

**Jeanette Howard, PhD  
Director of Science, Water Program  
The Nature Conservancy**

Jeanette Howard is a senior scientist with expertise in freshwater systems, salmon recovery efforts, and site and eco-regional based conservation planning and research. Currently Director of Science for the Water Program at The Nature Conservancy in California charged with developing effective and scalable freshwater solutions for California. Program management includes work plan development for multiple projects, convening and facilitating multi-stakeholder processes, developing and managing budgets, and managing contracts.
