

Budget and Finance Committee Presentation

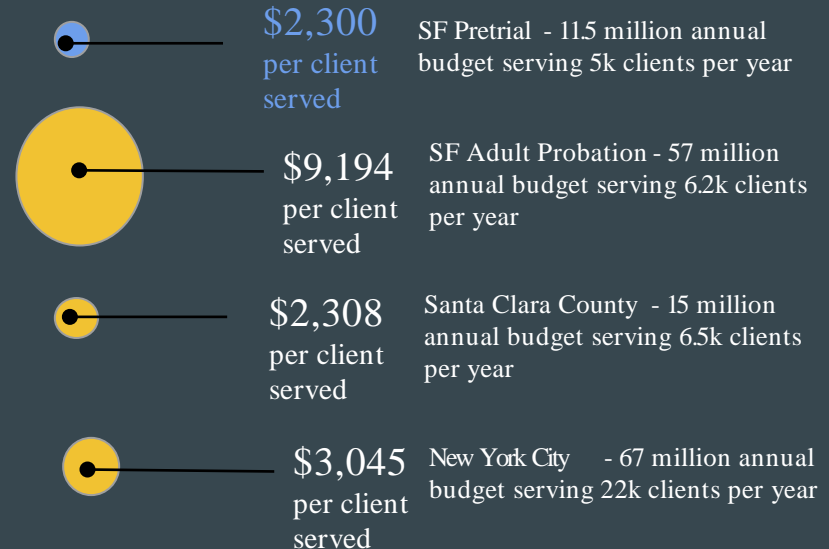

San Francisco Pretrial
July 24, 2024

Cost Effective and Sustainable Practices

- **Financial sustainability** through diverse funding sources
 - a. Grants held through local government, state, federal, and private foundations
 - b. \$8mm funding over 3 years from non-city sources
- **Reduction of jail overpopulation** and associated costs.
- Long-term staff retention and **community-connected staffing** as key to success.

SF Pretrial remains lower cost compared to other agencies operating supervision/reentry programs

Impacts of Pretrial Services

For the majority of the pretrial population, detention increases the likelihood of future arrests, limits job and housing prospects, and reduces access to life-saving behavioral health services, adversely impacting public safety.

If held in pretrial detention, people are subject to increased likelihood of

- **Future arrests** 9.7% more likely to be charged with a new misdemeanor within 18 months
- **Less Employment** 12% less likely to be employed 3 years after their bail hearing
- **Conviction:** 14% more likely to plead guilty and 18% more likely to be convicted

Studies across the U.S. have found no negative public safety impacts connected to reducing pretrial detention.
