Bid/Proposal Attachment regarding the Darfur Contracting Act of 2008

Effective January 1, 2009, all Invitations for Bids (IFB) or Requests for Proposals (RFP) for goods or services must address the requirements of the Darfur Contracting Act of 2008 (Act). (Public Contract Code sections 10475, et seq.; Stats. 2008, Ch. 272). The Act was passed by the California Legislature and signed into law by the Governor to preclude State agencies generally from contracting with "scrutinized" companies that do business in the African nation of Sudan (of which the Darfur region is a part), for the reasons described in Public Contract Code section 10475.

A scrutinized company is a company doing business in Sudan as defined in Public Contract Code section 10476. Scrutinized companies are ineligible to, and cannot, bid on or submit a proposal for a contract with a State agency for goods or services. (Public Contract Code section 10477(a)).

Therefore, Public Contract Code section 10478 (a) requires a company that currently has (or within the previous three years has had) business activities or other operations outside of the United States to certify that it is not a "scrutinized" company when it submits a bid or proposal to a State agency. (See # 1 on the sample Attachment).

A scrutinized company may still, however, submit a bid or proposal for a contract with a State agency for goods or services if the company first obtains permission from the Department of General Services (DGS) according to the criteria set forth in Public Contract Code section 10477(b). (See # 2 on the sample Attachment).

The following sample Attachment may be included in an IFB or RFP to satisfy the Act's certification requirements of bidders and proposers.

Therefore, to be eligible to submit a bid or proposal, please complete only one of the following three paragraphs (via initials for Paragraph # 1 or Paragraph # 2, or via initials and certification for Paragraph # 3): YOUR BID OR PROPOSAL WILL BE DISQUALIFIED UNLESS YOUR BID OR PROPOSAL INCLUDES THIS FORM WITH EITHER PARAGRAPH #1 OR #2 INITIALED OR PARAGRAPH #3 INITIALED AND CERTIFIED.

OR

7. Clearly identify the top three safety issues related to your request in your jurisdiction.

1) Search and Rescue / Victim Recovery Operations - The Marine Unit responds in all environmental conditions for the purpose of both search and rescue (SAR) and victim recovery. The extreme environmental conditions of the San Francisco Bay make locating victims even more dangerous and difficult in periods of rough seas, heavy weather and limited visibility. The potential for victim survival decreases rapidly if a person in the frigid water cannot be quickly located and rescued.

2) Operational Safety of Mixed-Use Waterways - SF Bay is the largest harbor on the West Coast and has more annual USCG issued Marine Event Permits than anywhere in the country. Our waterways consist of heavy commercial activity including tour boats, passenger ferries, and cruise ships, as well as the largest commercial fishing fleet on the West Coast. Year round, these vessels simultaneously operate on the San Francisco Bay within close proximity to dozens of organized swims, sailing regattas, paddlecraft and recreational fishing boats.

3) Critical Infrastructure Protection – There are numerous federally identified Critical Infrastructure and Key Resources located along our Bay waterfront. Effective inspection of critical ferry and cruise terminals, bridges, mass transit sub-Bay ventilation structures, and large public gathering piers, along with enforcement of security restrictions set in place to prevent and deter terrorist activity at these locations is critical.

Misc. Equipment Items Questions (Thermal Camera with display)

11. Item Details

11 a. Is this equipment general all-purpose gear? NOTE: person-specific items will not be funded. Yes No

11 b. Describe exactly what you are requesting and how this equipment will help mitigate the boating safety issues you identified in Question 7.

Request:

One (1) long range, gyro-stabilized, forward looking thermal camera system with multi-function touch display. To be mounted aboard our all-weather, enclosed cabin response vessel, "SF Marine 3", and replace the current inoperative camera. System shall have automatic target tracking, and will integrate with our existing vessel computer communication and navigation systems for rapid identification. Touch screen display allows rapid, intuitive camera control while underway in unstable conditions.

Mitigation of Boating Safety Issues:

Search and Rescue (SAR) and Victim Recovery Operations - Boat mounted thermal camera systems are a proven mission critical asset for locating and recovering victims in the water in order to preserve life. This camera's stabilization and long-range scanning and tracking features will increase the success of SAR missions, especially during rough seas, blinding fog and darkness. Having proper equipment to effect these missions as quickly as possible is critical to the safety of both the victims and the responding officers operating in dangerous waters.

Operational Safety of Mixed-Use Waterways - High resolution thermal cameras with long-range capability are highly effective in visually locating and then protecting or redirecting Bay swimmers, paddlers, recreational power boats, and sail regattas, from passing commercial vessel traffic. This is critical to ensuring the safety of all waterway users during the frequent large, organized events.

Critical Infrastructure Protection - During periods of inclement weather (large waves, heavy fog) or low/no lighting, thorough inspection and security of critical maritime infrastructure and resources can be impossible without the use of a gyro-stabilized, high-resolution thermal and long-range visual camera mounted aboard a vessel capable of operating in such conditions. This project, mounted aboard our all-weather vessel, provides the security asset necessary to complete this mission.

11 c. Describe any negative impacts to boating safety and/or boating enforcement if you do not get this grant.

The existing thermal camera system onboard vessel "SF Marine 3", is inoperable, obsolete technology and beyond cost effective repair due to its age. Without the replacement this critical equipment through this project, this all-weather patrol and response vessel is not mission capable during periods of low light/darkness or inclement weather when heavy fog is present. These limited visibility conditions are frequently present during much of the summer boating season on the San Francisco Bay. The result is a greatly diminished ability to provide safety oversight and response to the high waterway use and need that continues during these conditions, including: organized swims; sail regattas; critical infrastructure protection, and search and rescue missions.

11 d. Classify this request

Classify this request by choosing one of the following options and present a strong justification for the request

- "Critical" (operations would cease without it)
- "Increased efficiency" (if it would save staff time, identify how much time)
- "Convenience" (it would make life a little easier)
- "Protection" of existing equipment (ex: shade structure, hoists to get the vessels out of the water, etc. to extend longevity)

Justification: Current thermal camera system on our response vessel recently became inoperable. Without this project, our response vessel is not mission ready during periods of inclement weather, low light, darkness, and periods of fog, thereby drastically reducing the safety of our heavy-use waterways.

- 11 e. If you are not awarded your full request, would your agency be able to supplement the difference? Yes No

If yes, what percentage can you supplement?

11 f. What other capabilities exist in your region for this equipment? Justify why it is not feasible to borrow this equipment from a neighboring agency.

Our Agency current operates and utilizes vessel mounted thermal camera systems on two other patrol vessels, neither of which is fully suitable for the all-weather conditions required of this vessel, nor with the capability this camera system will be able to provide.

While other Agencies may employ similar thermal cameras on their vessels, as mounted equipment with hard wired components, it is not practical to borrow and remount such a camera system and display onto our boat for the typically unpredictable and immediate needs this equipment fulfills.

No other neighboring Agency is operational and underway with a capable vessel and mounted thermal camera system to respond to our jurisdictional waters in the timeframe required of a search and rescue missions, nor are they able to provide the frequent oversight and protection of the events and waterfront features previously described.

11 g. How and why did you select this particular model? Explain if this is standard equipment or do you need something specialized for your waterbody to meet your agency's needs? List less expensive models considered and explain why they are not being requested.

This camera system is gyro-stabilized and can be networked with the vessel's navigation systems. This allows touchscreen selection of radar and chart identified targets, and then automatically points the camera to visually track the target. This provides more rapid target investigation and identification through darkness or fog and allows crew more time to operate other critical electronics, radios and ships controls.

The FLIR M400XR is the most capable, lowest cost gyro-stabilized camera system available that has video target tracking and other critical features, including 30x visual zoom and 4x thermal zoom. A vessel mounted system must be gyro-stabilized for effective image use while underway on the rough, open waters of the SF Bay and ocean, especially when viewing long-range distances.

Less expensive models deemed ineffective:

FLIR M400 – no visual tracking capability

Aydin Displays KMGBL-15T – unable to integrate with navigation systems for selectable target tracking
