

AT&T

Existing Coverage

Proposed Coverage

AT&T is the official private partner behind FirstNet.

We are working with the First Responder Network Authority (FirstNet Authority) – an independent government agency – to design, build and evolve FirstNet for the next 20+ years.

FirstNet is a nationwide, high-speed wireless broadband network and set of specialized, innovative tools, technologies and features specifically built for public safety.

FirstNet is designed for every first responder in the country – career or volunteer; city, state, tribal or federal; and urban, suburban or rural. Think firefighters, EMS personnel, law enforcement, 9-1-1 communicators and emergency managers. FirstNet is also available to a community of users who are critical to supporting an emergency response – including nurses and physicians or utility companies that clear downed power lines and manage gas leaks.

How does it work?

FirstNet uses all AT&T LTE spectrum bands and a special lane of connectivity called Band 14 – nationwide, high-quality spectrum specifically set aside for FirstNet. During an emergency, this band – or lane – can be cleared and locked just for FirstNet subscribers.

Whatever the mission – responding to a routine call, supporting a large event or managing an emergency or disaster – FirstNet gives priority to public safety, so they can connect where and when they need to, to keep us all safer.

Creating a specialized communications highway just for public safety

Why does it matter?

No connection matters more than one that could help save a life. That's why our work to give first responders access to the leading tools that will help them do their important jobs is something we can all feel good about.

Equipping first responders with 24/7 reliable, unthrottled connectivity and an ecosystem of cutting-edge apps, devices and solutions means they can connect to the critical information they need – every day and in every emergency – without worrying about connectivity challenges.

FirstNet is also bringing more reliable communications to rural communities across the country – covering over 2.61 million square miles nationwide and growing.

Helping public safety achieve their mission as they work to keep us safe
