it would limit the Planning Department's ability to bring decisive action against violators.
12. The Commission finds that the current regulation, which only allows the primary resident to register the unit as a STR, is sufficient enough to ensure that Accessory Dwelling Units are not illegally converted to a permanent hotel use. The Commission does not find a policy reason to prohibit the permanent residents of these units from participating in the City's STR program.
13. **General Plan Compliance.** The proposed amendments to the Planning Code are consistent with the following Objectives and Policies of the General Plan.

## HOUSING ELEMENT

### OBJECTIVE 2

RETAIN EXISTING HOUSING UNITS, AND PROMOTE SAFETY AND MAINTENANCE STANDARDS, WITHOUT JEOPARDIZING AFFORDABILITY.

*As amended, the proposed Ordinances would be consistent with Object two of the Housing Element because they would limit the number of days that a unit could be utilized as a short term rental and how much that could be charged for a short-term rental, helping to preserve the City's existing housing stock.*

### OBJECTIVE 3

PROTECT THE AFFORDABILITY OF THE EXISTING HOUSING STOCK, ESPECIALLY RENTAL UNITS.

#### POLICY 3.1

Preserve rental units; especially rent controlled units, to meet the City's affordable housing needs.

*With the proposed amendments, the proposed Ordinances would help preserve rental units by ensure that they are not converted into full time short-term rentals.*

### OBJECTIVE 11

SUPPORT AND RESPECT THE DIVERSE AND DISTINCT CHARACTER OF SAN FRANCISCO'S NEIGHBORHOODS.

#### POLICY 11.8

Consider a neighborhood's character when integrating new uses, and minimize disruption caused by expansion of institutions into residential areas.

*While not an entirely a new use, short-term rentals are proliferating within the City like never before and having a new and distinct impact on the City's residential neighborhoods. With the Commission's proposed amendments, the proposed Ordinances would help preserve the distinct residential character of the City's residential neighborhoods by limiting the number of nights a residential unit can be rented out as a short-term rental.*

## COMMERCE AND INDUSTRY ELEMENT

### OBJECTIVE 2

MAINTAIN AND ENHANCE A SOUND AND DIVERSE ECONOMIC BASE AND FISCAL STRUCTURE FOR THE CITY.

#### POLICY 2.1

Seek to retain existing commercial and industrial activity and to attract new such activity to the city.

*Short-term rentals are commercial activity and these Ordinances seeks to retain that commercial activity in the City while providing sufficient regulatory controls to ensure that any negative impacts are addressed.*

OBJECTIVE 3

PROVIDE EXPANDED EMPLOYMENT OPPORTUNITIES FOR CITY RESIDENTS,  
PARTICULARLY THE UNEMPLOYED AND ECONOMICALLY DISADVANTAGED

Policy 3.4

Assist newly emerging economic activities

*Short-term rentals and short-term rental hosting platforms are an emerging economic activity; the proposed Ordinances would maintain the legality of this activity within San Francisco.*

14. **Planning Code Section 101 Findings.** The proposed amendments to the Planning Code are consistent with the eight Priority Policies set forth in Section 101.1(b) of the Planning Code in that:

1. That existing neighborhood-serving retail uses be preserved and enhanced and future opportunities for resident employment in and ownership of such businesses enhanced;

*The proposed Ordinances would not have a negative effect on neighborhood-serving retail uses.*

2. That existing housing and neighborhood character be conserved and protected in order to preserve the cultural and economic diversity of our neighborhoods;

*The Commission's proposed amendments to the proposed Ordinances seek to minimize any impacts that this proposal would have on existing housing and neighborhood character.*

3. That the City's supply of affordable housing be preserved and enhanced;

*The proposed Ordinances would not negatively affect the City's supply of affordable housing.*

4. That commuter traffic not impede MUNI transit service or overburden our streets or neighborhood parking;

*The proposed Ordinances would not result in commuter traffic impeding MUNI transit service or overburdening the streets or neighborhood parking.*

5. That a diverse economic base be maintained by protecting our industrial and service sectors from displacement due to commercial office development, and that future opportunities for resident employment and ownership in these sectors be enhanced;

*The proposed Ordinances would not cause displacement of the industrial or service sectors due to office development, and future opportunities for resident employment or ownership in these sectors would not be impaired.*

6. That the City achieve the greatest possible preparedness to protect against injury and loss of life in an earthquake;

*The proposed Ordinances would not have an impact on City's preparedness against injury and loss of life in an earthquake.*

7. That the landmarks and historic buildings be preserved;

*The proposed Ordinances would not have an impact on the City's Landmarks and historic buildings.*

8. That our parks and open space and their access to sunlight and vistas be protected from development;

*The proposed Ordinances would not have an impact on the City's parks and open space access to sunlight and vistas.*

- 8. Planning Code Section 302 Findings.** The Planning Commission finds from the facts presented that the public necessity, convenience and general welfare require the proposed amendments to the Planning Code as set forth in Section 302.

NOW THEREFORE BE IT RESOLVED that the Commission hereby recommends that the Board ADOPT WITH MODIFICATIONS the proposed Ordinances as described in this Resolution.

I hereby certify that the foregoing Resolution was adopted by the Commission at its meeting on April 23, 2015.

Jonas P. Ionin  
Commission Secretary

ADOPTED: April 23, 2015

### ADMINISTRATIVE CODE AMENDMENTS

#### Sponsors Supervisors Kim and Breed: Short Term Rental Ordinance, Duplicated File.

The proposed Ordinance sponsored by Supervisors Kim and Breed (hereinafter “Kim Ordinance”) would amend the Administrative Code’s provisions on Short-Term Rentals (hereinafter “STR”) (Chapter 41A) to prohibit certain residential units that have been the subject of an Ellis Act Eviction from use as short-term residential rentals and provide for private right of action to enforce the requirements of Admin Code Chapter 41A; and making findings of consistency with the General Plan and the eight priority policies of Planning Code Section 101.1.

#### The Way It Is Now:

1. Units that have been subject to an Ellis Act Eviction<sup>1</sup> are not prohibited from being used as a STR.
2. The City may institute civil proceedings against a Hosting Platform<sup>2</sup>, Business Entity<sup>3</sup>, or Owner<sup>4</sup>, but only following the filing of a complaint and the determination of a violation by the Planning Department.

---

<sup>1</sup> Administrative Code Section 37.9(a)(13)

<sup>2</sup> **Hosting Platform** is defined as “A person or entity that provides a means through which an Owner may offer a Residential Unit for Tourist or Transient Use. This service is usually, though not necessarily, provided through an online platform and generally allows an Owner to advertise the Residential Unit through a website provided by the

3. Interested Parties<sup>5</sup> may only institute civil proceedings against a Business Entity or Owner and only following the filing of a complaint and the determination of a violation by the Planning Department.

**The Way It Would Be:**

1. Units that had been subject to an Ellis Act Eviction within the last five years could not be used as a STR.
2. The City could institute civil proceedings against a Hosting Platform, Business Entity, or Owner at any time.
3. Interested Parties could still only institute civil proceedings against a Business Entity or Owner and only following the filing of a complaint and the determination of a violation by the Planning Department; however two additional private rights of action would be allowed, which are as follows:
  - (a) Non-profit Organization that has the preservation or improvement of housing as a stated purpose in its articles of incorporation or bylaws may institute a civil action against the Owner or Business Entity, if within 5 years prior to the date of the filing of the Complaint, the Owner or Business Entity terminated the tenancy of one or more tenants in the building using the Ellis Act, where the tenant was served with a notice of eviction after October 7, 2014. An Interested Party may institute a civil action under this subsection only if (1) the Interested Party has filed a Complaint with the Department; (2) 30 days have passed since the filing of the Complaint; (3) after such 30-day period has passed, the Interested Party has provided 30 days' written notice to the Department and the City Attorney's Office of its intent to initiate civil proceedings; and (4) the City has not initiated civil proceedings by the end of that 30-day period.
  - (b) Non-profit organization that has the preservation or improvement of housing as a stated purpose in its articles of incorporation or bylaws and has existed as such for no less than five years from February 1, 2015, may institute civil proceedings against an Owner or Business Entity of a rent-controlled building of at least three Residential Units for injunctive relief. An Interested Party may institute a civil action under this subsection only if the Interested Party has (1) filed a Complaint with the Department; (2) 45 days have passed since the filing of the

---

Hosting Platform and provides a means for potential tourist or transient users to arrange Tourist or Transient Use and payment, whether the tourist or transient pays rent directly to the Owner or to the Hosting Platform."

<sup>3</sup> **Business Entity** is defined as "A corporation, partnership, or other legal entity that is not a natural person that owns or leases one or more residential units."

<sup>4</sup> **Owner** is defined as "Any person who is the owner of record of the real property. For the purposes of the City's STR regulations, the term "Owner" includes a lessee where the lessee is offering a Residential Unit for Tourist or Transient use."

<sup>5</sup> **Interested Parties** is defined as "A Permanent Resident of the building in which the Tourist or Transient Use is alleged to occur, any homeowner association associated with the Residential Unit in which the Tourist or Transient Use is alleged to occur, the Owner of the Residential Unit in which the Tourist or Transient Use is alleged to occur, the City and County of San Francisco, or any non-profit organization exempt from taxation pursuant to Title 26, Section 501 of the United States Code, which has the preservation or improvement of housing as a stated purpose in its articles of incorporation or bylaws."

Complaint; and (3) after such 45-day period has passed, the Interested Party has provided written notice to the Department and the City Attorney's Office of its intent to initiate civil proceedings.

### Sponsors Supervisors Campos, Mar and Avalos: Amendments to the STR Ordinance

The proposed ordinance sponsored by Supervisors Campos, Avalos, and Mar (hereinafter the "Campos" ordinance) would amend the Administrative Code to revise the Residential Unit Conversion Ordinance to: limit short-term rental of a Residential Unit to no more than 60 days per calendar year; require Hosting Platforms to verify that a Residential Unit is on the City Registry prior to listing, remove a listing once a Residential Unit has been rented for Tourist or Transient Use for more than 60 days in a calendar year, and provide certain usage data to the Planning Department; prohibit short-term rental of certain "in-law" units; revise the definition of Interested Parties who may enforce the provision of Chapter 41A through a private right of action to include Permanent Residents residing within 100 feet; amend the private right of action provisions to allow for a private right of action against Hosting Platforms and create an additional private right of action against Owners, Business Entities, and Hosting Platforms under certain circumstances; and provide for criminal penalties against Hosting Platforms in violation of this Chapter 41A; and affirming the Planning Department's determination under the California Environmental Quality Act.

#### The Way It Is Now:

1. An Interested Party is defined as "*A Permanent Resident of the building in which the Tourist or Transient Use is alleged to occur, any homeowner association associated with the Residential Unit in which the Tourist or Transient Use is alleged to occur, the Owner of the Residential Unit in which the Tourist or Transient Use is alleged to occur, the City and County of San Francisco, or any non-profit organization exempt from taxation pursuant to Title 26, Section 501 of the United States Code, which has the preservation or improvement of housing as a stated purpose in its articles of incorporation or bylaws.*"
2. The City may institute civil proceedings against a Hosting Platform, Business Entity, or Owner, but only following the filing of a complaint and the determination of a violation by the Planning Department.
3. Interested Parties may only institute civil proceedings against a Business Entity or Owner and only following the filing of a complaint and the determination of a violation by the Planning Department.
4. Non-hosted rentals are limited to 90-days a year and hosted rentals are unlimited<sup>6</sup>.
5. Hosting Platforms are not prohibited from listing a Residential Unit that does not maintain good standing on the City's Short-term Residential Registry<sup>7</sup>.

---

<sup>6</sup> The actual text states that The Permanent Resident must occupy "*the Residential Unit for no less than 275 days out of the calendar year in which the Residential Unit is rented as a Short-Term Residential Rental,*" the effect of which is to limit non-hosted rentals to 90-day.

<sup>7</sup> **Short-Term Residential Rental Registry** is defined as "A database of information maintained by the Planning Department that includes information regarding Permanent Residents who are permitted to offer Residential Units for Short-Term Residential Rental. Only one Permanent Resident per Residential Unit may be included on the

6. The Permanent Resident must submit a report to the Department every year regarding the number of days the Residential Unit or any portion thereof has been rented as a Short-Term Residential Rental; however, Hosting Platforms are not required to report the number of nights a Residential Unit was occupied as a Short-Term Residential Rental.
7. Dwelling Units authorized under Section 207.3 of 715.1 of the Planning Code, also known as Accessory Dwelling Units (ADUs) or in-laws, are not prohibited from being used as a STR.
8. The Planning Department is required to redact the name of the Permanent Resident included in the STR register for records available for Public Review.
9. Existing law provides for misdemeanor criminal penalties against an Owner or Business Entity who violates Chapter 41A and unlawfully rents a unit as a short-term rental.

### The Way It Would Be:

1. For the definition of Interested Party, *“Permanent Resident or owner residing within 100 feet”* would be added to the definition and *“the Owner of the Residential Unit in which the Tourist or Transient Use is alleged to occur”* would be deleted from the definition.
2. The City could institute civil proceedings against a Hosting Platform, Business Entity, or Owner at any time (the same change as prescribed in the Kim Ordinance’).
3. An Interested Party would be able to institute a civil action against the Owner, Business Entity or Hosting Platform for injunctive and monetary relief prior to the Department finding that a violation has occurred if the Interested Party has filed a Complaint with the Department; 60 days have passed since the filing of the Complaint; after such 60-day period has passed, the Interested Party has provided 30 days’ written notice to the Department and the City Attorney’s Office of its intent to initiate civil proceedings; and the City has not initiated civil proceedings by the end of that 30-day period.
4. Both non-hosted and hosted rentals would be limited to 60-days a year.
5. Hosting Platforms would be prohibited from listing any unit that did not maintain good standing on the City’s Short-term Residential Registry.
6. Permanent Residents would still be required to report to the Department how many times their unit had been rented over the past year as a STR, and the Hosting Platforms would now be required to report quarterly to the Planning Department the number of nights the Residential Unit was occupied as a Short-Term Residential Rental. Further, if a Hosting Platform has information that a unit has been used as a STR for more than 60 days, they would be required to immediately remove such listing from its platform.
7. ADUs or in-laws approved under Section 207.3 or 715.1 of the Planning Code would be prohibited from being used as a STR.
8. The Planning Department would be required to redact the street and unit numbers of any residences included in the STR register, in addition to the name of the Permanent Resident.

---

Registry at any given time. The Registry shall be available for public review to the extent required by law, except that, to the extent permitted by law, the Department shall redact any Permanent Resident names from the records available for public review.”

9. The proposed ordinance would allow for misdemeanor criminal penalties against a Hosting Platform, as well as an Owner or Business Entity, who violates the requirements of Chapter 41A.

### **Sponsor Mayor Edwin Lee, Supervisor Farrell: Amendments to the STR Ordinance**

The proposed ordinance Sponsored by Mayor Edwin Lee and Supervisor Farrell (hereinafter the "Mayoral" Ordinance) would amend the Administrative Code to revise the Residential Unit Conversion Ordinance to limit short-term rental of a Residential Unit to no more than 120 days per calendar year, revise the definition of Interested Parties who may enforce the provisions of Chapter 41A through a private right of action to include Permanent Residents residing within 100 feet of the Residential Unit, create an additional private right of action under certain circumstances, and direct the Mayor to create an Office of Short-Term Residential Rental Administration and Enforcement staffed by the Planning Department, Department of Building Inspection, and Tax Collector's Office.

#### **The Way It Is Now:**

1. Non-hosted rentals are limited to 90-days a year and hosted rentals are unlimited.
2. An Interested Party is defined as *"A Permanent Resident of the building in which the Tourist or Transient Use is alleged to occur, any homeowner association associated with the Residential Unit in which the Tourist or Transient Use is alleged to occur, the Owner of the Residential Unit in which the Tourist or Transient Use is alleged to occur, the City and County of San Francisco, or any non-profit organization exempt from taxation pursuant to Title 26, Section 501 of the United States Code, which has the preservation or improvement of housing as a stated purpose in its articles of incorporation or bylaws."*
3. All STR functions, including registration and enforcement, are administered by the Planning Department.
4. The Planning Department is required to redact the name of the Permanent Resident included in the STR register for records available for Public Review.
5. The Planning Department is not required to include information on the Department's website about any pending or resolved Complaints regarding violations of Chapter 41A.
6. The City may institute civil proceedings against a Hosting Platform, Business Entity, or Owner, but only following the filing of a complaint and the determination of a violation by the Planning Department.
7. Interested Parties were eligible for civil penalties if the Interested Party won a lawsuit against a violation of Chapter 41A.
8. Interested Parties may only institute civil proceedings against a Business Entity or Owner and only following the filing of a complaint and the determination of a violation by the Planning Department.

#### **The Way It Would Be:**

1. Both non-hosted and hosted rentals would be limited to 120 days.
2. The definition of Interested Party would be amended to include *"Permanent Resident or owner residing within 100 feet,"* the same languages that is proposed in Campos ordinance.

3. The proposed Ordinance includes a provision directing the Mayor to set up a STR Office that would be staffed by the Planning Department, Department of Building Inspection and The Tax Collector's office.
4. The Planning Department would be required to redact the street and unit numbers of any residences included in the STR register, in addition to the name of the Permanent Resident.
5. The Planning Department would be required to include information on the Department's website about any pending or resolved complaints regarding violations of Chapter 41A.
6. The City could institute civil proceedings against a Hosting Platform, Business Entity, or Owner at any time (the same change as prescribed in the Kim ordinance and the Campos ordinance).
7. Only the City may be entitled to civil penalties if it wins the lawsuit, not an Interest Party.
8. Interested Parties would be able to institute civil proceedings against a Business Entity or Owner if the following conditions are met: (1) The Interested Party has filed a Complaint with the City; (2) The Planning Director has not made a determination that there is no violation of Chapter 41A or no basis for an investigation; (3) 105 days have passed since the filing of the Complaint and an administrative hearing officer has not issued a final determination regarding the Complaint; (4) After the 105-day period passes, the Interested Party notifies the City of its intent to file a lawsuit; and (5) The City does not file its own lawsuit by the end of the 30 day notice period.

## **BACKGROUND**

### **Existing Regulations**

With a valid Short-Term Residential Rental Registration number, a Permanent Resident<sup>8</sup> may rent out their Primary Residential Unit for periods of less than 30 nights without violating the requirements of the City's Residential Unit Conversion and Demolition Ordinance (Administrative Code Chapter 41A) or the Planning Code. This includes renting a portion or the entire unit while the permanent resident is present for an unlimited number of nights per year and renting a portion of the entire unit while the permanent resident is *not* present for a maximum of 90 nights per year.

In order to obtain a Short-Term Residential Rental Registration number, the following conditions must be met:

1. The applicant must be the Permanent Resident (owner or tenant) of the residential unit that they intend to rent short-term.
2. The applicant must obtain a San Francisco Business Registration Certificate from the San Francisco Treasurer and Tax Collector's Office.
3. The applicant must obtain liability insurance in the amount of no less than \$500,000 or provide proof that liability coverage in an equal or higher amount is being provided by any and all hosting platforms through which the applicant will rent the unit.

---

<sup>8</sup> To be a **Permanent Resident**, the applicant must live in that specific residential unit for at least 275 nights of any given calendar year. New residents must have occupied the specific unit for at least 60 consecutive days prior to applying for the Short-Term Residential Registration. Applicants may only register the specific residential unit in which they reside.

4. The applicant's residential unit must not have any outstanding Planning, Building, Housing, Fire, Health, Police, or other applicable City code violations.
5. The applicant may only register one residential unit.
6. Residential units that are subject to the Inclusionary Affordable Housing Program and residential units designated as below market rate (BMR) or income-restricted under City, state, or federal law are not eligible to register. Units subject to San Francisco's Rent Stabilization (Rent Control) Ordinance are able to register, but may charge tourists no more than a proportional amount of the residential rent.

### **Planning Commission's Original Recommendation**

The Planning Commission heard the original STR ordinance introduced by Supervisor Chiu<sup>9</sup> on August 7, 2014 and voted four (Antonini, Fong, Hillis, and Johnson) to two (Moore and Sugaya) with Commissioner Wu absent to recommend approval with modifications to the Board of Supervisors. In making their recommendation, Commission found that allowing residents to rent their units on a limited basis was of reasonable, that STRs needed to be limited in order to preserve the City's housing stock, to reduce impacts on affordable housing, and to protect the livability of residential neighborhoods.

The Commission's recommendation sought to create a legal avenue for hosts who want to occasionally rent their primary residence on a short-term basis, while balancing concerns over housing affordability and neighborhood character. Consequently, the Commission's recommendations mainly focused on improving the enforcement and monitoring of STRs; however the Commission also believed that the Ordinance needed to be expanded to regulate both hosted and non-hosted rentals and that all of the City's non-subsidized dwelling units should be treated the same under the new restrictions.

Of the Commission's 16 recommendations, six were not incorporated into the final ordinance. Those include:

1. Modify the Ordinance so that the proposed city-run registry tracks the number of nights a unit has been rented.
2. Require any STR platform or company doing business in San Francisco to provide information on the number of nights a property was rented. Information should be reported back to the city on a quarterly basis at a minimum.
3. Grant citation authority to the Planning Department if it is chosen to be the enforcement agency for STRs, and provide for increased penalties for repeat violators.
4. Limit hosted rentals by nights rented, similar to the restrictions placed on non-hosted rentals, or by limiting the number of rooms that can be rented at any one time.
5. Require the property owner's consent in tenant occupied units and/or a 30-day notification by the Department to the owner prior to listing a unit on the STR registry.
6. Require the Planning Department to maintain a list of registered hosting platforms.

The final ordinance did include a requirement similar to recommendation five that requires the Department to send a letter to the property owner notifying them that the permanent resident of the unit has applied to be on the STR registry; however, a property owner's consent is not required before listing a unit on the short-term rental ordinance.

---

<sup>9</sup> Board File 140381, Ordinance Number 218-14, Final Action 10/27/2014

### **Budget and Finance Committee Hearing**

Since the Board adopted the STR Ordinance, the Department also participated in a public hearing before the Budget and Finance Sub-Committee on March 4, 2015<sup>10</sup>. This hearing was at the request of Supervisors Farrell and Christensen and focused on the Planning Department's capabilities to enforce the STRs Ordinance, and the financial resources necessary for effective enforcement. At the hearing, Department staff presented an overview of the new law; the process for registration; some of the stats on how registration is progressing; and then provided our assessment of what's working and what could work better.

During the presentation, staff emphasized that the Planning Commission felt that if housing and neighborhood character could be preserved, it would be reasonable to allow STRs. So while the Commission felt comfortable with permitting the use in a way that did not reduce our housing, this use is predicated on this limits being enforced.

Staff also acknowledged that while some potential applicants complained about the burden of registering in person, appointments save both applicants and planners from a chaotic intake situation. The face-to-face meetings allow for applicants to ask important questions and learn about the program in greater detail. Staff believes the face-to-face, scheduled appointments also help to reduce the occurrence of fraudulent applications being filed.

The members of this Committee are typically Chair Farrell, Tang, and Mar. At the March 4 hearing, Supervisors Christensen, Campos, and Kim joined in for the hearing. Supervisor Farrell restated his commitment to ensuring sufficient resources to enforce this law. Supervisor Campos stated that he has asked the Board's Budget Analyst to report on the issue and that the City may need to subpoena some hosting platforms to increase our understanding. Supervisor Christensen wanted to increase motivation for registry and thought the City should get clear about our goals and develop a timeline for hosts to register. Supervisor Mar expressed his disappointment that a local, successful corporation was failing to cooperate. He said he liked the idea of adding a cap to the registry. Supervisor Kim again stated that the law has put the Planning Department in a difficult position of enforcing a law that is inherently difficult to enforce. As this was a hearing, no action was taken.

## **ISSUES AND CONSIDERATIONS**

### **Planning Department's Short-Term Rental Data**

As of April 3, 2015, 455 Short-Term Residential Rental Applications have been submitted to the Planning Department for review. While staff is currently reviewing these applications, the following is a summary of our current disposition of these applications:

Certificates Issued: 170 applications out of 455 applications (37%) have been reviewed by staff and found to be complete and accurate, resulting in the issuance of a registration certificate. This process involves 1) creating the record in the Project and Permit Tracking System (PPTS); 2) verifying accuracy and completeness of application materials; 3) checking for open enforcement violations with the Planning Department and Department of Building Inspection; 4) mailing notices to property owners when necessary; and, 5) creating/issuing the registration certificate and mailing registration packet to the applicant.

Ineligible Applications: 27 of the 455 applications (6%) have been reviewed by staff and appear to be

---

<sup>10</sup> Board File 150198

ineligible. Ineligible applicants are those who do not appear to be permanent resident of the unit in question. This is often determined by information the applicant has provided during their appointment or information available as a result of previous enforcement action. These applicants have been issued a Notice of Intent to Deny Based Upon Incomplete or Ineligible Short-Term Residential Rental Application (“Notice”). The Notice provides 30 days for the applicant to submit additional materials. Failure to respond will result in denial of the application.

Incomplete Applications: Staff has found that at least 53 of the 455 (12%) applications include inadequate or inconsistent information. This includes documents that show ownership of the property with different mailing addresses for supporting materials. Staff has also received applications for multi-unit buildings where the owner claims residency in one unit (the unit they are also applying to rent short-term), while also submitting documentation revealing that they live in another unit in the same building. These inconsistencies prevent staff from being able to process and issue certificates. During the intake appointment, applicants are informed of the missing or inaccurate documents and are given the opportunity to email or physically drop off the missing documentation (avoiding the need for a separate appointment). Those applicants that have not submitted missing documentation have been issued a Notice of Intent to Deny Based Upon Incomplete or Ineligible Short-Term Residential Rental Application (“Notice”). The Notice provides 30 days for the applicant to submit additional materials. Failure to respond will result in denial of the application.

“No-Show” and Canceled Appointments: Since the program first began accepting appointments on February 2, 2015; staff has experienced a no-show/cancellation rate of 26%. Over time, staff has observed that a greater number of applicants fail to show up for their scheduled appointment. Staff believes that the high no-show/cancellation rate may decrease if applicants are charged a no-show/cancellation fee. The Department has begun offering after-hours drop-in application sessions (without need for appointment) once per month and plans to introduce business-hours drop-in sessions (beginning in May) to increase opportunities for the public to submit applications and optimize staff time for application intake.

	<b>Number</b>	<b>Ratio</b>
<b>Applications Submitted</b>	455	--
<b>Certificates Issued</b>	170	170/455
<b>Applications Found to be Ineligible</b>	27	27/455
<b>Submitted Applications Currently Missing Materials</b>	53	53/455
<b>“No-Show” and Canceled Appointments</b>	132	132/515* <small>*number of scheduled appointments</small>

### **Housing Affordability**

The Planning Department’s paramount concern continues to be limiting the impact that STRs have on the availability and affordability of the City’s housing stock. This concern is derived from Objectives Two and Three of the City’s Housing Element, which seek to “retain existing housing units” and “protect the affordability of the existing housing stock” respectively. Many hosts (56%) say the tourist use enables

them to pay their rent or mortgage<sup>11</sup>. The concern is that the financial assistance for hosts may be coming at the expense of residential tenants' opportunity for permanent housing.

*The critical questions for policy makers seeking to protect housing are: when does STR make more efficient use of unused resources and when does it incentivize the conversion of residential space to tourist use? While this report reviews a fair amount of new data, these fundamental questions remain unanswered.*

This section of the staff report will review available data in relation to how tourist use of housing may affect housing availability and affordability.

Newly available data, specific to San Francisco since the August 2014 Commission hearing:

- 2014 August- datascape of Airbnb by an independent journalist<sup>12</sup>
- 2014 December- datascape of Airbnb by an independent journalist<sup>13</sup>
- 2015 February- datascape of Airbnb by an independent journalist<sup>14</sup>
- PENDING- Controller's Report by the Office of Economic Analysis
- PENDING- Board of Supervisors Budget and Legislative Analyst

New comparative reports on STR in other cities:

- 2014 October- NY State Attorney General Study, "Airbnb in the City"<sup>15</sup>
- 2015 March- LAANE, "Airbnb, Rising Rent, and the Housing Crisis in Los Angeles"<sup>16</sup>

In 2015, the Planning Department benefited from the graduate research of Alex Marqusee at the UC Berkeley Goldman School of Public Policy. A detailed memorandum summarizing this work to date is attached as Exhibit B. The attached memorandum collaborates multiple data sources to provide the most complete and transparent window yet into San Francisco's STR market. Highlights of the "Marqusee Memorandum" include:

**1. Extent of San Francisco's STR Market.** Using multiple sources, the memo reaffirms previous estimates that approximately 4000-5000 Airbnb listings currently exist in San Francisco. To understand how listings may translate into tourist stays and/or the loss of housing, this memo notes that:

- an estimated 130,000 tourists stayed in STRs in 2014, according to the San Francisco Travel Association;

<sup>11</sup> [Economic Impact Analysis](#). HR&A Associates, commissioned by Airbnb. 2012.

<sup>12</sup> Data collected and published by Tom Slee. Retrieved from <https://www.google.com/fusiontables/DataSource?docid=1WvonuxK6oy6c6gi7iIvLDIaJtcyHXbx8t0KKGh1p#map:id=3> in February 2015.

<sup>13</sup> Data collected by: Murray Cox of <http://insideairbnb.com/> (personal communication with staff in March 2015).

<sup>14</sup> Data collected by: Guss Dolan (<http://darkanddifficult.com/>) & Anti-Eviction Mapping Project (<http://www.antievictionmappingproject.net/>) (personal communication with staff in March 2015)

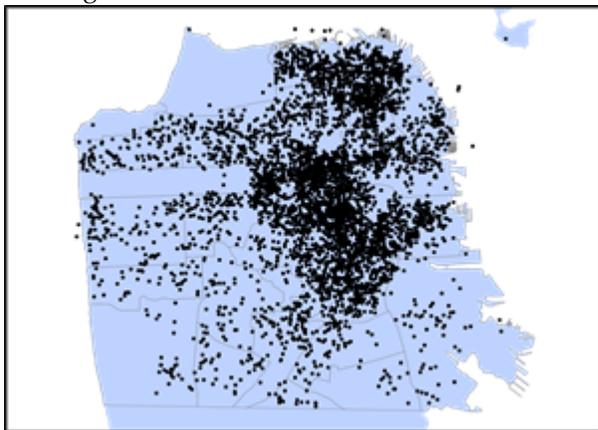

<sup>15</sup> New York State Attorney General, Eric T. Schneiderman. "Airbnb in the city". October 2014. Retrieved from <http://www.ag.ny.gov/pdfs/Airbnb%20report.pdf> in November 2014.

<sup>16</sup> LAANE, A New Economy for All. "Airbnb, Rising Rent, and the Housing Crisis in Los Angeles", March 2015. Retrieved from <http://www.laane.org/wp-content/uploads/2015/03/AirBnB-Final.pdf> in April 2015.

- the majority of hosts rent out their units less than once per month; however, a few hosts rent more frequently, there are about 500 listings that are booked at least 3.5 times per month; and
- Airbnb estimated that the average stay per booking is 5 nights per trip in 2011. This estimate is collaborated with a survey by the SF Travel Association Visitor Survey that found short-term rental stays averaged 5.1 nights.

**2. Revenue and Economic Incentives for San Francisco Hosts.** The memo estimates revenue of hosts by counting post-rental reviews and increasing this number by 28% to account for the percentage of bookings that Airbnb has said do not result in reviews. This estimation technique shows that most units generate little revenue per month (\$495 monthly revenue for 50% of hosts) but some hosts make a sizable income (\$1894 monthly revenue for the top 10% of hosts and \$2500 monthly revenue for the top 5% of hosts). When considering when the economic incentives that the STR market may provide to convert residential use to tourist use, it's important to compare the prices of similar units from both the residential and STR market. While a perfect comparison is not possible, the memo explores current Craigslist rental rates by neighborhood against STR rates by neighborhood. This data show that the median number of days where STR use would outcompete residential use is about 257 days<sup>17</sup>. This provides assurance that the highest STR cap proposed (120 day limit) in the pending ordinances would still protect housing by ensuring that residential use would be more lucrative than STR.

**3. Description of STR Listings: Entire Units in the Northern and Eastern Neighborhoods.** All three datascrapes cited in the memo confirm that a majority of hosts (61%) rent their entire unit. Private rooms account for about a third of the listings (35%). And, shared rooms represent the smallest fraction of San Francisco listings (4%). The density map below shows that STR units are concentrated where the City's housing is concentrated.

*Note: Map points for listings are imprecise as the data available on Airbnb's website obscures the exact location by about ¼ mile. This obfuscation likely accounts for dots in the ocean and parks.*

**San Francisco Analysis.** The data shows that the average, minimum booking per month is slightly less than once per month. If Airbnb's 2011 statement that bookings typically are for 5 rental days is still accurate; then the median tourist use of a listing represents 54 days per year or about 15% of the year. Allowing for tourist use of a unit for 15% of the year falls squarely within policymaker expectations. The current law allows tourist use of a full unit for 25% of the year. However, the most active 25% of listings average 2 bookings per month which results in tourist use for approximately 33% of the year and the top

---

<sup>17</sup> This number overestimates the profitability of Airbnb by not accounting for some fees and operating costs. The Office of the Controller is expected to explore this topic in more detail in an upcoming report.

10% of listings are estimated to be in tourist use for the majority of the year—exceeding the limits proposed by all of the draft ordinances. The good news is that the average listing continues to be dedicated to tourist use for a fraction of the year. Without a more detailed survey of hosts, it cannot be determined if the listing is used for residential use for the remainder of the year. Along the same lines, there is no data to inform policymakers about when a tenant may decide to forego a roommate and instead periodically lease a portion of their unit as a STR. The data does show that a limited number of listings that are dedicated to tourist use for a majority of the year and have little capacity to house San Francisco residents.

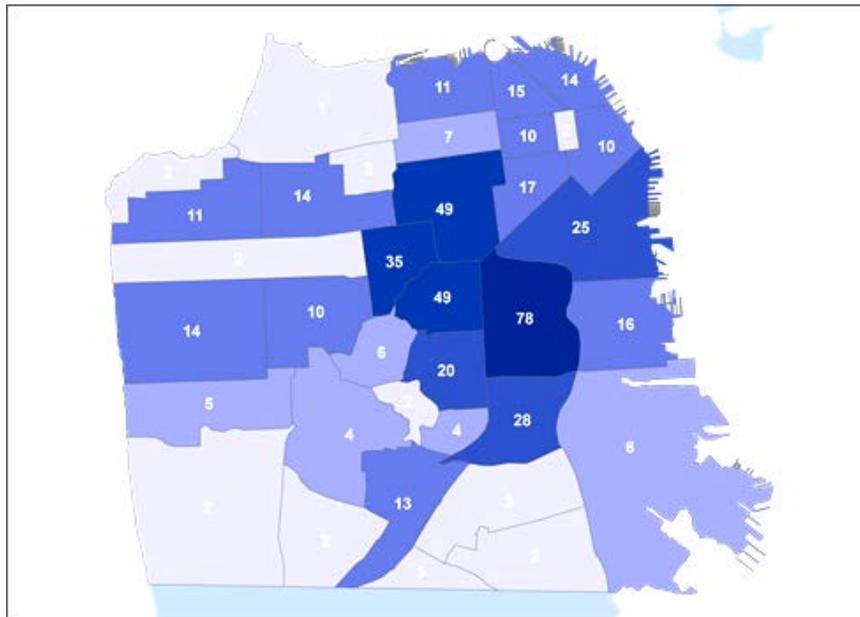

**Minimum Estimated Bookings for all 5,148 Listed Units in San Francisco**

**The Average Listings Comply with SF Policy Intent; But  
 The Most Active Listings Are Dedicated to Tourist, Not Residential Use**

	Median (average) listings	Maximum use if 90 STR days allowed	Top 25% most active listings	Maximum use if 120 STR days allowed	Top 10% most active listings	Top 5% of active listings
<b>Bookings per month</b>	0.9	1.5	2	2	3.5	4.5
<b>Approx. % of the year listing dedicated to tourist use*</b>	<b>15%</b>	<b>25%</b>	<b>33%</b>	<b>33%</b>	<b>58%</b>	<b>74%</b>

*\* The length of stay per booking is estimated here at 5 days. This is based upon Airbnb’s 2011 statement that bookings are typically for 5 rental days and is slightly less than the 2014 SF Travel Association Visitor Survey stating short-term rental stays averaged 5.1 nights.*

**Density of STR Listings By Neighborhood That Appear to Be Rented as STR at Least 50% of the Year**

*This map demonstrates that some of the most frequently booked or commercially-oriented listings are concentrated in core neighborhoods. The numbers represent the listings per neighborhood which are believed to be rented at least 50% of the year.*

**Conclusions Beyond San Francisco.** In addition to the Marqusee Memorandum, staff reviewed the New York Attorney General Report on New York City; the LAANE report on Los Angeles and a report commissioned by Airbnb as summarized in the Wall Street Journal<sup>18</sup>.

Together, the conclusions in these three reports seem to mirror the local public dialogue:

- 1) *While the majority of hosts may be offering units in a manner that aligns with public policy goals in San Francisco; a minority of commercial users dominate the market and*
- 2) *Although STRs likely have limited effect on the citywide housing market, the effect is more pronounced in high-demand neighborhoods.*

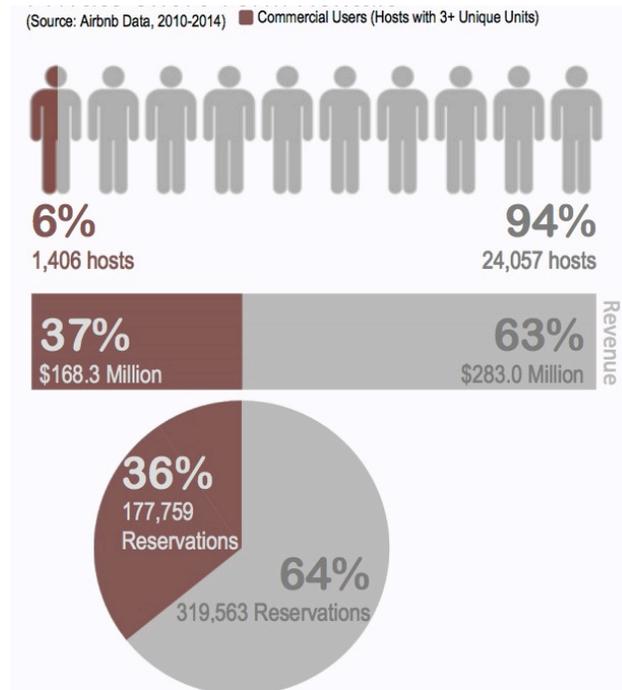

Highlights from these three reports on STRs include:

- **NY Attorney General Report:** This report analyzes Airbnb bookings from January 1, 2010 to June 2, 2014. It provides the first exploration of how users in NYC use the hosting platform. The intent of the report is to inform decision-makers on how to “best embrace emerging technology while protecting the safety and well-being of our citizens”.
  - **Effects on Housing Supply.** “Thousands of residential units in New York City were dedicated primarily or exclusively to private STRs. In 2013, over 4,600 unique units were each booked as private STRs for three months of the year or more. Of these, nearly 2,000 units were each booked as private STRs on Airbnb for at least 182 days—or half the year. While generating \$72.4 million in revenue for hosts, this rendered the units largely unavailable for use by long-term residents. Notably, more than half of these units had also been booked through Airbnb for at least half of the prior year (2012).” (pg. 12)
  - **Neighborhood Concentration.** “The majority of units converted to private STRs are in popular neighborhoods in Brooklyn and Manhattan. A dozen buildings in those same neighborhoods had 60% or more of their units used at least half the year as private STRs, suggesting that the buildings were operating as de facto hotels.” (pg. 12)
  - **Rate of Growth.** “Private STRs in New York City have grown at a staggering pace. The number of unique units booked for private STRs through Airbnb has exploded, rising from 2,652 units in 2010 to 16,483 in just the first five months of 2014. Private bookings in New York City saw a nearly twelvefold spike, rising from 20,808 in 2010 to an estimated 243,019 in 2014.” (pg. 6)
  - **Commercial Users.** “While commercial users represented a minority of hosts, they dominated the private STR market in units, reservations, and revenue. Commercial Users [represent only 6% of all hosts, but] controlled more than one in five unique units in New York City booked on Airbnb, accepted more than one in three private reservations, and received more than one of every three dollars in revenue from private STRs on Airbnb—for a total of \$168 million.” (pg. 10)

<sup>18</sup> Kusisto, Laura. Wall Street Journal. “Airbnb Pushes Apartment Rents Up Slightly, Study Says” March 30, 2015. Retrieved from <http://blogs.wsj.com/developments/2015/03/30/airbnb-pushes-up-apartment-rents-slightly-study-says/> in April 2015.

## New York City Commercial Users Accounted for a Disproportionate Share of Private STRs

*Image from NY Attorney General report illustrating that a minority of hosts garner the a high percentage of revenue and reservations.*

- **LAANE Report on Los Angeles.** This report completed by a nonprofit that seeks to “build a new economy based upon: good jobs, thriving communities, and a healthy environment” is the most critical. It concludes with four principals for regulating short-term rentals 1) protect housing; 2) require approval for each STR; 3) hosting platforms should share the burden of enforcement; and 4) hosts should only be able to rent STR when they are present during the rental period.
  - **Characterization of STR in LA.** “these units are not, by and large, the “shared” space implied by terms like host or sharing economy. Instead, nearly 90 percent of AirBnB’s Los Angeles revenues are generated by lessors with whole units and leasing companies who rent out two or more whole units.” (pg. 3)
  - **Loss of Housing.** “AirBnB has created a nexus between tourism and housing that hurts renters. The 7,316 units taken off the rental market by AirBnB is equivalent to seven years’ of affordable housing construction in Los Angeles.” (pg. 3)
  - **Impact Varies by Neighborhood.** “In Venice, as many as 12.5% of all housing units have become AirBnB units, all without public approval.” (pg. 3)

- **Wall Street Journal.** This article<sup>19</sup> summarizes a report commissioned by Airbnb and written by Thomas Davidoff of the University of British Columbia.
  - **Citywide Impacts on Housing May Be Limited.** “Airbnb increases the price of a one-bedroom unit by about \$6 a month. In San Francisco, he found that it increases rents by on average about \$19 a month... Even without relying on Airbnb’s estimates, Mr. Davidoff said that if one assumes that all listings are investors renting out units solely on Airbnb, the increases are modest. In New York, rents would likely go up around \$24 a month and San Francisco around \$76 a month.”
  - **Neighborhood Impacts May Be More Pronounced.** “Airbnb listings aren’t evenly spread across most cities but tend to be concentrated in prime neighborhoods, meaning that popular places could face more pressure on rents than others. Mr. Davidoff said it is difficult to measure how much Airbnb drives up rents in places like Venice Beach, which has about 200 places available for this Friday evening, because some people may just move to a different area, lessening the rent increase. He said in that case, the criticism of Airbnb is less about citywide affordability than the right of people to stay in desirable neighborhoods. ‘It’s not an affordability issue. It’s a luxury neighborhood issue or a bohemian neighborhood issue,’ he said.”

Since the Planning Commission hearing in August, decision-makers and the public benefit from much greater availability of data on STRs. Both the San Francisco data and the data from other reports point to limited impacts from the average host, while a small number of commercially-minded hosts disproportionately colonize the listing market. For this reason, a key need is to identify the apparently small number of hosts who provide year-round lodging to tourists at the expense of potential residents. Further, the current level of STRs likely has a limited effect on citywide housing prices and availability. However, certain neighborhoods that provide the City’s most affordable housing may also provide a ripe incentive to illegally convert housing to tourist use. Targeting legislative and enforcement efforts towards those commercial hosts and vulnerable neighborhoods may provide the greatest protections of the City’s precious housing resources. The pending reports to be published by the Controller’s Office of Economic Analysis and the Budget & Legislative Analyst may very well provide such data. Without such data, a broader legislative approach may be advisable given the current housing affordability crisis.

### Neighborhood Character

There have been concerns raised that STRs are impacting neighborhood character and quality of life for residents. Many of the complaints that the Department receives about STRs have to do with the hours of activity that tourists keep compared to long-term residents. The Department believes that this may be a concern in some neighborhoods that have a concentration of units being used as STRs full time, but in most neighborhoods where occasional use is the norm this is not likely to be as much of a problem.

### Hotels, Inns and Bed & Breakfast Uses in Residential Districts

In addition to STR provisions in the Administrative Code, the Planning Code also allows small hotel uses in Residential Districts with Conditional Use authorization. They are historically known as bed and breakfast inns or small hotels, and are limited to 5 rooms in all RH Districts except in RH-1 Districts,

---

<sup>19</sup> The Wall Street Journal. “Airbnb Pushes Up Apartment Rents Slightly, Study Says”, Kusisto, Laura. March 30, 2015.

where the use is prohibited. Because the existing STR law doesn't place any restrictions on the number of days for hosted rentals, the law essentially allows small hotels in RH districts as of right. Prior to the recent legislative change hotels with less than six rooms required a Conditional Use authorization, which is accompanied by notice to the neighbors and a discretionary public hearing. There is clearly a difference between renting out a home while on vacation versus a fulltime bed and breakfast; however, as the Department's enforcement team has found, and subsequent studies have affirmed<sup>20</sup>, a number of owners are using STR sites to circumvent traditional oversight processes and are effectively adding high-intensity hotel-like uses in a residential neighborhood.

## **REQUIRED COMMISSION ACTION**

The proposed Ordinance is before the Commission so that it may recommend adoption, rejection, or adoption with modifications to the Board of Supervisors

## **RECOMMENDATION**

The Department recommends that the Commission recommend *approval with modifications* of the proposed Ordinances and adopt the attached Draft Resolution to that effect.

The Department recommends approval on the following aspects of the three proposed Ordinances:

1. Remove the distinction between hosted and un-hosted rentals, per the Campos and Mayoral ordinances.
2. Prohibit units that have been subject to an Ellis Act Eviction within the last 5 years from registering on the STR registry, per the Kim ordinance.
3. Allow the City to institute civil proceedings against a Hosting Platform, Business Entity, or Owner at any time, per all three ordinances.
4. Allow private right of action for non-profits as outlined in the Kim ordinance.
5. Add "Permanent Resident or owner residing within 100 feet" to the definition of Interested Party per the Campos ordinance and the Mayoral ordinance.
6. Prohibit Hosting Platforms from listing any unit that did not maintain good standing on the City's STR registry, per the Campos ordinance.
7. Add a provision to the STR law directing the Mayor to set up a STR Office that would be staffed by the Planning Department, Department of Building Inspection and The Tax Collector's office, per the Mayoral ordinance.
8. Make the maximum number of nights a unit can be used as a hosted or un-hosted STR at 120 days. Adjust as needed if future studies can confirm the point where such use would incentive the illegal conversion of residential units to fulltime tourist use, per the changes proposed in the Mayoral ordinance.

---

<sup>20</sup> "Window into Airbnb's hidden impact on S.F." (June 16, 2014) Retrieved from [www.SFChronicle.com](http://www.SFChronicle.com) on July 1, 2014.

The Department is proposing the following modifications, which are not proposed in any ordinance.

9. Remove the provision in the Administrative Code that requires an Administrative Hearing if a violation is found.
10. Remove the provision in the Administrative Code that allows cross-examination of witnesses during the Administrative Hearing.

The Department does not recommend approval of the following items:

11. Do not Require Hosting Platforms to report quarterly to the Planning Department the number of nights the Residential Unit was occupied as a Short-Term Residential Rental, per the Campos ordinance.
12. Do not remove “the Owner of the Residential Unit in which the Tourist or Transient Use is alleged to occur” from the definition of Interested Party, per the Campos ordinance.
13. Do not allow private rights of action for any Interested Party after 90 days if the Department has not instituted civil action, as proposed in the Campos ordinance.
14. Do not prohibit units that have been approved under Section 207.3 of 715.1 of the Planning Code from being used as a STR, per the Campos ordinance.

## **BASIS FOR RECOMMENDATION**

Generally, the Department supports efforts to amend the law now that the City has a better understanding of STR and now that implementation of the STR program has begun. The Department continues to believe that STRs should be allowed within a reasonable regulatory structure. Many of the proposed amendments in these three ordinances would add regulation that enables limited STR while seeking to protect the public interest by minimizing the potential effects on neighborhoods and the housing stock. The proposed amendments generally increase the City’s capacity for enforcement either by adding additional resources, data for checks and balances or more easily verified limits. However, some proposed changes would undermine the City’s enforcement ability and rights the rights of landlords.

### **Recommendation 1: Remove the distinction between hosted and un-hosted rentals, per the Campos ordinance and Mayoral ordinance.**

Both Supervisor Campos’s and the Mayoral ordinances would remove the distinction between hosted and non-hosted rentals. The current law permits hosted rentals 365 days per year and limits un-hosted rentals to 90 days per year. Removing this distinction is a great improvement to the current law. Without this change, enforcement of the law would continue to be compromised as the Department has not identified an effective method to determine if a rental is truly hosted or not. Further, the distinction between hosted and un-hosted rentals creates an avenue to operate a fulltime bed and breakfast type use in their home without public notice or Planning Commission review.

### **Recommendation 2: Prohibit units that have been subject to an Ellis Act Eviction within the last 5 years from registering on the STR registry, per the Kim ordinance.**

Paramount to the Department’s recommendations is protecting the existing housing stock for San Francisco’s residents and workers. An Ellis Act Eviction, by its very nature, is the property owner’s statement that they are exiting the rental market. The existing and proposed versions of the law seek to keep the unit as primarily residential by limiting STR to the occupant of the unit. An owner move-in eviction is another eviction type that would allow the owner to move in and engage in STR. By allowing

STR in owner-move in evictions; the owners' rights to STR are maintained. Removing the capacity for STR in the circumstance of Ellis Act Eviction removes a potential enforcement problem and removes the incentive to evict tenants when STRs may be more lucrative.

**Recommendation 3: Allow the City to institute civil proceedings against a Hosting Platform, Business Entity, or Owner at any time, per the Kim ordinance and Campos ordinance.**

This provision increases the Department's enforcement powers and gives the City more power in prosecuting the most egregious cases by allowing the City to take immediate action against repeat offenders. It also helps restore balance between the City and other Interested Parties, which under the various proposal, would be allowed to act before the Department has found that a violation has occurred.

**Recommendation 4: Allow private right of action for non-profits as outlined in the Kim ordinance.**

This limited provision increases the Department's enforcement capacity by allowing non-profits that have in their bylaws a focus on housing the ability to go after some of the city more vulnerable housing, including units where an Ellis Act Eviction has occurred within the last five years and in buildings with three or more rent-controlled units. Further these entities' main focus is on the preservation or improvement of housing and have an inherent interest in ensuring that the City's housing stock is protected.

**Recommendation 5: Add "Permanent Resident or owner residing within 100 feet" to the definition of Interested Party per the Campos ordinance and the Mayoral ordinance.**

This modification will add those that are most directly impacted by STRs, those living within the immediate vicinity of the unit in question, to initiate civil proceedings once the Department has found a violation. Protecting neighborhood character is one of most important issues that the Department is concerned about when it comes to allowing STRs in residential districts, and the department finds that this modification is in line with that concern.

**Recommendation 6: Prohibit Hosting Platforms from listing any unit that did not maintain good standing on the City's STR registry, per the Campos ordinance.**

This amendment would prohibit Hosting Platforms from listing a STR property on their service without a valid STR registration number. The Department believes that this provision is essential to improving the City's enforcement capacities as it would prevent anyone from listing a unit without a registration number, and it makes the Hosting Platforms an active partner in ensuring that hosts are abiding by the City's rules.

**Recommendation 7: Add a provision to the STR law directing the Mayor to set up a STR Office that would be staffed by the Planning Department, Department of Building Inspection and The Tax Collector's office, per Mayoral ordinance.**

While this proposal is not outlined in detail, the Department understands that this new office will act as a one stop shop for all STR issues in the city, including enforcement, administration, and outreach. The office will allow a host to apply for the business license, sign up for the registry and get answer to their questions in one office. Having three agencies share in the responsibilities for the STR program will add more resources to enforcement and provide enhanced customer service to the City's residents.

**Recommendation 8: Make the maximum number of nights a unit can be used as a hosted or un-hosted STR at 120 days. Adjust as needed if future studies can confirm the point where such use would incentivize the illegal conversion of residential units to fulltime tourist use, per the changes proposed in the Mayoral ordinance.**

As mention on page 10, two pending reports (one each by the Controller's Office and Budget Analyst) may shed more light onto the financial aspects of STRs in the City. As part of that analysis, the Department understands the Controller may be looking at the number of days at which STRs become more profitable than renting a unit out full time to a permanent resident. When this item first came to the Planning Commission, the Department supported the 90-day limit because it was consistent with the accessory uses limits for dwelling units in the Code, which is currently one-fourth of the floor area (90 days is one-fourth of the year), and still maintained the unit as primarily residential. 120 days is one-third of the year, which still fits within the definition of an accessory use for other non-residential uses, and the units would still be primarily residential for the majority of the year. The Marqusee Memo estimates that the median days of STR needed to outcompete residential use is about 257 days<sup>21</sup>. This provides assurance that the recommended 120 day cap would still protect housing by ensuring that residential use would be more lucrative than STR. That said, the Department is hesitant to recommend further changes to the number of days until we better understand what impact the change will have on the City's housing stock. In particular, it is unclear if STR listings that are frequently booked would be put to residential use if STR were further limited. For example, even in cases where STRs are not as lucrative as residential uses and where the STR merely provides the host with a marginal funding source, the question remains: would the space be offered for another tenant if STR were not available? The answer to this question lies in individual living preferences as to whether it's easier to live with a roommate or intermittent tourists.

**Recommendation 9: Remove the provision in the Administrative Code that requires an Administrative Hearing if a violation is found.**

This amendment is not proposed in any of the pending ordinances. Existing law requires a mandatory administrative review hearing once the Department has found there is a violation. The Department is recommending that this be modified to make the hearing voluntary, so that if the Department finds there is a violation, it could be abated without a hearing. If the violation is contested, then a hearing could be requested by person or entity charged with a violation.

**Recommendation 10: Remove the provision in the Administrative Code that allows cross-examination of witnesses during the Administrative Hearing.**

This amendment is not proposed in any of the pending ordinances. Existing law allows for cross-examination of witnesses during the Administrative Hearing. This provision is a holdover from the administrative hearing processes that was in place prior to the STR program. The Department finds that cross-examination is unnecessary for a hearing of this type and removing cross-examination would reduce the potential for needless acrimony.

**Recommendation 11: Do not require Hosting Platforms to report quarterly to the Planning Department the number of nights the Residential Unit was occupied as a Short-Term Residential Rental, per the Campos ordinance.**

---

<sup>21</sup> This number overestimates the profitability of Airbnb by not accounting for some fees and operating costs. The Office of the Controller is expected to explore this topic in more detail in an upcoming report.

The Department originally recommended this provision be added to the STR ordinance when it was first heard by the Planning Commission last August. At the time, the Department was concerned that without this information the ordinance could not be effectively enforced. However, if Recommendation 6 listed above is added to the City's STR program the Department believes that the law will be more enforceable. Further, not all Hosting Platforms are involved with the booking or the financial transaction between the host and the renter, making the information the City would get from these Hosting Platforms incomplete. This requirement would also subject those Hosting Platforms that do collect this information to a higher standard and scrutiny than those that do not, and these reporting requirements may shift hosts to other platforms that do not collect the information in order to circumvent the law.

Instead the Department believes that the City should pursue improved data collection and technologic solutions to inform policy-makers and assist with enforcement, and explore collaboration with other city agencies that may provide better information across hosting platform types. Certainly hosts who maintain booking information should be encouraged to share this data with the City, especially when a violation is alleged; however the Department does not believe that it should not be requirement of the STR program for the reasons stated above.

**Recommendation 12: Do not remove "the Owner of the Residential Unit in which the Tourist or Transient Use is alleged to occur" from the definition of Interested Party, per the Campos ordinance.**

This modification would remove the owner of the unit from the definition of Interested Party. Interested Parties are currently allowed to seek civil action against a tenant (Owner<sup>22</sup>) or Business Entity once the Planning Department has found in violation. Removing owners of the unit from the definition of Interested Party would remove the unit owner's ability to seek civil action under Admin Code Section 41A. While the unit owner has other legal avenues to address violations of a lease agreement, the Department believes that unit owners have an inherent interest in the unit that they own and therefore should not be removed from the definition of Interested Party.

**Recommendation 13: Do not allow private rights of action for any Interested Party after 90 days if the Department has not instituted civil action, as proposed in the Campos ordinance.**

Supervisor Campos's ordinance proposes to allow anyone who is defined as an Interested Party to initiate civil proceedings if the Department has not determined if a violation has happened within 90-days. While the Department supports the limited expansion of private rights of action in Supervisor Kim and Breed's Ordinance; the Department finds that the provision in Supervisor Campos's ordinance is overly broad. The Department believes that the City should be responsible for enforcing its own laws, and allocate resources accordingly. Allowing any Interested Party, which is proposed to include everyone within 100 feet of the property, to initiate civil proceedings before the Department has determined if a violation has occurred could open up the entire process for abuses. Further, it would limit the Department's ability to bring decisive action against violators.

**Recommendation 14: Do not prohibit units that have been approved under Section 207.3 of 715.1 of the Planning Code from being used as a STR, per the Campos ordinance.**

Units approved under 207.3 and 715.1 are not subject to any income restrictions, and for all intents and purpose they are units like any other in the City. The Department believes that the current regulation, which only allows the primary resident to register the unit as a STR, is sufficient enough to ensure that

---

<sup>22</sup> For the purposed of the City's STR regulations, the term "Owner" includes a lessee where the lessee is offering a Residential Unit for Tourist or Transient use.

these units are not illegally converted to a permanent hotel use. The Department does not see a policy reason to prohibit the permanent residents of these units from the City's STR program.

## **ENVIRONMENTAL REVIEW**

The proposed Ordinance is not defined as a project under CEQA Guidelines Sections 15378 and 15060(c)(2) because it does not result in a physical change in the environment.

## **PUBLIC COMMENT**

As of the date of this report, the Planning Department has not received any comments of support or opposition to the proposed ordinances.

<b>RECOMMENDATION:</b> <b>Recommendation of Approval with Modifications</b>

**CITY AND COUNTY OF SAN FRANCISCO  
BOARD OF SUPERVISORS  
BUDGET AND LEGISLATIVE ANALYST**

1390 Market Street, Suite 1150, San Francisco, CA 94102  
(415) 552-9292 FAX (415) 252-0461

**Policy Analysis Report**

To: Supervisor Campos  
From: Budget and Legislative Analyst's Office  
Date: May 13, 2015  
Re: Analysis of the impact of short-term rentals on housing

---

**Summary of Requested Action**

Your office requested that the Budget and Legislative Analyst conduct an analysis on how short-term rentals affect the housing market in San Francisco, and how these effects might change given different limitations on the number of allowed nights housing units can be rented on a short-term basis. You also requested an overview of the Planning Department's short-term rental enforcement efforts and how they might be made more effective along with an assessment of how additional data on the short-term rental market might enhance their enforcement mandate.

*For further information about this report, contact Fred Brousseau at the Budget and Legislative Analyst's Office.*

---

**Executive Summary**

- Short-term rentals in recent years have become a new form of visitor lodging in San Francisco and throughout the world. While an informal market may have existed in the past, hosts can now make a spare room or an entire apartment or house available to potential visitors through websites such as Airbnb, Homeaway, Flipkey and others.
- Unlike a hotel or bed and breakfast inn, making one's personal residential space available for short-term rentals can be a low-cost and flexible undertaking for a host. It can also substitute for having a roommate for hosts who would otherwise need to share their space to cover their rent or mortgage.
- Guests can select from a variety of housing options and have the experience of staying in a home in a neighborhood not traditionally geared to tourism. The host can earn income by renting their space for as few or as many nights as they wish and that the market will bear. The platform companies have different arrangements but generally earn fees when bookings occur and/or when listings are posted by hosts.
- Though short-term rentals (defined as 30 days or fewer) were illegal in San Francisco until February 2015, between 5,249 and 6,113 of Airbnb listings in San Francisco were identified between November 2013 and February 2015 in Airbnb website webscrapes conducted by three individuals and made publically available. Comparable information for other hosting

---

*Budget and Legislative Analyst*

platform companies was not available and is not included in the estimates prepared for this report, understating the estimated impacts reported.

- While specific locations are not disclosed, neighborhood locations can be identified from the Airbnb webscrapes. There are listings in almost all neighborhoods in San Francisco but concentrations of listings were found in the Inner Mission, Haight-Ashbury/Western Addition, Castro/Eureka Valley and Russian Hill/Polk Gulch.
- Numerous studies and assertions about the benefits and costs of the short-term rental market have been made. On the positive side, claims have been made that the short-term rental market increases tourism and its economic benefits, provides additional income for hosts, particularly those who would not otherwise rent out their housing unit or rooms, and benefits neighborhoods that tourists traditionally do not visit.
- On the negative side, some assert that short-term rentals take away already scarce housing for long-term rentals, may encourage tenant evictions if a landlord concludes that they can earn more from short-term rentals than from a long-term tenant, violates local zoning and other ordinances and negatively affects the quality of life in residential areas.
- To assess the impact of the 6,113 Airbnb listings identified as of December 2014 on the housing market in San Francisco, the Budget and Legislative Analyst developed a model to estimate bookings for those listings and to classify hosts as either casual or commercial.
- Casual hosts are defined by the Budget and Legislative Analyst as those who occasionally make their residences available for short-term rentals for supplemental income. For example, hosts who rent their entire unit on a short-term basis when they are away for a weekend, on vacation or otherwise travelling and would not otherwise rent the unit on a long-term basis are classified as casual. In the case of renting a room in their residences, casual hosts would not usually need or choose to have a roommate. Casual hosts are assumed not to be affecting the housing market since they would continue to occupy their housing unit in the absence of the short-term rental market.
- Commercial hosts for entire units are defined by the Budget and Legislative Analyst as those who probably do not live or could not live in their short-term rental unit and therefore rent it out as a means of generating income. For commercial hosts renting out rooms on a short-term basis, the motivation would be to cover rent or mortgage payments that would otherwise require having a roommate. The next best uses of the housing units for such hosts in the absence of the short-term rental market would be living in the unit themselves, placing the unit on the long-term rental market, or getting roommates. Commercial hosts are thus assumed to be removing housing units that would otherwise be available for the long-term rental market.
- The Budget and Legislative Analyst prepared estimates of the impact of short-term rentals on San Francisco's housing market using various assumptions and calculations about the number of bookings per listing and the threshold number of booked nights that distinguish casual and commercial Airbnb hosts. Three scenarios were developed with variations in assumptions, resulting in the distribution of host classifications shown in Exhibit A. The medium pact scenario, referred to as the primary scenario and presented in the main body

of this analysis, applied a threshold of 59 nights or more for commercial hosts of entire units. For private and shared rooms, the threshold was 89 or more booked nights.

<b>Exhibit A: Number of Hosts by Type under 3 BLA Scenarios</b>			
<b>Host Type</b>	<b>Lower Impact Scenario</b>	<b>Medium Impact Scenario (primary scenario used in this report)</b>	<b>Higher Impact Scenario</b>
Number of Casual Hosts	4,517	4,191	3,107
Number of Commercial Hosts	1,596	1,922	3,006
<b>Total</b>	<b>6,113</b>	<b>6,113</b>	<b>6,113</b>

- Assessing only the impact of commercial hosts that rent entire housing units for short-term rentals, the Budget and Legislative Analyst estimates that between 925 and 1,960 units citywide have been removed from the housing market from just Airbnb listings. At between 0.4 and 0.8 percent, this number of units is a small percentage of the 244,012 housing units that comprised the rental market in 2013 (the latest number available from the U.S. Census Bureau's American Community Survey). However, when compared to the 8,438 units reported as vacant by the American Community Survey in 2013, the percentage is estimated to be between 11.0 and 23.2 percent, as follows.

<b>Exhibit B: Estimated Number of Commercial Entire Unit Listings as % of Vacant Units Citywide</b>			
	<b>Lower Impact Scenario</b>	<b>Medium Impact (primary scenario used in this report)</b>	<b>Higher Impact Scenario</b>
Number of Commercial Entire Unit Airbnb Listings, 2014	925	1,251	1,960
Percent of 8,438 vacant units, 2013	11.0%	14.8%	23.2%

Sources: American Community Survey 2013, Budget and Legislative Analyst Utilization Model

- The impact of short-term rentals on the housing market varies by neighborhood. When adding the number of entire unit commercial listings to the number of vacant units in each neighborhood as of 2013, and calculating the percentage of total units potentially for rent, the impacts are highest in the Inner Mission, the Haight-Ashbury/Western Addition, the Castro/Eureka Valley, and Potrero Hill/South Beach, as follows. The primary scenario assumptions were used for these estimates. On the low side, the impact in nine neighborhoods was under 5 percent.

<b>Exhibit C: Primary Scenario: Impact on Vacant For Rent Housing of Commercial Short-term Rentals for Entire Housing Unit, by Neighborhood</b>						
<b>Zip Code</b>	<b>Neighborhood</b>	<b>Rental Market Size (2013)</b>	<b>Vacancy For Rent (2013)</b>	<b>Number of Commercial Entire Unit Listings</b>	<b>Total Potential Units for Rent</b>	<b>Airbnb Commercial Unit Listings as % of Total Potential for Rent</b>
94117	Haight-Ashbury/Western Addition	14,686	260	122	382	31.9%
94110	Inner Mission	19,194	483	199	682	29.2%
94107	Potrero Hill/South Beach	9,121	246	85	331	25.7%
94114	Castro/Eureka Valley	9,921	358	117	475	24.6%
Source Webscrape of Airbnb website prepared by Murray Cox, December 2014; Budget and Legislative Analyst Utilization Model, American Community Survey 2013						

- The Budget and Legislative Analyst’s analysis of commercial host earnings from the short-term rental market compared to 2013 median gross rent earned for their neighborhoods found that, on average, hosts earned more in the short-term rental market than they would in the long-term rental market as of December 2014. Applying the hosts’ December rates to the full year, an estimated 508 listings would have earned more than the 2014 median market rental rate of \$3,750 per month. There were another approximately 200 listings generating slightly less than \$3,750 per month but could have exceeded the median market rate with higher rates charged at peak months of the year. Some hosts probably earn less than the market rent but may not be offering housing comparable to what commands the median market rate.
- A number of the neighborhoods with the most commercial hosts also had high numbers of evictions in 2014 according to the City’s Rent Board data. Exhibit D presents number of commercial hosts and number of evictions for the five neighborhoods with the highest number of evictions. While there are many reasons for evictions, and evictions for the purpose of conversion into a short-term rental is not tracked by the Rent Board, some landlords could be motivated to evict a tenant for the financial benefits of entering the short-term rental market.

<b>Exhibit D: Neighborhoods with Most 2014 Commercial Hosts Compared to Evictions</b>					
<b>Zip Code</b>	<b>Neighborhood</b>	<b>Number of Commercial hosts</b>	<b>Number of Evictions</b>	<b>Neighborhood Evictions, as % of Total Evictions in San Francisco</b>	<b>Neighborhood Evictions, Ranked</b>

Source: Webscrape of Airbnb website prepared by Murray Cox, December 2014; Budget and Legislative Analyst Utilization Model; San Francisco Rent Board

- Enforcement of the City’s laws pertaining to short-term rentals that went in to effect in February 2015 has been hampered by the lack of information about the location and number of bookings per listing. Since short-term rentals operate in private residences and cannot be publically viewed and platform companies do not disclose addresses or booking information about their hosts, the City has limited information for enforcement.
- Hosts are required to pay hotel taxes for every booking and register with the City’s Planning Department. The Treasurer and Tax Collector reports that hotel taxes are being paid by short-term rental hosts but cannot disclose information about the total number of hosts with business licenses. The Planning Department reports that, as of May 1, 2015, only 579 hosts had applied for now required registration and 282 certificates have been issues. Given the 6,113 listings identified for just Airbnb in December 2014, compliance with the registration requirement has been low.

## Policy Options

The Board of Supervisors should consider the following actions:

1. Enact legislation requiring hosting platforms to provide host address information and booking information on a quarterly basis for enforcement purposes.
2. Enact legislation requiring hosting platforms to only list units and hosts that are registered with the City.
3. Enact legislation limiting the number of un-hosted nights allowed per year.
4. Amend the Planning Code to allow the Planning Department to levy fines on platforms that list unregistered hosts.

*Project staff: Fred Brousseau, Julian Metcalf and Mina Yu.*

## Background

### Short-term Rental Market

The short-term rental market has three key players: the host, the guest, and the rental platform. The host is the property owner, lease holder, or a third party management company who supplies entire apartments, private rooms, or shared rooms. The guests rent out the apartments or rooms, and the rental platform facilitates the exchange between the hosts and guests.

Some municipalities, including the City and County of San Francisco, limit the number of days a short-term rental can be rented out and prohibit using residences solely for commercial purposes. Short-term rentals may provide a close substitute to hotel rooms or may offer a new type of lodging product by providing additional amenities such as full kitchens, easy access to different neighborhoods, and a more local and familiar experience of an area.

In San Francisco and in other cities, Airbnb is the predominant rental platform in the short-term rental market and generates revenue by taking a fee from both the host and guest for each booking completed (a pay-per-booking model). Other rental platforms such as HomeAway and FlipKey will offer a pay-per-booking option and also a subscription model, which charges hosts for advertising rentals.

### Airbnb

This report focuses on Airbnb due to its predominance in the short-term rental market and the availability of public data on its activities. Airbnb originated in 2008. Airbnb has since expanded to over 34,000 cities and 190 countries and has over 1 million listings worldwide.<sup>1</sup> As of April 2014, Airbnb has raised nearly \$800 million from investments firms including Andreessen Horowitz, Sequoia Capital, T. Rowe Price, and SherpaVentures. Airbnb has been valued at \$20 billion,<sup>2</sup> which is higher than major hotel chains such as Hyatt Hotels Corporation (\$8.4 billion).<sup>3</sup>

The Airbnb website allows for three types of rentals: 1) entire homes where the guest has access to the entire unit and the host is generally not present, 2) private rooms where the host is often present in the home, and 3) shared rooms, where hosts or others guests may sleep in the same room.

As detailed further below, using publically available webscrapes of Airbnb's San Francisco website, the Budget and Legislative Analyst identified 6,113 total listings in San Francisco from December 2014, consisting of entire units, private rooms and shared rooms. Details about these listings and their impacts on the housing market are provided below.

**Report estimates are Conservative**

The Airbnb listings are only part of the short-term rental market so all conclusions and estimated short-term rental impacts presented in this report understate the full short-term rental market by an unknown amount although Airbnb is considered to have the largest number of short-term rental listings by many analysts. Neither company nor other public data was available for the other short-term rental platforms.

Besides excluding estimates of part of the short-term rental market, estimates in this report are conservative because housing stock and vacancy data was obtained from the American Community Survey conducted by the U.S. Census Bureau. The latest data from that source was from 2013 and based on five year averages ending that year.

**Three Scenarios of Housing Impact were Developed for this Report**

Since no single source of data was available to identify the exact number of short-term rental listings and bookings in San Francisco, estimates were prepared using different assumptions about bookings and the thresholds that distinguish casual from "commercial" short-term rental hosts. Details about the three scenarios are explained below. While all show an impact on the rental housing market, particularly in certain neighborhoods, the impacts vary from lower to medium to higher. For ease of reading, the medium impact scenario, referred to as the primary scenario, is presented in the main body of the text; the other two scenarios are presented as alternative scenarios at the end of the report. While all of the scenarios have strengths and limitations, the primary scenario is considered to be the most reasonable, with the most realistic assumptions by the Budget and Legislative Analyst.

**Current Regulation in San Francisco**

In the fall of 2014, San Francisco legalized short-term rentals. Previously illegal, the new law allowed permanent residents -- a person who occupies a unit for at least 60 consecutive days with the intent to make it their home -- to offer short-term rentals. There are some caveats: Hosts are required to register with the City's Planning Department; they must pay the City's hotel tax; un-hosted rentals, which are usually entire homes, are limited to 90 days per year; and each listing is required to carry liability insurance.

Short-term rentals are subject to the same 14 percent transient occupancy tax that hotels in the City pay. The Treasurer and Tax Collector of the City and County of San Francisco issued a ruling in 2012 that the City's Transient Occupancy Tax applied to short-term rental hosts and website companies. Airbnb has publicly stated that they have paid back taxes owed to the City and County, but the Treasurer is unable to confirm this due to taxpayer confidentiality laws. Airbnb reports that it has been collecting and remitting transient occupancy taxes on behalf of its hosts in San Francisco and remitting them monthly to the City. In a 2014 letter to its hosts in the City, Airbnb stated it is remitting "nearly \$1 million" per month.

## Positive Impacts and Claims Pertaining to Short-term Rentals

### Strong Tourism Demand

Short-term rentals may provide many benefits to the City and its residents. Beyond the tax revenue that Airbnb reports, and the Treasurer and Tax Collector confirms, that it routinely collects and remits to the City, some studies report that short-term rentals can contribute to tourism, bringing additional customers to local businesses. In some cases, hosting may help individuals afford housing cost and other expenses.

Based on a study by the San Francisco Travel Association<sup>4</sup>, short-term rentals accounted for an estimated 1.9 percent of all overnight tourists stays in the City in 2014. While, this is a relatively small proportion, it is significant when considering the City received an estimated 16.9 million visitors in 2013<sup>5</sup>. Applying the 2014 rate to the 2013 number of tourists means that 321,100 tourists stayed in short-term rentals that year.

The current hotel market in the City is reported to be one of the strongest in the country, with an occupancy rate of 84.1 percent in 2013<sup>6</sup>, well above the national rate of 62.2 percent.<sup>7</sup> With the demand for hotel accommodations so strong, short-term rentals may present a unique option to accommodate tourist demand, especially during peak tourist seasons and large events. To this point, the San Francisco Travel Association recently partnered with Airbnb to be a provider of accommodations that the Association can sell to conferences as blocks for large events.<sup>8</sup>

The theory that short-term rentals contribute to increased tourism, rather than simply replace hotel stays outright, is supported by a 2014 study conducted by researchers at Boston University. The Boston University study analyzed short-term rentals across the state of Texas. The study found that every "1% increase in Airbnb listings in Texas results in a 0.05 percent decrease in quarterly hotel revenues." It also concluded that this loss to hotels and replacement mainly occurred on less expensive, lower-end hotels.<sup>9</sup> Assuming the same ratio applies to San Francisco, with its currently booming, often heavily booked hotel market, a potential loss of 0.05 percent would be exceeded by the average 2.0 percent year-over-year growth<sup>10</sup> or non-existent given the strong tourism demand. However, in the future if the market is declining, the substitution of short-term rentals compared to hotels

might be more noticeable. To determine the extent of the potential impact on San Francisco hotels a more robust study and access to additional data would be necessary.

#### **Short-term Rentals May Increase Tourism Spending**

Assuming the Boston University study results for Texas that the availability of short-term rentals results in a net increase in tourists is similarly applicable to San Francisco, increased visitors to the City should result in additional spending at local businesses. A study funded by Airbnb<sup>11</sup> concludes that in 2012 Airbnb guests generated “approximately \$56 million in local spending and supported 430 jobs in San Francisco.” The study also suggests that tourist spending by Airbnb guests is distributed to less visited neighborhoods across the City. However, there is limited data on the extent to which Airbnb guests spend time in their host neighborhood vs. traditional tourist neighborhoods and the study did not assess the neighborhood impact when short-term guests replace long-term residents.

#### **Short-term Rentals May Provide New Supplemental Income for Some Hosts**

Many supporters of short-term rentals have stated that their hosting business allows them to afford the cost of living in the City and to pay various expenses. Based on the Budget and Legislative Analyst’s assessment of available data on income earned by Airbnb hosts, this seems to be true in some case. Still, there is a distinction to be made between two types of hosts assumed for this analysis: casual hosts who rent out entire units and rooms on an occasional basis and commercial hosts who rent out their rooms or entire units more frequently to maximize earnings and achieve other business objectives.

Casual hosts are defined for this analysis as those who may on occasion share a room with a guest or rent a private room or entire home when they are away but they would not choose otherwise to be in the business of renting out their space on a long-term basis. Available data shows that the income earned in these scenarios could reasonably be considered supplemental but does not equal what could be earned with more frequent bookings. In contrast, commercial hosts may substitute their rooms and entire home that may otherwise be available on the long-term market with short-term rentals either to earn more than could be earned through long-term rentals or for other reasons.

In addition to the Budget and Legislative Analyst’s assessment, the scenario of the casual host is supported by two recent studies. The first, a survey of 344 hosts concluded in a draft report for Airbnb that 56 percent of hosts report using income from rentals listed on Airbnb to pay for part of their rent or mortgage.<sup>12</sup> The second study, by Rosen Consulting Group in 2013, surveyed users of Airbnb and

<sup>12</sup> HR&A Advisors, unpublished report for Airbnb on the economic impact assessment of Airbnb rental activities in San Francisco and New York City, October 2013. Some details are available from the (1) [official press release](#) from Airbnb.com, (2) article discussing results on [Forbes.com](#), and (3) HR&A Advisor’s [summary](#) on their client portfolio webpage.

found that 42 percent report using short-term rental income to supplement living expenses.<sup>13</sup> Both studies were commissioned by Airbnb, but the survey results seem reasonable. The remaining 44 percent of hosts from the 2012 study and the 58 percent from the 2013 study are assumedly not supplementing living expenses with their rental revenue but are treating it as a steady source of income.

The Budget and Legislative Analyst prepared estimates of the number of casual and commercial Airbnb hosts as of 2014 under three scenarios for this analysis using different assumptions about the threshold number of bookings that distinguish casual and commercial hosts and about the number of bookings per listing. One of the three scenarios, which will be referred to as the primary scenario in this report, is the one the Budget and Legislative Analyst concludes is the most reasonable and is presented in the main body of this report. The results of the two other scenarios are presented in the Alternate Scenarios section at the end of this report.

For the primary scenario, the Budget and Legislative Analyst classified 69 percent of all hosts, or 4,191 of the 6,113 hosts identified, as casual. This higher than the 42 to 56 percent of hosts identified in the two studies cited above as hosts who use their earnings to supplement living expenses or help pay their rent or mortgage. The remaining 31 percent of hosts, or 1,922 of the 6,113 hosts are assumed to be operating their short-term rentals as a business and may be generating income above the amount they could earn on the long-term rental market and/or that otherwise suits their business and personal objectives such as not having long-term tenants covered by rent control and rent stabilization.

## **Negative Impacts and Claims Pertaining to Short-term Rentals**

### **Short-Term Rentals Decrease Available Housing in San Francisco**

Short-term rentals may exacerbate the housing shortage in San Francisco by offering a more lucrative alternative or a more flexible living arrangement to listing a unit on the long-term rental market.

With the three estimates of the number of commercial users by listing type, the Budget and Legislative Analyst estimates that commercial hosts of 1,251 entire homes or apartments, 631 private rooms and 40 shared rooms may generate higher income through Airbnb than from the long-term rental market, which is shown in Tables 6 and 7 below. Since these hosts can earn an estimated level of revenue that is above what they could earn on the long-term market, they have an incentive to remove their units from traditional long-term rental opportunities. Some hosts may also be attracted to participating in the short-term rental market in order to maintain a more flexible living arrangement. For example, a host may not wish to have a roommate or long-term tenants on a rent-stabilized lease. The ease of participation in the short-term offers these hosts an alternative to participation in the traditional long-term rental market.

---

<sup>13</sup> Rosen Consulting Group, *Short-Term Rentals and Impact on the Apartment Market*, 2013

At 0.3 percent, the estimated 1,251 entire units being rented out by commercial Airbnb hosts is relatively small compared to the entire 376,083 units of housing in San Francisco, but larger when compared to the number of units available for rent at any one time, which was reported to be 8,438 in 2013 by the American Community Survey conducted by the U.S. Census Bureau. From this perspective, entire homes listed by commercial hosts take away an estimated 14.8 percent of the total rental housing available for rent Citywide, and private and shared rooms that might otherwise be occupied by roommates take even more units off the rental market. The impact on the rental stock in certain neighborhoods is higher, as detailed below.

Hosts operating casually are not assumed to take units off of the housing market since it is assumed that they occupy the unit themselves and only rent out only sporadically such as during their own vacations and trips away.

#### **Short-Term Rentals May Encourage Tenant Evictions**

Approximately 71.9 percent of San Francisco's rental stock is rent-stabilized, which typically results in rents below market rate. Housing market rental rates in San Francisco have been increasing significantly over the past few years so that for some landlords that may already be inclined to evict their tenants to capture current full market value rents, an additional incentive exists due to the higher revenue that could be generated through short-term renting. The San Francisco Rent Board reports that notices of eviction increased from 2,039 to 2,789, or by 37 percent, between 2011 and 2014. The Rent Board does not track what happens to units after evictions occur so it cannot be readily determined how many evictions resulted in housing units converted to short-term rental use. The Rent Board tracks filing of eviction notices only, though these are generally strong indicators of subsequent evictions. The Board does not systematically track successful evictions.

#### **Many Short-Term Rentals May Violate Local Ordinances**

In the fall of 2014, the Board of Supervisors legalized un-hosted short-term rentals (i.e., entire units) under 90 days, on the condition that hosts register with the Planning Department and apply for business licenses with Treasurer & Tax Collector. However, hosts have been slow to register; as of April 2015 455 hosts have registered. Given that seven publically available webscrapes report the number of listings on just the Airbnb platform as between 4,865 to 6,113 the rate of registration to date suggests that the majority of the current hosts are violating the required registration requirement.

#### **Short-Term Rentals May Introduce Neighborhood Safety Risks and Decline in Quality of Life**

The Planning Department has received noise complaints, concerns about parking, and other quality of life complaints from residents due to units suspected to be short-term rentals. These impacts seem plausible, but the extent and magnitude of these impacts have not been measured.

## Housing Stock Impacts

To determine the potential impact of short-term rentals on San Francisco's housing available for long-term rentals, the approach for this analysis was to first distinguish between hosts who rent out their homes or rooms in their home on an occasional, or casual, basis such as hosts who rent out their entire units when they are away on vacation, a business trip or away for a weekend. For private room rentals, an example of a casual host would be one who occasionally rents out rooms for supplemental income and perhaps for the experience of meeting people from elsewhere, but does not otherwise need or want a full-time roommate.

Hosts who own or rent homes for the express purpose of renting on the short-term rental market and, for the most part, do not live in the unit themselves or who regularly rent out rooms in their homes in lieu of having a roommate to cover rent and other expenses were classified as commercial hosts.

The Budget and Legislative Analyst concludes that commercial hosts affect the Citywide and, to varying degrees, neighborhood supply of housing available for the long-term rental market. Without commercial short-term rentals, the use of the housing units would assumedly be the owners living in the unit themselves or renting the unit out on a long-term basis. Hosts who rent out rooms on a more frequent short-term basis and who need the income to cover rent and other living expenses would assumedly turn to getting long-term roommates if not for short-term rentals.

While data is not publically available from the short-term rental platform companies on the frequency of bookings per listing, the Budget and Legislative Analyst assembled data to estimate the number of bookings per listing. Data on listings, neighborhoods, and host type (entire units, private rooms, shared rooms) were obtained and analyzed from several publically available webscrapes of the Airbnb website to create three scenarios based on three sets of assumptions about the number of bookings per listing and the number of bookings that distinguishes casual and commercial hosts.

Though neither the short-term rental platform companies nor any of the available webscrapes provide information on the frequency of bookings for individual listings, the Budget and Legislative Analyst used a multiple of the number of reviews per listing to estimate the number of bookings, or frequency of rental use of each listing, to categorize all listing hosts as either casual or commercial.

Since no single source of data was available to identify the exact number of short-term rental listings and bookings in San Francisco, estimates were prepared using different assumptions about bookings and thresholds distinguishing casual from "commercial" short-term rental hosts. All three scenarios show an impact on the rental housing market, particularly in certain neighborhoods, ranging from lower to medium to higher impact. The scenarios are summarized as follows:

**Lower impact scenario:** assumes casual hosts are those renting their unit 90 nights or fewer per year, commercial hosts rent out their units more than 90 nights per year, and the number of reviews for each listing represents 72 percent of total bookings for the listing.

**Medium impact scenario** (*referred to as primary scenario in this report*): assumes casual hosts are those renting their unit 58 nights or fewer per year, commercial hosts rent out their units more than 58 nights per year, and the number of reviews for each listing represents 72 percent of total bookings for the listing.

**Higher impact scenario:** assumes casual hosts are those renting their unit 58 nights or fewer per year, commercial hosts rent out their units more than 58 nights per year and the number of reviews for each listing represents 30.5 percent of total bookings for the listing (resulting in a higher number of bookings per listing than the other two scenarios).

As an example of the differences between the three scenarios, the Budget and Legislative Analyst classified Airbnb hosts as follows under the three scenarios:

	BLA Scenario		
	Lower Impact	Medium Impact <i>(primary scenario used in this report)</i>	Higher Impact
Number of Casual Hosts	4,517	4,191	3,107
Number of Commercial Hosts	1,596	1,922	3,006
Total	6,113	6,113	6,113

Casual hosts are assumed for the most part to be operating their short-term rentals to earn supplemental income or for other non-business reasons such as meeting travelers. Commercial hosts are assumed for the most part to be operating their short-term rentals as a business and may be generating income above the amount they could earn on the long-term rental market and/or otherwise fulfilling their business and personal objectives such as not having long-term tenants covered by rent control and rent stabilization.

As another example of differences between the three scenarios, in 2013, the American Community Survey estimated a 5-year average of 8,438 units as Vacant and For Rent in San Francisco, or 3.5 percent of the 244,012 units defined as the rental market at that time.<sup>14</sup> Based on the Budget and Legislative Analyst’s model

<sup>14</sup> The American Community Survey (ACS) is conducted annually by the U.S. Census Bureau. Compared to the relatively comprehensive 10-year Census, the ACS is a “mandatory ongoing statistical survey that samples a small percentage of the population every year.” The ACS selects approximately 1-in-480 addresses to mail 3.5 million questionnaires annually. While this is a significant number of individuals and addresses surveyed, it still relies on statistical assumptions, which result in a margin of error for every ACS estimate. The ACS Rental Vacancy figures

used to prepare estimated impacts and the 5-year average number of units Vacant For Rent in 2013 reported by the American Community Survey, commercial hosts renting out entire units would have reduced the San Francisco rental stock by between 11 and 23.2 percent, in accordance with the three scenarios' assumptions, as follows:

	Lower Impact	Medium Impact ( <i>primary scenario used in this report</i> )	Higher Impact
Number of Commercial Entire Unit Listings, 2014	925	1,251	1,960
Percent of 8,438 vacant units, 2013	11.0%	14.8%	23.2%

Sources: American Community Survey 2013, Budget and Legislative Analyst Utilization Model

For ease of reading, the primary scenario only is presented in the following main body of the text; the lower and higher impact scenarios are presented as alternative scenarios at the end of the report. While all three scenarios have strengths and limitations, the primary scenario is considered to be the most reasonable, with the most realistic assumptions, by the Budget and Legislative Analyst. The results of the two other scenarios are presented in the Alternate Scenarios section at the end of this report.

Table 1 summarizes the Budget and Legislative Analyst's classification of short-term rental hosts for Airbnb using only primary scenario assumptions. As shown, the total number of housing units listed in 2014 was 6,113, of which 4,191, or 69 percent, were classified by the Budget and Legislative Analyst as casual, and the other 1,922 units, or 31 percent, were classified as commercial. The threshold number of days to distinguish casual and commercial hosts is shown for each type of host for the primary scenario. Commercial hosts are those that book their space for more than 58 days for entire units and more than 88 days for private or shared rooms. Those amounts are the average number of booked nights reported for each host type in an unpublished report prepared for Airbnb and obtained by the Budget and Legislative Analyst.<sup>15</sup>

---

include all units listed for rent but currently not occupied and all units that are rented but have yet to be occupied by the incoming tenant. The total number of units that are vacant but have incoming tenants is expected to be small, but does somewhat inflate the size of the available rental units listed on the market.

<b>TOTAL UNITS</b>		<b>6,113</b>	<b>100%</b>

Source: Webscrape prepared by Murray Cox, December 2014; Budget and Legislative Analyst Utilization Model

To determine the impact of the commercial hosts on the rental market, the Budget and Legislative Analyst relied on the U.S. Census Bureau's American Community Survey data from 2013 which reports total number of housing units in the San Francisco rental market and total number of vacant housing units available for rent, by neighborhood. This data, the most recent available from the American Community Survey, may overstate the number of units available currently since the published data is from 2013 and based on a five year average for the years leading up to 2013.

Table 2 summarizes the data sources used for the analysis. Further details and sources and methods are provided below.

**Table 2: Information Sources Used for Analysis**

**Data Sources**

This report considers the impacts of short-term rentals on housing availability in San Francisco, and data from the American Community Survey, Zillow, Trulia, the San Francisco Rent Board, various webscrapes of the Airbnb website, and other reports on the short-term rental market such as those produced by and for the City's Planning Department, Airbnb press releases and public statements, and our own internal review of Airbnb.com were used.

The Budget and Legislative Analyst's Office sent a request for anonymized listing and booking data to Airbnb in April 2015 but the company did not respond. Therefore, the Budget and Legislative Analyst Office utilized 7 webscrapes of the Airbnb website and cross-referenced this information with actual Airbnb data obtained through subpoena and reported by the New York State Attorney General's Office in

<sup>16</sup> Chesky, Brian. September 7, 2012. "What percent of Airbnb hosts leave reviews for their guests?" Retrieved on May 6, 2015 from: <http://www.quora.com/What-percent-of-Airbnb-hosts-leave-reviews-for-their-guests>

<sup>17</sup> This rate was used to calculate a high estimate of the number of units removed from the long-term market by neighborhood, as shown in the Alternate Scenario section below.

2014, a report prepared for Airbnb<sup>18</sup> and Airbnb's press releases and public statements.

**Source of Webscrape data**

The Budget and Legislative Analyst's Office reviewed seven webscrapes of the Airbnb website prepared by three technology professionals. Webscrapes extract and compile data from the public-facing websites and allow for analysis that would otherwise not be feasible or practical to conduct using a standard browser. All seven of the webscrapes reviewed show a consistency over time in the number of Airbnb listings and in rental rates. The December 2014 webscrape prepared by Murray Cox was used by the Budget and Legislative Analyst for this analysis as this dataset provided the most comprehensive collection of data. Summary information from each of the seven webscrapes is provided in the Appendix to this report.

The webscrapes used were prepared by the following three individuals. Tom Slee, who works in the software industry, writes about technology and politics, is active in the open data and sharing economy communities, and is based in Waterloo, Ontario. Murray Cox is a community activist based in New York City who utilizes his technology skills for various non-profits and community groups. He has a degree in computer science from the University of Sydney. Gus Dolan collaborates with the Anti-Eviction Mapping Project.

Webscrapes are subject to limitations: there may be duplicate or inaccurate listings, and webscrape authors may run the scrapes several times to reduce error. Because of the consistency of the information in the webscrapes reviewed, the Budget and Legislative Analyst concluded that they were reliable sources of information for this analysis.

The Budget and Legislative Analyst conducted a review and sampling of Airbnb's current San Francisco listings to confirm summary statistics of the webscrapes. Average prices were checked by listing type for each webscrape against the website's reported averages. Table 4 below shows the average prices from the webscrape used for this analysis. See the Appendix for more detail about how the webscrapes were used for this analysis.

**Limitations of data**

The number of bookings is key to understanding the impact of the short-term rental market on housing in San Francisco. Hosts have the option to unlist or deactivate listings, but it is unclear whether listings expire; thus, units that are not currently being booked may still be listed. Data from the webscrapes do not provide information on bookings. However, the Budget and Legislative Analyst utilized the number of reviews left on each listing to estimate the booking frequency, or utilization rate, in booked nights per year for each listing. See the Appendix for detail on our methodology.

Airbnb and other platforms obscure the location of a host's unit on their website so it is not possible to determine exact locations. Neighborhoods are identified for each listing, although inconsistently and without clear definition. To help determine neighborhood locations for listings, zip codes were pulled from some of the webscrapes. The neighborhood locations used in our analysis are expected to approximate to within 0.6 miles of their true location.

**Review Data Key to Estimating Utilization**

Because data from the webscrapes do not provide information on the number of bookings, two estimates of bookings were prepared: 1) Airbnb's public statement that 72 percent of guests leave reviews was applied to all listings with reviews to

determine the total number of bookings per listing (i.e., assuming that the number of reviews per listing represented 72 percent of all bookings for that listing), and 2) a second, lower review rate of 30.5 percent was applied based on the number of reviews per listing reported from a webscrape of New York City Airbnb listings and compared to the number of bookings for the same time period in New York City as reported by the New York State Attorney General in subpoenaed Airbnb booking data. That report showed a total of 497,322 bookings from January 1, 2010 through June 2, 2014. When compared with the webscrape results showing a review count of 151,623 from January 1, 2010 through June 2, 2014, the rate of apparent reviews to bookings was determined to be 30.5 percent.

The apparent review ratio of 30.5 percent may not represent the actual rate that users leave reviews. Some sources suggested that Airbnb alters the number of reviews on their website, and may remove older reviews over time. If true, this would explain the difference between the apparent review rate and Airbnb statements from 2012 that 72 percent of guests leave reviews. Both the apparent review ratio and Airbnb's stated ratio are all well above common ratios assumed for the e-commerce and other online industries, which have been estimated to range between one<sup>19</sup> to nine percent, but the Airbnb business model appears to be more dependent on reviews than some other businesses.<sup>20 21</sup>

The 72 percent review rate was used for the primary scenario estimates presented in this report. The 30.5 percent review rate was used for the higher impact alternate scenario presented in this report.

### **Many Types of Hosts**

As discussed above, for purposes of this analysis, the Budget and Legislative Analyst categorized hosts into one of two groups: casual hosts and commercial hosts depending on the number of nights their unit was booked. For entire units rented in the primary scenario for this analysis, the threshold for commercial hosts was 59 booked nights or more. Casual hosts for entire units were those with 58 or fewer booked nights. For private and shared rooms, the threshold was 88 or fewer booked nights for casual hosts and 89 or more booked nights for commercial hosts.

Casual hosts are defined for this analysis as those who list units on an ad hoc basis to make supplemental income. A casual host might be a host who lists their unit for rent a few weekends throughout the year or while on an out-of-town trip. Casual hosting is assumed to have little or no impact on the long-term rental market.

Commercial hosts with more than 58 booked nights per year for an entire home or 88 nights or more for private or shared room listings are renting out a room for over 7 days per month or a whole unit for almost 5 days a month. Commercial entire unit hosts would need to be out of their residences to rent them out for approximately two months or more per year. Commercial hosting is assumed by the Budget and Legislative Analyst to reduce the number of units or rooms available for long-term rent. A commercial host is one that practices short-term renting as a business instead of listing a unit on the long-term rental market.

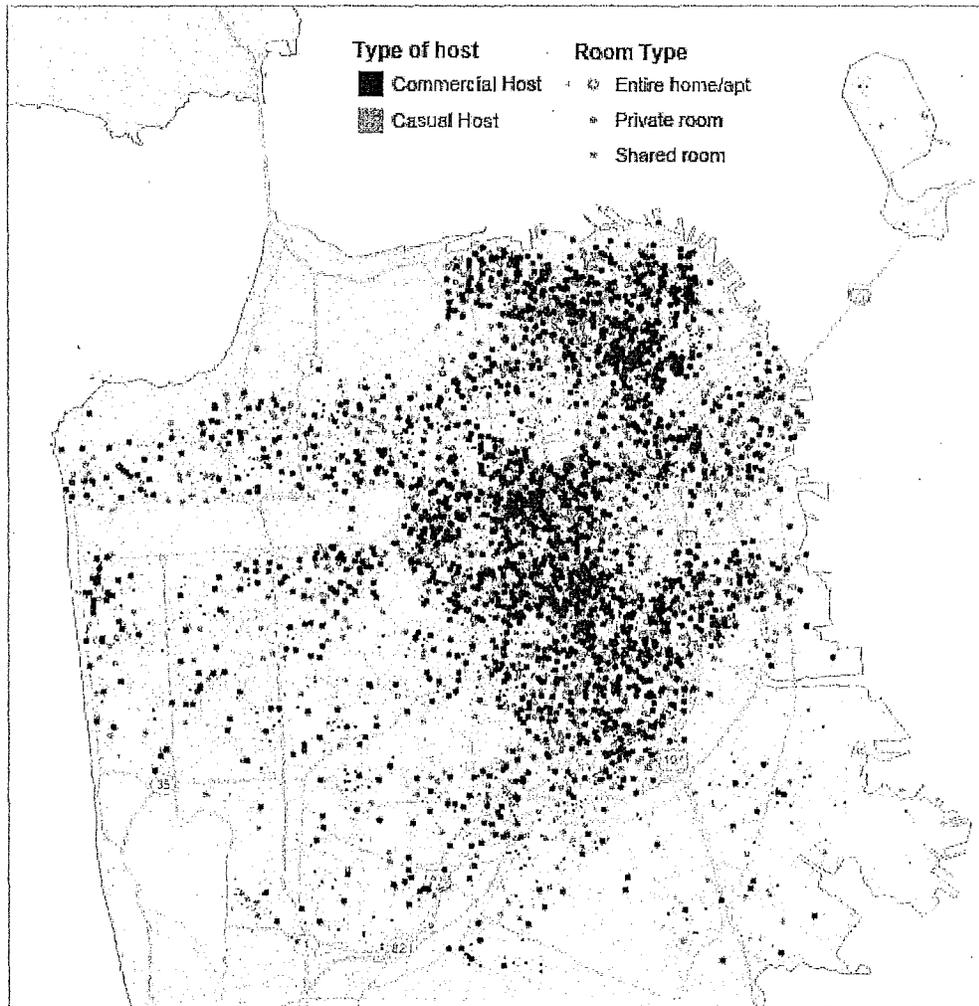

The Budget and Legislative Analyst assumes that there are exceptions to the casual and commercial classifications above. There are likely hosts who travel or stay elsewhere more than 59 days a year, rent out their entire primary residence unit while they are gone and therefore are not taking a housing unit away from the long-term rental market. Similarly, there are likely hosts who rent entire units for 58 days or less though they do not live in the unit, but would otherwise make it available to the long-term market.

Using the data from the December 2014 San Francisco Airbnb webscrape, the Budget and Legislative Analyst created a utilization model for the number of nights per year a listing is expected to be booked based on the number of reviews for each listing. For the primary scenario presented in this report, the following data was used: the 72 percent review to bookings ratio, 5.1 average nights of stay for Airbnb guests as reported by SF Travel, and the length of time from the host join date to the last review date. To determine the number of bookings per month for each listing, total bookings were spread over the amount of time since the host joined the site since that data was available from the 2014 webscrape. The detailed methodology for calculating this utilization rate is found in the Appendix.

Based on the utilization model and the thresholds described above to distinguish between casual and commercial hosts, Figure 5 below shows the distribution of the 6,113 Airbnb listings from the December 2014 webscrape across San Francisco by type of host under the primary scenario assumptions. As presented in Table 1

above, the primary scenario assumes 4,191 casual hosts and 1,922 commercial hosts for a total of 6,113.

**Figure 5: Distribution of Casual and Commercial Hosts in San Francisco  
December 2014**

Source: Webscrape of Airbnb website prepared by Murray Cox, December 2014; Budget and Legislative Analyst Utilization Model

**Commercial Hosts Expected to Have Greater Impact on Housing Availability**

At 68.6 percent, the 4,191 hosts classified as casual is slightly more than two thirds of all 6,113 listings. Casual hosts are not expected to reduce the rental stock due to the infrequency of and the motivations for their hosting. As shown Table 6 below, casual hosts are expected to earn significantly less than median gross rent for their neighborhoods on the short-term rental market based on the number of nights their unit is booked as estimated by our utilization model and the price a host charges per night.

**Table 6: Differences between Short-term vs Long-term Monthly Revenue Generated by Casual Hosts for Entire Units, 2014**

Zip Code	Neighborhood	Average Monthly Revenue for Entire Unit, Casual Host	Median Gross Rent, by Neighborhood (2013)	Monthly Earnings Above/(Loss Below) Long-term Rent

Source: Webscrape of Airbnb website prepared by Murray Cox, December 2014; Budget and Legislative Analyst Utilization Model; American Community Survey 2013 median gross rents

However, the estimated average monthly revenue from a commercial host for entire units exceeds the expected long-term rental rates per month. The table below shows that there is a financial incentive to list a unit on the short-term rental market, as it can generate revenues above median rents for each neighborhood.

**Table 7: Differences between Short-term vs Long-term Monthly Revenue Generated by Commercial Hosts for Entire Units, 2014**

Zip Code	Neighborhood	Average Monthly Revenue for Entire Unit, Commercial Host	Median Gross Rent by Neighborhood (2013)	Monthly Earnings Above/(Loss Below) Long-term Rent
94102	Tenderloin/Union Square/Hayes Valley	\$2,264	\$840	\$1,424

Source: Webscrape of Airbnb website prepared by Murray Cox, December 2014; Budget and Legislative Analyst Utilization Model; American Community Survey 2013 median gross rents

Commercial hosts are expected to have a larger impact on the housing market. Entire units listed by commercial hosts would reduce the number of long-term rental units available, while private and shared rooms would reduce the number of rooms available for long-term rent. Entire units make up the majority of commercial units listed at 1,251 homes or apartments.

In 2013, the American Community Survey estimated a 5-year average of 8,438 units as Vacant For Rent in San Francisco, or 3.5 percent of the 244,012 units defined as the rental market at that time by the Census Bureau.<sup>22</sup> Based on the model developed for this analysis and the 5-year average Vacant For Rent in 2013 reported by the American Community Survey, the 1,922 commercial hosts renting entire units for over 58 days a year would reduce the San Francisco rental stock by an amount equal to 14.8 percent of the 8,438 units Vacant For Rent Citywide in San Francisco under the primary scenario assumptions. The range of this impact is between 11.0 and 23.2 percent based on the lowest to highest impact scenario assumptions. Rentals for private and shared rooms would reduce the available rental stock even further.

While commercial short-term rental hosts appear to be beating the median rents across the City in the data we examined, the Budget and Legislative Analyst also compared short-term rental revenues to the median \$3,750 rental market rate in 2014.<sup>23</sup> Comparing data to this market rate, there were a total of 508 units in December 2014 beating the market rate—286 entire rooms, and 222 private rooms.

There were also about 200 units that generated just slightly less revenue than the median market rate. For example, a commercial entire home in the Castro which earned an average of approximately \$330 per night, and was booked an estimated 134 nights per year earned about \$3,690 per month, or slightly less than the 2014 City-wide median rent of \$3,750. However, if the unit was booked just three more nights in the year or charged higher rates at other times of year, the short-term rental listing would be more profitable than the long-term market rates. Thus, the short-term rental market can offer similar financial compensation with an added flexibility in living arrangements over the long-term rental market.

The data from December 2014 shows that over two-thirds of the hosts could have potentially earned more by listing their units in the long-term rental market if their unit could have commanded the then median market rate of \$3,750.<sup>24</sup> However, other factors affecting this calculation include:

---

<sup>22</sup> The American Community Survey (ACS) is conducted annually by the U.S. Census Bureau. Compared to the relatively comprehensive 10-year Census, the ACS is a “mandatory ongoing statistical survey that samples a small percentage of the population every year.” The ACS selects approximately 1-in-480 addresses to mail 3.5 million questionnaires annually. While this is a significant number of individuals and addresses surveyed, it still relies on statistical assumptions, which result in a margin of error for every ACS estimate. The ACS Rental Vacancy figures include all units listed for rent but currently not occupied and all units that are rented but have yet to be occupied by the incoming tenant. The total number of units that are vacant but have incoming tenants is expected to be small, but does somewhat inflate the size of the available rental units listed on the market.

<sup>24</sup> Zillow.com, San Francisco Home Prices & Values. Accessed on May 10, 2015 at <http://www.zillow.com/san-francisco-ca/home-values/>

<sup>24</sup> Zillow.com, San Francisco Home Prices & Values. Accessed on May 10, 2015 at <http://www.zillow.com/san-francisco-ca/home-values/>

- The calculations above are based on short-term rental rates charged in December 2014. Hosts may have charged higher rates at other times of year such as summer and thus their total annual income could be higher than the projected amounts based on December rates.
- Some short-term hosts could be renting units with market values below the median market rate so they could still be beating the market value for their particular unit even if their earnings or less than the total market median amount.
- Some of the short-term rental housing stock may not match the amenities of the median market rate housing stock and therefore it may not be possible to earn median market rent through long-term rentals compared to landlords with newer apartments and/or more amenities.
- Some commercial short-term rental hosts may not be marketing their units effectively to maximize rentals.
- Short-term rental and hotel competition may prevent some commercial short-term hosts from charging rates to earn more than a long-term rental would generate.
- Some commercial hosts may be satisfied earning more than they had in the long-term rental market though less than the median market rental rate as they may prefer the flexibility of short-term rentals and may not wish to rent their unit(s) on a long-term basis under City rent control laws.

Some commercial hosts may be in the hospitality business and not interested in entering the long term rental market.

#### **Commercial Short-term Rentals by Neighborhood**

Table 8 below shows the rental market size, vacancy for rent, and the estimates of commercial listings on Airbnb by neighborhood zip code under the primary scenario. The same results for the lower and higher impact scenarios are presented at the end of the report in the Alternative Scenarios section.

<b>Table 8: Primary Scenario: Impact on Vacant For Rent Housing of Commercial Short-term Rentals for Entire Housing Unit, by Neighborhood</b>

**Private Room Commercial Hosts**

No historical data on roommate market was available, but an average number of bedrooms by neighborhood was calculated based on American Community Survey data. We multiplied the number of Vacant For Rent units by the Average Number of Rooms by zip code to get the number of Vacant Rooms For Rent. Based on 2013 American Community Survey data, 12,884 rooms were available for rent in San Francisco in 2013.

In addition to the number of entire units presented above, 631 commercial private rooms and 40 commercial shared rooms were listed on the Airbnb webscrape from December 2014. The number of shared rooms were divided by 2 to estimate the number of rooms these commercial shared rooms listings accounted for, and we estimate that 651 commercial rooms were listed in December 2014.

Table 9 below shows the range of commercial room listings and impacts by neighborhoods.

Zip Code	Neighborhood	Room Rental Market Size (2013)	Vacancy For Rent (2013)	Number of Commercial Room Listings	Total Potential Rooms for Rent	Airbnb Commercial Room Listings as % of Total Potential Units
94130	Treasure Island	No data	0	4	4	100%
94158	Mission Bay	2,705	0	1	1	100%

**Neighborhoods**

The table below shows the five neighborhoods with the highest number of commercial Airbnb listings.

Table 10: Neighborhoods with Most Commercial Hosts					
Zip code	Neighborhood	Entire Unit	Private Room	Shared Room	TOTAL
94110	Inner Mission	199	112	4	315
94117	Haight-Ashbury/Western Addition	122	70	1	193
94114	Castro/Eureka Valley	117	70	1	188
94109	Russian Hill/Polk Gulch	89	37	4	130
94103	SOMA	71	34	8	113

Source: Webscrape of Airbnb website prepared by Murray Cox, December 2014; Budget and Legislative Analyst Utilization Model

### Evictions

Table 11 below shows that the neighborhoods with the highest number of listings also have the highest number of evictions. While the use of housing units after evictions cannot be determined from Rent Board data, landlords in neighborhoods that are popular areas for short-term rentals may have financial incentives to remove existing tenants.

About 71.9 percent of San Francisco's rental stock is rent-stabilized. Housing market rate prices in San Francisco have been increasing significantly over the past few years, and landlords, already encouraged to capture the full market value on the long-term rental market, may be further encouraged by the higher revenue that could be generated through short-term renting. The San Francisco Rent Board provided data which showed that evictions have increased by 37 percent from 2011 through 2014.

In 2014 there were 2,789 evictions. The table below compares the five neighborhoods with the most Airbnb listings to the eviction rates.

<b>Table 11: Neighborhoods with Most 2014 Commercial Hosts Compared to Evictions</b>					
<b>Zip code</b>	<b>Neighborhood</b>	<b>Number of Commercial hosts</b>	<b>Number of Evictions</b>	<b>Neighborhood Evictions, as % of Total Evictions in San Francisco</b>	<b>Neighborhood Evictions, Ranked</b>
94110	Inner Mission	315	323	12%	1st
94117	Haight-Ashbury/Western Addition	193	212	8%	3rd
94114	Castro/Eureka Valley	188	130	5%	10th
94109	Russian Hill/Polk Gulch	130	269	10%	2nd
94107	Potrero Hill/South Beach	126	51	2%	19th

Source: Webscrape of Airbnb website prepared by Murray Cox, December 2014; Budget and Legislative Analyst Utilization Model; San Francisco Rent Board

As shown in the table above, the Inner Mission, Russian Hill, and Haight-Ashbury had the top three highest eviction rates in 2014 and are also the amongst the top five neighborhoods with highest commercial entire unit and private room Airbnb listings.

**Impact of Night Limits**

If followed, the various proposed legislation could result in significantly different hosting outcomes for all types of rooms. The estimates in Table 12 below are based on the December 2014 Airbnb webscrape. This webscrape showed 3,651 entire homes, 2,196 private homes, and 266 shared rooms, for a total of 6,113 listings.

Given current booking rates, if regulation that caps the number of un-hosted nights only at 90 nights, were followed, the number of entire homes listed would decrease to 3,115, or by 15 percent. Private and shared rooms would remain unchanged as the current legislation does not restrict hosted nights.

If the number of days for hosted and unhosted nights were capped at 120 nights, the total number of units expected to be listed on Airbnb would decrease from 6,113 to 5,706, or by 7 percent. If the number of nights were capped at 90 nights, the total number would decrease to 5,168 or by 15 percent. If the number of nights were capped at 60 nights, the total number would decrease to 4,471 or by 27 percent.

The table considers the financial incentives a commercial user would incorporate into their decision to host a short-term rental or a long-term rental based on American Community Survey 2013 rental rates by zip code. All casual users are

expected to remain in the short-term rental market, and only modify their behavior to abide by the caps. A commercial user would compare the expected monthly revenues from participating in the short-term rental market based on the cap to the monthly rate on the long-term market.

	Current scenario	Current Scenario if Fully Enforced Regulation (Max 90 un-hosted nights)	120 Night Max on All Unit Types	90 Night Max on All Unit Types	60 Night Max on All Unit Types
<b>Entire Units Remaining</b>	3,651	3,115	3,390	3,115	2,634
<b>Private Rooms Remaining</b>	2,196	2,196	2,060	1,803	1,602
<b>Shared Rooms Remaining</b>	266	266	256	250	235
<b>TOTAL</b>	<b>6,113</b>	<b>5,577</b>	<b>5,706</b>	<b>5,168</b>	<b>4,471</b>

Source: Webscrape of Airbnb website prepared by Murray Cox, December 2014; Budget and Legislative Analyst Utilization Model

Table 13 below shows the corresponding number of units that are estimated to exit the short-term rental market and may be available for long-term rent under the various policy proposals and assuming effective enforcement.

	Current Scenario if Fully Enforced Regulation	120 Night Max on All Unit Types	90 Night Max on All Unit Types	60 Night Max on All Unit Types
Entire unit	536	261	536	1,017
Private room	0	136	393	594
Shared room	0	10	16	31
<b>Total</b>	<b>536</b>	<b>407</b>	<b>945</b>	<b>1,642</b>

Source: Webscrape of Airbnb website prepared by Murray Cox, December 2014; Budget and Legislative Analyst Utilization Model; American Community Survey 2013 median gross rents

### **If Regulations Are Fully Enforced Many Commercial Hosts Will Switch to Long-term Rentals**

The analysis suggests if regulations are followed at almost all levels then many commercial hosts will no longer find their operations economically feasible compared to the traditional long-term rental market. This is because with limitations on the number of nights that can be rented annually hosts would make more money renting continuously on the long-term market, particularly for entire units. Some amount of commercial hosts would remain because they have relatively high prices that allow them to maintain operations despite any annual limits on the number of nights per year. Other commercial hosts might raise their prices in response to any limitations, which would keep their unit off the long-term market. However, this group would likely be small since there market limits on how much guests are willing to pay per night.

### **Commercial Hosts Might Be Replaced by Additional Casual Hosts**

The primary group of hosts that remain are the casual hosts. This is because they are less sensitive to revenue lost from capping the number of nights per year. Most aren't hosting at or above the various maximums modeled already and only a small percentage would lose revenue in any of the models.<sup>25</sup> As a side business, casual hosts aren't in the business of commercial lodging and unlike commercial hosts they haven't invested money on additional property to run a short-term rental business.

If demand from guests remains high, the bookings currently filled by commercial hosts are expected to be replaced by additional casual hosts. This would continue to deliver the many benefits of short-term rentals to the City and would replace much of the transient occupancy tax revenue that commercial host activity is currently providing.

## **Current Enforcement**

The current regulations allow some limited commercial activity of short-term rentals in residential properties. Despite this change, the new laws have added few tools for the City to enforce short-term rentals. The primary challenge remains that short-term rentals are businesses that operate in private residences and it is difficult to know what is happening behind closed walls. Companies such as Airbnb have been unwilling to share booking information with the City and others such as VRBO don't facilitate individual transactions and don't have aggregate booking data available. Without booking information the City is unable to sufficiently enforce current regulations that limit the number of nights per year in some types of units.

---

<sup>25</sup> An estimated #X of casual hosts are currently offering private rooms and shared rooms that are booked for an estimated 61 to 88 nights per year. Under the 60 maximum scenario these casual hosts would lose some revenue because their maximum number of nights would be reduced to 60.

### **Limitations of Complaint-based System**

Prior to the current regulations enacted in November 2014 that took effect in February 2015, all residential short-term rentals that weren't zoned and permitted as hotels, motels and bed and breakfasts were out of compliance - essentially over 5,000 businesses were operating in the City illegally. Even now that some host's rental activity is permitted, the City's is unable to sufficiently enforce regulations current regulations.

Enforcement is currently reliant on a traditional land use enforcement framework, where complaints trigger investigations. Upon receiving complaints, often from neighbors, violators are cited and asked to appear before an administrative hearing. Alleged violators are given 30 days to come into compliance prior to the hearing. Following the hearing and temporarily suspending business operations, many hosts reportedly return to renting their property short-term. This leaves only limited enforcement options for the City, and a challenge to essentially monitor and document alleged business activities occurring behind closed doors.

### **Framework Effective for Other Land Use Violations**

This complaint-based enforcement framework has historically been effective for other land use violations. This is because most unpermitted commercial land use activities, such as un-approved retail or industrial activities and non-compliant building types were easy to identify and relatively visible to the public. In contrast, the operations of short-term rentals are obscured by vague internet listings and activities that occur within the walls of private residences.

### **Short-term Rentals Require New Information**

Without knowledge of what is occurring within short-term rentals it is nearly impossible to enforce limits on the number of nights that are booked. This information could come from the platforms or, when platforms don't record booking transactions, it could come from the hosts themselves. Access to booking information would allow the Planning Department to better identify violators and substantiate the extent of their violations. This type of data sharing requires a stronger partnership with platforms and hosts to work with the City to ensure compliant hosts are allowed to operate and noncompliant hosts are penalized. If a partnership can't be established, regulations requiring the sharing of data could be considered.

### **City and State Options**

To address these enforcement needs the Board of Supervisors could pass additional legislation requiring that platforms and hosts share booking data that allows the Planning Department to better enforce existing regulation. At the state level, Senator Mike McGuire of Healdsburg introduced state Senate Bill 593. The bill would provide a uniform framework across the state for municipalities to receive booking information on a quarterly basis and hold platforms accountable when their listings violate local laws. The bill would allow municipalities to levy fines against platforms that do not provide data or knowingly list units that violate local regulations.

**Privacy Concerns**

In any case, booking data does contain a degree of private information on hosts' activities. Despite its sensitivity, the data is important as it is the only way to monitor the business operations that hosts and platforms are conducting. Currently, the Planning Department maintains its registration information on a database separate and secured from other information systems in the department. It also anonymizes all host information that the public could potentially access. The same level of protections could be applied to booking data they receive from hosts and platforms. Importantly, information on the guests staying in short-term rentals is not needed for enforcement and the City would not need to receive private guest information.

Personal privacy protection for hosts remains important, but hosting is a business activity and a choice hosts make to transform a residential space into a commercial lodging. Like most other businesses and industries, some level of regulatory oversight is required. If handled with confidentiality and hosts' personal privacy in mind, then asking hosts and platforms to provide information on their bookings would be in line with other types of business oversight.

**Rate of Registration is Low**

Beyond the current enforcement limitations, very few hosts have applied to register their units with the Planning Department, as shown in Figure 14 below. As of May 1, 2015, only 579 hosts have applied. This is a small volume of the total amount of hosts estimated in the City, or 9.5 percent of the 6,113 estimated Airbnb listings as of December 2014, and even a smaller percentage if hosts that use other platforms besides Airbnb are considered. The incoming pipeline for hosts seems small too, with only 550 hosts having applied for business licenses with the Treasurer and Tax Collector since April 30, 2015. However, an unknown amount of hosts may have applied for business permits previously, but the Treasurer and Tax Collector did not track licenses for short-term rentals until recently.

**Figure 14: Low Rate of Registration Compared to Total Estimated Units**

Estimated total number of listings in 2014	Applied for Business License prior to February 2015	Applied for Business License after February 2015	Short-term Rental Applications Submitted to the Planning Department for Review	Certificates Issued	Incomplete Applications	Applications Under Review	Applications Awaiting Review
6,113	Unknown <sup>26</sup>	550	579	282	77	50	170
	Unknown	9.0% of total listings	9.4% of total listings	48.7% of applications	13.3% of applications	8.6% of applications	29.4% of applications
	<i>As of April 30, 2015</i>			<i>As of May 1, 2015</i>			

Sources: Budget and Legislative Analyst Utilization Model, San Francisco Treasurer and Tax Collector, and San Francisco Planning Department

The low rate of applications implies that hosts have limited incentive to apply, don't know about the current regulations or have faced challenges in the application process. Our analysis shows there are an estimated 1,922 hosts operating at a commercial level and 536 renting their entire house for over the current 90 day un-hosted maximum. These hosts might choose not to register in order to avoid any unnecessary attention on their operations. However, even if all hosts applied, the Planning Department would have a very limited capacity to monitor compliance with current regulations without additional information on host's bookings.

**Require Verification of Hosts by Platforms**

Finally, increased registration and compliance with regulations could be encouraged if platforms only listed hosts with verified registration with the City. This again could be accomplished through stronger partnerships with platforms or in lieu of cooperation, regulations requiring platforms to verify the legality of units they list should be considered.

**Alternative Scenarios**

As discussed, the Budget and Legislative Analyst prepared two other scenarios in addition to the primary scenario presented above to estimate the impact of short-term rentals on the housing market. One of the two alternative scenarios presents a lower impact on the long-term rental market than the primary scenario used and the other scenario presents a higher impact.

The key differences in assumptions used to prepare these alternative scenarios were as follows. For the lower impact scenario, a threshold of 90 booking nights

<sup>26</sup> Treasure & Tax Collector did not track business licenses specific to short-term rentals prior to February 2015.

was used to distinguish casual and commercial hosts rather than the 58 used in the primary and higher impact scenarios. This resulted in a smaller number of hosts being classified as commercial and reduced the number of housing units removed from the long-term rental market through short-term rentals. For the higher impact scenario, a 32 percent rate of reviews per booking was used rather than the 70 percent used in the primary and lower impact scenarios. This resulted in more bookings per listing being assumed and thus increased the number of hosts classified as commercial and impacting the long-term rental housing market. The results are presented in the following tables.

<b>Table 15: Higher Impact Scenario: Estimate of Short-term Rental Housing Units in San Francisco, by Type of Host, 2014</b>			
Type of Host/Listing	Threshold Number of Days Unit Rented	Est'd # of Units as of December 2014	Percentage of Total Units
Casual: Entire unit	58 days or under	1,690	28%
Casual: Private room	88 days or under	1,233	20%
Casual: shared room	88 days or under	184	3%
<i>Total casual:</i>		3,107	51%
Commercial: Entire unit	over 58 days	1,960	32%
Commercial: Private room	over 88 days	963	16%
Commercial: Shared room	over 88 days	82	1%
<i>Total commercial:</i>		3,006	49%
<b>TOTAL UNITS</b>		6,113	100%

Source: Webscrape of Airbnb website prepared by Murray Cox, December 2014; Budget and Legislative Analyst Utilization Model

<b>Table 16: Lower Impact Scenario: Estimate of Short-term Rental Housing Units in San Francisco, by Type of Host, 2014</b>			
Type of Host/Listing	Threshold Number of Days Unit Rented	Est'd # of Units as of December 2014	Percentage of Total Units
Casual: Entire unit	90 days or under	2,726	45%
Casual: Private room	88 days or under	1,565	26%
Casual: shared room	88 days or under	226	4%
<i>Total casual:</i>		4,517	74%
Commercial: Entire unit	over 90 days	925	15%
Commercial: Private room	over 88 days	631	10%
Commercial: Shared room	over 88 days	40	1%
<i>Total commercial:</i>		1,596	26%
<b>TOTAL UNITS</b>		6,113	100%

Source: Webscrape of Airbnb website prepared by Murray Cox, December 2014; Budget and Legislative Analyst Utilization Model

Impacts of the two alternative scenarios on long-term housing by neighborhood are presented in Tables 17 and 18. As can be seen, the lower and higher impact scenarios also show impacts on housing available for long-term rentals.

<b>Zip Code</b>	<b>Neighborhood</b>	<b>Rental Market Size (2013)</b>	<b>Vacant For Rent (2013)</b>	<b>Number of Commercial Unit Listings (Low~ High)</b>	<b>Total Potential Units for Rent (Low ~ High)</b>	<b>Airbnb Commercial Unit Listings as % of Total Potential Units(Low ~ High)</b>

### **Policy Options**

**The Board of Supervisors should consider the following actions:**

1. Enact legislation requiring hosting platforms to provide host address information and booking information on a quarterly basis for enforcement purposes.
2. Enact legislation requiring hosting platforms to only list units and hosts that are registered with the City.
3. Enact legislation limiting the number of un-hosted nights allowed per year.
4. Amend the Planning Code to allow the Planning Department to levy fines on platforms that list unregistered hosts.

## Appendix: Methodology

### Airbnb Listing Counts, Distributions, and Prices

#### **Webscrape Total Counts**

The Budget and Legislative Analyst's Office reviewed 7 webscrapes of the Airbnb website prepared by three technology professionals. Webscrapes extract and compile data from the public-facing websites and allow for analysis that would otherwise not be feasible or practical to conduct using a standard browser. All seven of the webscrapes reviews show a consistency over time in the number of Airbnb listings and in rates reported by the different webscrapers. The December 2014 webscrape prepared by Murray Cox was used by the Budget and Legislative Analyst for this analysis as this dataset provided the most comprehensive collection of data. Summary information from each of the seven webscrapes is provided in the Appendix to this report.

The webscrapes used were prepared by the following three individuals. Tom Slee, who works in the software industry, writes about technology and politics, is active in the open data and sharing economy communities, and is based in Waterloo, Ontario. Murray Cox is a community activist based in New York City who utilizes his technology skills for various non-profits and community groups. He has a degree in computer science from the University of Sydney. Gus Dolan collaborates with the Anti-Eviction Mapping Project.

Webscrapes are subject to limitations: there may be duplicate or inaccurate listings, and webscrape authors may run the scrapes several times to reduce error. Because of the consistency of the information in the webscrapes reviewed, the Budget and Legislative Analyst concluded that they were reliable sources of information for this analysis.

The table below shows the frequency distribution of types of listing by each of the 7 webscrape.

<b>Appendix Table 1: Number of Airbnb Listings, by Type</b>				
	<b>Number of Entire Unit Listings</b>	<b>Number of Private Room Listings</b>	<b>Number of Shared Room Listings</b>	<b>Total Number of Listings</b>
<b>November 2013</b>	3,533	1,917	235	5,685
<b>May 2014</b>	2,991	1,733	192	4,916
<b>August 2014</b>	3,001	1,691	173	4,865
<b>December 2014</b>	3,651	2,196	266	6,113
<b>December 2014</b>	3,329	1,938	235	5,502
<b>February 2015</b>	3,176	1,844	229	5,249
<b>February 2015</b>	2,988	2,101		5,089

Source: Webscrapes prepared by: November 2013, May 2014, August 2014, December 2014 and February 2015: Tom Slee; December 2014: Murray Cox; February 2015: Gus Dolan.

The Budget and Legislative Analyst conducted a review and sampling of Airbnb’s current listings to confirm summary statistics of the webscrapes. Average prices were checked by listing type for each webscrape against the website’s reported averages. While variations appear from the different webscrapes, the table below also shows consistent relationships in the prices of the different types of rentals.

<b>Appendix Table 2: Number of Listings</b>				
	<b>Number of Entire Unit Listings</b>	<b>Number of Private Room Listings</b>	<b>Number of Shared Room Listings</b>	<b>Total Number of Listings</b>
<b>November 2013 Tom Slee</b>	3,533	1,917	235	<b>5,685</b>
<b>May 2014 Tom Slee</b>	2,991	1,733	192	<b>4,916</b>
<b>August 2014 Tom Slee</b>	3,001	1,691	173	<b>4,865</b>
<b>December 2014 Murray Cox</b>	3,651	2,196	266	<b>6,113</b>

<b>February 2015 Tom Slee</b>	3,176	1,844	229	<b>5,249</b>
<b>February 2015 Gus Dolan</b>	2,988	2,101		<b>5,089</b>

Source: Webscrapes prepared by: November 2013, May 2014, August 2014, December 2014 and February 2015: Tom Slee; December 2014: Murray Cox; February 2015: Gus Dolan; Budget and Legislative Analyst review of Airbnb.com in April 2015

**Percentage Distribution of Listings by Type**

HR&A reported a percentage distribution by Airbnb listing type in 2012 which was described to be based on actual Airbnb data. The table below compares the distribution by webscrapes to the distribution reported by HR&A. We determined the frequency distribution by listing type for each and calculated the percentage of total listings report for each of the webscrapes. We also calculated the percentage distribution based on our review in April 2015 of the website. We compared the distribution by listing type for the webscrapes and our review to the HR&A distribution, as a check on the webscrapes. We found the percentage distributions to be similar.

<b>Appendix Table 3: Percent Distribution of Listings by Type</b>			
	<b>% Entire Unit Listing</b>	<b>% Private Room Listing</b>	<b>% Shared Room Listing</b>
<b>HR&amp;A 2012</b>	63%	35%	2%
<b>November 2013 Tom Slee</b>	62%	34%	4%
<b>May 2014 Tom Slee</b>	61%	35%	4%
<b>August 2014 Tom Slee</b>	62%	35%	4%

<b>February 2015 Tom Slee</b>	61%	35%	4%
<b>February 2015 Gus Dolan</b>	59%	41%	0%
<b>April 2015 Airbnb Website</b>	54%	38%	9%

Source: Webscrapes prepared by: November 2013, May 2014, August 2014, December 2014 and February 2015: Tom Slee; December 2014: Murray Cox; February 2015: Gus Dolan; HR&A report 2012; Budget and Legislative Analyst review of Airbnb.com April 2015

#### **Price Check by Types**

We checked the average prices by listing type for each webscrape against the website's reported averages. The New York Attorney General's report in 2014 shows seasonality in the usage of Airbnb, which would affect prices based on demand for Airbnb units. The table below reflects the seasonality, showing higher prices in May, November, and December, and lower ones in April.

<b>Appendix Table 4: Average Prices by Listing Type</b>				
	<b>Average Price of Entire Unit Listings</b>	<b>Average Price of Private Room Listings</b>	<b>Average Price of Shared Room Listings</b>	<b>Average Price of All Listings</b>
<b>November 2013 Tom Slee</b>	\$240	\$111	\$73	\$190
<b>May 2014 Tom Slee</b>	\$254	\$132	\$87	\$204
<b>August 2014 Tom Slee</b>	\$281	\$134	\$94	\$224
<b>December 2014 Murray Cox</b>	\$239	\$115	\$72	\$239
<b>December 2014 Tom Slee</b>	no data	no data	no data	no data
<b>February 2015 Tom Slee</b>	\$322	\$153	\$105	\$253
<b>February 2015 Gus Dolan</b>	\$249	\$113		\$193
<b>April 2015 Airbnb Website</b>	\$232	\$115	\$71	\$173

Source: Source: Webscrapes prepared by: November 2013, May 2014, August 2014, December 2014 and February 2015: Tom Slee; December 2014: Murray Cox; February 2015: Gus Dolan; Budget and Legislative Analyst review of Airbnb.com April 2015

**Price Check by Sampling**

In order to gather further confidence in the price data from the webscrapes, we collected data internally to check prices reported in the webscrapes. We pulled samples of sizes to obtain a 95 percent confidence level + / - 10 for select neighborhoods. We used the distribution by type to collect samples for each type from three zip codes.

<b>Appendix Table 5: Sampling by Neighborhood</b>		
<b>Zip Code</b>	<b>Total Number of Listings from Airbnb Website</b>	<b>Sample for 95% Confidence Interval</b>
94110	1,000	183
94109	741	120
94103	738	121

Based on the total populations listed by zip code on Airbnb, we selected samples of the sizes found in the table above. We manually went through the website and collected information to check prices and the length of time host is active for our utilization model.

The sampled data was first used to compare the median prices by listing type for each webscrape to our samples. The data showed variations due to seasonality, but showed similarities.

<b>Appendix Table 6: Median Prices of Listings</b>			
	<b>Median Price of Entire Unit Listings</b>	<b>Median Price of Private Room Listings</b>	<b>Median Price of Shared Room Listings</b>
<b>November 2013 Tom Slee</b>	\$193	\$99	\$54
<b>May 2014 Tom Slee</b>	\$201	\$111	\$62
<b>August 2014 Tom Slee</b>	\$214	\$118	\$79
<b>December 2014 Murray Cox</b>	\$190	\$105	\$60
<b>December 2014 Tom Slee</b>	no data	no data	no data
<b>February 2015 Tom Slee</b>	\$249	\$141	\$83
<b>February 2015 Gus Dolan</b>	\$195	\$100	
<b>April 2015 Airbnb Website</b>	\$182	\$110	\$60

Source: Source: Webscrapes prepared by: November 2013, May 2014, August 2014, December 2014 and February 2015: Tom Slee; December 2014: Murray Cox; February 2015: Gus Dolan; Budget and Legislative Analyst review of Airbnb.com April 2015

Our samples were also used to check the prices of one of the key webscrapes we utilized in our analysis, the December 2014 Murray Cox webscrape. This webscrape provided a more comprehensive database with locations and dates of activity recorded more thoroughly than the other webscrapes. The table below compares the median reported prices from the December 2014 Murray Cox webscrape and our sample data. These numbers show similarities in the data.

<b>Appendix Table 7: Median Prices of Listings for Sampled Neighborhoods</b>				
		<b>Median Price of Entire Unit Listings</b>	<b>Median Price of Private Room Listings</b>	<b>Median Price of Shared Room Listings</b>
<b>April 2015 Airbnb Website</b>	<b>94103</b>	\$199	\$113	\$65
	<b>94109</b>	\$195	\$107	\$159
	<b>94110</b>	\$174	\$100	\$53
<b>December 2014 Murray Cox Webscrape</b>	<b>94103</b>	\$185	\$115	\$59
	<b>94109</b>	\$193	\$120	\$74
	<b>94110</b>	\$180	\$100	\$59

Model to Estimate Utilization Rate (Days per Year)

Our model to estimate utilization rate in days per year required several preliminary calculations.

**Apparent review rate**

Total # reviews / Total # bookings = Review rate (1)

Airbnb stated that the rate of reviews was 72 percent in 2012. However, data on New York City's apparent reviews and bookings show a rate of 30.5 percent. The New York Attorney General's report on Airbnb released in October 2014 shows a total of 497,322 bookings from January 1, 2010 through June 2, 2014. Data pulled from Murray Cox's InsideAirbnb.com showed reviews of 151,623 from January 1, 2010 through June 2, 2014, which is an apparent review rate of 30.5 percent.

We interpret this 30.5% of reviews as the apparent review ratio, in that the number of visible reviews to the number of actual bookings remains a reliable variable assuming

that Airbnb behaves similarly with the San Francisco market in its activities around reviews.

We used both ratios in our calculations. The 30.5 percent apparent review ratio estimated a higher number of bookings to apparent reviews, and the 72 percent review ratio estimated a lower number of bookings to reviews.

#### **# Days listing active**

Date of host join - Date of first review = # Days listing active (2)

The dates a listing is active was calculated by subtracting the date of the host joining from the date of last review. Airbnb has been noted to remove older reviews and alter the review displays.

#### **# Reviews per average booked nights**

(# Reviews for a listing / Review rate) \* Average # nights for a listing = Estimated # nights booked for a listing (3)

We divided the number of reviews visible on the site by the review rate to get the estimated number of bookings (see (1)), and multiplied this by the average number of nights per stay of 5.1 as reported by SF Travel. This gives us an estimate of the number of nights the Airbnb listing is occupied.

**Utilization rate over lifetime of listing**

Estimated # nights booked for a listing / # Days listing active = Utilization rate over lifetime of listing (4)

We divide the estimated number of nights booked for a listing (3) by the dates a listing is active (2), to determine the utilization rate over the lifetime of a listing.

**Utilization rate model**

Utilization rate over lifetime of listing \* 365 days = # Days a listing is booked out of the year (5a)

We multiple the utilization rate in (4) by 365 days in a year to obtain an estimate of the number of days a listing is booked out of the year. This is our utilization rate.

To put it all together, our model to estimate utilization rate (days per year) is as follows:

( [ (# Reviews for a listing / Review rate) \* Average # of nights for a listing ] / # Days listing active ) \* 365 days = # Days a listing is booked out of the year (5b)

**Estimated revenue**

Price per night \* # Days a listing is booked out of the year = Estimated revenue per listing per year (6a)

Estimated revenue per listing per year / 12 = Estimated revenue per listing per month (6b)

The webscrapes provided listing prices per night. We multiplied this by the number of days a listing is booked out of the year to get an estimate of the revenue per year. We divided the estimated revenue per year by 12 to get an estimated revenue per month.

Number of Rentals Available "for rent" by Neighborhood

The American Community Survey is conducted annually by the U.S. Census Bureau. Compared to the relatively comprehensive 10-year Census, the American Community Survey is a "mandatory ongoing statistical survey that samples a small percentage of the population every year." The American Community Survey selects approximately 1-in-480 addresses to mail 3.5 million questionnaires annually. While this is a significant number of individuals and addresses surveyed, it still relies on statistical assumptions, which result in a margin of error for every American

Community Survey estimate. The American Community Survey Rental Vacancy figures include all units listed for rent but currently not occupied and all units that are rented but have yet to be occupied by the incoming tenant. The total number of units that are vacant but have incoming tenants is expected to be small, but does somewhat inflate the size of the available rental units listed on the market.

Another survey challenge of the American Community Survey is that field representatives are only deployed to review addresses which did not reply by mail, internet or phone. As such, there are no field representatives present to independently assess the units reported by mail, internet or phone. If a survey respondent has any reason to falsely report or not report a vacant unit these false responses are then included in the data. Despite these shortcomings, the American Community Survey vacancy data was the most reliable, comprehensive, and up-to-date data source identified by the Budget and Legislative Analyst.

#### Size of Rental Market by Neighborhood

The American Community Survey includes an estimate of Rental Vacancy Rates, and the rental market size by neighborhood was backed out of the 5-year estimate of the Rental Vacancy Rate. The American Community Survey summary of definitions defines the Rental Vacancy Rate as "The rental vacancy rate is the proportion of the rental inventory that is vacant "for rent." It is computed by dividing the number of vacant units "for rent" by the sum of the renter-occupied units, vacant units that are "for rent," and vacant units that have been rented but not yet occupied, and then multiplying by 100. This measure is rounded to the nearest tenth."

American Community Survey estimates vacant units "for rent," renter-occupied units, and rented but not yet occupied units. These three were added to find the size of the rental market. This was checked against the American Community Survey's estimate of the overall housing stock and subtracting out the home ownership rate for the city to get the size of the rental market.

#### Rental Unit and Room Prices

Gross rents reported by the American Community Survey were used for 2013 rents. Zillow median rental prices by zip code over 2014 were used for market rate comparisons.

<b>Appendix Table 8: Rents by Neighborhood</b>			
<b>Zip Code</b>	<b>Neighborhood</b>	<b>Median Rent (2013)</b>	<b>Room Rental Price (2013)</b>
94102	Tenderloin/Union Square/Hayes Valley	\$2,326.51	\$840

Eviction rates

The San Francisco Rent Board provided data on the number of eviction notices filed. The Rent Board does not track the purpose of evictions systematically and does not follow up on outcomes of notices filed, but stated that the notices filed are a reliable indicator of the number of actual evictions.

**Subject:** Report To Submit to Land Use Committee for May 18th Meeting  
**Attachments:** The Impact of Airbnb on the San Francisco Housing Crisis\_Alex Marqusee\_May2015.pdf

Hi Andrea,

I hope everything is going well. I'd like to submit the attached report to the land use committee for their meeting on the 18th. I unfortunately will not be there to also comment publicly but I would like this to be part of the record for the meeting.

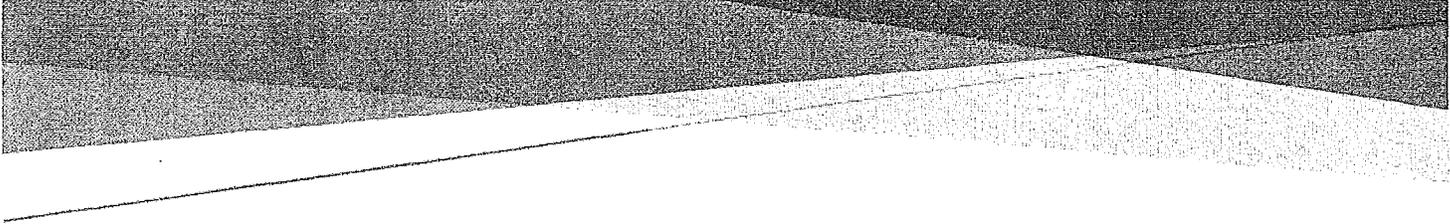

The attached document, "The Impact of Airbnb on the San Francisco Housing Crisis" is in response to 2014-001033PCA, 2015-003861PCA, and 2015-004765PCA [Board File No. 141036, 150295, 150363].

Please excuse me if I should be sending this to someone else.

Best,

--

## EXECUTIVE SUMMARY

In November of 2014, San Francisco enacted an ordinance to regulate the short term rental (STR) market that has existed illegally since at least 2008.<sup>1</sup> Short term rentals in San Francisco generate enormous consternation and controversy over their potential to disrupt the social fabric of neighborhoods as well as the threat they pose to the City's stock of affordable rental housing. So far, anecdotes, conjecture and political posturing dominate the public discussion.

This report seeks to infuse data and economic analysis into the public policy debate over the impact of short term rentals to rental housing in San Francisco. The analysis relies on the publicly facing data available from Airbnb, the largest STR hosting platform, demographic and economic indicators and a database of apartments posted on Craigslist in 2014.

This report investigates what, if any, problems short term rentals pose to the supply of rental housing in San Francisco in order to recommend improvements to the current legislation. In order to minimize the potential loss of long term rental housing while still permitting STRs, this analysis recommends that the Board of Supervisors of the City and County of San Francisco:

### **Increase the current limit on STR use to 120 days for any combination of hosted and unhosted STRs:**

1. The vast majority of STR hosts appear to be genuine 'homesharers' who rent their space infrequently and do not impact the supply of long term rental housing.
2. Approximately 10% of hosts appear to be 'Airbnb hotels' that rent their listing for more than half of the year. The existence of these fully commercial units and the potential for further conversions necessitate an enforceable cap.
3. It is infeasible to enforce two caps that differentiate between hosted and unhosted rentals.
4. This analysis suggests that raising the cap from 90 to 120 days will not incentivize more conversions since at a 120 day cap almost no vacant apartments are more profitable as STRs than as traditional long term rentals.

### **Remove the restriction on rent controlled tenants earning more revenue than they pay in monthly rent:**

1. Even though at least 30% of rent controlled tenants could pay for their entire rent through STR income, there is no reason to suggest that these tenants would have rented their spare bedrooms to long term roommates in the absence of STRs. In effect, it is unclear whether any housing is being removed from the market due to the use of STR by rent controlled tenants.
2. This provision hurts low income rent controlled tenants who might benefit greatly from the extra income generated through a STR.

### **Give regulators the powers necessary to enforce the law:**

---

<sup>1</sup> Cutler, K. *San Francisco Legalizes, Regulates Airbnb with 7-4 Vote, Lots of Amendments*. 2014. Tech crunch piece Retrieve at <http://techcrunch.com/2014/10/07/san-francisco-airbnb/>

1. Currently, the law is completely unenforceable and market trends indicate that an unregulated STR market will lead to the loss of more long term rentals. In order to make the law enforceable, the enforcing agency needs to be able to require short term rental hosting platforms to regularly provide non-anonymized data and/or to fine hosting platforms each day for listing illegal short term rentals.

## AUTHOR'S NOTE

This report was prepared by Alex Marqusee as part of the program of professional education at the Goldman School of Public Policy, University of California, Berkeley. This report is submitted in partial fulfillment of the course requirements for the Master of Public Policy degree. The judgments and conclusions are solely those of the author, and are not necessarily endorsed by the San Francisco Planning Department, the Goldman School of Public Policy, the University of California, or by any other agency.

**Academic Advisor:** Dan Lindheim, Lecturer, Goldman School of Public Policy, University of California, Berkeley.

**Client:** AnMarie Rodgers, Senior Policy Advisor, Planning Department of the City and County of San Francisco.

## ACKNOWLEDGMENTS

I would like to first and foremost thank AnMarie Rodgers for taking a chance on me and for her partnership and encouragement throughout the process. Thank you for your mentorship, your humor and the incredible energy and enthusiasm you bring to work every day.

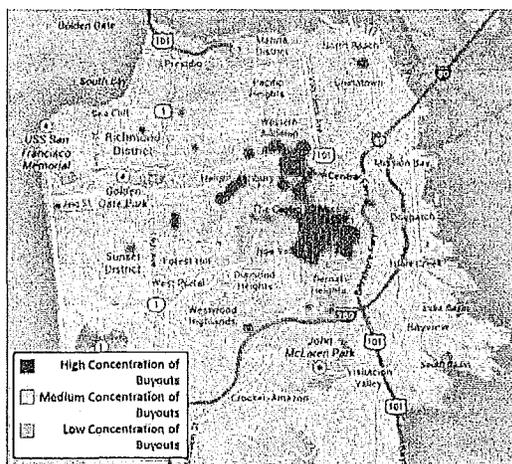

I am also grateful to Dan Lindheim for always pushing me to answer the bigger questions; Larry Rosenthal and Michael O'Hare for suggestions on how to approach the analysis; the entire enforcement team at the Planning Department for letting me pester them with questions; the citywide staff at the Planning Department for their comments and suggestions; and, of course, to Airbnb and Homeway for creating a policy conundrum for me to solve. Finally, many thanks to the inimical Ann Hollingshead for her constant reminders of just how far we can go if only we truly believe in ourselves.

On a personal note, I am thankful for the support and friendship of Ethan Guy during this process without whom I would have eaten half as many meals, forgotten to laugh at all my mistakes and never gotten the chance to meet our dear friend George.

## INTRODUCTION

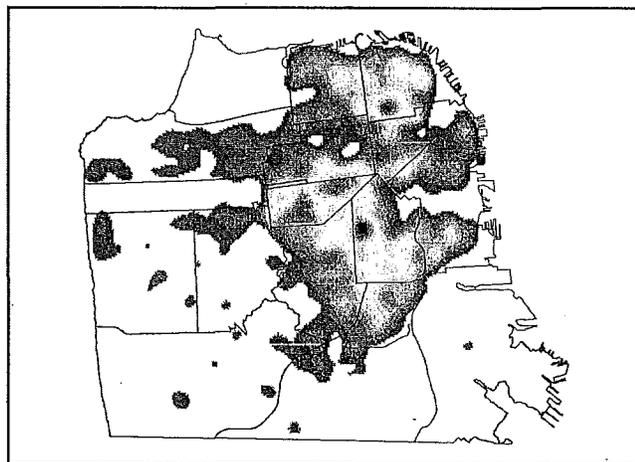

In November of 2014, San Francisco enacted an ordinance to regulate the short term rental (STR) market that has existed illegally since at least 2008.<sup>2</sup> Short term rentals in San Francisco generate enormous consternation and controversy over both their potential to disrupt the social fabric of neighborhoods and the threat they pose to the City's stock of affordable rental housing. Opponents of STRs claim that the commercial use of residential housing remove units from the long term rental market and increases rents. If nothing else, short term rentals have become a flashpoint in the debates surrounding the housing affordability crisis and opponents claim that they contribute to the gentrification in and displacement of vulnerable communities:

Exhibit 5: Map of Reported Tenancy Buyouts, 2013-14

Source: San Francisco Tenants Union, 2014 as of February 28, 2014

Distribution of Airbnb Listings (December 2014)

On the other side of the debate, proponents of 'homesharing' claim that the income generated through STRs allows them to remain in their homes and maintain their quality of life despite the rising cost of living. They also cite internal Airbnb studies that purport to link economic growth to increased tourism made possible by short term rentals. So far, anecdotes, conjecture and political posturing dominate both sides of the public discussion.

This report seeks to infuse data and economic analysis into the policy debate over the impact of short term rentals to rental housing in San Francisco. STRs potentially pose a variety of problems in addition to the impacts to housing but these issues are outside the scope of this report.<sup>3</sup> Instead, this report takes a step back from the political and anecdotal arguments to collect and evaluate the available public data and determine what, if any, problems short term rentals pose to rental housing supply in San Francisco in order to recommend improvements to the current legislations.

<sup>2</sup> Cutler, K. *San Francisco Legalizes, Regulates Airbnb With 7-4 Vote, Lots of Amendments*. Nov. 2014. Retrieved from <http://techcrunch.com/2014/10/07/san-francisco-airbnb/>

<sup>3</sup> A brief overview of the potential problems STRs may pose outside of threats to the housing supply may be found in the Appendix.

The San Francisco Planning Department commissioned this report in response to the lack of credible data sources or analysis from which to recommend an appropriate regulatory framework. This report relies on an analysis of publicly facing data collected from the website of the largest STR hosting platform – Airbnb, which comprises an estimated 80% of the STR market – as a proxy for the entire short term rental market.<sup>4</sup> Readers unfamiliar with short term rentals should begin with the background section included in the Appendix. Additionally, readers interested in an in-depth presentation of statistics describing the Airbnb market in San Francisco and of the limited academic research on STRs should refer to the ‘Marqusee Memo’ submitted to the San Francisco Planning Commission on April 16<sup>th</sup>, 2015.<sup>5</sup>

The rest of the report first introduces and explains the three mechanisms by which STRs might reduce the supply of rental housing. Next, the report presents the potential threat of STRs in the context of the larger rental housing and hotel markets. The loss of rental housing from STRs is then evaluated to determine the current magnitude of STRs’ impact as well as the potential threat for the future. Finally, the report recommends legislative changes. In addition to the background section, the Appendix contains a brief discussion of other problems to tenants and neighborhoods that short term rentals pose, a summary of the findings from this report, a description of data sources and methods, and results from simulations and regressions.

<sup>4</sup> Please refer to the Marqusee Memo.

<sup>5</sup> The Marqusee Memo can be accessed as Exhibit B of the SF Planning Department’s submission to the SF Planning Commission Website on proposed amendments to short term rental legislation. The document can begin on page 30 at <http://commissions.sfplanning.org/cpcpackets/2014-001033PCA.pdf>. A video record of the public debate over short term rentals as well as a brief presentation of the Marqusee Memo can be found at [http://sanfrancisco.granicus.com/MediaPlayer.php?view\\_id=20&clip\\_id=22581](http://sanfrancisco.granicus.com/MediaPlayer.php?view_id=20&clip_id=22581) and the short term rental discussion begins at 2:50.

## HOW COULD SHORT TERM RENTALS IMPACT RENTAL HOUSING?

Leasing lodging on a short term basis isn't a new phenomenon, but the increased frequency of STRs facilitated by online hosting platforms combined with unenforceable regulations raises the possibility of new, larger impacts. An increase in the commercial use of residential housing through STRs poses several potential problems. This section introduces the mechanisms by which short term rentals may reduce the supply of rental housing. The Appendix contains a brief discussion of how short term rentals may pose problems for tenants and for the quality of life in neighborhoods.

### PERMANENT CONVERSIONS TO STR HOTELS

Landlords could choose to convert long term units to short term rental hotels. This might stem from landlords seeking the greatest financial return from their rental unit and deciding short term rentals are more profitable than long term rentals. Even if STRs are less profitable than long term rentals, landlords may seek to avoid the complications of rent control and eviction protections and use STRs to generate almost as much profit as long term rentals.

### INCREASED WITHHOLDING OF RENTAL UNITS

Landlords in San Francisco currently withhold rentals from the market for a number of reasons. San Francisco has a higher incidence of vacant rentals held off the market than comparable cities.<sup>6</sup> The ability to cover operating costs through STR income may encourage more landlords to withhold units from the long term rental market or to withhold units for longer periods of time.

### OVERCONSUMPTION OF HOUSING (LOSS OF ROOMMATES)

Owners and tenants may remove rental capacity from the market by converting bedrooms to 'private room' STRs that they would otherwise offer to long term tenants. Some tenants may value the lack of a permanent roommate more than the financial security of a long term lease and the disruptions associated with STRs. In this scenario, a tenant may purchase more rental housing than they could normally afford by renting part of their new apartment as a STR.

In other scenarios, current residents may have an additional bedroom that they could rent to a long term tenant but decide to rent on a short term basis. This may happen to avoid rent control, the potential for being locked into a year-long contract with a noxious tenant or if they value the flexibility of not having to always have a roommate.

Retrieved from [http://www.spur.org/sites/default/files/publications\\_pdfs/SPUR\\_Non-Primary\\_Residences.pdf](http://www.spur.org/sites/default/files/publications_pdfs/SPUR_Non-Primary_Residences.pdf) Page 9 indicates that the vacancy rate in San Francisco is 60% higher than in comparable cities.

## EVALUATING IMPACTS TO RENTAL HOUSING FROM SHORT TERM RENTALS

This section evaluates the extent to which each of the mechanisms described above currently impacts rental housing as well as its potential to reduce the supply of rental housing in the future. First, the section begins with a description of current and projected short term rental market in San Francisco in order to put the potential threat to rental housing in context.

### PUTTING THE THREAT OF SHORT TERM RENTALS TO RENTAL HOUSING IN CONTEXT

The removal of even a small number of rental units could have a large impact on the availability of rental housing in San Francisco because of the current very low rental vacancy rates. The table below presents data from the census in 2013 on the number of vacant units in San Francisco as compared to the number of apartments listed on Airbnb at the end of 2014. Please note that there are certainly more STR listings on other STR hosting websites.

The vacancy data from the census shows that there were at least 5,883 rental units available in 2013 and another 8,898 vacant units that the census staff were unable to characterize and might have been available for rent. Compared to the limited available rental housing, if some STRs remove rental housing then STRs could substantially reduce the supply of available rental housing.

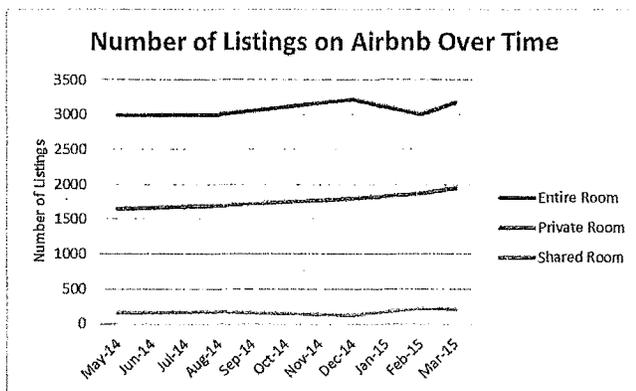

Interviews with housing experts and economists revealed that, either through signaling or by directly reducing the stock of low-cost housing, small changes in supply can have discernable effects on rental

prices, particularly when rental vacancy rates are low.<sup>7</sup> In other words, the actual loss of even a few units or the appearance of units being removed from the market can increase prices in areas where vacancy rates are very low. In 2013, the census estimated an overall rental vacancy rate of 2.5%.<sup>8</sup> However, some submarkets such as Pacific Heights, Russian Hill, the Western San Francisco neighborhoods and the Haight-Ashbury neighborhood have vacancy rates lower than the city-wide average.<sup>9</sup> The loss of even a few long term rentals in these areas could exacerbate the housing crisis in San Francisco in submarkets with lower vacancy rates.

### SUPPLY OF SHORT TERM RENTALS

There are approximately 3000 'entire units' and another 2000 'private or shared room' short term rentals available on Airbnb.<sup>10</sup> There are approximately another 1200 listings on VRBO but it's unclear how many of these listings are repeated on multiple platforms.<sup>11</sup> For Airbnb, this number has not changed significantly over the past year.

The number of actual properties available for rent is lower than the number of listings. There are certainly fake listings as well as listings where the same property lists both a private room and an entire unit separately.<sup>12</sup> In addition, approximately one fifth of rentals appear to have never be rented.<sup>13</sup>

Geographically, Airbnb listings concentrate in the downtown and central neighborhoods. The maps below show a 'heat map' of the concentration of listings on the left and each Airbnb listing rendered individually as a point on the right:

<sup>7</sup> Interviews conducted by Ann Hollingshead and shared with Author. The original work can be accessed from: Hollingshead, A. (Forthcoming: 2015). Maps of Airbnb Listings in San Francisco (December 2014)

This higher concentration of units in the central and northern neighborhoods remains even after controlling for the higher density of housing units in those neighborhoods.

Map of Airbnb Listings Normalized by Number of Housing Units (Dec. 2014)

The map to the left presents the number of listings on Airbnb in each neighborhood divided by the total number of housing units in that neighborhood. Darker shades represent neighborhoods with higher concentrations of Airbnb listings. Controlling for housing density in this way confirms that the concentration of Airbnb units in the northern and central neighborhoods is not due simply to a larger total number of housing units in those areas.

## DEMAND FOR SHORT TERM RENTALS

A lack of good data precludes a perfect accounting of the demand for short term rentals in San Francisco. However, it is possible to approximate the demand for STRs by corroborating several data sources. In 2014, a survey of 4,682 visitors to San Francisco found 76 visitors who were staying in “peer-to-peer lodging” of some kind through Airbnb, VRBO, Homeaway or a related service. From this number, the survey estimated that 130,000 visitors stayed in peer-to-peer lodging in 2014.<sup>14</sup> In 2012, a

---

<sup>14</sup> Destination Analysts. *San Francisco: Visitor Industry Economic Impact Summary, 2014*. Published by the San Francisco Travel Association provided to the author

study commissioned by Airbnb reported that the highest demand in any one month was 1,576 individual bookings in August.<sup>15</sup>

In addition, data collected from Airbnb's website allow for an estimation of the number of days guests book each listing (i.e. the occupancy rate). There are four methods to approximate the true occupancy rate per listing. These methods provide a range of estimated occupancy rates to account for the fact that guests underreport reviews and that many guests stay for longer than the minimum stay required by the host.<sup>16,17</sup>

#### Methods for Estimating Occupancy Rates

1. Restrict the analysis to only include units for which an occupancy rate can be reasonably estimated: those active for more than six months that also have a minimum required stay of fewer than 6 days. Other units may show much higher occupancy rates that in reality reflect the higher occupancy rates during the summer or have recently changed their minimum required stay to much higher than 6 nights. These restrictions lead to conservative estimates.
2. Calculate the minimum occupancy rate by multiplying the number of reviews per year by the minimum length of stay required by the host.
3. Create less conservative estimates of the occupancy rate that account for the underreporting of reviews and average stays longer than the minimum required by the host:
  - a) Multiply by the minimum length of stay and inflate the number of reviews to account for underreporting. Airbnb stated in 2012 that only 72% of guests leave reviews.
  - b) Multiply by the average length of stay instead of minimum required stay. Three sources from 2012 and 2014 state that, on average, guests stay approximately 5 nights per trip.
  - c) Use both the average length of stay instead of the minimum required and inflate for the underreporting of reviews.

These calculations create the following distributions in the chart below of the number of days per year that Airbnb listings have been rented. The groups represent increasingly less conservative estimates

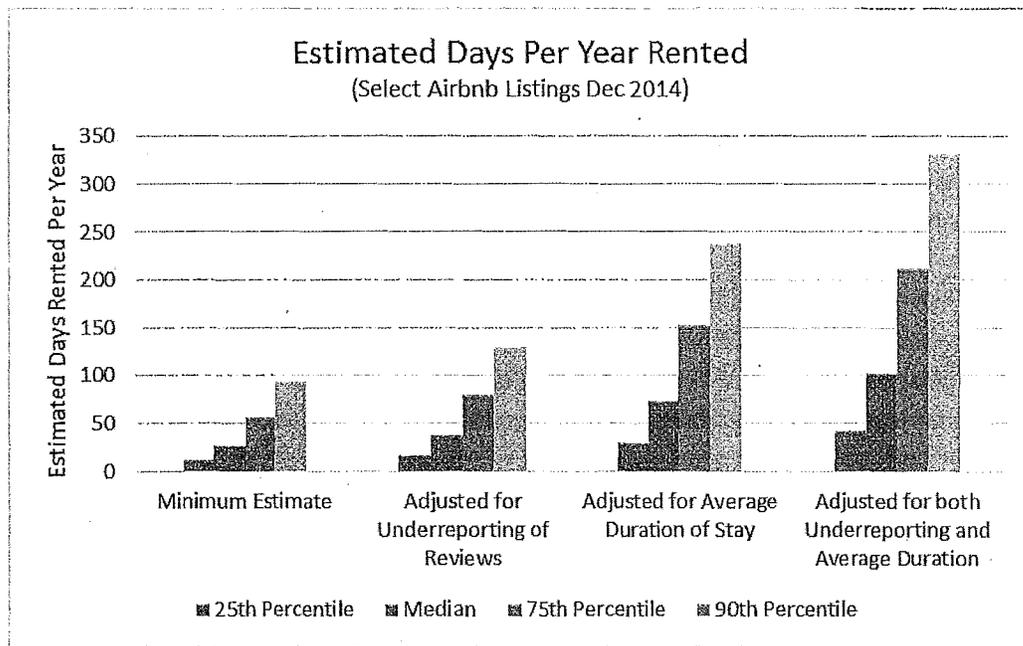

---

<sup>15</sup> Rosen Consulting Group. *Short-Term Rentals and Impact on the Apartment Market*. 2013. Retrieved from <http://www.rosenconsulting.com/products/rentalreport.html> . This report accessed Airbnb data for 2012 but offers no transparency into their methodology. The website 'Journalist's Resource' described this study as an internal Airbnb report.

<sup>16</sup> Multiple sources over several years point to an average duration of stay of 5 nights in San Francisco most recently the Destination Analysts report cited earlier found an average length of stay of 5.1 nights.

<sup>17</sup> Chesky, B. (9/7/2012) *What percent of Airbnb hosts leave reviews for their guests*. Retrieved from: <http://www.quora.com/What-percent-of-Airbnb-hosts-leave-reviews-for-their-guests>

arranged from left to right. For each estimation technique, the value of the quartiles and the 90<sup>th</sup> percentile visualizes the range of the days of occupancy realized by Airbnb listings as of December 2014.

The above chart shows how difficult it is to accurately estimate occupancy rates for Airbnb units with the very highest occupancy rates. It is possible to say that the top ten percent of most frequently booked Airbnb Units are likely occupied between a quarter to three quarters of the year. However, the data do not support more precise estimates due to potential biases. For instance, the recent survey presented above reported that the 67 visitors to San Francisco staying in peer-to-peer lodging stayed for an average of 5.1 nights. In reality, this average reflects a distribution that might be different for different types of rentals. STRs that resemble hotels may have a very high number of reviews and bookings but each booking is only for a few days. Conversely, STRs that cater to business travelers staying for two week conferences may have fewer reviews and bookings but each stay is for a week or more. If these two scenarios represent most listings, then the conservative estimates would underestimate the occupancy rate of STRs catering to business travelers and the less conservative estimates would overestimate the occupancy rate of STRs that resemble hotels. However, given that it is impossible to know whether that scenario is true, this report assumes that the distribution of the duration of stay is unrelated to the number of reviews a unit has. Regardless, these estimates represent the best approximation of the occupancy rates of STRs in the absence of data provided directly by the hosting platforms.

#### REGULATIONS AND ENFORCEMENT

The current San Francisco law restricts the use of short term rentals to permanent residents. There is no restriction on the number of days a host can rent their unit while present ('hosted rentals') but there is a 90 day cap on the number of days a host can rent their unit while not present ('unhosted rentals'). Legal

operators of short term rentals must be registered with the San Francisco Planning Department, have a business license, and hold liability insurance for at least \$500,000. In addition, tenants of below market rate rentals are barred from offering STRs and tenants in rent controlled apartment are restricted from generating more revenue per month than they pay in rent.<sup>18</sup>

The legislation charges the San Francisco Planning Department with enforcement but the legislation fails to provide enough tools to meaningfully enforce the law for several reasons. First, it is very difficult to verify whether or not an applicant is a permanent resident. School districts for years have run into great difficulty investigating parents for misrepresenting their permanent addresses.<sup>19,20</sup> Second, it is virtually impossible to monitor whether or not a host is present or not during the rental. Third, it is unclear how the Department can monitor the current rent that rent controlled tenants pay or the total revenue or profit generated by any listing. Finally, verifying that a host has not exceeded the cap on unhosted rentals may prove to be impossible without data from the short term rental platform. The Planning Department may be able to catch hosts exceeding the cap on occupancy by analyzing tax receipts submitted to City but it is unclear at this point whether or not that is possible.

#### PROJECTING THE SHORT TERM RENTAL MARKET

The market for STRs in San Francisco, much like any other lodging market, will change over time depending on the underlying fundamentals of the local economy as well as the prices, demand and supply for its substitutes and complementary goods.

The very limited evidence suggests that short term rentals substitute for lower-priced hotels. An econometric study by researchers from Boston University found that a 10% increase in the supply of Airbnb listings in Texas caused a 0.35% decrease in the monthly revenue for hotels in the same area.<sup>21</sup> They also found that the impact on revenue was not distributed evenly amongst all hotels but disproportionately impacted lower-priced hotels. Even though this is just one study, it does confirm at least the link between short term rentals and traditional hotel lodging in a city with similar housing pressures to San Francisco.<sup>22</sup>

Currently, hotels in San Francisco report record high occupancy rates and analysts project that this trend will continue in the near term. SF Travel, the local travel industry association, reports that many

companies who host conventions and large meetings in San Francisco book large blocks of hotel rooms fifteen years in advance.<sup>23</sup> PKF Hospitality Research recently reported a city-wide occupancy rate of 85% which belies the fact that during the high season hotels are essentially completely booked.<sup>24,25</sup> Occupancy rates are similar for both upper-priced and lower-priced hotels. These record high occupancy rates mean that there is little excess supply to accommodate any increase in the number of visitors travelling to San Francisco. Instead, visitors will have to either stay in lodging outside of the city or turn to STRs.

A projected increase in demand for lower-priced hotels combined with rising hotel prices and a limited supply of new hotel rooms suggests that demand for short term rentals will increase in the near term. Tourism Economics' projections illustrate the increasing mismatch between rising demand for hotel lodging and the anemic supply response.<sup>26</sup>

The chart above confirms that demand is projected to outstrip supply over the next few years and that the average daily rate for hotel rooms in San Francisco will rise from approximately \$200 per night to

<sup>23</sup> Sciacca, A. *Here's where 1,600 hotel rooms are planned in San Francisco*. 2015. Retrieved from <http://www.bizjournals.com/sanfrancisco/blog/2015/04/san-francisco-hotel-projects-tourism-slideshow.html?page=all>

<sup>24</sup> PKF Hospitality Research, A CBRE Company. *San Francisco Econometric Forecast of U.S Lodging Markets*. March-May 2015 Edition. Provided to the author by the SFTA.

<sup>25</sup> Occupancy rates for hotels varies seasonally. Data from 2010-2012 illustrates clearly that occupancy rates in the last spring and the summer are approximately ten percentage points higher than the annual average.

<sup>26</sup> STR. *Tourism Economics, Forecast – San Francisco/ San Mateo, CA*. February 2015. Provided to author by SFTA.

\$250 per night over the next two years. However, the changes in supply and demand are not projected to be even spread across all types of hotels.

Demand for lower priced hotel is projected to grow at an even higher rate than upper-priced hotels at approximately three percent over the next few years. Supply is only projected to increase by the 195 lower-priced hotel rooms in the two hotels currently under construction. To put that in context, there are currently 7691 lower-priced hotel rooms in San Francisco. Even if the hotel rooms under construction come on-line immediately, that only represents a 2.5% increase in supply resulting in a modest increase in occupancy rates in lower-priced hotels. The increased occupancy for lower-priced hotels and the rising prices relative to STRs suggests that consumers will increasingly substitute towards short term rentals as a substitute for increasingly expensive and unavailable lower-priced hotels.

In addition, there is another market for STRs that includes visitors, new residents and business travelers interested in lodging that falls somewhere between a hotel and a formal, longer-term sublease. These consumers are searching for vacation rentals, corporate housing or temporary housing for a couple of weeks. These consumers are not substituting away from hotels but rather appear to be taking advantage of short term rentals hosting platforms as one of the only ways for extended stay rentals. For business travelers at least, newspaper accounts indicate a growing acceptance of STRs and companies that handle reimbursements have started to accept Airbnb as a valid expense item.<sup>2728</sup>

Finally, upper-priced hotels comprise over two thirds of the supply of hotels in San Francisco and charge approximately \$250 per night on average.<sup>29</sup> Prices for upper priced hotels are projected to increase to nearly \$300 per night by the end of 2017 and there is no supply of upper-priced hotels planned for at least the next three years. Demand, however, is projected to increase for upper-priced hotels. Entire apartment STRs in comparison only charge about \$250 on average and private room rentals only charge about \$120 all before cleaning fees which average about \$80-\$90 and a 20% tax and fee surcharge.<sup>30</sup> It is unclear whether the prices of STRs will rise alongside of hotel prices since there is conceivably a much larger pool of potential STR suppliers who might be induced to enter the market by rising demand.

The analysis presented here suggests that rising prices and reduced availability for upper-priced hotels will lead more affluent consumers to search for more expensive STRs, lower-priced hotels or lodgings outside of San Francisco. In addition, if STRs do substitute in large part for lower-priced hotels, then the increasing affordability of STRs relative to hotels and the scarcity of available lower-priced hotel rooms suggests that more and more consumers will look to short term rentals. At the very least, there is no

evidence to suggest that current market conditions that have led to worries about STRs removing rental housing will lessen in the near future.

## EVALUATING THE LOSS OF RENTAL HOUSING FROM SHORT TERM RENTALS

### PERMANENT CONVERSION TO STR HOTELS

Short term rentals may remove housing from the long term rental markets through the conversion of rental units to full-time, commercial STR hotels. Unfortunately, data limitations preclude a perfect estimation of the number of STR hotels. Data scraping offers a large amount of useful information to understand the Airbnb market but does not offer data on the exact number of bookings or the length of those bookings. It is possible to get a general sense of the magnitude of the number of commercial users through the occupancy rates estimated earlier. However, these estimates rely on assumptions about the number of guests that leave reviews and the length of each stay. With the qualification that these estimates are mildly conservative approximations, the following table shows the numbers of suspected commercial units defined as listings with an occupancy rate greater than 50%:

*Estimated Number of Commercial Airbnb Units: All Airbnb Units (Dec. 2014)*

Type of Unit	Occupancy Rate Above 50% (Average of 5.1 Days per Stay)	Occupancy Rate Above 50% (Most Conservative Calculation)
Entire home/apt	413	23
Private room	303	10
Shared room	9	0
<b>Total</b>	<b>725</b>	<b>33</b>

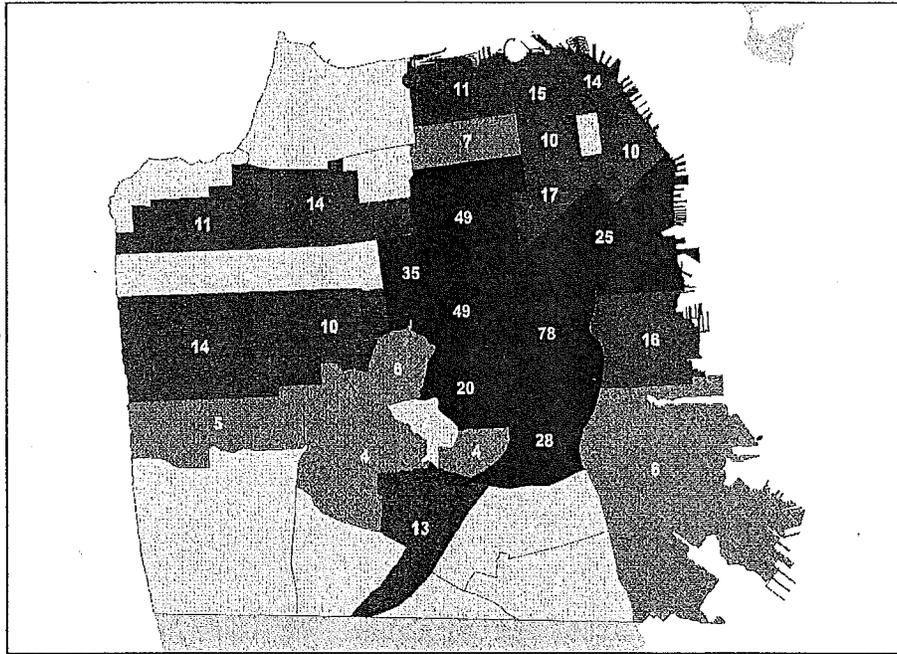

However, some of these units may only reflect a high occupancy rate because they have been listed for a very short amount of time or had a few bookings just after entering the market. It is also possible that listings that joined Airbnb in the spring of 2014 benefited from the increased demand that occurs each year during the high tourist season in summer. The next table only looks at Airbnb rentals that have been listed for at least six months to exclude this source of potential bias:

*Estimated Number of Commercial Airbnb Units: Airbnb Units Listed for Minimum Six Months (Dec. 2014)*

Type of Unit	Occupancy Rate Above 50% (Average of 5.1 Days per Stay)	Occupancy Rate Above 50% (Most Conservative Calculation)
Entire home/apt	282	18
Private room	211	8
Shared room	4	0

<b>Total</b>	497	33
--------------	-----	----

The above table confirms that there are Airbnb hosts who rent out their listing very frequently and appear to be operating STR hotels. This distribution of listings is not even across the city:

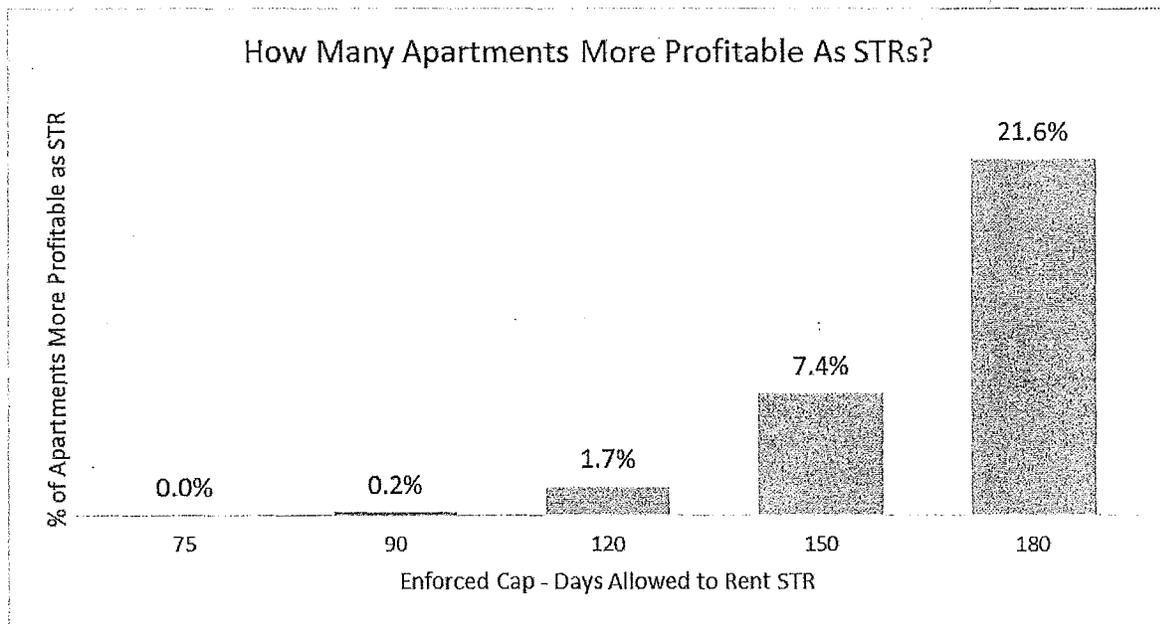

The map above shows the approximately 500 commercial Airbnb units representing 10% of total listings. Simulating the choices landlords face when choosing between a STR and a traditional long term rental helps project whether this number may rise in the future. The following analysis seeks to answer the question: how many days would a landlord have to rent out an Airbnb unit to generate more revenue than the equivalent traditional long term rental. The resulting simulation creates a distribution of the 'Break Even Point' by comparing actual, advertised long term rental prices to short term rents calculated to match the apartment's attributes (location, bedrooms and bathrooms). A full explanation of the methods, the regression model and regression results for predicting STR, the model for the 'Break Even Point' and the results of a simulation analysis confirming these statistics is available in the Appendix.

## Methods for Calculating "Break Even Point"

1. Compare short term rents and long term rents for 8500 apartments listed on Craigslist in 2014. A regression analysis created a predicted short term nightly rent for each listing based on its location, number of bedrooms and number of bathrooms.
2. Assume that operating a short term rentals costs 18% of total revenue. Airbnb charges hosts a 3% processing fee and the two most prominent management companies (Pillow and Guesthop) charge 15% of revenue to manage all aspects of running a short term rental. This underestimates the true cost of running a short term rental.
3. Calculate the occupancy rate required for each short term rental to generate the same income as the apartment listed on Craigslist. Expressed as 'Days Occupied until STR is More Profitable' which multiplies the occupancy rate by 365 to convert into number of days out of the year.

Applying the estimated short term rents to a sample of apartments listed on Craigslist creates a distribution of 'Break Even' occupancy rates expressed as the number of days in a year a short term rental would have to be rented to be as profitable as a comparable long term rental. The median value suggests that, on average, there is an incentive for rational landlords to convert long term units to short term rentals if the unit could be rented as a short term rental for more than 213 days out of the year. The distribution also shows that nearly all of the rental units sampled would have to be rented for more than 120 days a year to be more profitable as a short term rental:

The resulting analysis suggests that many vacant properties are vulnerable to conversion to a short term hotel because they would be more profitable as a full time short term rental than as a long term rental.

<sup>31</sup> The potential for an increase in demand for STRs established earlier suggests that in the absence of effective regulation San Francisco should expect more conversions of vacant apartments to commercial STR hotels.<sup>32</sup>

In summary, this analysis suggests:

1. Some hosts currently run commercial Airbnb units in San Francisco. The number is not entirely clear, but it appears to be approximately five hundred units or 10% of total listings concentrated in the downtown and central neighborhoods.
2. In an unregulated market, the majority of landlords have an incentive to convert their vacant apartments into short term rental hotels if they believe they can achieve occupancy rates above approximately 213 days a year.
3. If the current spatial distribution of commercial units continues, the central and downtown neighborhood will have many more units removed from the long term rental market. As a result, there will be an increase in prices in those areas due to the current very low rental vacancy rates.

There may be landlords who still choose to convert their empty apartments to STRs even if they can't generate as much income than a long term rental. The following section investigates this possibility.

#### INCREASED WITHHOLDING OF RENTAL UNITS

STRs may remove rental housing from the long term market if the income from a STR allows landlords to hold more rental units off the market or hold them off the market for longer. This scenario does not pose a problem if the government is able to enforce the requirement that hosts permanently reside in

---

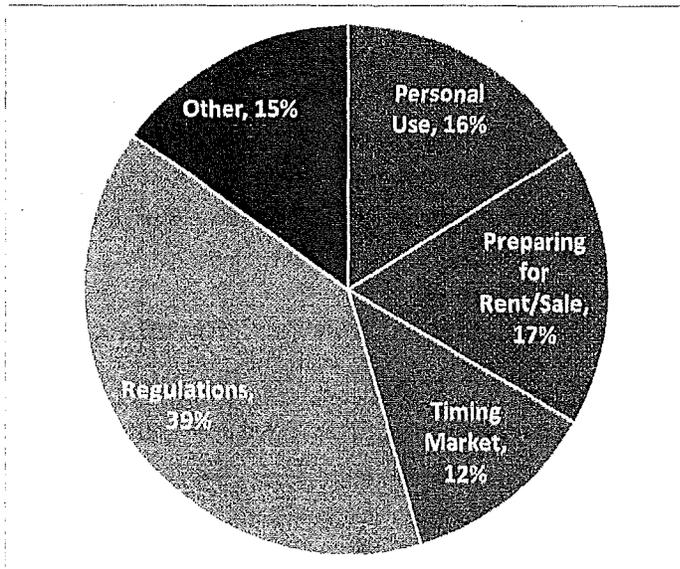

<sup>31</sup> This calculation is only as good as the estimated short term rent. The analysis included simulations of a selection of neighborhoods to confirm that these findings are not due to poor estimates. This method ran two thousand versions of this same analysis by altering the estimated short term rents each time by a random amount of the margin of error. The resulting distributions confirm these findings and can be found in the Appendix.

<sup>32</sup> The available evidence suggests that approximately 10% of current Airbnb listings operate as full-time, commercial Airbnb hotels and that the relative long term and short term prices are such that many more rental units could be converted profitably to short term rentals in an unregulated marketplace. However, the above simulation analysis fails to incorporate landlords' expectations of future income streams when making a choice between long term and short term rentals and so may misstate a rational landlord's decision making process.

A more accurate estimate of a rational landlord's decision to rent a unit as a short term rental or long term rental projects the expected revenue of a long term and short term rental over many years. The income from a long term rental is varied by the expected turnover of tenants each year and the resulting increase in rents by the allowable increase from the rent board or a resetting of rates to the market price. A full description of the methods and results is available in the Appendix. The simulation confirms the earlier results that, on average, a rational landlord would only prefer short term rentals if she were able to achieve occupancy rates similar to a San Francisco hotel.

the unit being rented as a STR. However, it is difficult to imagine a city agency ever being able to audit whether a resident uses an apartment as their primary residence through reasonable methods.

Landlords in San Francisco already hold units off the market for a variety of reasons. In 2003, Bay Area Economics surveyed landlords in San Francisco in part to determine why landlords withhold rental units:<sup>33</sup>

The pie chart to the left illustrates that many units are held off the market without a plan to rent them out in the near future because of a fear of regulations. The small sample size precludes any definitive claims but does establish the real possibility of landlords operating short term rentals in order to hold more units off the market or hold them off the market for a longer period of time.

Landlords only need to cover their operating expenses through a STR in order to hold a unit off the market

without incurring losses. The 2013 Survey of Income and Operating Expenses in Rental Apartment Communities found that the average apartment cost just over \$4,500 annually to operate.<sup>34</sup> In comparison, a study commissioned by Airbnb in 2012 established that the average Airbnb listing generated approximately \$6,772 in income annually.<sup>35</sup>

It is possible to estimate the revenue currently generated by each listing through information available on Airbnb's website including: the number of reviews, the nightly price, the minimum required stay and how long the unit has been listed. However, the resulting metrics understate the true gross revenue and are inexact approximations.<sup>36</sup> Overall, these numbers should be interpreted as only general

<sup>33</sup> Bay Area Economics. *San Francisco Property Owners Survey Summary Report*. Retrieved from <http://www.sfrb.org/Modules/ShowDocument.aspx?documentid=1887>

<sup>34</sup> Lee, C. *2013 Survey of Operating Income & Expenses In Rental Apartment Communities*. National Apartment Association. Retrieved from <http://www.naahq.org/sites/default/files/naa-documents/income-expenses-survey/2013-Income-Expenses-Summary.pdf> Page 60

<sup>35</sup> This data point actually represents the average revenue realized by Airbnb hosts over the last 12 months and not over the 2012 calendar year. It is unclear whether this represents gross revenue or revenue net of fees, taxes and Airbnb charges listed on the website. Data from Rosen Consulting Group study.

<sup>36</sup> The metric understates the true revenue since not all guests leave reviews. In addition, assuming that all guests stayed for the minimum number of nights only provides the minimum revenue. Finally, some guests might have changed their prices and minimum stay requirements over the lifetime of the rental. This makes the resulting statistics less accurate.

approximations of the magnitude of the revenue that listings generate. In addition, this statistic creates misleading results when applied to some units and so the dataset is restricted.<sup>37</sup>

Methods for Estimating Hosts' Revenue	
1.	Calculate the most conservative estimated monthly revenue (number of reviews per month multiplied by the minimum required length of stay multiplied by the price per night).
2.	Calculate progressively less conservative estimates of monthly revenue: <ol style="list-style-type: none"> <li>Multiply the minimum length of stay and inflate by how many users did not leave reviews. Airbnb stated in 2012 that only 72% of guests leave reviews</li> <li>Multiply by the average length of stay instead of the minimum required stay but use the original number of reviews per month. Sources from 2012 and 2014 state approximately 5 nights as the average length of stay.</li> <li>Adjust for both the average length of stay instead of the minimum and for the underreporting of reviews.</li> </ol>

The following table presents the distribution of monthly revenues from the four different estimation techniques and are presented top to bottom in order from most to least conservative. Please note that these are estimates meant to give an approximation of how much revenue listings generate each month on average:

*Estimates for Hosts' Monthly Revenue: Select Airbnb Units (Dec. 2014)*

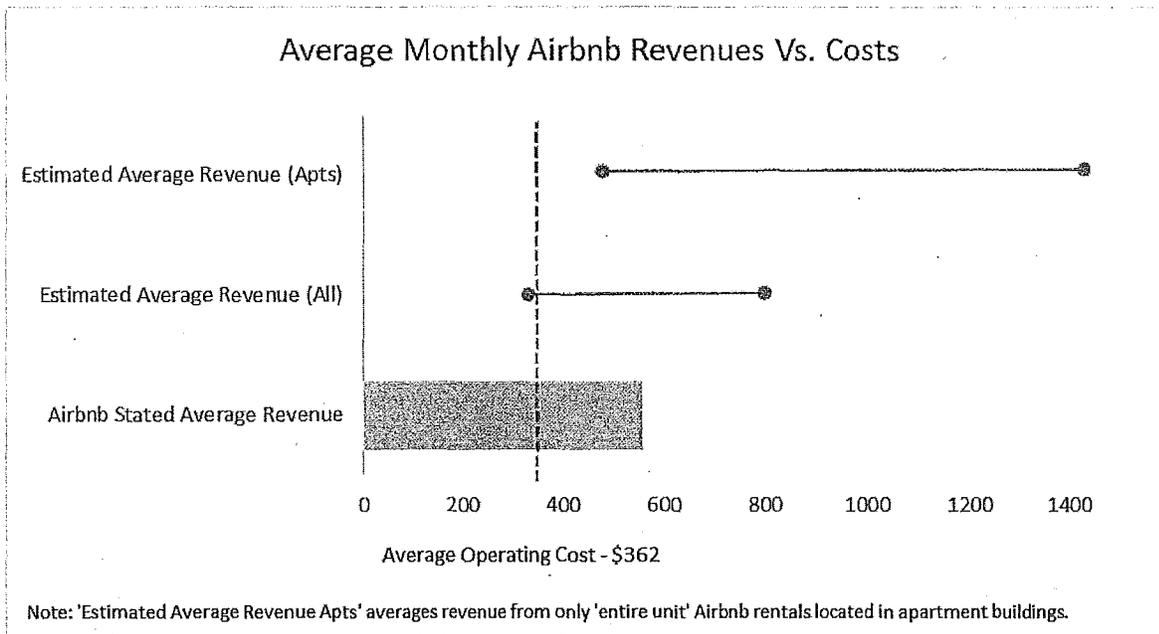

Adjustment to Estimate	25 <sup>th</sup> Percentile	50 <sup>th</sup> Percentile	75 <sup>th</sup> Percentile	90 <sup>th</sup> Percentile	95 <sup>th</sup> Percentile
<b>Nothing (Most Conservative Estimate)</b>	\$150	\$356	\$780	\$1,364	\$1,800
<b>Number of bookings inflated for missing reviews</b>	\$208	\$495	\$1,083	\$1,894	\$2,500
<b>Average stay of 5 nights instead of minimum requirement</b>	\$398	\$956	\$1,964	\$3,189	\$4,137

<sup>37</sup> The following statistics are misleading when calculated for certain units and so the data is restricted to avoid biasing these results. First, these statistics exclude units that have been offered for fewer than six months to remove revenue numbers that might only reflect the occupancy rates during San Francisco's high tourist season during the summer.<sup>37</sup> In addition, it is clear that some units have changed their minimum nights required for a reservation since the unit's reviews per month multiplied by the minimum nights for reservation exceed the number of days in a month. So, these statistics exclude units with a minimum required stay of more than five days to very conservatively avoid the potential for including these inaccurate estimations. These two restrictions reduce the total units for this analysis from 5148 units to 2752 units.

Both increased length of stay and inflated for missing reviews (Least Conservative Estimate)	\$553	\$1,328	\$2,727	\$4,429	\$5,746
--	-------	---------	---------	---------	---------

When annualized, the more conservative estimate that just corrects for the under reporting of reviews illustrates that most Airbnb units in San Francisco generate more revenue than the average operating cost of about \$4,500 (or approximate \$380 monthly). Both the upper range of the estimated revenue that Airbnb units currently generate as well as the average revenue that Airbnb reported in 2012 exceed the national average of long term operating costs.

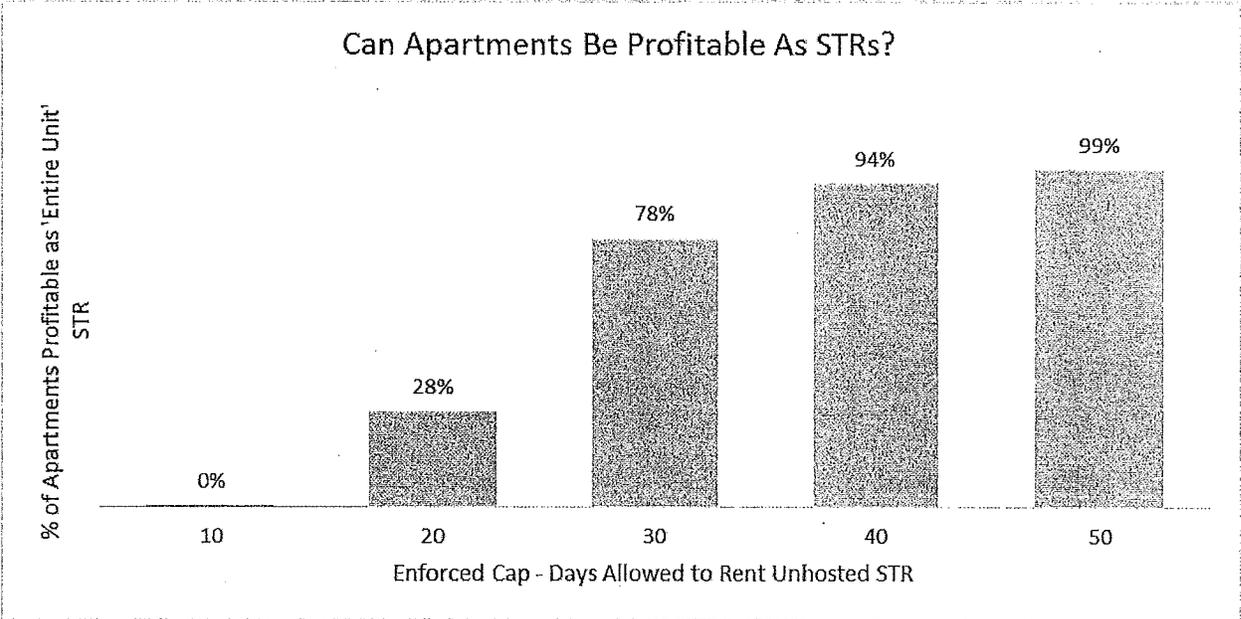

Estimating revenue for only Airbnb listings in apartment buildings illustrates that STR operators in apartment buildings currently generate higher revenues than they pay in annual operating costs.

The chart above establishes that the average Airbnb STR located in an apartment building that is rented out as an entire apartment generates more revenue than the average annual cost of operating an apartment unit.<sup>38</sup> However, these calculations of revenue do not include the costs associated with running a short term rental (managing reservations, scheduling cleaning services, purchasing extra insurance, etc.).

<sup>38</sup> This analysis restricts the Airbnb dataset to only those units that report being located in an apartment. Approximately two thirds of the units report being located in an apartment while most of the rest report being in a house. It appears impossible to estimate a reasonably consistent average operating cost for the owner of a home in San Francisco and so this analysis only uses units in apartments.

Analyzing apartments listed on Craigslist establishes that the majority of vacant apartments could be held off the market at no loss to the landlord through the use of short term rentals. The costs of operating any unit listed on Craigslist is estimated as the square footage multiplied by 4.98, the national average cost per square foot for rental operations.<sup>39</sup> Using a similar methodology to the Break Even Point analysis gives a distribution of how many days a short term rental would need to be rented to break even with costs.<sup>40</sup> This calculation compares the average cost not to the estimated revenue but to the estimated income that includes the costs associated with running at STR.<sup>41</sup>

The above chart shows that, on average, market rate apartments in San Francisco only need to be rented for approximately 24 days on Airbnb to cover operating costs. The majority of sampled Craigslist apartments only need between 19 and 29 days to cover operating costs. This analysis does not suggest that this many apartments would be removed from the long term rental market if STRs were completely unregulated. Instead, this chart suggests that nearly all of the apartments that were listed on Craigslist in 2014 could be profitable as a STR if they were rented for more than fifty days.

In summary, this analysis suggests:

<sup>39</sup> Lee, C. 2014 Survey of Operating Incomes & Expenses in Rental Apartment Communities. 2014. Retrieved from <http://www.naahq.org/sites/default/files/naa-documents/income-expenses-survey/2014-Income-Expenses-Summary.pdf>

<sup>40</sup> For this analysis:  $O = M/P_{ST}$  where O is the occupancy rate, M is the long term operating costs calculated by square foot, and  $P_{st}$  is the fitted value for the short term rental net of short term operating costs.

<sup>41</sup> This includes accounting for both the Airbnb processing fee of 3% as well as 15% as the estimated cost of managing a STR over and above long term operating costs.

1. Currently, most Airbnb STRs generate more income than they incur in long term operating costs. This is especially true for Airbnb's that are located in apartment buildings.
2. Landlords have the ability to hold many units off the rental market without incurring operating losses by using Airbnb in an unregulated market. On average, this analysis estimates that apartments in San Francisco only need to be rented for 24 days as an Airbnb rental to cover operating costs.

## OVERCONSUMPTION OF HOUSING

The 'overconsumption of housing' made possible by short term rental income threatens long term rental housing by reducing the number of bedrooms available to long term tenants. Essentially, a tenant will rent a higher quality house or apartment (more expensive neighborhood, more bedrooms, more amenities, etc.) than they would otherwise choose or be able to afford only because they can rely on the additional income generated through renting part of their space as a STR. Under current regulations, a registered host can rent out a spare bedroom for an unlimited amount of time.

It is possible to investigate how many tenants might be currently removing bedrooms from the long term rental market by analyzing the estimated occupancy rates of hosts offering 'private rooms'. The analysis presented earlier showed that approximately half of the suspected commercial users of Airbnb offered private rooms. However, the average operator of a private room on Airbnb generates somewhere between \$200 and \$700 per month which is substantially below the median rent per bedroom of \$2,800 in San Francisco.<sup>42</sup> This suggests that few hosts of private rooms fully recoup the market rate rent of the bedroom used as a STR.

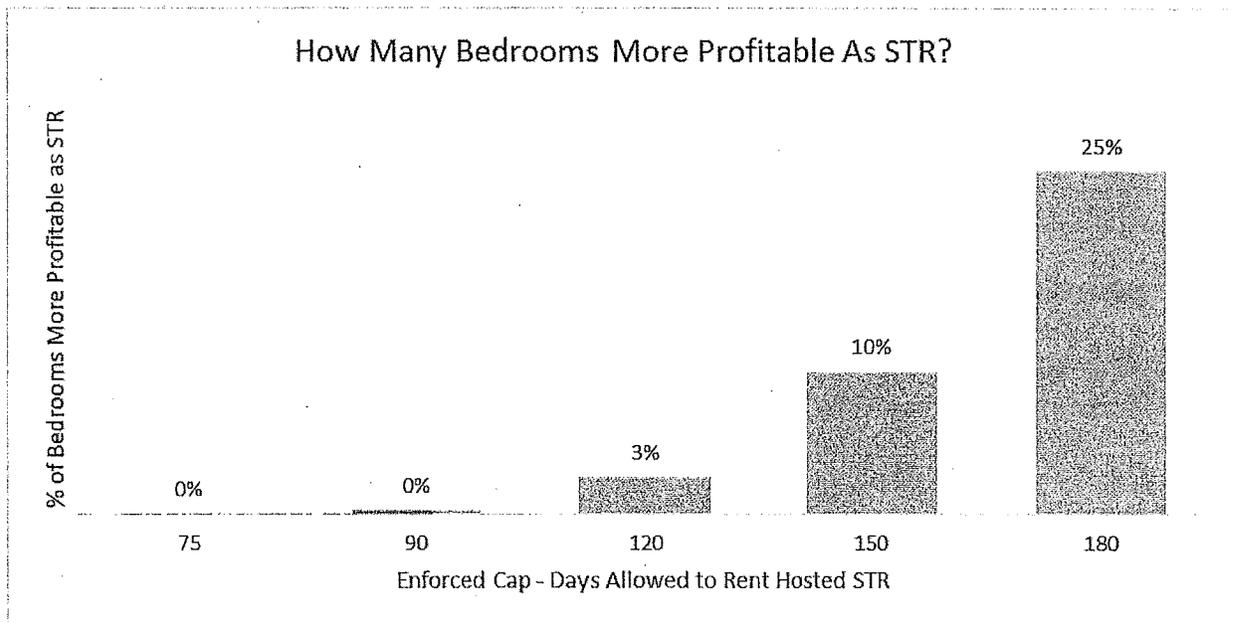

In addition, comparing Airbnb prices to the price per bedroom of apartments listed on Craigslist gives an estimate of how easily a tenant could recoup the long term rent of a bedroom through a STR. Using the same methodology as estimating the days needed to cover long term operating costs,<sup>43</sup> the distribution below presents the number of days a host would need to rent out their spare bedroom to generate the same revenue as the market rent of that bedroom:

---

<sup>42</sup> Median rent from: <http://blog.zumper.com/wp-content/uploads/2015/03/March-2015-National-Rent-Report.pdf>

<sup>43</sup> For this analysis:  $O = \frac{R_{LT/Bed}}{P_{ST}}$

Where: O is the occupancy rate,  $R_{LT/Bed}$  is the rent per bedroom of craigslist apartment (annualized), and  $P_{st}$  is the fitted value for a private room short term rental net of short term operating costs (annualized). This analysis is restricted only to craigslist apartments that have more than one bedroom. In reality, many residents will double up in smaller apartments. This analysis may understate the profitability of renting out a private room by not including those situations.

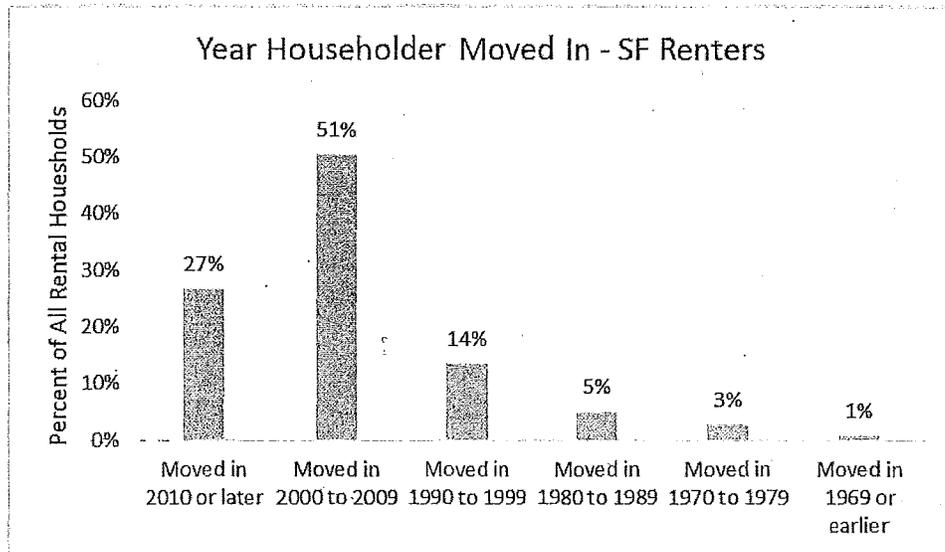

The chart above illustrates that the very few tenants could recoup the full market cost of a bedroom through a STR if they rented the STR for fewer than 120 days. The average master tenant renting a new apartment would have to rent out a spare bedroom for an average of 254 days a year to generate as much revenue as a long term tenant. Even if a new master tenant is willing to pay a 20% premium for full control over the apartment, the average private room listed on Airbnb would still need to be rented for 203 days to generate as much revenue as a long term roommate.

However, this analysis is confounded by a number of factors:

1. The analysis may underestimate the profitability of Airbnb 'private room' rentals by analyzing only apartments from Craigslist that listed more than one bedroom. In reality, many apartments listed as '1 Bedroom' may in fact contain two or more sleeping spaces that could be rented as a STR. In this way, the cheapest apartments have been removed from this analysis which may have been more profitable as a private room STR at lower occupancy rates.
2. Hosts may choose to overconsume housing without recovering the entire amount of foregone rent. A master tenant could highly prefer having more control over the entire unit and be willing to recoup substantially less than she could have earned with a long term roommate.
3. Not all hosts offering private rooms would have rented those bedrooms to long term tenants if STRs weren't possible. This could be because the host is the tenant of a rent controlled apartment and doesn't need the extra income for living expenses. The owner of a non-rent controlled house might not value the additional income from a long term tenant more than the trouble of having that tenant. Finally, owners might be willing to rent out an illegal unit as a short term rental but be unwilling or unable to rent out the unit on a long term basis due to a lack of a full kitchen or minimum safety requirements.

4. Tenants who have lived in their unit for a long time might benefit from rent control and pay substantially below market rates. For these tenants, the above calculations based on market rates underestimate the profitability of renting out a bedroom. The analysis still holds for evaluating the choice a rent controlled master tenant makes when deciding between short term rentals and a long term roommate who could be charged market rent. However, master tenants in rent controlled apartments might be able to make a lot of profit from short term rentals and may choose to do so if they value control over their space more than maximizing revenue.

The following analysis investigates this possibility that master tenants of rent controlled apartments may more easily be able to profit greatly through a STR and eschew offering those rooms to long term roommates. The potential for rent controlled tenants to do so depends on the size of their discount on rent due to rent control. The census reports that 84% of rental units are in buildings built before 1980 which means the vast majority of rental units in San Francisco are most likely covered by rent control.<sup>44</sup> Given that most renters are covered by rent control, the following chart illustrates that many renters are likely receiving deep discounts on rent because they have lived in rent-controlled apartments for more than five years:

The longer a household has stayed in their rental unit the deeper the discount they currently receive. The following table shows the current rent paid by tenants in 2013 as reported by the American Community Survey and the number of apartment available at that price on Craigslist during 2014:<sup>45</sup>

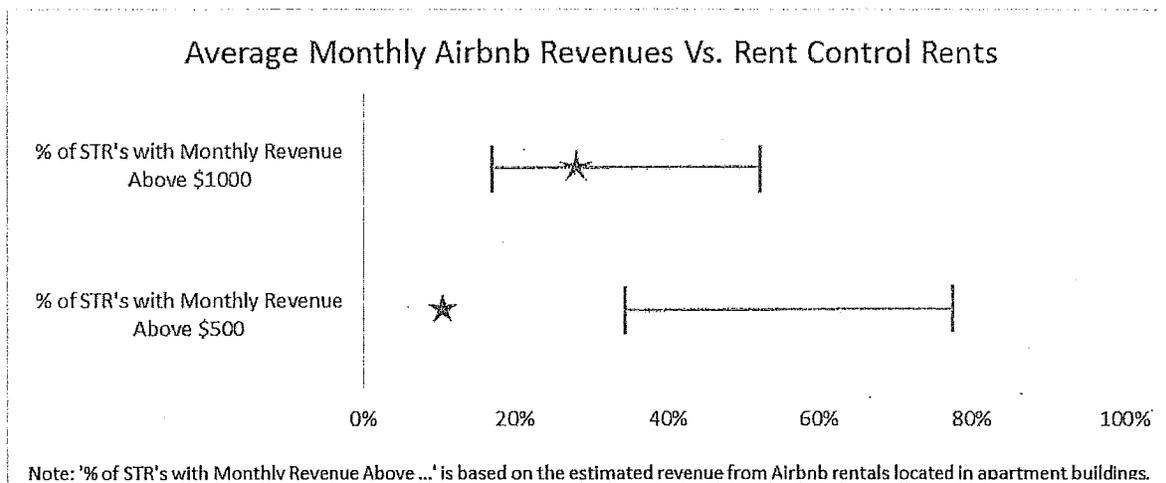

<sup>44</sup> 2013 American Community Survey, 5 Year Sample, Table B25036.

<sup>45</sup> Apartment data from Authors calculations of craigslist data scraped repeatedly during 2014 and cleaned for duplicates. ACS Data from the 2013 American Community Survey 3 year Sample.

Monthly Rent	1 Bedroom Apartments		2 Bedroom Apartments	
	% of households in 1 Bedroom Rentals paying this rent	% of vacant apartments available at this rent	% of households in 2 Bedroom Rentals paying this rent	% of vacant apartments available at this rent
\$1 to \$500	10%	0%	3%	0%
\$500 to \$1000	24%	1%	9%	0%
\$1000 to \$1500	23%	2%	10%	0%
\$1500 to \$2000	26%	6%	12%	2%
\$2000 +	17%	91%	15%	98%

The table above demonstrates that a large percentage of tenants pay far less in rent than the current market price. This is especially true for two bedroom units which may be more likely to have extra room for a private bedroom short term rental.

The following chart shows the range of estimates of average revenue of Airbnb units in apartment buildings in San Francisco that generate at least \$1000 or at least \$500 dollars a month. The blue stars indicate the percentage of rent controlled apartments that pay less than a \$1000 or less than \$500 a month in rent.

The chart above demonstrates that there is a high likelihood that many rent controlled households that offer short term rentals generate more gross revenue than they pay in monthly rent. The chart shows that approximately 30% of rent controlled households (which is in turn approximately 25% of all rental households) could generate more in monthly gross revenue than they pay in monthly rent.

Proponents of restricting the income generated through STRs for tenants of rent controlled apartments allude to either the increased likelihood of lost roommates or the general unfairness that rent controlled households can more easily profit through a STR. However, these claims are tenuous at best.

First, when opponents of STRs cite a general unfairness of a rent controlled tenant generating profit from a STR they fail to mention to whom this situation is unfair. The landlord does not receive any more or less rent when the master tenant becomes a STR host. In fact, the landlord may benefit if they are able to evict the tenant for cause for breaking their lease and then rent the apartment at the market rent. The situation is also not unfair to the general public or to prospective tenants since if the apartment turned over the rent would reset to market rates and the benefit to rent control would be lost to all. The only plausible 'unfairness' would be to residents who might have been roommates had STRs not existed. However, this isn't the most likely outcome.

Most master tenants paying less than \$1000 in rent are likely neither rent burdened and nor do they need the income from a long term tenant to meet rent or living expenses. Also, the economics literature on the distribution of rent controlled housing has demonstrated that rent control does not distribute benefits just towards low income residents but rather distributes benefits across all income classes.<sup>46,47</sup> There is little to support the claim that rent controlled master tenants would rent out their spare bedrooms to long term tenants in the absence of STRs.

The above evidence does however suggest that rent controlled tenants are more easily able to profit from STRs than new tenants who may be choosing to 'overconsume' housing. However, since rent controlled tenants are most likely not removing bedrooms from the market, there is no long term housing lost to protect through STR regulation.

In sum,

1. It is not possible to determine how many bedrooms are taken off of the market by the 'overconsumption' of vacant rental units but the relative prices of STRs and market rate long term rents suggest that this scenario is unlikely.
2. Although long-tenured rent controlled tenants can easily profit from STR, the distribution of the benefits of rent control means that rent controlled tenants might not be removing housing through STRs.
3. In an unregulated market, this analysis suggests that the average new tenant has an incentive to remove a bedroom for STR use if they are able to rent that room for at least 250 days. The analysis also suggests that no tenants will be able to fully cover their rental costs if they rent

their spare bedroom for fewer than 100 days. This result hold true even if you assume tenants are willing to pay a 20% premium for not having a permanent roommate.

## RECOMMENDATIONS FOR REGULATING SHORT TERM RENTALS

This report established that short term rentals currently impact rental housing in San Francisco through the existence of commercial STRs and the likelihood that landlords withhold more rental units using STR income. In addition, the profitability of STRs compared to long term rentals makes the loss of more long term units a worrisome possibility in the context of a very constrained rental market and rising demand for STRs. This section outlines recommendations for how San Francisco should regulate STRs based on the preceding analysis.

### Normative Criteria for Recommendations

These recommendations draw on the principles established by the San Francisco Planning Department's second and third policy objectives as directed by the City's General Plan:

"That existing housing and neighborhood character be conserved and protected in order to preserve the cultural and economic diversity of our neighborhoods;

That the City's supply of affordable housing be preserved and enhanced"

In addition, this report advocates for regulations that allow residents to engage in short term rentals according to their individual preferences up until the point that their use of short term rentals conflicts with these two policy objectives.

This reports recommendations are responses to a few of the major choices currently facing policy makers as they debate proposed amendments to the original legislation:

#### Recommendations:

- 1. Increase the current cap to 120 days for any combination of hosted and unhosted STRs;**
- 2. Remove the restriction on rent controlled tenants making more revenue than they pay in monthly rent;**
- 3. In order to make the law enforceable, institute either a requirement for short term rental hosting platforms to regularly provide non-anonymized data and/or give an enforcement agency the ability to fine hosting platforms for listing illegal short term rentals.**

**Rationale: The current cap of 90 days is unnecessarily restrictive.** This report shows that the overwhelming number of short term rental units currently rent their listing for far fewer than 90 days. There are also hosts who exceed the 90 day cap and appear to generate a substantial amount of revenue. The relevant policy question is whether changing the cap would alter the incentives of hosts in such a way that induces the conversion of more long term units to STRs. Raising the cap to 120 days under a future regulatory framework that is able to effectively enforce an occupancy rate of STRs will not induce more conversions for the following reasons:

1. Very few landlords can generate more revenue from a STR than from a long term tenant at either 90 or 120 days. If a landlord is seeking to maximize profit then approximately the same very small number of landlords will convert their vacant apartments to STR under both 90 and 120 caps. Since no more housing will be lost, the cap should be raised to allow residents the freedom to rent their STRs for between 90 and 120 days if they so choose.
2. All units appear to be profitable as short term rentals at any cap above 50 days. Since operating costs relative to potential STR income are sufficiently low, this report estimates that nearly all apartments that become vacant could be profitable as a STR for fewer days than the current 90 day cap. In this sense, raising the cap from 90 to 120 days does not alter the decision making of a landlord whose goal is to avoid having a long term tenant and instead rent out to short term tenants. If the policy goal was to protect all rental housing from conversion to STRs at any cost, then the cap should be set to well below 20 days. However, this cap would effectively eliminate short term rentals which is not the policy objective of the Board of Supervisors, the Planning Department or the Mayor.
3. Any enforcement regime will be unable to differentiate between hosted and unhosted rentals. There is no conceivable way that the Planning Department or another city agency will be able to tell whether or not a host is present during a rental. So, it is necessary to set a cap that applies equally to hosted and unhosted rentals.

**Rationale: the current restriction on rent controlled tenants generating more income than they pay in monthly rent will most likely not preserve any long term housing and is an inequitable solution.** It is true that master tenants in rent controlled apartments might be able to pay their rent entirely through income generated by a STR. However, this policy should be removed for the following reasons:

1. It appears impossible to enforce this provision. Auditing the income and rental statements of all short term rentals to identify scofflaws is infeasible.
2. The evidence presented in this report suggests that there is no reason to believe that rent controlled tenants would rent their extra rooms to long term tenants even if this provision could be enforced. Rent controlled tenants often pay far below current market rates and the economics literature demonstrates that they are not mostly very low income tenants that would need the income from a long term roommate.
3. Allowing rent controlled tenants to profit from STR is not unfair. The landlord does not gain or lose anything more from their tenant profiting than if STRs didn't exist. Instead, restricting rent controlled tenants reduces the number of tourists coming to the city who then generate more

economic activity. It also produces an inequitable situation where the more affluent rent controlled tenants are still easily able to afford their living costs. At the same time, low income rent controlled tenants will struggle with their living expenses when they could have benefited from the revenue generated by STRs at little cost to society.

**Rationale: the current law is unenforceable without giving regulating agencies additional powers.** The enforcing agency should be able to require short term rental hosting platforms to regularly provide non-anonymized data and/or to be able to fine hosting platforms for listing illegal short term rentals. This requirement is essential because:

1. There is currently no mechanism to identify how many days any one listing is actually booked per year, no way to identify the address of online listings, and there doesn't ever appear to be a means to enforce the permanent residency requirement.
2. If the City is unable to enforce the regulations, current trends of demand and supply for STRs and the maturation of the STR market suggest that more long term housing will be lost to STRs.

## APPENDIX

### DATA SOURCES

This report relies on data from a number of sources.

1. A fact sheet provided by Airbnb in 2012 and included in the SF Planning Department's public record on STRs;
2. A consulting report by Rosen Consulting Group who had access to Airbnb data for 2012 but offer no transparency into their methodology. The website 'Journalist's Resource' described this study as an internal Airbnb report<sup>48</sup>;
3. An economic impact analysis by HR&A associates for Airbnb that was reported on but not released<sup>49</sup> to the public;<sup>50</sup>
4. Data scraped and mapped in August 2014 by an independent journalist<sup>51</sup> (cited as '8/14 Scrape');
5. A news story by Carolyn Said in the San Francisco Chronical relying on data scrapped from the Airbnb website on May 19, 2014, by the data mining company Connotate<sup>52</sup> (cited as SFC);
6. Data scraped and in December 2014 by an independent journalist<sup>53</sup> and provided to author (cited as '12/14 Scrape');
7. Data scraped on 02/09/15 by an independent journalist<sup>54</sup> and provided to author (cited as '2/15 Scrape').
8. A data summary brief, 'San Francisco: Visitor Industry Economic Impact Summary, 2014' by the San Francisco Travel Association provided to the author (cited as 'SFTA').
9. A database of apartment listings from Craigslist was provided by the San Francisco Planning Department to the author and included data for all of 2014. The data was put through an extensive process to remove duplicates which led to a final total of 8,553 observations.

*How reliable is this information?*

<sup>52</sup> Said, C. Window into Airbnb's hidden impact on S.F. *San Francisco Chronical*. Retrieved from <http://www.sfchronicle.com/business/item/Window-into-Airbnb-s-hidden-impact-on-S-F-30110.php>

<sup>53</sup> Data collected by: Murray Cox of <http://insideairbnb.com/> (personal communication with staff in March 2015).

<sup>54</sup> Data collected by: Guss Dolan (<http://darkanddifficult.com/>) & Anti-Eviction Mapping Project (<http://www.antievictionmappingproject.net/>) (personal communication with staff in March 2015)

**Overall, this data provides a reliable description of the general characteristics and size of the Airbnb market in San Francisco but cannot provide exact figures due to unverified methodologies and imperfections in the data scraping process.** The consulting reports by HR&A and the Rosen Consulting Group provide no methodology nor means of verification. It is impossible to tell whether or not their conclusions are biased or interpreted objectively. Data collected from webscrapes may omit some listings or may over-count duplicated listings and so the resulting statistics are inexact. These limitations in the data reinforce the need to corroborate each source against the others.

## BACKGROUND INFORMATION ON SHORT TERM RENTALS

The STR market comprises consumers (“guests”) renting entire apartments, private rooms, or access to a shared room from property owners or lease holders (“hosts”). Online hosting platforms such as Airbnb facilitate the connections between hosts and guests and earn a fee from both parties for each booking (i.e. the fee per booking model). Others hosting platforms such as Homeaway and VRBO also facilitate the connection between guest and, in addition to the fee per booking model, offer hosts a subscription service for advertising their rentals (i.e. the fee per listing model). Still other hosting platforms such as Craigslist do not generate revenue from either hosts or guests. Hosts and guests are encouraged by hosting platforms to provide reviews of each other. Most municipalities define short term rentals as lasting fewer than thirty days and prohibit turning residences into fully commercial units. STRs may provide a close substitute to hotel rooms or may provide a new type of lodging product by providing additional amenities such as full kitchens, easy access to different neighborhoods, and a more local and authentic experience of an area.

In many ways, short term rentals represent a hybrid between a hotel, a vacation rental and a subleased apartment. From the consumer perspective, short term rentals often resemble a vacation rental where the consumer pays for the use of a home for a specified duration of time. In some cases the guests may be sharing the space with the hosts in which case the experience more closely resembles Couchsurfing, an earlier service that matched travelers with hosts who were willing to share their homes for free. In other cases, guests and hosts barely interact during a short stay that more closely resembles a hotel transaction.

Short term rentals also resemble short term subleases. From a supplier’s perspective, the short term rental business resembles repeated short term subleases. Suppliers provide guests with sleeping quarters and access to a bathroom and sometimes other amenities. They must pay upkeep costs in between tenants for cleaning and maintenance work. In addition, they are responsible for property and/or income taxes and bear the costs of damages associated with tenant negligence. Suppliers also face some of the same risks as traditional sub-lessors in the form of bad tenants who are difficult to evict.

The growth of associated services and the maturation of the STR market may encourage more commercialization and increase the ability of casual users to engage in STRs. Hosts can increasingly rely on API integration to seamlessly post listings across multiple short term rental platforms. Full service

listing management services take all of the effort and work out of hosting a STR.<sup>55</sup> Still other services help hosts maximize their revenue through real time pricing algorithms.<sup>56</sup>

Many proponents of STR claim that the nature of online reviews will self-regulate the market and ensure high quality experiences for guests. The available evidence suggests that online marketplaces do not fully self-regulate. Online marketplaces that rely on profiles and digital reputations may facilitate racial discrimination. A study of Airbnb in New York City found that non-black hosts charge 12% more for rentals controlling for all information visible on the website.<sup>57</sup> Airbnb's rating system also fails to differentiate listings through their reputation based system since nearly 95% of ratings are 4.5 or 5 stars (Airbnb's rating system has a maximum of 5 stars). Moreover, it is unclear what these ratings really mean. There is only a very weak correlation between the ratings of properties listed on both Airbnb and TripAdvisor.<sup>58</sup> In general, users of reputation based marketplaces seek out reciprocal positive reviews. In this way, these reputations are probably upwardly biased.<sup>59</sup> More recently, Airbnb has acknowledged potential problems of bias and has instituted new structures to encourage more honest reporting.<sup>61</sup>

## BRIEF DISCUSSION OF OTHER THREATS OF SHORT TERM RENTALS

### *INCREASED TENANT EVICTIONS*

Many tenants may want to offer short term rentals in their unit without fully understanding the risks involved. Leases may have clauses in them making subleasing a violation of the lease or specifically prohibiting short term rentals. Tenants hosting short term tenants would be opening themselves up to an eviction for cause without fully understanding the risks. Other leases may not have specific language about subleasing or short term rentals but might have language about illegal uses of the unit. Most hosts in San Francisco are currently out of compliance with current short term rental regulations and so would also be opening themselves up to being evicted.

The evidence is difficult to come by, but it there appears to be a rise in evictions for breach of lease that correlates to the rise of short term rentals in San Francisco. However, there is also a general increase in

eviction pressure due to rising rents that incentivize landlords to put pressure on long tenured tenants in rent controlled apartments. It is inappropriate to claim from this data that STRs are responsible for the increase in evictions, but the correlation and anecdotal evidence do buttress the claims that the phenomenon is happening.<sup>62</sup>

#### INCREASED LEGAL LIABILITIES

Insurance companies consider short term rentals as a form of commercial use in the same way as the operation of a bed and breakfast.<sup>64</sup> Renters and homeowner’s insurance will not cover damages incurred through the use of a short term rental. Airbnb offers hosts supplementary insurance which increases the protections for hosts but only if their primary insurer accepts their claim. Owners and residents may be increasing their potential liability for damages to their units or from lawsuits by short term tenants if they only have insurance meant for strictly residential use. This could be especially true in San Francisco where the prohibition of accessory dwelling units (ADU, i.e. ‘in-law unit’) and restrictive zoning codes create illegal housing units that have not been inspected to be up to code.

Landlord-tenant conflicts are regulated similarly to traditional leases in some cases and hotels in others. California recognizes STR guests who stay in a rental for more than thirty days to have the same rights as long term tenants in some situations.<sup>65</sup> In this way, suppliers face many of the same risks of sublessors but appear to not take the same legal precautions. Some hosts ask guests to sign a contract or rental agreement as a condition of rental.<sup>66</sup> However, it appears that the majority of short term rentals do not require any written or signed terms.<sup>67</sup> The lack of clearly delineated rights and responsibilities could make future litigations more difficult in cases of conflict.<sup>68</sup> Tenants and landlords in California face the

prospect of having to go to the courts to formally evict any guests who refuse to leave after staying for more than thirty days.<sup>69</sup>

Hosts also may be required to comply with the American's with Disabilities act depending on the circumstances although this area of law remains unsettled. Owner-occupied residences are exempt from ADA requirements but units rented out full time for STRs may have to be ADA compliant.<sup>70</sup>

Some legal analysts believe that although it is unclear whether hosts are covered by the ADA, it is only a matter of time before ADA lawsuits begin.<sup>71</sup> Other analysts claim the short term rentals will most likely be covered by the ADA and similar state laws because of their similarity to timeshares which the DOJ has recently found to be "places of lodging."<sup>72</sup>

In addition, the Fair Housing Act applies to STRs and it is illegal to discriminate against a potential renter based on race, religion, national origin, gender, familial status or disability. Both Federal and California state laws (i.e. the Unruh Act) apply.<sup>73,74,75</sup>

#### *DISRUPTIVE BEHAVIOR OF STR GUESTS*

Increased use of short term rentals bring more and more visitors into neighborhoods and into residential buildings. STR guests have fewer incentives to create or maintain good social relations with other residents and may be more disruptive. Bachelor parties or visitors with a late night schedules would increase the noise and disturbances for the immediate neighbors. In addition, giving STR guests access to buildings raises safety concerns for all residents if keys are copied or lost, security gates are left open or criminals are given access to the building.

#### *LOSS OF COMMUNITY*

<sup>70</sup> Title III-1.300 of the ADA exempts residential dwelling units. However, time shares and vacation homes which are commercial in nature are sometimes covered by the act. The Department of Justice rules stress that "the extent to which the operations resemble those of a hotel, motel or inn" dictate whether or not a vacation home or time-share should be ADA compliant. Airbnb advises its hosts that most are not 'a place of public accommodation' and so are exempt from the ADA. However, it warns that the ADA may apply to hosts who offer more than five rooms.

Increased concentration of short term rentals in neighborhoods removes long term residents who build functioning health communities. Taken to an extreme, this would create a hollowing out of neighborhoods as the percentage of long term residents drops below the density required to support cultural or community institutions.

**SUMMARY OF PROBLEMS SHORT TERM RENTALS POSE TO RENTAL HOUSING**

The following chart summarizes this report’s analysis of the current impact of STRs in San Francisco:

	<b>Finding</b>	<b>Qualification/Notes</b>
<b>Overall Impact</b>	5000-7000 total STR listings which represent a substantial fraction of vacant rental units.	Unclear the number of duplications across hosting platforms and the number of unique properties with a STR.
	High concentration of Airbnb listings in central and northern neighborhoods	
<b>Conversion to STR Hotels</b>	Estimated 500 commercial Airbnb hotels	Conservatively estimates this figure by only including STRs listed for more than six months, on Airbnb, with an occupancy rate above 50%. This is an approximation that assumes that each stay is for the average duration of 5.1 nights.
	High concentration of ‘Airbnb hotels’ in central and northern neighborhoods	
<b>Withholding of rental units from market</b>	The current estimated average revenue for Airbnb’s in apartments exceeds the average operating costs for apartments.	
<b>Overconsumption of Housing (loss of roommates)</b>	Current Airbnb ‘private room’ listings do not generate as much revenue as the median per bedroom rent in SF but do generate more than the rent of approximately 30% of rent controlled apartments (25% of all apartments)	

The following chart summarizes this report’s analysis of the incentives involved with STRs and how STRs could impact rental housing in San Francisco in the future:

	<b>Finding</b>	<b>Qualifications/Notes</b>
<b>Overall Projections</b>	Increase in demand for STRs due to constrained hotel supply which substitutes for STRs.	Unclear how much of the increased demand for hotels will translate into demand for STR and how much will extend to hotels in areas outside of San Francisco.
	Increase in demand for STRs due to increased acceptance of STRs among business travelers.	Extended STR consumers are those who want to stay in San Francisco for between a week and a month.
	Increase in demand by continuing to serve 'extended STR' consumers who have no other formal options.	
<b>Conversion to STR Hotels</b>	Median of 213 days to make more money from a STR than a long term rental.	This does not indicate that half of apartments will convert to STR hotels if the cap is raised to 213. However, it points to the overall profitability of STRs that are operated like hotels
	Very few apartments more profitable above 120 days	There does not appear to be an incentive to convert a long term rental into a STR if there is an enforced cap of 120 days.
<b>Withholding of rental units from market</b>	Apartments in San Francisco need to be rented as a STR on average for 24 days to generate as much revenue as the long term operating costs of the unit.	This revenue figure does not include the costs of maintaining a STR which is roughly estimated at 18% of revenue.
<b>Overconsumption of Housing (loss of roommates)</b>	Uncertainty around whether rent controlled tenants would actually rent spare bedrooms to long term roommates precludes projections.	

## METHODOLOGY FOR BREAK EVEN POINT ANALYSIS

This section explains the methodology for determining the break even occupancy rate between short term rentals and long term rentals in San Francisco. This analysis seeks to answer the question: how many days of the year would a short term rental need to be rented to be as profitable as a long term rental? This analysis uses the data set of Airbnb units scraped in December 2014 as it appears to be the most complete and accurate data available.

The following variables are included in this calculation:

$P_{LT}$  = Annualized rent of an apartment rented as a long term rental. This is the actual monthly price listed on craigslist for an apartment in San Francisco multiplied by 12. Craigslist units with a price per bedroom below \$700 are removed since they all appear to be advertising for roommates instead of for entire units.

$P_{ST}$  = Estimated annualized price of an apartment rented at 100% occupancy as a short term rental on Airbnb. This is a value fitted to the specifics of one of the Craigslist apartments. A number of regressions were run to test different functional forms using the number of bedrooms, number of bathrooms and a dummy variable for each of the 38 planning department defined neighborhoods. These regressions were only run on the subset of the Airbnb units that are listed as entire units (as opposed to just private rooms or shared rooms). For Craigslist units that did not list information about a bathroom, the functional form specification is:

$$P_{ST} = \alpha + \beta \text{Bedrooms} + \beta \text{Bedrooms}^2 + \beta \text{Neighborhood}_i + \varepsilon$$

Where  $\alpha$  is the intercept, Bedrooms is the number of bedrooms that a short term rental has, Bedrooms squared is the squared number of bedrooms in a short term rental,  $\beta \text{Neighborhood}_i$  represents a set of dummy variables for all but one of the neighborhoods defined by the planning department and  $\varepsilon$  is the error term. For craigslist units whose listings included information about the number of bathrooms, the functional form is:

$$P_{ST} = \alpha + \beta \text{Bedrooms} + \beta \text{Bedrooms}^2 + \beta \text{Bathrooms} + \beta \text{Neighborhood}_i + \varepsilon$$

The coefficients from these regressions are used to estimate what each craigslist apartment would be able to charge as a short term rental. This gives an estimated nightly short term rental rate which I then multiply by 365 to create an estimated annualized short term revenue.

$C_{ST}$  = annual cost to running a short term rental over and above normal maintenance costs. This includes fees, cleaning and maintenance costs and hotel taxes. Two of the higher profile providers of short term rental management and cleaning services charges 15% of gross revenue.<sup>7677</sup> This service provides cleaning services, pre-reservation home preparation, managing guest interactions, price optimization, screening potential guests, and emergency support. In addition, Airbnb charges a 3% fee to the landlord for the processing the booking. This leads to a total short term operating cost of 18%. However, none of these costs are included in the normal maintenance of an apartment a landlord must pay each year which include more major repairs, building management, depreciation, and property taxes among others.

$M$  = Annual long term maintenance costs for being a landlord. The 2013 Survey of Operating Income & Expenses In Rental Apartment Communities found that the average annual operating expenditure for

---

<sup>76</sup> Retrieved from <https://www.pillowhomes.com/>

<sup>77</sup> Retrieved from <http://guesthop.com/>

multifamily units in the San Francisco-Oakland-Fremont MSA is \$7.68 per square foot.<sup>78</sup> This figure applies to both long term and short term rentals and so drops out from the model. It is possible that it does not apply evenly to both long term and short term rentals but this analysis assumes that they are the same.

**Model**

The research question is concerned about the expected income a landlord stands to gain or lose by choosing to withhold her unit from the long term market and instead rent it out as a short term rental. The outcome of interest is the breakeven occupancy rate that leads to equivalent short term rental income and long term rental income for the next year:

$$[ P_{ST} \times (1 - C_{ST}) \times O ] - M = P_{LT} - M$$

Simplifying and rearranging terms leads to our model:

$$O = \frac{P_{LT}}{P_{ST} \times (1 - C_{ST})}$$

The resulting values are used to evaluate the occupancy rates based on the fitted model. However, in this equation,  $P_{LT}$  and  $C_{ST}$  are known values but  $P_{ST}$  is a constructed variable subject to uncertainty. The regression model explains approximately half of the variation in short term rental prices. This uncertainty is included in the model through a simulation of the average one and two bedroom unit listed on Craigslist for five neighborhoods. So, instead of using single values, the simulation analysis incorporates the following distributions:

$P_{LT}$  = normally distributed with a mean equal to the average rent and with a standard deviation from the data used to calculate the mean. This is calculated by neighborhood separately for one and two bedroom units.

$P_{ST}$  = the fitted value equal to characteristics of the apartment under consideration in the simulation. This is also assumed to be normally distributed with a standard deviation equal to the standard error of the regression.

With the same model, two thousand trials were run using those distributions to estimate the breakeven occupancy rate for each typical one and two bedroom unit in five different neighborhoods of interest. The results confirm the general distribution of breakeven occupancy rates. The simulation additionally

provides a measure of confidence for predicting whether units are more profitable as a short term unit rather than a long term unit.

This resulting simulations illustrate the certainty with which the model estimates that a particular apartment could be more profitable as a STR than as a long term rental.

**METHODOLOGY FOR LANDLORD DECISION WITH DISCOUNTED FUTURE INCOME STREAMS**

This simulation builds off of the Break Even Point methodology to incorporate landlords' expectations of future income streams for long term and short term rentals. Surveys of landlords in San Francisco show that 45% of landlords say that rent control makes being a landlord more difficult and 61% say eviction controls have at least some impact on increasing the difficulty of operations.<sup>79</sup> To account for this, this

<sup>79</sup> Landlord Survey, page 23

simulations incorporates a rational landlord's accounting of expected losses from rent control when accepting a long term tenant.

Landlord's income streams for long term and short term rentals are simulated separately for the average one bedroom apartment in each of the five neighborhoods with the highest concentration of expected commercial units. These neighborhoods are simulated to test the impact of different caps on unhosted rentals on the expected profitability of short term rental hotels. The current regulatory framework suggests that it is possible to successfully enforce regulations on the number of nights an unhosted rental can be rented. However, other regulations around ensuring that a landlord is the permanent tenant appear to be very difficult to enforce.

The simulation uses several assumptions to model a landlord's decision about expected income streams. The allowable rent control increase in San Francisco is set at 60% of the consumer price index (CPI).<sup>80</sup> For this analysis, I assume that a landlord expects that inflation will continue at the most recently announced annual CPI for the Bay Area of 2.5%.<sup>81</sup> The expected annual allowable increase under rent control is then 1.5%. The landlord will also have an assumption about the growth of market rate rents. In January 2015, rents grew by an average of 14.9% year over year.<sup>82</sup> Although this increase is not spread evenly across the city, I will conservatively estimate that for any place in the city a landlord should expect a five percent increase in rents year over year for the next several years.

In summary, this simulation includes the following variables and assumptions:

$i$  = the inflation rate assumed to be the current consumer price index of 2.5%

$r_m$  = the growth rate of market rents, assumed to be 5%

$r_{ST}$  = the growth rate of short term rents. Assumed to be the same as the growth of hotel rates in the San Francisco metropolitan area which has averaged 3.9% from 1988 to 2014. However, the past four years have seen approximately 10% year over year growth in nightly hotel rates and this growth is projected to taper off to between 4% to 8% over the next four years. This analysis assumes that landlords conservatively expect short term rents to grow by 5% over the next ten years.

$r_c$  = the allowable rent increase for a rent controlled unit, assumed to be the most recent value of 1.5%.

$R_0$  = the base market rent charged at the beginning of tenancy ( $t = 0$ ).

$t$  = number of years

$C_{ST}$  = annual cost to running a short term rental over and above normal maintenance costs. Please see previous appendix section for explanation. Value assumed to be 32% of total short term revenue.

---

<sup>80</sup> Rent board <http://www.sfrb.org/Modules/ShowDocument.aspx?documentid=1939>

<sup>81</sup> [http://www.bls.gov/regions/west/news-release/ConsumerPriceIndex\\_SanFrancisco.htm](http://www.bls.gov/regions/west/news-release/ConsumerPriceIndex_SanFrancisco.htm)

<sup>82</sup> Zillow research: <http://www.zillow.com/research/jan-2015-market-report-8951/>

O = occupancy rate of the short term rental hotel. Assumption is varied between 60, 90, 120, 230 and 300 days. 60, 90 and 120 days model the three most commonly suggested caps on unhosted rentals. 230 and 300 days represent that national average hotel occupancy rate and the San Francisco hotel occupancy rate respectively.

The net present value of the income stream for long term rents depends the landlord's expectations of the length of tenure of their long term tenant because of the impact of rent control. The American Community Survey 5 year sample for San Francisco shows that of the 453,017 renters in San Francisco, 358,096 (79%) lived in the same residence a year ago.<sup>83</sup> The economics literature has established that under rent control the probability of turnover is a conditional on the tenant's length of tenure: people in rent controlled apartments are more likely to stay in their apartment the longer they've been in that unit.<sup>84</sup> However, for simplicities sake I will assume that the probability of any tenant leaving in any year is 20%.

The simulation predicts whether the rent should reset to market rates or continue to grow by the rate allowed by the rent control board each year for ten years. This income stream is converted to a net present value. The simulation compares that figure against the present discounted value of ten years of short term rental income where the nightly rate tracks the growth of hotel prices. This analysis is run for the five different occupancy rates. This creates five distributions of the expected profit or loss from renting a unit as a short term rental instead of a long term rental. The analysis assumes that rational landlords will choose the higher value.

The final results of the simulation for the five neighborhoods of interest ( [REDACTED] )

300	Expected Value	10441.04	76234.89	42708.61	47610.5	-17256.8	149924.8
	Confidence it's Converting	13.6	100	95.7	99	0	100

The table above confirms the earlier conclusion that long term rentals are still more profitable to the rational landlord unless the enforced cap approaches hotel occupancy rates of above 250.

#### REGRESSION MODEL AND RESULTS FOR PREDICTING VALUES OF AIRBNB PRICES

Short term rents are predicted for rental units listed on craigslist by regressing the available attributes of Airbnb rentals on their nightly price. The full model is:

$$P_{ST} = \alpha + \beta \text{Bedrooms} + \beta \text{Bedrooms}^2 + \beta \text{Bathrooms} + \beta \text{Neighborhood}_i + \varepsilon$$

Where  $\alpha$  is the intercept, Bedrooms is the number of bedrooms that a short term rental has, Bedrooms squared is the squared number of bedrooms in a short term rental,  $\beta \text{Neighborhood}_i$  represents a set of dummy variables for all but one of the neighborhoods defined by the planning department and  $\varepsilon$  is the error term. For units on Craigslist whose listings that did not include information about the number of bathrooms, the functional form is:

$$P_{ST} = \alpha + \beta \text{Bedrooms} + \beta \text{Bedrooms}^2 + \beta \text{Neighborhood}_i + \varepsilon$$

These regressions gave the following predictive values:

VARIABLES	(1) price	(2) price
Bedrooms	30.54*** (8.938)	51.08*** (13.86)

File No. 150295

Sarah Jones  
Environmental Review Officer  
Planning Department  
1650 Mission Street, 4<sup>th</sup> Floor  
San Francisco, CA 94103

Dear Ms. Jones:

On April 21, 2015, Supervisor Campos substituted the following legislation:

**File No. 150295**

**Ordinance amending the Administrative Code to revise the Residential Unit Conversion Ordinance to: limit short-term rental of a Residential Unit to no more than 60 days per calendar year; require Hosting Platforms to verify that a Residential Unit is on the City Registry prior to listing, remove a listing once a Residential Unit has been rented for Tourist or Transient Use for more than 60 days in a calendar year, and provide certain useage data to the Planning Department; revise the definition of Interested Parties who may enforce the provision of Chapter 41A through a private right of action to include Permanent Residents residing within 100 feet; amend the private right of action provisions to allow for a private right of action against Hosting Platforms and create an additional private right of action against Owners, Business Entities, and Hosting Platforms under certain circumstances; and provide for criminal penalties against Hosting Platforms in violation of this Chapter 41A; and affirming the Planning Department's determination under the California Environmental Quality Act.**

This legislation is being transmitted to you for environmental review.

Angela Calvillo, Clerk of the Board

## MEMORANDUM

TO: Olson Lee, Director, Mayor's Office of Housing & Community Development  
Delene Wolf, Executive Director, Rent Board  
John Rahaim, Director, Planning Department  
Jose Cisneros, Treasurer, Office of the Treasurer & Tax Collector

FROM: Andrea Ausberry, Assistant Clerk, Land Use and Transportation Committee, Board of Supervisors

DATE: April 24, 2015

SUBJECT: LEGISLATION INTRODUCED

---

The Board of Supervisors' Land Use and Transportation Committee has received the following substitute legislation, by Supervisor Campos on April 21, 2015:

**150295**

**Ordinance amending the Administrative Code to revise the Residential Unit Conversion Ordinance to: limit short-term rental of a Residential Unit to no more than 60 days per calendar year; require Hosting Platforms to verify that a Residential Unit is on the City Registry prior to listing, remove a listing once a Residential Unit has been rented for Tourist or Transient Use for more than 60 days in a calendar year, and provide certain useage data to the Planning Department; revise the definition of Interested Parties who may enforce the provision of Chapter 41A through a private right of action to include Permanent Residents residing within 100 feet; amend the private right of action provisions to allow for a private right of action against Hosting Platforms and create an additional private right of action against Owners, Business Entities, and Hosting Platforms under certain circumstances; and provide for criminal penalties against Hosting Platforms in violation of this Chapter 41A; and affirming the Planning Department's determination under the California Environmental Quality Act.**

If you have any additional comments or reports to be included with the file, please forward them to me at the Board of Supervisors, City Hall, Room 244, 1 Dr. Carlton B. Goodlett Place, San Francisco, CA 94102.

c: Sophie Hayward, Mayor's Office of Housing  
Eugene Flannery, Mayor's Office of Housing  
AnMarie Rodgers, Planning Department  
Aaron Starr, Planning Department  
Scott Sanchez, Zoning Administrator  
Sarah Jones, Acting Environmental Review Officer  
Joy Navarrete, Environmental Planning  
Jeanie Poling, Environmental Planning  
Amanda Kahn Fried, Office of the Treasurer & Tax Collector

Madam Clerk,

Attached is a letter to the full Board of Supervisors regarding Short Term Rental regulations that I am hoping your office can help distribute to individual members of the Board.

Thank you for your help, please let me know if you have any questions.

All the best,

David Noyola

President London Breed  
San Francisco City Hall  
1 Dr. Carlton B. Goodlett Place, Room 244  
San Francisco, CA 94102-4689

April 14, 2015

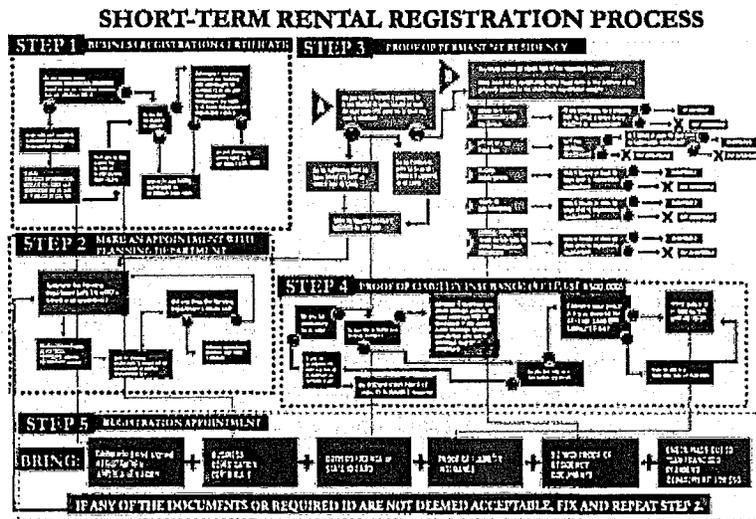

Dear President Breed,

Last October, San Francisco approved progressive home sharing legislation, marking an important step forward for the peer to peer economy. While the legislation was not perfect, it was welcomed by countless San Francisco families. Home sharing gives travelers the chance to see San Francisco's diverse neighborhoods and is an economic lifeline for San Franciscans, many of whom would be forced to leave the City they love if they couldn't share their space.

Today, home sharing and Airbnb are also helping to fight economic inequality by giving every resident the opportunity to turn their home into an economic asset. According to our surveys, 71 percent of hosts use the income they earn to help pay the bills. Later this week, we will be releasing new information showing how home sharing helps middle class San Franciscans make ends meet.

In October, Airbnb also began collecting and remitting the same taxes as hotels on behalf of our hosts and guests in San Francisco. We were under no obligation to take this action and the overwhelming majority of other short term rental platforms still refuse to follow our lead. We are proud that our community has already contributed millions of dollars to the City's General Fund through this initiative.

Unfortunately, after the law was approved, the Planning Department created a system that was designed to fail by implementing restrictions and requirements -- many of which had no basis in the law -- that have made it difficult or impossible for San Franciscans to follow the new rules. One Airbnb host documented the complexity of the current process:

Hosts who have successfully completed this process have received threatening letters from the City Treasurer demanding they collect hotel taxes - even though Airbnb is already doing so on their behalf. To be clear, Airbnb has been remitting these taxes to the City since October 1, 2014 and has paid a back tax assessment issued by the City Treasurer in full. Today, the City Treasurer is accepting nearly \$1 million every month from the Airbnb community, while demanding our hosts also remit the exact same tax -- double taxing on the same activity solely because they have not received personal, private, confidential information about regular people who share their home.

Given these challenges, it is no surprise that many critics of the new law have stepped forward. Supervisor Campos has introduced a Trojan Horse proposal that effectively bans home sharing by demanding the government receive sensitive personal data about thousands of City residents, and would pit neighbor against neighbor in frivolous litigation. Some in the City are also considering placing similar legislation on the ballot this November.

Supervisor Farrell has offered an alternative proposal. While this legislation is certainly an improvement upon Supervisor Campos'

attempt to ban home sharing, it also raises significant concerns. Most notably, this proposal imposes an arbitrary 120-day cap on families' ability to share the home in which they live, even when they are present. This kind of proposal would adversely impact San Franciscans like Kevin and Esther who share their guest room and use the money they earn to pay medical bills associated with Kevin's Parkinson's disease.

We know these issues are not easy and we appreciate the challenge in ensuring that home sharing remains legal and transparent while also preventing abuses. After over two years spent crafting legislation on this topic, the City should work quickly and give the new rules time to work. San Franciscans do not want us to continually re-fight old battles - revisiting this matter every few months will not move us forward. Instead, we should spend 2015 ensuring new rules are implemented quickly, fairly and in a way that supports families who depend on home sharing to make ends meet.

We are optimistic that we can achieve these goals and we appreciate the opportunity to participate in this conversation. The thousands of Airbnb hosts and guests who love this city look forward to continuing to work with you to make San Francisco an even better place to live and visit.

Sincerely,

A handwritten signature in black ink, appearing to read 'D. Owen', with a large, stylized flourish at the end.

David Owen

Madam President,  
Please find attached a recently released study highlighting the positive economic impacts of home sharing to San Francisco neighborhood businesses. Please don't hesitate to contact us with any questions on this research.

I've also cc'd the Board of Supervisors general email address in hopes the Clerk can help distribute this document to all members' offices.

Best,

## FINAL SF ECONOMIC IMPACT EMAIL

**TO:** San Francisco small business owners  
**FROM:** David Owen  
**RE:** Airbnb: Making San Francisco More Affordable, Supporting Small Businesses  
**DATE:** April 19, 2015

You're one of the hundreds of small business owners who support Airbnb in San Francisco, so we wanted you to be the first to know about new research that shows how home sharing supports businesses like yours and makes San Francisco more affordable for more families.

Airbnb got started in 2008 when our co-founders struggled to make their rent. Since then, we've heard from families across the city who use Airbnb to help pay the bills. For many people, sharing their home on Airbnb is the only way they can afford to stay in the city they love.

We've also heard from you about how Airbnb guests visit small businesses in neighborhoods from the Outer Sunset to the OMI and the Bayview - neighborhoods that haven't traditionally benefited from tourism in the past. These anecdotes confirm what we've always known: that the majority (72%, in fact) of Airbnb guests are staying outside of traditional hotel districts and in the neighborhoods where so many of you own small businesses.

We wanted to know more about how our hosts and guests are making our economy stronger, so we asked the Land Econ Group to study Airbnb's economic impact throughout San Francisco. Here's what they found:

- The Airbnb community contributed nearly **\$469 million to the San Francisco economy last year.**
- The average Airbnb host **earns \$13,000 per year** hosting - money they use to pay the bills and stay in San Francisco, and shop at businesses like yours.
- The Airbnb community supports **3,600 jobs at the local neighborhood businesses they patronize.**
- **72%** of Airbnb properties are outside of traditional hotel districts, in neighborhoods that haven't benefited from tourism in the past.
- The typical Airbnb property is **booked about 6.5 nights per month**, underscoring the point that these are people who are simply sharing space in the home in which they live.

Over the last three years alone, Airbnb's economic impact in San Francisco has grown from \$56 million to \$469 million annually, a more than eight-fold increase.

Our study also found that Airbnb guests spend more time and money in the city than the typical hotel guests. Check out this chart:

<b>Spending Per Trip</b>	<b>Airbnb Guests</b>	<b>Hotel Guests<sup>1</sup></b>
Total	\$1,223	\$931
Avg. Length of Stay	5.0 nights	3.5 nights

Each year, hundreds of thousands of people stay in Airbnb properties across the city. For these guests, San Francisco becomes a special place for two reasons: the warm hospitality they find in their San Franciscan hosts and the delicious meals, unique experiences, and vital services they discover at your businesses. San Francisco's small businesses are the backbone of this community. We're proud Airbnb's community is helping businesses like yours and making this city a little more affordable for thousands of residents, and countless more visitors - many of whom would not have come without an affordable, local travel option.

Thank you again for your partnership. As we update and add to this data in the future, we will make sure you're the first to know. If you have additional questions, or thoughts about strengthening our partnership, please don't hesitate to reach out to my colleague Mason Smith ([mason.smith@airbnb.com](mailto:mason.smith@airbnb.com)).

Sincerely,

David Owen

TO: San Francisco Board of Supervisors  
RE: Land Use & Transportation Committee Meeting, May 18 2015  
AGENDA ITEM: Short Term Rental Legislation

Please enter this document into the public record for the Land Use & Transportation Committee Meeting noted above. Please distribute a copy to all San Francisco Supervisors.

From Saturday through Monday (April 25-27 2015) I sent 338 emails, addressed to Airbnb (trust@airbnb.com; support@airbnb.com) and the San Francisco Planning Department (shorttermrentals@sfgov.org). Most of these (306 emails) I also CC'd to Mayor Ed Lee (mayoredwinlee@sfgov.org) and my Supervisor London Breed (Breedstaff@sfgov.org).

Each email gives details for a specific current (as of 4-18-2015) Airbnb listing for a San Francisco rental which is apparently not being 'hosted' by a San Francisco resident, based upon what the host lists as their 'Home Location', and therefore is most likely in violation of the terms of the recently enacted San Francisco Short Term Rental legislation. Each email lists the following information, taken from the online listing:

Listing Location: (always San Francisco, CA, United States)  
Host ID: #####  
Host Name: ??????????  
Host Link: <http://www.airbnb.com/users/show/#####>  
Host Home Location: (city/state/country/country abbreviation)  
Listing ID: #####  
Listing Link: <http://www.airbnb.com/rooms/#####>  
Listing Description: ??????????  
Share Type: (Shared room or Private room or Entire home/apt)

Below are all of the emails, and the auto-responses I received from Airbnb, combined. They are in order by date, first to last (I received no responses, automated or otherwise, from the San Francisco Planning Department, nor Mayor Lee, nor Supervisor Breed).

Print Form

# Introduction Form

By a Member of the Board of Supervisors or the Mayor

Time stamp  
or meeting date

I hereby submit the following item for introduction (select only one):

- 1. For reference to Committee.  
An ordinance, resolution, motion, or charter amendment.
- 2. Request for next printed agenda without reference to Committee.
- 3. Request for hearing on a subject matter at Committee.
- 4. Request for letter beginning "Supervisor [ ] inquires"
- 5. City Attorney request.
- 6. Call File No. [ ] from Committee.
- 7. Budget Analyst request (attach written motion).
- 8. Substitute Legislation File No. [ 150295 ]
- 9. Request for Closed Session (attach written motion).
- 10. Board to Sit as A Committee of the Whole.
- 11. Question(s) submitted for Mayoral Appearance before the BOS on [ ]

Please check the appropriate boxes. The proposed legislation should be forwarded to the following:

- Small Business Commission     Youth Commission     Ethics Commission
- Planning Commission     Building Inspection Commission

**Note: For the Imperative Agenda (a resolution not on the printed agenda), use a Imperative**
