THE CALIFORNIA DEPARTMENT OF PUBLIC HEALTH, hereinafter “Department”

“Disease Intervention Specialist (DIS) Workforce Development,” hereinafter

GRANT AGREEMENT NUMBER 25-10641

The Department awards this Grant, and the Grantee accepts and agrees to use the Grant funds as follows:

AUTHORITY: The Department has authority to grant funds for the Project under Health and Safety Code, Section 131085(a).

PURPOSE: The Department shall award this Grant Agreement to and for the benefit of the Grantee; the purpose of the Disease Intervention Specialist (DIS) Workforce Development grant is to develop, expand, train, and sustain the disease investigation and intervention workforce and address jurisdictional prevention and response needs for human immunodeficiency virus (HIV), sexually transmitted infections (STIs), hepatitis C virus (HCV), and mpox. **The funding is intended to scale prevention, increase capacity to conduct disease investigation, ensure appropriate treatment, link people to care and ongoing case management, monitor disease trends and rapidly respond to changes in disease trends and outbreaks of STIs, HIV, HCV, and mpox.**

STI prevention is HIV prevention. People with STIs are at an increase risk for acquiring and transmitting HIV. [CDC states in the STI Treatment Guidelines](#) that “diagnosis of an STI is a biomarker for HIV acquisition, especially among persons with primary or secondary syphilis or, among MSM individuals with rectal gonorrhea or chlamydia.” Data shows men who have sex with men (MSM) diagnosed with rectal gonorrhea and early syphilis were at the greatest risk of being diagnosed with HIV infection post-STI diagnosis and that these individuals should be prioritized for more intensive prevention interventions, including PrEP ([Katz et al, 2016](#)). Hence, identifying, treating and preventing STIs has a clear link to preventing HIV infection.

Additionally, HIV, STIs, HCV, and mpox have shared populations at risk, including MSM due to similar transmission mechanisms including sexual activity. In California, STI and HIV rates are particularly high among vulnerable populations already at elevated risk for HIV, including gay, bisexual, and other MSM, transgender and non-binary individuals, BIPOC communities, people who use drugs, and people experiencing homelessness or incarceration. Recent data also indicates STI rates are significantly higher - up to 39% (Williams & Bryant, 2018) and the CDC reports an increased HIV burden among people experiencing homelessness. Additionally, a composite literature review of [STI prevalence in homeless adults](#) identified HCV as the highest reported prevalence, at 52% among older men experiencing homelessness (Williams & Bryant, 2018).

According to HHS Guidelines: Both HIV and HCV can be transmitted by percutaneous exposure to blood or blood products, sexual intercourse, and perinatal transmission; however, the relative efficiency of transmission by these routes varies substantially. HCV transmission via injection drug use remains the most common mode of acquisition in the United States. The prevalence of HCV infection among people with HIV is distributed in the following subgroups: people who inject drugs (82.4%), men who have sex with men (MSM, 6.4%). In the United States, it is estimated that 62% to 80% of people who inject drugs and have HIV also have HCV infection. Estimates of HCV/HIV coinfection in the United States have been cited as 21% but have ranged from 6% to 30% with high variability based on the distribution of HIV transmission risk factors.

The potential for rapid spread of HIV among this population of PWID was realized during a 2015 outbreak in rural Scott County, Indiana. In January 2015, disease intervention specialists reported 11 new cases of confirmed HIV infection epidemiologically linked through injection drug use; by comparison, only 5 HIV infections had been diagnosed in this county in the prior 10 years (2004–2013). By November 2015, 181 new cases of HIV had been diagnosed; 92% of infected persons were coinfecting with HCV. In this outbreak among PWID, HCV infection typically preceded HIV infection, representing an important opportunity for HIV prevention. HCV among PWID is often an indicator of syringe-sharing, which also increases HIV risk. Empirical evidence and program evaluation data in California has shown that offering HCV testing increases acceptability and utilization of HIV testing among PWID.

Finally, people who are living with or are at risk for HIV are disproportionately impacted by mpox. Mitigation of mpox severity and transmission through vaccination is a core priority in California since approximately 40% of mpox cases in California in 2023 were among people with HIV. People with HIV, particularly those with a low CD4 cell count or those not receiving antiretroviral therapy, are at higher risk for severe mpox and even death.

Evidence for increasing STI, HCV and mpox incidence and prevalence in HIV-negative men seen in HIV PrEP clinics has also led to current recommendations to monitor for STIs, HCV and mpox as part of PrEP care. For this reason, it is critical that HIV prevention funds also incorporate these preventive services.

The syndemic of HIV, STIs, HCV and mpox from sexual and/or bloodborne transmission highlights the need for a syndemic approach to risk reduction. Given this context, LHJ disease investigators, epidemiologists, clinicians, and other program and grant managers play a critical role in identifying and responding to cases of HIV, STIs, HCV, and mpox, as well as reaching their partners. This work is essential for identifying those at greatest risk for HIV for expanding prevention, conducting investigations, monitoring disease trends, ensuring treatment, linking individuals and their partners to care and prevention are vital strategies for controlling the spread of HIV, STIs, HCV and mpox in California.

GRANT AMOUNT: The maximum amount payable under this Grant Agreement shall not exceed the amount of \$10,108,616.00.

TERM OF GRANT AGREEMENT: The term of the Grant shall begin on July 01, 2025, and terminates on June 30, 2030. No funds may be requested or invoiced for services performed or costs incurred after June 30, 2030.

Disease Intervention Specialist (DIS) Workforce Development Grant

The California Department of Public Health (CDPH), Sexually Transmitted Disease Control Branch (STDCB) will allocate approximately \$83,921,550 dollars in State local assistance funds through the Disease Intervention Specialist (DIS) Workforce Development Grant, funded by the AIDS Drug Assistance Program Rebate Fund. This Grant is to fund local disease intervention specialists supporting current or eligible services and programs as per Sections [120956 and 120972.2](#) of the Health and Safety Code. This Grant is set to begin on July 01, 2025, and end on June 30, 2030.

The syndemic of HIV, STIs, HCV and mpox from sexual and/or bloodborne transmission highlights the need for a syndemic approach to risk reduction. Given this context, LHJ disease investigators, epidemiologists, clinicians, and other program and grant managers play a critical role in identifying and responding to cases of HIV, STIs, HCV, and mpox, as well as reaching their partners. This work is essential for identifying those at greatest risk for HIV for expanding prevention, conducting investigations, monitoring disease trends, ensuring treatment, linking individuals and their partners to care and prevention are vital strategies for controlling the spread of HIV, STIs, HCV and mpox in California.

Funding will be allocated to sixty-one (61) local health jurisdictions (LHJ).

CDPH/STDCB included the following factors in the allocation model:

- These funds will maintain the disease intervention specialist workforce across 61 LHJs and ensure the continuation of essential services to prevent and control HIV, STIs, HCV, and mpox.

Exhibit A
Funding Allocation Process
Disease Intervention Specialist (DIS) Workforce Development Grant

- The original 2021 cycle of grant funds were allocated to LHJs using the [United States Census Community Resilience Estimates](#) (details about what is included is available) or the Social Vulnerability Index. CDPH/STDCB used the Community Resilience Estimates since that is what CDC used to distribute the funds to states. There is an expectation that the most vulnerable communities will be supported, rather than focusing on morbidity.
- This information was presented, and approval was provided by the California Conference of Local Health Officers and County Health Executives Association of California.
- Local deliverables with these funds will include activities related to expanded access to HIV/STI/HCV/mpox screening, testing, prevention services and materials for at risk populations. Activities should include increasing awareness and access to HIV/STI/HCV/mpox services, monitoring and responding to disease trends, delivering clinical expertise, providing timely treatment and prevention, notifying and providing partner services, linking patient and partners to prevention and care services including in atypical settings such as emergency departments and correctional facilities, and responding to outbreaks.
- Hiring priority should be given to front-line public health workforce DIS, DIS supervisors, PH nursing or other clinical, epidemiological staff and other roles that support the success of front-line DIS prevention, disease response and outbreak efforts.
- According to the 2018 Infrastructure Survey of local STD programs, the average salary of DIS, including DIS Supervisors, ranges between \$38,048 to \$131,418.

- C. *Workforce Member(s) Assessment.*** Before being permitted access to CDPH PCI, Contractor must assure there is no indication its Workforce Member(s) may present a risk to the security or integrity of CDPH PCI. Contractor shall retain the Workforce Member(s)' assessment documentation for a period of three (3) years following contract termination.

II. Technical Security Controls

A. *Encryption.*

- All desktop computers and mobile computing devices must be encrypted, in accordance with CDPH Cryptographic Standards or using the latest FIPS 140 validated cryptographic modules.

- C. *Minimum Necessary.*** Only the minimum amount of CDPH PCI required to complete an authorized task or workflow may be copied, downloaded, or exported to any individual device.

Exhibit F
Information Privacy and Security Requirements

- D. Antivirus software.** Contractor shall employ automatically updated malicious code protection mechanisms (anti-malware programs or other physical or software-based solutions) at its network perimeter and at workstations, servers, or mobile computing devices to continuously monitor and take action against system or device attacks, anomalies, and suspicious or inappropriate activities.
- E. Patch Management.** All devices that process or store CDPH PCI must have a documented patch management process. Vulnerability patching for Common Vulnerability Scoring System (CVSS) “Critical” severity ratings (CVSS 9.0 – 10.0) shall be completed within forty-eight (48) hours of publication or availability of vendor supplied patch; “High” severity rated (CVSS 7.0- 8.9) shall be completed within seven (7) calendar days of publication or availability of vendor supplied patch; all other vulnerability ratings (CVSS 0.1 – 6.9) shall be completed within thirty (30) days of publication or availability of vendor supplied patch, unless prior ISO and PO variance approval is granted.
- F. User Identification and Access Control.** All Contractor Workforce Member(s) must have a unique local and/or network user identification (ID) to access CDPH PCI. To access systems/applications that store, process, or transmit CDPH PCI, it must comply with SIMM 5360-C Multi-factor Authentication (MFA) Standard and NIST SP800-63B Digital Identity Guidelines. The SIMM 5350-C provides steps for determining the Authenticator Assurance Level (AAL), and a set of permitted authenticator types for each AAL (0-3). Note: MFA requirement does not apply to AAL 0.

All Contractor Workforce Member(s) are required to leverage FIDO authentication. The FIDO authentication is AAL 3 compliance. FIDO certified devices such as YubiKeys and Windows Hello for Business (WHfB) are the mechanism for user authentication in the Department.

Should a Workforce Member(s) no longer be authorized to access CDPH PCI, or an ID has been compromised, that ID shall be promptly disabled or deleted. User ID’s must integrate with user role-based access controls to ensure that individual access to CDPH PCI is commensurate with job-related responsibilities.

Information Privacy and Security Requirements

- G. CDPH PCI Destruction.** When no longer required for business needs or legal retention periods, all electronic and physical media holding CDPH PCI must be purged from Contractor's systems and facilities using the appropriate guidelines for each media type as described in the prevailing "National Institute of Standards and Technology – Special Publication 800-88" – "Media Sanitization Decision Matrix."
- H. Reauthentication.** Contractor's computing devices holding, or processing CDPH PCI must comply the Reauthentication requirement, in which a session must be terminated (e.g., logged out) when the specified time is reached. Note: Reauthentication requirement does not apply to Authenticator Assurance Level (AAL) 0.

	AAL 1	AAL 2	AAL 3
Reauthentication	30 Days – Fix Period of Time, regardless user activity	12 hours – Fix Period of Time, regardless user activity; 30 minutes inactivity May use one of the authenticators to reauthenticate	12 hours – Fix Period of Time regardless user activity; 15 minutes inactivity Must use both authenticators to reauthenticate

In addition, reauthentication of individuals is required in the following situations:

- When authenticators change
 - When roles change
 - When the execution of privileged function occurs (e.g., performing a critical transaction)
- I. Warning Banners.** During a user log-on process, all systems providing access to CDPH PCI, must display a warning banner stating that the CDPH PCI is confidential, system and user activities are logged, and system and CDPH PCI Use is for authorized business purposes only. User must be directed to log-off the system if they do not agree with these conditions.
- J. System Logging.** Contractor shall ensure its information systems and devices that hold or process CDPH PCI are capable of being audited and the events necessary to reconstruct transactions and support after-the-fact investigations are maintained. This includes the auditing necessary to cover related events, such as the various steps in distributed, transaction-based processes and actions in service-oriented architectures. Audit trail information with CDPH PCI must be stored with read-only permissions and be archived for six (6) years after event occurrence. There must protect audit information and audit logging tools from unauthorized access, modification, and deletion. There must also be a documented and routine procedure in place to review system logs for unauthorized access.
- K. Live Data Usage.** Using live data (production data) for testing and training purposes is not allowed. Synthetic data must be Used. If synthetic data cannot be generated and/or Used, a de-identification process against the live data must be done to reduce privacy risks to individuals. The de-identification process removes identifying information from a dataset so that individual data cannot be linked with specific individuals. Refer to CHHS Data De-Identification Guidelines.
- L. Privileged Access Management (PAM).** Contractor who responsible for setting up and maintaining privileged accounts related to CDPH electronic information resources shall comply with the CDPH PAM Security Standard. Information resources include user workstations as well as servers, databases, applications, and systems managed on-premises and on the cloud.

- A. *System Security Review.*** Contractor, to assure that administrative, physical, and technical controls are functioning effectively and providing adequate levels of protection for CDPH PCI, shall conduct at least, an annual administrative assessment of risk, including the likelihood and magnitude of harm from the unauthorized access, Use, Disclosure, disruption, modification, or destruction of an information system or device holding processing, or transporting CDPH PCI, along with periodic technical security reviews using vulnerability scanning tools and other appropriate technical assessments.
- B. *Change Control.*** All Contractor systems and devices holding, processing, or transporting CDPH PCI shall have a documented change control process for hardware, firmware, and software to protect the systems and assets against improper modification before, during, and after system implementation.

IV. Business Continuity / Disaster Recovery Controls

- A. *Emergency Mode Operation Plan.*** Contractor shall develop and maintain technical recovery and business continuity plans for systems holding, processing, or transporting CDPH PCI to ensure the continuation of critical business processes and the confidentiality, integrity, and availability of CDPH PCI following an interruption or disaster event lasting more than twenty-four (24) hours.
- B. *CDPH PCI Backup Plan.*** Contractor shall have a documented, tested, accurate, and regularly scheduled full backup process for systems and devices holding CDPH PCI.

V. Paper Document Controls

- A. *Supervision of CDPH PCI.*** CDPH PCI in any physical format shall not be left unattended at any time. When not under the direct observation of an authorized Contractor Workforce Member(s), the CDPH PCI must be stored in a locked file cabinet, desk, or room. It also shall not be left unattended at any time in private vehicles or common carrier transportation, and it shall not be placed in checked baggage on common carrier transportation.
- B. *Escorting Visitors.*** Visitors who are not authorized to see CDPH PCI must be escorted by authorized Workforce Member(s) when in areas where CDPH PCI is present, and CDPH PCI shall be kept out of sight of visitors.
- C. *Removal of CDPH PCI.*** CDPH PCI in any format must not be removed from the secure computing environment or secure physical storage of the Contractor, except with express written permission of the CDPH PCI owner.
- D. *Faxing and Printing.*** Contractor shall control access to information system output devices, such as printers and facsimile devices, to prevent unauthorized individuals from obtaining any output containing CDPH PCI. Fax numbers shall be verified with the intended recipient before transmittal.

Exhibit F
Information Privacy and Security Requirements

- E. *Mailing.*** Mailings of CDPH PCI shall be sealed and secured from damage or inappropriate viewing to the extent possible. Mailings which include five hundred (500) or more individually identifiable records of CDPH PCI in a single package shall be sent using a tracked mailing method which includes verification of delivery and receipt, unless the prior written permission of CDPH to use another method is obtained.

SUBJECT: DISEASE INTERVENTION SPECIALIST (DIS) WORKFORCE DEVELOPMENT GRANT

The California Department of Public Health (CDPH), Sexually Transmitted Disease Control Branch (STDCB), is awarding Local Health Jurisdictions (LHJ) local assistance funds through the Disease Intervention Specialist (DIS) Workforce Development Grant. Funded by the AIDS Drug Assistance Program Rebate Fund, this Grant is to fund local disease intervention specialists supporting current or eligible services and programs as per Sections [120956 and 120972.2](#) of the Health and Safety Code. This Grant is set to begin on July 01, 2025, and end on June 30, 2030.

Grant Activities

The purpose of the Disease Intervention Specialist (DIS) Workforce Development Grant is to develop, expand, train, and sustain the disease investigation and intervention workforce and address jurisdictional prevention and response needs for human immunodeficiency virus (HIV), sexually transmitted infections (STIs), hepatitis C virus (HCV), and mpox. **The funding is intended to scale prevention, increase capacity to conduct disease investigation, ensure appropriate treatment, link people to care and ongoing case management, monitor disease trends and rapidly respond to changes in disease trends and outbreaks of STIs, HIV, HCV, and mpox.**

STI prevention is HIV prevention. People with STIs are at an increase risk for acquiring and transmitting HIV. [CDC states in the STI Treatment Guidelines](#) that “diagnosis of an STI is a biomarker for HIV acquisition, especially among persons with primary or secondary syphilis or, among MSM individuals with rectal gonorrhea or chlamydia.” Data shows men who have sex with men (MSM) diagnosed with rectal gonorrhea and early syphilis were at the greatest risk of being diagnosed with HIV infection post-STI diagnosis and that these individuals should be prioritized for more intensive prevention interventions, including PrEP ([Katz et al](#), 2016). Hence, identifying, treating and preventing STIs has a clear link to preventing HIV infection.

Additionally, HIV, STIs, HCV, and mpox have shared populations at risk, including MSM due to similar transmission mechanisms including sexual activity. In California, STI and HIV rates are particularly high among vulnerable populations already at elevated risk for HIV, including gay, bisexual, and other MSM, transgender and non-binary individuals, BIPOC communities, people who use drugs, and people experiencing homelessness or incarceration. Recent data also indicates STI rates are significantly higher - up to 39% (Williams & Bryant, 2018) and the CDC reports an increased HIV burden among people experiencing homelessness. Additionally, a composite literature review of [STI prevalence in homeless adults](#) identified HCV as the highest reported prevalence, at 52% among older men experiencing homelessness (Williams & Bryant, 2018).

According to HHS Guidelines: Both HIV and HCV can be transmitted by percutaneous exposure to blood or blood products, sexual intercourse, and perinatal transmission; however, the relative efficiency of transmission by these routes varies substantially. HCV transmission via injection drug use remains the most common mode of acquisition in the United States. The prevalence of HCV infection among people with HIV is distributed in the following subgroups: people who inject drugs (82.4%), men who have sex with men (MSM, 6.4%). In the United States, it is estimated that 62% to 80% of people who inject drugs and have HIV also have HCV infection. Estimates of HCV/HIV coinfection in the United States have been cited as 21% but have ranged from 6% to 30% with high variability based on the distribution of HIV transmission risk factors.

The potential for rapid spread of HIV among this population of PWID was realized during a 2015 outbreak in rural Scott County, Indiana. In January 2015, disease intervention specialists reported 11 new cases of confirmed HIV infection epidemiologically linked through injection drug use; by comparison, only 5 HIV infections had been diagnosed in this county in the prior 10 years (2004–2013). By November 2015, 181 new cases of HIV had been diagnosed; 92% of infected persons were coinfecting with HCV. In this outbreak among PWID, HCV infection typically preceded HIV infection, representing an important opportunity for HIV prevention. HCV among PWID is often an indicator of syringe-sharing, which also increases HIV risk. Empirical evidence and program evaluation data in California has shown that offering HCV testing increases acceptability and utilization of HIV testing among PWID.

Finally, people who are living with or are at risk for HIV are disproportionately impacted by mpox. Mitigation of mpox severity and transmission through vaccination is a core priority in California since approximately 40% of mpox cases in California in 2023 were among people with HIV. People with HIV, particularly those with a low CD4 cell count or those not receiving antiretroviral therapy, are at higher risk for severe mpox and even death.

Evidence for increasing STI, HCV and mpox incidence and prevalence in HIV-negative men seen in HIV PrEP clinics has also led to current recommendations to monitor for STIs, HCV and mpox as part of PrEP care. For this reason, it is critical that HIV prevention funds also incorporate these preventive services.

The syndemic of HIV, STIs, HCV and mpox from sexual and/or bloodborne transmission highlights the need for a syndemic approach to risk reduction. Given this context, LHJ disease investigators, epidemiologists, clinicians, and other program and grant managers play a critical role in identifying and responding to cases of HIV, STIs, HCV, and mpox, as well as reaching their partners. This work is essential for identifying those at greatest risk for HIV for expanding prevention, conducting investigations, monitoring disease trends, ensuring treatment, linking individuals and their partners to care and prevention are vital strategies for controlling the spread of HIV, STIs, HCV and mpox in California.
