	Amended Capital Plan				
-	by: Linda Wong by: Linda Wong	Date Date_	Mu	y 25, 201	8

[Amended Ten-Year Capital Expenditure Plan-FYs 2018-2027 - Increase Proposed Seawall Bond - \$425,000,000]

Resolution amending the City's ten-year capital expenditure plan for FYs 2018-2027 to increase the proposed Seawall Bond from \$350,000,000 to \$425,000,000 to fund Phase 1 of the Seawall Program.

WHEREAS, This Board of Supervisors (the "Board") of the City and County of San Francisco (the "City") adopted Ordinance No. 216-05 (the "Capital Planning Ordinance") amending Administrative Code, Sections 3.20 and 3.21 to authorize the formation of a Capital Planning Committee (the "Committee") and the annual preparation and adoption of a ten-year capital expenditure plan for the City, including an assessment of the City's capital infrastructure needs, investments required to meet the needs identified through this assessment, and a plan of finance to fund these investments; and

WHEREAS, The Capital Planning Ordinance requires that the ten-year capital expenditure plan include all major planned investments to maintain, repair, and improve the condition of the City's capital assets, including, but not limited to, City streets, sidewalks, parks and rights-of-way; public transit infrastructure; airport and port; water, sewer, and power utilities; and all City-owned facilities; and

WHEREAS, The Capital Planning Ordinance further requires that the ten-year capital expenditure plan include a plan of finance for all recommended investments, including the proposed uses of general and enterprise funds to be spent to meet these requirements; and the use and timing of long-term debt to fund planned capital expenditures, including general obligation bond measures; and

WHEREAS, The Capital Ordinance establishes March 1 of each odd-numbered year as the target date for the City Administrator's submission of the annual ten year capital plan to

the Mayor of the City and the Board, and calls for the Mayor and the Board to review, update, amend and adopt the ten year capital plan by May 1 of the same year; and

WHEREAS, At the February 27, 2017, meeting the Committee unanimously adopted the ten-year capital plan for FYs 2018-2027 and approved it for submission to the Mayor and the Board for its consideration (as so adopted, the "Capital Plan"); and

WHEREAS, In Resolution 145-17 (the "Resolution") the Board approved the Capital Plan on April 25, 2017; and

WHEREAS, The Capital Plan provided for a proposed Seawall General Obligation bond in an amount of \$350,000,000 to finance improvements to the earthquake safety and performance of the Embarcadero Seawall and other critical infrastructure; and

WHEREAS The amount needed to complement other identified sources and fully fund Phase 1 of the Seawall Program is \$425,000,000, and the Office of Public Finance has indicated that the additional \$75,000,000 in the proposed bond will not exceed the policy constraint for the General Obligation Bond Program as stated in the City's ten year capital plan; and

WHEREAS, The timeline for the proposed bond to appear on the November 2018 ballot runs prior to the next update of the City's ten year capital plan, which will be adopted in spring 2019; and

WHEREAS, At the April 16, 2018, meeting the Committee unanimously adopted an amended ten-year capital plan for FYs 2018-2027 to include a \$425,000,000 Seawall Bond and approved the amended capital plan for submission to the Mayor and the Board for its consideration (as so adopted, the "Amended Capital Plan"); and

WHEREAS, The Amended Capital Plan and the City Administrator's transmittal letter are on file with the Clerk of the Board of Supervisors File No. 180461, which is hereby declared to be a part of this resolution as if set forth fully herein; now, therefore, be it

RESOLVED, That the above recitals are true and correct; and, be it

FURTHER RESOLVED, That this Board has reviewed the Amended Capital Plan; and, be it

FURTHER RESOLVED, That the City's ten-year capital expenditure plan for FYs 2018-2027 be amended to increase the proposed Seawall Bond from \$350,000,000 to \$425,000,000 to fund Phase 1 of the Seawall Program; and, be it

FURTHER RESOLVED, That this Board hereby adopts the Amended Capital Plan as the City's ten-year capital expenditure plan for purposes of the Capital Planning Ordinance.

Items 1, 2 and 3 Department:

Files 18-0454, 18-0461 & 18-0462 | Port Commission (Port)

EXECUTIVE SUMMARY

Legislative Objectives

• The proposed ordinance (File 18-0454) and resolutions (Files 18-0461 and 0462) (1) call for a ballot proposition on the November 6, 2018 San Francisco ballot to incur bonded debt of \$425,000,000 to finance the construction, reconstruction, acquisition, improvement, demolition, seismic strengthening, and repair of the Embarcadero Seawall; (2) amend the FY 2018-27 Capital Plan to increase the proposed Seawall Bond amount from \$350,000,000 to \$425,000,000; (3) determine the public interest and necessity of the project; (4) find that the cost is too great for the ordinary revenues and require incurring bonded indebtedness: (5) affirm the Planning Department's determinations under the California Environmental Quality Act; and (6) find the proposed bond in conformity with the priority policies of the Planning Code and the General Plan, and waive established time limits.

Key Points

- The Embarcadero Seawall, which is over 100 years old, protects San Francisco's waterfront, transportation infrastructure, and business activity. The Port of San Francisco (Port) determined that the Seawall would likely be significantly damaged in a major earthquake, a risk increased by flooding due to sea level rise. The Embarcadero is both a key evacuation route and access route for first responders in the event of a disaster. Phase 1 of the Seawall Program, which includes seismic improvements, flood protections, and mitigation and enhancement measures, is estimated to cost approximately \$500,000,000 through 2027. The Port is unable to fund this through its typical revenues.
- The proposed ordinance and resolutions would place a proposition on the November 6, 2018 San Francisco election ballot to incur \$425,000,000 of bonded debt for the Seawall program. The remainder of the Seawall program would be funded by various Federal, State, and City sources. The California State Constitution requires two-thirds voter approval for the City to issue General Obligation bonds.

Fiscal Impact

• The General Obligation bonds, if approved by voters, would provide \$425,000,000 of revenue to the Port for Phase 1 of the Seawall Program. Repayment of the bonds, including interest, would require approximately \$730,400,000 of debt service over 25 years. Using FY 2017-18 assessments, property taxpayers would each pay an average of approximately \$13.23 annually per \$100,000 of assessed value to repay the bonds.

Recommendation

 Approval of the proposed ordinance and resolutions is a policy decision for the Board of Supervisors.

MANDATE STATEMENT

According to Article 16, Section 18(a) of the State of California Constitution, no county, city, town, township, board of education, or school district, shall incur any indebtedness or liability for any purpose exceeding in any year the income and revenue provided for such year, without the approval of two-thirds of the voters of the public entity voting at an election to be held for that purpose. Section 9.105 of the City's Charter provides that the Board of Supervisors is authorized to approve the issuance and sale of General Obligation bonds in accordance with State law or local procedures adopted by ordinance.

City Administrative Code Section 2.34 requires that a resolution of public interest and necessity for the acquisition, construction or completion of any municipal improvement be adopted by the Board of Supervisors not less than 141 days before the election at which such proposal will be submitted to the voters. These time limits may be waived by resolution of the Board of Supervisors.

BACKGROUND

The Embarcadero Seawall, which is over 100 years old, supports San Francisco's piers, wharves, businesses, tourist destinations, recreational amenities, and key infrastructure, including Bay Area Rapid Transit, Muni Metro, and ferry networks. The Seawall also provides flood protection to downtown San Francisco, protecting over \$100 billion of assets and economic activity.

Analysis conducted by the Port of San Francisco (Port) determined that the Seawall would likely be significantly damaged in a major earthquake. The risk is compounded by increased likelihood of flooding due to sea level rise. The Embarcadero is both a key evacuation route and access route for first responders in the event of a disaster. The Seawall is named as a critical infrastructure priority and as part of the General Obligation Bond Program in the City's FY 2018-27 Capital Plan. Phase 1 of the Seawall Program, which includes seismic improvements, flood protections, and mitigation and enhancement measures, is estimated to cost approximately \$500,000,000 through 2027.

Due to the project scale, the Port is unable to fund the Seawall Program through its operating revenues. In addition to anticipated funding from the United States Army Corps of Engineers (USACE), the State of California, and various City departments, the Port estimates that issuance of \$425,000,000 of General Obligation bonds is needed to fund the Seawall Program. The City's Capital Planning Committee at their April 16, 2018 meeting recommended a November 2018 ballot measure to authorize \$425,000,000 in General Obligation bonds to reconstruct the Seawall.

DETAILS OF PROPOSED LEGISLATION

The proposed ordinance (File 18-0454) and resolutions (File 18-0461 and 18-0462) would:

i. Place a proposition on the November 6, 2018 San Francisco election ballot to incur \$425,000,000 of bonded debt for the Seawall Program;

- ii. Authorize landlords to pass through 50 percent of the property tax increase to residential tenants;
- iii. Amend the FY 2018-27 Capital Plan to increase the proposed Seawall Bond from \$350,000,000 to \$425,000,000 to fund Phase 1 of the Seawall Program;
- iv. Find the Seawall Program is in the public interest and necessity and that the estimated project cost is too large to be funded by ordinary revenues and will require bonded indebtedness;
- v. Affirm the Planning Department's determination under the California Environmental Quality Act (CEQA);
- vi. Find that the proposed bond conforms with the eight priority policies of the Planning Code and the General Plan; and
- vii. Waive the time requirements of Administrative Code Section 2.34.

The California State Constitution requires two-thirds voter approval for the City to issue General Obligation bonds. If the bonds are approved and issued, the Citizen's General Obligation Bond Oversight Committee would annually review expenditures to ensure that funds are used appropriately. An overview of possible uses of funds is shown in Table 1 below.

Table 1: Possible Uses of Bond Funding

Investment Category	Possible Uses	
	 Program development, planning, and pre-design 	
Project Implementation	 Design, engineering, and other soft costs 	
	Construction management	
	 Ground strengthening and liquefaction remediation 	
	 Bulkhead wall, wharf, and pier retrofits and replacements 	
	 Bulkhead building retrofits and seismic joints 	
Farthquaka Improvements	Pier building retrofits	
Earthquake Improvements	 Critical facility retrofits and replacements 	
	 Utility replacements, relocations, and bypasses 	
	 Matching funds for public and private sources 	
	Other life safety improvements	
	 Flood walls and barriers 	
	 Surface grade changes 	
Flood Protection Measures	Flood proofing	
Flood Protection Weasures	 Planning for future adaptation 	
	 Enhanced foundation for future adaptation 	
	Other flood control improvements	
	Public access enhancements	
Mitigation & Enhancement	 Transportation and mobility improvements 	
Mitigation & Enhancement	Environmental benefits	
	Other public benefits	

FISCAL IMPACT

The ballot measure authorized by the proposed ordinance and resolution, if approved by voters, would provide \$425,000,000 in bond proceeds to the Port to fund Phase 1 of the Seawall program. According to Mr. Vishal Trivedi, Controller's Office Financial Analyst, bonds would likely be issued in three separate sales over an approximate five-year period, and structured as 20 year bonds. Interest and principal payments are estimated to be \$730,400,000 over 25 years. Based on the citywide total assessed value of properties in FY 2017-18, property taxpayers would each pay an average of approximately \$13.23 per \$100,000 of assessed value annually, over the course of 25 years. For residential rental properties, one half of the property tax assessment to repay the bonds may be passed on to tenants.

City policy, defined in the 2018-27 Capital Plan, requires that the issuance of new General Obligation bonds will not increase the property tax rate above FY 2005-06 levels. According to Mr. Trivedi, if the voters approve the proposed \$425,000,000 in new General Obligation Bond authority, the City's property tax rate for all outstanding General Obligation Bond authority is expected to be maintained within the FY 2005-06 policy constraints.

According to Ms. Katharine Petrucione, Port Chief Financial Officer, the Port will be unable to provide a detailed project list until CEQA analysis is performed. An approximate sources and uses of funds for the total \$500,000,000 Seawall Program Phase 1 is shown in Table 2 below.

Table 2: Sources and Uses of Seawall Program, Phase 1

Sources	Amount
General Obligation Bonds	\$425,000,000
Port Capital	8,000,000
San Francisco Municipal Transportation Agency	1,000,000
Planning Department	1,000,000
USACE	10,000,000
State Sources*	55,000,000
Total Sources	\$500,000,000
Uses	Amount
Port Staff Costs	\$9,215,893
Public Outreach	1,695,270
USACE ¹	6,262,550
Planning/Engineering	38,477,718
Final Design	43,700,000
Construction	355,591,891
Subtotal	\$454,943,321
Contingency (10%)	45,056,678
Total Uses	\$500,000,000

^{*}State sources pending legislative action

POLICY CONSIDERATION

Approval of the proposed resolution (File 18-0462) requires two-thirds or more of the Board of Supervisors approval and approval by the Mayor. In addition, approval of this \$425,000,000 General Obligation Bond would require approval by at least two-thirds of San Francisco voters.

RECOMMENDATION

Approval of the proposed ordinance and resolution is a policy decision for the Board of Supervisors.

¹ According to Ms. Petrucione, USACE is currently evaluating the feasibility of implementing a flood protection project along the Embarcadero. A decision on the project, which would use both USACE and Port funds, is expected in Fall 2018.

OFFICE OF THE CITY ADMINISTRATOR

Maria Maria

Mark Farrell, Mayor Naomi M. Kelly, City Administrator

May 2, 2018

The Honorable Matk Farrell, Mayor City and County of San Francisco 1 Dr. Carlton B. Goodlett Place San Francisco, CA 94102

Honorable Members of the Board of Supervisors City and County of San Francisco 1 Dr. Carlton B. Goodlett Place San Francisco, CA 94102

Re: Amendment to the City and County of San Francisco Capital Plan FY 2018 - FY 2027

Dear Mayor Farrell and Members of the Board of Supervisors:

In compliance with the San Francisco Administrative Code Section 3.20, I am pleased to submit an amendment to the current City and County of San Francisco capital expenditure plan to fund the Seawall Program at \$425 million through the General Obligation Bond Program. This project was formerly included in the General Obligation Bond program at \$350 million.

To make this adjustment, the Capital Planning Committee recommended the following amendment to the General Obligation Bond Program table found on pages 10 and 62-63 of the current plan:

Augment the Seawall General Obligation Bond to add \$75 million in proposed debt issuance, for a total
of \$425 million, for the November 2018 election.

Unanimously approved by the Capital Planning Committee on April 16, 2018, this amendment complies with San Francisco's policy of limiting General Obligation Bonds controlled by the City and County of San Francisco so that property tax rates do not increase above 2006 levels.

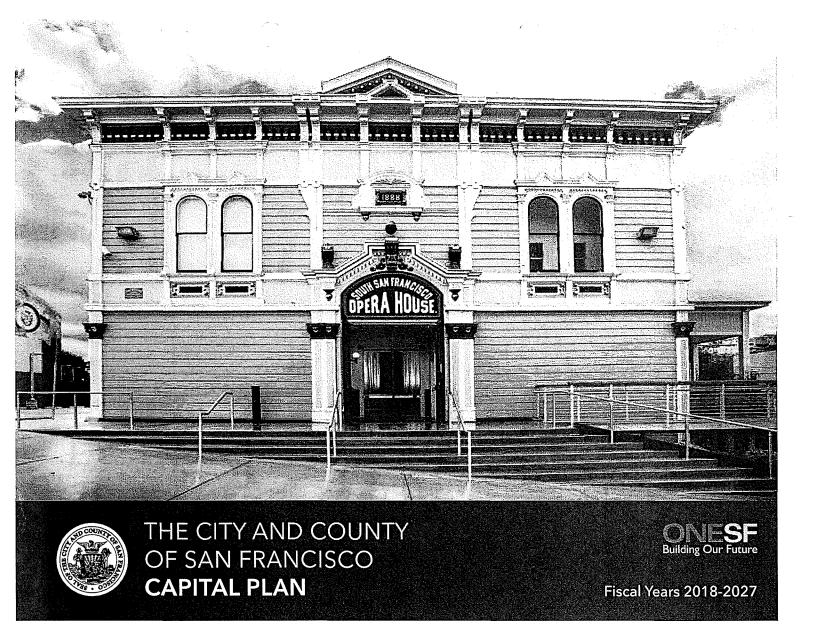

The revised General Obligation Bond Program table on pages 10 and 62 of the Capital Plan is shown belowy

Election Date	Bond Program	Proposed Amount
November 2018	Seawall Fortification	\$425M
November 2019	Parks and Open Space	\$185M
November 2020	Earthquake Safety & Emergency Response	\$290M
November 2022	Public Health	\$300M
November 2024	Transportation	\$500M
June 2025	Parks and Open Space	\$185M
November 2026	Earthquake Safety & Emergency Response	\$290M

Copies of the Capital Plan, along with materials related to the Capital Plan Amendment can be found at www.onesanfrancisco.org or by contacting the Capital Planning Program at (415) 554-5164.

Sincerely,

Naomi M. Kelly City Administrator

There is only ONE San Francisco.

Let's take care of it.

City and County of San Francisco Proposed Capital Plan Fiscal Years 2018-2027

Copies of this document can be found at http://onesanfrancisco.org or through the Of Čce of Resilience and Capital Planning

> City Hall, Room 347 1 Dr. Carlton B. Goodlett Pl. San Francisco, CA 94102

In compliance with the San Francisco Administrative Code Section 3.20, I am pleased to submit the Proposed City and County of San Francisco Capital Plan for Fiscal Years (FY) 2018-2027. The guiding document for City infrastructure investments, this Plan assesses the City's capital needs, identi\(\tilde{O}\)estimates the level of investment required to meet those needs, and provides a constrained plan of \(\tilde{O}\)nance for the next 10 years.

The Proposed Plan continues the City's commitment to plan and Onance projects that will strengthen the integrity of San Francisco's infrastructure. The Plan recommends a record level of \$35 billion in investments over the next decade that will improve San Francisco's

resilience through critical seismic repairs and strengthening; transportation and utility system improvements; safer streets for pedestrians, bicyclists, and drivers; and more affordable housing.

For the Örst time, the Proposed Plan includes strategies to address the multigenerational need to fortify the Seawall, which protects three miles of vital and vibrant waterfront. The Seawall, its assets, and the people who rely on it for home, work, recreation, and/or travel are all vulnerable to the immediate threat of earthquakes and the slow-moving threat of sea level rise.

Even with this record level of investment, the Proposed Plan defers \$4.6 billion in identiŌed capital needs for General Fund departments and does not fully fund annual state of good repair needs for those departments until FY2032.

San Francisco has long been a city resilient in the face of environmental, economic, and social challenges. The Capital Plan not only guides infrastructure investments but also builds public trust in the City's ability to do smart long-term planning. I look forward to working with the Mayor and the Board of Supervisors to enact the recommendations of this Plan and continuing to build a stronger City.

Naomi M. Kelly City Administrator

01. EXECUTIVE SUMMARY

The Fiscal Year (FY) 2018-2027 City and County of San Francisco Capital Plan (the Plan) is the City's commitment to building a more resilient and vibrant future for the residents, workers, and visitors of San Francisco. Updated every odd-numbered year, the Plan is a Öscally constrained expenditure plan that lays out infrastructure investments over the next decade. This document is the product of input from Citywide stakeholders, who have put forth their best ideas and most realistic estimates of San Francisco's future needs.

Projects in the Plan are divided into seven Service Areas: Economic and Neighborhood Development; General Government; Health and Human Services; Infrastructure and Streets; Public Safety; Recreation, Culture, and Education; and Transportation. Each Service Area chapter describes the associated Renewal Program, Enhancement Projects, Deferred Projects, and Emerging Needs. General Fund, Enterprise, and external agencies are all represented to give as full a picture of San Francisco's capital needs as possible.

A growing Bay Area economy has given rise to historic levels of capital investment in recent years. Spurred by a growing tax base, increases in General Fund revenues and debt issuance capacity have allowed San Francisco to fund a record level of capital projects over the last eight years. As a result, San Francisco is now better positioned to build a healthy infrastructure program and meet the challenges ahead.

Plan By the **Numbers**

The FY 2018-2027 Capital Plan generally retains most policies and practices set in prior year plans, including maintaining restrictions around issuing debt and fully funding certain capital programs such as the City's Americans with Disability Act (ADA) transition plans, facilities maintenance, and street resurfacing. Policies governing the Plan are discussed in the Introduction as well as the Capital Sources chapter. The Plan also proposes a number of goals that continue key objectives from previous years, including robust funding for renewals, relocating critical City services to seismically sound facilities, and construction on hundreds of other public infrastructure projects to improve services and quality of life.

This Plan captures \$24 billion in recommended direct City investments and \$11 billion in external agency investment, which total \$35 billion in capital improvements citywide, while creating an estimated 290,000 local jobs over the next decade.

Table 1.1 Provides an overview of this Plan's proposed capital program broken down by service category and

Planned Project Highlights

San Francisco has many competing needs, and the capital program is no exception. Major projects with funding identiČed in this Plan include:

General Fund Departments

- Zuckerberg San Francisco General Hospital campus improvements
- Southeast Health Center expansion
- Closure and demolition of the unsafe Hall of Justice
- Neighborhood Fire Stations program
- · District Police Stations program
- Department of Emergency Management expansion
- Animal Care & Control Shelter replacement
- SFFD Ambulance Deployment Center modernization
- Park system renovations, including Margaret S. Hayward Playground
- ADA facilities and right-of-way barrier removal

Enterprise Departments

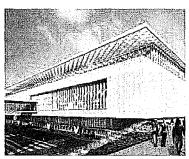

- FortiÖcation of the Seawall
- · Pier 70 and Seawall Lot 337
- Central Subway
- Transbay Transit Center
- Muni Forward
- Vision Zero Pedestrian Safety Program
- Van Ness and Geary Bus Rapid Transit (BRT)
- Water and Sewer System Improvement Programs
- SFO Terminal 1 and 3 improvements
- · Airport hotel construction

External Agencies

- HOPE SF affordable housing developments
- · Treasure Island redevelopment
- City College seismic and code upgrades
- · Modernization of SFUSD sites

Planned Terminal 1 Improvements at SFO

Planned Moscone Convention Center Expansion

General Fund Departments

General Fund departments primarily rely on the General Fund to support their infrastructure needs. Table 1.2 outlines a program summary of proposed General Fund department investments, as well as projects deferred from the Plan due to funding limitations.

Pay-As-You-Go Program

The Plan proposes funding the majority of the City's ongoing annual needs with General Fund dollars through the General Fund Pay-As-You-Go (Pay-Go) Program. These are typically smaller investments to maintain facilities and infrastructure in a state of good repair or fund critical infrastructure needs. Within the Pay-Go Program, projects are categorized as Routine Maintenance, ADA Facilities, ADA Public Right-of-Way, Street Resurfacing, Critical Enhancements, Facility Renewal, and Right-of-Way Infrastructure Renewal.

Table 1.3 provides a summary of the Plan's proposed funding for the Pay-Go Program by expenditure category.

TABLE 1.3

Capital Plan FY2018-2027

Enterprise and External Agencies

This Plan compiles information provided by the City's Enterprise departments—the Port of San Francisco, the San Francisco Metropolitan Transportation Agency, San Francisco International Airport, and the San Francisco Public Utilities Commission. Those departments have their own timelines and Commissions that govern their capital processes. The information in this Plan represents the best available at the time of publication.

The Plan captures nearly \$19 billion in Enterprise department capital investments during the next 10 years, a 3.8% increase from the previous Plan.

Major projects identified in the last Plan such as the Central Subway, the Transbay Transit Center, Pier 70, and SFO terminal improvements, are proceeding. Additional Enterprise department needs have arisen, most notably the need to fortify the Seawall along the northern waterfront to protect the buildings, transportation systems,

TABLE 1.4

Airport	5,217		5,217
SFMTA	150	100	250
Total	10,825	1,475	12,301

and horizontal infrastructure in that part of the city, as well as the residents, workers, and visitors who frequent there.

Enterprise departments appear in this Plan's G.O. Bond Program. The SFMTA passed a \$500 million Transportation G.O. Bond in 2014, and there is another one proposed for 2024, as well as a \$350 million bond to fortify the Seawall in 2018.

The Enterprise departments also issue revenue bonds against the revenues generated from user fees, taxes, and surcharges. Table 1.4 shows the current amount of proposed revenue bonds to be issued for each department over the 10-year term of this Plan.

As with the G.O. Bond and COP Programs, all revenue bond issuances are subject to change based on market conditions and cash flow needs of the associated projects.

For external agencies City College of San Francisco, San Francisco Unified School District, the San Francisco Housing Authority, Treasure Island Development Agency, and the Office of Community Investment & Infrastructure (the successor agency to the Redevelopment Authority), the Plan captures \$11 billion in capital investments over the next 10 years, a 29% increase from the last Capital Plan.

General **Obligation Bonds**

The Plan proposes issuing \$2.1 billion in General Obligation (G.O.) Bonds over the next 10 years. G.O. Bonds are backed by the City's property tax revenue and are repaid directly out of property taxes through a fund held by the Treasurer's Office.

Table 1.5 shows the Capital Plan's proposed G.O. Bond Program for the next 10 years.

Chart 1.1 illustrates the relation to proposed G.O. Bond Program on the local tax rate, including existing and outstanding issuance and voterapproved Bonds. This view shows the City's policy constraint that G.O. Bonds will not increase the property tax rate above 2006 levels.

All amounts attributed to future debt programs are estimates and may need to be adjusted.

The Capital Planning Committee on April 16, 2018, voted unanimously to amend this plan to increase the proposed November 2018 Seawall General Obligation Bond.

Capital Plan FY2018-2027

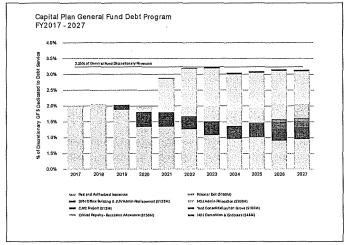

CHART 1.2

Certicates of Participation

The Plan proposes issuing \$963 million in CertiŌcates of Participation (COPs) over the next 10 years. COPs are backed by a physical asset in the City's capital portfolio, and repayments are appropriated each year out of the General Fund.

Table 1.6 shows the Capital Plan's proposed COP Program for the next 10 years.

Chart 1.2 illustrates the proposed COP program against the City's policy constraint for General Fund debt not to exceed 3.25% of General Fund Discretionary Revenue.

All amounts attributed to future debt programs are estimates and may need to be adjusted.

Towards Resilience

This Capital Plan recommends historic levels of funding at \$35 billion over 10 years, compared to \$32 billion in the last Plan two years ago. Despite this, the Plan defers \$4.6 billion in identiŌed needs for General Fund departments.

Chart 1.3 shows that San Francisco will begin to fully address its annual renewal needs starting in FY2032 if it funds the Pay-Go Program at Plan-recommended levels. However, due to the accumulation of deferred maintenance and cost escalation, the backlog is not expected to decrease. It is important that the City take advantage of current economic conditions to achieve or exceed the recommendations of this Plan.

San Francisco's growing Capital Plan reōects conŌdence in the City's capacity to administer our capital program in a responsible and transparent manner that employs best practices in Ōnancial management. This includes establishing Ōnancial constraints around each funding program to promote its

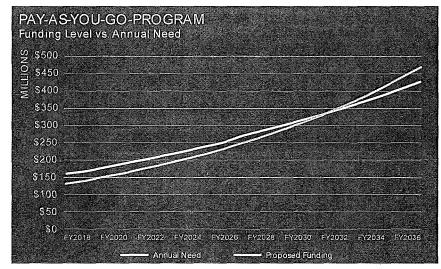

CHART 1.3

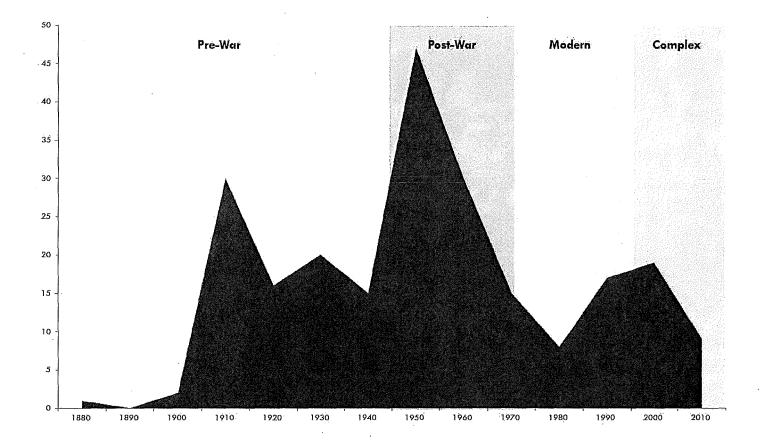

long-term viability, listing unfunded and deferred projects, and establishing funding principles.

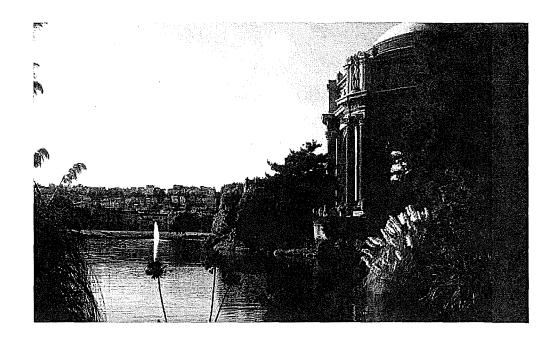

Taking care of our capital infrastructure is an important part of building a resilient city. Throughout this Plan, San Francisco has prioritized projects and initiatives

that build the capacity of individuals, communities, institutions, businesses, and systems to survive, adapt, and grow, no matter what kind of chronic stresses and acute shocks they may experience.

Capital Plan FY2018-2027

02. Introduction

- Capital Planning in San Francisco Citywide Strategy Policies, Principles, and Goals Capital Outlook
- 16 18 19
- 25

Capital Planning in San Francisco

The Fiscal Year (FY) 2018-2027 City and County of San Francisco Capital Plan (the Plan) is the City's commitment to building a more resilient and vibrant future for the residents, workers, and visitors of San Francisco. Updated every odd-numbered year, the Plan is a Öscally constrained expenditure plan that lays out infrastructure investments over the next decade. This document is the product of input from Citywide stakeholders, who have put forth their best ideas and most realistic estimates of San Francisco's future needs.

Through the application of consistent funding principles and Ōscal policies, the Plan prioritizes departmental capital needs against clearly deŌned Ōscal constraints. The result is a road map for investments in San Francisco's streets facilities, utilities, parks, waterfront, and transportation systems.

Developed on the centennial of the 1906 earthquake, San Francisco's Örst Capital Plan described the City's renewed dedication to investing in public facilities and infrastructure for FY2007-2016. Since that Orst Plan, the City's commitment to our capital portfolio has grown substantially. The Örst Plan called for \$15.7 billion to address earthquake safety, modernization, and maintenance needs for City buildings and infrastructure. The level of recommended funding steadily grew as better capital planning practices were employed, infrastructure systems and facilities reached the end of their useful life, and the City dug out of extremely low levels of investment from the mid-1970s to 2008.

The current Plan recommends a record \$35 billion in critical infrastructure improvements over the next 10 years. This is \$3 billion more than the previous Plan.

The primary drivers of this increase are (1) large investments in newly developing areas along the waterfront and at Treasure Island; (2) continued use of G.O. Bonds and other forms of

debt to address the transportation network, parks and open space, sewers, and key facilities that improve services and resilience for current and future generations; and (3) year-over-year growth to keep existing City assets in a state of good repair.

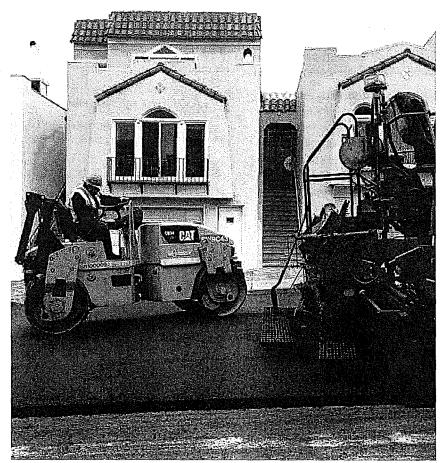

This growth reōects increased conŌdence in the City's capacity to administer our capital program in a responsible and transparent manner that employs best practices in Ōnancial management. This includes establishing constraints around each funding program to promote long-term viability, listing what is unfunded or deferred, and establishing funding principles, among others. It also recognizes an appreciation for the long-term beneŌts of investing in public infrastructure.

Ignoring the needs of our existing assets results in greater costs down the road as they become less ef Ōcient and more costly to repair or replace.

San Francisco has received voter approval for nearly \$3.5 billion in G.O. Bonds since 2008, more than the previous 50 years of G.O. Bonds combined.

TABLE 2.1

	G.O. Bond Program	Amount (Dollars in Millions)
2008	Neighborhood Parks and Open Space	180

Street Paving

Citywide Strategy

The Capital Plan is one of the cornerstones of San Francisco's commitment to long-term planning and responsible stewardship of public dollars.

The Plan connects directly with the City's overarching strategic aims. In 20 16 as part of the City's Five-Year Financial Plan, the Mayor's OfŌce published the Citywide Strategic Initiatives Framework, which presents a set of shared values and vision built upon the Departmental Strategic Plans from across the City administration.

Our Values

The Citywide Strategic Initiatives Framework de Ones our City values—what we stand for These values guide how we operate and conduct our service to the public.

Equity. Our services reoect the value that each person deserves an opportunity to thrive in a diverse and inclusive city.

Collaboration. We are stronger when we work together. We serve through consensus building and cooperation across all sectors.

Community. The needs of an engaged and empowered community drive our service and we support participation and democracy for all.

Compassion. Our service is grounded in respect, dignity, embracing diversity, care, empathy and inclusion.

Service Excellence. We work to continuously improve services that are high quality, innovative and informed by what works.

Responsibility & Integrity. We are stewards of the public's dollars. We make responsible decisions to ensure the long-term success for our City and residents.

Accountability & Transparency. We hold ourselves accountable based on outcomes and believe that transparency fosters public trust.

The vision from the Citywide Strategic Initiatives Framework articulates a Öve-part call to action to unify the diverse work of City departments towards a common direction for the City. (1) Residents and families who thrive. (2) Clean, safe, and livable communities. (3) A diverse, equitable, and inclusive City. (4) Excellent City services. (5) A City and region prepared for the future. This is the City San Francisco wants to be. The City's facilities and infrastructure are essential components of this vision, and the Capital Plan helps lay the Ōnancial groundwork so that our plans can be realized.

Funding Policies and Principles

The FY2018-2027 Capital Plan retains the policies set in prior years to ensure good stewardship of public funds and assets. These include the application of funding principles, restrictions around issuing debt, and setting funding targets for priority programs. The Plan's policies govern the level and distribution of funds that feed into the Plan, while the funding principles show how the funds will be prioritized.

Pay-Go Program Policies

The Capital Plan recommends a funding level in line with the previous Plan: \$137.3 million in Pay-As-You-Go (Pay-Go, or General Fund) in FY2018, escalated by seven percent annually thereafter.

The Pay-Go Program policies associated with that funding level are:

 General Fund revenue will grow at an annual rate of seven percent. This enables the program to grow at a higher rate than inoation so that the existing backlog and on-going needs can be addressed. TABLE 2.2

General Fund Pay-Go Program Funding (Dollars in Millions)	FY18-22	FY23-27	Plan Total
Routine Maintenance	67	86	153
ADA: Facilities	7	6	12
ADA: Public Right-of-Way	38	49	87
Street Resurfacing	278	416	693
Enhancements	50	50	100
Recreation and Parks Base Commitment	75	75	150
Capital Contribution to Street Tree Set-aside	25	32	58
ROW Infrastructure Renewal	47	74	121
Facility Renewal	202	320	522
Total Recommended Funding	789	1,107	1,897

- The Street Resurfacing Program will be funded at the level needed to achieve a "Good" Pavement Condition Index (PCI) score of 70 by FY2025.
- Projects under the City's ADA
 Transition Plans for facilities and the public right-of-way will be fully funded.
- Ten million dollars of General Fund each year will fund critical emergencies and enhancement projects not covered through proposed debt programs.

Several voter-determined outcomes over the past two years have affected the availability of funds in the Pay-Go Program. Newly approved set-asides for the Recreation and Parks Department and street trees maintenance without associated revenue sources have resulted in restrictions on General Fund spending. In addition, the failure of the \$150 million sales tax revenue measure at the ballot box in 2016 caused the City to rebalance the budget and Öve-year Önancial projections.

The impact of these measures and other pressures on the General Fund could have resulted in a signicant hit to the Pay-Go Program. According to estimates developed during the budget rebalancing process, a net loss of \$33 million was anticipated. If that loss had been carried unescalated through the entire Plan, it would have meant a \$330 million loss to the Pay-Go Program, a 17.4% drop from the recommended level.

In April 2017, however, Governor Jerry Brown signed SB 1 to provide \$5.2 billion annually for California's roads, bridges, and transit systems. The legislation, which includes a gas tax increase and a vehicle registration fee, is expected to provide suf Ocient revenue to enable the City to recover from the anticipated challenges resulting from the local sales tax measure's failure.

Though another source emerged in this instance, it is worth noting that a reduction of \$330 million in General Fund capacity would have had serious consequences for the City's capital assets and program. In FY20 18 alone, the City would have spent less than

20% of the recommended \$38.6 million on Facilities Renewals and Right-of-Way Infrastructure. The results would have greatly increased the renewal program backlog. It is important that San Francisco prioritize its critical Pay-Go Program needs now and in the future.

Debt Program Policies

The policy constraint for the G.O. Bond Program is:

 G.O. Bonds under the control of the city will not increase long-term property tax rates above FY2006 levels. In other words, G.O. Bonds under control of the City and County of San Francisco will only be used as existing bonds are retired.

Consistent with the Five-Year Financial Plan, the G.O. Bond Program assumes growth in Net Assessed Value of 4.19% in FY2018,5.90% in FY2019,4.49% in FY2020, and 3.50% annually thereafter.

The policy constraint for the Certi©cates of Participation (General Fund Debt)
Program is:

 The amount spent on debt service in the General Fund Debt Program will not exceed 3.25% of General Fund discretionary revenues.

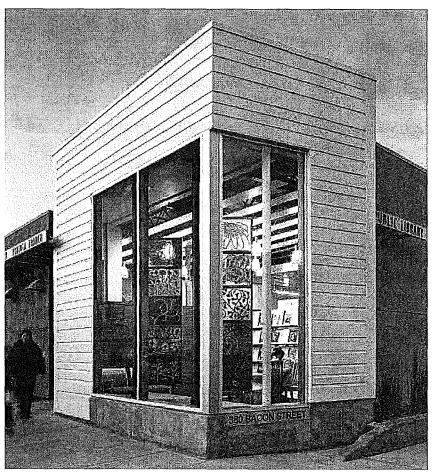

Consistent with the Five-Year Financial Plan, the Plan assumes that General Fund discretionary revenues grow 4.8% in FY2019, 3.2% in FY2020, and 2.8% in FY2021, and 2.7% annually thereafter.

General Policies

The Capital Plan uses the Annual Infrastructure Construction Cost Inōation Estimate (AICCIE) developed by the OfŌce of Resilience and Capital Planning and approved by the Capital Planning Committee for the Ōrst two years of the Capital Plan. For this Plan, that Ōgure is Ōve percent. Thereafter, the Plan assumes an annual escalation rate of Ōve percent unless otherwise noted.

The City uses a revolving Capital Planning Fund to support predevelopment of projects for inclusion in bonds with the expectation that these funds will be reimbursed at bond issuance.

Departments with major building projects within the Plan's time horizon are expected to develop estimates for the impact on the City's operating budget as part of project development. Those impacts appear in the Plan to the extent they are known at publication and are further discussed as a standard component of requests made to the Capital Planning Committee. Operating impacts are also considered during the City's annual budget development process. The Onancial impact of operations is not recorded in the Plan but is addressed for major projects in the City's Five-Year Financial Plan.

Portola Branch Library

Funding Principles

The funding principles for the Capital Plan are the categories used to make trade-offs between competing needs. They help San Francisco to keep our long-term perspective when it comes time to make choices about major projects and offer a consistent and logical framework for some of the City's most difŌcult conversations.

FUNDING PRINCIPLE 1:

Addresses Legal or Regulatory Mandate

Improvement is necessary to comply with a federal, state, or local legal or regulatory mandate.

The City faces a wide range of directives and requirements for our facilities, some with signicant consequences for failure to perform. Action in these cases is required by law, legal judgment, or court order, or it can proactively reduce the City's exposure to legal liability. The legal, can consequences for failure to perform are all weighed when considering these types of projects.

FUNDING PRINCIPLE 2:

Protects Life Safety and Enhances Resilience

Improvement provides for the imminent life, health, safety, and/or security of occupants and/or the public or prevents the loss of use of an asset.

Life safety projects minimize physical danger to those who use and work in City facilities, including protection during seismic events and from hazardous materials. Considerations for these projects include the seismic rating of a facility, the potential for increased resilience in the face of disaster, and the mitigation of material and environmental hazards for those who visit, use, and work in City facilities.

FUNDING PRINCIPLE 3:

Ensures Asset Preservation and Sustainability

Asset preservation projects ensure timely maintenance and renewal of existing infrastructure.

It is imperative to maintain the City's infrastructure in a state of good repair so that the City's operations are not compromised and resources are not squandered by failing to care for what we own. It is also important to support projects that lessen the City's impact on the environment. Some assets are more critical than others; for example, some facilities provide services that cannot be easily reproduced at another location or serve as emergency operations centers. Considerations for these projects include the effect on the asset's long-term life, importance for government operations, and environmental impact.

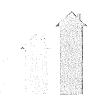

FUNDING PRINCIPLE 4:

Serves Programmatic or Planned Needs

This set of projects supports formal programs or objectives of an adopted plan or action by the City's elected of Cials.

Integrated with departmental and Citywide goals and objectives, this funding principle aims to align capital projects with operational priorities. Considerations for this type of project include con Ormation that they will contribute to a formally adopted plan or action from the Board of Supervisors or the Mayor.

FUNDING PRINCIPLE 5:

Promotes Economic Development

Economic development projects enhance the City's economic vitality by stimulating the local economy, increasing revenue, improving government effectiveness, or reducing operating costs.

These projects may have a direct or indirect effect on the City's revenues or may help to realize cost savings. Considerations for this type of project include the potential for savings, the level of revenue generation (either direct through leases, fees, service charges, or other sources; or indirect, such as increased tax base, business attraction or retention, etc.), and any improvements to government service delivery, such as faster response times, improved customer service, or increased departmental coordination.

Equity in San Francisco is one of the many ways that the City thinks about resilience-making sure that the programs, services. and features of the city are available to all. From a capital perspective, this means enabling access for persons with disabilities through ADA improvements to public facilities and rightsof-way and also seeing that the distribution of resources like parks and transit options is equitable. Affordability is a related concern as San Francisco strives to enable new residents to make the city their own while preserving space for those already here.

Resilience and Sustainability

A fundamental concern of the City and the Capital Planning Committee is to develop and implement infrastructure policies and programs to provide a safe, livable, and equitable environment for local residents, workers, and visitors for current and future generations.

As the stewards of San Francisco's public infrastructure, capital planning stakeholders in San Francisco look for ways to increase the City's resilience and sustainability via our capital program.

Resilience describes the capacity of San Francisco's individuals, communities, institutions, businesses, and systems to survive, adapt, and grow, no matter what kind of chronic stresses and acute shocks they may experience. For San Francisco this means (1) the ability to quickly respond to a disaster or large shock; (2) the ability to recover from systemic crises such as economic downturns, poverty, and housing shortages; and (3) the ability to prepare for and address slow-moving disasters like climate change and sea level rise.

King Tides on the Embarcadero

As a coastal city in a dense metropolitan region, San Francisco faces a wide range of challenges when it comes to promoting sustainability in our infrastructural programs and projects. Sustainability in San Francisco means promoting green building, clean energy, mass transit, urban forestry, and careful planning, as well as preserving our existing assets to reduce the need for additional building.

For more information about capitalrelated efforts supporting each of these high-level goals, please see Chapter Four: Building Our Future.

Capital Outlook

The booming Bay Area economy and the support of the Mayor, Board of Supervisors, and citizens of San Francisco have given rise to historic levels of capital investment in recent years. As a result, San Francisco is better positioned to build a health and wellbalanced infrastructure program for future generations. However, there are challenges ahead. A potential economic slowdown or downturn looms. The age of the City's infrastructure, combined with the large population growth in formerly industrial areas, some large replacement projects, persistent construction cost escalation, and rising sea levels all translate into substantial demands on the City's limited resources.

The Plan recommends a record level of funding at \$35 billion over 10 years. Despite this, the Plan defers \$4.6 billion in identiŌed needs for General Fund departments and does not fully fund annual state of good repair needs until FY2032, assuming recommended Pay-As-You-Go program funding levels, as shown in Chart 2.1. With this in mind, it is important that the City strive to

take advantage of current economic conditions to achieve or exceed the recommendations of this Plan.

Years of historic underinvestment in the City's capital program has resulted in a current backlog of \$472 million for streets and General Fund facilities. In prior versions of the Capital Plan, the deÖnition of current backlog was limited to deferred maintenance and did not include immediate renewal needs that could not be funded in the Örst year of

the Plan. In the current Plan, the backlog is deÖned as the difference between the total current renewal need and the portion of this need that is funded in the Örst year of the Plan. The total current renewal need includes both items identiÖed by departments as deferred maintenance, as well as Örstyear renewal needs. The new deÖnition of backlog used in the current Plan more accurately captures the full picture of immediate renewal needs.

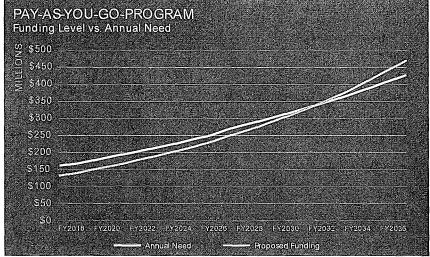

CHART 2.1

Under this Plan, even if the City meets the Plan's funding recommendations, the existing backlog is still projected to increase 191% to approximately \$1.4 billion by FY2027, as shown in Chart 2.2. This expected increase is the result of needs accumulated during low spending periods and projected cost escalation of today's backlog. To address the gap, the City continues to investigate different approaches, including revising funding benchmarks, leveraging the value of City-owned assets for debt Onancing, preparing projects for voter consideration at the ballot, forming public-private partnerships, and exploring new revenue sources.

In addition to the formidable backlog, there are a number of other issues that the City will face with regard to our capital program, and the associated risks will have to be managed.

The local boom in private sector construction continues to drive up demand for construction services, and with it, overall construction costs. While this activity buoys the local economy, the rising cost of construction strains available resources.

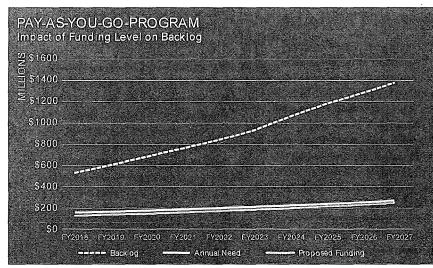

CHART 2.2

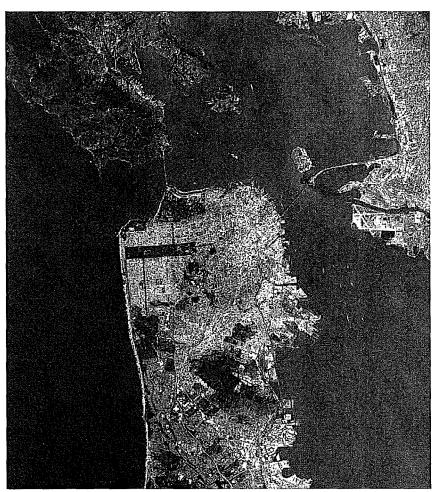

New construction in the formerly industrial eastern reaches of the city continues to accelerate demand for and usage of transit, streets and other right-of-way infrastructure, and open spaces. San Francisco must accommodate that growth while balancing state-of-good-repair needs and absorbing greater operating and renewal costs.

Finally, San Francisco's resilience mindset presents its own challenges.

As a densely populated, aging city situated between two fault lines and surrounded by water on three sides, the threats of disaster and climate change raise serious safety concerns. At the same time, obstacles both physical and Ōnancial threaten the fabric of San Francisco's communities. Without letting any one fade, the City must balance our efforts on these fronts to keep all of them moving forward.

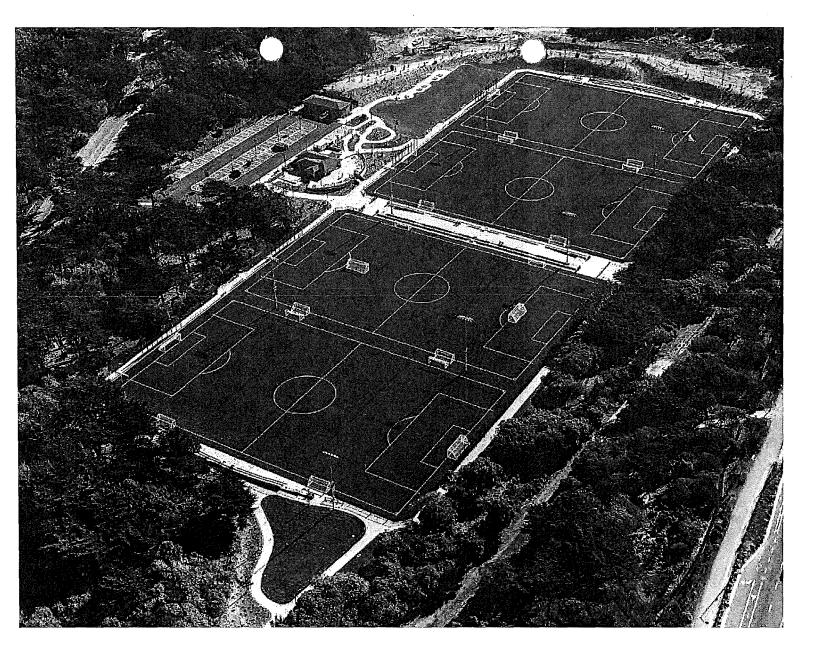

Aligning the capital budget with the Plan's recommendations in the years to come will be challenging as competing needs persist and arise. However, San Francisco has taken many steps that demonstrate our commitment to carrying out the Capital Plan's recommendations, including but not limited to: increasing the General Fund contribution within the capital budget, continuing "smart" General Obligation and General Fund Debt Programs that tackle critical needs, and developing strategies for addressing infrastructure demands associated with projected growth.

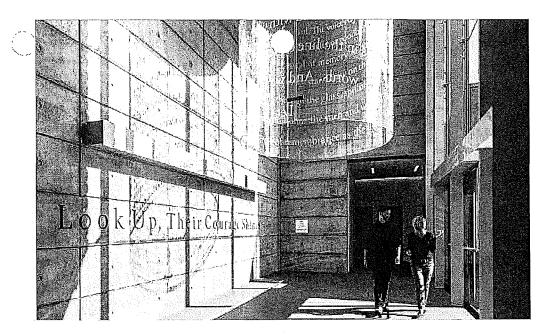

This Capital Plan puts forth a robust plan that balances maintaining current assets in a state of good repair with meeting San Francisco's growing service and population needs. Though there are risks associated with rising construction costs, a substantial capital backlog, the scale of our resilience goals, and a potential economic slowdown or downturn, the City's capital program is undoubtedly much better positioned than it was at the time of the Ōrst Capital Plan in 2006.

Plan for Crane Cove Park

Opening of the Bayview Gateway

Rendering of the Transbay Transit Center

Economic + Neighborhood Development

Port of San Francisco

Awarded the Örst contract for the Crane Cove Park Project Phase 1, a nine-acre project which will include preservation of the historic ship building slip-way and two historic cranes, a variety of landscape and plaza areas, and 1,000 feet of Bay shoreline open to the public.

Completed the Bayview Gateway, a one-acre green open space located at Third Street and Cargo Way near Pier 90 to serve as an entryway to the Bayview neighborhood. This passive open space with drought-tolerant plants and fruitbearing trees was designed to reoect the natural and cultural history of the neighborhood and to be compatible with the Port's cargo and maritime industrial operations.

Executed a lease for the 20th Street Historic Buildings Rehabilitation Project with Orton Development that will include a total investment in these previously backlogged, unfunded buildings, and established the Örst Port Infrastructure Financing District (IFD) as the Örst step in the Pier 70 Historic Core Rehabilitation Plan.

Repaired the Pier 35 Bulkhead Building, upgrading two elevators and completing essential water intrusion work in several areas in the Pier 35 bulkhead and shed buildings. Pier 35 is a historic building and serves as the Port's secondary cruise terminal with of Ce tenants in the bulkhead building.

Major Expansion Projects

Hunters Point Shipyard/Candlestick Point: Completed nearly all of the horizontal development of the Hilltop area and 208 (of the 898) housing units are complete; in addition, the Alice Grif th Project, which will include 122 units of replacement and affordable housing, will be complete in early 2017.

Mission Bay: Constructed 4,795 housing units, including 822 affordable units and more than 1.9 million square feet of commercial, of Čec, clinical, and biotechnology lab space with another 1 million square feet under construction; in addition, 60% of the UCSF campus has been developed including the Öst phase of the UCSF medical center, and more than 10 acres of new non-UCSF parks have been completed.

Transbay Transit Center: Constructed or currently constructing over 2.1 million square feet of of Oce and 1,812 residential units, including 569 affordable units.

Treasure Island: Completed the Örst and second transfers of property from the Navy to TIDA and the Örst transfer of building development parcels from TIDA to the Treasure Island Community Development (TICD), and began the demolition of existing structures in the initial areas of development.

Neighborhood Development

Eastern Neighborhoods: Constructed improvements on Bartlett Street between 21st and 22nd Streets, completed a new park in Showplace Square, and will complete construction on a new park at 17th and Folsom Streets in early 20 17.

Market/Octavia: Completed the Hayes Street two-way project, which included the Central Freeway dog park, skate park, and McCoppin Hub Plaza, as well as pedestrian crossing enhancements along Franklin and Gough Streets.

Balboa Park: Extended the Lee Avenue and Brighton Avenue Public Access Easement, which enables pedestrian access from Ocean Avenue to future development on the Balboa Reservoir site.

Rincon Hill: Completed design on Guy Place Park; the Orst phase of street scape improvements along Harrison Street will be designed in 2017. Both projects are projected to begin construction in 2017.

Created new guidelines in collaboration with the Human Services Agency (HSA) that outline a new RFP process to select child care projects that add care capacity. These projects will be funded through impact fee revenue, and HSA has issued a Notice of Funding Availability (NOFA) for child care centers within the Market/Octavia area.

Initiated two community-based grant programs for the Eastern Neighborhoods and Market/ Octavia Plan areas, funded with impact fees.

General Government

General Services Agency

Celebrated the 100th anniversary of the opening of San Francisco City Hall in the summer of 2015 and completed a number of capital improvements in the centennial year.

Completed Phase 2 Structural Steel for the Moscone Convention Center Expansion Project with the Onal beam set on the east half of the building, and started the Howard Street plug to reconÖgure the street and ensure trafÖc ōow.

Celebrated the 15th anniversary of the Community Clean Team in 2015, which has logged more than 148,000 volunteer hours, added more than 30,000 plants to public landscaped areas, and painted over approximately 3 million square feet of graf Qi.

Launched the Pit Stop Program, which provides 15 locations with clean and safe public toilets, sinks, used needle receptacles, and dog waste stations in the City's most impacted neighborhoods. The Pit Stop Program provides a place for people to take care of their bathroom needs with dignity, improving neighborhood livability and reducing demands on department staff to clean up human waste from the City's sidewalks, doorways, and streets. The Pit Stop program has been successful because all facilities are staffed by paid attendants who help ensure that the toilets are well maintained and used for their intended purpose, and because Public Works has collaborated with a community non-proOt to help rehabilitate and train Pit Stop workers.

Created 14 murals through the StreetSmARTS program in collaboration with the Arts Commission in the most graf $\tilde{\alpha}$ i-tagged parts of the City to engage both artists and private property owners in the effort of deterring tagging.

Launched the City's free municipal wireless internet access in parks project at 32 parks, plazas, and open spaces across San Francisco. The project is another step toward a larger vision of connectivity for the City as a whole to bridge the digital divide.

Secured funding and advanced planning for a seismically resilient Animal Care and Control Shelter that will reduce overcrowding, provide modern, safer standards of care, and enhance the health of animals in the City's care to help prevent the spread of disease.

Other General Accomplishments

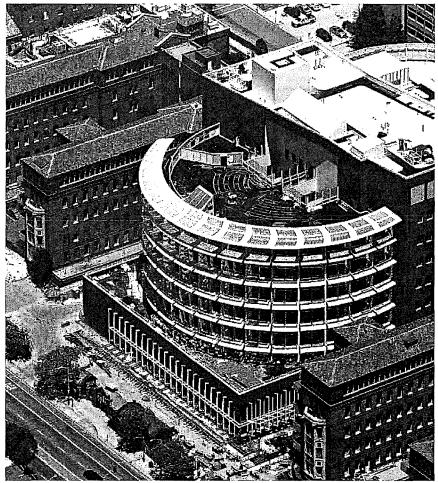

Completed construction on the Critical Construction Project for the City's 9-1-1 Center and Emergency Operations Center, which aimed to address the vulnerability of critical infrastructure while ensuring the operational readiness of the center; as part of this project, all critical telephone circuits have been rerouted through new vaults for maximum security and to establish operational redundancy. Additionally, the cable work completed allows the Department of Technology to install new redundant Öber infrastructure to serve multiple City Departments and the Recreation and Parks Department to proceed with the planned renovations of the Margaret Hayward Playground.

Advanced the Citywide 800MHz Radio System Replacement Project by completing design for the Twin Peaks Tower replacement, which includes generator, electrical, HVAC, and controls improvements for nine radio sites; the Clay Jones generator replacement; and the VA Hospital Site move.

Completed 90% of the ADA Transition Plan projects, with the other 10% in design or construction phases, to provide uniform physical access for the public and employment opportunities for persons with disabilities.

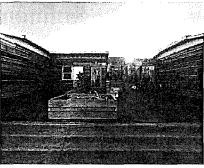

Designed, constructed, or upgraded 1,563 curb ramps to comply with ADA standards.

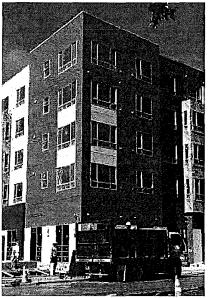

New Level One Trauma Center at Zuckerberg San Francisco General Hospital

New Navigation Center

Construction at HOPE SF Alice Grif Ōth

Health + Human Services

Citywide

Voters approved a \$310 million Affordable Housing G.O. Bond and a \$350 million Public Health and Safety Bond, both of which support major capital projects in this Service Area.

Department of Public Health

Completed construction of the new Zuckerberg San Francisco General Hospital and Trauma Center (ZSFG), which opened for patient care in May 20 16. The new 284-bed hospital is 484,000 square feet, seven stories high, and features an emergency room three times the size of the previous hospital, more operating rooms, and the City's only Level One trauma center. It is the Öxt LEED®Gold trauma center certiČed in California.

Updated the 2009 Institutional Master Plan, which provides a framework for space planning decisions and funding needs for future major capital projects at the ZSFG Campus.

Completed ADA improvements to ZSFG Buildings 1 and 9 entrances and will be completing entrance improvements on Buildings 3 and 500 in addition to 22 public restrooms in Building 5 by December 2016.

Completed additional improvements at the ZSFG Campus, including replacement of steam turbine generators with on-demand diesel generators that will provide emergency power to the campus (exclusive of the new hospital building which has its own emergency generators) in the event of a commercial power failure; installation of new, more energy-ef Ceient boilers and major elevator repairs at ZSFG Buildings 5 and 80/90.

Completed Phase One of a new Centralized Call Center for the SF Health Network, which is located at LHH in Wing E-3 of the Administrative Building and will aim to centrally serve all SF Health Network ambulatory clinics.

Improved and remodeled nearly 150,000 square feet of space within Laguna Honda Hospital (LHH) Wings A, B, C and H into administrative of Čces.

Fully decommissioned the previous LHH Hospital (now Administrative Building) as a hospital facility, paving the way for the planned eventual reuse of the facility as administrative of Čces.

Human Services and Homelessness and Supportive Housing

Opened the City's Örst two Navigation Centers, as short-term, low-threshold, service-intensive shelters for people experiencing long-term street homelessness. In early 2017, HSH will open the third, the Central Waterfront Navigation Center.

Remodeled the lobbies at Human Services Agency buildings at 170 Otis Street, 1235 Mission Street, and 1440 Harrison Street, to support the increase in clients seen after the passage of the Affordable Care Act, and to coordinate facility layout with changing business practices.

Opened two new facilities to serve San Francisco's most vulnerable populations; the new County Veterans Service OfŌce and the Department of Aging and Adult Services BeneŌts and Resource Hub at 2 Gough Street, as well as a children's resource center at the Edgewood Center for Children and Families.

Undertook an assessment for the Department of Homelessness and Supportive Housing to determine the department's capital needs that can be funded through the 2016 Public Health and Safety Bond.

Affordable Housing

HOPE SF Hunters View: Construction will be completed in December 2016 on Block 7 and 11 and construction on Block 10 is expected to be completed in June 2017. Once complete, all remaining residents in the existing public housing on site will be allowed to move to their new units.

HOPE SF Alice Grif Ath: Phases I and II construction is expected to be complete in February 2017.

HOPE SF Potrero: Project-wide NEPA and CEQA approvals and land use entitlements for Phase I are in place and construction closing is scheduled for year-end 2016.

HOPE SF Sunnydale: Project-wide NEPA and CEQA approvals are in place, and the project is expected to be entitled in early 2017.

Rental Assistance Demonstration program: MOHCD converted 1,425 housing units in 15 SFHA developments in December 2015 and 2,046 units in 14 SFHA developments in November 2016. The converted units were transferred to community based non-proot ownership, maintaining long term affordability.

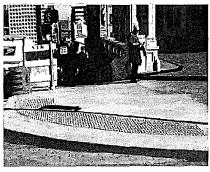

Completed modernization efforts at remaining SFHA sites, such as security camera installations, elevator repair work, and Öre alarm upgrades.

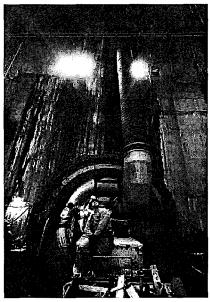

Street Repaying

Newly Installed Curb Ramp

Ongoing Water Sewer Improvement Program

Infrastructure + Streets

Streets and Rights-of-Way

Street blocks: Repaved and maintained 1,650 street blocks total in FY2015 and FY2016, raising the City's average Pavement Condition Index score to 69 as of December 2016. This marks the Čfth straight year of PCI improvement.

Curb ramps: Constructed approximately 3,000 curb ramps through stand-alone and repaving projects.

Sidewalks: Inspected the sidewalk condition of 446 blocks and repaired more than 590,000 square feet of sidewalks.

Street structures: Inspected 230 street structures, and repaired 28 structures including stairs, retaining walls, and guardrails.

Completed 9 street scape improvement projects: Soma Alleyways Phase II, McCoppin Hub Plaza, Fell and Oak Pedestrian and Bicycle Improvements, Castro Street scape Improvements, 24th Street Urban Village, Taraval Streetscape, Sloat Boulevard, 19th Avenue Planted Median, and Randolph Street scape. In addition, the Castro Street scape Improvements project received an award from the Northern California chapter of the American Public Works Association and an honorable mention from the International Partnering Institute.

Public Utilities Commission

Accepted and incorporated major Water System Improvement Program (WSIP) reliability projects into operation, including the Bay Tunnel, New Irvington Tunnel, and the seismic upgrade of Bay Division Pipelines 3 & 4.

Advanced water supply diversi Cation work by approving the West side Recycled Water Project and beginning construction on groundwater projects.

Replaced 11.4 miles of local water mains in FY15 and FY16, meeting annual WSIP targets.

Rehabilitated old water enterprise facilities, such as Sunol and Millbrae Yards, and new priority facilities such as the Alameda Creek Watershed Center.

Advanced the North Point Facility Outfall System Rehabilitation Project by receiving and evaluating qualications, issuing a list of qualications, and advertising a request for bids for a construction contract.

Issued certiŌed green bonds for eligible sustainable stormwater management projects.

Completed renovation of the Southeast Plant, which included roof repairs of the SEP Existing Digester and improvements on the SEP Oxygen Generation Plant.

Began design work on major collection system reliability projects including the Geary BRT and Van Ness BRT Sewer improvements.

Completed storm water management improvements including construction of the pilot block of Sunset Green Infrastructure, initiation of the Lake Merced Green Infrastructure Project, and design for the Channel Green Infrastructure Project.

Began design work and issued bids on construction for Oceanside Plant improvements.

Advanced several ŏood resilience projects by completing a draft Flood Resilience Study and beginning planning for Wawona, Cayuga, and Folsom storm water improvement projects.

Completed Hetch Hetchy Water Infrastructure Projects including the rehabilitation of the San Joaquin Pipeline, which involved the evaluation and assessment of structural integrity the structural upgrade of the pipeline, and pipeline cathodic protection, coating, and lining.

Completed Power Infrastructure System Reliability Projects including the Warnerville Switchyard Upgrade Phase 1.

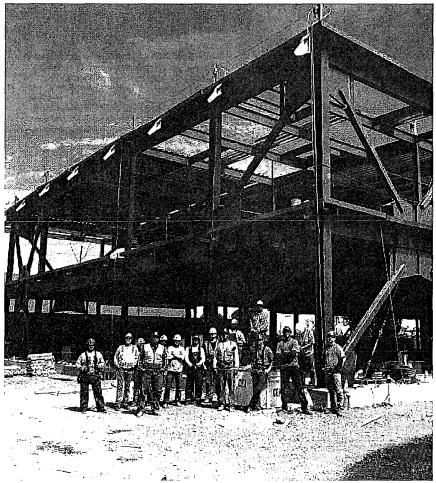

Performed facilities upgrades to over 80 Hetch Hetchy structures to meet water levels of service for sustainability, operational objectives for power system reliability, and regulatory compliance.

Established the new Streetlight Pole Assessment and Rehabilitation Program with 7,000 poles assessed and 135 deteriorated poles replaced.

Completed energy ef Ceiency projects including the completion of the LEED@Certification process for City Hall, which is now LEED@Platinum certified, and the installation of solar photovoltaic systems at City Hall and Cesar Chavez School.

Installed new power infrastructure at development sites, including over 300 electric revenue meters at Hunters Point Shipyard, and completed 14 electric distribution preventative maintenance projects on Treasure and Yerba Buena Islands.

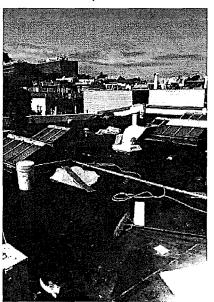

Topping-out Ceremony at the New Of Oce of the Chief Medical Examiner

New Roof at the Ashbury Tank

Roof Replacement at Fire Station 6

Public Safety

Citywide

Voters approved a \$350 million Public Health and Safety Bond, which supports major capital projects and renewals in this Service Area.

San Francisco Fire Department

Renovated 25 of the City's 42 operating Öre stations through the 20 10 and 20 14 ESER Neighborhood Fire Stations Programs, with work including:

- Completed design and bidding process for seismic upgrade projects at Stations 5 and 16.
- Completed exterior envelope projects to prevent water intrusion, as well as sidewalk, driveway, and window repair work.
- Completed roof replacement projects at Stations 3, 17, and 40.
- Completed focused scope projects at several stations, including the installation of a new HVAC and emergency generator at Station 3.
- Completed shower improvements at several stations including Stations 13 and 34.
- Advanced planning for mechanical scope projects with investigation and scope validation, proceeding with priority projects at Stations 8, 14, 20, and 41, as well as needed duct cleaning at Station 9.
- Plans for emergency generator repair are underway for Stations 14, 24, 31, and 37.

Rehabilitated historic Fire Station #30 as a multi-purpose facility for the Fire Department and the community.

Advanced Emergency FireÖghter Water System (EFWS) projects in collaboration with the Public Utilities Commission by completing construction on 21 of the 30 planned cisterns projects and seismically improving and/or replacing pump stations, reservoirs, tanks, pipes, and tunnels.

Began planning and design for the Fire Depart ment's new Ambulance Deployment Center; the site for the new building is currently being prepared for construction.

San Francisco Police Department

Completed construction on the new Public Safety Building, a seismically sound replacement facility for the San Francisco Police Department (SFPD) Headquarters and the Southern District Police Station that also includes a new Mission Bay Fire Station. Both the Police Headquarters and the Southern District Police station were previously located at the seismically decient Hall of Justice, and this new facility is included in the Justice Facilities Improvement Program (JFIP) to replace the Hall of Justice.

Began the design phase of a replacement facility for the SFPD Forensic Services Division and SFPD Trafoc Company to a site in Mission Bay. These divisions are currently located in the seismically deocient Hall of Justice, and their relocation is part of JFIP.

Completed ADA Barrier Removal projects at Mission, Bayview, and Central Police Stations and completed design for future ADA improvement projects as part of the 2014 ESER Police Facilities Program.

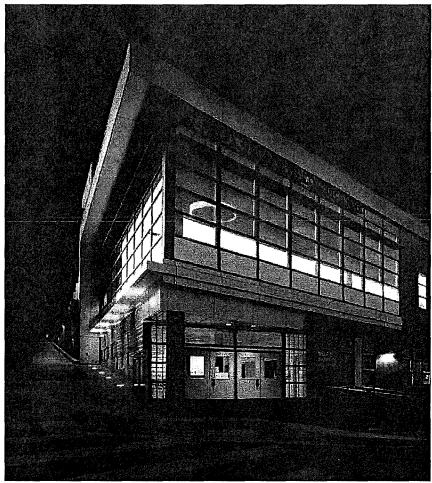

Other Public Safety Accomplishments

Completed the structural steel erection and celebrated the topping-out ceremony of the new seismically sound replacement building for the OfŌce of the Chief Medical Examiner (OCME). The City was advised by the National Association of Medical Examiners that the existing facility is undersized, has a number of deŌciencies that are currently mitigated by operational protocols, and should be replaced to assure continued accreditation. The existing OCME is located in the seismically deŌcient Hall of Justice, and its relocation is part of JFIP.

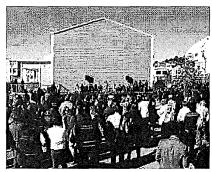

The Sheriff's Department completed its Facilities Master Plan, which documents current and future capital needs across its jails and other facilities.

Stakeholders from across the City Administration participated in the Re-Envisioning the Jail Work Group to try to Čnd alternatives to incarceration facilities for the prisoner population currently housed at the seismically and operationally unsafe, un Čt Hall of Justice.

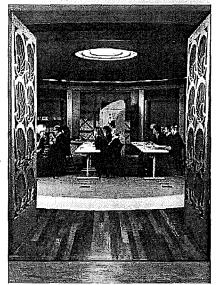

New Willie L. Brown Jr. Middle School

Opening of the Renovated Bayview Opera House

Bridge at Main at the Main Library

Recreation, Culture + Education

Recreation and Parks Department

Finished construction on Mission Dolores and Kimball Playgrounds, the Chaltwo parks from the 2008 Bond Neighborhood Parks Program, and completed renovations to Joe DiMaggio Playground.

Completed construction on new parks at Noe Valley Town Square and at 17th and Folsom.

Began planning for three Let'sPlaySF Program properties: Merced Heights, Sgt. John Macaulay, and Washington Square playgrounds. Planning for the next three properties—Panhandle Playground, Alice Chalmers Playground, and John McLaren Park/Group Picnic—is also underway.

Completed renovations at Beach Chalet Play Öelds, completing the Park Play Öelds Repair and Reconstruction Program.

Completed repairs and renovations at restrooms throughout the park system, including Portsmouth Square, Washington Square, and Noe Courts.

Cultural Departments

Completed renovations at the Asian Art Museum including restoring the façade and ōoors of the historic building, and repainting the Hyde Street side of the building, as well as the historic torchieres in front of the building.

Completed the renovation of the Bayview Opera House, which includes a new entrance to the historic Newcomb Street façade, an expanded plaza with an outdoor stage, and structural renovations and ADA accessibility improvements. Finished repairs at the City's cultural centers, including electrical work and a roof at the African-American Arts & Culture Center; a roof, Ore panels and doors, and ADA work at the Mission Cultural Center for Latino Arts; and a new roof at SOMArts.

Advanced renovation projects at the Fine Arts Museums, including repairs to the rooong systems, replacement of the Oe alarm system at the Legion of Honor, replacement of the art reatment freezer, and repairs to the irrigation system exterior pipes at the de Young.

Began Phase I of the Old Mint Restoration Project, which will assess all aspects of project development and feasibility and the viability of a set of culture and arts uses at this National Historic Landmark Property.

Completed the seismic retroÖt and renovation of the War Memorial Veterans Building, which includes new exhibition space and storage for the civic art collection, as well as a new performance and practice space for the San Francisco Opera and other arts organizations.

Educational Agencies

Completed improvements at many San Francisco UniŌed School District (SFUSD) facilities, including the opening of the new 650-student Willie L. Brown Jr. Middle School; construction of new classroom buildings at Sunnyside, Monroe, Stevenson, Junipero Serra, and Peabody elementary schools, and Lowell High School; and modernization work at 35 other school sites due to funds available through the 2011 SFUSD General Obligation Bond.

Won voter approval for a \$744 million SFUSD General Obligation Bond in November 20 16 that will fund repairs and maintenance to SFUSD facilities, construct new schools, and seismically upgrade existing facilities.

Opened the Mix at SFPL, a 4,770-squarefoot dynamic, digital media lab for teens at the San Francisco Main Library. This effort was a collaboration with the California Academy of Sciences, KQED, and the Bay Area Video Coalition, which provides opportunities for youth to perform, learn, and engage with peers and mentors.

Opened the Bridge at Main in the Main Library on the 5th ōoor, a center that prioritizes community literacy and learning through services such as hands-on computer learning, basic life skills classes, and drop-in technology workshops for families; the Library's 33-year-old Project Read adult literacy program; and a drop-in Veterans Resource Center.

Completed renovations at the Academy of Sciences, including the replacement of two broken motor mounts and two failing motors, as well as cleaning, treating, and coating the three cooling towers for the Water Planet Chiller System, which sustains the cooling needs of the majority of Steinhart Aquarium's small and medium tanks.

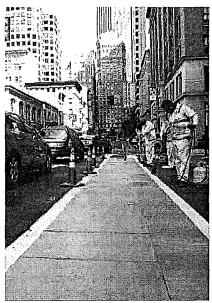

New Muni Bus

Bike Lane Painting

Transportation

San Francisco Municipal Transportation Agency

Completed 30 Vision Zero-related high priority street safety projects in 24 months along the High-Injury Network, implemented 34 miles of safety improvements, and installed 1,599 safety treatments.

Completed the City College Terminal and Unity Plaza that provides a safer and more convenient pedestrian link between Muni, the City College campus, and a below-market rate housing development.

Bicycling Improvements: Completed the Fell & Oak Bicycleway Project that improves safety and comfort for bicyclists, Phase 1 of the Bay Area Bicycle Share program in addition to initiating the phase 2 expansion, and installation of automated bicycle counters along major cycling routes.

Several facilities improvements: Completed Phase 1 of the Islais Creek Facility to provide additional space for motor coach maintenance and operations, Phase 1 of the Muni Metro station escalator replacement project, and replacements of the Presidio and Woods Divisions Bus Hoist Lift that insures continued maintenance of Muni coaches.

Expanded the bus ōeet and replaced aging motor and trolley coaches to increase service in high demand areas, improve service overall, and lower the average age of the ōeet.

Replaced the closed circuit television with the Subway CCTV Surveillance System to enhance security in the subway system and its perimeters.

Streets and pedestrian improvement projects: Made improvements on Market and Haight transit lines, which reduce travel time on Muni and improve pedestrian safety. Also completed the Castro Streetscape Improvement Project, which enhanced the pedestrian experience and upgraded the right-of-way.

San Francisco International Airport

Opened a new state-of-the-art Air Traf Öc Control Tower and Integrated Facility building in conjunction with the Federal Aviation Administration (FAA), which provides the Airport with the latest in technology and design, while obtaining LEED®Gold status and meeting stringent safety, security, and seismic standards.

Completed the Terminal 3 East Renovation Project, which reconŌgured the east side of the terminal to enhance passenger ōow, alleviate congestion, and improve passenger amenities; the project also included seismic renovations, updates to building systems, airŌeld expansion, and new passenger amenities.

Interagency Initiatives

San Francisco, Alameda, and Contra Costa voters approved a \$3.5 billion BART general obligation bond in November 2016 that will allow BART to fund necessary improvements to BART's aging transit infrastructure.

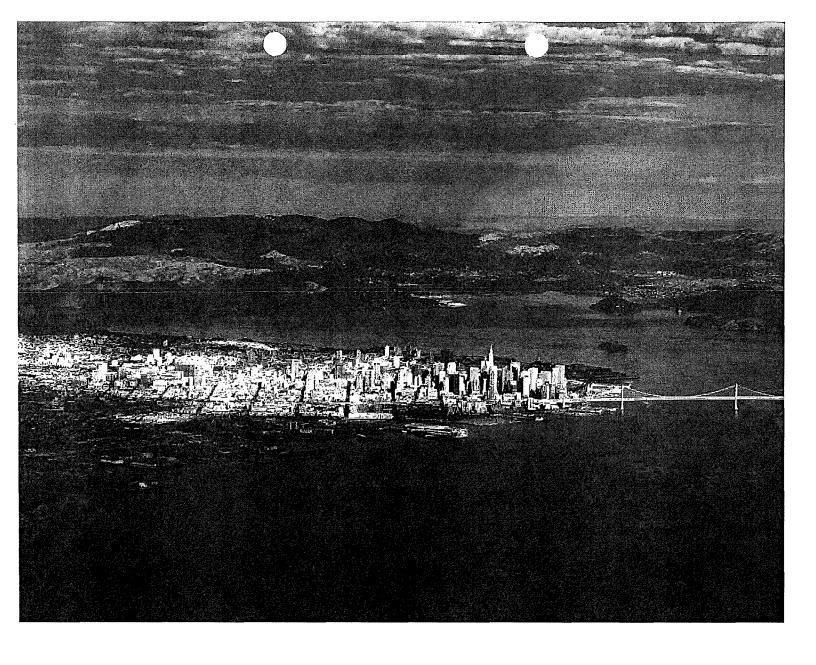

Finished construction on several county initiatives including the Önal roadway conÖguration of the Presidio Parkway, the new westbound I-80 on and off ramps connecting Yerba Buena Island and Treasure Island with the Bay Bridge, and the newly realigned off-ramp at Folsom Street.

Advanced major efforts at Yerba Buena Island and in central San Francisco: Began Ōnal design of the second major component of the Yerba Buena Interchange Improvement Project and commenced construction of the Van Ness BRT.

Completed several Caltrain improvements including reconstruction of the Jerrold Avenue Bridge, removal of the Quint Street Bridge, and investments in new technology, including predictive arrival and departure information that displays train arrival information on station visual message signs and on Caltrain.com.

Advanced the Transbay Transit Center Project by completing the structural steel assembly on site, creating a Mello-Roos Community Facilities District to allow the City to levy a special tax to help fund construction of the program, and establishing a Greater Rincon Hill Community Benect District to fund approximately 80% of the maintenance and operations of the rooftop park.

04. Building Our Future

- Resilience in San Francisco Earthquakes Sea Level Rise 46
- 48
- 52
- Emergency Response Sustainability Looking Ahead
- 54 55 57

Resilience in San Francisco

Resilence describes the capacity of individuals, communities, institutions, businesses, and systems within a city to survive, adapt, and grow, no matter what kind of chronic stresses and acute shocks they may experience.

As a waterfront city proximate to two major fault lines and home to a population rapidly approaching one million, resilience is of paramount concern for San Francisco. Resilience is something we must constantly strive toward, a process of preparing and building to protect our people and infrastructure.

The City works collaboratively across departments to maintain safe and healthy facilities and to ensure the delivery of programs and services. Earthquake readiness and disaster response preparations are essential to that effort. Above and beyond asset preservation, many resilience initiatives promote long-term sustainability in the face of climate change and increasing

Some of San Francisco's greatest challenges and opportunities extend past the 10-year timeframe of the Capital Plan. San Francisco is committed to tackling these multi-generational problems through an integrated planning approach leading to smart policies and projects. Some of these are listed below.

- Seawall Resilience Project
- Sea Level Rise
- · Mission Creek
- · Climate Action Targets
- Ocean Beach
- Second Transbay BART Tunnel

- Muni Forward
- · DTX/High-Speed Rail
- · Utility Undergrounding
- Treasure Island
- Affordable Housing
- Courthouse at the Hall of Justice

density. Sea level rise adaptation, reduction of greenhouse gas emissions and waste, and promoting renewable energy and conservation are all part of building a resilient San Francisco for generations to come.

Developing and implementing policies and programs to improve San Francisco's overall resilience has long been a priority for the City. In 2013, San Francisco became one of the Örst 100 Resilient Cities (100 RC) to receive funding and support from the Rockefeller Foundation. San Francisco was the Örst to hire a Chief Resilience Of Öcer and one of the Örst to complete a strategic plan, Resilient SF.

Resilient SF lays out San Francisco's most pressing resilience challenges and calls for City action in partnership with our communities to make bold and

lasting progress against them. Resilient SF takes a long view of resilience and lays out actionable goals to address strategies related to San Francisco's planning, infrastructure, demography, and communities.

In 2016 as part of the City's Five-Year Financial Plan, the Mayor's OfŌce published the Citywide Strategic Initiatives Framework, which presents

Our Vision

The Mayor's Citywide Strategic Initiatives Framework lays out a vision that represents the City San Francisco wants to be:

- Residents and families who thrive
- Clean, safe, and livable communities
- A diverse, equitable, and inclusive City
- Excellent City services
- A City and region prepared for the future

a set of shared values and vision built upon strategic plans from departments across the City administration. Insofar as they ensure the long-term resilience of our City's facilities, infrastructure, and communities, San Francisco's capital planning efforts touch all of the initiatives envisioned by this Framework. Several of the featured initiatives that will help advance the City's vision are especially capital-intensive.

Ensuring that San Francisco is a clean, safe, and livable place is a fundamental part of our capital planning efforts and our overall resilience. From sidewalks to street trees to Vision Zero, many of the programs named in the Plan demonstrate the City's investment in its neighborhoods and commitment to a good quality of life for all. Well-maintained roadways, utilities, and physical infrastructure translate into access, livability, clean water and power, and safety.

Both the Capital Plan and Resilient SF recognize the importance of diversity, equity, and inclusivity surrounding housing and homelessness in San Francisco. The \$310 million Affordable Housing G.O. Bond, the inclusion of

homeless service sites for \$20 million in the most recent Public Health and Safety G.O. Bond, the implementation of HOPE SF, and conversion of public housing sites to non-proŌt management are all capital-related efforts that can make a real difference for San Franciscans seeking housing.

Finally and most directly, the Ofoce of Resilience and Capital Planning helps to ensure that the City is resilient now and for future generations. Issues around the environment and global climate change will be at the forefront over the next Ove years, with a focus on sea level rise adaptation planning and greenhouse gas emissions reduction. Major infrastructure projects like the Central Subway, Muni Forward, and the Transbay Transit Center will transform transportation in San Francisco. The Seawall along the northern waterfront requires signicant improvements to survive the next big earthquake and address increasing ōood risk. All of these efforts and more are supported by the City's Capital Plan.

In addition to implementating the Resilient SF strategy, the Of Oce of Resilience and Capital Planning builds

upon the San Francisco Hazard Mitigation Plan (HMP), a federally mandated planning document produced every Ōve years that assesses risks from natural and human-caused hazards—including climate change, drought, earthquakes, energy disruption, ōoods, hazardous material events, oil spills, tsunamis, wildŌre etc.—and lays out mitigation strategies for reducing the impact of those risks. The HMP was last published in 2014, and planning for the 2019 HMP will begin in Spring 2017. FEMA approval is required for the City to be eligible for federal disaster relief.

Both Resilient SF and the 2014 HMP directly address the City's areas of highest concern for disaster preparedness: earthquakes, sea level rise, and emergency response. Equally important is our commitment to environmental sustainability. Improving the environment by reducing greenhouse gases, encouraging the use of public transit, and preserving our natural resources are all components of a more resilient city. These areas are covered in further detail in the rest of this chapter.

1989 Loma Prieta Earthquake

Earthquakes

Nearly all of San Francisco's people, residences, and essential facilities and infrastructure are located within the very violent and violent shaking intensity hazard areas for a large magnitude earthquake on both the San Andreas and Hayward Faults. Because the risk of a major earthquake is imminent and the potential damage signiČcant, San Francisco is constantly seeking new ways to protect our homes, businesses, and people from seismic risks.

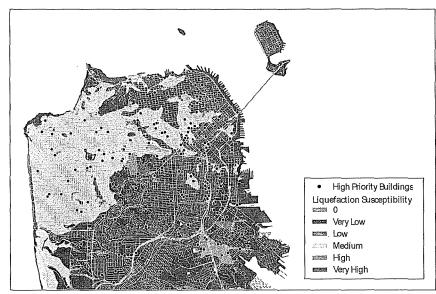

A major component of this effort is the Earthquake Safety Implementation Program (ESIP), a comprehensive plan of 50 tasks that grew out of the Community Action Plan for Seismic Safety (CAPSS) to address the City's most pressing seismic risks in partnership with our communities. Priority ESIP tasks currently underway include the implementation of the Façade Maintenance Ordinance passed in 20 16, the Soft Story RetroÖt Program, and the Private School Earthquake Safety Program.

The Of Cee of Resilience and Capital Planning aims to understand how our infrastructure is likely to respond to earthquakes and how to shore up vulnerable assets before a major event occurs. The primary tools for such analysis include the HAZUS Earthquake Loss Estimation Study Seismic Hazard Ratings, and the Building Occupancy Resumption Program, as well as the work of the Lifelines Council and the Infrastructure Branch Working Group.

The HAZUS Earthquake Loss
Estimation Study is a standardized
analysis developed by FEMA that uses
geographic information systems data
along with local facility and economic
impact data to estimate the physical
and economic impacts for speci©c
earthquake scenarios. San Francisco
is the Ōrst known municipality to have
applied the HAZUS methodology at
the individual building level, run Ōrst in
2013 and recently updated for 2017. The
results from the most recent HAZUS
analysis are shown in Table 4.1 and
shown in the accompanying HAZUS map.

TABLE 4.1

HAZUS Results (239 Buildings) (Dollars in Millions)	Hayward M6.9	San Andreas M6.5	San Andreas M7.2	San Andreas M7.9
Structural Damage	107.2	133.4	212.3	353.1
Non-Structural Damage	398.3	545.4	859:7	1,489.3
Subtotal, Building Damage	505.5	678.8	1,072.0	1,842.4
Content Damage	130.1	426.7	523,6	714.3
Operational Losses (Rent, Relocation, and Lost Income)	154.8	19 1.9	314.7	. 527.2
Total Economic Impact	790.4	1,297.3	1,910.3	3,083.8

HAZUS Map

Seismic Hazard Ratings (SHRs) were Örst developed in San Francisco in 1992 and are used to assess risk and prioritize seismic-strengthening capital improvements for over 200 public buildings. Buildings are rated on a scale from one (best) to four (worst). At present the City has addressed nearly all of the buildings identiČed as SHR4, with the exceptions of 101 Grove Street and Kezar Pavillion, and many of those rated SHR3. Updating the ratings is important for the future prioritization of seismically vulnerable structures.

Results from the HAZUS analysis and SHRs contain important information about the relative seismic risks and potential impacts to City facilities. Prior to the next Capital Plan update, the Ofoce of Resilience and Capital Planning will work with the Capital Planning Committee to develop policies that incorporate this information into project planning and program development.

The Building Occupancy Resumption Program (BORP) prioritizes critical facilities and reduces inspection times for reoccupation following a major earthquake. Building owners may apply to the BORP through the Department of Building Inspections to expedite the inspection for reoccupation to within eight daylight hours of an event, a process that can otherwise take days or weeks in the wake of a citywide emergency. This program is the Ōrst of its kind in California for private and public buildings and will enable San Francisco to restore services with minimal delay.

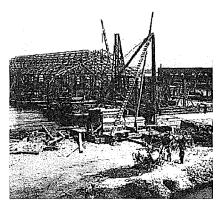

The Lifelines Council of San Francisco is a post-disaster resilience initiative to improve regional collaboration and understand dependencies to enhance planning, restoration, and reconstruction in relation to a major disaster. In 2014 the Council published an Interdependency Study, which identiŌed a series of actions to improve utility reliability and post-disaster function in San Francisco. Since then the Council has considered and discussed priority topics for City earthquake preparedness and held a table-top exercise for an earthquake scenario where all power and communications are cut.

The Infrastructure Branch Working Group is an interdepartmental group focused on the recovery of the City's publicly owned infrastructure after a major earthquake.

Seismic Priorities

One of the top concerns to emerge from the City's risk analyses in recent years is the vulnerability of the Seawall, which runs under the Embarcadero along the northern waterfront, roughly from Fisherman's Wharf to AT&T Park. To promote leading-edge thinking around the Önancing for this multigenerational project, San Francisco applied to and was selected for participation in the Living Cities City Accelerator, a national technical assistance program that facilitates information-sharing amongst cities with large-scale infrastructure challenges.

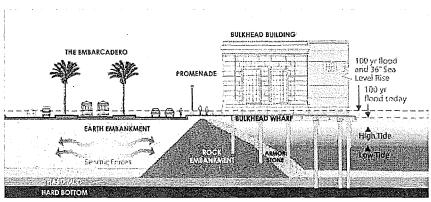

Two other essential disaster preparedness projects are San Francisco's Emergency FireŌghting Water System (EFWS), which is vital for protecting against loss of life and property from Ōre in the event of a major earthquake, and the PUC's Sewer

Construction of the Seawall

System Improvement Program (SSIP) to ensure the reliability and performance of our sewers in the face of an earthquake and other system strain.

The San Francisco Public Utilities
Commission assumed responsibility
of the EFWS in 2011 and is steadily
moving forward with plans to improve
and expand its reach. Priority projects
focus on improving the reliability of the
system, making repairs or improvements
to vulnerable components, and adding
cisterns to increase capacity. It is
expected that citywide reliability of

Depiction of Seismic Risk to the Seawall

the EFWS will reach 85 percent upon completion of projects funded with ESER 2014.

Since 2013, the SSIP has been upgrading the sewer system's aging infrastructure so that it can withstand acute stresses and continue to provide safe and sound wastewater and storm runoff management. Aging infrastructure like pump stations and treatment facilities will be upgraded. Green infrastructure will also be built to reduce storm water ōows into the sewer system while enhancing neighborhoods. The PUC will also ensure that only treated water

will be released into the San Francisco Bay and PaciŌc Ocean, continuing to protect the health of our community and environment. By increasing overall system capacity to handle surging tides in storm conditions, the SSIP addresses threats posed by climate change. Citywide efforts on that front are discussed in more detail in the following section.

Sea Level Rise

Sea level rise may be a slow-moving threat, but San Francisco recognizes that it demands action now. Climate change is accelerating the rate at which oceans are rising, and our lower-lying shoreline areas are increasingly exposed to ōood waters. San Francisco is committed to planning for and adapting to the anticipated effects of climate change.

By 2100, the National Research Council projects a most likely level of sea level rise of 36 inches. In the event that land ice melting accelerates beyond current conditions, estimates through 2100 project as much as 66 inches of sea level rise. A combination of storm surge and king tides adds 40 inches to that upper estimate, for a potential rise of up to 108 inches in water levels by 2100. For long-lasting planning, it is this most severe scenario that is depicted in the Vulnerability Zone map.

Proactive adaptation planning will allow San Francisco to minimize risks and meet the challenges posed by rising seas. To that end, San Francisco has convened an interagency committee Legend — SLR

Vulnerability Zone Map - The area between the blue line and the shore shows potential inundation that could result from extreme seal level rise in the year 2100 plus a 100-year storm.

("SLR Coordinating Committee") of 13
City departments to develop a Sea Level
Rise Action Plan ("SLR Action Plan").
The SLR Action Plan highlights the risk
to both public and private assets, as well
as the complex regulatory environment
that governs coastal planning and
development activities. It identiões
actions that San Francisco can take
now and in the near future to meet the

challenge of rising seas. Implementation of the SLR Action Plan will ultimately culminate in a Citywide Adaptation Plan, which will guide the allocation of resources towards policies and projects that will improve San Francisco's resilience as sea levels change.

The visionary goals of the SLR Action Plan speaks to San Francisco's commitment to equitable resilience

planning. The City is mindful of the disproportionate impact disaster can have on our most vulnerable communities. When Onalized, the Citywide Adaptation Plan will lay the groundwork for an adaptable city that recognizes and protects social as well as physical and economic value. It will help communities to participate in comprehensive planned response to sea level rise so that they are empowered to support efforts over the long term. Dependable and actionable information, transparency, and a common understanding of the shared responsibilities between public, private, and community interests will all be important for effective response.

As the Citywide Adaptation Plan is developed, the City has already adopted technical guidance for incorporating sea level rise planning into its capital planning. Approved by the Capital Planning Committee in 2014, this guidance establishes a consistent review, planning, and implementation process for projects in the Vulnerability Zone. Departments are expected to identify and map project sites to check whether they fall within the Vulnerability

The Recently Published Sea Level Rise Action Plan

Zone, Čl out a checklist for all projects over \$5 million funded within the next 10 years, and submit for review by the Capital Planning Committee and the City Engineer. Prior to their inclusion in either a budget cycle or the Capital Plan, each project's strategies for addressing sensitive and adaptive capacity are reviewed. Major waterfront projects incorporating innovative adaptive management include Hunters Point Shipyard, Candlestick Point, Crane Cove Park, and Mission Rock, as well as

Treasure Island and the Ocean Beach Master Plan.

Vulnerability assessments for the Port, SFO, and PUC are underway. SFO has already launched its Shoreline Protection Program to protect the airport from extreme tide and storm ōooding risks in the near term, as well as long-term ōooding risks from sea level rise.

Assessments for SFMTA, parks and open space, and other City buildings and properties are still needed and expected to be completed as part of the Citywide Adaptation Plan development. Public property in the Vulnerability Zone has been catalogued across City agencies.

Recognizing that San Francisco cannot fully address the threats posed by climate change and sea level rise in a vacuum, the City has engaged in numerous collaborative preparation and adaptability efforts.

San Francisco is participating in the Bay Area Resilient by Design Challenge. Expected to launch in 2017, the challenge will unite interdisciplinary design teams to work in collaboration with communities to identify solutions to vulnerable locations on the bayside

waterfront. Architects, designers, ecologists, engineers, and community leaders will create a blueprint for preparation to serve as a model for cities around the world.

Additional regional efforts include the Coastal Hazards Adaptation Resilience Group, Adapting to Rising Tides, the Rockefeller 10 0 Resilient Cities Challenge, the Bay Area Ecosystems Climate Change Consortium, the Bay Area Regional Collaborative, the Climate Readiness Institute, Plan Bay Area, and Our Coast Our Future.

Emergency Response

While the risks posed by earthquakes and sea level rise are at the forefront of our collective resilience planning, San Francisco also prepares for a wide range of disaster types that could impact our capital infrastructure.

The Department of Emergency
Management maintains a number of plans
to ensure that San Francisco is ready
to respond to a variety of threats and

911 Call Cente

hazards. These plans are consistent with the California Standardized Emergency Management System (SEMS) and the federal National Incident Management System (NIMS). The most wide-reaching of these are the 2014 HMP, referenced above, the All-Hazards Strategic Plan published in 2008, and the Emergency Response Plan published in 2009 and last updated in December 2010.

The All-Hazards Strategic Plan assists Citywide leadership in ensuring accountability and allocating limited resources regarding emergency response. Developed by emergency management and homeland security stakeholders, it describes goals for

developing and maintaining a Citywide risk-based emergency management and homeland security program; enhancing the City's emergency management and homeland security training and exercise program; and ensuring suf Ceient voice and data communications capabilities are in place. Implementation of activities that support those and the other goals is coordinated through the City's Department of Emergency Management.

The Department of Emergency
Management also administers the
Emergency Response Plan, an allhazards response and restoration plan
that describes the coordination, roles, and
responsibilities of responding agencies. It
lays out how the City works with state and
federal partners during an emergency.
This document includes speciÖc
operational annexes, ranging from
transportation to mass care to hazardous
materials response.

In 2017 San Francisco will initiate a threeyear process to receive certiocation from the Emergency Management Accreditation Program (EMAP). EMAP is a voluntary, non-governmental process of self-assessment, documentation,

and independent review. The program evaluates compliance with requirements in planning, resource management, training, communications and more. This certi©cation process will provide an opportunity to assess our jurisdiction-wide Emergency Management Program against established national standards. It will also demonstrate San Francisco's commitment to safe and resilient communities.

Sustainability

Both the Mayor and the Board of Supervisors are committed to protecting public health and welfare by calling for and supporting local actions to reduce global warming and protect the environment. A major component of that effort is increasing the adaptive capacity of our capital infrastructure while decreasing fossil fuel dependence.

San Francisco PUC LEED Platinum Building

The City's greenhouse gas emissions reduction goals codiŌed in the Climate Change Goals and Action Plan within the Environment Code are:

- 20% below 1990 levels by 2012
- 25% by 2017
- 40% by 2025
- 80% by 2050

Achieving these reduction goals requires that we use clean energy sources, abandon the use of fossil fuels, and make healthy choices for ourselves and the planet. As part of that effort, emission reduction measures are integrated into departmental standard operating procedures and are an important consideration for our facilities planning.

San Francisco is leading the way in municipal green building. San Francisco was one of the Örst cities in the world to require LEED certiÖcation for our buildings, dating back to 1999. LEED, or Leadership in Energy & Environmental Design, is a green building certiÖcation program developed by the U.S. Green Building Council that provides independent veriÖcation of a building's green features and promotes the design, construction, and maintenance

The City's real estate portfolio includes 50 certiced projects (7 million square feet of property) that meet LEED's® sustainability standards for energy efcciency, green design, and resource conservation.

of resource-ef Ceient buildings. In 2016 the Mayor and Board President jointly introduced legislation to update the San Francisco Environment Code with new green building standards for all new municipal construction projects. The proposed legislation will bring municipal building into compliance with state law and alignment with the requirements of LEED version 4. This legislation will help reduce greenhouse gas emissions while providing healthy, productive places for City staff and members of the public.

The proposed Environment Code change also requires feasibility analyses to explore achieving Zero Net Energy in new municipal construction by 2030 and identifying potential sites for solar and storage capacity to increase resilience in case of a disaster or emergency.

California has set a goal that all new residential buildings be Zero Net Energy by 2020 and all commercial buildings will be Zero Net Energy by 2030. A Zero Net Energy building produces enough renewable energy to meet its own annual energy consumption requirements. While state-level guidance has focused on residential construction so far, San Francisco is looking ahead to be able to meet the commercial target. The feasibility studies required in the proposed Environment Code will enable the City to reone our approach so that the potential of Zero Net Energy construction is realized.

Like other cities, San Francisco faces the challenge of being unable to use our sustainable energy resources if the electric grid goes down. The Solar+Storage for Resiliency project aims to integrate solar and energy storage into the City's emergency response planning. The primary goals of Solar+Storage are to accelerate the deployment of photovoltaics and create a roadmap for using them as a viable tool for energy security in the event of an emergency.

San Francisco municipal leadership in green building and greenhouse gas emissions reduction has informed the adoption of LEED standards in the San Francisco Building Code for private sector development. Green buildings have achieved extraordinary market penetration in San Francisco, with more than 100 million square feet of space earning LEED certiocation to date. In 2011 San Francisco was awarded Best Green Building Policy by the World Green Building Council and ranked the number one market for green development in North America in the Better Bricks/ Cushman & Wake Celd Green Building Opportunity Index.

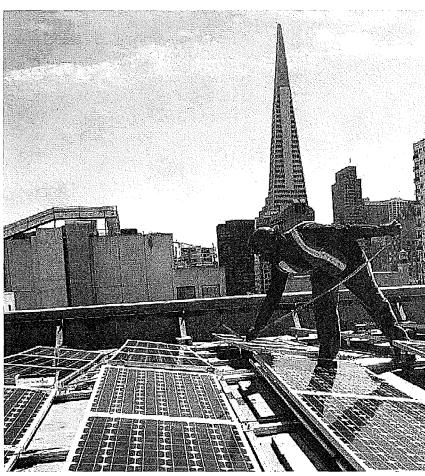

San Francisco's greenhouse gas emissions reduction and Zero Net Energy goals are challenging, and there is much work ahead. San Francisco needs timely, granular data in order to evaluate building performance and utility usage so that it can make improvements and track progress. The City also needs a clear understanding of each municipal building's criticality so that emergency response preparations can be prioritized strategically. Identifying

funding mechanisms that will support the implementation of recommendations as they are developed is also essential.

Looking Ahead

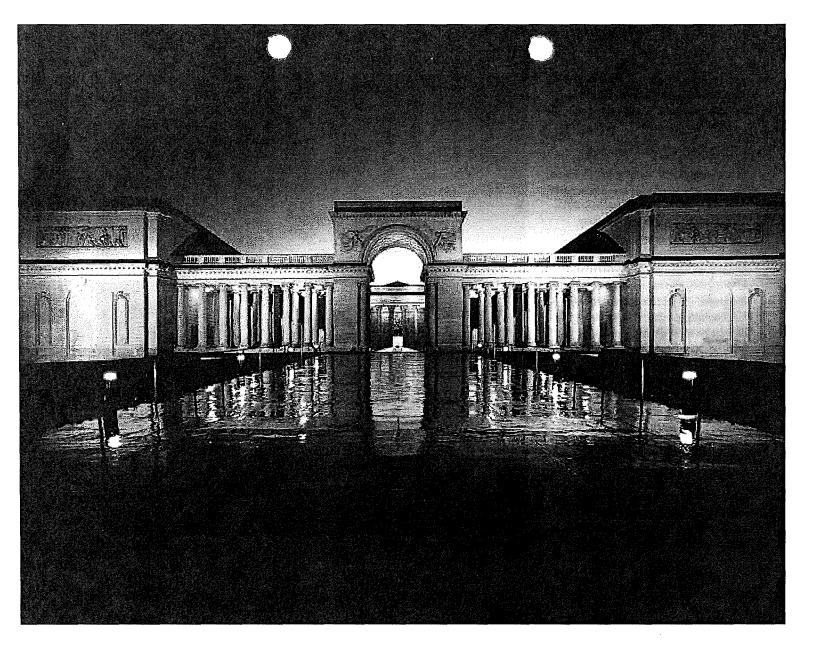

In December 2016 San Francisco hosted the second West Coast Mayors Summit, a bipartisan convening of mayors as well as resilience and sustainability of Ocers from 10 cities. The two-day meeting addressed topics of shared concern across the cities—housing affordability and resilience. Participants discussed the intersection of resilience and capital planning, integrating climate change adaptation into local plans, and incorporating equity into the equation. The group reviewed examples of generational infrastructure projects that would beneOt from federal investments prior to a natural disaster, such as San Francisco's Seawall. The summit's mayors agreed to various federal asks, such as increased investment in major infrastructure.

San Francisco understands that resilience and sustainability cannot be easily attained, but the City continues to prioritize these values.

05. Capital Sources

- Pay-As-You-Go Program (General Fund) Capital Planning Fund
- 60 60
- 61 Debt Programs
 - Development Impact Fees Other Sources
- 66 67

For details about the policies that govern the planning for the Pay-Go Program, the General Obligation Bond Program, and the General Fund Debt Program, as well as general policies for the Plan overall, please refer to the Introduction.

Overview

The City maintains a diverse variety of funding sources to meet the broad array of infrastructure projects to be implemented each year. These include the San Francisco General Fund, publicly issued debt, federal and state grants, and other local funding sources. These funds have been used for countless facilities, parks, streetscapes, and transportation initiatives used on a daily basis.

Pay-Go Program (General Fund)

Over the 10-year timeframe of this Capital Plan, the City will fund many of our ongoing annual needs with funds from the San Francisco General Fund, the source of the Pay-As-You-Go Program ("Pay-Go"). The General Fund is comprised of various taxes collected by the City, which include property, sales, business, and hotel taxes, and is the primary funding stream for nearly all City programs and services. The General Fund is an appropriate funding mechanism because San Francisco residents, businesses, and visitors alike beneŌt from the capital investments laid out in this plan.

Improvements paid through the Pay-Go Program tend to be smaller in scale than programs that require debt Onancing over a multi-year period. By using the Pay-Go Program for short-term improvements, the City is less reliant on debt Ōnancing, and ultimately spends less money to deliver those projects. Pay-Go strikes an important balance between paying for improvements today, and issuing debt which will be largely be borne by users of those improvements in the future. Within the Pay-Go Program, Routine Maintenance, ADA Transition Plans for Facilities and Public Right-of-Way, and Street Resurfacing are recommended for full funding.

Capital Planning Fund

The Capital Planning Fund supports critical project development or pre-bond planning outside the regular General Fund budget. Historically, the General Fund supported pre-bond critical project development on the condition that once bonds for that project were issued, the General Fund would be reimbursed. This Plan assumes that bond reimbursements

will flow into the Capital Planning Fund and be used for future project development and pre-bond planning.

The Capital Planning Fund may be used for planning of building projects that are funded through sources other than bonds, but those funds are not reimbursable. This investment in planning helps increase public confidence and the likelihood that these projects will be delivered on time and on budget by improving cost estimation reliability and refining project delivery methods.

This Plan has identified \$3.8 million in FY2018 projects to be funded through the Capital Planning Fund: Seawall fortification and the relocation of DPH staff out of 101 Grove Street. There are additional projects in the Plan well-suited to Capital Planning Fund allocations, such as public safety improvements expected to be funded through Earthquake Safety & Emergency Response G.O. Bonds and continued planning for the Justice Facilities Improvement Program to close the Hall of Justice.

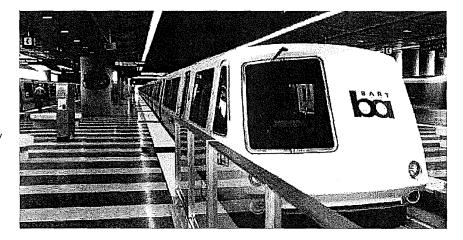

Debt Programs

The majority of the capital investments outlined in the General Fund Summary Table are funded with voter-approved General Obligation Bonds (G.O. Bonds), General Fund debt called Certificates of Participation (COPs), or revenue bonds.

Issuing debt is a typical method for financing capital enhancements with long useful lives and high upfront costs which the City would not be able to cover through the Pay-Go Program. The use of debt also spreads the financial burden

of paying for facilities between current residents and future generations who will also benefit from the projects.

For planning purposes department-level allocations have been assigned in this document for all planned G.O. Bond and COP programs. These allocations are subject to change and will be refined prior to approval from the Capital Planning Committee based on information from Citywide needs assessments such as the HAZUS analysis described in Chapter Four: Building Our Future, as well as evolving department priorities.

General Obligation Bonds

G.O. Bonds are backed by the City's property tax revenue and are repaid directly out of property taxes through a fund held by the Treasurer's Office.

The Plan structures the G.O. Bond schedule around the notion of rotating bond programs that target specific areas of capital need approximately every six years, although the City's debt capacity, election schedules, and capital needs also determine these levels. This approach was established in the original 2007 Capital Plan and has been maintained ever since.

Specific areas of need for capital improvements include Earthquake Safety, Parks & Open Space, and Public Health; however, the Plan occasionally recommends bonds outside these categories if there is a demonstrated capital need that the City would otherwise not be able to afford. Recently approved G.O. Bond measures include the 2015 Affordable Housing Bond and the 2016 Public Health & Safety Bond.

The Capital Planning Committee on April 16, 2018, voted unanimously to amend this plan to increase the proposed November 2018 Seawall General Obligation Bond.

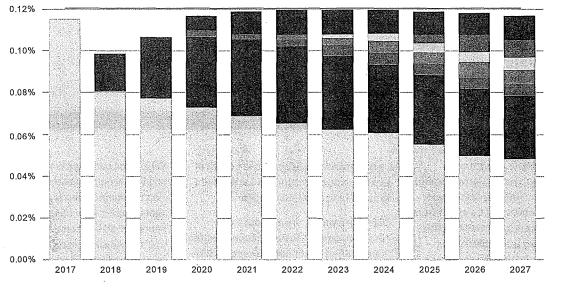

TABLE 5.1

Dollars in Million		
Election Date	Bond Program	Proposed Amount
November 2018	Seawall Fortification	425 350 -
November 2019	Parks and Open Space	185
November 2020	Earthquake Safety & Emergency Response	290
November 2022	Public Health	300
November 2024	Transportation	. 500
June 2025	Parks and Open Space	185
November 2026	Earthquake Safety & Emergency Response	- 290
Total		2,100 2

Table 5.1 shows the Capital Plan's proposed G.O. Bond Program for the next 10 years. The next proposed bond is a Seawall Bond scheduled for the November 2018 ballot, a new addition to the G.O. Bond Program to meet infrastructure fortification needs for San Francisco's waterfront, All amounts attributed to future bond programs are estimates and may need to be adjusted in future plans to account for new federal and state laws, programmatic changes, site acquisition, alternate delivery methods, changing rates of construction cost escalation, and/or newly emerged City needs.

Chart 5.1 illustrates the impact on the local tax rate of issued, expected, and proposed G.O. Bond debt. The red line represents the property tax limit policy established in 2006 that sets the annual level of bond debt repayment. The space between the red line and the bars on the chart illustrates the projected capacity for bond debt for each year. This capacity is largely driven by changes in assessed value and associated property tax revenues within the City. The recent economic boom has increased assessed value growth over the past several years but there is an expectation that this will level off when the economy turns.

Existing & Outstanding

Earthquake Safety \$290 (2020)

Parks \$185 (2025)

- FY2006 Rate/Constraint

Voter Approved \$3,488 (2006-16)

Public Health \$300 (2023)

Seawaii \$350 (2018)

Parks \$185 (2019)

Transportation \$500 (2024)

Earthquake Safety \$290 (2026)

Note: Chart does not reflect passage of Measure C in November 2016, allowing use of Seismic Safety Loan Bond Program capacity for Affordable Housing projects

CertiGcates of Participation

CertiŌcates of Participation (COPs) are backed by a physical asset in the City's capital portfolio, and repayments are appropriated each year repaid from the City's General Fund or revenue that would otherwise ōow to the General Fund. The City utilizes COPs to leverage the General Fund to Ōnance capital projects and acquisitions, many of which provide direct revenue beneŌt or cost savings.

Funding from COPs is planned to support critical City responsibilities such as replacing the seismically de Ocient Animal Care & Control Shelter, reducing the local jail population and relocating prisoners and City staff from the seismically de Ccient Hall of Justice, and modernizing the Public Works Operations Yard. Table 5.2 shows the Capital Plan's proposed COP Program for the next ten years. Vacating seismically unsafe buildings like 10 1 Grove Street and the Hall of Justice remains top priority. The COP Program also includes a three-year \$50 million annual recession allowance for critical repairs,

TABLE 5.2

Proposed CC (Dollars in Millions)	Ps FY2018-2027	
Year of Issuance	Project	Amount
FY2018	DPH 10 1 Grove Exit & JUV Admin Relocation	15 8
FY2019	CJ#2 Improvements Match	12
FY2020-22	Critical Repairs - Recession Allowance (\$50M Annually)	150
FY2021	JFIP - HOJAdmin Relocation	308
FY2021	JFIP – Prisoner Exit	190
FY2025	10 1 Grove RetroÖt	50
FY2025	PW Yard Consolidation	50
FY2026	JFIP - HOJ Demolition & Enclosure	48
Total		962

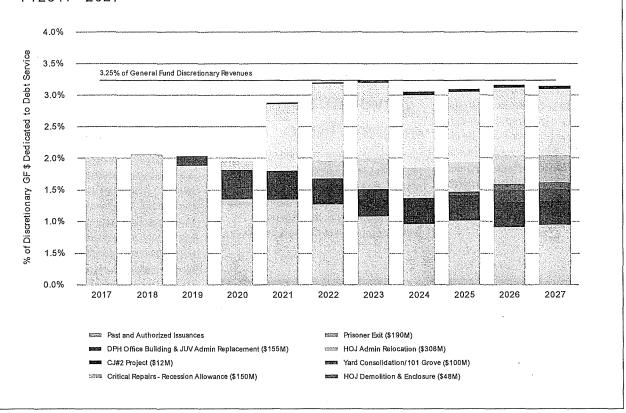

which reserves capacity in the event of an economic downturn and associated impact to the Pay-Go Program.

Chart 5.2 shows the proposed COP Program against the policy constraint for General Fund debt not to exceed 3.25% of General Fund Discretionary Revenue, represented by the red horizontal line.

The bottom portions of the columns represent debt service commitments for previously issued and authorized but unissued COPs, including the debt issued for the Moscone Center, San Bruno jail,

City of Oce buildings in the Civic Center, the War Memorial Veterans Building, and the Animal Care & Control Shelter replacement. New obligations are represented in discrete colors, beginning in 2018. As with the G.O. Bond Program, all amounts attributed to future COPfunded programs are estimates and may need to be adjusted in future plans to account for new federal and state laws, programmatic changes, site acquisition, alternate delivery methods, changing rates of construction cost escalation, and/or newly emerged City needs.

Capital Plan General Fund Debt Program FY2017 - 2027

Revenue Bonds

Revenue bonds are a type of debt that is repaid from revenues generated by projects that the debt was used to Onance. Revenue bonds are typically used by the City's enterprise departments (SFMTA, Port, SFPUC, and SFO), which generate their own revenues from fees paid by users of services provided by those agencies. This type of debt is repaid solely by users of those projects and therefore does not require payments from the General Fund. Examples of projects funded by revenue bonds are the SFPUC's Water Systems Improvement Program or the Airport's Terminal Renovation Program.

Table 5.3 shows the current amount of proposed revenue bonds to be issued over the 10-year term of this Plan. All revenue bond issuances are subject to change based on market conditions and cash ōow needs of the associated projects. There is no line for the Port, as that agency does not have any additional issuance planned in the next ten years.

Development Impact Fees

San Francisco must expand our infrastructure to manage the impacts of our growing population as more residents utilize transportation networks, parks, and other public assets. A large proportion of this new growth is

TABLE 5.3

(Dollars in Millions)			
Agency	FY18-22 Amount	FY23-27 Amount	Total

Total	219.9

concentrated in a few speciŌc areas, which include Eastern Neighborhoods, Market/Octavia, Visitacion Valley, Balboa Park, Rincon Hill, and Transit Center. The City established development impact fees, which are paid by developers, to fund the services that are required by new residents of these areas. The City's Planning Department has created speciŌc Area Plans to focus new capital investments in those neighborhoods.

Development impact fees for the Plan Areas are programmed through the City's Interagency Plan Implementation Committee (IPIC) with input from each Plan Area's respective Citizen Advisory Committee. IPIC is chaired by the Planning Department, and all IPIC projects' appropriations are funneled through the capital budget process each year. While impact fees are collected by the Planning Department, funds are transferred to the departments implementing those projects, such as Public Works or SFMTA.

The City estimates it will raise over \$219 million in Plan Area impact fees over the next ten years. Table 5.4 shows the estimate of impact fees to be collected over the next 10 years by Plan Area.

While the revenues projected from development impact fees are signicant, they are insufacient to cover all of the growth-related infrastructure needs of the Plan Areas. The City will continue to seek opportunities to leverage these impact fees and identify complementary funding for Plan Area projects.

Other Sources

The City has several sources of funding for capital projects that are derived from speciŌc sources and designated for speciŌc purposes. For example, the

Marina Yacht Harbor Fund receives revenues generated by users of the Yacht Harbor and uses them for projects such as sediment remediation and security and lighting systems. The Open Space Fund sets aside funds from annual property tax revenues, outside private sources, and Recreation and Parks Department revenues, and applies those funds to open space expenditures. In the Ōrst year of the Capital Plan, these funds will provide \$33.2 million for these projects, as shown in Table 5.5.

San Francisco also receives funding from the federal government and the State of California to execute some of our capital projects. Major funders include the Federal Aviation Administration, the Federal Transportation Administration, and the California Department of Transportation, to name a few. At present the City does not track which grants support capital projects, so no summary data on that subject is available. These sources have provided funding for important work including seismic retro table and improvements to parks, table of the capital projects, and libraries.

Adopted Plan

06. ECONOMIC + NEIGHBORHOOD DEVELOPMENT

PORT: Port of San Francisco

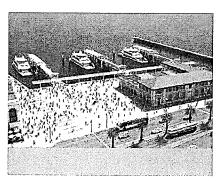

OCII: Of Community Investment and Infrastructure

TIDA: Treasure Island Development Authority PLANNING: Impact Development Plan Areas

A place of unique neighborhoods, progressive values, and innovative industry, San Francisco is growing. The city's creative culture and dynamic economy continue to draw new residents; as of 2015 the population was 864,816, up 11% from 2000. Plan Bay Area, developed by the Association of Bay Area Governments, projects San Francisco to grow by 90,000 housing units and 190,000 jobs by 2040. As the city's density increases, having suf©cient infrastructure to support all residents in all neighborhoods becomes more challenging but also more important.

Real estate developments along the city's waterfront, the creation of new neighborhoods, and preparing existing neighborhoods for anticipated growth will increase the City's infrastructure portfolio along with its tax base. Eastern Neighborhoods, Mission Bay, Candlestick Point, and Hunters Point Shipyards are just a few of the high-growth areas changing the face of San Francisco. Many of these developments and projects have distinctive funding mechanisms, including dedicated development fees and developer agreements that target improvements in areas of especially high growth. These projects seek to create well-planned, safe places to live, travel, work, and play.

New Cruise Ship Terminal at Pier 27

Ferry Terminal Expansion

Overview

While many things contribute to the local economy, this chapter includes departments and programs whose primary objectives are to improve San Francisco's wide-ranging economic base and plan for its future growth.

Port of San Francisco

The Port of San Francisco is responsible for the 7.5 miles of San Francisco waterfront adjacent to San Francisco Bay. The Port manages, maintains, develops, markets, and leases all of the property in this area. The Port's operating portfolio is composed of approximately 580 ground, commercial, retail, of Ōce, industrial, and maritime leases, including leases of many internationally recognized landmarks such as Fisherman's Wharf, Pier 39, the Ferry Building, and AT&T Park, home of the San Francisco Giants baseball team.

Port lands must be used consistently with public trust principles for the beneŌt of all California citizens, to further navigation and maritime commerce, Ōsheries, public access and recreation, environmental restoration, and commercial activities

that attract the public to the waterfront. Urban waterfront developments, including the new Southern Bayfront neighborhood developments proposed in the Mission Rock, Orton, and Forest City projects require detailed coordination, review, and approval of many government agencies. In recent years, the Port has also secured State legislation to allow non-trust uses of speciŌed Port lands and created Infrastructure Financing Districts to support waterfront improvements. Such advances were made possible by developing a common understanding with partner agencies of project objectives and implementation requirements to restore historic structures and improve the waterfront for maritime and public use and enjoyment.

The Port's Waterfront Land Use Plan guides the integration of public and private investment to improve the waterfront for broad public use and enjoyment. It includes a comprehensive public access and open space plan that integrates with the Port's varied maritime industries, and offers opportunities for new public-private partnership projects.

Of Community Investment and Infrastructure

The Of Community Investment and Infrastructure (OCII) is the successor agency to the San Francisco Redevelopment Agency, which was dissolved in 2012 by order of the California Supreme Court. OCII is authorized to continue to implement the Major Approved Development Projects, which include the Mission Bay North and South Redevelopment Project Areas (Mission Bay), the Hunters Point Shipyard Redevelopment Project Area and Zone 1 of the Bayview Redevelopment Project Area (Shipyard/Candlestick Point), and the Transbay Redevelopment Project Area (Transbay). In addition, OCII continues to manage Yerba Buena Gardens before its formal transfer to the Real Estate Division in 2017.

The Mission Bay development covers 303 acres of land between the San Francisco Bay and Interstate-280. The development program for Mission Bay includes market-rate and affordable housing; new commercial space; a new UCSF research campus and medical

center; neighborhood-serving retail space; a 250-room hotel; new public open space; and myriad community facilities.

The Shipyard/Candlestick Point comprises of nearly 780 acres of abandoned and underutilized land along San Francisco's southeastern Bayfront. These long-abandoned waterfront lands will be transformed into areas for jobs, parks, and housing. The development will feature up to 12,100 homes, of which nearly one-third will be affordable; nearly 900,000 square feet of neighborhood retail; and three million square feet of commercial space; and 26 acres of parks and open space.

Transbay development includes the new Transbay Transit Center (TTC) and 10 acres of former freeway infrastructure, which OCII and the Transbay Joint Powers Authority (TJPA) are developing into a new, mixed-use neighborhood surrounding a state-of-the-art, multimodal transit station. The TJPA is responsible for constructing, owning and operating the new TTC, and OCII is responsible for the development of the surrounding neighborhood. At full build-out, these publicly-owned parcels

will be transformed into approximately 3,300 new housing units, including nearly 1,400 affordable units, three million square feet of new commercial development, and 3.6 acres of parks and open space.

In 2017 several assets will transfer from OCII to the Real Estate Division. consistent with OCII's recently stateapproved Property Management Plan. These assets include open space in Mission Bay, Yerba Buena Gardens, commercial and parking facilities in the Fillmore, and other properties. The transfer of Yerba Buena Gardens will be accompanied by a master operating lease with a newly formed non-proOt (Yerba Buena Gardens Conservancy or YBGC) who will be responsible for maintenance and operations under a Board of Directors that will include appointments from the City & County of San Francisco and work with Real Estate staff to ensure proper management.

Treasure Island Development Authority

Treasure Island and Yerba Buena Island ("TI" and "YBI"; collectively, "the Islands") are in San Francisco Bay, about halfway between the San Francisco mainland and Oakland. Treasure Island contains approximately 404 acres of land, and Yerba Buena Island, approximately 150 acres. In early 2003, the Treasure Island Development Authority (TIDA) and the Treasure Island Community Development, LLC (TICD) entered into an Exclusive Negotiating Agreement and began work on a Development Plan for the Islands.

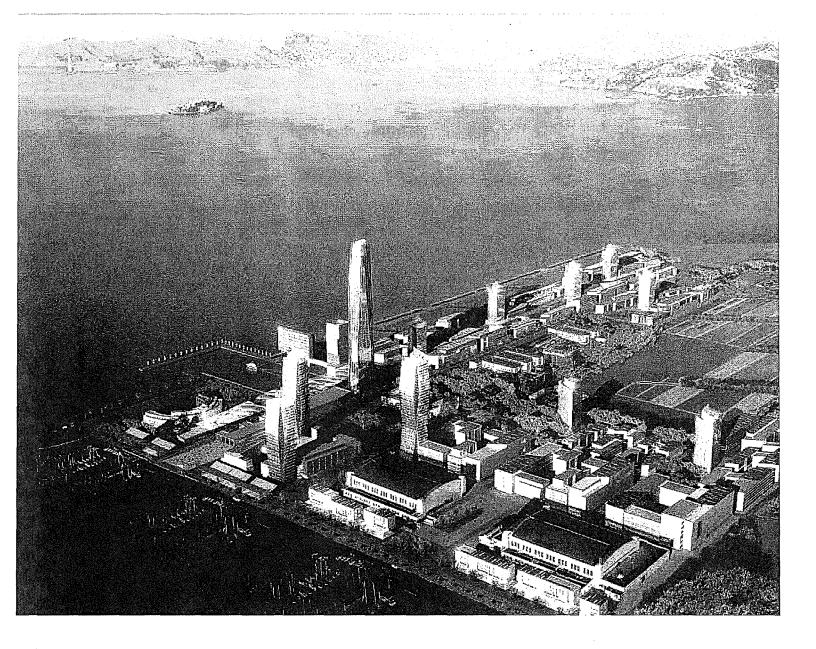

The Treasure Island/Yerba Buena Island Development Project will create a new San Francisco neighborhood consisting of up to 8,000 new residential housing units, as well as new commercial and retail space. The Project will also feature new hotel accommodations and 300 acres of parks and public open space, including shoreline access and cultural uses. Transportation amenities being built for the project will enhance mobility on the Islands as well as link the Islands to San Francisco. These amenities will include new and upgraded streets and public

byways; bicycle, transit, and pedestrian facilities; landside and waterside facilities for the existing Treasure Island Sailing Center; an expanded marina; and a new Ferry Terminal.

Planning Department – Neighborhood Development

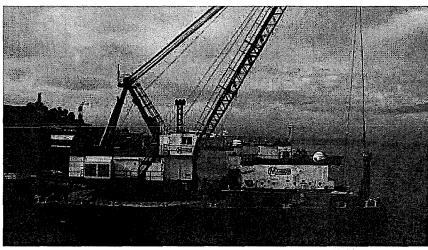

Through various planning efforts, such as Community Plans, Redevelopment Plans, and Development Agreements, the Planning Department helps San Francisco to create a built environment that will support our own growth. The City has developed speciÖc Area Plans where current development is concentrated. These Plan Areas are Balboa Park, Eastern Neighborhoods, Market Octavia, Rincon Hill, Transit Center, and Visitacion Valley. New infrastructure projects planned in these areas include improvements to transportation networks, streetscape enhancements to create inviting pedestrian corridors, new open space areas that provide access to recreation and sporting activities, and other categories of projects that will improve quality of life in these areas.

The City assesses impact fees on development projects to generate revenue needed for infrastructure to serve new residents and address existing de Giencies. The Planning Department estimates it will raise over \$219 million in impact fees in the Plan Areas over the next 10 years.

Renewal Program

This chapter includes agencies and plans that focus on areas of new development, and as a result not all entities and projects have signiŌcant renewal programs. Renewal needs in this Service Area predominantly fall under the purview of the Port. Yerba Buena Gardens renewals are addressed in the General Government Service Area.

Dredging at the Port

Port of San Francisco

Consistent with the Port Commission's commitment to investing in renewal of Port resources and guided by the priorities laid forth in the Waterfront Land Use Plan, the Port invests at least 20 percent of its annual budget into

facility renewals. This work maintains existing resources and, when possible, makes un-leased properties of for leasing, thus increasing the Port's revenue-generating capacity. Repairing the Port's pier structures is necessary to ensure: 1) the continued safe operation

of pier superstructures and buildings; 2) the preservation of lease revenues; and 3) the extension of the economic life of the Port's pier and marginal wharf assets.

Many large renewal projects are designed by Port Engineering staff and performed by contractors. Maintenance of the Pier substructures, the deck and piles that make up the piers, is done primarily by Port staff, which analysis indicated was the most cost-effective delivery method. With two new crews of pile workers funded in the current Capital Budget, the rate of pier repair in this Capital Plan period will increase.

Maintenance dredging ensures the proper depth of berths at the Port's piers so that they remain suitable for water traf $\bar{\mathbb{C}}$ c. Dredging makes up 21 percent of the Port's average annual capital renewal investment in the most recent Capital Budget. Maintenance dredging

is necessary for the continued operation of Port maritime facilities by keeping the Port's berths and channels at navigable depths, including sites where the Port has contractual obligations with shipping lines and operators.

The one-time cost category primarily captures non-cyclical needs, which are typically driven by changes in code requirements. Such work includes items like closure of the dumpsite at Pier 94 and many structures at Pier 70. For these structures, partial rehabilitation is not a viable option, and any rehabilitation will trigger substantial seismic work. Until they are rehabilitated and enter a capital maintenance cycle, the entire rehabilitation cost or the cost for demolition of these buildings are modeled as one-time costs. Demolition costs are included for a limited number of structures at Pier 70, as they no longer provide utility to the Port or its mission.

The Port's Engineering Division regularly conducts inspections of all Port facilities and categorizes the condition of more than 350 structures, including piers, wharves, and buildings. The 2016 engineering report lists 34 facilities as yellow-tagged, which Port staff recommend be repaired in the near future to avoid being shut down and 20 facilities as red-tagged (restricted access, unsafe, poor structural condition). Consistent with the Port's capital budget investment criteria, revenue-generating yellow-tagged facilities will receive priority in future capital planning and allocation decisions. While some of the red-tagged facilities may never be repaired, others may still be brought back into productive use with suf Ocient capital investment.

Project Name

Description

Port - Seawall Resilience Project

The Seawall Resilience Project will improve earthquake safety and performance of the Embarcadero Seawall, provide near-term ŏood protection improvements, and plan for additional long-term resilience and adaptation of the northern Bayfront. The overarching goals are to: improve earthquake safety without delay, reduce earthquake damage and disruption, lower ŏood risk, enhance the San Francisco Bay, and create a stable foundation for sea level rise adaptation.

Recognizing that a project of this magnitude will occur over several decades and require federal, state, and local permitting and funding, the Port Commission has approved a two-pronged approach that includes (1) planning and completing the improvements needed to address the most immediate life safety and high-priority upgrades to the Seawall; and (2) decning requirements for subsequent work to complete the Seawall's resilience strengthening.

The Project will focus on making improvements before disaster strikes, improvements that will save lives, reduce suffering, support disaster response and recovery efforts, and help protect the historic waterfront. The primary focus is to design and implement the most critical improvements within the next decade and to plan for additional improvements over the next several decades as climate change and rising seas significantly challenge our ability to maintain a thriving urban waterfront and protect a national registered historic district.

The budget for the Seawall Resiliency Project is currently estimated at \$500 million. The City has committed \$9.6 million through FY2018 for the initial planning component of Phase 1, with \$5.6 million scheduled prior to this 10-year plan period and \$4.0 million identičed for FY2018. The Plan proposes a \$350 million General Obligation Bond for voter approval in November 2018. The Port is leading the development of a funding strategy for the deferred need that may include seeking the State share of tax increment from the Mission Rock development project Infrastructure Financing District and working with the US Army Corps of Engineers to identify a 500d control project under the authority of the Water Resources Development Act. This variety of funding sources aims to spread the cost of the project across a range of constituencies that have an interest in preserving infrastructure that supports a National Historic District, major transit routes that serve millions daily, and embarkation sites that will be critical for the City's recovery in the event of a major earthquake.

Port - Mission Bay Ferry Landing

The Mission Bay Ferry Landing will provide critical Transbay and regional ferry service to and from the fastest growing southern waterfront neighborhood of San Francisco, the Onancial district, and the East and North bays. The landing will provide capability to berth two ferry boats simultaneously and will likely include a nearby water taxil landing. The Port is entering into MOUs with the Bay Area Water Emergency Transportation Authority (WETA) to establish roles and responsibilities for the construction of the project as well as for the details and cost of ongoing operations, which WETA will bear.

The estimated project cost is between \$32.5 and \$42.7 million, depending on the location selected. The Port has solicited contractor architectural and engineering services to help determine the location, obtain permitting, and establish a Önal budget. Design and permitting phases of work are funded in this Plan at \$7 million, with \$1.5 million scheduled prior to this 10-year plan period and \$5.5 million identiCed for FY20 18. Potential funding sources for the remainder of this project include local funds for transportation, private contributions, and state and federal transportation grants.

Project Name	Description
Port – Pier 70 20th Street Historic Buildings	The 20th Street Historic Buildings are eight buildings at Pier 70, some dating back to the 1880s, that need substantial investment to return to active use. The Port has selected Orton Development Inc. for a public-private partnership to rehabilitate these buildings for use by of Ce workers, retailers, artists, and manufacturing companies. Orton has commenced construction, and Crst occupancy is anticipated by summer 2017 with full buildout estimated by fall 2018.
	The capital cost estimate for this public-private partnership project is \$81 million.
Port – Pier 70 Waterfront Site	The Waterfront Site Project includes nine acres of waterfront parks, playgrounds, and recreation opportunities; new housing units (including 30% below market-rate homes); restoration and reuse of currently deteriorating historic structures; new and renovated space for arts, cultural, small-scale manufacturing, local retail, and neighborhood services; up to two million square feet of new commercial and of De space; and parking facilities and other transportation infrastructure. The Port Commission selected Forest City California, inc. as its development partner for the Pier 70 Waterfront Site. Construction is expected to commence in 2017, with full build-out completion in 10-15 years.
	The capital cost estimate for this concept of the project is \$270 million.
Port – National Park Service Alcatraz Embarkation Site	The National Park Service ("NPS") and the Port are negotiating to develop a long-term, land-side home for an NPS welcome center for embarkation to Alcatraz Island, as well as an entry point for its many regional destinations in the Golden Gate National Recreation Area via ferry. NPS has partnered with the Golden Gate National Parks Conservancy on design and improvement plans for Pier 31 and Pier 33 Bulkhead buildings and the Pier 31½ marginal wharf.
	The improvements to the site include approximately \$20.8 million in investment in the buildings, wharf, 5 oats, ramps, and other inwater property to be made by the Conservancy and the next ferry concessioner selected by NPS. The Port has also committed to a \$5 million repair to the marginal wharf's substructure, which is funded in FY2018.
Port – Seawall Lot 337 and Pier 48	The vision for this project, led by Seawall Lot 337 Associates, LLC (an afdiate of the San Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a decible development that balances residential, of the san Francisco Giants), is a development that balances residential, of the san Francisco Giants), is a development that balances residential, of the san Francisco Giants), is a development that balances residential, of the san Francisco Giants), is a development that balances residential, of the san Francisco Giants), is a development that balances residential, of the san Francisco Giants), is a development that balances residential, of the san Francisco Giants), is a development that balances residential, of the san Francisco Giants), is a development that balances residential, of the san Francisco Giants), is a development that balances residential, of the san Francisco Giants, is a development that balances residential, of the san Francisco Giants, is a development that balances residential, of the
	The total cost of the project, as planned, is estimated at \$1.8 billion.
Port – Seawall Lots 323 and 324	In 20 15 the Port Commission approved an agreement with Teatro ZinZanni and its Čnancial partner, operating together as TZK Broadway, LLC, for the lease and development of Seawall Lots 323 and 324 for a dinner-theater, a maximum 200-room, 40-foot high boutique hotel, an approximately 7,500 square foot privately Čnanced public park, and ancillary uses. The project is anticipated to be constructed and operational by 2019.
	This project's total development cost is estimated at \$124 million to be funded with private funds.

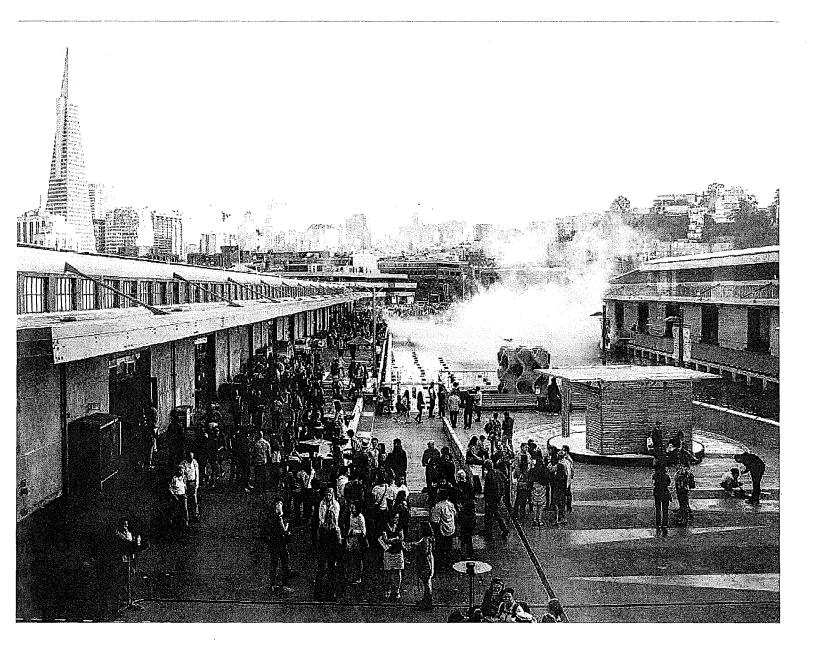

Project Name	Description
Port – Seawall Lot 322-1 Development for Affordable Housing	In 2014 the Port Commission approved an agreement between the Port and the Mayor's Of Ce of Housing and Community Development (MOHCD) regarding a joint effort to pursue the feasibility of improving Seawall Lot 322-1 with an affordable housing development. The project is scheduled for construction in 2018. MOHCD recently selected Bridge Housing as its private partner to develop the site with 130 family housing rental units.
	The project's projected cost is \$72 million.
Port – Downtown San Francisco Ferry Terminal Expansion Project	The Bay Area Water Emergency Transportation Authority (WETA) is developing the Downtown San Francisco Ferry Terminal Expansion project to expand and improve facilities at the ferry terminal. The expansion will accommodate anticipated increases in ferry ridership as new ferry services from downtown San Francisco to Richmond, Treasure Island, and other locations, are introduced through 2030. The project will include construction of two new ferry gates and four new berths, landside pedestrian circulation improvements, installation of amenities such as weather-protected areas for queuing, and covering of the current "lagoon" area south of the Ferry Building. This covered area will enhance emergency response capabilities and serve as a new public plaza in the heart of the Ferry Building area.
1	Construction, at an estimated cost of \$75 million, is expected to begin in 2017 and be completed by 2020.
Port – Agua Vista Park	Agua Vista is a waterfront park at the southern edge of Mission Bay located on Terry Francois Boulevard at 16th Street that was originally improved in the 1970s. This project will renovate and connect the 20,000 square foot, shoreline Agua Vista Park to the recently improved edge of Bayfront Park. When completed, Agua Vista Park and the future Bayfront Park combined are expected to include 2,000 linear feet of new shoreline access, continuous walking and bike paths, and dramatic views of ships being worked on at the Pier 70 shipyard and dry dock. Improvements may include new pathways, seating areas, interpretation, and Oshing facility improvements. The project is expected to be completed in 2017.
	The budget for this project is \$2 million dollars and is funded through the Neighborhood Parks G.O. Bond program.
Port – Blue Greenway Public Art	Working with the San Francisco Arts Commission, the Port has identiced the Bayview Gateway site as the appropriate site and location for an art enrichment project. Construction is anticipated to be complete in 2017.
	The budget for this art enrichment project is \$684,000 and is funded through the Neighborhood Parks G.O. Bond program.
Port – Islais Creek Improvements	This project will complete the pathway along the northern shore of Islais Creek from I-280 to Illinois Street. New public access would connect the Islais Creek Promenade at Tennessee Street to the historic Third Street Bridge. Improvements are expected to include a new waterfront walkway and scenic lookout points. This site currently is partially unimproved. Improvements would close a gap in the Islais Creek system of open spaces, the Blue Greenway, and Bay Trail. The project is expected to be complete in 2017.
	Improvements are budgeted at \$2 million, and this project is funded through the Neighborhood Parks G.O. Bond program.
Port – Crane Cove Park Phases 1 and 2	Crane Cove Park is a new, approximately nine-acre, Blue Greenway waterfront park located in the Central Waterfront between 19th and Mariposa Streets east of Illinois Street. Initial park concepts include shoreline cleanup and stabilization, restoration of historic cranes, historic interpretation, bay access, and a facility for human powered boats. Phase 1 construction is underway, and completion is slated for 2018, and Phase 2 will support completion of a four acre site east of slipway 2.
	Phase 1 of the Crane Cove Park project is funded by \$24.6 million from the 2008 and 2012 Neighborhood Parks Bonds and \$6.9 million in other Port sources. The budget for Phase 2 is \$20 million and a top priority for future G.O. Bond programming.

Project Name	Description
OCII Mission Bay – Parks and Open Space	Nineteen additional parks are anticipated to be constructed over the next 10 years, of which 13 are planned for delivery over the next \(\tilde{O}\)vers. Parks anticipated to be \(\tilde{O}\)nished by FY2019 include: remaining segments of the Mission Creek park loop, a new dog park to serve Mission Bay South, a small remaining segment of Mariposa parks to serve the new UCSF Children's hospital and expanding Dogpatch neighborhood, the Commons linear park, a small pocket park and more.
OCII Mission Bay — Streetscape and Underground Utilities	While a signicant amount of roadways in Mission Bay, along with their underground utility system, have been constructed since 1998, the need remains to Chalize improvements to the core infrastructure serving the new residential neighborhood and research district in the southern portion of Mission Bay. This infrastructure includes new roadways, underground utilities, highway off-ramp improvements, and pedestrian and bicycle improvements. The majority of these improvements will be constructed over the next over years.
OCII Mission Bay Storm Water Treatment	The remaining required storm water treatment improvements in Mission Bay are all located south of Mission Creek. This southern portion of Mission Bay will have a storm water treatment system separate from the combined sewer/storm water system found in the rest of the City to avoid additional burdens on the Southeast Treatment Facility. These improvements include construction of storm water pump stations and storm water treatment facilities, which are expected to be constructed within the next Öve years.
OCII Shipyard/Candlestick - Building 101& Artists Replacement Studios	Building 10 1 will be retained as part of the Shipyard redevelopment and will require signiČcant upgrades in the future. New artist studios for approximately 10 0 artists will be constructed.
OCII Shipyard/Candlestick - New Parks and Open Space	The development will build out several new parks which include: Hillpoint Park, Hilltop Pocket Parks, Innes Court Park, Coleman Promenade and Overlook, Storehouse Plaza, Coleman Bluffs Paths, Hillside Central Park, Jamestown Walker Slope, Wedge Park, Bayview Hillside Open Space, and Alice Grif th Community Garden, Northside Park, Horne Blvd Park, Shipyard Hillside Open Space, Mini-Wedge Park, Earl Blvd Park, Waterfront Promenade North/South, Heritage Park, and Alice Grif th Neighborhood Park.
OCII Shipyard/Candlestick — Transportation Improvements	The Shippard/Candlestick Point project includes an extensive program of on-site and off-site transportation improvements to facilitate automobile, transit, bicycle, and pedestrian mobility in and around the project area. Over the next Öve years, the master developer will build out a new network of streets in the former Candlestick Stadium site to serve a new retail center and the Alice Grif Öth public housing site.
OCII Shipyard/Candlestick Streetscape Projects	The Shipyard/Candlestick Point Project will enhance the walkability of several streets, providing new amenities to pedestrians in the area by performing streetscape projects on Gilman Street, Harney Way, and Innes Avenue.
OCII Transbay – Folsom Street Improvements	Planned improvements to Folsom Street in the Transbay area include widened sidewalks with special paving, new street trees, rain gardens, and new streetlights and traf©c signals. Construction of improvements is anticipated to begin in 2017, with completion of all permanent improvements by 2019.
	The total cost of the Folsom Street improvements is \$18 million and will be funded by tax exempt bonds issued by OCII.

Project Name	Description
OCII Transbay – New Public Park (between Main & Beale)	Within the next Öve years, OCII will complete construction of a new 1.1-acre park north of Folsom Street, between Main and Beale Streets, adjacent to the site of the Temporary Transbay Terminal. The TJPA plan has programmed the site for approximately 730 new residential units surrounding the new park. Construction of the park is expected to begin in 2018.
	The cost of this project is approximately \$15 million.
OCII Transbay – Greater Rincon Hill Community BeneŌt District	In 2015 property owners within Transbay and the Rincon Hill neighborhoods approved the Greater Rincon Hill Community Bene Ct District. The District provides funding for maintenance of the new infrastructure, including the new parks, sidewalk and street cleaning, security, and programming for neighborhood events.
	The District produces approximately \$4.5 million in funding annually to meet these needs.
TIDA – Horizontal Infrastructure	Treasure Island requires signicant investment in modernizing its horizontal infrastructure, which is needed to ensure that the Island is in the developable condition necessary for new buildings and structures to be built upon it. This investment includes building a replacement low-pressure potable water system, a reclaimed water system, new sanitary sewer and storm drainage facilities, and joint trenches throughout the area to accommodate electrical, communication, and gas utilities.
TIDA – Public Open Spaces	Improvements to public open space will include public access trails, parks, shoreline improvements and other waterfront improvements to enhance public use, and enjoyment of views of the San Francisco Bay.
TIDA – Transportation Improvements	Public transportation improvements will include a new ferry terminal, lease payments for new ferry boats, and the cost to purchase or lease shuttle buses for the new on-island free shuttle service. A transportation operating subsidy to enhance funding for the project's unique transit services and transportation demand management programs as decred by the DDA and Transportation Plan.
Planning – Neighborhood Development Plan Areas	Please see the following pages to Ond an overview of the infrastructure enhancement projects planned for each of the Plan Areas governed by the Interagency Plan Implementation Committee (IPIC): Balboa Park, Eastern Neighborhoods, Market/Octavia, Rincon Hill, Transit Center, and Visitacion Valley. The projects and associated costs discussed in this section are based on the original Area Plans that were developed when the enabling legislation which established the plan areas was enacted. Since that time, additional projects for these areas have been idention.

Balboa Park

The Balboa Park area is expected to build 1,780 new housing units, generating approximately \$1.6 million in impact fee revenue through FY2027. Infrastructure investments in the Balboa Park Area Plan include pedestrian and streetscape improvements along Ocean and Geneva Avenues, additional open spaces adjacent to Ingleside Library and as part of the potential Balboa Reservoir development, and realigning freeway ramps. The Area Plan also includes signicant improvements at the Balboa Park BART and Muni station.

Eastern Neighborhoods

The Eastern Neighborhoods are among the City's highest growth areas; the Area Plan enables approximately 12,000 additional housing units and 20,000 new jobs. The Eastern Neighborhoods Area Plan is vast and calls for over 90 different projects to be implemented. Highlights in the Area Plan include transit improvements to the 16th Street bus corridor, rehabilitation to the Mission Recreation Center, and redevelopments at Jackson Playground in Potrero Hill.

The City currently estimates approximately \$397 million will be needed to serve new growth through FY2027, and the Capital Plan identiČes \$288 million over the next 10 years.

Market/Octavia

The Market/Octavia Area Plan envisions 5,500 new residential units housing 10,000 additional people in the neighborhood. To accommodate this projected growth, the Area Plan calls for enhancements including the upcoming Van Ness Bus Rapid Transit Project, improvements to the 5-Fulton and 71-Haight bus lines, renovation of Margaret Hayward Park, bicycle infrastructure on Page Street, and various traf©c calming and pedestrian safety improvements.

The City currently estimates approximately \$27 million will be needed for Market/Octavia through FY2027, and the Capital Plan identiŌes \$25 million in funding to meet these needs.

Rincon Hill

The Rincon Hill Area Plan enables over 2,500 additional residential units in the neighborhood. To accommodate this growth, the Rincon Hill Streetscape Plan includes park and streetscape improvements for the neighborhood.

The Planning Department estimates another \$3.8 million in impact fees between FY2018 and FY2027 for additional priority improvements, which will cover streetscape and open space improvements in the Plan Area. In 2011, criteria were established regarding the use of an Infrastructure Financing Districts in Plan Areas with signicant upzoning. Subsequently, an Infrastructure Financing District for Rincon Hill was established that could potentially cover these costs.

Transbay Transit Center

The Transit Center District Plan, adopted in 2012, enables about 3,500 additional residential units and about 6.5 million square foot of new commercial space (of Ce and retail) near the new Transbay Transit Center.

The Planning Department projects over \$134 million in impact fee revenues available for infrastructure in the Transit Center District through FY2020. Nearly \$35 million of these impact fees are set aside for open space improvement projects, and the other \$99 million are to be used for transit and streetscape improvements. Additional information about the Transbay Transit Center can be found in the Transportation chapter of this Plan.

Visitacion Valley

Visitacion Valley is expected to lead to an increase of 4,800 housing units, 128,000 square feet of commercial space, and 90,000 square feet of community space. Infrastructure projects to be implemented in Visitaction Valley include renovations to Visitacion Valley Playground, pedestrian improvements on Arleta Avenue, and bicycle network improvements on Geneva Avenue.

Over the next years, the Planning Department projects approximately \$22 million in fee revenue, including in-kind improvements at Schlage Lock.

Emerging Projects

Project Name	Description
Port – Seawall Stabilization and Adaptation for Sea Level Rise	To address the stabilization and sea level rise adaptation needs of the entire Seawall, it is estimated that up to \$5 billion will be needed. Further analysis is needed to deone the project scope, budget, and schedule. San Francisco was selected to participate in the Living Cities City Accelerator's Infrastructure Finance Cohort. Through participation in the Accelerator, the City will conceptualize a Chancing and public engagement strategy that can endure a near-term change in administrations as well as sustain public support years from today.
Port – BAE Ship Repair	The BAE Ship Repair leasehold is 15.1 acres of land and 17.4 acres of water on the northeastern edge of Piers 68 and 70. It includes 19 buildings, six functional cranes, and two ōoating drydocks. It is under a lease to BAE, generating approximately \$1.8 million dollars in annual revenues to the Port. BAE's ship repair is key to sustaining the Port's maritime function and is utilized by other maritime enterprises, such as cruise ships calling in San Francisco. Recently, competitive facilities in Vallejo and Oregon have caused a decline in BAE revenues. The current lease between the Port and BAE committed to improvements that will sustain the ship repair facility for the next 25 years by replacing one or both drydocks to improve the facility's competitiveness. A new dry dock is estimated to cost \$50 million. The Port will work with BAE to develop the business case to support private or public funding for this expenditure.
Port – Piers 80-96 Maritime Eco-Industrial Center	The Maritime Eco-Industrial Center co-locates maritime industrial uses to enable product exchange, optimize the use of resources, incorporate green design and technologies on site, foster resource recovery and reuse, provide economic opportunities that employ local residents, minimize environmental harm, and incorporate public open space. The Port has made strides in bringing new industries to Piers 80-96, but additional capital investments are needed to support and grow maritime industries in the area. Likely areas of investment include improving transportation access to the site, substructure renewal at Piers 80 and 94/96, public realm improvements, area beautification, and wharf and pile removal from the Bay. The Port will likely seek Federal Fostering Advancements in Shipping and Transportation for the Long-term Achievement of National Ef Ceiencies (FASTLANE) grant funds to improve transportation access to the site.
Port - Conditional Seismic Costs	Seismic costs may be required for code compliance when performing renewal work on piers. The seismic cost estimate represents a worst-case scenario in terms of the total potential cost for repair work. In some instances, renewal work on wharfs and piers may be scoped and designed so that it does not trigger the need for seismic repairs. This project and its cost are included in the Capital Plan because in some instances the scope of repairs undertaken by the Port will trigger the need for full seismic upgrades of a substructure.
	The Port anticipates \$561.7 million may be needed for conditional seismic work on Port facilities, excluding many facilities at Pier 70, where the costs for seismic work are rolled into "full rehabilitation" estimates.
OCII Mission Bay Projects	A potential need that is emerging is that the Community Facilities District #5 fees may not fully cover the maintenance and operation of the Mission Bay park system once the system is fully constructed. The actual cost of maintaining the parks is exceeding the originally estimated amount used to calculate the maximum fee allowed by Community Facilities District #5. As a result, there may be limited funds available for capital improvements to the parks as they age and require on-going improvements. This will most likely occur towards the end of this 10-year capital planning period.

Project Name	Description
OCII Shipyard/Candlestick Projects	Primary funding sources for the following projects have not yet been identiČed: Arts Center; Hunters Point Historic Commemoration (landmarks or memorial) of the Drydocks; Community Facilities Parcels; Building 10 1 Upgrades; Building 813; Hunters Point Shipyard and/ or Candlestick Point Fire Station and full funding of a school site. OCII envisions that these projects may be funded through a combination of local, state and federal grants or loans; philanthropic funds; master leases or development agreements; or funds derived from the project's Community Bene Cts Fund.
OCII Shipy and/Candlestick – Community Facility Parcels	Approximately eight acres throughout the Shipyard and Candlestick site have been set aside for community resources such as social services, education, art, public safety facilities, and other community services as to be determined through a community process. While \$10 million has been set aside for a new school facility, no other funding sources have been set aside for alternative uses for the community facility parcels.
OCII Shipyard/Candlestick – Building 813	Building 813 is being considered for reuse as an incubator and training facility for a range of new businesses, with a likely focus on clean technology, biotech and life sciences, and green businesses, with a mix of of Oce, incubator, and workforce training uses.
OCII Shipyard/Candlestick – New Police Department Safety Hubs	New San Francisco Police Department safety hubs will be constructed in the Shipyard/Candlestick area to serve the growing population there. Expected locations include Alice Grif Ch, the Regional Retail Center, and Hunters Point Shipyard.
OCII Yerba Buena Project s	Yerba Buena does not have any major deferred projects at this time, however, based on projected capital expenditures over the next 10 years, OCII's capital reserve will not be suf Ccient to keep up with anticipated facility renewals. Sources of future capital funding have yet to be identiCed, but may include establishment of public-Cnancing mechanisms, additional contributions from property owners, and/or signiCcant cutbacks in operating and cultural facility expenditures.
TIDA – Utility Infrastructure	The San Francisco Public Utilities Commission and TIDA have identi\(\tilde{O}\) d \$4 million in rehabilitation and repair priorities for the wastewater collection system and treatment plan to be completed in FY2017 and FY2018 drawing upon previously authorized Certi\(\tilde{C}\) cates of Participation \(\tilde{O}\) nancing to maintain the existing facilities while new infrastructure is developed. The improvements will provide minimum levels of service reliability during the interim period before new infrastructure is constructed, dedicated to and accepted by the City as part of the Treasure Island Development Project. A new Wastewater Treatment Plant is to be constructed by the SFPUC and funds for this purpose are included in the SFPUC capital plan beginning in FY2017 and continuing through FY2019. TIDA and the SFPUC have initiated planning for the new plant.
TIDA – Westside Viaduct Structures	Federal HBP and Prop 1-B funds have been secured to seismically retro or replace the viaduct structures on the west side of Yerba Buena Island. The project is in design and will be constructed following completion of the Yerba Buena Ramps project and improvements to Macalla Road to be made by TICD in the Orst phase of development.

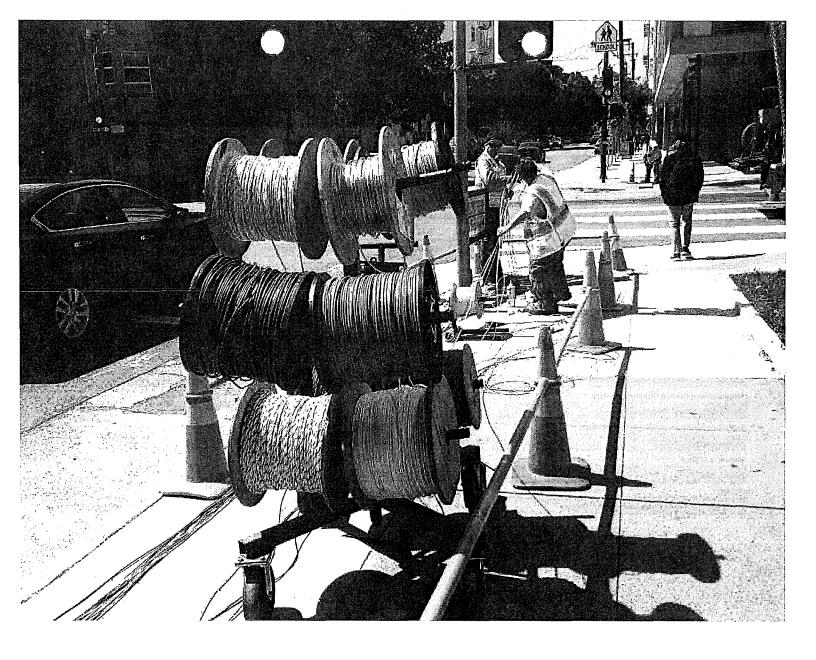

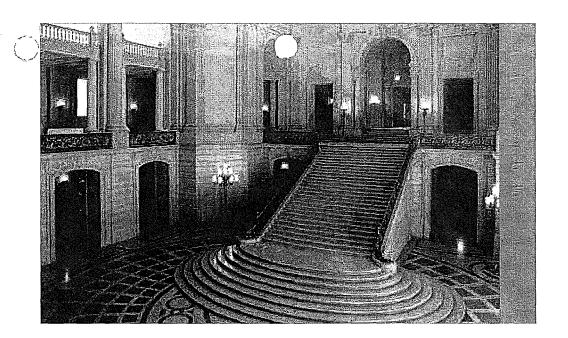

Emerging Projects

Project Name	Description
TIDA – Affordable Housing	The Housing Plan and Financing Plan set forth a strategic framework for funding 2,173 of the housing units to be affordable units. 1,866 of these units are to be developed by the City with the balance being inclusionary units to be constructed by TICD. Due to an escalation in costs since 2011, an increase in the number of affordable units to be delivered, and other changes, revised funding strategies will be required to close the resultant funding gap.
TIDA – Navy Structures	While the majority of existing structures on the Islands will be demolished to make way for development, several existing structures will be preserved through the development as TIDA assets, including the gymnasium and chapel, Building 1, Hangers 2 & 3, and the former naval of Čeers housing on Yerba Buena Island. All of these structures, except the gymnasium, came into TIDA ownership with the initial transfer and require individual assessment. The renovation or upgrade of some of the structures are included in the Project, but the programming, preservation, and improvement of others will the responsibility of TIDA.
Planning – Eastern Neighborhoods	The City has identiČed a number of emerging capital projects within the Eastern Neighborhoods Plan Area that are in the early planning stage. The scope, feasibility, and costs of these projects require further vetting and are therefore still considered emerging. Emerging needs range from major streetscape projects which re-envision stretches of the street grid, to Green Connection projects that enhance paths of travel leading, to parks and open space.
Planning – Market/Octavia	The City has identiČed a number of emerging capital projects within the Market/Octavia Plan Area that are in the early planning stage. The scope, feasibility, and costs of these projects require further vetting and are therefore still considered emerging; however very preliminary analyses estimate these needs to be approximately \$26 million. Emerging needs projects include additional pedestrian safety upgrades, streetscape improvements and bicycle network enhancements, among others.
Planning – Visitacion Valley	Planning Department staff is currently conducting outreach with the community to identify projects going forward. Examples of these projects include Pedestrian Safety and Transit Improvements at Arleta Avenue, greenway street crossing enhancements, and art murals.

General Government Facilities ACC: Animal Care & Control
DT: Department of Technology
GSA: General Service Agency
MOD: Mayor's Of to on Disability
MOS: Moscone Convention Center

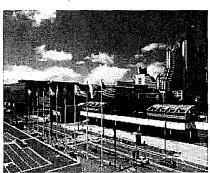

PW: Public Works

In order for local government to successfully deliver services as San Francisco grows, the City must plan carefully, run our internal functions smoothly, and pay attention to performance across the board. In practice, much of this work falls to the Of $\bar{\mathbb{C}}$ ee of the City Administrator, which oversees the General Services Agency (GSA). Comprised of a broad array of departments, divisions, programs and of $\bar{\mathbb{C}}$ ees, GSA is committed to increasing San Francisco's safety and resilience and ensuring the ef $\bar{\mathbb{C}}$ cacy of government services. Day in and day out, GSA's operations help the wheels of government to turn.

The General Government Service Area encompasses the capital needs that pertain to the operations of GSA departments; projects delivered for client departments are captured in the Plan's other Service Areas.

San Francisco City Hall

Moscone Convention Center Expansion

Overview

The General Services Agency delivers a wide range of capital-related services, including the maintenance and management of City-owned buildings, real estate, design and construction of capital improvements, capital planning, and technology services. These operations largely support the service delivery efforts of other City departments. Those with projects named in the 10-Year Capital Plan are described here.

Public Works

Public Works (PW) divisions under the City Architect relate to facility design, construction, maintenance, and repair. The Bureau of Building Repair provides construction, repair, remodeling, and management services to City-owned facilities. The Building, Design, and Construction and Project Management divisions provide facility programming, architectural design, planning, conceptual design, and construction management services. PW programs that address San Francisco's horizontal infrastructure are discussed in the Infrastructure and Streets Service Area.

Real Estate

The Real Estate Division (RED) within GSA manages over four million square feet of of Oce space and other civic facilities that support the operations of city departments. RED is responsible for the acquisition of all real property required for City purposes, the sale of surplus real property owned by the City, and the leasing of property required by various City departments. Facility operations at the Alemany Farmers' and Flea Markets, Yerba Buena Gardens, and the UN Gift Gallery at UN Plaza are also managed by RED. In addition to these responsibilities, RED provides property management services to City Hall, 1 South Van Ness Avenue, 25 Van Ness Avenue, 30 Van Ness Avenue, 1640-1680 Mission Street, the Hall of Justice, and 555 7th Street.

One of the priorities for RED is the Civic Center real estate consolidation and reconŌguration effort known as "Project Chess." Project Chess ultimately envisions a new City ofŌce building at 1500 Mission Street as part of a larger development. This project would allow for the consolidation of permitting

services into a one-stop center, a similar consolidation of City HR functions, and the relocation of City staff throughout the Civic Center area into more efocient, cost-effective, resilient, and green of oce spaces. Upon completion the City would be able to terminate 100,000 square feet in leased premises while creating new transit-oriented development, of oce space, and opportunities for housing. The sales of City assets at 30 Van Ness, 1660 Mission, and 1680 Mission, are required to fund this project.

Technology

The Department of Technology (DT) is San Francisco's information and technology services organization, providing leadership, policy direction, and technical support for technology and information solutions. DT has both internal and public-facing initiatives. The department manages City network operations and data centers. It also maintains the City's Öber optics network, radio system, digital security, and other vital systems. DT serves the public through efforts like the development of a centralized online business portal, the delivery of SFGovTV, and the City's

Connectivity Plan, which aims to connect every City building to its Čber network and offer free, wireless internet service to more parts of San Francisco.

Animal Care and Control

In addition to these critical support services of built and digital infrastructure, GSA's umbrella includes the emergency response services delivered through the department of Animal Care and Control (ACC). ACC administers an open-admission animal shelter, providing housing, care, and medical treatment to wild, exotic, domestic, stray, lost, abandoned, sick, injured, and surrendered animals. ACC's doors are open to all animals in need regardless of species, medical, or behavioral condition. ACC is also the Orst responder for animals in natural disasters and emergencies.

Moscone Convention Center

The City-owned Moscone Convention Center draws over one million attendees and exhibitors per year and is responsible for 21% of San Francisco's travel and tourism industry. Moscone's footprint includes over 700,000 square feet of exhibit space, 106 meeting rooms, and nearly 123,000 square feet of prefunction lobbies, but more space is required to keep up with demand and stay competitive nationally. Architects Skidmore, Owings + Merrill have designed an expansion project, currently underway with expected completion in 2018.

Mayor's Of Gce on Disability

Working to ensure accessibility for projects from all of these GSA agencies and all City departments is the Mayor's Ofoce on Disability (MOD). The mission of MOD is to ensure that every program, service, beneot, activity, and facility operated or funded by the City is fully accessible to and useable by people with disabilities. Regarding physical access speciocally, MOD's Architectural Access Program has overseen the implementation of the highest-priority projects in the City's ADA Transition Plans for facilities and right-of-way barrier removals.

Renewal Program

The overall renewal needs for the City's General Government facilities total \$416 million over the next 10 years. Given funding constraints, the Plan allocates \$126 million from the General Fund to meet these needs, as shown in Chart 7.1.

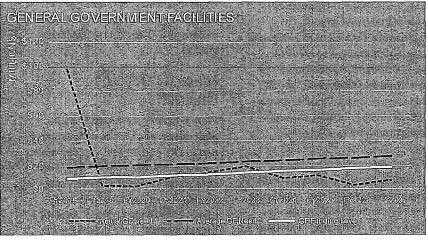

CHART 7.1

Of note in this service area are the signiŌcant needs at the Moscone Convention Center. Some of these needs will be funded by the Moscone Expansion District hotel assessment; this contribution starts at one percent of funds collected in the Ōrst 10 years

(approximately \$200,000 per year) and grows to six percent thereafter (approximately \$1 million per year). The Convention Facilities Fund will provide an additional \$35 million towards renewals over the next 10 years.

Approximately \$23 million in facility renewal needs have been identiŌed for Yerba Buena Gardens over the next 10 years. Remaining capital reserves and anticipated revenues are expected to be sufŌcient to fund these costs. Major renewals will include roof and elevator repairs, open space restorations, and waterprooŌng work, among others.

Another important piece of the GSA renewal program is San Francisco's City Hall, managed by RED. In 2015 San Francisco City Hall held a community celebration marking the 100th anniversary of the building's opening. While a number of capital improvements have been made, additional improvements are required to keep the building in condition be ting its landmark status.

Project Name	Description
ACC – Animal Care and Control Shelter	ACC has an approved project to construct a replacement animal shelter at the site of 14 19 Bryant Street. The facility will protect the animals under the care of Animal Care and Control and provide safe, sanitary housing for animals even if power and/or water are temporarily interrupted. The facility will also provide improved education and training facilities for the public, staff, and volunteers. Construction is scheduled to commence in summer 2018 with a tentative completion date of fall 2020.
	The project cost for the renovated facility is \$54 million, \$5 million already spent and \$49 million to be funded through the CertiÖcates of Participation program, issuance expected in FY2020.
DT - CCSF Fiber Connectivity Project	This ongoing project aims to install Öber to enhance the backbone, serve City buildings, and reach neighborhood institution. The scope includes City-owned buildings and facilities, SFO, and San Francisco Housing Authority buildings. DT estimates a six million dollar annual need for the Örst two years of the Capital Plan (FY2018 and FY2019).
	Funding for this program comes from the General Fund and is set in the Plan at an estimated \$1 million annually.
DT – Dig Once	The Dig Once Ordinance aims to minimize disruptions to the public whenever feasible by requiring the coordination of improvements involving the planning, construction, reconstruction, or repaving of a public right-of-way. Originally focused on street improvements, in 2014, the Dig Once Ordinance was modiČed to include the placement of communications conduit in trenches when feasible as determined by the Department of Technology.
	DT estimates an \$8 million annual need for the duration of the Capital Plan (FY2018 through FY2027). Funding for this program comes from the General Fund and is set in the Plan at an estimated \$1 million annually.
MOD – ADA Barrier Removals	As needs and priorities have evolved since the ADA Transition Plan was published in 2004, MOD is currently reviewing the portfolio of projects to bring it up to date and adjust for the current state.
	Meanwhile, it is expected that \$1 million of General Fund will be devoted to barrier removal projects annually, in addition to code compliance projects at bond-funded project sites, which appear in the relevant Service Area chapters for those programs.
MOS – Moscone Convention Center Expansion	The Moscone Expansion Project aims to meet the growing need for contemporary, contiguous convention space to allow San Francisco to remain competitive nationally in this market. The expansion will add over 305,000 square feet of functional area, including new exhibition space, meeting and prefunction rooms, ballroom space, and support areas. This project also includes urban design and streetscape elements designed to improve Moscone's connection to the surrounding neighborhood, including bicycle and pedestrian improvements. It is expected that the expansion will provide over 3,400 permanent new jobs and about the same number of construction jobs through 2018. The economic impact of the expansion, considering both Moscone net operating income and total visitor spending, is estimated at approximately \$734 million through FY2026. Construction is scheduled for completion in 2018.
	In 2013 the Board of Supervisors voted unanimously to establish the Moscone Expansion District, a business improvement district encompassing tourist hotels within the City. Hotels therein have agreed to a self-assessment based on gross revenue from tourist rooms that has been combined with City revenue to support the expansion project. No further General Fund revenue is expected to be appropriated for the Expansion Project.

Project Name	Description
PW - GSA Central Shops	The City has awarded a contract to a private developer for Central Shops. Construction documents are currently being completed to relocate Central Shops operations from 1800 Jerrold Street to two sites proximate to each other: 450 Toland and 555 Selby Street. Construction will begin in 2017, and relocation is expected to be complete by June 2018.
	The estimated project cost is \$70 million and will be funded by the SFPUC.
RED – 1500 Mission Street/One-Stop Permitting Center	The City is advancing a public-private partnership of Ce development at 1500 Mission Street to deliver a 464,000 square foot of Ce building, slated to open in late 2019. This development facilitates the relocation of staff from the Departments of Public Works, Planning, and Building Inspection, among others, to a single location, providing enhanced customer service at a true one-stop permitting center. This development will also enable the City to dispose of under-utilized assets in the Civic Center, in some cases fostering more appropriately dense mixed-use transit-oriented development and housing.
	This project will be funded with revenues from the sales of 30 Van Ness, 1660 Mission, and 1680 Mission.
RED – Assessor-Recorder Space Modernization	This project will modernize the OfČee of the Assessor-Recorder at City Hall in order to improve public service operations and security, create a functional employee break room, provide conOdential ofČee space for Human Resources and senior managers, add cubicles for new employees, and reconŌgure existing cubicles to maximize operational efŌciency. Occupational safety and hazard recommendations for a functional employee break room cannot be implemented within the existing layout. Modernizing will allow ASR to provide better customer service to the public and improve the efŌciency of its business operations to expedite document recording and property assessment functions.
	The total cost for the modernization and reconŌguration is \$5.2 million total, funded through \$1.1 million from the General Fund and \$4.1 million in operational savings from the department and the General Fund.
RED – Energy Ef©ciency Projects (Various Buildings)	RED has worked in partnership with the Department of the Environment to identify energy efficiency projects for lighting in various City garages (e.g., 1650 Mission Street and the Hall of Justice) to replace old, inefficient Extures and bring the systems up to current building compliance. In addition, RED plans to replace the atrium glass at 1650 Mission Street with a more energy efficient solution. These efforts will enhance the green profte of these facilities and also decrease their utility costs, likely paying for the projects in savings realized over the life of the buildings, if not sooner.
	The estimated cost of this set of projects is \$520,000, to be funded from RED department funds.
RED – Wholesale Produce Market Expansion	Located in the southeast sector of San Francisco, the Wholesale Produce Market has been providing food to residents for 137 years, offering fresh produce to local and regional grocers, specialty and upscale retailers, restaurants, hotels, caterers, and convention facilities. In 2012 the Board of Supervisors approved a 60-year master lease agreement for the City-owned land on which the market operates, including an expansion of the market to include Jerroid Avenue and 901 Rankin Street. The full buildout envisions a three-phase, \$100 million expansion and renovation. The Crst building—901 Rankin Street—is now complete, with two new tenants, Good Eggs and Mollie Stones, set to occupy the full 82,000 square feet. The entire expansion increases the footprint of the market by about 25%.
	The total project budget is \$100 million; \$19.1 million has been spent, \$49.6 million is budgeted during the timeframe of the Plan, and the balance of \$31.3 million is budgeted in the project's Ōnal phase, expected to end in 2030. Funding sources are current market revenue and a combination of Ōnancing options including New Market Tax Credits, all outside of the General Fund. It is expected that net revenues will begin to ōow into the General Fund in 2036 (at the point of project stabilization and with consideration of appropriate capital reserve).

103

Deferred Projects

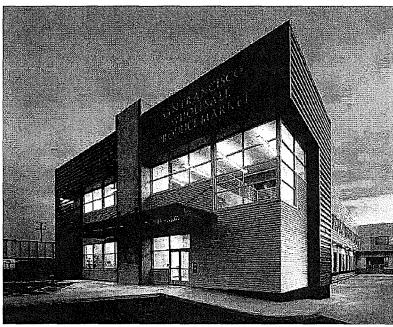

Project Name

Description

DT - Network/Security Operating Center and Department of Technology Space Optimization

Currently the City does not have a fully functional Network Operating Center (NOC) and has no Security Operating Center (SOC) from which to monitor and operate Citywide IT infrastructure, DT is also space constrained in its current of ces at 1 South Van Ness Avenue, and a general optimization is necessary to accommodate staff by maximizing the footprint in the existing space. The optimization project would add 62 permanent work stations, activate underutilized atrium space, create a Street Lab space for evaluation and deployment of infrastructure-related technologies, and create an open and collaborative environment.

The estimated budget for this project is \$1.3 million.

Wholesale Produce Market

Emerging Projects

Project Name	Description
DT – Broadband for San Francisco	Every resident and business in San Francisco should have access to fast and affordable broadband connectivity to be able to participate and thrive in the 21st century. Currently 12% of San Francisco residents—over 100,000 people—do not have internet service at home, including 14% of San Francisco's public school students. The price of internet access is cited as the main reason residents do not have access at home. In addition, 50,000 residents have slow dial-up speeds. Private providers may not have sufficient incentives to make the necessary investment to ensure next-generation standard 1 GB speed service in all San Francisco neighborhoods. A new Öber-to-the-home/business (FTTP) network could address these issues. This project will prioritize providing service to traditionally underserved households.
	DT estimates the cost of building such a network at \$700 million dollars and is currently exploring funding and delivery options.
GSA – 101 Grove RetroÖt	Once Department of Public Health staff exit the of ces at 101 Grove Street, the City will have to decide how to activate the building. The monumental Beaux Arts 101 Grove is contributory to the Civic Center Historic District and not eligible for replacement. The City will evaluate whether a sale, public-private partnership, or City-driven retro project will make for the best use of the space and funds required. No preliminary costing for any of these scenarios has been developed.
	There is a \$50 million project slated for FY2025 of the CertiŌcates of Participation program that could be applied towards this project, depending on future City priorities.
PW – Operation Yard	ReconÖguration of the Public Works Operation Yard would optimize utilization of this space. It would create greater operational efÖciency, provide a new home for the department's Materials Testing Lab, and make currently occupied land available to a partner agency or private tenant. The Materials Testing Lab is being asked to vacate its current location by the PUC in order to make room for the Southeast Treatment Plant project. Relocating the Materials Testing Lab to the Yard is part of this project's scope. PW has completed a topographic survey of the site and developed preliminary master plan concepts to optimize the future site at 2323 Cesar Chavez. The preliminary cost estimate to reconÖgure the Yard is \$214 million.
	There is a \$50 million project slated for FY2025 of the CertiÖcates of Participation program that could be applied towards this project, depending on future City priorities.

TABLE 7.1 - GENERAL GOVERNMENT FINANCIAL SUMMARY

08. HEALTH + HUMAN SERVICES

DPH: Department of Public Health HSA: Human Services Agency

HSH: Department of Homelessness and Supportive Housing

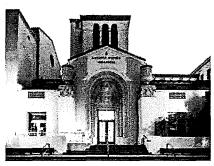

MOHCD: Mayor's Of Ce of Housing and Community Development

SFHA: San Francisco Housing Authority

The Health and Human Services Service Area includes a broad range of facilities that provide direct public health and social services to many of San Francisco's most vulnerable residents, including individuals and families experiencing homelessness. Providing innovative and compassionate health care, delivering safety net services, and creating and preserving housing for families and residents at every income level are top priorities for the City. Our major medical campuses, neighborhood clinics, homeless shelters, children's resource centers, supportive housing sites, Navigation Centers, and associated administrative space all play a part in providing these essential services.

Zuckerberg SF General Hospital

Laguna Honda Hospital

Capital Plan FY2018-2027

Overview

San Francisco's health and human services agencies provide high-quality, culturally sensitive services to many of the city's most vulnerable residents.

Public Health

The San Francisco Department of Public Health's mission is to protect and promote the health of all San Franciscans, and the department's hospitals, clinics, and administrative of Oces all contribute to the success of that mission. DPH's organization falls into two divisions, the San Francisco Health Network, which provides direct health services to insured and uninsured residents, and the Population Health Division, which addresses public health concerns including consumer safety and health promotion. The department's central administrative functions support the work of both divisions and promote integration.

With the completion of the Zuckerberg San Francisco General Hospital and Trauma Center (ZSFG) in 2015, DPH will focus on the renovation of existing hospital campus buildings and community-based clinics, as well as the relocation of staff from the seismically vulnerable building at 101 Grove Street. The 2016 Public Health and Safety G.O. Bond will fund the seismic strengthening of Building 5 at the ZSFG campus, as well as improvements at Southeast, Castro-Mission, Maxine Hall, and Chinatown Health Centers. In 2016 DPH completed master planning efforts to move staff out of 101 Grove. This effort will be funded through the General Fund Debt Program. The proposed solution involves relocating some staff to Buildings 5 and 9 on the ZSFG campus, others to Onger buildings on the Laguna Honda Campus, and the rest to a combination of Cityowned and leased properties in and around Civic Center.

Human Services and Homelessness and Supportive Housing

San Francisco has two human services departments: the Human Services Agency (HSA) and the newly formed Department of Homelessness and Supportive Housing (HSH). Through assistance and supportive services programs, HSA promotes wellbeing and self-suf Cciency among

individuals, families, and communities for San Francisco residents. HSA is also responsible for three homeless shelter facilities and three child care center facilities. These shelters are expected to be transferred to HSH beginning in 2018 to help San Francisco's homeless population permanently exit the streets. With a mandate to end homelessness for at least 8,000 people by 2020, HSH is currently engaged in a rigorous strategic planning process that will guide capital and operating efforts in the years ahead. Among HSH's known capital priorities are improvements to the existing shelter facilities and the expansion of the Navigation Center program.

The November 2016 election saw the loss of Proposition K, a proposed three-quarter-cent sales tax increase that would have generated around \$50 million annually for homeless services. Addressing San Francisco's homeless crisis remains a top priority, however, and the City has identiŌed sources that can be redirected towards HSH priorities. These funds will complement the \$20 million already approved by voters for homeless service sites in the 2016 Public Health & Safety G.O. Bond.

Affordable Housing

The responsibilities of San Francisco's housing agencies have been evolving in recent years. In 2012 staff from the City and the San Francisco Housing Authority (SFHA), along with representatives of 72 different community organizations, met over a four-month period to re-envision the roles and responsibilities of SFHA. One of the primary goals of that process was addressing the \$270 million backlog of deferred maintenance needs in the public housing stock. The resulting strategy addressed critical immediate and long-term rehabilitation needs while preserving affordability and improving conditions for very low-income residents.

As part of this strategy, SFHA set out to convert the majority of the its public housing units to private, non-proŌt-led ownership and management to enable the use of tax credits as a funding source for these properties. The conversion program is funded through the US Department of Housing and Urban Development's (HUD) Rental Assistance Demonstration (RAD) program as well as a combination of other sources including but not limited to: HUD rental

subsidies, Mayor's Ofoce of Housing and Community Development (MOHCD) funding, low-income housing tax credits, tax-exempt bond Onancing through the California Debt Limit Allocation Committee, long-term ground leases from SFHA, and seller carryback Onancing. SFHA will continue to ensure compliance with eligibility and other programmatic requirements at these sites, but the management of the facilities will no longer be SFHA's responsibility. It is expected that 4,575 housing units, including those at HOPE SF sites, will be converted through this process, leaving approximately 1,460 public housing units along with partnership interests in HOPEVI sites in the SFHA portfolio.

The mission of MOHCD is to coordinate the City's housing policy; provide Ōnancing for the development, rehabilitation, and purchase of affordable housing in San Francisco; and strengthen the social, physical, and economic infrastructure of San Francisco's low-income neighborhoods and communities in need. MOHCD administers the HOPE SF initiative and the RAD program, and it also manages the funding available

HOPE SF Alice Grif Oth

through the 20 15 Affordable Housing General Obligation Bond and the Housing Trust Fund. Additionally, MOHCD serves as the Successor Housing Agency, responsible for all former San Francisco Redevelopment Agency affordable housing assets.

HOPE SF is Mayor Lee's signature anti-poverty initiative that works to revitalize San Francisco's largest and most distressed public housing sites as mixed-income developments. This effort calls for a wide variety of capital improvements, beginning with horizontal infrastructure improvements that pave the way for new homes, community facilities, and open spaces. The HOPE

HOPE SF Hunters Point

SF public housing sites are Hunters View, Alice Grif Oth, Potrero Terrace and Annex, and Sunnydale and Velasco. All of these projects are former San Francisco Housing Authority sites, now being converted to private management.

The real estate and infrastructure component of HOPE SF requires the complete demolition and rebuilding of the four sites along with new streets, parks and open spaces, and community space that will physically reconnect these sites to their surrounding neighborhoods. HOPE SF also includes family-focused community building, neighborhood-based health and wellness supports, integrated neighborhood

HOPE SF Potrero Terrace and Annex

education supports, targeted early care supports, economic mobility pathways for youth, and community policing. In total, the City's HOPE SF initiative will replace 1,904 public housing units, add 1,026 new affordable housing units serving low- and very-low income households, and provide 2,357 workforce units for sale and for rent.

RAD is a HUD program for the voluntary, permanent conversion of public housing to Section 8 housing. San Francisco was an early adopter of this program and is the largest RAD conversion site in the country. Unlike public housing properties, converted properties are eligible for low-income tax credits, a more reliable

and adequate source of funds to support the capital needs of these facilities.

RAD funds are used for both HOPE SF developments and for gut rehabilitations on smaller properties throughout the city.

Altogether MOHCD's portfolio of affordable housing now includes more than 26,000 units for seniors, families, formerly homeless individuals, and people with disabilities. The affordable housing that MOHCD supports is developed, owned and, managed by private non-proŌt and for-proŌt entities that leverage City subsidies with state and federal resources to create permanent affordable housing opportunities for low-income households.

Key Housing Terms

AMI: Area median income; for 2016 100 % of AMI for an individual is \$75,400, and for a family of four it is \$107,700

Affordable Units, also referred to as Tax-Credit Affordable Units: Affordable to low- and very-low-income households, deŌned as up to 60% AMI

Inclusionary Units: Affordable to households with income restrictions subject to Section 415 of the San Francisco Planning Code

Market-Rate Units: No income limit restriction

HUD: United States Department of Housing and Urban Development, the federal agency responsible for affordable housing programs

Public Housing: Affordable to households with incomes of up to 80%, and rent is set at 30% of income

Section 8: HUD housing choice voucher program, the major federal program for assisting very low-income families, the elderly, and the disabled to afford decent, safe, and sanitary housing in the private market

Section 18: HUD disposition program that allows the conversion of properties found to be economically or functionally obsolete to mixed Önance developments

Tenant Protection Vouchers: Vouchers available through HUD and issued directly to eligible tenants to ensure that a Section 18 disposition does not harm existing residents in a property slated for disposition

Workforce Units: Available to households earning roughly between 60 % and 120 % AMI but priced below market, typically part of Inclusionary Units

Renewal Program

The overall renewal needs for the City's Health and Human Services facilities total \$328 million over the next 10 years. Given funding constraints, the Plan allocates \$193 million from the General Fund to meet these needs, as shown in Chart 8.1.

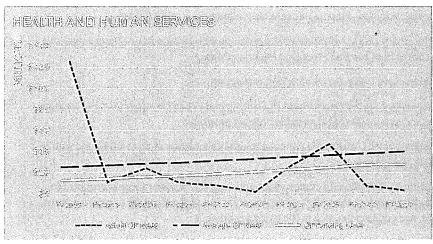

CHART 8.1

There are many outstanding needs for aging Public Health facilities, both at the Zuckerberg San Francisco General Hospital and Laguna Honda Hospital campuses. Of note are two large water tanks at Laguna Honda due for replacement, estimated to cost \$4.9 million.

The RAD program is not captured in the renewals curve because it does not fund projects at City-owned assets, but it is an important part of San Francisco's affordable housing preservation. RAD funds the rehabilitation of existing affordable units in the SFHA portfolio, and those units become eligible for

Section 8 vouchers. These projects are expected to maintain the physical and economic viability of the units for at least 20 years.

Also not shown in the Renewals curve are the physical needs of the postconversion SFHA portfolio. The most recent needs assessment of the SFHA portfolio was conducted in 2009 and determined needs of \$269 million, including sites already converted and those slated for conversion. The needs of the post-conversion portfolio are likely to exceed the \$3 million annual pot expected to be available through HUD. Funding for maintenance, including annual federal operating subsidies, have been and are expected to continue to be inadequate, making deterioration of these units a continual challenge.

Project Name	Description
DPH – Civic Center Buildings Relocation	This comprehensive plan relocates Department of Public Health central administrative staff out of the seismically unsafe 101 Grove Street to Building 9 at ZSFG campus and two of the Orger buildings at Laguna Honda Hospital (LHH) campus. The scope of work includes ADA and Ore life safety compliance, renewal of all building subsystems, tenant improvements and IT infrastructure. This project also includes the relocation of the AITC Immunization and Travel Clinic, the Communicable Disease Prevention Unit, and the Tom Waddell Urgent Care Clinic.
	The estimated project cost for all DPH project components including the AITC clinic and the Tom Waddell clinic is \$90.8 million, and it is planned to be funded by CertiCcates of Participation as early as FY2018. The planning effort is expected to cost \$2 million and will be funded by the Capital Planning Fund in FY2018.
DPH – Clinics Renovation and Infrastructure Improvements	This project addresses major renovations needed at high-demand neighborhood clinics, including Castro Mission Health Center, Maxine Hall Health Center and Chinatown Public Health Center. The project will support the integration of primary care with behavioral health care, foster a collaborative team based care model, and enable improved work ōow. For Castro Mission and Maxine Hall Health Centers, construction is expected to begin in May 2017 and January 2018 respectively, and planning for Chinatown Public Health Center will begin in 2017. In addition to these renovations, this project also includes infrastructure improvements such as modernization of outdated equipment, upgrades and retrocts of building automation systems, and repairs to HVAC controls.
,	The total project budget is \$20 million, and it is funded by the 20 16 Public Health and Safety G.O. Bond.
DPH – Southeast Health Center Expansion and Behavioral Health Integration	This project will be implemented in two phases, the Crst of which will be a renovation of the existing facility to provide more ef Ccient work and patient Sow, including additional examination rooms and other support functions. Construction for this phase is expected to begin in January 2017. The second phase will be a new addition that expands and integrates family-oriented primary care and behavioral health services. Behavioral health programming that may include Children, Youth & Families programs and services, will be relocated here from leased space. Construction for this phase is expected to begin in June 2018.
	The total project budget is \$33 million, with \$3 million from a Mental Health Services Act grant, and \$30 million from the 2016 Public Health and Safety G.O. Bond.
DPH – UCSF Research Facility at the ZSFG Campus	The University of California at San Francisco (UCSF) plans to build a contemporary research facility at the ZSFG campus. The facility will be Ove stories high, with an area of approximately 175,000 square feet, and provide space for 800 researchers and technical staff. Construction is expected to begin in the fall of 2017.
	The estimated project cost is \$175 million and will be funded by UCSF. The City is required to offset costs for planning, legal, and real estate services, which will be funded by the General Fund.
DPH – ZSFG Building 5 Renovation and Seismic RetroÖt	In addition to the seismic retroot and safety improvements, the ZSFG Bldg 5 Renovation & Seismic Retroot project also includes scopes of work related to the Public Health laboratory, physical therapy relocation, chronic dialysis, and urgent care. The planning phase for this project is complete and design is underway, with construction expected to begin in June 2017.
	The total project budget is \$222 million and is funded by the 2016 Public Health and Safety G.O. Bond. The Orst Bond sale of approximately \$176 million is scheduled for January 2017.

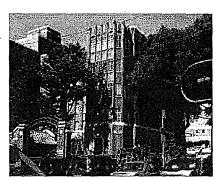

Project Name	Description					
DPH – ZSFG Building 80/90 Renovation & Seismic RetroŌt	Constructed in 1934, Building 80/90 is a seismically de Celent red brick building at the ZSFG campus that houses the urgent care clinic and several other clinics. These clinics will move to Building 5 to make room for a major seismic renovation of this structure.					
	The total project cost is estimated to be \$115 million and will be funded by the 2022 Public Health G.O. Bond.					
DPH – Remaining Facilities Improvements	Although the scope of this project is still in development, outstanding Department of Public Health needs include major renovation and infrastructure improvements at the remaining neighborhood clinics, renovating remaining unoccupied buildings at LHH, and needs related to the Population Health Division City Clinic.					
	The total project cost is estimated to be \$185 million and will be funded by the 2022 Public Health G.O. Bond.					
HSH – Administrative Headquarters Tenant Improvements	The City recently acquired an of Cce building located at 440 Turk to serve as the administrative headquarters for the new Department of Homelessness and Supportive Housing. The building is in need of substantial retroCt					
	This project is estimated to cost \$4 million dollars and is funded by the General Fund in FY2017.					
HSH – Homeless Service Sites Projects	HSH is currently assessing the construction, acquisition and improvement needs of City-owned homeless shelters and service sites, as well as needs related to the expansion of homeless services.					
	The 2016 Public Health and Safety G.O. Bond will fund \$20 million of these needs.					
HSH – Future Navigation Centers	The navigation center model is based on creating spaces for engaging people experiencing street homelessness, outside of the traditional shelter model. The Board of Supervisors passed an ordinance in 20 16 requiring the City to open no fewer than six navigation centers by July 20 18. Two of these Navigation Centers are already in operation. One more at the central waterfront is expected to be completed in FY20 17.					
	This central waterfront project has an estimated construction cost of \$3.5 million and is funded by the General Fund. The remaining three sites have not yet been determined and are dependent on the availability of future funding.					
HOPESF – Hunters View	The Hunters View development consists of the demolition of the original 267 public housing apartment units on the property and the new construction of 267 replacement public housing units, plus up to an additional 533 mixed-income housing units; off-street parking; new roadways, and sidewalks; up to 6,500 square feet of retail space; up to 8,500 square feet of child care space; community parks; and landscaping. The relocation of tenants is expected to start in November 2016, and the Chal phase of construction is slated for completion at the end of 2016.					
	Hunters View received a \$30 million California In Al Infrastructure Grant for infrastructure development, and the Board of Supervisors authorized the issuance of Certiocates of Participation Chancing in the amount of approximately \$25 million for this project.					
HOPESF Alice Grif Oth	The Alice GrifCth Replacement Housing Project is rebuilding one-for-one the 256 public housing units from the original property, as well as an additional 248 tax-credit-affordable units. This project is a portion of the greater Housing Plan of the Candlestick and Hunters Point Shipyard Project being developed by CP Development Co., LP. The Housing Plan includes 382 market-rate units, 43 inclusionary units, and 281 workforce units, for a total of 1,210 units to be developed in the Candlestick and Phase 2 Hunters Point Shipyard Project. The projected date of substantial completion for Phases I and II of the Alice GrifCth Housing Development is February 2017; projected substantial completion for Phases IIIA and IIIB is September 2017.					
	Alice Grif Čth was awarded a federal Choice Neighborhoods Initiative grant for \$30.5 million, and the infrastructure and housing costs will be funded primarily through developer contributions and property tax Önancing as part of the ongoing Önancial obligation of the Of Oce of Community Investment and Infrastructure (OCII).					

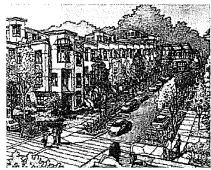

HOPESF – Potrero Terrace and Annex project is a master-planned new construction development consisting of the demolition of the existing of public housing units on the property and the construction of up to 1,700 new units, including one-for-one replacement of the existing public housing units, affordable rental units, and market-rate rental and for-sale units. The project will also feature up to 15,000 square feet of neighborhood-serving retail and/or öex space, up to 35,000 square feet of community space, approximately seven acres of new open spaces, and a reconfigured street network. Demolition is planned for early 2018, pending HUD approval and award of Section 8 subsidies. The anticipated timeline for development is 10-12 years. HOPESF – Sunnydale and Velasco The Sunnydale and Velasco project is a master-planned new construction development consisting of the demolition of the existing 775 public housing units on the property and the construction of up to 1,700 new units, including one-for-one replacement of the existing public housing units on the property and the construction of up to 1,700 new units, including one-for-one replacement of the existing public housing units, affordable for-sale units. The project will also provide up to 16,200 square feet of retail space, up to 46,300 square feet of community service, and educational facilities. Approximately 11 acres of new parks and recreation spaces and approximately 12 acres of a new and reconfigured street network will be built as part of the project. Pending HUD approval and award of Section 8 subsidies, the Örst two phases of the project could begin in 2018 and would include the relocation of existing households, demolition, and then new construction. Subsequent phases would proceed when replacement units are completed and if subsidies are available and awarded. The overall development timeline to completion is 12-15 years.

10 1 Grove Street Building

ZSFG Campus Building 80/90

HOPE SF Sunnydale Master Plan

Deferred Projects

Project Name	Description				
DPH – LHH Pharmacy Code Compliance Upgrades	This project is a State licensing and certi Cation regulatory requirement. Code upgrades are required to compounding hood enclosures to comply with USP800 by 2018.				
	The estimated project cost is \$450,000.				
DPH – LHH Second Floor Service Corridor Access Control	This project is an OSHPD requirement. Elevators need to have access control, which is not currently in place. Control is needed at three points—the adjacent administration building and second ōoor corridors from North and South towers.				
	The estimated project cost is \$400,000.				
DPH - ZSFG Building 2 Cooling	The existing system is over 30 years old and a recent study by an engineering Črm established the need for replacement.				
Towers Replacement	The estimated project cost is \$7.2 million.				
DPH - ZSFG Building 2 (Service Building) NPC-4 Seismic Upgrade	Building 2 provides utilities to acute care services, but does not currently meet all the seismic performance requirements needed to serve acute care services. A seismic upgrade to Non-structural Performance Criteria level 4 (NPC-4) is required.				
	The estimated project cost is \$1.2 million.				
DPH – ZSFG Building 5 Kitchen Upgrade and Remodel	This kitchen at General Hospital was last updated in 1982, and there is ōooring, ceiling, and electrical work required throughout. In addit food storage areas require renovation and upgrade. This is an OfŌce of Statewide Health Planning and Development (OSHPD) project				
	The estimated project cost is \$3.4 million.				
DPH - ZSFG Building 5 New Chiller	Existing and planned IT Infrastructure requires dedicated cooling, and is experiencing failure due to cooling de Ceiencies within IT closets.				
to Support IT Infrastructure	The estimated project cost is \$1.2 million.				

Emerging Projects

Project Name	Description
DPH – ZSFG Remaining Brick Buildings Seismic Upgrade	The Department of Public Health continues to own seismically-deccient buildings, with no identiced funding to retroct. These include Buildings 1, 10, 20, 30, 40 and 100.
DPH – DPH Clinics Patient Renewal and Upgrade Program	There are long outstanding needs at neighborhood clinics not covered by the 2016 Public Health and Safety GO. bond, including exam room recon Eguration, renewal of interiors, renovation of nursing stations, and exterior work.
DPH - DPH Clinics Security Improvements	Security improvements are required at several neighborhood clinics, including security cameras, IT improvements, and monitoring capabilities. The total project scope and cost have not yet been deoned.
HSA – 170 Otis Street Seismic Upgrade	Built in 1978, 170 Otis St. houses HSA executive of Čes and program administration. Addressing the building's seismic de Čeiencies, which is possible for the basement and the ground ooor only, is estimated to cost \$3.3 million, but no funding source has been identiced.
HSA – 170 Otis Street Tenant Improvements	HSA needs to remodel certain ōoors of 170 Otis Street in order to accommodate increases in staff and changes in job functions. The remodel would include new cubicles to increase capacity, demolition of existing walls, construction of new walls as needed, and any related subsystem renewals. The goal is to reduce energy and water use, increase capacity, and improve functionality of the space.
HSA – OfŌce Space ReconŌguration Planning	HSA is currently undertaking a study to look at its existing and future uses and staffing levels for the purposes of maximizing efficiency of space use, streamlining and consolidating operations, preparing for projected increase in clients, and coordinating its facility layout with its changing business practices.

09. INFRASTRUCTURE + STREETS

PW: San Francisco Public Works

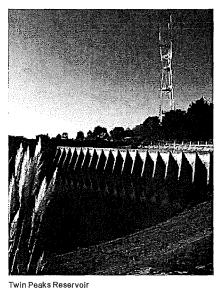

SFPUC: San Francisco Public Utilities Commission

The backbone of San Francisco is our horizontal infrastructure; the streets, water, power, and sewer systems that make living in a city possible. Many of these projects function outside of the visibility of many residents. They run underground, are walked over, and are turned on with the ōick of a switch or turn of a faucet. Many of the infrastructure systems that the City invests in provide not only basic services, but contribute to City-wide goals of environmental sustainability, pedestrian safety, and a more beautiful and livable City.

It is imperative that the City maintain these assets in a state of good repair given the essential nature of these systems. Proactive maintenance not only ensures the steady provision of services, but is less costly than Ōxing problems that have degraded beyond repair.

Recently Completed Taraval Street scape Project

I WIII Ledva Mesel Anti

Overview

Programs addressed in this chapter are delivered by the San Francisco Public Works and the San Francisco Public Utilities Commission. Among the key programs implemented by Public Works are Street Resurfacing, Sidewalk Repair, and Street Tree Planting. SFPUC provides San Francisco with water, power, and wastewater systems, with multi-billion dollar programs designed to prolong the life of these assets. Together, these two agencies provide tangible results that affect the lives of each and every San Franciscan.

Public Works Streets and Rights-of-Way

The City has been able to make signicant improvements when combining proceeds from the Road Repaving and Street Safety 2011 Bond Program with existing revenue sources for streets and right-of-way. The third and Chal bond sale was completed in the spring of 2016, rounding out the \$248 million program dedicated to street resurfacing, streetscape, and trafCc signal upgrade projects.

In order to continue to improve streets and public right-of-way assets, the Plan recommends pursuit of dedicated long-term funding sources for street resurfacing as the General Fund lacks capacity to fully meet these needs.

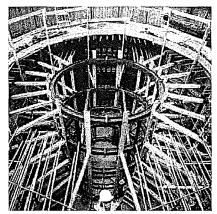

Since the last Capital Plan, the City has committed to Vision Zero with a goal of zero trafÖc fatalities and critical injuries in San Francisco by 2024. San Francisco's expenditures in streets and right-of-way infrastructure improve safety in myriad ways. Roadway repaving creates a smoother surface and renews street and crosswalk markings, which improves the safety of drivers, bicyclists, and people in crosswalks. Additionally, the City continues to reaf Orm our commitment to safe and accessible paths of travel for people with disabilities by making capital improvements to curb ramps, sidewalks, street crossings, and roadways across the City.

Public Utilities Commission

The San Francisco Public Utilities Commission (SFPUC) provides and distributes water to 2.6 million customers, treats wastewater, and supplies electric power to operate Muni streetcars and electric buses, street and trafcc lights, and municipal buildings. The SFPUC includes three utility enterprises: Water, Wastewater, and Power.

The Water Enterprise consists of over 389 miles of pipeline, over 74 miles of tunnels, 11 reservoirs, Ōve pump stations, and three water treatment plants located outside of the City (the "Regional Water System") and over 1,235 miles of pipeline, 11 reservoirs, eight storage tanks, 22 pump stations, eight hydropneumatic stations and 17 chlorination stations located within the city limit of the City (the "In-City Distribution System").

The Water Enterprise is responsible for the distribution of high quality water to its customer in San Francisco and other Bay Area communities. Hetch Hetchy wastershed, located in Yosemite National

Water System Facilities Improvements

Park, provides approximately 85% of San Francisco's total water needs, with the remaining 15% produced by the Alameda and Peninsula watersheds. The drinking water provided is among the purest in the world; the system for delivering that water is almost entirely gravity fed, requiring almost no fossil fuel consumption to move water from the mountains to your tap. Hetchy Water operates, maintains, and improves water and power facilities, smaller dams and reservoirs, water transmission systems, power generation facilities, and power transmission assets.

The Wastewater Enterprise operates and maintains the City's water pollution control plants, pumping stations, and collection system in order to protect public health and the environment. The Wastewater Enterprise maintains the 900-mile long combined sewer system and 27 pump stations that collect sewage and storm water, moving wastewater to treatment plants for eventual discharge into the San Francisco Bay and the Pacioc Ocean. The SFPUC is undertaking a Sewer System Improvement Program (SSIP) to modernize its systems and help meet its Levels of Service goals. The SSIP is expected to take place over the next 20 years.

The Power Enterprise is responsible for providing reliable, clean, high-quality electric energy to the City. The Power Enterprise's 100% GHG-free electric supply portfolio consists of hydroelectric power from three power plants in the Sierra Nevada mountains, solar power generated at SFPUC and other City facilities, and bio-methane power produced at SFPUC wastewater treatment facilities.

The Plan proposes \$1.3 billion in renewal funding for these needs over the next 10 years, with \$1.1 billion coming from the General Fund, as shown in Chart 9.1.

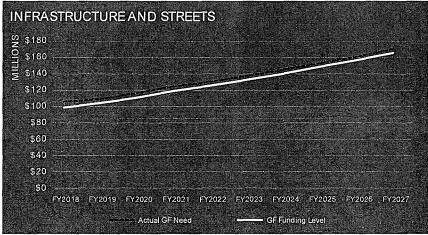

CHART 9.1

The General Fund streets and right-ofway renewal program includes street resurfacing, curb ramp inspection and replacement, median maintenance, plaza inspection and repair, sidewalk inspection and repair, street structure repair, and street tree planting, establishment, and maintenance.

The PUC's renewal program includes sewer replacements, pump system rehabilitations, water storage upgrades, technology infrastructure improvements, and many other projects necessary to provide for San Francisco's water, wastewater, and power needs. As with Enterprise departments covered in other chapters, PUC renewal projects are not included in the Service Area renewal curve. For more information on these projects, please see the narrative descriptions included in the following table.

Project Name	Description
PW – Street Resurfacing and Reconstruction	Public Works oversees the maintenance of 865 miles of streets. Without regular resurfacing treatments, a street could end up costing the City four times more over the course of its life cycle. As approved by city of Cials and voters, Public Works' goal is to achieve and maintain a Pavement Condition Index score (PCI) of 70. This target will take streets from the "at-risk" to a more cost-effective "good".
	The estimated cost to achieve and maintain a PCI of 70 is \$816 million over the next 10 years. The Plan recommends fully funding this need, with \$693 million coming from the General Fund, and the remainder from a combination of federal, state, and other local sources.
PW – Curb Ramp Inspection and Replacement	Title II of the Americans with Disabilities Act requires local entities to develop a transition plan speciocally for curb ramps. The City is committed to improving curb ramps and providing accessible paths of travel for people with disabilities. This project complements the installation of new ramps (see the Enhancements section below for additional details) by ensuring sufocient funds for maintaining previously installed ramps.
	The estimated cost for curb ramp inspection and replacement is \$16 million over the next 10 years. Given funding constraints, the Plan allocates \$9 million from the General Fund towards this need.
PW – Median Maintenance	As the City converts more paved areas into green space, Public Works needs capacity to maintain these areas to ensure that the investments last and that medians and other landscape spaces are kept in great condition. There are irrigation systems at 67 landscaped medians across the City.
	The estimated cost for median maintenance is \$147 million over the next 10 years. Given funding constraints, the Plan allocates \$57 million from the General Fund towards this need, in addition to \$50 million expected from the State.
PW – Plaza Inspection and Repair Program	Public Works is responsible for maintaining fourteen plazas throughout the City, including: Blanken Bayshore, Embarcadero, Hallidie, Harvey Milk, Justin Herman, Mechanics, Mendell, Organ, United Nations, Civic Center, Tutubi, McCoppin Hub, Bartlett, and Corbett Community Garden. These plazas require annual inspection to determine the extent of any repairs that may be required.
	The estimated cost for plaza inspection and repair is \$22 million over the next 10 years. Given funding constraints, the Plan allocates \$13 million from the General Fund towards this need.
PW – Sidewalk Improvements and Repair Program	Public Works maintains sidewalks in three ways. First, the Bureau of Urban Forestry maintains sidewalks around city-maintained street trees. Second, the Bureau of Street Use & Mapping executes the Sidewalk Inspection and Repair Program; its goal is to inspect and repair every block on a 25-year cycle. Finally, Bureau of Street Mapping also has a reactive program called the Accelerated Sidewalk Abatement Program, which inspects locations based on complaints and issues notices of violation to property owners in order to compel them to repair their dangerous sidewalks.
	The estimated cost for sidewalk improvements and repair is \$37 million over the next 10 years. The Planfully funds this need, with \$14 million coming from the General Fund, and the remainder from the State, and other local sources.

Project Name	Description
PW – Street Structure Repair	The Capital Plan provides a strategy for the maintenance and renewal of 364 street structures including retaining walls, stairs, bridges, viaducts, tunnels, underpasses and overpasses, plus numerous guardrails throughout the City. Work performed under this program includes general maintenance and major repairs of city street structures to maintain safety, proper operations of moveable bridges, and minimize long-term renewal costs. For this Plan, two major projects in this category include the Islais Creek and 4th Street bridges.
	The estimated cost for the Islais Creek Bridge project is \$45 million, with \$5.4 million being funded by the General Fund, and \$39 million from a Federal grant. The estimated cost for the 4th Street Bridge project is \$22 million, with \$2.6 million being funded by the General Fund, and \$20 million from a Federal grant.
	The estimated cost for other street structure repair is \$67 million over the next 10 years. Given funding constraints, the Plan allocates \$40 million from the General Fund towards this need.
PW – Street Tree Planting, Establishment, and Maintenance	By FY2018, Public Works will be responsible for maintaining approximately 121,000 street trees. Public Works will have the resources to maintain street trees on an average three-to-Öve-year cycle, inspect all street trees annually, and make sidewalk repairs on a similar cycle. Additionally, the City anticipates replacing approximately four percent of trees each year as a result of typical tree mortality, disease, or vandalism.
	The estimated cost for street tree planting, establishment, and maintenance is \$250.5 million over the next 10 years. The Plan fully funds this need, with \$219.9 million from the General Fund, in addition to \$30.6 million expected from State and other local sources.
SFPUC Hetch Hetchy Water and Power – Mountain Tunnel Rehabilitation Project	Mountain Tunnel was constructed between 19 17 and 1925, and has provided reliable water conveyance for nearly 90 years. Deterioration in the concrete lining of the tunnel has increased in recent decades, and the tunnel is in need of rehabilitation and/or replacement to ensure continued reliability.
SFPUC Hetch Hetchy Water and Power Projects – Power Infrastructure	Many Hetchy Power infrastructure, facilities, and equipment have reached their end of their life expectancy. The Capital Plan provides funding for various generation renewal and replacement projects at the Holm, Kirkwood and Moccasin Powerhouses. These projects include upgrades to the powerhouse protection, control, monitoring systems, equipment replacement and upgrades.
	The Capital Plan also includes rehabilitation of transmission lines and distribution systems, which consist of reliability projects to address regulatory requirements. Typical projects in this program include replacement of insulators, switches, tower infrastructure, grounding and protection. Distribution system projects include upgrades to distribution lines, dry transformers, distribution substations; disconnect switches, breakers, protection, and metering.
SFPUC Hetch Hetchy Water and Power – Water Infrastructure	The San Joaquin Pipelines convey water from the Foothill Tunnel to the Coast Range Tunnel and vary in age from 45 to almost 80 years. Rehabilitation is intended to extend the life of the assets to about 2030 before requiring replacement.
SFPUC Wastewater – Collection System Spot Sewer Repair Project	This project provides as-needed contingency-based repairs of existing sewer pipes for a city block or less in length. Current funding levels are projected to repair approximately 700 individual spot sewer locations per Oscal year, to meet the targeted levels of service goals. It is anticipated that this base rate of spot repair will continue for the next several years and would ultimately decrease as the overall program continues to be implemented.
SFPUC Wastewater – Condition Assessment Project	There are more than 80 miles of major sewers that have been in service for 100 years or more and are at the end of their useful life. This project will conom needs and provide recommendations for replacement or rehabilitation of major sewers through the Sewer System improvement Program.

Project Name	Description
SFPUC Wastewater – Salt Water Intrusion	Salt water corrodes the pipes and concrete of the system. If it reaches the treatment plant in large quantities, it can harm or kill the biological secondary treatment process, cause discharge permit violations and harm receiving water quality. The Salt Water Intrusion projects will reduce salt water intrusion into the sewer system. Projects in this area will consist of sewer pipeline joint sealing work.
SFPUC Wastewater – Sewer Replacement/Improvement Program	Failure of the collection system will reduce the City's ability to handle and dispose of wastewater and stormwater which can lead to public health, safety and environmental risks and non-compliance with the State of California's discharge permit. This program maintains the existing functionality of the sewage collection system and includes planned and emergency repairs and replacement of structurally inadequate sewers.
	The estimated annual cost for sewer replacement beginning in FY2018 is approximately \$60 million and increases to \$88 million by FY2027 allowing the renewal and replacement of approximately 15 miles of sewer per year.
SFPUC Wastewater – Treatment Plants	This renewal program seeks to extend the useful life of treatment facility assets throughout San Francisco by helping to maintain their treatment capacity, process performance, and ensure compliance with regulatory requirements.
SFPUC Water – Emergency FireÖghting Water System	The Emergency FireÖghting Water System (EFWS) will increase the safety response capacity of the Fire Department following a major earthquake and during multiple-alarm Öxes from other causes. This project includes improvements to or expansion of EFWS pipelines, tunnels, and physical plant.
	For project Onancial information, please see the Public Safety chapter of this Plan.
SFPUC Water – Local Buildings & Grounds Improvements	This project will provide funding for capital improvements at City Distribution Division facilities and structures. Projects in this area include a new fueling station, yard improvements to address health and safety issues and security, a comprehensive arc 5 ash and electrical hazard study and construction of a seismically reliable building for City Distribution Division's communications and control systems.
SFPUC Water – Local Water Conveyance/Distribution System	Currently, 16% of the SFPUC's 1,230 miles of mains exceed their typical 100-year useful life. This project includes funding to install, replace and renew distribution system pipelines and service connections for drinking water mains in San Francisco and meet customer level of service goals for uninterrupted service. The increased investment is needed to improve annual replacement rate to 15 miles per year to minimize main breaks due to aging infrastructure resulting in fewer service disruptions, property damage and need for emergency repairs.
SFPUC Water – Local Water System Improvement Program (WSIP) Augmentation	This project includes a new recycled water treatment facility that will provide irrigation water to Golden Gate Park, Lincoln Park, and the SF Zoo. It includes additional capacity to serve potential future customers such as the Presidio Golf Course.
SFPUC Water - Pump Stations	This project provides long-term funding for renewal and rehabilitation of 12 major water pump stations and seven hydropneumatic tanks that boost pressure within the San Francisco distribution system, including the McLaren Park and Bay Bridge pump stations.
SFPUC Water – Regional Buildings & Grounds Programs	Sunol Yard improvements include replacement structures with LEED facilities for maintenance shops and equipment storage, new fueling center and administration building, re-surfacing of yard, and demolition of six dilapidated structures. Millbrae Yard improvements include a new administration building to consolidate the Water and Wastewater laboratory, maintenance shop, and equipment storage, demolition of a large unused abandoned building, new parking lot, and new vehicle wash site.

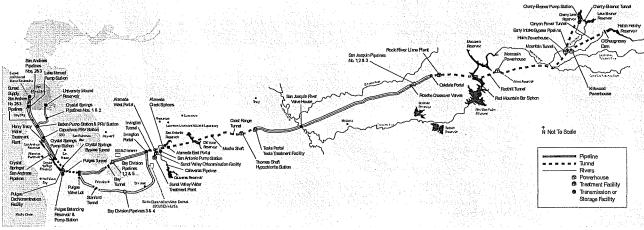

Project Name	Description
SFPUC Water – Regional Communications & Monitoring Program	The objective of this project is to build a microwave radio backbone for communications and security systems, including video surveillance, remote gate locks, and audio monitoring, across the entire SFPUC regional system. This will enhance SFPUC emergency response, security, and regional interoperability.
SFPUC Water Regional Water Supply & Storage Program	The California State Division of Safety of Dams requires upgrades to structures, including geotechnical work and installation of monitoring systems. The automated data acquisition system, part of the monitoring system, will provide timely, accurate data related to inspections at various dams.
SFPUC Water – Regional Water Treatment Program	In addition to maintaining compliance with permits, improvements to regional treatment plants are expected to achieve higher levels of reliable performance for extended periods.
SFPUC Water – Regional Water Transmission Program	This program will provide upgrades to the Transmission System including pipeline inspection and repairs, valve replacements, metering upgrades, corrosion protection to extend the useful life of the pipelines, pump station upgrades and vault upgrades.
·	Included is \$157 million funding for Pipeline Improvement Program over the next 10 years to replace or slip-line up to 10 miles of pipelines in densely populated areas to improve operational reliability and reduce liability.
SFPUC Water – Regional Watersheds & Land Management	This program supports projects that improve and protect the water quality and ecological resources impacted by the siting and operation of PUC facilities. These projects include the repair, replacement, maintenance, or construction of roads, fences, or trails, the acquisition of easements and/or fee title of properties, and other ecosystem restoration or public access, recreation, and education projects.
SFPUC Water – Regional Water System Improvement Program (WSIP) Augmentation	Additional funding at Calaveras Dam and the Alameda Creek Diversion Dam is needed for unanticipated subsurface conditions and localized slope stability which will result in increases in rock support, shotcrete, and shale disposal work. The revised baseline schedule will still allow the dam embankment to be complete by fall 2018, which will allow Ölling of the reservoir to begin in the fall/winter 2018-19 as planned.
SFPUC Water - System Monitoring and Control	The System Control and Data Acquisition (SCADA) provides remote monitoring of pressure, 50w, and valve position status at key locations throughout the distribution system. This project provides improvements to SCADA and to facilities that control and monitor San Francisco's water distribution system. This program will also install Öber optic communications to critical facilities and security installations not completed under WSIP.
SFPUC Water – Water Storage Facilities	The PUC maintains 10 major water storage reservoirs and six storage tanks that range in age from 50 to 120 years old. The College Hill Reservoir supplies much of the eastern and northern areas of San Francisco, including Zuckerberg San Francisco General Hospital, the City's trauma center. This project provides long-term funding for the renewal and rehabilitation of these reservoirs and tanks. Planning evaluation and geotechnical review were conducted and recommend that the outlet structure be replaced with a new 48-inch diameter steel pipeline with outlet valve facilities.

Project Name	Description
PW – ADA Curb Ramps Program Right-of-Way Transition Plan	The Americans with Disabilities Act (ADA) requires cities to develop a transition plan speciÖcally for curb ramps. San Francisco is committed to fully improving curb ramps and providing accessible paths of travel for people with disabilities by 2026. This program installs curb ramps at sites in response to requests from the public to prioritize locations of known need.
	The estimated cost to install curb ramps for the ADA Right-of-Way Transition Plan is \$86 million over the next 10 years, and this need is fully funded through the General Fund.
PW – ADA Curb Ramps Program Right-of-Way Transition Plan Special Projects	As Public Works develops an overarching strategy to tackle the most structurally difficult curb ramp locations, some work has begun to address requests along the city's pedestrian high-injury corridors. The Mayor's Office on Disability and Public Works collaborated to identify these priority locations, which are for now budgeted separately from the Curb Ramps Transition Plan (above).
	Through FY2017 \$1.4 million has been budgeted for these sites, and approximately \$400,000 is expected to be funded through the General Fund in FY2018.
SFPUC Hetch Hetchy Power – Civic Center District Power Improvements	This initiative will plan, design, and construct projects in the green energy district in the Civic Center in accordance with the partnership Memorandum of Understanding with the Clinton Global Initiative. This program includes City Hall, Davies Symphony hall, Opera House, Main Library, Public Health Headquarters, Asian Art Museum, Bill Graham Auditorium, Civic Center Garage, and the Civic Center.
SFPUC Hetch Hetchy Power – Transmission and Distribution Services for Retail Customers	The Capital Plan provides funding for the design and construction of transmission and distribution facilities to serve new retail customers, installation of intervening facilities required under the new Wholesale Distribution Tariff, and the development, administration, and incentive payments to new retail customers. The project will also look into the feasibility and implementation of a supervisory control and data acquisition (SCADA) system, automated metering information system, and integration of both with other technologies into a possible smart grid electric system.
SFPUC Hetch Hetchy Power – Energy Efőciency	Energy ef©ciency improvements are an important component of an electric utility's resource portfolio. These investments reduce facility operating costs and electric bills for customers, improve system functionality, and reduce the environmental impact of energy use. The Plan proposes funding for lighting and mechanical system ef©ciency upgrades.
SFPUC Hetch Hetchy Power – General Fund Departments	Energy retro ds for San Francisco General Fund Departments include lighting, heating and ventilation, retro-commissioning, and energy management systems projects. The budget funds ef ciency projects in municipal facilities for departments such as Police, Real Estate, Recreation & Parks, Muni, Yerba Buena Center, and Fine Arts departments.
SFPUC Hetch Hetchy Power – Renewable/Generation Power	Hetchy Power is continuously developing and implementing new renewable generation resources, including a proposed series of small municipal and energy development projects such as solar photovoltaic, solar thermal, biogas fuel cells, wind projects, and other renewable energy projects. The Capital Plan also funds portions of the long-term development of cost-effective, small hydroelectricity projects.
SFPUC Hetch Hetchy Power – Streetlights	Hetchy provides power to all of San Francisco's 44,528 streetlights, maintains the 25,509 streetlights owned by the City, and funds the maintenance of the 19,019 streetlights owned by PG&E. The plan funds street lighting area improvements to correct inadequate lighting and provide safer street and pedestrian friendly environment, replace insufficient lighting, and rehab and replace streetlight poles.
	The Plan includes \$43 million over 10 years for upgrades to street lighting infrastructure.

Project Name	Description
SFPUC Hetch Hetchy Power – Treasure Island/Other Development	The SFPUC is required to provide utility operations and maintenance services at Treasure Island and Yerba Buena Island for the electrical and natural gas utility systems. Current planning shows that the existing electrical overhead poles, lines, and substation are adequate to serve the Crst phase of development. At some point in the development, when the electric load approaches the design limit of the electric lines at approximately 10 megawatts, the lines will have to be upgraded and subsequently installed underground.
	The second phase of development at Hunters Point Shipyard, Candlestick Point, and the Alice Grifcth Housing Complex will require the installation of new underground 12 kV electrical distribution systems in all three areas. The SFPUC as the electric utility provider will install the conductors in the conduits, transformers, switches, and metering equipment required for the electric distribution system.
SFPUC Wastewater – Advanced Rainfall Prediction	This SSIP project will provide the SFPUC with better rainfall forecasting capabilities, especially four-eight hours in advance of an event, which will be beneccial in managing wet weather bows in the combined collection system and preparing for booding. This decision support tool will rely on the strategy and concepts for real-time control being developed under the SSIP, and represents the Crst step in implementing system-wide real-time control.
SFPUC Wastewater – Drainage Basins	Phase 1 of this SSIP project will construct, monitor, and evaluate green infrastructure projects in each of San Francisco's eight urban watersheds to manage-stormwater before it enters the combined sewer system.
SFPUC Wastewater – Flood Resilience	This group of projects related to SSIP will address ōooding caused by heavy rain. The Foerster Street Auxiliary and Mangels, Hearst, Detroit Sewer Replacement Project will increase the hydraulic capacity of the conbined sewer system on eight blocks in the Sunnyside Terrace neighborhood. This project will also include two raised crosswalks on Foerster Street and will mitigate the area's ōood risk.
SFPUC Wastewater – Islais Creek Outfall	SFPUC will provide improvements to the Southeast Water Pollution Control Plant efouent force main crossings at Islais Creek.
SFPUC Wastewater – Ocean Beach Protection Process	This project will develop a comprehensive shoreline management and protection plan to establish a long-term solution to the erosion issues along Ocean Beach. This solution is necessary to protect the integrity of wastewater assets built to protect public health and the environment, including the Lake Merced Transport/Storage facility, the Westside Pump Station and the Oceanside Treatment Plant.
SFPUC Wastewater – Sewer/Collection System	Sewer/Collection System projects include the proposed Central Bayside System Improvement Project, providing enhancements to the Channel Drainage Basin, including needed reliability and redundance for the existing 66-inch Channel Force Main; hydraulic improvements to sewers and pump stations; and improvements to stormwater management through elements of both grey and green infrastructure. The Mariposa Dry-Weather Pump Station Improvement Project will increase the dry weather pumping capacity to accommodate additional wastewater ŏows from recent and planned developments in the Mission Bay, Potrero Hill, and other tributary areas near 3rd Street.
SFPUC Wastewater – Sewer System Improvement Program-Wide Efforts	The SSIP Program-Wide Management Project will support the SSIP's overall implementation, providing condition assessments, project deOntion and prioritization, public outreach and education, sustainability evaluation, and general program management. The initial focus will be on scope optimization and program implementation of the \$2.9 billion SSIP Phase 1; and the continued development of programmatic schedules, construction cost estimates; and rates and cash low projections for the SSIP.
SFPUC Wastewater – Facilities and Infrastructure	The Wastewater Facilities and Infrastructure projects will focus on protecting the structural integrity of critical infrastructure and streamlining core operational functions. Projects include: improvements to GrifCth Yard for the Collection System Division Celd staff; rebuilding the Southeast Community Center to fulCl SFPUC's commitment to the mitigation measure for the expansion of the Southeast Plant, and erosion control to protect existing SFPUC facilities located adjacent to Ocean Beach.

Project Name SFPUC Wastewater - Treasure Island Capital Improvement The City entered into a Cooperative Agreement with the U.S. Navy in which the City agreed to take responsibility for caretaker services on Treasure Island and Yerba Buena Island. The SFPUC provides utility operations and maintenance services for the wastewater and stormwater systems. This project includes \$64 million for the New Wastewater Treatment Facility. A new tertiary two-million gallon per day wastewater treatment facility is proposed for the Treasure Island/Yerba Buena Island service area to replace the existing, aged facility. SFPUC Wastewater - Treatment facilities projects for the SSIP include the Bayside Biosolids (Digester) Project which will fully replace the existing aged facilities with new ones with modern, proven, and efficient treatment technologies.

Hetch Hetchy Water Supply Map

Deferred Projects

Project Name	Description
PW – Bayview Transportation Improvements	This project will rehabilitate and recon our the right-of-way in the in the Bayview and Hunters Point Shipyard development areas to increase roadway capacities and increase safety and accessibility. It will reduce truck traf on Third Street and residential streets and develop a more direct truck route between US 101 and existing and planned development in the Bayview and Hunters Point Shipyard.
	The estimated project cost is \$41 million.
PW – Jefferson Street Streetscape Enhancement Project, Phase 2	Phase 1 of the Jefferson Street Streetscape Enhancement Project was completed in 2013 and created improvements to pedestrian areas along the length of Jefferson Street, featuring improved intersections and street segments, pedestrian corner plazas, shortened crossing distances, pedestrian scale lighting, and other amenities. Phase 2 of this project would extend street improvements on Jefferson Street from Jones to Powell Streets, improving the street user experience on a major, iconic, commercial corridor in San Francisco.
	The total cost to complete Phase 2 is \$13 million.
PW – Market Street Plaza Enhancements	Market Street Plaza Enhancements would bring major improvements to UN, Hallidie, and Mechanics Plazas along Market Street, making them more inviting, active spaces. Based on the conceptual designs, improvements could include: decking over the sunken plaza at Hallidie, creating a space for civic events at the UN Plaza, regrading to address accessibility issues at the Mechanics Plaza, and increasing seating at all three locations.
	The total cost to enhance these plazas is \$97 million.
PW-Streetscape Improvement Program	The Streetscape Program enhances neighborhood streets, alleys, and plazas across the City through best practices in design that bring safety, economic, and beautiÖcation improvements. Typical improvements include street tree planting, site furnishings, lighting upgrades, and pedestrian and bicycle safety features such as pedestrian islands, bike lanes, crosswalk enhancements, and other trafÖc calming measures.
	The 10-year estimated cost for the Street scape Improvement Program is \$442 million.
PW Utility Undergrounding	Overhead utility wires and related infrastructure are potential public safety hazards and a visual blemish on San Francisco's vistas. This project would involve relocating overhead utility wires underground. Undergrounding utilities reduces the frequency of needed maintenance, but requires a large up-front investment.
	Generally, undergrounding costs roughly eight million dollars per mile. The estimated cost to underground utilities across the City over the next 10 years is over \$1 billion dollars. Funding for the project has not been identiQed to date. Going forward the City will continue to explore funding options as well as potential leveraging opportunities associated with other right-of-way projects that involve opening up the roadway.

Emerging Projects

Project Name

Description

PW - Better Market Street

This project will redesign Market Street as a more pedestrian, bicycle, and transit-oriented street. A comprehensive renovation is undergoing environmental review and requires inter-agency coordination for work that could include: repaving of the roadway, sidewalk and crosswalk reconstruction, curb ramps, new street trees and landscape elements, replacement of MUNI overhead wires and upgrades to the trafoc signal infrastructure, street lighting upgrades, sewer repair and/or replacement, water main work, and replacement of Emergency Fireoghting Water System facilities and infrastructure. The project will extend from Steuart Street in the Financial District through Octavia Boulevard.

The project has an expected total cost of \$384 million of which \$92 million will be funded by the 2014 Transportation G.O. Bond and \$43 million from federal sources. Funding sources for the balance of need have not been identiÕed.

A renewed Market Street will anchor neighborhoods, link public open spaces and connect the City's Civic Center with cultural, social, convention, tourism, and retail destinations, as well as with the regional transit hub that will be centered at the planned Transbay Terminal.

The Public Safety Service Area addresses the capital needs of the agencies working to keep San Franciscans safe and secure in their daily lives and in response to emergency situations. From \bullet e and police stations, to jails and juvenile detention facilities, to evidence storage and forensic lab space, public safety facilities have unique needs for their highly specialized operations.

Addressing the capital needs of the City's public safety departments is one of the primary challenges of the Capital Plan. As the City works towards a more progressive justice system, there is an obligation to maintain the infrastructure that enable departments to do their jobs safely day in and day out. To ensure the security and well-being of San Francisco's visitors and residents, including those in custody, the City must devote resources to provide humane and resilient facilities for our public safety agencies.

Public Safety Building

Overview

Neighborhood Ōre stations, district police stations, County jails, and administrative of Ōce space are all important supports for the public safety operations throughout the city. Space needs for storage, training, and equipment unique to public safety operations are also part of the picture.

ESER G.O. Bond Program

Since 2010, the voters of San Francisco have enthusiastically supported the Earthquake Safety and Emergency Response (ESER) General Obligation Bond Program at the ballot box. That program has provided funding for essential public safety projects large and small, from a new public safety headquarters to focused scope projects in neighborhood Ore and district police stations. The ESER Program is projected to continue in the Plan, with measures planned for elections in 2020 and 2026. Planning work in FY2018 and FY20 19 will be needed to ensure ESER 2020 projects are shovel-ready at Orst issuance. The City will aim to prioritize projects that address the greatest

seismic and related structural and nonstructural risks in the publicly owned capital portfolio as shown in the recently completed HAZUS analysis discussed in Chapter Four: Building Our Future.

ESER Bond Program

ESER 2010: \$412.3M

ESER 2014: \$400M

ESER 2020 slated for \$290M

· ESER 2026 slated for \$290M

Justice Facilities Improvement Program

The Justice Facilities Improvement Program (JFIP) was originally developed in 2008 to initiate the closure of the Hall of Justice (the Hall or HOJ) and the construction of replacement spaces for that facility.

The HOJ stands seven stories tall and was originally built in 1958. It contains the County courthouse, of Ōce space for various justice-related staff, and two County jails. The jails on its two top ōoors (County Jails #3 and #4) were built

145

on an antiquated model of corrections with linear jails and limited program space. This linear model creates limited visibility of prisoners, leaving them vulnerable to assault and self-harm. A major earthquake is likely to generate signiocant damage to the building and render it unusable.

As San Francisco is responsible for the lives of the persons in custody and the staff who work with them, closing the dangerous HOJ facility has been a top priority of the City's Capital Plan since its inception and remains so.

Space considerations for JFIP include both the custodial and administrative uses of the Hall. County Jail #3 is closed, but County Jail #4 remains open, with approximately 400 prisoners in the building 24 hours a day. The District Attorney's Of Ōce, SFPD Investigations Unit, Sheriff's Department, and the Adult Probation Department all occupy of Ōce space in the Hall. In addition the kitchen, laundry, and some of the building's core subsystems support operations at the nearby County Jails #1 and #2. The last Capital Plan updated JFIP to reōect current conditions and existing

staff levels at the Hall and also at 555 7th Street, which houses the Public Defender's OfŌce.

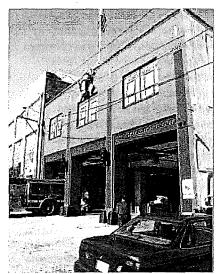

The last Capital Plan identiŌed a Rehabilitation and Detention Facility project that would have created replacement capacity for the prisoners in custody at the Hall. Construction of a replacement facility was prioritized so as to evacuate the Hall's most vulnerable population, the prisoners, Ōst. The City applied for an \$80 million award of State Ōnancing and won, but in the face of tremendous community resistance and demands for overarching reform to the criminal justice system, the Board of Supervisors unanimously declined that award.

In the wake of that rejection of State funds, Board President London Breed convened the Work Group to Re-Envision the Jail Replacement Project. The Work Group was tasked with identifying strategies to reduce the jail population and strengthen prevention and treatment services to bring about the permanent closure of County Jails #3 and #4.

Co-chaired by the Sheriff, the Director of Public Health, and a leading community advocate, the Work Group was convened in public sessions from March through October 2016. During that time, Work Group membership and support staff gathered, analyzed, and discussed information about San Francisco's criminal justice and behavioral health systems. An interim report was made to the Government Audit and Oversight Committee of the Board of Supervisors in December 2016, and a Chal report is expected in March 2017.

The primary result of the Work Group's efforts was a set of prioritized strategies to address programmatic, policy, and facility needs. The construction of a replacement jail facility for the beds at the Hall was not prioritized by a majority of Work Group members, nor was a centralized Behavioral Health Justice Center that was proposed by the District Attorney's Of Ce. Prioritized strategies included investments in housing, expansion of community-based and Department of Public Health behavioral health treatment facilities, a reentry navigation center for justice-involved persons, renovations to County Jail #2 to

SFFD Fire Station

SFPD Park Station

accommodate a portion of the County Jail #4 population, and the creation of an interagency intake and discharge planning center in County Jail #1.

As City stakeholders plan the implementation of efforts to close the HOJ permanently, San Francisco intends to honor the input of the Work Group to pursue non-incarcerating strategies to reduce the jail population. For example, the City plans to implement the Law Enforcement Assisted Diversion (LEAD) program based on the successful model from Seattle. It will also add capacity to Hummingbird Place, which provides a safe environment in a health treatment setting for those that need mental health support staving off a crisis. The Co-Chairs, Mayor's Of Cce, and elected of Ccials will factor the prioritized strategies into upcoming decisions and planning efforts, including this Capital Plan.

The Plan has slated two HOJ-related projects in the COP Program, both with Ōrst issuance in FY2021: one for administrative staff relocation (either lease-to-own or construction), and one for prisoner exit. Planning work to Ōnd a solution that will permanently close the

Hall of Justice jails will be needed in the years leading up to the proposed Örst issuance for the Prisoner Exit project.

In recent weeks, conditions at the Hall have worsened dramatically, compounding the facility's already critical problems and hastening the need to vacate the building. Beyond the known seismic risk, subsystems including plumbing and elevators, have repeatedly failed and require substantial investment to repair. Rather than invest more than necessary in a facility ultimately unot for occupation, in January 20 17 the City Administrator declared the building's City's of ces and jails should be shuttered as quickly as possible.

The target date for expedited exit from the Hall is 2019, the fastest possible to line up alternative locations for all staff and prisoners. City staff are exploring ways to meet this deadline; solutions may involve the allocation of General Fund Debt and/or Capital Planning Fund capacity to meet the cost of this ambitious schedule.

Should the expedited exit stall and/or the good-faith implementation of prioritized strategies from the Work Group fall

short of reducing the jail population enough to be able to close the HOJ jails permanently, the City will need to make a dif Cult decision about what to do with the building's staff and prisoners.

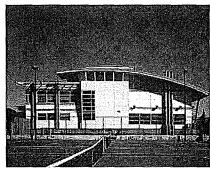

San Francisco has historically been averse to the construction of new jail facilities. However, given the City's responsibility for prisoners and staff, it will be necessary to relocate them from the Hall one way or another. The solution may require the construction of a scaled replacement facility and/or operational changes such as out-of-county placements.

Meanwhile, the Sheriff's Department is proceeding with an application to the California Board of State and Community Corrections for Önancing that would support work at County Jail #2. The project scope includes needed repairs to the roof, HVAC system, and kitchen, hardening of dorms into cells to allow for some prisoners to move out of the Hall, and improvements for ADA code compliance. San Francisco intends to apply for the maximum large-county award of \$70 million and has identiČed \$12 million for the required match in the General Fund Debt Program.

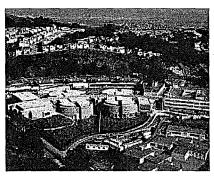

Master Planning

As San Francisco's population quickly grows and density increases, greater demand is placed on the City's public safety agencies and their facilities. The San Francisco Fire Department, Police Department, and Sheriff's Department have all taken a close look at needs across their respective portfolios, and they have identiŌed signiŌcant needs throughout. The Juvenile Probation Department's needs and facilities assessment is currently underway.

Working in partnership with San Francisco Public Works, these public safety agencies have identiŌed repair and renewal needs to keep their existing facilities in a state of good repair. They have also identiŌed some sizable gaps between the current portfolio and their projected operational needs in the years ahead. The departments are working actively with Public Works project managers, as well as Capital Planning and Mayor's Budget OfŌce staff, to prioritize projects, balance renewals and enhancements, and ensure that each agency's operational needs are met.

Current DEM Headquarters

Juvenile Justice Center

The overall renewal needs for the City's Public Safety facilities total \$227 million over the next 10 years. Given funding constraints, the Plan allocates \$69 million from the General Fund to meet these needs, as shown in Chart 10.1. Additional funding from the ESER G.O. Bond Program will also be invested in Fire and Police Department renewals.

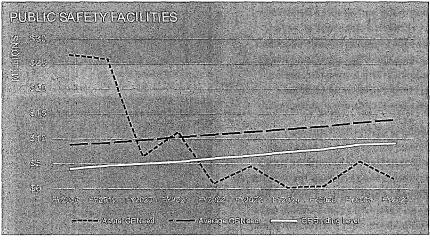

CHART 10.1

The Sheriff's Department has particularly challenging renewal needs at present. The County jail facility at 425 7th Street (County Jails #1 and #2) was built in 1994 as a work furlough facility, and many of its sub-systems need attention. The roof is leaking in

multiple areas, and the roof-mounted air handlers need replacements. The ōooring, ceilings, and lighting need to be replaced for code compliance and better hygiene. The analog security system is not adequate for a modern detention facility. The kitchen and laundry are not

functional. If awarded, the \$70 million in Ōnancing from the California Board of State and Community Corrections would address the most pressing of these needs.

There are enormous renewal needs at the Hall of Justice as well, but because that building is slated for retirement and demolition, its renewal needs have been deprioritized. Some repairs, such as water intrusion and waste management system issues, cannot be ignored completely for health/safety reasons.

Project Name	Description
DEM – 1011 Turk Street/DEM Headquarters Expansion	DEM prepares the City's administration for everyday and occasional emergencies. DEM's dispatchers answer all 911 calls made in San Francisco, and its planners prepare for disaster and manage local government's response and recovery in coordination with state and federal agencies. Preliminary planning is underway for a proposed addition to DEM headquarters directly west of its current location at 1011 Turk Street. This facility houses several critical operations, including the 911 Help Desk. The current space is inadequate for the City's monitoring systems and current stafong levels, and a modiced parking solution is required.
	The budget for the needed two-ōoor below-grade parking structure and 12,000 square feet of of Čce space is \$29 million. This project is recommended for funding through the 2020 ESER G.O. Bond, and the City will also explore the potential of modifying the 911 User Fee as a funding source for this project.
FIR – Ambulance Deployment Center Relocation	SFFD responds to more than 100,000 emergency medical service calls a year, or about 270 each day, nearly 75% of the total ambulance response in San Francisco. The current SFFD ambulance depot can no longer support the department's needs from an operational or logistical perspective. A new, seismically safe ambulance and paramedic deployment facility will be constructed that will ensure the ambulance-dispatch facility remains operational during and after a major earthquake and enable quicker turnaround times for more efficient emergency response.
	The budget for this project is \$44 million, funded by the 2016 Public Health & Safety G.O. Bond.
FIR & PUC - Emergency FireŌghting Water System (EFWS)	The Emergency Fire Cighting Water System (EFWS) is the City's high-pressure emergency Cre protection system. The system includes two pump stations, two storage tanks, one reservoir, and approximately 135 miles of pipes and 150 functional cisterns. Additionally, the system includes 52 suction connections along the northeastern waterfront, which allow Cre engines to pump water from San Francisco Bay, and two Creboats that supply seawater by pumping into any of the Overmanifolds connected to pipes.
	Funding for continued improvements to the EFWS comes from the ESER G.O. Bond program; \$102.4 million and \$54.1 million were appropriated for the project in the 2010 and 2014 ESER Bonds, respectively, and all of the bonds for this program have been issued. Future issuances are anticipated in the proposed 2020 ESER Bond, pending voter approval.
FIR – Neighborhood Fire Stations	Driven by a comprehensive SFFD Capital Improvement Plan, the Neighborhood Fire Stations program addresses the most urgently needed repairs and improvements to critical ÖreÖghting facilities and infrastructure, driven by a comprehensive SFFD Capital Improvement Plan. Projects can be comprehensive, focused, or seismic in scope. Comprehensive renovations correct all deÖciencies pertaining to emergency response and health and safety issues and include renovation, renewal, or replacement of major building systems to assure station functionality for at least 15 years. Focused scope projects correct deÖciencies of selected building components and assure station functionality for up to ten years. Seismic improvements bring stations up to current building codes and include a comprehensive remodel
	This program is funded primarily through the ESER General Obligation Bond program; \$67 million and \$81 million were appropriated in the ESER 2010 and ESER 2014 bonds, respectively. All bonds from 2010 ESER have been issued. Of ESER 2014 funds, \$24 million have been issued, \$25 million is expected to be issued in FY2018, and \$32 million is expected in FY2019. Future issuances are anticipated in the proposed ESER 2020 and ESER 2026 Bonds, pending voter approval.
FIR – Treasure Island Fire House Replacement	The Treasure Island Öre station is being torn down as part of the Island's greater development plan. Once redevelopment proceeds, a new Öre station is planned to be built to meet the needs of the island's occupants and visitors.
	The budget for this project is estimated at \$20 million and will be entirely developer-funded.

Project Name	Description
JFIP – HOJ Administrative Space Relocation	The Adult Probation Department, the District Attorney's Ofoce, the SFPD Investigations Unit, and Sheriff's Department staff are all currently based at the seismically unsafe Hall of Justice. An ofoce space solution that co-locates these functions is the most efocient solution to the administrative needs for the public safety operations currently in the Hall of Justice. Related, for day-to-day operations, the SFPD Investigations Unit requires between 5,000 and 10,000 square feet of evidence storage space for active cases, and the City is pursuing a leased solution for that need.
	Assuming a viable more expedient exit option cannot be found, the amount allocated for this project is \$308 million, and it is planned to be funded through the Certiocates of Participation program with Orst issuance in FY2021.
JFIP – HOJ Prisoner Exit Project	Originally envisioned as the Örst step in JFIP to extricate the most vulnerable population in the Hall of Justice, the prisoners, this project will address the immediate prisoner relocation needs, if any, for the City to meet its target HOJ closure date. This project's timeline assumes that recommended strategies from the Work Group to Re-Envision the Jail Replacement recommendations will be given approximately three years (until the end of FY2020) to reduce the jail population enough to enable permanent closure of the HOJ jails.
	Assuming a viable more expedient exit option cannot be found, the amount allocated for this project is \$190 million, and it is planned to be funded through the CertiÖcates of Participation program with Örst issuance in FY2021. Should the implementation of recommended strategies from the Work Group to Re-Envision the Jail Replacement yield a drop in the jail population sufÖcient to close the HOJjails permanently, those funds will be reassigned to other capital priorities.
JUV – ADA Barrier Removal at Juvenile Probation Facilities	This already-underway project is being completed as part of the City and County of San Francisco's ADA Uniform Physical Access Strategy (UPhAS) Transition Plan to meet the requirements of the Americans with Disabilities Act per 28 CFR Part 35 of Title II. Juvenile Probation facilities were identiCed for ADA Disabled Access barrier removal and originally assigned to the Juvenile Hall project in 1999-2000. The barrier removal work on the Administrative and Courts building was not completed. The facility has a non-accessible entrance, and other accessibility deCelencies. The required work is in addition to the department's entry/wheelchair lift and elevator upgrades.
	The total cost of this project is \$2.7 million; \$1.8 million from the General Fund has been appropriated previously, and \$900,000 more is anticipated in FY2018.
JUV – Administrative Building Project	Built in 1950, the Administrative and Service Buildings for the Juvenile Probation Department house probation and administration functions, as well as kitchen services for the Juvenile Justice Center and heating and power for the entire campus at Woodside Avenue. In addition to seismic de Ceiencies, the facility has poor accessibility, antiquated plumbing and electrical systems, and a lack of proper programming space. The possibility of a project combined with planned Department of Public Health improvements to the vacant, adjacent Laguna Honda Hospital (LHH) has emerged, which could potentially get JUV staff out of their seismically vulnerable building six or more years earlier than originally scheduled. Public Works will work with JUV and DPH to understand the operational needs of both departments and establish project scope prior to debt issuance. This project replaces the JUV Admin Replacement project from the previous Plan, slated for \$106.6 million in COP funding in FY2024.
	The Plan proposes \$65 million in CertiŌcates of Participation issued as early as FY2018 to develop a replacement facility. This project amount and timing assume a project coordinated with the DPH relocation to LHH.
JUV – Juvenile Probation Department Master Plan	The Juvenile Probation Department has multiple aging facilities and related assets with signi©cant capital needs, including the Log Cabin Ranch facility in San Mateo County. The department is undergoing a facilities assessment for its entire portfolio, which will include an in-depth analysis of current and projected space needs based on anticipated population and future programming. The assessment will include work to determine whether a project at LHH is feasible for the relocation of staff in the JUV Admin Building. It will also include recommendations on strategies for addressing these needs and potential funding opportunities.
	This assessment has been funded previously through the General Fund, and no further funds are anticipated for its completion.

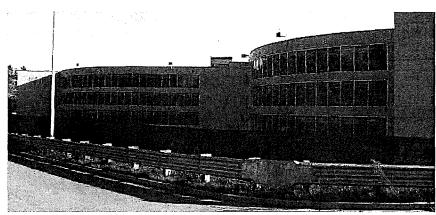

Project Name	Description
JUV – Security Cameras at the Juvenile Justice Center	The existing security camera system at the Juvenile Justice Center is out of compliance with State code, provides inadequate image quality, and does not allow for any video recording, audio, or analysis. This project has been phased; Phase 1 will install 175 strategically placed digital cameras to fortify surveillance throughout the facility and grounds, and Phase 2 would replace the current analog cameras and supporting network with digital upgrades. The new equipment and supporting infrastructure will enable higher resolution, Internet Protocol (IP) cameras, and the ability to record and store up to 13 months' worth of video for potential legal issues and the protection of our residents.
	The total project budget is \$3.3 million. The budget for Phase 1 is \$2.45 million. The budget for Phase 2, deferred at this time, is \$850,000. This project has been funded with \$1.5 million of General Fund in prior budgets, and an additional \$700,000 is proposed in FY2018 of the Plan.
POL – District Police Stations	SFPD's facilities are not adequate to meet the department's 21st-century operational needs. In march 2013 a Facility Evaluation & Standards Study was completed for the department to identify needed improvements and repairs. The report noted that many of the stations exhibited a broad range of functional, safety, security, and technical inadequacies, including space shortfalls. The named stations with immediate needs included Central, Bayview, Tenderloin, Park, and Ingelside, as well as the Academy. There are also ADA barrier removal and seismic strengthening needs across facilities.
	Improvements to District stations are funded primarily through the ESER General Obligation Bond Program. The ESER 2014 bond included \$30 million for SFPD facilities, and \$17.1 million has been issued already, leaving \$12 million to be issued in FY2018. Additional funds are expected from the ESER 2020 and ESER 2026 G.O. Bonds, pending voter approval.
POL – SFPD TrafÖc Company & Forensic Services Facility (JFIP)	This project relocates and reunites in a seismically safe facility the SFPD Forensic Services Division (FSD) Crime Lab, currently located at Building 606 in Hunters Point, and SFPD FSD of Oces, currently in the Hall of Justice (HOJ). The site at 1 Newhall in the Southeast section of the city has been purchased, and 100% schematic design is complete. The project also provides a new location for the TrafOc Company along with off-street parking for department vehicles and secure storage of vehicles impounded as evidence. The new facility will improve the chain of custody of evidence, provide a modern lab to improve efOciency, and address increasing caseload.
	Funded entirely by the ESER 2014 G.O. Bond, the total budget for this project is \$162 million. Of that, \$47 million has been issued so far, and two future issuances are expected: \$58 million in FY2018 and \$58 million in FY2019.
SHF – County Jails #1 and #2 (425 7th Street) Improvements Phase 1	The detention facility at 425 7th Street was designed for low security work-furlough. In practice, it serves as a satellite facility of the HOJ for many functions & utilities. Many systems are failing, including the HVAC and roof. Security improvements must be made in order to house maximum classication inmates and reduce the population of the Hall.

The scope of this project has been designed to the maximum allowable large county award of California Board of State and Community Corrections funding available through SB844 in FY2017: \$70 million from the State. To meet the match requirement, the City has identiÕed \$12 million to be provided through the General Fund, Commercial Paper, or another source, if the award is accepted.

Deferred Projects

Project Name	Description
FIR – Bureau of Equipment Relocation	The SFFD Bureau of Equipment is the site of maintenance and repair for all of the Department's equipment and apparatus, among other essential functions. The current facility is undersized and seismically unsafe, but has been designated historical, limiting the nature of repairs and modiocations that can be made. SFFD has identiced a need for a new Bureau of Equipment facility to meet its current needs and improve efociency of operations.
	The estimated budget for this relocation project is \$60 million.
SHF – Alternate Programs Facility	To centralize and streamline operations of the Sheriff's Department's many service programs for justice-involved people, expand the Women's Resource Center located at 930 Bryant Street from 6,000 square feet to 20,500 square feet.
	The recently completed Sheriff's Department Facility Assessment recommends such a facility and estimates a total project cost of \$14 million.
SHF – County Jail #5 (1 Moreland Drive) Facilities and Grounds	The County Jail #5 campus located in San Mateo County has many areas of need. The roads are deteriorating; the fences are failing; the trees are overgrowing the site; and drainage of the watershed needs annual maintenance. The piping from the old irrigation tank is unmapped and deteriorating at a rapid pace. This City asset needs to be reviewed for actionable work scopes to ensure that the site remains secure, Ore-resistant, and passable.
	The estimated need for this project over the ten years of the Capital Plan is \$1.6 million.

County Jail #5 in San Bruno

Emerging Projects

Project Name	Description
FIR – Candlestick Development New Fire Station	The new development in the 38-acre site of Candlestick Park will include approximately 16 blocks of retail, entertainment, and 10,000 housing units, with one-third designated as affordable housing. The surge in population and the increase of trafcc and density will warrant a new Neighborhood Fire Station in an already-identiced community facility parcel. The developer's infrastructure plan includes horizontal development of the site before turning it over to the City for the construction of the new station.
FIR – Hunters Point New Fire Station	As with the Candlestick Park development, the projected growth at Hunters Point shippard will warrant the development of a new Čre station to meet the needs of surging population, traf Čc, and density in the area. The parcel is expected to be ready for development of a new Čre station around 2020 at the earliest.
JUV – Juvenile Probation Department Master Plan Implementation	The Juvenile Probation Department is undergoing a facilities assessment for its entire portfolio, including Log Cabin Ranch in San Mateo County. The results of that assessment are expected to show a signiCcant funding need across facilities. Decisions regarding prioritization of projects and funding levels will be made following the completion of the assessment. There may be some revenue sources available to cover a portion of the costs, such as State funds for construction of local juvenile facilities and working in partnership with neighboring counties to establish a regional facility.
JUV – Transitional Housing for High-Risk Juveniles	Transitional housing managed by trained Probation personnel could provide an important and needed resource within the City's continuum of service to high-risk youth. The proposed housing could be located on the Woodside Avenue campus and help youth removed from their homes to receive treatment in a safe and therapeutic environment so that they can successfully transition back to the community.
POL – Central District Station Replacement	The Central District Station was constructed in 1972 and was the only district station not upgraded in the 1987 SFPD facility bond program. Central Station is adjacent to a structure that houses a public parking garage, which poses a real danger as blast setback is not incorporated into the building's design. In addition, the station is ballistically inadequate for use. Recent assessment has determined that this facility, needs complete replacement. An interim solution may be to relocate the station temporarily until an adequate site can be identified. The ESER G.O. Bond Program is a possible source of funds for this project.
POL - Long-Term Evidence Storage	The SFPD requires between 50,000 and 100,000 square feet of evidence storage for cold cases. This facility could be located out of county, This space is in addition to the space required for active case evidence more proximate to the Investigations Unit described above. The Real Estate Division is currently pursuing lease options out of county to meet this need for cold case evidence storage.
POL – Tenderloin District Station	The Tenderloin Station was established in 2000 from an old auto garage. Since that time the station has undergone small changes to accommodate daily functions, but the facilities are under strain due to the round-the-clock operations and increased stationg levels. A large evidence processing and storage room, women's locker room, and secure designated sally port prisoner processing area are all needed. The Tenderloin Station is a zero lot building which will only allow for the building to expand upward, creating a multi-story building. Due to the structural integrity concerns, it is anticipated that the building will need a considerable amount of study and retrootting if it is to be used in the future. The ESER G.O. Bond program would be a possible source of funds for this project once scoped.

Emerging Projects

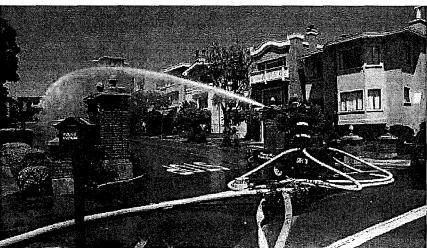

Project Name

Description

SHF – County Jails #1 and #2 (425 7th Street) Improvements Phase 2 There are many needs at the 425 7th Street jails that are unlikely to be met even if the BSCC Önancing is awarded and accepted. The kitchen and laundry are inoperable. Improvements are needed in the medical services pod (Pod C). A more comprehensive conversion of dorms to cells would further reduce the population of the Hall of Justice by creating more space for maximum security classiÖcation prisoners. A full description of facility needs has been documented in the recently completed SHF Master Plan.

SHF – County Jail #6 Decommissioning and Repurposing The low-security facilities at C.#6 in San Mateo County have not been used for prisoner housing for many years. The Sheriff's Department intends to decommission this facility as a jail so that it can be repurposed for other uses. One options for this space would be training spaces. This project will require a full code review for "Occupancy" re-classication and professional designer review for modern updating for its new intended purpose.

Multiple Departments – Public Safety Training Facilities SFFD, SFPD, and the Sheriff's Department have all identiÕed training facility needs. SFFD currently rents a facility on Treasure Island, which will be demolished as part of the island's redevelopment plan, and the department's second facility in the Mission District is too small to accommodate all training operations. The Police Academy facility does not have adequate oor space to accommodate training programs for the department's of Cers and needs to expand. The Sheriff's Department has been using the old County Jail #6 facility for training as needed, but that building needs to be brought up to code and reconŌgured to serve its current purpose. The ESER G.O. Bond Program is a possible source of funds to support these needs.

SFFD in the Richmond District

SFUSD: San Francisco UniCed School District

The Recreation, Culture and Education Service Area encompasses much of what makes San Francisco a rich and vibrant city. San Francisco's park system has more green space than any other municipality in the United States. Dog play spaces, golf courses, urban trails, natural areas, and urban agriculture are all part of the City's recreational portfolio. Our Main Library and 27 branch libraries provide free and equal access to information as well as diverse literary and educational programs. Our City museums—the Asian Art Museum, de Young Museum, Legion of Honor, and Academy of Sciences—showcase wide-ranging exhibitions and complement the City's own civic art collection of over 4,000 objects and monuments. An essential part of the City's social and cultural fabric is our student body; each year San Francisco UniČed School District serves 57,000 students, and City College of San Francisco serves 35,000 full-time equivalent students. These San Francisco institutions honor the City's cultural histories while embracing the promise of the future.

Overview

San Francisco's recreational, cultural, and educational resources drive our quality of life and underlie our shared experience as a city. Keeping these institutions in a state of good repair is a priority. Within each subsection of this chapter, projects are discussed in the following order: Parks (REC), Cultural Facilities (AAM, ARTS, FAM, SCI, WAR), and Educational Institutions (LIB, CCSF, SFUSD).

Parks

In June 2016 the voters of San Francisco approved Proposition B, a set-aside of the City's General Fund for the Recreation and Parks Department to fund ongoing and onetime capital needs. These General Fund dollars complement the voterapproved Neighborhood Parks and Open Space General Obligation Bonds program, passed in 2008 and 2012 and anticipated to continue in this Plan. Park facilities are also supported by the Open Space Fund, a property tax earmark approved by voters in 2000. With these resources, the Recreation and Parks Department aims to continue making

progress against the department's substantial deferred maintenance needs and to address increasing demands on the system due to population growth.

The Recreation and Parks Department recently set out to update its calculation of deferred maintenance through the use of a new asset lifecycle management tool. The new system will replace COMET, which has not been updated in several years. This year, the Recreation and Parks Department has prepared its Örst annual Öve-year capital plan to address the development, renovation, replacement, and maintenance of capital assets, as well as the acquisition of real property. This annual capital plan is a requirement of Proposition B and includes an equity analysis using Recreation and Parks Commission-adopted metrics.

Cultural Facilities

With some of the oldest and some of the newest construction in the City's capital portfolio, San Francisco's cultural institutions present a wide range of needs. From repairing the roofs of the Legion of Honor and Opera House, to protecting the deYoung and Academy of Sciences against the foggy conditions in Golden Gate Park, to restoring the publicly held Civic Art Collection, the City's arts agencies have distinct capital priorities.

Educational Institutions

Having recently completed the \$196 million Branch Library Improvement Program, the San Francisco Public Library is in the process of planning the renovation of three outstanding branches. The Library's mission is evolving as access to technology and the provision of services take on a greater role in providing services to the public. The City is committed to serving local communities' needs into the future and continues to program our spaces accordingly.

Although City College of San Francisco (CCSF) and the San Francisco UniŌed District (SFUSD) do not fall within the City's administrative purview, descriptions of their capital priorities are included here to provide a comprehensive look at the infrastructure needs in this Service Area.

Renewal Program

The overall renewal needs for the City's Recreation, Culture, and Education facilities total \$696 million over the next 10 years. Given funding constraints, the Plan allocates \$295 million from the General Fund to meet these needs, as shown in Chart 11.1.

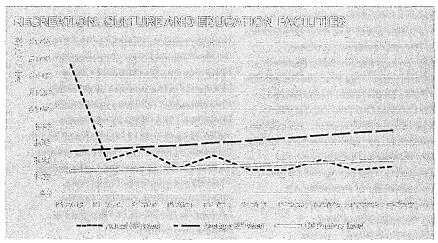

CHART 11.1

Priority parks renewal needs in this service area include pathway improvements, court resurfacing, and play Öeld improvements. The Arts Commission recently completed a needs assessment showing signiÖcant renewal needs related to the Civic Art Collection.

RooŌng and masonry projects at the Legion of Honor and the War Memorial Opera House also represent signiŌcant needs. Mechanical and electrical components in the Steinhart Aquarium require replacement at the California Academy of Sciences.

Not included in the renewal curve are the needs for CCSF and SFUSD. CCSF's facilities data shows a current capital renewal need of \$524 million and a deferred maintenance backlog of \$18 million. Planned CCSF renewal projects include utility infrastructure replacement, boiler and roof repairs, and district-wide asphalt, concrete, and painting projects. SFUSD has a Öve-year plan to estimate deferred maintenance needs. With less state funding available for deferred maintenance, such projects are being funded through G.O. bonds. Needs that must be addressed before bond proceeds become available include repairs to roo Ong, boilers, HVAC and electrical systems, Ōre alarms and suppression systems, plumbing, and aging modular building replacement. Funding sources for SFUSD deferred maintenance are expected to remain limited for the duration of this Capital Plan.

Project Name	Description
REC - ADA Improvements to Parks Facilities	This program includes disabled access improvements to speciŌc sites and facilities as cited for ADA complaints and barrier removals. SpeciŌc types of corrections include toilet and shower alterations, walkway and pathway paving to compliant accessible slopes, ramp and stair handrails and provision of accessible parking.
	The planned funding for this program is \$600,000 per year from the REC set-aside within the General Fund.
REC – Bond-Funded Neighborhood Parks and Open Space Program	The Neighborhood Parks and Open Space G.O. Bond Program funds park system modernization, increases in open space, improvement of geographic equity, and other long-standing capital needs. Examples of priority needs include those at India Basin, Gene Friend Recreation Center, Kezar Pavilion, Mission Recreation Center, Crocker Amazon Clubhouse, and Portsmouth Square.
	The next Neighborhood Parks and Open Space G.O. Bonds are planned for 2019 and 2025 elections, slated at a projected \$185 million each, and at least \$150 million from each of those bonds is expected to go toward this program. REC has a number of substantial obligations remaining in its capital portfolio. Addressing these needs will require a multi-bond investment at currently anticipated levels and would bene to from an extended planning horizon.
REC – Citywide Programs and Park Improvements	This program addresses a broad range of citywide needs related to the Recreation and Parks system, including redesigning 13 failing playgrounds, improving trails and open space at citywide parks, addressing forestry needs, water conservation, and the continuation of the successful Community Opportunity Fund Program, which allows residents and advocates to initiate improvements in their parks.
	This program, including the six highest-priority playgrounds, is estimated to cost \$33 million and it is funded by the 20 12 Neighborhood Parks and Open Space G.O. Bond. REC is working with the SF Parks Alliance to raise funds for the remaining playgrounds.
REC – Angelo J. Rossi Pool Renovation Project	This project includes renovation of the pool, pool building, and maintenance storage facility, as well as improved park accessibility. Work will begin on this project once the renovation at Balboa Pool is complete.
	The estimated cost for this project is \$8.2 million, and it is funded by the 2012 Neighborhood Parks and Open Space G.O. Bond.
REC – Coastal Trail Project	As part of the South Ocean Beach Plan, the Coastal Trail Project is an initiative to create a new multi-use trail between Sloat Avenue and Skyline Boulevard. The project is being implemented in conjunction with the Great Highway narrowing project taking place in the same location. Project planning will take place throughout 2017.
	The estimated cost for this project is \$2 million, and it is funded by the Federal FLAP grant, Prop K, SPUR, and the General Fund.
REC GarŌeld Pool Improvement Project	This project includes the renovation of the pool, pool building, reconÖguration of park indoor facilities, and improved park accessibility at GarÖeld Square. Work will begin on this project once the ongoing renovation at Balboa Pool is complete.
	The estimated cost for this project is \$11 million, and it is funded by the 2012 Neighborhood Parks and Open Space G.O. Bond and Impact Fees.
REC – George Christopher Playground Improvement	This project includes improvements to the children's play area, exterior clubhouse restrooms, and park access. Construction is projected to begin in 2017 with expected completion in 2018.
	The estimated cost for this project is \$2.8 million, and it is funded by the 2012 Neighborhood Parks and Open Space G.O. Bond.

Project Name	Description
REC – Margaret S. Hayward Playground Improvement Project	Margaret S. Hayward Park, covers an area of 265,000 square feet and is located at the corner of Turk and Gough Streets. This project includes renovation and consolidation of park structures including recreational buildings, storage and restrooms, improving park access and replacement of sport courts, play Čelds, play areas, and related amenities. The project entered the design phase in 2016 and is expected to open to the public in 2018.
	The estimated cost for this project is \$14 million, funded by the 2012 Neighborhood Parks and Open Space G.O. Bond and Impact Fees.
REC - Potrero Hill Recreation Center Improvement Project	Potrero Hill Recreation Center is a 455,000 square foot facility that includes play Celds, tennis courts, a dog play area, playground and recreation center. This project includes replacement and renovation of natural turf play Celds and the dog play area, as well as improvement of site lighting.
	The estimated cost for this project is \$4.2 million, and it is funded by the 2012 Neighborhood Parks and Open Space G.O. Bond and Impact Fees.
REC – Turk and Hyde Mini Park Improvement	This park, located at 201 Hyde Street and covering 6,500 square feet, has a children's play area, landscaping, and related amenities. This project includes renovation of the children's play area, landscaping and related amenities, as well as addressing site accessibility.
	The estimated cost for this project is \$1.7 million, and it is funded by the 2012 Neighborhood Parks and Open Space G.O. Bond and the General Fund.
ARTS – ADA Barrier Removal at Cultural Facilities	The project is part of the City and County of San Francisco's ADA UPhAS Transition Plan to meet the requirements of the Americans with Disabilities Act per 28 CFR Part 35 of Title II. Forthcoming work on the project includes ADA disability access improvements at the SOMArts Center (Phase 2 ADA Renewals), rounding out previous barrier removal work at the African-American Arts Cultural Center (Phase 2 ADA Renewals) and the Mission Cultural Arts Center (Phase 1 ADA Renewals).
	The total project budget for cultural centers barrier removal is \$1.5 million; \$600,000 in General Fund was appropriated previously, and \$900,000 is anticipated in FY2018.
LIB – Branch Improvement's at Chinatown and Mission Branch Libraries	Chinatown and Mission branch libraries are the next branch libraries slated for renovation. Initial project funding will cover planning and pre-development costs, including a community engagement process. Branch renovations are anticipated to address community needs, expand teen space, revamp program rooms, actualize innovations in service delivery and collections management, and include ADA improvements, preservation or restoration of historic features, and energy efficiency work. The initial phase is expected to begin in FY2018, with construction expected in FY2020.
	The total estimated cost for this project is \$27 million, funded by the Library Preservation Fund.
LIB — Main Library Improvements	This project will optimize space usage at the Main Library based on changing business needs. This will include the implementation of additional materials sorting equipment on the lower level to improve efficiencies and reduce repetitive motion work associated with manual materials sorting.
	The estimated project cost is \$1.5 million, and it will be funded by the Library Preservation Fund over three years, starting in FY2019.
LIB – Support Services Facility Tenant Improvements	The Library's Support Services Facility at 190 Ninth Street was originally purchased in 2004, and included all furnishings. Tenant improvements are geared toward capturing underutilized space and creating more space for additional stafong capacity, staff training services and staff programming. Tenant improvements will also create energy efociencies, improve library collections receipt and processing, expand storage capacity, and make ergonomic upgrades for staff.
	The estimated project cost is \$1.5 million, and it will be funded by the Library Preservation Fund over three years, starting in FY2021.

Project Name	Description	
CCSF-750 Eddy Street Seismic and Code Upgrades	This project will bring structural integrity into current building code conformance. Concurrently, upgrades will be made to mechanical, plumbing, electrical, communication, building envelope, interior walls, 80 cors and ceilings as required by code and to facilitate seismic enhancements. Plans and speci©cations will be developed in FY20 18; permitting through the Division of the State Architect is anticipated o occur in the Crst half of FY20 19. Construction procurement is anticipated in the second half of FY20 19. Construction is anticipated to ake 18 months.	
	The budget for this project is \$11 million and will be funded out of the California Chancellor's Of Ōce Capital Outlay Program.	
CCSF - Classroom	This project will continue ongoing efforts to provide state-of-the-art instructional technology in classrooms across the district,	
Technology Enhancements	The budget for this project is \$1.7 million, funded out of the California Chancellor's OfČee Physical Plant and Instruction Support Program, as well as an Adult Education Block Grant.	
CCSF - Downtown Center	This project will provide needed additional classrooms on the Ötth öoor of the Downtown Center.	
Fifth Floor Renovation	The budget for this project is \$1 million dollars, funded out of the California Chancellor's Ofoce Physical Plant and Instructional Support Program.	
CCSF – Way Önding and Compliance and Signage Upgrades (All Locations)	This project will provide upgraded signage at all District locations as needed for enhanced way Onding. It also includes enhanced signage related to parking, trafOc, and smoking compliance.	
	The project budget is \$100,000, funded out of the California Chancellor's Of Čce Physical Plant and Instructional Support Program.	
SFUSD – Various Modernization, Expansion, and Seismic Improvement Projects	The SFUSD has several long-standing seismic de©ciencies and deferred maintenance needs. In addition, current demographic projections anticipate that SFUSD enrollment will grow by between 6,000 and 12,000 new students over the next 15 years, and this growth will require the expansion of current schools, and the possible construction of new schools as well. Also, the SFUSD plans to continue making improvements in building ef centry, green building technologies, and the use of renewable and sustainable resources, as well as providing a modern environment to accommodate the latest thinking education.	
	This wide range of projects will be funded primarily by the recently-approved \$744 million 2016 SFUSD G.O. Bond, and a planned \$513 million G.O. Bond in FY2022. Other funding sources may include state grants, impact fees, and other local sources.	

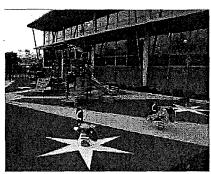

Deferred Projects

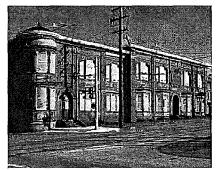

Project Name	Description
REC – Recreation and Park Roads	REC has no funding capacity to maintain roadways and tries to collaborate with other departments to identify funding opportunities that can go towards this need. For example, REC is working with the SFMTA on the Mansell Corridor within McLaren Park.
	The estimated roadways backlog is approximately \$19 million.
ARTS – Cultural Centers Facility Master Plan	Though the ADA Transition plan funded accessibility improvements at the City's cultural centers, building deciencies and seismic issues remain. The severity of these facility needs, the cost of renovating the existing sites, and the possibility of relocating to other sites required additional review and analysis.
	This assessment is estimated to cost \$500,000.
CCSF - Districtwide Projects	CCSF has identiÕed several projects that have been deferred due to lack of funding: the Seismic Upgrade of Cloud Hall at Ocean Campus Renovation of the Science Building and the Theater/Arts Building at Ocean Campus; Construction of a Performing Arts Education Center Modernization of the Downtown Center and the Evans Center; and an Addition to the John Adams Center.
	The total budget for CCSF's deferred projects is \$450 million.
SFUSD - Ruth Asawa School of the	The Ruth Asawa School of the Arts project at the historic 135 Van Ness Avenue location is currently deferred due to lack of funds.
Arts at 135 Van Ness	Of the \$295 million 2003 SFUSD G.O. Bond, \$15 million has been reserved for this project, but further fundraising is needed.

Noe Valley Branch Library

Hamilton Recreation Center and Pool

Geneva Car Barn

Project Name	Description
REC – 900 Innes Park	Located in the Bayview-Hunters Point neighborhood of San Francisco, the 900 Innes property was acquired in 2014 for three million dollars. The 900 Innes Park Planning Project presents a unique opportunity to unite the historic boatyard of 900 Innes and the underutilized India Basin Shoreline Park into one park, to complete 1.5 miles of accessible shoreline linking to the Bay Trail and the Blue Greenway, and to foster better neighborhood accessibility to the water. This project will give the community eight acres of waterfront open space.
REC – Camp Mather Master Plan	Located near Yosemite National Park, Camp Mather is a family camp covering 337 acres, and includes a pool, lake, tennis and basketball courts, staff housing dormitories, kitchen and dining hall, and over 100 rustic camps that serve as guest accommodations. This revenue-generating site is heavily used and a long neglected resource. Signicant improvements are needed to existing structures, including a modern wastewater treatment facility to meet current environmental standards. A Master Plan, including environmental review, would help guide the improvements needed.
REC – Civic Center Plaza Modernization	This modernization would involve development of a conceptual plan and environmental review to modernize Civic Center Plaza as part of the Civic Center Commons initiative and the Civic Center Public Realm Plan.
REC – Geneva Car Barn Enhancement	The Geneva Car Barn Enhancement Project includes renovation of the Powerhouse and Car Barn. This project will include a seismic upgrade, installation of modern utility systems, restoration of historic features, hazardous materials remediation, and new circulation systems to accommodate ADA access. Additional improvements for the Powerhouse include streetscape improvements, improved entrances, new roof, restored windows, mechanical and electrical systems upgrades, new ōoors, and radiant heating. The renovated Car Barn will comprise over 20,000 square feet and include space for new art studios, a cafe, an event space, a theater, a community meeting room, a student lounge and visitor-serving retail space.
REC – Golf Course Improvements	SigniCcant facility upgrades are needed at the City's golf courses. The Lincoln Park golf course needs netting along Clement Street, a new or refurbished clubhouse, a new perimeter fence and a rehab of the entire course. Most other courses within the City, including Sharp Park also require substantial upgrades, with the exception of Harding Park, which was recently updated.
REC – Japantown Peace Plaza Surface Improvements	Resurfacing is needed at Japantown Peace Plaza to improve plaza surface and remove water intrusion from the subsurface garage.
REC – Kezar Pavilion Seismic Upgrades	Based on an engineering study, Kezar Pavilion has signi@ant seismic de@iencies causing safety concerns for staff and public use.
REC – Marina Yacht Harbor Renovation	Renovation is needed at the Marina Yacht Harbor, on both the waterside and landside. Waterside marina renovations would include installation of a new breakwater, removal of existing breakwater structures, reconstruction of portions of the riprap slopes, replacement and recon of guration of the obtaing docks and slips and maintenance dredging. Landside improvements would include renovation of the existing harbor of oce into restrooms, adaptation of the degaussing station into a new harbor of oce, and parking and landscape improvements.
REC – McLaren Lodge Seismic and Code Upgrades	John McLaren Lodge, situated at the entrance to Golden Gate Park, requires seismic improvements including improvements to the newer annex (a two-story administrative building directly behind the Lodge), the breezeway which connects both buildings, and an ADA-compliant elevator.

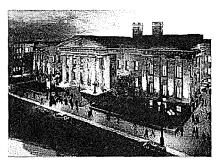

Project Name	Description
REC – Neighborhood Parks - Recreation Centers	Recreation centers, including Potrero, Mission, Gene Friend / SoMa and St. Mary's Recreation Centers, are in need of renovation for seismic safety, upgraded access, replacement of failing structures, systems, and play features.
REC – New Park Acquisitions and Capital Development Needs	REC recently acquired property at Francisco Reservoir and Schlage Lock, and is in the process of acquiring the 11th Street Properties located in western SoMa. Planning and design is expected to begin in 2017, with construction slated for 2024, but funding needs remain.
REC - Park Concessions	REC has several revenue generating properties that are in need of capital improvements. Without needed renovations, the operations and revenue generation at these sites may be jeopardized. In addition, REC is interested in re-purposing existing structures so that they can have a dual purpose that includes the provision of park-serving amenities.
REC – Regional Park Improvements	This project would renovate and improve park features at Golden Gate Park, McLaren Park and Lake Merced, including restoration of natural features and recreational assets, as well as improving connectivity and access. The 2012 Neighborhood Parks and Open Space GO. Bond funds some of the needs at these parks, but aging infrastructure, roadways and water features will require other funding sources.
REC – Sharp Park Wetland Restoration	This project would improve the habitat for special status species, such as California Red Legged Frogs and San Francisco Garter Snakes, at the Laguna Salada Wetland Complex, by creating an additional 19 acres of habitat and re-establishing the connection with Mori Point.
REC – Twin Peaks Figure 8 Redesign	A planning effort is underway to evaluate design options for the portion of the Twin Peaks roadway adjacent to, and between, the two peaks and the Christmas Tree point parking entrance. The objectives of this project are to create safer connections to Twin Peaks Trail System, improve pedestrian and bicycle access, and provide a deonection to the Bay Area Ridge Trail. Funding for the current phase is provided by a Priority Conservation Area grant, Proposition K Transportation Improvement funds, and the 2008 Clean and Safe Neighborhood Parks G.O. Bond, but additional funding is needed.
REC - Water Conservation Program	Despite successful water conservation and irrigation upgrade projects at Balboa Park, Jefferson Square, Alta Plaza, and Moscone Playground, there still remains a substantial need to bring all of the City's parks up to the modern standard for water conservation.
REC – Zoo Improvements	The Zoo is currently undergoing a Master Planning process to analyze current capital needs. While the western side of the Zoo has seen signionant improvements in recent years, there are many structures that still need repair, including the Mothers Building. Approximately \$400,000 in funding was idention for the Mothers Building in the current budget; however, an outstanding need remains. On the eastern side of the Zoo, substantial work is needed to renovate the lion house and bear grottoes along with the other original structures from the 1920s and 30s.
AAM — Asian Art Museum Transformation Project	The Asian Art Museum is in the early phases of planning a set of changes that will add signicant space for major exhibitions, expand and modernize classrooms, and re-contextualize permanent collection galleries. This project will feature a 12,000 square foot pavilion — a large space capable of supporting the dynamic and large-format artworks commonplace in exhibitions today. The pavilion will sit atop an existing wing on the Hyde Street elevation, and add about 9,000 square feet of gallery space to the Crist Foor. The classrooms, which currently serve around 35,000 students per year, will be expanded and updated with state of the art audiovisual systems. This project will be fully funded by private donations from the Asian Art Museum Foundation.
ARTS – Renovation of the City's Cultural Centers	If the City is able to fund the Cultural Centers Facility Master Plan, this project will address the needs that are identiÕed.

Project Name	Description
OEWD – Old Mint Restoration Project .	Cost estimates for the completion of the Old Mint Restoration Project — the City's effort to transform the landmark United States Old Mint building into a new, destination cultural facility — are approximately \$100 million. A more complete and detailed Önancing plan will be developed through the Phase I evaluation period, presently underway, but this total project cost will be met with a mix of local, state, and federal funding sources. As currently developed, the proposed Community BeneČts Package from the City's Central SoMa Plan includes a major investment in the Mint's restoration. This local funding, generated from assessments of the plan area's Community BeneČts District, will be leveraged to raise additional public and private support. Additionally, the Phase I assessment will examine the use of Historic Preservation Tax Credits and General Fund debt Önancing tools to complete the project's funding. Developed in collaboration with the California Historical Society, the City's of Cial partner on the project, the Phase I evaluation will also produce a campaign feasibility analysis exploring the market for private and philanthropic participation in the project.
LIB – Branch Improvements at Ocean View branch library	After the Chinatown and Mission branch library renovations, the Ocean View branch library would be the Önal branch renovation project. Initial project funding will cover planning and pre-development costs, including a community engagement process.
LIB – Satellite Library Locations	As the City population continues to grow, and new developments such as Treasure Island and Candlestick Point are completed, the Library will consider the creation of satellite locations to meet the needs of the growing communities. Potential future library facilities could include a E-Library Center, which would provide the public with increased access to technology for the purpose of enhancing job skill sets and developing technology literacy.
LIB - Branch Community Rooms	There are currently 19 community rooms in the branch library system available for public use. The Library will begin to explore the addition of community rooms at other branch locations based on the community's need and the availability of space.
CCSF - Facilities Master Plan	City College is in the process of developing a new Facilities Master Plan to guide facilities development in the coming ten-year period. This Plan is anticipated to be adopted by the College's governing Board in Spring 2017. Following adoption of the Plan, City College will act as the lead agency for environmental review compliance in conformance with California Environmental Quality Act (CEQA) requirements. Emerging needs identiŌed will be included in future updates of the Capital Plan.

12. TRANSPORTATION

SFMTA: San Francisco Municipal Transportation Agency

SFO: San Francisco International Airport

SFCTA: San Francisco County Transit Authority Caltrain: Peninsula Corridor Joint Powers Board

TJPA: Transbay Joint Powers Authority

With San Francisco's population and economy growing, the local transportation infrastructure has never been more important to the city's well-being. Without smooth operations and adequate capacity, residents, workers, and visitors would be unable to access jobs, schools, or the cultural institutions that make San Francisco special. Transportation is also a driver of regional and national competitiveness, allowing San Francisco to maintain our status as a global leader of innovation and a renowned destination for tourism. For decades, San Francisco has cultivated a reputation for economic vitality, unique cultural offerings, and a progressive spirit. It is critical that San Francisco take care of our transportation needs so that the city remains accessible and livable for generations to come. The myriad transportation offerings that run to and through San Francisco connect neighborhoods and ensure that the city is accessible to locals, commuters, and travelers alike. This chapter describes projects and programs that will improve San Francisco's transportation network over the next 10 years.

Overview

San Francisco sits at the center of the Bay Area, both geographically and economically. To support our residents, workers, and visitors, the City must maintain a vast system of transportation infrastructure ranging from crosstown buses and Muni trains to the San Francisco International Airport, one of the busiest in the United States. Regional transportation assets like BART and Caltrain also run through the city, connecting San Francisco to the surrounding counties.

San Francisco is currently in the midst of implementing several major initiatives that will improve its transportation system. From the Transbay Transit Center downtown, Bus Rapid Transit lines on major thoroughfares, and terminal expansions at the Airport, San Francisco is adding capacity that will dramatically improve mobility for residents. The projects being pursued will expand the City's transit network and provide beneŌts for generations to come.

Muni Lightrail Vehicle

San Francisco Municipal Transportation Agency

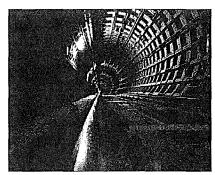

The San Francisco Municipal
Transportation Agency manages all
City-owned ground transportation
infrastructure in the city. Related
operations include running the San
Francisco Municipal Railway (Muni),
managing parking and traf Cc, facilitating
bicycling and walking, regulating taxis,
and planning and implementing strategic
community-based projects to improve
the transportation network and prepare
for the future.

SFO International Terminal

The SFMTA has a number of short-term and long-term processes in place to identify and prioritize its capital projects. Once every two years the SFMTA develops its own Öscally unconstrained Capital Plan, last published in 2015, to identify needs for projects and programs over the next 20 years. This Capital Plan is overseen by the Transportation Capital Committee, which is comprised of representatives from all the agency's functional divisions. This identiČes the agency's capital investment needs and establishes priority investments.

Over the next 10 years, the SFMTA's total capital need is \$6.1 billion.

Muni Metro Tunnel

This document summarizes SFMTA's capital needs at a high level. For a detailed description of SFMTA's capital projects, please see the SFMTA's published plans at https://www.sfmta.com/about-sfmta/reports.

San Francisco International Airport

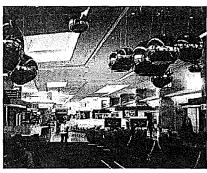

Owned by the City and County of San Francisco, and located within unincorporated San Mateo County, the San Francisco International Airport (SFO) manages a large and diverse infrastructure portfolio that includes four runways, 91 operational gates, and four terminals that total 4.4 million

SFO Terminal 3 East

square feet. It also oversees 32 miles of roadways, Ōve parking garages, the AirTrain transit system, a rental car facility, leased cargo and maintenance facilities, a waste treatment plant, and more than 274 miles of pipelines, ducts, power, and pump stations for water, sewage, storm drainage, industrial waste, and gas, in addition to electrical, and telecommunications distribution systems.

To help manage its assets, the Airport maintains a Ōve-year and a 10-year Capital Plan, which is generally updated annually. A major objective of Airport's current Capital Plan is to meet increased infrastructure demands driven by

SFO Terminal 3, Gate Area

historic levels of passenger growth. In FY20 16 the Airport continued its long run of passenger growth, reaching a record 51.4 million passengers – a seven percent increase over the prior year and a 56% increase since FY2007.

The Airport's Capital Plan identiŌes \$5.7 billion in need over the next Ōve years, and \$6.1 billion over the next 10 years. This chapter contains a high level summary of the Airport's capital needs. For a more in-depth description of the Airport's capital projects, please see the Ōve-year and 10-year Capital Plans published on the Airport's website: http://www.ōysfo.com/about-sfo.

San Francisco County Transportation Authority

The San Francisco County
Transportation Authority (SFCTA) is the sub-regional transportation planning and programming agency for the City.
The SFCTA is responsible for the City's long-range transportation planning, coordinating with federal, state, and other local transportation agencies. In this capacity SFCTA helps to plan, fund, and deliver improvements for San Francisco's roadway and public transportation networks.

In early 2017, the SFCTA will adopt a minor update of the 2013 San Francisco Transportation Plan (SFTP), the long-range countywide transportation plan. The SFTP evaluates existing needs and growth trends to develop updated transportation sector policies, strategies, and investment priorities for sustainable growth.

The full SFTP can be found at www.sfcta.org.

Connect SF (http://connectsf.org/) is a multi-agency collaboration process that builds on the SFTP and other local planning efforts to develop an effective, equitable, and sustainable transportation system for our future. It will develop a long-range vision that will guide plans for the City and our transportation system.

Peninsula Corridor Joint Powers Board (Caltrain)

San Francisco, along with San Mateo and Santa Clara counties, is a representative member of the Peninsula Corridor Joint Powers Board (JPB), which operates and maintains Caltrain, one of the oldest commuter rail services in Northern California, Caltrain provides peak and offpeak connections along the Peninsula rail corridor between San Francisco and Gilroy. Per the 1996 Joint Powers Agreement, funding for system-wide capital improvements are shared equally among the three member counties, while local improvements are, in general, borne by the county in which the improvements are located.

The total estimated cost for the 10year JPB Capital Improvement Program is \$3.3 billion, as projected in its most recent Short Range Transit Plan, covering FY2015 through FY2024. This includes basic maintenance, renewal costs, and major enhancements. An example of such enhancements are the conversion to an electriŌed system and installation of a federally mandated Positive Train Control system.

The Short Range Transit Plan can be found at www.caltrain.com.

Transbay Joint Powers Authority

The Transbay Joint Powers Authority (TJPA) was created to manage all matters concerning the Onancing, design, development, construction, and operation of the Transbay Program, including the Transbay Transit Center. The Transbay Transit Center will help unify a fractured regional transportation network by connecting eight Bay Area counties and the State of California through 11 transit systems: AC Transit, BART, Caltrain, Golden Gate Transit, Greyhound, Muni, Sam Trans, West CAT Lynx, Amtrak, Paratransit, and the future California High-Speed Rail. The Program's total capital cost is estimated at approximately \$6.2 billion. It is funded through a mix of local, regional, state and federal funds.

A related project overseen by the City's OfŌce of Community Investment and Infrastructure will create a new mixeduse transit-oriented neighborhood surrounding the new Transit Center. For more information on Transbay neighborhood development, please refer to the OfŌce of Community Infrastructure and Investment Section within the Economic and Neighborhood Development Chapter of this Plan.

Bay Area Rapid Transit

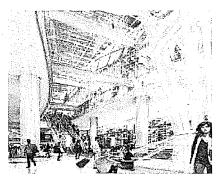

Since its opening in 1972, Bay Area Rapid Transit (BART) has become essential to the mobility, economy, and livability of the Bay Area for riders and non-riders alike. BART currently carries 440,000 passengers on a typical weekday. Forecasts suggest that demand for BART will increase as the region grows, with 600,000 daily riders projected to use BART by 2040. However, after 44 years of service to the region, BART faces major challenges including aging infrastructure and crowded conditions for riders. Without addressing these issues BART will not be able function effectively, putting the Bay Area's economic vitality and quality of life at stake.

Transbay Transit Center, Rooftop Garden

In November 2016 voters approved Measure RR which authorized BART to issue \$3.5 billion in G.O. Bonds to fund projects throughout its system. The Bond was put to the voters in three counties: San Francisco, Alameda, and Contra Costa. Its projects include replacement of 90 miles of track, renew mechanical infrastructure, repair of tunnels and stations, and many other initiatives that will modernize the BART system. The result of the Bond's program will be shorter wait times, fewer delays, and more comfortable rides for passengers.

Riders to, from, and through San Francisco will beneŌt from overall system improvements. These

Transbay Transit Center Lobby

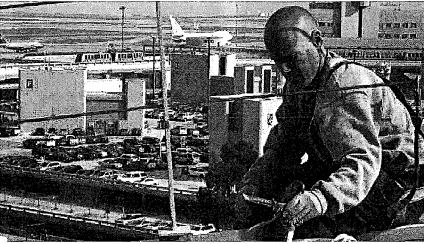

improvements will include repairing water damage in the Market Street tunnels, ADA compliance to improve accessibility, and adding protective canopies to all downtown stations. BART will begin Phase 1 of its Powell Street and Balboa Park modernizations to improve capacity, aesthetics, and security. Balboa Park is also receiving the Eastside Connection Project, which will improve access to the station.

BART's investments in San Francisco will establish its stations as inviting public spaces and provide reliable service to its riders.

Renewal Program

As all of the agencies covered in the Transportation chapter are either enterprise departments or external agencies, there are no General Fund expenditures expected for renewals. SFMTA, SFO, and Caltrain each has its own state of good repair and other various renewal programs, which are described by the agencies here.

Roof Repair at SFO

SFMTA

The SFMTA currently has over \$13.5 billion worth of capital assets, including: bike routes and lanes, trafŌc signals, subway infrastructure, stations, maintenance and operations facilities, taxifacilities, Ōxed guideway track,

overhead wires" and parking garages. SFMTA has been establishing a greater focus of its capital planning efforts into its Asset Management Program, ensuring that current assets receive needed maintenance, rehabilitation, and replacement. Over the next Ōve years, the SFMTA will roll out state of good

repair investments across the transit network totaling \$1.7 billion over this period. Highlights of these investments include:

- Replacement of the entire rubber tire ōeet, including replacement and expansion of the paratransit ōeet;
- Expansion of the Light Rail vehicle ōeet starting in Fall/Winter 2017;
- Rail grinding, track work, and replacement of Automated Train Control Systems (ATCS) to maintain the Öxed guideway system;
- Upgrades to Overhead Catenary Systems, traf Oc signals, and other infrastructure essential to traf Oc and transit operations.

As part of the Vision Zero and Transit First initiatives, SFMTA is replacing and upgrading traf ©c signals, as well as restoring, rehabilitating, and replacing overhead lines, train tracks, subway

elevators and escalators, off-street parking facilities, and revenue vehicle storage and maintenance facilities when necessary. Vision Zero SF is the City's road safety policy that will build safety and livability into our streets, protecting the one million people who move about the City every day. The goals are to create a culture that prioritizes trafÖc safety and to ensure that mistakes on our roadways don't result in serious. injuries or death. The Transit First Policy gives top priority to public transit investments as the centerpiece of the City's transportation policy and adopts street capacity and parking policies to discourage increases in automobile trafÖc.

SFO

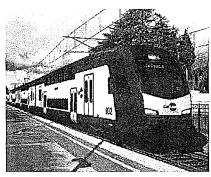

A major objective of the Airport's current Capital Plan is to meet increased infrastructure demands driven by historic levels of passenger growth.

Over the past Öve years, the Airport has been one of the fastest growing airports nationwide. As more passengers visit the Airport, the facilities that support passenger travel must be maintained. The Airport considers renewals to

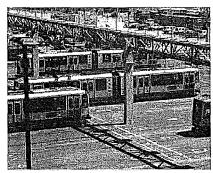

be general repair and replacement of building systems and Ōxtures, such as a roof repair, that do not enhance the value or change the use of an asset. These projects typically have a small scope and are completed in less than a year. These projects are funded through the Airport's annual operating budget, unlike capital improvements which are usually multi-year projects Ōnanced with capital funds. The Airport expects the cost of its renewal program to be approximately \$214 million through FY2027.

Caltrain

Pursuant to the Joint Powers
Agreement, each member County of
the JPB has been contributing a onethird share towards Caltrain's local
match for its capital projects that are
designed to maintain Caltrain assets in a
state of good repair. Examples of these
projects include replacement of track
structures, overhaul to rail vehicles,
station rehabilitation, and signal and
communication rehabilitation. The total
cost of Caltrain's State of Good Repair
program is \$335 million.

Caltrain

MTA Rail Yard

Project Name	Description
SFMTA – Central Subway	The SFMTA's most prominent enhancement project is the Central Subway, a 1.7 mile extension of the existing Third Street light rail line to Chinatown that will vastly improve transportation to and from some of the city's busiest, most densely populated areas. This transformational project will provide direct connections to major retail, sporting, and cultural venues while efciently transporting people to jobs, educational opportunities, and other amenities. With stops in South of Market (50Ma), Yerba Buena, Union Square, and Chinatown, the Central Subway will vastly improve transit options for the residents of these neighborhoods.
	The cost of this project is approximately \$1.6 billion and is expected to begin service in 2019.
SFMTA – Communications & IT infrastructure	The SFMTA maintains a wide array of IT assets across the city, from Wi-Fi and telephone systems at SFMTA worksites to the Öber network that provides the internal communication backbone of the Muni Metro system. Projects planned for the next Öve years include procuring new Muni Metro subway blue light (emergency response) phones, pre-planning for a new time clock project to improve operational ef Öciency, and replacing antiquated radio communications systems.
	The expected cost of SFMTA's communications & IT Infrastructure projects through FY2027 is approximately \$6.6 million.
SFMTA - Facilities	The facilities program at SFMTA supports the modernization and expansion of outdated facilities to make them safe and ef Ceient, as well as acquiring new facilities to accommodate Seet growth. Over the next Ove years, the Agency will carry out projects to make sure that all SFMTA employees experience a safe, comfortable, and ef Ceient working environment.
	The SFMTA will spend \$191 million through FY2027 to upgrade its facilities.
SFMTA – Fixed Transit Guideway	Muni's Öxed guideway systems, which include light rail, trolley coach, streetcar, and historic cable car lines, are a crucial component of San Francisco's transportation infrastructure. Key Öxed guideway projects planned for the next Öve years include the Muni Metro Twin Peaks Tunnel track replacement, rail signal upgrades at priority locations like Saint Francis Circle and San Jose Avenue, and projects addressing train control throughout the Muni Metro system.
	The cost of the Öxed transit guideway program is \$395 million through FY2027.
SFMTA – Fleet Capital Program	The öeet capital program is planning enhancement projects include the expansion of the light rail vehicle, motor and trolley coach, as well as improvements to the radio communication system within the communications and IT capital program, and improving maintenance facilities that support Muni öeet in the Facility capital program.
	SFMTA plans to spend approximately \$1.8 billion on its öeet through FY2027.
SFMTA – Parking	The SFMTA parking program supports the planning, design, rehabilitation and construction of public parking garages, as well as street infrastructure and facilities related to public parking. Some of the parking projects over the next Öve years include the rehabilitation and equipment upgrades of key parking structures such as Civic Center Plaza, Golden Gateway, Japan Center, Moscone Center, Performing Arts Center, Union Square, and neighborhood garages in North Beach.
	The cost for these parking rehabilitation projects through FY2027 is \$30 million.
SFMTA – Security	SFMTA security program funds are used to plan, design, and implement security initiatives in case of a natural disaster, terrorist attack, or other emergency situations. Some of the security projects planned for the next Öve years include investments in the physical security of subway systems, revenue-öeet maintenance, and storage facilities, as well as threats and vulnerabilities countermeasures. The security program also provides security and emergency preparedness training for frontline transit employees.
	The security program at SFMTA will cost \$19 million through FY2027.

Project Name	Description
SFMTA – Streets Program	San Francisco is a national leader in complete, streets design that accommodates all transportation modes and prioritizes safety for vulnerable users. The SFMTA is implementing enhancement projects that make walking and bicycling safer in the City thereby supporting the Vision Zero goal of eliminating trafc deaths.
	The cost of the SFMTA's streets program through FY2027 is \$535 million.
SFMTA – Taxi	The SFMTA taxi program strives to make comfortable, efÖcient, and environmentally friendly taxis available throughout the city. Program funds are used to plan, design, and implement improvements to the taxi system and to provide a better customer experience for all taxi users. Current projects include continued incentive programs for "green" taxi technology such as electronic taxi hailing, a taxi Clean Air Energy Rebate, and an electric vehicle charging network.
	The SFMTA taxi program will cost four million dollars through FY2027.
SFMTA – TrafÖc and Signals	The traf©c and signals program provides funding for upgrading, replacing and constructing new traf©c signals and signal infrastructure. The SFMTA is replacing outdated signals with Intelligent Transportation Systems (ITS) tools to enhance traf©c analysis, provide transit signal priority, and expedite maintenance procedures. ITS tools include advanced traf©c signal controllers, traf©c cameras, video detection, variable message signs, and a communications network. This program also funds the design and construction of new and upgraded traf©c signals to improve safety and help the city reach its Vision Zero goal of eliminating all traf©c fatalities and severe injuries by 2024.
	The cost of the traf $\bar{\mathbb{C}}$ and signals program is \$119 million through FY2027.
SFMTA – Transit Optimization and Expansion	The transit optimization and expansion program is a series of projects which will make Muni more efficient, reliable, safe, and comfortable for its existing 700,000 daily passengers – as well as to prepare the system for future growth. Included in this program is Muni Forward, an initiative designed to enhance service on certain bus and light rail lines. These projects address the root causes of delay and passenger frustration like trafcc congestion, stops that are spaced too close together, narrow travel lanes, and slow boarding times. The Van Ness Bus Rapid Transit (BRT), discussed as part of the SFCTA Enhancements, is part of this program and now in the implementation phase, led by SFMTA.
	The cost of SFMTA's transit optimization and expansion program is \$1 billion through FY2027.
SFO - Air Öeld Enhancements	Major air Čeld-related projects include taxiway improvement projects, runway overlays, and apron reconstruction projects.
	SFO is planning to spend over \$161 million on AirŌeld Enhancements in the next 10 years.
SFO-Airport Support Projects	Major airport support projects include security infrastructure improvements, various technology improvement projects, renovation of the Superbay Hangar, construction of the Črst phase of the Consolidated Administrative Campus, the Airport Shoreline Protection program, and the demolition of the Airport's existing air traf Co control tower.
	SFO plans to spend nearly \$480 million on Airport Support projects in the next 10 years.
SFO – Groundside Projects	The largest groundside project is the construction of a new Airport-owned hotel. In September 2015 the Airport Commission awarded a Hotel Management Agreement to Hyatt Corporation and authorized the issuance of debt to Onance the development and construction of the on-Airport hotel and related AirTrain station. Other major groundside projects include the development of a new consolidated rental car facility and conversion of the existing rental car facility for public parking use, a new long-term parking garage, and the extension of the AirTrain system to the new long-term parking garage.
	The estimated cost of SFO's Groundside projects is \$1.1 billion over the next 10 years.

Project Name	Description
SFO – Terminal Redevelopment	The largest terminal projects are the redevelopment of Terminal 1 and the renovation and recon Oguration of the western side of Terminal 3. The planned Terminal 1 renovations include additional gates in Boarding Area B, seismic and building systems improvements, construction of a new baggage handling system, renovation of the central and southern portions of the departures hall, and construction of a post-security passenger connector from Terminal 1 to the International Terminal. The recon Oguration and renovation of the western side of Terminal 3 focuses on increasing gate ōexibility, improving seismic stability, upgrading building and baggage handling systems, improving passenger ōow, and enhancing passenger amenities.
•	SFO plans to spend approximately \$2.5 billion on its Terminal Redevelopment projects over the next 10 years.
SFO – Utilities Enhancements	Major utilities-related projects include waste water system improvements, water system improvements, power and lighting improvements, and the installation of an energy management control system.
	In the next 10 years SFO estimates that it will spend over \$318 million on Utilities Enhancements.
SFCTA – Bus Rapid Transit Planning	The SFCTA, in partnership with SFMTA, leads the environmental studies for Bus Rapid Transit (BRT) on Van Ness Avenue (now in construction), Geary Boulevard (starting design in early 2017) and a feasibility study for BRT in the Geneva-Harney corridor (now in environmental studies phase). By FY2018, all of these projects will have transitioned to SFMTA for implementation. BRT is a new mode of transit for San Francisco, developed to deliver many of the beneon so flight rail at a lower cost. It is a high-quality transit service that reduces travel time, increases reliability, and improves passenger comfort by giving the bus an exclusive lane to operate faster and more reliably. For an in-depth discussion of San Francisco's BRT projects, please see the SFMTA's 5-year Capital Improvement Plan.
SFCTA – Presidio Parkway	The Presidio Parkway, also known as Doyle Drive or Route 101, addresses the problems associated with an aging structure (built in 1936) as well as a desire to integrate what had been an elevated roadway structure through an active Army installation into what is now the Presidio National Park. Construction of Phase I was substantially completed in mid-2012 when a portion of the new permanent parkway as well as a temporary bypass were opened. Construction of Phase II began in 2012 and is being delivered through the State of California's Örst public-private-partnership. Golden Link Partners was selected to design, build, Önance, operate, and maintain the project for 30 years. In July 2015 the Önal roadway conÖguration was opened for public use. Work continues on related elements, including landscaping and will be completed in late 2016.
	The SFCTA expects to spend \$1.8 million to complete the Presidio Parkway project.
SFCTA – Treasure Island and I-80/ Yerba Buena Island Interchange and Mobility Projects	The SFCTA is working with the Treasure Island Development Authority (TIDA) on the development of these projects. On the east side of the island, new westbound on- and off-ramps to the new eastern span of the Bay Bridge have been constructed, opened for use on October 22, 20 16. On the west side of the island, existing bridge structures will be seismically retro ted. This part of the project is scheduled to start construction in the spring of 20 18 after the Caltrans Bay Bridge eastbound on-off ramps improvement project and TIDA's Macalla Road reconstruction in order to avoid traft circulation delays. These projects are scheduled to be completed by mid-2020.
	These projects will cost approximately \$96 million over the next 10 years.
SFCTA – Treasure Island Mobility Management Program	In its role as the Treasure Island Mobility Management Agency, the SFCTA is responsible for implementing a comprehensive and integrated transportation program to manage travel demand on Treasure Island as the Treasure Island Redevelopment Project proceeds. The centerpiece of this effort is an integrated and multimodal congestion pricing demonstration program that applies motorist user fees to support enhanced bus, ferry, and shuttle transit, as well as bicycling options, to reduce the traffic impacts of the project. The capital elements to be funded by the Treasure Island Mobility Management Program include upfront capital cost of tolling infrastructure and ferry vessel purchase. Installation and testing of the tolling system is expected to start in FY2018. All work is timed to support new development on Treasure Island, with sales of the Crist 1,000 housing units expected in FY2020.
	The Treasure Island Mobility Management Program will cost \$61 million over the next 10 years.

,	1	8	5	

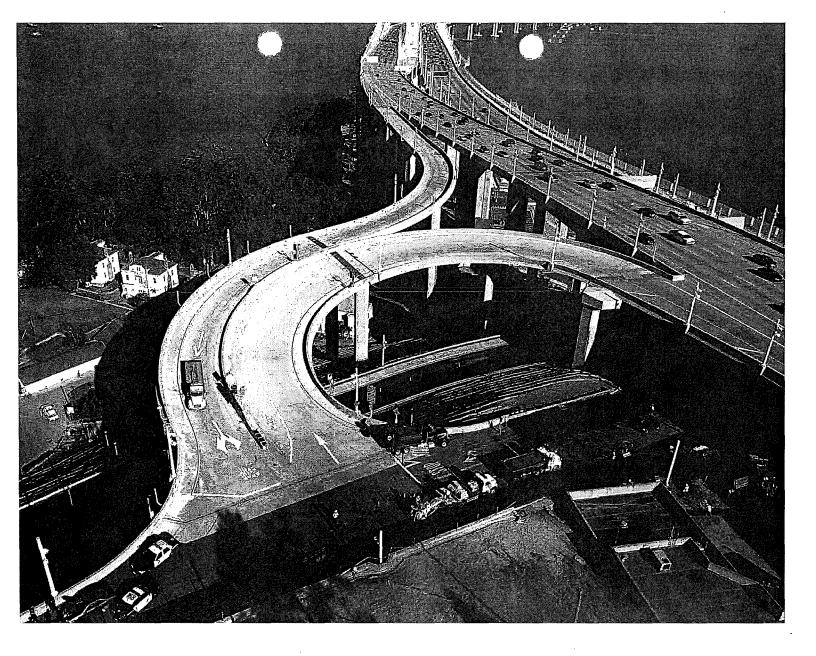

Project Name	Description
SFCTA – Quint Street Bridge Replacement and Quint-Jerrold Connector Road	The existing Caltrain rail bridge over Quint Street is over 100 years old and in need of replacement. The Quint Street Bridge Replacement project will replace the rail bridge with a berm that will facilitate construction of a potential future Caltrain station at Oakdale Avenue. The SFCTA and Department of Public Works are working collaboratively on the Quint-Jerrold Connector Road Project, which will link Quint Street just north of Oakdale Avenue to Jerrold Avenue via a new road along the west side of the Caltrain tracks. The road will also support the potential new Caltrain Station at Oakdale Avenue and provide access to other nearby land uses.
	The current cost estimate for the project is \$13 million based on planning designs. The expected cost of this project is \$9.7 million over the next 10 years.
Caltrain – Caltrain ElectriÖcation	In March 2012, the JPB entered into a Memorandum of Understanding with the California High Speed Rail Authority to make strategic, early investments in the Peninsula Corridor that would allow Caltrain's existing system to support high-speed rail services while enhancing Caltrain service. These improvements include corridor electriCation and an advanced signal system. The electriCation program, or Peninsula Corridor ElectriCation Project (PCEP) is the centerpiece of Caltrain's proposed Capital Improvement Program to transform the system into a world-class commuter rail system connecting San Francisco and San Jose.
	The total project cost for PCEP infrastructure is \$1.3 billion, while the replacement of train-sets is estimated to cost \$665 million. The cost of the signal system is \$245 million. A mix of local, regional, state, and federal funding sources have been identiÕed to cover the costs. At the local level, the JPB has agreed to contribute \$180 million, to be split equally between the three member entities for both PCEP and the advanced signal system. The JPB Capital Improvement Program includes \$60 million in San Francisco funding sources, with roughly \$24 million from the Proposition K sales tax funds and an estimated \$40 million from G.O. Bonds.
TJPA – Transbay Transit Center Phase 1	Phase 1 of this project entails the construction of the new multimodal Transbay Transit Center, which will serve train and bus commuters, local area of ce workers, and residents of the emerging Transbay neighborhood. The Transbay Transit Center is composed of four levels above-ground and two levels below and will contain active pedestrian, shopping, dining, and recreational areas. A bus ramp will connect the Bay Bridge to the elevated bus deck of the Transit Center for buses providing service across the Bay. A new bus storage facility, to be used primarily by AC Transit, will be constructed below the I-80 West approach to the Bay Bridge. The facility will also include AC Transit of Ces, storage, and restrooms. Construction of the Transit Center began in 2010 and is scheduled to be completed in 2017.
	The total budget for Phase 1 is \$2.2 billion, \$274 million of which falls in the Plan's timeframe. The project is funded through a combination of local, regional, state, and federal funds.
TJPA – Transbay Transit Center Phase 2	Phase 2 of the Transbay Transit Center will build the 1.95-mile DTX connection for Caltrain commuter and high-speed rail. The DTX will extend from the current Caltrain terminus at Fourth and King streets into the lower level of the new Transit Center. Phase 2 includes a new Caltrain station at Fourth and Townsend streets, an intercity bus facility to house Greyhound and Amtrak intercity bus service, and potentially a block-long pedestrian tunnel between the lower level of the Transit Center and the Embarcadero BART/Muni Metro station. Construction will begin once Phase 2 is fully funded.
	The capital cost of Phase 2 is estimated at approximately \$3.9 billion, nearly all of which falls in the Plan's timeframe. It is funded through a mix of local, regional, state, and federal funds.

Project Name	Description						
SFMTA – Line Extension Projects	In addition to the renewal and enhancement programs, emerging needs at the SFMTA include the Geary and Geneva-Harney BRT projects, the T-Third line extension to Fisherman's Wharf, the F-Line Extension to the Fort Mason Center, and major upgrades to the M-Ocean View line, as well as planning for sea level rise and increasing rail capacity.						
SFCTA – I-280 Interchange Improvements at Balboa Park	Recommendations from the Balboa Park Station Area Circulation Study, adopted by the SFCTA in June 2014, include realignment of the southbound off-ramp from I-280 to Ocean Avenue (Element 1) and closure of the northbound on-ramp from Geneva Avenue (Element 2). Both provide extensive pedestrian and safety beneOts while minimizing trafOc impacts to I-280 and the surrounding areas. The ramp closure analysis for Element 1 is planned for completion in December 2016. Caltrans documentation and environmental clearance for Element 2 is scheduled for completion in March 2017. The rough order of magnitude estimate for planning, design, and implementation is up to \$5.2 million for Element 1 and up to \$7.3 million for Element 2.						
Caltrain – Second Phase of Caltrain ElectriÖcation	Caltrain's 2015 SRTP Plan also contemplates a second "phase" PCEP that includes the full conversion of Caltrain's ōeet to Electric Multiple Units, the extension of trains from six to eight cars, and modiČcation of station platforms to accommodate longer trains and support level boarding. This project is currently estimated at approximately \$474 million in the SRTP. This second phase of electriČcation also contemplates the modiČcation of Caltrain's platforms to achieve level boarding across all of its stations. Technical discussions related to this issue are ongoing and the cost of achieving level boarding is not currently captured in the total shown.

A. Administrative Code

SEC 3.20. Capital Expenditure Plan

By March 1 of each odd-numbered year, beginning with March 1, 2013, the City Administrator shall submit to the Mayor and Board of Supervisors a ten-year capital expenditure plan which shall include an assessment of the City's capital infrastructure needs, investments required to meet the needs identiŌed through this assessment, and a plan of Onance to fund these investments. By May 1 of the same year, the Mayor and Board of Supervisors shall review, update, amend, and adopt by resolution the ten-year capital expenditure plan. The Mayor and Board of Supervisors may update the plan as necessary and appropriate to reoect the City's priorities, resources, and requirements.

The capital expenditure plan shall include all recommended capital project investments for each year of the plan. The plan shall incorporate all major planned investments to maintain, repair, and improve the condition of the City's capital assets, including but not limited to city streets, sidewalks, parks, and rights-

of-way; public transit infrastructure; airport and port; water, sewer, and power utilities; and all City-owned facilities.

The capital expenditure plan shall include a plan of Ōnance for all recommended investments, including proposed uses of General and Enterprise Funds to be spent to meet these requirements. Additionally, the plan shall recommend the use and timing of long-term debt to fund planned capital expenditures, including General Obligation bond measures.

The capital expenditure plan shall include a summary of operating costs and impacts on City operations that are projected to result from capital investments recommended in the plan. This operations review shall include expected changes in the cost and quality of City service delivery.

The plan shall also include a summary and description of projects deferred from the ten-year capital expenditure plan given non-availability of funding necessary to meet assessed capital needs. (Added by Ord. 216-05, File No. 050920, App. 8/19/2005; amended

by Ord. 40-06, File No. 060078, App. 3/10/2006; Ord. 222-11, File No. 111001, App. 11/15/2011, Eff. 12/15/2011) (Former Sec. 3.20 added by Ord. 223-97, App. 6/6/97; amended by Ord. 55-98, App. 2/20/98; repealed by Ord. 216-05)

SEC. 3.21. Capital Planning Committee

There is hereby created a Capital Planning Committee consisting of the City Administrator as chair, the President of the Board of Supervisors, the Mayor's Finance Director, the Controller, the City Planning Director, the Director of Public Works, the Airport Director, the Executive Director of the Municipal Transportation Agency, the General Manager of the Public Utilities System, the General Manager of the Recreation and Parks Department, and the Executive Director of the Port of San Francisco. Each member of the Capital Planning Committee may designate a person to represent her or him as a voting member of the Committee. Such designations shall be in written documents signed by the designating member and Ged with the City Administrator, or her or his designee.

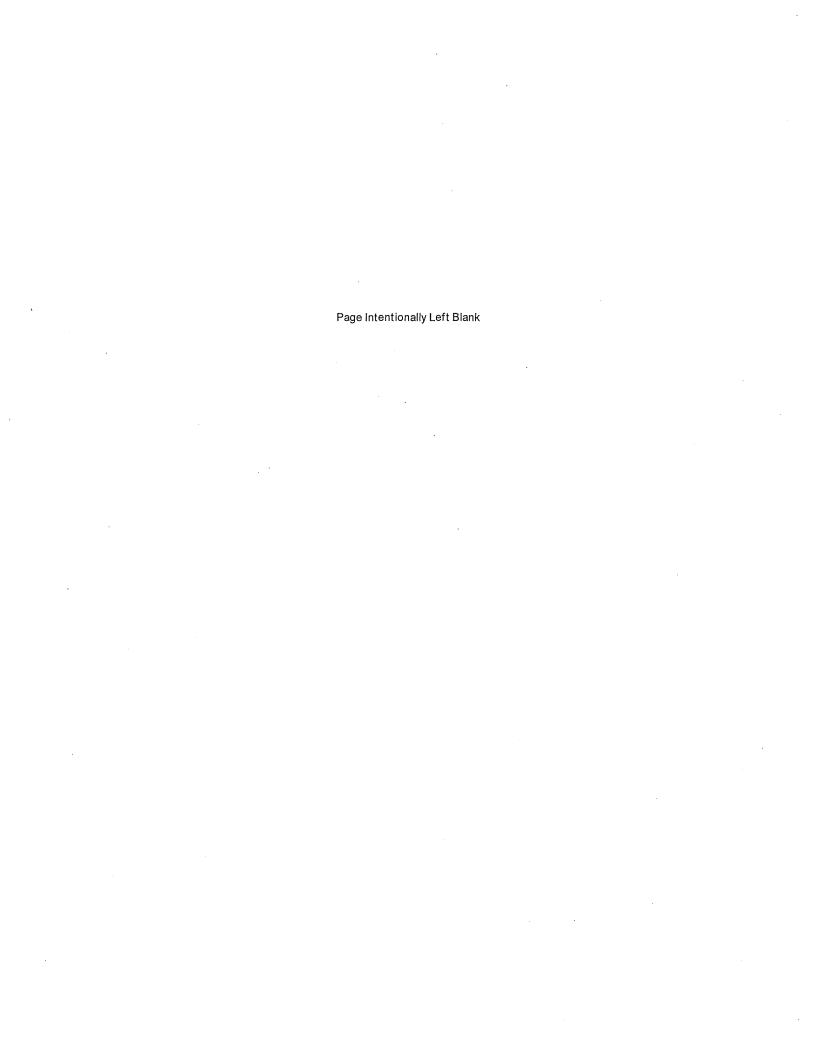

The mission of the Capital Planning Committee is to review the proposed capital expenditure plan and to monitor the City's ongoing compliance with the Onal adopted capital plan. As such, the Capital Planning Committee shall (1) establish prioritization and assessment criteria to assist the City Administrator with the development of the capital expenditure plan, (2) annually review the City Administrator's proposed capital expenditure plan prior to its submission to the Mayor and Board of Supervisors, and (3) review the annual budget and any proposed use of long-term debt, including General Obligation bonds, to ensure compliance with the adopted capital expenditure plan.

The Board of Supervisors shall not place on the ballot, or authorize the issuance of any long term Ōnancing, until the Capital Planning Committee completes a review of the proposal and submits its recommendation to the Board of Supervisors. Each proposal shall be in form and substance satisfactory to the Committee, and shall be accompanied by descriptive Ōnancial, architectural, and/or engineering data, and all other pertinent material in sufŌciently

complete detail to permit the Committee to review all aspects of the proposal. The Committee shall submit a written report to the Mayor and the Board analyzing the feasibility, cost, and priority of each proposal relative to the City's capital expenditure plan.

The Chair of the Capital Planning Committee is hereby authorized to adopt such rules, deŌnitions, ad procedures as are necessary to meet the requirements described in Section 3.20 and 3.21. (Added by Ord. 216-05, File No. 050920, App. 8/19/2005) (Former Sec. 3.21 added by Ord. 223-97, App. 6/6/97; repealed by Ord. 216-05)

B. Governance Structure

San Francisco's Ten-Year Capital Plan Governance Structure

In August 2005, concerns from city leaders, citizens, Mayor Newsom, and the Board of Supervisors culminated in Administrative Code Sections 3.20 and 3.21 requiring the City to annually develop and adopt a ten-year constrained capital expenditure plan for city-owned facilities and infrastructure. The code ensures the Plan's relevance by requiring that all capital expenditures be reviewed in light of the adopted capital expenditure plan.

The Capital Planning Committee (CPC) approves the Capital Plan and makes recommendations to the Board of Supervisors on all of the City's capital expenditures. It consists of the City Administrator as chair, the President of the Board of Supervisors, the Mayor's Finance Director, the Controller, the City Planning Director, the Public Works Director, the Airport Director, the Municipal Transportation Agency Executive Director, the Public Utilities Commission General Manager, the Recreation and Parks Department General Manager, and the Port of San Francisco Executive Director. The mission of the Capital Planning Committee is to review the proposed capital expenditure plan and to monitor the City's ongoing compliance with the Ōnal adopted capital plan.

193

C. Glossary of Terms

Commonly used terms throughout the Plan are deoned below.

Area Plans: Subsections of the City's General Plan that address the speciŌc urban design, open space, transportation, housing, and community facility goals of a particular neighborhood. For the purposes of the Capital Plan, Area Plans refer to those Areas of high marginal growth governed by Chapter 36 of the San Francisco Administrative Code: Balboa Park, Eastern Neighborhoods, Market/Octavia, Rincon Hill, Transit Center, and Visitacion Valley.

Assessed Value: The dollar value assigned to individual real estate or other property for the purpose of levying taxes.

Capital Project: A major construction and improvement project, including the planning and design phases. Examples include the resurfacing of a street and the construction of a new hospital, bridge, or community center.

Capital Plan: Also referred to as the Plan. The City and County of San Francisco Capital Plan outlines all of the Capital Projects that are planned for the next ten years. The City's Capital Plan is updated every two years and has a ten-year horizon. Not every project in the plan has funding (see Deferred Project), but the Plan aims to present a complete picture of the City's strategy for maintaining and improving its infrastructure and key assets. The Capital Planning Program produces the Capital Plan based on department capital requests, and the Capital Planning Committee reviews and proposes the Plan to the Board of Supervisors.

CertiŌcates of Participation (COPs): A commonly used form of lease Ōnancing for capital improvement projects or purchases of essential equipment. COPs are loans to the city that are paid back by the revenue generated by a building or other city-owned assets.

Community Facility District (CFD): Also known as a Mello-Roos District. A deŌned area such as a county, city, special district, or joint powers authority where residents can vote to approve a special property tax on real estate, in addition to the normal property tax, to fund public improvements beneŌting the district. The tax is often used to secure debt.

Debt Service: The annual payment of principal and interest on the City's bonded debt (see Municipal Bond for more information on bonded debt). Debt service can be used to describe the payments for an individual project or to provide an overall picture of the city's bonded debts.

Deferred Project: A project not funded in the Capital Plan either due to lack of funding or the timeline of the project falling outside of the ten-year planning cycle.

Emerging Need: A project not funded in the Capital Plan because additional planning is needed or there is signiŌcant uncertainty around project-speciŌc issues. Emerging needs are included in the Plan to show the City's awareness that they may become more signiŌcant and/or deŌned in coming years.

Enhancement: An investment that increases an asset's value and/or changes its use. Enhancements typically result from the passage of new laws or mandates, functional changes, or technological advancements. Examples include purchasing or constructing a new facility or park, major renovations

of or additions to an existing facility, accessibility improvements to comply with the Americans with Disabilities Act (ADA), and planting new street trees. Typically, enhancements are large-scale, multi-year, projects such as renovations, additions, or new facilities. While some project costs can be funded with payas-you-go sources, most enhancements require debt Önancing through the issuance of General Obligation (GO) bonds, CertiÖcates of Participation (COPs) or lease revenue bonds.

Enterprise Department: An Enterprise Department generates its own revenues from fees and charges for services and thus does not rely on the General Fund. The City has four Enterprise departments: Public Utilities Commission, San Francisco International Airport, Port of San Francisco, and the Municipal Transportation Agency.

External Agency: An agency that is a separate, autonomous entity from the City and County of San Francisco and operates separately.

Facilities Maintenance: See Routine Maintenance. General Fund: The largest of the City's funds, the General Fund is a source for discretionary spending and funds many of the basic municipal services such as public safety, health and human services, and public works. Primary revenue sources for the General Fund include local taxes such as property, sales, business, and others.

General Fund Department: A City department that relies primarily or entirely on the General Fund as a revenue source to provide City services. The General Fund departments included in the Plan are: Asian Art Museum, Arts Commission, California Academy of Sciences, District Attorney's Of Cce, Emergency Management, Fine Arts Museum, Fire, General Services Agency, Homelessness and Supportive Housing, Human Services Agency, Juvenile Probation, Police, Public Health, Public Library, Public Works, Recreation and Parks Department, Sheriff, Technology, and the War Memorial and Performing Arts Center.

General Plan: Adopted by the Planning Commission and approved by the Board of Supervisors, the General Plan is the document that serves as the foundation for all land use decisions in the City, especially around the issues of land use, circulation, housing, conservation, open space, noise and safety. It contains speciŌc Area Plans for the planning of different City neighborhoods.

General Obligation Bonds (G.O. Bonds): A municipal bond secured by property tax revenues. G.O. Bonds are appropriately used for the construction and/or acquisition of improvements to real property broadly available to the residents and visitors of San Francisco.

Horizontal Infrastructure: Infrastructure required to deliver basic public goods and services such as roads, sewers, water lines, bridges, transit rail, and open space, among others.

Infrastructure: Physical elements of the city that allow it to function effectively for residents, workers, and visitors. This can include roads, bridges, sewers, water lines, transit rail, open space, hospitals, housing units, city of Čces, jails, and other public assets.

C. Glossary of Terms

Job Years: DeÖned as one year of fulltime work. For example, three people employed full-time for Ōve years represent 15 job years.

Lease Financing: An important source of medium- and long-term Ōnancing where the owner of an asset gives another person the right to use that asset against periodical payments. A common example would be a landlord leasing an apartment for a monthly rent. The owner of the asset is known as lessor and the user is called lessee. There are various forms of lease Ōnancing in the Plan, including CertiŌcates of Participation.

Mello-Roos District: See Community Facility District.

Municipal Bond: A debt obligation issued by a government entity, such as the City and County of San Francisco. When an individual buys a municipal bond, they are loaning money to the issuer – the City – in exchange for a set number of interest payments over a predetermined period. At the end of that period, the bond reaches its maturity date, and the full amount of the original investment is returned to the individual. The amount of

money that the City owes as a result of selling municipal bonds is known as the City's bonded debt.

Net Assessed Value: The total assessed value of property in San Francisco, excluding property considered exempt from tax levies, such as properties owned by religious or non-proŌt organizations.

Pay-As-You-Go (Pay-Go): Refers to the funding of Capital Projects with current General Fund revenue on an annual basis rather than paying for projects by taking on long-term debt or using another dedicated funding source.

The Plan: See Capital Plan.

Renewal: An investment that preserves or extends the useful life of facilities or infrastructure. Examples of renewal projects include the repair and replacement of major building systems including the roof, exterior walls and windows, and heating and cooling systems; street resurfacing; and the repair and replacement of infrastructure in the public right-of-way, including sidewalks and street structures.

Since renewal projects tend to be smaller investments compared with investments needed to replace entire facilities, the proposed plan funds many of these needs through Pay-Go cash revenue sources, appropriated through the City's annual budget process.

Revenue Bond: A municipal bond secured by and repaid from speciŌc revenues. Pledged revenues are often earnings from a self-supporting enterprise or utility. Typically, these revenues are associated with the asset for which the bond was originally issued, for example those issued by the Airport or Public Utilities Commission.

Right-of-Way Infrastructure: Infrastructure constructed and maintained by the City for right-of-way purposes, which are deŌned as the right of public travel on certain lands. Examples include the traveled portion of public streets and alleys, as well as the border areas, which include, but not limited to, any sidewalks, curb ramps, planting strips, trafŌc circles, or medians.

Vertical Infrastructure: Facility structures such as hospitals, clinics, public safety buildings, administrative facilities, public housing units, community centers, and jails, among others.

D. Methodology and Assumptions

Capital Plan Methodology

Under direction of the City Administrator, department staff annually assesses facility conditions, determines cost projections for renewal projects and proposed enhancements, and analyzes available funding resources to prepare a ten-year capital plan.

Through a series of meetings the CPC reviews proposals, staff recommendations, and documents toward the development of the citywide capital plan. These reviews do not, and are not meant to, replace the authority of department commissions' or other oversight bodies under the City Charter and other codes. Rather, the ten-year plan is meant to provide a forum that examines capital needs from a citywide perspective and to foster a dialogue on those needs between stakeholders, commissions, the Mayor, and the Board of Supervisors.

Staff uses two approaches to collect data for the Plan. The Facilities Renewal Resource Model (FRRM) is used to collect information on the state of repair for major facility and infrastructure subsystems (also known as renewals) for all of the General Fund departments. The Airport, Port, and MTA have implemented this model for their facilities as well. In addition, General Fund departments submitted enhancement requests using the Capital Planning and Reporting database (CPRd). Each proposal is reviewed by professional staff (e.g., architects, engineers, etc.) and categorized as a funded, deferred, or emerging need.

Facilities Renewal Resource Model (FRRM)

- The City used the facility life-cycle model to predict annual funding requirements for General Fund department facilities. The objectives of the facility modeling effort are listed below:
- Develop a budget model to predict annual funding requirements for facilities renewal and document the existing backlog of deferred maintenance in a consistent way for all departments.

- Provide a basis for a funding plan that will Orst address adequate resources for renewal and then a reduction of the deferred maintenance backlog.
- Create consistent and comparative data among departments for determining funding allocations and targets for addressing renewal as a part of operating or capital budgets.
- Deliver a cost model to each department with associated staff training so that facilities renewal and deferred maintenance needs can be updated annually and progress in meeting those needs can be measured.
- Provide a planning tool for departmental use which provides a useful life "systems" prode of each building as a way of predicting future funding needs or packaging projects to leverage fund sources.
- Develop a credible model to assess needs consistently and to focus on total funding needs and strategies.
- The model uses building information (gross square feet, construction date,

facility subsystem type, etc.) and an approach based on subsystem life cycles and replacement costs to estimate the backlog of deferred maintenance and future capital reinvestment needs. Below is an example of the ten-year renewal forecast report generated by FRRM for a particular facility. This report, one of dozens available, shows subsystems within the building that need to be replaced during the next 10 years and the corresponding cost (in thousands). A variety of other reports are available for further analysis.

Each department maintains the model, with the capability of summarizing information at both the department and citywide level. The model has a great deal of built-in ōexibility that allows the City to enter new data and even change the underlying assumptions in future years.

The FY 2018-2027 Capital Plan reōects renewal data collected from August through December 2016 and includes detailed information for each General Fund department. These Ōndings are summarized in the renewal graphs and the renewal line of the Ōnancial summary schedules for each of the General Fund service areas found throughout the Plan.

Capital Plan Assumptions

- Throughout the time frame of the Plan from FY2018-27, the Plan uses the Annual Infrastructure Construction Cost Inōation Estimate (AICCIE) of 5 percent as the escalation rate.
- Fiscal years (FY) in the Plan refer to the calendar year in which the City's July 1 to June 30 budget cycle ends. For example, FY20 18 refers to calendar year dates from July 1, 20 17 to June 30, 2018.

D. Methodology and Assumptions

- Dollars are listed in thousands for all Ōnancial schedules unless otherwise noted.
- For all proposed General Obligation Bonds, the Ōnancial schedules show the total bond amount in the Ōscal year during which the bond is to be approved by voters. For example, a G.O. Bond proposal on the November 2018 ballot will appear in FY2019 of the Ōnancial schedule.
- The General Obligation Bond Program assumes growth in Net Assessed Value of 4.19 percent in FY2018,5.90 percent in FY2019; 4.49 percent in FY2020, and 3.5 percent annually thereafter.
- When issued, G.O. Bonds proposed by this Plan will not increase voters' long-term property tax rates above FY2006 levels. In other words, new G.O. Bonds will only be used as funding source when existing approved and issued debt is retired and/or the property tax base grows.

- The General Fund Debt Program assumes that General Fund discretionary revenues grow 4.8 percent in FY2019, 3.2 percent in FY2021, and 2.7 percent thereafter. In addition, the General Fund Debt Program assumes that the amount of General Fund revenues spent on debt service will not exceed 3.25 percent.
- The Pay-As-You-Go Program
 assumes only General Fund revenue
 sources.

Jobs Creation Estimation Methodology

In an effort to better evaluate and prioritize capital projects, local governments are examining not only upfront Ōnancial costs but also their contributions of direct and indirect jobs generated by the capital investment. The City and County of San Francisco's FY 2018-27 Capital Plan estimates almost \$35 billion in capital projects during the next ten years, which will create as many as 290,000 San Francisco jobs. A job is deŌned as one job year of full-time work. For example, Ōve people employed for

four years equals 20 job years. This jobs estimate is based on the REMI Policy Insight model which attributes 8.35 San Francisco jobs per million dollars in construction spending. This is exclusive of the additional jobs created outside of the City and County as workers and materials migrate in from surrounding areas.

Customized for San Francisco, REMI has the unique ability to determine the effects of taxes and other variables on the local economy. As a result, the Controller's Of Ce of Economic Analysis uses this model for analyzing the economic impact of pending legislation. The table below summarizes the number of job years from the REMI model based on \$1 million of construction spending in San Francisco.

Infrastructure Finance Districts Criteria

The following threshold and strategic criteria to guide the use of future Infrastructure Finance Districts (IFDs) in San Francisco were adopted by the Board of Supervisors (BOS) on February 18,2011. These criteria are in addition to those in IFD law (CA Government Code section 53395 et. seq.)

Estimated Jobs Created from Construction Spending in San Francisco

Sectors	Industry	Employment per \$M of Construction Spending

Source: Economic Multipliers from Of Öce of Economic Analysis, Controller's Of Öce, REMI Model Outputs

The Guidelines are organized into two sets of criteria: (1) minimum "Threshold Criteria" that must be satis Qed for an IFD to be formed by the BOS and (2) "Strategic Criteria" that may be considered when deciding whether to form a future IFD. These policy guidelines would not apply to any existing Redevelopment Area (IFD law prohibits it) or to any property owned or managed by the Port of San Francisco.

Threshold Criteria:

1. Limit to areas that are rezoned as part of an Area Plan or Development Agreement approved by the Board of Supervisors (BOS) and also adopted as a Planned Priority Development Area (PDA) by the Association of Bay Area Governments (ABAG). Priority Development Areas (PDAs) are locally-identiŌed, inŌl development opportunity areas within existing communities. They are generally areas of at least 100 acres where there is local commitment to developing more housing along with amenities and services to meet the day-to-day needs of residents in a pedestrian-

> ONESE Building Our Future

201

D. Methodology and Assumptions

friendly environment served by transit. To be eligible to become a PDA, an area has to be within an existing community, near existing or planned Oxed transit or served by comparable bus service, and planned for more housing. Designation of PDAs expresses the region's growth priorities and informs regional agencies, like the Metropolitan Transportation Commission (MTC), which jurisdictions want and need assistance. Planned PDAs are eligible for capital infrastructure funds, planning grants, and technical assistance. Linking creation of future IFDs to areas designated as PDAs will allow the City to leverage the increment generated by an IFD to increase its chances to receive matching regional, state, or federal infrastructure and transportation grants.

2. Limit to areas where a rezoning results in a net Ōscal beneŌt to the General Fund as determined by the Controller's OfŌce. SpeciŌcally, the City must demonstrate that any added General Fund costs generated by the new service population

- projected to result from the growth supported by a rezoning are offset by greater General Fund revenues, resulting in a net Ōscal beneŌt or surplus. As a general rule, this would mean that use of IFDs would be limited to areas that received substantial & quanticable upzoning, based on actual net increases in height, bulk, density that result in greater developable FAR than the previous "baseline" zoning, or through liberalization of land use and permitting provisions that increase the certainty of entitlements and the value of property.
- 3. In general, restrict the maximum increment available to an annual average of 33-50% over the 30-year term of the IFD, and in no event allow the annual average increment over the life of the IFD to exceed the projected net Ōscal beneŌt over the life of the IFD. This maximum average cap would include annual pay-as-you-go monies and bond service payments or some combination of both. The maximum average increment cap may be increased to 50% to fund neighborhood
- infrastructure that also provides clear citywide beneŌts, like an extension or upgrade of a MUNI light rail line or the development of a City-serving park. In any event, this policy would guarantee that an IFD diversion should always be less than the net Öscal beneÖt, guaranteeing that there is at least some again to the General Fund in all circumstances. This policy would not prevent the "front-loading" of increment in the beginning years of an IFD to allow for bonding and the acceleration of construction of neighborhood-serving infrastructure, especially since accelerating delivery of infrastructure should have a correspondingly positive effect on property tax revenues for the General Fund.
- 4. Limit to areas with documented existing infrastructure de Ciencies. Because the City has not developed universally-applied and objective citywide standards for assessing the suf Ciency (or de Ciency) of existing neighborhood-serving infrastructure, BOS-adopted planning documents (like Area Plans) that qualitatively and/or quantitatively

describe such de Cciencies will sufŌce until new citywide standards are adopted at a later date. After the adoption of a new IFD policy, the Capital Planning Committee should be tasked with developing a systematic and quantitative set of criteria or standards for assessing existing neighborhood infrastructure deŌciencies in the following areas: (i) neighborhood parks & open space improvements; (ii) "Better Streets" streetscape & pedestrian safety improvements; (iii) bicycle network improvements; (iv) transit-supportive improvements; (v) publicly-owned community center and/or childcare facilities. Furthermore, the CPC would need to adopt citywide standards to avoid the use of IFD funds for "gold-plated park benches" or facilities that far exceed citywide norms for cost and quality.

5. Limit use of IFD monies to individual infrastructure projects where a source of long term maintenance funding is identiŌed. Within an IFD, limit expenditure of IFD monies to projects that have identiŌed a separate source of funding for

ongoing maintenance and operations. In some cases this could be through public-private agreements, such as a Master HOA agreeing to maintain a public park or a Community BeneŌt District agreeing to fund long-term maintenance, or via the creation of a new supplemental property tax assessment district, like a Mello-Roos Community Facilities District.

Strategic Criteria:

In general, limit IFDs to parcels without any occupied residential use. The City may want to exclude parcels that contain existing occupied residential structures. This is because IFD law requires an actual voterbased election if there are 12 or more registered voters within the proposed boundaries of an IFD. If there are less than 12 registered voters, the law only requires a weighted vote of the property owners, which, in general, should reduce the complexity and time required for forming a district. On the other hand, there may be circumstances where a voter-based election may be both desirable and manageable.

- Use IFDs as a strategy to leverage additional non-City resources. As noted in Threshold Criteria #1 above, IFDs should be used as a tool to leverage additional regional, state, and federal funds, thereby serving a purpose beyond earmarking General Fund resources for needed infrastructure. In particular, IFDs may prove instrumental in securing matching federal or state dollars for transportation projects.
- Consider adopting a limited policy of "overriding considerations" for situations where the BOS may have adopted zoning that purposely restricts or limits the economic "highest and best" use of a given area, thereby limiting or reducing the net General Fund beneŌt derived from a rezoning, but where other social policy objectives might dictate that some IFD revenues be spent on supportive infrastructure.

ONES Building Our Future

The FY2018-2027 Capital Plan represents the City's committment to building a stronger future.

There's only on San Francisco. Let's take care of it.

RE: U/

Amended Ten-Year Capital Expenditure Plan-FYs 2018-2027

DATE:

May 1, 2018

Attached for introduction to the Board of Supervisors is a resolution amending the City's ten-year capital expenditure plan for FYs 2018-2027 to increase to \$425 million the proposed Seawall Bond.

Should you have any questions, please contact Andres Power (415) 554-5168.
