

Muni Forward/Vision Zero Overview

Muni Forward/Vision Zero capital projects improve transit reliability and safety for everyone on the City's streets

Street Re-design Coordination

- SFMTA regularly coordinates with paving and utility projects to improve street design for safety, mobility and livability.
- SFMTA inputs all projects into Envista to share upcoming plans, reviews all NOIs, and attends recurring coordination meetings.
- Factors that help guide coordination include:
 - Projects identified in our Capital Improvement Program (CIP)
 - Locations with a history of injury collisions
 - Streets with established plans or community-vetted designs
 - Bicycle and Transit routes
- Other factors considered:
 - Can low-cost measures be installed ahead of repaving?
 - Would paving/utility work need to be delayed to allow additional time for public outreach and environmental review?
 - If not in the CIP, what are the trade-offs to funding?
