## TABLE OF CONTENTS

|  | <u>Page</u> |
|--|-------------|
| 1. PROJECT OVERVIEW .....                    | 3           |
| 1.1. Purpose and Term .....                  | 3           |
| 1.2. Project Description.....                | 3           |
| 1.3. Mission Rock .....                      | 4           |
| 1.4. Special Use District.....               | 6           |
| 1.5. Land Use Table .....                    | 7           |
| 2. PROJECT PHASING .....                     | 7           |
| 2.1. Schedule of Performance .....           | 7           |
| 2.2. Development Process for Each Phase..... | 7           |
| 2.3. Phase Areas.....                        | 9           |
| 2.4. Phasing Goals.....                      | 9           |
| 2.5. Garage Phase Requirements .....         | 10          |
| 2.6. Mission Rock Square Garage.....         | 12          |
| 2.7. Central Plants .....                    | 13          |
| 3. PHASE APPROVAL.....                       | 13          |
| 3.1. Presubmittal Activities.....            | 13          |
| 3.2. Phase Submittal.....                    | 15          |
| 3.3. Phase Budget.....                       | 17          |
| 3.4. Phase Submittal Review Process .....    | 18          |
| 3.5. Phase Budget Review Process .....       | 19          |
| 3.6. Phase Completion .....                  | 21          |
| 3.7. Changes to Phase .....                  | 21          |
| 3.8. Changes to Project .....                | 21          |
| 4. EXCUSABLE DELAY .....                     | 23          |
| 4.1. Generally.....                          | 23          |
| 4.2. Excusable Delay Periods.....            | 24          |
| 4.3. Limits on Excusable Delay Period.....   | 25          |
| 4.4. Down Market Delay Procedures.....       | 25          |
| 5. PARTY RELATIONSHIPS.....                  | 26          |
| 5.1. No Agency .....                         | 26          |

|       |  |    |
|-------|--|----|
| 5.2.  | Interagency Cooperation Agreement .....            | 27 |
| 5.3.  | Port Approvals .....                               | 27 |
| 5.4.  | Developer Approvals .....                          | 28 |
| 5.5.  | Standards Otherwise Applicable.....                | 28 |
| 5.6.  | Day-to-Day Communications .....                    | 29 |

**DISPOSITION AND DEVELOPMENT AGREEMENT**  
Mission Rock Project

This **DISPOSITION AND DEVELOPMENT AGREEMENT** (this “**DDA**”) between the **CITY AND COUNTY OF SAN FRANCISCO**, a municipal corporation and charter city (the “**City**”), acting by and through the **SAN FRANCISCO PORT COMMISSION** (the “**Port**” or the “**Port Commission**”), and **SEAWALL LOT 337 ASSOCIATES, LLC**, a Delaware limited liability company (“**Developer**”), is dated for reference purposes only as of the date specified on the title page (the “**Reference Date**”). Developer and the Port are each a “**Party**” to this DDA.

Initially capitalized and other terms are defined in the Appendix or other Transaction Documents as specified in the Appendix, which contains standard provisions, definitions, and rules of interpretation.

**RECITALS**

**A.** The Port owns about 7½ miles of tidelands and submerged lands along San Francisco Bay. This DDA specifies the Port’s terms for Developer’s master development of the Project Site. The legal description and site plan for the Project Site are contained in **DDA Exhibit A1** and **DDA Exhibit A2**.

**B.** The seawall lots are tidelands that were filled and cut off from the waterfront by the construction of the great seawall in the late 19<sup>th</sup> and early 20<sup>th</sup> centuries, and by the construction of the Embarcadero roadway which lies, in part, over a portion of the great seawall. Seawall Lot 337, the largest of the designated seawall lots, is located just south of China Basin and for years has been used as a surface parking lot.

**C.** Through legislation known as SB 815, the California Legislature has found that the revitalization of Seawall Lot 337 is of particular importance to the State of California. Under SB 815, the Port is authorized to ground lease portions of the Project Site to permit development of improvements that may be used for nontrust uses to enable higher economic development and revenues. Some of the revenues from these leases will be advanced to pay for early infrastructure costs of the Project, with remaining infrastructure costs paid with Project-generated special taxes and property taxes. The Port will use nontrust lease revenues, as well as repayment of lease revenues advanced for infrastructure costs, to preserve its historic resources and for other public trust consistent uses permitted under SB 815, as approved by State Lands as required under Section 4.5 and Section 6(b) of SB 815.

**D.** Following a public solicitation process to implement goals and objectives developed through a multi-year community process, the Port Commission awarded Developer the opportunity to negotiate exclusively for the lease, construction, and operation of the Project Site in 2010. Negotiations resulted in a Term Sheet that the Port Commission and the Board of Supervisors endorsed in 2013.

**E.** Mission Rock will be a new mixed-use neighborhood created on a site now used principally to provide parking for the Ballpark. The Project will complement and link Mission Bay to the urban fabric of the City. At build-out, the Project would include approximately 3,600,000 gsf of above-grade development and create approximately 8 acres of new and expanded parks and shoreline access.

**F.** Seawall Lot 337 will be developed in Phases consisting of one to four Development Parcels each. Eleven of the parcels will provide a mix of commercial/office, retail, and market rate and affordable residential uses, with the precise combination of uses determined by market demands as the Project progresses. One or two Garages will serve the development and other nearby uses, including games and other events at the Ballpark. Most new buildings will have ground floor retail or neighborhood-serving uses.

G. Pier 48 is part of the Project that the Port will convey under a separately negotiated ground lease with its own development schedule. The Port and Developer will work cooperatively to identify a development plan and tenant at Pier 48 that will include a mix of uses to meet public trust requirements, including continued maritime operations on Pier 48's south apron and public access. An affiliate of Developer will enter into the interim Pier 48 Lease for parking and event use.

H. On November 3, 2015, San Francisco voters approved the *Mission Rock Affordable Housing, Parks, Jobs and Historic Preservation Initiative* (Proposition D), which authorized increased height limits on the Project Site, subject to environmental review, and established a City policy to encourage development of the Project Site and Pier 48 with the major features listed below. Proposition D specifically provides that it is intended to encourage and implement the lease and development of the Project Site and Pier 48 as described in SB 815 to support the purposes of the Burton Act, especially the preservation of historic piers and historic structures and construction of waterfront plazas and open space.

I. The Project is the culmination of many years of community-based planning and coordination with Other Regulatory Agencies. Project features and Associated Public Benefits include those specified below.

1. The Project will create a vibrant mixed-use community, woven into the fabric of the surrounding Mission Bay and South Beach neighborhoods, without displacing any current residents or businesses. The Project will include between 1,000 and 1,950 housing units, nearly all of which are expected to be rental and 40% of which will be affordable to low- and middle-income households.

2. The Project will create approximately 8 acres of major new and expanded parks, pedestrian plazas and rehabilitated public piers and wharves, and will also provide a dynamic range of space for shops, restaurants, cafés, neighborhood-serving retail uses, such as a grocery store, and community spaces, as well as commercial/office and light industrial space.

3. The Project will implement a Sustainability Strategy that provides leadership in long-term sustainability planning and design. Resilient design strategies will be implemented to respond to climate change and resulting sea level rise.

4. The development of the under-utilized Project Site and Pier 48 will generate significant revenues to the City and its Port, estimated at more than \$1 billion over the life of Mission Rock, including increased rent payable to the Port of San Francisco, increased property, parking and sales taxes, and Impact Fees.

5. Mission Rock will create an estimated 13,500 temporary construction jobs and 11,000 permanent jobs on- and off-site. Planning, design, and construction work for Mission Rock will provide substantial contracting opportunities for local contractors and professional service firms, as well as many businesses, employers, and organizations.

J. The Planning Commission reviewed and considered the proposed environmental impact report for the Project, consisting of the draft environmental impact report and the "Comments and Responses" document on October 5, 2017. By Motion No. 20018, the Planning Commission certified the completion of the Final EIR in compliance with CEQA based on its findings that: (1) the contents of the report and the procedures through which the report were prepared, publicized, and reviewed comply with CEQA law; (2) the proposed report reflects the City's independent judgment and analysis, is adequate, accurate, and objective; and (3) the Comments and Responses document contains no significant revisions to the draft report. In connection with Project Approvals, the Port Commission and the Board of Supervisors each adopted CEQA Findings, including a Statement of Overriding Considerations, and the MMRP. A complete list of Project Approvals is attached to the Development Agreement.

## AGREEMENT

### 1. PROJECT OVERVIEW

#### 1.1. Purpose and Term.

(a) Purpose. This DDA governs the Parties' respective rights and obligations with respect to the portion of Project to be master developed, as described briefly in **Subsection 1.2(b)** (Master Development) and incorporates all applicable requirements and limitations under the Project Approvals and implementing documents attached as DDA Exhibits.

(b) Term.

(i) The DDA Term will begin on the Reference Date.

(ii) Unless terminated under **Article 11** (Material Breaches and Termination), the DDA Term will end on the earlier of: (1) the date that is 30 years after the Reference Date, as extended by Excusable Delay for any reason other than Down Market Delay; and (2) when the Port has issued the Final Certificate of Occupancy for the Project and accepted the Final Audit.

(iii) Termination of this DDA will not affect any provisions of this DDA, the Acquisition Agreement, the Financing Plan, or other Transaction Documents that expressly survive termination.

(c) Pier 48. The Port and Developer or an Affiliate of Developer will enter into an interim lease for Pier 48 that will provide for terminable termination to allow for the rehabilitation of Pier 48 in accordance with the Pier 48 Rehabilitation Plan under a Pier 48 Development Lease.

**1.2. Project Description.** The Project consists of the horizontal and vertical development of the Project Site and, if Pier 48 is later added to the Project Site in accordance with **Section Error! Reference source not found. (Pier 48)**, potential rehabilitation of Pier 48 in accordance with the Pier 48 Rehabilitation Plan, consistent with the Waterfront Plan, the Land Use Plan, and the SUD. Key elements of the Project are summarized in this Section.

(a) Project Site. The Project Site consists of Seawall Lot 337, a portion of Terry A. Francois Boulevard, a portion of the wharf between Pier 48 and Pier 50, China Basin Park, and certain other property, all as more specifically described in **DDA Exhibit A1** and as depicted in the Site Plan attached as **DDA Exhibit A2**. The Project Site will be subdivided into the Development Parcels listed in **Section 1.5** (Land Use Table) and depicted in the Land Use Plan attached as **DDA Exhibit A3**.

(b) Master Development. Developer is responsible for master development of the new Mission Rock neighborhood encompassing the Project Site as more specifically set forth in this DDA. As soon as practicable after the Reference Date, the Port and Developer will enter into the Master Lease providing for lease of all of the Project Site. Through Escrow, each Development Parcel that the Port conveys to a Vertical Developer will be released from the Master Lease at the Close of Escrow for the pertinent Parcel Lease, as more specifically set forth in the Master Lease. This DDA establishes the Parties' respective rights and obligations, including Project Requirements, that will apply to horizontal development of Mission Rock and the process for conveyance of Parcel Leases to Vertical Developers.

(c) Pier 48. As soon as practicable after the Reference Date, the Port will enter into the Pier 48 Lease with Developer or its Affiliate.

### **1.3. Mission Rock.**

(a) Horizontal Development. Developer has the right and obligation to construct the Horizontal Improvements for the Project in coordination with vertical development, subject to the terms and conditions in this DDA and all required Regulatory Approvals.

(b) Later Approvals. Section 14.4 (Regulatory Approvals) will apply to all Later Approvals. The Parties acknowledge that a major permit for the Project, BCDC Permit No. 20017.004.00, was issued by BCDC on June 29, 2018.

(c) Phasing. The Project is expected to be developed in four Phases, as shown in the Phasing Plan attached as **DDA Exhibit B1**, which illustrates the expected size, order, and duration of the Project's Phases and the Parties' best estimates of the conditions that are forecast for the expected development period. Each Phase Area includes Development Parcels and areas that will be developed as Public ROWs and Public Spaces. Features of Phases are discussed in **Article 2** (Project Phasing). Procedures for Phase Approval and adjustments to Phases are addressed in **Article 3** (Phase Approval).

(d) Horizontal Improvements.

(i) The Parties' respective roles regarding Developer's horizontal development activities and applicable construction procedures and standards are described in **Article 12** (Improvement Plans), **Article 13** (Construction Generally), and **Article 14** (Horizontal Development). Together, the Land Use Plan and the Phasing Plan reflect the Parties' current expectations regarding the progression of the Project as a whole.

(ii) The Schedule of Performance establishes Outside Dates by which Developer is required to begin and complete key benchmarks for each Phase of the Project, subject to extension for Excusable Delay under **Article 4** (Excusable Delay). Developer's failure to meet its obligations by the Outside Dates may result in a Material Breach for which the Port could exercise remedies up to termination of this DDA under **Article 11** (Material Breaches and Termination).

(iii) Developer is obligated to construct new and upgraded Horizontal Improvements for the Project Site under this DDA as described in the Infrastructure Plan attached as **DDA Exhibit B3**. Master Utilities Plans and approved Improvement Plans consistent with the approved Infrastructure Plan will be subject to the approval of the responsible Acquiring Agencies as described in the ICA. The Subdivision Code regulates the subdivision map process. The Design Controls provide development controls and design guidelines for street and sidewalk landscaping and furnishings, public parks, and other public access areas in conformance with the SUD.

(iv) The ICA and the Subdivision Code establish procedures applicable to Other City Agency review and approval of plans, specifications, Subdivision Maps, and Improvement Plans for the Project. Certain Other City Agencies have agreed to, and the Board of Supervisors has directed the Other City Agencies to comply with, undertaking their review and approvals according to procedures in the ICA.

(e) Vertical Development.

(i) The Port will convey Development Parcels to Vertical Developers by Parcel Leases as described in **Article 7** (Parcel Leases) in accordance with procedures in the Vertical DDAs. Each Vertical Developer's development rights and obligations, which may include the obligation to complete Deferred

Infrastructure, will be specified in a Vertical DDA, and permitted uses will be specified in a Parcel Lease.

(ii) Vertical development will include a mix of office, retail, restaurant, parking, and market rate and affordable residential uses conforming to the Land Use Plan attached as **DDA Exhibit A3**. The SUD and the Waterfront Plan regulate vertical development, and the Design Controls provide guiding principles for the design of Vertical Improvements.

(f) Certain Other Construction Obligations. DDA Exhibits and other Transaction Documents provide more detail about Project Requirements, including Associated Public Benefits that will be provided through the Project, some of which are listed below.

(i) The Housing Plan attached as **DDA Exhibit B5** describes how each Vertical Developer of a Residential Project will be required to deliver affordable housing through production of Inclusionary Units. The Housing Plan also addresses how Jobs/Housing Equivalency Fees will be allocated to the Project, acceptable marketing procedures for the Inclusionary Units, the distribution of Inclusionary Units within Residential Projects and the Project Site, and related matters.

(ii) The Transportation Exhibit attached as **DDA Exhibit B7** describes certain transportation and transit-related improvements (some of which may be public facilities) and initiatives to serve visitors to and residents and workers in the neighborhood. Developer's obligations include payment of the Transportation Fee, a TDM Program, and an Event Management Plan.

(iii) The Sustainability Strategy attached as **DDA Exhibit B8** describes sustainability goals for the Project, specifies certain measures that both Developer and Vertical Developers will undertake to further the City's environmental goals. The attached Sustainability Checklist establishes persons responsible for implementing required measures.

(iv) The MMRP attached as **DDA Exhibit A5** describes all the measures required to mitigate environmental impacts of the Project and identifies a responsible person for each measure. Developer is required to undertake all Developer Mitigation Measures.

(v) *DA § 5.4(b)(iv) (Child Care)* establishes a Child Care Equivalency Fee that Vertical Developers of nonresidential uses will pay to the Port. These fees will be used to assist one or more Vertical Developers or their tenants to provide childcare facilities within the Project

(vi) Developer may offer through a Phase Submittal, or the City may request during a Phase Submittal review process, to include in one or more Phases up to a Project-wide total of 15,000 gsf of space for community facilities under *DA § 5.4(b)(vii) (Community Facilities)*.

(g) Financing Plan. The Financing Plan for the Project, attached as **DDA Exhibit C1**, establishes the Parties' agreement on capital sources for Horizontal Development Costs, the use of Public Financing Sources, and the flow of all Project Payment Sources to reimburse Developer and the Port for their capital investments in Horizontal Development Costs with Developer Return and Port Return, respectively.

**(h) Conveyances.**

**(i)** Under this DDA, Developer has an Option to ground lease each Development Parcel. Development Parcels are divided into the following three categories:

**(1)** Option Parcels are Development Parcels that the Port will convey for Fair Market Value as determined under **Section 7.4** (Fair Market Value).

**(2)** Lead Parcels are a subset of Option Parcels. Lead Parcels will be conveyed by Prepaid Leases in Phase 1. At least two Lead Parcels in Phase 1 will be designated through the Phase 1 Phase Submittal process.

**(3)** A Garage Parcel is a Development Parcel on which a Vertical Developer Affiliate will build a Garage. The Garage Parcels are Parcel D2 and, if Developer elects under **Section 2.6** (Mission Rock Square Garage) to create an air parcel below Mission Rock Square in which to build the Mission Rock Square Garage, the Mission Rock Square Garage Parcel.

**(ii)** The Port has granted Options to Developer under which it may acquire leasehold interests in the Option Parcels at Fair Market Value. As described in **Article 7** (Parcel Leases), after Developer exercises an Option, the Port will be obligated to enter into a Vertical DDA with Developer or a Vertical Developer Affiliate that will establish the conditions for the Port's conveyance by a Parcel Lease substantially in the form of **DDA Exhibit D2**.

**(iii)** Under certain circumstances, as set forth in **Article 7** (Parcel Leases), the Port has a Put Option under which it can require Developer to exercise its Option as to one or more Development Parcels in a Current Phase within the Put Option Period.

**(iv)** If Developer elects not to exercise its Option for any Development Parcel subject to the Put Option, the Port has the right to undertake a Public Offering of that Development Parcel as described in **Article 7** (Parcel Leases).

**(i) Controlling Laws.** Nothing in this DDA affects the Parties' respective obligations under this DDA to comply with the Regulatory Requirements and the Development Agreement, as applicable to the Improvements required or permitted to be made to the Project Site.

**1.4. Special Use District.** The SUD and related zoning maps prescribe allowed uses and certain development standards at the Project Site. Planning Code provisions covering matters that are not addressed in the SUD will apply to the Project Site as modified by the Development Agreement.

**1.5. Land Use Table.** The following table reflects the principal land uses for Development Parcels under the Land Use Plan on the Reference Date.

| Parcel    | Phase | Anticipated Principal Use on Reference Date |
|-----------|-------|---|
| Parcel A  | 1     | Residential                                 |
| Parcel B  | 1     | Commercial-Office                           |
| Parcel C  | 2     | Commercial-Office                           |
| Parcel D1 | 2     | Residential                                 |
| Parcel D2 | 2     | Garage                                      |
| Parcel E  | 3     | Commercial-Office                           |
| Parcel F  | 3     | Residential                                 |
| Parcel G  | 1     | Commercial-Office                           |
| Parcel H  | 4     | Residential or Commercial-Office            |
| Parcel I  | 4     | Residential or Commercial-Office            |
| Parcel J  | 4     | Residential or Commercial-Office            |
| Parcel K  | 1     | Residential                                 |

## 2. PROJECT PHASING

### 2.1. Schedule of Performance.

(a) Outside Dates. The Outside Dates for certain Project benchmarks are specified in the Schedule of Performance attached as **DDA Exhibit B2**, subject to extension as provided in **Article 4** (Excusable Delay). Developer may request changes to Outside Dates or other revisions to the Schedule of Performance, subject to the Port's approval under **Section 3.7** (Changes to Phase) and **Section 3.8** (Changes to Project). For the Parties' convenience, following a Transfer, the Port, Developer, and the Transferee may agree to maintain one or more separate schedules of performance related to the Transferee's obligations under this DDA for the remainder of the Project or for any relevant Phase.

(b) Coordinated Horizontal and Vertical Construction. To the greatest extent feasible, construction of Horizontal Improvements in each Phase will be coordinated with construction of Vertical Improvements throughout the Project.

**2.2. Development Process for Each Phase.** The horizontal development process for each Phase is outlined generally in this Section.

(a) Phase Submittals. Developer will initiate each Phase by submitting the applicable Phase Submittal to the Port under **Article 3** (Phase Approval).

(b) Subdivision Maps. Developer is responsible for subdividing the Project Site (except Pier 48), but agrees not to submit any proposed Subdivision Map to Public Works for review and approval under the Subdivision Code without the Port's prior review as landowner. The Port will advise Developer within 30 days after receiving each proposed Subdivision Map of the Port's determination of consistency with Project Requirements. If the Port fails to do so, Developer will be entitled to claim Administrative Delay. Once a proposed Final Map has been determined to be consistent, the Developer may submit the proposed Final Map to Public Works for review, and thereafter shall pursue the approval of the Final Map consistent with the requirements of this DDA.

(i) Without limiting the generality of the foregoing, it is specifically agreed that if a Final Map for the applicable Phase has not been approved and recorded at such time as either (1) the Developer delivers an Appraisal Notice

under **Section Error! Reference source not found. (Fair Market Value)** or (2) Port delivers notice to Developer that it is exercising a right to initiate a Public Offering for the Option Parcel under **Section Error! Reference source not found. (Public Offering Procedures)**, then, and for so long as either the Option process under **Section Error! Reference source not found. (Fair Market Value)** and **Section Error! Reference source not found. (Appraisal Disputes)**, or the Public Offering process under **Section Error! Reference source not found. (Public Offering Procedures)**, is ongoing, or a Vertical DDA resulting from either Developer's exercise of an Option or a Public Offering is in effect, Developer will use diligent efforts to timely submit required applications and Improvement Plans, and to respond to City comments on prior submissions in a reasonable fashion and within a reasonable time given the nature and scope of such City comments so as to achieve recordation of such Final Map by the First Scheduled Closing Date (or, if no Vertical DDA has yet been entered into, the reasonably anticipated First Scheduled Closing Date that would be established under any Vertical DDA resulting from either Developer's exercise of such Option or such Public Offering).

(ii) For purposes of **subsection (b)(i)** of this **Section 2.2**, an Option or Public Offering process will be considered ongoing for so long as those processes have not ceased or been suspended pursuant to this DDA, including Developer's withdrawal of an Appraisal Notice pursuant to **subsection (g)(ii)** of **Section 7.4 (Fair Market Value)** or **subsection (c)** of **Section 7.5 (Appraisal of Disputes)**, Developer's failure to deliver an Option Notice or the Vertical Developer Affiliate's failure to timely deliver an executed Vertical DDA pursuant to **subsection (a)(iv)** of **Section 7.7 (Option Parcel Closings)**, or for any of the reasons in **subsection (c)** of **Section 7.7 (Option Parcel Closings)** or **Section 7.8 (Public Offering Procedures)**.

(iii) If the Option or Public Offering process ceases or is suspended, then Developer may cease its efforts to achieve a Final Map for the applicable Phase, unless, within thirty (30) days after cessation or suspension of the Option or Public Offering process, Port delivers a notice to Developer in which Port requests that Developer continue its efforts to achieve a Final Map because the Port intends to exercise its Put Option, or undertake a Public Offering, with respect to a Development Parcel(s) in the Phase for which Developer was attempting to achieve a Final Map. If Developer receives such notice, and, thereafter, the Port fails to exercise the applicable Put Option, or commence the Public Offering process, within the required time periods under this DDA, then Developer may cease its efforts to achieve a Final Map for the applicable Phase.

(c) **Site Preparation.** The Project Site consists largely of uncompacted fill. As a result, among other horizontal development activities to prepare the Project Site for development activities, Site Preparation includes:

- (i) soil compaction, which Developer may perform in phases; and
- (ii) restoration of the area as necessary for the permitted uses under the Master Lease.

(d) **Phase Improvements.** Developer is required to obtain all necessary Regulatory Approvals before beginning construction of Phase Improvements and an SOP Compliance Determination after they are finally complete.

(e) **Fair Market Value Determinations.** Subject to **Subsection 7.1(c)** (Lead Parcels), Developer may initiate the Fair Market Value determination process for any Option Parcels in a Phase at any time after submitting its Phase Submittal.

(f) Parcel Leases. After the City approves the Final Map for the Phase Area, and each Party has satisfied or waived the conditions to Close Escrow under the Vertical DDA, the Port will Close Escrow on the Parcel Lease for each Development Parcel. Each Vertical DDA will include:

(i) procedures for the Vertical Developer to obtain required Regulatory Approvals for its Vertical Improvements and any Deferred Infrastructure for which the Vertical Developer is responsible; and

(ii) the required schedule for the Vertical Developer to begin and complete its Vertical Improvements.

### **2.3. Phase Areas.**

(a) Phase Area Boundaries. The preliminary boundaries of the Phase Areas are shown in the Phasing Plan. Developer may request changes to the boundaries of a Phase Area, subject to:

(i) the City's approval of the revised Final Map for the Phase Area; and

(ii) the Port's consent to the revised Final Map and approval under Section 3.7 (Changes to Phase).

(b) Parcel Boundaries. The preliminary boundaries of the Development Parcels are shown in the Phasing Plan. A Vertical Developer may request changes to the boundaries of a Development Parcel, subject to:

(i) the City's approval of the revised Final Map for the Development Parcel; and

(ii) the Port's consent to the revised Final Map and approval to the extent required under the applicable Vertical DDA.

(c) Associated Public Benefits. Because the Project will be built out over a number of years, the amount and timing of Associated Public Benefits are allocated by Phase. Developer may request changes to the Associated Public Benefits for any Phase, subject to the Port's approval under Section 3.7 (Changes to Phase).

(d) Phasing Order. Developer will submit Phase Submittals in the order listed in the approved Phasing Plan. Developer may request changes to the approved order, subject to the Port's approval under Section 3.4 (Phase Submittal Review Process).

### **2.4. Phasing Goals.** The Phasing Plan reflects the following Phasing Goals.

(a) Proportionality. Associated Public Benefits in each Phase of horizontal development should be provided no less than proportionately with that Phase's share of the housing and commercial-office uses in the Project as a whole. In determining proportionality, the following will apply.

(i) If any Prior Phase provided more than its proportionate share of Associated Public Benefits, then Later Phases may provide fewer Associated Public Benefits so long as no Later Phase is required to bear more than its proportionate share.

(ii) Proportionality is to be evaluated on a Project-wide basis.

(b) Functional Development. The scope of Horizontal Improvements should be appropriate for the Horizontal Improvements and Vertical Improvements to be built in each Phase Area, consistent with the Infrastructure Plan, Housing Plan, Transportation Exhibit, and Sustainability Strategy, and should be developed in an orderly manner so as

to coordinate with the needs of vertical development. Completed infrastructure should provide continuous reliable access and utilities to visitors, residents, and businesses.

(c) Affordable Housing. Inclusionary Units will be provided in each Residential Project in conformity with the Housing Plan.

(d) SB 815. The Phasing Plan should be consistent with the requirements of SB 815 and with the Port's fiduciary duties as a trustee of the public trust.

(e) Flexibility. Subject to Outside Dates, the Phasing Plan should provide enough flexibility to allow Developer, with the Port's approval, to adjust the Phases to respond to market conditions, cost and availability of financing, and economic feasibility.

(f) Feasibility of Later Phases. Subject to *FP § 2.6 (Phase 1 Cost Containment)*, each Phase, including the Current Phase and each Later Phase, should be projected to have sufficient Project Payment Sources to satisfy the Phase-specific Project Payment Obligation.

## **2.5. Garage Phase Requirements.**

(a) Garage Phasing. At full buildout, the Project may include up to 3,100 parking spaces, of which up to 3,000 may be Garage Spaces, that will serve the entire Project as well as the Ballpark and other nearby facilities.

(i) Under the current Phasing Plan, the Parcel D2 Garage would be developed in Phase 2 and would be the only Garage developed in the Project. A Residential Project would be developed in Parcel D1; an air parcel to be created above Parcel D2.

(ii) Developer will have the right to change the Phasing Plan and defer the Parcel D2 Garage to a Later Phase on the following conditions.

(1) The Final Map for Phase 2 creates Parcel D1 as a land parcel with sufficient area for development of a stand-alone building, whether or not the Parcel D2 Garage is built. The boundaries of Parcel D2 would be reduced to accommodate both land parcels in the footprint of the area designated for Parcel D2 in the current Phasing Plan.

(2) If the Port exercises a Put Option under **Section 7.3** (Parcel Put) for any other Parcel in the Phase that includes Parcel D2, the Port also may deliver a Garage Put Notice that will require Developer to exercise its Option for Parcel D2. Developer will exercise its Option through a Vertical Developer Affiliate.

(3) If Developer exercises its Option, the designated Vertical Developer Affiliate will be obligated to enter into a Vertical DDA to develop the Parcel D2 Garage within 90 days after the Garage Put Notice is delivered to Developer. A Vertical Developer Affiliate's failure to timely enter into the Parcel D2 Vertical DDA will be a Material Breach under **Section 11.2** (Material Breaches by Developer).

(4) The size and configuration of the Parcel D2 Garage will be established through the Phase Submittal process for the Garage Phase, subject to **Subsection 2.5(b)** (Garage Report).

(b) Garage Report. No more than six months before submitting a Phase Application for any Garage Phase, Developer will submit to the Port, with copies to the Planning Director and the Director of Transportation, a Garage Report containing the following information:

(i) the status of vertical build-out in any Prior Phases;

(ii) a summary of TDM Plan implementation, including progress towards achieving the goal of reducing estimated aggregate daily one-way vehicle trips by 20%, and current parking usage for any completed development project and of other parking available on the Project Site;

(iii) a conceptual analysis of the Garage, including the expected capacity of the Garage at completion, a discussion of any features of the design that would allow for adaptability of portions of the Garage, and any requirements for future adaptation;

(iv) the financial feasibility of the Garage, including estimates of parking demand and how the estimates relate to parking ratios approved by the City during the prior three years in comparable office, residential, and commercial projects in similar submarkets, such as the Mission Bay North and South of Market submarkets;

(v) a summary of TDM efforts then being implemented for the Ballpark, including the most recently available data from surveys of Ballpark patrons and their transportation mode to and from San Francisco Giants home games, parking demand associated with home games, and a discussion of how these travel behaviors are expected to change over the following five to ten years;

(vi) a narrative description of the implementation of the parking management plan for the operation of the Garage, any wayfinding or park-assist systems, an event-period operations plan, and plans for queue abatement measures to avoid any excessive recurring queuing during non-event periods that could affect the operation of the T Third MUNI line;

(vii) a draft of the proposed pricing structure for the Garage in accordance with **Subsection 2.5(d)** (Garage Phase Submittals); and

(viii) an evaluation of the potential for a portion of Ballpark parking demand to be met through other proximate offsite options that could be secured on a long-term basis at comparable cost to the San Francisco Giants and Ballpark patrons.

**(c) Garage Recommendations.**

(i) After Developer submits the Garage Report, the Port and Developer will meet with the Planning Director and the Director of Transportation. The Planning Director and the Director of Transportation will each have 45 days after the Garage Report is delivered to provide Garage Recommendations regarding development, operations, and parking management to the Port and Developer.

(ii) Developer will consider any Garage Recommendations in good faith and deliver to the Port before or with the Phase Submittal for that Garage Phase, with copies to the Directors of Planning and Transportation, Developer's response to Garage Recommendations, including:

(1) the manner in which accepted Garage Recommendations will be incorporated into the development and operation of the Garage; and

(2) a reasoned narrative setting forth the reasons any Garage Recommendations were not accepted.

**(d) Garage Phase Submittals.** In addition to other requirements under **Section 3.2** (Phase Submittal), the Phase Submittal for a Garage Phase will:

- (i) include a proposed form of Garage REA covering at least the issues listed in **Subsection 2.5(f)** (Garage REA);
- (ii) confirm that the Garage will be open to the public; and
- (iii) provide additional detail about how Developer will determine pricing for Garage Spaces during non-event times for users who are not residents of a building within the Project Site or employees of businesses in the Project Site, Pier 48, or the Ballpark.
- (e) Garage Pricing Proposal. Developer's proposed pricing must be:
  - (i) consistent with the Mission Rock Transportation Exhibit;
  - (ii) designed to encourage efficient use of the Garage as a part of the larger multimodal network;
  - (iii) discourage commuter parking;
  - (iv) provide sufficient flexibility to reflect market conditions and operate the Garage at a net gain;
  - (v) provide for parking rates that will be subject to change over time in response to demand and market pricing in the surrounding neighborhood; and
  - (vi) establish a framework for determining and periodically adjusting parking rates consistent with the TDM Plan.
- (f) Garage REA. Any proposed form of Garage REA submitted for the Port's review and approval will cover:
  - (i) easements reasonably required for the mutual benefit of the Garage and the Vertical Improvements to be developed on any Adjacent Parcel; and
  - (ii) methods for allocating costs of development, operation, and maintenance between the Garage Parcel and any Adjacent Parcel, with the express understanding that Mission Rock Square will not bear any additional costs of construction, operation, or maintenance due to the construction of the Mission Rock Square Garage.

**2.6. Mission Rock Square Garage.** This Section describes additional requirements should Developer desire to build the Mission Rock Square Garage in the Mission Rock Square Garage Parcel created beneath Mission Rock Square.

- (a) No Increase in Garage Spaces. In no event will the total number of Garage Spaces in the Project exceed 3,000.
- (b) Second Garage Notice. Under the current Phasing Plan, Mission Rock Square would be developed in Phase 3. If Developer proposes to include the Mission Rock Square Garage in the Project, Developer will deliver to the Port a Second Garage Notice no later than the date on which the Phase Budget for Phase 2 is submitted for Port Commission consideration. The Second Garage Notice must include:
  - (i) a description of any additional or modified Horizontal Improvements required to serve the Mission Rock Square Garage;
  - (ii) an estimate of any increased Horizontal Development Costs attributable to the additions or modifications;
  - (iii) an initial proforma for Garage operations that includes operating costs estimates, including TDM Plan implementation costs such as parking control officers, and demonstrates that Developer's projected parking revenues would be sufficient to pay for operating costs;

(iv) a proposed plan for the subdivision of Mission Rock Square into two air space parcels, consisting of an underground Mission Rock Square Garage Parcel and an above-ground parcel for Mission Rock Square;

(v) easements required for the mutual benefit of the two parcels; and

(vi) any proposed changes to the Phasing Plan.

(c) Second Garage Adjustments. Following delivery of the Second Garage Notice, the Port and Developer will negotiate on Second Garage Adjustments necessary to accommodate the Mission Rock Square Garage. Issues for Second Garage Adjustments will include at least the following:

(i) amendments to the Infrastructure Plan and Master Utilities Plans;

(ii) a preliminary form of Garage REA;

(iii) a formula to determine the incremental Horizontal Development Costs directly attributable to the Mission Rock Square Garage, which the Vertical Developer Affiliate will solely bear;

(iv) additional terms of the lease for the Mission Rock Square Garage, including a requirement for the tenant to bear all operating and maintenance costs, subject to cost-sharing with Vertical Developers of Adjacent Parcels under the Garage REA; and

(v) any proposed changes to the Phasing Plan.

(d) Negotiation Period.

(i) The Parties will negotiate under **Subsection 2.6(c)** (Second Garage Adjustments) for six months, subject to extension by agreement in each Party's sole discretion. If the Port and Developer agree on the Second Garage Adjustments, they will negotiate additional conditions to the Port's Phase Approval for the applicable Garage Phase.

(ii) If the Parties do not agree on the Second Garage Adjustments within the negotiation period under this Subsection, negotiations will terminate automatically, and Developer will not have the right to develop the Mission Rock Square Garage.

**2.7. Central Plants.** Developer may pursue Regulatory Approvals for either or both Central Plants before preparing Central Plant Feasibility Studies. If the Central Plant Feasibility Studies find either or both of the Central Plants to be feasible, the Central Plant Feasibility Studies submitted under **Subsection 3.2(b)** (Phase 1 Submittal) will include a conceptual design of each Central Plant found to be feasible.

### **3. PHASE APPROVAL**

#### **3.1. Presubmittal Activities.**

(a) Progress Meetings. The Parties will schedule regular meetings, at least quarterly, to discuss the progress of the Project, with a focus on the Current Phase and the Later Phase for which Developer will submit a Phase Submittal. Topics for discussion will include the following, as appropriate:

(i) any observed or anticipated significant changes in market conditions, including potential impacts on the costs of labor and materials;

(ii) any updated estimates of the aggregate Fair Market Value of Development Parcels that the Port has not yet conveyed;

- (iii) any updated estimates of construction costs and Acquisition Prices;
- (iv) any particular issues that Developer anticipates may require material updates to the most recent Proforma;
- (v) estimates of Parcel DRPs, Mello-Roos Taxes, Tax Increment, and bonding capacity for the Phase;
- (vi) whether the Port intends to make Port Capital Advances and, if so, the potential impacts to the proposed Phase Budget and Phase Schedule;
- (vii) whether Developer anticipates the need to change Insurance Requirements or Adequate Security Requirements; and
- (viii) timing of public outreach, any Port Commission hearings on Developer's Phase Submittal, and later informational presentations on expected Vertical Improvements in the Phase.

**(b) Subdivision Map Procedures.**

- (i) City Agencies will review, comment on, and approve or disapprove Subdivision Maps and Improvement Plans in accordance with the Subdivision Code, subject to the DA Waivers, the Project Requirements, and procedures in this DDA and the ICA, as applicable.
- (ii) Developer intends to submit for the City's conditional approval a Tentative Map for the Project Site and a Phase Final Map for each Phase Area. Developer must obtain the relevant Phase Approval before the City records any Phase Final Map.
- (iii) Following Port's determination of consistency with respect to the proposed Subdivision Map pursuant to **Subsection 2.2(b)** (Subdivision Maps), Port will assist Developer with Developer's efforts to achieve the Final Map for the applicable Phase by diligently requesting each applicable Permitting Agency and other Regulatory Agency to use diligent efforts to process the Final Map in accordance with the provisions of the ICA.
- (iv) Following commencement of Developer's processing of the draft Final Map for a Phase, Developer will submit monthly reports to Port by the 10th day of each month describing work activity in the previous month toward achievement of the applicable Final Map, including submissions to City Agencies, comments received, any delays encountered, and updated projections of when the Final Map will be achieved. Developer will continue to submit such monthly reports until achievement and recordation of the applicable Final Map. Within 14 days after the receipt of each such monthly report, Port will give notice to Developer of any Port concerns regarding Developer's efforts to timely submit required applications and Improvement Plans and to respond to City comments on prior submissions in accordance with the requirements of Section 2.2(b), if applicable.

**(c) Port Capital Commitment.**

- (i) To prepare its Phase Submittal, Developer may request that the Port make a nonbinding statement as to whether and when it plans to make any Port Capital Advances and the proposed timing and amount of any Bond issuance for that Phase. In the proposed Phase Budget, Developer may suggest alternatives to any of the Port's funding proposals.
- (ii) If the Port does not respond within 30 days after Developer's request, Developer may assume in its Phase Budget proposal that the Port does

not intend to make any Port Capital Advances for that Phase, but that assumption will not bind the Port Commission.

### **3.2. Phase Submittal.**

(a) Purpose. The Phase Submittal process is intended to provide a comprehensive overview of the design, expected cost, and Project Payment Sources for Phase Improvements sufficient for the Port to determine consistency with the Project Requirements. Except for Hard Costs incurred for work within the scope of a Port permit issued under **Section 14.2** (Site Preparation), the Port will not be obligated to reimburse Developer or pay directly for any Hard Costs of Phase Improvements incurred before Phase Approval.

#### **(b) Phase 1 Submittal.**

(i) Developer must submit its Phase Submittal for Phase 1 by the Outside Date specified in the Schedule of Performance. In addition to the other requirements of this Section, the Phase Submittal for Phase 1 must include:

- (1) the Central Plant Feasibility Studies, if not previously submitted;
- (2) the proposed Lead Parcels;
- (3) the proposed Reserve Rent Allocation for Option Parcels, based on the projected land use and potential FAR for each;
- (4) a proposed Affordable Housing Subsidy Plan;
- (5) the proposed Parks Plan;
- (6) the proposed Event Management Plan;
- (7) a proposed form of Master CC&Rs addressing all issues listed in **DDA Exhibit C4**; and
- (8) a proposed Retail Program meeting the Port's public trust goals for the Project Site.

(ii) If Developer does not submit its Phase Submittal for Phase 1 by the third anniversary of the Entitlement Date, the Outside Date in the Schedule of Performance for Developer to begin construction of Phase Improvements will be reduced from eight years to six years after the Entitlement Date.

#### **(c) Narrative Statement.** Each Phase Submittal must describe:

- (i) any proposed changes to the Phase Area from the boundaries shown in the Phasing Plan;
- (ii) any proposed changes to the scope of Phase Improvements and a description of Deferred Infrastructure for the Phase;
- (iii) the expected land use program for each building, including Inclusionary Units to be provided in each Residential Project in accordance with the Housing Plan;
- (iv) any material deviations from the Design Controls that Developer intends to propose with respect to any Development Parcel on an Option Parcel as to which Developer expects to exercise its Option;
- (v) consistency with the Transportation Exhibit, Sustainability Strategy, MMRP, and other implementation plans attached under **DDA Exhibit Tab B**;

- (vi) any proposed changes to Associated Public Benefits to be provided in the Phase;
  - (vii) a general description of the type and location of Public Art to be included in the Phase Improvements in accordance with the Design Controls;
  - (viii) a description of any proposed community facilities consistent with *DA § 5.4(b)(vii) (Community Facilities)*;
  - (ix) any proposed changes to the boundaries of the Phase Area or any Development Parcels in the Phase;
  - (x) any proposed changes to the Phasing Plan, which the Port will consider as described in **Section 3.7** (Changes to Phase); and
  - (xi) an updated, current Phase Proforma, with a statement as to whether it is a preliminary Phase Budget or ready to submit to the Port Commission for approval under **Section 3.5** (Phase Budget Review Process).
- (d) **Outside Dates for Completing Construction.** Each Phase Submittal will include Developer's Estimated Construction Duration, Estimated Construction Schedule, and the proposed Outside Date for final completion of Phase Improvements.
- (e) **Subdivision Map.** If not previously provided, Developer will submit a copy of the preliminary Phase Final Map. If Developer proposes to change the Phase Area boundaries, it will also provide information supporting the proposed change, including any impact on Associated Public Benefits.
- (f) **Improvement Plans.** Developer will provide Improvement Plans for the Phase Improvements at a design level Developer determines in good faith to be required for cost estimating purposes. All Improvement Plans will be prepared in compliance with the Port Building Code, the Seismic Hazards Mapping Act (Cal. Pub. Res. Code ch. 7, ch. 8), and California Geological Survey Special Publication 117A, *Guidelines for Evaluating and Mitigating Seismic Hazards in California*.
- (g) **Acquisition Prices.** Developer will provide Supplements to *AA Exhibit A* and Acquisition Price Updates to *AA Exhibit B* providing additional detail and any revisions to descriptions of Horizontal Improvements and estimated costs of their Components. Final Acquisition Prices will be determined in accordance with the Financing Plan.
- (h) **Nonbinding Elections.** Developer will make a nonbinding statement of intention as to Development Parcels in the Phase Area regarding whether and when Developer expects to exercise its Options and proceed with the Phase Improvements.
- (i) **Put Delay Request.** In any Phase Submittal delivered before the applicable Outside Date, Developer may request that the Port agree not to exercise the Put Option until a specified date. The Executive Director may grant or deny the request in her sole discretion.
- (j) **Event Management Plan.** For each Phase that will include an event venue or provide event-supporting Garage Spaces, Developer must submit a proposed or updated Event Management Plan meeting the requirements of the Transportation Plan in **DDA Exhibit B7**.
- (k) **Garage Phase.** If the Phase will be a Garage Phase, Developer must comply with **Section 2.5** (Garage Phase Requirements) and, to the extent applicable, **Section 2.6** (Mission Rock Square Garage).

### 3.3. Phase Budget.

(a) **Budget Guidelines.** With each Phase Submittal, Developer will submit a proposed Phase Budget in a form reasonably acceptable to the Port. Each proposal for a Phase Budget or revised Phase Budget will be a refinement of the Phase Proforma, consistent with the Funding Goals, Project Requirements, and the Budget Guidelines, and include:

(i) The proposal will include actual dates and amounts of Soft Costs paid, listed by line item up to a specified date before submitting the Phase Budget, with detailed line item estimates of additional Soft Costs that Developer expects to incur over the Estimated Construction Schedule.

(ii) The proposal will provide line item estimates of Hard Costs that Developer expects to incur over the Estimated Construction Schedule based on design information then available. Estimates will include an allowance for inflation and include contractor contingency consistent with **Article 13** (Construction Generally).

(iii) The proposed Developer Contingency for Hard Costs and Soft Costs will be supported by information used to develop the amounts, including commercially reasonable assumptions for unknown conditions, further design development, concealed subsurface conditions, escalation, and Force Majeure.

(iv) Based on projected spending dates, Estimated Construction Duration, and Estimated Construction Schedule, the proposal will include reasonable projections of:

(1) Developer Return (separately estimating Allowed Developer Return, Additional Developer Return, and Alternative Developer Return), Peak Developer Equity, and Minimum Phase Return; and

(2) Interest on DRP Advances and, if Port Capital Advances are anticipated, Port Return (separately estimating Allowed Port Return, Additional Port Return, and Alternative Port Return).

(v) Any unpaid Developer Balance and Port Balance from Prior Phases will be included.

(vi) The proposal for any Phase after Phase 1 will include, if applicable, Alternative Return Rent Credits to be applied to the Phase 1 Overage under the Master Lease in accordance with *FP § 2.6 (Phase 1 Cost Containment)*.

(vii) Based on pre-Phase consultations, Developer will include projected amounts and dates that the following Public Financing Sources will be available:

(1) proceeds of Mello-Roos Bonds issued in the Phase, subject to Port and City discretion under the Financing Plan; and

(2) any other Project Payment Sources reasonably anticipated, including anticipated "pay-as-you-go" Public Financing Sources not pledged or required to pay debt service on Bonds.

(viii) The proposal must provide for:

(1) Parcel DRPs that, together with other Project Payment Sources, are sufficient to pay estimated Capital Costs; and

(2) Project Payment Sources that are not subject to the Interest Cost Limitation sufficient to fund all Additional Return through the end of the Phase.

(b) **Budget Narrative.** Each Phase Budget proposal will include a narrative statement covering at least the following:

(i) a discussion of any material updates to assumptions underlying the most recent Phase Proforma or Phase Budget for that Phase;

(ii) any proposed changes to the land uses designated for Development Parcels in the Phase, and, if Developer expects to exercise its Option for any Flex Parcel, the proposed land use for the parcel;

(iii) a proposed Phase Schedule that specifies the Estimated Construction Duration and Estimated Construction Schedule, accounting for any Site Preparation, construction of other Horizontal Improvements, and phasing of Development Parcels and Horizontal Improvements based on commercially reasonable assumptions for unknown conditions;

(iv) an estimate of the aggregate Fair Market Value of each Development Parcel in the Current Phase;

(v) projections of the Jobs/Housing Equivalency Fees payable on Commercial Parcels in the Phase, the minimum amount payable on each Commercial Parcel in accordance with *DA § 5.4(b)(ii) (Jobs/Housing Equivalency Fee)*, and any proposed variances from the approved Affordable Housing Subsidy Plan; and

(vi) if applicable, a proposal to limit in the Phase Budget the amount of Project Payment Sources generated by the Current Phase that will be applied to unpaid Capital Costs of any Prior Phase that would otherwise have priority over Capital Costs of the Current Phase, which the Port Commission may approve or disapprove in its sole discretion.

#### **3.4. Phase Submittal Review Process.**

(a) **Completeness.**

(i) Port staff will have 60 days after Developer's delivery of the Phase Submittal for Phase 1 to review it for completeness and 30 days for each Phase Submittal for any Later Phase.

(ii) The Port will notify Developer within the review period specified in **clause (i)** of this Subsection if the Phase Submittal is complete or identify any deficiencies and make any requests for additional information or materials that are reasonably necessary to process the Phase Submittal, consistent with **Section 3.2 (Phase Submittal)** and **Section 3.3 (Phase Budget)**.

(iii) The Port will have an additional 15 days after Developer's delivery of requested information and materials to review the Phase Submittal, as supplemented, for completeness. This process will continue until Port staff finds the Phase Submittal completed.

(b) **Compliance Review.** Port staff will determine whether a Phase Submittal complies with Project Requirements within 30 days after the completeness determination under **Subsection 3.4(a) (Completeness)**. The Port Director will provide Developer with a description of the basis for any finding of noncompliance and the changes that are necessary to bring the Phase Submittal into compliance in accordance with **Subsection 5.5(d) (Disapproval)**.

(c) Notice of Expired Review Periods. If the Port Director does not notify Developer timely of Port staff's determination under **Subsection 3.4(a)** (Completeness) or **Subsection 3.4(b)** (Compliance Review), Developer may deliver electronic notice in accordance with *App* ¶ 4.2.2(c) (*No Deemed Consent Without Notice*). No Phase Submittal will be deemed complete or in compliance with Project Requirements unless Developer has complied with this requirement.

### **3.5. Phase Budget Review Process.**

(a) Staff Review. In general, Port staff will have 15 days after the Port finds Developer's Phase Submittal to be complete to review the Phase Budget. If Developer resubmits a Phase Budget to reflect revisions required in other parts of the Phase Submittal, Port staff will have 30 days to review the Phase Budget. Port staff will provide responses to Developer on the following issues.

(i) Port staff will indicate whether the proposed Phase Budget fails to comply with the requirements of **Section 3.3** (Phase Budget) and, if pertinent, measures Developer must take to satisfy those requirements.

(ii) Port staff will indicate whether they believe that Developer's estimate of Horizontal Development Costs and Estimated Construction Schedule in the proposed Phase Budget are commercially unreasonable or inconsistent with the Project Requirements and, if so, the basis for that belief.

(iii) After consulting with the Controller, the Port will address any proposed revisions to the timing and amount of any Bond issuance.

(iv) The Port will make a nonbinding statement of intent to make Port Capital Advances during the Phase or update any previous statement made during progress meetings under **Subsection 3.1(a)** (Progress Meetings).

(b) Port Commission Approval. Each Phase Budget will be subject to approval by the Port Commission in accordance with **Subsection 5.3(c)** (Port Commission Meetings), but Port staff will not be required to submit a proposed Phase Budget to the Port Commission unless staff has found that the proposed Phase Budget complies with **Section 3.3** (Phase Budget). The Port Commission's resolution may delegate authority for the Port Director to approve specific Phase Budget line items, within specified parameters.

(c) Deferral of Port Commission Action.

(i) Developer may elect to submit a preliminary Phase Budget and other information regarding Site Preparation and defer Port Commission consideration of a complete Phase Budget to a date closer to Developer's anticipated commencement of construction of Phase-specific Improvements.

(ii) The Port may elect to issue a construction permit authorizing Developer to begin Site Preparation before the pertinent Phase Approval in accordance with **Section 14.2** (Site Preparation).

(d) Port Commission Schedule. Subject to **Subsection 7.2(a)** (Phase I Election), Port staff will submit the proposed Phase Budget for approval at the Port Commission's next available meeting if any of the following circumstances apply.

(i) Developer has exercised one or more Options for Development Parcels in the Current Phase.

(ii) The Port intends to exercise its Put Option with respect to any Development Parcels in the Current Phase.

(iii) Developer is requesting Port Commission approval of a Phase Budget with contingencies for certain line items intended to allow Developer to respond quickly to changes in market conditions affecting the Current Phase.

(iv) Developer is requesting Port Commission approval of increases or other material modifications to a previously approved Phase Budget.

(e) Criteria for Approval. The Port Commission will approve the Phase Budget or modification if it reasonably finds that the Phase Budget or modification:

(i) is consistent with the Funding Goals and Project Requirements and satisfies the Budget Guidelines;

(ii) is based on reasonable projections;

(iii) provides for sources sufficient to fund the Phase and any carryover from Prior Phases;

(iv) would not adversely affect Project Payment Sources available to satisfy the Project Payment Obligation for any Later Phases and the Project as a whole; and

(v) would not impair the Port's fiduciary obligations under Applicable Port Laws.

(f) Resubmission. The Port Commission's failure to approve a proposed Phase Budget or modification will be without prejudice to Developer's right to resubmit a revised proposal under this Section.

(g) Reserve Rent. The Port Commission's approval of a Phase Budget will not waive the Port's right to decline to enter into a Parcel Lease for an Option Parcel under which Annual Ground Rent is less than its Reserve Rent Allocation, unless explicitly approved in the Phase Budget.

(h) Phase Budget Updates and Revisions.

(i) With its submittal of Phase Quarterly Reports, Supplements, and Acquisition Price Updates, Developer will update the Phase Budget, subject to **Subsection 3.5(i)** (Effect of Phase Budget Approval), to reflect the application of Developer Contingency to:

(1) current market conditions and projections; and

(2) contract prices as they are procured under **Article 13** (Construction Generally).

(ii) At any time, Developer may submit a request for Port Commission approval of a revised Phase Budget to respond to changed circumstances. Each request will describe any material modifications to any of the information previously submitted under **Section 3.3** (Phase Budget). The Port will review each request in accordance with **Section 3.5** (Phase Budget Review Process) and approve revisions necessary to authorize payment of Horizontal Development Costs reasonably required to implement this DDA.

(i) Effect of Phase Budget Approval. The Port Commission's approval of a Phase Budget will have the effects described below.

(i) The approval will establish the benchmarks for the Phase Schedule, including the Outside Date for Developer to finally complete Phase Improvements, which will be the last day of the Estimated Construction Schedule, subject to **Subsection 1.1(b)** (Term) and **Article 4** (Excusable Delay).

(ii) Unless the Parties agree otherwise, the Port will be obligated to submit a Port FY Budget for each City Fiscal Year during the Phase that is consistent with the approved Phase Budget. Nothing in this clause will limit the Port's discretion regarding the issuance of Bonds under *FP art. 5 (Mello-Roos Bonds)*. If the Phase Budget includes Port Capital Advances, Port Commission approval will be the Port's binding commitment to make one or more Port Capital Advances in the amounts and on the dates in the Phase Budget except to the extent the Parties later agree otherwise.

(iii) The Chief Harbor Engineer and the Director of Public Works will be authorized to issue construction permits to Developer for approved Phase Improvements in accordance with **Article 12** (Improvement Plans) and approved Improvement Plans approved under the ICA, subject to **Article 14** (Horizontal Development) and **Article 4** (Excusable Delay).

(iv) The Phase Budget, including all allowances, contractor contingencies, Developer Contingency, and approved amendments, will establish the upper limit of spending by Developer that will be authorized for reimbursement under the Financing Plan.

(v) If the Port Commission approved Developer's proposal under **clause (v) of Subsection 3.3(b)** (Budget Narrative), the Phase Budget will limit the amount of Project Payment Sources generated by the Current Phase that will be applied to unpaid Capital Costs of any Prior Phase that would otherwise have priority over Capital Costs of the Current Phase.

**3.6. Phase Completion.** Developer will deliver an SOP Compliance Request to the Port when Developer has finally completed all Phase Improvements in accordance with **Section 14.6** (SOP Compliance).

**3.7. Changes to Phase.**

(a) Changed Conditions. The Parties agree that many factors, including general economic conditions, local housing, office, and retail markets, capital markets, general market acceptability, and local tax burdens will affect the rate at which various residential and commercial uses within the Project can be developed and absorbed.

(b) Developer Request. Developer may request changes to a Phase Approval or changes to the Phasing Plan and related changes to any applicable Outside Dates. Except when **Subsection 2.5(a)** (Garage Phasing) applies, the Port will grant or withhold its approval based on whether, in its reasonable judgment, the modified Phase Approval or Phasing Plan would be consistent with the Phasing Goals.

(c) Port Request. The Port may request changes to the Phasing Plan. In considering whether to approve the Port's requested changes to the Phasing Plan, Developer may grant or withhold its approval based on whether, in its reasonable judgment, the modified Phasing Plan would be consistent with the Phasing Goals.

**3.8. Changes to Project.** Project build-out will take place over a number years, and unforeseen circumstances may affect market conditions. This Section will apply to any request by Developer to change its Developer Construction Obligations under this DDA.

(a) Timing and Contents of Notice. If Developer determines in good faith that further development of the Project in accordance with this DDA has become commercially infeasible for reasons other than Developer's financial condition, the following will apply.

(i) Developer may deliver a Requested Change Notice to the Port in which Developer provides a detailed description of all provisions of the

Transaction Documents that Developer proposes to change, with evidence to support Developer's belief that further development is infeasible without the proposed changes.

(ii) Developer will deliver any Requested Change Notice to the Port before beginning construction for any Phase that would be affected by the changes described in Developer's request.

(iii) The Port will not be required to respond to a Requested Change Notice if:

(1) Developer does not deliver the Requested Change Notice timely; or

(2) when the notice is delivered, an uncured Material Breach or uncured Prospective Breach by Developer of which the Port has given notice exists.

(b) Effect of Requested Change Notice. If Developer delivers a Requested Change Notice complying with **Subsection 3.8(a)** (Timing and Contents of Notice), the following will apply.

(i) If Developer seeks to extend the Outside Dates to begin or complete any Phase for which the Conditions to Commencement in **Article 14** (Horizontal Development) have been satisfied, Developer's request will be presented to the Port Commission for consideration in accordance with **Subsection 5.3(c)** (Port Commission Meetings).

(ii) Any other Outside Dates specified in the Requested Change Notice will be tolled for the Change Negotiating Period, subject to extension by agreement in each Party's sole discretion.

(c) Amendments.

(i) If Port staff and Developer agree to changes within the Change Negotiating Period, the Port will prepare any appropriate Transaction Document amendment for Port Commission consideration.

(ii) The City, through Board Resolution No. 42-18 approving this DDA, has delegated to the Port the authority to make certain modifications to this DDA. If the change would be a Material Modification in the Port Director's reasonable judgment, the Port will also present the amendment to the Board of Supervisors for consideration if the Port Commission approves the amendment. Any decision by the Port Commission or the Board of Supervisors to approve or disapprove a proposed amendment will be made in its respective sole discretion.

(iii) The Port Director and the Director of Public Works are authorized to approve amendments to the Infrastructure Plan unless either, as applicable, reasonably determines that a proposed amendment would significantly increase an Acquiring Agency's costs of ownership or impair the operation of the affected Horizontal Improvements. No other implementing documents may be amended without the approval of the City Agency that acts as the City's principal Regulatory Agency. For example, SFMTA must approve any amendments to the Transportation Exhibit, and MOHCD must approve any amendments to the Housing Plan.

(d) Changes to Implementation Documents. If Port staff and Developer agree within the Change Negotiating Period to changes to implementing documents, the changes will be presented to the Port Commission, the Board of Supervisors, or Other City Agencies if required, and the Change Negotiating Period will be extended for any

additional period required for the appropriate City Agency to consider the changes or undertake any additional review under CEQA. City Agencies will have the right to reject any requested change that would not comply with Regulatory Requirements, but will make other determinations in their reasonable discretion in light of the circumstances, including the impact on Project Requirements. Examples of implementing documents are the Infrastructure Plan, the Sustainability Strategy, and the Workforce Development Plan.

(e) Failure to Agree or Approve. Tolling and extensions under **Subsection 3.8(b)** (Effect of Requested Change Notice) will cease upon 30 days' notice from the Port to Developer. After the 30-day notice period expires, the Port may exercise any of its rights under this DDA for Developer's failure to meet its obligations by the previously tolled or extended Outside Dates, if:

(i) the Acquiring Agency that will own or operate the Improvements rejects Developer's proposed amendments to the Infrastructure Plan;

(ii) Port staff and Developer are unable to agree within the Change Negotiating Period on changes to be submitted to the Port Commission and, if applicable, Board of Supervisors; or

(iii) the Port Commission or the Board of Supervisors, if applicable, disapproves a proposed amendment presented for its approval.

(f) Developer's Withdrawal of Request. At any time during the Change Negotiating Period, Developer may withdraw its change request in writing. Developer's delivery of its withdrawal will cause the following to occur immediately and without any further action.

(i) The Change Negotiating Period will terminate,

(ii) Extensions of Outside Dates granted by the Port Commission under **Subsection 3.8(b)** (Effect of Requested Change Notice) will terminate.

(iii) The Parties' rights and duties under this DDA will remain in effect without any other changes.

#### **4. EXCUSABLE DELAY**

##### **4.1. Generally.**

(a) Required Notice.

(i) Except for Environmental Delay and Down Market Delay, the Party claiming Excusable Delay must provide notice to the other Party promptly, and in no case more than 30 days, after learning of:

(1) the Delay Event; or

(2) a delay in performance caused by the Delay Event that the Noticing Party could not reasonably discover immediately after the Delay Event occurred.

(ii) A notice given under this Section must specify:

(1) the Delay Event Date;

(2) the expected period of Excusable Delay; and

(3) whether the Party claims Excusable Delay for a specific obligation, a Phase, or the Project as a whole.

(iii) The Noticed Party may challenge the existence or length of claimed Excusable Delay by notice to the Noticing Party. The following disputes will be resolved by procedures in **Article 9** (Resolution of Certain Disputes):

- (1) whether an Excusable Delay has occurred;
- (2) whether the Noticing Party gave notice timely; and
- (3) the length of Excusable Delay.

(b) **Effect of Excusable Delay.** In addition to any other specific provisions of this DDA excusing or delaying a performance date, a Party will not be in default of any specific DDA provision, and performance dates will be extended under procedures in this Article, if an Excusable Delay applies to the specific DDA provision. If a Party's performance is subject to Excusable Delay under this Article, any obligation of the other Party that is conditioned on the excused or extended performance will be excused or extended to the same extent. Obligations to process Payment Requests and Requisitions and to pay Approved Payments are not Time-Sensitive Matters subject to Excusable Delay.

(c) **Limits on Excusable Delay.** Each extension for Excusable Delay will cause future performance dates for Time-Sensitive Matters specified in the notice to be extended, subject to the following limitations:

(i) If the delay interrupts Developer's ability to start or finish any Developer Construction Obligations, Developer will take appropriate measures to secure and leave the affected property in good and safe condition until construction can start again.

(ii) Excusable Delay will not affect Developer's obligations to:

- (1) pay taxes or assessments, if applicable;
- (2) maintain in effect Adequate Security or other financial assurances; or
- (3) pay Developer Reimbursement Obligations except to the extent payment due dates are tied to completion of Developer Construction Obligations delayed by Excusable Delay.

**4.2. Excusable Delay Periods.** All of the following are subject to **Section 4.3** (Limits on Excusable Delay Period).

(a) **Environmental Delay.** Environmental Delay begins on the Delay Event Date. Environmental Delay will end 90 days after the final judgment or other final resolution of the Delay Event.

(b) **Down Market Delay.** Down Market Delay begins on the Down Market Test Date. Down Market Delay will end on the earlier of:

- (i) the Down Market Test Date of a later Down Market Test under **Subsection 4.4(e)** (End of Down Market) indicating that a Down Market has ended; and
- (ii) 24 months after a Down Market Test Date indicating that a Down Market exists.

(c) **Other Excusable Delays.** Other Excusable Delays will begin on the respective Delay Event Date. Subject to **Section 4.3** (Limits on Excusable Delay Period), these Excusable Delays will end on the earlier of:

(i) the date specified in the notice or as otherwise determined by agreement or procedures under **Article 9** (Resolution of Certain Disputes); and

(ii) 90 days after the date on which the delay caused by the Delay Event ends.

#### **4.3. Limits on Excusable Delay Period.**

(a) Meet and Confer.

(i) The Parties agree to meet and confer in a good faith attempt to agree on measures that will allow the Project to proceed if an Excusable Delay (based on an event of Force Majeure) of longer than one year occurs. The obligation to meet and confer will arise when the Parties reasonably foresee or know that the Delay Event will exceed one year.

(ii) Measures to which the Parties agree at the staff level may be subject to Port Commission and Board of Supervisors approval if the Port Director in her reasonable judgment determines that the changes would require a Material Modification to any of the Transaction Documents. But the Parties' failure to reach agreement under this Subsection will not result in adverse consequences to either Party, except for those caused by Force Majeure.

(b) Maximum Delay. In no event will an Excusable Delay extend the DDA Term by more than 36 months. As specified in **Subsection 1.1(b)** (Term), the DDA Term will not be extended by Down Market Delay.

#### **4.4. Down Market Delay Procedures.**

(a) Timing. Developer may request a Down Market Test at any time to determine whether a Down Market exists. Except when market conditions are established by a failed Public Offering as described in **Subsection 7.8(g)** (Effect of Failed Offering) or by agreement, a Down Market Test will be used to determine whether each Party's Time-Sensitive Matters for the Phase will be tolled or otherwise adjusted under this Section. Within 30 days after requesting a Down Market Test, Developer will submit to the Port an updated Phase Proforma and a Down Market Test Budget containing all of the information required under **Section 3.3** (Phase Budget), prepared on the assumption that the Current Phase proceeds under then-current market conditions.

(b) Existence of Down Market. Subject to **Subsection 4.4(c)** (Appraisal), a Down Market for a particular Phase will be deemed to be in effect as a result of any of the following:

(i) the sum of Annual Ground Rent projected to be payable to the Port for all Option Parcels in the Current Phase under the Down Market Test Budget is less than the sum of the Reserve Rent Allocations for the same Option Parcels;

(ii) the Down Market Test Budget does not meet the criteria for approval of a Phase Budget under **Subsection 3.5(e)** (Criteria for Approval);

(iii) a Down Market Delay is deemed to be in effect under **Subsection 7.7(c)** (Down Market Before Closing); or

(iv) a Public Offering fails as described in **Subsection 7.8(g)** (Effect of Failed Offering).

(c) Appraisal.

(i) Either Party may give notice to the other Party within 10 days after Developer's submission of the Down Market Test Budget under **clause (i)** or **clause (ii)** of **Subsection 4.4(b)** (Existence of Down Market) that the Noticing

Party intends to engage a Qualified Appraiser to appraise all Option Parcels in the Phase using procedures described in **Section 7.4** (Fair Market Value). The Noticing Party's appraisal instructions will require the appraisal report to include the Rent Conversion Factor for each Option Parcel.

(ii) A Down Market will be deemed to have occurred if the appraisals conducted under **clause (i)** of this Subsection show that the sum of Annual Ground Rent projected to be payable to the Port for each Option Parcel in the Current Phase is lower than the sum of the Reserve Rent Allocations for the same Option Parcels, taking into account the Parcel DRPs in the Down Market Test Budget.

(d) Effect of Down Market Delay.

(i) During a Down Market Delay as to any Phase, the applicable Outside Dates for Developer's obligations to submit Phase Submittals and to exercise its Option for the Option Parcels in that Phase, and dates by which either Party will perform any other Time-Sensitive Matter will be extended in accordance with **Subsection 4.2(b)** (Down Market Delay).

(ii) One Party's Excusable Delay in performing a Time-Sensitive Matter may automatically affect the other Party's Time-Sensitive Matters. The following example illustrates the effect of a Down Market on the Option process.

(1) Developer may request that the Port allow Developer to exercise its Option for an Option Parcel for the sum reported in the Down Market Test.

(2) The Port will not be obligated to convey the affected Option Parcel and may elect in its sole discretion to hold the Option Parcel off the market until the Down Market ends.

(iii) At its sole discretion, Developer may rescind its exercise of an Option for an Option Parcel that has not Closed by the start of the Down Market Delay. Rescission under this Subsection will:

(1) cause the simultaneous, automatic termination of the pertinent Vertical DDA;

(2) entitle the pertinent Vertical Developer to a refund of any deposits made into Escrow, less any fees payable to the Escrow Agent upon cancellation of Escrow; and

(3) not prejudice Developer's right to exercise the Option after the Down Market Delay ends.

(e) End of Down Market. At any time after the first anniversary of the applicable Down Market Test Date, either Party may request another Down Market Test to determine whether the Down Market has ended. Each new Down Market Test indicating the continuing existence of a Down Market will result in a new Down Market Test Date, subject to the 24-month period under **Subsection 4.2(b)** (Down Market Delay).

## 5. PARTY RELATIONSHIPS

**5.1. No Agency.** The Port is not, and none of the provisions in this DDA will be deemed to make the Port, a partner in Developer's or any Vertical Developer's business, or a joint venturer or member in any joint enterprise with Developer or any Vertical Developer. Developer is not, and none of the provisions in this DDA will be deemed to make Developer a

partner in Port's business or a joint venturer or member in any joint enterprise with Port. No Party has the right to act as the agent of any other Party in reference to this DDA.

**5.2. Interagency Cooperation Agreement.** The Port agrees to perform its obligations under the ICA and to use commercially reasonable efforts to cause Other City Agencies to perform their respective obligations under the ICA. Developer is a third-party beneficiary under the ICA with direct enforcement rights under *ICA § 9.4 (Successors and Assigns; Third-Party Beneficiary)*.

**5.3. Port Approvals.** The approval standards and procedures below will apply to implementation of this DDA except as otherwise specified.

(a) Regulatory Capacity. While this DDA does not constrain the Port's exercise of regulatory authority, the Port has consented to and will comply with the DA Requirements.

(b) Proprietary Capacity. The Port, when acting in its proprietary capacity as landowner and landlord, will make determinations in its reasonable judgment except as otherwise specified. All Improvements will be subject to the Port's review in accordance with applicable procedures in this DDA and as otherwise set forth in the SUD, the Development Agreement, and the ICA.

(c) Port Commission Meetings. Except as otherwise provided in this DDA, whenever the Port Commission must approve or otherwise consider any matter in reference to the Project, the Port Director will submit the matter to the Port Commission at the next regularly-scheduled meeting of the Port Commission for which an agenda has not been finalized and for which Port staff can prepare and submit a staff report in keeping with the Port Commission's customary meeting practices and obligations under public meeting laws. The Port Commission will approve or disapprove discretionary matters in accordance with its powers and duties under Applicable Port Laws and as otherwise specified in this DDA.

(d) Authority for Port Approvals.

(i) The Port Director, or her designee, is authorized to sign on behalf of the Port any documents, including any contracts, agreements, memoranda, or similar documents with state, regional, or local authorities or other persons, or enter into any tolling agreement with any person, to the extent of the authority granted under the Port Commission and Board of Supervisors resolutions approving this DDA. The Port Director's authority is limited to matters that do not materially increase the obligations or liabilities of the Port or the City or materially decrease the public benefits to the Port or the City, and are necessary or advisable to complete the transactions described in this DDA and to effectuate the purpose and intent of the authorizing resolutions if the Port Director determines, after consultation with the City Attorney, that the document is necessary or proper and in the Port's and the City's best interests. The Port Director's signature on any document will be conclusive evidence of her determination and the proper exercise of her authority.

(ii) The Port Commission, through the Chief Harbor Engineer, administers and enforces the Port Building Code, the Port Harbor Code, and other Port regulations to protect the public health, safety, and general welfare. Unless Public Works is the Permitting Agency, the Chief Harbor Engineer will issue permits for construction, sign certificates regarding completion of Improvements, and issue "red tags" and other regulatory notices that would prohibit or condition use of Port property to protect public safety.

#### **5.4. Developer Approvals.**

(a) **Authority.** Each of the persons executing this DDA on behalf of Developer represents to the Port, and the Port is entitled to rely on those representations, that: (i) Developer is a duly authorized and existing entity under Delaware law; (ii) Developer is qualified to do business in California; (iii) Developer has full right and authority to enter into this DDA and other Transaction Documents executed as of the Reference Date; and (iv) each of the persons signing the Transaction Documents on its behalf is authorized to do so. Developer agrees to provide the Port with satisfactory evidence confirming these representations promptly after a Port request.

(b) **Authorized Developer Representative.** Developer will designate from time to time by notice to the Port under **Section 18.1** (Notices), given in accordance with *App ¶ 4.5 (Notices)*, a representative who is authorized to act on Developer's behalf in reference to requests for approvals or other actions. The Port will be entitled to rely on any notice delivered under this Subsection until superseded by a later notice.

**5.5. Standards Otherwise Applicable.** Except as expressly provided otherwise, the following standards will apply to the Parties' conduct under this DDA.

(a) **Covenant of Good Faith and Fair Dealing.** This DDA is subject to the covenant of good faith and fair dealing applicable to contracts under California law. Accordingly, Developer and the Port each covenants, on behalf of itself and its successors, to take all actions and to execute, with acknowledgment or affidavit if required, all documents necessary to achieve the objectives of this DDA to the extent consistent with applicable law.

(b) **Cooperation and Non-Interference.** Developer and the Port acknowledge that the implementation of this DDA and the remedies provided to a Party for the other Party's default or failure to perform an obligation under this DDA are predicated on their cooperation throughout the DDA Term, and agree, subject to **Article 10** (Defaults):

(i) to implement this DDA in a manner intended to accomplish its objectives within the time periods specified in this DDA or in any of the Transaction Documents otherwise entered into in conjunction with this DDA or, if a time period is not specified, then within a commercially reasonable period of time, subject, in each case, to any extensions of time provided in this DDA or the applicable Transaction Document;

(ii) to refrain from doing anything that would render performance under this DDA impossible; and

(iii) that a Party will be excused from performing under this DDA to the extent prevented by the other Party's actions.

(c) **Commercial Reasonableness.** Unless specifically provided otherwise in this DDA, whenever a Party is permitted to make a judgment, form an opinion, provide an estimate or projection, judge the sufficiency of the other Party's performance, or exercise discretion in taking (or refraining from taking) any action or making any determination, that Party will proceed with due diligence and employ commercially reasonable standards in doing so. In general, the Parties' ministerial acts in implementing this DDA, including construction of Improvements, approvals, disapprovals, demands for performance, requests for additional information, and any exercise of an election or option, will be commercially reasonable. The requirements under this DDA extend to and bind any Agents of Developer or of the Port authorized to act on their behalf.

(d) **Disapproval.** A Party that declines to grant approval or agree to a request, grants conditional approval, or makes a finding of noncompliance will deliver a written statement of its reasons in reasonable detail to the other Party. This requirement does not

apply to actions that are subject to either Party's sole discretion or any matter that the Port Commission will consider in open session at a noticed public meeting held under applicable public meeting laws.

(e) Specificity of Approval. A Party's approval to or of any act or request by the other Party will not be deemed to waive or render unnecessary approval to or of any similar or subsequent acts or requests. In determining whether to give an approval, no Party is allowed to require changes from or impose conditions inconsistent with applicable Project Requirements or its prior approvals for the specific matter.

#### **5.6. Day-to-Day Communications.**

(a) Manner of Communications. Developer and the Port agree that day-to-day communications regarding the Project must be in writing, but need not be delivered in compliance with *App ¶ 4.5 (Notices)* and **Section 18.1 (Notices)**. Day-to-day communications will be transmitted or confirmed by email or facsimile and will be directed to other Party's designated project managers specified below, as indicated otherwise in a Transaction Document, or as agreed by the Parties.

(b) Scope. In general, this Section will apply to communications made in connection with **Article 3 (Phase Approval)**, **Article 12 (Improvement Plans)**, and **Article 13 (Construction Generally)**.

(c) Project Contacts. As of the Reference Date, day-to-day communications will be delivered to:

(i) Developer:

Name: Julian Pancoast  
Email: jpancoast@sfgiants.com  
Tel.: (415) 972-1752

(ii) For the Port:

Name: Phil Williamson  
Email: phil.williamson@sfport.com  
Tel.: (415) 274-0453

### **6. TRANSFERS**

**6.1. Port Conditions.** The following conditions will apply to all Transfers except Initial Transfers.

(a) No Breach. Developer is not in Material Breach of this DDA and no Prospective Breach of which the Port has given notice remains uncured before Developer presents the Assignment and Assumption Agreement to the Port Director with the request to sign the Port's consent under **Subsection 6.6(a) (Form)**.

(b) Port Costs. Developer agrees to reimburse the Port for its reasonable costs of reviewing the Transferee's qualifications.

(c) No Material Modification. The Transferee does not condition its acquisition on the Port's approval of either: (i) a Material Modification; or (ii) other changes to the Transaction Documents that would materially increase the costs or other burdens to the Port or the City unless offset by a corresponding increase in revenues.

(d) Insurance and Adequate Security. The Transferee provides commitments that satisfy the Insurance Requirements under **Article 15 (Insurance)** and the Adequate Security Requirements under **Article 16 (Security for Project Activities)** for all obligations that the Transferee assumes, subject to approvals of the Port Director and Director of Public Works, if applicable, unless Developer confirms, with each applicable

Obligor's consent, that the Adequate Security previously provided to the Port will secure the Transferee's assumed obligations.

(e) Single Record Keeper. Unless Developer Transfers all of its rights and obligations as master developer under this DDA, or the Port and the Transferee have consented, Developer will continue to be responsible for all Phase Quarterly Reports, Phase Audits, and the Final Audit, including information from each Transferee's horizontal development activities, except to the extent that *FP § 9.1(c) (Effect of Termination)* applies.

(f) Master Lease. The Transferee of the Developer Construction Obligations for one or more Phases will enter into appropriate subleases with the Master Lease Tenant simultaneously with the Transfer.

## **6.2. Transfers in Phase 1.**

(a) Prohibition. Except for an Initial Transfer under **Subsection 6.2(b)** (Initial Transfer), Developer is expressly prohibited from Transferring its development rights and obligations for Phase 1 (except Deferred Infrastructure) to an Unrelated Transferee under any circumstance without the approval of the Port Commission, in its sole discretion.

(b) Initial Transfer. A proposed Transfer by Developer before Phase 1 Approval that meets the criteria below will be an Initial Transfer not requiring Port consent if:

- (i) after the Transfer, one or more Giants Affiliates will retain both:
  - (1) Significant Ownership; and
  - (2) Management Control; and
- (ii) the Port Director determines, in her reasonable judgment, that:
  - (1) the Initial Transferee satisfies the Experience Requirement; and
  - (2) after the Transfer, Developer will meet the Net Worth Requirement.

(c) Port Rights as to Initial Transfer. The Port will not have the right to approve an Initial Transfer meeting the requirements of **Subsection 6.2(b)** (Initial Transfer). But the Port Director will have the right to examine portions of Developer's operating agreement or other documentation that the Port finds reasonably necessary to determine whether the Transfer meets the requirements of **Subsection 6.2(b)** (Initial Transfer).

## **6.3. Transfers Before and After Initial Benchmarks.**

(a) Until Initial Benchmarks. As part of its commitment to the Project, Developer has agreed that, until it has achieved the Initial Benchmarks:

- (i) a Giants Affiliate will retain Significant Ownership and Management Control of all Phases of the Project; or
- (ii) the Port Commission may approve or disapprove in its sole discretion any proposed Transfer that would result in no Giants Affiliate retaining Significant Ownership and Management Control of all Phases of the Project.

(b) After Initial Benchmarks. After Developer has achieved the Initial Benchmarks, the Port Commission will consider, in accordance with **Subsection 6.4(e)** (Port Consideration), any proposed Transfer that would result in:

(i) neither a Giants Affiliate retaining Significant Ownership and Management Control of the Current Phase and each Later Phase of the Project; nor

(ii) an Initial Transferee Affiliate retaining Significant Ownership and Management Control of the Current Phase and each Later Phase of the Project.

(c) Triggering Event. The Port will be entitled to receive the Port Share of the Sale Profit from any Triggering Event.

**6.4. Other Unrelated Transfers** After Developer has achieved the Initial Benchmarks, Transfers to Unrelated Transferees will be subject to Port Commission approval under this Section.

(a) Phase Transfer Before Phase Approval. Developer may Transfer horizontal development rights and obligations for a Phase that is not an Approved Phase subject to the Port's approval under **Subsection 6.4(e)** (Port Consideration).

(b) Phase Transfer After Phase Approval. Developer may Transfer horizontal development rights and obligations for a Phase that is an Approved Phase to an Unrelated Transferee, subject to the Port's approval under **Subsection 6.4(e)** (Port Consideration) and the following conditions.

(i) If Developer has not begun construction of Phase Improvements, Developer may Transfer all of its Developer Construction Obligations for the Approved Phase.

(ii) If Developer has begun construction of Phase Improvements for the Approved Phase, Developer may Transfer all of its future Developer Construction Obligations for the Approved Phase on condition that Developer, the Phase Transferee, and Developer's general contractor enter into assignment and indemnity agreements for the construction work underway on the Approved Phase. These agreements must be commercially reasonable in the Port's reasonable judgment.

(c) After Completion of Backbone Infrastructure. Developer may Transfer future horizontal development rights and obligations for an Approved Phase to an Unrelated Transferee without the Port's prior consent if the following conditions are satisfied.

(i) Developer has substantially completed all Backbone Infrastructure for the Approved Phase, including all punch list items, or has provided funds or other security to the Unrelated Transferee that are adequate to cover the estimated cost to complete all punch list items.

(ii) Each Acquiring Agency has inspected and approved the substantially completed Backbone Infrastructure in accordance with the ICA.

(d) Request for Approval. Developer's request for approval of a Transfer to an Unrelated Transferee will include detailed information to demonstrate compliance with this Section, an Assignment and Assumption Agreement in the form of **DDA Exhibit B11**, and any additional documents and information that the Port Director reasonably requests. Upon request, the Port Director will provide confirmation of her Net Worth Requirement finding.

(e) Port Consideration. The Port will not unreasonably withhold, delay, or condition its approval of a proposed Transfer to an Unrelated Transferee that meets all of the requirements under **Section 6.1** (Port Conditions), **Subsection 6.3(b)** (After Initial Benchmarks) if applicable, and this Subsection.

(i) The proposed Transfer would not result in Developer Construction Obligations for the Phase to be split between more than one person.

(ii) The Transferee must agree to satisfy and maintain the Net Worth Requirement at all times until the Transferee has satisfied all of its assumed obligations. Promptly after the Port's request, a person required to maintain a minimum Net Worth under this DDA must provide to the Port reasonable evidence that the person satisfies the Net Worth Requirement.

(1) If available, the Transferee must submit a copy of its most recent audited financial statements, which must not be dated more than 180 days before the date of the Port's request. Audited financial statements must be prepared by an independent CPA and must include the CPA's opinion that the financial statements are fairly stated in all material respects.

(2) If the Transferee does not have recent audited financial statements, the Port may require that the Transferee make available to the Port for review unaudited CPA-reviewed financial statements.

(iii) Developer (or any Transferee of all of Developer's obligations as master developer) agrees to be solely responsible for any distribution of Project Payment Sources to its Transferees and to indemnify the Port against any Claims from Transferees regarding reimbursements and revenue-sharing.

(f) Port Commission Consideration.

(i) When the Port Director has sufficient information in her reasonable judgment to permit the Port Commission to make its determination, the Port Director will submit the proposed Transfer to an Unrelated Transferee for Port Commission consideration. The Port Director will provide confirmation that she has sufficient information within five days after Developer delivers a request that she do so, all in accordance with **Subsection 5.6(a)** (Manner of Communications).

(ii) Developer may request that the Port Commission consider a Transfer to an Unrelated Transferee that does not meet all applicable requirements of this Section. The Port Commission may give or withhold its approval to a noncompliant request in its sole discretion.

**6.5. Affiliate Transfers.** This Section governs Developer's Transfer of horizontal development rights and obligations for one or more Phases under this DDA to one or more Transferee Affiliates.

(a) Conditions to Transfer.

(i) Developer has the right at any time to Transfer any portion of its rights and corresponding obligations under this DDA to a Transferee Affiliate without the Port's approval if Developer is not then in Material Breach and no Prospective Breach of which Developer has notice remains uncured on the effective date of the Transfer.

(ii) Developer will provide notice to the Port of any anticipated Transfer to a Transferee Affiliate at least 30 days before the effective date of the Transfer or any shorter period that the Port Director approves in her sole discretion. Developer's notice will include:

(1) the identity, business and notice addresses, contact person, and contact information for the Transferee Affiliate;

(2) a copy of the proposed Assignment and Assumption Agreement; and

(3) evidence satisfactory to the Port Director that the Transferee would meet the Net Worth Requirement and the Experience Requirement.

(iii) Upon request, the Port Director will provide confirmation of her Net Worth Requirement finding.

(b) Reorganization. A Transfer effected by Developer's consolidation or merger into or with any other business organization that meets the requirements of **Subsection 6.5(a)** (Conditions to Transfer) will be considered a permitted Transfer under this Section even if Developer is not the surviving entity under applicable law.

(c) Application. Any Affiliate Transferee under this Section will be a Developer Party under this DDA to which Developer's Loss Security and any Phase Security will apply to the obligations assumed by the Transferee unless it provides replacement Adequate Security approved by the Port Director.

#### **6.6. Assignment and Assumption Agreement.**

(a) Form. Each Transfer permitted under this Article that results in a change in the legal entity contracting with the Port in this DDA will be subject to an Assignment and Assumption Agreement substantially in the form of **DDA Exhibit B11**. With the Port Director's prior approval, the Assignment and Assumption Agreement may address other matters at Developer's request. The Port Director will sign and return the Port Consent within a reasonable time after Developer and the proposed Transferee have provided all required documentation and other information that the Port reasonably requests.

#### **(b) Release.**

(i) A Transfer will not release Developer of obligations that expressly survive the DDA or of its obligation to provide reports for the entire Project in accordance with *FP § 9.1(b) (Phase Quarterly Reports)* unless the Transferee and the Port expressly agree that the reporting obligations are included among transferred obligations.

(ii) Except as specified in **clause (i)** of this Subsection or in **Subsection 6.8(c)** (Defaults and Breaches), Developer may be released from future obligations under this DDA to the extent explicitly assumed by the Transferee in the relevant Assignment and Assumption Agreement. No Transfer will release Developer from any Claims by the Port (or an Indemnified Party whose Claim arises through the Port) that arose before the effective date of the Transfer except to the extent stated in the Port's consent to the Transfer.

(iii) At the Port's election, a Transfer subject to **clause (ii)** of **Subsection 6.4(e)** (Port Consideration) will include a provision in the Assignment and Assumption Agreement that Developer is not released by the Transfer from DDA obligations that the Port reasonably specifies as a condition to its consent.

#### **6.7. Notices Regarding Transfers.**

(a) Approval Requests. The Port will review any request for approval of a Transfer within 30 days after Developer has delivered its request and supporting information. If the Port finds the request incomplete, the Port will notify Developer of the additional information that is needed within the 30-day review period; and the Port will have an additional 15 days after Developer's new submittal to review the additional information for completeness.

(b) **Affiliate Transfers.** The Port will review information that Developer provides under **Section 6.5** (Affiliate Transfers) to determine whether the conditions of that Section are satisfied within 30 days after receiving the request. If the Port finds the request incomplete or the information insufficient, the Port will notify Developer of the additional information that is needed within the 30-day review period, and the Port will have an additional 15 days after receiving Developer's new submittal to review the additional information.

(c) **Notice After Transfer.** Developer will provide notice to the Port in accordance with **Section 18.1** (Notices) and *App ¶ 4.5 (Notices)* within 10 business days after the effective date of a Transfer, in addition to providing a copy of the fully executed Assignment and Assumption Agreement and any additional information and materials that the Port Director reasonably requests. The Port will have 20 days to notify Developer if the information submitted is sufficient in accordance with **Subsection 5.6(a)** (Manner of Communications).

(d) **No Deemed Approval.** Developer must comply with *App ¶ 4.2.2(c) (No Deemed Approval or Consent Without Notice)* with respect to all Port responses due under this Section.

#### **6.8. Effect of Transfers.**

(a) **Prohibited Transfers.** Any attempted Transfer that does not meet all applicable requirements of this Article will be void as to the Port, and the Port will continue to have all rights against Developer under this DDA and at law as if the prohibited Transfer had not occurred.

(b) **Transferee as Developer.** As of the effective dates of Transfers conforming to applicable requirements of this Article, all references to Developer in this DDA relating to the assigned and assumed obligations will include each permitted Transferee.

(c) **Defaults and Breaches.**

(i) An Event of Default by Developer will not be an Event of Default by a Transferee as to its Approved Phase.

(ii) An Event of Default by one Transferee will not be an Event of Default by any other Transferee as to its Approved Phase.

(iii) An Event of Default by the Transferee in a Transfer that is a Triggering Event as to its Approved Phase will not be an Event of Default by Developer.

(iv) An Event of Default by the Transferee in a Transfer that is a Triggering Event as to its Approved Phase will not be an Event of Default by any other Transferee.

(v) A Material Breach by a Transferee Affiliate will be a Material Breach by Developer, subject to Developer's cure rights under **Subsection 6.8(d)** (Developer's Cure Rights).

(d) **Developer's Cure Rights.** This Subsection applies to all Transferees.

(i) The Port will deliver to Developer copies of all notices given to a Transferee that could result in termination of any part of this DDA at the same time and in the same manner that notice is delivered to the Transferee.

(ii) If the Port gives notice of a default or of the Port's intent to terminate a Transferee's rights under this DDA due to its Prospective Breach, Developer will have 35 days to cure any monetary Prospective Breach and to

initiate steps to cure any nonmonetary Prospective Breach. To the extent applicable, the outside date for Developer to cure a nonmonetary Prospective Breach will be extended by the sum of 35 days and the applicable cure period under **Subsection 11.1(c)** (Cure Period).

(iii) Developer may request that the Port meet and confer before the noticed Termination Date regarding a Transferee's Prospective Breach. If Developer provides notice to the Port that Developer is willing and able to cure the Transferee's Prospective Breach and specifies the time and conditions to Developer's performance, the Port and Developer will negotiate over Developer's proposal in good faith for 90 days, subject to extension by agreement in each Party's sole discretion.

(iv) The Port may accept or reject Developer's proposed conditions in the Port's sole discretion. The Port will not be required to negotiate exclusively with Developer, agree to Developer's proposed terms for assumption, or approve another Transfer proposed by Developer.

#### **6.9. Related Matters.**

(a) Certain Recordkeeping. Each Transferee will be required to create and maintain reports, records, and information in compliance with its obligations under this DDA. Unless Developer has transferred all of its rights and obligations as master developer under this DDA, or the Port and the Transferee agree, Developer will continue to be responsible for gathering and compiling all Transferee information for inclusion in integrated reports required under this DDA. The Port's audit and inspection rights as to Developer will apply to all Transferees that assume horizontal development obligations.

(b) Exclusions. Nothing in this Article prohibits or otherwise restricts Developer from any of the following, none of which will be treated as a Transfer:

(i) granting easements, leases, subleases, licenses, or permits to facilitate the development, operation, and use of any part of the Project Site that Developer holds by leasehold;

(ii) granting or creating a Deed of Trust permitted under **Article 17** (Lender Rights);

(iii) conveying its interest in Encumbered Property in connection with a Foreclosure Sale in accordance with **Article 17** (Lender Rights); or

(iv) making a Transfer to the Port, the City, or any other Regulatory Agency as authorized by this DDA or other Transaction Document.

### **7. PARCEL LEASES**

#### **7.1. Developer Option.**

(a) Option Rights. Under procedures in this Article, Developer has the Option to enter into a Parcel Lease for each Development Parcel through a Vertical Developer Affiliate. Developer may initiate the Option process for any Option Parcel by delivering an Appraisal Notice to the Port. After Developer exercises its Option for a Development Parcel, the Port and the designated Vertical Developer Affiliate will enter into a Vertical DDA that will specify the conditions precedent for the Close of Escrow for the pertinent Parcel Lease and construction obligations for the parcel.

(b) Market Conditions Consultation. At least once each quarter, or more frequently at a Party's request on reasonable advance notice, the Parties will meet and confer to decide when market conditions support development of each Phase. These meetings will begin after the Entitlement Date and continue until Developer has exercised

or relinquished all of its Option rights under this DDA. During this period, the Parties will jointly engage a mutually acceptable real estate professional to estimate the Fair Market Values of the Option Parcels in each Phase.

(c) Lead Parcels. To provide early Parcel DRPs for the Port to apply to the Entitlement Sum, the Parties will jointly engage one or more mutually acceptable Qualified Appraisers to deliver appraisals of the designated Lead Parcels at least 90 days before Developer anticipates entering into the PIA for Phase 1. The Port will Close Escrow on Prepaid Leases for the Lead Parcels with Developer's designated Vertical Developer Affiliates as provided in *FP § 3.4 (Lead Parcels)*. Parcel DRPs from the Prepaid Leases will be applied to the Entitlement Sum as set forth in *FP § 2.3 (Entitlement Costs)*.

(d) Reserve Rent Allocations. The following will apply to all Option Parcels except the Lead Parcels.

(i) The Reserve Rent Allocation for each Option Parcel establishes the floor for Annual Ground Rent that the Port expects to receive under the pertinent Parcel Lease.

(ii) The Port will be required to enter into a Vertical DDA for an Option Parcel if the Annual Ground Rent that the Port would receive under the Parcel Lease as determined under **Section 7.4 (Fair Market Value)** would equal or exceed its Reserve Rent Allocation. The net present value of Annual Ground Rent payments over the life of the Parcel Lease plus the amount of the Parcel DRP should equal its Fair Market Value.

(iii) If the Port agrees to enter into a Parcel Lease with a greater proportion of rent as prepaid rent, or with a greater proportion of rent as Percentage Rent, the Reserve Rent Allocations may be adjusted. The Port will not be required to enter into any Parcel Lease unless the initial Annual Ground Rent that the Port will receive under the Parcel Lease will equal or exceed its adjusted Reserve Rent Allocation.

(e) Proposal to Prepay Rent. Developer may seek the Port's consent, which the Port may grant or withhold in its sole discretion, to enter into a Prepaid Lease for any Option Parcel in addition to the Lead Parcels.

(f) Garages. Developer intends to develop the Parcel D2 Garage and may elect to develop the Mission Rock Square Garage to serve Mission Rock, the Ballpark, and other nearby facilities subject to the requirements in **Section 2.5 (Garage Phase Requirements)** and **Section 2.6 (Mission Rock Square Garage)**. Any Garages will be developed by Vertical Developer Affiliates. A Vertical Developer Affiliate building a Garage will be required to enter into a Garage REA as described in **Subsection 2.5(f) (Garage REA)** and enter into a Vertical DDA and a Parcel Lease generally in the form of **DDA Exhibit D2**, revised by applicable requirements in **Section 2.5 (Garage Phase Requirements)** and **Section 2.6 (Mission Rock Square Garage)**.

(g) Quiet Title Action. The Parties acknowledge that portions of the Project Site are subject to a title exception that may be removed by a McEnerney action. The Port will file the appropriate McEnerney action within 90 days after the Reference Date and diligently prosecute the same to judgment. If the Port obtains a favorable judgment in the action, it will obtain a certified copy of the judgment and instruct the Escrow Agent to record the judgment and issue an amendment or endorsement removing the exception. Developer must cooperate with the Port, and fees and costs the Port incurs in the McEnerney action will be Port Costs or City Costs reimbursable under *FP § 9.2 (Port Accounting and Budget)*.

(h) Street and Utility Vacations. The Parties acknowledge that the recordation of Subdivision Maps and construction of Phase Improvements may require the vacation of certain streets and utilities located within the Project Site, and the failure to do so in a timely manner could adversely affect or delay the Commencement or the completion of the applicable Phase Improvements. Therefore, in connection with each Phase Submittal and Subdivision Map application, the Parties will work cooperatively to identify any such street or utility easements that should be abandoned, removed, relocated, amended, or otherwise modified to permit the recordation of a Phase Final Map and/or to allow the construction of the Phase Improvements. To the extent that action by the City is required, such as a quiet title action or Board of Supervisors action to abandon, vacate, or relocate (temporarily or permanently) any such street or utility easements, the Port will take all such reasonable measures to cause the City to implement such abandonment, removal, relocation, amendment or modification. Developer must cooperate with the Port on such measures, and the fees and costs of such measures will be Port Costs or City Costs reimbursable under *FP § 9.2 (Port Accounting and Budget)*. Port's failure to implement such abandonment, removal, relocation, amendment or modification will not be a breach of this Section; however, the Port's failure to timely implement such abandonment, removal, relocation, amendment or modification will be considered an event of Excusable Delay if such failure directly, materially and substantially causes a delay in Developer's performance under the Schedule of Performance.

**7.2. Phase 1 Put Option.**

(a) Phase 1 Election. If Developer states in its Phase Submittal for Phase 1 that it is not ready to present the Phase Budget included in the Phase Submittal to the Port Commission for approval under **Subsection 3.2(b)** (Phase 1 Submittal), then the Port Director may elect to either:

- (i) hold the Phase Budget until Developer states its readiness to proceed with Phase 1, and to submit the Phase Budget, with or without modification, to the Port Commission for approval; or
- (ii) at any time that is later than three years after the Entitlement Date, initiate the process under **Subsection 7.2(b)** (Phase 1 Put Procedures).

(b) Phase 1 Put Procedures.

(i) The Port will engage a Qualified Appraiser to conduct an appraisal of at least one Commercial Parcel and one Residential Parcel in Phase 1 in accordance with appraisal procedures in **Section 7.4** (Fair Market Value), except that:

- (1) the appraisals will be delivered only to the Port, in confidence; and
- (2) the appraisals will be provided to Developer only if the Port exercises its Put Option for Phase 1.

(ii) The Port will conduct a proforma feasibility analysis of Phase 1 using the appraised values to make reasonable estimates for the other Development Parcels in the Phase and the estimated costs in the proposed Phase Budget to test whether Phase 1 is feasible. The Port will determine feasibility by whether the analysis projects that the sum of projected Project Payment Sources and Developer Capital would be sufficient to pay the Entitlement Sum, Phase 1 Horizontal Development Costs, and Developer Return.

(iii) If the Port concludes that Phase 1 is feasible, the Port may exercise its Put Option for Phase 1 by delivering to Developer a Put Notice that includes copies of the appraisals and the feasibility analysis.

(iv) Developer may dispute the Port's feasibility analysis by submitting the matter to binding arbitration under **Section 9.4 (Binding Arbitration)**. Developer's Arbitration Notice will toll all rights and obligations under this Section until the proceeding is finally resolved.

(v) Within 60 days after the Put Notice is effective under *App ¶ 4.5 (Notices)* or an Arbiter's decision is final, Developer must update the proposed Phase Budget for Phase 1. The updated Phase Budget must incorporate the values and other applicable elements of the appraisals and feasibility analysis and include Parcel DRPs at least equal to the unpaid Developer Balance. Port staff will review the Phase Submittal and present the updated Phase Budget to the Port Commission for its approval.

(vi) If the Port Commission approves the updated Phase Budget:

(1) Developer may elect to initiate the appraisal process for any Development Parcel in Phase 1;

(2) the Port may elect to exercise its Put Option for any Development Parcel in Phase 1 under **Section 7.3 (Parcel Put)**;

(3) the Port may include its costs for the appraisal and feasibility analysis as Port Costs;

(4) Developer will be entitled to Credit Bid up to the aggregate amount of the unpaid Developer Balance when any Vertical Developer Affiliate Closes Escrow on a parcel; and

(5) the Commission's action will be treated as a Phase Approval for all purposes under this DDA.

(vii) If Developer does not exercise its Option on Development Parcels with an aggregate value at least equal to the Entitlement Sum, the Port will have the right to initiate a Public Offering on any Development Parcels for which Developer has not exercised its Option. The Port will use Parcel DRPs to pay off any remaining balance of the Entitlement Sum by disbursements at the Close of Escrow on third-party Parcel Leases.

### **7.3. Parcel Put.**

(a) Port Exercise. Subject to **Subsection 3.2(i) (Put Delay Request)**, the Port may exercise a Put Option for any of the Development Parcels in a Current Phase if the Port believes that the Annual Ground Rents payable to the Port on Option Parcels in the Current Phase would be at least equal to their combined Reserve Rent Allocations. The Port may deliver a Put Notice to begin the 15-day Put Exercise Period at any time between Phase Approval and the Outside Date for Developer to begin construction of Phase Improvements. The Put Notice will list each Development Parcel that is subject to the Put Option.

(b) Effect on Option Parcels. After receiving the Put Notice but no later than the last day of the Put Exercise Period, Developer may deliver an Appraisal Notice to the Port for any Option Parcel in the Put Notice. If Developer fails to respond to the Put Notice, then Developer's Option for all Option Parcels in the Put Notice will be suspended. If Developer's Appraisal Notice specifies that Developer is exercising its Option for one or more, but not all, Option Parcels in the Put Notice, then Developer's Option for declined Option Parcels will be suspended.

(c) Garage Parcels. The Port may include Parcel D2 in a Put Notice under the circumstances described in and subject to **clause (ii) of Subsection 2.5(a) (Garage Phase Requirements)**.

(d) Election to Publicly Offer.

(i) The Port will have the right to publicly offer under **Section 7.8** (Public Offering Procedures) any Option Parcel for which Developer's Option was suspended at any time after the earlier of:

(1) the last day of the Put Exercise Period; and

(2) the effective date of Developer's Appraisal Notice to the Port declining to exercise the Put Option for all of the Option Parcels.

(ii) The Port will deliver notice of its election to initiate a Public Offering to Developer within five business days after the expiration of the applicable period under **clause (i)**. After the notice is delivered, **Section 7.8** (Public Offering Procedures) will apply.

**7.4. Fair Market Value.**

(a) Established by Appraisal. Fair Market Values of Option Parcels will be established by appraisals under this Section.

(b) Appraisal Notice. Developer will trigger the appraisal process for an Option Parcel by delivering an Appraisal Notice to the Parties' jointly chosen Qualified Appraiser before the Outside Date to begin construction of Phase Improvements or in response to a Put Notice. The Appraisal Notice will identify the Option Parcel and provide a detailed program of uses planned for the parcel, including the area programmed for each type of use. The Appraisal Notice will include Appraisal Instructions that require the Qualified Appraiser to deliver an appraisal report for the applicable Option Parcel to the Parties within 30 days after the Appraisal Notice is delivered.

(c) Appraiser Qualifications. Each Qualified Appraiser must meet the following qualifications:

(i) be licensed in the State of California as a Certified General Appraiser;

(ii) be a member of the Appraisal Institute;

(iii) have at least 10 years' experience in the San Francisco Bay Area valuing commercial-office or multiple occupancy residential properties or both, depending on the allowed uses of the Option Parcel;

(iv) be a principal in either a national or regional firm based in California that:

(1) is not a Vertical Developer Affiliate;

(2) does not have an equity investment in Developer, any Vertical Developer Affiliate, any Vertical Developer that has entered into a Parcel Lease with the Port, or any of their Affiliates;

(3) does not have a conflict of interest by virtue of a contractual relationship with Developer either existing or in the 24 months immediately preceding the engagement, unless the Port in its sole discretion waives the conflict;

(4) agrees to avoid future conflicts of interest as a condition to being on the panel; and

(v) is otherwise acceptable to both Parties.

(d) Qualified Appraiser Pool. The Qualified Appraiser Pool from which the Parties may select as of the Project Approval Date is attached as **DDA Schedule 2**. From

time to time, either Party may propose in writing to amend the Schedule to add or remove appraisers to or from the Qualified Appraisers Pool. If the Parties disagree on a proposed addition or removal, then the Parties will engage in a dispute resolution procedure under **Section 9.4** (Binding Arbitration).

(e) **Appraisal Instructions.** The Appraisal Instructions will direct the Qualified Appraiser to prepare and deliver simultaneously to both Parties a Joint Appraisal. For a Residential Project where TAY Units are required, the appraisal instructions will instruct the Qualified Appraiser to assume that:

(i) TAY Units will be provided as Inclusionary Units restricted to households with incomes up to 45% of AMI;

(ii) TAY Units and associated service space will occupy the same building area that would be occupied by the same number of Inclusionary Units restricted to households with incomes up to 45% of AMI; and

(iii) the Vertical Developer and operator of the Residential Project will not bear the cost of services associated with TAY Units.

(f) **Revisions.**

(i) Either Party may propose to make nonmaterial changes to the form of Appraisal Instructions from time to time. The other Party will not unreasonably withhold, condition, or delay its approval of the proposed changes.

(ii) If a Party proposes material changes to Appraisal Instructions, such as revising assumptions, special assumptions, limiting conditions, hypothetical conditions, and special instructions, the Party proposing the changes must provide its proposal in writing with evidence supporting its proposed changes. The other Party may approve or disapprove the proposed changes in its sole discretion.

(g) **Joint Appraisal.**

(i) If the Parties agree on the value conclusions in the Joint Appraisal for an Option Parcel, it will become the Final Appraisal. The costs of the Joint Appraisal will be Soft Costs.

(ii) If the Parties do not agree on the value conclusions in a Joint Appraisal, the dispute will be resolved by procedures in **Section 7.5** (Appraisal Disputes); provided, however, that the Developer may withdraw its Appraisal Notice at any time prior to delivery of a notice by either Party pursuant to **Subsection 7.5(a)** submitting a Disputed Value to binding arbitration. If pursuant to the preceding sentence, Developer withdraws an Appraisal Notice that was delivered under **Subsection 7.3(b)** (Effect on Option Parcels) in response to a Put Notice, the Developer shall be deemed to have declined to exercise the Put Option for the applicable Option Parcel as of the date of such withdrawal, the Developer's Option for such Parcel shall be suspended under **Subsection 7.3(b)** (Effect on Option Parcels), and the Port shall have the rights provided under **Subsection 7.3(d)** (Election to Publicly Offer). If Developer withdraws any other Appraisal Notice, such withdrawal (i) will be without prejudice to Developer's right to deliver a subsequent Appraisal Notice or the Port's right to exercise its Put Option with respect to such Option Parcel(s) if and when otherwise applicable, and (ii) will not itself be grounds for Port to commence a Public Offering. Whether determined by a mutually acceptable Joint Appraisal or by **Section 7.5** (Appraisal Disputes), a Final Value for any Option Parcel must be determined within six months after the date that Developer delivered the related Appraisal Notice.

**7.5. Appraisal Disputes.** A Party that objects to the Fair Market Value or the Rent Conversion Factor in the Joint Appraisal may submit the Disputed Value to binding arbitration under this Section by notice delivered within two weeks after the Joint Appraisal is delivered.

**(a) Right to Party Appraisals.**

**(i)** Each Party will have the right to engage another Qualified Appraiser to prepare a Party Appraisal using the same instructions used for the disputed Joint Appraisal. The fees and costs of Party Appraisals will not be Soft Costs.

**(ii)** If a Party chooses not to obtain a Party Appraisal, the appraisal delivered under **Subsection 7.4(g)** (Joint Appraisal) will be deemed to be its Party Appraisal for the purpose of this Section.

**(b) Dispute Resolution Procedures.** The Final Value will be determined as follows.

**(i) Step 1.** If the Disputed Values in the Party Appraisals are within 10% of each other, then the Final Value will be the average of those two. Otherwise, go to Step 2.

**(ii) Step 2.** The Parties will jointly select another Qualified Appraiser to prepare a Neutral Appraisal using the same instructions. The fees and costs of the Neutral Appraisal will be Soft Costs. The Disputed Value will be established as follows.

**(1)** If the Disputed Values in the Neutral Appraisal and only one of the Party Appraisals are within 10% of each other, then the Final Value will be the average of the Disputed Values in the Neutral Appraisal and the Party Appraisal within 10%.

**(2)** If the Disputed Value in the Neutral Appraisal is within 10% of the Disputed Values in both Party Appraisals, then the Final Value will be the average of all three values.

**(3)** If neither **Paragraph (1)** nor **Paragraph (2)** applies, then both Party Appraisals will be disregarded, and the Final Value will be the Disputed Value in the Neutral Appraisal.

**(c) Delay in Achieving Final Map: Withdrawal of Appraisal Notice.** If a Party submits a Disputed Value to binding arbitration under this **Section 7.5** and Developer thereafter reasonably determines in good faith that there is a substantial risk that Developer will not achieve and record the Final Map for the applicable Phase by the First Scheduled Closing Date that would be established by a Vertical DDA resulting from the exercise of Developer's Option for such Parcel following the determination of the Final Value, then, at any time prior to Developer's exercise of such Option, Developer may, by notice to the Port setting forth the grounds for such determination, withdraw its Appraisal Notice. Withdrawal of the Appraisal Notice shall be effective 10 days following Developer's delivery of notice pursuant to the preceding sentence unless within such 10 day period Port gives notice of its reasonable determination that (i) there is not a substantial risk that the Final Map will not be recorded for the applicable Phase by the First Scheduled Closing Date so long as Developer continues to diligently pursue such recordation, or (ii) Developer's past failure to use diligent efforts as required under **Section 2.2(b)** (Subdivision Maps) was a direct, material and substantial cause of substantial risk that the Final Map will not be recorded for the applicable Phase by the First Scheduled Closing Date. Any dispute with respect to the withdrawal of an Appraisal Notice pursuant to this **Subsection 7.5(c)** shall be subject to binding arbitration. If pursuant to this **Subsection 7.5(c)**, Developer withdraws an Appraisal

Notice that was delivered under **Subsection 7.3(b)** (Effect on Option Parcels) in response to a Put Notice, the Developer will be deemed to have declined to exercise the Put Option for the applicable Option Parcel as of the date of such withdrawal, the Developer's Option for such Parcel shall be suspended under **Subsection 7.3(b)** (Effect on Option Parcels), and the Port shall have the rights provided under **Subsection 7.3(d)** (Election to Publicly Offer). If Developer withdraws any other Appraisal Notice, such withdrawal (i) will be without prejudice to Developer's right to deliver a subsequent Appraisal Notice or the Port's right to exercise its Put Option with respect to such Option Parcel(s) if and when otherwise applicable, and (ii) will not itself be grounds for Port to commence a Public Offering.

#### **7.6. Rent.**

(a) **Annual Ground Rent.** Except for Prepaid Leases, all Parcel Leases will require Annual Ground Rent, which will be determined by deducting the Parcel DRP in the Phase Budget from Prepaid Lease Value and multiplying the difference by the Rent Conversion Factor.

(b) **Percentage Rent.**

(i) For any Parcel Lease that will include Percentage Rent, the Parties will retain a real estate economics consultant within 30 days after Final Values are established under **Subsection 7.4(g)** (Joint Appraisal) or **Section 7.5** (Appraisal Disputes). The Parties will provide the Final Appraisal and the underlying materials and information to the consultant with directions to prepare and deliver to the Parties a proforma with a Projected AGI conclusion for the Option Parcel.

(ii) If the Parties agree with the consultant's proforma analysis, the percentage for Percentage Rent will be determined using the consultant's Projected AGI.

(iii) A Party that disagrees with the consultant's proforma analysis may deliver an Arbitration Notice to the other Party to initiate a proceeding under **Section 9.4** (Binding Arbitration).

(iv) Percentage Rent will be set as the percentage derived by dividing Annual Ground Rent by Projected AGI, as finally agreed or determined.

#### **7.7. Option Parcel Closings.**

(a) **Closing Deadline.**

(i) Developer will have 30 days after the Final Values for an Option Parcel that will not include a Percentage Rent Obligation are final to deliver an Option Notice to the Port.

(ii) Otherwise, Developer will have 30 days after the Percentage Rent for an Option Parcel is final to deliver an Option Notice to the Port.

(iii) If Developer timely delivers its Option Notice to the Port, Developer's selected Vertical Developer Affiliate will have 40 days to enter into a parcel-specific Vertical DDA with the Port.

(iv) Developer's failure to deliver an Option Notice or its Vertical Developer Affiliate's failure to deliver its executed Vertical DDA timely will give the Port the right to initiate a Public Offering for the Option Parcel.

(b) **Disposition of Parcel DRPs.**

(i) The Port will instruct the Escrow Agent to disburse all Parcel DRPs from Escrow at Closing. The Parties will make entries in the Developer

Capital Schedule and the Port Capital Schedule to reflect the disposition of Parcel DRPs. Acceptable forms of payment are:

- (1) cash;
- (2) cash deemed to have been deposited by Credit Bid as described in *FP § 3.5 (Right to Credit Bid)*; and
- (3) any deemed DRP Advance for estimated Deferred Infrastructure costs.

(ii) All Parcel DRPs will be subject to reconciliation and adjustment by a Phase Audit under *FP § 9.3(a) (Phase Audit)*.

(c) Down Market Delay Before Closing. If Annual Ground Rent using the Rent Conversion Factor determined under **Subsection 7.6(a)** (Annual Ground Rent) would be lower than the Reserve Rent Allocation for an Option Parcel, the Parties will proceed with one of the alternative courses of action described below.

(i) After the appraisal is final, Port staff will seek direction from the Port Commission at one or more regularly scheduled meetings for which an agenda has not been finalized and for which Port staff can prepare an analysis of real estate market conditions, which may require the assistance of real estate consultants.

(1) Promptly after the Port Commission has provided its direction, Port staff will give Developer notice that the Port will either: (A) accept Annual Ground Rent based on the Rent Conversion Factor conclusion under **Subsection 7.6(a)** (Annual Ground Rent); or (B) hold the Option Parcel off the market due to a Down Market, subject to **clause (ii)** of this Subsection.

(2) If the Port will accept Annual Ground Rent that is lower than the Reserve Rent Allocation for the Option Parcel: (A) Developer will have 10 days after delivery of the Port's notice to designate a Vertical Developer Affiliate that will enter into a Vertical DDA for the Option Parcel; and (B) the designated Vertical Developer Affiliate will have 40 days after delivery of the Port's notice to enter into a Vertical DDA with the Port.

(ii) If the Port's notice stated its intent to hold the Option Parcel off the market due to a Down Market, Developer, in its sole discretion, may offer to pay Annual Ground Rent equal to the Reserve Rent Allocation for the Option Parcel by notice delivered to the Port within 30 days after delivery of the Port's notice under **clause (i)** of this Subsection. If Developer does so, the Port must accept the offer, and the designated Vertical Developer Affiliate must enter into a parcel-specific Vertical DDA with the Port within 40 days after delivery of Developer's notice.

(iii) Neither Party may take any other action regarding the Option Parcel until each period in **clause (i)** or **clause (ii)** of this Subsection, as applicable, has expired. If the Parties do not reach agreement, or the Vertical Developer Affiliate does not enter into a Vertical DDA within the time periods specified in **clause (i)** or **clause (ii)** of this Subsection:

(1) the Port in its sole discretion may deliver notice to Developer rescinding the Port's offer to convey the Option Parcel; or

(2) Developer in its sole discretion may deliver notice to the Port rescinding Developer's exercise of its Option for the Option Parcel; and

(3) Down Market Delay will be deemed to be in effect on the effective date of the notice, and **Subsection 4.4(d)** (Effect of Down Market Delay) and **Subsection 4.4(e)** (End of Down Market) will govern the Parties' respective rights and obligations.

(iv) A Party rescinding under this Subsection may direct the Escrow Agent to close the Escrow Account. Rescission will not affect Developer's right to exercise the Option after the Down Market Delay ends. Without further action, the Final Appraisal triggering action under this Subsection will be disregarded for any purpose under this DDA.

(d) **Final Map.** As provided in **Subsection Error! Reference source not found.(b)** (Subdivision Maps), the Developer is required, in circumstances specified therein, to use diligent efforts to timely submit required applications and Improvement Plans, and to respond to City comments on prior submissions in a reasonable fashion and within a reasonable time given the nature and scope of such City comments so as to achieve recordation of a Final Map by the First Scheduled Closing Date. The First Scheduled Closing Date and each Subsequent VDDA Closing Date will be subject to extension as follows:

(i) The First Scheduled Closing Date and each Subsequent VDDA Closing Date will be automatically extended upon extension of the Closing Date under the applicable Vertical DDA for a reason other than failure to record a Final Map;

(ii) If the First Scheduled Closing Date or any Subsequent Closing Date is established by reference to a Vertical DDA resulting from a Public Offering, such First Scheduled Closing Date or Subsequent Closing Date shall be automatically extended, if it would otherwise occur earlier, to the date 13 months after (x) the date Port delivered the Put Notice to Developer under **Subsection 7.3(a)** (Port Exercise) if the Public Offering was initiated by the Port under **Subsection 7.3(d)** (Election to Publicly Offer), (y) the date the Developer delivered the Appraisal Notice under **Subsection 7.4(b)** (Appraisal Notice) for the applicable Development Parcel if the Public Offering was initiated by the Port under either **Subsection Error! Reference source not found.(a)(iv)** (Closing Deadline) or **Subsection Error! Reference source not found.(e)** (Effect of Failure to Close Escrow), or (z) the date Port initiated the Public Offering if the Public Offering was initiated by the Port under **Subsection 7.2(b)(vii)** (Phase 1 Put Procedures); provided, however, the extension described in this **Subsection 7.7(d)(ii)** is subject to the condition that Developer file an application for Final Map no later than 60 days after (aa) the date the Port delivered the Put Notice described in **clause (x)** above, (bb) the date Developer delivered the Appraisal Notice described in **clause (y)** above, or (cc) the date the Port initiated the Public Offering described in **clause (z)** above, as applicable.

(iii) The First Scheduled Closing Date and each Subsequent VDDA Closing Date are subject to extension for Excusable Delay in accordance with **Article Error! Reference source not found.** (Excusable Delay).

(iv) The First Scheduled Closing Date and any Subsequent VDDA Closing Date (as such dates may have been extended pursuant to clauses (i) through (iii) above), each may be extended as follows, subject to Developer's delivery of notice to Port at least 20 days prior to such First Scheduled Closing

Date or Subsequent Closing Date, as applicable, and payment of the applicable extension fee not later than five (5) business days prior to such First Scheduled Closing Date or Subsequent Closing Date, as applicable:

- (1) an initial extension of 90 days without cost to Developer;
- (2) first additional extension of 90 days – \$25,000 per Development Parcel;
- (3) second additional extension of 90 days – \$50,000 per Development Parcel;
- (4) third additional extension of 90 days – \$75,000 per Development Parcel;
- (5) fourth additional extension of 90 days – \$100,000 per Development Parcel;
- (6) fifth additional extension of 90 days and each subsequent extension of 90 days (subject to the 3 year maximum limitation for Developer extensions described below) – \$150,000 per Development Parcel.

References to “Development Parcel” in clauses (1) through (6) above shall mean each Development Parcel for which a Vertical DDA is in effect and the Development Parcel has not been conveyed to Vertical Developer due to the Final Map not being recorded.

Extension fees payable pursuant to clause (iv) of this **Subsection 7.7(d)** are not Horizontal Development Costs and are not applicable to the Acquisition Price of the Development Parcel(s) under the applicable Vertical DDA(s). The Port will deposit all such fees into the DRP Fund. Developer will not have the right to extend the applicable First Scheduled Closing Date or Subsequent VDDA Closing Date, pursuant to clause (iv) of this **Subsection 7.7(d)** by more than 3 years.

(e) **Effect of Failure to Close Escrow.** Developer’s or a Vertical Developer Affiliate’s failure to Close Escrow by the Closing Deadline in effect when all conditions to Closing under its Vertical DDA have been satisfied or waived, or the termination of a Vertical DDA because the Final Map was not recorded by the First Scheduled Closing Date or Subsequent VDDA Closing Date, as applicable, will give the Port the right to conduct a Public Offering for the affected Option Parcel under **Section 7.8** (Public Offering Procedures).

#### **7.8. Public Offering Procedures.**

(a) **Broker-Managed Offerings.** Each Public Offering will be managed by a Qualified Broker selected jointly by Developer and the Port from a list that the Parties have approved. The Qualified Broker Pool as of the Reference Date is set forth in **DDA Schedule 3**. From time to time, either Party may propose in writing to add or remove Qualified Brokers to or from the list. If the Parties disagree on a proposed addition or removal, then the Parties will engage in the dispute resolution procedure under **Section 9.4** (Binding Arbitration).

(b) **Offering Document.** The Public Offering documents for any Option Parcel will identify the parcel and include at least the following information:

- (i) the permitted uses and height, bulk, mass, and other physical limitations on Vertical Improvements to the Option Parcel;

- (ii) existing encumbrances, including applicable Impact Fees and Exactions, including Inclusionary Unit requirements for any Residential Parcel;
  - (iii) any Deferred Infrastructure obligations;
  - (iv) whether Fair Market Value is to be prepaid in full or in part, paid by Annual Ground Rent that amortizes Fair Market Value over the Parcel Lease term, or a combination of a Parcel DRP and Annual Ground Rent;
  - (v) financial requirements, including:
    - (1) the Parcel DRP;
    - (2) the minimum Annual Ground Rent, which will be no less than the Reserve Rent;
    - (3) parameters for a Percentage Rent proposal if it will be required; and
    - (4) the Minimum Price, consistent with the Phase Budget, but subject to negotiation in conjunction with any proposed revision of the Phase Budget;
  - (vi) the Qualified Broker managing the Public Offering;
  - (vii) a date by which sealed bids must be submitted, a Closing Deadline by which the winning bidder must enter into a Parcel Lease, and any conditions to extension of the Closing Deadline, such as Developer's failure to timely complete Backbone Infrastructure needed to serve the Option Parcel;
  - (viii) a form to be submitted with each bid requiring each bidder to agree to enter into a Vertical DDA and Parcel Lease with the Port substantially in the forms attached to this DDA and acknowledge that the Port will require the winning bidder to comply with the Project Requirements and the Regulatory Requirements;
  - (ix) a description of the criteria and scoring system that the Port will use to determine the highest and best offer;
  - (x) matters that will result in automatic disqualification, including a bid submitted after the offering period ends and a proposal for Annual Base Rent below Reserve Rent;
  - (xi) disclose that Developer or its selected Vertical Developer Affiliate will be a deemed Qualified Bidder entitled to submit a bid on the same conditions as all other Qualified Bidders except that the Vertical Developer Affiliate will have the right to Credit Bid, unless **Section 11.8** (Effects of Termination on Project Payment Sources) applies; and
  - (xii) the date by which any challenges to the Port's award must be submitted.
- (c) **Bidder Prequalification.** Each Public Offering document will specify a prequalification period ending no less than 20 business days before bids are due during which any person interested in bidding will submit evidence of its qualifications to the Port for its determination. The Port will notify each person who submits qualifications of the Port's determination at least 14 days before bids are due. Each Qualified Bidder subject to this requirement will:
- (i) be a Vertical Developer that is reasonably creditworthy in the Port's reasonable judgment given the obligations the bidder would be assuming and its other qualifications;

- (ii) have one or more principals with at least five years of experience in developing the type of land use to be developed on the Option Parcel; and
  - (iii) meet all other applicable bidder criteria in **DDA Exhibit D4**.
- (d) **Offering Periods.** The following time periods will apply to a Port election to publicly offer an Option Parcel under this Subsection. Failure to meet any of these time periods will cause the Public Offering to be deemed a failed offering under **Subsection 7.8(g)** (Effect of Failed Offering).
- (i) The Port will require the broker managing the Public Offering to publish the offering documents within 120 days after:
    - (1) Developer or a Vertical Developer Affiliate failed to Close Escrow under **Subsection 7.7(d)** (Effect of Failure to Close Escrow); or
    - (2) the effective date of the Port's notice under **Subsection 7.3(d)** (Election to Publicly Offer).
  - (ii) The Port's target date to Close Escrow with the successful bidder will be six months after the deadline to submit bids for the Public Offering. If the Port does not Close Escrow, **Subsection 7.8(h)** (Effect of Bidder Delay) will apply.
  - (iii) The outside date for the Port to Close Escrow with the successful bidder will be one year after the deadline to submit bids for the Public Offering.
- (e) **Award.** The Port will award the publicly-offered Option Parcel to the Qualified Bidder receiving the highest point score according to the criteria and scoring system described in the Public Offering document.
- (f) **Obligations After Selection.**
- (i) Unless otherwise directed by the Port, Developer will begin diligent efforts to satisfy the Conditions to Commencement for Phase Improvements by the Closing Deadline specified in the Public Offering document.
  - (ii) Until the Closing Deadline, the Port will be obligated to enter into a Parcel Lease for the Option Parcel with the Vertical Developer.
  - (iii) The Port will be required to forbear from issuing another Put Notice for any Option Parcel specified in its earlier Put Notice for 24 months after the bid deadline specified in the Public Offering document.
- (g) **Effect of Failed Offering.** A failed Public Offering will reinstate automatically Developer's Option for the Option Parcel that was publicly offered, but will not extend any Outside Dates in the Schedule of Performance applicable to the parcel unless Developer exercises its rights under **Section 4.4** (Down Market Delay Procedures). A Public Offering will be considered to have failed if:
- (i) no Qualified Bidder submits a timely bid at or above the Minimum Price; or
  - (ii) the Vertical Developer selected through the Public Offering does not timely enter into a Vertical DDA or Close Escrow timely under **clause (iii)** of **Subsection 7.8(d)** (Offering Periods).
- (h) **Effect of Bidder Delay.** If the Vertical Developer does not Close Escrow by the six-month target date specified in **clause (ii)** of **Subsection 7.8(d)** (Offering Periods), Developer's target date to begin construction of Phase Improvements will be

extended one day for each additional day until the Close of Escrow under **clause (iii) of Subsection 7.8(d)** (Offering Periods), for a maximum of six months' delay.

(i) **Bidder's Failure to Close Escrow.** A Vertical Developer's failure to Close Escrow on a Parcel Lease will not be deemed to be evidence of a Down Market Delay, but the Parties will meet and confer as to whether they agree that Down Market Delay exists.

(i) If the Parties agree that Down Market Delay exists, the Closing Deadline that the Vertical Developer failed to meet will be deemed to be the Down Market Test Date under **Section 4.4** (Down Market Delay Procedures).

(ii) If the Parties do not agree that Down Market Delay exists, either Party seeking a Down Market Delay must proceed under **Section 4.4** (Down Market Delay Procedures).

**7.9. Vertical Cooperation Agreement.** Prior to commencement of construction of Vertical Improvements, the Port will require Vertical Developers to enter into a Vertical Cooperation Agreement with Developer. The Port will have the right to review and object to Developer's form of Vertical Cooperation Agreement, but the Port will not be a party to it. The Vertical Cooperation Agreement may address:

(a) plans for Developer's reasonable access to the Development Parcel during construction of Phase Improvements adjacent to or serving the parcel;

(b) coordination of horizontal and vertical development, including obligations for Backbone Infrastructure and Deferred Infrastructure;

(c) Developer's and the Vertical Developer's respective construction staging plans;

(d) any required milestones in construction of the Phase Improvements consistent with the Phase Schedule approved as part of the Phase Budget;

(e) mutual indemnity and insurance requirements; and

(f) at Developer's sole election, a requirement that the Vertical Developer enter into a project labor agreement to minimize the risk of labor conflicts.

**7.10. Pier 48.**

(a) **Pier 48 Rehabilitation Plan Objectives.** The Parties have agreed to make joint efforts to develop a Pier 48 Rehabilitation Plan that would, upon receipt of all required Regulatory Approvals:

(i) accommodate new commercial/light industrial uses of the Pier 48 sheds and aprons, consistent with the SUD, the Waterfront Plan, and Applicable Port Laws;

(ii) continue maritime operations on the aprons and along Channel Plaza;

(iii) provide for rehabilitation of Pier 48, consistent with the Secretary's Standards;

(iv) maintain the Pier 48 aprons as open space, with maximum feasible public access, consistent with maritime operations; and

(v) complement the development and character of the rest of the Project and the surrounding neighborhood.

**(b) Public Input into Process.**

**(i)** Developer acknowledges that the Port anticipates issuing a Request for Interest for public-serving uses at its finger piers in the near future and agrees that Pier 48 will be included to generate a better shared understanding of potential uses that could achieve the objectives of the Pier 48 Rehabilitation Plan.

**(ii)** The Port agrees that the Request for Interest will specifically disclose Developer's rights under **Subsection 7.10(f)** (Developer's Rights) and the Port's obligation to identify an Interested Pier 48 User under the process described in **Subsection 7.10(e)** (Public Solicitation Process).

**(c) Feasibility Analysis.**

**(i)** The Port may give notice to Developer at any time if the Port determines on the basis of credible available information and reasonable economic projections that a specific potential Pier 48 Rehabilitation Plan appears economically feasible.

**(ii)** The Port's notice will include:

- (1)** a description of the proposed Pier 48 Rehabilitation Plan;
- (2)** the feasibility study on which the Port's determination is based; and
- (3)** a description of the potential uses that would satisfy the objectives of the Pier 48 Rehabilitation Plan.

**(iii)** Developer will have 150 days after the Port delivers its notice, subject to extension by agreement, to prepare, in consultation with the Port, and submit to the Port a more detailed feasibility analysis of the proposed Pier 48 Rehabilitation Plan.

**(iv)** Developer's feasibility analysis will include:

- (1)** preliminary cost estimates;
- (2)** a development pro forma;
- (3)** explanations as to why any of its assumptions differ from those underlying the Port's feasibility study.

**(d) Pier 48 Term Sheet Negotiations.**

**(i)** Either Party may deliver to the other Party a Pier 48 Negotiation Notice within 120 days after Developer delivers its feasibility analysis to the Port. The Noticing Party may specify whether it desires to include any refinements from the feasibility analysis in the potential Pier 48 Rehabilitation Plan.

**(ii)** The Pier 48 Negotiation Notice will start a 120-day period during which the Port will negotiate exclusively with Developer on the terms of a nonbinding term sheet for a Pier 48 Development Lease. The Parties may extend the negotiation period by agreement in each Party's sole discretion.

**(iii)** The term sheet will specify any related amendments to the Transaction Documents necessary or desired to implement the Pier 48 Rehabilitation Plan. If the negotiations for a Pier 48 Development Lease term sheet are successful, the Parties will as promptly seek any Regulatory Approvals required to enter into the Pier 48 Development Lease and carry out the Pier 48 Rehabilitation Plan.

(iv) During the 120-day negotiation period, Developer may negotiate a sublease term sheet separately with an identified Interested Pier 48 User.

(e) Public Solicitation Process. If the negotiations initiated by the Pier 48 Negotiation Notice do not result in the Parties' agreement on the on the terms of a Pier 48 Development Lease within the negotiation period under **Subsection 7.10(d)** (Pier 48 Term Sheet Negotiations), the Port may elect, upon notice to Developer, to issue a Pier 48 Solicitation. Any Pier 48 Solicitation will specify:

(i) the permitted uses and height, bulk, mass, and other physical limitations on the redevelopment of Pier 48, consistent with the Pier 48 Rehabilitation Plan;

(ii) applicable Impact Fees, Exactions, and other applicable laws;

(iii) a date by which proposals must be submitted;

(iv) a certificate to be submitted with each proposal requiring each proposer to agree to enter into an exclusive negotiating agreement with the Port substantially in an attached form;

(v) a description of the criteria and scoring system that the Port will use to determine the highest and best offer; and

(vi) the date by which any challenges to the Port's award must be submitted.

(f) Developer's Rights. Developer may elect one of the following alternatives with respect to any Pier 48 Solicitation.

(i) Developer or a Vertical Developer Affiliate will have the right to respond to the Pier 48 Solicitation.

(ii) By notice given no more than 20 days after the Port delivers notice under **Subsection 7.10(e)** (Public Solicitation Process), Developer may notify the Port that Developer irrevocably waives its right to respond to the Pier 48 Solicitation under **clause (i)** of this Subsection. After delivery of Developer's notice:

(1) the Port will not issue the Pier 48 Solicitation until Developer has had at least 45 days to review and comment on the draft Pier 48 Solicitation; and

(2) Developer will be entitled to participate in the Port's evaluation of responses to the Pier 48 Solicitation to the extent desirable, in the Port's reasonable judgment, to coordinate the potential development of Pier 48 with the rest of the Project.

(g) Responses to Pier 48 Solicitation.

(i) If the Port receives one or more responses to the Pier 48 Solicitation from qualified respondents, the Port may select and enter into an exclusive negotiating agreement with the respondent in accordance with the Pier 48 Solicitation.

(ii) If the selected respondent is a third party, Developer's rights under **Subsection 7.10(f)** (Developer's Rights) will terminate automatically.

(iii) If the Port does not select and enter into an exclusive negotiating agreement with a respondent, or if the Port enters into an exclusive negotiating agreement that terminates without agreement on a Pier 48 Development Lease,

Parties' rights and obligations as to a Pier 48 Rehabilitation Plan and a Pier 48 Development Lease will be reinstated automatically.

## **8. PROPERTY CONDITION AND INDEMNITIES**

**8.1. As-Is.** Under the Master Lease and this DDA, the Port will deliver the Project Site and Development Parcels strictly in their "as-is" condition with all faults and defects. Developer has agreed to the form of Vertical DDA, which includes a similar "as-is" provision. The Port has no obligation to repair any improvements on the Project Site or any liability for their damage or destruction, however caused.

### **(a) Developer Due Diligence.**

**(i)** Developer acknowledges explicitly that it has had the opportunity to investigate the physical and title conditions affecting the Project Site fully, using experts of its own choosing. Through the term of the Master Lease, Developer will have a continuing opportunity to conduct due diligence, including physical testing, subject to reasonable conditions in the Master Lease. The Port, at no cost to the Port, will cooperate reasonably with Developer in its investigations and provide Developer with prompt access to public books and records in the Port's possession or control relating to the prior use and ownership of the Project Site during the Port's regular business hours. Developer will provide a reasonably detailed description of the documents that it wishes to review at least five days before any requested review date.

**(ii)** Developer represents that it has received and reviewed a geotechnical investigation report covering the geological conditions, focused on areas intended to be developed as Public ROWs and Public Spaces, prepared by a California Certified Engineering Geologist or California Registered Geotechnical Engineer of its choice that was prepared in compliance with the requirements of the Port Building Code, the Seismic Hazards Mapping Act (Cal. Pub. Res. Code ch. 7 & ch. 8), and California Geological Survey Special Publication 117A (Guidelines for Evaluating and Mitigating Seismic Hazards in California).

**(iii)** Developer acknowledges that it had the opportunity to conduct, but elected not to do so, a thorough geotechnical investigation report covering the geological conditions of portions of the Project Site not intended to be developed as Public ROWs and Public Spaces and bears all risks of its election before the Port enters into Vertical DDAs with Vertical Developers responsible for construction on Development Parcels.

### **(b) Hazardous Materials.**

**(i)** Developer expressly acknowledges its knowledge of the industrial history of the Project Site and nearby property, including the contents of Environmental Covenants attaching to the Project Site. Developer agrees to comply with Environmental Laws, including the Environmental Covenants, applicable to the Project Site, whenever it has access to or possession of any portion of the Project Site.

**(ii)** Developer acknowledges that no City Party has made any representation or warranty, express or implied, in reference to the condition of the Project Site.

**(c) FEMA Disclosure.** FEMA is revising Flood Insurance Rate Maps ("FIRMs") for San Francisco Bay Area communities. As part of this effort, FEMA is preparing a FIRM for the City and County of San Francisco for the first time. That process may have significant impacts for developing new structures and reconstructing or

repairing existing structures on San Francisco's waterfront. The City, through the Port, advises Developer as follows.

(i) FEMA prepares the FIRMs to support the National Flood Insurance Program ("NFIP"), a federal program that enables property owners, businesses, and residents in participating communities to purchase flood insurance backed by the federal government. The San Francisco Board of Supervisors has adopted the Floodplain Ordinance. The Floodplain Ordinance imposes requirements on any new construction or substantial improvement of structures in city-designated flood zones that are intended to minimize or eliminate flood hazard risks. NFIP regulations allow a local jurisdiction to issue variances to its floodplain management ordinance under certain narrow circumstances, without jeopardizing the local jurisdiction's eligibility in the NFIP. However, the particular projects that are granted variances by the local jurisdiction may be deemed ineligible for federally-backed flood insurance by FEMA.

(ii) FIRMs identify areas that are subject to inundation during a 100-year flood. FEMA refers to an area that is at risk from a flood of this magnitude as a special flood hazard area ("SFHA"). To prepare the FIRM for San Francisco, FEMA has performed detailed coastal engineering analyses and mapping of the San Francisco Bay shoreline. The San Francisco Bay Area Coastal Study includes both regional hydrodynamic and wave modeling of the San Francisco Bay, as well as detailed onshore coastal analysis used to estimate wave runup and overtopping, as well as overland wave propagation. These onshore analyses form the basis for the Base Flood Elevations ("BFEs") and SFHAs shown on the FIRM.

(iii) FEMA initiated preparation of a FIRM for the City in the mid-2000s, and issued a preliminary version of the FIRM in 2007, but did not finalize that map. Subsequently, FEMA completed region-wide analyses of flooding on San Francisco Bay and the Pacific Ocean coastline. FEMA used these studies to prepare another preliminary FIRM for San Francisco, which it issued in November 2015. The preliminary FIRM identified SFHAs along the City's shoreline in and along the San Francisco Bay consisting of "A zones" (coastal areas subject to inundation by tidal surge and waves less than three feet in height) and "V zones" (areas subject to the additional hazards that accompany waves more than three feet in height). These zones generally affect City property under the jurisdiction of the Port of San Francisco and other areas of the San Francisco waterfront, including parts of Mission Bay, Hunters Point Shipyard, Candlestick Point, Treasure and Yerba Buena Islands, and an area adjacent to Islais Creek.

(iv) Due to comments and an appeal submitted by The City, FEMA has not yet finalized the FIRM. Sometime during 2018, FEMA intends to issue a revised preliminary FIRM showing changes due to the appeal resolution, and give the City a period (most likely 30 days) in which to comment. Following resolution of any comments, FEMA would finalize the FIRM.

(v) To finalize the FIRM, FEMA will issue a Letter of Final Determination ("LFD") stating that the map will be published in final form six months from the date of the LFD (referred to as the "effective date" of the FIRM). During that six-month period, the City must amend the floodplain management ordinance to adopt the new FIRM. After the effective date, the FIRM will be used for all flood insurance and floodplain management purposes.

(vi) The Port Building Code provides for variances from these requirements under certain extraordinary circumstances that parallel those in the Floodplain Ordinance. The Port Building Code regulates construction activities on piers and wharves and incorporates, with certain amendments, California

Building Code provisions that generally limit new construction in V zones to areas that are landward of the reach of mean high tide.

(vii) The federal legislation and regulations implementing the NFIP are located at 42 U.S.C. §§ 4001 et seq.; 44 C.F.R. Parts 59-78, §§ 59.1-78.14. FEMA also publishes "Answers to Questions About the NFIP" and FEMA Publication 186 entitled "Mandatory Purchase of Flood Insurance Guidelines." Additional information on this matter can be found on the City's and FEMA's websites at the following links:

<http://sfgsa.org/san-francisco-floodplain-management-program>

<https://www.fema.gov/national-flood-insurance-program-flood-hazard-mapping>

<https://www.fema.gov/national-flood-insurance-program>

**8.2. Damage and Destruction.** Beginning on the Reference Date, Developer will assume all risk of damage to or destruction of existing or future Improvements as provided in this Section.

(a) **Existing Improvements to be Demolished.** A casualty causing damage to or destruction of any existing improvements in a Phase Area, including any off-site improvements serving the Master Lease Premises and other changes in site conditions, will not affect the Parties' rights and obligations under this DDA except by application of this Section or **Article 4** (Excusable Delay). Developer will have the right to elect to obtain relief under either provision, but not both, following a casualty.

(b) **Cost Report.** Before seeking relief under this Section, Developer will contract for an updated construction cost estimate for any affected Horizontal Improvements prepared by a construction cost estimator approved by the Port Director. Developer will instruct the estimator to deliver copies of the construction cost estimate simultaneously to Developer and the Port within 120 days after the casualty. The report will identify increased costs caused solely by the casualty and those caused by market increases in the costs of labor or materials. At either Party's request, Developer and the Port will confirm the date on which they received the report.

(c) **Developer's Remedies.** If a casualty outside of Developer's reasonable control occurs before the Close of Escrow for the Port's first conveyance of an Option Parcel in any Phase, Developer may choose one of the following as its exclusive remedy under this Section.

(i) Under these circumstances only, Developer may deliver a Requested Change Notice to the Port under **Section 3.8** (Changes to Project) seeking to revise the Phase Schedule to provide Developer a reasonable amount of additional time to make adjustments to the Phase Improvements in light of the casualty. The Parties' obligations under this DDA would not be affected except to the extent changes are approved under **Section 3.8** (Changes to Project).

(ii) If the updated construction cost estimate, net of any available insurance proceeds, is more than 20% above the cost estimate that Developer submitted with a Phase Submittal, then Developer may terminate this DDA as to the related Phase. Developer must give notice to the Port within 60 days after Developer receives the updated cost estimate, specifying the date on which the termination will be effective, which will be no less than 60 days after the notice is delivered.

(iii) If the casualty occurs at any time between the Reference Date and the date the Port Commission considers Phase Approval for the second Phase, and the updated construction cost estimate, net of any available insurance proceeds, is more than 20% above the cost estimate that Developer submitted with its Phase Submittal, Developer may elect to terminate this DDA in its entirety. Developer may exercise this election by giving 60 days' notice to the Port within 60 days after Developer receives the updated cost estimate, specifying the date on which the termination will be effective. All of the Parties' rights and obligations under this DDA, except those that explicitly survive termination, will be extinguished on the termination date.

(d) No Action. If Developer fails to seek a remedy under **Subsection 8.2(c)** (Developer's Remedies), the Parties' rights and obligations under this DDA will not be affected by the casualty except to the extent of relief available under **Article 4** (Excusable Delay).

(e) Negotiation Period. If the Port Director reasonably determines that Developer's proposed termination of a Phase under **clause (ii) of Subsection 8.2(c)** (Developer's Remedies) would violate the proportionality principle in **Subsection 2.4(a)** (Proportionality), then, within 15 days after the date of the applicable termination notice, the Port Director will give notice of her determination to Developer. The Port Director's notice will initiate a 90-day negotiation period, which will be deemed an Administrative Delay under **Article 4** (Excusable Delay), during which the Parties will negotiate in good faith for a proposed resolution that substantially maintains the benefits of the bargain for both Parties. If the Parties are unable to reach agreement within the 90-day negotiating period, then the Parties may agree, each in its sole discretion, to submit the matter to arbitration under **Section 9.5** (Nonbinding Arbitration).

### **8.3. General Indemnity.**

(a) Scope of Indemnity. The following apply to an Indemnitor's obligations under this Section.

(i) The Indemnitor will defend the Indemnified Parties against any Claims for Losses that reasonably fall or are otherwise determined to fall within this indemnity even if the Claims may be groundless, fraudulent, or false. If a Claim is made against an Indemnified Party that may be within the scope of this indemnity, that Indemnified Party will provide notice to the Indemnitor of the Claim within a reasonable time after learning of the Claim and cooperate with the Indemnitor in the defense of the Claim. An Indemnified Party's failure to provide the notice, however, will not affect the Indemnitor's obligations except to the extent of prejudice caused by the lack of notice. The Indemnitor's defense obligation will arise when a City Party tenders the Claim to the Indemnitor and will continue until finally resolved.

(ii) After the Port has entered into a Parcel Lease with a Vertical Developer, the Parcel Lease will govern the scope and extent of its indemnification obligations. The agreements to indemnify under this DDA are in addition to, and must not be construed to limit or replace any other obligations or liabilities that the Port may have as to a Vertical Developer or that a Vertical Developer may have as to the Port under any Parcel Lease or applicable law.

(b) Developer. Except to the extent directly or indirectly caused by a City Party's acts or omissions, Developer will indemnify the City Parties against all Losses arising directly or indirectly from:

(i) any Developer Party's failure to comply with any Regulatory Requirement applicable to its design and construction of the Horizontal Improvements;

(ii) any Developer Party's acts or omissions in relation to construction, management, or operations at the Project Site, including patent and latent defects and mechanic's or other liens to secure payment for labor, service, equipment, or materials; and

(iii) contracts or other agreements between Developer Parties and third parties in connection with Developer's performance under this DDA with or without a City Party's consent and whether or not the City Party is a party to an action.

(iv) Claims made by a Vertical Developer Affiliate arising out of the termination of its Vertical DDA because the Final Map was not recorded by the First Scheduled Closing Date or Subsequent VDDA Closing Date, as applicable, as such dates may be extended for the applicable Development Parcel in accordance with clauses (i) – (iv) of Subsection 7.7(d).

**8.4. Hazardous Material Indemnity.** In addition to its obligations under Section Error! Reference source not found. (General Indemnity), Developer will Indemnify State Lands and the City Parties from Losses and Hazardous Materials Claims as and to the same extent that the Master Lease Tenant is required to Indemnify State Lands and the City Parties from Losses and Hazardous Materials Claims under *ML § 19. 2 (Hazardous Materials Indemnification)*.

**8.5. Defense of Claims.**

(a) Notice.

(i) The Port, on behalf of itself and the City Parties, and Developer, on behalf of itself and Developer Parties, agrees to give notice to any Indemnitor by the earlier of:

(1) 10 business days after valid service of process of a summons or other notice that an action has been filed against the Indemnified Party; or

(2) 10 business days after receiving notice that: (A) an action has been filed or a Claim has been made against an Indemnified Party; or (B) any other event that the Indemnified Party believes in good faith will be covered by this indemnity.

(ii) But the Indemnified Party's failure to give timely notice will not affect the Indemnified Party's rights or the Indemnitor's obligations under this DDA except to the extent that the delay prejudices the Indemnitor.

(b) Control. Subject to the Indemnified Party's approval, the Indemnitor will be entitled to control the defense, compromise, or other resolution of any Claim through counsel of the Indemnitor's choice. But in all cases the Indemnified Party will be entitled to participate in the defense, compromise, or other resolution of the Claim at its own expense.

(c) Failure to Defend. If the Indemnitor fails to take reasonable and appropriate steps to defend the Claim within a reasonable time after notice from the Indemnified Party describing in reasonable detail the nature of the Indemnitor's alleged failure, the Indemnified Party will have the right to hire defense counsel to carry out the defense at the Indemnitor's cost, which may be any combination of the City Attorney's Office (for a City Party), in-house counsel (for a Developer Party), and outside counsel. The Indemnified Party's defense costs will be due and payable within 30 days after the

Indemnified Party delivers to the Indemnitor an invoice meeting the requirements of App. ¶ A.4.1 (*Attorneys' Fees*).

**8.6. Mutual Release and Waiver.**

(a) **Scope.** The releases under this Section do not affect either Party's rights to enforce the other Party's obligations, assert an Event of Default or Material Breach by the other Party, or seek its remedies under any Transaction Document at law or in equity.

(i) In consideration of the Port's covenants and obligations under this DDA and as part of Developer's agreement to accept the Project Site in its "as-is" condition under **Section 8.1 (As-Is)**, Developer, on behalf of itself and all other Developer Parties, agrees to waive any right to recover from, and forever releases the City Parties and their Agents of and from any Losses, whether direct or indirect, known or unknown, foreseen or unforeseen, that any Developer Party may now have or that may arise later on account of or in any way be connected with:

- (1) the negotiations for this DDA and other Transaction Documents;
- (2) the Existing Geotechnical Condition of the Project Site;
- (3) the Existing Hazardous Material Condition of the Project Site, nuisance, or other physical condition that occurred or existed before Developer first took possession of the Project Site, except to the extent arising from any Developer Party's acts or omissions;
- (4) Developer Losses incurred with respect to third-party Claims arising from the Existing Geotechnical Condition of any portion of the Project Site; or
- (5) any applicable laws in effect on the Reference Date.

(ii) In consideration of Developer's covenants and obligations under this DDA and as part of its agreement to master develop the Project Site, the Port releases Developer Parties from all Losses that may arise on account of or in any way be connected with:

- (1) the negotiations for this DDA and other Transaction Documents;
- (2) the Existing Geotechnical Condition of the Project Site;
- (3) any applicable laws in effect before the Reference Date; or
- (4) the Existing Hazardous Material Condition of the Project Site, nuisance, or other physical condition that occurred or existed before Developer first took possession of the Project Site, except to the extent arising from any Developer Party's acts or omissions on the Project Site.

(b) **Waiver of Statute.** In connection with this release, Developer and the Port each acknowledges familiarity with California Civil Code section 1542, which provides as follows:

A GENERAL RELEASE DOES NOT EXTEND TO CLAIMS WHICH  
THE CREDITOR DOES NOT KNOW OR SUSPECT TO EXIST IN HIS  
OR HER FAVOR AT THE TIME OF EXECUTING THE RELEASE,

WHICH IF KNOWN TO HIM OR HER MUST HAVE MATERIALLY  
AFFECTED HIS OR HER SETTLEMENT WITH THE DEBTOR.

Each Party agrees that the release given in this Subsection covers unknown Claims and that, by entering into this DDA, each Party waives the benefits of Civil Code section 1542, or under any other statute or common law principle of similar effect.

(c) Informed Consent. Each Party represents that it has been fully informed in reference to, and represented by counsel of its choice in connection with the rights, remedies, limitations on damages, and waivers contained in this DDA and after consultation with its attorneys, with full knowledge of its rights and remedies otherwise available at law or in equity, presently and actually intends to waive and relinquish those rights and remedies to the extent specified in this DDA, and to rely solely on the prescribed remedies for any breach of this DDA, or any other right that the Party seeks to exercise.

**8.7. Parties to Contract.** For purposes of this Article, no City Party will be deemed to be a party to a contract solely because the City Party approved or consented to the contract, and no Developer Party will be deemed to be a party to a contract solely because Developer Party approved or consented to the contract.

**8.8. Cost of Claims.** Except to the extent the applicable Claim was caused solely by the gross negligence or willful misconduct of Developer or its Agents, costs that Developer incurs in discharging its obligations under this Article, *ML art. 19 (Indemnification of Port)*, or *ML art. 20 (Insurance)* with respect to any Claims, net of insurance proceeds and any recovery from third parties, will be Soft Costs of the Phase or Phases to which the Claim relates.

**8.9. Survival.** The agreements to indemnify described in **Section 8.3** (General Indemnity) and **Section 8.4** (Hazardous Material Indemnity), and the releases and waivers stated in **Section 8.6** (Mutual Release and Waiver) will survive termination of this DDA. The agreements to indemnify are in addition to, and do not limit or replace, any other obligations or liabilities under this DDA or other Transaction Documents.

**9. RESOLUTION OF CERTAIN DISPUTES**

**9.1. Arbiters.**

(a) Arbiter Pool. The Parties have agreed, or may agree, to submit certain disputes to Arbiters listed on the Approved Arbiters Pool attached as **DDA Schedule 1** and have agreed that Arbiters on the list meet the qualifications under this Subsection. To be qualified, an Arbiter will have at least 10 years' experience in the San Francisco Bay Area in a professional capacity handling issues arising from complex real estate and master planned development transactions with expertise in areas such as property valuation, commercial and multifamily residential real estate sales and leasing, engineering and cost-estimating, real estate economics, and complex financial accounting.

(b) Changes.

(i) The Parties will review the Approved Arbiters Pool periodically to determine each Arbiter's continued availability and willingness to serve. Either Party may propose to change the Approved Arbiters Pool by notice to the other Party, together with documentation supporting the proposed change, such as a proposed new Arbiter's qualifications or reasons to remove an Arbiter from the Approved Arbiters Pool.

(ii) The other Party will have 15 business days to respond. Failure to respond will be deemed consent if the notice prominently stated that the other Party's failure to respond within 15 business days will be deemed consent.

(iii) If the other Party objects, the Parties will meet and confer under **Subsection 9.2(a)** (Good Faith Efforts) and, if necessary, discuss whether to resolve the dispute by nonbinding arbitration under **Subsection 9.5(b)** (Nonbinding Arbitration Process).

## **9.2. Meet and Confer Requirement.**

(a) Good Faith Efforts. Before resorting to any dispute resolution procedure under **Subsection 9.4(b)** (Binding Arbitration Procedures) or **Subsection 9.5(b)** (Nonbinding Arbitration Process), or initiating a judicial action, each Party agrees to make good faith efforts to resolve the dispute as follows. Cure periods will be tolled during the meet-and-confer period.

(i) Any Party may initiate a meet-and-confer effort by giving notice to the other Party. Within 10 business days after a Disputing Party's request to confer regarding an identified matter, decision-making representatives of each Disputing Party will meet in a good faith effort to resolve the dispute.

(ii) If the Disputing Parties are unable to resolve the dispute at the meeting (or any longer time to which each Disputing Party agrees in its sole discretion), the following options will apply.

(1) The Parties may agree to submit the matters listed in **Subsection 9.4(a)** (Agreed Scope) to binding arbitration under **Subsection 9.4(c)** (Binding Arbitration Procedures).

(2) The Parties, each in its sole discretion, may agree to submit the matters listed in **Subsection 9.5(a)** (Scope) to nonbinding arbitration under **Subsection 9.5(b)** (Nonbinding Arbitration Process).

(3) The Parties, each in its sole discretion, may agree to submit any other matters to arbitration under this Article.

(iii) If the Disputing Parties do not agree to arbitration, or the dispute is not resolved by nonbinding arbitration, or the dispute is not subject to arbitration under this Article, any Disputing Party may seek to enforce its rights and remedies at law or in equity.

(b) No Prejudice. The dispute resolution procedures in this Article will not delay or otherwise prejudice a Party's right to give notice of an alleged default under **Article 10** (Defaults).

## **9.3. General Arbitration Procedures.**

(a) Notice. A Party may initiate arbitration by providing an Arbitration Notice to the other Party, specifying with particularity both the nature of the dispute between the Parties and the initiating Party's demand to resolve the dispute. Neither Party may initiate or continue to prosecute a judicial action, except to comply with court rules, while an arbitration proceeding is pending.

(b) Selection of Arbitrator. The Parties will meet to designate the Arbitrator from the Approved Arbitrators Pool within 10 business days after the effective date of the Arbitration Notice. If the designated Arbitrator is not available to meet the time requirements for the proceeding, the Disputing Parties will designate another Arbitrator on the Approved Arbitrators Pool. If none of the Arbitrators listed is able or willing to hear a dispute, the Disputing Parties will agree on the selection of an Arbitrator to serve for the

purposes of that dispute. Each Party initially will advance 50% of the required arbitration fee.

(c) Arbiter's Authority. The Arbiter will be authorized to:

- (i) decide the matter on the written submissions;
- (ii) hold an evidentiary hearing on reasonable prior notice to the Parties;
- (iii) enter a default decision against a Party that does not deliver a brief or appear at the hearing and require the non-participating Party to pay the other Party's attorneys' fees and arbitration fees; and
- (iv) award attorneys' fees and arbitration fees to the prevailing Party.

(d) Limits on Arbiter's Authority. The Arbiter will have no authority to:

- (i) decide any matter that is listed in **Section 9.6** (Nonarbitrable Matters);
- (ii) decide any matter that was not specified in the initiating Party's notice;
- (iii) add to, remove from, disregard, modify, or otherwise alter this DDA or any other agreement between the Parties regarding the Project;
- (iv) negotiate new agreements or provisions between the Parties;
- (v) award damages of any kind or award attorneys' fees or arbitration fees except as specified in **Subsection 9.3(c)** (Arbiter's Authority); or
- (vi) order any form of equitable relief.

(e) Service of Documents. In all dispute resolution proceedings under this Article, all agreements, submittals, and decisions will be in writing, and each Disputing Party will serve copies of any documents submitted to any Arbiter simultaneously to all other Disputing Parties.

(f) Ex Parte Communications. No Disputing Party or any of its Agents may engage in ex parte communications with the Arbiter with regard to any pending arbitration proceeding. A Disputing Party may write to the Arbiter concerning procedural matters such as scheduling if a copy is delivered simultaneously to the other Disputing Parties.

#### **9.4. Binding Arbitration.**

(a) Agreed Scope. The Parties have agreed to submit the following disputes to binding arbitration:

- (i) proposed changes to the Qualified Appraiser Pool **Subsection 7.4(d)** (Qualified Appraiser Pool);
- (ii) proposed changes to the Qualified Broker Pool under **Subsection 7.8(a)** (Broker-Managed Offerings);
- (iii) proposed changes to the Approved Arbiters Pool under **Subsection 9.1(b)** (Changes);
- (iv) the Port's conclusions regarding its feasibility analysis under **Subsection 7.2(a)** (Phase I Election); and
- (v) Projected AGI to be used to establish Percentage Rent for a Parcel Lease under **Subsection 7.6(b)** (Percentage Rent).

(b) By Later Agreement. The Parties, each in its sole discretion, also may agree to submit any other dispute to binding arbitration under this Section.

(c) Binding Arbitration Procedures. The following procedures will apply to binding arbitration of disputes under this Section.

(i) Each Disputing Party may submit an initial brief, not to exceed 10 double-spaced pages, and supporting documentary evidence to the Arbiter within 20 business days after the Arbitration Start Date. Evidence may include expert or consultant opinions, any form of graphic evidence such as photos, maps, and charts, and other evidence that could assist the Arbiter in resolving the dispute in the Disputing Party's discretion.

(ii) Each Disputing Party may submit a reply brief, not to exceed five double-spaced pages, within 20 business days after the Arbitration Start Date, even if it did not submit an initial brief. The Arbiter may request further briefing on specified issues, with documents submitted within 10 business days after the Arbiter's request.

(iii) Unless each Disputing Party agrees otherwise, the Arbiter will hold a telephonic hearing. The Arbiter will issue a decision within 25 business days after the submission deadline for the last set of briefs submitted under **clause (ii)** of this Subsection. The Arbiter's decision will be final, binding on all Parties, and nonappealable. Each Party explicitly waives any right to de novo judicial review of an Arbiter's decision under this Section.

#### **9.5. Nonbinding Arbitration.**

(a) Scope. The Parties, each in its sole discretion, may agree to submit any other dispute to nonbinding arbitration under this Section.

(b) Nonbinding Arbitration Process.

(i) The Disputing Parties may agree to submit disputes to nonbinding arbitration within 15 business days after the meet-and-confer period under **Section 9.2 (Meet and Confer Requirement)** expires. The Disputing Parties may submit a joint statement of the dispute and a proposed discovery, briefing, and hearing schedule to the Arbiter. Otherwise, each Disputing Party may submit to the Arbiter a short statement of the dispute and a proposed discovery, briefing, and hearing schedule, and the Arbiter will specify the schedule for the proceeding. The Disputing Parties may agree to supplement, but not override, the nonbinding arbitration process under this Subsection by procedures applicable to commercial nonbinding arbitration of alternative dispute resolution providers in the San Francisco Bay Area.

(ii) The Arbiter will decide any dispute subject to nonbinding arbitration under this Section. The Disputing Parties will provide the Arbiter with briefs, not to exceed 10 double-spaced pages, on their respective positions. The Arbiter's decision will be due 30 days after the last submission.

(iii) Within 20 business days after the Arbitration Start Date, the Arbiter will conduct a preliminary hearing, either by telephone or personal appearance at the Arbiter's option. At the preliminary hearing, the Arbiter will establish discovery and briefing schedules and relevant dates, including a hearing date. In resolving discovery issues, the Arbiter will consider expediency, cost effectiveness, fairness, and the needs of the Disputing Parties for adequate information in reference to the dispute. The Disputing Parties will make good faith efforts to prepare a joint record of evidentiary documents for the proceeding.

(iv) The Disputing Parties may agree to retain one or more consultants to assist the Arbiter at the Arbiter's request in writing explaining the need for each proposed consultant, the consultant's identity and relevant qualifications, hourly rate, the estimated costs of the service, and a proposed cap on the consultant's cost. If all Disputing Parties do not approve each consultant's retention, the cost cap, and each Parties' allocated share of the consultant's cost, the Arbiter's request will be denied.

(v) The evidentiary hearing will be scheduled to begin within 60 days and be completed within 80 days after the preliminary hearing, unless the Arbiter extends the date with the Disputing Parties' consent. The Arbiter will issue an advisory decision, specifying the reasons for the decision, within 20 days after the hearing. Each Disputing Party will give due consideration to the Arbiter's decision before deciding to pursue further legal action.

(vi) No advisory decision will be admissible or have any res judicata or collateral estoppel effect in any other arbitration conducted under this Article or in any other action.

**9.6. Nonarbitrable Matters.** The following are not subject to arbitration under this DDA unless both Parties agree, each in its sole discretion.

(a) Construction Completion. Developer cannot compel the Port to arbitrate a decision not to issue an SOP Compliance Determination.

(b) Approval. Developer cannot compel any City Agency to arbitrate a decision not to grant a Regulatory Approval for the Project.

(c) Adequate Security. Developer cannot compel the Port to arbitrate a dispute about whether a Port draw on Adequate Security was wrongful or whether an Obligor failed to perform the Obligor's obligations under the Adequate Security.

(d) Sole Discretion. One Party cannot compel the other to arbitrate any decision that another Party is entitled to make in its sole discretion.

## **10. DEFAULTS**

### **10.1. Generally.**

(a) Notice. Except as otherwise specified, an Aggrieved Party will provide notice of the occurrence of an alleged Prospective Default, to the Breaching Party in accordance with **Section 18.1** (Notices) and *App ¶ 4.5 (Notices)*. The notice will state with reasonable specificity the nature of the alleged default, the provisions under which the Aggrieved Party claims the default arose, and the cure period for the default.

(b) Cure Period.

(i) A Prospective Default that is cured before the specified cure period ends will not become an Event of Default.

(ii) The Breaching Party will have 10 business days after the effective delivery date of the default notice to request a meeting with the Aggrieved Party to discuss measures to cure any performance (not payment) Prospective Default. The Aggrieved Party's agreement to meet will not cause the cure period to be extended.

(iii) If the Breaching Party cures the Prospective Default in accordance with this DDA or otherwise to the Aggrieved Party's reasonable satisfaction within the cure period, the Aggrieved Party will acknowledge the cure within three business days after the cure is complete.

(iv) If the Breaching Party does not timely cure the Prospective Default, the Aggrieved Party in its sole discretion may:

- (1) agree to extend the cure period;
- (2) waive the Event of Default; or
- (3) take any other measure permitted under this DDA following an Event of Default, including an action at law or in equity.

**10.2. Events of Default by Developer.** The Parties agree that the occurrence of any of the following will be an Event of Default by Developer under this DDA.

(a) Nonpayment to Port. Developer fails to pay any sum due under this DDA and does not cure the default within 30 days after the Port delivers notice to Developer.

(b) Taxes. Developer or, subject to **Section 6.8** (Effect of Transfers), any Transferee fails to pay any property taxes or Mello-Roos Taxes levied on any Taxable Parcel subject to the Master Lease or a Parcel Lease by the delinquency date specified in its tax bill. This Event of Default will not be subject to any cure period except to the extent that **Section 6.8** (Effect of Transfers) applies.

(c) Other Obligations. Developer fails to perform any other obligation to be performed by Developer under this DDA, excluding obligations described in **Section 11.2** (Material Breaches by Developer), and does not cure the Prospective Default within the specified cure period (or 60 days if none is specified), or if the Prospective Default cannot be cured within the specified period (or 60 days if none is specified), Developer fails to take steps to cure the Prospective Default within the cure period and diligently complete the cure within a reasonable time.

(d) Financial Condition. A Significant Adverse Change to Developer occurs, and Developer fails, within 45 days after the Port delivers notice to Developer, to provide the Port with either: (i) evidence reasonably acceptable to the Port Director of Developer's continuing ability to meet Developer Construction Obligations and Developer Reimbursement Obligations; or (ii) a letter of credit or other security instrument reasonably satisfactory to the Port Director, securing the cost of the remaining Developer Construction Obligations and Developer Reimbursement Obligations for the applicable Phase in which the Significant Adverse Change Occurs.

(e) Insolvency. Developer initiates or is the subject of an Insolvency proceeding, if not released, dismissed, or stayed within 120 days.

**10.3. Events of Default by the Port.** The Parties agree that the occurrence of any of the following will be an Event of Default by the Port under this DDA.

(a) Financing Plan. The Port, by action (such as revoking instructions to the Escrow Agent or Special Fund Trustee) or omission (such as failure to issue required instructions) causes funds then available to pay any part of the Project Payment Obligation under the Financing Plan to be withheld and does not cure the Prospective Default within 30 days after Developer delivers notice to the Port, or if the Prospective Default cannot be cured within 30 days, the Port fails to take steps to cure the Prospective Default within the cure period and diligently complete the cure within a reasonable time.

(b) Other Obligations. The Port fails to perform any other agreement or obligation under this DDA, excluding obligations described in **Section 11.3** (Material Breaches by the Port), and does not cure the Prospective Default within the specified cure period (or 60 days if none is specified), or the Port fails to take steps to cure the Prospective Default within the cure period (or 60 days if none is specified) and diligently complete the cure within a reasonable time.

#### **10.4. Remedies for Events of Default.**

**(a) Equitable Remedies.**

**(i)** Following an Event of Default, the Aggrieved Party may file an action in equity to compel the Breaching Party to perform its obligations under this DDA or to prevent the Breaching Party from further violating this DDA. The Aggrieved Party is not required to postpone filing an equitable action if it believes in good faith that postponement would cause it to suffer irreparable harm.

**(ii)** The Parties agree that, except when a dispute involves a known or knowable sum or an indemnified Loss:

**(1)** monetary damages are generally inappropriate remedies for an Event of Default under this DDA;

**(2)** determining the actual damages suffered by any Party as a result of an Event of Default would be extremely difficult and impractical; and

**(3)** equitable remedies are particularly appropriate to enforce this DDA.

**(b) Specific Remedies.** This DDA prescribes the following specific remedies for certain Events of Default.

**(i) Phase Security.** The Port will not issue any construction permit for any work in any Phase until Developer has provided Loss Security and Phase Security complying with the requirements of **Article 16** (Security for Project Activities). Developer's failure to provide required Adequate Security will not extend any dates for Developer's performance under this DDA.

**(ii) Significant Adverse Change.** If a Significant Adverse Change to Developer occurs, the Port may increase Loss Security requirements to commercially reasonable levels commensurate with the degree of the Significant Adverse Change.

**(iii) Nonpayment of Taxes.** During any period when Developer or any Affiliate is delinquent on its obligation to pay any property taxes or Mello-Roos Taxes levied on a Taxable Parcel subject to the Master Lease or a Parcel Lease, the City will not be obligated to issue any Bonds for the Project.

**(iv) Violation of Covenants.** If Developer defaults in its performance of the Other City Requirements described in **DDA Exhibit A6** or the implementation documents attached as **DDA Exhibits B3, B5, B6, B7 and B8**, the Port and the City will have the remedies prescribed in the applicable ordinance, policy, or implementation document.

**(v) Other Payment Obligations.** If either Party fails to make any payment when due (other than Developer Reimbursement Obligations for Developer or a final judgment in favor of either Party), the Aggrieved Party's exclusive remedy is to initiate a request for nonbinding arbitration under **Article 9** (Resolution of Certain Disputes) or a judicial action for actual damages.

**(c) Rights and Remedies Cumulative.** Except as expressly limited by this DDA, the Parties' respective rights and remedies with respect to an Event of Default are cumulative. An Aggrieved Party's exercise of any one or more of its remedies for an Event of Default by the Breaching Party will not preclude its exercise, at the same or different times, of any of its other remedies. Each Party acknowledges its intent to limit its remedies for an Event of Default by the other Party to those specified in this DDA.

## **11. MATERIAL BREACHES AND TERMINATION**

### **11.1. Generally.**

(a) Nature of Material Breaches. Because certain defaults could seriously impair the benefits that the Parties expect the Project to generate, they are categorized as Material Breaches and could result in more serious consequences affecting some or all of the Project as described in this Article.

(b) Notice. An Aggrieved Party will provide notice to the Breaching Party as specified in **Section 18.1** (Notices) and *App ¶ 4.5* (Notices) of any alleged Prospective Breach by the Breaching Party. The notice will state with specificity the nature of the alleged Prospective Breach, the provisions of this DDA under which the alleged Prospective Breach would arise, and the specified cure period.

(c) Cure Period.

(i) Except as otherwise specified, the Breaching Party will not be in Material Breach unless it fails to cure the Prospective Breach within the specified cure period.

(ii) The Breaching Party may request a meeting to discuss measures to cure a potential performance-based Prospective Breach. But the Aggrieved Party will not be required to meet if the Breaching Party delivers the request less than five business days before the cure period ends for the Prospective Breach.

(iii) If the Breaching Party cures the Prospective Breach by performing in accordance with the applicable provisions of this DDA (or otherwise to the Aggrieved Party's reasonable satisfaction) within the cure period, the Aggrieved Party will acknowledge the cure within three business days after it is complete.

(iv) If the Breaching Party does not cure the Prospective Breach within the cure period, the Aggrieved Party in its sole discretion may:

- (1) agree to extend the cure period;
- (2) waive the Prospective Breach; or
- (3) take any other measure permitted under this DDA, including an action at law or in equity.

**11.2. Material Breaches by Developer.** The occurrence of any of the following will be a Material Breach by Developer under this DDA.

(a) Prohibited Transfer. Developer causes or allows a Transfer that violates any provision of **Article 6** (Transfers) and does not reverse or rescind the Transfer within 30 days after the Port delivers notice to Developer.

(b) Outside Dates. Developer fails to meet any Outside Date and does not cure its failure within 90 days after the Port delivers notice to Developer.

(c) Abandonment. Developer abandons its work on Phase Improvements for more than 60 consecutive days or a total of 120 days (which need not be consecutive) during the Current Phase, subject to **Article 4** (Excusable Delay), and does not cure the Prospective Breach within 45 days after the Port delivers notice to Developer.

(d) Maintain Adequate Security. Developer fails to maintain or replenish any form of Adequate Security required under **Article 16** (Security for Project Activities) and does not cure the failure within 45 days after the Port delivers notice to Developer.

(e) Replace Adequate Security. The Obligor of any Adequate Security commits a default under the applicable security instrument or revokes or refuses to

perform as required under the Adequate Security, and Developer does not replace the Adequate Security within 90 days after the Port delivers notice to Developer.

(f) Significant Change to Obligor. Neither Developer nor the Obligor of any Adequate Security complies with **Subsection 16.4(a)** (Verification), or a Significant Change to Obligor occurs, and Developer fails to provide the Port with new Adequate Security when required under **Section 16.4** (Obligor Net Worth).

(g) Special Taxes. The CFD is unable to satisfy any obligation under an Indenture due to Developer's failure to pay any property taxes or Mello-Roos Taxes levied on any Taxable Parcel subject to the Master Lease by the delinquency date specified in its tax bill.

(h) Development Agreement. The Planning Director finds Developer is not in compliance with the Development Agreement or the City initiates proceedings under Administrative Code section 56.17(c) or otherwise takes action to enforce its rights and remedies under the Development Agreement.

(i) Final Judgment. Developer fails to satisfy a final judgment in the Port's favor in an action for payment or performance against Developer within 60 days after the judgment becomes final or any longer period specified in the judgment.

(j) Final Map. The Final Map is not recorded for the applicable Phase on or before the First Scheduled Closing Date, as such First Scheduled Closing Date may have been extended pursuant to **Subsection** Error! Reference source not found. (d), and (i) Developer failed to use diligent efforts to timely submit required applications and Improvement Plans, and to respond to City comments on prior submissions in a reasonable fashion and within a reasonable time given the nature and scope of such City comments, as required under **Section** Error! Reference source not found. (b), (ii) Developer's failure to use such diligent efforts was a direct, material and substantial cause of the failure to timely obtain and record the Final Map, and (iii) the failure to timely obtain and record the Final Map continues for 5 days after Port delivers notice to Developer.

(k) Parcel D2 Garage. After the Port exercises its Option under **Section 7.3** (Parcel Put), unless **clause (ii)** of **Subsection 2.5(a)** (Garage Phase Requirements) applies, Developer fails to exercise its Option and cause a Vertical Developer Affiliate to:

- (i) timely enter into a Vertical DDA for Parcel D2;
- (ii) Close Escrow on the Parcel Lease, assuming all of the Vertical Developer's conditions to Closing under the Vertical DDA are satisfied; and
- (iii) Commence Construction on the Parcel D2 Garage by the date specified in the Vertical DDA.

**11.3. Material Breaches by the Port.** The occurrence of any of the following will be a Material Breach by the Port under this DDA.

(a) Project Finance. A noticed Event of Default by the Port occurs under **Section 10.3** (Events of Default by the Port) that also:

- (i) materially and adversely affects Developer's ability to meet the Schedule of Performance or to perform its Construction Obligations, all as reasonably determined by Developer; or
- (ii) prevents or substantially delays or impairs the availability of Project Payment Sources.

(b) Failure to Enter into Vertical DDA or Close Escrow. After 30 days' notice, the Port fails to:

(i) enter into a Vertical DDA with a Vertical Developer Affiliate in accordance with **Article 7** (Parcel Leases); or

(ii) Close Escrow on the Parcel Lease for an Option Parcel after all of the Port's conditions and mutual conditions to Closing have been satisfied or waived.

(c) **Port Title Defect.** The Port defaults on the Port Title Covenant by creating or allowing a title exception other than the Permitted Exceptions, and the Port does not remove the exception within 60 days after Developer delivers notice to the Port.

(d) **Final Judgment.** The Port fails to satisfy a final judgment in Developer's favor in an action for payment or performance against the Port within 60 days after the judgment becomes final or any longer period specified in the judgment.

**11.4. Termination as Remedy.** Either Party may elect to terminate this DDA if the other Party is in Material Breach of this DDA. A Party's exercise of its termination rights will not affect its right to seek other remedies in lieu of or in addition to termination.

**Subsection 6.8(c)** (Defaults and Breaches) applies to the Port's rights under this Section.

**11.5. Mutual Termination Right.** If a Third-Party Challenge to the Project is filed, Developer may elect not to reimburse all Port Costs and City Costs arising from the action by providing notice to the Port within 10 days after Developer receives notice of the action. If Developer makes this election, either Party may terminate this DDA on 10 days' notice to the other Party. Termination under this Section will not relieve Developer of its obligation to pay all Port Costs and City Costs incurred before the Termination Date.

**11.6. Termination Procedures.** The following procedures will apply to all terminations.

(a) **Termination Notice.**

(i) The Party electing to terminate will provide a Termination Notice to the other Party that prominently includes the phrase "*Termination Notice*." The notice will describe the Material Breach or other circumstance giving rise to the right to terminate, list portions of the DDA or the Project to be terminated, and specify a Termination Date at least 30 days after the notice is delivered.

(ii) A Party may agree in its sole discretion to extend the Termination Date in a writing confirming the later Termination Date, but doing so will not require the Party to deliver a new Termination Notice.

(iii) The Port may deliver a Termination Notice before the date of the public meeting at which the Port Commission is expected to consider termination. None of the following will affect the validity of the Port's Termination Notice, except as to the specified Termination Date: (1) the Port Director, in her sole discretion agrees to extend the anticipated Termination Date; (2) the matter is not placed on the Port Commission's agenda for the anticipated Termination Date; or (3) the Port Commission continues its action to a later date.

(b) **Port Commission Action.** Except for the situation described in **Section 11.5** (Mutual Termination Right), a Port Commission resolution is required for the Port to terminate any part of this DDA.

(c) **Recorded Notice.** After termination, the Party electing termination may record a Notice of Termination specifying the Termination Date in the Official Records. The Party will deliver, or cause delivery of, conformed copies of any recorded Notice of Termination to the other Party and any Interested Person.

(d) Preservation of Special Tax Lien. The Parties acknowledge that the lien of the CFD on all Taxable Parcels benefits Developer, the Port, the City, and the public trust. Developer agrees not to object to any agreement between the Port on its own behalf, or as the CFD Agent, and the City, any Indenture Trustee, or other person that would confirm the lien even if any portion of Developer's rights under this DDA is terminated.

**11.7. Effects of Termination on Development Rights.** On the Termination Date, the following changes will take effect automatically.

(a) Mutual Obligations. On the Termination Date, each Party's future obligations to the other Party for the terminated portions of this DDA will terminate, except for indemnities and any other obligations that expressly survive termination.

(b) Development Opportunities.

(i) The Port will have the right to offer the Development Opportunities associated with the terminated portions of the DDA to third parties through proprietary public offerings and to specify any terms that the Port determines in its sole discretion are appropriate for the offered Development Opportunities.

(ii) Developer will have no rights to the Development Opportunities associated with the terminated portions of the DDA or to reimbursement of Developer Capital it uses for the terminated Development Opportunities after the Termination Date.

(iii) Developer acknowledges the Port's rights under this Subsection and expressly waives any right that Developer might have to: (1) challenge or limit the Port's right to publicly offer any Development Opportunity under this Subsection; or (2) bid in the proprietary public offering.

**11.8. Effects of Termination on Project Payment Sources.**

(a) Before Lead Parcel Conveyance. Port termination of the DDA following a Material Breach by Developer before the Lead Parcels are conveyed will terminate Developer's right to reimbursement of any outstanding portion of the Entitlement Sum under this DDA. Instead, Developer's rights will be as specified in the Master Lease.

(b) Incomplete Phase 1. If the Port terminates the DDA as to Phase 1 following a Material Breach by Developer while Phase 1 is incomplete, the following will apply.

(i) Subject to **Subsection 11.8(a)** (Before Lead Parcel Conveyance), Developer will be entitled to reimbursement of Horizontal Development Costs that it incurred before the Termination Date, without Developer Return, to the extent of Project Payment Sources generated by Phase 1 Parcel Leases on which Vertical Developer Affiliates Closed Escrow before the Termination Date.

(ii) Developer's Option for all other Option Parcels will terminate.

(c) Other Phases Incomplete. If the Port terminates the DDA as to any incomplete Phase other than Phase 1 following a Material Breach by Developer, the following will apply.

(i) Developer will be entitled to reimbursement of Horizontal Development Costs that it incurred in the incomplete Phase before the Termination Date, without Developer Return, to the extent of Project Payment Sources generated by:

- (1) Parcel Leases in any Phase on which Vertical Developers Closed Escrow before the Termination Date; and
- (2) Parcel Leases in any Phase on which Vertical Developers Close Escrow after the Termination Date if the related Vertical DDA was in effect on the Termination Date.
- (ii) Developer will be entitled to Reduced Return on Horizontal Development Costs that it incurred in the incomplete Phase before the Termination Date for substantially complete Phase Improvements to the extent of Project Payment Sources generated by:
  - (1) Parcel Leases in any Phase on which Vertical Developer Affiliates Closed Escrow before the Termination Date; and
  - (2) Parcel Leases in any Phase on which Vertical Developer Affiliates Close Escrow after the Termination Date if the related Vertical DDA was in effect on the Termination Date.
- (iii) Developer's Option for all other Option Parcels in the Phase will terminate.
- (d) After Phase Completion. If the Port terminates the DDA as to any Phase after the Phase Improvements are substantially completed, Developer will be entitled to receive the Developer Balance for its Horizontal Development Costs of the Phase to the extent of Parcel DRPs and Public Financing Sources generated by Parcel Leases in effect in the Terminated Phase or any Prior Phase or any Parcel Lease that Closes Escrow after the Termination Date if the related Vertical DDA was in effect on the Termination Date.

#### **11.9. Assignment of Documents after Termination.**

- (a) Consulting Contracts. Developer agrees to use good faith efforts to obtain provisions in services contracts with its consultants that will permit Developer's assignment of Project Materials to the Port under this Section.
- (b) Required Assignment. If this DDA is terminated in whole or in part, upon notice from Port, Developer will:
  - (i) provide to the Port at no cost within 60 days after the Port's notice a Project Assignment of all Project Materials, including all Structural Materials, to the associated portions of the Project, to the extent permitted under Developer's consulting contracts;
  - (ii) satisfy all outstanding fees relating to the Project Materials for services rendered by any of the Project Consultants up to the Termination Date and provide proof of payment to the Port; and
  - (iii) subject to limitations in this Section, deliver copies of all Project Materials in Developer's possession or confirm for materials not in its possession, on request from Project Consultants or the Port, that Project Consultants are authorized to deliver all Project Materials to the Port.
- (c) Allowed Disclaimer. Developer will be permitted to disclaim any representations or warranties with respect to the Project Materials (other than Developer's payment of fees), and, at Developer's request, as a condition to the delivery of the Project Assignment and any Project Materials, the Port will provide Developer with a release from liability arising after any future use by the Port of the Project Materials, in a mutually acceptable form. Developer's acceptance of the Port's release will be deemed to waive and release the Port from any claims by Developer of proprietary rights or interest in the Project Materials.

## **12. IMPROVEMENT PLANS**

### **12.1. Improvement Plans for Phase Improvements.**

(a) Generally. This Section applies to Developer's submittal of Improvement Plans for Phase Improvements. Developer has consented to the procedures in and agreed to comply with *ICA art 4 (Review Procedures for Improvement Plans, Inspections, and Acceptance)*.

(b) Other Deferred Infrastructure. Whenever the Parties agree that a Vertical Developer will build Deferred Infrastructure, Developer will be required to:

(i) seek and obtain the appropriate Other City Agency's consent to inspect Deferred Infrastructure Plan for compliance with Developer's approved Improvement Plans in accordance with the ICA; and

(ii) coordinate the construction and permitting of the Backbone Infrastructure with the related Deferred Infrastructure.

**12.2. Review of Improvement Plans.** All applicable City Agencies have conditionally approved the Infrastructure Plan attached as **DDA Exhibit B3**.

(a) Review by City Agencies. The Port and Other City Agencies have entered into the ICA, which establishes procedures for City Agency review and approval of Improvement Plans and applications for construction permits for Horizontal Improvements. In the ICA, the City Agencies agree to conduct their review consistently with this DDA and the Development Agreement.

(b) Standard of Review. Except as otherwise provided in this DDA, the Port's review and approval or disapproval of Improvement Plans subject to its review will be final and conclusive.

### **12.3. Conflicts with Other Governmental Requirements.**

(a) Other Regulatory Approvals. The Port will not withhold its approval, if required under this DDA, of elements of or changes to Improvement Plans required by any other Regulatory Agency if all of the following occur.

(i) The Port receives notice of the required change.

(ii) The Port has at least 10 days to discuss the element or change with the other Regulatory Agency requiring the element or change and with Developer's registered design professional in responsible charge.

(iii) Developer cooperates fully with the Port and the other Regulatory Agency within the 10-day discussion period to reach a design solution satisfactory to the Port and the other Regulatory Agency.

(iv) As modified, the Improvements will comply with all applicable laws.

(b) Disputes. Developer and the Port recognize that regulatory conflicts may arise at any stage in the preparation of the Improvement Plans, but that it is more likely to arise at or after the Final Permit Sets have been prepared and may arise in connection with permit applications. Accordingly, time is of the essence when a conflict arises. Both Parties agree to use their good faith efforts to reach a solution expeditiously that satisfies both Developer and the Port. At any time, either Party may submit the conflict to the dispute resolution procedures of **Section 9.4 (Binding Arbitration)**.

**12.4. As-Built Drawings.** As a condition to the Port's issuance of an SOP Compliance Determination for each Phase, Developer must deliver to the Port As-Built Drawings for the applicable Phase Improvement that meet the requirements of this Section.

(a) **Technical Requirements.** As-Built Drawings must reflect all requests for information responses, field orders, change orders, and other corrections to the documents made during the course of construction. As-Built Drawings must be both in the form of full-size (24" x 36"), hard paper copies and converted into electronic format as full-size scanned tagged image files (TIFF) and AutoCAD files. As-Built Drawings must be full-sized documents, with "mark-ups" neatly drafted to indicate modifications from the original design documents, scanned at 400 dots per inch (dpi). Each drawing must have a unique number stamped onto the title block. An index of drawings must be prepared correlating drawing titles to the numbers. A minimum of 10 drawings must be scanned as a test before execution of this requirement in full.

(b) **Format.** The AutoCAD files must be contained in Release 14 or a later version, and drawings must be transcribed onto electronic storage media. All "X-REF," "block" and other referenced files must be coherently addressed within the environment of the compact disc. Media containing files that do not open automatically without searching or reassigning "X-REF" addresses will be returned for reformatting. A minimum of 10 complete drawing files, including all referenced files, must be transmitted to the Port as a test before execution of this requirement in full.

(c) **Production Costs.** Developer's costs to produce required files will be reimbursable Soft Costs unless Developer fails to comply timely with this Section. If Developer does not comply, the Port, after giving notice to Developer, will have the right, but not the obligation, to cause an engineer of the Port's choice to prepare final surveys and As-Built Drawings, plans and specifications, at Developer's sole, unreimbursable cost.

**12.5. Schematic Design Review of Public Spaces.** This Section specifies conditions precedent to the Port's issuance of construction permits for Public Spaces.

(a) **Approval of Parks Plan.** The Port Commission will adopt a Parks Plan, which will include limits on restricted access events at Public Spaces consistent with *DA § 5.9 (Public Spaces)* and may be added to the Port Code, before or in conjunction with its approval of Developer's first Schematic Design Application for Public Space in Phase 1. Developer will have an opportunity to comment on proposed rules and regulations in the Parks Plan before it is submitted to the Port Commission for approval. After approval, the Parks Plan will apply to each Public Space when opened to the public under this DDA.

(b) **Applications.** Developer will submit to the Port a Schematic Design Application for each Public Space Parcel sufficiently in advance of applicable Outside Date to permit an orderly review and approval process. Developer may elect to include more than one Public Space Parcel in each application.

(c) **Presubmittal Meetings.**

(i) At least 30 days before submitting a Schematic Design Application for Port Commission approval, Developer will provide the Port Director with draft documents.

(ii) At least 20 days before submitting a Schematic Design Application, Developer and Port staff will schedule and hold at least one presubmittal meeting. Developer may submit information and materials iteratively, and Developer and the Port staff may agree to hold additional meetings.

(iii) If Developer fails to submit draft documents or to schedule a presubmittal meeting as specified in this Subsection, the Port's time for review of the Schematic Design Application will be extended by 30 days.

(d) Public Review. Prior to submitting a Schematic Design Application, Developer will host a public presentation of its design and will provide a minimum of two weeks' notice by publication, posting, mailing, or other means reasonably aimed at providing stakeholders with an opportunity to attend the presentation.

(e) Initial Port Review. Port staff will review each Schematic Design Application for completeness. The Port will make its determination of completeness within 15 days after submittal and will advise Developer in writing of any deficiencies.

(f) Design Advisory Committee Review. Port staff will transmit each complete Schematic Design Application to the Design Advisory Committee for consideration at its next noticed public meeting. The Design Advisory Committee will make design recommendations to ensure that the design of Public Spaces is consistent with the Design Controls and other Project Requirements.

(g) Port Commission Approval. The Port Director will submit the applicable complete Schematic Design Application to the Port Commission for review and consideration with the Design Advisory Committee recommendation in accordance with **Subsection 5.3(c)** (Port Commission Meetings).

(h) Approval of Public Space Improvement Plans.

(i) After the Port Commission's approval of a Schematic Design Application, Public Space Improvement Plans will be reviewed in accordance with the ICA.

(ii) The Port Director may approve Public Space Improvement Plans that amend or modify the approved Schematic Design Application if she finds that the amendment or modification:

- (1) would not be a Material Modification;
- (2) would not be detrimental to the public welfare or injurious to property or improvements in the vicinity of the Project; and
- (3) would be consistent with the Design Controls and other Project Requirements.

### **13. CONSTRUCTION GENERALLY**

**13.1. Substantial Compliance with Plans.** Developer agrees to construct Horizontal Improvements in substantial compliance with approved Improvement Plans and in compliance with applicable Project Requirements. Each Vertical Developer's construction obligations will be subject to similar standards and be specified in its Vertical DDA.

#### **13.2. Standards of Construction.**

(a) Generally. Developer will be responsible for constructing all Improvements in compliance with good construction practices, engineering standards under the Professional Engineers Act.(Cal. Bus. & Prof. Code §§ 6700-6799), and other applicable laws.

(b) Required Measures. Developer will undertake commercially reasonable measures to:

- (i) minimize damage, disruption, or inconvenience caused by its work, including an obligation not to impede tenant access to adjacent premises;
- (ii) make adequate provision for the safety and convenience of all persons affected by the work;

(iii) minimize the risk of damage to adjoining portions of the Project Site, Horizontal Improvements and Vertical Improvements under way or completed, and the surrounding property; and

(iv) minimize the risk of injury to its workforce and members of the public.

**13.3. Security.** During all construction activities, Developer will be responsible for taking commercially reasonable measures to secure the physical site and protect the public, as well as the City, the Port, and their Agents, from reasonably foreseeable harm. Examples of security measures are fencing, security patrols, and general liability insurance.

**13.4. Contracting Procedures.** Developer agrees to follow the contracting procedures described in this Section to negotiate all construction contracts for Phase Improvements consistent with each Phase Approval.

(a) **General Contractor Selection.** This Subsection applies to all construction contracts.

(i) Developer will select one or more general contractors for each Phase through a competitive "best value" selection process that requires the general contractor and all subcontractors to be licensed by the Contractors State License Board and in good standing with the City. "Competitive" for purposes of this Section means that Developer receives at least three bids from qualified bidders. Other relevant factors include the contractor team's experience with similar projects, contract price, and financial capacity, including ability to meet bonding requirements and comply with all City contracting requirements.

(ii) Developer will submit a description of and rationale for its proposed selection process, including examples of similar and different processes that Developer considered to the Port Director for her approval. The proposed selection process may provide for an expedited selection process for smaller scopes of work, in accordance with specified standards. The Port Director will not unreasonably withhold approval of a process that she finds is commercially reasonable and designed to be fair and equitable.

(iii) Before initiating its general contractor selection process for Phase 1, Developer will provide the Port with a list of the general contractors from which Developer intends to solicit bids for construction of Horizontal Improvements before issuing bid packages. The Port must deliver its objection to any of the proposed general contractors to Developer within five business days after receiving Developer's list. The Port's reasons for objection will be limited to the general contractor's:

(1) relevant experience and financial capacity, including its ability to meet bonding requirements;

(2) ability to comply with the Workforce Development Plan and the Other City Requirements to the extent applicable; and

(3) legal grounds for disqualification, such as disbarment or failure to be licensed by the Contractors State License Board.

(iv) If the Port objects to a general contractor, then Developer may either:

(1) provide the Port with notice of a replacement general contractor, subject to the five-day objection period; or

(2) submit the matter to the dispute resolution procedures of **Section 9.4 (Binding Arbitration)**.

(v) Before entering into a construction contract, Developer will provide a report to the Port with supporting documents to demonstrate compliance with the approved selection process and support the proposed selection as the "best value" among all bidders. The Port Director will have five days to object to Developer's proposed selection, but only on the grounds that Developer did not comply with the approved selection process or that the general contractor does not reasonably represent the "best value" among all bidders.

(b) **Bid Package Requirements and Security**. The bid package for general contractors must include relevant Improvement Plans, which may be preliminary, defining the scope of work. The bid package will require the general contractor to guarantee performance and payment the work, which may be provided through a subcontractor default insurance provided by the general contractor covering all enrolled subcontractors, or require each subcontractor under subcontracts having a value of more than \$100,000 to provide payment and performance bonds guaranteeing their work. Payment and performance bonds must be issued by a surety meeting the required standards under the Subdivision Code.

(c) **Guaranteed Maximum Price Contract**. If Developer wishes to use a guaranteed maximum price form of contract, it will select a contractor/CM-GC in accordance with this Section, subject to the following additional requirements.

(i) In its bid, the CM-GC must include the following:

- (1) estimated preconstruction costs;
- (2) an estimate of General Conditions costs to complete the Horizontal Improvements and the method used for estimation, such as a fixed monthly cost for the staff and support;
- (3) a construction management fee as a fixed percentage to be applied to the cost of Horizontal Improvements;
- (4) a preliminary estimate for the cost of the Horizontal Improvements; and
- (5) any Horizontal Improvements the CM-GC intends to self-perform.

(ii) At the end of the preconstruction period, Developer will negotiate a GMP contract based on budgeting and estimating performed by the CM-GC in collaboration with appropriate sub-trades at various design milestones during preconstruction, subject to the following.

(1) Developer may elect to proceed under the negotiated GMP contract terms or terminate the contract and issue a new solicitation in accordance with this Section. In either case, the CM-GC will be required to solicit competitive bids in accordance with this Section for each sub-trade package, including work it wishes to self-perform.

(2) The CM-GC's decision to self-perform any of the sub-trade work must be based on evidence of potential time savings, cost savings, quality control, and enhanced worksite safety.

(3) GMP contract terms will limit contingency to 15% or less unless the competitive process demonstrates that the market terms for

contingency are higher. If the proposed contingency is greater than 15%, Developer must obtain the Port's consent before negotiating the contract.

(4) Developer must obtain the Port's approval of contractual incentives to ensure the contractor's performance.

(iii) Before entering into any GMP contract, Developer agrees to provide the Port with the opportunity to review the proposed contract and its scope of work. The Port's review will be limited to determining the contract's consistency with the Phase Approval, selection process, approved Improvement Plans, and Project Requirements. The Port will give notice of its determination regarding consistency (including the reasons for any determination of inconsistency) of the proposed GMP contract within 15 days after its delivery to the Port.

**(d) Subcontractor Selection.**

(i) Developer's general contractor will select subcontractors through a competitive selection process. All subcontractors must provide evidence of relevant experience and financial capacity and agree to comply with all applicable City contracting requirements. Bidders that are not in good standing with the City or are not licensed by the Contractors State License Board will not be eligible for selection. Other relevant factors include the subcontractor's experience with similar projects, contract price, and financial capacity, including ability to meet bonding requirements and comply with all City contracting requirements.

(ii) Developer will submit a description of and rationale for the proposed subcontractor selection process to the Port Director for her approval. The Port Director will not unreasonably withhold approval if she finds the process is commercially reasonable and designed to be fair and equitable.

(iii) The general contractor will select subcontractors using the approved selection process. The Port will be permitted to review, but not copy, all bid documents, correspondence, and quotations from bidders promptly after contractor selection.

(iv) Developer may propose authorizing the general contractor to perform trade work as appropriate for the project or to negotiate subcontracts without competitive bidding in accordance with **Section 13.5** (Sole Source Contracts).

**13.5. Sole Source Contracts.**

(a) Developer Validation. If Developer selects a contractor to perform a particular scope without competitive selection, Developer must validate the costs as qualified for reimbursement by either:

(i) providing the Port with an engineer's cost estimate of Hard Costs demonstrating that the cost will not have a negative impact on the expected Phase Budget; or

(ii) demonstrating that the product or service is available from only one supplier in the San Francisco Bay Area.

**(b) Port Decision.**

(i) The Port may hire a third-party consultant, with costs reimbursable as Port Costs, to validate the Hard Costs and Soft Costs when evaluating the commercial reasonableness of the sole source bid.

(ii) The Port Director will approve a proposal under this Section if Developer is able to demonstrate to the Port Director's reasonable satisfaction that the cost is commercially reasonable.

**13.6. Documentation of Costs.**

(a) Reporting. Whenever Developer anticipates incurring any Horizontal Development Costs that do not satisfy **Section 13.4** (Contracting Procedures), it will include an estimate of the costs in its next Phase Quarterly Report submitted under *FP § 9.1(b) (Phase Quarterly Reports)*.

(b) Estimated Costs. Each Phase Quarterly Report that Developer submits under *FP § 9.1(b) (Phase Quarterly Reports)* will update estimates of Horizontal Development Costs for the Phase in as much reasonable detail as then practicable, based on executed contracts and approved change orders to the extent available. The standards for estimated costs include:

(i) substantial consistency with applicable Improvement Plans, subject to approved changes;

(ii) line item details for all Hard Costs and Soft Costs;

(iii) detail for cost changes due to approved and expected change orders; and

(iv) a comparison of updated costs with the applicable Phase Budget, including costs incurred to date, percentage of work completed, and current cost variances by line item.

(c) Disputes. The Port will notify Developer within five days after Developer's submission of documents described in **Subsection 13.6(b)** (Estimated Costs) if the Port considers any of the estimated costs to be commercially unreasonable. If not resolved by consultation under **Subsection 13.7(a)** (Purpose), the Parties may agree to submit the following disputes for resolution under **Section 9.5** (Nonbinding Arbitration):

(i) whether the challenged costs are commercially unreasonable;

(ii) whether the challenged costs are outside the scope of approved Improvement Plans;

(iii) proposed changes to address regulatory conflicts under this Subsection; and

(iv) whether the review process meets the applicable standard of conduct.

(d) Change Orders Generally. Developer and its general contractor may agree on change orders to the underlying contract over the course of construction of the applicable Phase Improvements, subject to **Subsection 13.6(e)** (Change Order Threshold).

(e) Change Order Threshold. Developer must provide the Port with information on any change order that would exceed \$250,000 per occurrence at the earliest feasible opportunity, but in any event no later than the next regular progress meeting under **Section 13.7** (Progress Meetings). If multiple occurrences are packaged in a single change order, this threshold applies only to individual occurrences.

(f) Reporting. All change orders will also be reflected in Developer's reporting of estimated or actual Horizontal Development Costs required under *FP § 9.1(b) (Phase Quarterly Reports)*. Each Payment Request submitted under the Acquisition Agreement, must include documentation supporting each change order.

including any amendment to a GMP or other construction contract reflecting change orders at or above the threshold.

(g) Consultation. Developer agrees to consult with the Port to discuss whether reasonable cost-containment and value engineering measures can be applied to reduce expected cost increases above the threshold. At the Port's request, the consultation will take place outside of scheduled progress meetings.

(h) Exigent Circumstances. When exigent circumstances make it infeasible for Developer to wait until a progress meeting to share a contractor request for a proposed change order above the threshold, Developer agrees to contact the Port's assigned engineer orally and by email immediately after receipt of the change order request. The Parties will meet within one business day to confer on whether reasonable cost-containment and value engineering measures can be applied to reduce an expected cost increase.

### **13.7. Progress Meetings.**

(a) Purpose. During construction of all Improvements, Developer will notify Port staff about the place, date, and time of on-site construction progress meetings and the expected discussion topics. The Port and the other Acquiring Agencies will be entitled to participate in all pertinent meetings. The purpose of the Acquiring Agencies' participation in these meetings will be to:

- (i) review the status of design work and design decisions with significant cost implications;
- (ii) review progress in the preparation and submission of Improvement Plans to the Port for City Agency review;
- (iii) review progress in constructing the Improvements;
- (iv) coordinate the Acquiring Agencies' inspections;
- (v) review any expected change orders and cost increases;
- (vi) review any expected changes in the scope of work; and
- (vii) review cost estimates and identify any expected cost increases and means of achieving cost efficiencies or savings.

(b) Disputes. Should Developer approve a change order that would result in an increase above the change order threshold despite the Port's objection as to the eligibility of any additional cost for reimbursement, the Parties may agree to submit the dispute for resolution under **Section 9.5** (Nonbinding Arbitration).

(c) Emergency. In case of an emergency or other exigent circumstance (other than a change order addressed in **Subsection 13.6(h)** (Exigent Circumstances)) making it unreasonable to defer action until the next progress meeting, Developer will:

- (i) provide oral notice to the Port of the circumstance;
- (ii) specify in the oral notice the action that Developer proposes to take in response to the situation; and
- (iii) include the circumstance in the agenda of items to be discussed at the next regular progress meeting.

(d) Minutes. Developer agrees to prepare and distribute meeting minutes promptly after each progress meeting. Port staff and Developer (and their respective consultants) agree to communicate and consult informally as frequently as reasonably

necessary to assure that the formal submittal of any Improvement Plans to the Port can receive prompt and speedy consideration.

(e) Representatives. For the purposes of this Section, until otherwise directed, the Port's representative is the Chief Harbor Engineer, and Developer's representative is Julian Pancoast.

(f) Reports. During periods of construction, the Port will have the right to require Developer to submit monthly progress reports on construction to the Port, in form and detail as required by the Port.

### **13.8. Other Construction Matters.**

(a) Port and Other Governmental Permits. Developer has the sole responsibility for obtaining all necessary permits for the Horizontal Improvements and will submit applications for the permits directly to the applicable Regulatory Agency. Whenever a Port building permit is required for Horizontal Improvements in a Phase, Developer will submit to the Port a complete Permit Set of Improvement Plans sufficiently in advance of Developer's desired construction start date to permit review in accordance with the ICA. Developer will bear all risk of delay due to its submission of an incomplete or insufficient permit application.

(b) Port Right of Entry. Developer acknowledges that under the Master Lease, the Port and its Agents have the right of entry onto the Project Site to the extent reasonably necessary to carry out the purposes of this DDA as follows.

(i) The Port may inspect work on Horizontal Improvements on reasonable prior notice to Developer during regular business hours. During an inspection, the Port will comply with Developer's onsite safety measures and act reasonably to minimize any interference with Developer's construction activities. The Port will provide a copy of any inspection reports prepared by the Port or its Agents promptly following Developer's request, subject to the Port's right to withhold documents otherwise privileged or confidential. With respect to any reports prepared during the course of construction, the Port:

(1) disclaims any warranties, representations, and statements and will have no liability or responsibility with respect to any warranties, representations, and statements in the reports;

(2) will not be estopped from taking any action (including later claiming that the construction of the Horizontal Improvements is defective, unauthorized, or incomplete); and

(3) may not be required to take any action as a result of any inspection.

(ii) The Port will have access required to install, repair, replace, monitor, and service any security installations.

(iii) The Parties may agree to submit disputes over whether Port actions arising from entry under this Section or through the Port's exercise of its right of entry under the Master Lease unreasonably impeded Developer's construction activities for resolution under **Section 9.5** (Nonbinding Arbitration).

(c) Construction Signs and Barriers. Developer will provide appropriate construction barriers, construction signs, and a project sign or banner describing the Project and will post the signs at the Project Site during construction. Except to the extent governed by *Design Controls § 2.10 (Wayfinding and Signage)*, the Port's *Guidelines for Review and Approval of Signs and Murals on Port Property*, adopted by Resolution No. 97-12, will apply. Developer will submit the proposed size, design, text,

and location of any construction signs and the composition and appearance of any construction barriers to the Port for approval before installation.

(d) Coordination. The Parties acknowledge that a number of construction projects on public land near the Project Site are being or are expected to be constructed at the same time as the construction of early Project Phases. Expected projects include the rehabilitation of Lefty O'Doul Bridge, new residential development across from the Project Site at Mission Bay Parcel 1 on Third Street on Channel Street and Mission Bay Parcel 8 and Parcel 9A on Mission Rock Street at Terry A. Francois Boulevard, lease build-outs at Pier 48.5, Pier 50, and 401 Terry A. Francois Boulevard. Developer and the Port each agree to use reasonable efforts to coordinate construction efforts, to the extent within each Party's respective control, with those at other Project Sites in a manner intended to reduce construction conflicts without material delay to Developer Construction Obligations under this DDA.

(e) Construction Staging. During the DDA Term, Developer may use portions of the Project Site as staging areas for construction lay down and parking, construction equipment, and related materials in accordance with the Master Lease. The Port will have no responsibility for providing additional areas for construction staging.

(f) Mechanics' Liens. Developer will keep the Project Site and Horizontal Improvements free from any liens arising out of any work performed, materials furnished, or obligations incurred by Developer or its Agents. Developer's failure to cause any construction-related lien to be released of record or bonded or take other action acceptable to the Port within 30 days after Developer's receipt of final notice of the imposition of the lien will be a default under this DDA, and the Port will have the right at its option to effect a release of the lien by any commercially reasonable means. Developer at its sole cost, will reimburse the Port for all costs the Port incurs to do so within 30 days after the Port's demand. Developer will be permitted to contest the validity or amount of any tax, assessment, encumbrance, or other lien and to pursue any remedies associated with the contest, but the contest will be subject to all applicable conditions in the Master Lease.

**13.9. Mitigation Measures.** Developer and the Port agree that construction and operation of all Improvements will comply with applicable Mitigation Measures in the MMRP.

(a) Horizontal Improvements. Developer agrees to implement Developer Mitigation Measures related to the Horizontal Improvements as required by the MMRP and Project Requirements. Developer also agrees to cause its contractor, subcontractors, and Transferees to comply with this obligation through its construction contracts and Assignment and Assumption Agreements, as applicable.

(b) Vertical Improvements. Developer and the Port agree that Vertical DDAs and Parcel Leases will incorporate each Vertical Developer's responsibility to implement Developer Mitigation Measures related to Vertical Improvements.

(c) Other Horizontal Improvements. The Port agrees to implement the Mitigation Measures that are Port obligations as required by the MMRP and use good faith efforts consistent with the ICA to cause the necessary Other City Agencies to implement any Mitigation Measures assigned to them.

#### **14. HORIZONTAL DEVELOPMENT**

**14.1. Outside Dates.** Developer must begin construction of Phase Improvements by the Outside Dates in the Schedule of Performance. Outside Dates for Developer to finally complete Phase Improvements will be established through the Phase Approval process.

**14.2. Site Preparation.** The Port will issue construction permits for Site Preparation on the conditions in this Section. Conditions to construction of other Horizontal Improvements are not prerequisites to the Port's issuance of Site Preparation permits.

(a) Improvement Plans. Developer will submit for the Chief Harbor Engineer's approval a Permit Set of Improvement Plans for the proposed Site Preparation work and pay the permit fee. Demolition and Utility Relocation Plans, Mass Grading Plans, and Ground Improvement Plans may be submitted separately or together in a Permit Set.

(b) Cost Estimates. Developer will submit current construction cost estimates for the work, to the extent not included in a previously submitted Phase Quarterly Report updating the Phase Budget or an Acquisition Price Update, supported by contract bids or executed contracts procured in compliance with **Article 13** (Construction Generally).

(c) Adequate Security. Developer will provide evidence of Adequate Security meeting the requirements of **Article 16** (Security for Project Activities). Until the Port issues a Notice to Proceed for Phase Improvements, Phase Security will be limited to the estimated cost of authorized Site Preparation.

(d) Regulatory Approvals. Developer will provide evidence to the Port that Developer has obtained all other required Regulatory Approvals for the work.

(e) Insurance. Developer will provide evidence that it has satisfied applicable Insurance Requirements.

**14.3. Other Horizontal Improvements.** The Port and Developer will execute a Notice to Proceed confirming that all conditions described in this Section have been satisfied or waived before Developer begins any other Phase Improvements.

(a) Conditions for Developer's Benefit. The following are conditions to Developer's obligation to begin construction of any Phase Improvements unless waived by Developer in its sole discretion.

(i) The Port has performed all obligations under this DDA that the Port is then required to have performed.

(ii) The Port is not in Material Breach of this DDA, and no Prospective Breach remains uncured.

(b) Conditions for Port's Benefit. The conditions in this Section are solely for the benefit of the Port. Only the Chief Harbor Engineer, in his sole discretion, may waive any of those conditions.

(i) Developer is not in Material Breach of this DDA, and no Prospective Breach by Developer remains uncured.

(ii) Developer has met all Adequate Security requirements under **Article 16** (Security for Project Activities).

(c) Mutual Conditions. The following may be waived only if both Parties agree, and are waivable only to the extent permitted by law.

(i) The Port has issued the applicable Phase Approval, approved the Phase Budget, and approved Developer's Schematic Design Application for any Public Space Parcels in the Phase.

(ii) Developer has obtained Public Works' conditional approval of the Tentative Map for the Phase Area, entered into a PIA with the City, provided all bonds required under the Subdivision Code, and Public Works' authorization to begin construction.

(iii) Each applicable Acquiring Agency has reviewed and approved Improvement Plans for the Phase Improvements under the ICA.

(iv) All other Regulatory Approvals required to begin construction of the Phase Improvements have been issued and are final.

(v) Developer has entered into one or more contracts for the construction of the Phase Improvements consistent with the Phase Budget and **Article 13** (Construction Generally).

(vi) The areas in which the Phase Improvements are to be constructed are within the Master Lease Premises or will be upon issuance of the Notice to Proceed.

(d) Effect of Failure of Condition. Developer's failure to satisfy any condition described in **Subsection 14.3(b)** (Conditions for Port's Benefit) for one Phase will not alone:

(i) be a failure of Port conditions for any other Phase unless the failure directly impedes the other Phase;

(ii) relieve either Party of any obligations that previously arose under this DDA; or

(iii) be a Material Breach except in conjunction with Developer's failure to meet an Outside Date for the Phase or Developer's abandonment of construction after notice and the opportunity to cure.

#### **14.4. Regulatory Approvals.**

(a) Requirement to Obtain. Developer understands that:

(i) its construction of Horizontal Improvements will require Regulatory Approvals from other Regulatory Agencies to begin construction under this DDA; and

(ii) no Port action with respect to the Developer Construction Obligations in the Port's regulatory capacity is a guarantee that other Regulatory Agencies will grant required Regulatory Approvals.

(b) Cooperation. The Port will cooperate reasonably with Developer to obtain required Regulatory Approvals and will sign any application that the Port is required to sign as a co-applicant or co-permittee. Developer is not authorized to agree to any conditions or restrictions to a Regulatory Approval that would create any Port obligation not expressly stated under this DDA without the Port's approval in its sole discretion. The Port's may condition its execution of any application as a co-applicant or co-permittee on Developer's agreement to reimburse the Port for any material costs incurred.

(c) City Regulatory Approvals.

(i) Developer and the Planning Department, with the Port's consent, have entered into the Development Agreement, which will govern certain land use matters under the Planning Code, including Impact Fees and Exactions.

(ii) The Port and Other City Agencies, with Developer's consent, have entered into the ICA specifying certain procedures and standards that will apply when Developer seeks Regulatory Approvals from Other City Agencies.

(iii) Under this DDA, the Development Agreement, and the ICA, City Agencies, including the Port and the Planning Department, have agreed that their

Regulatory Approvals will be consistent with Existing City Laws, their prior Regulatory Approvals, and, as applicable, this DDA (for the Port), the Development Agreement (for the Planning Department), and the ICA (for Other City Agencies).

(d) Compliance. Developer is solely responsible for ensuring that the design and construction of the Horizontal Improvements comply with all Project Requirements at no cost to the Port.

(e) Noncompliance.

(i) Developer will pay any fines and penalties and perform any corrective actions imposed for noncompliance with any applicable Regulatory Requirement for which Developer is responsible and indemnify the Port against any liability arising from noncompliance, even if the Port is a co-permittee. Fines, penalties, and costs to correct Developer's noncompliance will not be reimbursable Horizontal Development Costs.

(ii) Unless stated otherwise in an Other Regulatory Approval or a Transaction Document, the Port will be responsible for matters that extend to regional-wide or area-wide obligations. For example, the Port will be responsible for conducting studies of the effects of sea level rise on its public access areas, which may be required under conditions specified in the BCDC major permit.

**14.5. Deferred Infrastructure.** Implementation of Deferred Infrastructure is subject to all required City approvals, as indicated in *ICA Exh D*.

(a) Conditions Precedent. In *ICA § 4.6(c) (Deferred Infrastructure)*, the City Agencies agree to work in good faith to explore Developer's proposal for Deferred Infrastructure, which is outlined in *ICA Exh D*. Developer's proposal would require the Board of Supervisors to amend the Subdivision Code or the Director of Public Works to grant one or more exceptions under Subdivision Code section 1312.

(b) Identification of Deferred Infrastructure. The timely and efficient construction of Phase Improvements may require the construction of certain Deferred Infrastructure to be delayed until the adjacent Vertical Improvements are built. When Developer submits its Basis of Design Report under the ICA, it will identify Deferred Infrastructure as "not-in-permit."

(c) Deferred Infrastructure Zones. To the extent known, Developer will identify Deferred Infrastructure Zones associated with the applicable Phase Improvements in each Phase Submittal and with each Basis of Design Report.

(d) Construction of Deferred Infrastructure. Developer (or a Vertical Developer under a Vertical DDA) will be obligated to construct the Deferred Infrastructure in accordance with the Project Requirements and the applicable Schedule of Performance.

**14.6. SOP Compliance.** This Section sets forth the procedures for determining whether Developer has finally completed Phase Improvements by the Outside Date under the Schedule of Performance. The ICA addresses procedures and standards that will apply when Developer seeks certain Regulatory Approvals from the Port and Other City Agencies, including future acceptance of Phase Improvements.

(a) Request to Port.

(i) Developer will submit its SOP Compliance Request to the Chief Harbor Engineer. Developer's request must include all of the documents listed in **DDA Exhibit B9**.

(ii) Unless the SOP Compliance Request specifically requests a determination as to Deferred Infrastructure, the Chief Harbor Engineer will make an SOP Compliance Determination without regard to Deferred Infrastructure.

(b) SOP Compliance Determination.

(i) The Chief Harbor Engineer will review the SOP Compliance Request and will consult with Other City Agencies as provided under the ICA to determine whether Developer has finally completed Phase Improvements in compliance with the Schedule of Performance. A Determination of Completion issued by Public Works will be sufficient to find it complete in an SOP Compliance Determination.

(ii) Under the ICA, each Other City Agency must respond within 30 days to the Chief Harbor Engineer with any comments, subject to a 14-day cure period for failure to respond within the 30-day period. In any event, the Chief Harbor Engineer will grant or withhold each SOP Compliance Request within 45 days after receiving Developer's complete SOP Compliance Request.

(iii) The Chief Harbor Engineer will grant an SOP Compliance Request by issuing an SOP Compliance Determination identifying each finally complete Phase Improvement. The Parties will negotiate on the form of the SOP Compliance Determination before Developer submits its Phase Submittal for Phase I.

(iv) If the Chief Harbor Engineer disapproves the SOP Compliance Request, he will deliver instead a reasonably detailed description of the reasons for disapproval and measures necessary to address the deficiencies. Developer's resubmittal of an SOP Compliance Request will be subject to the same review and response periods.

(v) If the Chief Harbor Engineer fails to respond to the SOP Compliance Request within 45 days after receiving Developer's complete packet, Developer may submit a request to the Chief Harbor Engineer, clearly labelled, "*Action Required for Determination of SOP Compliance or Deemed Approval*," in accordance with App ¶ 4.5 (Notices) and Section 18.1 (Notices) requesting issuance of the SOP Compliance Determination. If the Chief Harbor Engineer fails to respond within 15 days after the date the notice is delivered, the SOP Compliance Request will be deemed approved solely for the purpose of establishing Developer's compliance with the Schedule of Performance.

(c) Effect of SOP Compliance Determination. An SOP Compliance Determination or deemed approval under clause (iv) of Subsection 14.6(b) (SOP Compliance Determination):

(i) will conclusively establish Developer's compliance with the Outside Date under the Schedule of Performance for final completion of each Phase Improvement listed in the SOP Compliance Request; but

(ii) will not have any precedential effect for the purpose of the City's acceptance of Horizontal Improvements.

(d) Effect of Recordation. Developer may record in the Official Records each SOP Compliance Determination or, if applicable, a Memorandum of Deemed Approval. After a recordation, any person then owning or later purchasing, leasing, or otherwise acquiring any interest in the applicable Phase Area will not, solely by virtue of its interest or actual or constructive knowledge of the contents of this DDA, incur any obligation or liability under this DDA for the construction, operation, restoration, or rehabilitation of the Phase Improvements to which the recorded document applies.

(e) Timing. The Schedule of Performance includes Outside Dates by which Developer must obtain an SOP Compliance Determination for all Phase Improvements, including Public Spaces within Public Space Parcels. Developer will not be in Material Breach for failure to meet the Outside Date for an SOP Compliance Determination if Developer:

- (i) has submitted a complete SOP Compliance Request for the Phase Improvements at least 45 days before the applicable Outside Date; and
- (ii) is diligently curing any deficiencies identified by the Chief Harbor Engineer in response to the SOP Compliance Request.

**14.7. Acceptance of Port Facilities.** After the Chief Harbor Engineer issues an SOP Compliance Determination for any Public Space Parcel or other Phase Improvement that the Port will accept, subject to final completion of Deferred Infrastructure, Port staff will place an item on the Port Commission's calendar in accordance with **Subsection 5.3(c)** (Port Commission Meetings). Port staff's memorandum to the Port Commission will report on the findings made by the Chief Harbor Engineer in issuing the SOP Compliance Determination and recommend that the Port Commission accept the applicable Public Space Parcel or Phase Improvement on the following terms.

(a) Conformity Findings. The Port Commission finds that the Improvement is a functional Public Space or Phase Improvement and is constructed in conformity with the Project Requirements.

(b) Delegation for Deferred Infrastructure. The Port Commission delegates to the Port Director the authority to accept Deferred Infrastructure associated with the applicable Improvement. The Port Commission resolution will specify any conditions to the actions delegated to the Port Director.

(c) Release and Acceptance. After Developer has satisfied all conditions specified in the Port Commission resolution approved under **Subsection 14.7(b)** (Delegation for Deferred Infrastructure), the Port Commission will authorize and direct the Port Director, or her designee, to record a partial release in accordance with *ML § 1.4 (Adjustment of Premises for Development)* releasing the area containing the finally complete Improvement from the Master Lease promptly after the Chief Harbor Engineer issues an SOP Compliance Determination for the Deferred Infrastructure. The Port Director will deliver a conformed copy of the recorded release to Developer promptly after recordation.

(d) Effect of Recordation. Recordation of the partial release under **Subsection 14.7(c)** (Release and Acceptance) will:

- (i) transfer ownership of the applicable Improvement to the Port; and
- (ii) release Developer from future obligations for liability or repair of the Improvement except to the extent provided under **Section 8.3** (General Indemnity), **Section 8.4** (Hazardous Materials Indemnity), and applicable warranties.

**14.8. Acceptance of Other Horizontal Improvements.**

(a) City Acceptance. The ICA provides for the City Agencies to meet and confer to consider other standards and procedures for acceptance of Horizontal Improvements, including Utility Infrastructure and, if desired, adopt procedures for obtaining the acceptance of Horizontal Improvements by the Board of Supervisors.

(b) Release from Master Lease. For any Horizontal Improvement that any Other City Agency accepts in accordance with applicable Regulatory Requirements, upon a City Agency's acceptance of a Horizontal Improvement, the Parties will record a Partial

Release under *ML § 1.4 (Adjustment of Premises for Development)*, which will release Developer from future obligations for liability or repair except to the extent provided under **Section 8.3 (General Indemnity)**, **Section 8.4 (Hazardous Materials Indemnity)**, and applicable warranties.

**14.9. Maintenance of Horizontal Improvements.**

(a) New Port Facilities. Developer will be required to maintain Phase Improvements that will be under Port jurisdiction until the Port issues the Phase Completion Certificate under **Subsection 14.7(c) (Release and Acceptance)**.

(b) Existing Outfall Infrastructure. From the date that Developer begins work on a portion of the Outfall Infrastructure until the Acquiring Agency accepts the Relocated Outfall Infrastructure, Developer be responsible for all associated maintenance and repair. This obligation does not include responsibility to maintain Other Regulatory Approvals to operate the Outfall Infrastructure.

(c) Non-Port Facilities. Developer will be required to maintain all other Phase Improvements until the effective date of the Board of Supervisors' acceptance action.

(d) Services Special Taxes. The Parties expect to fund Ongoing Maintenance Costs of completed Phase Improvements by Services Special Taxes from the Mission Rock CFD in accordance with *FP § 4.6 (Services Special Taxes)*.

(e) Maintenance as Soft Costs. All Ongoing Maintenance Costs will be Soft Costs to the extent Services Special Taxes are not available to pay for the costs. Upon 30 days' prior notice, the Port may require Developer to provide Maintenance and Repair Security in an amount up to 5% of the Hard Costs of the covered Phase Improvements as additional security for its obligations under this Section.

**14.10. Phase Completion and Final Completion.** Developer Construction Obligations include completing all Horizontal Improvements, including the following.

(a) Final Map. Developer will obtain the Final Maps creating separate legal parcels for each Development Parcel and have them recorded in the Official Records.

(b) Site Conditions. As appropriate, portions of Public Spaces, Public ROWs, and each Development Parcel will be graded and soil compacted under the applicable grading permit and the geotechnical recommendations for the Project Site as certified by Developer's geotechnical engineer in a form acceptable to the Port.

(c) Phase Improvements.

(i) Developer will complete construction of the Phase Improvements serving each Development Parcel, except to the extent that the Port in consultation with Other City Agencies has agreed to make Vertical Developers assume responsibility for applicable Deferred Infrastructure, and otherwise be in compliance with all applicable Regulatory Approvals and the Phase Schedule for other Phase Improvements.

(ii) After all Phase Improvements, including any allowed Deferred Infrastructure, are finally completed and Developer has completed all other obligations for the Phase, the Port Director will deliver a recordable Phase Completion Certificate to Developer.

(iii) Each recorded Phase Completion Certificate will release the Phase Area from the lien of this DDA. The Final Phase Completion Certificate, when recorded, will release the lien of this DDA from the Project Site.

## 15. INSURANCE

Developer will be required to meet the Insurance Requirements under the Master Lease. As a part of each Phase Submittal, Developer may propose the form, amount, type, terms, and conditions of insurance coverages required of Developer in connection with the applicable Phase to the extent different from the Insurance Requirements, which the Port Director will consider for approval in consultation with the City's Risk Manager.

## 16. SECURITY FOR PROJECT ACTIVITIES

**16.1. Adequate Security.** Developer must provide to the Port Adequate Security from one or more Obligor meeting the Obligor Net Worth Requirements to secure obligations under this DDA as provided in this Article.

(a) Multiple Adequate Security Instruments. If Developer provides more than one instrument of Adequate Security, the instruments must not be cross-defaulted, and liability under each will be several and not joint, unless Developer requests otherwise with each Obligor's consent. The Port will have the right to proceed against all forms of Adequate Security securing the same obligation simultaneously or in any order that the Port elects in its sole discretion.

(b) Substitution of Adequate Security. Developer has the right to substitute at any time any portion of the Adequate Security that it has provided to the Port with another form of Adequate Security that meets the requirements under this Article.

(c) Material Breach. Except as specified in **clause (ii) of Subsection 16.3(a)** (Delivery), procedures under **Article 11** (Material Breaches and Termination), will apply to Developer's failure to maintain or replenish required Adequate Security. If Developer's failure results in a Material Breach under **Subsection 11.2(d)** (Maintain Adequate Security) or **Subsection 11.2(e)** (Replace Adequate Security)), Developer must:

(i) take steps to preserve the existing condition of Improvements and other actions necessary to protect public health and safety; and

(ii) suspend all other activities that were, or were to be, secured by the Adequate Security.

### 16.2. Loss Security.

(a) Delivery. As a condition to the Port's issuance of the first construction permit for each Phase, Developer will provide to the Port Loss Security in the aggregate amount of \$5.5 million to secure Developer Reimbursement Obligations for the Phase. Each Loss Security instrument must be issued by an Obligor that meets the Obligor Net Worth Requirement and be in a form approved by the Port Director. Developer will maintain and replace or replenish the Loss Security until the applicable Loss Security End Date.

(b) Delivery by Transferees. As specified in **Article 6** (Transfers), the Port Commission's approval of any Transfer will be conditioned on the continued availability of Loss Security meeting the requirements of this Section.

(c) Replenishment. No payment or performance by the Obligor under any Loss Security will reduce or eliminate the requirement for Loss Security meeting the requirements of this Section until the applicable Loss Security End Date. Accordingly, within 30 days after any payment or performance by an Obligor under its Loss Security, Developer or its Transferee, as applicable, will replenish the Loss Security to its previous level. Developer or its Transferee may satisfy this requirement by replacing the Loss

Security or providing an amendment to the Loss Security from the Obligor that honored the claim meeting all of the requirements for the Loss Security under this DDA.

(d) Release. The Port will release the unused portion of any Loss Security and, on request, destroy or return the original instrument to Developer or Transferee after the Loss Security End Date.

(e) Relationship to Phase Security. Developer Reimbursement Obligations are secured by Loss Security and not by Phase Security. The Port may demand payment and performance of Developer Reimbursement Obligations only under the Loss Security.

### **16.3. Phase Security.**

(a) Delivery.

(i) As a condition to the Port's issuance of the first construction permit for each Phase, Developer must provide to the Port Phase Security in form acceptable to the Port and in the Secured Amount required under this Section. Phase Security will secure completion of Developer Construction Obligations for the Phase, including payment of the related costs of labor, materials, equipment, and services.

(ii) Developer must deliver the Phase Security to the Port at least five business days before commencing construction with respect to the particular Phase for which Phase Approval has been received without any requirement that the Port provide notice or an opportunity to cure. The Port will not be required to issue a construction permit until five business days after its receipt of Phase Security, and the five-day delay will not be an Excusable Delay if it causes Developer to miss the Outside Date to begin construction of Phase Improvements.

(b) Secured Amount.

(i) Subject to **clause (ii)** of this Subsection, Phase Security will have aggregate liability no less than 100% of estimated cost of Developer Construction Obligations for the Phase. More specifically, Developer will provide security sufficient to pay for 100% of the costs to complete the Phase Improvements, plus (without duplication) 100% of the costs of labor, materials, and goods needed to complete the Phase. In each case, the Port Director will approve the proposed Phase Security.

(ii) To the extent that the Phase Security secures the same obligations for which Developer has provided Improvement Bonds to Public Works, the Port will approve an appropriate reduction in the Secured Amount of the Phase Security under this DDA. In all cases, the sum of the payment and performance obligations that Developer provides under the Subdivision Code and the Phase Security will be 100% of the estimated cost of payment and performance of Developer Construction Obligations for Phase Improvements.

(c) Reduction, Return, and Release.

(i) Phase Security will be proportionately reduced when Developer has satisfied portions of Developer Construction Obligations for the Phase to the extent approved by the Port or by the express terms of the Phase Security.

(ii) Phase Security will be released when Developer has satisfied all Developer Construction Obligations for the Phase. After the Port has issued the last Phase Completion Certificate under **Subsection 14.7(c)** (Release and Acceptance), Developer may ask the Port to destroy or return to Developer the original Phase Security documents.

(iii) If the Port terminates this DDA as to a Phase before issuing the Phase Completion Certificate, the Port will release the Phase Security when Developer Construction Obligations for the period ending on the Termination Date are complete or, if applicable, as ordered by a final judgment.

(d) Port Facilities. When implementing this Section, the Parties expressly agree to take into account their agreement that Developer may provide Adequate Security for Developer Construction Obligations relating to Improvements that will be Port facilities separately from Adequate Security required under the Subdivision Code.

#### **16.4. Obligor Net Worth.**

(a) Verification.

(i) Documentation for each form of Adequate Security will require the Obligor to provide reasonably satisfactory evidence to the Port on request that the Obligor satisfies the Obligor Net Worth Requirement. The Port may direct its request to the Obligor or Developer from time to time but not more than once in any calendar year unless the Port reasonably believes that a Significant Change to Obligor has occurred.

(ii) In response to the Port's request, Developer or the Obligor must provide to the Port a copy of a financial statement on the Obligor's financial condition prepared by a CPA. The report must not be dated more than six months before the date of the Port's request and must include the CPA's unqualified opinion (subject to customary qualifications) that the data in the financial statement are fairly stated in all material respects.

(iii) If the Obligor or Developer does not provide the financial statement within 30 days after the Port's request, Developer will deliver to the Port a new form of Adequate Security that satisfies the requirements of **Section 16.1** (Adequate Security) within the following 30 days.

(iv) If a Significant Change to Obligor occurs of which Developer has actual knowledge, Developer will notify the Port as soon as reasonably practicable. Within 45 days after the occurrence of the Significant Change to Obligor, Developer will deliver to the Port a new form of Adequate Security that satisfies the Adequate Security Requirements from a replacement Obligor that satisfies the Obligor Net Worth Requirement.

(v) An Obligor may satisfy the Obligor Net Worth Requirement by providing a guaranty satisfactory in form and content to the Port Director in her sole discretion, guaranteeing the Secured Amount from a different person that meets the Obligor Net Worth Requirement.

#### **17. LENDER RIGHTS**

This Article does not apply to Pier 48.

**17.1. Right to Encumber.** Subject to this Article, Developer or a Transferee may encumber its respective real property interest in a Development Parcel or personal property interest as a Borrower under a Deed of Trust to secure the Borrower's obligation to repay one or more loans that a Lender makes to finance Improvements benefiting the Encumbered Property.

**17.2. Lender's Right to Transfer.** A Lender may transfer any part of its interest in a Deed of Trust without the consent of or notice to any Party, but the Port will not be obligated to give notice under this DDA to a successor Lender until the Lender or its successor delivers to the Port notice of the transfer, copies of the documents effecting the transfer, and successor notice information. More specifically, if the Port receives notice of a Deed of Trust transfer after

delivering a copy of a notice or demand to the original Lender under **Section 17.4** (Copies of Notices), the successor Lender will not be entitled to an extension of the time periods for a Lender's response or performance.

**17.3. Certain Assurances.** The Port agrees to cooperate reasonably with prospective Lenders to confirm Lender rights under this DDA.

**17.4. Copies of Notices.** A Lender that wishes to receive copies of notices from the Port of the occurrence of the pertinent Borrower's default under this DDA will give notice to the Port under *App ¶ A.5.4 (Interested Persons)* providing the Lender's address for notices and requesting copies of notices from the Port to the Borrower. When the Port delivers any notice or demand to a Lender relating to its Borrower's default, the Port will deliver a copy to the Lender at the address listed in its most recent notice to the Port.

**17.5. Option to Cure Defaults.** Each Lender may elect to cure or cause to be cured an Event of Default by its Borrower.

(a) **Extended Cure Periods.** A Lender electing to cure will have any cure period specified in **Section 10.2** (Events of Default by Developer) or **Section 11.2** (Material Breaches by Developer), plus an additional 30 days to cure a monetary Event of Default or Material Breach and an additional 60 days to cure a nonmonetary Event of Default or Material Breach that can be cured without obtaining title to or control of the Encumbered Property.

(b) **Port Forbearance.** The Port will refrain from exercising any of its remedies for an Event of Default or for a Material Breach after the periods under **Subsection 17.5(a)** (Extended Cure Periods) expire if the Lender does all of the following:

(i) gives notice to the Port before the extended cure period expires that the Lender intends to initiate a Foreclosure Sale within 60 days after its notice to the Port;

(ii) begins proceedings for a Foreclosure Sale within 60 days after its notice to the Port and completes the Foreclosure Sale within 180 days after notice to the Port; and

(iii) promptly after completing the Foreclosure Sale, cures all outstanding Events of Default and Material Breaches except matters covered by **Subsection 17.6(a)** (Developer Construction Obligations) and **Subsection 17.6(b)** (Personal Obligations).

**17.6. Foreclosure Purchaser's Limited Obligations and Rights.**

(a) **Developer Construction Obligations.** No Foreclosure Purchaser will be obligated under this DDA to obtain Phase Approvals, begin construction or complete construction of Horizontal Improvements or Vertical Improvements, or provide any form of Adequate Security (unless it chooses to construct Improvements). Although no Foreclosure Purchaser is obligated to do so, a Foreclosure Purchaser that directly or indirectly obtains title to the Encumbered Property and then properly completes construction of approved Horizontal Improvements on the Encumbered Property under this DDA will be entitled to a Phase Completion Certificate on request to the Port. Nothing in this DDA permits or authorizes any Lender Foreclosure Purchaser to use the Encumbered Property or construct any Improvements other than for uses and Improvements consistent with the Project Requirements.

(b) **Personal Obligations.** No Lender or Foreclosure Purchaser will be obligated under this DDA to cure any Event of Default or Material Breach that is

personal to its Borrower, such as the Borrower's Insolvency or failure to submit required information in the Borrower's possession.

(c) Assumption After Foreclosure Sale.

(i) Except as specified in this Article, no Lender or Foreclosure Purchaser will have any obligations or other liabilities under this DDA unless the Lender completes a Foreclosure Sale and enters into an agreement expressly assuming Developer's development rights and obligations under this DDA. A Foreclosure Purchaser will take title subject to this DDA to the extent applicable to the foreclosed Encumbered Property, including any Claims for payment or performance of obligations that are due as of the date of the Foreclosure Sale, as a condition to enjoying certain benefits under this DDA.

(ii) If a Foreclosure Purchaser assumes obligations to construct Improvements on the Encumbered Property under this DDA, the Port will agree to reasonable extensions of the construction-related periods under the Phase Schedule and, if applicable, the Schedule of Performance. In addition, a Foreclosure Purchaser will be entitled to reimbursement of its Horizontal Development Costs.

(d) No Assumption After Foreclosure Sale. If a Foreclosure Purchaser does not enter into an assumption agreement with the Port within 90 days after the date of the Foreclosure Sale, the Port will have the right to terminate this DDA in reference to the Encumbered Property.

(e) Nominees. This Section also applies to a Lender's nominee in a Foreclosure Sale.

**17.7. No Impairment of Lien.** A Borrower's Event of Default or Material Breach under this DDA will not invalidate the lien of the applicable Deed of Trust.

**17.8. Multiple Deed of Trusts.**

(a) Priority of Liens. If more than one Deed of Trust attaches to any part of the Encumbered Property, the senior Lender will be vested with all rights under this Article to the exclusion of any junior Lender. For purposes of this Section, in the absence of a final court order establishing lien priority, the Port may rely on a title report prepared by a reputable title company licensed to do business in California and having an office in San Francisco as conclusive evidence of lien priority.

(b) Junior Lender's Rights. If a senior Lender fails to exercise its rights under this Article with respect to the Encumbered Property, then rights under this Article will vest in junior Lenders successively in their order of priority on a junior Lender's delivery of notice to the Port asserting rights under this Article with a copy delivered simultaneously to the senior Lender. A junior Lender exercising its rights will not be entitled to any further extensions of the cure periods under **Subsection 17.5(a)** (Extended Cure Periods).

**17.9. Cured Defaults.** The Port's right to pursue any remedies for an Event of Default or Material Breach will terminate on the date a Lender cures the Event of Default or Material Breach if the cure is completed within the time provided under **Subsection 17.5(a)** (Extended Cure Periods), **Subsection 17.5(b)** (Port Forbearance), or **Subsection 17.6(c)** (Assumption After Foreclosure Sale).

**17.10. Application.** This Article pertains only to Lenders holding perfected liens on Encumbered Property and has no application to any Deed of Trust securing obligations unrelated to the Project Site.

**17.11. Estoppel Certificates.** Each Party agrees to execute and deliver to the requesting Party and, if requested, any Lender or prospective Lender, within 20 days after the request is made, an estoppel certificate with regard to the following matters.

(a) Modification. The responding Party must state that this DDA:

- (i) is unmodified and in full force and effect;
- (ii) is in full force and effect with modifications specified in the estoppel certificate; or
- (iii) is not in full force and effect for reasons specified in the estoppel certificate.

(b) Defaults. The responding Party will state whether it is aware of any Event of Default or Material Breach or the occurrence of an event that with notice or the passage of time or both would be an Event of Default or Material Breach if not cured, by the other Party under this DDA and, if so, describing the event, Event of Default, or Material Breach.

## **18. MISCELLANEOUS PROVISIONS**

The following apply to this DDA in addition to the standard provisions in the Appendix.

### **18.1. Notices.**

(a) Notice Addresses. Addresses for notice under this DDA are listed below.

Port: Port of San Francisco  
Pier I  
San Francisco, CA 94111  
Att'n: Mike Martin, Director, Real Estate & Development  
  
Telephone: (415) 274-0400  
Facsimile: (415) 274-0495  
Email: michael.martin@sfport.com

With a copy to: City Attorney's Office  
Port of San Francisco  
Pier I  
San Francisco, CA 94111  
Att'n: Eileen Malley, General Counsel  
  
Telephone: (415) 274-0485  
Facsimile: (415) 274-0494  
Email: eileen.malley@sfcityatty.org

Developer: SWL 337 Associates  
c/o San Francisco Giants  
24 Willie Mays Plaza  
San Francisco, CA 94107  
Attention: Jack Bair

One Montgomery Street, 30<sup>th</sup> floor  
San Francisco, CA 94104  
Attention: Harry O'Brien

Facsimile: (415) 989-1663  
Email: hobrien@coblentzlaw.com

## **18.2. Transaction Documents.**

(a) Relationship to ENA and Master Lease. The ENA will terminate on the later of the date that this DDA is fully executed and the Reference Date. This DDA will control over any inconsistent terms in the Master Lease.

(b) Documents on Record with the Port. All exhibits and attachments to this DDA need not be recorded but will be kept on file with the Port as amended or supplemented from time to time. In addition, the Proforma as of the Reference Date is on file with the Port, and the Port will keep on file each updated Proforma as approved by Developer and the Port. The Port Director and Developer will update or supplement the Schedule of Performance from time to time to reflect changes to the same as permitted in this DDA. All public records on file with the Port will be made available to members of the public in keeping with the Port's standard practices and public records laws.

(c) Brokers. Developer and the Port each represents to the other that it has not employed a broker or a finder in connection with the execution and delivery of this DDA, and agrees to indemnify the other from the claims of any broker or finder in relation to the Project.

## **18.3. Lien of Agreement.**

(a) Recordation. The Parties agree that this DDA and certain exhibits, when fully executed, will be recorded in the Official Records because the obligations under this DDA and other documents to be recorded are covenants that attach to and run with Developer's interest in the Project Site under the Master Lease and this DDA.

(b) Partial Releases. The Port will cause the lien of this DDA to be released as to Development Parcels through the Close of Escrow for the Parcel Lease between the Port and the applicable Vertical Developer. But no partial release of the lien of this DDA will release Developer Construction Obligations as to any other portion of the Project Site or of Developer Reimbursement Obligations.

(c) Termination of Agreement. If this DDA is terminated, Developer or the Port may record a Termination Notice as provided in **Subsection 11.6(c)** (Recorded Notice). Recordation of a Termination Notice will terminate the lien of this DDA as to all portions of the Project Site affected by the notice except for provisions that expressly survive the expiration or termination.

## **18.4. Survival.**

(a) Generally. Except as provided otherwise, termination or expiration of this DDA will not affect:

(i) rights and obligations in reference to Adequate Security for an obligation arising before termination or expiration;

(ii) any provision of this DDA or any other Transaction Document that expressly survives the expiration or termination of this DDA; or

Developer and the Port have executed this DDA as of the last date written below.

## **PART A: STANDARD PROVISIONS AND RULES OF INTERPRETATION**

This Appendix consists of **Part A** (standard provisions and rules of interpretation) and **Part B** (glossary of defined terms). **Part A** is an integral part of the DDA and other Transaction Documents for the Mission Rock Project. **Part B** provides defined terms for the DDA and certain other Transaction Documents.

### **1. TRANSACTION DOCUMENTS.**

**1.1. Entire Agreement.** The Transaction Documents collectively (including this Appendix and all preamble paragraphs, recitals, exhibits, schedules, other attachments, and Consents) contain all of the representations and warranties and the entire agreement, and supersede all prior correspondence, memoranda, agreements, warranties, and representations, between the Parties with respect to the matters they address. No prior drafts of any Transaction Document or changes from those drafts to the executed versions may be introduced as evidence in any litigation or other dispute resolution proceeding by any person, and no court or other body may consider those drafts in interpreting any Transaction Document.

**1.2. Counterparts.** The Transaction Documents may be executed in multiple counterparts, each of which will be deemed to be an original and that together will be one instrument. Parties may deliver their counterparts by electronic mail or other electronic means of transmission.

**1.3. Exhibits and Schedules.** This Appendix and each exhibit are a part of the Transaction Document to which they are attached or into which they are expressly incorporated by reference. Each schedule attached to a Transaction Document is provided for reference when implementing the Project. The Parties agree that this Appendix and all attachments may be revised from time to time by agreement based on changed circumstances and experience in the course of the Project. Each Party (including any applicable affected Transferee) will confirm its agreement by signing the revised document in counterparts, which will be deemed to be attached to each counterpart of the revised document and will supersede the document being revised.

### **1.4. Advance Writings Required.**

(a) Amendments and Waivers. Any amendment or waiver of any provision of any Transaction Document must be in writing and signed on behalf of each Party by a person authorized to do so. Material modifications to Transaction Documents may require the approval of either or both the Port Commission and the Board of Supervisors, each of which may give or withhold approval in its sole discretion unless explicitly stated otherwise.

(b) Approvals and Waivers. Whenever a Party's approval or waiver is required: (i) the approval or waiver must be obtained in advance and in writing; and (ii) except as specified otherwise, the Party whose approval or waiver is sought must not unreasonably withhold, condition, or delay its approval or waiver, as applicable.

(c) Specific Application. A Party's waiver or consent in reference to another Party's performance of or any condition to its obligations under a Transaction Document will not be a waiver of or consent to any other performance or condition.

**1.5. Technical Changes.** The applicable Parties may correct any inadvertent error in any Transaction Document that is contrary to their mutual intention in the identification or characterization of or any reference to any title exception, legal description, boundaries of any parcel, map or drawing, or the text, or otherwise agree to minor changes that do not affect the delivery of Associated Public Benefits. Any agreed change will be effected by a signed memorandum or initialed replacement pages, neither of which will be deemed an amendment of a Transaction Document as long as any adjustments are relatively minor and do not result in a material change as determined by the Port in consultation with counsel. A change memorandum or replacement pages will become a part of the affected Transaction Document when fully executed or initialed.

**1.6. Other Necessary Acts.** Each Party will execute, acknowledge, and deliver to the other all other documents and take other actions that are reasonably necessary to implement, and provide each Party with all of its rights under, any Transaction Document.

**1.7. Enforceability.** Developer and the Port each represents and warrants to the other that its execution and delivery of, and the performance of its obligations under the Transaction Documents have been duly authorized by all necessary action, and will not conflict with, result in any violation of, or be a default under, any provision of any agreement or other instrument binding on or applicable to it, or any present law or court decree. If Developer signs as a corporation, limited liability company, or a partnership, each of the persons executing the Transaction Documents on behalf of Developer represents and warrants that Developer is a duly authorized and existing entity, that Developer has and is qualified to do business in California, that Developer has full right and authority to enter into the Transaction Documents, and that each of the persons signing on Developer's behalf is authorized to do so. At the Port's request, Developer must provide the Port with evidence satisfactory to the Port confirming these representations and warranties.

**1.8. No Gift or Dedication.** Unless explicitly stated otherwise, no Transaction Document will be deemed to be a gift or dedication of any portion of the Project Site to the general public, for the general public, or for any public use or purpose. Developer has the right to prevent or prohibit the use of any portion of the Project Site it owns or controls, including common areas and buildings and improvements, by any persons for any purpose inimical to the operation of a private, integrated mixed-use project as contemplated by the Transaction Documents.

## **2. PARTIES AND PERFORMANCE.**

**2.1. Joint and Several Liability.** If Developer consists of more than one person, then the obligations of each under any Transaction Document to which it is a Party will be joint and several, but in no event will any Developer be jointly and severally liable with any other Developer under any Transaction Document.

### **2.2. Performance Generally.**

#### **(a) Time.**

(i) Time is of the essence in the performance of all of the terms and conditions of each Transaction Document.

(ii) Subject to this Paragraph, all required performance dates including cure deadlines, expire at 5:00 p.m. Pacific Standard or Daylight Savings Time, as applicable, on the stated date, unless extended under the Transaction Document under which performance is due. Any reference to a week, quarter, or month without reference to a specific day will mean the last day in the period.

(iii) If a Party must give notice or take any other action within a specified minimum number of days that would not fall on a business day, then the Party must take the action on the preceding business day. For example, if a Party is required to give at least five days' prior notice of an action and the fifth day before the desired action falls on a Sunday, the Party must give notice by the preceding business day.

(iv) In all other cases, if the last day of any period to take an action occurs on a day that is not a business day, then the last day for undertaking the action is extended to the next business day. For example, if a Party has 30 days to cure an Event of Default, and the 30<sup>th</sup> day is a Saturday, the Party would have until the next business day to effect the cure.

#### **(b) Extensions of Time.**

(i) Each Party to a Transaction Document, acting in its sole discretion, may agree to extend the date for the other Party's performance of any term, covenant, or condition, or the other Party's exercise of any rights under the Transaction Document,

without executing an amendment. A Party may impose reasonable conditions on an extension of the other Party's time to cure a default. No extension of time will release any of the obligations subject to the extension or waive the granting Party's rights in relation to any other term, covenant, or condition of or any other default in the performance or breach of the Transaction Document under which the extension is granted.

(ii) Any extension of time requiring Port Commission approval must be made by a resolution adopted at a noticed public meeting. All other extensions will be made by a countersigned writing.

(c) No Deemed Approval or Consent Without Notice. Unless expressly and unequivocally stated in any Transaction Document or other agreement between the Parties, deemed approval or consent will only occur on the following conditions.

(i) The Party seeking consent must send notice by electronic mail, addressed to one or more line staff responsible for the specific matter for which consent is sought at least five, but no more than seven, business days before the response period has ended, stating in the subject line, "*Immediate Action Required To Avoid Deemed Consent*" or words to the same effect.

(ii) If the electronic mail notice under clause (i) is not delivered timely, the responding Party will not be deemed to have consented until the sixth business day after the notice is delivered. The response may be delivered by the addressee or other person authorized to act on the responding Party's behalf.

(d) Waivers. Unless otherwise specified in a Transaction Document, none of the following circumstances will waive an Aggrieved Party's rights or remedies with respect to an Event of Default or Material Breach, including its right to prosecute any actions it deems necessary to enforce its rights or remedies.

(i) Party's failure to give notice or delay in giving notice or asserting any of its rights or remedies as to an Event of Default or Material Breach will not waive or delay the date on which the Event of Default or Material Breach occurs.

(ii) A Party's waiver as to a specific Event of Default, Material Breach, right, or remedy will not be a waiver of any other Event of Default, Material Breach, right, or remedy.

(e) Responsibility for Costs. The Party on which any obligation is imposed in any Transaction Document will be solely responsible for paying all costs incurred in performing the obligation, unless specifically provided otherwise.

**2.3. Successors.** The Parties are entering into the Transaction Documents only for the protection and benefit of the Parties and their successors, subject to **DDA art. 6** (Transfers), **DDA art. 17** (Lender Rights), **DA art. 11** (Transfers, Conveyances, and Encumbrances), and correlating provisions in any other Transaction Documents.

**2.4. Third Party Beneficiaries.** Developer is an explicitly recognized third-party beneficiary under the ICA and the Tax Allocation MOU. Transferees and Vertical Developers are third-party beneficiaries to the extent that they acquire development rights under the DDA. Interested Persons have rights as specified in the Applicable Lender Protections. No other persons have third-party rights under any Transaction Document.

**2.5. No Limitation on Unrelated Rights.** The rights and remedies under the Transaction Documents do not supersede or preclude any Party's exercise of its rights and remedies under other agreements and documents, or of the City, the Port, or any other Regulatory Agency to require compliance with any Regulatory Approval or other entitlement granted for the Project.

**2.6. No Joint Venture or Partnership.** Nothing in any Transaction Document to which Developer is a Party, or in any document Developer executes in connection with the Transaction Documents, will create a joint venture or partnership between the City and Developer or between the Port and Developer. Developer is not acting as the agent of the City or the Port, nor is the City or the Port acting as the agent of Developer or any Vertical Developer in any respect under any Transaction Document. Developer is not a state or governmental actor with respect to any of its activities under the Transaction Documents.

**2.7. Survival.** Except as provided otherwise, termination or expiration of the DDA or any other Transaction Document will not affect: (a) any obligation to indemnify under any Transaction Document; (b) any provision of any Transaction Document that expressly survives expiration or termination; (c) rights and obligations as to Adequate Security for an obligation arising before termination or expiration; or (d) rights and obligations under the Financing Plan or the Acquisition Agreement to the extent related to an obligation arising before termination or expiration of the DDA.

### **3. GOVERNING LAW.**

**3.1. Construction of Transaction Documents.** The Transaction Documents are governed by and must be construed under the laws of the State of California and the Charter. All references in the Transaction Documents to local, regional, state, or federal laws means those laws as amended from time to time, except as limited by the Development Agreement or to the extent explicitly stated otherwise.

**3.2. Countervailing Law.** If any applicable state or federal law prevents or precludes compliance with any material provision of a Transaction Document, **App ¶ A.4.3 (Severability)** will apply. Alternatively, the Parties may agree to modify, amend, or suspend the affected Transaction Document to the extent necessary to comply with law in a manner that preserves to the greatest extent possible the intended benefits to the City, the Port, and Developer.

**3.3. Good Faith and Fair Dealing.** In all situations arising under the Transaction Documents, each Party must attempt to avoid and minimize the damages resulting from the other's conduct and take all reasonably necessary measures to implement the Transaction Documents. The Transaction Documents are subject to the covenant of good faith and fair dealing applicable to contracts under California law. Accordingly, Developer and the Port each covenants, on behalf of itself and its successors, to take all actions and to execute, with acknowledgment or affidavit if required, all documents necessary to achieve the objectives of the Transaction Documents to the extent consistent with applicable law.

### **4. ACTIONS.**

#### **4.1. Attorneys' Fees.**

##### **(a) Prevailing Party.**

(i) Should any Party file an action permitted or required under any Transaction Document, the prevailing Party will be entitled to recover its reasonable costs, including attorneys' fees, plus interest at the maximum amount allowed under law, from the losing Party.

(ii) The ICA and the Tax Allocation MOU are specifically excepted from this prevailing party provision.

**(b) Fee Schedules.** For attorneys in the Office of the City Attorney, attorney fee rates will be based on the fees regularly charged by private attorneys with an equivalent number of years of professional experience (calculated by reference to earliest year of admission to the bar of any state) who practice in San Francisco in law firms with approximately the same number of attorneys as employed by the Office of the City Attorney. For in-house counsel, attorney fee rates will be based on the same criteria, with amounts based on law firm rates where the office of in-house counsel is located.

**4.2. Jurisdiction and Venue.** All obligations under each Transaction Agreement are to be performed in the City and County of San Francisco. Each Party, by executing a Transaction Document, agrees that venue is proper in and consents to the jurisdiction of the Superior Court for the City and County of San Francisco.

**4.3. Severability.** Unless specifically provided otherwise, a final judgment invalidating any provision of any Transaction Document, or its application to any person, will not affect any other provision of the Transaction Document or its application to any other person or circumstance. All other provisions of the Transaction Document will continue in full force and effect, except to the extent that enforcement of the Transaction Document as affected by the final judgment would be unreasonable or grossly inequitable under all the circumstances or would frustrate a fundamental purpose of the Transaction Documents.

**4.4. Limitations on Liability of the Parties.**

(a) No Personal Liability of City Parties. Under no circumstances will any individual board member, director, commissioner, officer, employee, official, or agent of the City or the Port be personally liable to Developer for any Event of Default by a City Party or for any amount payable to a Developer Party under any Transaction Document.

(b) No Personal Liability of Developer Parties. Under no circumstances will any individual board member, director, officer, employee, official, partner, employee, or agent of Developer or any Affiliate of Developer be personally liable to any City Party for any Event of Default by a Developer Party or for any amount payable to a City Party under any Transaction Document. DA Successors are specifically recognized as Developer Parties for the purpose of this provision.

(c) No Consequential, Punitive, or Special Damages. Developer, the Port, and the City would not have entered into the Transaction Documents to which they are Parties if they could be liable for indirect or consequential, punitive, or special damages. Accordingly, Developer, the Port, and the City each waives any Claims against, and covenants not to sue, the other Party to any Transaction Document for indirect, consequential, punitive, or special damages, including loss of profit, loss of business opportunity, or damage to goodwill.

(d) No Effect on Other Rights. This Paragraph will not affect any Party's right to recover actual damages and attorneys' fees awarded by an Arbiter's decision or a court's final judgment for a Claim arising from a Breaching Party's failure to: (i) pay any sum when due under any Transaction Document; or (ii) satisfy an indemnity under any Transaction Document. The right to enforce a final decision or judgment will not be limited by subparagraph (e) of this Paragraph.

(e) Project Payment Sources. Except as otherwise provided in any Transaction Document, Developer agrees that its rights to payment in the implementation of the Project are limited as follows.

(i) All obligations of the Port or the City arising out of or related to each Transaction Document are special and limited obligations of the Port and the City, as applicable. The Port's and the City's respective obligations to make payments to implement any Transaction Document are restricted strictly to Project Payment Sources described in the Financing Plan, and only to the extent those sources are available.

(ii) More specifically, in no event may Developer compel: (1) the City to use funds in or obligate the City's General Fund; or (2) the Port to use funds in or obligate the Port Harbor Fund except as described in the Financing Plan, in either case to reimburse Developer's Horizontal Development Costs, pay any other costs associated with the Project, or satisfy any Developer Claim under any Transaction Document.

(f) Liability of Others. Unless specifically provided otherwise, the Parties agree that no Agents of the Port or of the City or of their successors or assigns will be personally liable to Developer or any Vertical Developer, and no Agents of Developer or any Vertical Developer or of

their successors or assigns will be personally liable to the Port or the City, for any default or breach or for any payment or performance that becomes due under any Transaction Document. This Subsection does not release or waive the obligations of any person with a direct legal obligation under applicable law, such as the general partner of a limited partnership or any Obligor providing Adequate Security for a specified obligation.

## **5. NOTICES.**

**5.1. Manner of Delivery.** Unless otherwise specified in a Transaction Document, any notices (including notice of approval or disapproval, demands, waivers, and responses to any of them) required or permitted under any Transaction Document must be delivered by: (a) hand delivery; (b) first class United States mail, postage prepaid, return receipt requested; or (c) overnight delivery by a nationally recognized delivery service or the United States Postal Service, delivery charges prepaid.

**5.2. Required Information.** To be effective, a notice must be in writing or be accompanied by a cover letter that, to the extent applicable:

- (a) cites the section of the Transaction Document under which the notice is given;
- (b) indicates whether a response or other action is required and, if so, the period of time within which the recipient must respond or otherwise act;
- (c) for a Prospective Default or Prospective Breach, is prominently marked "*Notice of Default*" or "*Notice of Material Breach*" and specifies the cure period;
- (d) is clearly marked "*Request for Approval*" if approval is being requested;
- (e) if denying or objecting to a request for approval, states with particularity the reasons for the disapproval or objection; and
- (f) if explicitly permitted under the Transaction Document, states that failure to respond to the notice within the stated time period will be deemed to be the recipient's approval of the subject matter of the notice.

**5.3. Effective Date.** Subject to App ¶ A.2.2(a) (Time), a notice will be deemed to be delivered and effective:

- (a) on the date personal delivery actually occurs;
  - (b) on the business day after the business day it is deposited for overnight delivery;
- or
- (c) on the date of actual delivery or on which delivery is refused as shown on the return receipt if mailed.

**5.4. Interested Persons.** Interested Persons may request copies of notices that the Port or the City delivers to Developer by providing notice to the Port or the City. Developer will have the sole responsibility for providing information to any Interested Person desiring notice. Neither the Port nor the City will incur liability for failure to provide notice to any Interested Person.

**5.5. Change of Address.** Notices must be delivered to the addresses for notice as specified in the Transaction Documents, unless superseded by a notice of a change in address for notices that is delivered in accordance with App ¶ A.5.1 (Manner of Delivery).

**5.6. Convenience Copies.** Except as explicitly permitted under specific circumstances, a Party must not give notice by facsimile or electronic mail, but any Party may deliver a copy of a notice by facsimile or electronic mail as a courtesy or for convenience. The effective date of a notice will not be affected by delivery of a convenience copy by facsimile or electronic mail.

## **6. PAYMENT DEMANDS.**

**6.1. Application.** The following procedures will apply to any demand from one Party to the other Party for payment whenever payment procedures are not specified in the Transaction Document

under which demand is made. These procedures do not apply to Payment Requests made under the Acquisition Agreement.

**6.2. Demand.** The Party seeking payment must deliver its demand for payment to the other Party together with proof of payment. The Party obligated to pay will have the right to engage a CPA to review the other Party's claimed costs, and the Party seeking payment must cooperate in providing information necessary for the review. The Party conducting the review will bear its own costs unless the review reveals that the other Party's costs are overstated by 5% or more, in which case, the amount of the reimbursement will be reduced by the amount of the review costs.

**6.3. Time for Payment.** Except when other procedures are specified in a Transaction Document, or during any period of review or dispute resolution, the Party obligated to make payment must satisfy the payment demand within 30 days after receipt of the demand for payment.

## **7. USAGE GUIDELINES FOR DEFINED TERMS.**

**7.1. Definitions in Glossary.** The glossary in **Appendix Part B** contains definitions for terms used in the primary Transaction Documents, or specifies the Transaction Document where terms are defined.

**7.2. Capitalization.** Defined terms that are not capitalized in this Appendix are not capitalized when used in the Transaction Documents.

**7.3. Correlating Terms Included.** Each defined term must be interpreted to encompass all correlating plural and singular nouns, verb tenses and forms, adjectives, adverbs, and other forms of the term. The following examples of the application of definitions to correlating terms are illustrative only and are not intended to limit the application of the examples used or the meaning of this Paragraph.

- "Assign" applies to "Assignment," "Assignee," "Assignor," and "Assigned."
- "Begin construction" applies to "began to construct," "beginning construction," and "has begun to construct."
- "Indemnify" applies to "indemnity," "indemnification," and "indemnitor."
- "substantial completion" applies to "Substantially Complete."
- "Third party" applies to "third-party" and "third parties."
- "Waive" applies to "waiver," "waivers," "waived," and "waiving."

**7.4. Definitional Context.** In some instances, defined terms apply only to certain circumstances or may have different meanings in different contexts. In those instances, the definition will be identified as specific to a situation. The following examples are illustrative only and are not intended to limit the application of the examples used or the meaning of this Paragraph.

- "final completion" and "substantial completion" as used in reference to Horizontal Improvements and Vertical Improvements incorporate conditions specific to each type of Improvement.
- The "Parties" to one Transaction Document may be different from the "Parties" to another Transaction Document.

## **8. INCONSISTENT PROVISIONS.**

**8.1. General Rule.** Developer and the City Parties intend for any Transaction Document addressing specific rights and obligations to prevail over any inconsistent provisions in any other any Transaction Document for the Project. This general rule will apply to the primary Transaction Document as amended from time to time, whether or not the amendment is reflected in the Appendix.

**8.2. Examples.** The following examples are illustrative only and are not intended to limit the application of the examples used or the meaning of this Paragraph.

- Financing provisions in the Financing Plan will prevail over conflicting provisions regarding Project Payment Sources in any other Transaction Document that is not specific to a Project Payment Source.

- The RMA will prevail over conflicting provisions in any other Transaction Document, including the Financing Plan, with respect to rates and methods of assessing Mello-Roos Taxes.
- An RMA amendment revising the definition of "Tax-Exempt Parcel" will prevail over an inconsistent definition in this Appendix as applied to the levy of Mello-Roos Taxes.
- Review periods for Improvement Plans in the ICA will prevail over conflicting review periods in any other Transaction Document.

## **9. HEADINGS AND REFERENCES.**

**9.1. Headings.** The headings preceding the articles, sections, and other parts of each Transaction Document and in the applicable table of contents have been inserted for convenience of reference only and must be disregarded in the construction and interpretation of the Transaction Documents.

**9.2. References Generally.** Any reference to a provision "in the [Transaction Document]," "herein," "hereof," or similar terms will be deemed to refer to any reasonably related provisions of the Transaction Document in which the reference appears in the context of the reference, unless the reference refers solely to a specific provision of the Transaction Document.

### **9.3. Within Transaction Documents.**

(a) Unless otherwise specified, whenever a Transaction Document, including all exhibits, schedules, and attachments, refers to the table of contents or any article, section, exhibit, attachment, or defined term, the reference is deemed to refer to the article, section, exhibit, attachment, or defined term of the Transaction Document or the referenced exhibit or attachment and all of the subsections, subparagraphs, clauses, exhibits, and attachments.

(b) The word "this" when used to refer to any document, article, section, paragraph, clause, or other distinct provision in a document means the referenced document or provision. For example, "this Paragraph" means App ¶ A.9.3, and "this subparagraph" means App ¶ A.9.3(b).

**9.4. To Other Documents.** Unless otherwise specified, all references to a Transaction Document or a specific exhibit, attachment, schedule, supplement, Consent, addendum, or other document attached or deemed attached to a Transaction Document means the entire document as amended, replaced, supplemented, clarified, corrected, or superseded at any time while any obligations under the Transaction Document are outstanding.

## **10. ATTRIBUTED AND DELEGATED ACTS AND OBLIGATIONS.**

**10.1. Delegated Actions.** References in any Transaction Document to a Party's acts or omissions mean acts or omissions by the Party and its Agents unless the context requires or specifically stated otherwise.

**10.2. Transferred Obligations.** References in any Transaction Document to a Party's obligations also mean the Party's obligation to ensure that its successors, Agents, and Transferees comply with all applicable obligations.

**10.3. Successor Public Bodies.** References to any public body acting in its regulatory or proprietary capacity also mean the named body or any successor public body designated by or under law to act in the same capacity.

**10.4. Successor Public Officials.** References to elected and appointed officials of public bodies also mean their duly appointed or elected, as applicable, successors to the extent authorized to act in the same capacity, and designees to the extent authorized to take specific actions on behalf of the named officials.

#### **11. TRANSFERRED RIGHTS.**

All references to Developer in a Transaction Document pertaining to any right under that Transaction Document also mean a Transferee to the extent set forth in an Assignment and Assumption Agreement in form and content consistent with DDA art. 6 (Transfers).

#### **12. RECITALS.**

Recitals are included to provide context for the Parties' agreement as set forth in the Transaction Document in which they appear and are not binding with respect to the Parties' rights and obligations. If the recitals conflict with other provisions of the Transaction Document, the other provisions will prevail.

#### **13. WORDS OF INCLUSION.**

The words "including," "such as," or similar terms when following any general term must not be construed to limit the term to the specific terms that follow, whether or not followed by language of non-limitation, such as "without limitation," "including, but not limited to," or similar words, but will be deemed to refer to all other items or matters that could reasonably fall within the broadest possible scope of the term and to be followed by the phrase "without limitation" or "but not limited to."

#### **14. GENDER AND NUMBER.**

Wherever the context requires, gender-specific and gender-neutral references are deemed to include the masculine, feminine, and gender-neutral, and references to the singular are deemed to include the plural and vice versa.

#### **15. NUMERALS.**

For purposes of calculations under any Transaction Document, fractions will not be rounded up or down. A numeral will prevail over any conflicting spelled out number.

#### **16. TIME PERIODS.**

**16.1. Calendar Periods.** References to days, months, quarters, and years mean calendar days, months, quarters, and years unless otherwise specified.

**16.2. Business Days.** References to a business day means a day other than a Saturday, Sunday, or a holiday recognized by the City. A business day begins at 8 a.m. and ends at 5 p.m., Pacific Standard Time or Pacific Daylight Savings Time, whichever is in effect on the date in question.

#### **17. STATUTORY REFERENCES.**

References to specific code sections mean San Francisco Municipal Ordinances unless otherwise specified or required by context. References to any law mean the law as in effect on the Reference Date and as amended at the time in question, unless specifically stated otherwise.

#### **18. NO PARTY DRAFTER.**

The Transaction Documents have been negotiated at arm's length between persons sophisticated and knowledgeable in the matters addressed. In addition, each Party has been represented by experienced and knowledgeable legal counsel, or has had the opportunity to consult with counsel. Accordingly, the provisions of the Transaction Documents must be construed as a whole according to their common meaning to achieve the Parties' intent and purpose, without any presumption (under Cal. Civ. Code §§ 1649, 1654, or otherwise) against the Party responsible for drafting any part of any Transaction Document.

[Remainder of page intentionally left blank.]

## **PART B: GLOSSARY OF DEFINED TERMS**

The following terms have the meanings given to them below. Defined terms that are not capitalized below are not capitalized when used in Transaction Documents.

**"100-year flood"** means a flood having a 1% chance of occurrence in a given year.

**"AA"** is an acronym for the Acquisition Agreement.

**"AA Allocation"** means the allocation of Horizontal Development Costs paid under a Payment Request to specific Horizontal Improvements or Components.

**"AB 2797"** means Assembly Bill 2797 (stats. 2016, ch. 529), which amended SB 815.

**"Acceptance and Maintenance Memorandum of Agreement"** is defined in ICA § 4.7(g) (Standard and Procedures for Acceptance) and means an agreement that City Agencies will enter into specifying the extent of each City Agency's responsibility for maintenance and liability and related matters.

**"Acquiring Agency"** means the City Agency (the Port, SFPUC, or Public Works) that will acquire Horizontal Improvements under the Acquisition Agreement.

**"Acquisition Agreement"** means the Acquisition and Reimbursement Agreement between Developer and the Port in the form of FP Exh A that lists Horizontal Improvements that Acquiring Agencies will purchase from Developer, establishes the Acquisition Prices of Horizontal Improvements, and provides forms and procedures for Developer to request inspection of and payment for Horizontal Improvements.

**"Acquisition Price"** means the amount that the Port will pay Developer on behalf of Acquiring Agencies to purchase Horizontal Improvements under the Acquisition Agreement, which will be the sum of the Horizontal Development Costs incurred and accrued Developer Return to the date of payment.

**"Acquisition Cost Update"** means one or more updates to the Phase Improvements, Components, and the preliminary Horizontal Development Cost estimates in AA Exh B that Developer submits to the Port.

**"action"** when used in reference to any Claim or Loss means any administrative, judicial, quasi-judicial, or nonjudicial proceeding, including any alternative dispute resolution proceeding, and includes any complaint, cross-complaint, counterclaim, bankruptcy case, adversary proceeding, and appeal.

**"active use"** means a use that by its nature does not:

- (i) require non-transparent walls facing a public street; or
- (ii) involve the storage of goods or vehicles.

**"actual damages"** means the exact amount of any sum due and owing, together with interest until paid and all costs of collection.

**"ADA"** is an acronym for the Americans with Disabilities Act and all other applicable federal, state, and local disability rights laws.

**"Additional Developer Return"** means the portion of Developer Return that exceeds the Interest Cost Limitation.

**"Additional Port Return"** means the portion of Port Return that exceeds the Interest Cost Limitation.

**"Additional Return"** means Additional Developer Return or Additional Port Return or both, as applicable.

**"Adequate Security"** means all Phase Security and Loss Security that Developer provides to the Port under the DDA:

- (i) to secure the faithful performance or payment, or both, of Developer Construction Obligations and Developer Reimbursement Obligations under **DDA art. 16** (Security for Project Activities);
- (ii) issued by a person that meets the Obligor Net Worth Requirement and is approved by the Port Director;
- (iii) that includes the Port's costs of enforcement in the Obligor's liability; and
- (iv) that is in form and substance proposed by Developer and approved by the Port Director, such as guaranties, bonds, letters of credit, certificates of deposit.

**"Adequate Security Requirements"** means Developer's obligations under **DDA art. 16** (Security for Project Activities).

**"Adequate Security Requirements" exclude security required by the Subdivision Code.**

**"Adjacent Parcel"** means:

- (i) Parcel D1 in reference to the Parcel D2 Garage; and
- (ii) Mission Rock Square and Parcels B, C, E, F, I, and J in reference to the Mission Rock Square Garage.

**"Adjusted Gross Income"** means Gross Income less Adjustments.

**"Adjustments"** when used in reference to Adjusted Gross Income means:

- (i) all Impositions (as defined in the Parcel Lease) paid by Tenant, allocated on a straight-line basis during the Lease Year in which the Imposition was paid;
- (ii) utility charges paid by Tenant, including water, gas, oil, sanitary and storm sewer, and electricity; and
- (iii) insurance premiums for insuring the Improvements in compliance with the Master Lease, allocated on a straight-line basis during the Lease Year in which the insurance premium was paid.

**"Administrative Delay"** means an Excusable Delay caused when:

- (i) a Regulatory Agency fails to act on a Developer request or application within the time specified in the ICA, the Development Agreement, or the DDA, or, if no time is specified, within a reasonable time under the agency's standard practices;
- (ii) an appeal body or court determines that a Regulatory Agency's act or failure to act on an application was improper following a challenge by Developer or a Vertical Developer Affiliate; or
- (iii) for any matter that requires the execution and delivery of a Vertical DDA or Parcel Lease, a Vertical Developer has delivered the partially executed agreement to the Port, but the Port has failed to execute and deliver the fully executed agreement to the Vertical Developer.

**"Administrative Delay" excludes any delay caused by Developer's failure to meet any Outside Date or to submit timely all required and requested information supporting a request or application.**

**"Administrative Fee"** means:

- (i) a fee imposed citywide (or portwide, for Port fees) in effect and payable when a developer submits an application for any permit or approval, intended to cover

only the estimated actual costs to the City or the Port of processing the application, addressing any related hearings or other actions, and inspecting work under the permit or approval; and

- (ii) amounts that Developer or a Vertical Developer must pay to the City or the Port under any Transaction Document to reimburse the City or the Port for its administrative costs in processing applications for any permits or approvals required under the Project Requirements.

**"Administrative Fee"** excludes any Impact Fee or Exaction.

**"ad valorem tax"** means an ad valorem tax levied on a taxable real property interest under article XIII A of the California Constitution.

**"Advance"** means a loan of a Parcel DRP or Port Capital that the Port makes to the Mission Rock CFD under FP art. 7 (Port Advances).

**"Affiliate"** means:

- (i) in general, any person that directly or indirectly controls, is controlled by, or is under common control with, another person or a partner or managing or other member of the other person; and
- (ii) in reference to Developer, a Transferee Affiliate and a Vertical Developer Affiliate.

**"Affordability Covenant"** means the agreement of each Vertical Developer of a Residential Parcel to meet permanent affordable housing requirements applicable to the parcel, which will be documented in a recorded Declaration of Restrictions.

**"affordable housing"** means Residential Units at the Project Site that will be affordable to households with income ranges specified in the Housing Plan.

**"Affordable Housing Cost"** means a monthly rental charge, including the Utility Allowance, for a Residential Unit that does not exceed 30% of the maximum Area Median Income permitted for the applicable type of Residential Unit, based upon Household Size.

**"Affordable Housing Fund"** means the segregated account in the Special Fund Trust Account to hold Jobs/Housing Equivalency Fees that will be used to provide Affordable Housing Subsidies to Residential Developers in compliance with the Housing Plan.

**"Affordable Housing Overage"** means the amount by which available Jobs/Housing Equivalency Fees exceeds the Affordable Housing Subsidy allocated to Residential Developers in a Phase.

**"Affordable Housing Shortfall"** means the amount by which the Affordable Housing Subsidy allocated to Residential Developers in a Phase exceeds available Jobs/Housing Equivalency Fees.

**"Affordable Housing Subsidy"** means the amount of Jobs/Housing Equivalency Fees allocated to Residential Developers through the Phase Approval process.

**"Affordable Housing Subsidy Plan"** means the methodology for allocating Affordable Housing Subsidies to Residential Developers approved in the Phase Approval process for Phase 1.

**"AGI"** is an acronym for Adjusted Gross Income.

**"Agent"** means any officer, director, employee, legal or other authorized representative, attorney, or contractor of any person and any of their respective Agents.

**"agree"** means an accord, mutual consent, or binding decision reached by two or more persons.

**"agree"** *excludes any unilateral decision.*

**"Aggrieved Party"** means the Party alleging that a Breaching Party has committed an Event of Default or is in Material Breach under the DDA, the DA, or other Transaction Document.

**"alcoholic beverage"** is defined in California Business and Professions Code section 23004.

**"all-gender toilet facility"** means a toilet that is not restricted to use by persons of a specific sex or gender identity by means of signage, design, or the installation of fixtures.

**"Allocated Tax Increment"** means the portion of Gross Tax Increment from Project Area I that the City has agreed to allocate to the IFD for use in Project Area I by approving Appendix I.

**"Allocation Period"** means the period ending on October 17 each year for Prop M purposes.

**"allonge"** means a document that is affixed to and is a part of a negotiable instrument.

**"Allowed Developer Return"** means the portion of Developer Return that accrues at a rate equal to the Interest Cost Limitation.

**"Allowed Port Return"** means the portion of Port Return that accrues at a rate equal to the Interest Cost Limitation.

**"Allowed Return"** means Allowed Developer Return or Allowed Port Return or both, as applicable.

**"ALTA"** is an acronym for the American Land Title Association.

**"Alternative Developer Return"** means the portion of Developer Return accruing at the Alternative Return Rate.

**"Alternative Port Return"** means the portion of Port Return accruing at the Alternative Return Rate.

**"Alternative Return"** means Alternative Developer Return or Alternative Port Return or both, as applicable.

**"Alternative Return Balance"** means the sum of unreimbursed Alternative Return Costs and accrued Alternative Return owing to Developer or the Port or both, as applicable, on the date of determination.

**"Alternative Return Cost"** means a cost that is to bear Alternative Return under any Transaction Document, consisting on the Reference Date of:

- (i) the amount of any Phase 1 Overage funded by a Port Capital Advance under **clause (i) of FP § 2.7(c)** (Port Election);
- (ii) up to \$10 million of any Phase 1 Overage funded by Developer Capital under **clause (ii) of FP § 2.7(c)** (Port Election);
- (iii) the amount of any Affordable Housing Shortfall funded by Developer Capital under **clause (ii)** or a Port Capital Advance under **clause (iii) of FP § 2.8(f)** (Affordable Housing Shortfall); and
- (iv) the amount of any Affordable Housing Subsidy funded by Developer Capital or a Port Capital Advance under **FP § 2.8(g)** (Affordable Housing Fund Delays).

**"Alternative Return Rate"** means the lesser of:

- (i) LIBOR published on the date that an Alternative Return Cost is paid, plus 400 basis points; and
- (ii) the annual rate of 9 %.

**"Alternative Return Rent Credits"** means rent credits provided to Master Lease Tenant under FP § 2.6(c) (Alternative Treatment of Costs).

**"Amendment Action"** means a discretionary action to approve a termination by agreement or an amendment, supplement, or addition to any of the Transaction Documents or Project Requirements.

**"AMI"** is an acronym for Area Median Income.

**"AMI Percentage"** means the percentage multiple of AMI applicable to an Inclusionary Unit.

**"Annual Allocated Tax Increment"** means the Allocated Tax Increment that the Port receives, as IFD Agent, in a City Fiscal Year.

**"Annual Cost Budget"** means the amount of Port Costs and Other City Costs that the Port and Developer agree will be payable by Project Payment Sources in each City Fiscal Year during the DDA Term.

**"Annual Ground Rent"** means ground rent for an Option Parcel that is payable to the Port in annual installments over the Parcel Lease term.

**"Annual Review"** means the periodic review of whether Developer has complied in good faith with the Development Agreement required under section 65865.1 of the Development Agreement Statute and Administrative Code section 56.17.

**"Annual Review Date"** means the date established by Administrative Code section 56.17 by which the Annual Review must begin, as amended by DA § 8.1(c) (Planning Director's Discretion).

**"App"** is a term used in the Transaction Documents to refer to this Appendix.

**"Appendix I"** means the Project-specific infrastructure financing plan for Project Area I that the Board of Supervisors approved by Ordinance No. 34-18, which is attached as Appendix I to the IFD Financing Plan.

**"Applicable Lender Protections"** means provisions under DDA art. 17 (Lender Rights), Vertical DDA art. 16 (Financing; Rights of Lenders), and PL art. 40 (Mortgages) that protect the rights of Lenders making loans to Borrowers to finance Improvements at the Project Site.

**"Applicable New Law"** means, individually or collectively:

- (i) a Change in City Law amending the Construction Codes;
- (ii) a Change in City Law adding or amending any other Existing City Law to protect the public health and safety; and
- (iii) changes in federal or state law that apply to the Project as described in DA art. 5 (Vesting and City Obligations).

**"Applicable Port Laws"** means the Burton Act, as amended by SB 815, and Charter Appendix B.

**"applicable service"** means electric service that SFPUC Power will provide to the Project Site under one or more Electric Service Agreements.

**"Appraisal Instructions"** means directions to Qualified Appraisers substantially in the form of DDA Exh D4 for Option Parcels to be developed for residential use or DDA Exh D5 for Option Parcels to be developed for commercial-office.

**"Appraisal Notice"** means a notice from Developer to the Port initiating the appraisal process for an Option Parcel under **DDA § 7.3** (Parcel Put).

**"Approved Arbiters Pool"** means **DDA Sch 1**, as revised under **DDA § 9.1** (Arbiters).

**"Approved Payment"** means, individually or collectively as appropriate in the context, the final Entitlement Cost Statement, an Approved Payment Request, or an Approved Requisition.

**"Approved Payment Request"** means a Payment Request in the form of **AA Exh C** for Horizontal Development Costs of Horizontal Improvements that the Chief Harbor Engineer has approved or is deemed to have approved, in either case under **AA § 4.2** (Processing Payment Requests).

**"Approved Requisition"** means a Requisition in the form of **FP Exh E** for costs that the Port Director has approved under **FP § 2.2(c)** (Entitlement Sum Statement and Requisitions).

**"Approved Phase"** means a Phase of the Project that the Port has approved.

**"Arbiter"** means an arbitrator who will preside over any arbitration proceeding.

**"Arbitration Notice"** means the notice that one Party delivers to the other Party to initiate a proceeding under **DDA art. 9** (Resolution of Certain Disputes):

**"Arbitration Start Date"** means the date on which a selected Arbiter confirms in writing to the Parties that the Arbiter is available and willing to serve.

**"Architect"** means the licensed architect of record for any Improvements.

**"Architect's Certificate"** means a certificate signed by the Architect in the form of **Vertical DDA Exh P** verifying that a Vertical Developer has completed the specified Vertical Improvement under the Improvement Plans.

**"Area Median Income"** means, for the Inclusionary Units, unadjusted median income for the San Francisco area as published from time to time by HUD, adjusted solely for Household Size.

**"Army Corps"** means the Army Corps of Engineers.

**"As-Built Drawings"** means design and Improvement Plans and specifications in their final form and as-built field documents prepared during the course of construction.

**"Assessed Parcel"** means a Taxable Parcel that meets all of the following conditions:

- (i) one or more buildings have been constructed or rehabilitated on the Taxable Parcel for which the Port has issued a TCO;
- (ii) the buildings have been finally assessed;
- (iii) the Assessor has levied ad valorem taxes on the Taxable Parcel covering a full City Fiscal Year.

**"Assessed Parcel Credit Report"** means a report that the CFD Administrator will prepare for the Treasurer-Tax-Collector that specifies the amount of the Development Special Tax Credit to be applied to Assessed Parcels.

**"Assessment Shortfall"** means, on the date of determination, any amount by which Allocated Tax Increment generated by the levy of the ad valorem tax on a Taxable Parcel's Baseline Assessed Value (if paid in full), as escalated by any annual increases or reassessments following a change in ownership or later Improvements, exceeds Allocated Tax Increment generated by the levy of the ad valorem tax on the Taxable Parcel (if paid in full) after a Value Reduction.

**"Assessor"** and **"Assessor-Recorder"** mean the Assessor-Recorder of the City and County of San Francisco.

**"Assignment and Assumption Agreement"** means an agreement in the form of DDA Exh D4 and otherwise consistent with DDA art. 6 (Transfers).

**"Associated Public Benefits"** means public benefits that the Project will provide, including:

- (i) Horizontal Improvements such as shoreline improvements, Public ROWs, new and expanded Public Spaces, and other public facilities to serve the Project Site;
- (ii) Inclusionary Units required under the Housing Plan, and an activated ground-floor environment with space for shops, restaurants, cafes, neighborhood-serving retail, and community activities serving the public trust; and
- (iii) benefits associated with development, such construction and permanent jobs, contracting opportunities for local businesses, and public art installations.

**"Associated Public Benefits"** *excludes public facilities provided by any City Agency.*

**"attorneys' fees"** means reasonable attorneys' fees and related costs incurred in an action or as otherwise indicated in the DDA, including all costs of litigation, such as fees and related costs of attorneys, consultants, testing, and experts, litigation costs of the action, and costs for document copying, exhibit preparation, carriers, postage, and communications.

**"audited financial statements"** means financial statements prepared by an independent CPA that include the CPA's opinion that the financial statements are fairly stated in all material respects.

**"Available Tax Increment"** means the amount of Allocated Tax Increment that the City has allocated to the IFD and is available on the date of calculation.

**"AWSS"** is an acronym for the City's auxiliary water supply system.

**"AWSS Plan"** means Developer's proposed AWSS design for associated Horizontal Improvements.

**"Backbone Infrastructure"** means all Horizontal Improvements except Deferred Infrastructure.

**"Ballpark"** means the stadium and related facilities currently known as AT&T Park, located at 24 Willie Mays Plaza, San Francisco, California.

**"Barrier Removal Funds"** means the portion of the CBO Funds that will be used to fund community-based organizations that provide services to reduce barriers to employment for individuals within at-risk populations.

**"base flood"** is a term used to describe a 100-year flood.

**"Baseline Assessed Value"** means:

- (i) while any First Tranche Bonds are outstanding and before Second Tranche Bonds are issued, the greater of (1) the initial assessed value of a Taxable Parcel in Project Area I in the first City Fiscal Year in which the assessed value reflects the full cash value of the initial Improvements constructed on the Taxable Parcel for which the Port has issued a TCO, after all rights to appeal have expired or been exhausted, as escalated by annual increases or (2) the initial assessed value of a Taxable Parcel in Project Area I in the first City Fiscal Year in which the assessed value reflects any change in ownership or later Improvements, after all rights to appeal have expired or been exhausted, as escalated by annual increases; and
- (ii) after all First Tranche Bonds are defeased and Second Tranche Bonds are issued, the assessed value of a Taxable Parcel in the first City Fiscal Year in which the assessed value reflects any change in ownership or later Improvements, after all rights to appeal have expired or been exhausted.

**"Baseline Revenue"** means the average annual revenue that the Port received from Seawall Lot 337 between January 1, 2003, and December 31, 2007, adjusted for inflation.

**"Base Rent"** is defined in the Master Lease.

**"Base Value"** means, on the date of determination, the sum of the following to the extent Transferred directly or indirectly by a Triggering Event:

- (i) the Developer Balance;
- (ii) any remaining Unrecovered Rent Credits under the Master Lease; and
- (iii) if the Participation Threshold has been met on the date of the Triggering Event, the net present value, calculated at a discount rate of 8.5%, of the then-projected Developer Participation from any Parcel Leases under the Participation Agreement.

**"Basis of Design"** means the documents described in ICA Exh E (Mission Rock Basis of Design).

**"BCDC"** is an acronym for the San Francisco Bay Conservation and Development Commission.

**"begin construction"** means to start the physical improvement of a site as part of a sustained and continuous building plan.

**"Board of Supervisors"** means the legislative branch of the City and County of San Francisco with all powers and authority granted under the Charter and state law.

**"Bond"** means any bond or other form of indebtedness secured by Mello-Roos Taxes or Tax Increment or both issued on behalf of the Mission Rock CFD or Project Area I to implement the Financing Documents.

**"Books and Records"** means books and records that Developer and the Port will prepare and maintain under FP § 9.5 (Books and Records).

**"Borrower"** means:

- (i) Developer, a Vertical Developer, or a Transferee with rights and obligations under the DDA directly or through a Parcel Lease or an Assignment and Assumption Agreement when used in reference to a Deed of Trust; and
- (ii) a person with a direct or indirect controlling interest in Developer, a Vertical Developer, or a Transferee with rights and obligations under the DDA directly or through a Parcel Lease or an Assignment and Assumption Agreement when used in reference to a Security Interest.

**"Breaching Party"** means a Party alleged to have committed an Event of Default or to be in Material Breach under the DDA, the Development Agreement, or other Transaction Document.

**"Broadcast Services"** means the electronic capture or live transmission on-site of video, digital, or audio content for Commercial Purposes through the use of a remote production or satellite truck on-site by individuals that may include a technical director, video controller, assistant director, and stage manager, as well as individuals engaged in the following functions: audio; camera; capture and playback; graphics; and utility.

**"Budget Guidelines"** means the guidelines applicable to each Phase Budget, which are listed in DDA § 3.3(a) (Budget Guidelines).

**"Burton Act"** means Assembly Bill 190 (stats. 1968, ch. 1333), authorizing the State to grant tidelands and submerged lands comprising San Francisco Harbor to San Francisco under the management and control of the Port Commission.

**"Capital Cost"** means, as applicable:

- (i) a Horizontal Development Cost funded by Developer Capital or Port Capital or both;
- (ii) any other cost funded by Developer Capital or Port Capital or both that is reimbursable under the Financing Plan;
- (iii) Horizontal Development Costs funded by Developer Pass-Throughs;
- (iv) accrued Developer Return or accrued Port Return or both; and
- (v) Minimum Phase Return and Minimum Developer Return as applicable.

**"cash"** means United States currency delivered in legal tender or other forms of immediately available funds.

**"CBO Funds"** means one-half of the Workforce Job Readiness and Training Funds, which will be used as Barrier Removal Funds and Job Readiness Training Funds.

**"Central Plant"** means a central water treatment plan or a central energy plant, each as described in the Sustainability Strategy.

**"Central Plant Feasibility Studies"** means studies that Developer will submit under DDA § 3.2(b) (Phase 1 Submittal) examining the feasibility of the construction and operation of Central Plants.

**"CEQA"** is an acronym for the California Environmental Quality Act (Cal. Pub. Res. Code §§ 21000-21189.3).

**"CEQA Findings"** means findings adopted by the Planning Commission, the Port Commission, and the Board of Supervisors under CEQA, the CEQA Guidelines, and the CEQA procedures.

**"CEQA Guidelines"** means the California Guidelines for Implementation of CEQA (Cal. Admin. Code §§ 15000-15387).

**"CEQA law"** means CEQA, the CEQA Guidelines, and the CEQA procedures.

**"CEQA procedures"** means Administrative Code chapter 31.

**"Certificate of Compliance"** means certificate signed by the Director of Public Works that is affixed to a Final Map to indicate that a subdivider has met all conditions of approval to the Final Map in accordance with the Subdivision Code.

**"CFD"** is an acronym for City and County of San Francisco Special Tax District No. [TBD] (Mission Rock), which will consist of a Facilities CFD and a Services CFD, that the Port will ask the Board to establish by CFD Formation Proceedings.

**"CFD Administrative Costs"** means the reasonable costs that the Port, as CFD Agent, actually incurs and pays for:

- (i) services of any Indenture Trustee (including its counsel) for any Bonds that the City issues for the Mission Rock CFD;
- (ii) marketing or remarketing Bonds; and
- (iii) all other administrative services provided by the Port, the CFD Administrator, the City, the Special Fund Trustee, and any other third-party professionals necessary for the Port to perform its duties under the DDA, Tax Allocation MOU, Special Fund Administration Agreement, and the RMA.

- "CFD Administrator"** means the Port's special tax consultant or any other person that the Port Director designates to administer Mello-Roos Taxes from the Mission Rock CFD according to the RMA.
- "CFD Agent"** means the Port, acting on behalf of the Mission Rock CFD, which the Port will ask the Board to authorize in the CFD Formation Proceedings.
- "CFD Formation Proceedings"** means the Board of Supervisors resolution by which the Board of Supervisors will establish the Mission Rock CFD.
- "CFD Goals"** means the *Local Goals and Policies for Community Facilities Districts*, approved by Board of Supervisors Resolution No. 387-09 on October 6, 2009, as amended from time to time solely to the extent required under CFD Law or other controlling state or federal law.
- "CFD Law"** means the San Francisco Special Tax Financing Law (Admin. Code ch. 43, art. X), which incorporates the Mello-Roos Community Facilities Act of 1982 (Cal. Gov't Code §§ 53311-53368).
- "CFD Report"** means the annual report that the Mission Rock CFD must file with the Treasurer-Tax Collector under CFD Law.
- "Change in City Law"** means a change to an Existing City Law, or a new law, plan, or policy, adopted by the City or the Port or by voter initiative after the DA Ordinance Effective Date that would conflict with the Project Approvals, the Transaction Documents, or Applicable Port Laws as specified in DA § 5.3 (Change in City Law).
- "Change in City Law"** *excludes regulations, plans, and policies that change only procedural requirements of an Existing City Law.*
- "Change in Law"** means a Change in City Law or a new or amended federal or state law that materially and adversely affects the feasibility of the Project or the delivery of the Associated Public Benefits.
- "Change Negotiating Period"** means a period of nine months during which specified Outside Dates will be tolled to allow the Parties to negotiate possible changes to Developer Construction Obligations or other elements of the Project to address changed circumstances under the DDA.
- "Chapter 12T"** means Administrative Code chapter 12T (Criminal History In Hiring And Employment Decisions).
- "Chapter 56"** means Administrative Code chapter 56, which the Board of Supervisors adopted under the Development Agreement Statute, as amended by the DA Ordinance.
- "Chapter 82"** means the Local Hiring Policy for Construction (Admin. Code ch. 82).
- "Chapter 83"** means the First Source Hiring Program (Admin. Code ch. 83).
- "Charter"** means the Charter of the City and County of San Francisco adopted on November 7, 1995, as amended and in effect on the Reference Date.
- "Chief Harbor Engineer"** means the Port's Deputy Director, Engineering.
- "Child Care Equivalency Fee"** means the Impact Fee payable under **clause (iv) of DA § 5.4(b)** (Impact Fees and Exactions) in lieu of the Child Care Fee.
- "Child Care Fee"** means the Impact Fee payable under Planning Code sections 414.1-414.15 and sections 414 A.1-414 A.8.
- "City"** means the City and County of San Francisco, a charter city and municipal corporation, subject to DA § 2.6(d) (City and Port).

**"City Agency"** means any public body or an individual authorized to act on behalf of the City in its municipal capacity, including the Board of Supervisors or any City commission, department, bureau, division, office, or other subdivision, and officials and staff to whom authority is delegated, on matters within the City Agency's jurisdiction.

**"City Delay Notice"** means a notice given under DDA Exh A4 (Provisions for Office Development) from Planning to the Port that the City has reasonably determined that delaying office development in the Project Site is necessary to allow the City to balance its planning objectives for Pending Projects elsewhere in the City.

**"City Engineer"** means the Public Works employee responsible for infrastructure matters on City property.

**"City Fiscal Year"** means the period beginning on July 1 of any year and ending on the following June 30.

**"City General Fund"** means San Francisco's general operating fund, into which taxes are deposited, excluding dedicated revenue sources for certain municipal services, capital projects, and debt service.

**"City Law"** means any City ordinance or Port code provision and implementing regulations and policies governing zoning, subdivisions and subdivision design, land use, rate of development, density, building size, public improvements and dedications, construction standards, new construction and use, design standards, permit restrictions, development impacts, terms and conditions of occupancy, and environmental guidelines or review at the Project Site, including, as applicable:

- (i) the Waterfront Plan and the Design Controls;
- (ii) the Construction Codes, applicable provisions of the Planning Code, including the SUD and the Zoning Maps, the Subdivision Code, the General Plan;
- (iii) local Environmental Laws and the Health Code; and
- (iv) the Other City Requirements.

**"City Party"** means the Port, the City, City Agencies, and their respective Agents.

**"City Req"** refers to the Other City Requirements (DDA Exh A11).

**"City-standard"** means a public facility meeting the specifications of an Other City Agency.

**"citywide"** means all real property within the territorial limits of San Francisco, not including any property owned or controlled by the United States or the State that is exempt from City Laws.

**"Claim"** means a demand made in an action or in anticipation of an action for money, mandamus, or any other relief available at law or in equity for a Loss arising directly or indirectly from acts or omissions occurring in relation to the Project or at the Project Site during the DDA Term.

**"Claim"** *excludes any demand made to an insurer under an insurance policy or to an Obligor of Adequate Security.*

**"Close of Escrow," "Close Escrow," and "Closing"** mean that all conditions to a Port conveyance of a Development Parcel have been satisfied or waived and actions required to effect the conveyance are complete.

**"Closing Date"** means the date on which a Port conveyance of a Development Parcel becomes effective by execution and delivery of a Parcel Lease.

**"Closing Deadline"** means the date by which a Vertical Developer must Close Escrow on a Parcel Lease or as otherwise specified in a Public Offering document, as extended under the applicable document.

**"CLTA"** is an acronym for the California Land Title Association.

**"CMD"** is an acronym for the Contract Monitoring Division of the City's General Services Agency.

**"CM-GC"** is an acronym for construction manager-general contractor in a GMP contract.

**"Commencement of Construction"** is defined in DA § 4.2(a) (Obligation to Provide).

**"Commercial Parcel"** means:

- (i) a Development Parcel that is designated in Section 249.80 for primarily Commercial Mixed Use; and
- (ii) a Flex Parcel that is designated in a Phase Approval for primarily Commercial Mixed Use.

**"Commercial Purposes"** for purposes of Administrative Code section 21C.9 means an operation of Broadcast Services for profit.

**"Commercial Purposes"** *excludes instances where the capture and transmission of video, digital, or audio content is performed by or on behalf of a governmental entity.*

**Commercial Tenant** means a tenant under a lease or other occupancy contract for commercial space at a Vertical Improvement in the Project Site.

**"Commercial Vehicle"** means a vehicle that:

- (i) is used or maintained primarily for the transportation of materials, goods, or products;
- (ii) has six wheels or more; and
- (iii) displays or is required to display a California Department of Motor Vehicles weight decal under the Commercial Vehicle Registration Act (Cal. Veh. Code §§ 9400 et seq.)

**"Commercial Vehicle"** *excludes a vehicle used exclusively for food catering purposes, meaning its exclusive purpose on a particular trip is for the transport of food and beverages to be served at a Show or Special Event, the transport of equipment for the preparation and service of food and beverages at a Show or Special Event, or both.*

**"common control"** means that:

- (i) a person directly or indirectly controls another person; or
- (ii) one or more persons are controlled by the same third person.

**"Component"** as defined in the CFD Law means:

- (i) for a Horizontal Improvement with an estimated cost of over \$1 million, a discrete portion or phase that may be financed whether or not the Component is capable of serviceable use; or
- (ii) for a Horizontal Improvement with an estimated cost of \$1 million or less, a discrete portion or phase that may be financed when the Component is capable of serviceable use.

**"Conditions of Approval"** means specified conditions to approval of a final Subdivision Map.

**"Conditions to Commencement"** means the conditions to beginning construction of Horizontal Improvements specified in **DDA art. 14** (Horizontal Development).

**"conflict"** means any circumstance described in **DA § 5.3(b)** (Circumstances Causing Conflict).

**"Consent"** means Developer's or a City Agency's executed approval of its agreement with the Transaction Document to which the Consent is attached.

**"Consistency Determination"** means the Port's finding that Developer's proposed submittal to a City Agency complies and is consistent with prior approvals and Project Requirements.

**"Consolidated Response Date"** means three business days after the Chief Harbor Engineer or Public Works receives review comments on an Improvement Plan Submittal from all Other City Agencies for purposes of **ICA § 4.6(h)** (Delivery of Compiled Comments).

**"Construction Codes"** means the Port Building Code and all Municipal Codes regulating construction of new Improvements and alteration or rehabilitation of existing Improvements, including the International Building Code and the California Building Code to the extent incorporated and as modified by the Port Commission or the Board of Supervisors.

**"construction permit"** means any permit that Developer and each Vertical Developer must obtain from the Port or any Other City Agency before beginning any physical work at the Project Site, including demolition, excavation, grading, site, and building/site permits and addenda.

**"Construction Training Resources"** means any portion of the OEWD Funds that OEWD chooses to use to support programs that train disadvantaged workers and local residents in the field of construction work.

**"contractor"** means a general contractor, including a CM-GC, or subcontractor, as appropriate in the context, licensed by the Contractors State License Board.

**"control"** means that a person has one or more of the following:

- (i) direct or indirect ownership of more than 50% of the profits or capital of another person;
- (ii) the right to dictate the controlled person's major decisions, subject to the rights of other owners;
- (iii) the right to appoint 50% or more of the controlled person's managers or directors.

**"Controller"** means the Controller of the City and County of San Francisco.

**"controlling interest"** means the interest that a controlling person holds in the controlled person.

**"Convention"** means an organized association of persons with a common interest, including a professional, commercial, political, social, cultural, vocational, recreational, or fraternal interest, most of whom are from outside of San Francisco, who meet in a hotel, convention center, or other building to discuss or act on matters affecting their common interest or to participate in activities related to their common interest.

**"convey"** means to transfer an interest in real property by Parcel Lease, deed, or other instrument.

**"Coordination Agreement"** means a contract between Developer and Vertical Developers that addresses matters necessary to coordinate horizontal and vertical construction in an orderly manner.

**"Core Benefits"** is defined in Administrative Code section 12B.1(b).

**"Cost Allocation Proposal"** means Developer's proposed allocation of Horizontal Development Costs under AA § 4.1(d) (Cost Allocation).

**"Costa-Hawkins Act"** means the Costa-Hawkins Rental Housing Act (Cal. Civ. Code §§ 1954.50-1954.535).

**"costs"** means actual and reasonable expenses, fees, and other charges directly arising from or relating to the matter giving rise to a right to payment.

**"County Surveyor"** means the Office of the City and County of San Francisco Surveyor.

**"CPA"** is an acronym for an independent certified public accounting firm approved by the Port and Developer.

**"CPI"** is an acronym for the Consumer Price Index for All Urban Consumers in the San Francisco-Oakland-San Jose region (base period 1982-1984=100) that the United States Department of Labor, Bureau of Labor Statistics, publishes in February, April, June, August, October, and December of each year. If the index is changed after the Reference Date to use a different base year, CPI will be calculated using the published conversion factor. If publication is discontinued and not replaced, the Parties will confer to reach agreement on a substitute measure.

**"Credit Bid"** means a Vertical Developer Affiliate's deemed Development Rights Payment to the Port, subject to the limitations and conditions of FP § 3.5 (Right to Credit Bid), and the act of making the deemed payment when used as a verb.

**"Credit Bid Determination Date"** means the 30<sup>th</sup> day after a Final Appraisal is issued under DDA art. 7 (Parcel Leases).

**"Cumulative IRR"** means Developer's cumulative internal rate of return in a Current Phase and any Prior Phase, calculated through the date of determination, excluding Developer Capital spent on any Later Phase.

**"Current Assessed Value"** means a Taxable Parcel's Baseline Assessed Value, as escalated or reassessed by the Assessor under applicable law, on the date of determination.

**"Current Phase"** means the Phase of the Project during which an event or determination occurs.

**"Current Parcel"** means an Assessed Parcel in the Mission Rock CFD that is identified in the Payment Report as being current on payment of ad valorem taxes.

**"DA"** is an acronym for the Development Agreement between the City and Developer specifying the entitlement rights that the City agreed to vest in Developer for development of the Project Site by adoption of the DA Ordinance.

**"DA Assignment"** is defined in DA § 11.1 (DA Successors' Rights).

**"DA Default"** is defined in DA § 9.2(a) (Specific Events).

**"DA Ordinance"** means Ordinance No. 033-18 approving the Development Agreement, incorporating by reference the General Plan Consistency Findings, authorizing the Planning Director and other City officials to execute the Development Agreement on behalf of the City, and waiving the application of certain Municipal Code provisions to aspects of the Project.

**"DA Ordinance Effective Date"** is defined in DA § 2.1 (Effective Dates).

**"DA Requirements"** is defined in DA § 5.2(a) (Agreement to Follow Existing Policy).

**"DA Statute"** means California Government Code sections 65864-65869.5.

**"DA Successor"** is defined in DA § 12.1 (DA Successors' Rights).

"DA Term" is defined DA § 2.2 (DA Term).

"DA Waivers" means, collectively, all Municipal Code waivers in the DA Ordinance.

"DDA" is an acronym for the Disposition and Development Agreement between the Port and Developer specifying the terms and conditions for Developer's master development of the Project Site.

"DDA Term" means the period beginning on the Reference Date and ending when the DDA expires by its own terms or by early termination.

"debt" means, when required by the context, financial obligations as defined in section 53395.1 and section 53395.8(c)(4) of the IFD Law.

"debt service" means the principal and interest payable on Bonds under an Indenture.

*"debt service" excludes capitalized interest, funding requirements (such as coverage), and any other amounts that are funded from gross Bond proceeds under an Indenture before net Bond proceeds are available for disbursement.*

"Declaration of Restrictions" means a document in the form attached to the Housing Plan to be recorded against a Development Parcel developed for rental residential use requiring that designated Inclusionary Units remain affordable in accordance with the Housing Plan.

"Deed of Trust" means a mortgage, deed of trust, or other security instrument encumbering a Development Parcel or a leasehold interest in a Development Parcel or a Security Interest to secure a Borrower's repayment obligation to a Lender.

"defend" when used in reference to a Claim means the defense, compromise, or other resolution of the Claim in or outside of an action.

"Deferred Infrastructure," subject to further discussion and the City Agencies' prior agreement as described in ICA Exh D, means Improvements that would be Horizontal Improvements built or installed by Developer but for the Port's agreement through a Phase Approval to require Vertical Developers to construct one or more of the following:

- (i) Utility Infrastructure;
- (ii) Public ROW Improvements; and
- (iii) fixtures installed between right-of-way curbs and the boundaries of a Development Parcel, such as sidewalks and curb cuts, lighting, street furnishings, landscaping, and utility boxes and laterals serving the parcel.

*"Deferred Infrastructure" excludes utility Improvements and fixtures customarily installed as part of a Vertical Improvement.*

"Deferred Infrastructure Zone," subject to further discussion and agreement as described in ICA Exh D, means one or more of the following:

- (i) the area between back-of-curb and the adjacent Development Parcel boundary or the adjacent Public Space, as applicable;
- (ii) bands up to 40 feet along the outer boundaries of Public Spaces adjacent to Development Parcels; and
- (iii) the area adjacent to Development Parcels for the installation of service infrastructure, including laterals, traps, air vents, clean-outs, meter boxes, irrigation facilities and associated pedestals, pull boxes, and secondary conduits.

"Delay Event" means the event causing a claimed Excusable Delay.

"Delay Event Date" means the date on which the Delay Event occurred or the date on which the Party claiming Excusable Delay discovered the Delay Event.

**"Demolition and Utility Relocation Plan"** means one of a Permit Set of Improvement Plans for Site Preparation.

**"Design Advisory Committee"** means a body of qualified design professionals designated by the Port Director in consultation with the Planning Director to make design recommendations regarding public realm Improvements to the Port Commission.

**"Design Controls"** means the Mission Rock Design Controls that the Port Commission and the Planning Commission approved.

**"Developer"** means Seawall Lot 337 Associates, LLC, and its successors under **App ¶ A.2.3** (Successors) and **App ¶ A.11** (Transferred Rights).

**"Developer Audit"** means a financial review performed by a CPA on behalf of Developer under **FP § 9.4(b)** (Developer Audit).

**"Developer Balance"** means, as shown on the Developer Capital Schedule on the date of determination, the sum of:

- (i) Developer's unreimbursed Horizontal Development Costs;
- (ii) Developer's unreimbursed Alternative Return Costs;
- (iii) accrued and unpaid Developer Return; and
- (iv) if applicable, the amount required for Developer to receive Minimum Phase Return under **clause (ii)** or Minimum Developer Return under **clause (iii)** of **FP § 2.5(c)** (Developer Return).

**"Developer Balance"** *excludes any part of vertical development costs and sums arising in any Later Phase before the applicable Phase Approval.*

**"Developer Capital"** means funds available to Developer that are not subject to restrictions or limitations under the Financing Plan.

**"Developer Capital Schedule"** means an accounting schedule that Developer maintains to record the Developer Balance for all Phases of the Project individually and in the aggregate.

**"Developer Construction Obligations"** means Developer's duty under the DDA to perform or provide, in accordance with applicable Project Requirements, for:

- (i) construction of the Horizontal Improvements for each Phase of the Project;
- (ii) Developer Mitigation Measures associated with horizontal development; and
- (iii) Associated Public Benefits associated with horizontal development.

**"Developer Construction Obligations"** *excludes any Deferred Infrastructure that Vertical Developers will construct.*

**"Developer Contingency"** means the separate allowances to cover additional Soft Costs and Hard Costs in a Phase Budget.

**"Developer Market Rate Return"** means return on Developer Capital accruing at the annual rate of 18%, compounded quarterly, on unreimbursed Horizontal Development Costs (excluding Alternative Return Costs), as adjusted under **clause (ii)** and **clause (iii)** of **FP § 2.5(c)** (Developer Return).

**"Developer Marketing Costs"** means costs associated with marketing the Project, including interim activation, events associated with openings of public improvements and other activities that benefit Project land and user absorption, overall Project branding and recognition, subject to a maximum for each Phase in the amount of \$325,000 for Phase 1 and \$250,000 for each subsequent Phase; provided, however, that:

- (i) the maximum dollar amounts referenced above are stated in 2018 dollars, and are subject to adjustment on each anniversary of the Reference Date by the percentage change in the CPI, subject to a floor of no change and a maximum increase of 4.5%; and
- (ii) the maximum dollar amounts referenced above may be subject to further increase if the Developer demonstrates to the Port's reasonable satisfaction that such increase is appropriate and expected to generate a net benefit to the Port.

**"Developer Marketing Costs"** *exclude* expenditure of funds received from the Master Marketing Fee.

**"Developer Mitigation Measure"** means any Mitigation Measure in the MMRP (DDA Exh A5) that is to be performed by Developer in connection with horizontal development.

**"Developer Participation"** means the amount of Annual Participation Revenue payable to Developer under the Participation Agreement.

**"Developer Party"** means Developer and its direct and indirect partners, members, shareholders, officers, Affiliates (including Vertical Developer Affiliates), individually or collectively.

**"Developer pass-through"** means a Horizontal Development Cost that a Payment Agent is authorized by an Approved Payment to disburse to one or more of Developer's contractors, consultants, or suppliers.

**"Developer Reimbursement Obligations"** means Developer's duty under the DDA to indemnify the City Parties and pay Port Costs and Other City Costs.

**"Developer Reimbursement Obligations"** *excludes* Developer's use of Developer Capital to finance Horizontal Improvements.

**"Developer Return"** means any combination of Additional Developer Return, Allowed Developer Return, Developer Market Rate Return, Alternative Developer Return, and Reduced Return payable to Developer under the Financing Plan.

**"Development Account"** means the segregated account within the Special Tax Fund that the Port establishes with the Special Fund Trustee to receive, administer, and disburse Development Special Taxes.

**"Development Agreement"** means the agreement that the City entered into with Developer under Administrative Code chapter 56 and the Development Agreement Statute.

**"Development Agreement Statute"** means California Government Code sections 65864-65869.5.

**"Development Opportunity"** means Developer's development rights under the DDA that the Port terminates under DDA § 11.7 (Effects of Termination on Development Rights).

**"Development Parcel"** means any parcel in Seawall Lot 337 designated for vertical development.

**"Development Rights Payment"** means a lump sum payment to the Port at the Closing of a Parcel Lease in the amount of:

- (i) Fair Market Value if the Option Parcel is conveyed by a Prepaid Lease; or
- (ii) an agreed portion of Fair Market Value, with the balance of Fair Market Value paid as Annual Ground Rent under a Parcel Lease, calculated by multiplying the

difference between Fair Market Value and the Parcel DRP by the Rent Conversion Factor.

**"Development Special Tax Credit"** means the amount by which the Potential Development Special Tax Levy for a Current Parcel in the Mission Rock CFD will be reduced by the application of Allocated Tax Increment under **FP § 6.6** (Tax Increment Credit).

**"Development Special Taxes"** means the portion of Facilities Special Taxes that the City levies in a City Fiscal Year on Taxable Parcels in the Mission Rock CFD to finance Horizontal Improvements and for other eligible purposes, subject to Port Commission and Board of Supervisors approval, an amount per square foot intended to be equivalent to 0.65% of the parcel's Baseline Assessed Value as projected for the CFD Formation Proceedings.

**"Director of Public Finance"** means the director of the Public Finance Division of the Controller's Office.

**"Director of Public Works"** means the Director of San Francisco Public Works.

**"Director of Transportation"** means the Director of San Francisco Municipal Transportation Agency.

**"Disputed Value"** means a challenged Fair Market Value or Rent Conversion Factor in an appraisal that is subject to arbitration under **DDA § 7.5** (Appraisal Disputes).

**"Disputing Party"** means a person affected by a dispute that is subject to **DDA art. 9** (Resolution of Certain Disputes).

**"Down Market"** means a period of economic and other conditions meeting one or more criteria under **DDA § 4.4(b)** (Existence of Down Market).

**"Down Market Delay"** means an Excusable Delay meeting one or more criteria under **DDA § 4.4(b)** (Existence of Down Market).

**"Down Market Test"** means the procedures in **DDA § 4.4** (Down Market Delay Procedures) by which the Parties have agreed to determine whether a Down Market exists.

**"Down Market Test Budget"** means a hypothetical Phase Budget that Developer submits under **DDA § 4.4(a)** (Timing) as part of a Down Market Test.

**"Down Market Test Date"** means the date that the existence of a Down Market is established under the DDA.

**"DRP"** is an acronym for a Development Rights Payment.

**"DRP Advance"** means a loan of a Parcel DRP that the Port makes to the Mission Rock CFD under **FP art. 7** (Port Advances).

**"DRP Advance Proceeds Account"** means the segregated accounts within the Mello-Roos Fund and the Tax Increment Fund that the Port establishes with the Special Fund Trustee to receive, administer, and disburse Allocated Tax Increment and Development Special Taxes to pay the Mission Rock CFD's obligations under the Promissory Note.

**"DRP Fund"** means the segregated account within the Special Fund Trust Account described in **FP § 4.3** (Special Fund for Special Taxes), which will hold Development Rights Payments for future use under the Financing Plan.

**"DTSC"** is an acronym for the California Department of Toxic Substances Control.

**"Early Mello-Roos Bonds"** means Mello-Roos Bonds that the City issues on behalf of the Mission Rock CFD to finance Phase Improvements at the Port's request early in a Phase.

**"Electrical Service Agreement"** means the agreement between SFPUC Power and a customer specifying the terms on which SFPUC Power will provide applicable SFPUC service.

**"eligible"** when used in reference to Horizontal Development Costs or Horizontal Improvements means Hard Costs and Soft Costs for which the use of special tax financing or tax increment financing is authorized under Governing Law and Policy.

**"Eligible Occupant"** means, for any Inclusionary Unit, a household with a Gross Annual Income that does not exceed the result of the following:

- (i) identify the applicable AMI, adjusted for Household Size;
- (ii) multiply the AMI from **clause (i)** by the AMI Percentage applicable to that Inclusionary Unit; and
- (iii) add 5% to the product of **clause (ii)**.

**"ENA"** is an acronym for the Exclusive Negotiation Agreement dated as of May 25, 2010, effective as of September 15, 2010, as amended and restated as of the Reference Date.

**"Encumbered Property"** means, as applicable:

- (i) the real property interest in a Development Parcel and any other assets that are the collateral under a permitted Deed of Trust; or
- (ii) the personal property interest in Borrower and any other assets that are the collateral under a permitted Security Interest.

**"Encumbrance"** means a Deed of Trust or Security Interest.

**"Engineer"** means the engineer of record for Horizontal Improvements, who must be licensed by the California Board for Professional Engineers, Land Surveyors, and Geologists.

**"Entitlement Cost Statement"** means Developer's report on Entitlement Costs, prepared by a third party or subject to third-party review, under **FP § 2.4(a)** (Preliminary Entitlement Cost Statement).

**"Entitlement Costs"** are Soft Costs that the Parties incurred between May 25, 2010, and June 30, 2018, to entitle the Project, including:

- (i) preliminary planning and design work;
- (ii) environmental review under CEQA;
- (iii) negotiating the financial and other terms of the Transaction Documents; and
- (iv) obtaining Project Approvals.

**"Entitlement Costs"** *exclude costs of planning and design work specifically related to the Phase Submittal for Phase 1 incurred after April 19, 2018, which shall be considered Soft Costs of Phase 1 rather than Entitlement Costs.*

**"Entitlement Date"** means the date on which all of the following are final:

- (i) BCDC approval of a major permit for the development of the Project Site (excluding Pier 48), which was issued on June 29, 2018;
- (ii) State Lands approvals required under SB 815, which were granted on April 19, 2018; and
- (iii) DTSC's approval of a variance to, modification of, or substitute for the existing Environmental Covenants.

**"Entitlement Sum"** means the sum of Entitlement Costs plus accrued Developer Return up to the Reference Date.

**"Environmental Covenants"** means recorded deed restrictions, as may be in effect from time to time, which impose conditions under which certain land uses will be permitted at designated portions of the Project Site.

**"Environmental Delay"** means an Excusable Delay caused when:

- (i) the Port or the City is required to conduct additional environmental review or prepare additional environmental documents after the Reference Date;
- (ii) a third party files an action challenging the certification or sufficiency of the Final EIR or any other additional environmental review, even if development activities are not stayed, enjoined, or otherwise prohibited;
- (iii) the unanticipated need to investigate, remediate, or otherwise correct environmental or geotechnical conditions on or affecting any portion of the Project Site, but only if the conditions or the need to investigate, remediate, or otherwise correct were not reasonably foreseeable in light of Developer's due diligence before the Reference Date, including its knowledge of the Pre-Existing Hazardous Materials; or
- (iv) the unanticipated need to comply with any Mitigation Measures adopted for the Project for conditions on or affecting any portion of the Project Site, but only if the conditions were not reasonably discoverable before the Reference Date and by their nature require a delay or work stoppage for investigation, remediation, or related activities, as long as the Party claiming delay is proceeding in a diligent manner to resolve the unforeseen issues.

**"Environmental Law"** means any law pertaining to handling, release, or remediation of Hazardous Materials, conditions in the environment, including structures; soil, air, bay water, and groundwater, the protection of the environment, natural resources, wildlife, and human health and safety, industrial hygiene and employee safety, and community right-to-know requirements, including CEQA, the Mitigation Measures, and the Environmental Covenants, applicable to the Project Site or related to the work being performed under the DDA or any Parcel Lease.

**"Environmental Regulatory Action"** means any inquiry, investigation, enforcement, remediation, agreement, order, consent decree, compromise, or other action that is threatened, instituted, filed, or completed by an Environmental Regulatory Agency in relation to a release of Hazardous Materials.

**"Environmental Regulatory Agency"** means the United States Environmental Protection Agency, the United States Occupational Safety and Health Administration, the United States Department of Labor, any California Environmental Protection Agency board, department, or office, including DTSC and the Water Board, the California Division of Occupational Safety & Health, Department of Industrial Relations, the Bay Area Air Quality Management District, the San Francisco Department of Public Health, SFPD, SFPUC, the Port, and any other Regulatory Agency now or later authorized to regulate Hazardous Materials.

**"Environmental Regulatory Approval"** means any approval, license, registration, permit, or other Regulatory Approval required or issued by any Environmental Regulatory Agency, including any hazardous waste generator identification numbers relating to operations at any portion of the Project Site and any closure permit.

**"ESA"** is an acronym for Electrical Service Agreement.

**"Escrow"** and **"Escrow Account"** mean an account established with an Escrow Agent for the delivery, recordation, and distribution as applicable of title documents, funds, and any other items necessary to Close a conveyance of a real property interest.

**"Escrow Agent"** means a local branch of a title company on the approved list maintained by the Real Estate Division of the San Francisco General Services Agency selected to handle a conveyance under the DDA.

**"Escrow Closing Costs"** means the Escrow costs customarily assigned to the buyer or ground lessee, such as escrow and associated fees, title insurance premiums and endorsement charges, transfer taxes, ad valorem taxes and assessments, if any, prorated as of the applicable Closing Date.

**"Estimated Construction Duration"** means Developer's projected construction periods for Components of Phase Improvements in each Phase Submittal.

**"Estimated Construction Schedule"** means Developer's projected schedule for pre-construction and construction of Phase Improvements in each Phase Submittal, which will be based on the Estimated Construction Duration.

**"Event Day"** means a calendar day during which an event is held in a Public Space, excluding time allowed for setup and breakdown of the event in the event permit.

**"Event Management Plan"** means TP Sch 4 to DDA Exh B7 (Transportation Exhibit), which includes an anticipated approach to managing pedestrian activity, vehicle flows, and bicycle parking in and near the Project before, during, and after events at the Ballpark, event venues in the Project Site, and other nearby event venues, such as Chase Center, where the event promoter has a parking agreement with the Garage operator to provide parking for patrons of the event.

**"Event of Default"** means a Breaching Party's failure to cure a noticed breach within any cure period specified in DDA §§ 10.2 (Events of Default by Developer) or 10.3 (Events of Default by the Port), DA § 9.2 (DA Defaults), or as otherwise specified in any Transaction Document, including all incorporated implementation plans and documents.

**"Exacerbate"** when used in reference to Hazardous Materials means any act or omission that increases the quantity or concentration or potential for human exposure of Hazardous Materials in the affected area, causes the increased migration of a plume of Hazardous Materials in soil, groundwater, or bay water, causes a Release of Hazardous Materials that had been contained until the act or omission, or otherwise requires investigation or remediation that would not have been required but for the act or omission, it being understood that the mere discovery of Hazardous Materials does not cause

**"Exacerbation"**. **"Exacerbate"** also includes the disturbance, removal or generation of Hazardous Materials in the course of Developer's operations, investigations, maintenance, repair, and construction of Horizontal Improvements. **"Exacerbate"** also means failure to comply with the Soil Management Plan or Environmental Covenants.

**"Exacerbation"** has a correlative meaning.

**"Exaction"** means any requirement to provide services or Improvements that the City imposes as a condition of approval to mitigate the impacts of increased demand for public services, facilities, or housing caused by a development project, which may or may not be an impact fee governed by the Mitigation Fee Act, including a fee paid in lieu of complying with a City requirement.

**"Exaction"** excludes Mitigation Measures and any federal, state, or regional impositions.

**"Excluded Transfer"** means any of the following:

- (i) any Lender's exercise of remedies;
- (ii) the removal of a general partner or managing member by the exercise of remedies under any form of operating agreement;

- (iii) the sale, transfer, or issuance of stock listed on a national or internationally recognized stock exchange; or
- (iv) a change resulting from death or legal incapacity of an individual.

**"Excusable Delay"** means an allowed delay in performance, or an extension of an Outside Date, as a result of the occurrence of an event of Force Majeure.

**"Excusable Delay" excludes:**

- (1) *Developer's lack of Developer Capital needed for a Phase;*
- (2) *Developer's Insolvency; and*
- (3) *an Administrative Delay or Environmental Delay if the Party claiming delay fails to take required actions or make good faith efforts to resolve the issues causing delay in a timely manner.*

**"Exempt Parcel"** means, depending on the context:

- (i) any assessor's parcel of a real property interest that is exempt either in whole or in part from property taxation under California law; and
- (ii) any assessor's parcel of a real property interest that is exempt from Mello-Roos Taxes under an RMA.

**"Exempt Parcel" excludes any parcel that:**

- (1) *the Port or any other Regulatory Agency acquires by gift, devise, negotiated transaction; or foreclosure;*
- (2) *the Port acquires under the DDA; or*
- (3) *is in private use for taxable purposes.*

**"Exhibit, Display, or Trade Show Work"** means the on-site installation, set-up, assembly, and dismantling of temporary exhibits, displays, booths, modular systems, signage, drapery, specialty furniture, floor coverings, or decorative materials in connection with or related to a Special Event.

**"Existing City Law"** means any City Law in effect on the DA Ordinance Effective Date, including Planning Code section 291, which was added by Proposition D.

**"Existing Geotechnical Condition"** means the physical, geotechnical condition of the Project Site, including soils and groundwater conditions, before Developer or its Affiliate first took possession of the Project Site.

**"Existing Geotechnical Condition" excludes the Existing Hazardous Material Condition of the Project Site.**

**"Existing Hazardous Material Condition"** means the presence or release of Hazardous Materials in, on, or about any portion of the Project Site that occurred before Developer or its Affiliate first took possession of the Project Site.

**"Experience Requirement"** means the Port's requirement that a proposed Transferee have substantial experience (in the Port's reasonable judgment), either directly or through any of its Affiliates or its project team, as a developer of mixed-use projects comparable to the Project.

**"Exposition"** means a large-scale public exhibition with a primary though not necessarily exclusive purpose of promoting one or more products, services, or businesses.

**"extensive renovation"** means any renovation where the construction cost exceeds 50% of the cost of providing all-gender toilet facilities.

**"Facilities CFD"** means the part of the Mission Rock CFD to be formed to finance Horizontal Improvements, Shoreline Adaptation Studies, Shoreline Protection Facilities, and other public facilities as approved by the Port Commission and the Board of Supervisors.

**"Facilities CFD Administrative Costs"** means CFD Administrative Costs payable from Facilities Special Taxes.

**"Facilities Special Taxes"** means one or more of Development Special Taxes, Office Special Taxes, and Shoreline Special Taxes.

**"Fair Market Value"** means the value conclusion for a Development Parcel in the Project Site reached according to procedures described in the DDA, expressed as the price that a prospective buyer with reasonable knowledge of the relevant facts would be willing to pay on the open market for the leasehold interest.

**"FAR"** is an acronym for floor area ratio.

**"Federal or State Law Exception"** is defined in DA § 5.6(a) (City's Exceptions).

**"FEHA"** is an acronym for the Fair Employment and Housing Act (Cal. Gov't Code §§ 12900-12996).

**"FEMA"** is an acronym for the Federal Emergency Management Agency.

**"final"** when used to refer to any Project Approval or Later Approval means that:

- (i) no administrative or judicial appeal has been filed by the applicable deadline;
- (i) if an administrative or judicial appeal has been timely filed, the Project Approval or Later Approval has been upheld by a final decision; or
- (ii) the Board of Supervisors has certified the results of an election under the Elections Code at which a referendum petition regarding a Project Approval is rejected.

**"Final Appraisal"** means the appraisal report that will be used for the conveyance of any Option Parcel, which can be either the Joint Appraisal as provided in DDA § 7.4(g) (Joint Appraisal) or the result of a dispute resolution process under DDA § 7.5 (Appraisal Disputes).

**"Final Audit"** means Developer's final financial report for the Project as described in FP § 9.3(b) (Final Audit).

**"Final Audit Date"** means the due date for the Final Audit under FP § 9.3(b) (Final Audit).

**"Final Certificate of Occupancy"** means a certificate of occupancy and completion that the Chief Harbor Engineer issues in the form of Vertical DDA Exh Q after accepting an Architect's Certificate verifying that a Vertical Developer has finally completed a Vertical Improvement.

**"final completion"** means that Developer has completed all aspects of a Horizontal Improvement for which City Agency approval is required in compliance with the approved Improvement Plans and the Project Requirements by the Outside Date in the applicable Schedule of Performance in accordance with DDA § 14.6 (SOP Compliance).

**"Final EIR"** means the environmental impact report for the Project that the Planning Department certified by Motion No. 20018 on October 5, 2017.

**"final judgment"** means an order, judgment, award, settlement, consent decree, stipulated judgment, or other partial or complete termination of an action with respect to a Claim or a Loss issued by an administrative, judicial, quasi-judicial, or nonjudicial body that is effective and binding after any appeal is finally adjudicated and all rights to appeal have been exhausted, or the time to appeal has expired.

**"Final Map"** means a final Subdivision Map meeting the requirements of the Subdivision Code and the Map Act, subject to amendments made by the DA Ordinance, which map has been approved by the Board of Supervisors.

**"Final Phase"** means the last Phase of development of Seawall Lot 337.

**"Final Port Report"** means the Port's final financial report for the Project as described in FP § 9.2(d) (Reporting).

**"Final Value"** means the Fair Market Value or Rent Conversion Factor conclusion that is in a Joint Appraisal or reached by the appraisal dispute resolution procedures in DDA § 7.5 (Appraisal Disputes).

**"Financing Document"** means one or more of the Financing Plan, the Acquisition Agreement, the Special Fund Administration Agreement, the Participation Agreement, Appendix I, the RMA, the Tax Allocation MOU, the CFD Formation Proceedings, the IFD Formation Proceedings, and all related ordinances and resolutions that the Board of Supervisors adopt in connection with the formation of Project Area I and the Mission Rock CFD.

**"Financing Plan"** means DDA Exh C1, the part of the DDA that will govern the application of Project Payment Sources to meet the Project Payment Obligation and other matters relating to financing the Project and revenue-sharing.

**"Fire Safety Infrastructure"** means Improvements that will be under SFFD jurisdiction when accepted.

**"First Scheduled Closing Date"** shall mean the originally scheduled Closing Date set forth in the Vertical DDA in effect for the first Development Parcel anticipated to be conveyed in a Phase, as such Closing Date may be extended under DDA § 7.7(d) (Final Map).

**"First Source Hiring Agreement"** means WDP Att A.

**"First Submittal"** means the set of Improvement Plans submitted before the Second Submittal under ICA § 4.6(c) (Plans Submittals).

**"First Tranche Bonds"** means Bonds that are payable from Allocated Tax Increment, the proceeds of which are used to finance the Project Payment Obligation.

**"Flex Parcel"** means Development Parcels designated as Flex, for which either Commercial or Residential Mixed Use is permitted as the primary land use under Section 249.80.

**"Flexible Street Improvements"** means Public ROWs that are not supported by Structured Street Superstructure.

**"Flexible Utility Connections"** means utility connections that are flexible to accommodate differential settlement where structured streets interface with Flexible Street Improvements.

**"Floodplain Management Plan"** means the document described in Port Building Code §§ 104A.2.1.1-104A.2.1.2.

**"Floodplain Ordinance"** means the law (Admin. Code art. XX) regulating construction in flood-prone areas of San Francisco and authorizing the City's participation in the National Flood Insurance Program.

**"Force Majeure"** means an Administrative Delay, Environmental Delay or Down Market Delay or any other event that is not caused by and is outside the reasonable control of the Party claiming an Excusable Delay and includes:

- (i) domestic or international events disrupting civil activities, such as war, acts of terrorism, insurrection, acts of the public enemy, and riots;

- (ii) acts of nature, including floods, earthquakes, unusually severe weather, and resulting fires and casualties;
- (iii) epidemics and other public health crises affecting the workforce by actions such as quarantine restrictions;
- (iv) inability to secure necessary labor, materials, or tools (but only if the Party claiming delay has taken reasonable action to obtain them on a timely basis) due to any of the above events, freight embargoes, lack of transportation, or failure or delay in delivery of utilities serving the Project Site;
- (v) government action or inaction after the Reference Date that precludes or substantially increases Developer's cost to perform or comply with any provision of the DDA;
- (vi) delays in any Closing under a Vertical DDA as a result of the Port's acts or omissions;
- (vii) any Vertical Developer's failure to perform an obligation on or before the time specified for performance; and
- (viii) litigation or written threat of litigation.

**"Foreclosure Purchaser"** means a person, including a Lender, that acquires a property interest by a Foreclosure Sale or that person's successor.

**"Foreclosure Sale"** means a Lender or its nominee taking title to Encumbered Property under its Deed of Trust or Security Interest through a foreclosure proceeding, a conveyance or other action in lieu of foreclosure, or its exercise of any other power of sale or other remedy.

**"FP"** is an acronym for **DDA Exh C1**, the Financing Plan.

**"Free Public Event"** means an event in a Public Space that:

- (i) is open to the general public; and
- (ii) does not require the purchase of a ticket for entry to the event, but may require a ticket or registration to manage the number of attendees.

**"Funding Goals"** means the Parties' financial objectives under **FP § 1.2** (Funding Goals).

**"FY"** is an acronym for "fiscal year" in reference to a City Fiscal Year.

**"FYE"** is an acronym for "fiscal year end," which occurs on June 30 of each City Fiscal Year.

**"GAAP"** means generally accepted accounting principles consistently applied.

**"Garage"** means a parking structure that Developer builds on the Project Site as permitted under the SUD and the DDA.

**"Garage Parcel"** means a Development Parcel designated for construction of a Garage, consisting of Parcel D2, the Mission Rock Square Garage Parcel, or both, as required in the context.

**"Garage Phase"** means an optional Phase between Phase 1 and Phase 2 (or possibly later, under **DDA § 2.5(a)** (Garage Phasing)) during which Developer may construct a Garage and associated Horizontal Improvements.

**"Garage Put Notice"** means a notice that the Port will deliver if it elects to exercise its rights under **DDA § 7.3** (Parcel Put) with respect to Parcel D2.

- "Garage REA"** means the reciprocal easement agreement that the Vertical Developer of any Garage Parcel must enter into with the Vertical Developer of any Adjacent Parcel under DDA § 2.5(f) (Garage REA).
- "Garage Recommendations"** means the written recommendations that the Director of Planning or the Director of Transportation, or both, provide to Developer regarding the development and operation of a Garage and possible refinements to the parking management plan under DDA § 2.5(c) (Garage Recommendations).
- "Garage Report"** means the report that Developer must prepare and submit to specified City Agencies for any proposed Garage under DDA § 2.5(b) (Garage Report).
- "Garage Space"** means a parking space in a Garage.
- "General Plan"** means goals, policies, and programs for the future physical development of the City, as adopted by the Planning Commission and approved by the Board of Supervisors, taking into consideration social, economic, and environmental factors.
- "General Plan Consistency Findings"** means findings made by the Planning Commission by Motion No. 20019 that the Project as a whole and in its entirety is consistent with the objectives, policies, general land uses, and programs specified in the General Plan and the planning principles in Planning Code section 101.1.
- "Giants"** means the holder of the San Francisco Giants National League franchise.
- "Giants Affiliate"** means a person controlling, controlled by, or under common control with the Giants on the Reference Date or the effective date of a Transfer.
- "GMP contract"** means a guaranteed maximum price contract or negotiated contract described in DDA § 13.4(c) (Guaranteed Maximum Price Contract).
- "Governing Law and Policy"** when referring to Public Financing Sources collectively or individually as applicable, means the CFD Law, the IFD Law, the Tax Code, the CFD Goals, and the Port IFD Guidelines.
- "graffiti"** means any inscription, word, figure, marking, or design that is affixed, marked, etched, scratched, drawn, or painted on any building, structure, fixture, or other improvement, whether permanent or temporary, including signs, banners, billboards, and fencing surrounding construction sites, whether public or private, without the consent of the owner of the property or the owner's authorized agent, and that is visible from the public right-of-way.
- "Gross Annual Income"** means pre-tax money earned annually by a household, including overtime pay, commissions, dividends, and any other source of income.
- "Gross Income"** means Master Lease Tenant's revenues under the Master Lease, as defined in greater detail in the Master Lease.
- "Gross Tax Increment"** means 100% of the property and possessory interest taxes that the City actually receives in a City Fiscal Year by application of the 1% ad valorem tax against the increase in assessed value of Taxable Parcels in Project Area I above their values in the base year of Project Area I.
- "Ground Improvement Plan"** means a Permit Set of Improvement Plans for Site Preparation.
- "gsf"** is an acronym for gross square feet in any structure, as measured under applicable provisions of the Planning Code.
- "handle"** when used in reference to Hazardous Materials means to use, generate, process, manufacture, produce, package, treat, transport, store, emit, discharge, or dispose of a Hazardous Material.

**"Hard Cost"** means any cost incurred after the Reference Date, including, without duplication:

- (i) construction labor and materials for Horizontal Improvements;
- (ii) Port permit fees;
- (iii) fees for Adequate Security; and
- (iv) any other amount specifically identified in a Transaction Document as a Hard Cost or a category of Hard Costs.

**"Hard Costs" excludes:**

- (1) *Soft Costs; and*
- (2) *costs incurred before the Reference Date.*

**"Hazardous Material"** means any material, waste, chemical, compound, substance, mixture, or byproduct that is identified, defined, designated, listed, restricted, or otherwise regulated under Environmental Laws as a "hazardous constituent," "Hazardous Material," "hazardous waste constituent," "infectious waste," "medical waste," "biohazardous waste," "extremely hazardous waste," "pollutant," "toxic pollutant," or "contaminant," or any other designation intended to classify substances by properties deleterious to the environment, natural resources, wildlife, or human health or safety, including:

- (i) ignitability, infectiousness, corrosiveness, radioactivity, carcinogenicity, toxicity, and reproductive toxicity;
- (ii) any form of natural gas or petroleum products;
- (iii) asbestos, asbestos-containing materials, and presumed asbestos-containing materials;
- (iv) PCBs, PCB-containing materials; and
- (v) any other substance that, due to its characteristics or interaction with one or more other materials, wastes, chemicals, compounds, substances, mixtures, or byproducts, damages or threatens to damage the environment, natural resources, wildlife, or human health or safety.

**"Hazardous Material Claim"** means any Environmental Regulatory Action or any Claim made or threatened by any third party against the Indemnified Parties, the State Lands Indemnified Parties, or the Premises relating to contribution, cost recovery compensation, Losses resulting from the Release or Exacerbation of any Hazardous Materials, including Losses based in common law. Hazardous Material Claims include Investigation and Remediation costs, fines, natural resource damages, damages for decrease in value of the Master Lease Premises or other Port property, the loss or restriction of the use or any amenity of the Premises or other Port property, Attorneys' Fees and Costs and fees and costs of consultants and experts.

**"Hazardous Material Condition"** means the Release or Exacerbation, or threatened Release or Exacerbation, of Hazardous Materials in, on, or under the Master Lease Premises or emanating from the Master Lease Premises, or from off-site conditions or events affecting receptors or the environmental condition in, on, over, or under, the Master Lease Premises, or from any vehicles Tenant, or its Agents and Invitees use in, on, or under the Master Lease Premises during the Master Lease Term or the DDA Term.

**"HCAO"** means the Health Care Accountability Ordinance (Administrative Code chapter 12Q).

**"HDPE"** means high-density polyethylene pipe.

**"Historic Tax Credits"** means tax credits available under the Historic Preservation Tax Incentives Program jointly administered by the National Park Service and the State Historic Preservation Offices, codified at Tax Code section 47.

**"horizontal development"** means the Horizontal Improvements and Associated Public Benefits that Developer is obligated to provide under the DDA.

**"Horizontal Development Costs"** means Hard Costs and Soft Costs.

**"Horizontal Development Costs" excludes:**

- (1) *any claimed costs that are not verified by proof of payment;*
- (2) *the portion of any cost that is commercially unreasonable as of the date incurred;*
- (3) *costs that are not eligible for reimbursement under the Financing Plan;*
- (4) *costs that would be Horizontal Development Costs but for exclusions under a Transaction Document, such as costs described in DDA § 2.6(c)(iii) (Second Garage Adjustments); and*
- (5) *costs of Vertical Improvements built by Vertical Developers except an Affordable Housing Shortfall or an Affordable Housing Subsidy funded by Developer Capital or a Port Capital Advance.*

**"Horizontal Improvements"** means public capital facilities and infrastructure built or installed at or near the Project Site, including Site Preparation, Shoreline Improvements, Public Space, Public ROWs, Utility Infrastructure, Deferred Infrastructure to the extent permitted, and work in Third Street to comply with Developer Mitigation Measure M-TR-6.

**"Horizontal Improvements" excludes Vertical Improvements.**

**"household"** means one or more related or unrelated individuals who live together in a Residential Unit as their primary dwelling.

**"Household Size"** means the total number of bedrooms in a Residential Unit plus one, used solely for the purpose of establishing rents and not for limiting occupancy.

**"Housing Data Table"** means a table that Developer submits in the report with detailed information about Developer's progress toward meeting inclusionary housing requirements for the Project.

**"Housing Plan"** means DDA Exh B5, which sets forth certain requirements for Residential Parcels, including inclusionary housing requirements.

**"HP"** is an acronym for the Housing Plan.

**"HSH"** is an acronym for the Department of Homelessness and Supportive Housing.

**"HUD"** is an acronym for the United States Department of Housing and Urban Development.

**"ICA"** is an acronym for "interagency cooperation agreement" that is used to refer to the Memorandum of Understanding regarding Interagency Cooperation.

**"IFD"** is an acronym for Infrastructure Financing District No. 2 (Port of San Francisco), formed by Ordinance No. 27-16.

**"IFD Administrative Costs"** means the reasonable costs that the Port, as IFD Agent, actually incurs and pays for:

- (i) *services of any Indenture Trustee (including its counsel) for any Bonds that the IFD issues;*
- (ii) *marketing or remarketing Bonds; and*

- (iii) all other administrative services provided by the Port, the IFD Administrator, the City, the Special Fund Trustee, and third-party professionals necessary for the Port to perform its duties under the DDA, Tax Allocation MOU, Special Fund Administration Agreement, and Appendix I, including the City's costs under section 53369.5 of the IFD Law.

**"IFD Administrator"** means the Port's tax increment consultant or any other person that the Port Director designates to administer Tax Increment from Project Area I in accordance with Appendix I.

**"IFD Agent"** means the Port, acting on behalf of the IFD with respect to Project Area I, as authorized by Board of Supervisors Resolution No. 45-18.

**"IFD Financing Plan"** means the infrastructure financing plan for the IFD, including all appendices implementing project-specific infrastructure financing plans for project areas.

**"IFD Formation Proceedings"** means Ordinance No. 34-18 and Board of Supervisors Resolution No. 45-18.

**"IFD Law"** means California law governing infrastructure financing districts, beginning at Government Code section 53395.

**"IFD Termination Date"** means, for each Sub-Project Area in Project Area I; date on which all allocations to the IFD of Tax Increment from that Sub-Project Area, and the IFD's authority to repay indebtedness with Tax Increment from that Sub-Project Area end under Appendix I in accordance with IFD Law, which is no later than 45 years after the IFD actually receives \$100,000 in Tax Increment from that Sub-Project Area.

**"Impact Fee"** means any fee that the City imposes as a condition of approval to mitigate the impacts of increased demand for public services, facilities, or housing caused by the development project that may or may not be an impact fee governed by the Mitigation Fee Act, including a fee paid in lieu of complying with an Exaction.

*"Impact Fee" excludes any Administrative Fee, school district fee, or federal, state, or regional fee, or tax, special tax, or assessment.*

**"Implementing Manuals"** is defined in the Housing Plan.

**"Improvement Bonds"** means bonds that Developer will be required to provide to Public Works in connection with the subdivision of the Project Site.

**"Improvement Plan Submittal"** means each packet of Improvement Plans submitted for review and approval under the DDA or ICA § 4.6(d) (Plan Submittals).

**"Improvement Plans"** means design and engineering plans for the Infrastructure Plan and MUPs, usually consisting principally of the Basis of Design Report, the First Submittal, the Second Submittal, and the Permit Set, submitted for Horizontal Improvements for purposes of the DDA or ICA § 4.6 (Processing Improvement Plans and Issuance of Construction Permits).

**"Improvements"** means all physical changes required or permitted to be made to the Project Site under the DDA, including Horizontal Improvements and Vertical Improvements.

**"Inclusionary Milestone"** means the Inclusionary Obligation under each approved Phase Application allowing for the development of Residential Units in compliance with HP § 3.1 (Inclusionary Housing Requirements).

**"Inclusionary Obligation"** means Developer's obligation to deliver 40% of all Residential Units as Inclusionary Units in compliance with HP § 3.1 (Inclusionary Housing Requirements).

**"Inclusionary Unit"** means a Residential Unit, which may be a TAY Unit, that is available to and occupied by households with incomes between 45% and 150% of AMI and rented at an

Affordable Housing Cost to the eligible household in accordance with **HP § 3.1** (Inclusionary Housing Requirements).

**"Income Certification"** means the form that a potential tenant must submit to determine income eligibility for an Inclusionary Unit under the Housing Plan.

**"Income Recertification"** means the form that an existing tenant must submit to determine continuing income eligibility for an Inclusionary Unit under the Housing Plan.

**"incomplete"** when used in reference to a Phase means that the Phase Improvements are not substantially complete.

**"Indemnified Party"** means, as applicable, a City Party, a Developer Party, or a Vertical Developer Party with the right to indemnification by an Indemnitor under the specific Transaction Document in which the term is used.

**"indemnify"** means reimburse, indemnify, defend, and hold harmless.

**"Indemnitor"** means, as applicable, a City Party, a Developer Party, or a Vertical Developer Party with an indemnification obligation under the specific Transaction Document in which the term is used.

**"Indenture"** means one or more indentures, trust agreements, fiscal agent agreements, financing agreements, or other documents containing the terms of any Bonds secured by a pledge of and to be paid by any combination of Mello-Roos Taxes and Allocated Tax Increment.

**"Indenture Trustee"** means the fiscal agent or trustee under an Indenture.

**"Index"** means the Construction Cost Index, San Francisco, published monthly by *Engineering News-Record* or a replacement index as agreed by the Parties.

**"Indexed"** means the product of a cost estimate or actual cost that Developer or a Vertical Developer established for any Component of Utility Infrastructure or Deferred Infrastructure in a Prior Phase, multiplied by the percentage of any increase between the Index published in the month in which the earlier actual cost or cost estimate was established and the Index published in the month in which Developer or Vertical Developer claims a Material Cost Increase.

**"individual"** when referring to a person means a human.

**"Infrastructure Acceptance & Maintenance MOA"** means a memorandum of understanding that Public Works, SFMTA, SFPUC, and the Port will negotiate in accordance with **clause (ii) of ICA § 4.6(b)** (Design Standards, Exceptions and Design Modifications) to identify the applicable Acquiring Agencies and other entities that will be responsible for maintenance of and liability for completed Horizontal Improvements, maintenance funding sources, anticipated exceptions and design modifications to the Subdivision Code, and any special inspection and training procedures required for City-standard and Non-Standard Infrastructure.

**"Infrastructure Plan"** means **DDA Exh B1**, which contains descriptions and Improvement Plans for Horizontal Improvements proposed to be built or installed at or to serve the Project Site, and each Master Utility Plan when approved by the applicable City Agency.

**"Initial Benchmarks"** means the following:

- (i) the Port's issuance of an SOP Compliance Determination for Phase 1 and a TCO for the Parcel D2 Garage; and
- (ii) the Port's determination, in consultation with the Director of Public Works, that the Shared Public Way is substantially complete.

**"Initial Transfer"** means a Transfer meeting the requirements of **DDA § 6.2(b)** (Initial Transfer).

**"Initial Transferee"** means the Transferee in an Initial Transfer under **DDA § 6.2(b)** (Initial Transfer).

**"Initial Transferee Affiliate"** means an Affiliate of the Initial Transferee.

**"Insolvency"** means a person's financial condition that results in any of the following:

- (i) a receiver is appointed for some or all of the person's assets;
- (ii) the person files a petition for bankruptcy or makes a general assignment for the benefit of its creditors;
- (iii) a court issues a writ of execution or attachment or any similar process is issued or levied against any of the person's property or assets; or
- (iv) any other action is taken by or against the person under any bankruptcy, reorganization, moratorium or other debtor relief law.

**"Inspection Request"** means Developer's written request that the Chief Harbor Engineer arrange for the applicable Acquiring Agency to inspect Horizontal Improvements or Components for compliance with Project Requirements and City Laws.

**"Insurance Requirements"** means the obligations of Developer to obtain and maintain insurance coverage in accordance with **ML art. 20** (Insurance), which is incorporated into **DDA art. 15** (Insurance) and **PL art. 20** (Insurance).

**"Interest Cost Limitation"** means the statutory limit on the amount of interest that an infrastructure financing district is authorized to pay to acquire infrastructure under IFD Law section 53395.2, specifically, "a rate of interest not to exceed the bond buyer index rate on the day that the agreement to repay is entered into."

**"Interest on DRP Advances"** means annual rate of 4.48%, compounded quarterly until paid, the rate at which interest accrues on the principal amount of Promissory Note.

**"Interest Rate"** means an annual rate equal to the greater of:

- (i) ten %; and
- (ii) the Prime Rate in effect on the date payment is due, plus 5%.

**"Interested Person"** means a person that acquires a property interest or security interest in any portion of the Project Site by Parcel Lease, Assignment and Assumption Agreement, or Encumbrance.

**"Interested Pier 48 User"** means a creditworthy person with a demonstrated interest in a long-term lease of a significant portion of a rehabilitated Pier 48, identified under **DDA § 7.10** (Pier 48).

**"investigate"** when used with reference to Hazardous Materials means any activity undertaken to determine and characterize the nature and extent of Hazardous Materials that have been, are being, or are threatened to be released in, on, under, or about any portion of the Project Site, other Port property, or the environment, including:

- (i) preparation and publication of site history;
- (ii) sampling, and monitoring reports;
- (iii) performing equipment and facility testing such as testing the integrity of secondary containment and above and underground tanks; and
- (iv) sampling and analysis of environmental conditions before, during, and after remediation begins and continuing until the appropriate Environmental

Regulatory Agency has issued a no further action letter, lifted a clean-up order, or taken similar action.

**"Invitee"** means a person's clients, customers, invitees, patrons, guests, members, licensees, permittees, concessionaires, vendors, suppliers, assignees, tenants and subtenants, any other person whose rights arise through them, and members of the general public present on any property under the person's possession and control.

**"IPM Ordinance"** means Environment Code chapter 3.

**"IPM Plan"** means the Port's integrated pest management plan.

**"IPM Policy"** means the policy described in Environment Code chapter 3.

**"IRS"** is an acronym for the Internal Revenue Service.

**"ISCOTT"** is an acronym for the Interdepartmental Staff Committee on Traffic and Transportation.

**"issue"** when used in reference to any form of indebtedness in the Financing Plan means to complete all actions required to obtain the proceeds for authorized uses under the Financing Plan.

**"Janitorial Services"** means maintenance and cleaning services on property owned or leased by the City.

**"JHEF"** is an acronym for Jobs/Housing Equivalency Fee.

**"Job Readiness Training Funds"** means the portion of the CBO Funds that will be used to fund community-based organizations that provide services to provide job-readiness training for individuals within at-risk populations.

**"Jobs/Housing Equivalency Fee"** mean the Impact Fee payable under DA § 5.4(b) (Impact Fees and Exactions) in lieu of the Jobs/Housing Linkage Fee.

**"Jobs/Housing Linkage Fee"** means the Impact Fee due under Planning Code sections 413.1-413.11.

**"Joint Appraisal"** means the appraisal report that a Qualified Appraiser delivers to both Parties under DDA § 7.4(g) (Joint Appraisal).

**"Land Use Plan"** means DDA Exh A3, which consists of a map showing Developer's proposed land uses and intensity of vertical development at the Project Site.

**"Land Use Table"** means the chart in DDA § 1.5 (Land Use Table) with principal land uses for Development Parcels, as anticipated on the Reference Date.

**"Land Value Indicator"** means dollar value per usable square foot within the building envelope assumed in the Final EIR for each Option Parcel for its proposed use, initially based on the Land Use Plan attached to the DDA and the residual land values in the Summary Proforma attached to the Financing Plan on the Reference Date, which will be used solely for a Down Market Test under DDA art. 4 (Excusable Delay).

**"Large Event"** means an event occupying at least 30%, but no more than 70%, of the footprint of a Public Space.

**"Later Approval"** means any Regulatory Approval required after the Reference Date to implement the Project or to begin Site Preparation or construction of Improvements.

**"Later Phase"** means the Phase following a Current Phase.

**"law"** means any of the following validly in effect as of the Reference Date and as later amended, supplemented, clarified, corrected, or replaced during the DDA Term, whether or not within the present contemplation of the Parties:

- (i) federal, state, regional, or local constitution, charter, law, statute, ordinance, code, rule of common law, resolution, rule, regulation, standard, directive, requirement, proclamation, order, decree, and policy (including the Waterfront Plan and Port and City construction requirements);
- (ii) judicial order, injunction, writ, or other decision interpreting any law;
- (iii) requirement or condition of any Regulatory Approval of a Regulatory Agency affecting any portion of the Project Site; and
- (iv) recorded covenants, conditions, or restrictions affecting any portion of the Project Site.

**"LBE"** is an acronym for a local business enterprise as defined in Administrative Code chapter 14B.

**"Lead Parcel"** means any Option Parcel in Phase 1 that will be subject to a Prepaid Lease under DDA § 7.1(c) (Lead Parcels).

**"Lease Year"** is defined in the Master Lease.

**"Leasing Costs"** means customary and usual costs incurred by a landlord with respect to leased property, such as costs associated with tenant defaults, costs of collection, vacancies, assignments and subleases, estoppel certificates, nondisturbance agreements, and Insolvency.

**"Legislature"** means the legislative branch of the State.

**"Lender"** means:

- (i) a financial institution that makes a loan to a Borrower to finance Project-related costs, secured by a real property interest in the Project Site; and
- (ii) an entity that makes a loan to a Borrower to finance Project-related costs, secured by a Security Interest.

**"LIBOR"** means the London Interbank Offered Rate, based on a 365-day year, for interbank loans of U.S. dollars with one-year maturities, published as daily rates for USD ICE LIBOR by the Intercontinental Exchange Administration Limited, or a replacement rate for short-term lending mutually acceptable to the Parties.

**"Local Hiring Agreement"** means WDP Att B.

**"Local Hiring Policy for Construction"** means the hiring policies for San Francisco described in Administrative Code chapter 82.

**"LOSP"** means the San Francisco Local Operating Subsidy Program, which is an anticipated source of funding for operating TAY Units.

**"Loss"** when used in reference to a Claim means any personal injury, property damage, or other loss, liability, actual damages, compensation, contribution, cost recovery, lien, obligation, interest, injury, penalty, fine, action, judgment, award, or costs (including reasonable attorneys' fees), or reasonable costs to satisfy a final judgment of any kind, known or unknown, contingent or otherwise, except to the extent specified in the DDA.

**"Loss Security"** means Adequate Security that Developer is required to provide to secure the Developer Reimbursement Obligations for each Phase.

**"Loss Security End Date"** means the date that is the earliest to occur of the following:

- (i) issuance of a SOP Compliance Determination for all Phase Improvements within a Phase;
- (ii) the expiration or termination of the DDA with respect to Developer; or
- (iii) the expiration or termination of all of Developer's rights to develop or submit Phase Submittal applications to develop any portion of the Project Site.

**"Maintained Facilities"** means Port- or City-owned Horizontal Improvements, Outfall Infrastructure, and Relocated Outfall Infrastructure in or serving the Mission Rock CFD that will be listed in the RMA.

**"Maintenance and Repair Security"** means Adequate Security that the Port may require under DDA § 14.9 (e) (Maintenance as Soft Costs).

**"Management Control"** means that a person has major decision rights regarding the Phase Submittal and Phase Budget for a Phase under an operating or similar agreement.

**"Map Act"** means the Subdivision Map Act of California (Cal. Gov't Code §§ 66410-66499.37).

**"Marketing and Operations Plan"** means, for the Inclusionary Units in a Residential Project, the Vertical Developer's MOHCD-approved:

- (i) marketing plan, including any preferences under Administrative Code chapter 47;
- (ii) rental charges conforming to the Housing Plan; and
- (iii) eligibility and income qualifications of renters, together with any supplemental information required under the Implementing Manuals.

**"Market-Rate Unit"** means a Residential Unit in a Residential Parcel that is not subject to any affordability requirements under the Housing Plan.

**"Mass Grading Plan"** means a Permit Set of Improvement Plans for Site Preparation.

**"Mass Participation Sports Event"** mean a participatory sporting event such as a marathon, running race, or bicycle race or tour with anticipated participation by 150 or more participants.

**"Master Association"** means the entity that Developer will form to administer the Master CC&Rs.

**"Master CC&Rs"** means conditions, covenants, and restrictions relating to Ongoing Maintenance Obligations to be recorded against all Taxable Parcels in the Project Site.

**"Master Lease"** means an interim lease for a portion of the Project Site in the form of DDA Exh B10 that allows Developer to take possession of the Master Lease Premises and construct Horizontal Improvements approved under the DDA and to conduct other uses as provided therein.

**"Master Lease Premises"** means the area subject to the Master Lease at the time in question.

**"Master Lease Tenant"** means the tenant under the Master Lease at the time in question.

**"Master Marketing Fee"** means a private fee collected from each Vertical Developer in the amount and in accordance with the terms set forth in Vertical DDA § 12.16 (Master Marketing Fee).

**"Master Utilities Plan"** means a set of plans and detailed specifications for the following Utility Infrastructure, which will be deemed incorporated into the Infrastructure Plan when approved:

- (i) low-pressure water system;

- (ii) non-potable water system;
- (iii) auxiliary water supply system;
- (iv) grading, sanitary sewer, and separate stormwater systems;
- (v) dry utilities joint trench; and
- (vi) electrical system.

**"Material Breach"** means the occurrence of any of the events described in **DDA art. 11** (Material Breaches and Termination).

**"Material Change"** means any circumstance that would create a conflict between a Change in City Law and the Project Approvals that is described in **DA § 5.3(b)** (Circumstances Causing Conflict).

**"Material Cost Increase"** means a material increase in the hard costs or soft costs of any Horizontal Improvement or Vertical Improvement, as applicable.

**"Material Modification"** means an amendment to a Transaction Document that would materially increase an Acquiring Agency's costs of ownership or impair the operations of Horizontal Improvements, or that would materially decrease the benefits to the Port or the City, as determined by the Port Director under **DDA § 3.8(c)** (Amendments).

**"Maximum Special Tax Rate"** means the highest rate at which any category of Mello-Roos Taxes is authorized to be levied on a Taxable Parcel under the RMA.

**"McEnerney Act"** means the Destroyed Land Records Relief Law (Cal. Code of Civ. Proc. §§ 751.01-751.28).

**"McEnerney action"** means a lawsuit under the McEnerney Act.

**"meal"** means "prepared food" as defined in Environment Code section 1602(l).

**"Medium Event"** means an event occupying more than 10,000 square feet, but less than 30% of the footprint of a Public Space.

**"Medium Event Day"** means an Event Day during which a Medium Event is held.

**"Mello-Roos Bond Proceeds"** means proceeds of Mello-Roos Bonds, including Early Mello-Roos Bonds and Mello-Roos-only Bonds if appropriate in the context, issued under CFD Law that are available for disbursement after funding the costs of issuance, capitalized interest, reserves, and any other amounts specified in the applicable Indenture.

**"Mello-Roos Bonds"** means one or more series of taxable or tax-exempt bonds, including refunding bonds, or any other debt (as defined in CFD Law) that the City issues for the Facilities CFD, secured by a pledge of Development Special Taxes or Allocated Tax Increment, or both, for any purpose authorized under Governing Law and Policy.

**"Mello-Roos Bonds Debt Service Requirement"** means the debt service due on Mello-Roos Bonds in any City Fiscal Year before the next expected Receipt Date of Mello-Roos Taxes.

**"Mello-Roos Improvement Fund"** means the funds or accounts, however denominated, that an Indenture Trustee establishes to hold, administer, and disburse Mello-Roos Bond Proceeds to be used to finance Horizontal Development Costs, Shoreline Protection Facilities, or for any other purpose authorized under the Indenture.

**"Mello-Roos-only Bonds"** means one or more series of taxable or tax-exempt bonds, including refunding bonds, or any other debt (as defined in CFD Law) that the City issues for the Facilities CFD, secured solely by a pledge of Development Special Taxes for any purpose authorized under Governing Law and Policy.

**"Mello-Roos Taxes"** means special taxes that the City levies in a City Fiscal Year on Taxable Parcels in the Mission Rock CFD in accordance with the RMA, including delinquent special taxes collected at any time by payment or through foreclosure.

**"Memorandum of Understanding (Levy and Allocation of Taxes)"** means an interagency agreement between the City, through the Controller and the Treasurer-Tax Collector, and the Port, establishing procedures for levying Mello-Roos Taxes, allocating Mello-Roos Taxes to the Mission Rock CFD, and allocating Tax Increment to the IFD, and related matters, as authorized by Port Commission Resolution No. 18-09 and the MOU Resolution under Charter section B7.340.

**"Memorandum of Understanding regarding Interagency Cooperation"** means an interagency agreement between the City, through the Mayor, the Controller, the City Administrator, and the Director of Public Works, with the Consents of SFMTA and SFPUC, and the Port, establishing procedures for interagency cooperation in City Agency review of Improvement Plans, inspection of Horizontal Improvements, and related matters, as authorized by Port Commission Resolution No. 18-07 and the MOU Resolution and Board of Supervisors Resolution No. 44-18 under Charter section B7.340.

**"Minimum Affordable Percentage"** is defined in HP § 2.1 (Development Program).

**"Minimum Developer Return"** means the sum of \$40.5 million payable to Developer under the conditions specified in FP § 2.5(c) (Developer Return).

**"Minimum JHEF"** means the amount of the Jobs/Housing Equivalency Fee assigned to each Development Parcel under FP § 2.8 (Jobs/Housing Equivalency Fee), which the Parties may agree to adjust through the Phase Budget approval process.

**"Minimum Phase Return"** means the minimum amount of Developer Return that the Port is obligated to pay to Developer under the conditions specified in FP § 2.5(c) (Developer Return).

**"Minimum Price"** means the minimum price that the Port will accept in a Public Offering for an Option Parcel under DDA § 7.8 (Public Offering Procedures).

**"Mission Rock"** means the master-planned portion of the Project and the Project Site that will encompass SWL 337 and the expansion of China Basin Park.

**"Mission Rock CFD"** is a term used to refer to the CFD for the Project, if and when formed.

**"Mission Rock On-Site Event Management Plan"** means the plan required under ICA § 4.11(c).

**"Mission Rock Parks Plan"** means Port regulations and policies to govern the management, programming, and operations of Public Spaces in the Project Site.

**"Mission Rock Square Garage"** means the underground parking garage that the Parties may agree to include in the Project under DDA § 2.6 (Mission Rock Square Garage).

**"Mission Rock Square Garage Parcel"** means the underground air parcel that will be created under Mission Rock Square on conditions described in DDA § 2.6 (Mission Rock Square Garage).

**"Mitigation Fee Act"** means California Government Code sections 66000-66025.

**"Mitigation Measure"** means any measure identified in the MMRP required to minimize or eliminate material adverse environmental impacts of the Project and any additional measures necessary to mitigate adverse environmental impacts that are identified through the CEQA process for any Later Approval.

**"MMRP"** is an acronym for the Mitigation Monitoring and Reporting Program adopted for the Project.

"MOD" is an acronym for the Mayor's Office of Disability.

"MOHCD" is an acronym for the Mayor's Office of Housing and Community Development.

"MOU Resolution" is a term used to refer to Board of Supervisors Resolution No. 45-18, approving under Charter section B7.340 the Tax Allocation MOU and the Port's designation as the City's agent for the term of the Tax Allocation MOU for:

- (i) the Mission Rock CFD;
- (i) Project Area I;
- (ii) the administration of Mello-Roos Taxes and any proceeds of Bonds secured by Mello-Roos Taxes; and
- (iii) the administration of Allocated Tax Increment and any proceeds of Bonds secured by Tax Increment.

"MUNI" means the municipal public transit systems operated by SFMTA.

"Municipal Code" means, collectively, the Charter and ordinances adopted by the Board of Supervisors and by San Francisco voters through initiatives.

"MUP" is an acronym for Master Utilities Plan.

"Net Consideration" means the consideration that a Selling Member receives for the Transfer of its interests in Developer after deducting the appropriate transaction costs associated with the Transfer, subject to confirmation by the Port.

"net present value" means the difference between the present value of the future cash flows from an investment, calculated by discounting the future cash flows at the required rate of return, and the amount of investment.

"Net Proceeds" means a Vertical Developer's proceeds from a transfer of any part of its interest in an Option Parcel or from refinancing any indebtedness associated with its acquisition or construction costs after deducting the costs of acquisition, financing, development, and capital improvement for the parcel.

*"Net Proceeds" excludes any loan proceeds that are designated for additional investment and actually are invested in capital improvement of an Option Parcel.*

"Net Transfer Proceeds" means the proceeds of a Vertical Developer's transfer of its rights under a Vertical DDA as described in Vertical DDA § 19.1 (Before Close of Escrow).

"Net Worth" when used in reference to a Transfer means the equity of an entity's owners (e.g., equity interest of shareholders of a corporation or members of a limited liability company) calculated in accordance with GAAP or the income tax basis of accounting consistently applied.

"Net Worth Requirement" when used in reference to a Transfer means, for each Transfer of one or more Transferred Phases in which Phase Improvements are not complete, either:

- (i) a Net Worth of at least \$27.5 million, increased automatically by 10% on each fifth anniversary of the Reference Date for the remainder of the DDA Term, unless otherwise approved by the Port Director; or
- (ii) written evidence satisfactory to the Port Director that a person directly or indirectly holding Significant Ownership in Developer after the Transfer would have a legally binding obligation to fund Developer's anticipated Developer Capital requirements in amounts sufficient to satisfy the Developer Construction Obligations for the Phase.

**"Neutral Appraisal"** means any appraisal report that the Parties jointly obtain under DDA § 7.5(b) (Dispute Resolution Procedures).

**"New Hazardous Material"** means a Hazardous Material that is not a Pre-existing Hazardous Material.

**"Non-Standard Infrastructure"** means, collectively, Horizontal Improvements that are not built to City standard specifications, and includes the Structured Street Superstructure, interfaces with existing perimeter streets, Shared Public Ways, and the use of HDPE throughout the Project Site.

**"nontrust revenues"** means the Port's revenues from Development Parcels from which the public trust use restrictions have been lifted temporarily under SB 815 and Project-based revenues outside of the Port Harbor Fund that are available for the Project, such as Mello-Roos Taxes, Tax Increment, and proceeds of Bonds secured by either or both, credits that may be applied to offset any portion of Impact Fees or Exactions that would otherwise be due, and proceeds of general obligation bonds.

**"notice"** means a written notification, demand, request for information or consent, or response to a request delivered in accordance with App ¶ A.5 (Notices) and any other requirements specified in a Transaction Document.

**"Noticed Party"** means the Party receiving a notice.

**"Noticing Party"** means the Party delivering a notice to the Noticed Party.

**"Nutritional Standards Requirements"** means the food and beverage nutritional standards and calorie labeling requirements set forth in Administrative Code section 4.9-1(c).

**"Obligor"** means the person contractually obligated to perform under any form of Adequate Security provided under DDA art. 16 (Security for Project Activities).

**"Obligor Net Worth"** when used in reference to Adequate Security means the issuer's net worth (shareholder equity for a corporation or member equity for a limited liability company), calculated in accordance with GAAP or the income tax basis of accounting consistently applied.

**"Obligor Net Worth Requirement"** when used in reference to Adequate Security means an Obligor with a Net Worth greater than the Secured Amount, and in no event less than \$27.5 million, subject to an automatic increase of 10% on the fifth anniversary of the Reference Date and every succeeding fifth year during the DDA Term or as otherwise approved by the Port Director.

**"OEWD"** is an acronym for the Office of Economic and Workforce Development.

**"OEWD Funds"** means the portion of the Workforce Job Readiness and Training Funds that will be used to fund OEWD programs that train economically disadvantaged adults, workers, and local residents in the fields of construction, end use operations, and hospitality.

**"Office Account"** means the segregated account within the Special Tax Fund that the Port establishes with the Special Fund Trustee to receive, administer, and disburse Office Special Taxes.

**"Office Development Authorization"** means Planning Commission approval of an application for a large office allocation.

**"Office Special Taxes"** means Facilities Special Taxes that the City levies in a City Fiscal Year, in addition to Development Special Taxes, on Taxable Parcels in Commercial Parcels in the Mission Rock CFD under the RMA, in an amount per square foot intended to be equivalent to 0.25% of the parcel's Baseline Assessed Value as projected for the CFD Formation Proceedings.

**"Official Records"** means the documents and maps that the recorder's office function of the Assessor-Recorder's Office records and maintains.

**"OLSE"** is an acronym for the Office of Labor Standards Enforcement of the San Francisco Department of Administrative Services.

**"Ongoing Maintenance Costs"** means maintenance and capital repair costs of Maintained Facilities that will be paid by Services Special Taxes, Master Association fees, or Developer Capital (under **DDA § 14.9(e)** (Maintenance as Soft Costs) until Services Special Taxes are available), including:

- (i) landscaping and irrigation systems and other equipment directly related to maintaining and replacing landscaped areas and water features;
- (ii) maintenance and replacement as needed of parks, public access areas, and streets, right-of-ways, shared public ways, and sidewalks (including street cleaning and paving);
- (iii) lighting, rest rooms, trash receptacles, park benches, planting containers, picnic tables, and other furniture and fixtures;
- (iv) insurance;
- (v) replacement reserves; and
- (vi) Port and City personnel, administrative, and overhead costs related to maintenance or to contracting for and managing third-party maintenance.

**"On-site"** for purposes of Administrative Code chapter 21C means the site of a Special Event, which may occur in enclosed space or open space or both, and includes:

- (i) open space within 150 feet of primary site if the primary site is enclosed space; and
- (ii) public right-of-ways; including a street or sidewalk, as to which a City permit (ISCOTT or Port) has been issued in connection with the Special Event.

**"Operations Training Resources Funds"** means any portion of the OEWD Funds that OEWD chooses to use to support programs that provide end-use-operations job-training programs for economically disadvantaged adults, including individuals designated as a targeted population by the San Francisco Workforce Development Board, as an individual who is, or is at risk of, relying upon, or returning to, public assistance, including unemployment benefits, formerly incarcerated, homeless, veterans, out-of-school youth, pregnant or parenting teens, youth in the juvenile justice or foster care systems, people with disabilities, limited English populations, dislocated workers, or residents of public housing.

**"Option"** means development rights granted to Developer for Option Parcels under the DDA.

**"Option Notice"** means Developer's notice to the Port, delivered in accordance with **App ¶ A.5** (Notices) and **DDA § 18.1** (Notices), that Developer will exercise its Option for an Option Parcel at its Fair Market Value.

**"Option Parcel"** means a Development Parcel that is subject to the appraisal process for Option Parcels under **DDA art. 7** (Parcel Leases), including Lead Parcels.

**"Optioned Parcel"** means an Option Parcel for which Developer has exercised its Option under **DDA § 7.1** (Developer Option).

**"Other Acquiring Agency"** means an Acquiring Agency other than the Port.

**"Other City Agency"** means a City Agency other than the Port.

**"Other City Costs"** means costs that Other City Agencies incur to perform their obligations under the ICA, the Development Agreement, and the Tax Allocation MOU to implement or defend actions arising from the Project, including staff costs determined on a time and materials basis, third-party consultant fees, attorneys' fees, and costs to administer the Mission Rock CFD and the IFD to the extent not paid by Public Financing Sources.

**"Other City Costs" excludes Port Costs, Administrative Fees, Impact Fees, and Exactions.**

**"Other City Parties"** means the City, acting by and through the Mayor, the Board of Supervisors, the Controller, the City Administrator, the Director of Public Works, the San Francisco Municipal Transportation Agency, the San Francisco Fire Department, and the San Francisco Public Utilities Commission.

**"Other City Requirements"** means ordinances and policies described in **DDA Exh A6** and **DA Exh E** and approved plans to implement City and Port ordinances and policies, including those attached to the DDA at **DDA Exh Tab E**.

**"Other Regulatory Approval"** means a Regulatory Approval given by a Regulatory Agency that is not a City Agency.

**"Outfall Infrastructure"** means 30-inch and 12-inch outfalls and related Improvements for stormwater drainage existing on the Project Site on the Reference Date.

**"Outside Date"** means the last date by which Developer must perform identified obligations for the Project, as specified in the Schedule of Performance, or for a Phase, as specified in the Phase Schedule.

**"ownership change"** means any change in the direct or indirect ownership of Developer.

**"paid for in whole or part out of public funds"** is defined in and subject to exclusions and further conditions under California Labor Code sections 1720-1720.6.

**"Parcel D2 Garage"** means the Garage on Parcel D2 Garage that is shown in Developer's Phasing Plan on the Reference Date.

**"Parcel DRP"** means the amount of the Development Rights Payment that is paid for a specific Option Parcel.

**"Parcel Increment Amount"** means the amount of Tax Increment collected in the current City Fiscal Year from an Assessed Parcel in the Mission Rock CFD, as shown in the Payment Report.

**"Parcel Lease"** means a contract in the form of **DDA Exh D2** by which the Port will convey a leasehold interest in an Option Parcel to a Vertical Developer.

**"Parcel Lease Option"** means the Port's right to elect to convey an Option Parcel in a Current Phase by a Prepaid Lease under **FP § 3.7** (Parcel Leases).

**"Parcel Lease Quitclaim Deed"** means a deed in the form attached as an exhibit to each Parcel Lease by which the applicable Vertical Developer disavows any right or interest in an Option Parcel subject to a Parcel lease, which the Port may record in the Official Records after the Parcel Lease expires or is terminated.

**"Parks Plan"** means a plan for managing events at Public Spaces consistent with **DDA § 12.5(a)** (Approval of Parks Plan) and **DA § 5.9** (Parks Plan) that the Port Commission will adopt before or in conjunction with its consideration of the Schematic Design Application for Public Spaces in Phase 1 of the Project.

**"Participating Parcel"** means a Development Parcel on which a Vertical Developer has Closed Escrow on a Parcel Lease either:

- (i) before the Participating Parcel Termination Date; or
- (ii) after the Participating Parcel Termination Date, but only if the parcel was subject to a Vertical DDA before the Participating Parcel Termination Date.

**"Participating Parcel Termination Date"** means the Termination Date as to any part of the DDA as a result of the Port's election to terminate following a Material Breach by either:

- (i) Developer under **DDA art. 11** (Material Breaches and Termination); or
- (ii) a Transferee under **DDA art. 11** (Material Breaches and Termination) if Developer has failed to exercise its cure rights under **DDA § 6.8(d)** (Developer's Cure Rights).

**"Participation Agreement"** means the agreement in **FP Exh D** under which the Port and Developer will share Participation Revenue or any replacement agreement executed under **FP § 1.8(b)** (Separate Agreement by Request).

**"Participation Period"** means the period beginning with the City Fiscal Year immediately after Participation Revenue exceeds the Participation Threshold for two consecutive City Fiscal Years and continuing until the earliest of:

- (i) 75 years; or
- (ii) when the last Parcel Lease at the Project Site expires; or
- (iii) the occurrence of the Participating Parcel Termination Date for all Parcel Leases.

**"Participation Revenue"** means the portion of Annual Ground Rent equal to the sum of:

- (i) Annual Ground Rent and Percentage Rent paid to the Port from all Participating Parcels; and
- (ii) Shoreline Taxes collected in a City Fiscal Year from all Participating Parcels outside of Zone 1.

*"Participation Revenue" excludes the Port's revenues from capital events described in PL Exh D, § 3.6 (Port Participation in Sale Proceeds) and § 3.7 (Port Participation in Refinancing Proceeds).*

**"Participation Threshold"** means \$2.5 million, unescalated.

**"Party"** means the private or public persons named in the preamble to a Transaction Document.

**"Party Appraisal"** means a Developer Appraisal or a Port Appraisal that either Party obtains under **DDA § 7.5(b)** (Dispute Resolution Procedures).

**"Payment Agent"** means an Escrow Agent, an Indenture Trustee, or the Special Fund Trustee that will disburse funds for Approved Payments as directed by the Port Finance Director.

**"Payment Report"** means a report prepared by the Treasurer-Tax Collector in each City Fiscal Year that:

- (i) specifies the Parcel Increment Amount for each Assessed Parcel; and
- (ii) identifies each Current Parcel in the Mission Rock CFD.

**"Payment Request"** means Developer's written request to the Port in the form of **AA Exh C** for payment under the Acquisition Agreement.

**"PBC"** is an acronym for the Port Building Code.

**"PCBs"** is an acronym for polychlorinated biphenyls.

**"PCO"** is an acronym for a parking control officer, generally an employee of SFMTA who directs traffic.

**"Peak Developer Equity"** means the highest balance of Developer Capital outstanding over the course of a Phase.

**"Pending Project"** means any of the following:

- (i) an office development project for which a large office allocation application (50,000 gsf or more) has been submitted to the Planning Department that has not received an Office Development Authorization by the end of the Allocation Period;
- (ii) additional office space located in a structure owned or otherwise under the jurisdiction of the State, the United States, or any state, federal, or regional Regulatory Agency that is exempt from Planning Code section 321 or section 322; and
- (iii) a new office development project for 50,000 gsf or more on Port land outside of the Project Site for which the Port has entered into a vertical disposition and development agreement, ground lease, or purchase and sale agreement, but has not issued a building permit by the end of the Allocation Period.

**"Percentage Rent"** means additional rent that will be payable under Parcel Leases, determined as specified in DDA § 7.6(b) (Percentage Rent) or through a Public Offering process.

**"per diem wages"** is defined in California Labor Code section 1773.1.

**"Permit Set"** is a subset of Improvement Plans described in ICA § 4.6(c) (Plan Submittals).

**"Permitted Change"** means any of the following:

- (i) a Transfer, including an Initial Transfer, that occurs before Developer achieves the Initial Benchmarks, if a Giants Affiliate holds Significant Ownership and Management Control of all Phases of the Project after the Transfer closes; and
- (ii) a Transfer that occurs after Developer achieves the Initial Benchmarks, if a Giants Affiliate or an Initial Transferee Affiliate holds Significant Ownership and Management Control of the Current Phase and Later Phases after the Transfer closes.

**"Permitted Exceptions"** means exceptions to title with respect to any Option Parcel that Developer accepts under ML § 1.2(a) (Permitted Encumbrances).

**"Permitting Agency"** means the Chief Harbor Engineer or the Director of Public Works, as applicable, in relation to either's role in issuing construction permits and determining whether Improvements are complete in compliance with applicable Project Requirements and City Laws.

**"person"** means any individual, corporation (including any business trust), limited liability entity, partnership, trust, joint venture, or any other entity or association, or governmental or other political subdivision or agency.

**"personal injury"** means any physical or emotional trauma or injury to or death of any individual.

**"Phase"** means one of the integrated stages of horizontal and vertical development for the Project Site as shown in the Phasing Plan.

**"Phase 1"** means the first Phase of development under the Phasing Plan.

**"Phase 1 Overage"** means the amount by which the Horizontal Development Costs of Phase 1 exceed the amounts provided therefor, (including contingency), in the Phase Budget in effect at Commencement of Construction.

- "Phase Account"** means a bookkeeping account for any Phase as described in **FP § 9.1(a)** (Phase Accounts).
- "Phase Approval"** means the Port Director's approval of a Phase Submittal and the Port Commission's approval of a Phase Budget.
- "Phase Approval Date"** means the date of the public hearing at which the Port Commission adopts a resolution approving a Phase Submittal.
- "Phase Area"** means the Development Parcels and other land in the Project Site that are to be developed in a Phase.
- "Phase Audit"** means Developer's final financial report for a Phase as described in **FP § 9.3(a)** (Phase Audit).
- "Phase Audit Date"** means the due date for each Phase Audit under **FP § 9.3(a)** (Phase Audit).
- "Phase Budget"** means the proforma for a Phase, based on the Summary Proforma attached to the Financing Plan and included in each Phase Submittal under **DDA art. 3** (Phase Approval), as approved by the Port Commission. An inserted number will mean the Phase Budget for the Phase given the inserted number (e.g., "Phase 1 Budget").
- "Phase Closing Date"** means the date on which the Port accepts a Phase Audit under **FP § 9.3(a)** (Phase Audit).
- "Phase Completion Certificate"** means a document that the Port Executive Director will deliver to Developer after all Phase Improvements have been completed that, when recorded, will release the Phase Area from the lien of the DDA.
- "Phase Construction Schedule"** means Developer's projected schedule for construction of Phase Improvements and related spending in any Phase Budget.
- "Phase Final Map"** means a Final Map for a Phase Area.
- "Phase Improvements"** means Horizontal Improvements that are to be constructed in a Phase and includes Site Preparation and any Deferred Infrastructure that Vertical Developers will build in accordance with the DDA.
- "Phase Proforma"** means the Proforma that was included in a Phase Submittal, as approved and updated under **DDA art. 3** (Phase Approval).
- "Phase Quarterly Report"** means a quarterly financial report on a Current Phase as described in **FP § 9.1(b)** (Phase Quarterly Reports).
- "Phase Quitclaim Deed"** means a deed in the form attached as an exhibit to the Master Lease by which Developer disavows any real property interest in any part of a Phase Area under the Master Lease, which the Port will be entitled to record in the Official Records after issuing an SOP Compliance Determination for the Phase.
- "Phase Schedule"** means the schedule of performance for a Phase established in the Phase Approval process, including the Estimated Construction Duration and Estimated Construction Schedule.
- "Phase Security"** means Adequate Security for any specific Phase that meets the requirements of **DDA art. 16** (Security for Project Activities).
- "Phase Submittal"** means Developer's application for Port Commission approval of a proposed Phase under **DDA art. 3** (Phase Approval).
- "Phase Transferee"** means a person to which Developer Transfers its Developer Construction Obligations and related rights for a Phase in accordance with **DDA art. 6** (Transfers).

**"Phasing Goals"** means measures and objectives described in **DDA § 2.4** (Phasing Goals) to which the Parties have agreed to achieve their mutual goal of an economically feasible project that balances competing policy interests.

**"Phasing Plan"** means **DDA Exh B1**, which shows the order of development of the Phases and the Development Parcels in each Phase Area, subject to revision under **DDA art. 3** (Phase Approval).

**"PIA"** is an acronym for any Public Improvement Agreement that Developer is required to execute under the Subdivision Code.

**"Pier 48"** means a 212,500 square-foot facility located in the Embarcadero Historic District with two main pier sheds, Shed A and Shed B, connected by a connector shed, Shed C, at the east end of the pier, containing collectively 181,200 square feet of enclosed warehouse space and a 31,300 square-foot valley between the Shed A and Shed B.

**"Pier 48 Development Lease"** means a long-term lease of Pier 48 that would implement a Pier 48 Rehabilitation Plan.

**"Pier 48 Lease"** means the interim lease for Pier 48 as authorized by Port Commission Resolution No. 18-10 and Board of Supervisors Resolution No. 43-18.

**"Pier 48 Negotiation Notice"** means a Party's notice to the other Party that the Noticing Party seeks to enter into exclusive negotiations based on a proposed Pier 48 Rehabilitation Plan.

**"Pier 48 Rehabilitation Plan"** means a plan for the historic rehabilitation of Pier 48 in accordance with the Secretary's Standards under a long-term ground lease, developed under **DDA § 7.10** (Pier 48).

**"Pier 48 Solicitation"** means a request for proposals or similar public solicitation of proposals for the rehabilitation of Pier 48 in accordance with a Pier 48 Rehabilitation Plan under a Pier 48 Development Lease.

**"Pile Driver Training Funds"** means any portion of the OEWD Funds that OEWD chooses to use to support the development and implementation of a pile-driving training program for disadvantaged workers and local residents, including individuals who have formerly been incarcerated or are experiencing homelessness.

**"PIT Threshold"** means the amount of possessory interest taxes levied against the Master Lease Premises that are deemed to be attributable to the use of the the Master Lease Premises for parking and Special Events, as determined under **FP § 8.1(b)** (PIT Threshold). Possessory interest taxes levied against the Master Lease Premises in excess of the PIT Threshold are considered Soft Costs.

**"PL"** is an acronym for the form of Parcel Lease.

**"Planning"** means the San Francisco Planning Commission, acting by motion or resolution or by delegation of its authority to the Planning Department and the Planning Director.

**"Planning Commission"** means the San Francisco Planning Commission.

**"Planning Department"** means staff of the City's Planning Department.

**"Planning Director"** means the City's Director of Planning.

**"Pledge Agreement"** means a pledge of Allocated Tax Increment to Mello-Roos Bonds under a pledge agreement between the Port, as IFD Agent, CFD Agent, or both, and the Indenture Trustee for the Mello-Roos Bonds.

**"Pledged Tax Increment"** means Allocated Tax Increment that is actually pledged as security for an issue of Mello-Roos Bonds.

**"Port"** means the San Francisco Port Commission, acting by resolution or by delegation of its authority to the Port Director and other Port staff.

**"Port Application"** means a Port request for Planning assistance in the Port's review of any submittal under the Design Controls or schematic design application under Section 249.80.

**"Port Audit"** means a financial review performed by a CPA on behalf of the Port under FP § 9.4(a) (Port Audit).

**"Port Balance"** means, on the date of determination, the sum of any unreimbursed Port Capital Advances for Horizontal Development Costs and related accrued and unpaid Port Return.

**"Port Balance"** *excludes any DRP Advances and related Interest on DRP Advances.*

**"Port Capital"** means Port funds and other assets that are not subject to restrictions or limitations under the Financing Plan.

**"Port Capital Advance"** means a Port loan of Port Capital to the Mission Rock CFD to pay for Horizontal Development Costs.

**"Port Capital Plan"** means the Port's most recent 10-year capital plan as adopted or amended by the Board of Supervisors under Administrative Code sections 3.20-3.21.

**"Port Capital Schedule"** means an accounting schedule that the Port maintains that shows the inflows and outflows for all Phases of the Project individually and in the aggregate for the Port Balance.

**"Port Consent"** means the Consent to Development Agreement signed by the Port Director as authorized by Port Commission Resolution No. 18-06.

**"Port Costs"** means costs that the Port incurs to perform its obligations to Developer and otherwise implement the DDA and the Master Lease, including:

- (i) staff costs on a time and materials basis;
- (ii) costs paid to the Port's attorneys, consultants, and other professionals; and
- (iii) costs to administer the Mission Rock CFD and the IFD to the extent not paid by Public Financing Sources.

**"Port Costs"** *excludes Other City Costs, DRP Advances, and Port Capital Advances.*

**"Port Director"** means the Port Director of the Port.

**"Port Facilities"** means Public Spaces and other Horizontal Improvements that the Port will own when accepted.

**"Port Finance Director"** means the Port's Deputy Director, Finance and Administration.

**"Port FY Budget"** means the City Fiscal Year budget that the Port will submit to the Board of Supervisors annually for approval specifying the amount of Public Financing Sources, DRP Payments, and Port Capital that the Port expects to use to satisfy the Port's payment obligations to Developer under the Financing Plan.

**"Port Harbor Fund"** means the harbor trust fund that the Port must maintain in compliance with section 4 of the Burton Act, SB 815, the Agreement Regarding the Transfer of the Port of San Francisco from the State of California to the City and County of San Francisco, and Charter section B6.406.

**"Port IFD Guidelines"** means the *Guidelines for the Establishment and Use of an Infrastructure Financing District with Project Areas on Land under the Jurisdiction of the San Francisco*

*Port Commission*, adopted April 23, 2013, by Board of Supervisors Resolution No. 123-13.

**"Port Market Rate Return"** means Port Return accruing at the annual rate of 10%, compounded quarterly, on unreimbursed Port Capital Advances for Horizontal Development Costs (excluding Alternative Return Costs).

**"Port Master Indenture"** means the Indenture of Trust dated as of February 1, 2010, as supplemented by a First Supplement to Indenture of Trust, dated as of February 1, 2010, a Second Supplement to Indenture of Trust, dated as of May 1, 2014, and as further supplemented from time to time.

**"Port Quarterly Report"** means any of the Port's periodic reports to Developer on Port Costs, Other City Costs, and Project Payment Sources under FP § 9.2(d) (Reporting).

**"Port Return"** means one or more of Additional Port Return, Allowed Port Return, Port Market Rate Return, and Alternative Port Return, as applicable.

**"Port Revenue Bonds"** means Port Commission of the City and County of San Francisco Revenue Bonds Series 2010A (Non-AMT Tax-Exempt), Series 2010B (Taxable), Series 2014A (Non-AMT Tax-Exempt), and Series 2014B (Taxable).

**"Port Share"** means 10% of the Sale Profit from any Triggering Event.

**"Port Title Covenant"** means the Port's agreement not to create or consent to any new exceptions to title with respect to any Option Parcel other than the Permitted Exceptions.

**"portwide"** means any matter relating to all real property under the jurisdiction of the Port Commission.

**"Potential Development Special Tax Levy"** means the amount of the Development Special Tax levy on each Assessed Parcel:

- (i) after applying capitalized interest, delinquency collections, and other sources in the RMA; and
- (ii) before applying the Development Special Tax Credit.

**"Pre-existing Hazardous Materials"** means any Hazardous Material existing in, on, or under the Master Lease Premises on the Reference Date and identified in Master Lease Exhibit Q (List of Pre-Existing Hazardous Materials) documents or the Environmental Covenants.

**"pre-filing conference"** means one or more optional meetings under Subdivision Code section 1320 between the County Surveyor and a person proposing to subdivide land in San Francisco to discuss preliminary Subdivision Maps and other subdivision matters before the subdivider formally submits a Subdivision Map application.

**"Preliminary Entitlement Cost Statement"** means Developer's preliminary estimate of Entitlement Costs through December 31, 2017, attached as FP Sch 2.

**"Premises"** means the area subject to a Parcel Lease.

**"Prepaid Lease"** means a Parcel Lease under which a Vertical Developer makes a Parcel DRP in the amount of an Option Parcel's Fair Market Value to the Port at the Close of Escrow.

**"prepared food"** as defined in Environment Code section 1602(l) means food or beverages prepared within San Francisco for individual customers or consumers in a form commonly understood to be a breakfast, lunch, or dinner.

**"pre-Phase conference"** means one or more meetings between Developer and the Port under DDA § 3.1 (Presubmittal Activities) to discuss Phase Improvements before Developer submits a Phase Submittal.

**"preservative-treated wood containing arsenic"** means wood treated with a preservative that contains arsenic, elemental arsenic, or an arsenic copper combination, including chromated copper arsenate preservative, ammoniac copper zinc arsenate preservative, or ammoniacal copper arsenate preservative.

**"Prevailing Rate of Wages" and "Prevailing Wage"** mean:

- (i) the highest general prevailing rate of wage plus per diem wages and wages paid for overtime and holiday work paid in private employment in the City for the various crafts and kinds of labor employed in the construction of Improvements; or
- (ii) the rate of compensation determined under Administrative Code chapter 21C.7 for the categories of employment specified in Administrative Code chapter 21C.

**"Prime Rate"** means the base rate on corporate loans posted by at least 75% of the nation's 30 largest banks, as published by the *Wall Street Journal*, or if no longer published, a mutually acceptable third-party rate and publication.

**"Principal Payment Date"** means:

- (i) before Bonds are issued, September 1 of each year; and
- (ii) after Bonds are issued, the date on which principal or sinking fund payments are due in each year until the Bonds are defeased.

**"Prior Phase"** means the Phase for which Developer obtained Phase Approval before any Current Phase.

**"Priority Facilities CFD Administrative Costs"** means Facilities CFD Administrative Costs permitted to be paid first from Facilities Special Taxes under the Financing Plan.

**"Priority Services CFD Administrative Costs"** means Services CFD Administrative Costs permitted to be paid first from Services CFD Special Taxes under the Financing Plan.

**"Private Event"** means an event in a Public Space that is not open to the general public and may or may not require the purchase of a ticket for entry.

**"Product Type"** when used in reference to a Development Parcel to be developed for residential use means a building with a typical unit count and building typology that allows for general assumptions regarding construction costs, which may differ between Residential Units for rent and for sale. Examples of Product Types are townhomes, low-rise (heights to 70 feet), and mid-rise (71- to 90-foot heights).

**"Proforma"** means the Parties' financial projections for Horizontal Improvements.

**"Project"** means the horizontal and vertical development of the Project Site in accordance with the Project Requirements and the Port's interim lease of Pier 48 to Developer.

**"Project Approval"** means a Regulatory Approval that is necessary to entitle the Project and grant Developer a vested right to begin Site Preparation and construction of Horizontal Improvements, including:

- (i) Regulatory Approvals listed in **DA Exh C** granted by City Agencies and any Transaction Documents approved by those Regulatory Approvals;
- (ii) Regulatory Approvals by BCDC, State Lands, and DTSC by the Entitlement Date; and
- (iii) Later Approvals.

**"Project Area I"** means the area within the IFD covering the Project Site formed by Ordinance No. 34-18.

**"Project Assignment"** means a contractual assignment of all of Developer's rights under a consulting contract with a Project Consultant, including any rights to use the Project Consultant's work product.

**"Project Consultant"** means any architect, engineer, or other consultant that provided Project Materials for the Project.

**"Project Coordinator"** means a third-party consultant that the City may engage to assist in the implementation of the ICA under ICA § 6.2 (Role of Horizontal Improvements Project Coordinator).

**"Project Materials"** means all public, final, and material studies, applications, reports, permits, plans, drawings, and similar work product, including Structural Materials, prepared by Developer's Project Consultants.

**"Project Office Allowance"** means the amount of office use allowed in each Phase of the Project under DDA Exh A4.

**"Project Payment Obligation"** means the Port's contractual obligation on terms described in the Financing Plan to pay each Party's Capital Costs.

**"Project Payment Sources"** means separately or collectively, DRP Advances, Public Financing Sources, and Port Capital Advances, each applied as specified in the Financing Plan.

**"Project Requirements"** means all of the following:

- (i) Developer's obligations for the Project under the DDA, the Development Agreement, and the other Transaction Documents, including the Developer Construction Obligations and the Developer Reimbursement Obligations;
- (ii) Vertical Developers' obligations for the Project under their respective Parcel Leases;
- (iii) construction of all Improvements in a competent manner, without material defects, in strict accordance with approved Improvement Plans and all Regulatory Requirements; and
- (iv) diligent compliance with the Outside Dates specified in the Schedule of Performance, each Phase Schedule, or each Parcel Lease as applicable.

**"Project Site"** means the area consisting of SWL 337, 3.53 acres of Terry A. Francois Boulevard from Third Street to Mission Rock Street, and ½ acre to the east of Terry A. Francois Boulevard between Pier 48 and Pier 50, as more particularly described in DDA Exh A1.

**"Project Street Design Criteria"** means design criteria for the Structured Street System or any alternative proposal to be developed in accordance with clause (ii) of ICA § 4.3(a) (Development of Design Criteria).

**"Project Tax Revenues"** means Mello-Roos Taxes and Allocated Tax Increment that are deposited in the Special Tax Fund and the Tax Increment Fund of the Special Fund Trust Account in accordance with the Financing Plan.

**"Projected AGI"** means Adjusted Gross Income projected in a proforma for a Vertical Improvement in the year in which building rents are projected to reach stabilization and used to establish Percentage Rent under DDA § 7.6(b) (Percentage Rent).

**"Promissory Note"** means a promissory note in the form of FP Exh B, under which the Mission Rock CFD promises to repay DRP Advances to the Port with interest on DRP Advances, as described in FP § 7.2(b) (Promissory Note).

**"Promotional Activation"** means an activity in a Public Space that draws attention to one or more particular products that are not being sold onsite as part of the activation.

**"proof of payment"** means a cancelled check, a wire confirmation demonstrating delivery of a direct transfer of funds, an executed and acknowledged unconditional lien release, statements or invoices marked "paid" by the billing person, or other reasonably satisfactory evidence verifying that the person seeking payment actually incurred the claimed costs.

**"property contracts"** is defined in Administrative Code sections 12B.2 and 12C.2.

**"property damage"** means any injury to or impairment or destruction of any property or other pecuniary interest of any person, including goodwill, intellectual property, and business and leasing opportunities.

**"Prop M Constraint"** means that the total square footage available for Pending Projects exceeds the then-current total square footage available for large office allocation projects at the end of an Allocation Period.

**"Prop M Draw Down"** means the amount of office space on the Project Site to be applied against the City's annual maximum limit under Planning Code section 321(a)(1), based on approved building drawings, which the Port will report to Planning when the Port issues a site or building permit for an office development project in the Project Site.

**"Proposition D"** and **"Prop D"** mean the *Mission Rock Affordable Housing, Parks, Jobs, and Historic Preservation Initiative*, which San Francisco voters approved on November 3, 2015.

**"Proposition M"** and **"Prop M"** mean, for purposes of the DDA, Planning Code sections 320-325, approved by voters as the *Planning Initiative* in November 1986.

**"proprietary public offering"** means a public solicitation for offers to enter into a Parcel Lease with the Port for any Development Parcel that is not subject to the procedures in DDA § 7.8 (Public Offering Procedures).

**"pro rata"** means the proportion that each part of a sum bears to the sum.

**"Prospective Breach"** means an event that with notice and the passage of time would be a Material Breach if not timely cured.

**"Prospective Default"** means an event that with notice and the passage of time would be an Event of Default if not timely cured.

**"PTR Package"** is a term used to refer to a preliminary title report, together with copies of all documents relating to title exceptions shown in the preliminary title report.

**"Public Art"** means installations at the Project Site under **Design Controls § 2.11**.

**"Public Benefit Cost"** means the following:

- (i) funds paid to SFMTA for specified transit costs in compliance with Mitigation Measures M-TR-4.1 and M-TR-4.4; and
- (ii) Developer's contribution to the City's system-wide AWSS improvements proposed in the vicinity of the Project Site, as set forth in **clause (iii) of DA § 5.4(c)** (AWSS).

**"Public Benefit Cost"** excludes any cost incurred by a Vertical Developer.

**"Public Financing Sources"** means, separately or collectively, any source of financing for the Project under CFD Law and IFD Law, including Mello-Roos Taxes, Allocated Tax Increment, and net proceeds of Bonds.

**"Public Health and Safety Exception"** is defined in **DA § 5.6(a)** (City's Exceptions).

**"public improvement"** when used in reference to the requirement to pay prevailing wages means:

- (i) a public work or improvement as defined in Administrative Code section 6.1, including:
  - (1) construction work performed on real property that the City leases to another person or that the City sells for a project that includes the construction, expansion, or rehabilitation of three or more residential units; and
  - (2) all projects for "public works" as defined in California Labor Code section 1720 for which prevailing wages must be paid under section 1782, as required under Administrative Code section 6.22(e) and section 23.61(b); and
- (ii) all contracts described in Administrative Code chapter 21C.

**"Public Improvement Agreement"** means an agreement between the City and Developer with respect to requirements under the Subdivision Code.

**"Public Offering"** means a public solicitation for offers for the right to enter into a Parcel Lease with the Port for an Option Parcel, using procedures described in **DDA § 7.8** (Public Offering Procedures).

**"Public Off-Street Parking Lot, Garage, or Automobile Storage Facility"** means any off-street parking lot, garage, or automobile storage facility that is operated on property owned or leased by the City.

**"Public ROWs"** means Horizontal Improvements consisting of public streets, sidewalks, shared public ways, bicycle lanes, and other paths of travel, associated landscaping and furnishings, and related amenities.

**"Public Space"** means any Horizontal Improvement for public enjoyment, such as a public park, public recreational facility, public access, open space, and other similar public amenities, which may be a rooftop facility.

**"Public Space Parcel"** means any parcel designated in the Land Use Plan and Infrastructure Plan for Public Space.

**"Public Space Plans"** means a Permit Set of Improvement Plans for one or more Public Spaces.

**"public trust"** means, collectively, the common law public trust for commerce, navigation, and fisheries and the statutory trust created by the Burton Act.

**"Public Trust Study"** means the study determining land uses and the location of those uses within Seawall Lot 337 and Piers 48 and 50, analyzing the need to retain public trust uses within Seawall Lot 337, and reserving areas along the northern and eastern sides of Seawall Lot 337 to accommodate needed public trust uses, which the Port Commission approved by Resolution No. and forwarded to State Lands for its approval of the conclusions of the study in compliance with Section 6(b) of SB 815.

**"public work"** is defined in and subject to exclusions and further conditions under California Labor Code sections 1720-1720.6.

**"Public Works"** means the San Francisco Public Works Department.

**"Put Exercise Period"** means the period ending 15 days after the Port delivers a Put Notice to Developer under **DDA § 7.3** (Parcel Put).

**"Put Notice"** means a notice that the Port delivers to Developer under **DDA § 7.2** (Phase 1 Put Option) or **DDA § 7.3** (Parcel Put) in accordance with **App ¶ A.5** (Notices).

- "Put Option"** means the Port's rights under DDA § 7.2 (Phase 1 Put Option) and DDA § 7.3 (Parcel Put).
- "Put Parcel"** means any Option Parcel that is subject to the Port's Put Notice.
- "Qualified Appraiser"** means an appraiser who meets the qualifications of DDA § 7.4(c) (Appraiser Qualifications).
- "Qualified Appraiser Pool"** means the list of Qualified Appraisers attached as DDA Sch 2 and as revised from time to time under DDA § 7.4(d) (Qualified Appraiser Pool).
- "Qualified Bidder"** means a bidder at a Public Offering that meets the qualifications of DDA § 7.8(c) (Bidder Prequalification).
- "Qualified Broker"** means a licensed real estate broker with at least five years' experience in the San Francisco Bay Area market for commercial or multifamily residential sales and leasing, or both.
- "Qualified Broker Pool"** means the list of Qualified Brokers attached as DDA Sch 3 and as revised from time to time under DDA § 7.8(a) (Broker-Managed Offerings).
- "Rate and Method of Apportionment"** means a Financing Document that the Board of Supervisors will adopt by the CFD Formation Proceedings that prescribes how and at what rates the City will levy and collect Mello-Roos Taxes from taxpayers in the Mission Rock CFD.
- "RCRA"** is an acronym for the Resource Conservation and Recovery Act (42 U.S.C. §§ 6901 et seq.).
- "Reassessment"** means a proceeding that a taxpayer initiates under the California Revenue and Taxation Code that results in a Value Reduction of a Taxable Parcel in the Project Site.
- "Receipt Date"** means each date that the Port, as agent of the IFD, the Facilities CFD, or the Services CFD, receives Allocated Tax Increment or Mello-Roos Taxes from the City by the deposit of funds into the Special Fund Trust Account.
- "Reduced Return"** means interest at the annual rate of 12%, compounded quarterly.
- "Reduced Value Parcel"** means a Taxable Parcel that Developer or a Vertical Developer Affiliate holds by Parcel Lease on which the assessed value is lowered through a Value Reduction.
- "Reference Date"** means the date as of which the DDA, the Financing Plan, and the Master Lease are fully executed, as set forth on the cover sheet of the DDA.
- "Regulatory Action"** means any inquiry, investigation, enforcement, agreement, order, consent decree, compromise, or other administrative or judicial action that is threatened, instituted, filed, or completed by a Regulatory Agency in relation to any alleged failure to comply with or direct violation of any Regulatory Approval or any laws, including those relating to access.
- "Regulatory Agency"** means a City Agency or federal, state, or regional body, administrative agency, commission, court, or other governmental or quasi-governmental organization with jurisdiction over any aspect of the Project or the Project Site.
- "Regulatory Approval"** means any motion, resolution, ordinance, permit, approval, license, registration, permit, utility services agreement, Final Map, or other action, agreement, or entitlement required or issued by any Regulatory Agency with jurisdiction over any portion of the Project Site, as finally approved.

**"Regulatory Requirement"** means an obligation imposed by law or policy on development, occupancy, and use of the Project Site, subject to the Port's authority as trustee under the Burton Act as amended by SB 815, including:

- (i) the conditions of Project Approvals and other Regulatory Approvals;
- (ii) Existing City Laws applied to the Project by the Development Agreement and Project Approvals;
- (iii) Changes in Law to the extent permitted under the DDA and the Development Agreement;
- (iv) current Impact Fees and Exactions and any new or changed Impact Fees and Exactions to the extent permitted under the Development Agreement; and
- (v) Environmental Laws, the SUD, the Design Controls, the Waterfront Plan, and the Other City Requirements.

**"related"** when used to refer to an event in a Public Space that is subject to the Event Management Plan means an installation that has a relationship to other installations for the event, such as a concert event with a stage and areas for seating, concessions, and merchandise.

**"Related Third Party"** means any Agent of Developer or Master Lease Tenant.

**"Release"** when used in reference to Hazardous Materials means any accidental, actual, imminent or intentional spilling, introduction, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the air, soil gas, land, surface water, groundwater, or environment (including the abandonment or discarding of barrels, containers, and other closed receptacles containing any Hazardous Material).

**"Relocated Outfall Infrastructure"** means the Outfall Infrastructure from the date that Developer begins work to modify any portion of the Outfall Infrastructure until the modified Outfall Infrastructure is accepted by the Acquiring Agency.

**"remediate"** when used in reference to Hazardous Materials means to clean up, abate, contain, treat, stabilize, monitor, remediate, remedy, remove, or otherwise control Hazardous Materials, or to restore the affected area to the standard required by the applicable Environmental Regulatory Agency under applicable Environmental Laws and any additional Port requirements.

**"Rent"** means Annual Ground Rent, Percentage Rent, and other amounts Master Lease Tenant must pay to the Port under the Master Lease.

**"Rent Conversion Factor"** means the formula specified in a Final Appraisal that is used to convert Fair Market Value to Annual Ground Rent.

**"Rental Market-Rate Unit"** means a Residential Unit that is not subject to affordability requirements under the Housing Plan.

**"Requested Change Notice"** means Developer's notice to the Port requesting changes to the Phasing Plan under DDA § 3.8 (Changes to Project).

**"Required Element"** means a substantial and material element of any Improvement Plans requiring Port approval under DDA art. 12 (Improvement Plans).

**"Requisition"** means a payment request for Horizontal Development Costs (other than for Horizontal Improvements) and Developer Return in the form of FP Exh E that Developer submits to the Port for payment under FP § 2.2(c) (Entitlement Sum Statement and Requisitions).

**"Reserve Rent"** means a minimum of \$3.5 million in Annual Ground Rent.

**"Reserve Rent Allocation"** means the portion of Reserve Rent allocated to each Option Parcel, as determined in the Phase 1 approval process.

**"Residential Developer"** means a Vertical Developer of Residential Parcel identified through the Phase Approval process.

**"Residential Parcel"** means:

- (i) a Development Parcel that is designated in Section 249.80 primarily for Residential Mixed Use; or
- (ii) a Flex Parcel designated for primarily Residential Mixed Use in a Phase Approval.

**"Residential Project"** means a Development Parcel that is developed for residential use.

**"Residential Unit"** means a dwelling on a developed Residential Parcel that is designed for residential occupancy for 32 consecutive days or more and includes any apartment unit, condominium or cooperative unit, senior unit, assisted living unit, hotel or motel room, or other structure containing toilet facilities that is designed and available under applicable law for use and occupancy as a residence by one household.

**"restaurant"** is defined in Health Code section 451(s) and includes any coffee shop, cocktail lounge, sandwich stand, public school cafeteria, in-plant or employee eating establishment, and any other eating establishment that gives or offers for sale food that requires no further preparation to the public, guests, patrons, or employees for consumption on or off the premises.

**"Retail Program"** means Developer's plans to develop and retain a ground-floor mix that activates the Project Site and includes a full menu of public trust uses for the area, including public parks, walkways, roadways, restaurants, hotels, maritime training, sales and rentals, waterfront visitor serving retail services, and other trust uses.

**"RMA"** is an acronym for the Rate and Method of Apportionment.

**"Sale Profit"** means any amount by which the Net Consideration received by the Selling Member exceeds the Selling Member's Share.

**"saltwater immersion"** means a pressure-treated wood that is used for construction purposes or facilities that are partially or totally immersed in saltwater.

**"San Francisco Bay Area"** means the area consisting of the counties of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano, and Sonoma.

**"SB 815"** means Senate Bill 815 (stats. 2007, ch. 660), as amended by AB 2797.

**"SB 815 Baseline Revenue"** means the average annual revenues that the Port received from Seawall Lot 337 during the period between January 1, 2003, and December 31, 2007, adjusted for inflation.

**"Schedule of Performance"** means DDA Exh B2, which specifies certain performance time frames for the Project, including dates by which Developer is required to submit a Phase Submittal for each Phase and to begin construction of Phase Improvements, as supplemented by dates for completion of Phase Improvements established in the Phase Approval process.

**"Schematic Design Application"** means a complete set of Improvement Plans for a Public Space Parcel that includes the following information:

- (i) a written narrative describing the overall conceptual design, including the park program, design elements, and facilities provided for each Public Space Parcel;

- (ii) an illustrative site plan to scale showing: (1) conceptual circulation systems (vehicular, bicycle and pedestrian), including parking; (2) conceptual grading and drainage; (3) generalized locations of active and passive recreational areas, park elements, and facilities; (4) generalized locations and conceptual layout for landscaping and hardscape areas, including tree plantings and any stormwater treatment areas; and (5) generalized locations for furnishings, lighting, public art, signage, comfort facilities, stairs, ramps, and railings;
- (iii) illustrative sections and perspectives representative of the overall conceptual design, including key relationships between programmatic areas, design elements, and defining park features and facilities;
- (iv) image boards showing proposed concepts, detailed studies, and precedents for site furnishings, paving materials, site architectural elements, lighting, public art, signage, comfort facilities, stairs, ramps, and railings, tree species and alternate species, and species palette concepts for major landscaping areas; and
- (v) A public realm signage program, if not previously approved, setting forth signage standards and guidelines for Public Spaces and along public realm streets and rights-of-way identified in **Design Controls, Chapters 2 through 4**.

**"Second Garage Adjustments"** means adjustments to the Transaction Documents and ancillary documents that will be required if the Parties agree that Developer will build both the Parcel D2 Garage and the Mission Rock Square Garage under **DDA § 2.6** (Mission Rock Square Garage).

**"Second Garage Notice"** means Developer's notice of its proposal to include the development of the Mission Rock Square Garage as part of the Project under **DDA § 2.6** (Mission Rock Square Garage).

**"Second Submittal"** means the packet of Improvement Plans submitted for review and approval after the First Submittal and before the Permit Set.

**"Second Tranche Bonds"** means Bonds that are payable from Allocated Tax Increment, the proceeds of which are used to finance the Shoreline Protection Project.

**"Secretary's Standards"** means the *Secretary of the Interior's Standards for the Treatment of Historic Properties*, as supplemented by the *Port of San Francisco Historic Preservation Review Guidelines for Pier and Bulkhead Wharf Substructures*.

**"Section 1.126"** means Campaign and Governmental Conduct Code section 1.126.

**"Section 169"** means Planning Code sections 169-169.6 describing the City's TDM Program.

**"Section 249.80"** means Planning Code section 249.80, including Table 249.80-MR1 and Figure 249.80-MR1, and related zoning maps, which established the Mission Rock Special Use District and provide zoning and other land use limitations for the Project Site and procedures for design review of Vertical Improvements.

**"Section 291"** means Planning Code section 291, which establishes height limits and parcel boundaries for the Project Site and procedures for their modification.

**"Section 409"** means Planning Code section 409, which establishes citywide reporting requirements, timing, and mechanisms for annual adjustments to Impact Fees.

**"Section 415"** means Planning Code section 415.

**"Secured Amount"** means, unless specified otherwise in the DDA, the sum of the following amounts for each Phase:

- (i) 100% of a secured obligation to pay money; and

- (ii) 100% of the estimated cost to complete any secured Horizontal Improvements as evidenced by Developer's construction contracts or estimates, subject to both the Port Director's and Developer's prior approval, less the face amount of security for the same obligations provided to the City under Subdivision Code section 1370.

**"Security Interest"** means a security instrument encumbering a personal property interest in or held by a Borrower to secure the Borrower's repayment obligation to a Lender.

**"self-perform"** means a contractor's use of its own labor force, instead of subcontractors, to perform certain areas of construction.

**"Selling Member"** means:

- (i) any Giants Affiliate that holds a direct or indirect interest in Developer on the Reference Date;
- (ii) any Giants Affiliate that holds a direct or indirect interest in Developer before a Transfer that occurs before Developer has achieved the Initial Benchmarks; and
- (iii) any of the above in which a Significant Change has occurred.

**"Selling Member's Share"** means the portion of Base Value that is attributable to the interest being Transferred by the Selling Member.

**"Services Account"** means a segregated account that the Port will establish with the Special Fund Trustee to receive, hold, and administer Services Special Taxes.

**"Services CFD"** means the part of the Mission Rock CFD formed to finance Ongoing Maintenance.

**"Services CFD Administrative Costs"** means CFD Administrative Costs payable from Services Special Taxes.

**"Services Special Taxes"** means Mello-Roos Taxes that the City levies in a City Fiscal Year on Taxable Parcels in the Mission Rock CFD to fund Ongoing Maintenance Costs.

**"SFFD"** is an acronym for the San Francisco Fire Department.

**"SFMTA"** is an acronym for the San Francisco Municipal Transportation Agency.

**"SFMTA Consent"** means either:

- (i) the Consent of the San Francisco Municipal Transportation Agency that is attached to and incorporated in the DA; or
- (ii) the Consent of the San Francisco Municipal Transportation Agency that is attached to and incorporated in the ICA.

**"SFPD"** is an acronym for the San Francisco Police Department.

**"SFPUC"** is an acronym for the San Francisco Public Utilities Commission.

**"SFPUC Consent"** means either:

- (i) the Consent of the Public Utilities Commission of the City and County of San Francisco that is attached to and incorporated in the DA; or
- (ii) the Consent of the Public Utilities Commission of the City and County of San Francisco that is attached to and incorporated in the ICA.

**"SFPUC Utility Infrastructure"** means Utility Infrastructure that will be under SFPUC jurisdiction after City acceptance.

**"SFPUC Power"** means the SFPUC operating division that provides electrical service to ratepayers in accordance with the Charter.

**"SFPUC Wastewater Capacity Charge"** means the wastewater capacity charge and connection charge imposed by the SFPUC.

**"SFPUC Water Capacity Charge"** means the water capacity charge and connection charge imposed by the SFPUC.

**"Shared Public Street"** generally means a curbless Public ROW that emphasizes pedestrian traffic over vehicular traffic, as described in the City's Better Streets Plan and, for the Project, in the Infrastructure Plan and Design Controls.

**"Shared Public Way"** means the curbless street described in **Design Controls § 4.2** to be constructed as part of the Project.

**"Shoreline Adaption Studies"** means analysis and planning to characterize the preferred and Shoreline Protection Project and alternatives, including pre-entitlement planning and design work, environmental review, negotiation, and Regulatory Approvals related to the Shoreline Protection Facilities.

**"Shoreline Improvements"** means Horizontal Improvements such as stone columns, pilings, secant walls, other structures to stabilize the seawall or shoreline, and all other permitted uses of the Waterfront Set-Aside.

**"Shoreline Protection Account"** means the segregated account in the Special Tax Fund that the Port will establish with the Special Fund Trustee to receive, hold, and administer Zone 2 Shoreline Special Taxes under the Special Fund Administration Agreement.

**"Shoreline Protection Facilities"** means future Improvements to protect the San Francisco Bay shoreline from perils associated with seismic events and climate change, including sea level rise and floods, and other public improvements approved by the Port Commission and the Board of Supervisors.

**"Shoreline Protection Project"** means planning, design, and construction of Shoreline Protection Facilities.

**"Shoreline Special Taxes"** means the portion of Facilities Special Taxes that the City levies in a City Fiscal Year to fund Horizontal Development Costs (Zone 1 only), Shoreline Adaption Studies, the Shoreline Protection Project after environmental review is complete, and other authorized costs, an amount per square foot intended to be equivalent to 0.10% of the parcel's initial Baseline Assessed Value as projected for the CFD Formation Proceedings.

**"Show"** means any live act, play, review, pantomime, scene, music, song, dance act, song and dance act, or poetry recitation provided in front of a live audience or recorded for the purpose of later presentation.

**"Show" excludes** an event where a person solely plays pre-recorded music or pre-recorded performances so long as no other live performance is provided.

**"Significant Adverse Change"** means that Developer or a Transferee no longer meets the Net Worth Requirement.

**"Significant Change"** means any change in the ownership of Developer that is not a Permitted Change.

**"Significant Change" excludes** any Excluded Transfer.

**"Significant Change to Obligor"** means that an Obligor no longer meets the Obligor Net Worth Requirement.

**"significant environmental impact"** means a significant effect on the environment as defined in CEQA section 21068 and CEQA Guidelines section 15382.

**"Significant Ownership"** means that a person holds a direct or indirect ownership interest (i) of 10% or more of the membership interests in Developer or (ii) which entitles such person to 10% or more of Developer's profits or capital.

**"Site Preparation"** means physical work to prepare and secure the Project Site for installation and construction of Horizontal Improvements, such as demolition of existing structures, excavation and removal of contaminated soils, fill, grading, soil compaction, and construction fencing and other security measures, and temporary Improvements for interim uses before vertical development begins.

**"Site Preparation Plans"** means Improvement Plans for Site Preparation.

**"Small Event"** means a single event or related events occupying less than 10,000 square feet in the footprint of a Public Space.

**"Soft Costs"** means any costs incurred in connection with Horizontal Improvements or implementation of Developer's obligations under the DDA that are not Hard Costs, including, without duplication:

- (i) architectural, engineering, consultant, attorney, and other professional fees, including the cost of any Qualified Appraiser and the costs of consultants related to public financing to the extent not reimbursed by Public Financing Sources;
- (ii) property insurance (including general liability, automobile liability, worker's compensation, personal property, flood, pollution legal liability, comprehensive personal liability, watercraft liability, marine general liability, vessel pollution liability, builder's risk, and professional services insurance);
- (iii) construction management fees, project management costs, and asset management costs paid to or by Developer, a Transferee, or their respective Affiliates, limited in the aggregate to 15% of Hard Costs, subject to Developer's right to request reimbursement above this threshold, which the Port will not unreasonably disapprove if Developer demonstrates that the additional costs are commercially reasonable;
- (iv) regulatory fees other than building and site permit fees;
- (v) Developer Mitigation Measures and any additional environmental review required for horizontal development;
- (vi) Impact Fees associated with Horizontal Improvements;
- (vii) Port Costs and Other City Costs;
- (viii) possessory interest taxes payable for the Master Lease Premises above the PIT Threshold determined as set forth in FP § 8.1(b) (PIT Threshold);
- (ix) costs to use sources other than the Project Payment Sources to the extent not otherwise reimbursed;
- (x) Facilities Special Taxes and any other taxes, assessments, or fees levied by the City and paid by Developer as Tenant under the Master Lease, excluding any penalties or interest assessed due to Developer's failure to make payment before delinquency;
- (xi) security required under the DDA or otherwise in connection with the Horizontal Improvements, including any Adequate Security;
- (xii) safety and security measures;

- (xiii) community outreach associated with the Project Site;
- (xiv) maintenance of parks, streets, and public areas to the extent not paid by Services Special Taxes;
- (xv) third-party costs to prepare and store Phase Quarterly Reports, Phase Audits, Final Audits, and Developer's Books and Records;
- (xvi) Alternative Return Costs, Developer Marketing Costs, and Public Benefit Costs;
- (xvii) the Entitlement Sum;
- (xviii) costs incurred after June 30, 2018 up until the Reference Date that would have been considered Entitlement Costs if incurred prior to June 30, 2018; and
- (xix) any other amount specifically identified in a Transaction Document as a Soft Cost or a category of Soft Costs.

**"Soft Costs" excludes:**

- (1) *Hard Costs;*
- (2) *Losses that Developer pays to any third party to the extent recovered from insurance proceeds or other third parties;*
- (3) *Developer's (or any Affiliate's) corporate office, personnel, and overhead costs, subject to clause (iii) in the definition of Soft Costs;*
- (4) *costs incurred to lobby for the Project or for any political campaign, including costs related to any ballot measure affecting the Project;*
- (5) *construction financing costs (loan fees and interest) for Horizontal Improvements;*
- (6) *costs of vertical development, including Deferred Infrastructure if not paid by Developer; and*
- (7) *any other amount specifically excluded from Soft Costs in a Transaction Document.*

**"Soil Management Plan"** means that certain Soil Management Plan for the Project Site, approved by Port, DPH, and DTSC. The Soil Management Plan has not yet been approved as of the Reference Date.

**"SOP Compliance Determination"** means a recordable certificate that the Chief Harbor Engineer issues when granting Developer's SOP Compliance Request confirming that Developer has completed Phase Improvements by the applicable Outside Date in the Schedule of Performance.

**"SOP Compliance Request"** means a request made under DDA § 3.6 (Phase Completion) or DDA § 14.6 (SOP Compliance) for an SOP Compliance Determination.

**"Special Debt Service"** means the portion of the debt service on, or replenishment of reserve funds for, CFD Bonds secured by Development Special Taxes in the Mission Rock CFD that is equal to the Development Special Taxes levied on Taxable Parcels in the CFD.

**"Special Event"** means:

- (i) any Trade Show, Convention, Exposition, or other Temporary Event with the characteristics of a Trade Show, Convention, or Exposition, that involves Exhibit, Display, or Trade Show Work; and
- (ii) any Mass Participation Sports Event.

- "Special Facility"** means the Project Site and any other Port facility designated as such under the Port Master Indenture.
- "Special Facility Revenue"** means revenue that the Port earns from or with respect to any Special Facility designated in the Port Master Indenture.
- "Special Facility Revenue Bonds"** means Bonds issued by or on behalf of the Mission Rock CFD or the IFD that are secured by a pledge of Special Facility Revenue.
- "Special Fund Administration Agreement"** means an agreement between the Port in its proprietary capacity, as CFD Agent, and as IFD Agent, and the Special Fund Trustee authorizing the trustee to receive, administer, and disburse funds in the Special Fund Trust Account to implement the Financing Plan.
- "Special Fund Trust Account"** means, collectively, the DRP Fund, the Special Tax Fund, and the Tax Increment Fund, including segregated accounts within each fund.
- "Special Fund Trustee"** means a bank, national banking association, or a trust company having a combined capital (exclusive of borrowed capital) and surplus of at least \$50 million, and that is subject to supervision or examination by federal or state authority.
- "Special Tax Fund"** means the segregated accounts within the Special Fund Trust Account; including the Facilities Account, the Shoreline Reserve Account, the Shoreline Protection Account, and the Services Account, that the Port, as CFD Agent, establishes with the Special Fund Trustee to receive, administer, and disburse Mello-Roos Taxes on behalf of the Mission Rock CFD through the Special Fund Administration Agreement as described in FP § 2.3(b) (Disbursements from Special Fund Trust Account).
- "Special Tax Requirement"** means the amount that Facilities Taxes and Services Special Taxes, as applicable, must fund in any City Fiscal Year, as established by approved Phase Budgets.
- "State"** means the State of California.
- "State Lands"** means the California State Lands Commission.
- "Statement of Indebtedness"** means the annual report that the IFD must file with the Treasurer-Tax Collector under IFD Law and the Port IFD Guidelines.
- "Street Segment"** means any portion of a street described as such in the Schedule of Performance.
- "Structural Consultant"** means any Project Consultant who prepared Structural Materials.
- "Structural Materials"** means Project Materials relating to structural strengthening, maintenance, and repair of the substructure and superstructure of piers and wharves, Horizontal Improvements for, and subsurface stabilization of, any part of the Project Site.
- "Structured Street"** means a Public ROW that is pile-supported.
- "Structured Street Criteria"** means design criteria for the Structured Street System to be developed by Developer, in coordination and consultation with the Port, the Port's independent third party engineer, and Other City Agencies.
- "Structured Street Drainage"** means the drainage system for Structured Streets, which may include sump pumps.
- "Structured Street Superstructure"** means pile-supported U-shaped corridors and associated subdrains that support the Structured Streets that the Port or the City will acquire.
- "Structured Street System"** means Structured Street Superstructure and associated Structured Street Drainage, Flexible Utility Connections, and Flexible Street Improvements, as more specifically described in the Infrastructure Plan.

**"subcontracts to contracts"** is defined in Administrative Code sections 12B.2 and 12C.2.

**"Subdivision Code"** means the San Francisco Subdivision Code, as amended by the DA Ordinance, and Subdivision Regulations adopted by Public Works.

**"Subdivision Map"** means any map that Developer submits for the Project Site under the Map Act and the Subdivision Code.

**"Sub-Project Area"** means a sub-project area that the Board of Supervisors established in Project Area I.

**"Subsequent Assessed Value"** means the assessed value of a Taxable Parcel in any City Fiscal Year after the most recent Baseline Assessed Value was established.

**"Subsequent VDDA Closing Date"** shall mean the originally scheduled Closing Date set forth in a Vertical DDA in effect for any Development Parcel in a Phase other than the Vertical DDA that establishes the First Scheduled Closing Date as such Closing Date may be extended under DDA § 7.7(d) Final Map.

**"substantial completion"** means:

- (i) when used in reference to Horizontal Improvements, that the Chief Harbor Engineer has determined, or is deemed to have determined, that the Horizontal Improvements meet the conditions in DDA § 14.6 (SOP Compliance); and
- (ii) when used in reference to Vertical Improvements, that the Vertical Improvements have been Completed (as such term is defined in the Vertical DDA).

**"SUD"** is an acronym for the area subject to Section 249.80 and related zoning maps, which established the Mission Rock Special Use District and zoning and other land use limitations for the Project Site.

**"SUD Amendments"** means, collectively, Section 249.80 and related amendments to the Planning Code and zoning maps adopted by Ordinance No. 31-18.

**"Summary Proforma"** means the detailed document that Developer prepared to provide an accurate summary of the Proforma, a copy of which is attached to the Financing Plan as FP Sch 1, and any superseding or revised summaries prepared from time to time in accordance with the DDA.

**"Sustainability Strategy"** means DDA Exh B8, which contains:

- (i) strategies to develop the Project Site to balance San Francisco's plans for future growth within the context of the State's requirements to reduce greenhouse gas emissions and the City's goals to reduce water consumption, reduce waste, and enhance community-scale energy resources; and
- (ii) targets that Developer will track and report on to Planning regularly throughout the Project's development.

**"SWL 337"** is a term used to refer the Port property located south of Mission Creek/China Basin Channel, bordered by Third Street on the west, Mission Rock Street on the south, and Terry A. Francois Boulevard on the east, as reconfigured in accordance with AB 2797.

**"Task Force"** means a team of third-party professionals and Public Works staff that Public Works is authorized to assemble to assist the City and the Port in implementing the ICA.

**"Tax Allocation Bonds"** means Bonds issued on behalf of the IFD with respect to Project Area I, including obligations incurred under a Pledge Agreement, secured by a pledge of or otherwise payable from Allocated Tax Increment.

**"Tax Allocation Bonds"** excludes any Mello-Roos Bonds.

**"Tax Allocation MOU"** is a term used to refer to the Memorandum of Understanding (Levy and Allocation of Taxes).

**"Tax Code"** means the Internal Revenue Code of 1986, as amended, together with applicable temporary and final regulations promulgated, and applicable official public guidance published, under the United States Internal Revenue Code.

**"Tax Increment"** refers to Allocated Tax Increment or Gross Tax Increment, as appropriate in the context.

**"Tax Increment Fund"** means the segregated accounts within the Special Fund Trust Account that the Port, as IFD Agent, establishes with the Special Fund Trustee to receive, administer, and disburse Annual Allocated Tax Increment on behalf of the IFD through the Special Fund Administration Agreement.

**"Tax Increment Limit"** means the maximum dollar amount of Tax Increment that the City agreed to allocate to the IFD for each Sub-Project Area in Project Area I under Appendix I.

**"Taxable Commercial Parcel"** means a Taxable Parcel that is not residential.

**"Taxable Parcel"** means an assessor's parcel of real property or other real estate interest created by each Phase Final Map that is not an Exempt Parcel, which may include leased space occupied for private use in an Exempt Parcel.

**"Taxable Residential Unit"** means a Taxable Parcel that is a residential condominium unit.

**"TAY"** is an acronym for Transition Age Youth.

**"TAY Unit"** means an Inclusionary Units set aside to house an individual transitioning out of a public system such as the foster care system.

**"TAY Unit Occupancy Plan"** means an HSH-approved plan for lease-up and occupancy of the TAY Units that the Vertical Developer will submit to the Port at least 120 days before the Vertical Developer expects to begin marketing for Market-Rate Units in a Residential Project that includes TAY Units.

**"TDM"** is an acronym for Transportation Demand Management.

**"TDM Measures"** means the measures to implement the TDM Plan.

**"TDM Plan"** means the Transportation Demand Management Plan that is included in **TP Sch 2 to DDA Exh B7** (Transportation Exhibit) and prepared in compliance with EIR Mitigation Measure M-AQ-2.3 (**TP Sch 3 to DDA Exh B7** (Transportation Exhibit)), except as specified in the Transportation Exhibit.

**"TDM Program"** means the City's Transportation Demand Management Program, which is described in Section 169.

**"Temporary Certificate of Occupancy"** means a certificate of occupancy that the Chief Harbor Engineer issues under the Port Building Code allowing a discrete portion of a building to be occupied or conditional occupancy of a building, generally for no longer than 90 days.

**"Temporary Event"** means an event lasting no more than six months.

**"Temporary Use"** as defined in Planning Code section 249.80(f)(4) means a single or recurring use at the Project Site that is allowed under any Port lease or license for a period not to exceed 90 days, subject to extension by the Port Director. Examples include booths for charitable, patriotic, or welfare purposes; markets; exhibitions, festivals, circuses, musical and theatrical performances, and other forms of live entertainment including setup/load-in and demobilization/load-out; athletic events; open-air sales of agriculturally-produced seasonal decorations such as Christmas trees and Halloween pumpkins; meeting rooms

and event staging; mobile food and temporary retail establishments; and automobile and truck parking and loading associated with any authorized temporary use.

**"Tenant"** means the named tenant and any permitted successor under a Parcel Lease.

**"Tentative Map"** means a Tentative Transfer Map, Vesting Tentative Transfer Map, Tentative Map, or Vesting Tentative Map as defined in the Subdivision Code.

**"Terminated Phase"** means a Phase that is terminated under DDA art. 11 (Material Breaches and Termination).

**"Termination Date"** means the date on which a termination under DDA art. 11 (Material Breaches and Termination) becomes effective.

**"Termination Notice"** means a notice given under DDA § 11.6 (Termination Procedures).

**"Test Parcel"** means an Option Parcel that will be subject to a Down Market Test against the applicable Land Value Indicator under DDA art. 4 (Excusable Delay).

**"third party"** means a person that is not Developer, the Port, the City, or any of their Agents or Affiliates.

**"Third-Party Challenge"** means an action challenging the validity of any provision of the DDA or DA, the Project, any Project Approval or Later Approval, the adoption or certification of the Final EIR, other actions taken under CEQA, or any other Project Approval.

**"Ticketed Public Event"** means an event in a Public Space that is open to the general public and requires the purchase of a ticket for entry.

**"Time-Sensitive Matter"** means a Party's obligations that are due at a specific time under the DDA, in particular under the Schedule of Performance, any Phase Schedule, and the Financing Plan, but excluding obligations to process Payment Requests under the Acquisition Agreement or Requisitions under the Financing Plan.

**"tobacco product"** is defined Health Code section 1010(b).

**"Total Fee Amount"** means Transportation Fees paid for each development project on the Project Site.

**"Trade Show"** means a gathering in which:

- (i) one or more businesses or association of businesses in one or more industries or professions show their products or services to possible customers or patrons; or
- (ii) there are exhibits, displays, or demonstrations of specific products or services or that highlight all or part of an industry or profession.

**"Transaction Document"** means any of the following, individually or collectively:

- (i) the DDA, including the Financing Plan, the Participation Agreement, this Appendix, and all attached exhibits, schedules, and implementing agreements and plans;
- (ii) the DA and the ICA;
- (iii) each Assignment and Assumption Agreement governing a Transferee's obligations for the Project;
- (iv) the Master Lease;
- (v) each fully executed Vertical DDA and Parcel Lease; and
- (vi) any other agreement governing the Parties' respective rights and obligations with respect to the development or operation of any portion of the Project Site.

**"Transfer"** means an assignment of any portion of Developer's horizontal development rights and obligations under the DDA under an Assignment and Assumption Agreement or through a Significant Change or an Initial Transfer.

**"Transfer" excludes:**

- (1) a Deed of Trust or Security Interest given to a Lender;
- (2) an agreement under which a Vertical Developer is required to build Deferred Infrastructure; and
- (3) an Excluded Transfer.

**"Transferee"** means any person to which Developer's rights and corresponding obligations relating to any portion of a Phase are Transferred under DDA art. 6 (Transfers).

**"Transferee" excludes the transferee in an Excluded Transfer.**

**"Transferee Affiliate"** means a Transferee that is:

- (i) an Affiliate of Developer;
- (ii) as to any Transfer occurring before Developer has achieved the Initial Benchmarks, a person in which a Giants Affiliate holds Significant Ownership and Management Control of all Phases of the Project; or
- (iii) as to any Transfer occurring after Developer has achieved the Initial Benchmarks, a person in which a Giants Affiliate or an Initial Transferee Affiliate holds Significant Ownership and Management Control of the Current Phase and each Later Phase of the Project.

**"Transit Mitigation Agreement"** means a future agreement between Developer and SFMTA that will obligate Developer to make a fair share contribution to the cost of providing additional bus service or otherwise improving service in accordance with Mitigation Measure M-TR-4.1 and Mitigation Measure M-TR-4.4.

**"Transition Age Youth"** means young adults, ages 18–24, who are transitioning from public systems like foster care or are at risk of not making a successful transition to adulthood.

**"Transportation Exhibit"** means DDA Exh B7, which includes the TDM Plan and the Transportation Exhibit, among other things.

**"Transportation Fee"** means the Impact Fee that each Vertical Developer will pay to SFMTA under the DA § 5.4(b) (Impact Fees and Exactions) for uses described in the Transportation Exhibit.

**"Transportation Infrastructure"** means Improvements and technology necessary for transportation and public transit services on or serving the Project Site, including traffic control devices (traffic signs, roadway and curb paint, traffic signals, signal communication conduits or network devices, message signs, traffic video cameras); transit-related infrastructure (shelters, bathrooms, signs and mountings), overhead lines, power, and related conduits and ducts, transit signs and signals), parking infrastructure (public parking garages, lots, and related communications devices), parking and traffic enforcement infrastructure, bicycle parking and sharing facilities, protected bikeways, pedestrian facilities, bus boarding islands and bus bulbs, street striping and curb demarcations, lighting supports, wayside control and communications systems and devices, and electrical substations, junction boxes, underground conduit, and duct banks.

**"Transportation Plan"** refers to the Mission Rock Transportation Plan attached as TP Sch 1 to the Transportation Exhibit, which contains strategies that Developer is required to implement to address movement in and around the Project Site.

**"Transportation-Related Mitigation Measure"** means any Mitigation Measure that SFMTA is responsible for implementing or monitoring.

**"Treasurer-Tax Collector"** means the Treasurer and Tax Collector of the City and County of San Francisco.

**"Triggering Event"** means any Transfer that is not a Permitted Change or an Excluded Transfer.

**"unbundled"** when used in reference to a Garage Space in a Residential Project means that the space is available for rent separately from the applicable Residential Units.

**"Unrecovered Rent Credits"** means Alternative Return Rent Credits against Base Rent under the Master Lease that Master Lease Tenant has not exhausted as of the effective date of the applicable Triggering Event, documented by Developer to the Port's reasonable satisfaction.

**"Unrelated Transferee"** means a Transferee that is not an Affiliate of Developer, a Transferee Affiliate, or any of their respective Affiliates.

**"Utility Allowance"** means the dollar amount established periodically by the San Francisco Housing Authority based on HUD standards for cost of basic utilities for Households.

**"Utility Infrastructure"** means Horizontal Improvements for utilities serving the Project Site, such as electricity, gas, water, sanitary sewer, and storm drainage.

**"Utility Infrastructure"** *excludes telecommunications infrastructure.*

**"Utility-Related Mitigation Measure"** means any Mitigation Measure that SFPUC is responsible for implementing or monitoring.

**"Value Reduction"** means a reduction in assessed value of a Taxable Parcel obtained through a proceeding that the pertinent taxpayer initiates under the California Revenue & Taxation Code.

**"VDDA Notice"** means the Port's notice to Planning that the Port is prepared to enter into a Vertical DDA with a Vertical Developer that will have the right to build an office development project on an Option Parcel in the Project Site.

**"vending machine"** is defined in Administrative Code section 4.2(a) and means an automated machine dispensing products or services, including food, beverages, tobacco products, newspapers, and periodicals.

**"Vertical Application"** means the design documents that are required to begin the entitlement process for vertical improvements under the SUD.

**"Vertical Coordination Agreement"** means an agreement between Developer and Vertical Developer as generally described in **DDA § 7.9** (Vertical Cooperation Agreement).

**"Vertical DDA"** means a disposition and development agreement that the Port will enter into with each Vertical Developer in accordance with the DDA.

**"Vertical Developer"** means a party to a Parcel Lease and a Vertical DDA providing for construction of Vertical Improvements on a Development Parcel.

**"Vertical Developer Affiliate"** means a Vertical Developer in which Developer, or any person with a direct or indirect ownership in Developer, directly or indirectly holds any ownership interests or rights to capital or profits.

**"Vertical Developer Party"** means any Vertical Developer, its Affiliates, their Agents, and Invitees to the Project Site, individually or collectively.

**"vertical development"** means planning, design, and construction or rehabilitation of buildings and other structures on legal parcels.

**"Vertical Improvement"** means a new building that is built at the Project Site.

**"Vested Element"** means a specific component of the land use entitlements granted to Developer by the Project Approvals, including the locations and numbers of buildings, permitted land uses, height and bulk limits, and parking, as described in **DA § 5.1(b)** (Vested Elements).

**"Water Board"** means the San Francisco Bay Regional Water Quality Control Board of the California Water Resources Control Board.

**"Waterfront Plan"** means the Port's Waterfront Land Use Plan, including its Waterfront Design and Access Element, as amended by Port Commission Resolution No. 18-05 to incorporate the Design Controls.

**"Waterfront Set-Aside"** means a minimum of 20% of Annual Allocated Tax Increment from Project Area I, which the IFD must spend "solely on shoreline restoration, removal of bay fill, or waterfront public access to or environmental remediation of the San Francisco waterfront" to comply with IFD Law.

**"WDP"** is an acronym for the Workforce Development Plan.

**"Workforce Development Plan"** means **DDA Exh B6**.

**"Workforce Job Readiness and Training Funds"** means \$1 million that Vertical Developers at the Project Site will contribute to OEWD to support workforce job readiness and training through OEWD's CityBuild and First Source Hiring programs and qualified local community-based organizations in accordance with the Workforce Development Plan.

**"Zone"** as described in **ICA Exh D** means, subject to further discussion and agreement in accordance with the ICA, a Deferred Infrastructure Zone.

**"Zone 1"** means the Taxable Parcels in the Phase 1 Area of the Project Site.

**"Zone 1 Shoreline Special Taxes"** means the Shoreline Special Taxes levied on and actually collected from Zone 1.

**"Zone 2"** means the Taxable Parcels in the Mission Rock CFD outside of the Phase 1 Area.

**"Zone 2 Shoreline Special Taxes"** means the Shoreline Special Taxes levied on and actually collected from Zone 2.

**PROVISIONS FOR OFFICE DEVELOPMENT**

## DDA EXHIBIT A4

### Provisions for Office Development

**I. Legal Framework.** Under Planning Code section 321(a)(2)(A), office space under the jurisdiction of the San Francisco Port Commission shall count against the annual maximum limit. Per Planning Code section 324, the City of San Francisco has "limited legal authority to direct or control physical development, whether for office use or not, on land covered by approved redevelopment plans or under the jurisdiction of the Port Commission." Therefore, Planning approval under Planning Code Sections 321 and 322 is not required for new office development under the jurisdiction of the San Francisco Port Commission. (Zoning Administrator's Letter of Determination, dated June 13, 2017, to Charles Olson, Re: Pier 70 Historic Buildings.) The Port will notify the Planning Department promptly after issuing any building permit for office development in the Project Site, and new office development will count against the annual maximum limit.

The Development Agreement for the Project provides that office development located in the Project Site will be counted against the annual maximum in Planning Code section 321(a)(1) on the issuance of the building permit for the office development (in each case, a "**Prop M Draw Down**"), based on the approved building drawings for the described project.

The City, the Port, and Developer have agreed to implement the process described in these Provisions for Office Development to meet Developer's reasonably anticipated schedule for office development in the Project while allowing the City to balance its planning objectives for large office projects elsewhere in the City during the early years of the Project. Developer and the Port will proceed in accordance with **Section II** (Process for Office Development).

### **II. Process for Office Development.**

**A. Definitions.** The following definitions are inserted for ease of reference, but are included in the Appendix along with other terms used but not defined in these Provisions for Office Development.

**"Allocation Period"** means the period ending on October 17 each year.

**"City Delay Notice"** means a notice from Planning to the Port that the City has reasonably determined that delaying office development in the Project Site is necessary to allow the City to balance its planning objectives for Pending Projects elsewhere in the City under **Section II.D.2** (City-Initiated Delay).

**"large allocation project"** means a proposed office development project of 50,000 gsf or more.

**"Office Development Authorization"** means a Planning Commission approval of an application for a large allocation project.

**"Pending Projects"** means: (i) large office allocation projects for which applications have been submitted to the Planning Department that have not received Planning Commission approval by the end of the Allocation Period; plus (ii) additional office space of 50,000 gsf or more located in a planned structure to be owned or otherwise under the jurisdiction of the State of California, the federal government or any state, federal, or regional government agency, that is exempt from Planning Code section 321 or 322 as to which the City has received notice of environmental review in process, but for which building permits have not been issued by the end of the Allocation Period; plus (iii) any new large allocation project on Port land outside of the Project Site for which the Port has entered into a vertical disposition and development agreement, ground lease, or purchase and sale agreement, but has not issued building permits by the end of the Allocation Period.

**"Prop M"** means Planning Code sections 320-325, approved by voters as the *Planning Initiative* in November 1986.

**"Prop M Constraint"** means that the total square footage of Pending Projects exceeds the then-current total square footage available for large allocation projects at the end of an Allocation Period. The examples below are for illustrative purposes only.

*Example #1*

- On November 1, 2018, there were 1,400,000 gsf of current availability of large office allocation and Pending Projects of 750,000 gsf.
- Availability = 650,000 gsf; therefore, no Prop M Constraint exists.

*Example #2*

- On November 1, 2019, there was 1,300,000 gsf of current availability of large office allocation and Pending Projects of 3,800,000 gsf.
- Availability = (2,500,000 gsf), so a Prop M Constraint exists.<sup>1</sup>

**"Prop M Draw Down"** means the amount of office space to be applied against the City's annual maximum limit under Planning Code section 321(a)(1) under these Provisions for Office Development, based on the approved building drawings, which the Port will report to Planning when the Port issues a site or building permit for an office development in the Project Site.

---

<sup>1</sup> Parentheses denote negative numbers.

**"VDDA Notice"** means the Port's notice to Planning that the Port is prepared to enter into a Vertical DDA with a Vertical Developer that will have the right to develop an office project on its Option Parcel.

**B. Notices.** Developer and the Port will provide the Planning with notices at certain points during the development process that will allow Planning to assess anticipated large office allocation for the Project, as follows:

1. At Phase Submittal. In each Phase Submittal application, Developer will notify the Port if Developer intends to construct commercial office space that would result in a Prop M Draw Down and the anticipated total gsf of office development anticipated for each Option Parcel. The Port will communicate this information to Planning.
2. At Appraisal. When Developer triggers the appraisal process for an Option Parcel, it must provide the Port with a notice of the location and amount of any office development that would be developed on the parcel that would result in a Prop M Draw Down. The Port will communicate this information to Planning.
3. At Selection of Vertical Developer. The Port will deliver a VDDA Notice to Planning promptly after all Port conditions to entering into a Vertical DDA with the Vertical Developer for each Option Parcel on which large allocation office development is approved have been satisfied. If the City determines that a Prop M Constraint exists, then the City may exercise a City-initiated delay in accordance with **Section II.D.2 (City-Initiated Delay)**.

**C. If No Constraint Exists.** If no Prop M Constraint exists when Planning receives the VDDA Notice, then the **Prop M Schedule** will not apply.

[Remainder of page intentionally left blank.]

**D. If a Prop M Constraint Exists.** All Subsections of this Section will apply if a Prop M Constraint exists when Planning receives the VDDA Notice.

1. Prop M Schedule. The Port and Developer must comply with the following schedule:

| Phase            | Max Office GSF Allowed in Phase | Earliest Date for Prop M Draw Down |
|------------------|---------------------------------|------------------------------------|
| Phase 1          | 550,000                         | December 21, 2018                  |
| Phase 2          | 330,000                         | December 21, 2021                  |
| Phase 3          | 130,000                         | December 21, 2021                  |
| Phase 4          | 390,000                         | December 21, 2023                  |
| <b>Total GSF</b> | <b>1,400,000</b>                |                                    |

\*applicable only in years when there is a Prop M Constraint

2. City-Initiated Delay. As soon as reasonably practicable, but no later than 45 days after receiving the VDDA Notice, Planning may provide a City Delay Notice advising the Port that a Prop M Constraint exists and specifying the amount of delay requested, not to exceed 90 days. Promptly after receiving the notice, the Port will provide notice to the Vertical Developer of the Port's receipt of the City Delay Notice, which will cause all deadlines in the Vertical Schedule of Performance and the Outside Closing Date for Close of Escrow to be extended automatically by the amount of time specified in the City Delay Notice, in accordance with *VDDA § 5.2 (Regulatory Approvals for Vertical Project)*. If Planning fails to provide the City Delay Notice within the 45-day period under this Subsection, the automatic extensions under *VDDA § 5.2 (Regulatory Approvals for Vertical Project)* will not apply.

3. Prop M Advance. Planning may advise the Port to proceed under **Section II.C** (If No Constraint Exists) even if a Prop M Constraint exists, under either of the following circumstances.

(a) If Planning determines in its sole discretion that the office development referenced in the VDDA Notice would not be likely to conflict with other office developments on a similar development schedule.

(b) If both: (i) Developer provides documentation satisfactory to the Port in its reasonable discretion that Developer has identified a commercial office tenant interested in leasing more than 250,000 gsf in the proposed office development; and (ii) Planning, in consultation with OEWD, determines that the identified tenant would be beneficial to the City's then-current economic goals.

4. Effect of Unused Allocation. After the date in the **Prop M Schedule** applicable to a particular Phase, any unused portion of specified maximum office gsf allowed in the Phase will be available for future office development in the Project. For example, if the Port has not entered into a Vertical DDA for any office development in Phase 1 by July 31, 2019, 550,000 gsf of office allocated to Phase 1 would be available in addition to the 330,000 gsf allocated to Phase 2.

**E. Miscellaneous.**

1. Changes. Changes to which the Parties agree under *DDA § 3.7 (Changes to Phase)* or *DDA § 3.8 (Changes to Project)* will not affect the procedures in these Provisions for Office Development or the permitted amounts and dates in the **Prop M Schedule** unless the City agrees otherwise in its sole discretion.

**DDA EXHIBIT A5**  
**MITIGATION MONITORING AND REPORTING PROGRAM**

| MITIGATION MONITORING AND REPORTING PROGRAM FOR<br>SEAWALL LOT 337 AND PIER 48 MIXED-USE PROJECT   |   |   |   |  |
|--|---|---|---|--|
| NOTE: Each mitigation measure in this document applies to the proposed project and all variants, unless noted otherwise.   |   |   |   |  |
| MEASURES ADOPTED AS CONDITIONS OF APPROVAL   | Implementation Responsibility   | Mitigation Schedule                       | Monitoring/Reporting Responsibility (Public Agency)   | Monitoring Schedule  |
| MITIGATION MEASURES FOR THE SEAWALL LOT 337 AND PIER 48 MIXED-USE PROJECT  |   |   |   |  |
| <del>Cultural Resources (Archeological Resources) Mitigation Measures</del>  |   |   |   |  |
| <p><b>M-CP-2: Archeological Testing.</b><br/>Based on a reasonable presumption that archeological resources may be present within the project site, the following measures shall be undertaken to avoid any potentially significant adverse effect from the proposed project on buried or submerged historical resources. The project sponsor shall retain the services of an archeological consultant from the rotational Qualified Archeological Consultants List (QACL) maintained by the Planning Department archeologist. The project sponsor shall contact the Planning Department archeologist to obtain the names and contact information for the next three archeological consultants on the QACL. The archeological consultant shall undertake an archeological testing program as specified herein. In addition, the consultant shall be available to conduct an archeological monitoring and/or data recovery program if required pursuant to this measure. The archeological consultant's work shall be conducted in accordance with this measure at the direction of the Environmental Review Officer (ERO). All plans and reports prepared by the consultant, as specified herein, shall be submitted first and directly to the ERO for review and comment and shall be considered draft reports subject to revision until final approval by the ERO. Archeological monitoring and/or data recovery programs required by this measure could suspend construction of the project for up to a maximum of 4 weeks. At the direction of the ERO, the suspension of construction can be extended beyond 4 weeks only if such a suspension is the only feasible means to reduce to a less-than-significant level of potential effects on a significant archeological resource, as defined in CEQA Guidelines, Sections 15064.5 (a) and (c).</p> | <p>Permittee for horizontal improvements, such as infrastructure, in public right-of-ways, and public spaces (hereinafter "infrastructure developer") or vertical developer(s) for work on vertical development parcels and related improvements (hereinafter "vertical developer(s)").<sup>1</sup> as applicable, to retain qualified professional archaeologist from the rotational pool of archaeological consultants maintained by the Planning</p> | <p>Prior to issuance of site permits.</p> | <p>Infrastructure developer or vertical developer, as applicable, to retain the qualified archeological consultant for the project who shall report to the ERO. Qualified archeological consultant will scope archeological testing program with ERO.</p> | <p>Considered complete when infrastructure developer or vertical developer(s), as applicable, retains a qualified professional archaeological consultant and archeological consultant has approved scope by the ERO and submits any required reports to ERO for the archeological testing program.</p> |

<sup>1</sup> Where applicable, "vertical developer" includes the Pier 48 developer.

| MITIGATION MONITORING AND REPORTING PROGRAM FOR<br>SEAWALL LOT 337 AND PIER 48 MIXED-USE PROJECT   |  |  |  |   |

| NOTE: Each mitigation measure in this document applies to the proposed project and all variants, unless noted otherwise.   |  |  |  |   |
| MEASURES ADOPTED AS CONDITIONS OF APPROVAL   | Implementation Responsibility  | Mitigation Schedule  | Monitoring/Reporting Responsibility (Public Agency)  | Monitoring Schedule   |
| <p><i>Consultation with Descendant Communities:</i> On discovery of an archaeological site<sup>2</sup> associated with descendant Native Americans, the overseas Chinese, or other potentially interested descendant group, an appropriate representative<sup>3</sup> of the descendant group and the ERO shall be contacted. The representative of the descendant group shall be given the opportunity to monitor archaeological field investigations of the site and offer recommendations to the ERO regarding appropriate archaeological treatment of the site, recovered data from the site, and, if applicable, interpretative treatment of the associated archaeological site. A copy of the final archaeological resources report shall be provided to the representative of the descendant group.</p> | <p>Department.</p> <p>Infrastructure developer or vertical developer(s) (as applicable) and archaeological consultant.</p> | <p>For the duration of soil-disturbing activities and data recovery of potentially significant archaeological sites.</p> | <p>Infrastructure developer or vertical developer(s) (as applicable) and/or archaeological consultant shall contact the ERO and descendant group representative upon discovery of an archaeological site associated with descendant Native Americans, Overseas Chinese, or interested descendant group. The representative of the descendant group shall be given the opportunity to monitor archaeological field investigations on the site and consult with the ERO regarding appropriate archaeological treatment of the site, of recovered data from the site, and, if applicable, any interpretative treatment of the associated archaeological site.</p> <p>Archaeological Consultant shall prepare a Final Archaeological Resources</p> | <p>Considered complete upon submittal of Final Archaeological Resources Report.</p> |

<sup>2</sup> The term "archaeological site" is intended here to include any archaeological deposit, feature, burial, or evidence of burial.

<sup>3</sup> An "appropriate representative" of the descendant group is here defined to mean, in the case of Native Americans, any individual listed in the current Native American contact list for the City and County of San Francisco maintained by the NAHC or, in the case of overseas Chinese, the Chinese Historical Society of America. An appropriate representative of other descendant groups should be determined in consultation with the department archeologist.

|--|--|--|---|--|
| NOTE: Each mitigation measure in this document applies to the proposed project and all variants, unless noted otherwise.   |  |  |   |  |
| MEASURES ADOPTED AS CONDITIONS OF APPROVAL   | Implementation Responsibility  | Mitigation Schedule  | Monitoring/Reporting Responsibility (Public Agency)   | Monitoring Schedule  |
|  |  |  | Report in consultation with the ERO (per below). A copy of this report shall be provided to the ERO and the representative of the descendant group.   |  |
| <i>Archeological Testing Program.</i> The archeological consultant shall prepare and submit to the ERO for review and approval an archeological testing plan (ATP). The archeological testing program shall be conducted in accordance with the approved ATP. The ATP shall identify the property types of the expected archeological resource(s) that could be adversely affected by the proposed project, the testing method to be used, and the locations recommended for testing. The purpose of the archeological testing program will be to determine, to the extent possible, the presence or absence of archeological resources and identify and evaluate whether any archeological resource encountered on the site constitutes a historical resource under CEQA.   | Infrastructure developer or vertical developer(s) (as applicable) and archaeological consultant in consultation with the ERO. Development of ATP for a defined geographic area and/or specified construction activities. | Prior to any excavation, site preparation or construction, and prior to testing, submit an ATP for a defined geographic area and/or specified construction activities to and obtain approval by the ERO. A single ATP or multiple ATPs may be produced to address project phasing. | Archaeological consultant to undertake ATP in consultation with ERO.  | Prior to any soil disturbing activities. Considered complete upon approval of the ATP by the ERO and finding by the ERO that the ATP is implemented. |
| At the completion of the archeological testing program, the archeological consultant shall submit a written report of the findings to the ERO. If, based on the archeological testing program, the archeological consultant finds that significant archeological resources may be present, the ERO, in consultation with the archeological consultant, shall determine if additional measures are warranted. Additional measures that may be undertaken include additional archeological testing, archeological monitoring, and/or an archeological data recovery program. No archeological data recovery shall be undertaken without the prior approval of the ERO or the Planning Department archeologist. If the ERO determines that a significant archeological resource is present and that the resource could be adversely affected by the proposed project, at the discretion of the project sponsor: | Infrastructure developer or vertical developer(s) (as applicable) and archaeological consultant in consultation with the ERO.  | Upon completion of the archeological testing program.  | Archaeological consultant to submit results of testing, and, in consultation with ERO, determine whether additional measures are warranted. If significant archaeological resources are present and may be adversely affected, the infrastructure developer or vertical developer(s) (as applicable), at its discretion, may elect to redesign a project, or implement data | Considered complete after ERO review and approval of report(s) on ATP findings.  |

| MEASURES ADOPTED AS CONDITIONS OF APPROVAL  | Implementation Responsibility  | Mitigation Schedule  | Monitoring/Reporting Responsibility (Public Agency)   | Monitoring Schedule  |
| Once approved by the ERO, copies of the FARR shall be distributed as follows: California Archeological Site Survey Northwest Information Center (NWIC) shall receive one copy, the ERO shall receive a copy of the transmittal of the FARR to the NWIC, and the Environmental Planning division of the Planning Department shall receive one bound, one unbound, and one unlocked, searchable PDF copy on CD of the FARR, along with copies of any formal site recordation forms (CA DPR 523 series) and/or documentation for nomination to the National Register of Historic Places/California Register of Historical Resources. In instances of high public interest in or high interpretive value of the resource, the ERO may require a final report content, format, and distribution different from that presented above.   | Archaeological consultant at the direction of the ERO.   | Upon approval of the FARR by the ERO.  | Archaeological consultant to distribute FARR.   | Considered complete when archaeological consultant provides written certification to the ERO that the required FARR distribution has been completed.         |
| <b>M-CP-3: Treatment of Human Remains, Associated or Unassociated Funerary Objects.</b><br>The treatment of human remains and associated or unassociated funerary objects discovered during any soil-disturbing activity shall comply with applicable state and federal laws. This shall include immediate notification of the coroner of the City and County of San Francisco and, in the event of the coroner's determination that the human remains are Native American remains, notification of the Native American Heritage Commission (NAHC), which shall appoint a Most Likely Descendant (MLD) (PRC Section 5097.98). The ERO will also be immediately notified. The archeological consultant, project sponsor, ERO, and MLD shall have up to but not beyond 6 days after the discovery to make all reasonable efforts to develop an agreement for the treatment of human remains and associated or unassociated funerary objects with appropriate dignity (CEQA Guidelines, Section 15064.5(d)). The agreement should take into consideration the appropriate excavation, removal, recordation, analysis, custodianship, curation, and final disposition of the human remains and associated or unassociated funerary objects. Nothing in existing state regulations or in this mitigation measure compels the project sponsor and the ERO to accept recommendations of an MLD. The archeological consultant shall retain possession of any Native American human remains and associated or unassociated burial objects until completion of any scientific analyses of the human remains or objects, as specified in the treatment agreement, if such an agreement has been made or, otherwise, as determined by the archeological consultant and the ERO. | Infrastructure developer or vertical developer(s) (as applicable) and archaeological consultant, in consultation with the San Francisco Coroner, NAHC, ERO, and MLD. | In the event human remains and/or funerary objects are encountered during soils disturbing activity. | Archaeological consultant or archaeological monitor or infrastructure developer or vertical developer(s) or contractor to contact San Francisco County Coroner and ERO Implement regulatory requirements, if applicable, regarding discovery of Native American human remains and associated and/or unassociated funerary objects. Contact archaeological consultant and ERO. | Considered complete on notification of the San Francisco County Coroner, ERO, and NAHC, if necessary, and completion of treatment agreement and/or analysis. |

| <b>MITIGATION MONITORING AND REPORTING PROGRAM FOR<br/>SEAWALL LOT 337 AND PIER 48 MIXED-USE PROJECT</b>   |  |   |  |  |
|--|--|---|--|--|
| <b>NOTE: Each mitigation measure in this document applies to the proposed project and all variants, unless noted otherwise.</b>  |  |   |  |  |
| <b>MEASURES ADOPTED AS CONDITIONS OF APPROVAL</b>  | <b>Implementation Responsibility</b>   | <b>Mitigation Schedule</b>  | <b>Monitoring/Reporting Responsibility (Public Agency)</b>   | <b>Monitoring Schedule</b>   |
| <p><b>M-CP-4: Tribal Cultural Resources Interpretive Program.</b></p> <p>If the ERO determines that a significant archeological resource is present, and if in consultation with the affiliated Native American tribal representatives, the ERO determines that the resource constitutes a tribal cultural resource (TCR) and that the resource could be adversely affected by the proposed project, the proposed project shall be redesigned so as to avoid any adverse effect on the significant tribal cultural resource, if feasible.</p> <p>If the Environmental Review Officer (ERO) determines that preservation-in-place of the tribal cultural resource (TCR) pursuant to Mitigation Measure M-CP-2, Archeological Testing, is both feasible and effective, then the archeological consultant shall prepare an archeological resource preservation plan (ARPP). Implementation of the approved ARPP by the archeological consultant shall be required when feasible.</p> <p>If the Environmental Review Officer (ERO), if in consultation with the affiliated Native American tribal representatives and the Project Sponsor, determines that preservation-in-place of the tribal cultural resources is not a sufficient or feasible option, the project sponsor shall implement an interpretive program of the TCR in consultation with affiliated tribal representatives. An interpretive plan produced in consultation with the ERO and affiliated tribal representatives, at a minimum, and approved by the ERO would be required to guide the interpretive program. The plan shall identify, as appropriate, proposed locations for installations or displays, the proposed content and materials of those displays or installation, the producers or artists of the displays or installation, and a long-term maintenance program. The interpretive program may include artist installations, preferably by local Native American artists, oral histories with local Native Americans, artifacts displays and interpretation, and educational panels or other informational displays.</p> | <p>Infrastructure developer or vertical developer(s) (as applicable), archeological consultant, and ERO, in consultation with the affiliated Native American tribal representatives.</p> | <p>If significant archeological resources are present, during implementation of the project.</p>      | <p>Infrastructure developer, vertical developer(s), or archeological consultant shall implement the project redesign, completion of archeological resource preservation plan, or interpretive program of the TCR, if required.</p> | <p>Considered complete upon project redesign, completion of ARPP, or interpretive program of the TCR, if required.</p> |
| <b>Transportation and Circulation Mitigation Measures</b>  |  |   |  |  |
| <p><b>M-TR-3: Parking Garage and Intersection Queue Impacts.</b></p> <p>The easternmost driveway on Long Bridge Street (i.e., closest to Bridgeview Street) shall be restricted to right-in, right-out access during all times. | <p><b>M-TR-11.1: Commercial Loading Supply – Monitor Loading Activity and Implement Additional Loading Management Strategies as Needed.</b></p> <p>After completion of the first phase of the proposed project and prior to approval of each subsequent phase, the project sponsor shall conduct a study of utilization of commercial loading spaces. The methodology for the study shall be reviewed and approved by the Planning Department prior to completion. If the result of the study indicates that fewer than 15 percent of the commercial loading spaces are available during the peak loading period, the project sponsor shall implement additional loading management strategies and/or provide additional or expanded off-street loading supply sufficient to meet the loading demand in subsequent phases of the project in either the garages or in off-street parking in individual buildings, consistent with the proposed project's design intent. Additional loading strategies could include (but are not limited to): expanding efforts to coordinate with parcel delivery companies to schedule deliveries to the site during hours outside the peak hour of loading, installing parcel lock boxes that allow parcel delivery personnel unsupervised access to enable off-hour deliveries, coordinating delivery services across buildings to enable the delivery of several buildings' packages to a single location, and/or encouraging deliveries to the retail and restaurant components of the projects to happen during early morning or late evening hours. The project sponsor may also address a shortfall by reserving parking spaces for smaller delivery vehicles such as autos or vans, which comprise approximately two-thirds of the vehicle types for freight delivery service, on the ground floor of the Block D2 garage during peak or appropriate business hours for small-vehicle deliveries and, in connection therewith, providing hand trucks, bicycles, or electric wheeled carts for distribution of packages to buildings throughout the site.</p> <p>If plans for individual buildings include a driveway to off-street loading or parking (maximum 10 off-street spaces) along a frontage that has a designated on-street loading zone, an equivalent amount or level of off-street loading space shall be provided to effectively replace the lost on-street loading area.</p> | Infrastructure developer, vertical developer(s) or garage operators (as applicable). | Study completion: after completion of the first phase of the proposed project and prior to approval of each subsequent phase. If additional loading management strategies ongoing in subsequent phases are needed: after completion of each phase for which additional strategies are applicable. | Planning Department, in consultation with the SFMTA, will review and approve methodology of utilization study. Infrastructure developer, vertical developer(s), and garage operators (as applicable) will provide report to Planning Department on implementation of additional loading management strategies, if required. | Considered complete for each phase after Planning Department staff reviews and approves the study, in consultation with the SFMTA, and, if deemed necessary, the infrastructure developer, vertical developer(s), and garage operators (as applicable) incorporate provides a report of how it incorporated any additional management strategies for loading into each applicable phase. |

| NOTE: Each mitigation measure in this document applies to the proposed project and all variants, unless noted otherwise.   |   |   |  |   |
| MEASURES ADOPTED AS CONDITIONS OF APPROVAL   | Implementation Responsibility   | Mitigation Schedule   | Monitoring/Reporting Responsibility (Public Agency)  | Monitoring Schedule   |
| <p><b>M-TR-11.2: Coordinate Deliveries and Tenant Moving Activities.</b></p> <p>The project's transportation coordinator and in-building concierges shall coordinate with building tenants and delivery services to minimize deliveries and moving activities during peak periods, and endeavor to spread deliveries across the full day and moving activities to time periods after regular working hours, thereby reducing activity during the peak hour for loading. Although many deliveries cannot be limited to specific hours, the transportation coordinator and in-building concierges shall work with tenants to find opportunities to consolidate deliveries and reduce the need for peak-period deliveries, wherever possible.</p>   | Project Transportation Coordinator and vertical developer(s).                                 | Ongoing.  | Planning Department will monitor.  | On-going during project operations.   |
| <p><b>M-C-TR-4: Provide Fair-Share Contribution to Improve 10 Townsend Line Capacity Proposed Project.</b></p> <p>Upon completion and occupancy of Phase I and upon completion and occupancy of each subsequent phase of the proposed project as defined in the Disposition and Development Agreement, the project sponsor shall fund a transit capacity study to be reviewed and approved by the SFMTA. The project sponsor shall obtain from SFMTA the current ridership on the 10 Townsend and conduct an assessment of the capacity utilization at the screenline's Maximum Load Point (MLP) for weekday AM and PM peak hour conditions.</p> <p>If the capacity utilization exceeds 85 percent, a fair share payment shall be made to SFMTA by the project sponsor, calculated as further provided in a Transit Mitigation Agreement. Such payment shall be calculated in light of the project's progress towards one or the other of the development scenario (i.e. High Commercial or High Residential) as reflected by all phases of the project that have been completed up to such date. The fair share contributions by phase differ by scenario because the number of transit riders varies due to different mixes of land use.</p> <p>If the capacity utilization based on SFMTA's ridership data is less than 85 percent, then the project sponsor's fair share payment for that phase shall be \$0 and the process will repeat at the next subsequent phase. Each subsequent fair share calculation shall take account of amounts paid for prior phases, to ensure that payments are not duplicative for the same transit rider impacts.</p> | Infrastructure developer and/or vertical developer(s), Transportation Coordinator, and SFMTA. | Prior to issuance of certificate of occupancy of Phase I of the proposed project, enter into Transit Mitigation Agreement. Upon issuance of a certificate of occupancy for each phase of development as defined in the Development Agreement, SFMTA to provide ridership data and assess capacity utilization and, if capacity utilization exceeds 85 percent, the infrastructure developer/vertical developer(s) would pay fair share contribution fees as | Infrastructure developer and/or vertical developer(s) and Transportation Coordinator to obtain current ridership on the 10 Townsend from SFMTA and conduct an assessment of the capacity utilization associated with the project as described in the measure. If the capacity utilization of the 10 Townsend line at its maximum load point exceeds 85 percent as measured at the completion of any individual project phase, and the SFMTA has committed to implement M-C-TR-4, the infrastructure developers shall provide the fair share contribution subject to the limits stated in M-C-TR-3 to capital costs for SFMTA to implement one of the designated capacity enhancement measures. | Considered complete upon execution of Transit Mitigation Agreement for each phase of development, for which this measure is determined to be necessary. |

| MITIGATION MONITORING AND REPORTING PROGRAM FOR<br>SEAWALL LOT 337 AND PIER 48 MIXED-USE PROJECT   |                                  |   |   |                        |
|--|----------------------------------|---|---|------------------------|
| NOTE: Each mitigation measure in this document applies to the proposed project and all variants, unless noted otherwise.   |                                  |   |   |                        |
| MEASURES ADOPTED AS CONDITIONS OF APPROVAL   | Implementation<br>Responsibility | Mitigation<br>Schedule  | Monitoring/Reporting<br>Responsibility (Public<br>Agency) | Monitoring<br>Schedule |
| <p>The project sponsor shall enter into a Transit Mitigation Agreement with the SFMTA under which the agreement shall provide for the project sponsor to make a fair share contribution to the cost of providing additional bus service or improving service on the 10 Townsend by paying a fee. The fair share contribution as documented in the Transportation Impact Study from the proposed project shall not exceed the following amounts, in total across all phases:</p> <p>a. \$391,179 for High Commercial<br/>b. \$324,595 for High Residential</p> <p>SFMTA may determine that other measures to increase capacity along the route would be more desirable than adding buses and may use the funds provided by the project sponsor to implement these other measures, which include but are not limited to the following measures:</p> <ol style="list-style-type: none"> <li>1. Convert to using higher-capacity vehicles on the 10 Townsend route. In this case, the project sponsor's fair share contribution may be utilized to convert the route to articulated buses. Some bus stops along the route may not currently be configured to accommodate the longer articulated buses. Some bus zones could be extended by removing one or more parking spaces at locations where appropriate space is available.</li> <li>2. Instead of adding more buses to a congested route, it would be more desirable to increase travel speeds along the route which would allow for buses to move faster thus increasing efficiency and reliability. In this case, the project sponsor's fair share contribution may be used to fund a study to identify appropriate and feasible improvements and/or implement a portion of the improvements that would increase travel speeds enough to increase capacity along the bus route. Such improvements could include transit only lanes, transit signal priority, and transit boarding improvements.</li> <li>3. Another option to increase capacity along the corridor is to add a new Muni service route in this area. If this option is selected, the project sponsor's fair share contribution may fund the purchase of the new vehicles.</li> </ol> |                                  | specified in this measure, which would be used by SFMTA to increase capacity. |   |                        |

| MEASURES ADOPTED AS CONDITIONS OF APPROVAL   | Implementation Responsibility   | Mitigation Schedule   | Monitoring/Reporting Responsibility (Public Agency)  | Monitoring Schedule   |
| <p><b>Mitigation Measure M-NOI-2.3: Design of Future Noise-Sensitive Uses.</b><br/>Prior to issuance of a building permit for a residential building on Mission Rock Boulevard between Terry A. Francois Boulevard and Third Street, a noise study shall be conducted by a qualified acoustician to determine the need to incorporate noise attenuation measures into the building design in order to meet Title 24's interior noise limit for residential uses as well as the City's (Article 29, Section 2909(d)) 45-dBA (Ldn) interior noise limit for residential uses. This evaluation shall account for the projected increase in traffic noise as a result of project traffic along Mission Rock Boulevard between Terry A. Francois Boulevard and Third Street and any new shielding benefits provided by surrounding buildings that exist at the time of development. Future cumulative traffic noise increases on adjacent roadways, existing and planned stationary sources (i.e., emergency generators, HVAC, etc.), and future noise increases from all known cumulative projects located with direct line-of-sight to the project building.</p>  | Vertical developer(s) and qualified acoustician.  | Prior to the issuance of the building permit for vertical construction of any residential building on each parcel on Mission Rock Boulevard between Terry A. Francois Boulevard and Third Street. | Port staff to review the noise study. A single noise study or multiple noise studies may be produced to address project phasing.                                 | Considered complete after submittal and approval of the noise study by the Port.                            |
| <p><b>Mitigation Measure M-NOI-2.4: Design of Future Noise-Generating Uses near Residential Uses.</b><br/>Future land uses shall be designed to minimize the potential for sleep disturbance (defined as exceeding 45 dBA at residential interiors during the hours of 10 p.m. to 7 a.m.) at any future adjacent residential uses. Design approaches including, but not limited to, the following shall be incorporated into future development plans to minimize the potential for noise conflicts of future uses on the project site:</p> <ul style="list-style-type: none"> <li>Design of Future Noise-Generating Uses. To reduce potential conflicts between sensitive receptors and new noise-generating land uses located adjacent to these receptors, exterior facilities such as loading areas/docks, trash enclosures, and surface parking lots shall be located on the sides of buildings facing away from existing or planned sensitive receptors (e.g., residences). If this is not feasible, these types of facilities shall be enclosed or equipped with appropriate noise shielding.</li> <li>Design of Future Above-Ground Parking Structure on Block D2. For parking garage on Block D2, the sides of the parking structures facing adjacent or nearby existing or planned residential uses shall be designed to shield residential receptors from noise associated with parking cars.</li> </ul> | Garage developer (for Block D2 garage) and vertical developer(s) (for commercial/office buildings). | Prior to the issuance of a building permit for each commercial/office building, and prior to issuance of building permit for Block D2 parking garage.   | The Port's Building Permit Group to review construction plans to confirm that future noise-generating land uses meet the requirements of this Measure M-NOI-2.4. | Considered complete after submittal and approval of construction plans by the Port's Building Permit Group. |

| <b>MITIGATION MONITORING AND REPORTING PROGRAM FOR<br/>SEAWALL LOT 337 AND PIER 48 MIXED-USE PROJECT</b>  |   |  |   |  |
|---|---|--|---|--|

| <b>MEASURES ADOPTED AS CONDITIONS OF APPROVAL</b>   | <b>Implementation Responsibility</b>  | <b>Mitigation Schedule</b>                                       | <b>Monitoring/Reporting Responsibility (Public Agency)</b>  | <b>Monitoring Schedule</b>   |
| <b>M-NOI-3.1: Pile-Driving Control Measures – Annoyance.</b><br>To reduce impacts associated with pile driving, a set of site-specific vibration attenuation measures shall be implemented under the supervision of a qualified acoustical consultant during the project construction period. These attenuation measures shall include as feasible, in consideration of technical and structural requirements and conditions, the following control strategy, as well as any other effective strategies to the extent necessary to achieve a PPV vibration level at neighboring properties of less than the strongly perceptible level of 0.10 in/sec.<br>The project sponsor shall require the construction contractor to limit pile-driving activity so that the PPV vibration level at neighboring uses is less than 0.10 in/sec to the extent it is practical and necessary, and, to the extent it is practical, implement “quiet” pile-driving technology, such as predrilling piles, using sonic pile drivers, or using more than one pile driver to shorten the total duration of pile driving.  | Infrastructure developer and/or vertical developer(s) (as applicable), qualified acoustical consultant. | Prior to issuance of building permit for each proposed building. | Infrastructure developer or vertical developer(s) (as applicable) to submit the Construction Noise Control Plan (detailed in M-NOI-1) to the Port’s Building Permit Group documenting site-specific vibration attenuation measures. A single Noise Control Plan or multiple Noise Control Plans may be produced to address project phasing.   | Considered complete upon submittal and approval of the Construction Noise Control Plan (including vibration attenuation measures) to the Port’s Building Permit Group. |
| <b>M-NOI-3.2: Pile-Driving Vibration Control Measures – Damage.</b><br>To reduce the potential for damage to Pier 48, the following measures shall be implemented: <ul style="list-style-type: none"> <li>• The Port of San Francisco shall be notified in writing prior to construction activity that construction may occur within 100 feet of the Pier 48 buildings.</li> <li>• The project sponsor shall retain a structural engineer, an architectural historian, and a licensed historical architect (hereafter referred to as the building evaluation team) to evaluate potentially affected buildings and determine their susceptibility to damage. The structural engineer shall evaluate the building structure. The architectural historian and licensed historical architect shall evaluate architectural elements. This building evaluation team shall then establish building-specific vibration thresholds that will (a) identify the level of vibration affected historic buildings will tolerate so as to preclude structural damage to the building of a nature that would result in material damage to any historic features of the buildings, and (b) identify the level of vibration at which cosmetic damage may begin to occur to buildings.</li> <li>• The building evaluation team shall inventory and document existing cracks in paint, plaster, concrete, and other building elements.</li> </ul> | Infrastructure developer and/or vertical developer(s) (as applicable), building evaluation team.        | Prior to construction activities adjacent to Pier 48.            | Infrastructure developer or vertical developer(s) (as applicable) to submit proposed building-specific vibration thresholds with input from structural engineer, architectural historian, and historic architect; an inventory of the condition of Pier 48; a vibration monitoring plan; and results of the inspection following construction activities to the Port’s Building Permit Group for review and approval. | Considered complete upon submittal and approval of documentation incorporating identified measures by the Port’s Building Permit Group.                                |

| MITIGATION MONITORING AND REPORTING PROGRAM FOR<br>SEAWALL LOT 337 AND PIER 48 MIXED-USE PROJECT   |                                  |                        |   |                        |
|--|----------------------------------|------------------------|---|------------------------|
| NOTE: Each mitigation measure in this document applies to the proposed project and all variants, unless noted otherwise.   |                                  |                        |   |                        |
| MEASURES ADOPTED AS CONDITIONS OF APPROVAL   | Implementation<br>Responsibility | Mitigation<br>Schedule | Monitoring/Reporting<br>Responsibility (Public<br>Agency) | Monitoring<br>Schedule |
| <ul style="list-style-type: none"> <li>The building evaluation team shall develop a ground-borne vibration monitoring plan that will include monitoring vibration at the buildings of concern to determine if the established thresholds are exceeded.</li> <li>The project sponsor shall retain a qualified acoustical consultant or engineering firm to implement the vibration monitoring plan at Pier 48. As part of the monitoring plan, the consultant shall conduct regular periodic inspections for cosmetic damage to each building within 160 feet of planned ground-disturbing activity on the project site.</li> <li>Should vibration levels be observed in excess of the cosmetic damage threshold or cosmetic damage be observed below that level, the driving of piles within 100 feet of the Pier 48 structure (or within the impact distance determined by the study of building-specific vibration thresholds, per second bullet above, whichever distance is shorter) shall be halted until measures are implemented to prevent cosmetic damage to the extent feasible. These measures include use of alternative construction techniques, including, but not limited to, use of pre-drilled piles if soil conditions allow, use of smaller, lighter equipment, using vibratory hammers in place of impact hammers, and using pile cushioning or equipping the impact hammer with wooden cushion blocks to increase the period of time over which the energy from the driver is imparted to the pile. Should cosmetic damage to a building occur as a result of ground-disturbing activity on the site notwithstanding the use of alternative construction techniques, the building(s) shall be remediated to its pre-construction condition at the conclusion of ground-disturbing activity on the site.</li> <li>Should vibration levels be observed that reach the threshold designed to protect historic buildings from material damage to historic features, pile-driving within impact distances of the Pier 48 building, as determined by the building evaluation team, shall be halted and a structural bracing program or other appropriate protective measures for the potentially affected buildings shall be designed by the building evaluation team and implemented by the project sponsor. The structural bracing program or other protective measures shall be designed to prevent damage to the potentially affected buildings that could materially impair their historic resource status consistent with CEQA Guidelines Section 15064.5(b)(2).</li> </ul> |                                  |                        |   |                        |

| <p>4. How to use the table: If the ERO determines that the equipment requirements cannot be met, then the project sponsor must attempt to meet Compliance Alternative 1. If the ERO determines that the contractor cannot supply off-road equipment that meets Compliance Alternative 1, then the contractor must meet Compliance Alternative 2.</p> <p>C. Construction Emissions Minimization Plan</p> <p>Before starting onsite construction activities, the contractor shall submit a Construction Emissions Minimization Plan to the ERO for review and approval. The plan shall state, in reasonable detail, how the contractor shall meet the requirements of Section A.</p> <p>1. The plan shall include estimates of the construction timeline by phase, with a description of each piece of off-road equipment required for every construction phase. The description may include, as such information is available, but is not limited to: equipment type, equipment manufacturer, equipment identification number, engine model year, engine certification (tier rating), horsepower, engine serial number, and expected fuel usage and hours of operation. For VDECS installed, the description may include technology type, serial number, make, model, manufacturer, ARB verification number level, and installation date and hour meter reading on installation date. For off-road equipment using alternative fuels, the description shall also specify the type of alternative fuel being used. Renewable diesel shall be considered an alternative fuel if it can be demonstrated to the Planning Department or the City's air quality specialists that it is compatible with tiered engines and that emissions of ROG and NOx from the transport of fuel to the project site will not offset its NOx reduction potential.</p> <p>2. The project sponsor shall ensure that all applicable requirements of the plan have been incorporated into the contract specifications. The plan shall include a certification statement, stating that the contractor agrees to comply fully with the plan.</p> <p>3. The contractor shall make the plan available to the public for review onsite during working hours. The contractor shall post at the construction site a legible and visible sign summarizing the plan. The sign shall also state that the public may ask to inspect the plan for the project at any time during working hours and explain how to request</p> |  |                                |  |                                |

|--|--|---|--|---|
| <b>NOTE: Each mitigation measure in this document applies to the proposed project and all variants, unless noted otherwise.</b>  |  |   |  |   |
| <b>MEASURES ADOPTED AS CONDITIONS OF APPROVAL</b>  | <b>Implementation<br/>Responsibility</b> | <b>Mitigation<br/>Schedule</b>  | <b>Monitoring/Reporting<br/>Responsibility (Public<br/>Agency)</b> | <b>Monitoring<br/>Schedule</b>          |
| <p>Planning Department's approval of the proposed offset project by providing documentation of the estimated amount of emissions of ROG and NOx to be reduced (tons per year) within the SFBAAB from the emissions reduction project(s). The project sponsor shall notify the Planning Department within 6 months of completion of the offset project for Planning Department verification.</p> <p>2. Pay a mitigation offset fee to the BAAQMD Bay Area Clean Air Foundation (Foundation) in installments, as further described below, with each installment amount to be determined prior to the estimated first year of exceedance. This fee is intended to fund emissions reduction projects to achieve reductions totaling up to 10.5 tons of ozone precursors per year, the estimated maximum tonnage of operational and construction-related emissions offsets required to reduce emissions below significance levels after implementation of other identified mitigation measures. This total emissions offset amount was calculated by summing the maximum daily construction and operational emissions of ROG and NOx (pounds/day), multiplying by 260 work days per year for construction and 365 days per year for operation, and converting to tons. The amount represents the total estimated operational and construction-related ROG and NOx emissions offsets required.</p> <p>The fee shall be paid in up to 12 installments, each installment payable at the time of application for a site permit for each development block, representing the portion of the 10.5 tons of ozone precursors per year attributable to each building, as follows: (a) Blocks A, G, and K: 6.6% or 0.70 tons per each development block; (b) Pier 48: 18.6% or 1.95 tons; (c) Blocks B, C, and D: 9% or 0.95 tons per each development block; (d) Blocks E and F: 10.3% or 1.08 tons per each development block; and (e) Blocks H, I, and J: 4.6% or 0.49 tons per each development block. The mitigation offset fee, currently estimated at approximately \$18,262 per weighted ton, shall not exceed \$35,000 per weighted ton of ozone precursors plus an administrative fee of no more than 5 percent of the total offset to fund one or more emissions reduction projects within the SFBAAB. The not to exceed amount of \$35,000 will be adjusted to reflect annual California Consumer Price Index adjustments between 2017 and the estimated first year of exceedance. Documentation of payment shall be provided to the Planning Department.</p> |  | <p>with site permit application for each block, if no specific project or program is identified. Enter into MOU with BAAQMD Foundation and pay offset fee in installments for each development block.</p> |  | <p>installment outlined in the MOU.</p> |

| <b>MITIGATION MONITORING AND REPORTING PROGRAM FOR<br/>SEAWALL LOT 337 AND PIER 48 MIXED-USE PROJECT</b>  |  |  |  |   |
|---|--|--|--|---|
| <b>NOTE: Each mitigation measure in this document applies to the proposed project and all variants, unless noted otherwise.</b>   |  |  |  |   |
| <b>MEASURES ADOPTED AS CONDITIONS OF APPROVAL</b>   | <b>Implementation<br/>Responsibility</b> | <b>Mitigation<br/>Schedule</b>   | <b>Monitoring/Reporting<br/>Responsibility (Public<br/>Agency)</b>   | <b>Monitoring<br/>Schedule</b>  |
| <p>Unless directly implementing a specific offset project (or program) as described above, the project sponsor would enter into a Memorandum of Understanding (MOU) with the BAAQMD Foundation in connection with each installment payment described above. The MOU will include details regarding the funds to be paid, the administrative fee, and the timing of the emissions reductions project. Acceptance of this fee by the BAAQMD shall serve as acknowledgment and a commitment to (1) implement an emissions reduction project(s) within a time frame to be determined, based on the type of project(s) selected, after receipt of the mitigation fee to achieve the emissions reduction objectives specified above and (2) provide documentation to the Planning Department and the project sponsor describing the project(s) funded by the mitigation fee, including the amount of emissions of ROG and NOx reduced (tons per year) within the SFBAAB from the emissions reduction project(s). To qualify under this mitigation measure, the specific emissions reduction project must result in emission reductions within the SFBAAB that are real, surplus, quantifiable, and enforceable and would not otherwise be achieved through compliance with existing regulatory requirements or any other legal requirement.</p> |  |  |  |   |
| <p><b>Mitigation Measure M-AQ-2.1: Best Available Control Technology for Operational Diesel Generators.</b></p> <p>The project sponsor shall ensure that the operational backup diesel generators comply with the following: (1) ARB Airborne Toxic Control Measure (ATCM) emissions standards for model year 2008 or newer engines; and (2) meet or exceed one of the following emission standards for particulate matter: (A) Tier 4 interim certified engine or (B) Tier 2 or Tier 3 certified engine that is equipped with an ARB Level 3 VDECS. A nonverified diesel emissions control strategy may be used if the filter has the same particulate matter reduction as the identical ARB-verified model and BAAQMD approves of its use. The project sponsor shall submit documentation of compliance with the BAAQMD NSR permitting process (Regulation 2, Rule 2, and Regulation 2, Rule 5) and the emissions standard requirement of this measure to the Planning Department for review and approval prior to issuance of a permit for a backup diesel generator from any City agency.</p>   | <p>Vertical developer(s).</p>            | <p>Prior to issuance of permit for each backup diesel generator from BAAQMD.</p> | <p>Vertical developer(s) shall submit documentation of compliance to the Port for review and approval.</p> | <p>Considered complete upon review and approval of documentation by Port staff.</p> |

| <b>MEASURES ADOPTED AS CONDITIONS OF APPROVAL</b>  | <b>Implementation Responsibility</b>   | <b>Mitigation Schedule</b>  | <b>Monitoring/Reporting Responsibility (Public Agency)</b>  | <b>Monitoring Schedule</b>  |
| <p><b>Mitigation Measure M-AQ-2.2: Reactive Organic Gases Emissions Reduction Measures.</b></p> <p>To reduce ROG emissions associated with the project, the project sponsor shall provide education for residential and commercial tenants to help reduce area source (e.g., architectural coatings, consumer products, and landscaping) emissions associated with residential and building operations. Prior to receipt of any building permit and every 5 years thereafter, the project sponsor shall work with the San Francisco Department of Environment to develop electronic correspondence, which will be distributed by email annually to tenants of the project that encourages the purchase of consumer products that are better for the environment and generate fewer VOC emissions. The correspondence shall encourage environmentally preferable purchasing and include contact information and links to SF APPROVED. While microbreweries do not typically implement emission control devices, to further reduce ROG (primarily ethanol) emissions associated with Pier 48 industrial operations, the project sponsor shall implement technologies to reduce ethanol emissions if available and practicable. Such measures could include wet scrubbers, ethanol recovery and capture (e.g., carbon absorption) or incineration. At the time when specific designs for the Pier 48 use are submitted to the City for approval, the project sponsor shall provide an analysis that quantifies the emissions, based on the specific design proposal, and evaluates ROG emission control technologies.</p> | <p>Vertical developer(s).</p>  | <p>Prior to issuance of any building permit and every 5 years thereafter.</p>   | <p>Vertical developer(s) to work with the San Francisco Department of Environment to develop materials. San Francisco Department of the Environment to review and approve materials.</p>  | <p>Considered complete after documentation provided to the Department of Environment of distribution of educational materials to residential and commercial tenants.</p>                        |
| <p><b>Mitigation Measure M-AQ-2.3: Transportation Demand Management.</b></p> <p>The project sponsors shall prepare and implement a Transportation Demand Management (TDM) Plan. The TDM Plan shall have a goal of reducing estimated aggregate daily one-way vehicle trips by 20 percent compared to the aggregate daily one-way vehicle trips identified in the project's travel demand memo, prepared by Advant Consulting, dated June 30, 2015 ("Travel Demand Memo"), and attached as Appendix 4-4 to the Draft EIR. The project sponsors shall be responsible for monitoring implementation of the TDM Plan and proposing adjustments to the TDM Plan if its goal is not being achieved, in accordance with the following provisions.</p> <p>The TDM Plan may include, but is not limited to, the types of measures summarized below by way of example. TDM Plan measures shall generally be consistent with the City's adopted TDM Program Standards and the draft</p>   | <p>Transportation Coordinator and/or infrastructure developer to prepare the TDM Plan, which will be implemented by the Transportation Coordinator and will be binding on all development parcels.</p> | <p>Transportation Coordinator and/or Infrastructure developer to prepare TDM Plan and submit to Planning Department staff prior to approval of the project.</p> | <p>Transportation Coordinator to submit the TDM Plan to Planning Department staff for review and approval. Transportation Coordinator to submit monitoring report annually to Planning Department staff and implement TDM Plan Adjustments (if required).</p> | <p>The TDM Plan is considered complete upon approval by the Planning Department staff, in consultation with the SFMTA. Annual monitoring reports would be on-going during project buildout.</p> |

| offset fee in accordance with Mitigation Measure M-AQ-1.5, in the amount required to address, both the shortfall in reduction during the previously monitored years and the anticipated shortfall in the remaining expected years of project operations, the latter of which shall be based on the shortfall that occurred in the most recently monitored year. Calculations of emissions to be offset shall be based on the total amount of emissions anticipated to be reduced by achieving the 20 percent TDM goal adjusted for the actual percentage of aggregate daily one-way vehicle trip reduction achieved in the most recently monitored year.   |   |  |  |   |
| <b>Wind and Shadow Mitigation Measures</b>   |   |  |  |   |
| <b>M-WS-1: Assessment and Mitigation of Wind Hazards on a Building-by-Building Basis.</b><br>1. Prior to or as part of the submittal package for the schematic design of a new building (Proposed Building), the Proposed Building developer shall submit to the Planning Department, for its review and approval, a scope of work and, following approval of the scope, a report from a Qualified Wind Consultant (QWC) that reviews the Proposed Building schematic design, absent landscaping. <sup>6</sup> "QWC" means a wind consultant retained by the Proposed Building(s) developer and approved by the Planning Department for preparation of the report. The EIR wind consultant for the proposed project and any other wind consultant on the City's then approved list or otherwise approved by the City will be considered a QWC.<br>2. The QWC report shall evaluate whether the Proposed Building(s) would create a Significant Wind Impact. "Significant Wind Impact" means a substantial increase on a site-wide basis in the number of hours per year that the 26 mph wind hazard criterion is exceeded or, if baseline wind conditions are greater than 26 mph, a substantial increase in the area subjected to winds greater than 26 mph. This analysis shall focus on the entire project area that was studied in wind tunnel tests conducted for the EIR and not just the area immediately surrounding the Proposed Building(s). | Vertical developer(s) and qualified wind consultant.<br>Vertical developer(s) to implement architectural or landscaping features, or a combination of such features, that have been demonstrated in wind tunnel to reduce the Proposed Building's wind hazards to a level no greater than those of either | Prior to or as part of the submittal package for the schematic design of a new building. | Vertical developer(s) to submit to the Planning Department and the Port, for their review and approval, a scope of work and, following the approval of the scope of work by Planning Department and Port staff, a report from a qualified wind consultant that determines building-specific wind conditions. | Considered complete upon approval of wind report by the Planning Department and Port. |

<sup>6</sup> The scope of work for this report shall use the same methodology and wind test point locations as the Wind Study prepared for this EIR.

| MITIGATION MONITORING AND REPORTING PROGRAM FOR<br>SEAWALL LOT 337 AND PIER 48 MIXED-USE PROJECT   |   |                     |   |                     |
|--|---|---------------------|---|---------------------|
| NOTE: Each mitigation measure in this document applies to the proposed project and all variants, unless noted otherwise.   |   |                     |   |                     |

| <p>3. The QWC shall consider the Proposed Building(s) in the context of the "Current Project," which, at any given time during construction of the Project, shall be defined as the building masses used in the Original Model (Wind Study Configuration B),<sup>7</sup> except as updated to reflect schematic design submittals for any previously approved building that has not yet commenced construction, and construction permit designs for on-site buildings that are under construction or have completed construction. This model shall be referred to as the "Current Project" and shall be updated over time as architectural design for each proposed project block/building is completed.</p> <p>4. The Proposed Building shall be tested in the wind tunnel as proposed, including any architectural features that can be shown on plans to mitigate wind effects.<sup>8</sup> Testing may not include any existing or proposed onsite landscaping. A separate test shall be conducted with existing and proposed onsite landscaping included, if required per Section 5, below. The accompanying report shall compare the wind tunnel results analyzing the Proposed Building in the context of the Current Project to the following two baselines: (1) the EIR baseline conditions for the project site (Wind Study Configuration A), and (2) Existing Plus Project (i.e., with Mission Rock proposed project) conditions used in the EIR (Wind Study Configuration B).</p> <p>5. No further analysis shall be required if the QWC concludes, and the Planning Department concurs, that the Proposed Building's schematic design, absent proposed onsite landscaping, would not create a Significant Wind Impact. If the QWC concludes that the Proposed Building's schematic design, absent proposed onsite and existing offsite landscaping, would create a Significant Wind Impact, as defined above, then a second wind tunnel test shall be conducted, taking into account proposed onsite landscaping and existing offsite landscaping. The intent of landscaping is</p> | Wind Study Configuration A or Wind Study Configuration B. |                     |   |                     |

<sup>7</sup> All references to the Wind Study refer to the Mission Rock EIR Pedestrian Wind Study Wind Tunnel Tests Report prepared by RWDI, final report, January 25, 2017, which can be found in Appendix 7-1 to this EIR.

<sup>8</sup> These could include features such as setbacks, wind baffles, randomized balconies, overhands, canopies, awnings and the like, provided they are consistent with the project's Design Controls and shown on schematic architectural plans for the Proposed Building.

| <p>If inactive nests are identified, the project sponsor or its contractor shall remove those nests from the structure/vegetation and install nest exclusion measures on structures (i.e., fine mesh netting, panels, or metal projectors) outside of the nesting season, if deemed necessary and suitable by the qualified wildlife biologist. All exclusionary devices shall be monitored and maintained throughout the breeding season to ensure that they are successful in preventing the birds from accessing the cavities or nest sites.</p> <p>After each survey and/or after nest-deterrence activities are completed, the wildlife biologist shall complete a memorandum detailing the survey effort and results and submit the memorandum to the project sponsor within 7 days of survey completion.</p>   |  |  |   |  |
| <b>Geology and Soils Mitigation Measures</b>  |  |  |   |  |
| <p><b>M-GE-5: Accidental discovery of paleontological resource.</b></p> <p>Given the potential for paleontological resources to be present at the project site at excavation depths within the Colma Formation, the following measures shall be undertaken to avoid any significant adverse effect from the proposed project on paleontological resources. Before the start of any drilling or pile-driving activities, the project sponsor shall retain a qualified paleontologist, as defined by the SVP, who is experienced in teaching nonspecialists. The qualified paleontologist shall train all construction personnel who are involved with earthmoving activities, including the site superintendent, regarding the possibility of encountering fossils, the appearance and types of fossils that are likely to be seen during construction, and proper notification procedures should fossils be encountered. Procedures to be conveyed to workers include halting construction within 50 feet of any potential fossil find and notifying a qualified paleontologist, who shall evaluate the significance.</p> <p>If paleontological resources are discovered during earthmoving activities, the construction crew shall immediately cease work near the find and notify the project sponsor and the San Francisco Planning Department.</p> <p>Construction work in the affected areas shall remain stopped or be diverted to allow recovery of fossil remains in a timely manner. The project sponsor shall retain a qualified paleontologist to evaluate the resource and prepare a recovery plan in accordance with SVP guidelines. The recovery plan may include a field survey, construction monitoring, sampling and data recovery</p> | Infrastructure developer and/or vertical developer(s) (as applicable), and qualified paleontologist. | Before the start of any drilling or pile-driving activities. | Infrastructure developer or vertical developer(s) (as applicable) to retain qualified paleontologist and notify Port staff. Port staff to approve selection of paleontologist. If necessary, paleontologist to prepare and submit a recovery plan for Port review and approval. | Considered complete once training is complete, once construction is complete, or once the Planning Department approves the recovery plan and the infrastructure developer or vertical developer(s) and qualified paleontologist implements the plan. |

| MITIGATION MONITORING AND REPORTING PROGRAM FOR<br>SEAWALL LOT 337 AND PIER 48 MIXED-USE PROJECT   |   |  |   |                                      |
|--|---|--|---|--------------------------------------|
| NOTE: Each mitigation measure in this document applies to the proposed project and all variants, unless noted otherwise.   |   |  |   |                                      |
| MEASURES ADOPTED AS CONDITIONS OF APPROVAL   | Implementation Responsibility                                     | Mitigation Schedule  | Monitoring/Reporting Responsibility (Public Agency)   | Monitoring Schedule                  |
| procedures, museum storage coordination for any specimen recovered, and a report of findings. Recommendations in the recovery plan that are determined by the San Francisco Planning Department to be necessary and feasible shall be implemented before construction activities can resume at the site where the paleontological resources were discovered. The San Francisco Planning Department shall be responsible for ensuring that the monitor's recommendations regarding treatment and reporting are implemented.   |   |  |   |                                      |
| IMPROVEMENT MEASURES FOR THE SEAWALL LOT 337 AND PIER 48 MIXED-USED PROJECT  |   |  |   |                                      |
| <p><b>I-TR-1: Construction Management Plan.</b><br/> <b>Traffic Control Plan for Construction</b> – To reduce potential conflicts between construction activities and pedestrians, bicyclists, transit and autos during construction activities, the project sponsor should require construction contractor(s) to prepare a traffic control plan for major phases of construction (e.g. demolition and grading, construction, or renovation of individual buildings). The project sponsor and their construction contractor(s) should meet with relevant City agencies to coordinate feasible measures to reduce traffic congestion, including temporary transit stop relocations and other measures to reduce potential traffic and transit disruption and pedestrian circulation effects during major phases of construction. This includes coordinating project construction activities with nearby City construction projects, such as the Third Street Rehabilitation Project. For any work within the public right-of-way, the contractor would be required to comply with the San Francisco's Regulations for Working in San Francisco Streets, which establishes rules and permit requirements so that construction activities can be conducted safely and with the least possible interference with pedestrians, bicyclists, transit, and vehicular traffic. Additionally, restrict truck movements and deliveries to the maximum feasible extent during peak hours (generally 7:00 to 9:00 a.m. and 4:00 to 6:00 p.m., or other times, as determined by SFMTA and the TASC).</p> <p>In the event that the construction timeframes of the major phases and other development projects adjacent to the project site overlap, the project sponsor should coordinate with City agencies through the TASC and the adjacent developers to minimize the severity of any disruption to adjacent land uses and transportation facilities from overlapping construction transportation</p> | Infrastructure developer and/or developer(s) (as applicable) (s). | Construction Management Plan for Construction: Prior to the issuance of a grading, excavation, or building permit. Project Construction Updates: ongoing throughout construction activities. | Infrastructure developer and/or vertical developer(s) (as applicable) and construction contractor(s) to submit Traffic Control Plan for Construction to the Port and SFMTA for review and approval. Project construction update materials would be provided in the annual mitigation and monitoring plan. | Ongoing during project construction. |

| MITIGATION MONITORING AND REPORTING PROGRAM FOR<br>SEAWALL LOT 337 AND PIER 48 MIXED-USE PROJECT  |                               |  |   |  |

**DDA EXHIBIT A6**  
**OTHER CITY REQUIREMENTS**

**DDA EXHIBIT A6**  
**Other City Requirements**

The Municipal Code (available at [www.sfgov.org](http://www.sfgov.org)) and City and Port policies described in this Exhibit are incorporated by reference as though fully set forth in the DDA (collectively, the “**Other City Requirements**”). Developer is charged with full knowledge of and compliance with each applicable ordinance and policy and any related implementing regulations as amended, subject to *DA § 5.3 (New City Laws)*.

In Ordinance No. 33-18, a copy of which is attached as **Exhibit A**, the Board of Supervisors waived the application to the Mission Rock Project of the following provisions of the Administrative Code (collectively, the “**DA Waivers**”):

1. Chapter 6 (Public Works Contracting Policies and Procedures) other than the payment of prevailing wages as required in Chapter 6;
2. to the extent inconsistent with Developer’s approved LBE Utilization Program, Chapter 14B (Local Business Enterprise Utilization and Non-Discrimination in Contracting);
3. Competitive Bidding Procedures and Additional Appraisal Review as defined in Section 23.3 (Chapter Definitions) and required by Section 23.3 (Conveyance and Acquisition of Real Property);
4. Section 23.31 (Year-to-Year and Shorter Leases);
5. Section 23.30 (Lease of Real Property);
6. Section 23.33 (Competitive Bidding Procedures);
7. Section 23A. 7 (Transfer of Jurisdiction Over Surplus Properties to the Mayor’s Office of Housing and Community Development);
8. Subsection (c)(2) of Section 61.5 (Listing of Unacceptable Non-Maritime Land Uses); and
9. contract termination, liquidated damages, and debarment remedies under Section 4.9-1(c) (Nutritional Standards and Guidelines), Section 12Q.5(f) (Health Care Accountability), and Section 2T (Criminal History in Hiring and Employment).

The descriptions below are not comprehensive but are provided for notice purposes only. Developer understands that its failure to comply with any applicable provision of the Other City Requirements will give rise to the specific remedies described in the applicable Other City Requirements (which may include penalties) and in certain cases give rise to a default under the DDA, which could result in a default under the DA as well. References to Developer in the Other City Requirements will apply to Developer, its successors under the DDA, and DA Successors under the DA.

All statutory references in this Exhibit are to the Municipal Code as in effect on the DA Ordinance Effective Date unless specified otherwise. Initially capitalized or highlighted terms used in this Exhibit and not defined in the Appendix have the meanings ascribed to them in the cited ordinance.

## **Contracting, Hiring, and Construction**

### **1. Nondiscrimination in Contracts and Property Contracts.**

(Admin. Code ch. 12B, ch. 12C)

(a) **Covered Contracts.** All provisions in this Section regarding the Nondiscrimination in Contracts and Property Contracts ordinance apply to “subcontracts to contracts” and “property contracts” as defined in Administrative Code sections 12B.2 and 12C.2.

(b) **Covenant Not to Discriminate.** In its development of the Project Site, Developer covenants and agrees not to discriminate against or segregate any person or group of persons on any basis listed in section 12955 of the California Fair Employment and Housing Act (Cal. Gov. Code §§ 12900-12996), or on the basis of the fact or perception of a person’s race, color, creed, religion, national origin, ancestry, age, sex, sexual orientation, gender identity, domestic partner status, marital status, disability, AIDS/HIV status, weight, height, association with members of protected classes, or in retaliation for opposition to any forbidden practices against any employee of, any City employee working with, or applicant for employment with Developer, or against any person seeking accommodations, advantages, facilities, privileges, services, or membership in the business, social, or other establishment or organization operated by Developer.

(c) **Requirement to Include.** Developer must: (i) include a nondiscrimination clause in substantially the form of **Subsection (a)** (Covenant Not to Discriminate); and (ii) incorporate by reference Administrative Code sections 12B.2(a), 12B.2(c)-(k), and 12C.3(a) in all contracts, subcontracts, and subleases and require all contractors, subcontractors, and subtenants to comply with those provisions.

(d) **Nondiscrimination in Benefits.** Developer agrees not to discriminate between employees with domestic partners and employees with spouses, or between the domestic partners and spouses of employees, where the domestic partnership has been registered with any governmental entity under state or local law authorizing registration, subject to the conditions set forth in Administrative Code section 12B.2. Developer’s agreement relates to bereavement leave, family medical leave, health benefits, membership or membership discounts, moving expenses, pension and retirement benefits, and travel benefits (collectively “**Core Benefits**”), as well as other employee benefits described in section 12B.1(b), during the term of each covered contract.

(e) **Form.** On or before the Reference Date, Developer must complete, execute, deliver to, and obtain approval of its completed *Nondiscrimination in Contracts and Benefits* form CMD-12B-101 from CMD. The form is available on CMD’s website.

(f) **Penalties.** Developer understands that under Administrative Code section 12B.2(h), the City may assess against Developer or deduct from any payments due Developer a penalty for each person for each calendar day during which Developer or its subcontractor, property contractor, or other contractor discriminated against a protected person in violation of this Section.

**2. Health Care Accountability Ordinance.**

(Admin. Code ch. 12Q)

(a) Developer agrees to comply fully with and be bound by the Health Care Accountability Ordinance ("HCAO"), as set forth in Administrative Code chapter 12Q, unless exempt.

(b) Covered Employees. For each Covered Employee, Developer must provide the appropriate health benefit set forth in HCAO section 12Q.3, unless it is exempt as a small business under HCAO section 12Q.3(e).

(c) Notice and Opportunity to Cure. If Developer fails to cure a violation of the HCAO after receiving notice of a violation and an opportunity to cure the violation, the City will have the remedies set forth in HCAO section 12Q.5(f), subject to the DA Waivers, which the City may exercise individually or in combination with any of its other rights and remedies.

(d) Covered Contracts. Any Contract, Subcontract, or Sublease, as defined in Chapter 12Q, that Developer enters into for public works, public improvements, or for services that the City will pay directly or reimburse Developer for must require the Contractor, Subtenant, or Subcontractor, as applicable, to comply with the applicable provisions of the HCAO and must contain contractual obligations substantially the same as those set forth in the HCAO. Developer agrees to notify the Contracting Department promptly of any Subcontractors performing services covered by Chapter 12Q and certify to the Contracting Department that Developer has notified the Subcontractors of their HCAO obligations under this Chapter.

(e) Noncompliance. Developer will be responsible for monitoring compliance with the HCAO by each Subcontractor, Subtenant, and Contractor performing services on the Project Site. But the City agrees that Developer will not be liable for the noncompliance of its Subcontractors, Subtenants, or Contractors. The City's remedies for Developer's noncompliance with the HCAO are subject to the DA Waivers.

(f) Retaliation Prohibited. Developer must not discharge, reduce in compensation, or otherwise discriminate against any Employee for notifying the City of any issue regarding noncompliance or anticipated noncompliance with the HCAO, for opposing any practice proscribed by the HCAO, for participating in any proceedings related to the HCAO, or for seeking to assert or enforce any rights under the HCAO by any lawful means.

(g) Representation and Warranty. Developer represents and warrants that it is not an entity that was set up, or is being used, for the purpose of evading the intent of the HCAO.

(h) Reporting. Upon request, Developer must provide reports to the City in accordance with any reporting standards promulgated by the City under the HCAO.

(i) Records. After receiving a written request from the City to inspect pertinent payroll records and after at least 10 days to respond have elapsed, Developer agrees to provide the City with access to pertinent payroll records relating to the number of employees employed and terms of medical coverage. In addition, the City and its Agents, in consultation with the Department of Public Health, may conduct audits of Contracting Parties, although such audits shall be conducted through an examination of records at a mutually agreed upon time and location within 10 days after written notice. Developer agrees to cooperate with the City in connection with these audits.

(j) **Threshold.** If a Subcontractor, Subtenant, or Contractor is exempt from the HCAO because the amount payable to the Subcontractor, Subtenant, or Contractor under all of its contracts with the City or relating to City-owned property is less than \$25,000 (or \$50,000 for nonprofits) in that City Fiscal Year, but the Subcontractor, Subtenant, or Contractor later enters into one or more agreements with the City or relating to City-owned property that cause the payments to the Subcontractor, Subtenant, or Contractor to equal or exceed \$75,000 in that City Fiscal Year, then all of the Contractor's, Subtenant's, or Subcontractor's contracts with the City and relating to City-owned property will become subject to the HCAO from the date on which the later agreement is executed.

**3. Prevailing Wages and Working Conditions in Construction Contracts.**  
(Calif. Labor Code §§ 1720 *et seq.*; Admin. Code § 6.22(e))

(a) **Labor Code Provisions.** Certain contracts for work at the Project Site may be public works contracts if paid for in whole or part out of public funds, as the terms "**public work**" and "**paid for in whole or part out of public funds**" are defined in and subject to exclusions and further conditions under California Labor Code sections 1720-1720.6.

(b) **Requirement.** Developer must comply with the prevailing wage requirements in *ML §13.3(f) (Prevailing Wages)*.

(c) **Penalties.** The Port has designated OLSE as the agency responsible for ensuring that prevailing wages are paid and other payroll requirements are met, subject to the DA Waivers.

**4. Other Prevailing Wage Rate Requirements.**  
(Admin. Code §§ 21C.3, 21C.4)

(a) Under Administrative Code section 21C.4, individuals engaged in theatrical or technical services related to the presentation of a Show at the Project Site, including rigging, sound, projection, theatrical lighting, videos, computers, draping, carpentry, special effects, and motion picture services, are entitled to be paid not less than the Prevailing Rate of Wages (including fringe benefits or matching equivalents) fixed by the Board of Supervisors, unless the Show is free and open to the public or meets any of the other exemptions in Administrative Code section 21C.4(b)(1).

(b) Individuals employed in the following activities at the Project Site are also entitled to the Prevailing Rate of Wages: (i) a Public Off-Street Parking Lot, Garage or Automobile Storage Facility under Administrative Code section 21C.3; (ii) a Special Event under Administrative Code section 21C.8; and (iii) Broadcast Services under Administrative Code section 21C.9.

(c) **Agreement.** Developer agrees to comply with the obligations in Administrative Code chapter 21C and to require its tenants, contractors, and any subcontractors to comply with the obligations in chapter 21C. In addition, if Developer or its tenant, contractor, or any subcontractor fails to comply with these obligations, the City will have all available remedies against Developer to secure compliance and seek redress for workers who provided the services as described in section 21C.7, together with the remedies set forth in the DDA.

(d) Payroll Records. Developer will: (i) comply with Administrative Code section 21C.7(c)(4) as to any Covered Contract on the Project Site as defined in Administrative Code section 21C.7(b); and (ii) provide to the City for inspection, after receipt of a Violation Notice (as defined in section 21C.7(c)(4)), payroll records and other documentary evidence necessary to establish that the noticed violation has been cured.

(e) OLSE. For current Prevailing Wage rates, see the OLSE website or call the OLSE at 415-554-6235.

**5. First Source Hiring Program.**  
(Admin. Code §§ 83.1 et seq.)

Developer's obligations to comply with the First Source Hiring Program are set forth in **DDA Exh B6-A** (*Workforce Development Program*).

**6. Criminal History In Hiring And Employment Decisions.**  
(Admin. Code ch. 12T)

(a) Agreement to Comply. Administrative Code Chapter 12T ("Chapter 12T") will only apply to a Contractor's, Subcontractor's, or subtenant's operations to the extent those operations are in furtherance of performing a Contract or Property Contract with the City subject to Chapter 12T. If applicable, Developer will comply with and be bound by Chapter 12T, including the remedies and implementing regulations, with respect to applicants to and employees of Developer who would be or are performing work at the Project Site under the DDA.

(b) Breach. Developer must incorporate Chapter 12T by reference in all contracts related to be performed in furtherance of a Contract or Property Contract with the City, as defined in Administrative Code section 12T.1. Developer will be responsible for monitoring compliance by its Subcontractors, Contractors, and subtenants, but the City agrees that Developer will not be liable for their noncompliance.

(c) Prohibited Activities. Developer and its Subcontractors, Contractors, and subtenants must not inquire about, require disclosure of, or if the information is received, base an Adverse Action on an applicant's or potential applicant's or employee's: (i) Arrest not leading to a Conviction, except under circumstances identified in Chapter 12T as an Unresolved Arrest; (ii) participation in or completion of a diversion or a deferral of judgment program; (iii) a Conviction that has been judicially dismissed, expunged, voided, invalidated, or otherwise rendered inoperative; (iv) a Conviction or any other adjudication in the juvenile justice system, or information regarding a matter considered in or processed through the juvenile justice system; (v) a Conviction that is more than seven years old, based on the date of sentencing; or (vi) information pertaining to an offense other than a felony or misdemeanor, such as an infraction, except that a Contractor, Subcontractor, or subtenant may inquire about, require disclosure of, base an Adverse Action on, or otherwise consider an infraction or infractions contained in an applicant or employee's driving record if driving is more than a de minimis element of the employment in question.

(d) Employment Applications. Developer and its Subcontractors, Contractors, and subtenants must not inquire about or require applicants, potential applicants for employment, or employees to disclose on any employment application the facts or details of any Conviction.

History or unresolved arrest until either after the first live interview with the person, or after a conditional offer of employment in accordance with section 12T.4(c).

(e) **Disclosure.** Developer and its Subcontractors, Contractors, and subtenants must state in all solicitations or advertisements for employees that are reasonably likely to reach persons who are reasonably likely to seek employment with Developer or its Subcontractors, Contractors, and subtenants at the Project Site that the DDA and all Contracts and Property Contracts will consider for employment qualified applicants with criminal histories in a manner consistent with the requirements of Chapter 12T.

(f) **Posting.** Developer and its Subcontractors, Contractors, and subtenants must post the notice prepared by the OLSE, available on OLSE's website, in a conspicuous place at the Project Site and at other workplaces, job sites, or other locations under the Subcontractor's, Contractor's, or subtenant's control at which work is being done or will be done in furtherance of performing a Contract or Property Contract under the DDA with the City. The notice will be posted in English, Spanish, Chinese, and any language spoken by at least 5% of the employees at the Project Site or other workplace at which it is posted.

(g) **Penalties.** Developer and its Subcontractors, Contractors, and subtenants understand and agree that upon any failure to comply with Chapter 12T, the City will have the right to pursue any rights or remedies available under Chapter 12T, subject to Subsection (b) (Breach) and the DA Waivers, including a penalty of \$50 for each employee, applicant or other person as to whom the violation occurred or continued, and thereafter, for subsequent violations, the penalty may increase to no more than \$100, for each employee or applicant whose rights were, or continue to be, violated.

(h) **Inquiries.** If Developer has any questions about the applicability of Chapter 12T, it may contact the Port for additional information. The Port will consult with the Director of the City's Office of Contract Administration, who has authority to grant a waiver under the circumstances set forth in section 12T.8 of Chapter 12T.

**7. Employee Signature Authorization Ordinance.**  
(Admin Code §§ 23.50-23.56)

The City has adopted an Employee Signature Authorization Ordinance, which requires employers of employees in hotel or restaurant projects on public property with 50 or more full-time or part-time employees to enter into a "card check" agreement with a labor union regarding the preference of employees to be represented by a labor union to act as their exclusive bargaining representative. Developer agrees to comply with the requirements of the ordinance, if applicable, including any requirements applicable to its successors, as specified in Administrative Code section 23.54.

**Use Of City Property**

**8. Local Business Enterprises.**  
(Admin. Code ch. 14B)

Developer agrees to comply with the LBE Utilization Program, DDA Exh B6-B.

**9. Tobacco Products and Alcoholic Beverages.**  
(Admin. Code § 4.20; Health Code art. 19K)

(a) Definitions. For purposes of this Section: (i) “**alcoholic beverage**” is defined in California Business and Professions Code section 23004 and excludes cleaning solutions, medical supplies, and other products and substances not intended for drinking; and (ii) “**tobacco product**” is defined in Health Code section 1010(b).

(b) Advertising Ban. New general advertising signs that are visible to the public are prohibited on the exterior of any City-owned building under Administrative Code section 4.20-1.

(c) Tobacco Sales Ban. No person may sell tobacco products on property owned by or under the control of the City under Health Code article 19K.

(d) Alcoholic Beverage Advertising. Port property used for operation of a restaurant, concert or sports venue, or other facility or event where the sale, production, or consumption of alcoholic beverages is permitted, will be exempt from the alcoholic beverage advertising prohibition in Administrative Code section 4.20(a)-(c).

**10. Integrated Pest Management Program.**  
(Env. Code ch. 3)

(a) IPM Plan. Chapter 3 of the Environment Code (the “**IPM Ordinance**”) describes an integrated pest management policy (“**IPM Policy**”) to be implemented by all City departments. Except for the permitted uses of pesticides provided in IPM Ordinance section 303, Developer must not use or apply during the DDA term, and must not contract with any party to provide pest abatement or control services to the Project Site, except in compliance with the Port’s integrated pest management plan (“**IPM Plan**”).

(b) Application. Although not a City Department, Developer agrees to comply, and must require all of Developer’s contractors to comply, with the Port’s approved IPM Plan and IPM Ordinance sections 300(d), 302, 304, 305(f), 305(g), and 306, as if Developer were a City department. Among other matters, the IPM Ordinance: (i) provides for the use of pesticides only as a last resort; (ii) prohibits the use or application of pesticides on City-owned property except for pesticides granted exemptions under IPM Ordinance section 303 (including pesticides included on the most current Reduced Risk Pesticide List compiled by the Department of the Environment); (iii) imposes certain notice requirements; and (iv) requires Developer to keep certain records and to report to the City all pesticide use by Developer’s staff or contractors.

(c) Prior Review. Before Developer or Developer’s contractor applies pesticides to outdoor areas, Developer must obtain a written recommendation from a person holding a valid Agricultural Pest Control Advisor license issued by the California Department of Pesticide Regulation and any such pesticide application must be made only by or under the supervision of a person holding a valid Qualified Applicator certificate or Qualified Applicator license under California law. The City’s current Reduced Risk Pesticide List and additional details about pest management on City property can be found at the Department of the Environment website, <http://sfenvironment.org/ipm>.

**11. Resource-Efficient Facilities and Green Building Requirements.**  
(Env. Code ch. 7)

Developer agrees to comply with all applicable provisions of the Environment Code relating to resource-efficiency and green building design requirements.

**12. Tropical Hardwood and Virgin Redwood Ban.**  
(Env. Code ch. 8)

The City urges companies not to import, purchase, obtain or use for any purpose, any tropical hardwood, tropical hardwood wood product, virgin redwood, or virgin redwood wood product, except as expressly permitted by the application of Environment Code sections 802(b) and 803(b). Developer agrees that, except as permitted by the application of Environment Code sections 802(b) and 803(b), Developer will not use or incorporate any tropical hardwood or virgin redwood in the construction of the Improvements or provide any items to the construction of the Project, or otherwise in the performance of the DDA that are tropical hardwoods, tropical hardwood wood products, virgin redwood, or virgin redwood wood products. If Developer fails to comply in good faith with any of Environment Code chapter 8, Developer will be liable for liquidated damages for each violation in any amount equal to the contractor's net profit on the contract, or 5% of the total amount of the contract dollars, whichever is greater.

**13. Diesel Fuel Measures.**  
(Env. Code ch. 9)

Consistent with the City's Greenhouse Gas Emissions Reduction Plan (Env. Code § 903) to reduce greenhouse gas emissions in the City, Developer must minimize exhaust emissions from operating equipment and trucks during construction. Developer's compliance with MMRP Mitigation Measure M-AQ-1a will satisfy this requirement.

**14. Arsenic-Treated Wood.**  
(Env. Code ch. 13)

Developer must not purchase preservative-treated wood products containing arsenic on behalf of the City in the performance of the DDA without obtaining an exemption under Environment Code section 1304 from the Department of Environment. Developer may purchase preservative-treated wood products on the list of environmentally preferable alternatives prepared and adopted by the Department of Environment. This provision does not preclude Developer from purchasing preservative-treated wood containing arsenic for saltwater immersion. In this Section: (a) "**preservative-treated wood containing arsenic**" means wood treated with a preservative that contains arsenic, elemental arsenic, or an arsenic copper combination, including chromated copper arsenate preservative, ammoniac copper zinc arsenate preservative, or ammoniacal copper arsenate preservative; and (b) "**saltwater immersion**" means a pressure-treated wood that is used for construction purposes or facilities that are partially or totally immersed in saltwater.

**15. Food Service and Packaging Waste Reduction Ordinance.**  
(Env. Code ch. 16)

Developer agrees to comply fully with and be bound by section 1604(d) of the Food Service and Packaging Waste Reduction Ordinance (Env. Code ch. 16), including the remedies

provided in section 1607 and implementing guidelines and rules. By entering into the DDA and the Development Agreement, Developer agrees that if it breaches this provision, and fails to cure within the cure periods provided herein, the City will suffer actual damages that will be impractical or extremely difficult to determine and that the following amounts of liquidated damage are reasonable estimates of the damage that the City will incur based on any violation, established in light of the circumstances existing on the Reference Date: (a) \$100 for the first breach; (b) \$200 for the second breach in the same year; and (c) \$500 for subsequent breaches in the same year. These liquidated damages will not be considered penalties, but agreed monetary damages sustained by the City because of Developer's noncompliance.

**16. Bottled Drinking Water.**

(Env. Code ch. 24; Port Reso. No. 12-11)

Developer is subject to all applicable provisions of Environment Code chapter 24 prohibiting the sale or distribution of drinking water in plastic bottles with a capacity of 21 fluid ounces or less at Events held on City Property with attendance of more than 100 people during the DDA Term. Also, Developer must comply with the Port's *Zero Waste Policy for Events and Activities* (Port Reso. No. 12-11) for applicable Events at the Project Site during the DDA Term.

**17. Graffiti Removal and Abatement.**

(Pub. Works Code Sec. 23)

(a) Requirement. Developer agrees to remove all graffiti from the Project Site, including from the exterior of any structures within the Project Site, consistent with the notice and cure provisions of Public Works Code section 23. If the Director of Public Works determines that any property contains graffiti in violation of section 2303, the Director may issue a notice of violation to Developer and any Offending Party. At the time the notice of violation is issued, the Director will take one or more photographs of the alleged graffiti and make copies of the photographs available to Developer and any Offending Party upon request. The photographs will be dated and retained as a part of the file for the violation. The notice will give Developer and any Offending Party 30 days after the date of the notice to either remove the graffiti or request a hearing on the notice of violation and set forth the procedure for requesting the hearing. This Section is not intended to require a tenant to breach any lease or other agreement that it may have concerning its use of the real property.

(b) Application. In this Section, "graffiti" means any inscription, word, figure, marking, or design that is affixed, marked, etched, scratched, drawn, or painted on any building, structure, fixture, or other improvement, whether permanent or temporary, including signs, banners, billboards, and fencing surrounding construction sites, whether public or private, without the consent of the owner of the property or the owner's authorized agent, and that is visible from the public right-of-way, but does not include: (i) any sign or banner that is authorized by, and in compliance with, the applicable requirements of the DDA or the Port Building Code; (ii) any mural or other painting or marking on the property that is protected as a work of fine art under the California Art Preservation Act (Calif. Civil Code §§ 987 *et seq.*) or as a work of visual art under the Federal Visual Artists Rights Act of 1990 (17 U.S.C. §§ 101 *et seq.*); (iii) any painting or marking that a City department makes in the course of its official duties or as part of a public education campaign; or (iv) any painting or marking required for compliance with any local, state, or federal law.

**18. Drug-Free Workplace.**

(41 U.S.C. ch. 81; Police Code art. 40)

To the extent applied by a federal grant or contract for the Project, the Drug-Free Workplace Act of 1988 (41 U.S.C. ch. 81) will apply to Developer. Developer agrees to adopt a Drug-Free Workplace Policy and comply with all other applicable requirements of the drug-free workplace laws under Police Code article 40.

**19. Nutritional Standards and Guidelines.**

(Admin. Code § 4.9-1)

(a) Definitions. For the purpose of this Section: (i) “meal” means “prepared food” as defined in Environment Code section 1602(l), which means food or beverages prepared within San Francisco for individual customers or consumers in a form commonly understood to be a breakfast, lunch, or dinner; (ii) “Nutritional Standards Requirements” means the food and beverage nutritional standards and calorie labeling requirements set forth in Administrative Code section 4.9-1(c); (iii) “restaurant” is defined in Health Code section 451(s) and includes any coffee shop, cocktail lounge, sandwich stand, public school cafeteria, in-plant or employee eating establishment, and any other eating establishment that gives or offers for sale food that requires no further preparation to the public, guests, patrons, or employees for consumption on or off the premises; (iv) “vending machine” is defined in Administrative Code section 4.2(a) and means an automated machine dispensing products or services, including food, beverages, tobacco products, newspapers, and periodicals.

(b) Vending Machines. Any permitted vending machine must comply with the Nutritional Standards Requirements in section 4.9-1(c). Developer must incorporate the Nutritional Standards Requirements into any contract for the installation of a vending machine on the Project Site or for the supply of food and beverages to that vending machine.

(c) Restaurants. Any restaurant on City property is encouraged to ensure that at least 25% of meals offered on the menu meet the Nutritional Standards Requirements set forth in Administrative Code section 4.9-1(e).

(d) Penalties. Developer’s failure to comply with the Nutritional Standards Requirements in section 4.9-1(c) will be considered an Event of Default under the DDA and in addition to its other remedies, which will be subject to the DA Waivers, the City may require the removal of any vending machine on the Project Site that is not permitted or that violates the Nutritional Standards Requirements. Developer will be responsible for monitoring compliance with the Nutritional Standards Requirements by each subcontractor, subtenant, and contractor performing services or occupying premises on the Project Site. But the City agrees that Developer will not be liable for the noncompliance of its subcontractors, subtenants, or contractors.

**20. All-Gender Toilet Facilities.**

(Admin. Code § 4.1-3)

Developer must include at least one all-gender toilet facility on each floor of any new building on City-owned land or that is constructed by or for the City where toilet facilities are required or provided. Unless not allowed by an existing lease, whenever extensive renovations are made on one or more floors in any building on land that the City owns or in a building that is leased to or by the City, Developer will provide at least one all-gender toilet facility on each

floor where the renovations take place and toilet facilities are required or provided. An "all-gender toilet facility" means a toilet that is not restricted to use by persons of a specific sex or gender identity by means of signage, design, or the installation of fixtures. "Extensive renovations" means any renovation where the construction cost exceeds 50% of the cost of providing the required toilet facilities.

**21. Indoor Air Quality.**  
(Env. Code § 711(g))

Developer agrees to comply with section 711(g) of the Environment Code and regulations adopted under Environment Code section 703(b) relating to construction and maintenance protocols to address indoor air quality.

**Other Public Policies**

**22. Conflicts of Interest.**  
(Calif. Gov. Code §§ 87100 *et seq.* & §§ 1090 *et seq.*; Charter § 15.103; Campaign and Govt'l Conduct Code art. III, ch. 2)

Through its execution of the DDA, Developer acknowledges that it is familiar with Charter section 15.103, Campaign and Governmental Conduct Code article III, chapter 2, and California Government Code sections 87100 *et seq.* and sections 1090 *et seq.*, certifies that it does not know of any facts that would violate these provisions and agrees to notify the Port if Developer becomes aware of any such fact during the DDA Term.

**23. Sunshine.**  
(Calif. Gov. Code §§ 6250 *et seq.*; Admin. Code ch. 67)

Developer understands and agrees that under the California Public Records Act (Calif. Gov. Code §§ 6250 *et seq.*) and the City's Sunshine Ordinance (Admin. Code ch. 67), the Transaction Documents and all records, information, and materials that Developer submits to the City may be public records subject to public disclosure upon request. Developer may mark materials it submits to the City that Developer in good faith believes are or contain trade secrets or confidential proprietary information protected from disclosure under public disclosure laws, and the City will attempt to maintain the confidentiality of these materials to the extent provided by law. Developer acknowledges that this provision does not require the City to incur legal costs in any action by a person seeking disclosure of materials that the City received from Developer.

**24. Contribution Limits-Contractors Doing Business with the City.**  
(Campaign and Govt'l Conduct Code § 1.126)

(a)- Application. Campaign and Governmental Conduct Code section 1.126 ("Section 1.126") applies only to agreements subject to approval by the Board of Supervisors, the Mayor, any other elected officer, or any board on which an elected officer serves. Section 1.126 prohibits a person who contracts with the City for the sale or lease of any land or building to or from the City from making any campaign contribution to: (i) any City elective officer if the officer or the board on which that individual serves or a state agency on whose board an appointee of that individual serves must approve the contract; (ii) a candidate for the office held by the individual; or (iii) a committee controlled by the individual or candidate, at

any time from the commencement of negotiations for the contract until the later of either the termination of negotiations for the contract or six months after the date the contract is approved.

(b) Acknowledgment. Through its execution of the DDA, Developer acknowledges the following.

(i) Developer is familiar with Section 1.126.

(ii) Section 1.126 applies only if the contract or a combination or series of contracts approved by the same individual or board in a fiscal year have a total anticipated or actual value of \$50,000 or more.

(iii) If applicable, the prohibition on contributions applies to: (1) Developer; (2) each member of Developer's board of directors; (3) Developer's chairperson, chief executive officer, chief financial officer, and chief operating officer; (4) any person with an ownership interest of more than 20% in Developer; (5) any subcontractor listed in the contract; and (6) any committee, as defined in Campaign and Governmental Conduct Code section 1.104, that is sponsored or controlled by Developer.

**25. Implementing the MacBride Principles – Northern Ireland.**  
(Admin. Code ch. 12F)

The Port and the City urge companies doing business in Northern Ireland to move towards resolving employment inequities and encourage them to abide by the MacBride Principles. The Port and the City urge San Francisco companies to do business with corporations that abide by the MacBride Principles.

**Exhibit A

DDA Exhibit A6**

**Exhibit A to DDA Exhibit A6**

[Development Agreement - Seawall Lot 337 Associates, LLC - Seawall Lot 337 - Mission Rock Project]

Ordinance approving a Development Agreement between the City and County of San Francisco and Seawall Lot 337 Associates, LLC, for 28 acres of real property known as Seawall Lot 337, located east of Third Street between China Basin Channel and Mission Rock Street, China Basin Park and the portion of Terry A. Francois Boulevard abutting the park, Pier 48, the marginal wharf between Pier 48 and Pier 50, and Parcel P20; for the proposed Mission Rock Mixed-Use Project; waiving certain provisions of the Administrative Code, Planning Code, and Subdivision Code; and adopting findings under the California Environmental Quality Act, public trust findings, and findings of consistency with the General Plan, and the eight priority policies of Planning Code, Section 101.1(b).

NOTE: Unchanged Code text and uncodified text are in plain Arial font. Additions to Codes are in single-underline italics Times New Roman font. Deletions to Codes are in ~~strikethrough italics Times New Roman font~~. Board amendment additions are in double-underlined Arial font. Board amendment deletions are in ~~strikethrough Arial font~~. Asterisks (\* \* \* \*) indicate the omission of unchanged Code subsections or parts of tables.

Be it ordained by the People of the City and County of San Francisco:

Section 1. Background and Findings.

(a) California Government Code Sections 65864 et seq. ("Development Agreement Law") authorize any city, county, or city and county to enter into an agreement for the development of real property within its jurisdiction.

(b) Chapter 56 of the Administrative Code sets forth certain procedures for processing and approving development agreements in the City and County of San Francisco (the "City").

1 (c) In May 2010, the Port Commission (the "Port") selected SWL 337 Associates,  
2 LLC, a Delaware limited liability company ("Developer"), through a competitive process to  
3 negotiate exclusively for the mixed-use development (the "Project") of Seawall Lot 337,  
4 bounded by Third Street on the west, Parcel P20 and Mission Rock Street on the south,  
5 Pier 48 to the east, and China Basin Park on the north, and Pier 48. The Port Commission  
6 later added China Basin Park, the marginal wharf between Pier 48 and Pier 50, and  
7 Parcel P20 to the development site (collectively, the "Site"), subject to approvals necessary to  
8 remove Parcel P20 from the Mission Bay South Redevelopment Project Area. Developer, an  
9 affiliate of the San Francisco Giants, will act as the master developer for the Project.

10 (d) In conjunction with this ordinance, this Board has taken or intends to take a  
11 number of other actions in furtherance of the Project, including approval of: (1) a disposition  
12 and development agreement ("DDA") between Developer and the Port; (2) amendments to  
13 the Planning Code that create the Mission Rock Special Use District (the "SUD amendments")  
14 and incorporate the more detailed Mission Rock Design Controls; (3) amendments to the  
15 Zoning Maps; (4) a memorandum of understanding for interagency cooperation between the  
16 Port and other City agencies (the "ICA") with respect to the subdivision of the Site and  
17 construction of public infrastructure and other public facilities; (5) formation proceedings for  
18 financing districts covering the Site and a memorandum of understanding between the Port  
19 and the Treasurer and Tax Collector and the Controller regarding the assessment, collection,  
20 and allocation of ad valorem and special taxes to the financing districts; and (6) a number of  
21 related documents and entitlements to govern the Project.

22 (e) At full build-out, the Project will include: (1) 1.1 million to 1.6 million gross square  
23 feet ("gsf") of new residential uses (an estimated 1,000 to 1,950 new residential units), at least  
24 40% of which will be on-site housing affordable to a range of low- to moderate-income  
25 households as described in the Housing Plan in the DDA; (2) 972,000 to 1.4 million gsf of new

1 commercial and office space; (3) 241,000 to 244,800 gsf of active retail and production uses  
2 on 11 proposed development blocks on SWL 337 in buildings that would range in height from  
3 90 to 240 feet, consistent with Section 5 of the Mission Rock Affordable Housing, Parks, Jobs  
4 and Historic Preservation Initiative (Proposition D, November 2015); (4) rehabilitation and  
5 reuse of Pier 48, a significant contributing resource to the Port of San Francisco Embarcadero  
6 Historic District; (5) approximately 1.1 million gsf of above- and below-grade parking in one or  
7 two garages; (6) transportation demand management on-site and payment of impact fees that  
8 the Municipal Transportation Agency will use to improve transportation service in the area;  
9 (7) approximately 5.4 acres of net new open space for a total of approximately 8 acres of new  
10 and expanded open space, including an expansion of China Basin Park, a new central  
11 Mission Rock Square, and waterfront access along the shoreline; (8) public access areas,  
12 assembly areas, and an internal grid of public streets, shared streets, and utilities  
13 infrastructure; and (9) on-site strategies to protect against sea level rise.

14 (f) While the DDA binds the Port and Developer, other City agencies retain a role in  
15 reviewing and issuing certain later approvals for the Project. Later approvals include approval  
16 of subdivision maps and plans for public infrastructure and public facilities, design review and  
17 approval of new buildings under the SUD amendments, and acceptance of Developer's  
18 dedications of public infrastructure and public facilities for maintenance and liability under the  
19 Subdivision Code. Accordingly, the City and Developer negotiated a development agreement  
20 for the Project (the "Development Agreement"), a copy of which is in Board File No. 171313  
21 and incorporated in this ordinance by reference. The DDA, the Development Agreement, the  
22 ICA, the Tax MOU, and all vertical disposition and development agreements and leases that  
23 the Port enters into in accordance with the DDA are referred to collectively as the "Transaction  
24 Documents."  
25

1 (g) Development of the Site in accordance with the DDA and the Development  
2 Agreement will help realize and further the City's goals to restore and revitalize Seawall  
3 Lot 337 and Pier 48, increase public access to the waterfront, increase public open space and  
4 community facilities within the neighborhood, add to the City's affordable and market-rate  
5 housing stock, and create a significant number of construction and permanent jobs in and  
6 near the Site. In addition, the Project will provide additional benefits to the public that could  
7 not be obtained through application of existing City ordinances, regulations, and policies.

8 Section 2. Environmental Findings.

9 (a) The Planning Commission has determined that the actions contemplated in this  
10 ordinance comply with the California Environmental Quality Act (Cal. Pub. Res. Code  
11 §§ 21000 et seq.) ("CEQA"). A copy of this determination is in Board File No. 171313 and  
12 incorporated in this ordinance by reference.

13 (b) The Board of Supervisors has adopted Resolution No. 36-18, a copy of which is  
14 in Board File No. 171286, making CEQA findings for the Project. The Board of Supervisors  
15 adopts and incorporates in this ordinance by reference the Planning Commission's findings  
16 under CEQA.

17 Section 3. Consistency Findings.

18 The Planning Commission recommended that the Board of Supervisors approve the  
19 Development Agreement and amendments to the Planning Code and the Zoning Maps at a  
20 public hearing on October 5, 2017, by Motion No. 20019 and Resolution No. 20020, copies of  
21 which are in Board File No. 171313. This Board adopts and incorporates by reference in this  
22 ordinance the Planning Commission's findings of consistency with the General Plan and the  
23 eight priority policies of Planning Code Section 101.1(b).

24 Section 4. Public Trust Findings.  
25

1 At a public hearing on January 30, 2018, the Port Commission consented to the  
2 Development Agreement and approved the DDA, subject to the Board of Supervisors'  
3 approval, finding that the Project would be consistent with and further the purposes of the  
4 common law public trust and statutory trust under the Burton Act (Stats. 1968, ch. 1333), as  
5 amended by Senate Bill 815 (Stats. 2007, ch. 660) and Assembly Bill 2797 (Stats. 2016,  
6 ch. 529), by Resolution Nos. 18-03 and 18-06, copies of which are in Board File No. 171313.  
7 The Board of Supervisors adopts and incorporates in this ordinance by reference the Port  
8 Commission's public trust findings.

9 Section 5. Approval of Development Agreement.

10 The Board of Supervisors:

11 (a) approves all of the terms and conditions of the Development Agreement in  
12 substantially the form in Board File No. 171313;

13 (b) finds that the Development Agreement substantially complies with the  
14 requirements of Administrative Code Chapter 56 (Development Agreements);

15 (c) finds that the Project is a large multi-phase and/or mixed-use development as  
16 defined in Administrative Code Section 56.3(g); and

17 (d) approves the Workforce Development Plan attached to the DDA in lieu of  
18 requirements under Administrative Code Chapter 14B (Local Business Enterprise Utilization  
19 and Non-Discrimination in Contracting Ordinance), Article VII of Chapter 23 (Prevailing Wage,  
20 Apprenticeship, and Local Hire Requirements in City Real Property Sales Contracts and  
21 Leases), Section 56.7(c) (Nondiscrimination/Affirmative Action Requirements), and  
22 Chapter 83 (First Source Hiring Program) to the extent that they apply to construction work  
23 that is subject to the Local Hiring Requirements of the Workforce Development Plan.  
24  
25

1           Section 6. Administrative Code Chapter 56 Waivers.

2           The Board of Supervisors waives the application to the Project of the following  
3 provisions of Administrative Code Chapter 56 to the extent inconsistent with the Development  
4 Agreement, the DDA, or the ICA, specifically:

5           (a)    Section 56.4 (Application, Forms, Initial Notice, Hearing); Section 56.7(c)  
6 (Nondiscrimination/Affirmative Action Requirements); Section 56.8 (Notice); Section 56.10  
7 (Negotiation Report and Documents); Section 56.15 (Amendment and Termination);  
8 Section 56.17(a) (Annual Review); Section 56.18 (Modification or Termination); and  
9 Section 56.20 (Fee); and

10          (b)    any other procedural or other requirements if and to the extent that they are not  
11 strictly followed.

12           Section 7. Other Administrative Code Waivers.

13           The Board of Supervisors waives the application to the Project of the following  
14 additional provisions of the Administrative Code:

15           (a)    Chapter 6 (Public Works Contracting Policies and Procedures) other than the  
16 payment of prevailing wages when required;

17           (b)    remedies and penalties for noncompliance with Chapter 12Q (Health Care  
18 Accountability), Chapter 12T (City Contractor/Subcontractor Consideration of Criminal History  
19 in Hiring and Employment Decisions), or Section 4.9-1 (Nutritional Standards for Vending  
20 Machines; Nutritional Guidelines for Food Served at City Meetings and Events;  
21 Recommended Nutritional Guidelines for Restaurants on City Property) that could result in the  
22 termination of any Transaction Document, loss or impairment of Developer's rights under the  
23 Transaction Documents or a vertical developer's rights under a property contract for any part  
24 of the Site, or debarment of Developer or any vertical developer from future contract  
25 opportunities with the City;

1 (c) Chapter 14B (Local Business Enterprise Utilization and Non-Discrimination in  
2 Contracting Ordinance);

3 (d) Competitive Bidding Procedures and Appraisal Review as defined in  
4 Section 23.2 (Chapter Definitions) and required by Section 23.3 (Conveyance and Acquisition  
5 of Real Property) or Section 23.33 (Competitive Bidding Procedures);

6 (e) Section 23.31 (Year-to-Year or Shorter Leases), which limits the Director of  
7 Property's authority to enter into leases on behalf of the City as landlord for periods longer  
8 than one year;

9 (f) Chapter 23A.7 (Surplus Public Lands Ordinance);

10 (g) Paragraph (2) of Section 61.5(c) (Listing of Unacceptable Non-Maritime Land  
11 Uses); and

12 (h) solely to the extent inconsistent with Developer's approved Workforce  
13 Development Program, Chapter 82 (Local Hiring Policy for Construction) and Chapter 83  
14 (First Source Hiring Program).

15 Section 8. Subdivision Code Waivers.

16 (a) The Board of Supervisors waives the application to the Project of time limits  
17 under Subdivision Code Section 1346(e) (Improvement Plans) and Section 1355 (Time Limit  
18 for Submittal) to the extent that they conflict with the ICA or the Development Agreement.

19 (b) The Board of Supervisors also waives the application to the Project of  
20 Subdivision Code Section 1348 (Failure To Complete Improvements Within Agreed Time),  
21 and the following terms shall apply in lieu thereof: The Public Improvement Agreement, as  
22 defined in the ICA, shall include provisions consistent with the Transaction Documents and  
23 the applicable requirements of the Municipal Code and the Subdivision Regulations regarding  
24 extensions of time and remedies that apply when improvements are not completed within the  
25 agreed time.

1           Section 9. Authorization.

2           (a)    The Board of Supervisors affirms that the waivers in this ordinance do not waive  
3 requirements under the Development Agreement Law and authorizes the City to execute,  
4 deliver, and perform the Development Agreement as follows:

5                   (1)   the Director of Planning, the City Administrator, and the Director of Public  
6 Works are authorized to execute and deliver the Development Agreement with signed  
7 consents of the Port Commission, the Municipal Transportation Agency, and the San  
8 Francisco Public Utilities Commission; and

9                   (2)   the Director of Planning and other appropriate City officials are authorized  
10 to take all actions reasonably necessary or prudent to perform the City's obligations under the  
11 Development Agreement in accordance with its terms.

12           (b)    The Director of Planning is authorized to exercise discretion, in consultation with  
13 the City Attorney; to enter into any additions, amendments, or other modifications to the  
14 Development Agreement that the Director of Planning determines are in the best interests of  
15 the City and that do not materially increase the obligations or liabilities of the City or materially  
16 decrease the benefits to the City as provided in the Development Agreement. Final versions  
17 of any additions, amendments, or other modifications to the Development Agreement shall be  
18 provided to the Clerk of the Board of Supervisors for inclusion in Board File No. 171313  
19 within 30 days after execution by all parties.

20           Section 10. Ratification of Past Actions; Authorization of Future Actions.

21           All actions taken by City officials in preparing and submitting the Development  
22 Agreement to the Board of Supervisors for review and consideration are hereby ratified and  
23 confirmed, and the Board of Supervisors hereby authorizes all subsequent action to be taken  
24 by City officials consistent with this ordinance.

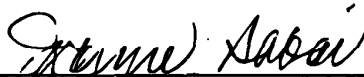

1           Section 11. Effective and Operative Dates.

2           (a)    This ordinance shall become effective 30 days after enactment. Enactment  
3 occurs when the Mayor signs the ordinance, the Mayor returns the ordinance unsigned, or the  
4 Mayor does not sign the ordinance within ten days after receiving it, or the Board of  
5 Supervisors overrides the Mayor's veto of the ordinance.

6           (b)    This ordinance shall become operative only on the effective date of the DDA. No  
7 rights or duties are created under the Development Agreement until the operative date of this  
8 ordinance.

9  
10          APPROVED AS TO FORM:  
11          DENNIS J. HERRERA, City Attorney

**DDA EXHIBIT B2**  
**SCHEDULE OF PERFORMANCE**

## DDA EXHIBIT B2

### Schedule of Performance

| <u>Event</u>   | <u>Target Date</u> <sup>1</sup> | <u>Outside Date (subject to extension for Excusable Delay)</u>   |
|--|---------------------------------|--|
| Phase 1 Submittal                                    | October, 2018                   | 5 years after Entitlement Date   |
| Construction of Phase 1 Phase Improvements commenced | August, 2020 <sup>2</sup>       | 8 years after Entitlement Date, subject to DDA Subsection 3.2(b)(ii)   |
| Construction of Phase 1 Phase Improvements Completed | February, 2022                  | Per the Phase Schedule established in the Phase Approval process   |
| Phase 2 Submittal                                    | July, 2020                      | The earlier of (i) 60 months after Completion of all Vertical Development in Phase 1, and (ii) 10 years after Entitlement Date |
| Construction of Phase 2 Phase Improvements commenced | November, 2021                  | 14 years after Entitlement Date  |
| Construction of Phase 2 Phase Improvements Completed | May, 2023                       | Per the Phase Schedule established in the Phase Approval process   |
| Phase 3 Submittal                                    | October, 2021                   | The earlier of (i) 60 months after Completion of all Vertical Development in Phase 2, and (ii) 16 years after Entitlement Date |
| Construction of Phase 3 Phase Improvements commenced | February, 2023                  | 20 years after Entitlement Date  |

<sup>1</sup> Target Dates have no contractual significance, but are consistent with the assumptions reflected in the Summary Pro Forma.

<sup>2</sup> Site Preparation, including deep dynamic compaction, is targeted to begin earlier, in the fall of 2019.

|  |                |  |
|--|----------------|--|
| Construction of Phase 3 Phase Improvements Completed | August, 2024   | Per the Phase Schedule established in the Phase Approval process   |
| Phase 4 Submittal                                    | January, 2022  | The earlier of (i) 60 months after Completion of all Vertical Development in Phase 2. and (ii) 21 years after Entitlement Date |
| Construction of Phase 4 Phase Improvements commenced | August, 2023   | 25 years after Entitlement Date  |
| Construction of Phase 4 Phase Improvements Completed | February, 2025 | Per the Phase Schedule established in the Phase Approval process   |

**INFRASTRUCTURE PLAN**

# **MISSION ROCK INFRASTRUCTURE PLAN**

**DECEMBER 12, 2017**

**Prepared by**

BKF Engineers  
with assistance from the Seawall Lot 337 Association,  
CMG, Perkins+Will, Langan Treadwell and Rollo, KPFF, ARUP,  
Atelier Ten, Nelson Nygaard Consulting Associates, Moffatt & Nichol,  
Evergreen Devco, Nibbi Brothers, Hathaway Dinwiddie,  
and Coblentz Patch Duffy & Bass

**TABLE OF CONTENTS**

|  |           |
|--|-----------|
| <b>1. INTRODUCTION .....</b>   | <b>1</b>  |
| 1.1 Purpose .....  | 1         |
| 1.2 Infrastructure Plan Overview .....   | 1         |
| 1.3 Property Acquisition, Dedication, and Easements .....  | 2         |
| 1.4 Project Datum .....  | 2         |
| 1.5 Conformance with EIR & Entitlements .....  | 3         |
| 1.6 Applicability of Uniform Codes and Infrastructure Standards .....                                  | 3         |
| 1.7 Master Plans .....   | 3         |
| 1.8 Project Phasing .....  | 3         |
| 1.9 Phases of Infrastructure Construction .....  | 4         |
| <b>2. SUSTAINABILITY .....</b>   | <b>6</b>  |
| <b>3. ENVIRONMENTAL REMEDIATION .....</b>  | <b>7</b>  |
| 3.1 Historical Use Background .....  | 7         |
| 3.2 Environmental Constraints and Regulations .....  | 7         |
| 3.2.1 Maher Ordinance Requirements and Site Assessment .....   | 7         |
| 3.2.2 Use Restrictions .....   | 8         |
| 3.3 Anticipated Site Remediation Procedures .....  | 8         |
| 3.2.1 Maher Ordinance Compliance .....   | 8         |
| 3.2.2 Use Restriction Variance .....   | 9         |
| <b>4. SITE DEMOLITION .....</b>  | <b>10</b> |
| 4.1 Scope of Demolition .....  | 10        |
| 4.2 Existing Utility Demolition .....  | 10        |
| 4.3 Phases of Demolition .....   | 11        |
| <b>5. SITE RESILIENCY .....</b>  | <b>12</b> |
| 5.1 Overview .....   | 12        |
| 5.2 Project Datum .....  | 12        |
| 5.3 Federal Emergency Management Agency Regulations .....  | 12        |
| 5.3.1 Seawall 337, China Basin Park and Terry A Francois Boulevard FEMA Flood Plain Designations ..... | 13        |
| 5.3.2 Pier 48, Pier 50, and Coastal Perimeter FEMA Flood Plain Designation .....                       | 13        |
| 5.4 Sea Level Rise .....   | 14        |
| 5.4.1 Sea Level Rise Design Guidance .....   | 14        |
| 5.4.2 Sea Level Rise Design Parameters .....   | 15        |
| 5.4.3 Existing Mission Bay Grading for Resiliency .....  | 16        |
| 5.5 Proposed Site and Infrastructure Designs .....   | 16        |
| 5.5.1 Grading .....  | 16        |
| 5.5.2 Stormwater System .....  | 19        |
| 5.6 Adaptive Managements Strategies .....  | 20        |
| 5.6.1 Development Parcel Strategy .....  | 20        |
| 5.6.2 Shoreline Adaptation Strategy .....  | 21        |

|  |           |
|--|-----------|
| <b>6. GEOTECHNICAL CONDITIONS</b>                    | <b>22</b> |
| 6.1 Existing Site Geotechnical Conditions            | 22        |
| 6.2 Existing Site Geotechnical Constraints           | 22        |
| 6.2.1 Liquefaction/ Settlement of Sand Layers        | 22        |
| 6.2.2 Lateral Spreading                              | 23        |
| 6.2.3 Settlement of Bay Mud                          | 23        |
| 6.3 Geotechnical Approaches                          | 23        |
| 6.3.1 Site Grading Strategies                        | 24        |
| 6.3.2 Liquefaction and Lateral Spreading Mitigations | 25        |
| 6.3.3 Flexible Utility Connections                   | 26        |
| 6.3.4 Site Accessibility                             | 26        |
| 6.4 Phases of Geotechnical Stabilization             | 26        |
| 6.5 Schedule for Additional Geotechnical Studies     | 27        |
| <b>7. SITE GRADING</b>                               | <b>28</b> |
| 7.1 Project Datum                                    | 28        |
| 7.2 Existing Site Conditions                         | 28        |
| 7.3 Site Geotechnical Constraints and Approach       | 28        |
| 7.4 Project Grading Overview                         | 28        |
| 7.5 Elevation and Grading Design Criteria            | 29        |
| 7.5.1 Elevation Design Criteria                      | 29        |
| 7.6 Proposed Grading Designs                         | 33        |
| 7.6.1 Building Areas                                 | 33        |
| 7.6.2 Proposed Roadways                              | 33        |
| 7.6.3 Overland Release                               | 33        |
| 7.7 Proposed Site Earthwork                          | 34        |
| 7.8 Phases of Grading Activities and Approvals       | 34        |
| <b>8. STREET AND TRANSPORTATION INFRASTRUCTURE</b>   | <b>35</b> |
| 8.1 Design Controls: Plan Overview                   | 35        |
| 8.2 Public Street System                             | 35        |
| 8.2.1 Public Street Layout and Parcelization         | 36        |
| 8.2.2 Roadway Dimensions                             | 36        |
| 8.2.3 Structured Streets and Open Space Areas        | 37        |
| 8.3 Public Street Modes of Travel and Access         | 38        |
| 8.3.1 Pedestrian Circulation and Accessibility       | 38        |
| 8.3.2 Vehicular Circulation                          | 39        |
| 8.3.3 Bicycle Circulation                            | 40        |
| 8.3.4 Loading, Servicing, and Parking                | 40        |
| 8.3.5 Fire Department Access                         | 42        |
| 8.4 Public Street Network and Hierarchy              | 42        |
| 8.4.1 Street Zones and Designs                       | 43        |
| 8.4.2 Street Designs                                 | 46        |
| 8.5 Components of Public Streets                     | 60        |
| 8.5.1 Curb Heights                                   | 60        |
| 8.5.2 Paving   | 60        |
| 8.5.3 Street Trees                                   | 61        |
| 8.5.4 Sustainable Water Strategies                   | 63        |

|        |   |    |
|--------|---|----|
| 8.5.5  | Lighting .....  | 64 |
| 8.5.6  | Accessible Loading .....  | 64 |
| 8.5.7  | Driveway and Streetscape Coordination .....                                 | 65 |
| 8.6    | Traffic Calming .....   | 65 |
| 8.6.1  | Raised Intersections and Raised Crosswalks .....                            | 65 |
| 8.6.2  | Intersection Bulb-Outs .....  | 66 |
| 8.7    | Off-Site Traffic Signalization .....  | 66 |
| 8.7.1  | 3rd Street and Existing Terry A Francois Boulevard .....                    | 67 |
| 8.7.2  | 3rd Street and Channel Street .....   | 67 |
| 8.7.3  | 3rd Street and Mission Rock Street .....                                    | 67 |
| 8.7.4  | 3rd Street and Exposition Street .....                                      | 67 |
| 8.7.5  | 4th Street Intersection Improvements .....                                  | 68 |
| 8.7.6  | Mission Rock Street Striping .....  | 68 |
| 8.8    | On-Site Traffic Controls .....  | 68 |
| 8.8.1  | All-Way Stop-Controlled Intersections: DPW-Standard Curb Condition .....    | 68 |
| 8.8.2  | All-Way Stop-Controlled Intersections: Raised Intersections .....           | 69 |
| 8.8.3  | 2-Way Stop at Raised Intersection .....                                     | 69 |
| 8.8.4  | All-Way Stop-Controlled Intersections: Flush Intersections .....            | 70 |
| 8.9    | Public Transportation System .....  | 70 |
| 8.10   | SFMTA Infrastructure .....  | 71 |
| 8.11   | Acceptance and Maintenance of Street Improvements .....                     | 72 |
| 8.12   | Phasing of New Roadway Construction .....                                   | 72 |
| 9.     | OPEN SPACE AND PARKS .....  | 74 |
| 9.1    | Open Space .....  | 74 |
| 9.1.1  | China Basin Park .....  | 74 |
| 9.1.2  | Mission Rock Square .....   | 74 |
| 9.1.3  | The Blue Greenway and the non-pile supported portion of Channel Wharf ..... | 74 |
| 9.1.4  | Channel Street .....  | 74 |
| 9.1.5  | Channel Lane .....  | 75 |
| 9.1.6  | Pier 48 Apron and the pile supported portion of Channel Wharf .....         | 75 |
| 10.    | UTILITY LAYOUT AND SEPARATIONS .....  | 76 |
| 10.1   | Utility Systems .....   | 76 |
| 10.2   | Utility Layout and Separation Criteria .....                                | 76 |
| 10.3   | Conceptual Utility Layout .....   | 76 |
| 10.4   | Utility Layout and Clearance Design Modifications and Exceptions .....      | 77 |
| 10.4.1 | Utility Main Clearance to Face of Curb .....                                | 77 |
| 10.4.2 | Utility Structure Type and Clearance to Face of Curb .....                  | 78 |
| 10.4.3 | Auxiliary Water Supply System Main within Sidewalk .....                    | 78 |
| 10.4.4 | Storm Drain Main and Sanitary Sewer Main Layout Order .....                 | 78 |
| 11.    | LOW PRESSURE WATER SYSTEM .....   | 79 |
| 11.1   | Existing Low Pressure Water System .....                                    | 79 |
| 11.2   | Existing SFPUC System Capacity .....  | 79 |
| 11.3   | Proposed Low Pressure Water System .....                                    | 79 |
| 11.3.1 | Project Water Supply .....  | 79 |
| 11.3.2 | Project Water Demands .....   | 79 |
| 11.3.3 | Project Water Distribution System .....                                     | 80 |

|   |            |
|---|------------|
| 11.3.4 Low Pressure Water Design Criteria .....                               | 81         |
| 11.3.5 Proposed Fire Hydrant Locations.....                                   | 81         |
| 11.4 Phases for Low Pressure Water System Construction.....                   | 81         |
| 11.4.1 Existing Low Pressure Water System Demolition Phasing.....             | 82         |
| <b>12. SANITARY SEWER SYSTEM .....</b>  | <b>83</b>  |
| 12.1 Existing Sanitary Sewer System .....                                     | 83         |
| 12.2 Proposed Sanitary Sewer System.....                                      | 83         |
| 12.2.1 Proposed Sanitary Sewer Demands .....                                  | 83         |
| 12.2.2 Proposed Sanitary Sewer Capacity.....                                  | 84         |
| 12.2.3 Proposed Sanitary Sewer Design Basis.....                              | 84         |
| 12.2.4 Proposed Sanitary Sewer Design Criteria.....                           | 84         |
| 12.2.5 Proposed Sanitary Sewer Collection System .....                        | 85         |
| 12.2.6 Structured Street Drainage.....  | 86         |
| 12.3 Design Modifications and Exceptions .....                                | 87         |
| 12.4 Phases for Sanitary Sewer System Construction .....                      | 88         |
| 12.4.1 Existing Sanitary Sewer System Demolition Phasing .....                | 88         |
| <b>13. STORM DRAIN SYSTEM .....</b>   | <b>90</b>  |
| 13.1 Existing Storm Drain System .....  | 90         |
| 13.2 Conceptual Storm Drain System Design.....                                | 90         |
| 13.2.1 Overview .....   | 90         |
| 13.2.2 Storm Drain Design Criteria .....                                      | 91         |
| 13.2.3 Conceptual Storm Drain System Layout .....                             | 92         |
| 13.3 Storm Drain System Design Modifications and Exceptions.....              | 92         |
| 13.3.1 Pipe Material .....  | 93         |
| 13.3.2 Freeboard and Cover.....   | 93         |
| 13.3.3 Linear Drainage Infrastructure on Curbless and Flush Curb Streets..... | 93         |
| 13.3.4 Storm Drainage Infrastructure on Curbless and Flush Curb Streets.....  | 93         |
| 13.4 Phases for Storm Drain System Construction.....                          | 94         |
| <b>14. AUXILIARY WATER SUPPLY SYSTEM (AWSS).....</b>                          | <b>96</b>  |
| 14.1 Existing AWSS Infrastructure.....  | 96         |
| 14.2 AWSS Regulations and Requirements.....                                   | 96         |
| 14.3 Conceptual AWSS Infrastructure .....                                     | 96         |
| 14.4 Phases for AWSS Construction .....                                       | 97         |
| 14.4.1 AWSS Phased Installation .....   | 98         |
| <b>15. DISTRICT UTILITY INFRASTRUCTURE.....</b>                               | <b>99</b>  |
| 15.1 Central Utility Plant .....  | 99         |
| 15.1.1 Central Utility Plant Components.....                                  | 99         |
| 15.1.2 Central Energy Plant.....  | 99         |
| 15.1.3 Heat Rejection and Cooling .....                                       | 100        |
| 15.1.4 Greywater Collection and Treatment Infrastructure .....                | 100        |
| 15.2 Phases for District Utility Infrastructure Construction .....            | 101        |
| <b>16. STORMWATER MANAGEMENT SYSTEM.....</b>                                  | <b>102</b> |
| 16.1 Existing Stormwater Management System .....                              | 102        |
| 16.2 Proposed Stormwater Management System .....                              | 102        |

|   |            |
|---|------------|
| 16.2.1 San Francisco Stormwater Management Requirements & Design Guidelines ..... | 102        |
| 16.2.2 Proposed Site Conditions and Baseline Assumptions .....                    | 102        |
| 16.2.3 Stormwater Management Design Concepts and Master Plan .....                | 103        |
| 16.3 Stormwater Control Plan .....  | 104        |

## **1. INTRODUCTION**

### **1.1 Purpose**

This Infrastructure Plan is an exhibit to the Development Agreement (DA) between Sea Wall Lot 337 Associates, LLC (Developer) and City and County of San Francisco (City), and the Development and Disposition Agreement (DDA) between the Developer and the City, acting by and through the San Francisco Port Commission. The Infrastructure Plan describes the Horizontal Improvements (also referred to herein as Infrastructure), and the Infrastructure improvements to be constructed for the Mission Rock Development Project (Project), associated with Project sustainability, environmental remediation, demolition, grading, street and transportation improvements, open space and park improvements, the potable water system, the sanitary sewer system, the storm drain system, the auxiliary water supply system (AWSS), the central utility plant and eco-district system, the stormwater management system, and the dry utility system.

The Project site includes approximately 28 acres including the existing 14.2-acre Seawall Lot 337, the 0.3-acre lot known as Block P20, the 6.0-acre Pier 48, the 2.2-acre China Basin Park, 3.5-acre Terry A Francois Boulevard, 1.4-acre Pier 48 and 50 access zone, and 0.5-acre of Marginal Wharf. Initially capitalized terms unless separately defined in this Infrastructure Plan have the meanings and content set forth in the DDA and DA.

### **1.2 Infrastructure Plan Overview**

This Infrastructure Plan describes and governs the construction and development of Infrastructure to be provided by Developer for the development of the Project on the Project Site, including known associated off-site improvements needed to support the Project.

The Project infrastructure obligations of the Acquiring Agencies, are described herein, with ownership, maintenance, and acceptance responsibilities of the Acquiring Agencies identified in the DA, DDA, or Memorandum of Understanding (MOU) or Memorandum of Agreement (MOA) per the terms of the Interagency Cooperation Agreement (ICA). A condition of the Developer's performance under this Infrastructure Plan is the obtaining of all requisite approvals in accordance with the DDA, DA and ICA.

**1.3 Property Acquisition, Dedication, and Easements**

The mapping, street vacations, property acquisition, dedication and acceptance of streets and other Infrastructure improvements is generally anticipated to occur through the subdivision mapping process. Except as otherwise noted, Infrastructure described in this Infrastructure Plan shall be constructed within the public right-of-way or dedicated easements to provide for access and maintenance of Infrastructure facilities.

Public service easements will be allowed within the Project as necessary to provide Infrastructure and services to the Project and are subject to review and approval by the affected City agency. Proposed public water, storm drain, sanitary sewer, recycled water, Auxiliary Water Supply System (AWSS), and power easements benefitting the San Francisco Public Utilities Commission (SFPUC) on Port property will be reviewed on a case-by-case basis. Full access for vehicles and equipment for the maintenance and repair of utility mains will be provided. Public utilities within easements will be installed in accordance with applicable City regulations for public acquisition and acceptance within public utility easement areas, including provisions for maintenance access. Where improvement standards proposed herein differ from the 2015 City and County of San Francisco Subdivision Regulations (Subdivision Regulations), such standards and Infrastructure shall be subject to design modification or exception requests and reviewed by the affected Acquiring Agencies during the Project Phase application or construction document approval process.

**1.4 Project Datum**

Elevations, including tidal elevations, hydraulic grade lines (HGLs), and site elevations, referred to herein, are based on the Mission Bay Datum (MBD). The MBD is defined as the Mission Bay Datum, which equates to the following:

- The Old City Datum (OCD) plus 100 feet
- The San Francisco Vertical Datum 13 (SFVD13) plus 88.7 feet
- The North American Vertical Datum 88 (NAVD88) plus 88.7 feet

The project will process a design modification or exception for using the MBD in compliance with the Subdivision Regulations.

**1.5 Conformance with EIR & Entitlements**

This Infrastructure Plan has been developed to be consistent with Project mitigation measures required by the Draft Environmental Impact Report (EIR) and other entitlement documents. Regardless of the status of their inclusion in this Infrastructure Plan, the mitigation measures of the EIR shall apply to the Project.

**1.6 Applicability of Uniform Codes and Infrastructure Standards**

Future deviations from or modifications to this Infrastructure Plan and/or current City Standards, Guidelines, and Codes are subject to the procedures and provisions of the DA and DDA.

**1.7 Master Plans**

Each publicly-owned or accepted Infrastructure system described herein will be more fully described and evaluated in Master Utility Plans (MUPs), which will be submitted to the Acquiring Agencies upon substantial completion of the Infrastructure Plan. The MUPs provide detailed layouts of each Infrastructure system. The Infrastructure Plan is to be approved by the Acquiring Agencies as part of the DA and DDA approval processes. Approval of this Infrastructure Plan does not imply approval of the MUPs, which will be approved after DA and DDA execution and prior to submittal of street improvement plans for the first phase of development.

**1.8 Project Phasing**

It is anticipated that the Mission Rock site will be developed in several phases (Development Phase(s)) subject to the approval process outlined in the DA, DDA, and ICA. Each Development Phase would include a Development Parcel or Parcels and associated Infrastructure and open space areas. Phase Improvements are the street, access, utility and open space improvements necessary to accommodate development of a particular Development Parcel or Parcels.

The parties acknowledge that certain Horizontal Improvements as described in Sections 3, 4, 5, 6, 7 and 8 of the Infrastructure Plan, such as site preparation, removal or remediation of soils, grading, soil compaction and stabilization, may be required or desired at an earlier stage of development and in advance of such Phase Improvements. As described in the DA and/or DDA, the parties will cooperate in good faith in determining the scope and timing of such advance Horizontal Improvements, so as not to delay the construction of Development Parcels and associated Phase Improvements, or affect the criteria for the proportional scope of Phase Improvements.

**1.9 Phases of Infrastructure Construction**

The construction of Infrastructure, as described in the Infrastructure Plan, tentative map and other Project approvals, will be phased to serve the incremental build-out of the Project in accordance with the Project approvals. Phase Improvements will be described in subsequent improvement plans and associated public improvements agreements or permits approved prior to filing a Final Map for the associated Development Parcels.

For each Development Parcel proposed for development, the associated adjacent and as needed Infrastructure to provide access and utilities to serve that development, such as streets, and improvements therein and thereon, will be constructed. As described in the DDA and DA, adjacent Infrastructure refers to Infrastructure that is necessary and near to and may share a common border or end point with the proposed Development Parcel or Parcels.

Phase Improvements may include Infrastructure on Port or City property outside of the present Phase boundary within a subsequent Phase area. The Acquiring Agency shall accept Phase Improvements that are constructed within Port or City property outside of the Phase boundary, subject to a demonstration of how the subsequent Phase Infrastructure can be sequenced to avoid impacting the Phase Improvements. Phase Improvements outside of the Phase boundary shall be accepted through an easement or Memorandum of Understanding (MOU) in Port property, which would terminate at the time of recording of the Final Map for the future Phase that will place said facilities into public right-of-ways.

The conceptual limits of the existing Infrastructure to be demolished as well as conceptual layouts of the permanent and/or temporary infrastructure systems for each Development Parcel will be provided as part of the construction document submittals for that Development Parcel or Phase. Repairs and/or replacement of the existing facilities necessary to serve the Development Parcel will be designed and constructed by the Developer.

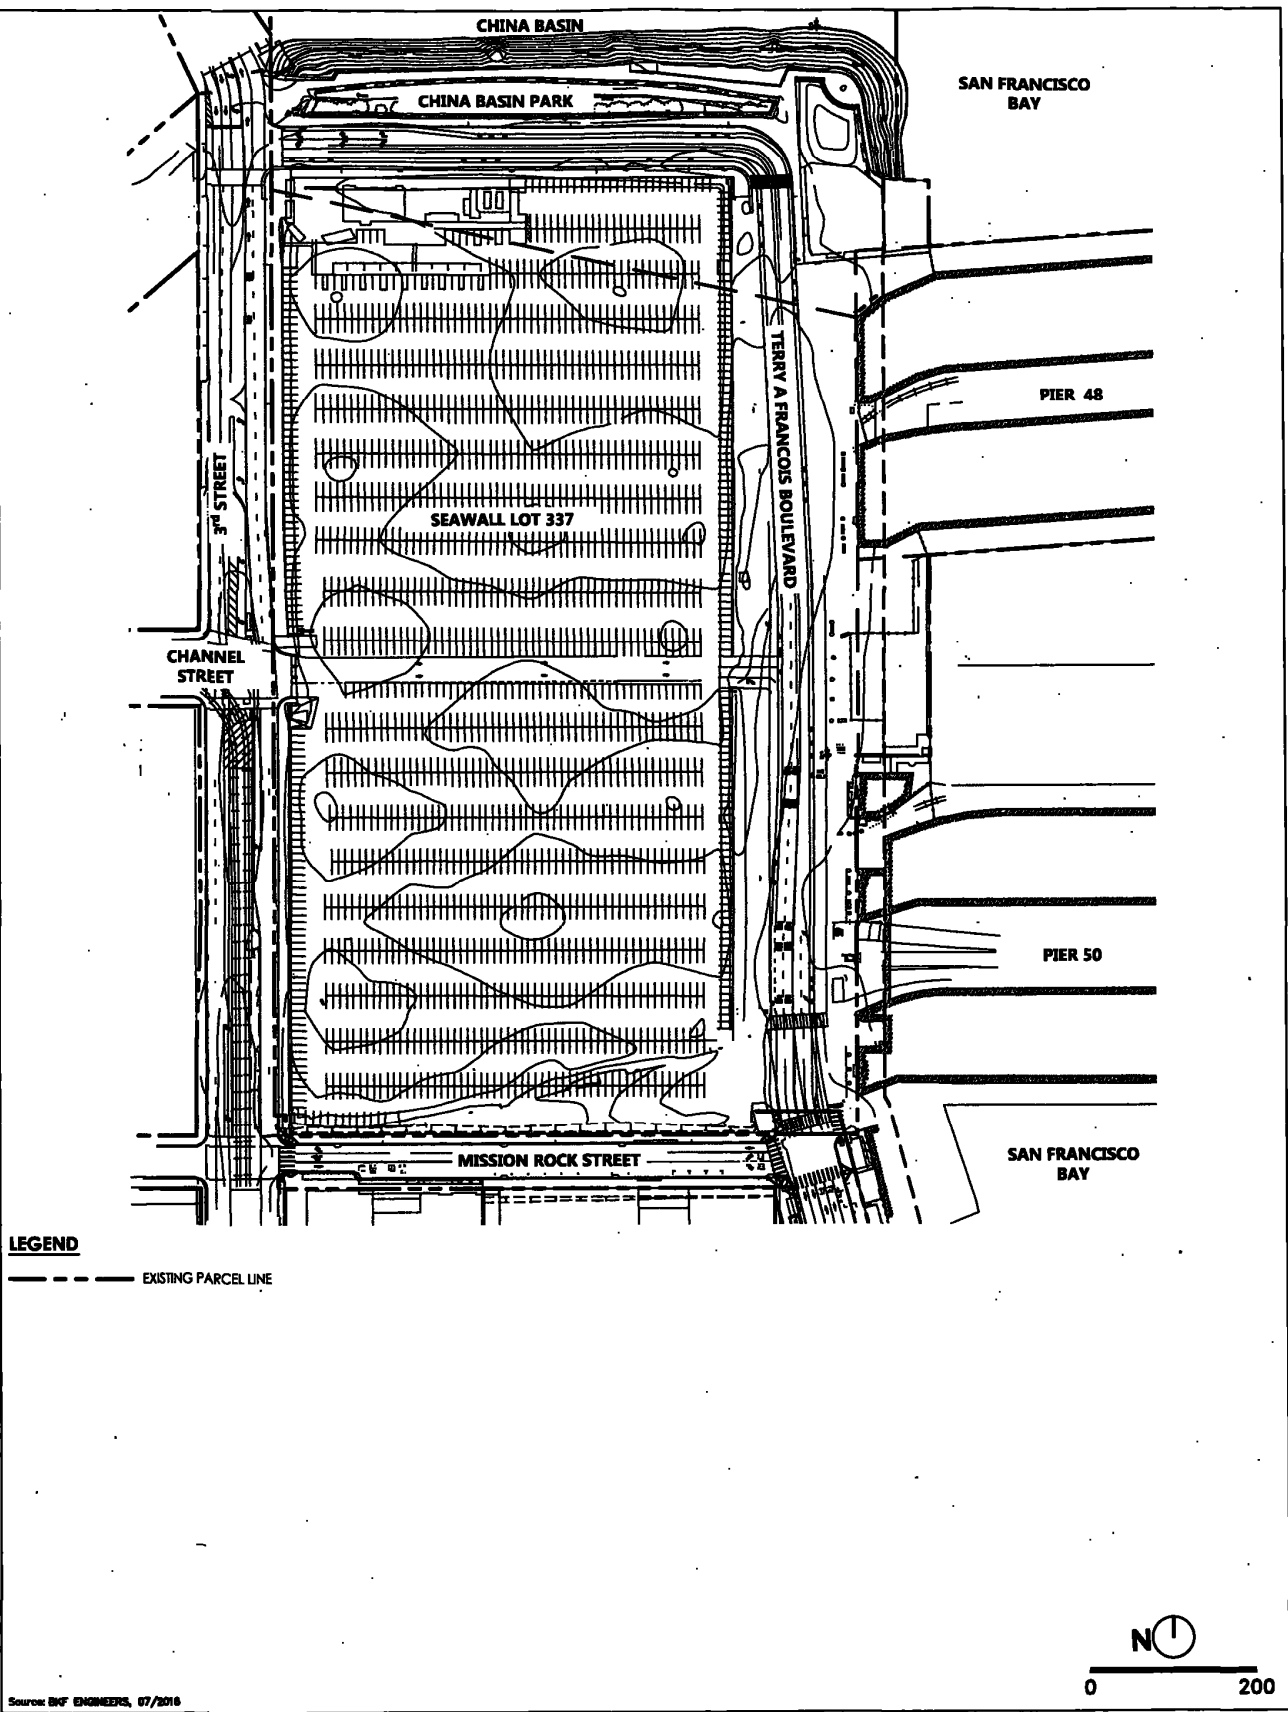

Where requested by Developer, and if the Acquiring Agency(s) with jurisdiction over the affected Infrastructure, determines it is appropriate in connection with the phased development of the Project, portions of the Phase Improvements may be constructed or installed as interim improvements to be owned and maintained by the Developer. Interim improvements would be removed or abandoned, as

determined by the Acquiring Agency, when substitute permanent Phase Improvements are provided to serve a subsequent Development Parcel.

Demolition of existing Project area infrastructure and construction of each proposed Development Parcel and associated Phase Improvements will impact site accessibility. During construction of each Development Parcel and associated Phase Improvements, interim access shall be provided and maintained for emergency vehicles, subject to San Francisco Fire Department (SFFD) approval, as well as pedestrian access on at least one side of the street around the construction perimeter that is American with Disabilities Act (ADA) compliant. Interim access to the existing parking will also be maintained and coordinated between the Port, Developer and City, as required.

The Acquiring Agency will be responsible for maintenance of proposed publicly owned and/or accepted Infrastructure installed by the Developer once construction of the proposed Infrastructure is complete and accepted by the Acquiring Agency, except as otherwise specified in the DA, DDA, and/or ICA. At all phases of development prior to full build out, the Developer shall demonstrate to the Acquiring Agency that functioning utility systems are in place at all times and comply with applicable City laws, codes and regulations.

MISSION ROCK INFRASTRUCTURE PLAN

FIGURE 1.2 - CONCEPTUAL PARCELIZATION

**2. SUSTAINABILITY**

The Mission Rock Project will be a leading exemplar for sustainable design development through high performance infrastructure and attention to community health and prosperity. Improvements comply with the City and County of San Francisco and State sustainability requirements including Title 24 (Divisions 6 and 11), San Francisco Non-Potable Water Ordinance and The San Francisco Green Building Code. Key benefits of the Project's sustainable site design and infrastructure elements include improved health, a cleaner environment, minimal water dependency, and greenhouse gas-free energy. Anticipated sustainable infrastructure includes, but is not limited to, stormwater management facilities (i.e. landscaped park areas, landscape strips, flow-thru planters, bioretention areas), a central energy distribution plant and infrastructure, treatment of greywater for non-potable reuse within the buildings, green building material selection, and water fixture and lighting efficiency. A more detailed description of the sustainability strategies for the Project is found in the latest edition of the Sustainability Strategy Document, attached to the DDA.

### **3. ENVIRONMENTAL REMEDIATION**

#### **3.1 Historical Use Background**

The Project is proposed to be located in an area that was formerly an industrial property built upon filled marshland and shallow tidal flats between 1877 and 1913. The existing fill includes construction and demolition debris, rubble, rock and dirt originating from the nearby hills and the 1906 earthquake. The site has been historically used for railroad transportation, shipping related support structures and automobile parking. H&H Ship Service occupied the area from 1950 to 1996 for wastewater treatment and transfer operations to treat petroleum contaminated wastewater. In 1978 the Department of Health Services, now known as the Department of Toxic Substances Control (DTSC), declared wastes managed at the Project site to be hazardous under federal and state hazardous waste management regulations and the property was later designated as a hazardous waste treatment facility. The DTSC approved a Closure Plan prepared by H&H Ship Service which was compliant with the California Hazardous Waste Control Law (HWCL) in 1995. As a requirement to the hazardous waste treatment facility closure, use restrictions are imposed on the Project site and compliance with a Soil Management Plan (SMP) prepared by Geomatrix Consultants in 1999 is required (see Appendix C).

#### **3.2 Environmental Constraints and Regulations**

The Project site is subject to environmental monitoring regulations and use restrictions that will impact the Project Improvements. The Developer is responsible for addressing and complying with the following regulations and restrictions for the site:

##### **3.2.1 Maher Ordinance Requirements and Site Assessment**

The Mission Rock Project site is within a location required to adhere to Article 22A of the City and County of San Francisco Health Code. This code requirement, often referred to as the Maher Ordinance in reference to the original legislation that resulted in regulation, requires project proponents to evaluate the presence of contaminants in soil and groundwater and, if warranted based on presence of contaminants, develop health and safety plans and/or site managements plans to protect workers, future users, and the environment.

The Maher Ordinance site assessment requirements were satisfied during the previous parking lot construction with the development of an SMP, dated June 1999. The SMP provided a summary of the soil samples taken and the contaminants detected throughout the site. The primary chemicals

detected in the soil included polynuclear aromatic hydrocarbons (PAHs) and metals such as antimony, arsenic, copper, lead, nickel and mercury. The groundwater sampling did not yield PAH contaminants, but did show low concentrations of several metals. It was determined that the presence of chemicals within the soil and groundwater are not considered an unacceptable risk to future on-site construction workers, nearby residents and visitors under the future use as a paved parking lot that was anticipated at that time. However, to best manage the contaminated soil and groundwater, the SMP outlined removal, handling, stockpiling and disposal procedure requirements for the parking improvements, as well as future site development.

### **3.2.2 Use Restrictions**

As part of the regulatory closure of the former H&H Ship Service facility, Covenant to Restrict Use of Property agreements ("use restrictions") were recorded between The Port of San Francisco and the DTSC restricting the use of certain portions of the Seawall Lot 337 property (approximately three acres of total 16-acre site). The use restrictions require that future activities comply with the Maher Ordinance, as applicable, and that the property shall not be used for any of the purposes stated in the use restrictions dated January 27, 2000 and July 25, 2002 (see Appendices D and E). Should the site be developed for any use of that which is listed as "restricted", then a variance request can be submitted to the DTSC for review.

### **3.3 Anticipated Site Remediation Procedures**

The Developer will be responsible for adhering to the requirements stated in this section and will coordinate with the appropriate Agency for environmental clearance prior to construction, as required. The Project requirements are described in the Hazardous Soil Remediation Plan Letter, "Mission Rock Development – Seawall 337 San Francisco, CA 1868-00," dated September 12, 2011 by Ash Creek Associates, Inc. (See Appendix B).

#### **3.2.1 Maher Ordinance Compliance**

The anticipated site remediation procedures will remain consistent with the SMP. The SMP will also be updated as required to support the Project. These remediation construction procedures shall include, but not be limited to, dust control, erosion and sediment control, stockpile management and appropriate soil disposal and sampling. Any excess soil that has been excavated and cannot be re-used within the excavation area will be considered waste soil and will be profiled

to determine suitable disposal options. Although chemical analysis results show that the soil samples collected on-site contain metal and organic constituents at concentrations less than the Total Threshold Limit Concentrations, additional testing may be needed to determine the concentration of soluble constituents and appropriately classify waste soil with respect to California state waste classification criteria. Waste soil containing contaminants at concentrations exceeding the Solubility Threshold Limit Concentrations of the State will be profiled as California Hazardous Waste and will be disposed of at the appropriately licensed landfill location.

The SMP requirements are consistent with the current parking lot site improvements. However, due to changes in the regulation, which now requires characterization of soil gas in some cases, and proposed change in use, additional evaluation of site conditions for compliance with the Maher Ordinance may be required. These issues will be discussed with the City and County of San Francisco Department of Public Health during a meeting with the Project team and additional documentation may be required.

### **3.2.2 Use Restriction Variance**

The January 27, 2000 use restriction states that residential housing is prohibited. Mission Rock is currently proposing high-density housing improvements on a portion of land subject to that restriction. It is the Project team's understanding that the intent of the use restriction is to prevent residents' direct contact with site soil, such as might occur in single family home development, but would not occur in a high-density, multi-family residential development. Consequently, the Developer and Port of San Francisco will work with the DTSC to revise or obtain a variance from the existing use restriction to enable proposed development in a manner that does not enable future site occupants to come into direct contact with existing site soil.

#### **4. SITE DEMOLITION**

##### **4.1 Scope of Demolition**

The Developer will be responsible for the demolition and deconstruction of all non-retained existing buildings and infrastructure features. Demolition and deconstruction will include removal and disposal of hardscape, landscape, utilities, and temporary building structures. The demolition limit of work consists of the existing parking lot known as Giants Lot A, China Basin Park, Terry A Francois Boulevard and select sidewalk and vehicular pavement replacement along 3<sup>rd</sup> Street and Mission Rock Street. The existing Channel Wharf at the eastern end of Terry A Francois Boulevard will be renovated and Pier 48 will remain and undergo structural upgrades with the Project improvements. Demolition activities will be performed in compliance with the City Construction Demolition Debris Ordinance. Project demolition and grading activities will comply with City Ordinance 175-91 for use of non-potable water for soil compaction and dust control. Where feasible, concrete and asphalt pavements will be recycled and used on-site or made available for use elsewhere. Soil removal associated with demolition activities will comply with the Project environmental permit requirements.

As part of the vegetation grubbing and clearing operation, trees and other plant materials will be removed, relocated or protected in place, as required. Tree removal within the public right-of-way will be reviewed and approved by the Department of Public Works, Bureau of Urban Forestry. Trees and plant materials removed as part of the demolition process will be recycled by composting or similar methods for on-site uses associated with the planting of new vegetation and erosion control to the extent feasible.

The Developer shall be responsible for providing for the Infrastructure permanent improvements proposed to replace the existing infrastructure in accordance with approved building and construction permits issued by the Acquiring Agency. The extent of these improvements and associated demolition will be finalized during the construction document approval process.

##### **4.2 Existing Utility Demolition**

Existing utility demolition scope includes storm drain, sanitary sewer, low pressure water and dry utility infrastructure removal. All storm drain utilities and utilities associated with the interim development, The Yard, at the northern edge of the existing parking lot and Terry A Francois Boulevard will be removed and disposed of. A portion of the existing sanitary sewer pipe along Terry A Francois Boulevard will be removed as well and replaced with a sanitary sewer line which will connect the existing Pier 48 and Pier

50 laterals to the public system. Existing water infrastructure along Terry A Francois Boulevard and China Basin Park will also be removed, disposed of and replaced to accommodate the proposed improvements. Gas utilities throughout Terry A Francois Boulevard will be removed and existing laterals that serve Piers 48 and 50 will be protected in place. Electric, telecom and fiber infrastructure will be undergrounded with new connections to Pier 48 and Pier 50 provided, where required. Existing outfalls on Terry A Francois and China Basin Park will be protected in place during adjacent demolition activities. Where transite pipe (asbestos-cement pipe) is encountered, appropriate abatement methods will be used to satisfy applicable regulatory agency requirements.

#### **4.3 Phases of Demolition**

Demolition will occur in phases based on the principle of adjacency and as-needed to facilitate a specific proposed Development Phase and consistent with the requirements of the DA, DDA and ICA. The amount and location of demolition will be the minimum necessary to support the Development Phase and maintain minimum required parking allocations, access and utility connections. Such phased demolition will allow the existing utility services, vehicular and pedestrian access areas, and landscaped spaces to remain in place as long as possible and reduce disruption of existing uses on the site and adjacent facilities. Project demolition activities will comply with City Ordinance 175-91 for use of non-potable water for soil compaction and dust control.

## 5. SITE RESILIENCY

### 5.1 Overview

Resilience is the ability to reduce risks and recover more easily from natural occurring events with large impacts on performance and use. The Project is located adjacent to the San Francisco Bay and faces potential risks from such events as earthquakes, settlement, liquefaction, lateral spreading, wave run-up, sea level rise, and climate change. The Developer plans to build site resiliency into the Project by implementing disaster risk reduction and resilient infrastructure. The Project will identify development areas and Infrastructure guidelines to accommodate tidal elevations, the 100-year Base Flood Elevation (BFE), and Sea Level Rise (SLR).

### 5.2 Project Datum

Elevations, including tidal elevations and site elevations, referred to herein are on the MBD. Refer to Section 1.4 for additional information related to the MBD and conversion information for OCD and SFVD 13.

### 5.3 Federal Emergency Management Agency Regulations

The Federal Emergency Management Agency (FEMA) under the jurisdiction of the Department of Homeland Security has recently completed a Preliminary City and County of San Francisco Flood Insurance Study (SF FIS) Number 060298V00A, version 2.3.2.0, dated November 12, 2015. This study has helped inform the development of preliminary Flood Insurance Rate Maps (FIRM) that categorize sites within "Flood Zones" based on their susceptibility to flood events. Flood Zone designations are used to inform the design process and insurance requirements for buildings to ensure that protections are made for human health and safety based on the flood hazard potential at a particular site. Per the FEMA website, the following is a description of the various Flood Zone designations employed by FEMA:

*"Flood hazard areas identified on the Flood Insurance Rate Map are identified as a Special Flood Hazard Area (SFHA). SFHA are defined as the area that will be inundated by the flood event having a 1-percent chance of being equaled or exceeded in any given year. The 1-percent annual chance flood is also referred to as the base flood or 100-year flood. SFHAs are labeled as Zone A, Zone AO, Zone AH, Zones A1-A30, Zone AE, Zone A99, Zone AR, Zone AR/AE, Zone AR/AO, Zone AR/A1-A30, Zone AR/A, Zone V, Zone VE, and Zones V1-V30. Moderate flood hazard areas, labeled Zone B or Zone X (shaded) are also shown on the FIRM, and are the areas between the*

*limits of the base flood and the 0.2-percent-annual-chance (or 500-year) flood. The areas of minimal flood hazard, which are the areas outside the SFHA and higher than the elevation of the 0.2-percent-annual-chance flood, are labeled Zone C or Zone X (unshaded)."*

### **5.3.1 Seawall 337, China Basin Park and Terry A Francois Boulevard FEMA Flood Plain Designations**

Based on our review of the Preliminary Flood Insurance Rate Map 0602980119A (Project FIRM ), dated November 12, 2015, the Mission Rock development site, excluding Pier 48, Pier 50, and the coastal perimeter along China Basin Park, is located in a flood hazard classification of "Zone X." Per the Project FIRM, the Zone X designation of our site describes the following:

*"0.2% Annual Chance of Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas less than one square mile."*

With a Zone X designation, the Project site is subject to minor flooding of less than a foot during large storm events, which is considered a low to moderate risk area.

Since the majority of the site is in Flood Zone X, FEMA does not require specific grading or flood-proofing requirements. Proposed site grading, described in greater detail in Section 7, will be designed to elevate the site higher than the existing condition to protect against the effects of SLR, which in turn will provide a greater level of protection against the potential for flooding the area. Proposed buildings with basements and loading docks will comply with FEMA regulations and provide appropriate flood-proofing measures to ensure compliance, if required.

### **5.3.2 Pier 48, Pier 50, and Coastal Perimeter FEMA Flood Plain Designation**

Based on the Project FIRM, Pier 48, Pier 50, and the coastal perimeter along China Basin Park are located in a SFHA "Zone AE," which has a 100-year base flood elevation (BFE) of 11-feet (NAVD 88 datum). The more detailed Preliminary SF FIS, dated November 12, 2015 indicates a 1-percent annual chance Total Water Level Elevation (TWLE) of 11.4-feet (NAVD 88), which is the assumed 100-year BFE value for the pier structure for the purposes of this analysis. The TWLE is the maximum combined sea water level elevation, wave setup, and wave run-up considered for coastal BFEs.

The datum conversion is approximately 11.32-feet between NAVD 88 and OCD, and 100 feet between the OCD and MBD. Combining these datum conversions, the approximate conversion

from elevation 11.4 feet (NAVD 88) to the MBD is 88.68 feet, resulting in a 100-year BFE of 100.08 feet (MBD) for Pier 48, Pier 50, and the coastal perimeter along China Basin Park.

Based on the Project FIRM, the existing pier structures are subject to flooding from the 1% annual flood event (100-year event). The BFE refers to the minimum elevation at which Pier 48 and Pier 50 must be elevated or flood-proofed in compliance with FEMA/National Flood Insurance Program (NFIP) regulations to provide protection from the 1% annual flood event. Given a designation of SFHA "Zone AE" with a BFE of 11.4 feet (NAVD 88) / 100.08 feet (MBD), the Pier 48 and Pier 50 structures would be subject to mandatory Flood Insurance coverage requirements from the NFIP should the preliminary Project FIRM be officially approved. Since the Pier 48 and Pier 50 structures are a historical resource and will remain at its current elevation, there may be options for receiving variances for portions of Flood Insurance requirements that the structure may be subject to.

## **5.4 Sea Level Rise**

### **5.4.1 Sea Level Rise Design Guidance**

The increase in elevation of the Earth's water bodies over time is referred to as SLR. As SLR occurs, there is increased pressure on infrastructure along shoreline areas to provide protections for infrastructure, health, and safety. Studies on the effects of climate change on surface water elevations across the Earth are evolving as more scientific data becomes available. The following is a brief chronology of the guidance documents that inform the SLR strategies being developed for the Project to date:

- The Intergovernmental Panel on Climate Change (IPCC) was formed in 1988 by the World Meteorological Organization (WMO) and the United Nations Environment Programme (UNEP) to provide policy makers with regular assessments of climate changes on a scientific basis. The IPCC issues reports which are produced by three working groups. The latest round of documents issued are based on their fifth assessment report which includes the following:

- Working Group 1, "Climate Change 2013: The Physical Science Basis," dated 2013.
  - Working Group 2, "Climate Change 2014: Impacts, Adaptation, and Vulnerability," dated 2014.
  - Working Group 3, "Climate Change 2014: Mitigation of Climate Change," dated 2014.
  - IPCC, "Climate Change 2014: Synthesis Report," dated 2014.
- Governor Schwarzenegger issued Executive Order S-13-08 in 2008 directing state agencies to study and plan for the potential effects of SLR
- Port Engineering commissioned URS and AGS to analyze available literature and studies related to SLR and prepare coasting engineering analysis of the Port's Northern Waterfront. The joint venture between URS and AGS published "Port of San Francisco Sea Level Rise and Adaptation Study," January 2012.
- The National Research Council (NRC) issued the report titled "Sea Level Rise for the Coasts of California, Oregon, and Washington," dated June 2012 and revisions dated December 6, 2013.
- Coastal and Ocean Working Group of the California Climate Action Team (CO-CAT) with science support from the Ocean Protection Council's Science Advisory Team and the California Ocean Science Trust issued "State of California Sea-Level Rise Document," dated March 2013
- City and County of San Francisco (CCSF) Sea-Level Rise Committee "Guidance for Incorporating Sea-Level Rise into Capital Planning in San Francisco: Assessing Vulnerability and Risk to Support Adaptation," September 2014.
- City and County of San Francisco (CCSF) "San Francisco Sea Level Rise Action Plan," March 2016.
- San Francisco Bay Conservation & Development Commission (BCDC) and Delta Alliance issued "Mission Creek Draft Sea Level Rise Adaptation Study," dated 2015.

#### **5.4.2 Sea Level Rise Design Parameters**

The minimum design elevations for the Project development area will accommodate potential future sea level rise estimates for San Francisco Bay. The SLR estimates for the Project were developed in response to the CCSF SLR guidance, which is based on both the NRC and CO-CAT

studies. Under CCSF SLR guidance, the Project will be designed to accommodate the SLR criteria provided in Table 5.1.

**Table 5.1**  
**SLR and Associated Planning Requirements for Development Area**

| YEAR          | SLR AND PLANNING REQUIREMENTS  |
|---------------|--|
| 2030 SLR      | 6 to 12-inches by 2030. Planning for adaptive management not required.   |
| 2050 SLR      | 11 to 24-inches by 2050. 12-inches is the mean 2050 estimate for SLR. Planning for adaptive management not required. |
| 2065 Mean SLR | 16-inches by 2065.   |
| 2100 Mean SLR | 36-inches by 2100. Planning for adaptive management required.  |
| 2100 High SLR | 66-inches by 2100. Planning for adaptive management required.  |

The existing historical Pier 48 structure and Channel Wharf will remain at their current elevations and not incorporate provisions included in Table 5.1.

#### **5.4.3 Existing Mission Bay Grading for Resiliency**

The existing finished grades in Mission Bay adjacent to the Project site range from elevations 97-100.5 feet (MBD). Grading and hydrology designs for Mission Bay were established prior to the more recent SLR investigations of the past 8 years, and do not accommodate for the 2100 High SLR estimates as currently graded. The existing perimeter streets of the Project including 3<sup>rd</sup> Street and Mission Rock Street will remain at their approximate existing grades. Along the east edge of the Project, Terry A Francois Boulevard will be reconstructed relatively close to its current grade. For existing grades at the Project site and surrounding existing streets, refer to Figure 7.1.

### **5.5 Proposed Site and Infrastructure Designs**

#### **5.5.1 Grading**

The proposed Project grading designs and approaches are documented in Section 7 Site Grading. The grading design criteria have been separated between:

- Elevation design criteria as it relates to tides, SLR, site elevations, HGL and existing streets
- Grading design criteria as it relates to site slopes.

The following summarizes the grading approaches for site building parcels and roadway areas,

open space areas, and historic structures:

- Maintain public access along the entire 100-foot shoreline band.
- In the zone between the development area and shoreline, provide access opportunities to water.
- Elevate and flood-proof proposed buildings and unadjustable structures to minimize the need for adaptive measures, even under high SLR estimates.
- Conform to grades of existing perimeter streets, pier structures, and wharf structure.

#### 5.5.1.1 Building and Roadway Areas

The minimum elevation design criteria for the proposed buildings and streets within the development areas are shown in Table 5.2.

**Table 5.2**  
**Elevation Design Criteria**

| AREA   | MINIMUM DESIGN CRITERIA  |
|--|--|
| Development Area – Proposed Buildings          | Provide a minimum finished floor elevation of 104.0 feet (~95 feet 2000 Mean Higher High Water elevation (MHHW) + 100-yr storm surge (100SS) (~3.5 feet) + 66 inches of 2100 High SLR) and/or flood-proof to 2100 High SLR projections for new occupied facilities.  |
| Development Area – Proposed Parking Structures | The Block D Parking Garage entrances will be set based on the grade of the adjacent street. At a minimum, the garage entrances will be set with a minimum finish floor elevation of 99.83 feet (95 feet 2000 MHHW + 100-yr storm surge + 16 inches of 2065 Mean SLR). As required, Adaptive Management Strategies will be incorporated within the structure to provide resiliency and protection through 2100.   |
| Development Area – Proposed On-Site Streets    | <p>The street elevation shall accommodate 4 feet in general and 2 feet minimum freeboard between the 5-year storm drain system HGL and the street gutter flow line.</p> <p>For streets with City standard 4-inch to 8-inch tall curbs, the street's lowest top of curb elevation shall be above the HGL for the 100-year storm for the storm drain system. Refer to Section 13.</p> <p>For curbless streets or streets with flush curbs, hydraulic modeling and overland release</p> |

|                            |   |
|----------------------------|---|
|                            | requirements will be determined during the approval process for the MUPs.   |
| Development Area – Pier 48 | The pier structure will remain at existing elevation. As SLR occurs, Adaptive Management Strategies may be incorporated within the structure to provide resiliency and protection through 2100, subject to jurisdictional approval. |

For adjacent streets serving the project, including 3rd Street and Mission Rock Street, street elevations will remain relatively close to their current elevations. Along the east edge of the project, Terry A Francois Boulevard will be reconstructed, relatively close to its current elevation. Proposed streets within the development will slope up from the existing conform elevations of approximate elevations of 99-101.5 feet at 3rd Street, Terry A Francois Boulevard, Piers 48 and 50, and Mission Rock Street to elevations of approximately 102.9-104.3 feet at the center of the site. By elevating the center of the site, access can be provided to building finished floors, which are set to accommodate protection from the 2100 High SLR projections or be flood-proofed to meet the 2100 High SLR projections.

#### **5.5.1.2 Shoreline Open Space Areas and Parks**

##### **5.5.1.2.1 China Basin Park**

China Basin Park will maintain shoreline elevations close to the existing grade of approximately 100 feet (MBD). The park will transition to the Bay Trail at an approximate elevation of 102 feet (MBD) through the center of the park. The Bay Trail through the center of the park provides approximately 6 feet of freeboard from the King Tide elevation of 96 feet (MBD). When the sea level rises above 48-inches, the park will function as a space where future adaptations will creatively be implemented to maintain flood protection for existing public access features. The promenade, which interfaces between the south portion of the park and the northern part of the development area, will maintain access to the public at an elevation of approximately 103.5 – 104 feet (MBD).

##### **5.5.1.2.2 Historical Pier Structures**

Pier 48 and Pier 50 are historical structures that will be maintained at existing elevations. The existing grades for accessible areas at Pier 48 range from 99.2 to

101.0 feet (MBD). Accessible areas at Pier 50 have existing grades of 99.5 to 100.9 feet (MBD). The low lying areas of the piers may be susceptible to the 100-year TWLE of 100.08. Since the existing pier structures are historic resources, they will remain in place. To minimize impacts during a 100-year storm event, the interfacing street of Terry A Francois Boulevard will be regraded to channel stormwater away from the pier structures. Existing grades of the piers provide protection beyond 2050 Mean SLR for potential future flooding.

#### **5.5.2 Stormwater System**

The 100-year Still Water Level Elevation (SWLE) is the 100-year return period water elevation, which is defined as the water elevation that is exceeded on average once every 100 years or the water elevation with a 1% annual chance of occurrence.

The SWLE for the design of the Development Area is 98.5 feet (MBD). The 100-year return period water elevation for the Development Area includes the effects of tides, storm surges, and tsunamis. The SWLE has been included with the drainage design of the 100-year storm event and overland flow release.

With the project's proximity to the San Francisco Bay, the Project must consider tidal elevations for drainage outfall conditions. The tidal elevation within the San Francisco Bay Area varies by location. The 2015 Subdivision Regulations identify a tidal elevation of 96.5 feet (MBD, -3.5 feet Old City Datum) for hydraulic grade calculations.

The SLR and tidal elevations for the Project have been prepared in the SLR Adaptation Strategy Memorandum by Moffatt & Nichol in Appendix I. The tidal elevations, SWLE, and SLR for the Project have been compiled in Table 5.3.

Table 5.3

## Tidal Elevations, SWLE and SLR by Datum

| Elevation   | NAVD88 | OCD    | MBD   |
|---|--------|--------|-------|
| 100-Year SWLE+66" SLR (2100 High SLR)<br>(MHHW+100SS+66" SLR (2100 High SLR)) | 15.3'  | 4.0'   | 104.0 |
| 100-Year SWLE+36" SLR (2100 Mean SLR)<br>(MHHW+100SS+36" SLR (2100 Mean SLR)) | 12.8'  | 1.5'   | 101.5 |
| 100-Year SWLE+16" SLR (2065 Mean SLR)<br>(MHHW+100SS+16" SLR (2065 Mean SLR)) | 11.1'  | -0.2'  | 99.8' |
|   |        |        |       |
| 100-Year SWLE+12" SLR (2050 Mean SLR)<br>(MHHW+100SS+12" SLR (2050 Mean SLR)) | 10.8'  | 0.7'   | 99.5' |
| 100-Year SWLE   | 9.8'   | -1.5'  | 98.5' |
| Subdivision Regulations Tidal Elevation                                       | 7.8'   | -3.5'  | 96.5' |
| King Tide (Moffatt & Nichol)  | 7.3'   | -4.0'  | 96.0' |
| MHHW  | 6.3'   | -5.0'  | 95.0' |
| Mean Sea Level  | 0.0'   | -11.3' | 88.7' |

## 5.6 Adaptive Managements Strategies

Sea Level Rise (SLR) has the potential to increase flooding risk along the shoreline areas as the MHHW, 100-year SWLE, TWLE, and BFE increases over time. The Project will be built to protect against varying amounts of SLR and has allocated space for future Adaptive Management Strategies to be implemented in the future to respond to adjusted SLR projections. Strategies for the Project have been developed for development areas, the shoreline, and pier structures.

### 5.6.1 Development Parcel Strategy

The proposed strategy for the Development Parcels, including unadjustable structures, is to set proposed grades to a minimum of 104 feet (MBD), high enough to accommodate for the current 2100 High SLR projects, thus Adaptive Management Strategies are not required. The Parcel D Parking Garage entrances will be set based on the grade of the adjacent street to accommodate for 2065 Mean SLR of 16-inches.

### **5.6.2 Shoreline Adaptation Strategy**

The shoreline adaptation strategy will be applicable to areas surrounding the Development Parcels. The Promenade and Bay Trail within China Basin Park will be raised to an elevation of 102 feet (MBD) to provide 3.5-feet of freeboard above present day BFE. The China Basin Park shoreline, Terry A Francois Boulevard, 3<sup>rd</sup> Street, and Mission Rock Street will be maintained at existing grades to provide protection to Development Parcels from inundation during the king tide events beyond 2080. Along the shoreline of China Basin Park, the entire 100-foot shoreline band will be reserved for public access. For SLR above 48 inches, the shoreline band will provide an opportunity for creative implementation of future adaptation strategies to maintain flood protection to Mission Bay and the Development Parcels. Adaptive Management Strategies within China Basin Park may include modifications to create a raised promenade with retaining walls, realignment of the promenade, reconfiguration of shoreline protection to provide flatter slopes and wave breaks. Beyond 2050, future Adaptive Management Strategies may be implemented by the Port to the pier apron and below the pier structure to maintain flood protection for the structure.

Today, the National Oceanic and Atmospheric Administration (NOAA) monitors weather conditions and notifies the public of potential risk for flooding in low lying areas. Future adaptation of the shoreline would be enacted by the Port when published information from NOAA indicates that flooding to the public access areas would occur during King Tide events. Funding for Adaptive Management Strategies would be provided by the Port through a Community Financing District (CFD) or other equivalent funding mechanism.

## **6. GEOTECHNICAL CONDITIONS**

Site geotechnical investigations have been completed and potential site wide geotechnical improvements have been identified by Langan Treadwell & Rollo, culminating in the development of the "Preliminary Geotechnical Investigation Seawall Lot 337 – Mission Bay" (Geotechnical Report) by Treadwell & Rollo, dated September 8, 2011 and subsequent evaluations. In addition, Langan Treadwell & Rollo has also provided a supplemental memorandum: "Preliminary Geotechnical Recommendations and Summary Memorandum No. 1" (Geotechnical Memorandum), dated January 26, 2016 for additional reference, which is attached as Appendix F.

### **6.1 Existing Site Geotechnical Conditions**

The site was originally a shallow bay below water and a part of Mission Bay. It is understood the site was elevated using building rubble and debris from the 1906 San Francisco earthquake as fill. Borings indicate 13 to 37-feet of heterogeneous fill is underlain by approximately 46 to 72-feet of Bay Mud consisting of weak, soft to medium stiff, compressible clay. The over-consolidated Bay Mud at the site is evidence of complete settlement under the existing fill weight. Locations where Bay Mud has failed beneath the heavy fill loads show a "Bay Mud wave" condition and is comprised of clayey gravel and gravelly clay. The borings also encountered the bedrock surface to be at a depth of approximately 160-feet near the northwest corner of the site and 260-feet near the northeast corner of the site.

Groundwater was encountered approximately 7 to 9-feet below grade (Elevations 91 to 93 feet MBD). Other sites within Mission Bay have encountered groundwater measured at approximately five feet below grade (Elevation 94.5 feet MBD).

### **6.2 Existing Site Geotechnical Constraints**

#### **6.2.1 Liquefaction/ Settlement of Sand Layers**

Liquefaction is the transformation of soil from a solid state to a liquefied state during an earthquake where saturated soil builds up excessive pore water pressure and temporarily loses its strength. The result is immediate settlement and possible lateral movement of the sand material. Conservatively, all loose to medium dense soil materials (sands, silts and low plasticity clays) within both the artificial fills and underlying Bay Deposits are potentially liquefiable. The potential for soil liquefaction is likely to occur during a major earthquake. With the potentially liquefiable layers being random and discontinuous throughout the site, it is estimated the site will experience up to 3-inches of liquefaction-induced settlement within the fill material of the site. Along the west

end of Pier 48, the analysis indicated that 3 to 5-inches of liquefaction-induced settlement could occur.

#### **6.2.2 Lateral Spreading**

Lateral spreading is considered the most damaging type of liquefaction-induced ground failure caused by earthquakes. In this case, surficial soil is displaced along a shear zone that has formed within a liquefied layer resulting in surficial blocks sliding downward toward unbound space, such as the Bay. These conditions are common in multiple San Francisco regions, such as the Downtown and Mission Bay districts. The southeast corner and northwest portion of the Project have been identified as being susceptible to lateral spreading estimated to result in 4 to 6-feet of lateral displacement during a large earthquake.

#### **6.2.3 Settlement of Bay Mud**

The site is underlain by a layer of Bay Mud estimated to be 46 to 72-feet thick, which appears to be over-consolidated. Placing the new fill on top of the existing bay mud layer will initiate a new cycle of consolidation settlements for the Bay Mud layer. It can be expected that for each additional foot of fill placed on the site, approximately 2-inches of settlement may occur at entrances to pile supported structures, 3-inches within streets, and 4-inches in open space areas. During an earthquake, an additional settlement of approximately 9 inches could potentially occur due to seismic densification and liquefaction. For proposed building and structures designed to be pile supported, it is anticipated that 1 to 2-inches of settlement may result from a major earthquake.

If mitigation measures or preventative designs are not incorporated, differential settlement may occur and result in interrupted access, utility infrastructure damage, and accessibility issues.

### **6.3 Geotechnical Approaches**

Successful site development will require engineering design and project construction methods that account for the existing soil, existing conforms, and shoreline conditions. These improvements will help ensure that site accessibility and building access is maintained during seismic events, SLR, and minor long-term consolidation settlement. Proposed building will be constructed on piles with a similar approach proposed for the on-site streets and utilities supporting the new development. The

geotechnical design approaches considered and recommended for the Project have been summarized below and are documented in the Geotechnical Memorandum.

### **6.3.1 Site Grading Strategies**

The proposed development will be elevated 1 to 5-feet above existing grade to accommodate for future SLR. The use of soil fill to raise the site would cause ground settlement of up to a few feet. At the existing Project conforms with Terry A Francois Boulevard and Piers 48 and 50 to the east, new constructed Mission Rock Street to the south, and existing 3rd Street to the west, proposed grades will match the approximate existing grades to mitigate the potential for settlement. To raise the center of the site, the design team has explored several different alternatives to adding soil fill to the site, which include the following strategies:

#### **6.3.1.1 Soil Surcharging with Wick Drains**

Adding mounds of surcharge soil with perforated wick drains to collect water across the site will induce Bay Mud Settlement in advance of Project construction. This effectively mitigates the settlement of Bay Mud that the new fill proposed as part of the finished Project would typically cause. Considering that parking operations must be maintained at the site prior and during build-out of the Project, this settlement mitigation solution is not appropriate for the Project, since parking availability would be eliminated or severely limited.

#### **6.3.1.2 Deep Soil Mixing**

Deep Soil Mixing (DSM) acts to improvement the stability of the underlying site by mechanically mixing cementitious binder slurry with weak and compressible soils. Due to the depth of the Bay Mud layers at the site extending down to nearly 90-feet below existing finished grade, DSM is both cost prohibitive and less practical than other solutions considered by the Geotechnical Memorandum.

#### **6.3.1.3 Lightweight Fill to Raise Grades**

Lightweight fill materials such as cellular concrete or Geofoam weigh less than traditional soil fill. Using such materials in lieu of soil to raise site grades significantly reduces the settlement of the Bay Mud layer. However, lightweight fill may present several utility installation and maintenance challenges. Installation of utilities can be difficult, as cutting

foam in the shape of the utilities may not be easily feasible. Long term maintenance of utilities within Geofoam would also require cutting of the Geofoam to access the utilities, which is a labor and cost intensive process. Additionally, storm drain and sanitary utilities will be installed as deep as 12 to 13-feet below finished grade, which is within the groundwater table, and can potentially cause uplift and complex dewatering strategies. Although lightweight fill is not anticipated to be used throughout the majority of the site, it may be utilized within park areas where utility grids and access for maintenance and operations is not a constraint.

#### **6.3.1.4 Pile supported structures, streets and utilities**

Due to the infeasibility of other options outlined above, the proposed Project streets are proposed to be pile supported "U-shaped" corridors that extend the width of the right-of-way and built to a depth required to support the installation of utilities. The "U-shaped" corridor would then be backfilled with soil to provide the typical street sub-surface condition, allow utilities to be installed with standard trenching method, and provide for long term utility and infrastructure maintenance using typical construction and City standards. Pile designs could include friction or end-bearing solutions with final designs prepared and approved during the construction document process. This is the preferred solution for mitigating site settlement issues, and with site structured street approaches are described in greater detail in Section 8 and on Figure 8.14 of this document. The pile-supported structure for the streets will be owned, maintained and accepted by the Acquiring Agency subject to the terms of the DA, DDA, and ICA.

#### **6.3.2 Liquefaction and Lateral Spreading Mitigations**

In order to mitigate the potential effects of earthquake induced lateral spreading and soil liquefaction, the Project proposed to incorporate solutions that would include Stone Columns, Deep Dynamic Compaction, or combination of both solutions.

Compaction Grouting and Rapid Impact Compaction (RIC) were also reviewed as potential solutions for mitigating lateral spreading and liquefaction. However, RIC has proven successful to depths of 10-feet, which is less than required for the site, and there is not enough soil overburden present in the site soils to handle the required pressures for Compaction Grouting.

### **6.3.3 Flexible Utility Connections**

Portions of the site may experience differential settlement at the interface of pile supported streets with proposed buildings and the utility connections at 3rd Street, Mission Rock Street, Terry A Francois Boulevard, and China Basin Park. Differential settlement at these location could cause the utility connections to shear and break along this plane. Therefore, flexible utility connections, incorporating such solutions flexible pipe materials, ball joints or settlement vaults, may be installed at the interface of the structured street with a non-structured on-grade street (Terry A Francois Boulevard, Mission Rock Street, 3rd Street, or China Basin Park) to mitigate the displacement of the utility connections and ensure continuous utility service to the Project and existing adjacent properties. Conceptual locations of flexible utility connections are shown on Figure 6.1 with a conceptual flexible utility section included as Figure 6.2. Final design solutions, will be subject to review and approval by the Acquiring Agency. Ownership of flexible connections will be by the Port, unless the SFPUC agrees to accept flexible connections at a later date prior to project construction document approvals or as indicated in the DA, DDA, ICA, or separate MOU/MOA identifying acceptance, ownership, and maintenance responsibilities.

### **6.3.4 Site Accessibility**

Minor Long-term settlement of the ground plane may occur along the site conforms at Mission Rock Street, 3rd Street, and Terry A Francois Boulevard. Where a pile-supported structure interfaces with the on-grade public streetscape, minor differential settlement may occur where the compressible material beneath the street begins to settle relative to pile supported buildings and proposed on-site streets. To mitigate areas where differential settlement is anticipated, grading and building designs will incorporate measures to ensure that continuous accessible paths of travel are maintained where building access points and private passageways interface with the public right-of-ways. Where required, measures such as flexible pavement sections, hinge slabs, gangways, and other adjustable surfaces, may be designed to mitigate the maximum anticipated long-term differential settlement. Refer to Figure 6.1 for the conceptual locations where flexible pavement connections would be required.

## **6.4 Phases of Geotechnical Stabilization**

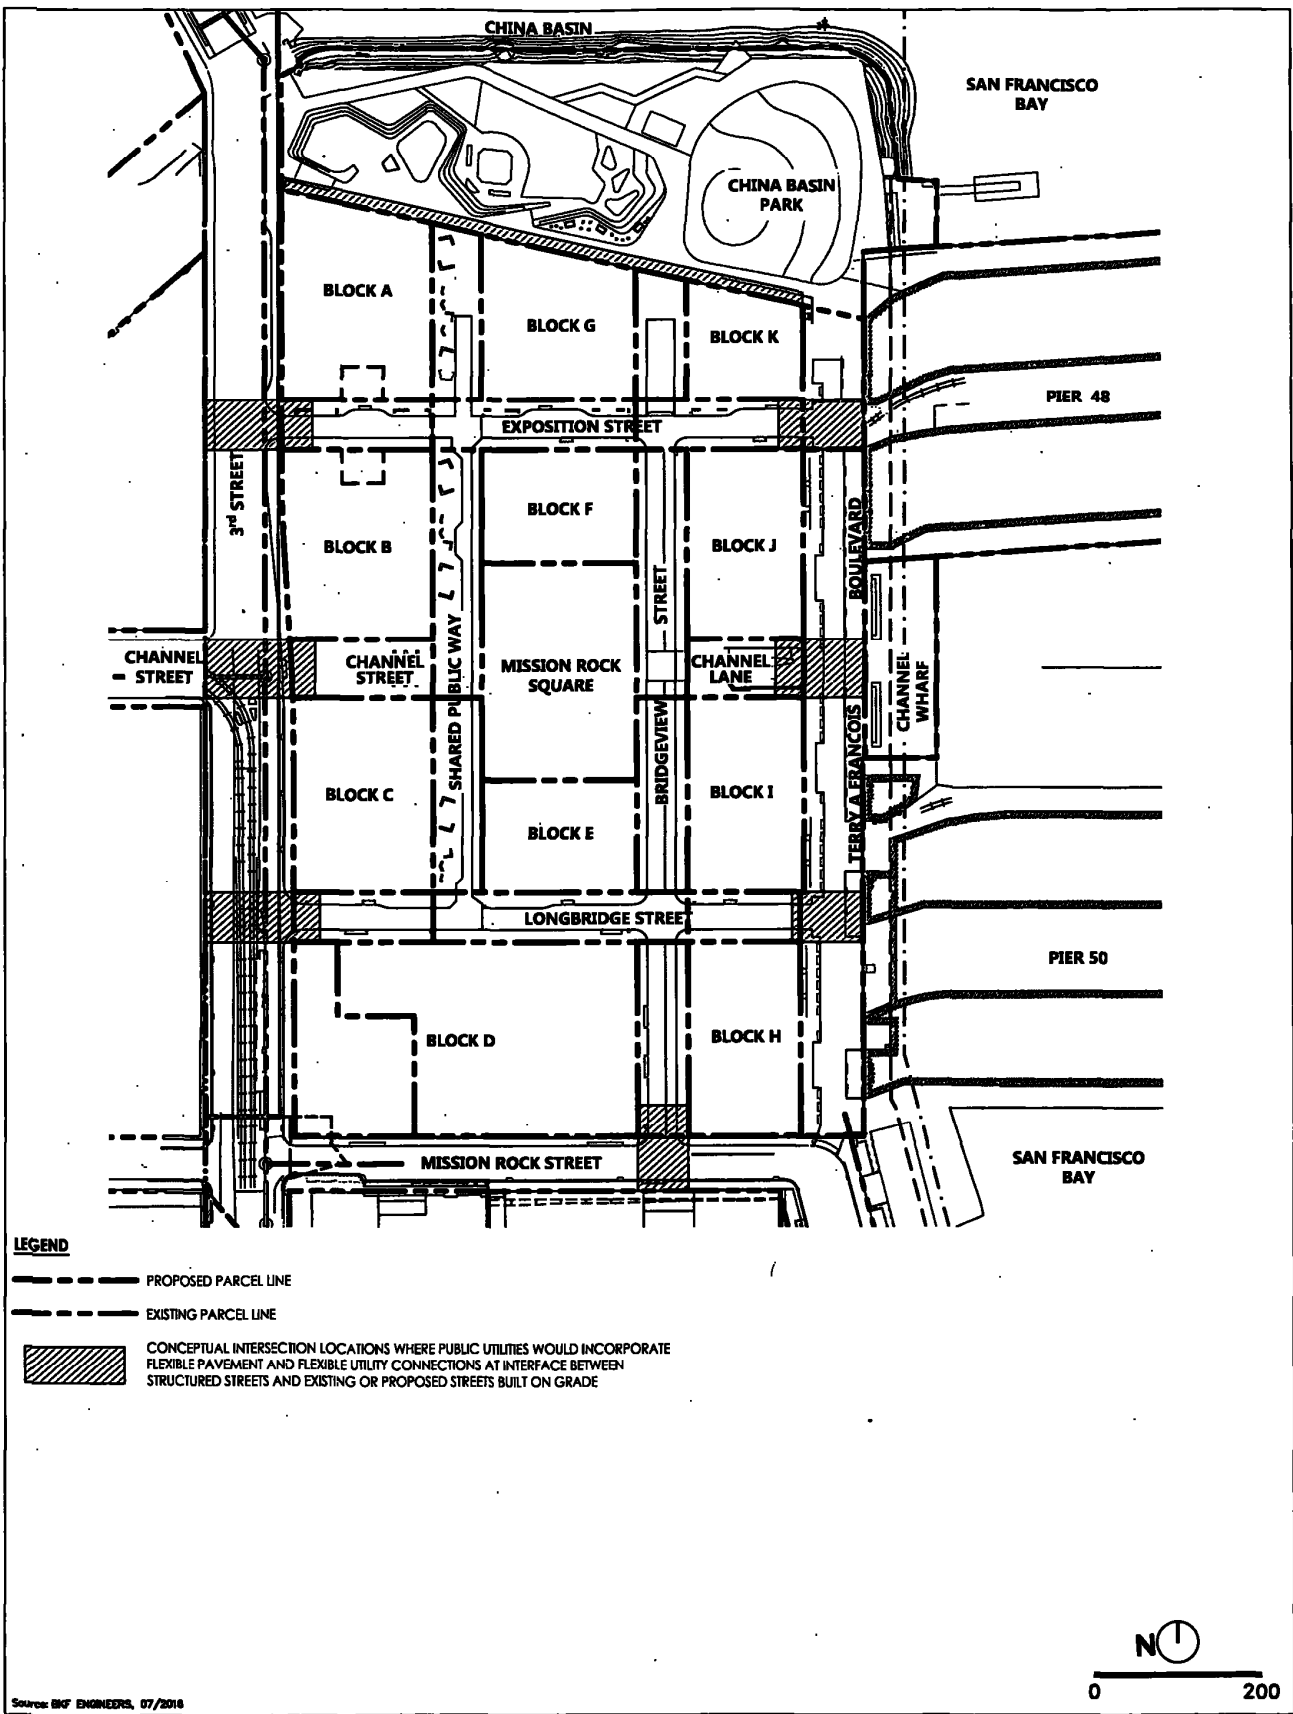

Geotechnical stabilization will occur in phases based on the principle of adjacency and as-needed to facilitate a specific proposed Development Phase and consistent with the requirements of the DA, DDA,

and ICA. The amount and location of geotechnical stabilization will be the minimum necessary to support the Development Phase and maintain minimum required parking allocations, access and utility connections. Such phased geotechnical stabilization will allow the existing utility services, vehicular and pedestrian access areas, and landscaped spaces to remain in place as long as possible and reduce disruption of existing uses on the site and adjacent facilities. Additional geotechnical stabilization, such as mitigations for lateral spreading and liquefaction, may be completed above the minimum necessary per phase due to constructability and efficiency considerations. Dewatering, and associated permits, may be required to support the Geotechnical Stabilization and construction process

#### **6.5 Schedule for Additional Geotechnical Studies**

Supplemental Geotechnical Studies and Reports will be prepared as required to support the proposed Project public improvements. In addition, Geotechnical Reports for private building parcels will be prepared and submitted to the City as part of the building permit process.

## **7. SITE GRADING**

### **7.1 Project Datum**

Elevations, including tidal elevations, HGLs, and site elevations, referred to herein are on the Section 7 MBD, unless identified otherwise.

### **7.2 Existing Site Conditions**

The existing grade within the Project site slopes gradually east, west, and south away from the center of the existing parking lot with ground elevations ranging from approximately 101 feet elevation at high points to approximately 97 feet elevation to the south at low points in the existing parking lot. Along the western and eastern borders, the site is bounded by and conforms to the existing grades along 3rd Street, Pier 48 and Pier 50, with ground elevations ranging from 99 feet to 100.5 feet in elevation. The northern border is bounded by the north interface of China Basin Park at the rip rap of China Basin. Along the southern border, there is a grade different of 3 feet to 4 feet of elevation between the existing parking lot and the newly constructed Mission Rock Street. The existing site elevations are shown in Figure 7.1.

### **7.3 Site Geotechnical Constraints and Approach**

The Geotechnical Report and Geotechnical Memorandum were prepared for the Project by Langan Treadwell & Rollo. The Project site was originally a shallow bay below water as part of Mission Bay. It was later elevated by using building rubble and debris from the 1906 San Francisco earthquake as fill sourced from Potrero Hill. Site investigation found the fill is underlain by Bay Mud, building rubble, and debris.

Placement of new fill on top of existing Bay Mud layers will initiate a new cycle of consolidation settlements. The Project site may experience minor amounts of liquefaction, settlement, and lateral spreading due to existing sand layers and soft Bay Mud. The geotechnical engineer and explored different measures to mitigate these site constraints, which are described in greater detail in Section 6.

### **7.4 Project Grading Overview**

The Developer will be responsible for the design and construction of the proposed grading for the Project. Below is a description of the grading design for the different areas of the site. The proposed Project conceptual grading plan is shown in Figure 7.2.

The Project is comprised of the development area at the center of the project, the Promenade and China Basin Park to the north, and Terry A Francois Boulevard to the east that interfaces with Pier 48, Channel Wharf, and Pier 50. The development area consists of the Development Parcels, open space areas, and structured street grids.

Proposed grading for the Project raises the development area to approximate elevations of 103.5 feet to 104.5 feet at the center of the site. The structured street grid grades will slope down to the existing adjacent streets, the San Francisco Bay and China Basin shoreline, or park and open space areas. The streets and sidewalks have been designed to provide overland release and ADA compliant accessible pathways throughout the site and adjacent parcels. The proposed street grid with interconnected open space and accessible pathways will be constructed to link 3rd Street with Terry A Francois Boulevard in the west-east direction and China Basin Park with Mission Rock Street in the north-south direction. Throughout the site, grades less than 5 percent are provided.

## **7.5 Elevation and Grading Design Criteria**

The grading design criteria has been separated between:

- Elevation design criteria as it relates to tides, SLR, site elevations, HGLs, and existing streets
- Grading design criteria as it relates to site slopes.

### **7.5.1 Elevation Design Criteria**

The minimum elevations are based on the FEMA 100-year BFE. For existing perimeter roads serving the Project and adjacent properties, proposed infrastructure within these existing streets will be designed to accommodate tidal elevations. For more information on the Project as it relates the FEMA, refer to Section 5 Site Resiliency.

#### **7.5.1.1 Sea Level Rise**

SLR will result in changing water levels in the San Francisco Bay that the Project will need to accommodate. The design criteria employed at the time of this Infrastructure Plan are based on the best scientific forecasts and potential design strategies currently available. The forecasts will very likely change over time and will provide guidance for the future.

The minimum design elevations for the Project Development Parcels will accommodate potential future SLR estimates for San Francisco Bay as discussed in Section 5 Site

Resiliency. The Project will be designed to accommodate the SLR criteria provided in Table 7.1.

**Table 7.1**  
**SLR and Associated Planning Requirements**

| <b>YEAR</b>   | <b>SLR AND PLANNING REQUIREMENTS RELATIVE TO YEAR 2000</b>   |
|---------------|--|
| 2030 SLR      | 6 to 12-inches by 2030. Planning for adaptive management not required.   |
| 2050 SLR      | 11 to 24-inches by 2050. 12-inches is the mean 2050 estimate for SLR. Planning for adaptive management not required. |
| 2065 Mean SLR | 16-inches by 2065. Planning for adaptive management required.  |
| 2100 Mean SLR | 36-inches by 2100. Planning for adaptive management required.  |
| 2100 High SLR | 66-inches by 2100. Planning for adaptive management required.  |

The minimum SLR to be accommodated for the elevation design of structures and streets in the Project is 16-inches. To the extent feasible, the Project plans to develop structures in the Development Parcels to accommodate a 2100 High SLR of 66-inches above the BFE. For more information on the Project as it relates the SLR, refer to Section 5 Site Resiliency and Table 5.1.

#### **7.5.1.2 100-Year Base Flood Elevation and Tidal Elevation**

The 100-year BFE is the 100-year return period water elevation, which is defined as the water elevation that is exceeded on average once every 100 years or the water elevation with a 1% annual chance of occurrence.

The BFE for the design of the Development Parcel is 98.5 feet. The 100-year return period water elevation for the Development Parcel includes the effects of tides, storm surges, and tsunamis. The BFE has been included with the drainage design of the 100-year storm event and overland flow release.

With the project's proximity to the San Francisco Bay, the Project must consider tidal elevations for drainage outfall conditions. The tidal elevation within the San Francisco Bay Area varies by location. For Mission Bay, the 2015 Subdivision Regulation identifies a tidal

elevation of 96.5 feet for the Project which has been included in design to analyze the 5-year storm event.

The SLR and tidal elevations for the Project have been prepared in the SLR Adaptation Strategy Memorandum by Moffatt & Nichol in Appendix I, and are provided in Table 7.2.

**Table 7.2**

**SLR and Tidal Elevations by Datum**

| <b>Elevation</b>  | <b>NAVD88</b> | <b>Old City Datum</b> | <b>MBD</b> |
|---|---------------|-----------------------|------------|
| FEMA 100-Year BFE +66" SLR<br>(100-Year SWLE+66" SLR (2100 High SLR)<br>MHHW+100SS+66" SLR (2100 High SLR)) | 15.3'         | 4.0'                  | 104.0      |
| FEMA 100-Year BFE/100-Year SWLE   | 9.8'          | 1.5'                  | 98.5'      |
| Subdivision Regulations Tidal Elevation   | 7.8'          | -3.5'                 | 96.5'      |
| King Tide (Moffatt & Nichol)  | 7.3'          | -4.0'                 | 96.0'      |
| MHHW  | 6.3'          | -5.0'                 | 95.0'      |
| Mean Sea Level  | 0.0'          | -11.3'                | 88.7'      |

**7.5.1.3 Minimum Site Elevations**

The minimum elevation design criteria for the Development Parcels are shown in Table 7.3.

**Table 7.3**  
**Elevation Design Criteria**

| AREA                                    | MINIMUM DESIGN CRITERIA   |
|---|---|
| Development Parcel – Buildings          | Provide a minimum finished floor elevation of 104.0 feet (~95 feet 2000 Mean Higher High Water elevation (MHHW) + 100-yr storm surge (100SS) (~3.5 feet) + .66 inches of 2100 High SLR) and/or flood-proof to 2100 High SLR projections for new occupied facilities.  |
| Development Parcel – Parking Structures | The Block D Parking Garage entrances will be set based on the grade of the adjacent street. At a minimum, the garage entrances will be set with a minimum finish floor elevation of 99.83 feet (95 feet 2000 MHHW + 100-yr storm surge + 16 inches of 2065 Mean SLR). As required, Adaptive Management Strategies will be incorporated within the structure to provide resiliency and protection through 2100.  |
| Development – Proposed On-Site Streets  | <p>The street elevation shall accommodate 4 feet in general and 2 feet minimum of freeboard between the 5-year storm drain system HGL and the street gutter flow line.</p> <p>For streets with City standard 4-inch to 8-inch tall curbs, the street's lowest top of curb elevation shall be above the HGL for the 100-year storm for the storm drain system. Refer to Section 13.</p> <p>For curbless streets or streets with flush curbs, hydraulic modeling and overland release requirements will be determined during the approval process for the MUPs.</p> |
| Development Parcel – Pier 48            | The pier structure will remain at existing elevation. As SLR occurs, Adaptive Management Strategies may be incorporated within the structure to provide resiliency and protection through 2100, subject to jurisdictional approval.   |

For adjacent streets serving the project, including 3rd Street and Mission Rock Street, street elevations will remain relatively close to their current elevations. Along the east edge of the project, Terry A Francois Boulevard will be constructed relatively close to its current elevation.

Proposed streets within the development will slope up from the existing conform elevations of approximate elevations of 99-101.5 feet at 3rd Street, Terry A Francois Boulevard, Piers 48 and 50, and Mission Rock Street to elevations of approximately 102.9-104.3 feet at the center

of the site. By elevating the center of the site, access can be provided to building finished floors, which are set to accommodate protection from the 2100 High SLR projections.

## **7.6 Proposed Grading Designs**

### **7.6.1 Building Areas**

Proposed finished floors will be set at a minimum of the 100-year tide level plus 66-inches of SLR to ensure protection from anticipated rising tide levels. Project development and grading designs will be developed to comply with the City requirements for ADA accessible paths of travel.

### **7.6.2 Proposed Roadways**

Proposed slopes along public streets and private alleys will be set at a maximum longitudinal slope of 5-percent to provide ADA accessible pathways of travel without requiring handrails as shown in Figure 7.2. The proposed public street system is designed in a saw tooth grading pattern as illustrated in Figure 7.3, such that adjacent high and low points have relatively the same elevations. At conforms, the site slopes down to the existing adjacent streets, China Basin, or park areas. With exception to Channel Street and Channel Lane, which will function primarily as pedestrian zones, handrails will be provided for stairs and accessible areas exceeding 5 percent, where required.

At street intersections, grades will be designed at a maximum slope of 2% to provide an accessible path of travel in crosswalks. In addition, vertical curves within the streets will be designed to both begin and end outside the limits of the crosswalk areas.

### **7.6.3 Overland Release**

As required by the Subdivision Regulations, grading designs will be developed such that the 100-year HGL is contained within the top of curb elevations on opposite sides of a street throughout the Project site. For streets without curbs or with flush curbs, such as Terry A Francois Boulevard, Shared Public Way and the northern block of Bridgeview Street, grading and hydrology designs will be developed to contain the HGL for a 100-year 3-hour storm within the street while both providing a 4-foot wide accessible path on one side of the street and assuming drainage structures within the local drainage area are blocked. The proposed on-site street grid will be graded to provide overland release for the Project. The proposed public street system is designed in a saw tooth grading pattern to facilitate overland flow of stormwater to adjacent streets. The Developer

shall provide all tenants, lessees, and owners adjacent to streets without curbs or with flush curbs with a written disclosure form, as approved by the Port and City, which notifies all such entities of the potential for flooding. The disclosure form also shall be recorded against any property adjacent to streets without curbs or with flush curbs prior to the initial sale or lease of all such properties.

#### **7.7 Proposed Site Earthwork**

The conceptual grading plan for the Project will require approximately 75,000 CY of gross earthwork to grade for topsoil within China Basin Park and the pile-supported structured streets. Within China Basin Park, grades will be elevated by a combination of topsoil and Geofoam. Development Parcels and Mission Rock Square may be pile-supported, requiring no additional fill to grade, or elevated using light-weight fill, Geofoam, topsoil, or a combination thereof. To support grading activities, a Storm Water Pollution Prevention Plan (SWPPP) / Erosion and Sediment Control Plan (ESCP) will be submitted in parallel with future grading permits. Grading in conjunction with site remediation efforts will be performed by the Developer.

#### **7.8 Phases of Grading Activities and Approvals**

The Developer will grade the site based on the principle of adjacency and as-needed to facilitate a specific proposed Development Phase and consistent with the requirements of the DA, DDA, and IGA. The amount and location of the grading proposed will be the minimum necessary to support the Development Phase. The new Development Phase will conform to the existing grades as close to the edge of the Development Phase area as possible while maintaining the integrity of the remainder of the Project. Repairs and/or replacement of the existing facilities necessary to support the proposed Development Phase will be designed and constructed by the Developer. Interim grading will be constructed and maintained by the Developer as necessary to maintain existing facilities impacted by proposed Development Phases. Project grading activities will comply with City Ordinance 175-91 for use of non-potable water for soil compaction and dust control.

**SCHEMATIC PLAN OF TYPICAL SAWTOOTH GRADING**

**OPTION 1**

**SCHEMATIC PROFILE OF SAWTOOTH GRADING WITH CONTINUOUS CENTERLINE AND TOP OF CURB**

**NOTES:**

1. ROADWAY CENTERLINE LONGITUDINAL SLOPE IS CONTINUOUS. TOP OF CURB FOLLOWS ROADWAY PROFILE.
2. STREET CROSS SLOPE VARIES BETWEEN 2% AND 5% AND CURB HEIGHT VARIES BETWEEN 6-INCHES AND 8-INCHES (EXCEPT AT CURB RETURNS, CROSSWALKS, ACCESSIBLE PARKING SPACES, AND ACCESSIBLE PASSENGER LOADING ZONES) TO ACHIEVE A FLOW LINE WITH A 0.5% MINIMUM LONGITUDINAL SLOPE.
3. THE LOW POINT OF THE FLOW LINE COINCIDES WITH THE STEEPEST STREET CROSS SLOPE AND 8-INCH CURB.
3. THE ROADWAY CENTERLINE SLOPE ON TERRY A FRANCOIS BOULEVARD IS LESS THAN 0.5% SLOPE DUE TO EXISTING CONDITIONS.

**OPTION 2**

**SCHEMATIC PROFILE OF FLOW LINE SAWTOOTH GRADING WITH PARALLEL ROADWAY CENTERLINE AND TOP OF CURB**

**NOTES:**

1. ROADWAY CENTERLINE PROFILE AND TOP OF CURB FOLLOWS FLOW LINE PROFILE.
2. FLOW LINE HIGH POINT ELEVATIONS ARE LOWER THAN THE UPSTREAM TOP OF CURB LOW POINT ELEVATIONS.
3. THE ROADWAY CENTERLINE SLOPE ON TERRY A FRANCOIS BOULEVARD IS LESS THAN 0.5% SLOPE DUE TO EXISTING CONDITIONS.

## **8. STREET AND TRANSPORTATION INFRASTRUCTURE**

Mission Rock's street network will be comprised of short, walkable blocks that connect to existing Mission Bay streets adjacent to the Project. The Project will prioritize pedestrian and bicycle safety and access to the buildings, streets, and open spaces at Mission Rock through careful consideration of transit and transportation connections, accessibility, traffic calming measures, and a centralized site parking facility instead of on-street parking. The bicycle network at Mission Rock will provide an important link for the district, connecting the Bay Trail/Blue Greenway to the Embarcadero, and will include a variety of facilities that will provide choices for cyclists of all ages and skill levels. These facilities will be integral to the unique character of Mission Rock's streets.

### **8.1 Design Controls: Plan Overview**

The Design Controls describe the public realm, open spaces, and streetscapes at Mission Rock represented in Figure 8.1. The street designs described herein represent one potential application of these controls. As a pedestrian-priority development, Mission Rock's street network will provide safe and easy access to open spaces, building entrances, and retail, with unique street types designed to the scale and speed of the pedestrian experience. A combination of traffic calming strategies will discourage unnecessary vehicle traffic and ensure that internal traffic will be low-speed and low-volume. The public realm will be fully integrated with the design and scale of the ground floor of Mission Rock's buildings.

### **8.2 Public Street System**

The Developer will be responsible for the design and construction of the public streets. Improvements will generally include the following:

- Pavement structural sections
- Concrete curbs and gutters
- Concrete sidewalk and curb ramps
- Traffic control signage and striping
- Traffic signals
- Street lighting and pedestrian-scale lighting
- Street landscaping and trees
- Stormwater management facilities (may include such methods as landscape strips, permeable pavements, and bio-retention areas)
- Street furnishings (includes, but are not limited to, benches, trash cans and bike support facilities)

- Accessible on-street passenger loading zones with adjacent street level passenger loading aisles and curb ramps.
- Accessible curb ramps
- Accessible Pedestrian Signal (APS) at traffic signal
- Raised crosswalks
- Raised Intersections
- Sidewalk bulb-outs
- Class I and II bikeways
- Enhanced Paving
- Installation of accessible pedestrian signals
- Utility Clearance Requirements

Streetscape and landscape improvements are further defined in Section 8.4 and in the Design Controls. Approval of and responsibility for maintenance and liability for non-standard stormwater treatment facilities shall be as specified in the ICA or future MOU or MOA.

#### **8.2.1 Public Street Layout and Parcelization**

A system of street and parcel numbers has been created to facilitate planning and design coordination and is shown on Figure 8.2. The new grid network of public streets includes three streets oriented north to south: the Shared Public Way, Bridgeview Street, and the existing Terry A Francois Boulevard, which will be realigned and reconstructed. Exposition Street and Long Bridge Street will be oriented east to west. Property frontage improvements will result in partial renovation of the existing 3rd Street and Mission Rock Street sidewalks, with bicycle facilities to be coordinated with the City adjacent to Blocks A and H. Typical cross sections for the proposed streets and existing street improvements can be found on Figures 8.5 – 8.12, with streetscape improvements shown on Figures 8.29-8.42.

#### **8.2.2 Roadway Dimensions**

Street widths—curb to curb—are designed to accommodate emergency access, utility clearances, bicycle facilities, passenger loading and building servicing, and vehicular access throughout the site. Typical vehicular travel lanes within streets will range from 10-feet to 11-feet in width. Travel lanes are measured from the face of curb or outside edge of bicycle facilities. All streets except the Shared Public Way will provide for two-way traffic and fire access, with street widths varying

from 22 to 34-feet. The Shared Public Way will provide a one-way 12-foot wide vehicular travelway within a Shared Zone that will have 20-foot minimum clearance between streetscape elements to facilitate fire access. All buildings will be Type 1 Construction. Additional roadway dimension information is shown in Figure 8.3 and detailed cross section information can be found on Figures 8.5-8.12, 8.29, 8.31, 8.33, 8.35, 8.37, 8.39, and 8.41.

### **8.2.3 Structured Streets and Open Space Areas**

Due to existing geotechnical constraints that make the Project site susceptible to differential settlement, liquefaction, and lateral spreading when fill is added to the site, the conceptual geotechnical approach is to provide structured street sections that are pile supported in fill areas. Refer to Section 6 for a detailed analysis of the Project's decision-making process for selecting the structured street and open space area approach to mitigating the site geotechnical constraints. Pile-supporting Mission Rock's streets will provide a geotechnically sound foundation for standard street and open space construction that will support the street designs described in Section 8.4, while mitigating the site's tendency for differential settlement.

The proposed structured streets include Exposition Street, Long Bridge Street, Shared Public Way and Bridgeview Street. The proposed open space areas include Channel Street and Channel Lane. Structured street and open space area locations are identified in Figure 8.13. The structured streets and open space areas will be comprised of street pavement and/ or pedestrian concrete paving, landscape, utility infrastructure, and sidewalk improvements built on top of and within structural fill throughout the street sections within the public right-of-way. Subject to the final design, preliminary designs for the concrete slab thickness at the bottom of the structure is conceptually 2-feet thick and walls will potentially be 1 foot thick. The depth of the structured streets will be a minimum of 6-feet deep beneath landscaping to provide sufficient room for tree roots and at least 1 foot deeper than the bottom of the deepest utility pipe per SFPUC vertical clearance requirements. Subdrains, where required based on the final design of the structured streets, will be provided within the structured streets and open space areas to prevent accumulation of water and will drain via a gravity connection or through a sump pump and force main to the sanitary sewer system as described in Section 12. Where a subdrain is required, a sand trap will be installed

in advance of the connection of the SFPUC sanitary sewer main. A preliminary typical structured street cross section is shown on Figure 8.14.

Structured streets and open space areas will be supported by steel H-piles or precast, pre-stressed concrete piles with no down drag. There are two types of pile systems being considered for supporting the structured streets and open space areas. The first consideration is friction-only piles that extend below the Bay Mud sub-layers and gain friction in the clay and sand beneath. The second consideration is a combination of friction plus end-bearing piles which will extend to dense sand or bedrock approximately 100 – 160-feet beneath the bottom of the Bay Mud layers. These preliminary pile-supporting systems are further discussed in Appendix F and are subject to final geotechnical studies and structural designs to be completed as part of the Construction Document process.

The structured streets and open space areas will be integrated within the Project's street grid and conform to existing and reconstructed streets of 3rd Street, Mission Rock Street, and Terry A Francois Boulevard. Final designs to determine pile spacing, depths, waterproofing and drainage will be completed as part of the Construction Document process. The Project will request a design modification or exception to the Subdivision Regulations for interim improvements. The request will be made to the City Department with authority over the interim infrastructure in compliance with the process outlined in the Subdivision Regulations.

### **8.3 Public Street Modes of Travel and Access**

#### **8.3.1 Pedestrian Circulation and Accessibility**

Creating a safe, accessible, and comfortable pedestrian experience will be a priority on all streets at Mission Rock, with safe pedestrian street crossings and connections to open spaces and surrounding streets. Mission Rock's three north-south streets will have reduced-height or flush curbs separating the pedestrian realm from the vehicular travelway. In addition to privileging pedestrian access, this strategy will facilitate paratransit vehicle access that can serve all of Mission Rock's Development Parcels and open spaces. Passenger loading and building servicing strategies will be designed to minimize conflicts between pedestrians and vehicles, and to maximize the special streetlife elements that create a rich pedestrian experience.

**8.3.1.1 Pedestrian Throughway**

On all sidewalks and major pedestrian routes to and within Open Spaces, a pedestrian throughway that is 6-feet minimum in width will be maintained. This throughway is defined as a universally accessible path of travel that does not exceed 5% maximum longitudinal slope and 2% maximum cross slope. See Section 8.4 for mandated minimum widths of pedestrian throughway and circulation routes for specific streets.

**8.3.1.2 Access to Development Parcels and Open Spaces**

Universal access to and within open spaces shall be provided for significant pedestrian connections, identified on Figure 8.15. Loading zones for passenger loading shall be provided, distributed to enable access to all Development Parcels and open spaces, with priority given to significant pedestrian connections.

**8.3.2 Vehicular Circulation**

All streets at Mission Rock shall have two-way low-volume, low-speed traffic circulation, with the exception of the Shared Public Way, which shall have one-way traffic in the northbound direction only. Circulation and controlled intersections are shown on Figure 8.16 and described in Sections 8.7 and 8.8.

**8.3.2.1 Paseos**

Paseos are proposed at the terminus of the Shared Public Way, Bridgeview Street, and Terry A Francois Boulevard at China Basin Park. These paseos shall accommodate Emergency Vehicle Access for a maximum distance of 150-feet from the Exposition Street right-of-way. The terminus of this access shall be clearly marked by permanent site furnishings or street trees. Along Exposition Street, paseos shall include signage and design cues that prohibit access for unauthorized vehicular traffic. Ownership and maintenance and liability for paseos and encroachments thereon shall be addressed as set forth in the ICA or future MOA or MOU.

**8.3.2.2 Intersections**

All stop-controlled and signalized intersections shall adhere to City standards for signage and street markings. Where crosswalks at uncontrolled intersections are proposed at Open Space connections, an appropriate combination of traffic control strategies, including

crosswalk markings, shall be employed to maximize visibility and safe pedestrian crossing. Refer to Section 8.8 for more detailed information on intersection design and controls.

### **8.3.3 Bicycle Circulation**

The Mission Rock development is dedicated to improving bicycle transportation throughout the Mission Bay area by implementing the 2009 San Francisco Bicycle Plan and providing infrastructure for improved cyclist safety. In addition to providing a key link within the Bay Trail, between the Blue Greenway south of the site and the Embarcadero north of the site, bicycle lanes of various class designations will be incorporated into the public streets throughout the site. Terry A Francois Boulevard will include the Bay Trail/Blue Greenway, a multi-use trail along the waterfront, as well as sharrows within the Shared Zone. Bridgeview Street and Terry A Francois Boulevard will accommodate the majority of bicycle traffic traveling north and south through the site on protected bicycle facilities or multi-use trails, providing a safer environment that separates bicycles from vehicular traffic and prioritizes bicycle travel. Bridgeview Street and Mission Rock Street will include cycle tracks that are separated from vehicular traffic using mountable curbs, horizontal buffers, or vertical barriers. Bridgeview Street and Terry A Francois Boulevard will accommodate the majority of bicycle traffic traveling north and south through the site on protected bicycle facilities or multi-use trails, providing a safer environment that separates bicycles from vehicular traffic and prioritizes bicycle travel. Figure 8.17 indicates the conceptual strategy for these facilities at a network scale. Refer to Section 8.4 for specific street designs, bicycle facilities, and safety strategies.

### **8.3.4 Loading, Servicing, and Parking**

Loading, servicing, and parking at Mission Rock will be distributed to minimize impact on the public realm pedestrian experience. While no permanent street parking will be provided, passenger loading across the site will be accommodated in dedicated areas. Servicing needs for all of Mission Rock's Development Parcels will be accommodated on Exposition Street, Long Bridge Street, 3<sup>rd</sup> Street at Parcel A, and Terry A Francois Boulevard in time-limited commercial or dedicated commercial zones. Figure 8.18 describes this conceptual strategy.

#### **8.3.4.1 Passenger Loading**

Passenger loading zones are distributed across the public realm, with dedicated accessible passenger loading stalls located on all streets except Bridgeview and Mission Rock Streets.

Refer to the Transportation Plan for more detailed information. Refer to Section 8.4 for streetscape designs, and Section 8.6 for accessible loading stall details.

#### **8.3.4.2 Servicing**

Servicing for Development Parcels, including ground floor tenants, will be located in dedicated or time-limited commercial loading zones for deliveries, freight loading, and building servicing. Dedicated commercial loading zones will be provided on Exposition and Long Bridge Streets, and time-limited commercial zones will be located on 3<sup>rd</sup> Street and Terry a Francois Boulevard.

#### **8.3.4.3 Large Vehicle Access**

Exposition and Long Bridge Streets and Terry A Francois Boulevard shall accommodate commercial vehicle circulation. Access to pier sheds, aprons, and valleys shall be maintained for WB-50 trucks to Pier 50, and access to the Pier 48-valley by WB-67 shall be provided; refer to Figures 8.19 and 8.20 for access studies. Commercial vehicle access for trucks that are a maximum size of SU-30 shall be accommodated in time-limited commercial loading zones on the west side of the Terry A Francois Boulevard right-of-way for Working Waterfront tenants; see Section 8.4.

#### **8.3.4.4 Parking and Driveways**

Per Chapter 5 of the Design Controls, driveways may be provided for interior servicing of Development Parcels. If provided, driveways to access off street parking on all blocks except D are only permitted on Exposition Street and Long Bridge Street in accordance with Section 7.7. Driveways for the shared parking facility at Block D shall be provided on Long Bridge Street, Bridgeview Street and Mission Rock Street. See Section 8.6 for information regarding placement of driveways relative to streetscape elements.

#### **8.3.4.5 Mission Rock Square Garage**

In accordance with the DDA and other Transaction Documents, Port and Developer may determine to develop the underground Mission Rock Square Garage as part of the Project, including associated access improvements and facilities at Channel Street and Channel Lane. The development of the Mission Rock Square Garage, and associated improvements, facilities, and mitigation under the MMRP, is anticipated under the

Transaction Documents and, accordingly, would not constitute a Material Change to this Infrastructure Plan. If Mission Rock Square Garage is proposed for a Phase, prior to the First Submittal of Improvement Plans for that Phase, Developer will: (i) submit and obtain the approvals and consents required for a non-material Infrastructure Plan amendment describing the additional or modified horizontal improvements to be constructed by the Developer to serve the underground Mission Rock Square Garage; and (ii) include the associated Mission Rock Square Garage infrastructure improvements in the applicable Basis of Design documents submitted for that Phase. This provision does not limit the City's obligation to comply with CEQA, in connection with any subsequently proposed modifications to the Mission Rock Square Garage or associated facilities or improvements.

### **8.3.5 Fire Department Access**

Based on the planning efforts undertaken during the Design Controls and meetings with the San Francisco Fire Department, intersection radii, street widths from curb to curb, and right-of-way layouts have been designed to accommodate fire truck turning movements at the Project intersections shown on Figure 8.21. Per the SFFD requirements, intersections are designed to accommodate the truck turning movements of the City of San Francisco 57-foot Articulated Fire Truck (Fire Truck), which is shown on Figure 8.22. Other emergency vehicles turning movements analyzed included the SFFD Engine, SFFD Rescue squad, and a second version of the 57-foot Articulated Truck. The SFFD 57-foot Articulated Fire Truck shown in figures 8.21-8.27 was the most restricted vehicle and thus was the basis for street layout designs. At intersection approaches and within intersections, the Fire Truck may encroach into the opposing vehicular travel lane to complete turning movements, but a minimum of 7-feet of refuge area is provided for any cars within these lanes. Figures 8.23-8.27 show enlargements of the fire truck turning movements for the San Francisco 57-foot Articulated Fire Truck at the site intersections.

## **8.4 Public Street Network and Hierarchy**

The Mission Rock street network will include several street types with distinctive character, planting, traffic speed, and streetlife elements – site furniture, street trees, special paving, and understory planting that combine with active ground floor uses to enrich the pedestrian experience. These street types include:

- Shared Public Way: A pedestrian-oriented shared street with one-way, low-speed, low-volume traffic (Shared Public Way, 8.29-8.30).

- Working Waterfront: A shared street with two-way, low-speed, low-volume traffic that integrates industrial and maritime uses with the Blue Greenway (Terry A Francois Boulevard, 8.31-8.32).
- Neighborhood Street: Streets with generous sidewalks, stormwater treatment gardens, and slow traffic; vehicular travelway curb-separated from sidewalk; must include sharrows, standard bicycle lanes, or protected bicycle facilities (Bridgeview Street, 8.33-8.34; Exposition Street, 8.35-8.36; and Long Bridge Street, 8.37-8.38).
- Paseo: Non-vehicular street connection adjacent to China Basin Park that accommodates emergency vehicle access (Bridgeview Street, Terry A Francois Boulevard, and the Shared Public Way).
- District Street: Streets referencing OCII Mission Bay design standards that include sidewalk and bicycle improvements only (3<sup>rd</sup> Street, 8.39-8.40; Mission Rock Street, 8.41-8.42)

#### **8.4.1 Street Zones and Designs**

The streets will contribute to a varied public realm while satisfying above- and under-ground infrastructure needs at Mission Rock. Proposed streets largely conform to the 2015 Subdivision Regulations, with exceptions noted in Section 8.4.2: Street Designs. The public right-of-way must be open to the sky with the exception of permitted landscape and street-wall encroachments per the Design Controls, Sections 3.8, 4.3, and 6.3.5, and publicly accessible at all times unless subject to maintenance, operations, security and safety rights, or closure by Master Developer for events. Street closure by Master Developer or others shall be subject to all applicable City and Port permitting and authorizations. Ownership and maintenance and liability for streetscape elements and encroachments shall be addressed as set forth in the ICA or future MOA or MOU for the following: on the Shared Public Way, including, but not limited to the Buffer/Furnishing Zone, Frontage Zone, Street Rooms, Tree Groves, and non-standard design features, such as lighting, stormwater gardens, and other stormwater treatments; on Terry A. Francois Boulevard, including but not limited to the Buffer/Furnishing Zone and non-standard design features; on Bridgeview Street, including but not limited to the Streetlife Zone and non-standard design features; on Exposition Street, including but not limited to the Streetlife Zone and Stormwater Zone; on Long Bridge Street, including but not limited to the Streetlife Zone and stormwater treatment; on 3<sup>rd</sup> Street, including but not limited to the

Streetlife Zone; on Mission Rock Street including but not limited to the Streetlife Zone.

#### **8.4.1.1 Street Zones: General Definitions**

The overall dimension of each streetscape is divided into several sidewalk and roadway zones. The following zones apply to the pedestrian realm of all streets:

- Frontage Zone: A zone along building frontages for Active Edge uses such as seating, signage, and merchandizing, a portion of the public realm that a ground floor building is permitted and encouraged to occupy, as defined in Chapter 5 of the Design Controls.
- Pedestrian Throughway: An unobstructed path of travel for pedestrians that is 6-feet minimum in width and universally accessible, with longitudinal slopes not to exceed 5% maximum.
- Streetlife Zone: A zone within the sidewalk that houses streetscape elements such as trees, lighting, furnishings, and stormwater gardens; equivalent to a Furnishing Zone as defined in the 2015 Subdivision Regulations. See 8.4.1.3.
- Stormwater Treatment Zone: A zone at sidewalk grade on Exposition and Long Bridge Streets where large feature stormwater treatment gardens are proposed within the right-of-way.
- Loading Zone: A zone where temporary spaces for passenger loading and building servicing will be provided. See Figure 8.18 for locations.

The following zones apply to the roadway of Bridgeview, Exposition, Long Bridge, 3rd, and Mission Rock Streets:

- Loading Zone: A zone where temporary spaces for passenger loading and building servicing will be provided.
- Travel Lanes
- Bicycle Facilities

The following zone applies to the Shared Public Way and Terry A Francois Boulevard:

- Shared Zone: The Shared Zone will be shared by pedestrians and vehicles and will be flush with the pedestrian realm. The vehicular travelway will be located between pedestrian-only areas, and defined by visual and tactile detection

cues, site furniture, and designed in accordance with applicable accessibility codes and guidance to ensure pedestrian safety. Crosswalks will be marked at regular intervals.

#### **8.4.1.2 Street Markings**

Street markings shall be in accordance with City and Port standards for street and intersection markings. See Section 8.8.

#### **8.4.1.3 Streetlife Zone: Elements**

Each street will include a Streetlife Zone, equivalent to a Furnishing Zone as defined by the 2015 Subdivision Regulations, which will include the following elements:

- Tree Planting. Trees should be adapted to the particular microclimate and shade conditions of each street, and sited with consideration of localized wind conditions and City spacing requirements. See Section 8.5.3 for street tree palette, distribution, and species attributes.
- Street Furnishings. Street furnishings, located in the Streetlife Zone, should contribute to wayfinding and identity of each street, and should be a mix of fixed and flexible, movable elements in accordance with specific standards and guidelines for each street. These performance criteria are provided in lieu of a specific palette:
  - Seating. Seating should be an inviting element allowing visual permeability and social use. Special street furnishings are encouraged to emphasize each street's unique character.
  - Accessibility. All street furnishings should be universally accessible, or modifiable to meet or exceed CBC and CAL-DAG minimum requirements.
  - Trash Receptacles. Trash receptacles should be standardized across the site. Location of selected receptacles should not impede visual access or mobility.
  - Bicycle Parking. Bicycle parking shall be provided at building and park entries within the Streetlife Zone as described on each street. Bicycle

racks should be standardized on all internal site streets, with the exception of Bridgeview Street.

## **8.4.2 Street Designs**

### **8.4.2.1 Shared Public Way**

The Shared Public Way is proposed to be a major pedestrian route linking important site anchors such as Mission Rock Square and China Basin Park to site arrival points for MUNI, vehicles, and bicycles, as well as the main site parking garage on Block D. Shared Public Ways are curbless streets that privilege pedestrian movement, following traditional street planning approaches in Europe and other pedestrian-friendly urban centers. The Shared Public Way at Mission Rock will be a dynamic space with active ground-floor retail, street rooms, stormwater gardens, and tree groves that will create a lively and unique environment. These design elements will also serve as cues to differentiate pedestrian-dedicated areas from the shared pedestrian/vehicular zone. Vehicles on the Shared Public Way will be limited to low-volume, low-speed, one-way northbound travel for drop-off, pickup, and deliveries, with traffic volumes not anticipated to exceed 100 vehicles per hour. The Shared Public Way will include the following zones as shown in Figures 8.29 and 8.30:

#### **8.4.2.1.1 Shared Public Way: Active Edges**

Active Edges will be located along the retail frontages on both sides of the Shared Public Way and will include the following zones:

- A) Pedestrian Throughway: An unobstructed, 6-feet-minimum clear width path of travel for pedestrians shall be maintained within the Active Edges on both sides of the ROW.
- B) Furnishing Zone: A 6-feet-maximum width zone for furniture, signage, and merchandizing with tree planting shall be included in the 12' active edge on the east side of the ROW.
- C) Frontage Zone: A 2-feet-maximum zone shall be maintained for furniture, signage, and merchandizing on the west side of the ROW.

**8.4.2.1.2 Shared Public Way: Streetlife Zone**

The Streetlife Zone will be a 20-feet-maximum width zone located along the Shared Zone for its entire length. This zone will provide for safe east-west connections across the ROW. This zone shall include:

- A) Street Rooms: Special landscape areas with non-standard paving, built-in furniture, and ample space for flexible seating, small newsstands, and temporary kiosks.
- B) Tree Groves: Finely textured tree groves that provide dappled shade and enclosure along the entire Shared Public Way. See Section 8.6.
- C) Stormwater Gardens: Stormwater treatment infrastructure that functions ecologically, aesthetically, and programmatically, designed to maximize permeability of movement and view and to encourage lingering, with integrated seating. See Sections 8.6 and 16.

**8.4.2.1.3 Shared Public Way: Shared Zone**

The Shared Zone shall be consistently a 20-feet-minimum clear zone shared by pedestrians and vehicles. It shall include a non-meandering 12 to 20-foot wide travel lane. Two 8-ft wide passenger loading spaces with clear zones are provided adjacent to the 12-ft travel lane at Blocks E and F to serve retail and open space uses along the street; otherwise, the 12-foot travelway will be bordered by an 8-ft wide area free of streetscape elements to provide 20-ft clear width for emergency vehicle access. Vehicular-accessible areas will be separated from dedicated pedestrian-only areas with visual and tactile detection cues. Crosswalks shall be marked at regular intervals. The Shared Zone shall include:

- A) One-way Traffic: Vehicular traffic shall be permitted one-way northbound, from Long Bridge Street to Exposition Street. North of Exposition Street, the street becomes a paseo; emergency vehicle access only shall be permitted on the paseo between Blocks A and G. No vehicular access is permitted to the Shared Public Way from Channel Street. The Shared Public Way may be closed to vehicular traffic during special events.

- B) Delineated Loading Areas: Paving and demarcation of 8-feet wide passenger loading zones shall be distinct from the 12'-wide vehicular travel lane. See Figure 8.56.

#### **8.4.2.1.4 Shared Public Way: Vehicular Intersections**

Raised intersections with visual/tactile detection marking the pedestrian route shall be provided at Exposition and Long Bridge Streets and will comply with applicable accessibility guidance. Refer to traffic calming design described in Sections 8.6 and 8.8.

#### **8.4.2.1.5 Shared Public Way: Visual/Tactile Detection Cues**

Visual/Tactile Detection Cues shall differentiate the Shared Zone travel lane and loading zones from dedicated pedestrian areas; these shall be coordinated in consultation with applicable codes and accessibility guidance and include the following:

- A) Paving Strategies: Material tactics, including contrasting paving color, texture, or material type, shall ensure safe pedestrian connections across the Shared Zone. These cues shall delineate the Shared Zone for its entire length. Also see 8.5.2 and Figures 8.44-8.45.
- B) Spatial Cues: Incorporate design and spatial cues such as a 'gateway' to the Shared Zone from Long Bridge Street -- a constricted entry point with physical elements that will provide a visual/physical cue for drivers to slow down. Raised intersections at Long Bridge and Exposition Street are proposed in order to maximize pedestrian safety and visibility. Additional spatial cues are described in Section 8.6: Traffic Calming Design.

#### **8.4.2.1.6 Shared Public Way: Non-Standard Curbs and Drainage**

The Shared Public Way is curbless on both sides of the vehicular-accessible 20-ft wide Shared Zone, which is not in conformance with the Subdivision Regulations. A linear drainage element for the inverted crown street, which is described in greater detail in Sections 10 and 13, will convey surface runoff. A design modification and exception or an Encroachment Permit will be requested of the

Acquiring Agency for construction of the inverted crown street during the permitting process for the street improvements. See Figure 8.29 and Section 8.6.

#### **8.4.2.2 Terry A Francois Boulevard**

Terry A Francois Boulevard will be a unique Working Waterfront that supports active maritime, industrial, and production uses on the waterfront. Terry A Francois Boulevard will also connect the Bay Trail/Blue Greenway to China Basin Park and the Embarcadero to contribute to uninterrupted public access along San Francisco's eastern waterfront. Connecting the Mission Rock development to its active and historical maritime context, the expression of craft and industrial character along Terry A Francois Boulevard will be central to the personality and experience of this working waterfront. Terry A Francois will include the following zones, shown in Figures 8.31 and 8.32:

##### **8.4.2.2.1 Terry A Francois Boulevard: Waterfront Zone**

Located adjacent to Pier 48, Pier 50, and Channel Wharf, the Waterfront Zone shall include the following zones within a minimum cumulative width of 22-feet, measured from Pier 50:

- A) Bay Trail/Blue Greenway: A multi-use trail located along the east side of the entire Terry A Francois Boulevard ROW, with a 16-feet-minimum clear path of travel for bikes and pedestrians.
- B) Buffer/Furnishing Zone: A 3-feet-minimum width buffer comprised of furnishings and iconic lighting, located along the entire length of the Shared Zone. This zone will have contrasting paving and other cues to be coordinated with applicable accessibility codes and guidance.

##### **8.4.2.2.2 Terry A Francois Boulevard: Shared Zone**

The Shared Zone will be a 26-feet-minimum width zone with two-way traffic that is shared by pedestrians and vehicles from Mission Rock Street to Exposition Street. The Shared Zone will be separated from the Waterfront Zone and the Building-Front Zone with flush curbs per 8.4.2.2.7 and Buffer/Furnishing Zones per 8.4.2.2.1-B and 8.4.2.2.3-B.

**8.4.2.2.3 Terry A Francois Boulevard: Building-Front Zone**

The Building-Front Zone shall be contained within a maximum width of 24-feet adjacent to Blocks H, I, and J. The Building-Front Zone will include:

- A) Pedestrian Throughway: A 12-feet-minimum width pedestrian area with 6-feet minimum clear path of travel at street grade along Blocks H, I, and J.
- B) Encroachments: Where an Elevated Walkway is provided within the property line of the adjacent Development Parcels per Chapter 5 of the Design Controls, a 6-feet-maximum width encroachment within the right-of-way shall be provided to accommodate accessible circulation to the Elevated Walkway and a dock lift or similar apparatus at the building face to serve ground floor tenants.
- C) Buffer/Furnishing Zone: A 3-feet-minimum width buffer comprised of furnishings, located along the entire length of the Shared Zone. This zone will have contrasting paving and other visual/tactile detection cues for pedestrians, to be coordinated with applicable accessibility codes and guidance.
- D) Loading Area: A 9-feet-wide loading area that accommodates a maximum truck size of WB-30, located adjacent to the Shared Zone at Blocks H, I, and J. See Figure 8.55.
- E) Streetlife Zone: A 9-feet-wide dedicated pedestrian spill-out space, located adjacent to the loading area.

**8.4.2.2.4 Terry A Francois Boulevard: Paseo North of Exposition Street**

Between Block K and Pier 48, Terry A Francois Boulevard will become a paseo that will accommodate emergency vehicle access for up to 150-feet of its length, with the terminus of this access marked by permanent street furnishings. The paseo will include the following zones:

- A) Waterfront Zone at Pier 48: A 28-feet-wide zone, located adjacent to the Pier 48 bulkhead, shall accommodate the Bay Trail/Blue Greenway per 4.3.1-A) and additional public space for Pier 48.
- B) Vehicular Turnaround + Loading Spaces: A vehicular turnaround with

passenger loading spaces, accessed from the Shared Zone.

- C) Pedestrian Throughway: A 6-foot-minimum clear path of travel for pedestrians, located along Block K.

#### **8.4.2.2.5 Terry A Francois Boulevard: Vehicular Intersections**

Flush intersections with visual/tactile detection marking the pedestrian route shall be provided at Exposition and Long Bridge Streets. An uncontrolled, marked intersection shall be provided at the pedestrian crossing between Channel Lane and Channel Wharf. These will comply with applicable accessibility guidance. Aural warnings will be integrated within paving adjacent to intersections.

#### **8.4.2.2.6 Terry A Francois Boulevard: Streetscape Elements**

Streetscape elements are an important aspect of experience and character of Terry A Francois Boulevard.

- A) Placement: Streetscape elements shall be placed within the Buffer Zones at regular intervals as determined by applicable accessibility guidance. Additional permanent streetscape elements in the Waterfront or Building-Front Zones, if desired, shall not block throughway areas or impede circulation along Terry A Francois Boulevard.
- B) Expression of Production Character: Street furnishings, especially benches, along Terry A Francois Boulevard shall express the industrial character of the Working Waterfront Typology. Industrial and salvaged materials are strongly encouraged for these elements.
- C) Consistency of Elements: Trash receptacles and bicycle racks shall be consistent for the length of this streetscape. Benches may be varied.

#### **8.4.2.2.7 Terry A Francois Boulevard: Non-Standard Curbs and Drainage**

Terry A Francois Boulevard has flush curb conditions on both sides of the vehicular-accessible Shared Zone, with flush intersections at Long Bridge and Exposition Street, which are not in conformance with the Subdivision Regulations. Additionally, a linear drainage element, which is described in greater detail in Sections 10 and 13, along the flush curb condition will convey surface runoff. A

design modification and exception or an Encroachment Permit will be requested of the Acquiring Agency for construction of the linear drainage element during the permitting process for the street improvements.

#### **8.4.2.3 Bridgeview Street**

Bridgeview Street will be a Complete Street with dedicated bicycle infrastructure, active sidewalks, stormwater treatment gardens, and low-speed, low-volume vehicular traffic. An important north-south bicycle connection from China Basin Park to Mission Bay, Bridgeview Street will integrate protected bicycle facilities into the life and character of the street. Bridgeview Street will include the following zones, shown in Figures 8.33 and 8.34:

##### **8.4.2.3.1 Bridgeview Street: Sidewalk Zones**

Sidewalks on Bridgeview Street shall be 14-feet-wide along the east side of the right-of-way, and 12-feet wide along the west side of the right-of-way. The sidewalk shall include:

- A) Frontage Zone: A 2-feet-maximum width zone shall be maintained along building frontages for furniture, signage, and merchandizing.
- B) Pedestrian Throughway: An unobstructed, 6-feet-minimum clear width path of travel for pedestrians, with width as noted on Figure 8.33, shall be maintained between the Frontage Zone and the Streetlife Zone.
- C) Streetlife Zone: A zone between the curb and pedestrian throughway with width as noted on Figure 8.33. This zone shall include trees, lighting, and furnishings that shall be consistent for the entire length of the street. Stormwater treatment gardens shall be included in the Streetlife Zone with minimum area as noted in Section 16.
- D) Driveway Restrictions: Driveways shall not be permitted, except at the Block D parking garage.

##### **8.4.2.3.2 Bridgeview Street: Roadway Zones**

The 34-feet-wide roadway will accommodate two-way vehicular traffic from Exposition Street to Mission Rock Street and will include:

- A) **Bicycle Facility:** A two-way Class 1 cycle track with total width of 10-feet on the east side of the right-of-way, including two 5-foot-wide lanes. This facility shall be protected from vehicular traffic with a 3-foot-wide horizontal buffer that is flush with the cycle track surface. This horizontal buffer will include a mountable curb that grade-separates the facility from the adjacent vehicular travelway. Approved safe-hit posts that are 46-inches in height shall be provided in this area.
- B) **Travel Lanes:** Two 10.5-foot-wide travel lanes shall be provided to accommodate two-way vehicular traffic.

#### **8.4.2.3.3 Bridgeview Street: Paseo North of Exposition Street**

Between Block G and Block K, Bridgeview Street will become a paseo that will accommodate emergency vehicle access for up to 150-feet of its length with the terminus of this access marked by permanent street furnishings or street trees. The paseo will include the following zones:

- A) **Multi-Use Trail Connection:** A 16-foot-minimum clear multi-use trail shall connect China Basin Park to the Class 1 bicycle facility. This connection shall include paving and signage delineating this shared use path and warning cues for pedestrians and cyclists at crossings.
- B) **Emergency Vehicle Clear Access Width:** A 20-foot-minimum clear zone shall accommodate emergency vehicle access for up to 150 feet, measured from the Exposition Street right-of-way.
- C) **Pedestrian Throughway:** A 6-foot-minimum clear path of travel for pedestrians shall be provided on the east and west sides of the right-of-way.

#### **8.4.2.3.4 Bridgeview Street: Traffic Control and Calming Measures**

The intersections of Bridgeview Street with Mission Rock and Exposition Streets will have full stop control. The intersection at Long Bridge Street will be a raised intersection at cycle track grade with two-way stop control for Long Bridge, but no stop control for Bridgeview Street bicycle or vehicular traffic. See Section 8.8. A raised mid-block crosswalk at the intersection of Bridgeview Street, Mission Rock

Square, and Channel Lane shall be included. Bicycle facility treatment shall continue across the intersection, with signage to yield to pedestrians. See Figures 8.63, 8.65, and 8.67.

#### **8.4.2.3.5 Bridgeview Street: Bicycle striping, signage, and wayfinding**

Bicycle Signage and Wayfinding should refer to City, Port, and NACTO (National Association of City Transportation Officials) Urban Bikeway Standards. Signage should be mounted at the curb edge of the Streetlife Zone, or inset in bicycle facility paving. Before all intersections and at the northern paseo portion of Bridgeview Street, the cycle track shall include paved and signed warning cues for pedestrian crossings. Cycle track demarcation shall continue across intersections at Exposition and Long Bridge Streets to indicate that cyclists have the right-of-way. Signs should indicate that vehicles must yield to cyclists.

#### **8.4.2.3.6 Bridgeview Street: Non-Standard Curbs and Drainage**

Bridgeview Street has a raised cycle track with a mountable curb separating the cycle track from the vehicular travel way, and a 4-inch curb separating the cycle track from the sidewalk on the east side of the street; these are not in conformance with the 2015 Subdivision Regulations.

#### **8.4.2.4 Exposition Street**

Exposition Street is designed to calm traffic and create a lush pedestrian connection with bulb-out gardens that will treat stormwater and provide seating. It will also accommodate service and loading demands for Blocks A, B, F, G, J, and K. Exposition Street will include the following zones, shown in Figures 8.35 and 8.36:

##### **8.4.2.4.1 Exposition Street: Sidewalk Zones**

Sidewalks on Exposition Street shall be 14-feet-wide along the south side of the street, and 20-feet wide along the north side, with inset loading zones for passenger loading and servicing access. The sidewalk shall include:

- A) Frontage Zone: A 2-feet-maximum width zone shall be maintained along building frontages for furniture, signage, and merchandizing.

- B) Pedestrian Throughway: An unobstructed, 6-feet-minimum clear width path of travel for pedestrians, with width as noted in Figure 8.35, shall be maintained between the Frontage Zone and the Streetlife Zone.
- C) Streetlife Zone: A zone between the curb and pedestrian throughway with width as noted on Figure 8.35. This zone shall include trees, lighting, stormwater treatment gardens, and furnishings that shall be consistent for the entire length of the street.
- D) Stormwater Zone: An 8-foot-wide zone between the Streetlife Zone and Roadway on the north side of the right-of-way, at grade with the sidewalk, shall include large stormwater treatment gardens with unique integral seating located at the southeast and southwest corners of Blocks A, G, and K.

#### **8.4.2.4.2 Exposition Street: Roadway Zones**

The 26-foot-wide roadway will accommodate two-way vehicular traffic from 3rd Street to Terry A Francois Boulevard, and shall include:

- A) Bicycle Facilities: A 5-foot-wide painted Class II bike lane in the westbound direction, separated from vehicular traffic with a 6-inch-wide solid white line. Minimize utility covers and material transitions in this area. This facility shall be located 1-foot from the face of the adjacent curb. Eastbound sharrows shall be provided.
- B) Loading Zone: An 8-foot-wide zone shall be provided at grade with the roadway, located between stormwater treatment gardens described in Figure 8.36, to provide passenger loading and servicing access. See Section 8.5.6 and Figures 8.18 and 8.54.
- C) Travel Lanes: Two 10-foot-wide travel lanes shall be provided to accommodate two-way traffic.

#### **8.4.2.4.3 Exposition Street: Traffic Control and Calming Measures**

The intersection of Exposition Street with Bridgeview Street shall have full stop control for bicyclists and vehicles. At the Shared Public Way and Terry A Francois Boulevard, there shall be stop-controlled raised or flush intersections with

pedestrian throughway clearly delineated by crosswalks. At intersections, bicycle lane treatment shall continue across intersections at Bridgeview Street and the Shared Public Way. See Section 8.8 and Figures 8.63 and 8.66.

#### **8.4.2.4.4 Exposition Street: Large Vehicle Circulation**

Large vehicle circulation to and from Terry A Francois Boulevard and Pier 48 shall be accommodated on the roadway between Blocks K and J. See Figures 8.22-27.

#### **8.4.2.5 Long Bridge Street**

Long Bridge Street will be an important pedestrian entry point to the site from MUNI on 3rd Street. It is designed with wide throughways, shade trees, ample street furniture opportunities, and compact linear stormwater gardens. Long Bridge Street will accommodate service and loading demands for Blocks C, D, E, H, and I and will be the vehicular entry point for the Shared Public Way. Long Bridge Street will include the following zones, shown in Figures 8.37 and 8.38:

##### **8.4.2.5.1 Long Bridge Street: Sidewalk Zones**

Sidewalks on Long Bridge Street shall be 15-feet-wide on both sides of the right-of-way. The sidewalk will include:

- A) Frontage Zone: A 2-feet-maximum width zone shall be maintained along building frontages for furniture, signage, and merchandizing.
- B) Pedestrian Throughway: An unobstructed, 8-feet-clear width path of travel for pedestrians shall be maintained between the Frontage Zone and the Streetlife Zone.
- C) Streetlife Zone: A 5-feet-wide zone between the curb and pedestrian throughway with width as noted on Figure 8.37. This zone shall include trees, lighting, stormwater treatment gardens, and furnishings that shall be consistent for the entire length of the street.
- D) Bulb-Out with Stormwater Treatment: A 4-feet-maximum width bulb-out that includes stormwater treatment gardens shall be provided on the north side of Long Bridge Street, on either side of the Shared Public Way intersection.

**8.4.2.5.2 Long Bridge Street: Roadway Zones**

The 30'-wide roadway will accommodate two-way vehicular traffic from 3rd Street to Terry A Francois Boulevard, and will include:

- A) Loading Zone: An 8-foot-wide loading zone shall be provided at grade with the roadway on the north side of the right-of-way, to provide passenger loading and building servicing access. This zone shall be painted with a unique surface treatment that differentiates it from the travel lanes. This zone shall not interfere with fire truck access or turning movements at intersections. Refer to Transportation Plan for loading and servicing strategies.
- B) Travel Lanes: Two 11-foot-wide travel lanes shall be provided to accommodate two-way traffic.
- C) Bicycle Markings: East- and west-bound sharrows shall be provided.

**8.4.2.5.3 Long Bridge Street: Traffic Control and Calming Measures**

The intersection of Long Bridge Street with Bridgeview Street shall have stop control for all Long Bridge Street traffic only. At the Shared Public Way and Terry A Francois Boulevard, there shall be stop-controlled raised intersections with pedestrian throughway clearly delineated by crosswalks. See Section 8.8.

**8.4.2.5.4 Long Bridge Street: Driveways at Block D Parking Facility**

Driveways shall be provided at the Block D parking facility to accommodate ingress and egress. Refer to Transportation Plan.

**8.4.2.6 3rd Street**

3rd Street is Mission Rock's gateway to Mission Bay. A wide multi-modal street, its character is fundamentally different from the interior streets of Mission Rock. South of Long Bridge Street, the sidewalk is a key threshold into Mission Rock from the MUNI station at Mission Rock Street. 3rd Street will adhere to approved San Francisco Office of Community Investment and Infrastructure (OCII) Mission Bay standards or approved substitutions for paving materials, trees, street furniture, and lighting. 3rd Street will include the following zones, shown in Figures 8.39 and 8.40:

**8.4.2.6.1 3<sup>rd</sup> Street: Sidewalk Zones**

The sidewalk on 3rd Street will be 12-feet-wide as shown in Figure 8.39 and will include:

- A) Pedestrian Throughway: An unobstructed, 6-feet-minimum clear width path of travel for pedestrians shall be maintained between the building façade and the Streetlife Zone.
- B) Streetlife Zone: A zone between the curb and pedestrian throughway with width as noted on Figure 8.39. This zone shall include trees, lighting, stormwater treatment gardens, and furnishings that shall be consistent for the entire length of the street.

**8.4.2.6.2 3<sup>rd</sup> Street: Roadway Zones at Block A**

At Block A only, the following shall be provided:

- A) Loading Zone: An 8-feet-wide zone shall be provided at grade with the roadway to provide passenger loading and servicing access per Figure 8.18.
- B) Bicycle Facility: A 6-feet-wide painted Class II bike lane in the north-bound direction, separated from vehicular traffic with a 6-inches-wide solid white line.

**8.4.2.6.3 3<sup>rd</sup> Street: Emergency Vehicle Access Radii**

Vehicular turning radii from Long Bridge Street and Exposition Street onto Third St have minimum requirements for emergency vehicle access. Refer Figures 8.21-8.27 for truck turning analysis.

**8.4.2.7 Mission Rock Street**

Mission Rock Street will provide an important link to the Blue Greenway at the terminus of Bridgeview Street. The Block H frontage will incorporate bicycle facilities connecting Bridgeview Street to the Blue Greenway on Terry A Francois Boulevard. Mission Rock Street will adhere to approved San Francisco Office of Community Investment and Infrastructure (OCII) Mission Bay standards or approved substitutions for paving materials, trees, street furniture, and lighting. South of Block H, a contraflow Class 1 cycle track will connect cyclists from Bridgeview Street to Terry A Francois Boulevard's Blue Greenway

infrastructure. Sidewalk improvements will extend along the north side of the right-of-way from Terry A Francois Boulevard to 3rd Street. Mission Rock Street will include the following zones, shown in Figures 8.41 and 8.42:

#### **8.4.2.7.1 Mission Rock Street: Sidewalk Zones**

Sidewalk improvements on Mission Rock Street shall be 12-feet-wide, on the north side of the right-of-way, as shown in Figure 8.41. The sidewalk shall include:

- A) Frontage Zone: A 2-feet-maximum width zone shall be maintained along building frontages for furniture, signage, and merchandizing.
- B) Pedestrian Throughway: An unobstructed, 6-feet-minimum clear width path of travel for pedestrians shall be maintained between the building frontage and the Streetlife Zone.
- C) Streetlife Zone: A zone between the curb and pedestrian throughway with width as noted on Figure 8.41. This zone shall include trees, lighting, and furnishings that are consistent for the entire length of the street. Refer to OCII Mission Bay Standards.
- D) Driveways: Driveways shall be permitted at the Parcel D parking garage.

#### **8.4.2.7.2 Mission Rock Street: Bicycle Facilities**

- A) Bicycle Facility: A two-way Class 1 cycle track with total width of 10 feet measured from the face of curb on the north side of the right-of-way, from Bridgeview Street to Terry Francois Boulevard. This facility shall be protected from vehicular traffic with a raised buffer that is a minimum of 15-inches in width, 6 inches in height, and includes a 46-inches-high permanent vertical buffer. This buffer will be segmented to permit drainage. Installation of the raised buffer is adjacent to an existing low pressure water main and will require an agreement between the SFMTA and SFPUC regarding the disposition of the existing water main that will be coordinated during the permitting process.
- B) Cycle Track Warning Cues: At intersections, the cycle track shall include paved and signed warning cues indicating pedestrian crossings and vehicular intersections.

- C) Cycle Track Intersections: Cycle track demarcation shall continue across intersections at Bridgeview Street and Terry Francois Boulevard to indicate the primary bicycle route.
- D) Reduced-width travel lanes: existing travel lanes on Mission Rock Street will be narrowed to 10-feet-wide. Proposed changes to existing roadway striping will be coordinated at a future date with SFMTA.

## **8.5 Components of Public Streets**

### **8.5.1 Curb Heights**

A variety of curb types will be installed throughout the site. Mission Rock Street, 3rd Street, Long Bridge Street and Exposition Street improvements will consist of crowned asphalt roadway and six-inch curb and gutter on either side. Terry A Francois Boulevard will have flush curb for optimal pedestrian access. Shared Public Way and the northern end of Bridgeview are curbless streets with continuous paving across the right-of-way. Overland release and stormwater drainage information for curbless streets can be found in Section 7: Site Grading and Section 13: Storm Drainage System, respectively. Bridgeview Street will utilize both mountable curb as well as four-inch and six-inch curb and gutter. The mountable curb will delineate the class I cycle track bicycle facility from the vehicular travel lanes and the four-inch curb and gutter will elevate the adjacent landscape and sidewalk above the bike lanes. Curb height design exception and modification requests subject to the process outlined in the City Subdivision Regulations will be reviewed and approved by the City on a case-by-case basis. For further reference of curb type locations throughout the site and typical curb details, see Figure 8.43.

### **8.5.2 Paving**

Paving will be a key component that defines the character, connectivity, and identity of Mission Rock's varied streets and open spaces. See Figures 8.44, 8.45, and 8.46 for proposed paving by street and zone. All paving in areas with high pedestrian traffic will facilitate universal accessibility. Paving connections to surrounding streets should be carefully considered for their impact on the larger Mission Bay neighborhood. Final pavement design for the roadway sections will be designed for the anticipated traffic load and equivalent single axial loads (ESAL) for a design life coordinated with the Acquiring Agency per the terms of the DA, DDA, and ICA.

The Pedestrian Throughway defined on each street shall be an accessible path of travel that is unobstructed by non-ADA-compliant paving or material treatments. Paving and built-in site elements shall be comprised of high-quality materials and finishes that are durable to withstand high-intensity use in the Bay environment. All material textures in designated clear path of travel and accessible use areas shall be ADA-compliant.

Where trees are planted in paving, surfacing material shall allow air and water to reach tree roots. Tree grates or stabilized crushed stone are permitted in the Streetlife Zone and in Open Spaces outside of dedicated Pedestrian Throughways. Where trees are planted in planting areas on streets, finish grade shall be within 2" of adjacent pedestrian paving.

### **8.5.3 Street Trees**

Planting at Mission Rock will function ecologically to help achieve the Project's goals for sustainability and contribute to a healthy environment. Composition and distribution of a diverse, adapted urban forest, stormwater gardens, and planted areas will create a resilient ecological framework to shape varied sensory experiences across the site and provide waterfront and urban habitat. See Figures 8.47, 8.48, and 8.49.

Trees will be used to block and mitigate wind, provide shade and reduce urban heat island effect, and to provide shelter for birds. Native or climate appropriate grasses, shrubs, and ground cover will provide as much species diversity as feasible in Mission Rock's planting areas, as well as function in stormwater treatment gardens. Upon construction, maintenance and management of tree and understory planting, soils, and irrigation will be essential to the successful function of the site's urban ecological systems.

Tree species shall be considered for their aesthetic and ecological benefits. Suggested species diversity in Figure 8.48 is a baseline; species selected for specific areas shall conform to this general distribution and diversity for the Mission Rock urban forest. Tree species suggested for each component of the Public Realm network have been selected in consultation with a certified arborist. If alternative species are chosen, they shall conform to the aesthetic and performance requirements outlined in Figure 8.48.

**8.5.3.1 Wind Mitigation**

Tree selection and maintenance will be vital to maintaining a comfortable public realm experience in both streets and open spaces. Trees shall be sited with consideration given to wind modeling at the neighborhood and local scale. Mandatory wind tolerances have been noted under the design criteria for tree species selection.

**8.5.3.2 Tree Species Installation and Establishment**

Trees shall receive adequate soil volume to sustain long-term health. Trees shall receive adequate irrigation and monitoring during a three-year establishment period. Large and medium-size trees shall be installed at a minimum size of 48-inch-box; small trees shall be installed at a minimum size of 36-inch box. Refer to Figure 8.48 for tree size and corresponding minimum size at installation. To meet functional requirements in both streets and open spaces, clear trunk requirements shall be achieved within five years of installation. Branches shall not interfere with pedestrian thoroughway (minimum 84 inches of clearance measured from ground surface) or mandated fire truck vertical clearance of 13.5-inches-minimum (measured from roadway surface). Master Developer and/or HOA intends to enter into a street tree maintenance and management agreement with Public Works to address street tree maintenance.

**8.5.3.3 Tree Maintenance and Management**

Trees in the Public Realm should be pruned yearly to sustain long-term health and to maintain desired growth habit. Determine appropriate water application after establishment (three years) in consultation with a certified arborist's comprehensive review of tree health on the site. Monitor water application yearly.

**8.5.3.4 Recommended Soil Volume for Trees**

Trees in the public realm should have adequate soil volume and infiltration, particularly trees planted in paving. Large tree species require 1500-2000 cubic feet of soil volume per tree; Medium tree species require 1000-1500 cubic feet of soil per tree; Small tree species require 800-1000 cubic feet of soil per tree. Tree species sizes are noted in Figure 8.48.

**8.5.3.5 Minimum clearance at On-Structure Conditions**

Where trees are planted in on-structure conditions, at least 4-feet of soil depth, and a continuous gravel drainage layer that is 6-12 inches in depth, should be maintained.

**8.5.4 Sustainable Water Strategies**

Mission Rock's landscapes and building systems will work together and be designed to conserve, re-use, and filter water. Site hydrology will be intertwined with daily life at Mission Rock in a unique and systematic way, with stormwater treatment gardens that are a part of the public realm experience in every streetscape and open space, building-integrated recycled water systems, and advanced greywater reuse strategies. Irrigation is an essential element of plant health and should be considered as part of the site hydrology strategy.

**8.5.4.1 Stormwater Treatment**

Stormwater treatment will be handled through a combination of treatment within specific streets, and in centralized, large feature stormwater gardens to which runoff is conveyed by gravity or force main for treatment. See Figures 8.50 and 8.51 for a conceptual diagram of the site stormwater treatment approach, and refer to Section 16 for detailed discussion and analysis of stormwater management.

**8.5.4.2 Irrigation**

All plant species shall receive establishment irrigation for a minimum of two years. Tree species shall receive establishment irrigation for three years or as deemed necessary for long-term health by a certified arborist. Refer to Mission Rock Sustainability Strategy for guidance about water usage. Planting design shall optimize irrigation efficacy by grouping plants with similar water needs into efficient irrigation hydrozones. Permanent irrigation infrastructure shall be provided for all trees, understory planting, stormwater treatment gardens, and lawn areas. Irrigation flow meters for all irrigation hydrozones will be installed to record and monitor water use across the site, and watering records kept for all site trees, with a yearly water audit to track the amount of water applied.

Efficient irrigation systems will be utilized, with drip irrigation except in lawn areas, where spray irrigation is acceptable. Refer to Local Model Water Efficient Landscape Ordinance for regulatory guidance. Recycled water shall be used for irrigation, with potable backup,

to minimize potable water use. This use shall conform to applicable public health standards; edible plants and play areas shall not be irrigated with non-potable water. See Sustainability Strategy for recycled water resources and minimum water quality treatment thresholds.

#### **8.5.5 Lighting**

Lighting will be an important component of nighttime identity, experience, and safety at Mission Rock. Lighting of special, unique character should reinforce key pedestrian routes along the Shared Public Way and Channel Lane and Channel Street. Where possible, a variety of lighting types should work together to create a warm, inviting, and safe nighttime environment. See Figures 8.42-8.53.

Lighting across the site will be scaled to the pedestrian and bicycle experience and will reinforce key pedestrian circulation routes and connections. Lighting strategies will also take care to protect site residents by minimizing light pollution. Lighting along the waterfront will operate on a *gradient of intensity from a well-lit Promenade at the Buildings and Piers to a more uniformly diffused, minimal character along the water that will not disrupt the ecology of the Bay edge.* Lighting strategies shall minimize glare, light trespass outside the development, and light pollution in areas adjacent to residential buildings and along the waterfront. Refer to Section 7.6 of the Design Controls and to the Sustainability Strategy for vertical development lighting controls. Site lighting will comply with applicable regulatory standards.

Lighting fixtures and bulbs shall meet or exceed applicable energy-efficiency standards. Lighting shall be designed to allow facial recognition along paths of travel. Lighting shall not create glare or "hot spots" that would inhibit visual acuity, or unnecessary vertical transmittance of light. Lighting strategies shall facilitate sight lines and perception of safety across the public realm. Lighting uniformity ranges in open spaces shall allow for variation in light levels to create hierarchy and a range of experiences.

#### **8.5.6 Accessible Loading**

Loading zones for vehicular and paratransit loading and unloading will be distributed across the site to enable access to all Development Parcels and open spaces, with priority given to significant

pedestrian connections noted in Figure 8.15. Proposed configurations for loading stalls are described for the following conditions:

DPW-Standard Curb, 6-inches typical: Figure 8.54.

Non-DPW-Standard flush curb, Shared Public Way: Figure 8.56

Non-DPW-Standard flush curb, Terry A Francois Boulevard: Figure 8.55.

#### **8.5.7 Driveway and Streetscape Coordination**

The project will ensure that locations of above-grade utility boxes, where provided, are coordinated with streetscape elements. These locations shall be coordinated with tree spacing to ensure Urban Forestry standards are applied to the greatest extent possible. If provided at all Development Parcels except Block D, driveways shall be located only Exposition or Long Bridge Streets. Driveways for Block D shall be provided on Long Bridge, Bridgeview, and Mission Rock Streets. Driveways are not permitted on the Shared Public Way, Terry A Francois Boulevard, 3rd Street, or Bridgeview Street north of Long Bridge Street. Driveway locations shall be coordinated with placement of streetscape elements per Figure 8.57.

### **8.6 Traffic Calming**

As part of the pedestrian and bicycle focused development plan outlined in the Mission Rock Transportation Plan, traffic calming elements are proposed to improve non-vehicular traffic safety and access. Proposed traffic calming elements for the Project street rights-of-way are identified in Figure 8.58 and include raised intersections, raised crosswalks, bulb-outs, and narrowed lane widths to accommodate bicycle infrastructure.

#### **8.6.1 Raised Intersections and Raised Crosswalks**

Raised intersections are proposed along the Shared Public Way, Terry A Francois Boulevard, and Bridgeview Street and are described in greater detail in Section 8.8. A raised mid-block pedestrian crosswalk is proposed along Bridgeview Street adjacent to Mission Rock Square and Channel Lane. A City Standard driveway is also proposed on Terry Francois Boulevard at the Mission Rock Street intersection to provide additional traffic calming measures as vehicles enter Terry A Francois Boulevard. At raised crosswalk and intersection locations, the street pavement areas will be raised as much as 6-inches to match the adjacent curb heights and will change paving material for a more effective visual cue to motorists. Final grades are dependent on overland release feasibility studies.

Where raised intersections or crossings are proposed, decorative crosswalk treatments or striped continental crosswalks shall be provided and comply with City and MUTCD standards and required review. Proposed decorative treatments shall meet ADA standards for slip-resistance. The design for these intersections and crosswalks will be coordinated with and are subject to the approval of the SFPUC, SFPDW, the SFMTA, and the San Francisco Fire Department (SFFD). Refer to Section 7: Site Grading for additional information about Project grading and overland release requirements. A typical raised crossing detail is shown on Figure 8.59.

The Developer or HOA will be responsible for maintenance and restoration of the street pavement sections, including pavement markings, within the raised intersection and raised crosswalk. Designs will incorporate measures to minimize maintenance and reduce the potential for dirt, silt and other debris to settle within the crosswalks.

#### **8.6.2 Intersection Bulb-Outs**

Bulb-outs have been strategically added along Long Bridge Street at the Shared Public Way intersection and along 3rd Street between Exposition Street and China Basin Park. These locations are expected to have a high concentration of pedestrian traffic traveling between the parking garage at Block D, the amenities along Shared Public Way, residential housing on the west side of 3rd Street, China Basin Park and AT&T Park just north of the development site. Bulb-outs will narrow driving lanes, create a shorter pedestrian crossing, make pedestrians more visible to motorists and require vehicles to reduce speeds. The final design for the bulb-outs will be coordinated with the SFMTA, SFPDW, SFPUC, and the SFFD. Bulb-out improvements will be constructed if the designs can meet the Acquiring Agency's requirements for overland drainage release, utility clearances, and accessibility for persons with disabilities. Overland Release at these locations will be studied in the Grading and Drainage Master Plan. A typical bulb-out detail is shown on Figure 8.59.

### **8.7 Off-Site Traffic Signalization**

As shown in Figure 8.60 and described below, the Developer will be responsible for design and construction funding, either as partial contribution or in full, of traffic signal modifications or new traffic signals, as well as striping. Where possible, the electrical service for traffic signals will be located within the joint trench (see Section 17). Traffic signals shall be designed by and constructed to the specifications

of the SFMTA and SFDPW. If determined feasible, planned off-site intersection improvements include, but may not be limited to the following:

**8.7.1 3rd Street and Existing Terry A Francois Boulevard**

The existing traffic signal infrastructure at Terry A Francois Boulevard and 3rd Street will be removed or modified during the demolition of the northern segment of Terry A Francois Boulevard that currently provides east-west access across the site. The new intersection at this location will serve northbound and southbound vehicular and bike traffic as well as eastbound and westbound bike and pedestrian traffic. An updated signalized intersection is anticipated to provide safe crossing for bikes and pedestrians across 3rd Street. The developer will be responsible for SFMTA costs to review, design, coordinate and implement improvements including signal design and signal timing changes.

**8.7.2 3rd Street and Channel Street**

To accommodate improvements at the existing 3rd Street and Channel Street intersection, signal timing and phasing will be revised. Vehicular access on Channel Street will now terminate at 3rd Street and will no longer continue eastward onto the site. The left turn from southbound 3rd street and phasing segments will be removed from the signalization at the intersection. The developer will be responsible for SFMTA costs to review, design, coordinate and implement improvements including signal design and signal timing changes.

**8.7.3 3rd Street and Mission Rock Street**

The existing traffic signals at the 3rd Street and Mission Rock Street intersection are planned to remain in place. Restriping of the Mission Rock lanes will likely require phasing and timing design alterations for the intersection. Revisions to the existing signalization at 3rd Street and Mission Rock Street will be completed by the SFMTA.

**8.7.4 3rd Street and Exposition Street**

A new traffic signal will be installed at the intersection of 3<sup>rd</sup> Street and Exposition Street to provide safe mobility for vehicular traffic, cyclists and pedestrians. Vehicles exiting the site from Exposition Street will be permitted to turn right and left onto 3<sup>rd</sup> Street. Northbound vehicles on 3<sup>rd</sup> Street will be allowed right turn access into the site at Expositions Street. Left turns from southbound 3<sup>rd</sup> Street on to Exposition Street will be permitted. Pedestrian crosswalks will also be incorporated

across Exposition Street in the north-south and east-west directions. The developer will be responsible for SFMTA costs to review, design, coordinate and implement improvements.

#### **8.7.5 4th Street Intersection Improvements**

As described in the project DEIR, the Developer will provide funding to the SFMTA, for a maximum amount of one-million dollars to SFMTA to design and construct traffic signals at the intersections of 4<sup>th</sup> Street and Mission Rock Street and 4<sup>th</sup> Street and Long Bridge Street. Funding shall be provided prior to the issuance of approval for the third building site permit, but in no event later than the site permit for Block D2 parking garage, SFMTA will construct the improvements in advance of the Developer's proposed date of opening for the Block D2 parking garage.

#### **8.7.6 Mission Rock Street Striping**

As described in the project DEIR, the Developer will provide the following:

- Stripe a "keep clear" zone in front of the easternmost driveway closest to Bridgeview Street.
- Extend the southbound left-turn lane at the Third Street-Mission Rock Street intersection to a total length of 350-ft. In combination with the re-striped left-turn lane, install advance traffic signal detention equipment in coordination with SFMTA.
- Stripe a "keep clear" zone on Mission Rock Street adjacent to the driveway access points serving the public services building. Final location and extents of the "keep clear" zone will be coordinated with the SFFD and San Francisco Police Department during the construction document approval process.

### **8.8 On-Site Traffic Controls**

Traffic calming and stop-controlled intersections, rather than signalization, are the primary strategy for on-site traffic control. Stop signs will be added at most of the intersections, with final locations to be determined by traffic sight distance requirements, Project phasing and coordination with the City. If implemented, stop signs on city streets will require legislation from SFMTA Board and traffic calming may also require SFMTA Board and/or public hearing.

#### **8.8.1 All-Way Stop-Controlled Intersections: DPW-Standard Curb Condition**

Mission Rock will have two all-way stop-controlled intersections at streets with DPW-Standard curbs, at the intersection of Bridgeview Street with Exposition Street (Figure 8.63) and the intersection of Bridgeview Street with Mission Rock Street (Figure 8.67). Bicycle and vehicular traffic will stop in all directions at these intersections. Crosswalks will be marked with City-

standard markings, and DPW-Standard curb ramps will be provided at crosswalks. Bicycle facility treatment will continue across these intersections for all streets. Refer to Transportation Plan for traffic volume information at these intersections.

### **8.8.2 All-Way Stop-Controlled Intersections: Raised Intersections**

Mission Rock will have two all-way stop-controlled intersections that are also raised intersections. These occur at the intersection of the Shared Public Way with Long Bridge Street and at Exposition Street. The Shared Public Way will have one-way northbound traffic only, from Long Bridge Street to Exposition Street. Refer to Transportation Plan for traffic volume information at these intersections.

#### **8.8.2.1 Shared Public Way at Long Bridge Street**

At the intersection of the Shared Public Way with Long Bridge Street, vehicular and bicycle traffic on Long Bridge Street will stop in both directions; Long Bridge Street traffic is permitted to turn onto the Shared Public Way at this intersection, but turning will be discouraged through design cues. Refer to Section 8.4.2 and Figure 8.64.

#### **8.8.2.2 Shared Public Way at Exposition Street**

At the intersection of the Shared Public Way with Exposition Street, vehicular and bicycle traffic on Exposition Street will stop in both directions and no turns will be permitted. Shared Public Way traffic will stop at the intersection with Exposition Street, and is permitted to turn right or left. The Shared Public Way becomes a paseo north of this intersection; vehicular traffic will not be permitted on the paseo, but it will accommodate emergency vehicle access for up to 150-feet of its length per Section 8.4. Approved removable or hydraulic bollards will be installed at Exposition Street to prohibit vehicular entry.

### **8.8.3 2-Way Stop at Raised Intersection**

Mission Rock will have one internal two-way stop-controlled intersection, at the intersection of Bridgeview Street with Long Bridge Street (Figure 8.65). Vehicular and bicycle traffic on Long Bridge Street will stop in both directions, while bicycle and vehicular traffic on Bridgeview Street will continue through without stopping. This intersection will be raised to meet the grade of the raised cycle track. Crosswalks will be marked with City- standard markings, and DPW-Standard

curb ramps will be provided at crosswalks. Bicycle facility treatment on Bridgeview Street will continue across this intersection. Refer to Transportation Plan for traffic volume information at these intersections.

#### **8.8.4 All-Way Stop-Controlled Intersections: Flush Intersections**

Mission Rock will have two all-way stop-controlled intersections that are also flush intersections, at the intersection of Terry A Francois Boulevard with Long Bridge Street and at Exposition Street. Grade transition will occur within the Terry A Francois Boulevard ROW. Terry A Francois Boulevard will have two-way traffic.

##### **8.8.4.1 Terry A Francois Boulevard at Exposition Street (Figure 8.66).**

At the intersection of Terry A Francois Boulevard with Exposition Street, vehicular and bicycle traffic on Exposition Street will stop; Exposition Street terminates at Terry A Francois Boulevard. For all vehicles except trucks servicing Pier 48, right turns only will be permitted onto Terry A Francois Boulevard. Northbound Terry A Francois Boulevard traffic will stop at the intersection with Exposition Street, and is permitted to turn left only. Terry A Francois Boulevard becomes a paseo north of this intersection. The paseo will accommodate emergency vehicle access for up to 150-feet of its length. Approved removable or hydraulic bollards will be installed to restrict vehicular entry; vehicular traffic will be permitted only for passenger loading within a clearly delineated and signed area (refer to Section 8.4.3).

##### **8.8.4.2 Terry A Francois Boulevard at Long Bridge Street.**

At the intersection of Terry A Francois Boulevard with Long Bridge Street, vehicular and bicycle traffic on Long Bridge Street will stop; Long Bridge Street terminates at Terry A Francois Boulevard. Long Bridge Street traffic is permitted to turn onto Terry A Francois Boulevard in both directions at this intersection. Terry A Francois Boulevard traffic will stop at this intersection in both directions, and turning onto Long Bridge Street is permitted. This intersection will be coordinated with Pier 50 operational requirements.

#### **8.9 Public Transportation System**

The Mission Rock site is adjacent to the Muni light rail along King Street and 3rd Street and the Caltrain 4th and King station. It is nearby the Bay Area Rapid Transit (BART) stations for Embarcadero,

Montgomery and Powell Street. The Transbay Transit Center, currently under construction, within the Financial District is also within close proximity to the proposed development. To encourage the use of these and other modes of sustainable transportation, the Mission Rock development has prioritized pedestrian, bike and transit access through the site. Ride share programs are also promoted within the design by incorporating loading and drop off zones throughout the proposed public street network.

Although there are no anticipated bus or light rail improvements associated with this Project, it is the Project team's understanding that SFMTA plans on enhancing the existing Muni transit networks near the Mission Bay area to improve commuter connections and efficiency throughout San Francisco. These improvements will be under the responsibility of SFMTA. For additional information regarding the public transportation system, refer to the latest edition of the Project Transportation Plan.

#### **8.10 SFMTA Infrastructure**

Where required, the following list of infrastructure items includes items to be owned, operated and maintained by the SFMTA within public right-of-ways:

- Security monitors and cameras
- Signals and Signal Interconnects, including Muni Bus Prioritization signals
- TPS signal preempt detectors
- Conduit containing TPS signal cables
- Shelters (with Vendor)
- Paint – poles and asphalt delineating coach stops
- Asphalt painting for transit lanes
- Departure prediction ("NextBus") monitors and related communications equipment
- Bicycle racks
- Crosswalk striping, except for areas with a raised intersection/crosswalk or with painted concrete special striping or other special decorative treatment
- Bike lane and facility striping
- APS/Pedestrian crossing signals
- Street Signs

**8.11 Acceptance and Maintenance of Street Improvements**

Upon acceptance of the new and/or improved public streets, including the structures supporting the streets, by the Acquiring Agency, responsibility for the operation and maintenance of the roadway and streetscape elements will be designated to the appropriate Acquiring Agency as defined in the City of San Francisco Municipal Code and related ordinances, and the Project DA, DDA, ICA, or a separate MOU or MOA per the terms of the ICA. Conflicts between proposed public utility infrastructure and the surface improvements proposed as part of the Project, including but not limited to dedicated transportation routes, trees, bulb-outs, traffic circles and medians, shall be minimized in the design of the infrastructure and surface improvements. The Acquiring Agency responsible for said utility infrastructure will review all proposals for surface improvements above proposed public utility infrastructure on a case-by-case basis to ensure that future access for maintenance is preserved. Stormwater management and treatment infrastructure installed as part of the streetscape to meet the Stormwater Management Requirements and Design Guidelines (SMR) will be maintained by the Master Developer and/or Acquiring Agency subject to the terms of the Project DA, DDA, ICA, or a separate MOU or MOA per the terms of the ICA.

As outlined in the DA, DDA, ICA, or a separate MOU or MOA, the Master Developer or Port will be responsible for maintenance and restoration of the non-standard materials and design features, including decorative paving and hardscape elements, as well as specific streetscape elements and encroachments. Restoration will include replacement of the pavement markings within areas with non-standard materials.

**8.12 Phasing of New Roadway Construction**

New roadway construction will occur in phases based on the principle of adjacency and as-needed to facilitate a specific proposed Development Phase and consistent with the requirements of the Project Phasing Plan, and the DA, DDA, ICA, or a separate MOU or MOA. The amount and location of roadway repair/ or replacement will be the minimum necessary to support the Development Phase and maintain minimum required parking allocations, access and utility connections. Such phased roadway construction will allow the existing utility services, vehicular and pedestrian access areas, and landscaped spaces to remain in place as long as possible and reduce disruption of existing uses on the site and adjacent facilities.

Temporary Fire truck turnaround areas, if any, will be coordinated with the SFFD and constructed by the Developer consistent with the Fire Code. Phasing of traffic signalization improvements will be based on

cumulative development thresholds identified by the Project traffic consultant and/or the SFMTA coincident with the Phase applications, construction documents or as stated in the DA. Sidewalk and other accessible pedestrian paths of travel, either permanent or temporary, shall be provided to serve the pedestrian entrance and exit requirements of each Development Parcel prior to being released for occupancy. Such paths of travel will connect to the sidewalks along 3rd Street, Mission Rock Street and Terry A Francois Boulevard and hence to the public transit stations and bus stops thereon.

The Developer will be responsible for mitigating impacts to improvements installed with previous Project Development Phase(s) due to the designs or construction of current or future Development Phases, which will be addressed prior to approval of the construction drawings for the current or future Development Phase.

MISSION ROCK INFRASTRUCTURE PLAN - DRAFT

FIGURE 8.67 MISSION ROCK STREET INTERSECTIONS

## **9. OPEN SPACE AND PARKS**

The following describes the phasing of construction of open space and parks in connection with the Development Parcels. Unless specifically identified otherwise in the Section, ownership, maintenance, and acceptance of the open space and park areas will be by the Master Developer or Port, subject to the terms of the DDA.

### **9.1 Open Space**

Open space shall be substantially Completed consistent with the following schedule:

#### **9.1.1 China Basin Park**

China Basin Park will be constructed in connection with the adjacent Development Parcels A, G and K, as further described in the associated Public Improvement Agreement(s) (PIA) for such Development Parcels. Construction of China Basin Park, including, without limitation, the portions of the park located between and adjacent to Development Parcels A and G and Development Parcels G and K, may be sequenced in relation to the phasing of such adjacent Development Parcels or to accommodate the need for construction staging or likelihood of site disturbances associated with construction of the adjacent Development Parcels.

#### **9.1.2 Mission Rock Square**

Mission Rock Square will be constructed in connection with the adjacent Development Parcels (E and F), as further described in the associated PIAs for such Development Parcels. Construction may be sequenced or adjusted as needed to accommodate construction of adjacent Development Parcels.

#### **9.1.3 The Blue Greenway and the non-pile supported portion of Channel Wharf**

The Blue Greenway and the non-pile supported portion of Channel Wharf (as described herein) will be constructed in connection with the construction of the adjacent portion of Terry A Francois Boulevard. The Blue Greenway is within the public street right-of-way of Terry A Francois Boulevard and will be owned and maintained by the Acquiring Agency.

#### **9.1.4 Channel Street**

Channel Street will be constructed in connection with the adjacent Development Parcels (B and C) as further described in the associated PIAs for such Development Parcels. Construction may be sequenced or adjusted as needed to accommodate construction of adjacent Development

Parcels. Ownership and maintenance and liability for Channel Street and encroachments thereon shall be addressed as set forth in the ICA or future MOA or MOU.

#### **9.1.5 Channel Lane**

Channel Lane will be constructed in connection with the adjacent Development Parcels (I and J) as further described in the associated PIAs for such Development Parcels. Construction may be sequenced or adjusted as needed to accommodate construction of adjacent Development Parcels. Ownership and maintenance and liability for Channel Lane and encroachments thereon shall be addressed as set forth in the ICA or future MOA or MOU.

#### **9.1.6 Pier 48 Apron and the pile supported portion of Channel Wharf**

The Pier 48 apron and the pile supported portion of Channel Wharf will be renovated, replaced or constructed in connection with the development of Pier 48. The Pier 48 Apron will be owned, maintained, and accepted by the Port.

## **10. UTILITY LAYOUT AND SEPARATIONS**

### **10.1 Utility Systems**

The Project proposes to install public utility systems, including the storm drainage system, separated sanitary sewer system, low pressure water (LPW) system, auxiliary water supply system (AWSS), and dry utility systems. Privately owned and maintained systems – district energy, greywater collection– will be installed to promote Project sustainability goals. Non-potable water infrastructure within the street right-of-ways will either be privately or publicly, by the SFPUC, owned or maintained. Ownership, maintenance, and acceptance responsibilities of utility infrastructure will be documented in the DA and DDA.

### **10.2 Utility Layout and Separation Criteria**

Utility main layout and separations will be designed in accordance with the Subdivision Regulations and SFPUC Utility Standards. The Project proposes district energy cooling, non-potable water, and greywater collection systems which have utility separation requirements based on the Subdivision Regulations Diagram 2 and separation requirements provided by ARUP, shown in Appendix H. Utility main separation requirements are presented in Figure 10.1 Horizontal Utility Main Separation Matrix.

### **10.3 Conceptual Utility Layout**

The Project utility layout is designed to connect the proposed Project utility infrastructure to the existing adjacent public utility infrastructure facilities. The proposed LPW system, shown on Figure 11.1, will be a looped system and have three connections to the existing SFPUC LPW system on 3<sup>rd</sup> Street and Mission Rock Street. The proposed separated sanitary system, shown on Figure 12.1, will have three connections to the existing SFPUC sanitary sewer system on both 3<sup>rd</sup> Street and Mission Rock Street. The proposed storm drainage system, shown on Figure 13.1, will have four connections to the existing SFPUC storm drain system on 3<sup>rd</sup> Street, a potential connection to the existing SFPUC storm drain system on Mission Rock Street, a connection to the existing Port outfall at China Basin, and a connection to the existing Port outfall at Channel Wharf, which, if accepted by the SFPUC as part of the Project, will be provided to the SFPUC subject to compliance the SFPUC standards for outfall design. The proposed AWSS, shown on Figure 14.1, will be a looped system a connection to the existing 12-inch AWSS main in 3<sup>rd</sup> Street at the Exposition Street intersection and to a future SFPUC AWSS main at the intersection of Mission Rock Street and Terry A Francois Boulevard. The district energy plant and infrastructure layout, shown on Figure 15.1, and greywater collection, shown on Figure 15.2 will be centralized at Block A. The bay source system will

be installed in China Basin Park to connect the district energy plant to the Bay. From Block A, District Energy and non-potable water will be provided to all Development Parcels.

#### **10.4 Utility Layout and Clearance Design Modifications and Exceptions**

Due to constraints within the Project site, design modifications and exceptions to standard sizing, spacing, and locations of utilities will be requested. A design modification and exception request to utility standards and requirements is subject to the review and approval by the department with authority over each utility. The separated sanitary sewer system, storm drainage system, LPW system, AWSS, and non-potable water system design modifications and exceptions receive authorization per the process outlined in the Subdivision Regulations. Potential locations for the design modifications and exceptions listed in this section are shown in Figure 10.2. Approval of this Infrastructure Plan does not constitute authorization of utility-related design modifications and exceptions.

##### **10.4.1 Utility Main Clearance to Face of Curb**

A bulb-out section, approximately 190-feet long, at the intersection of Long Bridge Street and Shared Public Way (SPW) will be provided for traffic calming purposes. The bulb-out reduces the face of curb to face of curb width from 30-feet to 26-feet. The Low Pressure Water main separation to the face of curb is given priority which ultimately reduces the Storm Drain structure to face of curb separation to 0.3-feet from the required 4.5-feet clearance. If the AWSS main is removed from Long Bridge Street, as currently proposed based on recent discussions, 4.5-ft of clearance between the bulb-out and LPW main may be provided and a design modification and exception request would not be required.

SPW will not have a curb, and Terry A Francois Boulevard will utilize flush curbs. The clear street width is 20 feet on SPW, which does not provide adequate width for the horizontal layout of District Energy pipes, a non-potable water main, a LPW main, and a storm drainage main. Thus, the project proposes to locate the storm drainage main underneath the edge of the clear travel way and beneath the linear drainage element. Proposed storm drainage infrastructure would be accepted by the Acquiring Agency with maintenance completed through the HOA fees or CFD funds. If the SFPUC and City do not accept the infrastructure, then the Acquiring Agency will be the Port.

**10.4.2 Utility Structure Type and Clearance to Face of Curb**

TFB, SPW, and the northern segment of Bridgeview Street will utilize flush curbs in place of City standard curb and gutter design, eliminating feasible installation of City standard curb inlets. To accommodate the Project design approach, a linear drainage element, including but not limited to a valley gutter, inverted crown street, or trench drains, in combination with inlets at low points will be incorporated at or along the flowline to provide drainage. Proposed storm drainage infrastructure would be accepted by the Acquiring Agency with maintenance completed through the HOA fees or CFD funds.

**10.4.3 Auxiliary Water Supply System Main within Sidewalk**

The street width of Terry A Francois Boulevard is inadequate to provide horizontal clearance for all proposed utility mains within the street pavement. The proposed AWSS main will be located underneath the blue greenway on the east side of Terry A Francois Boulevard, as agreed upon between the developer and the City, SFFD, and SFPUC.

**10.4.4 Storm Drain Main and Sanitary Sewer Main Layout Order**

Per the Subdivision Regulations, street utility order places the storm drain main closest to the face of curb, then the sanitary sewer main closer to the centerline of the street section. In Terry A Francois Boulevard and Exposition Street, the utility order of the storm drain main and the sanitary sewer main is switched to place the sanitary sewer main closest to the face of curb instead of the storm drain main. This change in layout order provides better alignment with the storm drain connection on 3<sup>rd</sup> Street and reduces crossing conflicts between the sanitary sewer and storm drain systems.

**Figure 10.1 - HORIZONTAL UTILITY MAIN SEPARATION**

| Utility Separation                         | Storm Drain  | Sanitary Sewer                                     | Sanitary Sewer Force Main                                | Potable Water (LPW)                                      | Auxiliary Water Supply System                            | Recycled Water (Private)                                 | Greywater Collection (Private)                           | District Energy (Private)   | Structure Appurtenances of Other Utilities                |

## **11. LOW PRESSURE WATER SYSTEM**

### **11.1 Existing Low Pressure Water System**

Potable water service is provided by a water supply, storage, and distribution system operated by the SFPUC. Existing LPW system infrastructure surrounds the site on Terry A Francois Boulevard (12-inch), 3rd Street (12-inch), and Mission Rock Street (12-inch). Fire hydrants and Piers 48 and 50 are serviced through the existing waterline in Terry A Francois Boulevard.

### **11.2 Existing SFPUC System Capacity**

Based on the report, "Computer Modeling and Analysis of the Low Pressure Water System, Mission Bay Development" by Winzler & Kelly dated May 2000 (2000 LPW Report), the existing mains along 3rd Street, Mission Rock Street, and Terry A Francois Boulevard will have adequate capacity to support the Development and do not require replacement. Fire hydrant pressure and flow data from field tests of existing SFPUC hydrants adjacent to the project site will be used to verify the 2000 LPW report assumptions. This field data will be incorporated into the LPW water model and will be included as part of the Low Pressure Water Master Utility Plan (LPWMP).

### **11.3 Proposed Low Pressure Water System**

#### **11.3.1 Project Water Supply**

The Project has been accounted for in the SFPUC's latest City-wide demand projections provided in its 2013 Water Availability Study<sup>1</sup> and the Water Supply Assessment prepared for and approved by the SFPUC in January 2017. As concluded previously, the Project would not require major expansions of the existing water system.

#### **11.3.2 Project Water Demands**

The Project water demands are identified in Table 11.1 below. The LPWMP will outline the Project's methods used for calculating the flow demands. The Project proposes bay source cooling, which provides significant water savings by reducing the quantity of cooling towers for the Project; however, the WSA assumed that each development parcel would incorporate independent heating and cooling systems, resulting in larger water demands than those assumed in Table 11.1

**Table 11.1**  
**Project Water Demands**

| <b>Scenario</b>  | <b>Demand (gpm)</b> |
|--|---------------------|
| Domestic Average Day Demand (ADD)                              | 450                 |
| Maximum Day Demand (MDD)<br>(includes peaking factor of 1.6)   | 721                 |
| Peak-Hour Demand (PHD)<br>(includes peaking factor of 2.4)     | 1,081               |
| Required Fire-Flow   | 1,875               |
| <b>Maximum Demand</b><br>(Max Day Demand + Required Fire-Flow) | <b>2,596</b>        |

### **11.3.3 Project Water Distribution System**

The LPW system will be designed and constructed by the Developer, then owned and operated by the Acquiring Agency upon completion of construction and acceptance of the improvements. The proposed LPW system is identified schematically in Figure 11.1. Along 3<sup>rd</sup> Street, two new LPW connections are proposed at Exposition Street and Long Bridge Street to provide an on-site looped system. The proposed domestic water supply and fire protection system is anticipated to consist of 12-inch ductile iron pipe mains, LPW fire hydrants, valves and fittings, and appurtenances. The LPW infrastructure will be located within the paved area of the street such that the outside wall of a potable water pipe is a minimum of 4.5-feet clear from the face of curb and a minimum of 5-feet clear from the center of proposed tree trunks. A portion of the existing LPW system in Mission Rock Street between Terry A Francois Boulevard and proposed Bridgeview Street may require relocation to accommodate bicycle infrastructure coordinated with the SFMTA.

Vertical and horizontal separation distances between adjacent separated sewer systems, LPW infrastructure, and dry utilities will conform to the requirements outlined in Title 22 of the California Code of Regulations, the State of California Department of Health Services Guidance Memorandum 2003-02, and the Subdivision Regulations. Refer to the Typical Utility Section (Figure 11.2) for depth and relationship to other utilities. Required disinfection and connections to new mains will be performed by the SFPUC at the Developer's cost. Cathodic protection to be provided as required by the SFPUC. Based on a cathodic protection analysis, cathodic protection is to be completed during the Development Phase of the project.

**11.3.4 Low Pressure Water Design Criteria**

The proposed LPW system is required to maintain a minimum pressure of 20 psi and a maximum velocity of 12 fps during a Maximum Day Demand and maintain a minimum pressure of 40 psi and a maximum velocity of 8 fps during a Peak Hour Demand. The Project LPW system will be modeled in the LPWMP to confirm the on-site system infrastructure will meet pressure and flow requirements.

**11.3.5 Proposed Fire Hydrant Locations**

As shown on Figure 11.3, proposed on-site and off-site fire hydrants have been located at a maximum radial separation of 300-feet between hydrants. In addition, building fire department connections will be located within 100-feet of a fire hydrant. Final hydrant locations are subject to the approval of the SFFD, SFPUC, and will be located outside of the curb returns per DPW Order 175,387. If fire hydrants are required by SFFD within the curb returns to meet SFFD requirements, the Project will work with the SFPUC and SFDPW to request an exception per Sections VI and VII of DPW Order 175,387 to accommodate the SFFD. Fire hydrants shall not be located within landscape or bioretention areas and must have a paved direct path leading to the adjacent access road.

**11.4 Phases for Low Pressure Water System Construction**

The Developer will design and install the new LPW system based on the principle of adjacency and as-needed to facilitate a specific proposed Development Phase and consistent with the requirements of the DA, DDA and ICA. The amount and location of the proposed LPW systems installed will be the minimum necessary to support the Development Phase. The new Development Phase will connect to the existing systems as close to the edge of the Development Phase area as possible while maintaining the integrity of the existing system for the remainder of the Project. Repairs and/or replacement of the existing facilities necessary to support the proposed Development Phase will be designed and constructed by the Developer. Interim LPW systems will be owned, constructed, and maintained by the Developer as necessary to maintain existing LPW facilities impacted by proposed Development Phases, unless the SFPUC agrees to maintain interim facilities at the Developer's cost.

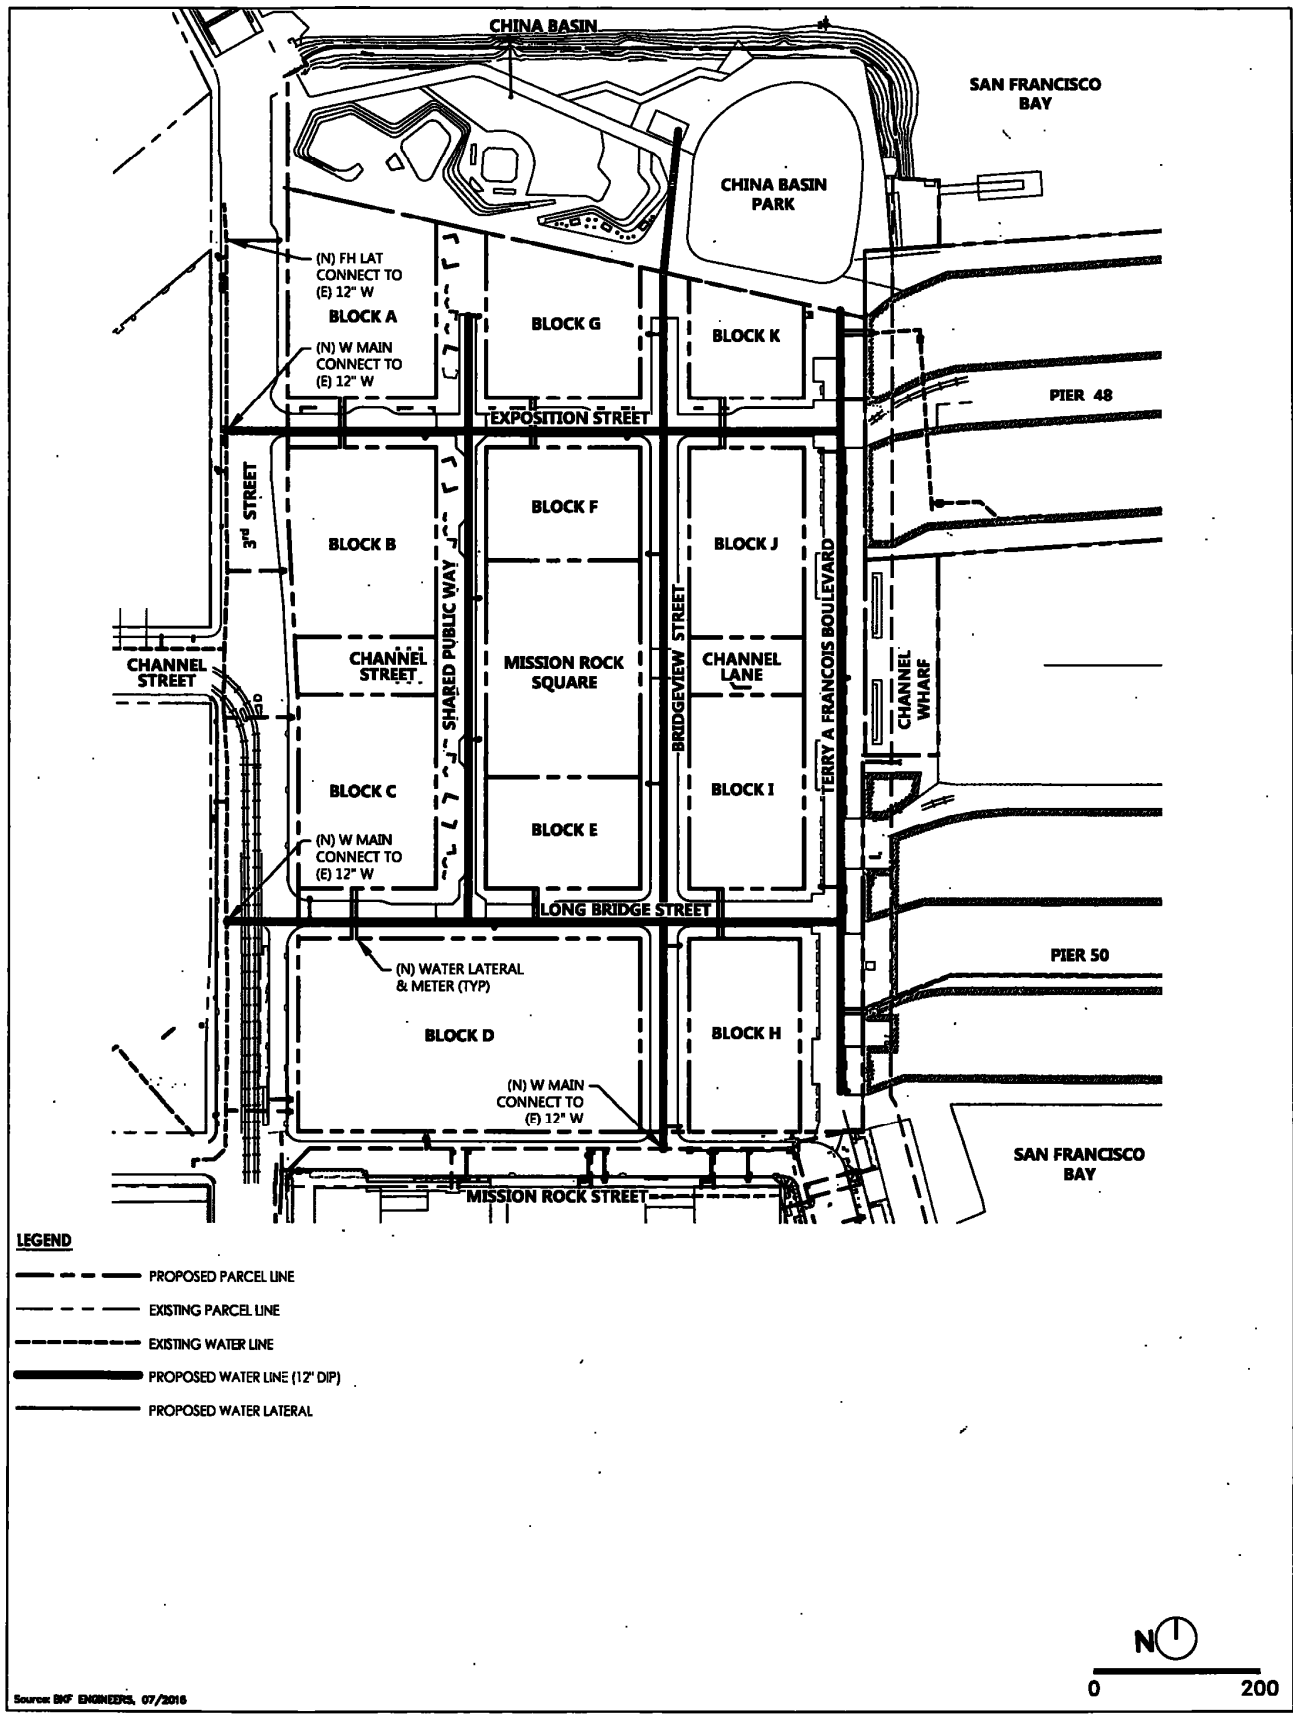

The SFPUC will be responsible for ownership and maintenance of existing SFPUC-owned LPW facilities. The Acquiring Agency will own and maintain the proposed LPW facilities once construction of the

horizontal improvements required for a Development Phase or a new LPW facility is complete and accepted by the Acquiring Agency. The Developer will be responsible for mitigating impacts to improvements installed with previous Project Development Phase(s) due to the designs or construction of current or future Development Phases, which will be addressed prior to approval of the construction drawings for the current or future Development Phase. For each Development Phase and concomitant with the submittal of Improvement Plans, the Developer will provide a phase-specific LPW Utility Report describing and depicting all existing LPW infrastructure to remain and demonstrating that the Development Phase will provide the required pressures and flow to the standards of the Acquiring Agency.

#### **11.4.1 Existing Low Pressure Water System Demolition Phasing**

The existing SFPUC-owned LPW system adjacent to the site along 3<sup>rd</sup> Street and Mission Rock Street will remain. The existing on-site 12-inch LPW main loops through Terry A Francois Boulevard connecting 3<sup>rd</sup> Street at the Lefty O'Doul Bridge to Mission Rock Street. The portion of this main along the frontage of Pier 48 and Pier 50 will remain to provide the piers service. This main will then be replaced with a 12-inch main connected to the Mission Rock LPW system during the redevelopment of Terry A Francois Boulevard. New connections will be made to Pier 48 and Pier 50 branching from the new LPW main.

FIGURE 11.3 - CONCEPTUAL FIRE HYDRANT LOCATIONS

## **12. SANITARY SEWER SYSTEM**

### **12.1 Existing Sanitary Sewer System**

The existing uses of the site include a parking lot and China Basin Park. Although the site does not have existing sanitary sewer facilities, an existing sewer lateral off of Channel Street and 3rd Street was capped after two existing industrial buildings were demolished to build the parking lot.

The existing sanitary sewer infrastructure along the south and west side of the Project site has a separated sewer system. On the east side of the Project, Pier 48 and Pier 50 are served by a 15-inch sanitary storm sewer main that drains to the south within Terry A Francois Boulevard. Sanitary flows within Terry A Francois Boulevard are conveyed to a low spot in the main just south of the intersection at Mission Rock Street where there is an existing sanitary sewer pump station (Port SSPS) owned and maintained by the Port of San Francisco. A 6-inch force main from the Port SSPS at this location lifts sanitary flows into a 12-inch gravity sewer main within Mission Rock Street and is conveyed west into a 15-inch main as it reaches 3rd Street.

Existing separated sanitary sewer facilities within 3rd Street include an 8-inch main north of Channel Street which connects into a 21-inch main in between Channel Street and Mission Rock Street. The flows from the 21-inch main in 3rd Street and the 15-inch main in Mission Rock Street converge at the intersection of 3rd Street and Mission Rock Street and are conveyed through gravity sewer mains to Sanitary Sewer Pump Station #3 at Park 15 and ultimately conveyed to the San Francisco Southeast Treatment Plant prior to treatment and discharge to the Bay.

### **12.2 Proposed Sanitary Sewer System**

#### **12.2.1 Proposed Sanitary Sewer Demands**

The Project sanitary sewer demands conservatively assume 95% return on potable water demands and 100% return on recycled water demands for ADD, resulting in an Average Daily Dry Weather Flow (ADWF) of approximately 312,668 gallons per day (gpd) or 217 gallons per minute (gpm) over 24-hours. Including an infiltration rate of 0.003 cubic feet per second per acre and applying a peaking factor of 3, the Project is anticipated to generate a Peak Wet Weather Flow (PWWF) of 978 gallons per minute (gpm). The Project's methods for calculating the flow demands will be outlined in the Sanitary Sewer Master Utility Plan (SSMP).

**12.2.2 Proposed Sanitary Sewer Capacity**

Sanitary sewer models for the Project have been developed to confirm the sanitary sewer system designs and capacity, and will be included in the SSMP. The Project proposes to direct all new sanitary sewer flows, with the exception of Block H & Block I, to the existing 21-inch sanitary sewer main in 3<sup>rd</sup> Street. Capacity of the existing 21-inch sanitary sewer main in 3<sup>rd</sup> Street is adequate to serve these demands, which is accounted for in the Mission Bay Master Plan. Block H & Block I sanitary sewer demands will be directed to the existing 12-inch sanitary sewer main in Mission Rock Street. An analysis of the impacts of the Project demands on the existing upstream and downstream infrastructure will be reviewed as part of the SSMP approval process.

The Project proposes to utilize the existing Port SSPS at the corner of Terry A Francois Boulevard and Mission Rock Street to continue serving the existing demands from Pier 48 and Pier 50 which amount to 96 gpm or 138,660 gpd under ADWF conditions and 315 gpm under PWWF conditions. This flow is within the conditions accounted for in the Mission Bay Master Plan. No additional flow resulting from the Project will be directed to the existing Port SSPS at the corner of Terry A Francois Boulevard and Mission Rock Street.

**12.2.3 Proposed Sanitary Sewer Design Basis**

The proposed sanitary sewer system will be designed in accordance with the City Subdivision Regulations and SFPUC wastewater utility standards. The design basis will be described in greater detail as part of the SSMP.

**12.2.4 Proposed Sanitary Sewer Design Criteria**

The proposed separated sewer system is intended to convey sanitary sewer flow from the Project. The physical and capacity design criteria for the sanitary sewer system are presented in Table 12.1.

Table 12.1

## Mission Rock Separated Sewer Main Design Criteria

| Parameter   | Criteria/Value   |
|---|--|
| Pipe material for pipe sizes 6-inch to 21-inch inside diameter              | VCP (ASTM C-700 Extra Strength)<br>HDPE with special approval from SFDPW and SFPUC |
| Manhole spacing   | 300-feet preferred<br>350-feet maximum (subject to approval of SFPUC)              |
| Minimum depth of cover for mains  | 6-feet minimum unless otherwise approved by the SFPUC on a case-by-case basis      |
| Minimum flow velocity<br>(average dry weather sanitary flow)                | 2 fps  |
| Minimum infiltration intensity  | 0.003 second feet per acre   |
| Manning's n (roughness coefficient) for proposed pipes                      | VCP: 0.013<br>HDPE: 0.010  |
| Maximum Pipe Flow Depth Ratio, $d/D$<br>(average dry weather sanitary flow) | 0.50   |
| Maximum Pipe Flow Depth Ratio, $d/D$<br>(peak wet weather sanitary flow)    | 0.8  |
| Sewer Generation <sup>(1)</sup>   | Residential: 54 GPD / capita<br>Commercial/Retail: 0.1 GPD / SF                    |

## TABLE 12.1 NOTES:

<sup>(1)</sup> Assumes 95% return on potable water and 100% return on non-potable water based on until demands from the "Treasure Island, Technical Memorandum, Potable Water" dated April 1, 2016. Sewer generation value subject to SFPUC review and approval in the Master Utility Plan.

VCP = Vitrified Clay Pipe

fps = feet per second

$d/D$  = ratio of the depth of flow ( $d$ ) to the pipe inside diameter ( $D$ )

## 12.2.5 Proposed Sanitary Sewer Collection System

The proposed sanitary sewer system is identified schematically on Figure 12.1. The sanitary sewer system will be designed and constructed by the Developer. Sanitary sewer designs will be reviewed and approved by the Acquiring Agency. Upon construction completion and improvement acceptance by the Acquiring Agency, the new sanitary sewer system will be maintained and owned by the Acquiring Agency. The proposed system will include sanitary sewer

laterals connected to a new system of 8-inch to 12-inch gravity sanitary sewer mains and a force main downstream of the proposed sanitary sewer pump station.

In addition, a new sanitary sewer pump station for dedication to the SFPUC is proposed adjacent to Exposition Street in either Block A or Block B. An easement, MOU, and/or separate agreement will be recorded for SFPUC facilities on Vertical Development parcels on Port property, including provisions for maintenance access.

The development will connect to the existing sanitary sewer main on 3<sup>rd</sup> Street at two locations. It is anticipated that the proposed sanitary sewer flows along Exposition Street will be discharged to an existing manhole at the intersection of 3<sup>rd</sup> Street and Exposition Street by a sanitary sewer force main. The proposed pump station for this sanitary sewer force main will be located in either Block A or Block B. The proposed sanitary sewer flows from Long Bridge Street will connect to existing sanitary sewer main on 3<sup>rd</sup> Street at a new SFPUC manhole structure.

The remaining proposed development flows from Block H & Block I will be collected by a sanitary sewer main in Bridgeview Street and discharge to the existing sanitary sewer main in Mission Rock Street at a new SFPUC manhole structure.

Consistent with the existing condition, the flows from Pier 48 and Pier 50 will connect to the new sanitary sewer main in Terry A Francois Boulevard and discharge to the existing Port SSPS at the intersection of Terry A Francois Boulevard and Mission Rock Street.

See Figure 12.2 for a typical utility cross-section identifying the approximate sanitary sewer system depth and its horizontal relationship to other adjacent utilities.

#### **12.2.6 Structured Street Drainage**

Due to geotechnical constraints, the Project will provide structured street sections which will require subdrains to prevent accumulation of water on the structured street. Subdrains, where required based on the final design of the structured streets, will be provided within the structured streets and open space areas to prevent accumulation of water and will drain via a gravity connection or through a sump pump and force main to the sanitary sewer system. Where a

subdrain is required, a sand trap will be installed in advance of the connection of the SFPUC sanitary sewer main. Ownership, maintenance and acceptance of the subdrains and/or sump pumps will be by the Acquiring Agency subject to the DA, DDA, ICA, or separate MOA or MOU.

### **12.3 Design Modifications and Exceptions**

Proposed pipe slopes and cover are constrained within the Project by the existing adjacent sanitary sewer system infrastructure. The existing adjacent sanitary sewer system does not have adequate depth or cover to provide Subdivision Regulation compliant pipe cover. A minimum cover of 6-feet will be provided on top of mains within public streets, where less than 6-ft of cover is provided, a design modification and exception request for a reduced cover depth of up to 3-feet will be submitted for approval by the Director of Public Works with the consent of the SFPUC during the construction document approval process. Anticipated locations where a design modification and exception requests for reduced pipe cover are shown on Figure 12.3.

With the cover and slope constraints, VCP sanitary sewer mains will not provide adequate flow velocities or capacities. To provide the minimum flow velocity of 2 fps and sufficient flow capacity with the limited available pipe slopes, the Project proposes to install fusion-welded high-density polyethylene (HDPE) pipe SDR-17 or better. The HDPE pipe has less friction than VCP and will provide adequate flow velocities and flow capacities. HDPE pipe will be flex tested using Mandrel test. Design modification and exception requests to allow HDPE pipe are subject to the approval of the Director of Public Works with the consent of the SFPUC.

Vertical and horizontal separation distances between adjacent sanitary sewer system, storm drain system, potable water, and dry utilities will conform to the requirements outlined in Title 22 of the California Code of Regulations and the State of California Department of Health Services Guidance Memorandum 2003-02 and the Subdivision Regulations. As shown in Figure 12.2 and described in Section 10, the sanitary sewer mains are proposed to be offset from the center of the street to ensure that adjacent water lines can be placed outside of the proposed bulb-outs while maintaining the required health code separation clearances. Horizontal clearances for proposed sanitary sewer infrastructure are provided in the Section 10 Utility Layouts and Separations. Design modification and exception requests to allow for alternative pipe locations are subject to the approval of the Director of Public Works with the consent of the SFPUC.

**12.4 Phases for Sanitary Sewer System Construction**

The Developer will design and install the new sanitary sewer system based on the principle of adjacency and as-needed to facilitate a specific proposed Development Phase and consistent with the requirements of the DA, DDA and ICA. The amount and location of the proposed sanitary sewer systems installed will be the minimum necessary to support the Development Phase. The new Development Phase will connect to the existing systems as close to the edge of the Development Phase area as possible while maintaining the integrity of the existing system for the remainder of the Project. Repairs and/or replacement of the existing Infrastructure necessary to support the proposed Development Phase will be designed and constructed by the Developer. Interim sanitary sewer systems connecting to SFPUC or Port owned infrastructure will be owned, constructed and maintained by the Developer as necessary to maintain existing sanitary sewer facilities impacted by proposed Development Phases. The Developer will own and maintain interim facilities, as required, until completion of the Development Phase or until the infrastructure is no longer functionally required and has been removed.

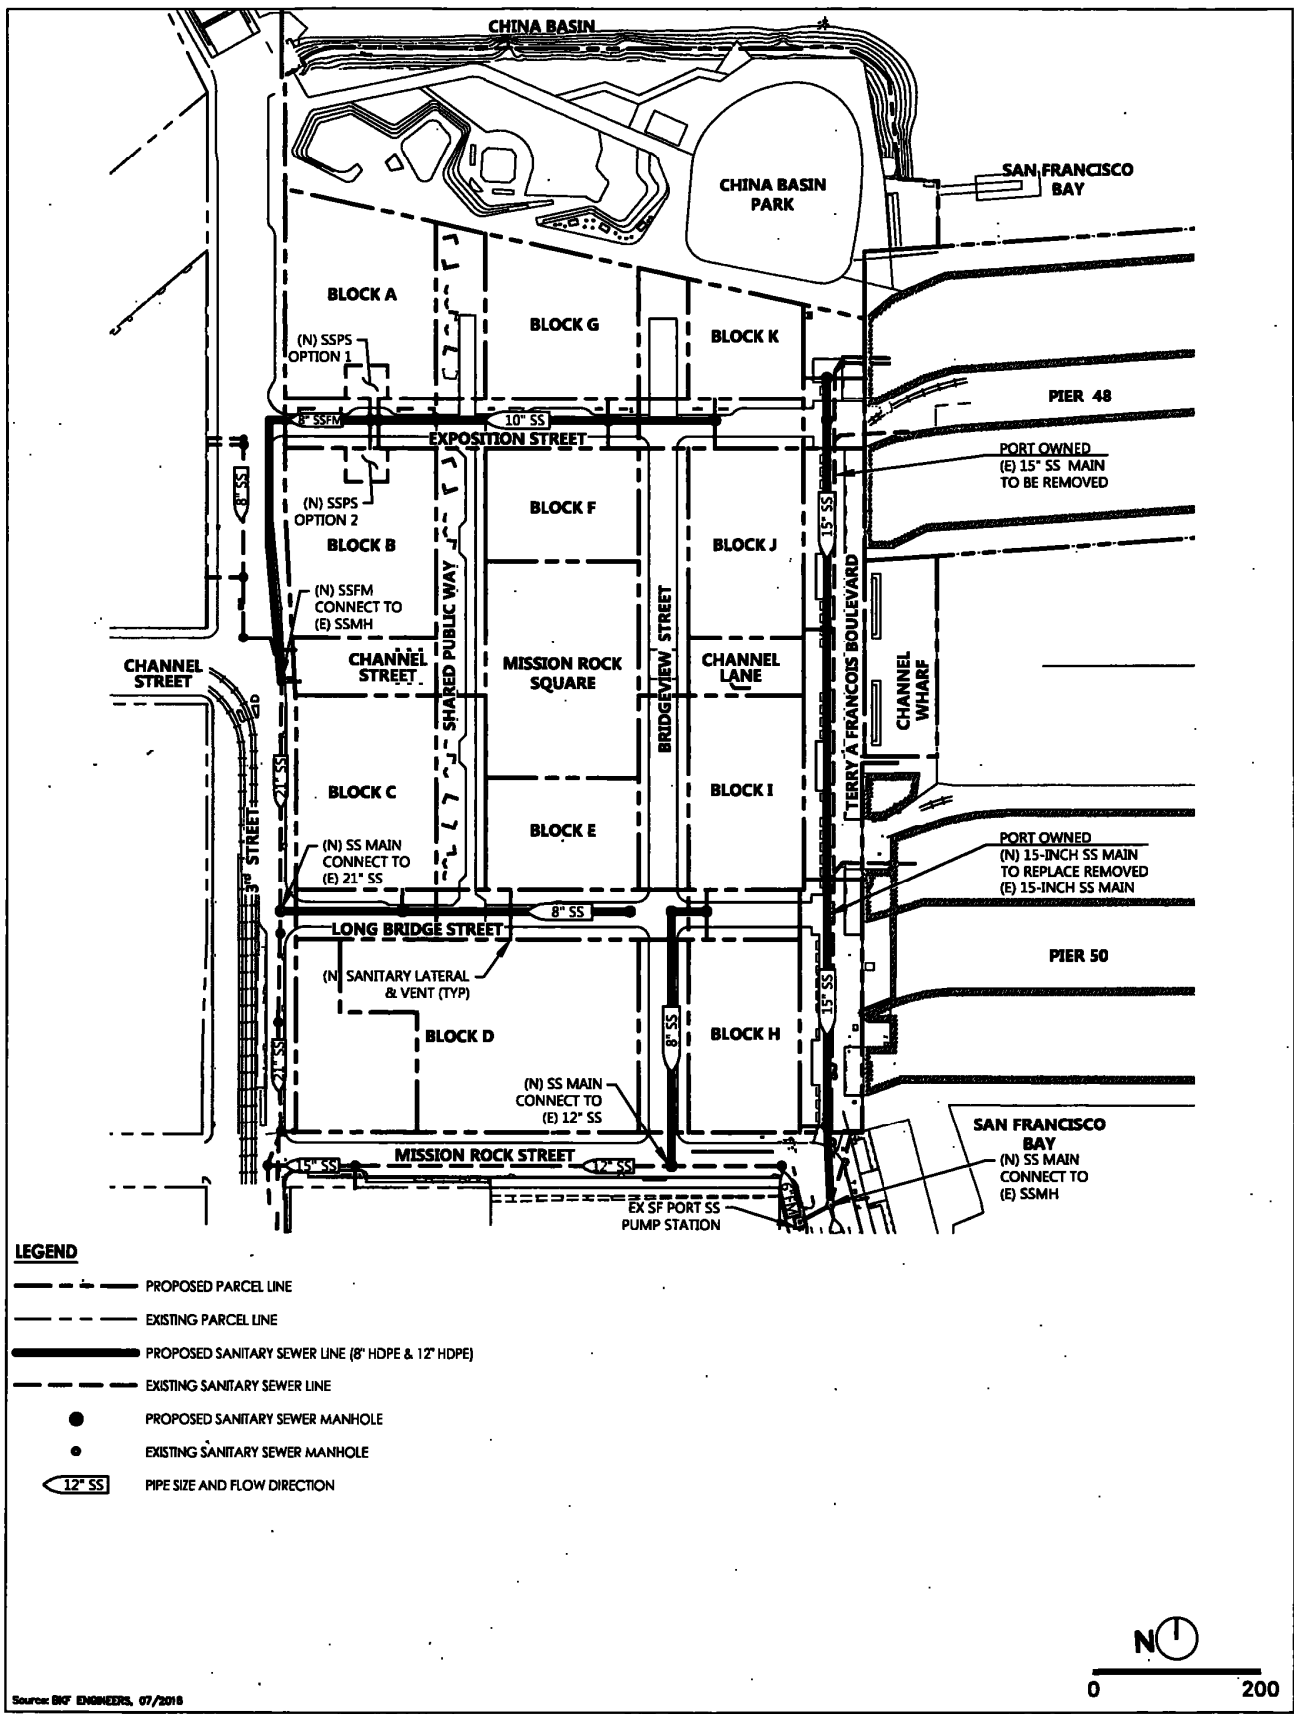

The Port and City are responsible for maintenance of the existing Port and City sanitary sewer facilities, respectively. The Acquiring Agency will be responsible for the proposed sanitary sewer system once construction of the horizontal improvements for Development Phase or new sanitary sewer system is complete and accepted by the Acquiring Agency. The Developer will be responsible for mitigating impacts to Infrastructure installed with previous Development Phases of the Project due to the designs or construction of new Development Phases and will be addressed prior to approval of the construction drawings for the new Development Phase. Pipes and manholes adjacent to a new Development Phase must undergo inspection before and after construction of the new Development Phase. For each Development Phase and concomitant with the submittal of construction documents, the Developer will provide a phase-specific Sanitary Sewer System Utility Report describing and depicting the existing and proposed sanitary sewer infrastructure, and demonstrating that the Development Phase will provide sanitary sewer infrastructure capable of serving the Development Phase to the standards of the Acquiring Agency.

**12.4.1 Existing Sanitary Sewer System Demolition Phasing**

The existing sanitary sewer system adjacent to the site along 3<sup>rd</sup> Street and Mission Rock Street will remain. The existing on-site 15-inch combined sewer main is located in Terry A Francois Boulevard east of Seawall Lot 337 and connects to the existing sanitary sewer manhole at the

intersection of Mission Rock Street and Terry A Francois Boulevard. The portion of this main that along the frontage of Pier 48 and Pier 50 will remain to provide service to the Piers. This main is proposed to be replaced with a 12-inch separated sanitary sewer system during the redevelopment of Terry A Francois Boulevard. New connections will be provided to Pier 48 and Pier 50 branching from the new main.

### **13. STORM DRAIN SYSTEM**

#### **13.1 Existing Storm Drain System**

The existing storm drain infrastructure within the vicinity of the Project site has a separated storm drain system to the west, south, and east, and two separate Port-owned outfalls that drain to the San Francisco Bay. The west side of the Project is served by an existing separated storm drain system within 3rd Street that is routed to the future Mission Bay Stormwater Pump Station (SWPS) #3 for discharge to Mission Creek. Until SWPS #3 is constructed, stormwater flows continue past SWPS #3 into an existing 11' x 11' combined sewer box that drains to the existing Channel Street Pump Station. The re-aligned Mission Rock Street to the south has a new separated storm drain system that conveys stormwater to Mission Bay SWPS #6 to the south that discharges to the San Francisco Bay adjacent to the Radiance Development and Block P18. Both China Basin Park and Terry A Francois Boulevard have storm drain systems that discharge directly to the San Francisco Bay through existing Port-owned outfalls. The existing Pier 48 and Pier 50 structures have a separated storm drain system that discharge directly to the Bay from the piers.

Storm drain system capacities within the existing 42 inch storm drain system in 3<sup>rd</sup> Street and the 21-inch storm drain main in Mission Rock Street are adequate to serve the tributary drainage areas from the Project. As described in the Draft Drainage Report for Mission Bay Drainage Area D (September, 2012), the existing storm drain system provides the minimum freeboard requirement for a 5-year storm event. Pump station designs have also been sized to meet the 5-year storm event requirements and are summarized in The Basis of Design Mission Bay Stormwater Pump Station #3 Draft Report (May, 2009).

#### **13.2 Conceptual Storm Drain System Design**

##### **13.2.1 Overview**

The Project will replace the existing on-site storm drain system with new storm drain systems connecting into the existing separated storm drain systems serving the site. The proposed separated storm drain system will be designed in accordance with the Subdivision Regulations and the Stormwater Management Requirements and Design Guidelines (SMR) and other SFPUC wastewater standards, where applicable. The on-site storm drain system will be designed to convey the stormwater runoff from the 5-year storm event from the development parcels and streets. For the 100-year storm and overland release, the storm drain system, street section, and street grading will be designed to convey the stormwater runoff from the Development Parcels

and streets. A more detailed analysis will be included in the Grading and Storm Drain System Master Utility Plan.

### **13.2.2 Storm Drain Design Criteria**

As documented in the Subdivision Regulations and the SFPUC utility standards, as appropriate, proposed 6-inch to 21-inch pipes will be constructed from ASTM C-700 Extra Strength Vitrified Clay Pipe (VCP). Main extensions for 36-inch pipes or larger shall require monolithic reinforced concrete or reinforced concrete pipe subject to approval by the Director with consent of the SFPUC.

Proposed Acquiring Agencies' storm drain mains within the Project will be constructed on approved crush rock bedding. The minimum residential and commercial service lateral size is 6-inches and 8-inches, respectively. Manhole covers will be solid with manhole spacing set at a maximum distance of 300-feet and at changes in size, grade or alignment. Stormwater inlets will be installed per the Subdivision Regulations or SFPUC wastewater utility standards and outside of the curb returns crosswalks, accessible passenger loading zones and accessible parking spaces, where feasible. Linear Drainage Elements within the bike and pedestrian zones of TFB and SPW will be installed to be ADA compliant, and meet the modeling requirements described in Section 13.3.3 below.

Storm drain system capacities within the existing 42-inch storm drain system in 3<sup>rd</sup> Street and the 21-inch storm drain main in Mission Rock Street are adequate to serve the entire buildout of the project. A minimum depth of cover of 6-feet will be required on top of storm drain mains within new public streets. A freeboard of 4-feet below pavement or ground will be required to conform to the Subdivision Regulations or SFPUC utility standards. If necessary, an alternative minimum cover of 4-feet and/or minimum freeboard of 2-feet below pavement or ground may be permitted by the Acquiring Agency, or if accepted by the City, the Director of Public Works with the consent of the SFPUC or Port.

Vertical and horizontal separation distances between adjacent sanitary sewer system, storm drain system, LPW infrastructure, district utilities, and dry utilities will conform to the requirements outlined in Section 10 and the Subdivision Regulations.

### **13.2.3 Conceptual Storm Drain System Layout**

The conceptual storm drain system is identified schematically on Figure 13.1. The storm drain system will be designed and constructed by the Developer. Street storm drains including street drainage within the new public rights-of-way will be reviewed and approved by the Acquiring Agency. The new storm drain system will be maintained and owned by the Acquiring Agency, upon construction completion and improvement acceptance by the Acquiring Agency. The proposed system will include storm drain laterals connected to a system of 12-inch to 42-inch SFPUC gravity storm drain mains.

The conceptual storm drain system will connect to the existing storm drain systems at up to seven locations. Along 3rd Street, the on-site storm drain system will connect to an existing SFPUC 42-inch main through proposed manhole structures at Exposition Street, Channel Street, Long Bridge Street, China Basin Park, and the west half of Block D. The storm drain system within Terry A Francois Boulevard will drain to a treatment pump conveying treatment flows to the proposed parks for treatment. For larger storm events, Terry A Francois Boulevard will connect into an existing Port 30-inch outfall that drains to the San Francisco Bay between Pier 48 and Pier 50. As part of the project, the outfall will be upgraded or replaced and dedicated to the SFPUC, along with a required access and maintenance easement. China Basin Park storm drain system will connect into an existing 12-inch Port outfall draining to China Basin for discharge of treated stormwater. Refer to Section 16 for a description of the conceptual stormwater treatment strategy for the Project

Refer to Figure 13.2 for the approximate storm drain system depth and its relationship to other adjacent utilities. The storm drain infrastructure layout and locations will be approved during the Project construction document review process.

### **13.3 Storm Drain System Design Modifications and Exceptions**

Design modification and exception requests are anticipated for, but not limited to, the following storm drain infrastructure items, which will be subject to the approval of the Director of Public Works with the consent of the SFPUC, or other Acquiring Agency:

**13.3.1 Pipe Material**

The Project proposes to install HDPE pipe SDR-17 or better and associated trenching requirements in place of VCP. The HDPE pipe has less friction than VCP, is more flexible, can better accommodate minor amounts of settlement, and will provide adequate flow velocities and capacities. In addition, HDPE pipe will be flex tested using the Mandrel test.

**13.3.2 Freeboard and Cover**

Due to existing conditions and constraints within the Project site and at conforms to the existing City-accepted public rights-of-way at 3<sup>rd</sup> Street and Mission Rock Street, exceptions to the standard layout of utilities will be requested during design development. A design modification and exception will be requested to allow for a reduced minimum cover of 4-feet on top of the storm drain system infrastructure. In addition, initial modeling for the 5-year storm design analysis indicates that the conceptual storm drain system was only able to provide a minimum hydraulic grade line (HGL) of 2-feet of freeboard below the pavement or ground surface at select proposed connection points due to existing high starting HGL elevations at existing storm drains.

**13.3.3 Linear Drainage Infrastructure on Curbless and Flush Curb Streets**

Terry A Francois Boulevard, SPW, and the northern segment of Bridgeview Street will be designed without curbs or with flush curbs in combination with an inverted crown. To accommodate the project design approach, a linear drainage element, including but not limited to a valley gutter, inverted crown street or trench drains, in combination with inlets at low points will be incorporated at or along the flowline to provide drainage. Linear drainage elements are proposed along the theoretical face of curb of the curbless streets, which represents the location in which a curb would typically be installed if included as part of the street design. These linear drainage elements will be rated to handle heavy vehicle (H20) traffic loading. Drainage from linear drainage elements will be conveyed to the storm drain. Performance modeling of grading and hydrology designs along streets with no curbs or with flush curb will be developed during the MUP approval process in conformance with the requirements of the Acquiring Agency.

**13.3.4 Storm Drainage Infrastructure on Curbless and Flush Curb Streets**

The clear street width is 20 feet on SPW, which does not provide adequate width for the horizontal layout of District Energy pipes, a non-potable water main, a low pressure water main, and a storm drainage main. Thus, the Project proposes to locate the storm drainage main underneath the edge

of the clear travel way and beneath the linear drainage element. If the SFPUC and City do not accept the infrastructure, then the Acquiring Agency will be the Port. This will be documented in the Ownership and Maintenance Matrix included is part of the DA, DDA, ICA, or a separate MOU/MOA between the Port, City and Developer.

Storm Drain lateral responsibility would be assigned to the property owner if the adjacent development parcel requiring a lateral from TFB, SPW, or the northern segment of Bridgeview Street. This will be documented in the Ownership and Maintenance Matrix included as part of the DA, DDA, ICA, or a separate MOU/MOA between the Port, City and Developer.

### **13.4 Phases for Storm Drain System Construction**

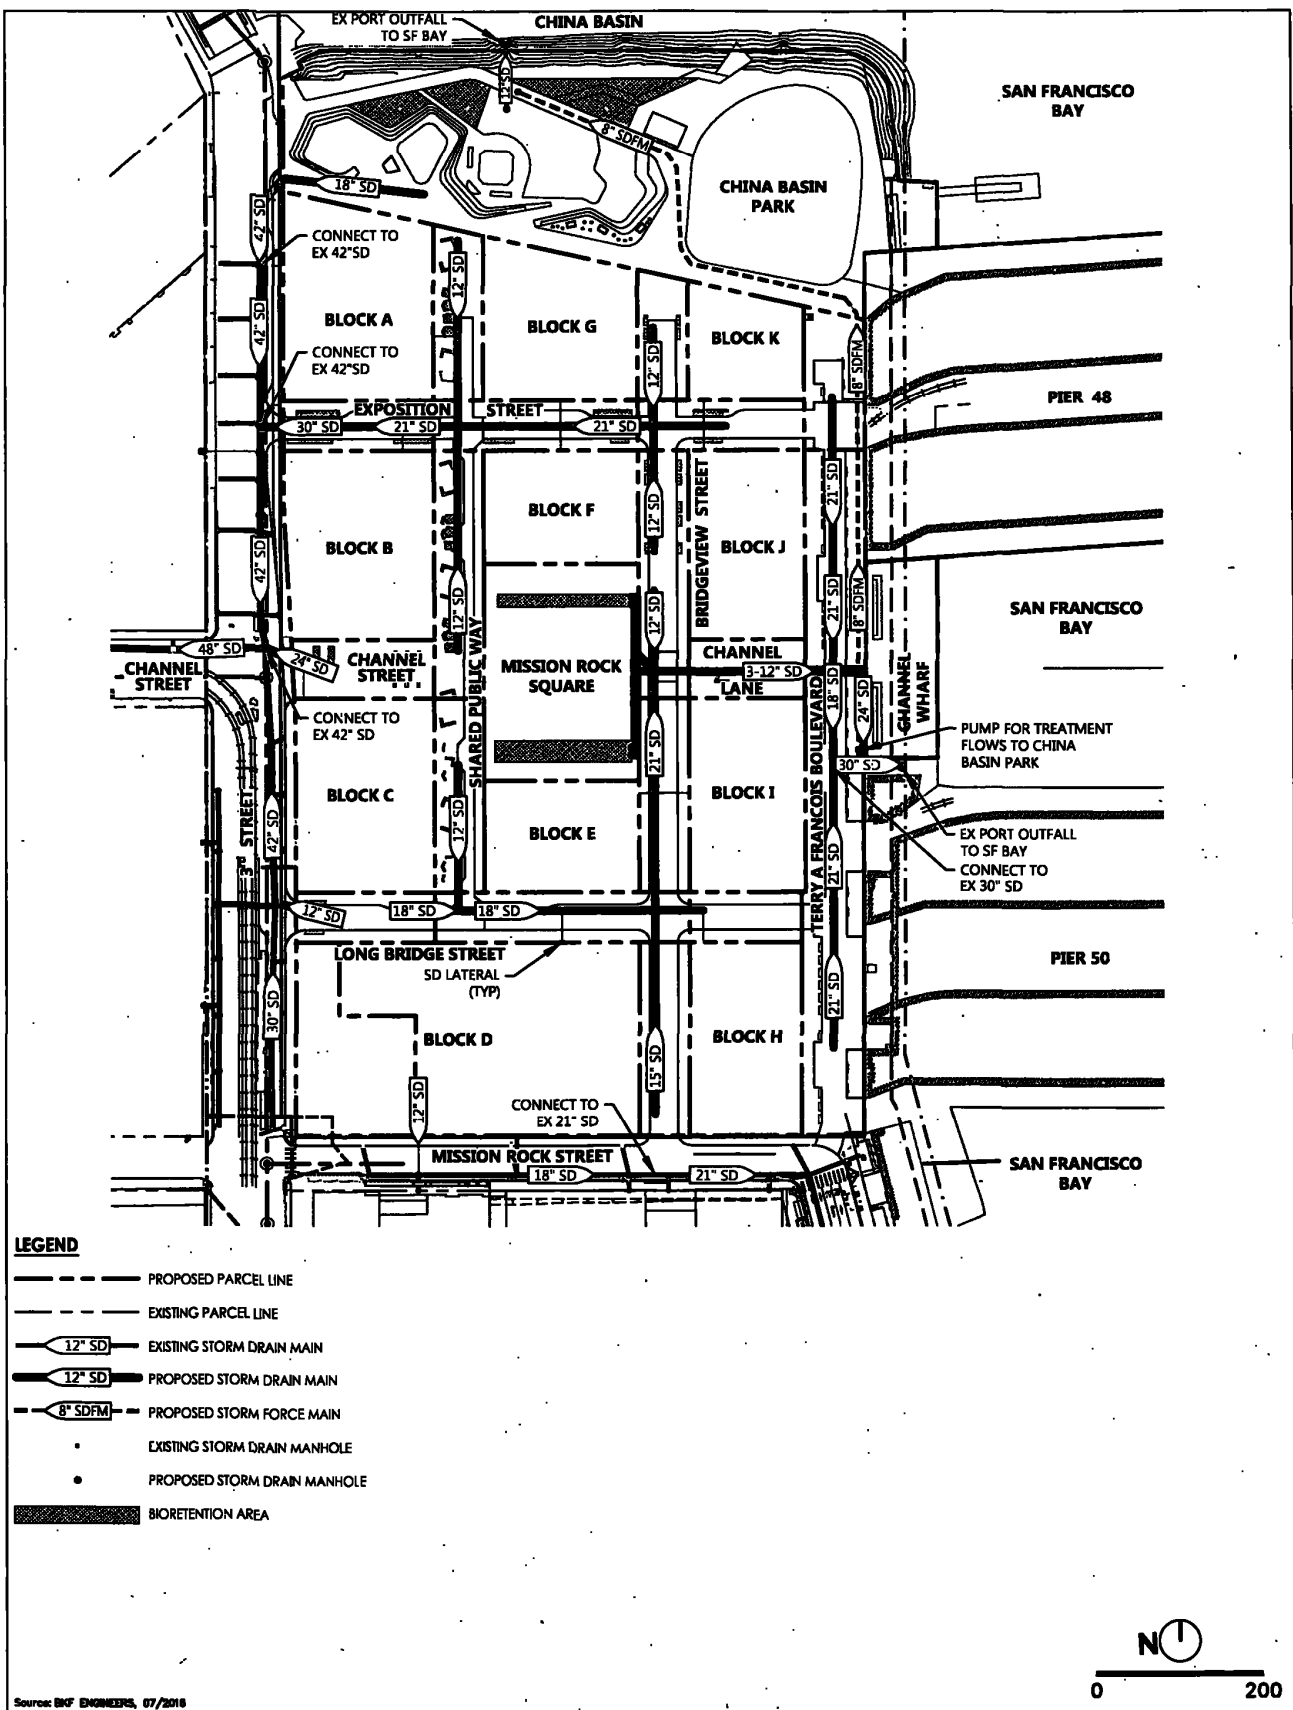

The Developer will design and install the new storm drain system based on the principle of adjacency and as-needed to facilitate a specific proposed Development Phase and consistent with the requirements of the DA, DDA, and ICA. The amount and location of the proposed storm drain systems installed will be the minimum necessary to support the Development Phase. The new Development Phase will connect to the existing systems as close to the edge of the Development Phase area as possible while maintaining the integrity of the existing system for the remainder of the Project. Repairs and/or replacement of the existing facilities necessary to support the proposed Development Phase will be designed and constructed by the Developer. Interim storm drain systems will be constructed, owned, and maintained by the Developer as necessary to maintain existing drainage facilities impacted by proposed Development Phases. The Acquiring Agency may inspect interim facilities owned by the Developer or Port subject to the DA, DDA, ICA, or separate MOU/MOA between the Port, City, and Developer.

The Port and City will be responsible for ownership and maintenance of existing Port or City owned storm drain facilities, respectively. The Acquiring Agency will own and maintain the proposed storm drainage facilities once construction of the Horizontal Improvements required for a Development Phase or a new storm drain facility is complete and accepted by the Acquiring Agency subject to the DA, DDA, ICA, or a separate MOU/MOA between the Port, City and Developer. The Developer will be responsible for mitigating impacts to Infrastructure improvements installed with previous Project Development Phase(s) due to the designs or construction of current or future Development Phases, which will be addressed prior to approval of the construction drawings for the current or future Development Phase. For each Development Phase and concurrent with the submittal of construction documents, the Developer will

provide a phase-specific Storm Drain System Utility Report describing and depicting the existing and proposed storm drain infrastructure, and demonstrating the that Development Phase will provide drainage infrastructure capable of serving the Development Phase to the standards of the Acquiring Agency. This will be documented in the Ownership and Maintenance Matrix included is part of the DA, DDA, ICA, or a separate MOU/MOA between the Port, City and Developer.

MISSION ROCK INFRASTRUCTURE PLAN

FIGURE 13.2 - TYPICAL UTILITY SECTION WITHIN PUBLIC STREETS

## **14. AUXILIARY WATER SUPPLY SYSTEM (AWSS)**

### **14.1 Existing AWSS Infrastructure**

The San Francisco Public Utilities Commission (SFPUC), in cooperation with the San Francisco Fire Department (SFFD), owns and operates the Auxiliary Water Supply System (AWSS), a high-pressure non-potable water distribution system dedicated to fire suppression that is particularly designed for reliability after a major seismic event. Currently, a 12-inch AWSS main exists adjacent to the Project site on 3<sup>rd</sup> Street between Channel Street and Mission Rock Street.

### **14.2 AWSS Regulations and Requirements**

New developments must meet the fire suppression objectives that were developed by the SFPUC and SFFD. The SFPUC and SFFD will work with the Developer to determine post-seismic fire suppression requirements during the planning phases of the Project. Requirements will be determined based on building density, fire flow and pressure requirements, City-wide objectives for fire suppression following a seismic event, and proximity of new facilities to existing AWSS facilities. AWSS improvements will be located in public rights-of-way or on City property, as approved by SFPUC. Easements required to place AWSS infrastructure on Port property are subject to the approval of the Port and SFPUC.

### **14.3 Conceptual AWSS Infrastructure**

To meet the SFPUC and SFFD AWSS requirements, the development may be required to incorporate infrastructure and facilities that may include, but are not limited to:

- Seismically reliable high-pressure water piping and hydrants with two points of connection. One connection is proposed at the existing 12-inch AWSS distribution system in 3<sup>rd</sup> Street near the Exposition Street intersection, and a second connection is proposed to a future AWSS facility at the Mission Rock Street and Terry A Francois Boulevard intersection;
- Independent network of seismically reliable low-pressure piping and hydrants with connection to existing potable water distribution system at location that is determined to be seismically upgraded by SFPUC;
- Saltwater pump station that supplies saltwater to AWSS distribution piping following a major seismic event;
- Piping manifolds along waterfront that allow fire trucks to access and pump sea or bay water for fire suppression; and/or
- Portable water supply system (PWSS), including long reaches of hose and equipment mounted

on dedicated trailers or trucks.

- Cisterns

Based on coordination with the SFPUC, the Project proposed locations and types of AWSS infrastructure are identified schematically on Figure 14.1 and approximate AWSS main depths and its relationship to other adjacent utilities are shown on Figure 14.2. AWSS fire hydrants are provided at street intersections within the Project site. In addition, the project includes an extension of the AWSS system down Terry A Francois Boulevard from Long Bridge Street to the Mission Rock Street-Terry A Francois Boulevard intersection for a connection to the future AWSS facility on Terry A. Francois Boulevard that will extend from South Street to Mission Rock Street. Where the AWSS facility is proposed to be installed in the Terry A Francois Boulevard right-of-way, the AWSS infrastructure will be placed beneath the 16-ft wide and clear zone beneath the Blue Greenway, which exceeds the 12-ft minimum clear access width for Gate Trucks required by SFPUC. Final designs of the AWSS solution for the Project site will be determined by the SFPUC and SFFD in consultation with the Developer based on equivalent infrastructure costs of the proposed AWSS layout and infrastructure as shown on Figure 14.2, and a capital contribution not to exceed \$1,500,000 current dollars, subject to a 4.5% escalation calculated from the time of project approval, to support off-site AWSS infrastructure per the terms of the DA, DDA, and/or ICA.

#### **14.4 Phases for AWSS Construction**

The Developer will design and install the new AWSS based on the principle of adjacency and as-needed to facilitate a specific proposed Development Phase and consistent with the requirements of the DA, DDA and ICA. The amount and location of the proposed AWSS installed will be the minimum necessary to support the Development Phase. The new Development Phase will connect to the existing systems as close to the edge of the Development Phase area as possible while maintaining the integrity of the existing system for the remainder of the Project. Repairs and/or replacement of the existing facilities necessary to support the proposed Development Phase will be designed and constructed by the Developer.

The SFPUC will be responsible for the new AWSS facilities once construction of the improvements is complete, and the facilities are accepted by the SFPUC. Impacts to improvements installed with previously constructed portions of the development due to the designs of other Development Phases will be the

responsibility of the Developer and addressed prior to approval of the construction drawings for the new Development Phase.

#### **14.4.1 AWSS Phased Installation**

The Mission Rock AWSS will be installed within the phased structured streets, 3<sup>rd</sup> Street and Terry A Francois Boulevard. The existing AWSS adjacent to the site along 3<sup>rd</sup> Street will remain in place. The new system will connect to the existing SFPUC system at the adjacent existing AWSS main along 3<sup>rd</sup> Street.

For each Development Phase, the SFPUC, in conjunction with its consultants, will provide an AWSS Report describing and depicting the pressures and flows the AWSS provides with the Phase. The construction documents and installation of AWSS infrastructure will be completed by the Developer in coordination with the SFPUC.

MISSION ROCK INFRASTRUCTURE PLAN

FIGURE 14.2 - TYPICAL UTILITY SECTION WITHIN PUBLIC STREETS

## **15. DISTRICT UTILITY INFRASTRUCTURE**

### **15.1 Central Utility Plant**

The Mission Rock development will utilize a central utility plant (CUP) in Block A for heating and cooling, greywater collection treatment, and non-potable water distribution infrastructure required to achieve the sustainability goals of the Project. The heating and cooling may be provided by a bay sourced cooling loop that will connect the Bay to the chillers at the CUP, or through an approved, alternative heat exchange method. Greywater, which refers to wastewater collected from building systems without fecal contamination, will be collected and directed to the CUP for treatment before distribution throughout the Project for non-potable uses. The development is considered a Type-I Eco-District. The infrastructure maximizes efficiencies by providing budget certainty for thermal services. In addition to providing a sustainable district energy system throughout the site, the Type-I Eco-District development will also meet the San Francisco Eco-District guidelines. For additional information, refer to the District Heating and Cooling Services at Mission Rock prepared by Arup, dated May 13, 2016 in Appendix M and the latest edition of the Sustainability Strategy prepared by Atelier Ten.

#### **15.1.1 Central Utility Plant Components**

The CUP comprises a central district energy distribution plant, bay source cooling, and a greywater treatment and distribution plant at Block A. The central energy plant will provide chilled and hot water to each Development Parcel to support mechanical system demands. The greywater treatment plant will supply non-potable water to each Development Parcel. The distribution system will be developed with consideration to other site utilities, but is anticipated to be predominately routed through Shared Public Way, Bridgeview Street, and China Basin Park. Considerations for this utility routing include limiting the amount of district utilities that are parallel to the main public utilities in Exposition Street and Long Bridge Street and development phasing. Locations for each Development Parcel's heating hot water and chilled water connections, greywater collection point of connection, and non-potable water distribution point of connection will be determined during the vertical design for each Development Parcel.

#### **15.1.2 Central Energy Plant**

The Project has a goal to use renewable energy for 100% of its building energy demands, thereby offsetting its projected greenhouse emissions. The central energy plant will be powered by 100% renewable energy. The renewable energy may be purchased from an off-site renewable power

provider and delivered to the site via the power provider. Chilled water and hot water supply and return lines will distribute heating and cooling energy from the central energy plant at Block A to each Development Parcel. Each Development Parcel will be required to connect to this system, which also significantly reduces the volume of water required by cooling towers. Chilled water and heating hot water supply lines are distributed to the Development Parcels from the central energy plant at Block A through Shared Public Way, Bridgeview Street, and China Basin Park.

#### **15.1.3 Heat Rejection and Cooling**

Bay water may be used for heat rejection and cooling in the district energy system to minimize the energy demand for cooling and provide significant water savings by reducing the need for cooling towers. Cooling will be provided by the bay source cooling loop that rejects heat from the chillers at the central plant to the Bay. This heat exchange requires very little energy. The HDPE Intake and outfall pipes will be placed within the Pier 48 footprint, at or slightly below the seabed elevation and on top of plastic lumber. The inlet screens will be in deep water, protected by the pier and accessible for maintenance. Secondary screening may also be provided at the pump station on-shore or near the bulkhead. The bay source heat rejection infrastructure will likely consist of two 24-inch pipes located in China Basin Park that provide a connection between the intake/outfall at Pier 48 and the central plant at Block A, shown on Figure 15.1. Backup cooling towers may be required for emergency or maintenance operations when the bay source cooling system is offline.

#### **15.1.4 Greywater Collection and Treatment Infrastructure**

The Project has established a goal to use non-potable water for 100% of the non-potable water demand. Non-potable water demands include irrigation, toilet flushing and cooling towers. However, the demand for cooling towers is minimized by the bay source cooling and heat rejection system; thus, the non-potable demands for the purposes of this section include only irrigation and toilet flushing. Greywater will only be collected from the largest greywater-producing buildings, which includes Blocks A and K in Phase 1 and Block F in Phase 3. Greywater is conveyed to the greywater treatment plant in Block A, as shown on Figure 15.2. Non-potable water (treated greywater) is then distributed to the Development Parcels from the central greywater treatment plant at Block A through Shared Public Way, Bridgeview Street, and China Basin Park, as shown on Figure 15.3. The centralized approach optimizes the collection, treatment,

and distribution systems by producing enough non-potable water to meet 100% of the site's flushing and irrigation demands, while minimizing the amount of Infrastructure. A backup connection to the City's non-potable water main at 3<sup>rd</sup> Street will be required for emergency or maintenance operations when the greywater collection and non-potable water distribution system is offline. A connection to the SFPUC LPW potable main or the existing SFPUC recycled water main, which is currently fed by the LPW potable system in 3<sup>rd</sup> Street, may be required for the greywater treatment plant to supply backup water should the greywater treatment facility become temporarily non-operational.

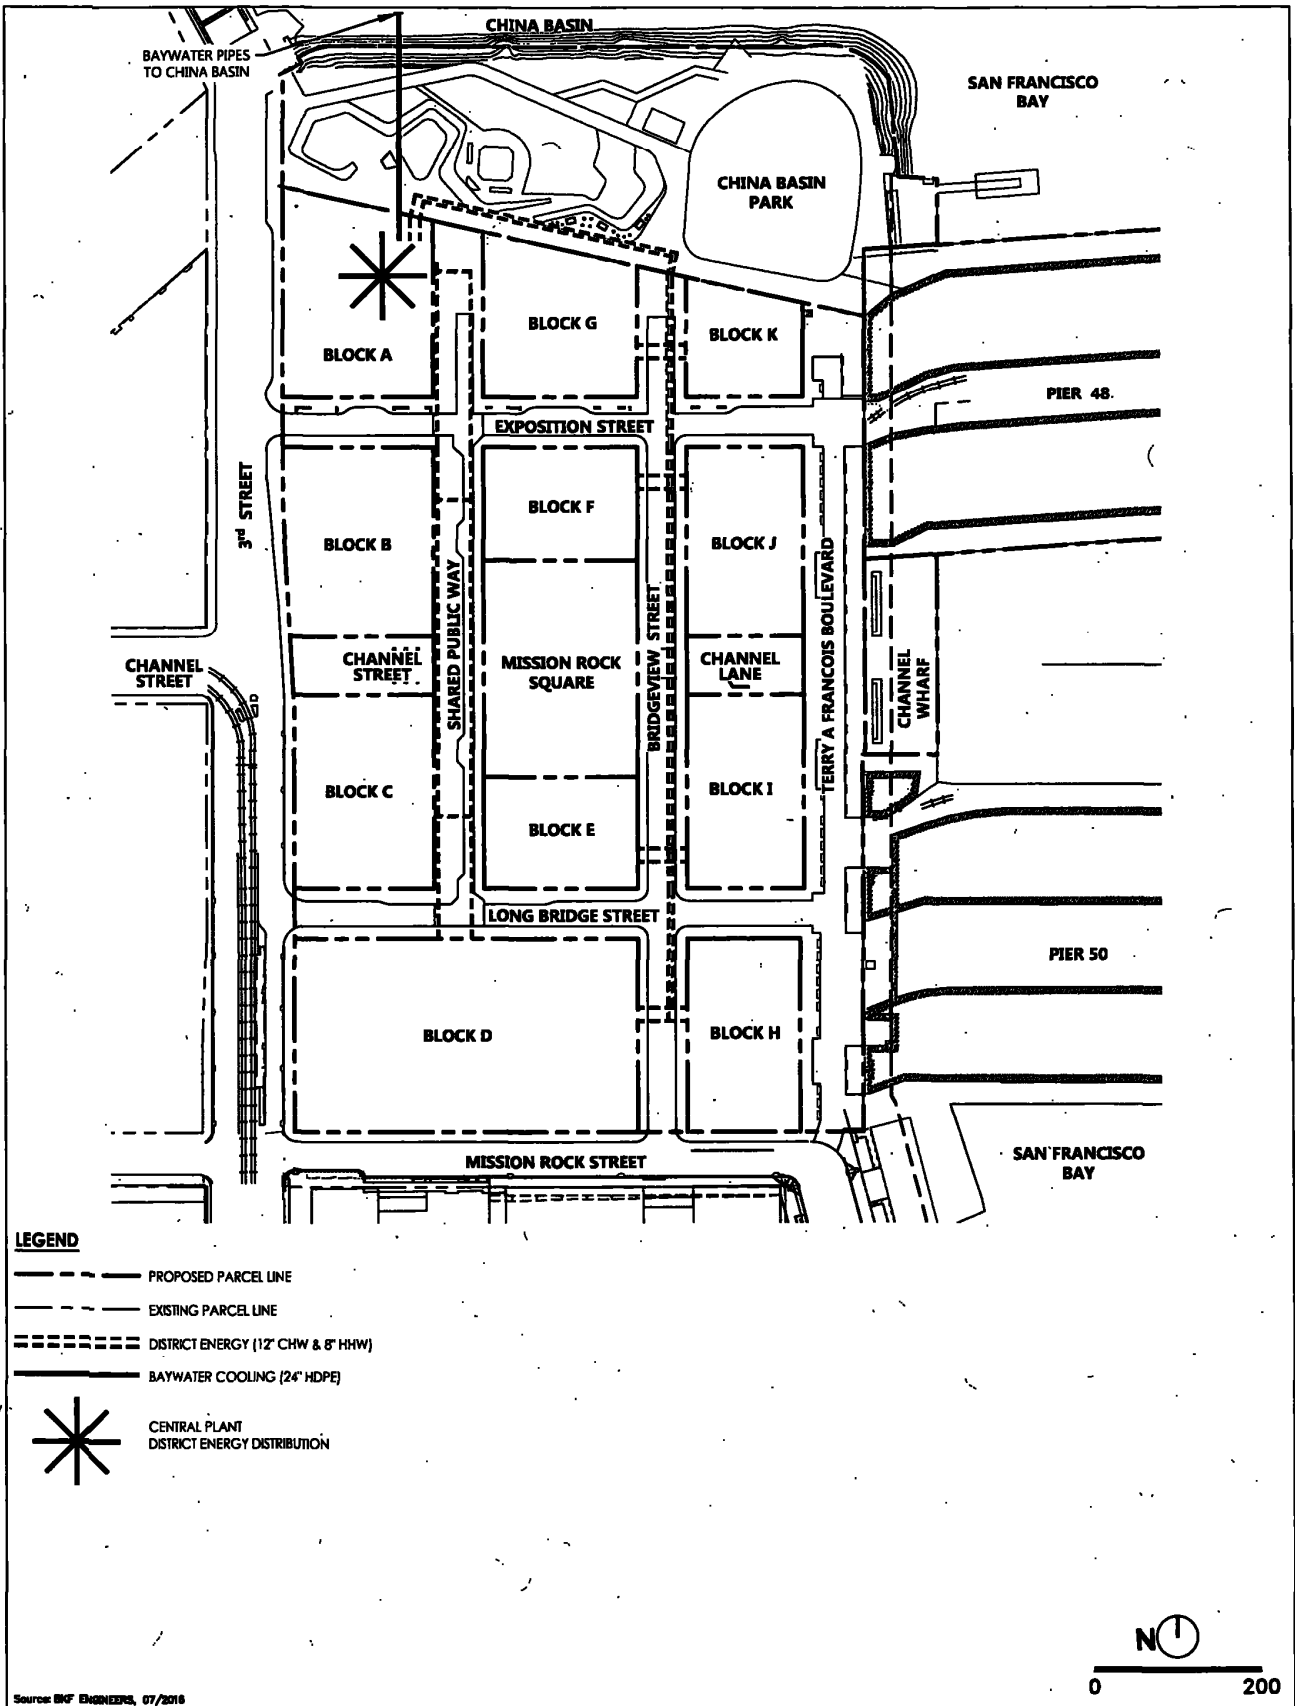

Greywater and non-potable water system designs will comply with Article 12C of the San Francisco Health Code. Required SFPUC water budget application materials will be submitted to the City as part of the phase applications and construction document submittals.

### **15.2 Phases for District Utility Infrastructure Construction**

The Developer will design and install the new central utility district infrastructure based on the principle of adjacency and as-needed to facilitate a specific proposed Development Phase and consistent with the requirements of the DA, DDA and ICA. The amount and location of the proposed central utility district infrastructure installed will be the minimum necessary to support the Development Phase.

The Private Entity, other Agent, or the Acquiring Agency will be responsible for ownership and maintenance of new district utility infrastructure with permitting coordinated by The Private Entity, other Agent, or Developer. Ownership, maintenance, and acceptance responsibilities for district utility infrastructure will be documented in a separate agreement. Impacts to central utility district infrastructure installed with previous Development Phases of the Project due to the designs of new Development Phases will be the responsibility of the Developer and addressed prior to approval of the construction drawings for the new Development Phase.

MISSION ROCK INFRASTRUCTURE PLAN

FIGURE 15.3 - CONCEPTUAL NON-POTABLE WATER INFRASTRUCTURE

## **16. STORMWATER MANAGEMENT SYSTEM**

### **16.1 Existing Stormwater Management System**

The existing site is approximately 96.6 percent impervious, mostly covered in pavement with a park to the north. The existing site drains to storm drain systems that discharged directly or indirectly to the San Francisco Bay. The west side of the Project is served by an existing SFPUC storm drain system within 3rd Street that is routed to the future SWPS #3 for discharge to Mission Creek. Until SWPS #3 is constructed portions of the run-off discharge to an existing 11' x 11' combined sewer. The re-aligned Mission Rock Street has a new storm drain system that conveys stormwater to Mission Bay SWPS #6 to the south that discharges to the San Francisco Bay adjacent to Radiance and Block P18. Both China Basin Park and Terry A Francois Boulevard have storm drain systems that discharge directly to the San Francisco Bay through existing Port outfalls. The existing condition of the Project site does not include any stormwater facilities to treat stormwater flows prior to discharge.

### **16.2 Proposed Stormwater Management System**

#### **16.2.1 San Francisco Stormwater Management Requirements & Design Guidelines**

The SMR is the regulatory guidance document describing requirements for post-construction stormwater management. Stormwater management performance requirements are determined based on the storm drain system available to connect into as well as the jurisdiction of the storm drain system. For Project areas that will connect into the SFPUC's existing separated storm drain system in 3<sup>rd</sup> Street or Mission Rock Street, or a SFPUC accepted outfall, the SMR requires the Project to implement a stormwater management plan that results in capture and treatment of all stormwater runoff from the 90<sup>th</sup>-percentile storm event prior to discharge to the separated storm sewer system. For Project areas that will be served by the Port's separated storm drain system outfalling directly to the San Francisco Bay through a Port outfall, the SMR requires the Project to implement a stormwater management plan that results in capture and treatment of all stormwater runoff from the 85<sup>th</sup> percentile storm event.

#### **16.2.2 Proposed Site Conditions and Baseline Assumptions**

The Project includes public streets, parks and plaza open space areas, and Private Development Parcels. The Project will be designed to integrate Low Impact Development (LID) elements with stormwater best management practices (BMPs) to create a sustainable environment at the site and achieve compliance with the SMR. LID elements include landscaping, permeable paving

materials, and vegetated roofs to reduce stormwater runoff from hardscape surfaces. Stormwater treatment BMPs considered for the Project include street flow-through planters, bioretention areas, rain gardens, and green roofs to treat stormwater runoff prior to discharging to the public separated storm drain system.

Public streets will consist of at-grade streets or pile-supported structured streets with a combination of landscape strips, tree wells, permeable pavers, and street flow-through planters. China Basin Park will be elevated by a combination of planting soil and Geofoam within the park and structured streets within the Promenade. Mission Rock Square may be a pile-supported podium or constructed on lightweight fill, Geofoam, and/or imported fill material. China Basin Park and Mission Rock Square will include landscape strips, tree wells, and centralized bioretention areas. The development parcels will be covered entirely with podium structures consisting of a combination of landscape planters, tree wells, green roofs, and pedestrian pathways.

#### **16.2.3 Stormwater Management Design Concepts and Master Plan**

The SMR requires the Project to implement BMPs to capture and treat stormwater runoff from all impervious areas for the design storm event. To be included with the Stormwater Management Master Utility Plan, a process flow diagram illustrating the limits of the drainage management areas (DMAs), location of stormwater discharge to existing storm drain system, and jurisdiction of existing storm drain system will be developed to illustrate compliance with the SMR.

The conceptual stormwater management plan for the Project includes DMAs with either localized treatment or centralized treatment facilities. Localized treatment occurs in DMAs that are able to direct surface runoff to BMPs that are sized to treat stormwater runoff from impervious areas per the given design storm event. Private development parcels located within DMAs with localized treatment will allocate a space to implement BMP measures and treat stormwater for the design storm event prior to discharging into the adjacent public storm drain system. Alternatively, Development Parcels also have the option to collect and reuse stormwater on-site.

For areas that are not able to treat surface runoff prior to entering the storm drain system, untreated runoff is pumped to centralized treatment facility located in either China Basin Park or Mission Rock Square. Private development parcels within DMAs without localized treatment are

not required to implement additional BMP measures on-site where centralized treatment areas are sized to treat runoff from the private development parcels.

The conceptual stormwater management approach for the Project is presented in Figure 16.1. Stormwater management performance quantities and strategies will be documented as part of the Project Stormwater Management Master Utility Plan to be submitted for review and approval by the SFPUC and Port.

### **16.3 Stormwater Control Plan**

Based on the designs to be reviewed and approved by the SFPUC and Port as part of the Stormwater Management Master Utility Plan, the stormwater management strategies for the Project will be documented in a Stormwater Control Plan (SCP) in compliance with SFPUC and Port stormwater management regulations and the requirements of the SMR. The selected modeling methodology will be per the SFPUC and Port-accepted hydrologic calculation methods. The Preliminary SCP for the public improvements will be submitted for review and approval before the 60% Improvement Plan for each phase of the project, and the Final SCP will be submitted with the 95% Improvement Plan for that phase or Development Parcel and prior to construction. For Development Parcels, a Preliminary SCP and Final SCP shall be submitted for approval per SFPUC and Port stormwater management requirements.

### **16.4 Phases for Stormwater Management System Construction**

The Developer will design and install the new stormwater management system based on the principle of adjacency and as-needed to facilitate a specific proposed Development Phase and consistent with the requirements of the DA, DDA and ICA. The amount and location of the proposed stormwater management systems installed will be the minimum necessary to support the Development Phase. The new Development Phase will connect to the existing systems as close to the edge of the Development Phase area as possible while maintaining the integrity of the existing system for the remainder of the Project. Development phasing with regard to stormwater treatment and storm drain system is conceptual and remains under design. The phasing and simplification of the stormwater treatment and drain systems will be further coordinated with the SFPUC prior to approval of the MUPs.

At all phases of the development, the Developer must provide functioning and adequate stormwater management in compliance with the SFPUC and Port's post-construction stormwater management requirements and the SMR. The Developer will be required to complete the review process with SFPUC

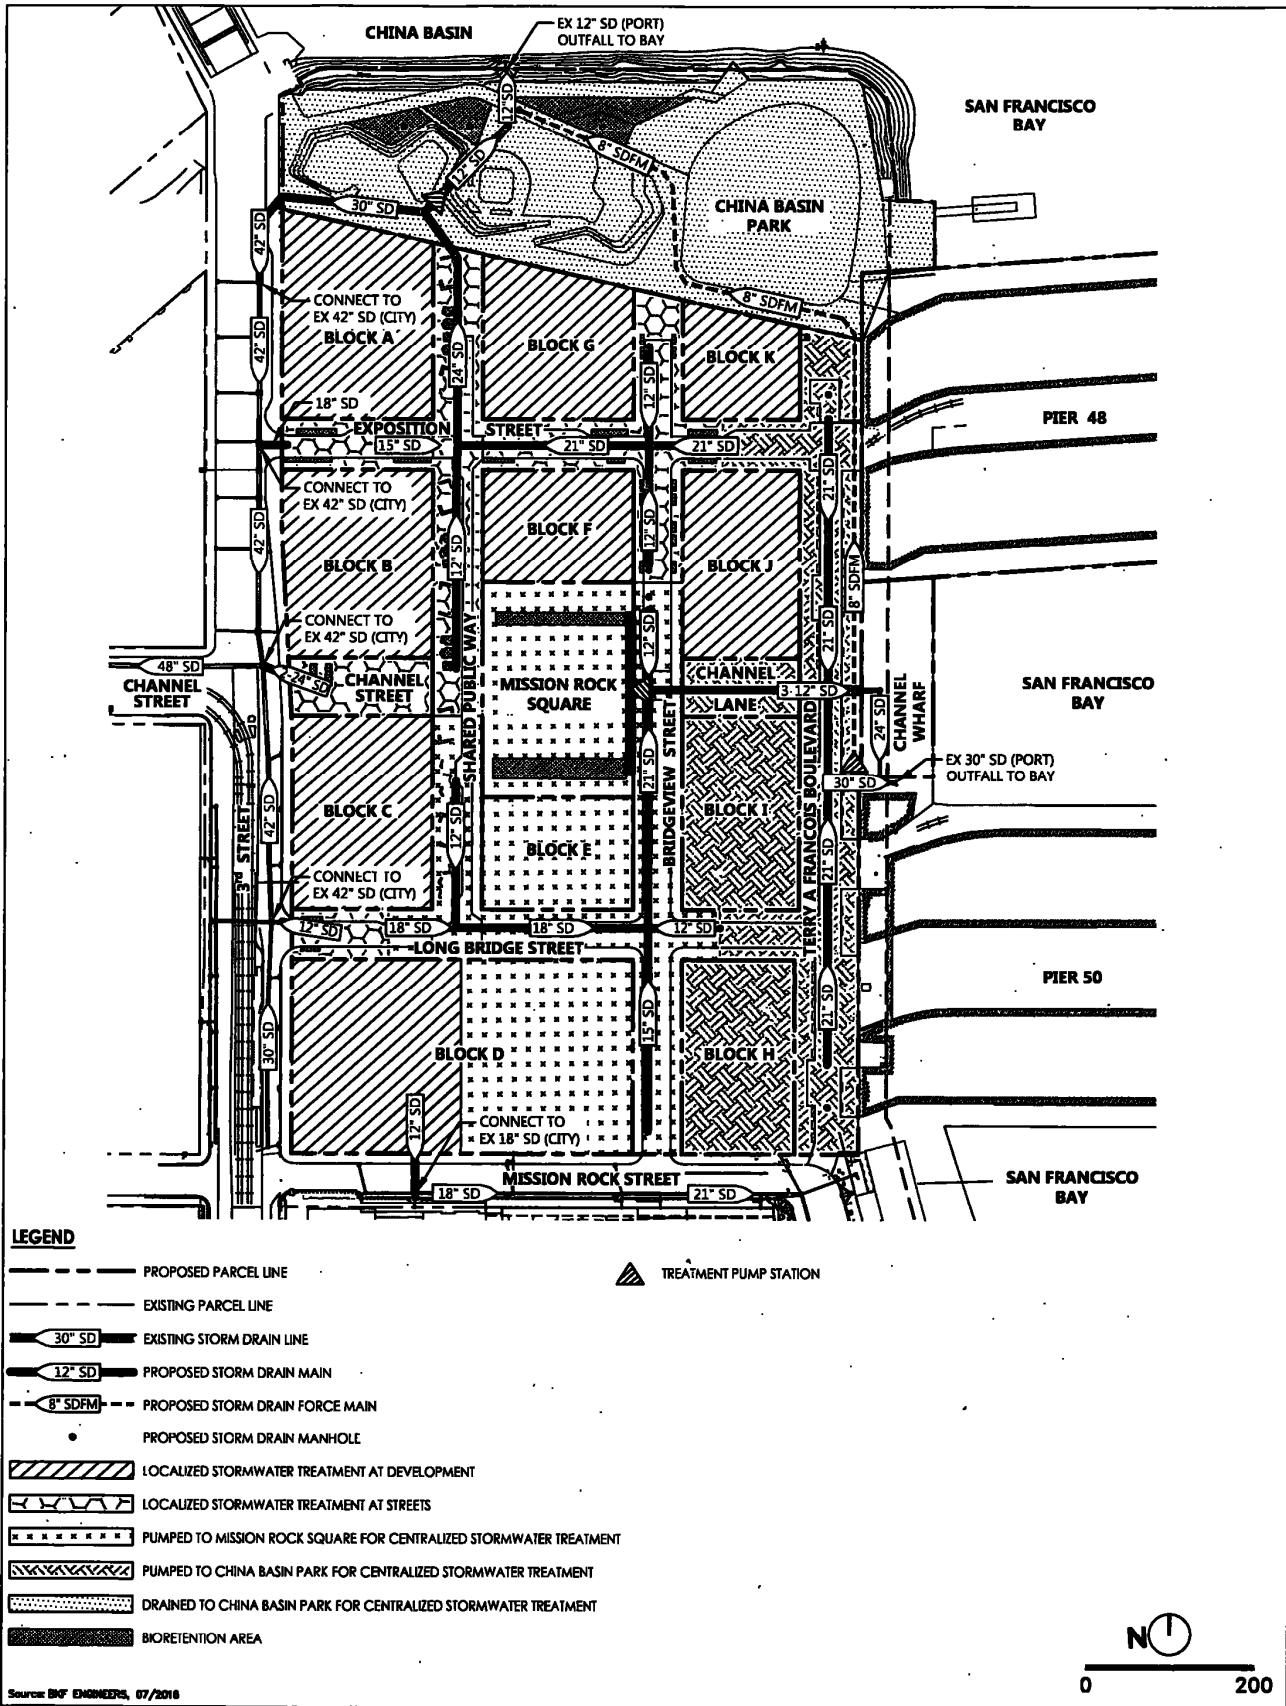

and Port to seek approval for the Preliminary SCP and Final SCP for each Development Phase. The street right-of-way and Park Improvement Plans must have Final SCP approval prior to issuance of the Street Improvement Permit (SIP). In addition, the Developer must complete the construction of the approved stormwater management and treatment improvements required for each development phase prior to receiving a Certification of Completion for the development phase.

Permanent or interim centralized stormwater management and treatment facilities necessary to achieve SMR compliance within a development phase will be constructed and operational prior to or in conjunction with that phase. Interim stormwater BMPs implemented as part of the on-site remediation will be preserved on undeveloped parcels. As required by the SFPUC and Regional Water Quality Control Board (RWQCB), the Developer will be responsible for constructing and maintaining interim stormwater management and treatment infrastructure, and ensuring such interim treatment facilities remain online and operating continuously until permanent BMP infrastructure is fully functional and operating.

Stormwater management and treatment systems, which may include bioretention areas, street flow-through planters, pump stations, and storage areas located on public or private property within the Project, will be constructed and maintained by the Acquiring Agency, Developer, or its Assignees, where applicable, per the terms of the DA and DDA, ICA, or separate MOU/MOA between the Port, City, and Developer.

MISSION ROCK INFRASTRUCTURE PLAN

FIGURE 16.1 - CONCEPTUAL STORMWATER MANAGEMENT PLAN

## **17. DRY UTILITY SYSTEMS**

### **17.1 Existing Electrical, Gas, and Communication Systems**

The existing parking lot is bordered by overhead PG&E electrical lines on Terry A Francois Blvd, 3<sup>rd</sup> Street and Mission Rock Street. The SFPUC provides electrical service to existing facilities at Piers 48 and 50 using existing rights to the overhead PG&E lines serving Piers 48 and 50 and is responsible for invoicing the existing facilities. Existing street lighting and telecom infrastructure are also located along 3<sup>rd</sup> Street and Mission Rock Street. Site lighting is also located within the Project. 3<sup>rd</sup> Street serves as a municipal transportation route and contains multiple Overhead Contact System (OCS) lines, owned by SFMTA, which will be maintained during and after construction. Existing PG&E gas and AT&T, or other fiber providers, telecom lines, serving Piers 48 and 50 are located on Terry A Francois Blvd as well.

### **17.2 Project Power Providers and Requirements**

Pursuant to Chapter 99.3 of the San Francisco Administrative Code, all leases and subleases on City property shall receive electric service from the SFPUC unless the SFPUC determines that such service is not feasible. In September 2016, the SFPUC notified the Port and the Developer of its intention to continue to be the electricity provider for the Project and the other Port properties in the vicinity, including Piers 48 and 50. The SFPUC shall prepare an assessment of the feasibility of the City providing electric service to the development (the "Feasibility Study"). The Developer will cooperate with SFPUC in SFPUC's preparation of the Feasibility Study. The Feasibility Study shall include, but not be limited to, the following: 1) electric load projection and schedule; 2) evaluation of existing electric infrastructure and new infrastructure that will be needed; 3) analysis of purchase and delivery costs for electric commodity as well as transmission and distribution services that will be needed to deliver power to the development; 4) the potential for load reduction through energy efficiency and demand response; 5) business structure cost analysis; and 6) financial and cost recovery period analysis. Should the City elect to provide electric service to the Project, such service shall be provided by the City on terms and conditions generally comparable to the electric service otherwise available to the Project. If the City determines that providing power services to the Project is infeasible, the developer will pursue PG&E or other power providers to serve the Project. Should the Project be served by SFPUC power, the Developer will enter into an Electric Service Agreement with the SFPUC.

**17.3 Proposed Joint Trench**

The proposed Joint Trench is identified schematically on Figures 17.1 and 17.2. Services and lighting will also be provided as required to China Basin Park and Mission Rock Square. Work necessary to provide the joint trench for dry utilities, typically installed within public streets and adjacent sidewalk area, consists of trench excavation and installation of conduit ducts for electrical, gas, and communication lines. In locations where public streets will be built upon structural piles, the joint trench utilities will be installed within the structured street section. Utility vaults, splice boxes, street lights and bases, wire and transformer allowance, and backfill will be included within the structured street section. Gas, Electric and power systems will be constructed per the applicable standards of the agency or company with controlling ownership of said facilities with street lighting infrastructure constructed per City standards. The utility owner/franchisee (such as SFPUC, PG&E, AT&T, Comcast and/or other communication companies) will be responsible for installing facilities such as transformers and wire. Necessary and properly authorized public utility improvements for which franchises are authorized by the City shall be designed and installed in the public right-of-way in accordance with permits approved by SFPDW and SFPUC. Proposed dry utility infrastructure location and separation from parallel wet utilities shall comply with the utility owner's regulations. Joint trenches or utility corridors will be utilized wherever allowed. The location and design of joint trenches or utility corridors in the public right-of-way must be approved by SFPDW and the SFPUC during the subdivision review process. The precise location of the joint trench in the right-of-way will be determined prior to recording the applicable Final Map and identified in the Project construction documents. Nothing in this Infrastructure Plan shall be deemed to preclude the Developer from seeking reimbursement for or causing others to obtain consent for the utilization of such joint trench facilities where such reimbursement or consent requirement is otherwise permitted by law.

**17.4 Phases for Dry Utility Systems Construction**

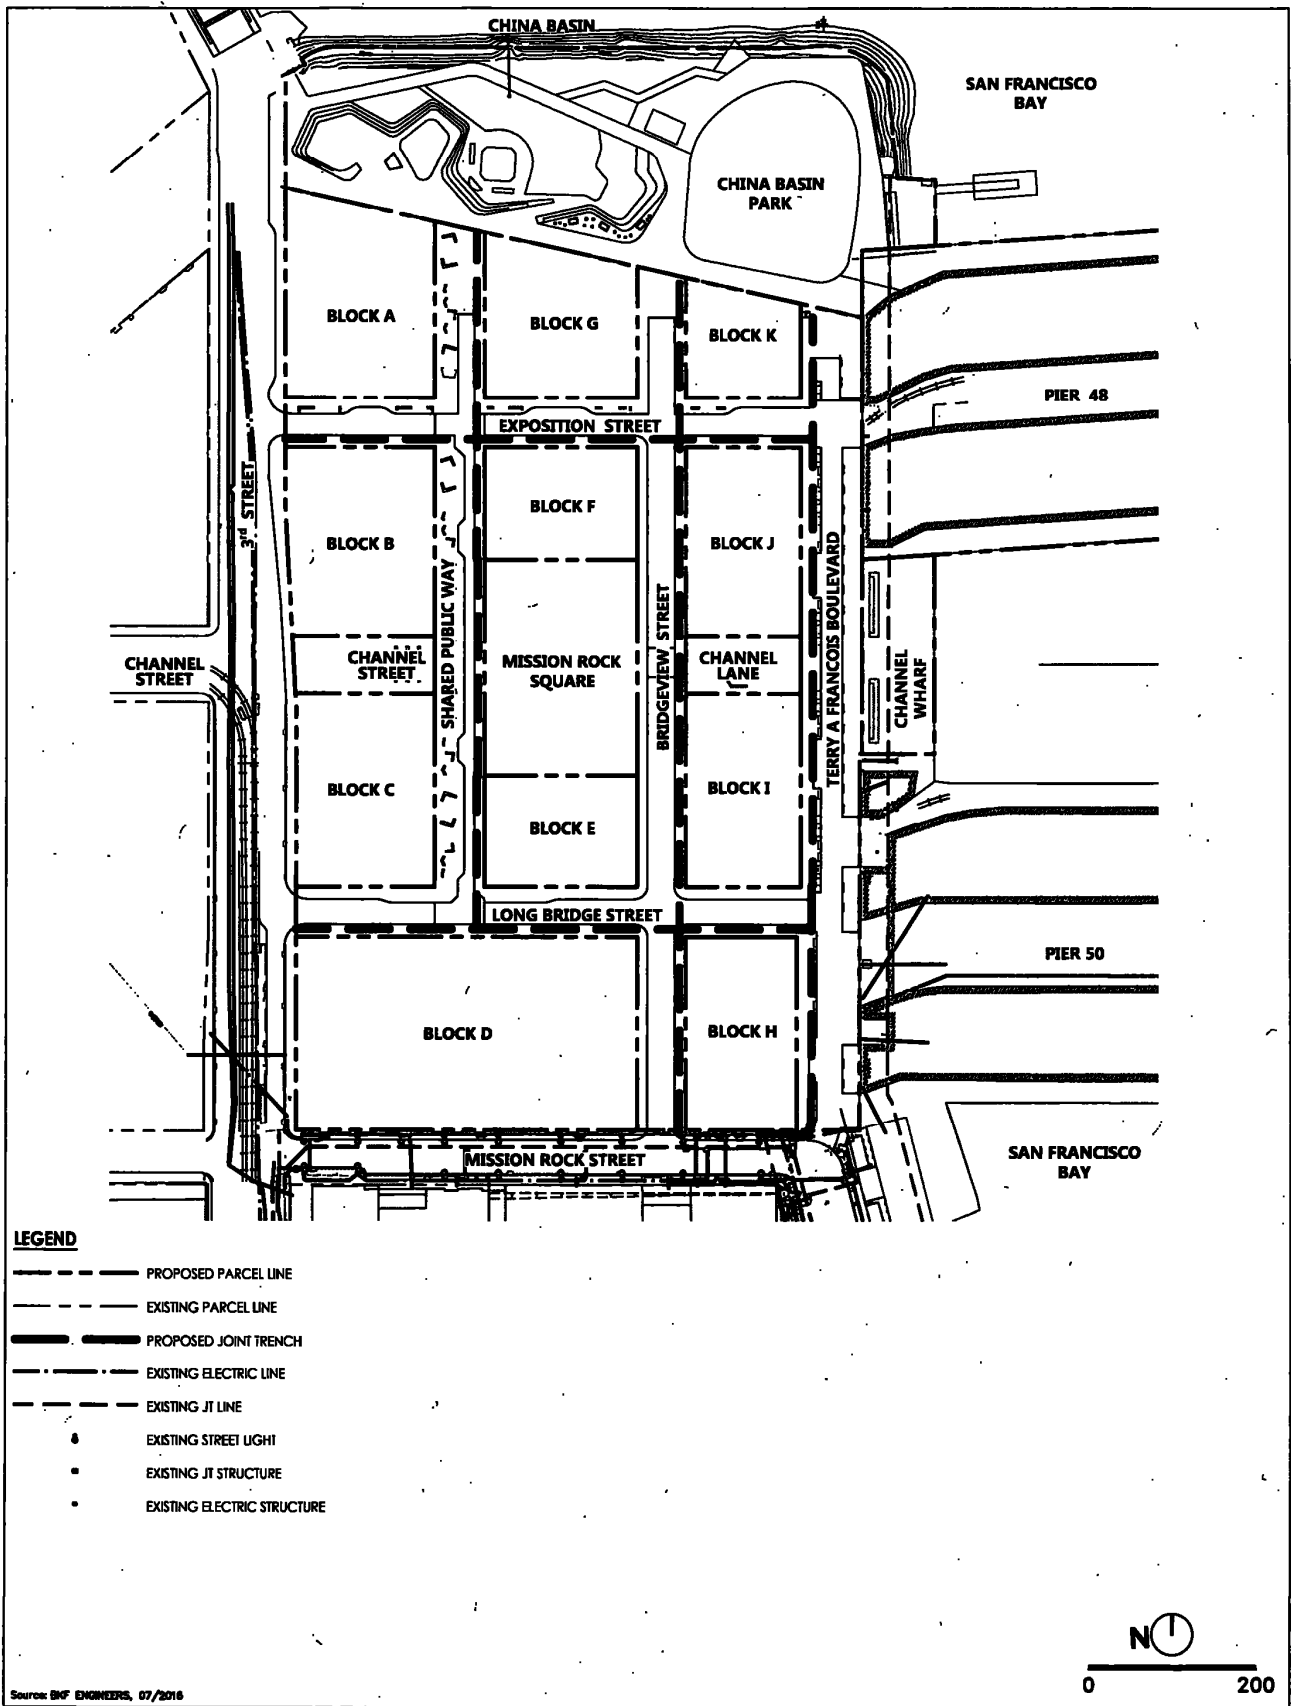

Joint trench design and installation will occur in phases based on the principle of adjacency and as-needed to facilitate a specific proposed Development Phase and consistent with the requirements of the DA, DDA and ICA. The amount of existing system replaced and new infrastructure installed along Terry A Francois Blvd, 3<sup>rd</sup> Street and Mission Rock Street will be the minimum necessary to support the Development Phase and piers. The new infrastructure will connect to the existing systems as close to the proposed development as possible while maintaining the integrity of the existing system. Repairs and/or replacement of the existing facilities necessary to serve the Development Phase will be designed and

constructed by the Developer. Such phased dry utility installation will allow the existing utility services to remain in place as long as possible and reduce disruption of existing uses on the site and adjacent facilities. Temporary or interim electric or dry utility infrastructure may be constructed and maintained as necessary to support service to existing buildings.

The service providers will be responsible for maintenance of existing facilities until replaced by the Developer. In the interim, the service provider is responsible for any power facilities installed under any agreement with the Developer and Acquiring Agency. The service provider will also be responsible for any new power facilities once the horizontal improvements for the Development phase or the new power facility is complete and accepted by the Acquiring Agency.

Impacts to improvements installed with previous Development Phases due to the designs of the new Development Phase will be the responsibility of the Developer and addressed prior to approval of the construction drawings for the new Development Phase.

San Francisco, CA 94107

Re: Mission Rock Development – Seawall Lot 337  
San Francisco, California  
1868-00

Dear Mr. Knorpp:

As requested, this letter outlines the anticipated steps to complete the environmental program related to potential hazardous substances in soil and groundwater at the subject site. Mission Rock Development is planning a mixed use development at Lot 337 in San Francisco, California (the Site). Figure 1 provides a Site Location Map. The Site is a former industrial property within the area subject to the requirements of Article 20 of the City and County of San Francisco Public Health Department Ordinance 253-86 (the Maher Ordinance). In addition, Covenant to Restrict Use of Property (Use Restrictions) were recorded in agreements between the City and County of San Francisco (City) and the California Department of Toxic Substance Control (DTSC) as a part of previous development of the Site. As described herein, these documents outline certain requirements that will need to be met prior to initiating the proposed site development.

### BACKGROUND

Environmental investigations were performed at the Site in the 1990s when the Site was redeveloped for use as a parking lot and park. The scope of the investigations performed was developed to satisfy the requirements of the Maher Ordinance and to achieve site closure from the City and DTSC. Several documents were prepared documenting the scope and results of these investigations, including:

- Site Use History and Proposed Article 20 Sampling Program, Proposed Imperial Weitz Parking Lots South of China Basin Channel, San Francisco California prepared by Geomatrix Consultants, Inc. dated March 1999;
- Results of Article 20 Sampling Program and Health Risk Assessment, Proposed Imperial Weitz Parking Lots for the Giants Pacific Bell Ball Park Area e – Port of San Francisco, San Francisco California prepared by Geomatrix Consultants, Inc. dated June 1999;
- Preliminary Screening Evaluation, H&H Ship Service Company, San Francisco, California, prepared by Harding Lawson Associates dated September 14, 1995; and

3015 SW First Avenue  
Portland, Oregon 97201-4707  
(503) 924-4704 Portland  
(360) 567-3977 Vancouver  
(503) 943-6357 Fax  
[www.ashcreekassociates.com](http://www.ashcreekassociates.com)

- RCRA Closure Certification Report, Former H&H Ship Service Company, San Francisco, California, prepared by Harding Lawson Associates dated February 4, 1999.

Copies of these reports can be obtained at the Port of San Francisco website at the following link:

<http://www.sf-port.org/index.aspx?page=44>

As part of the cleanup requirements to achieve site closure, a Soil Management Plan was prepared to detail methods and procedures for soil handling, stockpiling, disposal, and accessing to be used during and after site development. A copy of the Soil Management Plan is included as Attachment A to this letter. In addition, land use restrictions were described in the Use Restrictions and recorded in two agreements between the City and DTSC (one for the part of the Site that is South of Terry Francois Blvd and currently used as a parking lot and the second that is north of Terry Francois Blvd and is currently used as a park). A copy of each of the Use Restrictions are included as Attachment B to this letter. The Use Restrictions require, amongst other items, that Maher Ordinance assessments be performed if more than 50 cubic yards of soil are to be disturbed and a variance be obtained if the Site is to be developed for any of the uses listed as "restricted" in the Use Restriction.

#### **ANTICIPATED ACTIVITIES TO ACHIEVE ENVIRONMENTAL CLEARANCES**

Based on a review of the available documents and the Use Restrictions for the Site, the following actions are anticipated to achieve environmental clearances of potentially hazardous substances in soil or groundwater necessary to complete the site development.

- 1) **Use Variance.** The current Use Restrictions do not allow residential development at the Site. It is our understanding that some of the Site may be developed for high-density housing as a part of the proposed development. The intent of the Use Restrictions is to preclude single family home development and it appears that high-density housing is an acceptable use of the Site. However, a variance to the Use Restrictions may be needed. A meeting with the DTSC and the Port of San Francisco (Port) will be conducted to discuss the proposed development and identify whether a variance will be needed from the provisions in the Use Restrictions. If a variance is required, the variance will be developed and written in conjunction with the DTSC and the Port.
- 2) **Maier Ordinance.** The Use Restrictions and City regulations require that the Maier Ordinance requirements be met prior to initiation of site development. Investigations satisfying the Maier Ordinance were performed in support of the previous development of the Site as a parking area and park. The investigations performed for the Maier Ordinance provided an understanding of both the soil and groundwater quality at the Site. A risk assessment was performed and did not identify unacceptable risk to construction workers or other receptors for that development. The scopes of the previous assessments are consistent with currently proposed site development and appear to be sufficient to meet the requirements of the Maier Ordinance. A meeting with the City and County of San Francisco Department of Public Health (DPH) will be conducted to discuss site conditions and the proposed development to illustrate how the previous investigations have collected the needed data to meet Maier Ordinance requirements for the new development.

If the DPH agrees that sufficient data has been collected to meet the Maier requirements for the Site, a report will be prepared that summarizes the proposed development and existing data for DPH review and approval to document that the Maier Ordinance requirements have been met. If the DPH does not agree and requests additional site data, a work plan will be prepared identifying the work scope and procedures to collect the data the DPH is requesting to meet the Maier Ordinance requirements. The work plan will be submitted to the DPH for review. Upon DPH approval of the work plan, the work scope will be completed and a results report prepared for submittal to DPH to achieve closure on the Maier Ordinance requirements. The DTSC will be kept apprised of the activities being performed to meet the Maier Ordinance to satisfy the requirements of the Use Restrictions.

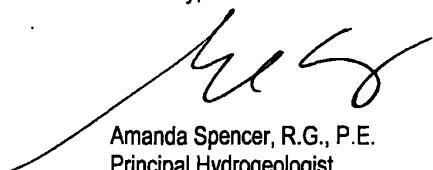

## REMEDATION PLAN

Based on our understanding of the Site, it is anticipated that site remediation will consist of implementation of a Soil Management Plan consistent to that previously developed for the Site (see Attachment A). The Soil Management Plan describes the methods and procedures for soil management during site construction and following site development, and maintenance of a site cover. Soil management during site construction will consist of dust control, erosion control, stockpile management, and appropriate soil disposal should excess soil be excavated during construction activities. If excess soil is generated, the excess soil would need to be profiled to determine appropriate disposal options. Based on chemical analysis results of soil samples collected from the Site, total metal and organic concentrations are less than the Total Threshold Limit Concentrations (TTLs) for designation as California Hazardous Waste. However, additional solubility testing of some of the metals (e.g., lead) would likely be required by disposal facilities to better assess the waste profile for the soil. It is possible that the solubility of the lead using the Waste Extraction Test would exceed the Solubility Threshold Limit Concentrations (STLCs) of the state. The excess soil would then be profiled as California Hazardous waste and would need to be disposed of at the appropriately licensed landfill facility.

Please do not hesitate to contact me should you have any questions.

Sincerely,

Amanda Spencer, R.G., P.E.  
Principal Hydrogeologist

**SOIL MANAGEMENT PLAN**  
**Imperial Weitz Parking Lots for the**  
**Giants Pacific Bell Ball Park**  
**Area E - Port of San Francisco Property**  
**San Francisco, California**

**1.0 INTRODUCTION**

Geomatrix Consultants, Inc. (Geomatrix) has prepared this Soil Management Plan (SMP) on behalf of Imperial Weitz, LLC for the proposed 14-acre parking lot for the Giants' Pacific Bell Ball Park. The proposed parking lot site is located south of China Basin Channel and east of Third Street in San Francisco, California (the site; Figure 1). The site is part of a total of approximately 36 acres of parking to be developed by Imperial Weitz south of China Basin Channel and has been referred to as Area E in previous environmental documents prepared by Geomatrix on behalf of Imperial Weitz.

**2.0 BACKGROUND**

Imperial Weitz is proposing to construct a paved parking lot on the site. A site history review, environmental investigation and risk evaluation were performed to meet Article 20 requirements and assess potential risks to construction worker and site visitor health associated with soil and groundwater quality at the site. The following summarizes the results of the site history review, environmental investigations, and risk assessment, and describes the proposed parking lot development.

**2.1 SITE SETTING AND HISTORICAL USAGE**

The approximately 19 acre site is currently owned by the Port of San Francisco (the Port). The subject area was originally marshlands and shallow tidal flats bordering San Francisco Bay. It was filled between 1877 and 1913; the source of the fill is unknown but likely included construction debris and rubble from the 1906 earthquake and cut material from nearby hills and construction areas.

Historical site uses include: railroad trackage and support structures for rail-related activities, parking and shipping, and truck maintenance. H&H Shipping Service Company, Inc. (H&H) occupied the northeastern corner of the site from 1950 to 1996. H&H used the area for vehicle parking and offices, and maintained a tank cleaning area and drum storage unit. No known underground storage tanks (USTs) have been identified on the site. Recently, the site has been

leased by multiple tenants. Tenant uses consist of a recycling center, an automobile sales center, the Mission Rock Recovery Center, a moving company, maritime offices, and automobile storage.

## **2.2 SITE INVESTIGATIONS**

### **2.2.1 Previous Site Investigations**

Burlington Northern Santa Fe Railway Company ("the Railroad") conducted Phase I and Phase II Environmental Assessments of property formerly operated by the Railroad located east of Third Street, between Sixteenth Street and China Basin Channel; this property included the western half of the site. The scope of the Railroad's investigations included one soil boring in the southern portion of the site. Soil samples were collected at depths of 0.5, 5, and 8 feet bgs and analyzed for total petroleum hydrocarbons as gasoline (TPHg), TPH as motor oil (TPHmo), lead, nickel, arsenic, chromium, cadmium, and zinc. Results of chemical analyses on these soil samples indicated that several metals were present at concentrations exceeding typical regional background concentrations (Geomatrix, March 1999).

In addition, HLA has performed an investigation of the former H&H Shipping parcel located in the northeast corner of the site (HLA; 1999). Seventeen soil samples were collected and analyzed for metals, TPH as diesel (TPHd), TPHg, oil and grease, volatile organic compounds (VOCs), polychlorinated biphenyls (PCBs), and polynuclear aromatic hydrocarbons (PNAs). Five groundwater samples were collected and one or more samples were analyzed for metals, TPHd, TPHg, benzene, toluene, ethylbenzene, xylenes [BTEX], PCBs, and PNAs. Several soil samples contained PNAs and metals; very low concentrations of some aromatic hydrocarbons and PCBs were detected in a few soil samples. The groundwater samples contained low to trace concentrations of several metals. Filtered groundwater samples did not contain PNAs; however, unfiltered samples contained low concentrations of several PNA compounds. PCBs and BTEX were not detected in the groundwater samples. Summary tables for the soil and groundwater analysis results of the H&H investigation are contained in Appendix A.

### **2.2.2 Recent Site Investigation**

In April 1999, Geomatrix installed 8 soil borings and collected 16 soil samples (two soil samples per boring) and 2 groundwater samples (from 2 of the 8 locations) for chemical analysis. Sampling locations are illustrated on Figure 2. Primary chemicals detected in soil were PNAs and some metals (i.e., antimony, arsenic, copper, lead, nickel, and mercury). Soil sample results from the recent investigation are summarized in Tables 1 through 5. Several

metals were detected in groundwater; however, chemical concentrations were generally low to non-detect (Table 6). PNAs were not detected in the groundwater samples.

### **2.3 PROPOSED DEVELOPMENT**

The proposed development for the subject area is asphalt paved parking. Two alternatives for storm drainage are being considered, as described below. Figures illustrating the two alternatives for the storm drainage system are contained in Appendix B.

#### **Alternative 1**

This alternative for the drainage system consists of a series of storm drainage lines and catch basins to collect and transport storm water from the parking lot site to the main City box culvert located on Channel Street, west of Fourth Street. During a 5 year storm event, the City system could reach capacity and overflows would result. Overflows from the parking lot site would be diverted to a small treatment plant to be located east of Fourth Street, near China Basin Channel. Under this alternative, Area E will be entirely paved with asphalt and surrounded by a 3- to 4-foot fence.

The catch basins will be installed in excavations with aerial dimensions of approximately 4 feet by 4 feet and extending to depths of 4 to 6 feet. Trenches will be excavated to install the piping; the trenches are anticipated to be approximately 2 to 3 feet wide and will extend between 4 to 6 feet below grade. Estimated maximum excavation depth for the piping system is 6 feet bgs. The parking area will be graded and bermed to enhance flow to each of the catch basins, and paved with asphaltic concrete.

#### **Alternative 2**

This alternative includes perimeter grassy drainage swales to collect and drain storm water overflows.

The parking area will contain a storm drain system to collect surface water runoff. The storm drain system will consist of a network of catch basins and drainage swales to collect storm water on the parking lot. The storm water will be conveyed through a series of pipes and the drainage swales to one point of discharge. The discharge pipe will collect into one main and flow into the City box sewer in Channel Street near Fourth Street.

The catch basins will be installed in excavations with aerial dimensions of approximately 4 feet by 4 feet and extending to depths of 4 to 6 feet. Trenches will be excavated to install the

pipings; the trenches are anticipated to be approximately 2 to 3 feet wide and will extend between 4 to 6 feet below grade. Estimated maximum excavation depth for the piping system is 6 feet bgs. The swales will be approximately 32 feet in width and 2 to 3 feet in depth. The swales will be covered with a geotextile fabric and grass. The parking area will be graded and bermed to enhance flow to each of the catch basins, and paved with asphaltic concrete.

## **2.4 RISK ASSESSMENT**

A health risk assessment (HRA) was conducted to evaluate the potential human health risks associated with the presence of chemicals in soil and groundwater assuming future use of the site as a parking lot with grassy swales (Geomatrix, May 1999). Potential noncarcinogenic hazard indexes and theoretical lifetime excess cancer risks were estimated for future on-site construction workers and future on-site visitors assuming conservative estimates of human exposure. Future on-site construction workers may be exposed to chemicals in soil across the site to the depth required for installation of the storm drain system or in groundwater if encountered in excavation areas. Following construction, potential exposure to future on-site visitors would be limited to exposed soil in the grass-covered swale areas.

The results of the HRA indicate that the presence of chemicals in soil and groundwater at the site should not pose an unacceptable noncarcinogenic or carcinogenic risk to future on-site construction workers and visitors. A summary table for the HRA results is provided as Table 7. Based on these results, it was also concluded that potential risks to nearby residents during construction and future on-site maintenance workers and trespassers after construction would also not be of concern.

## **3.0 OBJECTIVES**

As described above, the results of the HRA indicate that chemicals in site soil do not present an unacceptable human health risk. However, dust from a construction site can present a nuisance if not controlled. Likewise, erosion of on-site soil during construction activities can increase the turbidity of surface water run-off.

Therefore, the objectives of the SMP are to:

- provide guidelines for soil handling, stockpiling, dust and erosion minimization and, if needed, soil disposal during site construction activities for the proposed parking lot; and

- describe procedures for soil management following site construction for the duration of the use of the Site as a parking lot.

#### **4.0 PROPOSED SOIL MANAGEMENT PROCEDURES**

The following two sections describe the soil management procedures that will be implemented during and following site construction.

##### **4.1 SOIL MANAGEMENT PROCEDURES FOR SITE CONSTRUCTION**

The following procedures will be implemented during site construction activities to minimize dust and control erosion.

###### **4.1.1 Dust Control**

The dust control measures to be implemented at the site correspond to the PM<sub>10</sub> control measures recommended by the Bay Area Air Quality Management District (BAAQMD) in their California Environmental Quality Act Guidelines. These measures consist of:

- Water all active construction areas at least twice daily or as necessary to prevent visible dust plumes from migrating outside of the site limits.
- Mist or spray water while loading transportation vehicles.
- Minimize drop heights while loading transportation vehicles.
- Use tarpaulins or other effective covers for trucks carrying soils that travel on public streets.
- Pave, apply water 3 times daily, or apply non-toxic soil stabilizers on all unpaved access roads, parking areas, and staging areas.
- Sweep all paved access routes parking areas and staging areas daily, if visibly soiled.
- Sweep street daily if visible soil material is carried onto public streets from the site.

###### **4.1.2 Erosion Control**

A Stormwater Pollution Prevention Plan (SWPPP) will be developed by the site contractor prior to initiation of Site work that details procedures for minimizing erosion. The SWPPP will include elements such as silt traps and hay bales to minimize surface water runoff from the Site into storm drains or the San Francisco Bay, berms to control Site runoff, and covering soil stockpiles during the rainy season (November through March) to minimize sediment runoff.

#### **4.1.3 Soil Stockpile Management**

Temporary stockpiling of excavated soil may be necessary throughout site construction. Soil stockpiled at the Site will be lightly sprayed with water as needed to minimize dust. To the extent practical, the soil stockpiles will be covered with plastic sheeting or other similar material at times when not in active use. When a soil stockpile is uncovered during the rainy season, it will be surrounded by hay bales and/or silt traps to minimize sediment runoff.

#### **4.1.4 Soil Disposal**

Site development has been designed to minimize the generation of excess soil; therefore, soil requiring off-site disposal is not anticipated. Although not anticipated at this time, if excess soil is generated from the site, the excess soil will be profiled to determine appropriate disposal options. Handling and disposal of the soil will be conducted in accordance with all applicable state and federal laws.

Based on chemical analysis results of soil samples collected from the site, total metal and organic concentrations are less than the Total Threshold Limit Concentrations (TTLCs) for designation as California Hazardous Waste. However, additional solubility testing of some of the metals (e.g., lead) would likely be required by disposal facilities to better assess the waste profile for the soil.

#### **4.1.5 Site Access Control**

The construction site will be fenced to control pedestrian or vehicular entry, except at controlled points (i.e., gates). Gates will be closed and locked during non-construction hours. "No-trespassing" signs will be posted every 500 feet along the fencing.

### **4.2 SOIL MANAGEMENT FOLLOWING SITE DEVELOPMENT**

Following site development, the soil will be covered by asphalt pavement or grass (in the swale areas) and it is unlikely that the soil will be accessed, with the exception of future maintenance work on subsurface utilities. The HRA assessed possible health risks to future maintenance workers at the parking lot and concluded that chemicals in soil at the site should not pose an unacceptable carcinogenic or noncarcinogenic risk (Geomatrix, May 1999). Soil management procedures during future site maintenance work requiring soil excavation will be as described in Section 4.1 of this SMP; if waste soil is generated, the soil will be disposed in accordance with the procedures described in Section 4.1.4.

## 5.0 MAINTENANCE OF SITE COVER

Procedures in this section are applicable only if Alternative 2 is selected for the storm drainage system.

Although the HRA concluded that soil in the grass-covered swale area would not present an unacceptable risk to human health for parking lot visitors or trespassers, it is prudent that the grass-covered swale areas be well maintained. Therefore, the swale areas will be inspected monthly during the baseball season, and quarterly during the off-season to visually observe the condition of the grass cover. Large areas of exposed soil (e.g., areas larger than several feet in diameter) should be reseeded as quickly as practical. A log of the parking area inspections ("Inspection Log") will be maintained at the site and will include written comments on the condition of the grass cover, areas requiring repairs, and repair dates.

Annual inspections of the paved parking areas will be performed to observe whether breaches in the pavement that may allow prolonged access to site soil are visible. If observed, the breach would be repaired such that the soil cover is maintained. Results of the annual inspections of the paved parking areas will be documented in the Inspection Log, described above.

## 6.0 CONTINGENCY PLAN

A Contingency Plan for this site is not warranted. The purpose of a Contingency Plan is to present response actions to an emergency situation. The results of the HRA indicate that exposure to site soil or groundwater while breaches in the pavement or grassy areas are being repaired would not present a situation requiring an emergency response.

## 7.0 HEALTH AND SAFETY GUIDELINES

A health and safety plan for site construction will be developed by the site contractor before initiation of the development activities. The results of the HRA indicate that the presence of chemicals in soil and groundwater at the site should not pose an unacceptable health risk to future construction workers or nearby receptors during construction or future maintenance workers, visitors or trespassers after construction. Therefore, a health and safety plan for known chemical hazards at the Site is not warranted, and the health and safety plan will focus on physical hazards. Additionally, contingency actions for encountering unanticipated buried hazards (e.g., drums, or other containers) will also be included in the health and safety plan.

## 8.0 FACILITY MAP

The final construction plan for the Site development is not complete. A copy of this plan will be forwarded to the SFDPH as an addendum to this SMP once it has been finalized.

**Notes:**

<sup>1</sup> Soil samples collected by Geomatrix Consultants, Inc. and analyzed by Advanced Technology Laboratories of Signal Hill, California, for PNAs using EPA Method 8270 SIMS.

<sup>2</sup> Detected concentration reported as part of EPA Method 8260.

<sup>3</sup> Results reported from a 1:100 dilution.

<sup>4</sup> Results reported from a 1:50 dilution.

**Abbreviations:**

feet bgs = feet below ground surface.

< = indicates result less than the laboratory detection limit indicated.

PNAs = polynuclear aromatic hydrocarbons.

**Notes:**

<sup>1</sup> Soil samples collected by Geomatrix Consultants, Inc. and analyzed by Entech Analytical Laboratories, of Sunnyvale, California for Title 22 metals using EPA Methods 6000/7000 Series.

<sup>2</sup> Second result from duplicate sample GMX-11.

**Abbreviation:**

< = indicates result less than the laboratory detection limit indicated.

Sb = Antimony

Ar = Arsenic

Ba = Barium

Be = Beryllium

Cd = Cadmium

Cr Total = Total Chromium

Co = Cobalt

Cu = Copper

Pb = Lead

Hg = Mercury

Mo = Molybdenum

Ni = Nickel

Se = Selenium

Ag = Silver

Tl = Thallium

V = Vanadium

Zn = Zinc

ARTICLE VI  
VARIANCE, TERMINATION, AND TERM

6.01. Variance. Any Owner or, with the Owner's written consent, any Occupant of the Property or any portion thereof may apply to the Department for a written variance from the provisions of this Covenant. Such application shall be made in accordance with H&S Code section 25202.6.

6.02. Termination. Any Owner, and/or, with the Owner's written consent, any Occupant of the Property, or any portion thereof, may apply to the Department for a termination of the Restrictions or other terms of this Covenant as they apply to all or any portion of the Property. Such application shall be made in accordance with H&S Code section 25202.6.

6.03. Term. Unless ended in accordance with the Termination Paragraph above, by law, or by the Department in the exercise of its discretion, this Covenant shall continue in effect in perpetuity.

ARTICLE VII  
MISCELLANEOUS

7.01. No Dedication Intended. Nothing set forth in this Covenant shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof to the general public or anyone else for any purpose whatsoever.

7.02. Department References. All references to the Department include successor agencies/departments or other successor entity.

7.03. Recordation. The Covenantor shall record this Covenant, with all referenced Exhibits, in the County of San Francisco within ten (10) days of the Covenantor's receipt of a fully executed original.

7.04. Notices. Whenever any person gives or serves any notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: (1) when delivered, if personally delivered to the person being served or to an officer of a corporate party being served, or (2) three (3) business days after deposit in the mail, if mailed by United States mail, postage paid, certified, return receipt requested:

G723986

4.02. Soil Management

- (a) Any contaminated soils brought to the surface by grading, excavation, trenching or backfilling shall be managed in accordance with all applicable provisions of state and federal law.
- (b) If more than 50 cubic yards of any surface or subsurface soil will be disturbed, including excavation and grading, then the soil shall be evaluated for potential human health risks in compliance with Article 20 of the SF Municipal Code ("the Maher Ordinance"), and managed accordingly.

4.03. Prohibited Activities. The following activities shall not be conducted at the Property:

- (a) No raising of food (e.g., cattle, food crops, cotton, etc.) shall be permitted on the property.
- (b) No groundwater shall be extracted on the Property for purposes other than site remediation or construction dewatering without prior written approval by the Department.

4.04. Access for Department. Covenantor agrees that the Department shall have reasonable right of entry and access to the Property for inspection, monitoring, and other activities consistent with the purposes of this Covenant as deemed necessary by the Department in order to protect the public health and safety.

ARTICLE V  
ENFORCEMENT

5.01. Enforcement. Failure of the Covenantor and/or Owner to comply with any of the Restrictions specifically applicable to it shall be grounds for the Department, by reason of this Covenant, to require that the Covenantor and/or Owner modify or remove any improvements ("Improvements" herein shall mean all buildings, roads, driveways, and paved parking areas, constructed or placed upon any portion of the Property constructed in violation of the Restrictions.) Violation of this Covenant shall be grounds for the Department to file civil and/or criminal actions against the Covenantor and/or Owner as provided by law.

G723986

ARTICLE III  
GENERAL PROVISIONS

3.01. Restrictions to Run With the Land. This Covenant sets forth protective provisions, covenants, restrictions, and conditions (collectively referred to as "Restrictions"), upon and subject to which the Property and every portion thereof shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, and/or conveyed. Each and every one of the Restrictions: (a) shall run with the land pursuant to H&SC sections 25202.5, and 25202.6 and Civil Code section 1471; (b) shall inure to the benefit of and pass with each and every portion of the Property, (c) shall apply to and bind the respective successors in interest to the Property, (d) are for the benefit of, and shall be enforceable by the Department, and (e) are imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.02. Binding Upon Owners/Occupants. Pursuant to Health and Safety Code section 25202.5(b), this Covenant shall be binding upon all of the owners of the land, their heirs, successors, and assignees, and the agents, employees, and lessees of the owners, heirs, successors, and assignees. Pursuant to Civil Code section 1471(b), all successive owners of the Property are expressly bound hereby for the benefit of the covenantee(s) herein. "Owner" shall include "Covenantor".

3.04. Written Notice of Hazardous Substance Release. The Owner shall, prior to the sale, lease, or rental of the Property, give written notice that a release of hazardous substances has come to be located on or beneath the Property, pursuant to Health and Safety Code section 25359.7. Such written notice shall include a copy of this Covenant.

ARTICLE IV  
RESTRICTIONS

4.01. Prohibited Uses. The Property shall not be used for any of the following purposes:

- (a) A residence, including any mobile home or factory built housing, constructed or installed for use as residential human habitation;
- (b) A hospital for humans;
- (c) A public or private school for persons under 21 years of age;
- (d) A day care center for children; or
- (e) Recreational use involving direct contact with soil.

G723986

public review and comment from December 23, 1999 to January 24, 2000. The Department approved the closure plan, closure certification report titled, *RCRA Closure Certification Report, Former H&H Ship Service Facility, San Francisco, California*, dated February 4, 1999, containing a health risk assessment, and the Categorical Exemption on January 26, 2000. Hazardous wastes, which are also hazardous materials as defined in Health and Safety Code sections 25117 and 25260, including petroleum hydrocarbons, polynuclear aromatic hydrocarbons, metals and arsenic, remain in the soil and groundwater at the Site at concentrations below those which would pose a significant human health risk under proposed reuse scenarios. The health risk assessment did not evaluate an unrestricted land use scenario, recreational use involving direct contact with soil, or potential impacts from use of groundwater. Therefore a deed restriction to limit use of the property to those exposure scenarios evaluated and found to be below acceptable risk limits is required as part of the facility closure.

1.03. As detailed in the health risk assessment within the *RCRA Closure Certification Report*, as approved by the Department on January 26, 2000, portions of the surface and subsurface soils on the Site contain hazardous wastes and hazardous materials, as defined in H&S Code section 25117 and 25260, including the following contaminants of concern: arsenic (up to 92 mg/kg) and benzo(a)pyrene (up to 2.5 mg/kg). Groundwater beneath the Property is found within 10 to 20 feet below ground surface. Dissolved arsenic was found in groundwater at up to 812 ug/l. California drinking water standards are arsenic at 50 ug/l. Because the health risk assessment did not evaluate an unrestricted land use scenario, recreational use involving direct contact with soil, or potential impacts from use of groundwater, the Department concluded that use of the Property as a residence, hospital, school for persons under the age of 21, day care center, or recreational use involving direct contact with soil would entail an unacceptable potential human health risk. The Department further concluded that the Property, subject to the restrictions of this Covenant, does not present an unacceptable threat to human safety or the environment.

## ARTICLE II DEFINITIONS

2.01. Department. "Department" shall mean the California Department of Toxic Substances Control and shall include its successor agencies, if any.

2.02. Owner. "Owner" shall mean the Covenantor, its successors in interest, and their successors in interest, including heirs and assigns, who at any time hold title to all or any portion of the Property.

2.03. Occupant. "Occupant" shall mean Owners and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

G723986

"Department"). Pursuant to Civil Code section 1471(c), the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined in Health and Safety Code ("H&SC") section 25260. The Covenantor and the Department, collectively referred to as the "Parties", therefore intend that the use of the Property be restricted as set forth in this Covenant, in order to protect human health, safety and the environment.

ARTICLE I  
STATEMENT OF FACTS

1.01. The Property, totaling approximately 14 acres, is more particularly described in Exhibit "A" and depicted in Exhibit "A-1", attached hereto and incorporated herein by this reference. The Property is located in the area now generally bounded by Terry Francois Boulevard on the North and East, in the City and County of San Francisco, California.

1.02. The site was created by filling marshlands and shallow tidal flats bordering San Francisco Bay between 1877 and 1913. Sources of fill are unknown, but likely included construction/demolition debris and rubble, and rock and dirt cut from nearby hills. Historical uses of the Site include railroad tracks and related support structures, parking and shipping by truck, and truck maintenance. From 1950 to 1996 H&H Ship Service operated a hazardous waste treatment facility, including a tank cleaning area and drum storage unit, and used portions of the Property for vehicle parking and offices.

In 1978 several of the wastes managed at the H&H Ship Service facility were determined to be hazardous wastes subject to federal and state hazardous waste management regulations. Since that time, the Department of Toxic Substances Control (or its predecessor in interest, the Department of Health Services) authorized H&H Ship Service's operations pursuant to an interim status document. Under this authorization the property was a hazardous waste facility (Facility), regulated by the Department, subject to the requirements of the California Hazardous Waste Control Law ("HWCL"), at Health and Safety Code ("H&S Code") section 25100 et seq., and the federal Resource Conservation and Recovery Act ("RCRA"), at 42 U.S.C. section 6901 et seq.

The Department is requiring this Covenant pursuant to the closure requirements of the HWCL, including H&S Code section 25246 and post-closure notices provisions of Title 22 California Code of Regulations [section 66265.119(b) for interim status hazardous waste facilities], as part of the facility closure. The Department circulated a closure plan, dated August 30, 1996 and a draft Categorical Exemption pursuant to the California Environmental Quality Act, Public Resources Code section 21000 et seq for

**Note:**

<sup>1</sup> Soil samples collected by Geomatrix Consultants, Inc. and analyzed for pH, cyanide, total sulfide, fluoride, and asbestos using EPA Methods 9045, 9010, 9030, and 340.2M, and polarized light microscopy. Analyses performed by Entech Analytical Laboratories, Inc. of Sunnyvale, California (pH and fluoride), Advanced Technology Laboratories of Signal Hill, California (cyanide and total sulfide), and EMSL Analytical, Inc. of Milpitas, California (asbestos).

**Abbreviations:**

feet bgs = feet below ground surface.

< = analyte not detected at or above method detection limit shown.

NA = not analyzed.

FID = flame ionization detector.

ppmv = parts per million vapor.

**Notes:**

<sup>1</sup> Soil samples collected by Geomatrix Consultants, Inc. and analyzed by Advanced Technology Laboratories of Signal Hill, California, for PNAs using EPA Method 8270 SIMS.

<sup>2</sup> Detected concentration reported as part of EPA Method 8260.

<sup>3</sup> Results reported from a 1:100 dilution.

<sup>4</sup> Results reported from a 1:50 dilution.

**Abbreviations:**

feet bgs = feet below ground surface.

< = indicates result less than the laboratory detection limit indicated.

PNAs = polynuclear aromatic hydrocarbons.

## 8.0 FACILITY MAP

The final construction plan for the Site development is not complete. A copy of this plan will be forwarded to the SFDPH as an addendum to this SMP once it has been finalized.

## 5.0 MAINTENANCE OF SITE COVER

Procedures in this section are applicable only if Alternative 2 is selected for the storm drainage system.

Although the HRA concluded that soil in the grass-covered swale area would not present an unacceptable risk to human health for parking lot visitors or trespassers, it is prudent that the grass-covered swale areas be well maintained. Therefore, the swale areas will be inspected monthly during the baseball season, and quarterly during the off-season to visually observe the condition of the grass cover. Large areas of exposed soil (e.g., areas larger than several feet in diameter) should be reseeded as quickly as practical. A log of the parking area inspections ("Inspection Log") will be maintained at the site and will include written comments on the condition of the grass cover, areas requiring repairs, and repair dates.

Annual inspections of the paved parking areas will be performed to observe whether breaches in the pavement that may allow prolonged access to site soil are visible. If observed, the breach would be repaired such that the soil cover is maintained. Results of the annual inspections of the paved parking areas will be documented in the Inspection Log, described above.

## 6.0 CONTINGENCY PLAN

A Contingency Plan for this site is not warranted. The purpose of a Contingency Plan is to present response actions to an emergency situation. The results of the HRA indicate that exposure to site soil or groundwater while breaches in the pavement or grassy areas are being repaired would not present a situation requiring an emergency response.

## 7.0 HEALTH AND SAFETY GUIDELINES

A health and safety plan for site construction will be developed by the site contractor before initiation of the development activities. The results of the HRA indicate that the presence of chemicals in soil and groundwater at the site should not pose an unacceptable health risk to future construction workers or nearby receptors during construction or future maintenance workers, visitors or trespassers after construction. Therefore, a health and safety plan for known chemical hazards at the Site is not warranted, and the health and safety plan will focus on physical hazards. Additionally, contingency actions for encountering unanticipated buried hazards (e.g., drums, or other containers) will also be included in the health and safety plan.

#### **4.1.3 Soil Stockpile Management**

Temporary stockpiling of excavated soil may be necessary throughout site construction. Soil stockpiled at the Site will be lightly sprayed with water as needed to minimize dust. To the extent practical, the soil stockpiles will be covered with plastic sheeting or other similar material at times when not in active use. When a soil stockpile is uncovered during the rainy season, it will be surrounded by hay bales and/or silt traps to minimize sediment runoff.

#### **4.1.4 Soil Disposal**

Site development has been designed to minimize the generation of excess soil; therefore, soil requiring off-site disposal is not anticipated. Although not anticipated at this time, if excess soil is generated from the site, the excess soil will be profiled to determine appropriate disposal options. Handling and disposal of the soil will be conducted in accordance with all applicable state and federal laws.

Based on chemical analysis results of soil samples collected from the site, total metal and organic concentrations are less than the Total Threshold Limit Concentrations (TTLCs) for designation as California Hazardous Waste. However, additional solubility testing of some of the metals (e.g., lead) would likely be required by disposal facilities to better assess the waste profile for the soil.

#### **4.1.5 Site Access Control**

The construction site will be fenced to control pedestrian or vehicular entry, except at controlled points (i.e., gates). Gates will be closed and locked during non-construction hours. "No-trespassing" signs will be posted every 500 feet along the fencing.

### **4.2 SOIL MANAGEMENT FOLLOWING SITE DEVELOPMENT**

Following site development, the soil will be covered by asphalt pavement or grass (in the swale areas) and it is unlikely that the soil will be accessed, with the exception of future maintenance work on subsurface utilities. The HRA assessed possible health risks to future maintenance workers at the parking lot and concluded that chemicals in soil at the site should not pose an unacceptable carcinogenic or noncarcinogenic risk (Geomatrix, May 1999). Soil management procedures during future site maintenance work requiring soil excavation will be as described in Section 4.1 of this SMP; if waste soil is generated, the soil will be disposed in accordance with the procedures described in Section 4.1.4.

- describe procedures for soil management following site construction for the duration of the use of the Site as a parking lot.

#### **4.0 PROPOSED SOIL MANAGEMENT PROCEDURES**

The following two sections describe the soil management procedures that will be implemented during and following site construction.

##### **4.1 SOIL MANAGEMENT PROCEDURES FOR SITE CONSTRUCTION**

The following procedures will be implemented during site construction activities to minimize dust and control erosion.

###### **4.1.1 Dust Control**

The dust control measures to be implemented at the site correspond to the PM<sub>10</sub> control measures recommended by the Bay Area Air Quality Management District (BAAQMD) in their California Environmental Quality Act Guidelines. These measures consist of:

- Water all active construction areas at least twice daily or as necessary to prevent visible dust plumes from migrating outside of the site limits.
- Mist or spray water while loading transportation vehicles.
- Minimize drop heights while loading transportation vehicles.
- Use tarpaulins or other effective covers for trucks carrying soils that travel on public streets.
- Pave, apply water 3 times daily, or apply non-toxic soil stabilizers on all unpaved access roads, parking areas, and staging areas.
- Sweep all paved access routes parking areas and staging areas daily, if visibly soiled.
- Sweep street daily if visible soil material is carried onto public streets from the site.

###### **4.1.2 Erosion Control**

A Stormwater Pollution Prevention Plan (SWPPP) will be developed by the site contractor prior to initiation of Site work that details procedures for minimizing erosion. The SWPPP will include elements such as silt traps and hay bales to minimize surface water runoff from the Site into storm drains or the San Francisco Bay, berms to control Site runoff, and covering soil stockpiles during the rainy season (November through March) to minimize sediment runoff.

pipings; the trenches are anticipated to be approximately 2 to 3 feet wide and will extend between 4 to 6 feet below grade. Estimated maximum excavation depth for the piping system is 6 feet bgs. The swales will be approximately 32 feet in width and 2 to 3 feet in depth. The swales will be covered with a geotextile fabric and grass. The parking area will be graded and bermed to enhance flow to each of the catch basins, and paved with asphaltic concrete.

#### **2.4 RISK ASSESSMENT**

A health risk assessment (HRA) was conducted to evaluate the potential human health risks associated with the presence of chemicals in soil and groundwater assuming future use of the site as a parking lot with grassy swales (Geomatrix, May 1999). Potential noncarcinogenic hazard indexes and theoretical lifetime excess cancer risks were estimated for future on-site construction workers and future on-site visitors assuming conservative estimates of human exposure. Future on-site construction workers may be exposed to chemicals in soil across the site to the depth required for installation of the storm drain system or in groundwater if encountered in excavation areas. Following construction, potential exposure to future on-site visitors would be limited to exposed soil in the grass-covered swale areas.

The results of the HRA indicate that the presence of chemicals in soil and groundwater at the site should not pose an unacceptable noncarcinogenic or carcinogenic risk to future on-site construction workers and visitors. A summary table for the HRA results is provided as Table 7. Based on these results, it was also concluded that potential risks to nearby residents during construction and future on-site maintenance workers and trespassers after construction would also not be of concern.

#### **3.0 OBJECTIVES**

As described above, the results of the HRA indicate that chemicals in site soil do not present an unacceptable human health risk. However, dust from a construction site can present a nuisance if not controlled. Likewise, erosion of on-site soil during construction activities can increase the turbidity of surface water run-off.

Therefore, the objectives of the SMP are to:

- provide guidelines for soil handling, stockpiling, dust and erosion minimization and, if needed, soil disposal during site construction activities for the proposed parking lot; and

metals were detected in groundwater; however, chemical concentrations were generally low to non-detect (Table 6). PNAs were not detected in the groundwater samples.

### **2.3 PROPOSED DEVELOPMENT**

The proposed development for the subject area is asphalt paved parking. Two alternatives for storm drainage are being considered, as described below. Figures illustrating the two alternatives for the storm drainage system are contained in Appendix B.

#### **Alternative 1**

This alternative for the drainage system consists of a series of storm drainage lines and catch basins to collect and transport storm water from the parking lot site to the main City box culvert located on Channel Street, west of Fourth Street. During a 5 year storm event, the City system could reach capacity and overflows would result. Overflows from the parking lot site would be diverted to a small treatment plant to be located east of Fourth Street, near China Basin Channel. Under this alternative, Area E will be entirely paved with asphalt and surrounded by a 3- to 4-foot fence.

The catch basins will be installed in excavations with aerial dimensions of approximately 4 feet by 4 feet and extending to depths of 4 to 6 feet. Trenches will be excavated to install the piping; the trenches are anticipated to be approximately 2 to 3 feet wide and will extend between 4 to 6 feet below grade. Estimated maximum excavation depth for the piping system is 6 feet bgs. The parking area will be graded and bermed to enhance flow to each of the catch basins, and paved with asphaltic concrete.

#### **Alternative 2**

This alternative includes perimeter grassy drainage swales to collect and drain storm water overflows.

The parking area will contain a storm drain system to collect surface water runoff. The storm drain system will consist of a network of catch basins and drainage swales to collect storm water on the parking lot. The storm water will be conveyed through a series of pipes and the drainage swales to one point of discharge. The discharge pipe will collect into one main and flow into the City box sewer in Channel Street near Fourth Street.

The catch basins will be installed in excavations with aerial dimensions of approximately 4 feet by 4 feet and extending to depths of 4 to 6 feet. Trenches will be excavated to install the

leased by multiple tenants. Tenant uses consist of a recycling center, an automobile sales center, the Mission Rock Recovery Center, a moving company, maritime offices, and automobile storage.

## **2.2 SITE INVESTIGATIONS**

### **2.2.1 Previous Site Investigations**

Burlington Northern Santa Fe Railway Company ("the Railroad") conducted Phase I and Phase II Environmental Assessments of property formerly operated by the Railroad located east of Third Street, between Sixteenth Street and China Basin Channel; this property included the western half of the site. The scope of the Railroad's investigations included one soil boring in the southern portion of the site. Soil samples were collected at depths of 0.5, 5, and 8 feet bgs and analyzed for total petroleum hydrocarbons as gasoline (TPHg), TPH as motor oil (TPHmo), lead, nickel, arsenic, chromium, cadmium, and zinc. Results of chemical analyses on these soil samples indicated that several metals were present at concentrations exceeding typical regional background concentrations (Geomatrix, March 1999).

In addition, HLA has performed an investigation of the former H&H Shipping parcel located in the northeast corner of the site (HLA; 1999). Seventeen soil samples were collected and analyzed for metals, TPH as diesel (TPHd), TPHg, oil and grease, volatile organic compounds (VOCs), polychlorinated biphenyls (PCBs), and polynuclear aromatic hydrocarbons (PNAs). Five groundwater samples were collected and one or more samples were analyzed for metals, TPHd, TPHg, benzene, toluene, ethylbenzene, xylenes [BTEX], PCBs, and PNAs. Several soil samples contained PNAs and metals; very low concentrations of some aromatic hydrocarbons and PCBs were detected in a few soil samples. The groundwater samples contained low to trace concentrations of several metals. Filtered groundwater samples did not contain PNAs; however, unfiltered samples contained low concentrations of several PNA compounds. PCBs and BTEX were not detected in the groundwater samples. Summary tables for the soil and groundwater analysis results of the H&H investigation are contained in Appendix A.

### **2.2.2 Recent Site Investigation**

In April 1999, Geomatrix installed 8 soil borings and collected 16 soil samples (two soil samples per boring) and 2 groundwater samples (from 2 of the 8 locations) for chemical analysis. Sampling locations are illustrated on Figure 2. Primary chemicals detected in soil were PNAs and some metals (i.e., antimony, arsenic, copper, lead, nickel, and mercury). Soil sample results from the recent investigation are summarized in Tables 1 through 5. Several

**SOIL MANAGEMENT PLAN**  
**Imperial Weitz Parking Lots for the**  
**Giants Pacific Bell Ball Park**  
**Area E - Port of San Francisco Property**  
**San Francisco, California**

**1.0 INTRODUCTION**

Geomatrix Consultants, Inc. (Geomatrix) has prepared this Soil Management Plan (SMP) on behalf of Imperial Weitz, LLC for the proposed 14-acre parking lot for the Giants' Pacific Bell Ball Park. The proposed parking lot site is located south of China Basin Channel and east of Third Street in San Francisco, California (the site; Figure 1). The site is part of a total of approximately 36 acres of parking to be developed by Imperial Weitz south of China Basin Channel and has been referred to as Area E in previous environmental documents prepared by Geomatrix on behalf of Imperial Weitz.

**2.0 BACKGROUND**

Imperial Weitz is proposing to construct a paved parking lot on the site. A site history review, environmental investigation and risk evaluation were performed to meet Article 20 requirements and assess potential risks to construction worker and site visitor health associated with soil and groundwater quality at the site. The following summarizes the results of the site history review, environmental investigations, and risk assessment, and describes the proposed parking lot development.

**2.1 SITE SETTING AND HISTORICAL USAGE**

The approximately 19 acre site is currently owned by the Port of San Francisco (the Port). The subject area was originally marshlands and shallow tidal flats bordering San Francisco Bay. It was filled between 1877 and 1913; the source of the fill is unknown but likely included construction debris and rubble from the 1906 earthquake and cut material from nearby hills and construction areas.

Historical site uses include: railroad trackage and support structures for rail-related activities, parking and shipping, and truck maintenance. H&H Shipping Service Company, Inc. (H&H) occupied the northeastern corner of the site from 1950 to 1996. H&H used the area for vehicle parking and offices, and maintained a tank cleaning area and drum storage unit. No known underground storage tanks (USTs) have been identified on the site. Recently, the site has been

# EXPLANATION

- ◆ Soil samples collected at multiple depths by J. Yang and Assoc. March 15, 1995
- Surface soil samples collected by Geomatrix, November 16, 2001

Area of aggregate/crushed rock/road base material

Concrete/asphalt foundation

## EXHIBIT B

H-9674

EXHIBIT A

H&H Parcel – Tank Treatment Area

All that certain real property of the San Francisco Port Commission, City and County of San Francisco, State of California, situate at the northeast corner of Terry A. Francois Boulevard (formerly China Basin Street), more particularly described as follows:

Commencing at the point of intersection of the northwesterly line of Townsend Street with the southwesterly line of Delancey Street (formerly First Street), said point being Inner 14 of the Inner Waterfront Line as described in records on file in the office of Engineering of said San Francisco Port Commission; Thence along said Inner Waterfront Line, S. 03°02'27" E a distance of 2132.11 feet; Thence N 86°51'14" E a distance of 65.28 feet, to the True Point Of Beginning; Thence S 10°21'36" E a distance of 127.93 feet; Thence N 80°50'39" E a distance of 4.70 feet; Thence S 09°13'14" E a distance of 68.59 feet; Thence N 81°09'11" E a distance of 146.17 feet; Thence N 03°21'24" W a distance of 85.74 feet; Thence S 88°44'14" W a distance of 54.91 feet; Thence N 66°55'27" W a distance of 9.19 feet; Thence N 07°12'31" W a distance of 68.86 feet; Thence N 21°58'29" W a distance of 44.82 feet; Thence S 83°22'07" W a distance of 28.09 feet; Thence N 05°44'30" W a distance of 14.69 feet; Thence S 81°59'17" W a distance of 65.99 feet; Thence S 10°21'36" E a distance of 30.22 feet to the True Point Of Beginning; Containing 26,592 square feet (0.61 acres), more or less.

7.03. Recordation. The Covenantor shall record this Covenant, with all referenced Exhibits, in the County of San Francisco within ten (10) days of the Covenantor's receipt of a fully executed original.

7.04. Notices. Whenever any person gives or serves any notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: (1) when delivered, if personally delivered to the person being served or to an officer of a corporate party being served, or (2) three (3) business days after deposit in the mail, if mailed by United States mail, postage paid, certified, return receipt requested:

To Owner:

Carol Bach  
Assist. Deputy Director, Environmental Health and Safety  
Port of San Francisco  
Pier 1  
San Francisco, CA 94111

With a copy to:

Noreen Ambrose  
Port General Counsel  
Port of San Francisco  
Pier 1  
San Francisco, CA 94111.

To Department:

California Environmental Protection Agency  
Department of Toxic Substances Control  
700 Heinz Avenue, Suite 300  
Berkeley, CA 94710-2737  
Attention: Chief, Standardized Permits and Corrective Action  
Branch

Any party may change its address or the individual to whose attention a notice is to be sent by giving written notice in compliance with this paragraph.

7.05. Partial Invalidity. If any portion of the Restrictions or other term set forth herein is determined by a court of competent jurisdiction to be invalid for any reason, the surviving portions of this Covenant shall remain in full force and effect as if such portion found invalid had not been included herein.

have reasonable right of entry and access to the Property for inspection, monitoring, and other activities consistent with the purposes of this Covenant as deemed necessary by the Department in order to protect the public health and safety.

#### ARTICLE V ENFORCEMENT

5.01. Enforcement. Failure of the Covenantor and/or Owner to comply with any of the Restrictions specifically applicable to it shall be grounds for the Department, by reason of this Covenant, to require that the Covenantor and/or Owner modify or remove any improvements ("Improvements" herein shall mean all buildings, roads, driveways, and paved parking areas, constructed or placed upon any portion of the Property constructed in violation of the Restrictions.) Violation of this Covenant shall be grounds for the Department to file civil and/or criminal actions against the Covenantor and/or Owner as provided by law.

#### ARTICLE VI VARIANCE, TERMINATION, AND TERM

6.01. Variance. Any Owner or, with the Owner's written consent, any Occupant of the Property or any portion thereof may apply to the Department for a written variance from the provisions of this Covenant. Such application shall be made in accordance with H&S Code section 25202.6.

6.02. Termination. Any Owner, and/or, with the Owner's written consent, any Occupant of the Property, or any portion thereof, may apply to the Department for a termination of the Restrictions or other terms of this Covenant as they apply to all or any portion of the Property. Such application shall be made in accordance with H&S Code section 25202.6.

6.03. Term. Unless ended in accordance with the Termination Paragraph above, by law, or by the Department in the exercise of its discretion, this Covenant shall continue in effect in perpetuity.

#### ARTICLE VII MISCELLANEOUS

7.01. No Dedication Intended. Nothing set forth in this Covenant shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof to the general public or anyone else for any purpose whatsoever.

7.02. Department References. All references to the Department include successor agencies/departments or other successor entity.

Owners and Occupants.

4.04. Management of Native Fill and Concrete/Asphalt Foundation Material

- (a) All uses and development of the Property shall preserve the integrity of the existing Concrete/Asphalt Foundation.
- (b) No activities (e.g., excavation, grading, removal, trenching, filling, earth movement or mining) which will disturb the native fill and/or the Concrete/Asphalt Foundation material underlying the Cap as indicated in Exhibit B shall be permitted on the Property without a Department-approved Soil Management Plan and Health and Safety Plan.
- (c) Native fill and/or Concrete/Asphalt Foundation material shall not be managed or handled such that it may migrate into the bay.
- (d) Any native fill and/or Concrete/Asphalt Foundation material brought to the surface by grading, excavation, trenching or backfilling shall be managed in accordance with the applicable state and federal laws and their implementing regulations.
- (e) The Owner shall provide the Department written notice at least fourteen (14) days prior to any building, filling, grading, mining or excavating at the Property.
- (f) If more than 50 cubic yards of any native fill will be disturbed, including excavation and grading, then the soil shall be evaluated for potential human health risks in compliance with Article 20 of the SF Municipal Code ("the Maher Ordinance"), and managed accordingly.
- (g) Covenantor shall notify the Department of each of the following: (i) The type, cause, location and date of any disturbance to the native fill and/or Concrete/Asphalt Foundation which could affect the ability of the Concrete/Asphalt Foundation to contain subsurface hazardous materials in the Property, and (ii) the type and date of repair of such disturbance. Notification to the Department shall be made as provided below within ten (10) working days of both the discovery of any such disturbance(s) and the completion of any repairs. Timely and accurate notification by any Owner or Occupant shall satisfy this requirement on behalf of all other Owners and Occupants.

4.05. Access for Department. Covenantor agrees that the Department shall

ARTICLE IV  
RESTRICTIONS

4.01. Prohibited Uses. The Property shall not be used for any of the following purposes:

- (a) A residence, including any mobile home or factory built housing, constructed or installed for use as residential human habitation;
- (b) A public or private school for persons under 21 years of age; or
- (c) A hospital for humans; or
- (c) A day care center for children.

4.02 Prohibited Activities. The following activities shall not be conducted at the Property:

- (a) No raising of food (e.g., cattle, food crops, cotton, etc.) shall be permitted on the property.
- (b) No groundwater shall be extracted on the Property for purposes other than site remediation or construction dewatering without prior written approval by the Department.

4.03 Non-Interference with the Cap. Covenantor agrees:

- (a) No activities which will disturb the Cap (e.g. excavation, grading, removal, trenching, filling, earth movement, or mining) shall be permitted on the Property without prior review and approval by the Department.
- (b) All uses and development of the Property shall preserve the integrity of the Cap.
- (c) Any proposed alteration of the Cap shall require written approval by the Department.
- (d) Covenantor shall notify the Department of each of the following: (i) The type, cause, location and date of any disturbance to the Cap which could affect the ability of the Cap to contain subsurface hazardous materials in the Property, and (ii) the type and date of repair of such disturbance. Notification to the Department shall be made as provided below within ten (10) working days of both the discovery of any such disturbance(s) and the completion of any repairs. Timely and accurate notification by any Owner or Occupant shall satisfy this requirement on behalf of all other

an indicator lining material which is used to denote the separation of the imported topsoil from native fill.

2.05 Concrete/Asphalt Foundation. "Concrete/Asphalt Foundation" shall mean the existing concrete/asphalt surface which is overlain approximately two-third of the Property.

2.03. ARTICLE III  
GENERAL PROVISIONS

3.01. Restrictions to Run With the Land. This Covenant sets forth protective provisions, covenants, restrictions, and conditions (collectively referred to as "Restrictions"), upon and subject to which the Property and every portion thereof shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, and/or conveyed. Each and every one of the Restrictions: (a) shall run with the land pursuant to H&SC sections 25202.5, and 25202.6 and Civil Code section 1471; (b) shall inure to the benefit of and pass with each and every portion of the Property, (c) shall apply to and bind the respective successors in interest to the Property, (d) are for the benefit of, and shall be enforceable by the Department, and (e) are imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.02. Binding Upon Owners/Occupants. Pursuant to Health and Safety Code section 25202.5(b), this Covenant shall be binding upon all of the owners of the land, their heirs, successors, and assignees, and the agents, employees, and lessees of the owners, heirs, successors, and assignees. Pursuant to Civil Code section 1471(b), all successive owners of the Property are expressly bound hereby for the benefit of the covenantee(s) herein. "Owner" shall include "Covenantor".

3.03. Written Notice of Hazardous Substance Release. The Owner shall, prior to the sale, lease, or rental of the Property, give written notice that a release of hazardous substances has come to be located on or beneath the Property, pursuant to Health and Safety Code section 25359.7. Such written notice shall include a copy of this Covenant.

3.04. Incorporation into Deeds and Leases. The Restrictions set forth herein shall be incorporated by reference in each and all deeds and leases for any portion of the Property.

3.05. Conveyance of Property. Covenantor agrees that the Owner shall provide notice to the Department not later than thirty (30) days after any conveyance of any ownership interest in the Property (excluding mortgages, liens, and other non-possessory encumbrances). The Department shall not, by reason of this Covenant, have authority to approve, disapprove, or otherwise affect such proposed conveyance, except as otherwise provided by law, by administrative order, or specific provision of this Covenant.

foundation or a compacted aggregate/crushed rock/roadbase material. The concrete/asphalt foundation or compacted aggregate/crushed rock/roadbase material serves as a physical barrier preventing direct contact with chemicals in soil; thus, there are no potential direct exposure pathways to chemicals at these hot spots by future receptors. If in the unlikely event that the concrete/asphalt foundation is removed, the excess cancer risk to a receptor from the hot spots would range from  $9 \times 10^{-5}$  to  $3 \times 10^{-6}$ .

Imported topsoil at least 18 inches thick followed by a layer of sod will be placed over the existing asphalt-concrete foundation. The concrete is present at one foot thick to at least 3 feet thick across approximately two-third of the TTA. The remaining one-third of the TTA is currently overlain with an aggregate/crushed rock/roadbase material. The concrete/asphalt foundation and compacted aggregate/crushed rock/roadbase layer precludes a complete exposure pathway. Additional of the 18 inches of topsoil and sod layer will eliminate potential direct exposures to soil in fill material within the TTA.

In order to ensure that no complete pathways are established, the Department will require that the existing concrete/asphalt foundation remain undisturbed so long as the intended use of the Property is to be a recreational park. Additionally, the Department will require that the site be covered (capped) with at least eighteen (18) inches of imported topsoil on top of an indicator lining material to denote the separation of the topsoil from native fill. Because the health risk assessment also did not evaluate an unrestricted land use scenario or potential impacts from use of groundwater, the Department concluded that use of the Property as a residence, hospital, school for persons under the age of 21, or day care center would entail an unacceptable use. The Department further concluded that the Property, subject to the restrictions of this Covenant, does not present an unacceptable threat to human safety or the environment.

## ARTICLE II DEFINITIONS

2.01. Department. "Department" shall mean the California Department of Toxic Substances Control and shall include its successor agencies, if any.

2.02. Owner. "Owner" shall mean the Covenantor, its successors in interest, and their successors in interest, including heirs and assigns, who at any time hold title to all or any portion of the Property.

2.03. Occupant. "Occupant" shall mean Owners and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

2.04. Cap. "Cap" shall mean eighteen (18) inches of imported topsoil on top of

State Clearinghouse on February 15, 1995.

The Department reviewed the closure certification report titled, *RCRA Closure Certification Report, Former H&H Ship Service Facility, San Francisco, California*, (February 4, 1999), and subsequent submittals titled *Response to Comments, RCRA Closure Certification Report, Former H&H Ship Service Facility*, (November 2, 1999); *Results of Article 20 Sampling Program, Proposed China Basin Park Area* (July 2000); *Site Investigation and Surface Soil Sampling Results, Former H&H Ship Service Company – Treatment Transfer Area Parcel* (February 28, 2002); and *Addendum to the Article 20 Health Risk Assessment* (July 18, 2002). Upon filing of this deed restriction, the Department will approve the closure certification report.

Hazardous wastes, which are also hazardous materials as defined in Health and Safety Code sections 25117 and 25260, including petroleum hydrocarbons, polynuclear aromatic hydrocarbons, metals and arsenic, remain in the soil and groundwater at the Site at concentrations below those which would pose a significant human health risk under proposed reuse scenarios. Therefore a deed restriction to limit use of the property to those exposure scenarios evaluated and found to be below acceptable risk limits is required as part of the facility closure.

1.03. As detailed in the above-referenced reports, portions of the surface and subsurface soils on the Site contain hazardous wastes and hazardous materials, as defined in H&S Code section 25117 and 25260, including the following contaminants of concern: arsenic (up to 96 mg/kg) and benzo(a)pyrene (up to 11 mg/kg). Groundwater beneath the Property is found within 10 to 20 feet below ground surface. Dissolved arsenic was found in groundwater at up to 180 ug/l. The California drinking water standard for arsenic is 50 ug/l.

A review of the analytical results and the chemical distribution suggests that there are "hot spots". Hot spots are areas of affected soil or groundwater having concentrations higher than an empirically determined percentile of the distribution of concentrations in a particular population. 65 soil samples from 20 locations at various depths were collected within the TTA. Elevated concentrations of benzo(a)pyrene equivalent B(a)P EQ were measured in samples collected from two borings locations (EB-1, 19.8 milligrams per kilogram [mg/kg]) and (EB-20, 7.9 mg/kg). One surface soil sample (GMX-08) contained B(a)P EQ concentration of 1.5 mg/kg. All other concentrations of B(a)P EQ were less than 1 mg/kg. Elevated concentrations of arsenic and lead were observed in samples collected from borings EB-1 (3,000 mg/kg lead), EB-5 (96 mg/kg arsenic and 1,300 mg/kg lead), and EB-18 (2,400 mg/kg lead). Borings EB-1 and EB-5 are located in the eastern section of the TTA; GMX-08 is located near the northern perimeter; and borings EB-18 and EB-20 are located in the southwest section.

Based on these observations, borings EB-1, EB-5, GMX-08, EB-18, and EB-20 can be considered hot spots. However, each of borings is located under a concrete/asphalt

safety and the environment.

ARTICLE I  
STATEMENT OF FACTS

1.01. The Property, totaling approximately 0.6 acres, is more particularly described in Exhibit "A" and depicted in Exhibit "A-1", attached hereto and incorporated herein by this reference. The Property is located in the area now generally bounded by Terry Francois Boulevard to the west, China Basin Channel to the north, and San Francisco Bay to the east, in the City and County of San Francisco, California.

1.02. The site was created by filling marshlands and shallow tidal flats bordering San Francisco Bay between 1877 and 1913. Sources of fill are unknown, but likely included construction/demolition debris and rubble, and rock and dirt cut from nearby hills. Historical uses of the Site include railroad tracks and related support structures and parking. From 1950 to 1996 H&H Ship Service occupied the area for wastewater treatment and transfer operations, including aboveground storage tanks for receiving, settling and treating wastewater containing petroleum.

In 1978 several of the wastes managed at the H&H Ship Service facility were determined to be hazardous wastes subject to federal and state hazardous waste management regulations. Since that time, the Department of Toxic Substances Control (or its predecessor in interest, the Department of Health Services) authorized H&H Ship Service's operations pursuant to an interim status document. Under this authorization the property was a hazardous waste facility (Facility), regulated by the Department, subject to the requirements of the California Hazardous Waste Control Law ("HWCL"), at Health and Safety Code ("H&S Code") section 25100 et seq., and the federal Resource Conservation and Recovery Act ("RCRA"), at 42 U.S.C. section 6901 et seq. Under Interim Status, the property was a portion of the Facility that was known as the Treatment/Transfer Area (TTA).

The Department is requiring this Covenant pursuant to the closure requirements of the HWCL, including H&S Code section 25246 and post-closure notices provisions of Title 22 California Code of Regulations [section 66265.119(b) for interim status hazardous waste facilities], as part of the facility closure. In 1994, the Department reviewed H&H's Closure Plan to ensure that the closure of the TTA met the requirements in Title 22, California Code of Regulations, Chapter 15, Article 7. The Department circulated the draft Closure Plan and Proposed Negative Declaration for public review and comment from August 11, 1994 to September 13, 1994. The Department approved the Closure Plan on January 13, 1995 and filed a Notice of Determination for the project with the

### COVENANT TO RESTRICT USE OF PROPERTY

#### ENVIRONMENTAL RESTRICTION

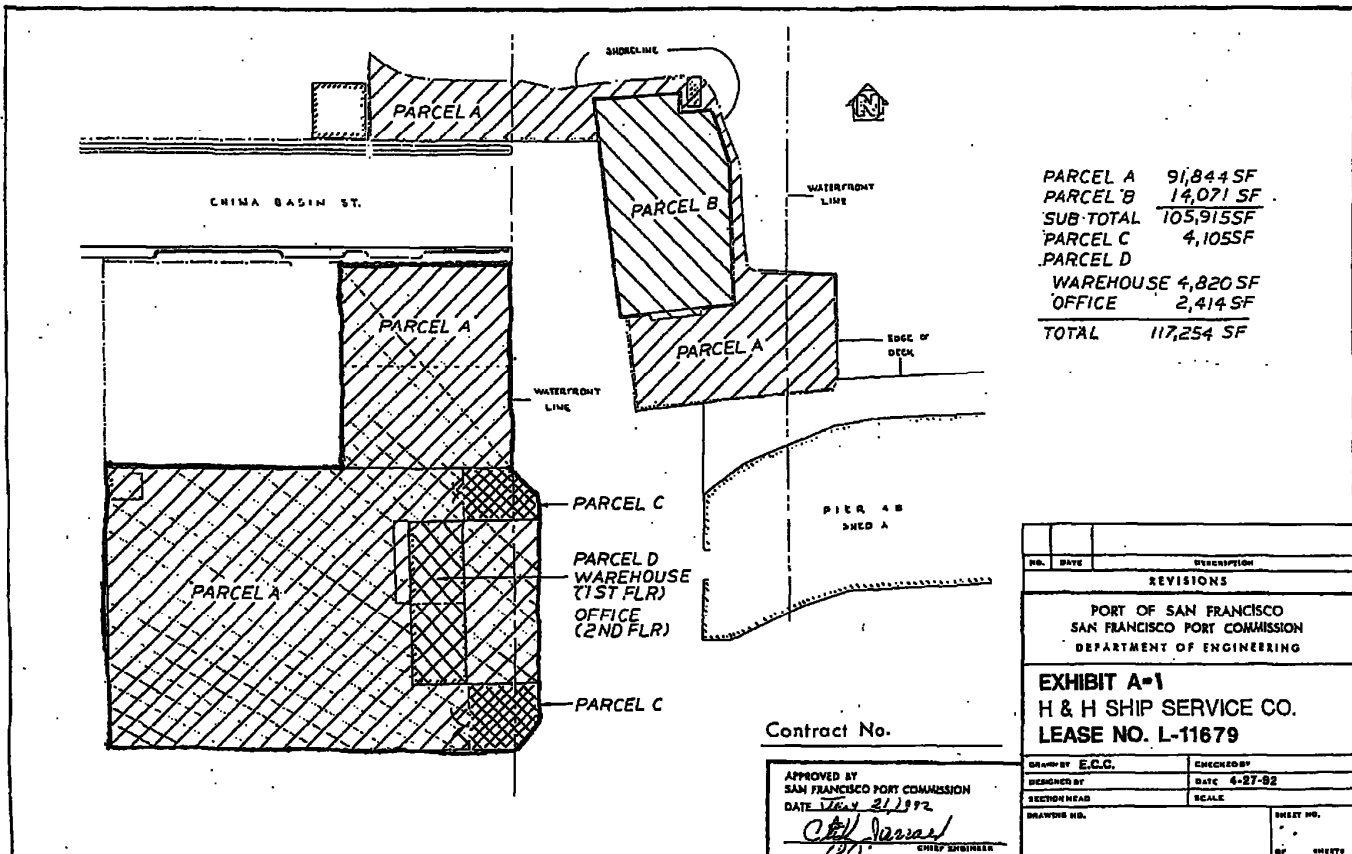

*(Re: H&H Site located at China Basin Channel and Terry Francois Blvd, City and County of San Francisco)*

---

---

This Covenant and Agreement ("Covenant") is made by and between the City and County of San Francisco, a charter city and county in trust (the "Covenantor"), the current owner of certain property situated in the City and County of San Francisco, State of California, described in Exhibit "A", attached hereto and incorporated herein by this reference (the "Property"), and the Department of Toxic Substances Control (the "Department"). Pursuant to Civil Code section 1471(c) and the California Health and Safety Code, Section 25222.1, the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined in Health and Safety Code ("H&SC"), Section 25260. The Covenantor and the Department, collectively referred to as the "Parties", therefore intend that the use of the Property be restricted as set forth in this Covenant, in order to protect human health,

Any party may change its address or the individual to whose attention a notice is to be sent by giving written notice in compliance with this paragraph.

G723986

ARTICLE VI  
VARIANCE, TERMINATION, AND TERM

6.01. Variance. Any Owner or, with the Owner's written consent, any Occupant of the Property or any portion thereof may apply to the Department for a written variance from the provisions of this Covenant. Such application shall be made in accordance with H&S Code section 25202.6.

6.02. Termination. Any Owner, and/or, with the Owner's written consent, any Occupant of the Property, or any portion thereof, may apply to the Department for a termination of the Restrictions or other terms of this Covenant as they apply to all or any portion of the Property. Such application shall be made in accordance with H&S Code section 25202.6.

6.03. Term. Unless ended in accordance with the Termination Paragraph above, by law, or by the Department in the exercise of its discretion, this Covenant shall continue in effect in perpetuity.

ARTICLE VII  
MISCELLANEOUS

7.01. No Dedication Intended. Nothing set forth in this Covenant shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof to the general public or anyone else for any purpose whatsoever.

7.02. Department References. All references to the Department include successor agencies/departments or other successor entity.

7.03. Recordation. The Covenantor shall record this Covenant, with all referenced Exhibits, in the County of San Francisco within ten (10) days of the Covenantor's receipt of a fully executed original.

7.04. Notices. Whenever any person gives or serves any notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: (1) when delivered, if personally delivered to the person being served or to an officer of a corporate party being served, or (2) three (3) business days after deposit in the mail, if mailed by United States mail, postage paid, certified, return receipt requested:

G723986

4.02. Soil Management

- (a) Any contaminated soils brought to the surface by grading, excavation, trenching or backfilling shall be managed in accordance with all applicable provisions of state and federal law.
- (b) If more than 50 cubic yards of any surface or subsurface soil will be disturbed, including excavation and grading, then the soil shall be evaluated for potential human health risks in compliance with Article 20 of the SF Municipal Code ("the Maher Ordinance"), and managed accordingly.

4.03. Prohibited Activities. The following activities shall not be conducted at the Property:

- (a) No raising of food (e.g., cattle, food crops, cotton, etc.) shall be permitted on the property.
- (b) No groundwater shall be extracted on the Property for purposes other than site remediation or construction dewatering without prior written approval by the Department.

4.04. Access for Department. Covenantor agrees that the Department shall have reasonable right of entry and access to the Property for inspection, monitoring, and other activities consistent with the purposes of this Covenant as deemed necessary by the Department in order to protect the public health and safety.

ARTICLE V  
ENFORCEMENT

5.01. Enforcement. Failure of the Covenantor and/or Owner to comply with any of the Restrictions specifically applicable to it shall be grounds for the Department, by reason of this Covenant, to require that the Covenantor and/or Owner modify or remove any improvements ("Improvements" herein shall mean all buildings, roads, driveways, and paved parking areas, constructed or placed upon any portion of the Property constructed in violation of the Restrictions.) Violation of this Covenant shall be grounds for the Department to file civil and/or criminal actions against the Covenantor and/or Owner as provided by law.

G723986

ARTICLE III  
GENERAL PROVISIONS

3.01. Restrictions to Run With the Land. This Covenant sets forth protective provisions, covenants, restrictions, and conditions (collectively referred to as "Restrictions"), upon and subject to which the Property and every portion thereof shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, and/or conveyed. Each and every one of the Restrictions: (a) shall run with the land pursuant to H&SC sections 25202.5, and 25202.6 and Civil Code section 1471; (b) shall inure to the benefit of and pass with each and every portion of the Property, (c) shall apply to and bind the respective successors in interest to the Property, (d) are for the benefit of, and shall be enforceable by the Department, and (e) are imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.02. Binding Upon Owners/Occupants. Pursuant to Health and Safety Code section 25202.5(b), this Covenant shall be binding upon all of the owners of the land, their heirs, successors, and assignees, and the agents, employees, and lessees of the owners, heirs, successors, and assignees. Pursuant to Civil Code section 1471(b), all successive owners of the Property are expressly bound hereby for the benefit of the covenantee(s) herein. "Owner" shall include "Covenantor".

3.04. Written Notice of Hazardous Substance Release. The Owner shall, prior to the sale, lease, or rental of the Property, give written notice that a release of hazardous substances has come to be located on or beneath the Property, pursuant to Health and Safety Code section 25359.7. Such written notice shall include a copy of this Covenant.

ARTICLE IV  
RESTRICTIONS

4.01. Prohibited Uses. The Property shall not be used for any of the following purposes:

- (a) A residence, including any mobile home or factory built housing, constructed or installed for use as residential human habitation;
- (b) A hospital for humans;
- (c) A public or private school for persons under 21 years of age;
- (d) A day care center for children; or
- (e) Recreational use involving direct contact with soil.

G723986

public review and comment from December 23, 1999 to January 24, 2000. The Department approved the closure plan, closure certification report titled, *RCRA Closure Certification Report, Former H&H Ship Service Facility, San Francisco, California, dated February 4, 1999*, containing a health risk assessment, and the Categorical Exemption on January 26, 2000. Hazardous wastes, which are also hazardous materials as defined in Health and Safety Code sections 25117 and 25260, including petroleum hydrocarbons, polynuclear aromatic hydrocarbons, metals and arsenic, remain in the soil and groundwater at the Site at concentrations below those which would pose a significant human health risk under proposed reuse scenarios. The health risk assessment did not evaluate an unrestricted land use scenario, recreational use involving direct contact with soil, or potential impacts from use of groundwater. Therefore a deed restriction to limit use of the property to those exposure scenarios evaluated and found to be below acceptable risk limits is required as part of the facility closure.

1.03. As detailed in the health risk assessment within the *RCRA Closure Certification Report*, as approved by the Department on January 26, 2000, portions of the surface and subsurface soils on the Site contain hazardous wastes and hazardous materials, as defined in H&S Code section 25117 and 25260, including the following contaminants of concern: arsenic (up to 92 mg/kg) and benzo(a)pyrene (up to 2.5 mg/kg). Groundwater beneath the Property is found within 10 to 20 feet below ground surface. Dissolved arsenic was found in groundwater at up to 812 ug/l. California drinking water standards are arsenic at 50 ug/l. Because the health risk assessment did not evaluate an unrestricted land use scenario, recreational use involving direct contact with soil, or potential impacts from use of groundwater, the Department concluded that use of the Property as a residence, hospital, school for persons under the age of 21, day care center, or recreational use involving direct contact with soil would entail an unacceptable potential human health risk. The Department further concluded that the Property, subject to the restrictions of this Covenant, does not present an unacceptable threat to human safety or the environment.

## ARTICLE II DEFINITIONS

2.01. Department. "Department" shall mean the California Department of Toxic Substances Control and shall include its successor agencies, if any.

2.02. Owner. "Owner" shall mean the Covenantor, its successors in interest, and their successors in interest, including heirs and assigns, who at any time hold title to all or any portion of the Property.

2.03. Occupant. "Occupant" shall mean Owners and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

G723986

"Department"). Pursuant to Civil Code section 1471(c), the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined in Health and Safety Code ("H&SC") section 25260. The Covenantor and the Department, collectively referred to as the "Parties", therefore intend that the use of the Property be restricted as set forth in this Covenant, in order to protect human health, safety and the environment.

ARTICLE I  
STATEMENT OF FACTS

1.01. The Property, totaling approximately 14 acres, is more particularly described in Exhibit "A" and depicted in Exhibit "A-1", attached hereto and incorporated herein by this reference. The Property is located in the area now generally bounded by Terry Francois Boulevard on the North and East, in the City and County of San Francisco, California.

1.02. The site was created by filling marshlands and shallow tidal flats bordering San Francisco Bay between 1877 and 1913. Sources of fill are unknown, but likely included construction/demolition debris and rubble, and rock and dirt cut from nearby hills. Historical uses of the Site include railroad tracks and related support structures, parking and shipping by truck, and truck maintenance. From 1950 to 1996 H&H Ship Service operated a hazardous waste treatment facility, including a tank cleaning area and drum storage unit, and used portions of the Property for vehicle parking and offices.

In 1978 several of the wastes managed at the H&H Ship Service facility were determined to be hazardous wastes subject to federal and state hazardous waste management regulations. Since that time, the Department of Toxic Substances Control (or its predecessor in interest, the Department of Health Services) authorized H&H Ship Service's operations pursuant to an interim status document. Under this authorization the property was a hazardous waste facility (Facility), regulated by the Department, subject to the requirements of the California Hazardous Waste Control Law ("HWCL"), at Health and Safety Code ("H&S Code") section 25100 et seq., and the federal Resource Conservation and Recovery Act ("RCRA"), at 42 U.S.C. section 6901 et seq.

The Department is requiring this Covenant pursuant to the closure requirements of the HWCL, including H&S Code section 25246 and post-closure notices provisions of Title 22 California Code of Regulations [section 66265.119(b) for interim status hazardous waste facilities], as part of the facility closure. The Department circulated a closure plan, dated August 30, 1996 and a draft Categorical Exemption pursuant to the California Environmental Quality Act, Public Resources Code section 21000 et seq for

## COVENANT TO RESTRICT USE OF PROPERTY

### ENVIRONMENTAL RESTRICTION

*(Re: H&H Site located at China Basin Channel and Terry Francois Blvd, City and County of San Francisco)*

This Covenant and Agreement ("Covenant") is made by and between the City and County of San Francisco, a charter city and county in trust (the "Covenantor"), the current owner of certain property situated in the City and County of San Francisco, State of California, described in Exhibit "A", attached hereto and incorporated herein by this reference (the "Property"), and the Department of Toxic Substances Control (the "Department"). Pursuant to Civil Code section 1471(c) and the California Health and Safety Code, Section 25222.1, the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined in Health and Safety Code ("H&SC"), Section 25260. The Covenantor and the Department, collectively referred to as the "Parties", therefore intend that the use of the Property be restricted as set forth in this Covenant, in order to protect human health,

safety and the environment.

ARTICLE I  
STATEMENT OF FACTS

1.01. The Property, totaling approximately 0.6 acres, is more particularly described in Exhibit "A" and depicted in Exhibit "A-1", attached hereto and incorporated herein by this reference. The Property is located in the area now generally bounded by Terry Francois Boulevard to the west, China Basin Channel to the north, and San Francisco Bay to the east, in the City and County of San Francisco, California.

1.02. The site was created by filling marshlands and shallow tidal flats bordering San Francisco Bay between 1877 and 1913. Sources of fill are unknown, but likely included construction/demolition debris and rubble, and rock and dirt cut from nearby hills. Historical uses of the Site include railroad tracks and related support structures and parking. From 1950 to 1996 H&H Ship Service occupied the area for wastewater treatment and transfer operations, including aboveground storage tanks for receiving, settling and treating wastewater containing petroleum.

In 1978 several of the wastes managed at the H&H Ship Service facility were determined to be hazardous wastes subject to federal and state hazardous waste management regulations. Since that time, the Department of Toxic Substances Control (or its predecessor in interest, the Department of Health Services) authorized H&H Ship Service's operations pursuant to an interim status document. Under this authorization the property was a hazardous waste facility (Facility), regulated by the Department, subject to the requirements of the California Hazardous Waste Control Law ("HWCL"), at Health and Safety Code ("H&S Code") section 25100 et seq., and the federal Resource Conservation and Recovery Act ("RCRA"), at 42 U.S.C. section 6901 et seq. Under Interim Status, the property was a portion of the Facility that was known as the Treatment/Transfer Area (TTA).

The Department is requiring this Covenant pursuant to the closure requirements of the HWCL, including H&S Code section 25246 and post-closure notices provisions of Title 22 California Code of Regulations [section 66265.119(b) for interim status hazardous waste facilities], as part of the facility closure. In 1994, the Department reviewed H&H's Closure Plan to ensure that the closure of the TTA met the requirements in Title 22, California Code of Regulations, Chapter 15, Article 7. The Department circulated the draft Closure Plan and Proposed Negative Declaration for public review and comment from August 11, 1994 to September 13, 1994. The Department approved the Closure Plan on January 13, 1995 and filed a Notice of Determination for the project with the

State Clearinghouse on February 15, 1995.

The Department reviewed the closure certification report titled, *RCRA Closure Certification Report, Former H&H Ship Service Facility, San Francisco, California*, (February 4, 1999), and subsequent submittals titled *Response to Comments, RCRA Closure Certification Report, Former H&H Ship Service Facility*, (November 2, 1999); *Results of Article 20 Sampling Program. Proposed China Basin Park Area* (July 2000); *Site Investigation and Surface Soil Sampling Results, Former H&H Ship Service Company – Treatment Transfer Area Parcel* (February 28, 2002); and *Addendum to the Article 20 Health Risk Assessment* (July 18, 2002). Upon filing of this deed restriction, the Department will approve the closure certification report.

Hazardous wastes, which are also hazardous materials as defined in Health and Safety Code sections 25117 and 25260, including petroleum hydrocarbons, polynuclear aromatic hydrocarbons, metals and arsenic, remain in the soil and groundwater at the Site at concentrations below those which would pose a significant human health risk under proposed reuse scenarios. Therefore a deed restriction to limit use of the property to those exposure scenarios evaluated and found to be below acceptable risk limits is required as part of the facility closure.

1.03. As detailed in the above-referenced reports, portions of the surface and subsurface soils on the Site contain hazardous wastes and hazardous materials, as defined in H&S Code section 25117 and 25260, including the following contaminants of concern: arsenic (up to 96 mg/kg) and benzo(a)pyrene (up to 11 mg/kg). Groundwater beneath the Property is found within 10 to 20 feet below ground surface. Dissolved arsenic was found in groundwater at up to 180 ug/l. The California drinking water standard for arsenic is 50 ug/l.

A review of the analytical results and the chemical distribution suggests that there are "hot spots". Hot spots are areas of affected soil or groundwater having concentrations higher than an empirically determined percentile of the distribution of concentrations in a particular population. 65 soil samples from 20 locations at various depths were collected within the TTA. Elevated concentrations of benzo(a)pyrene equivalent B(a)P EQ were measured in samples collected from two borings locations (EB-1, 19.8 milligrams per kilogram [mg/kg]) and (EB-20, 7.9 mg/kg). One surface soil sample (GMX-08) contained B(a)P EQ concentration of 1.5 mg/kg. All other concentrations of B(a)P EQ were less than 1 mg/kg. Elevated concentrations of arsenic and lead were observed in samples collected from borings EB-1 (3,000 mg/kg lead), EB-5 (96 mg/kg arsenic and 1,300 mg/kg lead), and EB-18 (2,400 mg/kg lead). Borings EB-1 and EB-5 are located in the eastern section of the TTA; GMX-08 is located near the northern perimeter; and borings EB-18 and EB-20 are located in the southwest section.

Based on these observations, borings EB-1, EB-5, GMX-08, EB-18, and EB-20 can be considered hot spots. However, each of borings is located under a concrete/asphalt

foundation or a compacted aggregate/crushed rock/roadbase material. The concrete/asphalt foundation or compacted aggregate/crushed rock/roadbase material serves as a physical barrier preventing direct contact with chemicals in soil; thus, there are no potential direct exposure pathways to chemicals at these hot spots by future receptors. If in the unlikely event that the concrete/asphalt foundation is removed, the excess cancer risk to a receptor from the hot spots would range from  $9 \times 10^{-5}$  to  $3 \times 10^{-6}$ .

Imported topsoil at least 18 inches thick followed by a layer of sod will be placed over the existing asphalt-concrete foundation. The concrete is present at one foot thick to at least 3 feet thick across approximately two-third of the TTA. The remaining one-third of the TTA is currently overlain with an aggregate/crushed rock/roadbase material. The concrete/asphalt foundation and compacted aggregate/crushed rock/roadbase layer precludes a complete exposure pathway. Additional of the 18 inches of topsoil and sod layer will eliminate potential direct exposures to soil in fill material within the TTA.

In order to ensure that no complete pathways are established, the Department will require that the existing concrete/asphalt foundation remain undisturbed so long as the intended use of the Property is to be a recreational park. Additionally, the Department will require that the site be covered (capped) with at least eighteen (18) inches of imported topsoil on top of an indicator lining material to denote the separation of the topsoil from native fill. Because the health risk assessment also did not evaluate an unrestricted land use scenario or potential impacts from use of groundwater, the Department concluded that use of the Property as a residence, hospital, school for persons under the age of 21, or day care center would entail an unacceptable use. The Department further concluded that the Property, subject to the restrictions of this Covenant, does not present an unacceptable threat to human safety or the environment.

## ARTICLE II DEFINITIONS

2.01. Department. "Department" shall mean the California Department of Toxic Substances Control and shall include its successor agencies, if any.

2.02. Owner. "Owner" shall mean the Covenantor, its successors in interest, and their successors in interest, including heirs and assigns, who at any time hold title to all or any portion of the Property.

2.03. Occupant. "Occupant" shall mean Owners and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

2.04. Cap. "Cap" shall mean eighteen (18) inches of imported topsoil on top of

an indicator lining material which is used to denote the separation of the imported topsoil from native fill.

2.05 Concrete/Asphalt Foundation. "Concrete/Asphalt Foundation" shall mean the existing concrete/asphalt surface which is overlain approximately two-third of the Property.

### 2.03. ARTICLE III GENERAL PROVISIONS

3.01. Restrictions to Run With the Land. This Covenant sets forth protective provisions, covenants, restrictions, and conditions (collectively referred to as "Restrictions"), upon and subject to which the Property and every portion thereof shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, and/or conveyed. Each and every one of the Restrictions: (a) shall run with the land pursuant to H&SC sections 25202.5, and 25202.6 and Civil Code section 1471; (b) shall inure to the benefit of and pass with each and every portion of the Property, (c) shall apply to and bind the respective successors in interest to the Property, (d) are for the benefit of, and shall be enforceable by the Department, and (e) are imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.02. Binding Upon Owners/Occupants. Pursuant to Health and Safety Code section 25202.5(b), this Covenant shall be binding upon all of the owners of the land, their heirs, successors, and assignees, and the agents, employees, and lessees of the owners, heirs, successors, and assignees. Pursuant to Civil Code section 1471(b), all successive owners of the Property are expressly bound hereby for the benefit of the covenantee(s) herein. "Owner" shall include "Covenantor".

3.03. Written Notice of Hazardous Substance Release. The Owner shall, prior to the sale, lease, or rental of the Property, give written notice that a release of hazardous substances has come to be located on or beneath the Property, pursuant to Health and Safety Code section 25359.7. Such written notice shall include a copy of this Covenant.

3.04. Incorporation into Deeds and Leases. The Restrictions set forth herein shall be incorporated by reference in each and all deeds and leases for any portion of the Property.

3.05. Conveyance of Property. Covenantor agrees that the Owner shall provide notice to the Department not later than thirty (30) days after any conveyance of any ownership interest in the Property (excluding mortgages, liens, and other non-possessory encumbrances). The Department shall not, by reason of this Covenant, have authority to approve, disapprove, or otherwise affect such proposed conveyance, except as otherwise provided by law, by administrative order, or specific provision of this Covenant.

ARTICLE IV  
RESTRICTIONS

4.01. Prohibited Uses. The Property shall not be used for any of the following purposes:

- (a) A residence, including any mobile home or factory built housing, constructed or installed for use as residential human habitation;
- (b) A public or private school for persons under 21 years of age; or
- (c) A hospital for humans; or
- (c) A day care center for children.

4.02. Prohibited Activities. The following activities shall not be conducted at the Property:

- (a) No raising of food (e.g., cattle, food crops, cotton, etc.) shall be permitted on the property.
- (b) No groundwater shall be extracted on the Property for purposes other than site remediation or construction dewatering without prior written approval by the Department.

4.03. Non-Interference with the Cap. Covenantor agrees:

- (a) No activities which will disturb the Cap (e.g. excavation, grading, removal, trenching, filling, earth movement, or mining) shall be permitted on the Property without prior review and approval by the Department.
- (b) All uses and development of the Property shall preserve the integrity of the Cap.
- (c) Any proposed alteration of the Cap shall require written approval by the Department.
- (d) Covenantor shall notify the Department of each of the following: (i) The type, cause, location and date of any disturbance to the Cap which could affect the ability of the Cap to contain subsurface hazardous materials in the Property, and (ii) the type and date of repair of such disturbance. Notification to the Department shall be made as provided below within ten (10) working days of both the discovery of any such disturbance(s) and the completion of any repairs. Timely and accurate notification by any Owner or Occupant shall satisfy this requirement on behalf of all other

Owners and Occupants.

**4.04. Management of Native Fill and Concrete/Asphalt Foundation Material**

- (a) All uses and development of the Property shall preserve the integrity of the existing Concrete/Asphalt Foundation.
- (b) No activities (e.g., excavation, grading, removal, trenching, filling, earth movement or mining) which will disturb the native fill and/or the Concrete/Asphalt Foundation material underlying the Cap as indicated in Exhibit B shall be permitted on the Property without a Department-approved Soil Management Plan and Health and Safety Plan.
- (c) Native fill and/or Concrete/Asphalt Foundation material shall not be managed or handled such that it may migrate into the bay.
- (d) Any native fill and/or Concrete/Asphalt Foundation material brought to the surface by grading, excavation, trenching or backfilling shall be managed in accordance with the applicable state and federal laws and their implementing regulations.
- (e) The Owner shall provide the Department written notice at least fourteen (14) days prior to any building, filling, grading, mining or excavating at the Property.
- (f) If more than 50 cubic yards of any native fill will be disturbed, including excavation and grading, then the soil shall be evaluated for potential human health risks in compliance with Article 20 of the SF Municipal Code ("the Maher Ordinance"), and managed accordingly.
- (g) Covenantor shall notify the Department of each of the following: (i) The type, cause, location and date of any disturbance to the native fill and/or Concrete/Asphalt Foundation which could affect the ability of the Concrete/Asphalt Foundation to contain subsurface hazardous materials in the Property, and (ii) the type and date of repair of such disturbance. Notification to the Department shall be made as provided below within ten (10) working days of both the discovery of any such disturbance(s) and the completion of any repairs. Timely and accurate notification by any Owner or Occupant shall satisfy this requirement on behalf of all other Owners and Occupants.

**4.05. Access for Department.** Covenantor agrees that the Department shall

have reasonable right of entry and access to the Property for inspection, monitoring, and other activities consistent with the purposes of this Covenant as deemed necessary by the Department in order to protect the public health and safety.

ARTICLE V  
ENFORCEMENT

5.01. Enforcement. Failure of the Covenantor and/or Owner to comply with any of the Restrictions specifically applicable to it shall be grounds for the Department, by reason of this Covenant, to require that the Covenantor and/or Owner modify or remove any improvements ("Improvements" herein shall mean all buildings, roads, driveways, and paved parking areas, constructed or placed upon any portion of the Property constructed in violation of the Restrictions.) Violation of this Covenant shall be grounds for the Department to file civil and/or criminal actions against the Covenantor and/or Owner as provided by law.

ARTICLE VI  
VARIANCE, TERMINATION, AND TERM

6.01. Variance. Any Owner or, with the Owner's written consent, any Occupant of the Property or any portion thereof may apply to the Department for a written variance from the provisions of this Covenant. Such application shall be made in accordance with H&S Code section 25202.6.

6.02. Termination. Any Owner, and/or, with the Owner's written consent, any Occupant of the Property, or any portion thereof, may apply to the Department for a termination of the Restrictions or other terms of this Covenant as they apply to all or any portion of the Property. Such application shall be made in accordance with H&S Code section 25202.6.

6.03. Term. Unless ended in accordance with the Termination Paragraph above, by law, or by the Department in the exercise of its discretion, this Covenant shall continue in effect in perpetuity.

ARTICLE VII  
MISCELLANEOUS

7.01. No Dedication Intended. Nothing set forth in this Covenant shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof to the general public or anyone else for any purpose whatsoever.

7.02. Department References. All references to the Department include successor agencies/departments or other successor entity.

H209674

7.03. Recordation. The Covenantor shall record this Covenant, with all referenced Exhibits, in the County of San Francisco within ten (10) days of the Covenantor's receipt of a fully executed original.

7.04. Notices. Whenever any person gives or serves any notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: (1) when delivered, if personally delivered to the person being served or to an officer of a corporate party being served, or (2) three (3) business days after deposit in the mail, if mailed by United States mail, postage paid, certified, return receipt requested:

Branch

Any party may change its address or the individual to whose attention a notice is to be sent by giving written notice in compliance with this paragraph.

7.05. Partial Invalidity. If any portion of the Restrictions or other term set forth herein is determined by a court of competent jurisdiction to be invalid for any reason, the surviving portions of this Covenant shall remain in full force and effect as if such portion found invalid had not been included herein.

H209674

IN WITNESS WHEREOF, the Parties execute this Covenant.

**Subject:** Preliminary Geotechnical Recommendations and  
Summary Memorandum No. 1

---

This memorandum is in fulfillment of our proposal dated 20 January 2016. It presents preliminary geotechnical design recommendations and a summary of geotechnical issues and concepts regarding development at SWL337 that have not been formally memorialized, in addition to an overview summary of some geotechnical issues that have been discussed in the previously published documents listed above. The topics addressed in this memorandum include:

- 1) axial capacity of piles bearing above bedrock, including friction-only piles in clay and friction plus end-bearing piles bearing in dense sand
- 2) impacts of raising site and surrounding street grades, including settlement and downdrag, and measures to mitigate adverse impacts, including discussion of surcharge/wick drains, Geofoam, ground improvement/deep soil mixing beneath streets, and pile-supported streets
- 3) preliminary geotechnical recommendations for design of the Mission Rock Square garage (MRSG)
- 4) liquefaction mitigation considerations, including discussion of deep dynamic compaction (DDC), compaction grouting, rapid impact compaction (RIC), and stone columns

We have previously studied the Mission Rock development site by performing: 1) a preliminary geotechnical investigation at Seawall Lot 337 (SWL337), 2) a liquefaction and lateral spreading evaluation for SWL337 and Pier 48 shoreline, and 3) a geotechnical evaluation of the shoreline conditions at Pier 48. The results of these evaluations were presented in reports dated 8 September 2011, 23 December 2013, and 5 March 2014 (draft), respectively.

## PROPOSED DEVELOPMENT

Plans for the SWL337 site, which is bound by Terry-A. Francois Boulevard on the north and east, Third Street on the west, and Mission Rock Street on the south, include constructing 12 structures between 90 and 240 feet in height (Blocks A through K, mixed residential and commercial), a large open park in the central portion of the site (Mission Rock Square), another large open park at the northern portion of the site (China Basin Park), a three-level, below-grade parking garage beneath Mission Rock Square (MRSG), and associated infrastructure, including streets, sidewalks, and utilities, as shown on Figure 1. We understand site grades will be raised to accommodate future sea level rise; the high point will be at the middle of the site at Mission Rock Square and may be about four to six feet above existing and surrounding Third Street and Terry Francois Boulevard grades. We further understand up to 1-1/2 and 4-1/2 feet of fill was placed recently (since 1997) to raise grades along the southern approximately 750 to 800 feet of Third Street adjacent to SWL337 and Mission Rock Street, respectively, and no new fill is planned along either of these streets or along Terry Francois Boulevard. On the basis of a review of drawings by Perkins + Will (Option 1 – Channel Street/Channel Plaza Entry/Exit Ramp Plan, dated 17 December 2013), it appears the lowest finished floor of the garage will be approximately 30 feet below the proposed finished grade of Mission Rock Square Park. Pier 48 will also be upgraded and be part of the Mission Rock Development.

## SUBSURFACE CONDITIONS

Originally, the site was below water in a shallow bay known as Mission Bay. Starting in the 1880s, the bay was reclaimed by placing fill. Based on historic maps, we believe the majority of the site was reclaimed between 1880 and 1906. Some of the material used to reclaim the site is likely building rubble and debris from the 1906 San Francisco earthquake.

Boring logs from investigations of the site and the site vicinity indicate the site is underlain by approximately 13 to 37 feet of heterogeneous fill which varies in density and, in some areas, contains rubble comprised of brick, rock and debris. The fill is underlain by approximately 46 to 72 feet of weak, soft to medium stiff, compressible clay, locally referred to as Bay Mud. Where tested, the Bay Mud at the site appears to be slightly overconsolidated, which indicates that settlement of the Bay Mud is complete under the weight of existing fill. The deeper fill material (below a depth of about 20 to 25 feet) adjacent to thin fill (thinner than about 15 feet) is indicative of a "Bay Mud wave". A Bay Mud wave can occur when heavy fill loads are placed on the Bay Mud and cause a bearing capacity failure of the Bay Mud. As the Bay Mud fails, the gravel sinks into the soil and the Bay Mud pushes up around the failure zone, causing the thick and thin fill soil profile. The Bay Mud wave fill material encountered at this site is generally comprised of clayey gravel and gravelly clay.

The borings drilled at the site indicate the Bay Mud is generally underlain by an older marine clay, known as Old Bay Clay that is 68 to 74 feet thick where explored. Old Bay Clay is typically stiff to very stiff and overconsolidated. In one area of the site, a 28-foot-thick layer of dense to

---

very dense clayey sand was encountered below the Bay Mud, which was, in turn, underlain by Old Bay Clay. Sand may be present beneath the Bay Mud in other unexplored areas of the site, as well.

Alluvial sand and clay layers are typically encountered below the Old Bay Clay. Dense to very dense sand layers with varying fines contents are present below the Old Bay Clay in some of the borings around the site. The top of this sand layer was encountered at approximately 165 to 180 feet below the existing ground surface and, where present, the sand is about 10 to 15 feet thick near the project site. Based on available borings this sand layer is not present across the entire site and, where present, varies in thickness, fines content, and density.

The top of the bedrock surface has been encountered in borings around the site at depths of about 160 feet (near the northwest corner of the site) to 260 feet (in the northeast corner of the site) below the ground surface. The bedrock surface appears to be steeply sloping down from west to east in the northern portion of the site and more gently sloping up along the eastern side of the site from a depth of 260 feet at the northeast corner to 220 feet at the southeast corner. The bedrock surface and quality are expected to vary significantly across the site.

Groundwater was encountered at the site and in the site vicinity approximately 7 to 9 feet below the existing ground surface (bgs), corresponding to approximate Elevations 91 to 93 feet<sup>1</sup>, but has been found within five feet of the ground surface at some sites in Mission Bay. No springs or seepages were observed on site.

## **AXIAL PILE CAPACITY FOR PILES BEARING ABOVE BEDROCK**

We provided estimates of axial and lateral capacities of 14-inch steel H-piles driven to bedrock in our preliminary geotechnical investigation report, dated 8 September 2011. Since then, the design team has requested preliminary axial capacities for piles bearing above bedrock, i.e. friction-only piles in clay and friction plus end-bearing piles bearing in dense sand. Preliminary pile capacities for all of these cases are presented below.

### **End-Bearing Piles**

Piles can typically encounter refusal in very dense, relatively clean sand layers (typically less than 10 percent fines, passing the No. 200 sieve), at least 10 feet thick. If significant fines are present, the pile will generally continue driving through the layer. Although some borings encountered a relatively dense sand at depth, a continuous sand layer does not appear to be present across the site. However, as described in the subsurface section above, there may be

a dense, end-bearing sand layer present below the Bay Mud in a few areas of the site; it should be noted that this condition is not typical across Mission Bay sites. Additionally, dense sand may be present below the Old Bay Clay in some areas of the site. The capacities provided in our preliminary report are for piles with downdrag loads on them. We have been requested to provide capacities of piles without downdrag loads imposed on them. For completeness, we are including end-bearing pile capacities for piles bearing in dense sand or bedrock for driven 14-inch steel H-piles or 14-inch-square precast prestressed concrete piles with no downdrag in Table 1.

**TABLE 1**  
**Preliminary Estimated Single Pile Axial Capacity**

**Piles (No Downdrag)**

| <b>Estimated Pile<br/>Tip Elevation<br/>(feet, SFCD +<br/>100 feet)</b>              | <b>Anticipated<br/>End-Bearing<br/>Condition</b> | <b><math>Q_{ultimate}</math><br/>Axial Capacity<br/>(kips)</b> | <b><math>Q_{allowable}</math><br/>Dead plus Live<br/>(kips)</b> | <b><math>Q_{allowable}</math><br/>Total Design<br/>Load<br/>(kips)</b> |
|--|--|--|---|--|
| Average of -150  | Bedrock  | 960  | 480   | 640  |
| 30<br>(representative<br>of conditions in<br>the vicinity of<br>Boring<br>BSWL337-2) | Dense Sand<br>just below Bay<br>Mud              | 500  | 175   | 230  |
| -60  | Dense Sand<br>below Old Bay<br>Clay              | 860  | 430   | 570  |

Notes:

- 1) Capacities of piles presented in Table 1 represent the capacity of the soil and bedrock only; the structural capacity of the pile should be checked and should govern if less.
- 2) For the bedrock and deeper sand (tip at Elevation -60 feet) end-bearing piles,  $Q_{allowable}$  includes a factor of safety of 2 (these capacities are based on nearby pile load tests).
- 3)  $Q_{allowable}$  for the shallower sand end-bearing piles (tip at Elevation 30 feet), dead plus live loads represents a factor of safety of 2 for friction and 3 for end-bearing.
- 4)  $Q_{allowable}$  for total design loads (including earthquake loads) represents a 1/3 increase over  $Q_{allowable}$  for dead plus live loads.

## **Friction-Only Piles Bearing in Clay**

We developed preliminary friction-only capacity for piles extending below the Bay Mud and gaining friction in the sand and clay below the Bay Mud; these capacities are presented on Figure 2. The capacities shown on Figure 2 consider:

- capacity starting at the bottom of the Bay Mud (see Figure 1 for estimated contours of the bottom of Bay Mud elevations)
- piles do not gain capacity in the fill and Bay Mud
- a factor of safety of 2

## **IMPACTS OF RAISING SITE AND SURROUNDING STREET GRADES**

As previously described, site grades will be raised to accommodate future sea level rise; the high point will be at the middle of the site at Mission Rock Square and may be about four to six feet above surrounding Third Street and Terry Francois Boulevard grades. We further understand up to 1-1/2 and 4-1/2 feet of fill was recently placed to raise grades along the southern portion of Third Street and Mission Rock Street, respectively, and no additional fill is planned along either of these streets or along Terry Francois Boulevard.

Using soil fill to raise grades will create a new cycle of consolidation settlement of the Bay Mud beneath the site, causing ground settlement of up to several feet. This settlement will create differential settlement between pile-supported buildings, where there will be little to no settlement, and surrounding streets, sidewalks, and other improvements. The differential settlement will affect utility connections and building entrances. The settlement will also cause an additional load (downdrag) to act on piles on the order of 200 to 225 kips, as the fill and Bay Mud move downward relative to the pile, thus reducing the pile capacity.

Where site grades have been raised in the public right-of-way around the site, the design team will need to accommodate the effects of settlement. Within the site, however, there are a variety of ways the site grades can be raised. The design team has explored several alternatives to adding soil fill loads to the site, including:

- preloading the site with soil mound surcharge and wick drains to "pre-settle" the Bay Mud, such that adding new fill would not cause new settlement of the Bay Mud (Surcharge and Wick Drains)
  - Because of the Giants' baseball operations and parking needs and the time required for the surcharge program, this option was deemed to be infeasible; the mounds would need to be at least ten feet tall, making parking access impractical.

**LANGAN TREADWELL ROLLO**

Mission Rock Development-Seawall Lot 337  
San Francisco, California  
Preliminary Geotechnical Recommendations and  
Summary Memorandum No. 1  
Langan Project No. 750604203  
26 January 2016 - Page 6 of 9

- improving the ground through the bottom of the Bay Mud using deep soil mixing (DSM) (Ground Improvement)
  - We understand that for DSM to be a cost-effective alternative over piles, the depth of the soil to improve should be less than about 30 to 40 feet. With the thickness of fill and Bay Mud at this site averaging on the order of 90 feet, it would be cost prohibitive and impractical to try to improve the ground to support new fill loads.
- using lightweight foam (geofoam, or similar) to raise site grades (geofoam)
  - Utilities and streets would need to be supported on and within geofoam; when they needed to be repaired, the geofoam would need to be cut through and replaced in kind. We anticipate on-going maintenance of the geofoam would be required, which could be difficult.
  - Several of the gravity-fed utilities require that trenches be on the order of 10 to 12 feet deep; this would put Geofoam below groundwater, which renders installation and maintenance difficult and impractical.
- supporting the streets and utility corridors on piles (Pile-Supported Streets)
  - This option was deemed to be the most practical, economical, and feasible for the site because:
    - relatively little street and utility settlement would occur and, thus, relatively little to no differential settlement between pile-supported streets and adjacent pile-supported buildings would occur
    - by pile supporting the streets, no new fill would be required; therefore, no downdrag loads would be induced on new piles supporting adjacent buildings (except where the streets surrounding the site have been raised)

Therefore, on a preliminary basis, the Mission Rock design team is moving forward with evaluating pile-supported streets and utility corridors for the proposed development.

We estimate that, due to the relatively recent placement of new fill along the southern portion of Third Street and along Mission Rock Street, new piles along the western and southern edges of SWL337 will be subjected to downdrag. We estimate this will affect piles for the southern 50 feet of planned structures at Parcels D and H and the proposed Bridgeview Street and for the western 25 feet of Parcels B, C, and D and the proposed Channel and Bosque Streets.

## PRELIMINARY RECOMMENDATIONS FOR MISSION ROCK SQUARE GARAGE

Plans are to construct a three-level below-grade garage below the Mission Rock Square park and surrounding streets that will abut proposed Parcels B, C, E, F, I, and J, as shown on Figure 2. Preliminary plans show that the proposed lowest garage finished floor will be at approximate Elevation 73 feet. We are currently planning a geotechnical investigation in the

---

MRSB footprint to develop site-specific preliminary geotechnical recommendations for design; however, we have performed preliminary analyses based on the existing data at the site, and have the following preliminary conclusions:

- We are anticipating that the structural loads of the MRSB plus some new soil atop the garage may be nearly balanced by the weight of soil removed for the excavation of the MRSB, such that the new loads may be nearly a "net zero" addition.
- Although there may be a nearly "net zero" new load addition, there will be some rebound/heave of Bay Mud below the garage due to removal of soil load and some recompression of the Bay Mud as the new loads are applied.
- We anticipate it may be difficult logistically to add the same amount of fill at the proposed street and ramp areas as can be added in the park area, such that there may be some differential settlement between these structures.
- We are anticipating that a pile-supported mat or "raft" foundation system may be appropriate for support of the MRSB; piles will likely be required mainly for settlement and uplift/heave control rather than actual structural load support.
- The shoring system should consist of a relatively rigid soil-cement-mixed, secant pile, soldier pile tremie concrete (SPTC) or diaphragm cutoff wall to resist earth and water pressures
- With a cutoff shoring wall extending into relatively impermeable Bay Mud, only the interior of the excavation will require dewatering.
- A concrete working pad with steel reinforcement should be constructed at the base of the excavation to reduce the potential for base heave and provide a relatively stable working pad for construction activities.
- On a preliminary basis, we estimate the allowable bearing capacity of the Bay Mud at Elevation 73 feet is on the order of 1,400 pounds per square foot (psf) for the temporary construction condition; this value includes a factor of safety of 2. For the permanent condition, we estimate the allowable bearing capacity of the Bay Mud at Elevation 73 feet is on the order of 1,900 psf; this value includes a factor of safety of 3. Care should be taken to minimize disturbance of the Bay Mud during construction. Disturbed Bay Mud will have lower strength and lower bearing capacity.

## LIQUEFACTION MITIGATION CONSIDERATIONS

As discussed in our 23 December 2013 letter, *Liquefaction and Lateral Spread Potential at Seawall Lot 337*, there is a potential for the fill across the majority of the site to liquefy<sup>2</sup> and settle during a major earthquake. Additionally, we estimate there are localized areas within the site that are susceptible to lateral spreading<sup>3</sup> as a result of liquefaction.

If liquefaction occurs, the ability of piles to resist lateral loads will be reduced, induced moments in the piles will be increased, and passive resistance at basement walls, pile caps and grade beams will be reduced. Where lateral spreading occurs, additional loading on piles and basement walls will occur due to the soil movement, which could cause significant foundation damage.

The Mission Rock design team is currently undergoing a study of the comparison of effects on design with and without liquefaction at the site. However, based on our experience, it may not be practical to design a foundation system to accommodate the loss of lateral capacity due to liquefaction and the lateral movement from lateral spreading. Deep foundation elements such as piles would need to be designed to resist large lateral deflections and associated moments.

Should it be decided to improve the ground against liquefaction, on the basis of our experience with different methods of improvement, we judge that the most appropriate methods to mitigate the potential for liquefaction and lateral spreading to occur at the site are:

- deep dynamic compaction<sup>4</sup> (DDC)
- stone columns<sup>5</sup>

---

<sup>2</sup> Liquefaction is a transformation of soil from a solid to a liquefied state during which saturated soil temporarily loses strength resulting from the buildup of excess pore water pressure, especially during earthquake-induced cyclic loading. Soil susceptible to liquefaction includes loose to medium dense sand and gravel, low-plasticity silt, and some low-plasticity clay deposits.

<sup>3</sup> Lateral spreading is a phenomenon in which surficial soil displaces along a shear zone that has formed within an underlying liquefied layer. The surficial blocks are transported downslope or in the direction of a free face, such as a bay, by earthquake and gravitational forces. Lateral spreading is generally the most pervasive and damaging type of liquefaction-induced ground failure generated by earthquakes.

<sup>4</sup> Deep dynamic compaction (DDC) consists of the systematic dropping of a 10- to 20-ton weight or tamper from heights as high as 40 to 80 feet. The weight or tamper typically drops about 5 to 15 times per location at a rate of one to three drops per minute. Depending on the total energy input into the ground and subsurface conditions, deep dynamic compaction can generally be effective at densifying granular soils up to 20 to 30 feet deep.

<sup>5</sup> Stone columns are a ground improvement technique that results in in-situ densification of granular soil. Stone column installation is accomplished using vibrating probes that are inserted to the desired depth of improvement and withdrawn. The voids created through densification are backfilled with gravel or crushed rock and compacted while withdrawing the probe, leaving a dense stone column typically 3 to 4 feet in diameter surrounded by densified soil.

Preliminary Geotechnical Recommendations and  
Summary Memorandum No. 1  
Langan Project No. 750604203  
26 January 2016 - Page 9 of 9

Compaction grouting<sup>6</sup> and rapid impact compaction<sup>7</sup> (RIC) were also considered; however, both of these ground improvement methods were rejected for this site. Because of the grout injection pressures required for compaction grouting, we believe there is insufficient overburden (soil weight) to resist heave and properly improve the fill. Additionally, it has been our experience across Mission Bay that RIC has been only moderately successful in improving the ground and mitigating the potential for liquefaction and lateral spreading and, when successful on recent projects, the ground improvement was evident only in the upper about 10 feet. There are potentially liquefiable layers at the site that extend deeper than 10 feet below ground.

Further details regarding the use of DDC and stone columns at the site are provided in our 23 December 2013 letter.

## PLANNED INVESTIGATION AND EVALUATIONS

We are planning additional subsurface investigation at the site, including drilling four borings at the four corners of the proposed MRSG footprint and three additional borings in the western portion of the site to fill in data gaps from previous investigations. Drilling for the additional investigation is currently scheduled to begin on 16 February 2016. The results of our investigation will be presented in a data report, which will present all of the previous borings and cone penetration tests (CPTs) performed at the site and the laboratory test results. We will also perform additional engineering analyses for the MRSG and will present those results and preliminary recommendations in a separate letter report. Other on-going analyses include evaluating the impacts on design with and without liquefaction, including site-specific seismic ground response analysis.

We trust that the foregoing is sufficient for the design team's needs at this time. If you have any questions, please call.

Attachments: Figure 1 – Proposed Site Plan

Figure 2 – Allowable Friction Capacity, Driven 14-Inch Steel H-Pile and  
14-Inch Square Precast Prestressed Concrete Piles

<sup>6</sup> Compaction grouting is a ground improvement technique in which cement grout is injected under high pressure to increase the density of the soil, thereby reducing the liquefaction potential.

<sup>7</sup> The rapid impact compaction method uses a Rapid Impact Compactor (RIC) to impart energy by dropping a 7.5 ton weight from a controlled height of about 1 m onto a patented foot. Applications include compaction of loose soils to improve bearing capacity and mitigation of liquefaction potential.

## MEMORANDUM

**To:** Jon Knorpp, Managing Director

**From:** Christopher Devick P.E. and Dilip Trivedi P.E.

**Date:** September 06, 2016

**Subject:** Mission Rock Development Seawall Lot 337  
Sea Level Rise Adaptation Strategy

**M&N Job No.:** 7530-02

This memorandum serves to summarize the present understanding of sea level rise projections being used by regulatory agencies, flood elevations proposed by Federal Emergency Management Agency (FEMA), minimum proposed grades and a proposed adaptation strategy for the Mission Rock Development Project in San Francisco, CA.

### Sea Level Rise Projections

In March 2013, the Sea-Level Rise Task Force of the Coastal and Ocean Working Group of the California Climate Action Team (CO-CAT) released their State of California Sea-Level Rise Guidance Document based on the recently published (June 2012) National Academy of Sciences (NAS) Sea-Level Rise for the Coasts of California, Oregon, and Washington. Table 1 summarizes the sea level rise (SLR) projections, including the low and high range values, for the San Francisco Bay area. Further, the CO-CAT guidance recommends that sea level rise values for planning be selected based on risk tolerance and adaptive capacity.

**Table 1 Sea Level Rise Projections for San Francisco, California (feet; NAS 2012 Report)**

| Year | Projections | Ranges      |
|------|-------------|-------------|
| 2030 | 6 ± 2 in    | 2 to 12 in  |
| 2050 | 11 ± 4 in   | 5 to 24 in  |
| 2100 | 36 ± 10 in  | 17 to 66 in |

### Reference Water levels

Water levels used in developing the sea level rise strategy included the Base Flood Elevation for the development areas, and King Tide for China Basin Park as described below.

The *Base Flood Elevation* (BFE) is a regulatory standard for insurance purposes. The definition of the BFE, per FEMA, is "The flood having a one percent chance of being equaled or exceeded in any given year." Since development areas with building structures are subject to flood plain ordinance review by City building permit officials, the BFE is an appropriate reference water level to use for establishing finish floor elevations. The BFE can be represented by the 1% still water level, which was estimated based on

work conducted by BakerAECOM<sup>1</sup> for a flood study of the Central Bay region that included the vicinity of the proposed project.

*King tide* is a colloquial term for an especially high tide, such as a perigean spring tide that occur when the gravitational pull of the sun and the moon are in alignment. They occur only a few times a year and therefore are a good indicator for the potential disruption of use for areas such as open space and park areas. The elevation representative of a king tide was estimated based on a review of tidal elevation observations at the National Oceanographic and Atmospheric Administration Alameda, CA tide gauge. The estimated BFE and King Tide for the Project site are provided in Table 2.

**Table 2: King Tide and Base Flood Elevations**

| <b>Water Level</b>                                     | <b>NAVD88,<br/>feet</b> | <b>Old City<br/>Datum, feet</b> | <b>Mission Bay<br/>Datum, feet</b> |
|--|-------------------------|---------------------------------|------------------------------------|
| <b>King Tide</b>                                       | 7.3                     | -4.0                            | 96.0                               |
| <b>Base Flood Elevation<br/>(1% Still Water Level)</b> | 9.8                     | -1.5                            | 98.5                               |

#### Proposed Minimum Grades

The proposed minimum grades were developed for the project based on the following criteria:

- Reserve the entire 100-foot shoreline band for public access;
- Elevate buildings and immovable facilities high enough such that adaptations would not be necessary even for conservative estimates of SLR;
- Rather than elevate the zone between the development area and the shoreline for flood protection, maximize access opportunities to the water.

Based on these criteria, the following design elements have been adopted:

1. For the development area, the proposed strategy will raise existing grades to a minimum elevation of 104 feet Mission Bay Datum (MBD), which will provide a minimum of 5.5 feet (66 inches) of freeboard above present day BFE. Streets placed on fill would be pile supported within the raised development grade. This is necessitated by geotechnical considerations.
2. For the China Basin Park area, the promenade and Bay Trail are proposed to be raised to elevation 102 feet MBD which will provide approximately 6 feet of freeboard above the King Tide (or 3.5 feet of freeboard above present day BFE). Proposed grading for the Park includes transitioning from BayTrail/Promenade elevations of 102 MBD to development grade elevations of 104 feet MBD.

<sup>1</sup> BakerAECOM. 2012. A Central San Francisco Bay Coastal Flood Hazard Study San Francisco County, California Study Report. November 2, 2012.

3. The shoreline, Pier 48, Pier 50, Terry A. Francois Boulevard, 3<sup>rd</sup> Street and Mission Rock Street will remain at current elevations; proposed grading includes transitioning from these locations to Bay Trail/Promenade elevations of 102 feet MBD.

The above set of criteria and proposed grades are based on the principles of 'living with the Bay' and 'managed retreat' rather than elevating shoreline spaces now against future SLR. It also implies that the proposed improvements along the shoreline are for the purpose of flood protection for the open space area and do not serve as a levee or flood protection element for the developed area.

#### Shoreline Adaptation Strategy

In the development footprint, the proposed minimum grades (104 MBD) provide an elevation which will address potential flooding for even the highest estimates of sea level rise in 2100 for the San Francisco Bay Area by the NRC. Therefore, based on current sea level rise projections, the earliest when adaptations for the development area may be needed is 2100.

For the space between the development area and the Bay Trail/Promenade, proposed minimum grades (102 MBD) will address potential flooding beyond 2080 for even the highest estimates of sea level rise. From a functional perspective, the proposed grades (102 MBD, or 6 feet above King Tide) will address potential future flooding from King Tide events even beyond 2100. For higher estimates of sea level rise, the China Basin Park area functions as the space where future adaptations could be creatively implemented to maintain flood protection for the constructed public access features. Strategies to address larger amounts of sea level rise may include modifications to raise the promenade and reconfiguring the shoreline protection to provide flatter slopes and wave breaks. This will ensure continued protection of the public access open space areas from flooding.

In general, adaptation actions at the shoreline would be implemented when published information from NOAA indicate that flooding to the public access areas will occur during king tides. To implement future adaptations for sea level rise for the Park Area, a fund from an infrastructure financing district or community facilities district could be established now for the improvements needed to address sea level rise greater than the 3.5 feet (42 inches) allowance that is included in the proposed grades.

## **1 INTRODUCTION**

---

Through this Request for Qualifications ("RFQ"), Seawall Lot 337 Associates LLC ("Master Developer") is soliciting Statements of Qualifications ("SOQs") from energy services companies ("Respondent" or "DES Developer") that describe their proposal and capabilities to build, own, and operate ("BOO") a district scale heating and cooling plant as well as operate and maintain a district scale distribution system (the "Project") in the Mission Rock development ("Project Site"), which is a private real estate development located on public land that will be ground leased from the Port of San Francisco for a period not to exceed 75 years.

The intention is for the Project to be developed through a private-to-private partnership between the Master Developer and DES Developer. The Master Developer is open to a variety of business models and commercial structures and is input from the DES Developer to this end.

Master Developer is interested in selecting a firm that has direct experience in developing, designing, building, financing, operating and maintaining projects similar to the Project, and that will deliver the Project to meet the goals, standards, performance requirements, and schedule outlined this RFQ.

## **2           PROCUREMENT INFORMATION**

---

### **2.1           Procurement Process**

This RFQ provides the information necessary for Respondents to prepare and submit SOQs for consideration by Master Developer. The following describes the general procurement process:

- Collecting SOQs in response to this RFQ is the first step in selecting a firm.
- Once SOQs are received, Master Developer will choose a shortlist of Respondents for in depth site visits and interviews.
- After interviews, a DES Developer will be selected and enter into a Memorandum of Understanding (MOU), under which Master Developer and DES Developer will negotiate the final terms and conditions of an Energy Service Agreement (ESA).

This RFQ is not an offer to enter into an agreement with any Respondent; it is a request to receive SOQs from companies interested in developing the Project. The Master Developer reserves the right to reject all SOQs, in whole or in part, and/or enter into negotiations with any party to provide such services, whether or not a SOQ has been submitted. Master Developer will not have any obligation to any Respondent unless and until it has entered into a written agreement with terms and conditions agreed to by to Master Developer. Master Developer may enter into discussions or negotiations with a Respondent with respect to any SOQ or otherwise, which shall not be deemed to be an acceptance of such SOQ or an agreement with the Respondent.

The City and County of San Francisco ("City"), the Port of San Francisco ("Port"), and various other agencies are aware of the Project and have been involved in the process to date; however, it should be noted that this is a private RFQ that does not fall under the City's Public Procurement Policies or any other competitive bidding requirements. During the RFQ process, no Public Agency may be contacted in regards to the Project.

#### **2.1.1           Procurement Schedule**

- Release: March 28, 2016
- Onsite Project Presentation and Q&A: Week of April 11<sup>th</sup>  
    Location:  
    Arup Office  
    560 Mission St, Floor 7  
    San Francisco, CA 94105
- Submission Due Date: May 13, 2016
- Anticipated Selection Date: June 15, 2016
- MOU Execution: no later than June 30, 2016
- ESA Substantially Complete: November 1, 2016 (estimated)

## **2.2 Submission of Qualifications**

Statements of Qualifications must be submitted via internet link only, which is provided below. No hard copies will be accepted.

[Internet link to be provided]

SOQs must use a minimum of 11 point font and be no more than 25 pages not including attachments. Attachments should be limited to items such as resumes, information on requested projects, and other materials pertinent to the evaluation but not suitable for including in written response.

Materials submitted as part of the SOQ will be subject to provisions in the NDA executed by the Respondents prior to receiving this RFQ. However, Master Developer may wish to use ideas or concepts presented by Respondents in the SOQ and reserves the right to do so subject to confidentiality.

## **2.3 Questions**

Respondents shall direct all questions regarding this RFQ in writing to the Point of Contact. The Point-of-Contact may or may not choose to answer questions and may share questions and answers with all responding parties unless it is clearly marked as confidential information by the submitting Respondent.

### **2.3.1 Point of Contact**

The below individuals are designated as Point-of-Contact for this RFQ:

Fran Weld, Vice President Development, San Francisco Giants  
[fweld@sfgiants.com](mailto:fweld@sfgiants.com)

Orion Fulton, Sr. Manager, Arup  
[Orion.fulton@arup.com](mailto:Orion.fulton@arup.com)

## **2.4 Evaluation of Qualifications**

Master Developer reserves the right to select the best Respondent for its partnership requirements; however, in general, the evaluation of the Qualifications shall be based on, but not limited to:

- Prior project experience with developing and operating similar scale systems;
- History of partnerships with other organizations, experience with urban systems with multiple off-takers;
- Ability to vertically integrate the development process; and
- Compatibility with Master Developer's stated goals and requirements in this RFQ.

Master Developer intends to evaluate SOQs submitted in response to this RFQ based on the completeness of the information provided, the business and technical merits as they address the goal of the Project, and any other factors that the Master Developer determines.

Following the submission of SOQs, Master Developer may request supplemental information from Respondents on an individual or group basis and may elect to meet with certain Respondents in person. Master Developer intends to select a Respondent that will serve the best interests of the Project as determined by Master Developer in its sole discretion.

## **2.5 No Reimbursement for Costs**

In submitting an SOQ, Respondent acknowledges and accepts that any costs incurred from the participation in this RFQ procurement process shall be at the sole risk and responsibility of the Respondent, and the Master Developer will not compensate Respondents for any expenses incurred in qualifications preparation or for any presentations that may be made.

## **2.6 Representations**

Master Developer makes no representations of any kind that an award will be made as a result of this RFQ. Master Developer reserves the right to accept or reject any or all SOQs, delete any item/requirements from this RFQ when deemed to be in Master Developer's best interest, consider factors not included in this RFQ, or select a DES Developer that did not respond to the RFQ.

## **2.7 Eligible Respondents**

Only individual firms or lawfully formed business organizations may apply. The Master Developer intends to contract only with a Prime Firm. This does not preclude a Respondent from using subcontractors or consultants, but a Prime Firm must be identified and be the entity submitting the SOQ. The Prime Firm must demonstrate in the SOQ it has the ability to represent any and all subcontractors or members of its team. Joint Ventures are not encouraged.

## **2.8 Additional Contract Requirements**

Under its agreement with the Port, Master Developer, as well as The Prime Firm and all other members of the Project Team, are obligated to comply with all applicable City and Port requirements in effect at the time that Master Developer's Development Agreement with the Port is executed. In submitting an SOQ, a Respondent acknowledges and accepts that if selected, it will be obligated to comply with all City and Port requirements, including without limitation, Non-Discrimination in Contracts and Property Contracts (Admin. Code Chapters 12B and 1C) and Health Care Accountability Ordinance (Admin. Code Chapter 12Q). DES Developers are obligated to become familiar with all applicable local, state, and Federal requirements and to comply with them fully as they are amended from time to time. City ordinances are currently available on the web at [www.sfgov.org](http://www.sfgov.org). It is a stated goal of Master Developer to promote and encourage contracting and subcontracting opportunities for Local Business Enterprises ("LBE") in all contracts. The target goals for each phase of development are:

- Entitlements 10%
- Horizontal Infrastructure Development 20%

### 3 GLOSSARY OF DEFINITIONS

---

The following terms and acronyms are used within this RFQ:

|                    |   |
|--------------------|---|
| Arup               | Master Developer's procurement advisor  |
| BOO                | Build Own Operate   |
| BTU or btu         | British Thermal Unit  |
| CHP                | Combined heat and power system  |
| City               | City and County of San Francisco  |
| CUP                | Central Utility Plant   |
| DES                | District Energy System  |
| DES Developer      | The entity selected as the preferred contracting entity via the RFQ evaluation process, that once selected, that will perform the works described in this RFQ and its SOQ |
| Project            | The district scale heating and cooling plant and related O&M functions  |
| EIR                | Environmental Impact Report   |
| ESA                | Energy Service Agreement  |
| ETS                | Energy Transfer Stations  |
| GAAP               | Generally accepted accounting principles  |
| gsf                | Gross square feet   |
| HUB                | Historically underutilized business   |
| IFRS               | International financial reporting standards   |
| kW                 | Kilowatt  |
| kWh                | Kilowatt-hour   |
| Lead A/E Firm      | Lead architecture and/or design engineering firm  |
| Lead Contractor(s) | Contractor(s) in the Project Team who are responsible for engineering, procurement and construction ("EPC") and Operation and Maintenance ("O&M") functions               |
| Master Developer   | Seawall Lot 337 Associates LLC  |
| MMBTH              | One million BTUs per hour   |
| Mission Rock       | The name for the development of Seawall Lot 337 and Pier 48, for the purposes of this RFQ, see "Project Site" below   |
| MOU                | Memorandum of Understanding   |
| MW                 | Megawatt  |
| O&M                | Operation and Maintenance   |
| PA                 | Project Agreement   |
| PG&E               | Pacific Gas & Electric  |
| psig               | Pounds per square inch gauge  |
| Prime Firm         | The organization considered to be lead Respondent/DES Developer entity (if not a joint venture)   |
| Port               | Port of San Francisco   |
| Project Site       | Seawall Lot 337 and Pier 48; the area that the DES serves   |
| Project Team       | All key entities that comprise the DES Developer organization   |

|                     |  |
|---------------------|--|
| Public Agency       | Port, City, SFPUC, PG&E, or other agency representing the public interest                          |
| Respondent          | The contracting organization/entity that submits the SOQ, on behalf of the Project Team.           |
| RFQ                 | Request for Qualifications   |
| SEC                 | Security and Exchange Commission   |
| SFPUC               | San Francisco Public Utilities Commission  |
| SOQ                 | Statement of Qualifications  |
| T&C's               | Terms and conditions   |
| Vertical Developers | Future holders of individual ground leases within the Project Site to build commercial real estate |

#### 4.1 Background

In 2008, the San Francisco Giants won a public bid for the exclusive development rights to this property. Over the last eight years, the Giants, which formed Sea Wall Lot 337 Associates LLC to act as master developer, have worked with the community to develop a comprehensive land use plan, and in November of 2015, this plan was voted on and passed by the voters of San Francisco.

A key element of the future neighborhood is a robust sustainability plan. This plan will outline topics such as material selection, climate change resiliency, water re-use, and energy; and the DES is expected to play a central role in achieving some of the sustainability goals.

##### 4.1.1 Urban context

Given its size and location, SWL 337 is one of the Port's most desirable development sites. Consistent with the Port's land use policy document, the Waterfront Land Use Plan, the Port engaged in a multi-year public planning process culminating in the following vision statement for development of the parcel:

*Create a vibrant and unique mixed-use urban neighborhood focused on a major new public open space at the water's edge. This new neighborhood should demonstrate the highest quality of design and architecture, and the best in sustainable development with a mix of public and economic uses that creates a public destination which enlivens the Central Waterfront, celebrates the San Francisco Bay shoreline, and energizes development at Mission Bay.*

The Project Site also includes Pier 48, a pile-supported 212,500 square-foot facility containing about 181,200 square feet of enclosed warehouse space and a 31,300 square-foot valley. Pier 48 is bounded by China Basin on the north, Pier 50 on the south, and Terry Francois Boulevard to the west. Pier 48 was originally constructed in 1928 and is the southernmost pier structure in the Port of San Francisco Embarcadero Waterfront Historic District, which is listed in the National Register of Historic Places.

Through the planning process, the Port identified the following objective for Pier 48, if included in any development proposal for SWL 337:

*Propose a use program for Pier 48 that is publicly-oriented and water-related to the extent possible, and which complements and enhances the public use and enjoyment of the major new open space at China Basin. The Pier 48 use program must be consistent with the public trust, and any improvements must comply with the Secretary of the Interior Standards for Rehabilitation.*

#### 4.2 Project Site

Seawall Lot 337 and Pier 48 are owned by the Port of San Francisco, and together form the Project Site. Seawall Lot 337 is a rectangular parcel bound by Terry A. Francois Boulevard to

the north and east, Third Street to the west, Mission Rock Street to the south. Seawall Lot 337 is currently a surface parking lot just south of AT&T Park known as Parking Lot A.

The Project Site will include 8 acres of parks and open space, approximately 3.5 million square feet of development with a mix of housing, offices, parking, and neighborhood serving retail, as well as historic Pier 48 which may become home for a new brewery by Anchor Brewing. More information can be found at <http://missionrock.org/index.html#>.

See Attachment B for a site plan showing land uses and phasing.

#### 4.2.1 Relationship of Parties

- Port of San Francisco: Owners of Project Site
- The City of San Francisco: land use and development regulation,
- Seawall Lot 337 Associates LLC: Master Developer, holds the exclusive rights to develop Mission Rock
- Anchor Brewery: Intended tenant for Pier 48
- Arup: Master Developer's DES concept designer & procurement advisor

#### 4.2.2 Land Use Program and Phasing

##### *Phasing*

The Project Site is divided into 12 buildable Parcels not including Pier 48, 11 of which will be developed in Phases of Parcels. The 11th parcel (parcel D2) would hold the structured parking. The table below shows the draft phasing program, including the Mission Rock ground-level parking and Pier 48:

*Table 1: Phasing Program and Land use details*

| Phase | Parcel  | Land Use    | Building Height | Building Stories | Gross SF (a) |
|-------|---------|-------------|-----------------|------------------|--------------|
| 1     | A       | Residential | 240 ft.         | 23 Stories       | 413,900      |
|       | B       | Office      | 118 ft.         | 8 Stories        | 274,750      |
|       | G       | Office      | 188 ft.         | 13 Stories       | 303,064      |
|       | K       | Residential | 120 ft.         | 11 Stories       | 130,469      |
|       | Pier 48 | Industrial  | n/a             | n/a              | 263,000      |
| 2     | C       | Office      | 188 ft.         | 13 Stories       | 354,826      |
|       | D1      | Residential | 240 ft.         | 23 Stories       | 240,494      |
|       | D2      | Parking     | 100 ft.         | 10 Stories       | 851,130      |
| 3     | E       | Office      | 90 ft.          | 6 Stories        | 141,330      |

| Phase | Parcel              | Land Use    | Building Height | Building Stories | Gross SF (a) |
|-------|---------------------|-------------|-----------------|------------------|--------------|
| 4     | F                   | Residential | 240 ft.         | 23 Stories       | 323,775      |
|       | Mission Rock Square | Parking     | 0 ft.           | 0 Stories        | 227,180      |
|       | H (Flex)            | Office      | 90 ft.          | 6 Stories        | 151,932      |
|       | I (Flex)            | Residential | 120 ft.         | 11 Stories       | 200,315      |
|       | J (Flex)            | Office      | 90 ft.          | 6 Stories        | 151,982      |
| TOTAL | -                   | -           | 1824 ft.        | 153 Stories      | 3,977,647    |

### ***Land Use Program***

A key element of the Master Developer's land use program is the ability to respond to future market demands through flexible zoning. To this end, eight parcels are proposed to be designated as either predominantly residential (Parcels A, D, F, and K) or commercial/office (Parcels B, C, E, and G) above the lower-floor active uses, while three parcels would be flexible to allow either type of land use (Parcels H, I, and J) above the lower floor.

On the flexible parcels, the land uses (i.e., residential or office/commercial), would be determined at the time of filing for design approvals for block development proposals. Parcels designated for flexible zoning would ultimately be developed for either predominantly residential or pre-dominantly commercial/office uses above the lower floor. In all circumstances, ground floor retail and restaurant uses would be included in the flexible zoning parcels. The square footage for the flex option by land use is as follows:

- Commercial: 1,377,884 gsf
- Parking: 1,078,310 gsf
- Production: 263,000 gsf

For more information, the following describes in general terms the type of land uses proposed at the Project Site.

- **Retail, Restaurant, and Ground Floor Spaces.** 241,038 gsf to 244,777 gsf of retail and restaurant space located on the ground floor of residential and commercial buildings throughout the site. These totals do not include development at Pier 48.
- **Housing.** Housing will be located throughout the site, between 1,048 and 1,579 residential units predominantly consisting of one and two bedroom apartments. Housing would be provided on Parcel A, D, F, K and potentially on flexible Parcels H, I, and/or J.
- **Office.** Office space would primarily be located along Third Street and the south end of the proposed Mission Rock Square and at China Basin Park. Between 972,175 gross sq. ft. to 1,361,181 gsf of office space would be developed on Seawall Lot 337. Office uses would be provided on Parcels B, C, E, and G and potentially on the flexible Parcels H, I, and/or J.
- **Open Spaces and Parks.** Approximately eight acres of new and expanded public open spaces would be included: expanded China Basin Park totaling 5.12 acres, Mission Rock

Square totaling 1.1 acres and located in the center of the Project Site. Channel Wharf would be a 0.5-acre, hardscaped plaza, located between Pier 48 and Pier 50. Lastly, the Pier 48 Aprons, totaling 1.1 acres, would be preserved and improved for public access, waterfront promenade, and maritime operations.

- **Parking.** Included in the proposed parking structure on Parcel D at the southwest corner of the Project Site would be 2,300 parking spaces for use by the Project and for the ballpark games and events, and other public parking, including commuter parking/park-and-ride. In addition to the above-grade structural garage parking on Parcel D, 700 parking stalls would be located under Mission Rock Square and adjacent streets. During game days, approximately 2,000 of the parking structure stalls in the two proposed garages would be available for use to the patrons of AT&T Park. An additional approximately 100 parking stalls would be provided within residential and commercial buildings, for a maximum of 3,100 off-street parking spaces.
- **Pier 48.** Pier 48 would be rehabilitated in compliance with the Secretary of the Interior's Standards for the Treatment of Historic Properties, with a mix of uses in the 240,000-sf rehabilitated pier, including light industrial/manufacturing, barging, ancillary office, storage, retail, restaurants, tours, events, and continued maritime operations on the east and south side and along Channel Plaza.

It is currently anticipated that the Anchor Brewing Company would occupy all of the interior usable space of Pier 48 under a 30-year Port interim lease. The retail/restaurant spaces provided at Pier 48 would include 11,000 gsf of brewery retail/exhibition space, 11,000 gsf of brewery restaurant space, and 10,000 gsf of other retail space. An additional 7,875 gsf of office space would be provided on Pier 48. The brewery/distillery would be up to 190,500 gsf and a separate production area would consist of 9,625 gsf.

#### **4.2.3 Site Utilities**

Utility provider contracts are still being developed. The Master Developer is currently undecided between Pacific Gas & Electric (PG&E) and San Francisco Public Utilities Commission (SFPUC) as the power utility. Input on this decision may be solicited from the DES Developer once the MOU is signed.

The opportunity to provide electricity into the development from the DES is described further in Section 5.2.4.

#### **4.2.4 Project Site Entitlement Schedule**

Key milestones in the Mission Rock entitlements are as follows:

- Publish Public Draft EIR July/Aug 2016
- Financial Negotiations with City through September 2016
- EIR Certification January 2017
- Port and City Approvals January 2017
- Regional (BCDC) and State (SLC) Approvals February 2017
- Begin Design of Phase 1 March 2017
- Complete construction of first building in Phase 1 Q1 2019 [approximate]

## 5 DESCRIPTION OF THE PROJECT

### 5.1 Project Goals and Objectives

#### 5.1.1 Project Goal

The Project goal is to develop a district scale solution to heating and cooling buildings at the Project Site that meets the stated performance and sustainability objectives.

#### 5.1.2 Project Objectives

The following are the primary project objectives (described without any order of importance or preference):

- Enter into a long-term contract(s) that provides vertical developers with budget certainty and economic value for thermal services;
- Leverage the creative problem solving capacity of the energy marketplace;
- Be a good steward of natural resources, including water resources; utilize reclaimed water service for cooling tower fill (assuming a source is available);
- Achieve a resilient utility infrastructure (with appropriate redundancy) that will deliver critical energy requirements during normal and emergency conditions;
- Fit proposed CUP or CUPs within allocated parcel space(s) and heights;
- Review, comment, and provide concurrence for DES distribution design;
- Meet Minimum Performance Requirements (see Section 5.1.3); and
- Help achieve the sustainability objectives (see Section 5.1.4).

#### 5.1.3 Minimum Performance Standards

Though not yet formalized, the Master Developer will set energy efficiency and environmental performance thresholds that the DES Developer will need to meet. For purposes of the RFQ, indicative performance thresholds are provided in Table 2 below.

Table 2: Indicative Performance Thresholds

| Annual Average Efficiency   |         |            |        |  |
|-----------------------------|---------|------------|--------|--|
| Chilled water plant         | Maximum | 0.45       | kW/Ton | Inclusive of chillers, all primary & secondary distribution pumps, and heat rejection                |
| Heat recovery chiller plant | Maximum | 0.68       | kW/Ton | Inclusive of chillers, all primary & secondary distribution pumps, and heat rejection                |
| Boiler combustion           | Minimum | 86.5<br>0% | %      | Per individual boiler fuel & btu meter trend data  |
| Chilled water distribution  | Minimum | 98.7<br>5% | %      | Per plant leaving chilled water btu meter & aggregate of customer chilled water btu meter trend data |
| Hot water distribution      | Minimum | 98.2<br>5% | %      | Per plant leaving hot water btu meter & aggregate of customer hot water btu meter trend data         |

#### 5.1.4 Sustainability Objectives for Vertical Development

The Master Developer has sustainability performance requirements and targets for both horizontal and vertical development. <sup>1</sup> These sustainability performance requirements and targets for Mission Rock, shown in Table 3, are consistent with San Francisco Eco-Districts guidelines, of which Mission Rock is a Type-1 Eco-District. <sup>2</sup> The DES Developer will assist in achieving these by delivering energy that is highly efficient and environmentally friendly.

Table 3: Project Site Performance Requirements and Sustainability Targets

| Performance requirements  | Sustainability targets  |
|---|---|
| <ul style="list-style-type: none"><li>• Up to 26% better than ASHRAE 90.1-2010</li><li>• Net zero potable water use for non-potable uses</li><li>• LEED Gold for commercial buildings</li><li>• LEED Gold for residential buildings</li></ul> | <ul style="list-style-type: none"><li>• Each building type can exceed future code and achieve an exceptional level of energy performance.</li><li>• The Mission Rock development looks to improve upon the city's leading emissions performance by further reducing annual carbon emissions associated with energy use by up to 19%.</li><li>• 100% renewable energy by 2030</li><li>• Water conservation and reuse strategies with a target of up to 47% reduction in annual carbon emissions associated with water.</li><li>• Municipal solid waste diversion in San Francisco is about twice the national average, significantly decreasing the GHG emissions associated with landfill waste disposal. As there is still room for improvement in waste diversion, Mission Rock is targeting a further 25% reduction in annual carbon emissions associated with waste, compared to current San Francisco performance.</li></ul> |

#### 5.2 Project Technical Opportunity

The main technical scope is to offer central combined heating and cooling with bay heat rejection and cooling (if permissible). However, there are a number of enhancement opportunities on the technical delivery discussed in this section.

The chosen DES Developer will be required to satisfy themselves of the peak design loads for the Site after the MOU is executed. However, for purposes of this RFQ, Arup's reference design and load calculation shall be used.

The DES is comprised of three major components:

<sup>1</sup> The sustainability plan is currently in draft form and may change during this procurement, with possible input from the DES Developer

<sup>2</sup> <http://www.sf-planning.org/index.aspx?page=3051>

- One or more central utility plants (CUP or CUPs)
- A thermal utility distribution system
- The energy transfer stations (ETS) within each building/parcel

Table 4 summarizes reference design information and further information is provided in subsequent sections and in Attachments D and E:

Table 4: DES conceptual design basic information

| Design and Construction Stage |   |
|-------------------------------|---|
| CUP                           | Central Combined Heating & Cooling + Bay Heat Rejection & Cooling   |
| CUP System                    | <ul style="list-style-type: none"> <li>• Centralized heat recovery chillers</li> <li>• Centralized electric water cooled chillers</li> <li>• Centralized low/medium temperature hot water boilers</li> <li>• Plate-and-frame "free-cooling" heat exchangers (bay-water)</li> <li>• Plate-and-frame "heat-rejection" heat exchangers (bay-water)</li> <li>• Balance of bay-water heat rejection and cooling plant</li> <li>• Minimal cooling towers</li> </ul> |
| Distribution System           | <ul style="list-style-type: none"> <li>• The planning basis for the distribution portion of the DES has assumed a 6-pipe system comprising of:</li> <li>• Chilled water (CHW) supply and return pipes</li> <li>• Heating hot water (HHW) supply and return pipes</li> <li>• Bay water intake and outflow pipes</li> <li>• Parcel level electrical infrastructure</li> </ul>   |

### 5.2.1 Estimated Heating and Cooling by Phase

#### Non-concurrent Peak Loads

The land-use heating and cooling peak load density assumptions (see Attachment E) yield the following peak non-concurrent loads in the tables below.

Table 5: Estimated Non-Concurrent Peak Heating and Cooling – By Parcel

| PARCEL | PRIMARY USE | PARCEL AREA (sqft) | TOTAL GFA (sqft) | Cooling (Tons) | Heating (MMBtu) |
|--------|-------------|--------------------|------------------|----------------|-----------------|
| A      | Residential | 42,150             | 413,900          | 591.3          | 4.1             |
| B      | Commercial  | 40,209             | 274,750          | 686.9          | 4.1             |
| C      | Commercial  | 39,124             | 354,826          | 887.1          | 5.3             |
| D1     | Residential | 9,745              | 240,494          | 343.6          | 2.4             |
| D2     | Parking     | 86,161             | 851,130          | n/a            | n/a             |
| E      | Commercial  | 25,110             | 141,330          | 353.3          | 2.1             |
| F      | Residential | 25,110             | 323,775          | 462.5          | 3.2             |
| G      | Commercial  | 33,057             | 303,064          | 757.7          | 4.5             |
| H      | Commercial  | 31,144             | 151,932          | 379.8          | 2.3             |
| I      | Residential | 32,543             | 200,315          | 286.2          | 2.0             |

| PARCEL | PRIMARY USE | PARCEL AREA (sqft) | TOTAL GFA (sqft) | Cooling (Tons) | Heating (MMBH) |
|--------|-------------|--------------------|------------------|----------------|----------------|
| J      | Commercial  | 31,515             | 151,982          | 380.0          | 2.3            |
| K      | Residential | 17,857             | 130,469          | 186.4          | 1.3            |
| P48    | Production  | 259,328            | 263,000          | 657.5          | 1.3            |

**TOTAL, without P48**

**5,315**

**33.8**

**TOTAL, with P48**

**5,972**

**35.1**

*Table 6: Estimated Non-Concurrent Peak Heating and Cooling, without P48 – By Phase*

| Assumed Phase | Parcel     | Heating (MMBH) | Cooling (Tons) |
|---------------|------------|----------------|----------------|
| 1             | A, B, G, K | 14.1           | 2,222          |
| 2             | C, D1, D2  | 7.7            | 1,231          |
| 3             | E, F       | 5.4            | 816            |
| 4             | H, I, J    | 6.6            | 1,046          |
| <b>Total:</b> | <b>-</b>   | <b>33.8</b>    | <b>5,315</b>   |

### Concurrent Peak Loads

Arup estimates that the concurrent load diversities for the mix of uses in the flex parcel option are:

*Table 7: Load diversities*

|           | Cooling | Heating |
|-----------|---------|---------|
| w/out P48 | 10%     | 2%      |
| w/P48     | 8%      | 2%      |

*Table 8: Estimated Concurrent Peak Heating and Cooling*

|           | Cooling (Tons) | Heating (MMBH) |
|-----------|----------------|----------------|
| w/out P48 | 4,791          | 33.1           |
| w/P48     | 5,517          | 34.3           |

### 5.2.2 Plant Location Considerations

Possible plant locations are constrained by size, phasing, and general location. The potential locations for siting CUP's are illustrated in Figure 1 below.

Figure 1: Potential CUP Siting Locations

Available when parcel is built. Refer to assumed phasing plan elsewhere in the RFQ.

#### ○ Process Plant

- Anchor plant for brewing process
- High pressure steam required
- Medium-high temperature hot water required (170 °F)
- Low temperature chilled water required (< 36 °F)
- Total area is currently unknown

#### ● Comfort Heating/Cooling Plant

- Central plants for building comfort heating & cooling equipment
- Elevated chilled water preferable (> 50 °F)
- Low temperature hot water preferable (< 150 °F)
- Connection to Bay to reduce cooling towers & maximize cooling efficiency
- Total area is between 24K & 35K sf plus some roof space (TBD)
  - Phase 1 Plant ~12K to ~20K sf

A consideration relating to siting the CUP is the nature of Pier 48. It has a limited clear height that roughly ranges between 20 feet at the edges and 35 feet at the core, load bearing limits due to pile foundation and bay mids, and sea level rise considerations.

Potential partners will need to propose solutions that are nimble and flexible so that the complexity and uncertainty introduced by the project phasing can be overcome.

### 5.2.3 Distribution System Considerations

The distribution system routing options are being planned along with other utilities in the public rights-of-way (ROW). Utilities are generally constrained along Exposition St and Bosque St. Further, utilities will not be placed in the Terry A Francois Blvd ROW until parcels I/J/K are built. A large parking structure is planned at the podium level beneath Mission Rock Square between parcels B and C to the West and parcels I and J to the East and between Exposition St to the North and Bosque St to the South. Rights-of-way for Shared Public Way and Bridgeview Way are currently being considered for the distribution system but this may require running the pipes inside the garage. Finally, the ROW north of parcels A, G, and K and South of China Basin Park is generally free of utilities. Please see Attachment B for a draft schematic of the planned utilities.

The selected DES Developer will be expected to provide input to, and ultimately concur with, the routing and design of the distribution system.

### 5.2.4 Anchor Brewing

It is currently anticipated that the Anchor Brewing Company would occupy all of the interior usable space of Pier 48 under a 30-year Port interim lease. Anchor Brewing has indicated that it will be developing, as part of the new brewery, a process plant capable of supporting the

production of approximately 200,000 barrels annually. This figure is subject to change by Anchor.

The technical opportunity includes the following heating and cooling loads for the Anchor site. This does not include any heating and cooling loads that Anchor may require for their production needs. See Attachment D section D.5 for more details on Anchor's production loads.

*Table 9: Estimated Peak Non-Concurrent Heating and Cooling for Anchor*

| Assumed Phase | Parcel | Heating (MMBtu) | Cooling (Tons) |
|---------------|--------|-----------------|----------------|
| n/a           | P48    | 1.3             | 658            |

#### **Anchor Brewing Enhancement Opportunities:**

There may be an opportunity to:

- Pre-heat the Anchor Brewing process hot water using the district heating system and distribution, thereby reducing the required steam boiler capacity in the Anchor Brewing process plant. This might be achievable under a scenario where an extensive distribution run from the closest main branch is not required.
- Operate and Maintain the Anchor Brewing process plant under a performance contract or other form of contract. This will require discussions with Anchor Brewing directly during the RFQ procurement.
- Run microturbines for cogeneration of electricity as part of the Anchor Brewing process plant operation. Again, discussions with Anchor Brewing directly during the RFQ procurement will be required to better understand this opportunity. [The environmental impacts of cogeneration may be addressed as part of the Mission Rock EIR.]

#### **5.2.5 Bay Water Heat Rejection & Cooling**

The inclusion of bay water as a means for heat rejection & cooling is an important aspect of the DES design as it relates to sustainability performance. Not only will it save considerable amounts of energy and water, it will also alleviate site design concerns related to cooling towers that would otherwise be needed. Master Developer expects this technology to be pursued as part of the DES design, construction, and operation.

The following is the current proposed approach for installing the bay water system, which was developed for purposes of examining potential environmental impacts in the EIR:

1. Based on the soil conditions at the site (young bay mud & rubble debris), directional drilling is not recommended.
2. The intake and outfall pipelines would be HDPE, placed at or just below the existing seabed, supported on plastic lumber attached the piles with 316SS hardware.
3. The outfall and intake pipelines & structures should be within the footprint of the Pier 48.
4. The inlet manifold should be placed one bent in from the pier head. The inlet screens will be in deep water, protected by the pier, and maintenance will have direct access to the screens.

5. If necessary to extend the pipeline offshore, it would likely be directly buried, which would require minor dredging and placement of rock riprap. Maintenance of the screens will be more costly and may require support piles.
6. The outfall is typically easier to install and the engineer will determine the placement and the number of duckbill diffusers.
7. The Pump Station is recommended to remain onshore or near the bulkhead. At Pier 15, a project precedent, the intake screens, pump station, secondary screens, and outfall are at one location near the outer third of the pier.
8. If secondary screening is required, it should be near the pump station.

### 5.3 Project Commercial Opportunity

#### 5.3.1 Introduction to Potential Commercial Structure

An "off-balance sheet" approach is the preferred approach of the Master Developer, where the DES Developer builds, owns, and operates the CUP and provides routine and lifecycle operations and maintenance for the distribution system up to the energy transfer station in each building. The Master Developer is interested in feedback on potential commercial structures throughout this section (see Section 6.4).

The anticipated payment structure will:

- Mitigate market risk through a DES connection mandate for all properties and, to the extent feasible, phasing of the real estate development so that annual capital requirements and annual cash flows yield sufficient returns for the DES Developer.
- Obligate DES Developer to (i) design and construct the CUP according to agreed specifications; provide a security package that includes but is not limited to parent company guarantee, warranties, liquidated damages and/or holdbacks of the design and construction work; (ii) provide project financing; (iii) operate and maintain the CUP and distribution system and (iv) provide required reporting and customer service activities, and;
- Grant DES Developer the right to receive payments according to the agreed schedule at agreed rates for a number of years to be determined after substantial completion of the Project (which will include, among other things, that the CUP is available for use), under the terms and conditions negotiated by the parties.

The following table displays the potential commercial roles for the parties involved in the CUP and distribution system:

Table 10: Potential Commercial Allocations

|                         | CUP                               | Distribution system                                    |
|-------------------------|-----------------------------------|--|
| Ownership               | DES Developer                     | Port/Nonprofit/DES Developer                           |
| Permitting              | DES Developer                     | Master Developer/DES Developer                         |
| Site Use                | DES Developer will lease from SWL | Franchise agreement/lease within public right of way   |
| Design and construction | DES Developer                     | Port or Master Developer with support of DES Developer |
| Commissioning           | DES Developer                     | DES Developer  |

|                              | CUP           | Distribution system  |
|------------------------------|---------------|--|
| Financing                    | DES Developer | On-balance sheet taxable from Master Developer with buy-out by the Port using tax exempt CFD |
| Billing and Customer Service | DES Developer | n/a  |
| Routine O&M                  | DES Developer | DES Developer  |
| Lifecycle                    | DES Developer | DES Developer  |

### 5.3.2 Off-take Agreement

It is assumed that each individual property owner will have a retail agreement to purchase from the DES Developer, based on rates negotiated under the ESA.

#### *Alternative Off-take Opportunities:*

Master Developer is considering an energy non-profit organization to act as the single off-taker for the ESA. The goal is for this organization to help reduce counterparty credit risk for the DES Developer by buying thermal power on behalf of the property owners in Mission Rock. The DES Developer, in turn, would not have to factor the credit risk (including the ongoing costs of billings/collections) of individual customers and could accept a lower rate of return.

Master Developer is interested in discussing with the partner the viability of this option as well as other commercial structures.

### 5.3.3 Energy Non-Profit

The Master Developer is interested in establishing a non-profit that could perform all or some of the following roles as they relate to the Project:

- **Rates Negotiation:** The non-profit entity would help to reduce counterparty credit risk for the DES Developer by buying thermal power, and would negotiate rates for Mission Rock property owners.
- **Ownership:** The non-profit could own the distribution system and contract the O&M to the DES Developer. The nonprofit could also own the full DES System, or to secure a credit enhancement for the full system from the Port.
- **Financing:** The non-profit could be used to secure conduit financing for the distribution system or the CUP.

The Master Developer would set up this organization, with it or the Port acting as the credit-worthy backer. Establishment and maintenance (reporting, auditing) costs for the nonprofit are expected to be nominal for a non-charity nonprofit.

Running the nonprofit requires the establishment of a board and the election of board members. Possible board seats could include voting and non-voting members, who would meet regularly (quarterly, bi-yearly) and would determine meetings and expenditures. Such board members may include:

- Master Developer

- The Port
- Elected seats for Mission Rock property owners/customers

#### **5.3.4 Financing**

The DES Developer will be responsible for the formation of capital necessary to deliver the Project. The Master Developer does not have a preference for a specific financing structure. However, it is expected that financing for the Project will include a combination of equity and debt (bank debt, taxable and/or tax-exempt bonds).

The distribution system is to be financed on Master Developer's balance sheet, which would be eventually bought out by the Port.

#### ***Alternative Financing Opportunities:***

In addition to the above, Master Developer is interested in feedback on the following possible financing options:

- The DES Developer providing upfront capital for the distribution system and the Port buying out their equity with the CFD tax exempt financing.
- A nonprofit entity providing 63-20 conduit financing (or similar) for the CUP or the distribution system.

#### **5.3.5 Operations and Maintenance**

Master Developer will include stipulations for output product availability (up-time) and other performance specifications as part of negotiations under the MOU. The DES Developer will be responsible for all operations and maintenance activities necessary to make sure that availability and performance requirements are met.

Prior to beginning output product sales, and annually thereafter, the DES Developer shall provide independent, certified calibration and operational checks of all revenue meters.

#### **5.3.6 Billing/Customer Service**

Master Developer and the DES Developer will negotiate an appropriate means and mechanism for invoicing. The DES Developer will be responsible for providing a negotiated level of customer service, inclusive of response and resolution of issues raised by Master Developer within a contractually agreed time period.

#### **5.3.7 Entitlement and Permitting**

Master Developer will be responsible for all entitlements and approvals from authorities having jurisdiction over the Project Site.

The DES Developer will be responsible for all permitting related to the CUP.

The distribution system will be a joint permitting effort between the Master Developer and the DES Developer.

DES Developer will be responsible for all ongoing permitting related to DES operations.

### **5.3.8 Reporting**

The DES Developer will be responsible for providing all routine, periodic, and incident reporting as negotiated between the Master Developer and DES Developer.

## **6 REQUIREMENTS FOR THE SOQ**

---

The following are the minimum requirements for the SOQ. Please structure your SOQ so that it mirrors the structure of this section, addressing each requirement in order.

In the Technical and Commercial Responses, the Master Developer is seeking to gain an understanding of how your Project Team would approach the Project, not on the final solutions. Technical and Commercial Responses will be subject to further negotiation and refinement post-selection when the DES Developer will be able to conduct full due diligence and determine feasibility, among other things.

Qualifications shall be prepared simply, providing a straightforward description of the Respondent's ability to meet the requirements of this RFQ. Emphasis shall be on the quality, completeness, clarity of content, responsiveness to the requirements, and an understanding of Master Developer's needs.

### **6.1 Proposed Project Team**

- Provide a statement of interest for the Project including a narrative describing the unique qualifications of the Project Team as they pertain to the Project.
- Provide a brief history of the Prime Firm and the Prime Firm's experience in similar projects. In addition, please discuss any known limitations to the Project Team's ability to fulfill the scope as outlined herein.
- Provide resumes (limit one page each) giving the experience and expertise of the key professional members that would be working on this deal from the Prime Firm as well as for the lead for engineering, procurement and construction ("EPC") services and the lead for O&M services (together "Lead Contractor(s)"), including their experience with similar projects, the number of years with the firm, and their city of residence.
- Provide a statement on the availability and commitment of the key professionals in the Prime Firm and Lead Contractor(s) that will be assigned to the Project.

### **6.2 Previous Experience**

- List a maximum of five (5) projects for which the Prime Firm has provided services that are most directly related to the Project. Wherever possible, provide representative projects where the proposed Prime Firm, Lead Contractor(s), lead A/E Firm and other key sub-contractors have worked together. List the projects in order of priority, with the most relevant project listed first. Provide the following information for each project listed:
  - ☐ Project name, location, contract delivery method, and description.
  - ☐ Color images (photographic or machine reproductions).
  - ☐ Final Construction Cost, including Change Orders.
  - ☐ Final Project size in gross square feet; Final Project power and thermal capacity.
  - ☐ Type of construction (new, renovation, or expansion).
  - ☐ Actual start and finish dates for design.
  - ☐ Actual Notice to Proceed and Substantial Completion dates for construction.
  - ☐ Description of professional services Prime Firm and contractors provided for the project.

- ☐ Name of Project Manager (individual responsible to the System/University for the overall success of the project).
- ☐ Sources of funding/financing.
- Provide references for each project listed above, identify the following:
  - ☐ The Owner's name and representative who served as the day-to-day liaison during the design and construction, and O&M phases of the Project, including name, title, telephone number and email.
  - ☐ Contractor's name and representative who served as the day-to-day liaison during the pre-construction and/or construction phase of the project, including name, title, telephone number and email.
  - ☐ Length of business relationship with the owner.

References shall be considered relevant based on specific project participation and experience with the Prime Firm and/or Lead Contractor(s).

### **6.3 Technical Response**

- Please describe generally the Project Team's suggested technical approach to the Project. In doing so, please describe how your approach would achieve stated goals and requirements of the Project listed in Sections 5.1.3 and 5.1.3 above. Highlight your experience with delivering the proposed technological solutions (e.g. from other projects preferably submitted with your SOQ). Please also include additional ideas or innovations not addressed in this RFQ.
- Describe the Project Team's approach to construction, commissioning and start-up. Please include in the narrative how the approach will take into account the phased nature of the Mission Rock development. Please specifically address the Team's approach to plant locations and any sequencing required to reach the final CUP build-out.
- Please describe the Project Team's approach to O&M. Include discussion and examples of reliability assurance, water and energy conservation practices in operations, energy efficiency practices in operations, safety practices, quality assurances, controls and monitoring approaches.

### **6.4 Commercial Responses**

- Please describe generally the commercial structure you envisage for the Project. Provide a deal structure diagram showing key parties and major agreements. Please also address the Alternative Off-taker Opportunity and Nonprofit Opportunity mentioned in Sections 5.3.2 and 5.3.3 above and discuss what benefits and challenges these opportunities may present. Highlight your experience with the proposed commercial structure (e.g. from other projects, preferably projects submitted with your SOQ).
- Please identify the primary risks that the Project Team anticipates for the Project, categorized by Design, Construction and O&M, along with recommended mitigation measures for those risks.
- Please demonstrate the Prime Firm's ability to secure financing for the Project (i.e. as a BOO). In doing so, please state what key debt requirements you might expect given your suggested structure (e.g. gearing requirements). Please also address the Alternative Financing

Opportunities mentioned in Section 5.3.2 above. Highlight your experience with similar financings involved on projects (preferably projects submitted with your SOQ).

- Detail the DES Developer's ability and demonstrated experience in providing financing for:
  - ☐ Similar projects within specified financial closing time parameters;
  - ☐ Projects utilizing offtake agreements for multiple retail customers; and
  - ☐ Projects where you were a counterparty to single, non-profit off-taker.

## **6.5 Blue Sky Discussion**

- Please also provide additional ideas or areas for consideration that have not been included in the scope of this RFQ.
- Please note the Master Developer may be running a separate RFQ for a water treatment system for Mission Rock. Please reach out to the Point of Contact if Respondent is interested in similarly designing, building, owning or operating a water treatment system. Respondents that are interested in this opportunity should state in this section of the SOQ the possible benefits the Master Developer and other end users might see as a result of the Project Team delivering and operating both systems jointly.

**ATTACHMENT A:     Draft Memorandum of Understanding**

**[To be released]**

**ATTACHMENT C: Draft Schematic of Planned Utilities**

## **ATTACHMENT D:      Supplementary Technical Information**

### **D.1      Thermal Generation Details**

The planning basis for the generation portion of the DES assumes:

- Centralized heat recovery chillers
- Centralized electric water cooled chillers
- Centralized low/medium temperature hot water boilers
- Plate-and-frame “free-cooling” heat exchangers (bay-water)
- Plate-and-frame “heat-rejection” heat exchangers (bay-water)
- Balance of bay-water heat rejection and cooling plant (tanks, screens, etc.)
- Cooling towers<sup>3</sup>

### **D.2      Distribution Details**

The planning basis for the distribution portion of the DES assumes a 6-pipe system comprising of:

- Chilled water (CHW) supply and return pipes
- Heating hot water (HHW) supply and return pipes
- Bay water intake and outflow pipes

The HHW and CHW systems are assumed to be direct bury, insulated piping systems, steel for HHW and HDPE for CHW. The bay water piping is assumed to be uninsulated, direct bury steel pipe.

Distribution routing and pipe sizing will be driven by CUP location and configuration and project phasing. Right of way corridors within the project site are relatively narrow, and site roadways are pile supported to mitigate differential settlement relative to the buildings, reducing the space available for utility installation. Pipe routing and building points of connection will need to be coordinated with site and building design teams.

Representative trench sections are presented in the figures below:

---

<sup>3</sup> Capacity to be limited by greater of (1) heat rejection capacity needed above 24” bay-water capacity, and (2) heat rejection requirements during scheduled bay-water system down-time

Figure 2: Typical Bay Water Intake/Outflow Section

Figure 3: Chilled and Hot Water Combined Trench - Maximum Section

Figure 4: Chilled Water Trench - Maximum Section

Figure 5: Heat Hot Water Trench - Maximum Section

### D.3 Building Interconnections

The planning basis for the building interconnection portion of the DTES has assumed pairs of plate-and-frame heat exchangers for each of the hot water and chilled water services. As part of a partnership, the developer will be taking on the responsibility of collaborating with the vertical development team on the design, coordination, and commissioning of these systems.

Figure 6: Substation Depiction

### D.4 Anchor Brewing Process Loads

Anchor Brewing process loads account for a major portion of the site energy consumption.

Figure 7: Ultimate Energy Consumption Split (400,000 Barrels/Year, no Brewery Efficiency)

Applying plausible levels of energy efficiency to all brewery end-uses generates the hypothetical energy consumption estimates summarized in Figure 8. This illustrates the sensitivity of the brewery energy efficiency as an input to the load estimation exercise.

Figure 8: Hypothetical Ultimate Energy Consumption Estimates (400,000 barrels/year)

Unlike the district, the Anchor brewing process entails several high-temperature, steam, and low-temperature chilled water loads as illustrated in Figure 9.

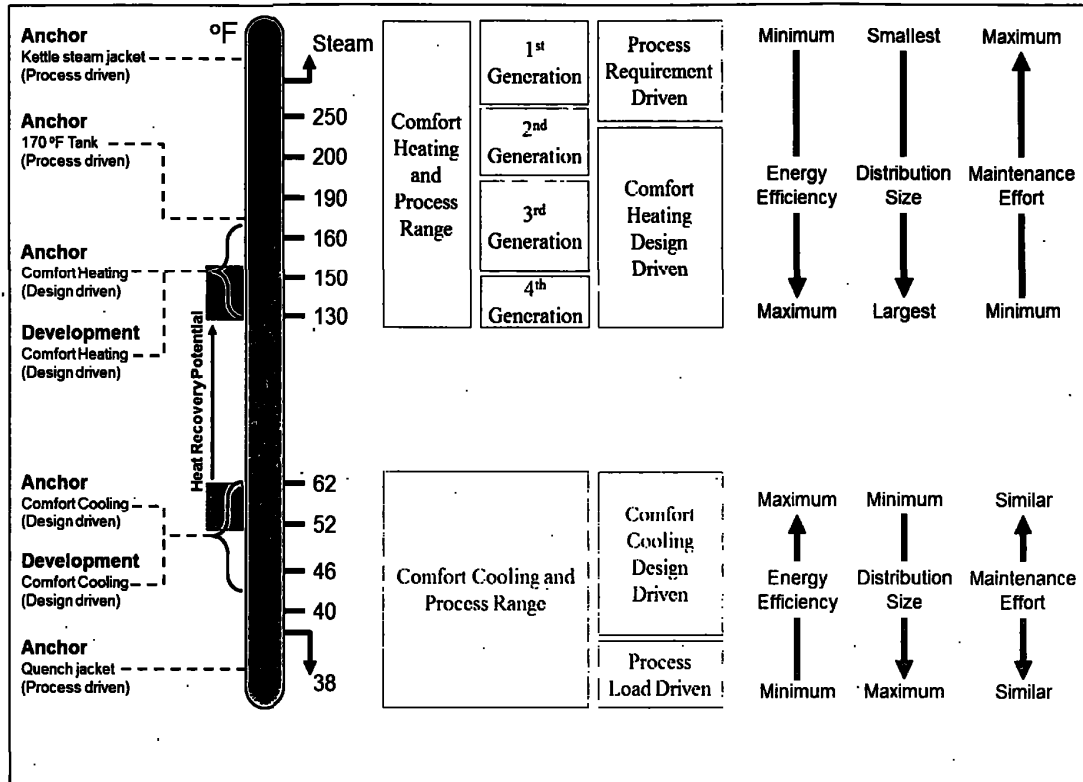

Figure 9: Development Thermal Load Map

It is not thermodynamically efficient to aggregate and supply these significantly different load categories from a single plant, or to overproduce steam or low-temperature chilled water to serve low-temperature heating and elevated chilled water cooling loads respectively.

Anchor Brewing has indicated that the brewing process, loads, and therefore the process plant requirements will continue to be updated as of and after the publication of this RFQ.

For these reasons, the current approach is to site the Anchor Brewing process plant as close as possible to the loads it serves (i.e. on Pier 48), and not over-size it to additionally serve the Project Site (or a portion thereof).

There may be opportunities to pre-heat the Anchor Brewing process hot water using the district heating system and distribution. This might be achievable under a scenario where an extensive distribution run from the closest main branch is not required, and could be beneficial if a significant resulting reduction in the Anchor brewing plant (essentially steam boiler capacity) can be achieved.

## ATTACHMENT E: Assumptions

Given the early planning nature of this work, Arup developed and shared a series of technical assumptions during the 2013 feasibility study. These assumptions were approved for planning purposes, and are being carried forward for purposes of a reference design in the RFQ. These assumptions are tabulated below.

|                                  |                                    |       |                  |

Exhibit B – Housing Data Table

## MISSION ROCK HOUSING PLAN SUMMARY<sup>1</sup>

The development plan for Mission Rock under the Transaction Documents provides for the development of approximately 1,000 to 1,950 Residential Units. This housing plan (the "Housing Plan") provides that not less than 40% of the Residential Units that may be developed at the Project Site will be below market rate units Affordable to low and moderate income households or TAY Units ("Inclusionary Units"). The parties anticipate that all Inclusionary Units will be built by Vertical Developers in concert with Market-Rate Units within private market-rate development projects. As discussed below, the Port shall convey land to Vertical Developers to develop all Residential Units on the Project Site. The Inclusionary Units will be constructed and rented in accordance with this Housing Plan.

Developer will submit Phase Submittals to the Port pursuant to the Transaction Documents. Following each Phase Approval, the Port will authorize the Chief Harbor Engineer to issue Port permits necessary for Developer to begin to construct the Horizontal Improvements in accordance with the DDA and the Master Lease. Upon exercise of an Option in accordance with the DDA, the Port will convey each Residential Parcel through Parcel Leases to a Vertical Developer. A Vertical Developer will construct the Vertical Improvements, including Residential Parcels and Inclusionary Units therein, in accordance with the Parcel Lease and Vertical DDA. Inclusionary Units within the Vertical Improvements will be constructed in accordance with this Housing Plan. While the Developer will retain certain flexibility and discretion to respond to market conditions as to each Phase and Vertical Improvement, the Project is required by the DDA to comply with certain Inclusionary Housing Milestones by Phase Approval regarding the types, sizes, locations, level of affordability and percentage of the Inclusionary Units.

Developer and the Port will designate the general location of potential Residential Parcels, which will be distributed throughout the Project Site in accordance with a generalized Phasing Plan. The Inclusionary Units are expected to include a range of Residential Unit types, including transition age foster youth ("TAY") units. Each Vertical Developer will retain the discretion to determine the type of Inclusionary Units to be constructed so long as such units are consistent with the Phase Approval and contain the same unit mix (i.e. studio, 1 bedroom, 2 bedroom, or 3 bedroom) or a larger bedroom mix as the Market-Rate Units in that particular Vertical Improvement.

A variety of private and public funding sources may be used to finance the Inclusionary Units, including, but not limited to, low-income housing tax credits, the Jobs/Housing Equivalency Fees, tax-exempt housing bonds, and various other local, State and Federal sources of funding.

The foregoing summary is provided for convenience and for informational purposes only. In case of any conflict, the provisions of the DDA, the Housing Plan, and each Vertical DDA shall control.

---

<sup>1</sup> Defined terms in the Summary have the meaning set forth in this Housing Plan.

## **1. DEFINITIONS**

Initially capitalized terms unless separately defined in this Housing Plan have the meanings and content set forth in the DDA. Terms defined in the DDA and also set forth in this Section are provided herein for convenience only.

1.1 Affordable, Affordability, or Affordable Housing Cost means with respect to a Rental Unit, a monthly rental charge (including the Utility Allowance applicable to the Household Size of such Rental Unit) that does not exceed thirty percent (30%) of the maximum Area Median Income percentage permitted for the applicable type of Residential Unit, based upon Household Size.

1.2 Area Median Income or AMI means for the Inclusionary Units, unadjusted median income for the San Francisco area as published from time to time by the United States Department of Housing and Urban Development (HUD) adjusted solely for household size.

1.3 BMR Units has the meaning set forth in the Monitoring and Procedures Manual.

1.4 Declaration of Restrictions means a document or documents recorded against an Inclusionary Unit requiring that the Unit remain Affordable in accordance with the terms of this Housing Plan. The Declaration of Restrictions for the Rental Inclusionary Units shall be in the form attached hereto as Exhibit A.

1.5 Development Agreement has the meaning set forth in the DDA.

1.6 Financing Plan means the Financing Plan attached to the DDA.

1.7 Horizontal Improvements has the meaning set forth in the DDA.

1.8 Household Size means the total number of persons residing within a Residential Unit

1.9 Housing Data Table means the table attached here to as Exhibit B.

1.10 Housing Preferences and Lottery Procedures Manual means MOHCD's Housing Preferences and Lottery Procedures Manual dated March 31, 2017, as may subsequently be updated.

1.11 Implementing Manuals means the Housing Preferences and Lottery Procedures Manual and the Monitoring and Procedures Manual.

1.12 Inclusionary Milestone means the date of each Phase Submittal submittal.

1.13 Inclusionary Obligation has the meaning set forth in Section 3.1(a) of this Housing Plan.

1.14 Inclusionary Units means for a Rental Unit, a unit that is available to and occupied by households with incomes not exceeding One Hundred Fifty percent (150%) of Area Median Income and rented at an Affordable Housing Cost for households with incomes at or below One Hundred Fifty percent (150%) of Area Median Income, including TAY Units. The mechanism for setting the maximum Affordable Housing Cost and income level for each Inclusionary Unit is set forth in Section 3 of this Housing Plan. For clarity, Developer anticipates that Inclusionary Units will be built within private market-rate development projects, subject to Section 3.1(e).

1.15 Jobs/Housing Equivalency Fee has the meaning set forth in the Development Agreement.

1.16 Marketing and Operations Plan has the meaning set forth in Section 3.1(i) of this Housing Plan.

1.17 Market-Rate or Market-Rate Unit means a Residential Unit constructed on a Residential Parcel that has no restrictions under this Housing Plan or the DDA with respect to Affordable Housing Cost levels or income restrictions for occupants.

1.18 Minimum Affordable Percentage has the meaning set forth in Section 2.1 of this Housing Plan.

1.19 MOHCD shall mean the City of San Francisco's Mayor's Office of Housing and Community Development or any successor agency.

1.20 Monitoring and Procedures Manual means the City and County of San Francisco's Inclusionary Affordable Housing Program Monitoring and Procedures Manual, dated May 10, 2013, as may be subsequently updated.

1.21 Option has the meaning set forth in the DDA.

1.22 Parking Space means a parking space constructed in the Parking Garage by or on behalf of Developer.

1.23 Phase has the meaning set forth in the DDA.

1.24 Phase Approval has the meaning set forth in the DDA.

1.25 Phase Submittal has the meaning set forth in the DDA.

1.26 Project Site has the meaning set forth in the DDA.

1.27 Residential Parcel has the meaning set forth in the DDA.

1.28 Residential Unit means a room or suite of two or more rooms that is designed for residential occupancy for 32 consecutive days or more, including provisions for sleeping, eating and sanitation, for not more than one family, and may include senior and assisted living facilities.

- 1.29 Section 415 means San Francisco Planning Code Section 415 *et seq.*
- 1.30 Schedule of Performance has the meaning set forth in the DDA.
- 1.31 Vertical DDA shall have the meaning in the DDA.
- 1.32 Vertical Developer shall have the meaning set forth in the DDA.
- 1.33 Vertical Improvement is defined in the DDA.

## **2. HOUSING DEVELOPMENT**

2.1 Development Program. Vertical Developers may develop approximately 1,000 to 1,950 Residential Units on the Project Site. At Project build-out, the number of the Inclusionary Units developed on the Project Site shall be equal to forty percent (40%) of the total number of the Residential Units that are developed on the Project Site (the "Minimum Affordable Percentage"). The Parties understand and agree that Vertical Developers' right to construct the number of Residential Units specified in this Housing Plan is absolute and is based on the total number of Residential Units entitled under the DDA, Phase Approvals and Vertical DDAs.

### **2.2 Development Process.**

(a) Subject to the terms of the DDA, the Project shall be developed in a series of Phases. The DDA includes a process for Developer's submittal of Phase Submittals and the Port's review and approval of Phase Submittals. The anticipated order of development of the Phases is set forth in the Phasing Plan and the Schedule of Performance, subject to revision in accordance with the procedures set forth in the DDA.

(b) Developer will submit Phase Submittals to the Port pursuant to the Transaction Documents. Following each Phase Approval, the Port will authorize the Chief Harbor Engineer to issue Port permits necessary for Developer to begin to construct the approved Horizontal Improvements in accordance with the DDA and the Master Lease. Upon exercise of an Option in accordance with the DDA, the Port will convey each Residential Parcel through Parcel Leases to each Vertical Developer.

(c) Simultaneously with the Closing of each Parcel Lease, the Port, in consultation with MOHCD, and the Vertical Developer will enter into a Vertical DDA which will include a commitment by the Vertical Developer to construct its Vertical Improvements within a specific timeframe coordinated with the approved Schedule of Performance in the Phase Submittal. The Vertical DDA will be substantially in a form agreed upon by the Port and Developer following the execution of the DDA and shall specify, among other things (i) the maximum number of Market-Rate Units allowed to be constructed on the Residential Parcel, (ii) the minimum number of Inclusionary Units to be constructed on the Residential Parcel (consistent with Section 3.1(c) of this Housing Plan), (iii) the Affordability level of each Inclusionary Unit (consistent with Section 3.1(a) of this Housing Plan), (iv) the location of the Inclusionary Units before recordation of the Declaration of Restrictions as set forth in Section 3.1(f) of this Housing Plan, and (v) the approximate unit type and size for each Inclusionary and

Market-Rate Unit. Vertical Developers will have the flexibility to select the size and type of Residential Units, including the complete discretion to determine the unit mix for Market-Rate Units subject to the unit mix requirements of Section 3.1(c)(v), and the applicable Vertical DDA and Parcel Lease.

(d) Developer shall submit the Housing Data Table with each Phase Submittal and the table will preliminarily identify the maximum number and location of Residential Units, including the number and location of anticipated Inclusionary Units, for each Residential Parcel within such submittal. Developer or the Port may request a revision to such number before execution of a Vertical DDA and the corresponding Parcel Lease conveying a Residential Parcel to a Vertical Developer, subject to the requirements of this Housing Plan and the DDA. The final details of the plan for the Inclusionary Units for each Residential Parcel shall be specified in the Parcel Lease and corresponding Vertical DDA. Vertical Developer may revise such numbers at any time after execution of a Vertical DDA and the corresponding Parcel Lease conveying a Residential Parcel to a Vertical Developer, subject to Port approval, in consultation with MOHCD, as required by the applicable Vertical DDA and Parcel Lease, as defined pursuant to Section 2.2(c), above.

(e) Subject to the terms of the applicable Vertical DDA and Parcel Lease, following receipt of all Vertical Approvals, the Vertical Developer may construct the applicable Vertical Improvements, and upon such construction, the Vertical Developer must include the number of Inclusionary Units for such Vertical Improvements as are set forth in the Vertical DDA and Parcel Lease.

### 2.3 Developer Land Conveyances.

(a) Housing Plan Compliance in Phase Submittals. This Housing Plan is intended to provide flexibility regarding delivery of Inclusionary Units within the Project Site, subject to the overall 40% Inclusionary Unit commitment. In order to track Developer's compliance with this Housing Plan, as part of the applicable Phase Submittal for a Residential Parcel, Vertical Developer shall submit a Project Housing Data Table, in the form of Exhibit B attached hereto, containing the following information:

(1) the location of each Residential Parcel subject to the Phase Submittal, including:

- (a) the parcel acreage;
- (b) the number of Residential Units;
- (c) the number and location of any Inclusionary Units, including the size, bedroom count, Household Size and amenities for each such Unit;
- (d) the AMI Percentage of each Inclusionary Unit;
- (e) the type and square footage of uses that are not residential uses (e.g., retail, community space, open space); and

(f) the anticipated date for completion of the Residential Parcel.

(b) Conveyance of Residential Parcels. After exercising an Option, the Port will convey the applicable Residential Parcel to the applicable Vertical Developer through a Parcel Lease. The Port will also enter into a Vertical DDA and confirm or modify pursuant to Section 2.4, as applicable, the information provided in the Phase Approval regarding items 2.3(a)(1) above for the Vertical Improvement that is the subject of the Vertical DDA.

2.4 Changes to Phasing Approval. Developer may, from time to time, request changes, including material changes, to the Phasing Approval, including but not limited to regarding the size, location or composition of a Residential Parcel(s) within a Phase, with a brief explanation as to why Developer is requesting such change. Any material change shall be subject to the Port's review and approval, in consultation with MOHCD, provided that the Port will not withhold its approval of any such changes which are consistent with the DDA and this Housing Plan.

2.5 Maintenance of the Horizontal Infrastructure. Following completion and conveyance to the Port or other City agency, as determined by the parties, it is anticipated that a master association will maintain or cause to be maintained the Horizontal Improvements in accordance with the DDA.

### 3. INCLUSIONARY HOUSING REQUIREMENTS

#### 3.1 Inclusionary Housing Requirements.

(a) Development of Inclusionary Units. Forty percent (40%) of all Residential Units shall be Inclusionary Units, with an Affordable Housing Cost to households with incomes not exceeding One Hundred Fifty percent (150%) of Area Median Income (the "Inclusionary Obligation"). The Inclusionary Obligation will be satisfied by developing Inclusionary Units at the following affordability levels:

| Levels of Affordability |            |
|-------------------------|------------|
| % of Total Units        | AMI Levels |
| 2%                      | 45%        |
| 10%                     | 55%        |
| 4%                      | 90%        |
| 17%                     | 120%       |
| 7%                      | 150%       |

(b) Transition Age Youth Housing. The Housing Program includes 24 Inclusionary Units that shall be set aside to house persons transitioning out of public systems, such as the foster system, or homelessness (TAY Units). It is anticipated that the Vertical Developer developing the Residential Parcel that includes TAY Units will partner with a qualified non-profit services provider and, in consultation with such provider and the Port, in consultation with MOHCD, the City's Budget Office, and the City's Department of Homelessness and Supportive Housing ("HSH"), will establish TAY Unit requirements to govern the Vertical Developer's obligations regarding construction and operation of the TAY Units and any associated service space. TAY Units built on the Project Site shall qualify as Inclusionary Units for purposes of meeting the Minimum Affordable Housing Percentage and Inclusionary Housing Obligation and as Inclusionary Units meeting affordability levels of 45% and/or 55% AMI levels for the purposes of satisfying the Inclusionary Housing Obligation. Notwithstanding anything to the contrary in this Housing Plan, TAY Units may be grouped together in a single Residential Parcel, among Market-Rate Units and other Inclusionary Units, for financing purposes and to maximize the efficient provision of on-site services to TAY Unit occupants.

(c) Developer Flexibility. Developer shall have sole discretion to determine the exact number of Inclusionary Units to be developed on each Residential Parcel and the Affordability level of each Inclusionary Unit, provided that: (i) the Housing Data Table to be submitted with each Phase Submittal shall identify the location of the Residential Parcels containing Inclusionary Units, the number of Inclusionary Units, and the Inclusionary Unit allocation shall be in accordance with the Phase Approval, subject to any subsequent revisions in accordance with the DDA, (ii) the cumulative number of all Inclusionary Units approved pursuant to a Phase Submittal shall at no time be less than thirty percent (30%) of the total Residential Units approved pursuant to such Phase Submittal; (iii) the number of Inclusionary Units in each Vertical Improvement approved pursuant to a Phase Submittal shall be between twenty percent (20%) and sixty percent (60%) of the total Residential Units within such Vertical Improvement approved pursuant to a Phase Submittal; (iv) Except for TAY Units, Affordability levels shall be appropriately distributed throughout the Project Site and Inclusionary Units consisting of Forty-Five percent (45%) and Fifty-Five percent (55%) Area Median Incomes shall not be grouped together or constructed in only the later phases of the Project, unless approved by Port, in consultation with MOHCD; (v) the unit mix of the Inclusionary Units must either (a) match the unit mix of the Market-Rate Units within a Vertical Improvement (this can be calculated by multiplying the number of any type of Market-Rate Unit (e.g. studio) by the required inclusionary percentage under the Vertical DDA), or (b) be composed of larger units than the Market-Rate Units (for example, a Residential Parcel may contain 3 bedroom Inclusionary Units, but not 3 bedroom Market-Rate Units) and (vi) Developer shall demonstrate that the Inclusionary Obligation has been or will be satisfied at each Inclusionary Milestone as set forth in Section 3.1(d) of this Housing Plan.

(d) Inclusionary Milestones. Developer retains flexibility in the order of development of Residential Parcels within a Phase. The purpose of the Inclusionary Milestones is to advise the Port, MOHCD and the Developer, as part of any new Phase Submittal, regarding the overall status of Residential Parcel construction, including compliance

with Inclusionary Obligations, which are consistent with the Inclusionary Housing obligations under previously approved Phase Submittals. Compliance with the Inclusionary Obligation at each Inclusionary Milestone shall be demonstrated by Developer providing the Port and MOHCD with information as follows: (1) a chart summarizing by Phase all Market-Rate and Inclusionary Units (including Affordability levels) approved to date, and describing construction and occupancy status as to each; and (2) a calculation of the cumulative percentages of Residential Units and Inclusionary Units constructed to date, by Phase and overall for the Project Site. During buildout of a Phase, interim conditions may dictate that the current number of units by Phase or cumulatively within the Project Site is less than thirty percent (30%) of the completed Residential Units by Phase or within the Project Site. If this is the case, then the Developer shall submit to the Port and MOHCD a plan summarizing the status of approved but not yet constructed projects on Residential Parcels, and include the plan for modifications to the prior Phase Approvals that will help to expedite development of the remaining Residential Parcels within the previously approved Phase(s). Developer's proposed plan shall be presented to the Port and MOHCD no later than thirty (30) days after the Inclusionary Milestone in which the Inclusionary Obligation was not met.

(e) Variations. MOHCD, in consultation with the Port, may approve a Phase Submittal or Vertical DDA that does not comply with Section 3.1(c)(iii) or (iv) if it determines that the proposed development will otherwise comply with this Housing Plan and such variance will allow a Vertical Developer to maximize available financing for the production and/or operation of Inclusionary Housing in the Project Site, such approval shall not be unreasonably withheld or delayed. By way of example only, it is anticipated that the TAY Units will be located in a single building for purposes of service delivery, and depending on factors such as the building size and remaining unit mix, the Inclusionary Unit percentage within such building could exceed 60%. There may be other examples of similar circumstances where a special circumstance warrants a higher level of affordability in a building; however, it is generally the intent of the Parties to develop a Project composed of mixed income buildings and not create stand-alone affordable buildings.

(f) Inclusionary Restrictions. The Port, in consultation with MOHCD, shall impose the Inclusionary Obligation on each Vertical Developer of a Residential Parcel. The obligation will be imposed in the Parcel Lease for the Residential Parcel and shall include any requirements pursuant to the DDA and the Vertical DDA.

(g) Continued Affordability of Inclusionary Units. The Inclusionary Units required under this Housing Plan shall remain for rent for the term of the applicable Parcel Lease (i.e. 75 years) and such units will not be mapped for individual unit ownership, provided, however, that the Market-Rate Units may be mapped for individual unit ownership to allow such Market-Rate Units to be converted in the future. The prohibition on condominium conversion on the required Inclusionary Units shall be included in the applicable Vertical DDAs. No later than the issuance of a first construction document applicable to an Inclusionary Unit, the applicable Vertical Developer shall record against the Inclusionary Unit a Declaration of Restrictions substantially in the form attached hereto as Exhibit A. Vertical Developer shall, upon recordation, provide to the Port and MOHCD a copy of the applicable Declaration of Restriction.

(h) Comparability. The Inclusionary Units required under this Housing Plan shall comply with the comparability requirements of Zoning Administrator Bulletin No. 10, dated December 2015, as may subsequently be updated, provided, however, that (a) the unit mix of the Inclusionary Units must not match the unit mix for the Project if the unit mix of the Inclusionary Units is composed of larger units than the Market-Rate Units (for example, a Residential Parcel may contain 3 bedroom Inclusionary Units, but not 3 bedroom Market-Rate Units), and (b) more than 50% of the units on any floor may be designated as Inclusionary Units in the case of the TAY Units, or as may be otherwise approved by the Port, in consultation with MOHCD.

(i) Marketing and Operations Guidelines for Inclusionary Units. A Vertical Developer may not market or rent Inclusionary Units until MOHCD, in consultation with the Port, has approved the following for such Inclusionary Units for consistency with this Housing Plan and the Implementing Manuals: (i) the marketing plan (which includes any preferences determined pursuant to San Francisco Administrative Code Chapter 47; such preferences may include, but shall not be limited to, preferences for educators currently employed with the San Francisco Unified School District); (ii) conformity of the rental charges for such Inclusionary Units with this Housing Plan; and (iii) eligibility and income-qualifications of renters, together with any supplemental information required under the Implementing Manuals (collectively "Marketing and Operations Plan"). Such approval shall not be unreasonably withheld or delayed. The Vertical Developer that develops the TAY Units must work with HSH to create and implement a lease-up and occupancy plan (the "TAY Unit Occupancy Plan"). Vertical Developers shall submit the HSH-approved TAY Unit Occupancy Plan to the Port not later than one hundred twenty (120) days before the date Vertical Developer expects to begin marketing the Market Rate Units. The Port, in consultation with MOHCD and HSH, shall review and consider approval of the applicable plan in accordance with the Vertical DDA and this Housing Plan, provided, however, if the Port does not respond to Vertical Developer within sixty (60) days after receipt of the applicable plan, such plan will be deemed approved.

(j) Planning Code Section 415 and Implementing Manuals. The provisions of this Housing Plan are hereby expressly deemed to satisfy the requirements of the San Francisco Inclusionary Affordable Housing Program and Section 415. The Parties agree and acknowledge that the Planning Department and MOHCD have established certain protocols for implementation of Section 415 as set forth in the Implementing Manuals. Vertical Developers of Inclusionary Units shall comply, as applicable, with the rental program for BMR Units set forth in the Implementing Manuals, provided, however, that Developer may: (i) use other development subsidies to finance the construction of Inclusionary Units beyond those described in Section V.C of the Monitoring and Procedures Manual; and (ii) establish an alternate pricing process, in consultation with the Port, including setting income levels and rents and establishing a methodology for maximum monthly rent levels consistent with the use of financing, other than the process described in Section III.C of the Monitoring and Procedures Manual, so long as the alternate pricing formula does not create affordability levels that exceed the levels set forth in Section 3.1(a) above. By complying with the provisions of this Housing Plan, Developer shall be deemed in full compliance with the Monitoring and Procedures Manual. Developer shall comply, as applicable, with the Housing Preferences and Lottery Procedures Manual, subject to modification in consultation with the Port, to address preferences and procedures related to TAY Units or educators or other preferences contemplated in Section 3.1(i).

#### **4. FINANCING OF INCLUSIONARY UNITS**

4.1 Funding Generally. The Inclusionary Units may be funded by a variety of private and tax-exempt funding sources, including, but not limited to, Vertical Developer equity, Jobs/Housing Equivalency Fees, low-income housing tax credits, tax-exempt housing bonds, and various other local, State and Federal sources of funding. Due to the nature of the Project, it is not possible to ascertain the exact funding sources for each Inclusionary Unit at the time of this Housing Plan. However, it is anticipated that several funding sources will be combined to fund the development of the Inclusionary Units. Additionally, it is anticipated that TAY Units will receive a local operating subsidy through the San Francisco Local Operating Subsidy Program (LOSP), and the Developer will work with HSH and the City's Budget Department to secure a LOSP commitment.

4.2 Jobs/Housing Equivalency Fees. The commercial development within the Project Site will generate Jobs/Housing Equivalency Fees to be paid into a housing fund held by the Port in accordance with the Financing Plan. In order to construct the Inclusionary Units required under this Housing Plan, all Jobs/Housing Equivalency Fees payable by Vertical Developers of commercial uses within the Project Site and paid into the affordable housing fund administered by the Port shall be used solely for predevelopment, development expenses and administrative costs associated with the acquisition and construction of Inclusionary Units within Residential Parcels in accordance with this Housing Plan, under the terms and conditions set forth in the Development Agreement.

#### **5. VERTICAL DEVELOPMENT PARKING AND TRANSIT PROGRAM**

5.1 Separation. For Residential Parcels, all Parking Spaces shall be "unbundled" (i.e., rented separately from a Unit within such Residential Parcel). It is anticipated that no Parking Spaces will be provided within a Residential Parcel. If Parking Spaces are provided within a Residential Parcel and offered to occupants of Residential Units, then such Parking Spaces shall be offered to occupants of Inclusionary Units on the terms and conditions set forth in the Monitoring and Procedures Manual. It is currently anticipated that all parking at the Project Site shall be within the Parking Garage, which will be operated by a Parking Garage operator. Occupants of Residential Units may choose to contract directly with the operator of the Parking Garage for parking at the Project site, but shall not be obligated to do so.

5.2 Transit Program. The Project will contain a comprehensive Transit Demand Management Plan which will manage travel through a variety of investments and programs applicable to the Inclusionary Units. The Project transit program may include, but shall not be limited to, providing residents of Market Rate Units and Inclusionary Units with pre-loaded Clipper Card, on-site bike sharing and bike parking, real-time transit information on screens within the Project, car-share memberships, improved pedestrian walking conditions and assistance with local public transit.

#### **6. NON-APPLICABILITY OF COSTA HAWKINS ACT**

The Parties understand and agree that the Costa-Hawkins Rental Housing Act (California Civil Code sections 1954.50 et seq.; the "Costa-Hawkins Act") does not and in no way shall limit

or otherwise affect the restriction of rental charges for the Inclusionary Units developed pursuant to the DDA and the Development Agreement (including this Housing Plan). The DDA falls within an express exception to the Costa-Hawkins Act because the DDA is a contract with a public entity in consideration for a direct financial contribution and other forms of assistance specified in Chapter 4.3 (commencing with section 65915) of Division 1 of Title 7 of the California Government Code. Accordingly, Developer, on behalf of itself and all of its successors and assigns, including all Vertical Developers, agrees not to challenge, and expressly waives, now and forever, any and all rights to challenge, Developer's obligations set forth in this Housing Plan related to Inclusionary Units, under the Costa-Hawkins Act, as the same may be amended or supplanted from time to time. Developer shall include the following language, in substantially the following form, in all Vertical DDAs:

"The DDA (including the Housing Plan) implements the California Infrastructure Financing District Law, Cal. Government Code §§ 53395 *et seq.* and City of San Francisco policies and includes regulatory concessions and significant public investment in the Project. The regulatory concessions and public investment include, without limitation, a direct financial contribution of net tax increment, the conveyance of real property without payment, and other forms of public assistance. These public contributions result in identifiable, financially sufficient and actual cost reductions for the benefit of Developer and Vertical Developers. In light of the Port's authority under Government Code Section 53395.3 and in consideration of the direct financial contribution and other forms of public assistance described above, the parties understand and agree that the Costa-Hawkins Act does not and shall not apply to the Inclusionary Units developed at the Project Site under the DDA."

The Parties understand and agree that the Authority would not be willing to enter into the DDA, without the agreement and waivers as set forth in this Section 6.

## **7. HOUSING PLAN IMPLEMENTATION AND ENFORCEMENT**

Under the terms and conditions of the DDA, this Housing Plan is administered, monitored and enforced by the Port, in consultation with MOHCD. The Port shall consult with MOHCD regarding implementation of the Housing Plan, including but not limited to providing copies of each Phase Submittal including a Residential Parcel, and any submittals for material amendment thereto, to MOHCD for review and comment prior to Phase Approval. In addition, the Port and MOHCD contemplate that MOHCD will provide ongoing technical assistance and advice to the Port regarding Housing Program implementation, including but not limited to compliance review regarding Section 415, the Monitoring and Procedures Manual, and the Housing Preferences and Lottery Procedures Manual.

## **8. MISCELLANEOUS**

8.1 No Third Party Beneficiary. Except to the extent set forth in the DDA, there are no express or implied third party beneficiaries to this Housing Plan.

8.2 Severability. If any provision of this Housing Plan, or its application to any Person or circumstance, is held invalid by any court, the invalidity or inapplicability of such provision shall not affect any other provision of this Housing Plan or the application of such provision to any other Person or circumstance, and the remaining portions of this Housing Plan shall continue in full force and effect. Without limiting the foregoing, in the event that any applicable law prevents or precludes compliance with any term of this Housing Plan, the Parties shall promptly modify this Housing Plan to the extent necessary to comply with such law in a manner that preserves, to the greatest extent possible, the benefits to each of the Parties. In connection with the foregoing, the Parties shall develop an alternative of substantially equal, but not greater, cost and benefit to Developer and any applicable Vertical Developer so as to realize from the Project substantially the same (i) overall benefit (from a cost perspective) to the public and (ii) overall benefit to Developer and any applicable Vertical Developer.

DECLARATION OF RESTRICTIONS

[Property Address]

**THIS DECLARATION OF RESTRICTIONS** ("Declaration") is made as of \_\_\_\_\_, by [LESSEE'S NAME IN BOLD, CAPITAL LETTERS.], a [\_\_\_\_\_ limited liability company] ("Lessee"), in favor of the **CITY AND COUNTY OF SAN FRANCISCO**, acting by and through the San Francisco Port Commission (the "Port").

RECITALS

A. The Port entered into that certain Disposition and Development Agreement (the "DDA") with Seawall Lot 337 Associates, LLC, a Delaware limited liability company ("Developer") on \_\_\_\_\_, 2017 governing the development of an approximately 16-acre parcel located in San Francisco south of Mission Creek/China Basin Channel, bordered by Third Street on the west, Mission Rock Street on the south, and Terry Francois Boulevard on the east (the "Mission Rock Project"). As part of the DDA, the Port and the Developer agreed to implement a housing plan that sets forth the obligations with respect to the delivery of affordable housing at the Mission Rock Project (the "Housing Plan"). The Port desires to impose certain restrictions described in the Housing Plan upon the development of the leasehold interest in the real property described in **Exhibit A** attached hereto and incorporated herein by reference (the "Property") with respect to the market-rate and inclusionary low-income housing therein (the "Residential Project"). Lessee and the Port entered into that certain Parcel Lease and Vertical DDA on \_\_\_\_\_, 201\_ governing the development of the Residential Project, including the development of inclusionary low-income housing, as either may be amended from time to time (the "Vertical Agreements"). The Vertical Agreements are incorporated by reference in this Declaration as though fully set forth in this Declaration. Definitions and rules of interpretation set forth in the Vertical Agreements apply to this Declaration.

B. Pursuant to the Vertical Agreements, Lessee has agreed to comply with certain affordability and other use and occupancy restrictions (collectively, the "Regulatory Obligations"), commencing on the date on which a certificate of occupancy is issued for the Residential Project, and continuing through the date that is the expiration of the Parcel Lease applicable to the Residential Project (the "Compliance Term").

### AGREEMENT

Now, therefore, in consideration of the Port's entering into the Vertical Agreements with Lessee, Lessee agrees as follows:

1. Lessee must comply with the Regulatory Obligations through the expiration of the Compliance Term. Specifically, Lessee agrees as follows, subject to additional terms as set forth in the Agreement:

[Revise to reflect specific requirements and income categories.] [Replace "Unit" if "Beds" are used in Regulatory agreement.]

(a) [Include if applicable: With the exception of one Unit reserved for the manager of the Residential Project.] Inclusionary Units in the Residential Project will at all times be rented only to tenants who qualify as Qualified Tenants at initial occupancy, specifically:

| Unit Size | No. of Inclusionary Units | Maximum Income Level |
|-----------|---------------------------|----------------------|
|           |                           | % of Median Income   |
|           |                           | % of Median Income   |
|           |                           | % of Median Income   |
|           |                           | % of Median Income   |
|           |                           | % of Median Income   |
|           |                           | % of Median Income   |
|           |                           | % of Median Income   |
|           |                           |                      |

[Include if there is a reason to restrict to a target population] In addition:

- (i) \_\_\_\_\_ Units must be rented at all times to [TAY tenants].
- (ii) \_\_\_\_\_ Units must be rented at all times to tenants who are [educators].

(b) The total amount for rent and utilities (with the maximum allowance for utilities determined by the San Francisco Housing Authority) charged to a Qualified Tenant may not exceed:

(i) thirty percent (30%) of the applicable maximum income level, adjusted for household size; or

(ii) the tenant paid portion of the contract rent as determined by the San Francisco Housing Authority for Qualified Tenants holding Section 8 vouchers or certificates.

2. During the Compliance Term the Port may rely on the Deed of Trust and/or this Declaration, in the Port's discretion, to enforce any of the Port's rights under the Port Documents..

3. This Declaration and the Regulatory Obligations constitute covenants running with the land, including the leasehold interest and bind successors and assigns of Lessee and any owner of the Property. In the event that Lessee fails to comply with the Regulatory Obligations to the Port's satisfaction, in its sole discretion, within thirty (30) days of Lessee's receipt of notice from the Port to so comply, the Port at its option may exercise any rights available at equity or in law, including, without limitation, institute an action for specific performance. Lessee shall pay the Port's costs in connection with the Port's enforcement of the terms of this Declaration, including, without limitation, the Port's attorneys' fees and costs.

[Delete Section 4 if HUD is not providing financing. Revise as appropriate for HUD financing.]

4. The Port acknowledges that this Declaration and the other Port Documents are subject and subordinate to the HUD Documents until the later to terminate of: (a) the term of the HUD Documents; or (b) any period during which HUD holds title to [the leasehold estate in] the Property. During any applicable period:

(a) The HUD Documents may be amended, extended, renewed, assigned, or superseded without the Port's consent.

(b) The Port will not declare a default or foreclose without HUD's prior written consent.

(c) The Residential Project will be constructed and operated in conformance with the provisions of HUD's Section 202 Program and all applicable regulations and administrative requirements. In the event of any conflict between this Declaration and the provisions of any HUD regulations, related administrative requirements or capital advance documents (including the HUD Documents), the latter shall control.

(d) HUD approval of a transfer of the Residential Project as defined in Section 4 of the Capital Advance Program Use Agreement shall be deemed to constitute approval of the Port to the transfer.

(e) This Declaration may not be amended or assigned without HUD's prior written approval.

(f) Enforcement of the provisions of this Declaration shall not result in any claim against the Residential Project, the capital advance proceeds, any reserve or deposit required by HUD in connection with the capital advance, or the rents or other income from the Residential Project other than residual receipts as defined and authorized for release by HUD.

(g) In the event that any Port restrictions on occupancy, use and rents at any time exceed HUD's restrictions on occupancy or rents or otherwise affect the financial viability of the Residential Project (i.e., impair Lessee's ability to sustain a level of income sufficient to meet all financial obligations of the Residential Project, including HUD required escrows and operating expenses) HUD reserves the right to remove or void the Port restrictions for as long as HUD deems necessary. The Port recognizes HUD's authority to take appropriate action unilaterally to remove or void the Port restrictions.

Lessee has executed this Declaration as of the date first written above.

**DDA EXHIBIT B6-A**  
**WORKFORCE DEVELOPMENT PLAN**

## **DDA Exhibit B6 - A**

### **Workforce Development Plan**

The development plan for Mission Rock under the Transaction Documents provides for the development of a new mixed-use neighborhood composed of commercial/office, retail, garage, market rate and affordable residential uses and major new and expanded parks. This Workforce Development Plan sets forth the activities Port, Developer and Vertical Developer shall undertake, and require their Contractors, Consultants, Subcontractors, Subconsultants, Commercial Tenants, Lessees, Service Providers and Professional Service Providers, as applicable, to undertake, to support workforce development in the pre-construction, construction and end use phases of the Project, as set forth in this Exhibit B6-A.<sup>1</sup>

The Port and Developer shall enter into the DDA which will provide for the development of the Project in a series of Phases. In connection with the DDA, the Port and the Developer will enter into a Master Lease providing Developer the right to construct Horizontal Improvements within the Project. Developer will enter into contracts with Contractors and Consultants to construct all Horizontal Improvements allowed under the Master Lease.

Developer will submit Phase Submittals to the Port pursuant to the Transaction Documents. Following each Phase Approval, the Port will authorize the Chief Harbor Engineer to issue Port permits necessary for Developer to begin to construct Horizontal Improvements in accordance with the DDA and the Master Lease. Upon exercise of an Option in accordance with the DDA, the Port will convey each Development Parcel through Parcel Leases to a Vertical Developer. A Vertical Developer will enter into contracts with Contractors and Consultants to construct the Vertical Improvements, including residential and commercial improvements, in accordance with the Parcel Lease and Vertical DDA. Upon completion of the Vertical Improvements, the applicable Parcel Lease, between the Port and the Vertical Developer, shall govern the operation and use of the Vertical Improvements.

The foregoing summary is provided for convenience and for informational purposes only. In case of any conflict, the provisions of the DDA and each Vertical DDA shall control.

#### **A. First Source Operations and Pre-Construction Hiring Agreement.**

1. Developer shall, with respect to Horizontal Improvements, and the Port shall require that each Vertical Developer shall, with respect to each Vertical Improvement, comply with the operational requirements of the First Source Hiring Program pursuant to San Francisco Administrative Code Chapter 83 ("**Chapter 83**") and upon entering into: (a) leases or any other occupancy contracts for commercial space at Vertical Improvements that are subject to Chapter 83 with a tenant ("**Lessee**"), provided, however, that no Lessee occupying less than 5,000 square

---

<sup>1</sup> Any capitalized term used in this Exhibit B6-A, including its Attachments, that is not defined herein, or in such Attachments, or in the referenced Administrative Code Sections, shall have the meaning given to such term in the DDA.

feet in floor area within the Project Site shall have an obligation to enter into a First Source Hiring Agreement or comply with the requirements of Chapter 83; or (b) janitorial, security, landscape, operations and maintenance contracts, will include in each such lease or contract a requirement that such third party enter into a First Source Hiring Agreement in the form attached hereto as Attachment A, and provide a signed copy thereof to the Office of Economic and Workforce Development within 10 business days of execution. The Port shall cause (i) Developer to comply with the above requirements by including such requirements as a material term in the Master Lease applicable to such Contract and (ii) each Vertical Developer to comply with the above requirements by including such requirements as a material term in the Vertical DDA applicable to such Contract.

2. Further, Developer shall, with respect to Horizontal Improvements, and the Port shall require that each Vertical Developer shall, with respect to each Vertical Improvement, voluntarily include within its good faith efforts to comply with Chapter 83 a requirement to include pre-construction work within the Project's First Source Hiring Program and upon entering into professional services contracts for architectural and engineering services, provided, however, that no professional services firm performing work through a contract valued at less than \$500,000 or a contract for services relating to the construction of any tenant improvements within a leased premises comprised of less than 15,000 square feet in floor area shall have an obligation to enter into a First Source Hiring Agreement, include in each such contract a requirement that such third party enter into a First Source Hiring Agreement in the form attached hereto as Attachment A, and provide a signed copy thereof to the Office of Economic and Workforce Development within 10 business days of execution. The Port shall cause (i) Developer to comply with the above requirements by including such requirements as a material term in the Master Lease applicable to such Contract and (ii) each Vertical Developer to comply with the above requirements by including such requirements as a material term in the Vertical DDA applicable to such Contract.

3. Residential units within the Project shall not be subject to any obligations under this Section A and the tenants of such residential units shall have no obligation to enter into a First Source Hiring Agreement.

4. The Office of Economic and Workforce Development ("OEWD") is the sole administrator of the First Source Hiring Program per San Francisco Administrative Code Chapter 83. OEWD's Business Services team will manage the First Source Hiring Agreement and will be the point of contact for Lessees and Service Providers. OEWD's Business Team will provide Referrals for the permanent Entry Level Positions located within the Project where required under Chapter 83.

5. Incorporation into contract provisions.

i. Developer or Vertical Developer shall include in its Contracts provisions that require Lessees and Service Providers to enter into a First Source Hiring Agreement and follow the good faith efforts within such agreements towards the hiring goals of Chapter 83. Developer or Vertical Developer shall also include in such Contracts provisions that require Lessees and Service Providers to identify a single point of contact and contact OEWD's Business Services team to discuss its obligations under the First Source Hiring Agreement.

ii. Developer or Vertical Developer shall include in its Professional Service Contracts provisions that require Professional Service Providers to enter into a First Source Hiring Agreement and follow the good faith efforts within such agreement towards the hiring goals of Chapter 83. Developer or Vertical Developer shall also include in such Professional Service Contracts provisions that require Professional Service Providers to identify a single point of contact and contact OEWD's Business Services team to discuss its obligations under the First Source Hiring Agreement.

6. Pre-start conference and access.

i. Developer or Vertical Developer shall meet with OEWD prior to initial occupancy of Vertical Improvements at the Project Site for a pre-start conference to assess the operation goals of the First Source Hiring Program, including commercial tenant operations, janitorial, security, landscape, operations and maintenance services and provide projections for Entry Level Position employment opportunities within such fields with respect to the Horizontal Improvements or Vertical Improvements. Developer or Vertical Developer shall also provide OEWD access to meet Lessees and Service Providers at the Project Site and encourage the same to meet with OEWD regarding their respective First Source Hiring Obligations.

ii. With respect to each Horizontal Improvement, Developer shall meet with OEWD upon submission of a Phase Submittal, and, with respect to each Vertical Improvement, Vertical Developer shall meet with OEWD upon entering into a Vertical DDA at the Project Site for a pre-start conference to assess the pre-construction goals of the First Source Hiring Program, including architectural and engineering services and provide projections for Entry Level Position employment opportunities within such fields with respect to such Horizontal Improvement or Vertical Improvement. Developer or Vertical Developer shall also provide OEWD access to meet Professional Service Providers at the Project Site and encourage the same to meet with OEWD regarding their respective First Source Hiring Obligations.

7. Compliance with the operational goals of Chapter 83 shall be determined on an individual Contract or Professional Service Contract basis. Lessees and Service Providers shall demonstrate good faith efforts towards the hiring goals of Chapter 83. Professional Service Providers shall demonstrate good faith efforts towards the hiring goals of their First Source Hiring Agreement.

8. For the purposes of a First Source Hiring Agreement, (i) Contract shall mean: (a) any commercial lease or other commercial occupancy agreement with respect to a Vertical Improvements; and (b) any contract for janitorial, security, landscape, or operations and maintenance services performed at a Horizontal Improvement or Vertical Improvement; (ii) Professional Service Contract shall mean any contract for architectural or engineering services performed with respect to a Horizontal Improvement or Vertical Improvement, (iii) Service Provider shall mean any person(s), firm, partnership, corporation, government agency, nonprofit or combination thereof, who owns or operates a commercial business that enters into a Contract to perform janitorial, security, landscape, and operations and maintenance services with respect a Horizontal Improvement or Vertical Improvement, and (iv) Professional Service Provider shall mean any person(s), firm, partnership, corporation, government agency, nonprofit or combination thereof, who owns or operates a commercial business that enters into a Contract to

perform architectural or engineering services with respect a Horizontal Improvement or Vertical Improvement.

9. OEWD shall notify any Lessees, Service Providers or Professional Service Providers in writing, with a copy to Developer or Vertical Developer, as applicable, and to the Port, of any alleged breach on the part of that entity of its obligations under the First Source Hiring Agreement, as applicable, and provide such entity a reasonable opportunity to cure its alleged breach before seeking an assessment of liquidated damages pursuant to Section 83.12 of the Administrative Code. OEWD sole remedy against a Lessees, Service Providers and Professional Service Providers shall be as set forth in Chapter 83, including the enforcement process. Upon OEWD's request, Port, Developer or Vertical Developer, as applicable, shall reasonably cooperate with OEWD in any such enforcement action against any Lessees, Service Providers or Professional Service Providers, provided in no event shall Port, Developer or Vertical Developer, as applicable, be liable for any breach by a Lessees, Service Providers or Professional Service Providers.

10. If Port, Developer or Vertical Developer, as applicable, fulfills its obligations as set forth in this Section A, it shall not be held responsible for the failure of Lessee, Service Provider or Professional Service Provider or any other person or party to comply with the requirements of Chapter 83, their applicable First Source Hiring Agreement or this Section A. If Developer or Vertical Developer, as applicable, fails to fulfill its obligations under this Section A, the applicable provisions of Chapter 83 shall apply as to Developer or Vertical Developer, as applicable, though the Port and Developer shall have the right to invoke the dispute resolution process set forth in Article 10 of the DDA.

11. This Section A is an approved "First Source Hiring Agreement" as referenced in Sections 83.9 and 83.11 of the Administrative Code.

**B. Local Hiring Agreement.**

1. Developer, with respect to each Horizontal Improvement, shall, and the Port shall require that each Vertical Developer, with respect to each Vertical Improvement, shall (i) include in each Contract for construction work a provision requiring each Contractor to enter into a Local Hiring Agreement in the form attached hereto as Attachment B before beginning any construction work, and (ii) provide a signed copy thereof to the Office of Economic and Workforce Development ("OEWD") and CityBuild within 10 business days of execution, provided, however, that no person or entity entering into leases or other occupancy contracts for commercial space at a Vertical Improvement within the Project site ("**Commercial Tenant**") which occupies less than 15,000 square feet in floor area within such Vertical Improvement shall have an obligation to enter into a Local Hiring Agreement or be subject to the Local Hiring Program pursuant to Chapter 82, as defined below.<sup>2</sup> All future tenant improvements performed subsequent to any initial tenant improvements within such Vertical Improvement shall be subject to the local hiring requirement within Attachment B on a good faith basis only. The Port shall cause (i) Developer to comply with the above requirements by including such requirements as a

---

<sup>2</sup> Any capitalized term used in this Section B that is defined in Attachment B will have the definition given to such term in such Attachment.

material term in the Master Lease applicable to such Contract and (ii) each Vertical Developer to comply with the above requirements by including such requirements as a material term in the Vertical DDA applicable to such Contract.

2. CityBuild shall represent OEWD and will provide referrals of Targeted Workers for positions on the construction work for Improvements subject to a Local Hiring Agreement in accordance with San Francisco Administrative Code Chapter 82 ("**Chapter 82**").

3. Incorporation into contract provisions. Developer and Vertical Developer, as applicable, shall include in their respective contracts provisions that require prospective Contractors and Subcontractors to comply with the requirements set forth in the Local Hiring Agreement Attachment B.

4. Tenant improvements performed within any residential units within the Project shall not be subject to any obligations under this Section B and the tenants of such residential units shall have no obligation to enter into a Local Hiring Agreement.

5. Compliance with the construction requirements of Chapter 82 for Horizontal Improvements shall be determined on a Phase by Phase basis. Compliance will be measured by dividing the number of Construction Work Hours performed by Local Residents or Apprentices, as applicable, by the total number of Construction Work Hours performed on Horizontal Improvements within a Phase. If Developer exceeds its obligations set forth in its applicable Local Hiring Agreement with respect to an individual Horizontal Improvement, Developer may, at its option, allocate such excess towards the compliance of another Horizontal Improvement within the Project Site, subject to the requirements of Attachment B. Notwithstanding anything to the contrary, Developer may, at its election, require that compliance be determined on a Project-wide basis by giving notice to OEWD and the Port of such election during the submission of the penultimate Phase Submittal.

6. Compliance with the construction requirements of Chapter 82 for Vertical Improvements shall be determined on an individual Vertical Improvement basis. Compliance will be measured by dividing the number of Construction Work Hours performed by Local Residents or Apprentices, as applicable, by the total number of Construction Work Hours performed on the Vertical Improvement. If a Vertical Developer exceeds its obligations set forth in its applicable Local Hiring Agreement with respect to an individual Vertical Improvement, the Vertical Developer of such Vertical Improvement may, at its option, allocate such excess towards the compliance of another Vertical Improvement within the Project Site, subject to the requirements of Attachment B. Notwithstanding anything to the contrary, Developer may, at its election, require that compliance be determined on a Phase-wide basis by giving notice to OEWD and the Port of such election during the submission of a Phase Submittal.

7. OEWD shall notify Contractor, Subcontractor and Commercial Tenant, as applicable, in writing, with a copy to the Port and Developer or Vertical Developer, as applicable, of any alleged breach on the part of that entity of its obligations under Chapter 82 or its Local Hiring Agreement, as applicable, and provide such entity an opportunity to cure its obligations before seeking an assessment of liquidated damages pursuant to Section 82.8 of the Administrative Code. OEWD's sole remedies against a Contractor, Subcontractor or Commercial

Tenant shall be as set forth in Chapter 82, including the enforcement process. Upon OEWD's request, Port, Developer or Vertical Developer, as applicable, shall reasonably cooperate with OEWD in any such enforcement action against any Contractor, Subcontractor or Commercial Tenant, provided that in no event shall Port, Developer or Vertical Developer, as applicable, be liable for any breach by a Contractor, Subcontractor or Commercial Tenant.

8. If Port, Developer or Vertical Developer, as applicable, fulfills its obligations as set forth in this Section B, it shall not be held responsible for the failure of a Contractor, Subcontractor, Commercial Tenant or any other person or party to comply with the requirements of Chapter 82 or this Section B. If Developer or Vertical Developer, as applicable, fails to fulfill its obligations under this Section B, the applicable provisions of Chapter 82 shall apply, though the Port and Developer, as applicable, shall have the right to invoke the process set forth in Article 10 of the DDA.

9. This Section B complies with the requirements of Chapter 82, including Sections 82.5 and 82.7 and the requirements of Chapter 83 related to construction work.

**C. Workforce Job Readiness and Training Funds.**

Vertical Developers, on behalf of the Project, shall contribute to OEWD \$1,000,000 (One Million Dollars) to support workforce job readiness and training ("Workforce Job Readiness and Training Funds") for allocation to OEWD's CityBuild and First Source Hiring programs and qualified local community based organizations. Such funds shall be paid to OEWD, and used as provided below, over the course of the Project on a Development Parcel by Development Parcel basis in eleven equal installments. Each equal installment shall be paid by a Vertical Developer at issuance of site permit for the development of Vertical Improvements upon a Development Parcel, except for the development of the parking garage parcel, pursuant to a Vertical DDA.

Priority for OEWD's use and allocation of Workforce Job Readiness and Training Funds shall be to organizations that have backgrounds in workforce readiness and training, an established program with a demonstrated history of performing workforce readiness and training and an existing track record of working in economically disadvantaged communities within San Francisco, including, but not limited to the Bayview/Hunters Point, Chinatown, Mission, South of Market, Tenderloin, Visitacion Valley and Western Addition neighborhoods.

1. **Community Based Organizations:** \$500,000 (Five Hundred Thousand Dollars) of the Workforce Job Readiness and Training Funds shall be dedicated to funding community-based organizations that provide services which seek to: reduce barriers to employment for individuals within at-risk populations (the "**Barrier Removal Funds**"); and/or provide job readiness and training ("**Job Readiness Training Funds**") (together, the "**CBO Funds**"). OEWD shall allocate the CBO Funds to qualified local community based organizations based on a competitive process, and distribute the CBO Funds during the construction and operation of the Project until exhausted. The funds will be primarily targeted to support Bayview/Hunters Point, Chinatown, Mission, South of Market, Tenderloin, Visitacion Valley and Western Addition neighborhood residents and residents of surrounding areas. OEWD shall prioritize allocating funds to organizations that have a background in workforce readiness and training, an established program with a demonstrated history of performing workforce readiness and training and an

existing track record of working in economically disadvantaged communities. OEWD shall use good faith efforts to promptly initiate and complete the competitive process and begin distribution of the Barrier Removal Funds within one hundred and eighty (180) days after OEWD's initial receipt of such funds, but in a manner that ensures the resulting programs and services will correspond directly to preparing participants for the jobs created by the project.

i. **CBO Funds.** OEWD shall allocate a portion of the CBO Funds to support the delivery of services to assist individuals within at-risk populations, including low-income youth and adults with histories of incarceration, homelessness, substance abuse or other factors that may create barriers to employment, with reducing barriers to employment and/or providing job readiness and training. The CBO Funds shall fund programs that provide case management, supportive services (i.e. union dues, tools, uniform/boots), life skills training, basic education, barrier removal (including assistance with attaining a GED or driver's license, if applicable), wrap-around social services, job training, job placement or retention services with a goal of allowing participants to become CityBuild or First Source Hire-ready.

2. **OEWD: \$500,000 (Five Hundred Thousand Dollars)** of the Workforce Job Readiness and Training Funds shall be dedicated to OEWD's programs that train economically disadvantaged adults, workers and local residents in the fields of construction, end use operations and hospitality (the "**OEWD Funds**"). OEWD shall identify and partner with local community-based organizations to promote the programs and identify and recruit program participants. OEWD shall allocate the funds throughout the construction and operation of the Project until exhausted. The resources shall be primarily targeted to support and prepare individuals in the Bayview/Hunters Point, Chinatown, Mission, South of Market, Tenderloin, Visitacion Valley and Western Addition and surrounding areas for construction and operation jobs at the Project. OEWD shall partner with organizations that have a background in workforce readiness and training, an established program with a demonstrated history of performing workforce readiness and training and an existing track record of working in economically disadvantaged communities. OEWD shall use good faith efforts to promptly begin distribution of the OEWD Funds within one hundred eighty (180) days after OEWD's initial receipt of such funds, but in a manner that ensures the resulting programs and services will correspond directly to preparing participants for the jobs created by the project.

i. **Operations Training Resources.** OEWD, in its discretion, shall dedicate a portion of the OEWD Funds to support programs that provide end use operations job training programs for economically disadvantaged adults, including individuals designated as a targeted population by the San Francisco Workforce Development Board, as an individual who is, or is at risk of, relying upon, or returning to, public assistance, including unemployment benefits, formerly incarcerated, homeless, veterans, out-of-school youth, pregnant or parenting teens, youth in the juvenile justice or foster care systems, people with disabilities, limited English populations, dislocated workers, or residents of public housing (the "**Operations Training Resources Funds**"), OEWD shall allocate Operations Training Resources Funds to programs performing vocational training in the retail, food service, janitorial, landscaping, facilities/open space operations and maintenance employment sectors. The intended use of the Operations Training Resources Funds is to provide additional training tailored towards future employment opportunities at the Project. The programs may also include working with potential

employers regarding any necessary accommodations or additional training, and ongoing support following job placement.

ii. Construction Training Resources. OEWD, in its discretion, shall dedicate a portion of the OEWD Funds to support programs that train disadvantaged workers and local residents in the field of construction work (the "**Construction Training Resources**"). OEWD shall allocate the Construction Training Resources Funds to programs such as the CityBuild Academy, an 18-week pre-apprenticeship training program that prepares citywide residents for entry into the trades, the Construction Administration & Professional Service Academy, an 18-week program offered at City College of San Francisco that prepares San Francisco residents for entry-level careers as professional construction office administrators, or the CityBuild Women's Mentorship Program, a volunteer program that connects women construction leaders with experienced professional and mentors.

iii. Pile Driving Training Program. OEWD, in its discretion, shall dedicate a portion of the OEWD Funds to support the development and implementation of a pile driving training program for disadvantaged workers and local residents, including individuals that have formerly been incarcerated or are experiencing homelessness (the "**Pile Driver Training Funds**"). The Pile Driving Training Funds shall be managed and implemented by OEWD in conjunction with local unions and community-based organizations. The programs may also include working with potential employers regarding any necessary accommodations or training, and ongoing support following job placement. The Pile Driving Training Program will address the shortage of skilled pile drivers in San Francisco and will augment the pipeline of skilled workers by providing specific training in a high-demand trade. By providing training in a high-demand trade, the program will help to ensure that more local residents are equipped with the education and skills necessary to be successful in the construction industry, thereby supporting local economic empowerment and upward mobility.

3. Accounting. Developer shall have no right to challenge the appropriateness of or the amount of any expenditure, so long as it is used in accordance with the provisions of this Exhibit b<sup>6</sup>-A. The Workforce Job Readiness and Training Funds may be commingled with other funds of the City for purposes of investment and safekeeping, but the City shall maintain records as part of the City's accounting system to account for all the expenditures for a period of four (4) years following the date of the expenditure, and make such records available upon Developer's request.

4. In the event individuals trained by the programs supported by the Workforce Job Readiness and Training Funds are hired to perform work at the Project, Developer may receive credit toward First Source and Local Hire obligations under San Francisco Administrative Code Chapters 82 and 83, as mutually determined with OEWD.

5. Board Authorization. Any interest earned on the Workforce Job Readiness and Training Funds shall remain in designated accounts for use by OEWD for workforce readiness and training consistent with this Exhibit B6-A and shall not be transferred to the City's general fund.

## Attachment A: First Source Hiring Agreement

### For Operations and Preconstruction Services

This First Source Hiring Agreement (this "FSHA Agreement"), is made as of \_\_\_\_\_, by and between [(the "Lessee"/ "Service Provider"/ "Professional Service Provider")], and the Office of Economic and Workforce Development, ("OEWD"), collectively the "Parties":

#### RECITALS

[Use for Lessee - WHEREAS, [Lessee has plans to occupy a portion of the Vertical Improvement at [Address] (the "Premises") which requires a First Source Hiring Agreement with OEWD because the Premises is subject to a property contract between [Developer/Vertical Developer] and the City acting through the San Francisco Port Commission;

WHEREAS, the [Developer/Vertical Developer] was required to provide notice in leases, subleases and other, occupancy contracts for use of the Premises; and

WHEREAS, as a material part of the consideration given by Lessee under such contract, Lessee has agreed to execute this FSHA Agreement and participate in the First Source Hiring Program managed by OEWD as established by the City and County of San Francisco pursuant to Chapter 83 of the San Francisco Administrative Code ("Chapter 83"), as modified herein;]

[Use for Service Providers contracts - WHEREAS, [Service Provider has plans to provide [ ] services to the [Horizontal Improvement/ Vertical Improvement] at [Address] (the "Premises") which requires a First Source Hiring Agreement with OEWD because the Premises is subject to a property contract between [Developer/Vertical Developer] and the City acting through the San Francisco Port Commission;

WHEREAS, the [Developer/Vertical Developer] was required to provide notice in janitorial, security, landscape, or operations and maintenance contracts that provide services to the Premises; and

WHEREAS, as a material part of the consideration given by Service Provider under such contract, Service Provider has agreed to execute this FSHA Agreement and participate in the First Source Hiring Program managed by OEWD as established by the City and County of San Francisco pursuant to Chapter 83 of the San Francisco Administrative Code ("Chapter 83");]

**[Use for Professional Service Providers contracts -** WHEREAS, [Professional Service Provider has plans to provide [ ] services to the [Horizontal Improvement/ Vertical Improvement] at [Address] (the "Premises") which requires a First Source Hiring Agreement with OEWD because the Premises is subject to a property contract between [Developer/Vertical Developer] and the City acting through the San Francisco Port Commission;

WHEREAS, the [Developer/Vertical Developer] was required to provide notice in architectural or engineering contracts that provide services to the Premises; and

WHEREAS, as a material part of the consideration given by Professional Service Providers under such contract, Professional Service Providers has agreed to execute this FSHA Agreement and participate in the First Source Hiring Program managed by OEWD as established by the City and County of San Francisco pursuant to Chapter 83 of the San Francisco Administrative Code ("Chapter 83");]

**[Use for [Developer/Vertical Developer] operations of Vertical Improvement -** WHEREAS, Lessee has plans to operate the building at [Address] (the "Premises") which required a First Source Hiring Agreement between Lessee and FSHA because the Premises is subject to a property contract between Lessee and the City acting through the San Francisco Port Commission; and

WHEREAS, as a material part of the consideration given by Lessee under the property contract, Lessee has agreed to execute this FSHA Agreement and participate in the Workforce System managed by OEWD as established by the City and County of San Francisco pursuant to Chapter 83 of the San Francisco Administrative Code ("Chapter 83");]

NOW, THEREFORE, in consideration of the mutual covenants set forth herein and other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, Parties covenant and agree as follows:

## 1. DEFINITIONS

For purposes of this FSHA Agreement, initially capitalized terms shall be defined as follows:

- a. "Entry Level Position" shall mean any non-managerial position that requires no education above a high school diploma or certified equivalency, and less than two (2) years training or specific preparation, and shall include temporary, permanent, trainee and intern positions
- b. "Contract" shall mean: (a) any commercial lease or other commercial occupancy agreement with respect to the Vertical Improvement; and (b) any contract for janitorial, security, landscape, or operations and maintenance services performed at the Horizontal Improvement or Vertical Improvement.
- c. "DA" means that certain Development Agreement between Developer and the City and County of San Francisco, acting by and through the San Francisco Port Commission with respect to the Project Site.

- d. "DDA" means that certain Disposition and Development Agreement between Developer and the City and County of San Francisco, acting by and through the San Francisco Port Commission with respect to the Project Site.
- e. "Developer" has the meaning set forth in the DDA, including any successor during the term of this FSHA Agreement.
- f. "Horizontal Improvement" has the meaning set forth in the DDA.
- g. "Lessee" includes every commercial tenant, subtenant, or any other entity occupying a Vertical Improvement for the intent of doing business in the City and County of San Francisco and possessing a Business Registration Certificate with the Office of Treasurer required to enter into a First Source Hiring Agreement as defined in Chapter 83, provided, however, that in no event shall the meaning of Lessee include a commercial tenant, subtenant, or any other entity occupying less than 5,000 square feet in floor area within the Vertical Improvement.
- h. "OEWD Resume Database" shall mean the web portal administered by OEWD that connects Lessees, Service Providers and Professional Service Providers with qualified job seekers. The web portal is a free recruiting service to all Lessees, Service Providers and Professional Service Providers and is to be used by the Lessees, Service Providers and Professional Service Providers as part of their FSHA Agreement.
- i. "Professional Service Contract" shall mean any contract for architectural or engineering services performed with respect to a Horizontal Improvement or Vertical Improvement, except for contracts for architectural or engineering services related to the construction of any tenant improvements within a leased premises comprised of less than 15,000 square feet in floor area within a Vertical Improvement.
- j. "Professional Service Provider" shall mean any person(s), firm, partnership, corporation, government agency, nonprofit or combination thereof, who owns or operates a commercial business that enters into a Contract to perform architectural or engineering services with respect to the Horizontal Improvement or Vertical Improvement, provided, however, that no professional services firm performing work through a contract valued at less than \$500,000 shall have an obligation to enter into this First Source Hiring Agreement.
- k. "Project Site" shall mean the area consisting of an approximately 16-acre parcel located south of Mission Creek/China Basin Channel, bordered by Third Street on the west, Mission Rock Street on the south, and Terry Francois Boulevard on the east, as reconfigured in accordance with AB 2797.
- l. "Service Provider" shall mean any person(s), firm, partnership, corporation, government agency, nonprofit or combination thereof, who owns or operates a commercial business that enters into a Contract to perform janitorial, security,

landscape, or operations and maintenance with respect to the Horizontal Improvement or Vertical Improvement.

- m. "Referral" shall mean a qualified job seeker identified by OEWD as having the appropriate training, background and skill sets for a [Lessee/ Service Provider] specified Entry Level Position.
- n. "Vertical Developer" shall mean *[insert name of applicable Vertical Developer]*, including any successor during the term of a FSHA Operations Agreement.
- o. "Vertical Improvement" has the meaning set forth in the DDA.

## 2. LESSEE AND SERVICE PROVIDER OEWD WORKFORCE PARTICIPATION

- a. Lessee or Service Provider, as applicable, shall contact OEWD's Business Services team to provide headcount projections for Entry Level Positions and register with the OEWD Resume Database upon execution of its Contract.
- b. Lessee or Service Provider, as applicable, shall notify OEWD's Business Team of every available Entry Level Position by posting job openings for Entry Level Positions on the OEWD Resume Database. Lessee or Service Provider, as applicable, shall provide OEWD a period of time to recruit and refer qualified candidates prior to advertising such position to the general public, starting on the date that the Lessee or Service Provider, as applicable, posts the job opening on the OEWD Resume Database, and ending on the earlier of: (i) 10 business days; or (ii) the date upon which such Lessee or Provider has received OEWD's list of Referrals and has considered such Referrals for the available Entry Level Position in good faith, subject to Section 5 below. OEWD shall develop a pipeline of potential candidates and shall develop a staffing and implementation plan that is generally designed to allow OEWD to provide Lessee or Service Provider, as applicable, with its list of Referrals within 3 business days after such Lessee or Service Provider has posted a job opening. In the event the OEWD Resume Database is inaccessible, Lessee or Service Provider, as applicable, shall contact OEWD directly regarding their FSHA obligations by emailing [Business.Services@sfgov.org](mailto:Business.Services@sfgov.org), or other email address as may be mutually agreed upon by Professional Service Provider's single point of contact and OEWD, and submitting Attachment A-1.
- c. Lessee or Service Provider, as applicable, shall consider and screen all Referrals that meet the minimum qualifications of a Lessee's or Service Provider's, as applicable, job opening and shall use the OEWD Resume Database to provide feedback regarding Referrals that were screened, interviewed and hired. Hiring decisions shall be entirely at the discretion of Lessee or Service Provider, as applicable.

**3. LESSEE AND SERVICE PROVIDER GOOD FAITH EFFORT TO COMPLY WITH ITS OBLIGATIONS HEREUNDER**

Lessee or Service Provider, as applicable, will make good faith efforts to comply with its obligations under this FSHA Agreement. Determination of good faith efforts shall be based on all of the following:

- a. Lessee or Service Provider, as applicable, shall execute this FSHA Agreement and Attachment A-1 upon entering into Contracts. Lessee or Service Provider will also accurately complete and submit Attachment A-1 annually to reflect employment conditions.
- b. Lessee or Service Provider, as applicable, shall register with the OEWD Resume Database. Lessee or Service Provider, as applicable, using a resume database not associated with OEWD will not be considered towards the requirements of the FSHA Agreement.
- c. Lessee or Service Provider, as applicable, shall provide OEWD a period of time to recruit and refer qualified candidates prior to advertising such position to the general public, starting on the date that the Lessee or Service Provider, as applicable, posts the job opening on the OEWD Resume Database, and ending on the earlier of: (i) 10 business days; or (ii) the date upon which such Lessee or Provider has received OEWD's list of Referrals and has considered such Referrals for the available Entry Level Position in good faith, subject to Section 5 below. Lessee or Service Provider, as applicable, must identify a single point of contact responsible for communicating Entry Level Positions and take active steps to ensure continuous communication with OEWD's Business Services Team. Lessee or Service Provider, as applicable, shall use the OEWD Resume Database to provide feedback regarding Referrals that were screened, interviewed and hired.

**4. PROFESSIONAL SERVICES - ARCHITECTURAL AND ENGINEERING SERVICE PROVIDERS**

- a. This section incorporates additional requirements for Professional Service Providers performing architectural or engineering services. Professional Service Providers obligations relate only to preconstruction work and shall terminate upon the completion of the Professional Service Provider's Professional Service Contract.
- b. Participation.
  - i. Professional Service Provider shall contact OEWD's Business Services team to provide headcount projections for Entry Level Positions and register with the OEWD Resume Database upon execution of its Professional Services Contract.
  - ii. Professional Service Provider shall notify OEWD's Business Team of every available Entry Level Position by posting job openings for Entry Level Positions on the OEWD Resume Database. Professional Service Provider shall provide OEWD a period of time

to recruit and refer qualified candidates prior to advertising such position to the general public, starting on the date that the Lessee or Service Provider, as applicable, posts the job opening on the OEWD Resume Database, and ending on the earlier of: (i) 10 business days; or (ii) the date upon which such Lessee or Provider has received OEWD's list of Referrals and has considered such Referrals for the available Entry Level Position in good faith, subject to Section 5 below. In the event the OEWD Resume Database is inaccessible, Professional Service Provider shall contact OEWD directly regarding their FSHA obligations and submit Attachment A-1.

iii. Professional Service Provider shall consider and screen all Referrals that meet the minimum qualifications of a Professional Service Provider's, as applicable, job opening and shall use the OEWD Resume Database to provide feedback regarding Referrals that were screened, interviewed and hired. Hiring decisions shall be entirely at the discretion of Professional Service Provider.

iv. Within 30 days of executing a Professional Services Contract, Professional Service Provider will email OEWD and schedule to meet with staff from the First Source Hiring Program. At the meeting, the Professional Service Provider will provide information on new and available Entry Level Positions, anticipated job opening projections, start dates and rate of pay.

c. Good Faith Compliance.

Compliance with the requirements of subsections i through iv below shall demonstrate Professional Service Provider's good faith compliance with its obligations under this FSHA Agreement.

i. Over the life of the Contract, Professional Service Provider shall make good faith efforts to hire Referrals from the First Source Hiring Program to fulfill new and available Entry Level Positions. Professional Service Provider may decline to hire a Referral if the Contractor considers the Referral in good faith and deems the Referral is not qualified. The final decision to hire a Referral shall be made by the Professional Service Provider.

ii. Professional Service Provider, as applicable, shall execute this FSHA Agreement and Attachment A-1 upon entering into Professional Service Contracts. Professional Service Provider will also accurately complete and submit Attachment A-1 annually to reflect employment conditions.

iii. Professional Service Provider shall register with the OEWD Resume Database. Professional Service Provider using a resume database not associated with OEWD will not be considered towards the requirements of the FSHA Agreement.

iv. Professional Service Provider shall notify OEWD's Business Services Team of all available Entry Level Positions by posting job openings for Entry Level Positions on the OEWD Resume Database. Professional Service Provider shall provide OEWD a period of time to recruit and refer qualified candidates prior to advertising such position to the general public, starting on the date that the Lessee or Service Provider, as applicable, posts the job opening on the OEWD Resume Database, and ending on the earlier of: (i) 10 business days; or (ii) the date upon which such Lessee or Provider has received OEWD's list of Referrals and

has considered such Referrals for the available Entry Level Position in good faith, subject to Section 5 below. OEWD shall develop a pipeline of potential candidates and shall develop a staffing and implementation plan that is generally designed to allow OEWD to provide Lessee or Service Provider, as applicable, with its list of Referrals within 3 business days after such Lessee or Service Provider has posted a job opening. Professional Service Provider must identify a single point of contact responsible for communicating Entry Level Positions and take active steps to ensure continuous communication with OEWD's Business Services Team. Professional Service Provider shall use the OEWD Resume Database to provide feedback regarding Referrals that were screened, interviewed and hired. In the event the OEWD Resume Database is inaccessible, Professional Service Provider shall contact OEWD directly regarding their FSHA obligations by emailing [Business.Services@sfgov.org](mailto:Business.Services@sfgov.org), or other email address as may be mutually agreed upon by Professional Service Provider's single point of contact and OEWD, and submitting Attachment A-1.

- d. OEWD Requirements. OEWD's Referrals to such Professional Service Provider shall be economically disadvantaged workers identified by OEWD that either: (a) graduated from OEWD's Entry Level Professional Services Training Program; or (b) have the appropriate training, employment background and skill set for any new and available Entry Level Position specified by the Professional Service Provider.

## 5. COMPLIANCE AND ENFORCEMENT

- a. Compliance with the operational goals of Chapter 83 shall be determined on an individual Contract basis and compliance with the voluntary professional service goals within this FSHA Agreement shall be determined on an individual Professional Service Contract basis.
- b. Lessee's, Service Provider's or Professional Service Provider's failure to meet the criteria set forth in Section 3 or 4 above, as applicable, does not impute "bad faith", but shall trigger a review of the Referral process and compliance with this FSHA Agreement. Failure and noncompliance with this FSHA Agreement may result in penalties as defined in Chapter 83, provided, however, that Lessee, Service Provider or Professional Service Provider shall be provided notice and a reasonable opportunity to cure such noncompliance prior to the assessment of any penalties. Lessee or Service Provider, as applicable, agrees to review SF Chapter 83, and execution of the FSHA Agreement denotes that Lessee or Service Provider agrees to its terms and conditions. OEWD agrees and acknowledges that Professional Service Provider's obligations hereunder are opted into voluntarily and such obligations are not based on the requirements of Chapter 83.
- c. Notwithstanding anything to the contrary herein, nothing in this FSHA Agreement precludes Lessees, Service Providers or Professional Service Providers from immediately advertising and filling an Entry Level Position that performs essential functions of its operation prior to notifying OEWD provided, however, the obligations of this FSHA Agreement to make good faith efforts to fill such vacancies permanently with Referrals remains in effect. For these

purposes, "essential functions" means those functions necessary to remain open for business. If Lessee, Service Provider or Professional Service Provider has an immediate need to fill an Entry Level Position that perform essential functions, Lessee, Service Provider or Professional Service Provider shall provide OEWD notice of such position, and the fact that there is an immediate need to fill such position, on or before the date such position is advertised to the general public.

- d. Nothing in this FSHA Agreement shall be interpreted to prohibit the continuation of existing collective bargaining agreements or existing employment policies, including, but not limited to, advertising job openings to existing employees. In the event of a conflict between this FSHA Agreement and an existing collective bargaining agreement, the terms of the existing agreement shall supersede this FSHA Agreement.

#### 6. FSHA AGREEMENT DURATION

- a. Lessees and Service Providers: This FSHA Agreement shall be in full force and effect up to 10 years from the date of the temporary certificate of occupancy of the Vertical Improvement or the earlier termination of Lessee's Contract with regard to Lessee and 10 years from the date of substantial completion of the Horizontal Improvement or the earlier termination of Service Provider's Contract with regard to Services Provider. Upon termination of this FSHA Agreement, the Project will be subject to Existing City Laws, as defined in the DA, including the applicable requirements of Chapter 83.
- b. Professional Service Providers: This FSHA Agreement shall be in full force and effect up to the completion of a Professional Service Contract or the earlier termination of such Professional Service Contract.

**8. ENTIRE AGREEMENT**

This FSHA Agreement and the Transaction Documents contain the entire agreement between the parties and shall not be modified in any manner except by an instrument in writing executed by the parties or their respective successors. If any term or provision of this FSHA Agreement shall be held invalid or unenforceable, the remainder of this FSHA Agreement shall not be affected. If this FSHA Agreement is executed in one or more counterparts, each shall be deemed an original and all, taken together, shall constitute one and the same instrument. This FSHA Agreement shall inure to the benefit of and be binding on the parties and their respective successors and assigns. If there is more than one party comprising Lessee, their obligations shall be joint and several.

Section titles and captions contained in this FSHA Agreement are inserted as a matter of convenience and for reference and in no way define, limit, extend or describe the scope of this Agreement or the intent of any of its provisions. This FSHA Operations Agreement shall be governed and construed by laws of the State of California.

### Attachment A-1 Employer Services Form

The First Source Hiring Program is administered by the Office of Economic and Workforce Development (OEWD) and provides recruiting services at no cost to the employer. To find out how we can support your hiring needs, please visit our website at [www.owd.org/workforce](http://www.owd.org/workforce).

## **Attachment B: Local Hiring Agreement**

This Local Hiring Agreement ("Local Hiring Agreement") is made as of , by and between , the San Francisco Office of Economic and Workforce Development, (the "OEWD"), and the undersigned contractor ("Contractor"):

### **RECITALS**

WHEREAS, Contractor has executed or will execute an agreement (the "Contract") to construct or oversee a portion of the Project to construct [**Horizontal Improvements, including [specify improvements]**] OR [**Vertical Improvements, including [specify improvements]**] ("Construction Work") at , Lots in Assessor's Block , San Francisco California ("Site"), and a copy of this Local Hiring Agreement is attached as an exhibit to, and incorporated in, the Contract; and

WHEREAS, as a material part of the consideration given by Contractor under the Contract, Contractor has agreed to execute this Local Hiring Agreement and comply with the local hiring requirements established by the City and County of San Francisco, pursuant to Chapter 82 of the San Francisco Administrative Code ("Chapter 82"), as further modified herein;

WHEREAS, the provisions of the San Francisco Local Hiring Policy for Construction (the "Policy") as set forth in Chapter 82, as modified herein, are hereby incorporated as a material term of the Contract. Where used in this Attachment B, "Policy" shall include the modifications herein.

WHEREAS, Contractor agrees that (i) Contractor shall comply with all applicable requirements of the Policy; (ii) the provisions of this Local Hiring Agreement are reasonable and achievable by Contractor and its Subcontractors; and (iii) they have had a full and fair opportunity to review and understand the terms of the Policy.

NOW, THEREFORE, in consideration of the mutual covenants set forth herein and other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties covenant and agree as follows:

#### **1.1 SUMMARY**

- A. This Local Hiring Agreement incorporates applicable requirements consistent with the Policy as set forth in Chapter 82. The provisions of the Policy are hereby incorporated as a material term of the DDA. Contractor agrees that (i) Contractor shall comply with all applicable requirements of the Policy; (ii) the provisions of the Policy are reasonable and achievable by Contractor and its Subcontractors; and (iii) they have had a full and fair opportunity to review and understand the terms of the Policy.
- B. OEWD is responsible for administering the Policy and will be administering the applicable requirements for the Contract. For more information on the Policy and its implementation, please visit the OEWD website at:  
[www.workforcedevelopmentsf.org](http://www.workforcedevelopmentsf.org).

- C. Capitalized terms not defined herein shall have the meanings ascribed to them in the DDA.

## 1.2 DEFINITIONS

- A. "Apprentice" means any worker who is indentured in a construction apprenticeship program that maintains current registration with the State of California's Division of Apprenticeship Standards.
- B. "Area Median Income (AMI)" means unadjusted median income levels derived from the Department of Housing and Urban Development ("HUD") on an annual basis for the San Francisco area, adjusted solely for household size, but not high housing cost area.
- C. "Construction Work" means: (i) in the case of Horizontal Improvements, the construction of all Horizontal Improvements required or permitted to be made to the Project Site during a Phase and to be carried out by Developer under the DDA; or (ii) in the case of Vertical Improvements, the construction of a Vertical Improvement to be carried out by a Vertical Developer on a Development Parcel pursuant to an applicable Vertical DDA and Parcel Lease and all tenant improvements therein, except for the construction of any tenant improvements within a leased premises comprised of less than 15,000 square feet in floor area.
- D. "Construction Work Hours" means the total onsite work hours worked on a construction contract for a Construction Work by all apprentices and journey-level workers, whether those workers are employed by the Contractor or any Subcontractor.
- E. "Contractor" means a prime contractor, general contractor, or construction manager contracted by Developer or a Vertical Developer who performs Construction Work on the Project.
- F. "DDA" means that certain Disposition and Development Agreement between Developer and the City and County of San Francisco, acting by and through the San Francisco Port Commission.
- G. "Disadvantaged Worker" means a local resident, who (i) resides in a census tract within the City with a rate of unemployment in excess of 150% of the City unemployment rate; or (ii) at the time of commencing work on a covered project has a household income of less than 80% of the AMI, or (iii) faces or has overcome at least one of the following barriers to employment: being homeless; being a custodial single parent; receiving public assistance; lacking a GED or high school diploma; participating in a vocational English as a second language program; or having a criminal record or other involvement with the criminal justice system.
- H. "Developer" has the meaning set forth in the DDA, including any successor during the term of this Local Hiring Agreement.

- I. "Development Parcel" has the meaning set forth in the DDA.
- J. "Excess Credit Hours" shall mean the number of Construction Work Hours performed within a trade by Local Residents or Apprentices, as applicable, on a Construction Work that exceed the obligations set forth in Section 1.3.
- K. "Horizontal Improvement" has the meaning set forth in the DDA.
- L. "Job Notification" means the written notice of any Hiring Opportunities from Contractor to CityBuild. Contractor shall provide Job Notifications to CityBuild with a minimum of 3 business days' notice.
- M. "Local Resident" means an individual who is domiciled, as defined by Section 349(b) of the California Election Code, within the City at least seven (7) days prior to commencing work on a portion of the Project.
- N. "Non-Covered Construction Work" means any construction work not covered by the San Francisco Local Hiring Policy and the construction of any tenant improvements within a leased premises comprised of less than 15,000 square feet in floor area.
- O. "Parcel Lease" has the meaning set forth in the DDA.
- P. "Phase" has the meaning set forth in the DDA.
- Q. "Project Site" has the meaning set forth in the DDA.
- R. "Specialized Trades" means a list of trades designated as "Specialized Trades" published by OEWD for which the local hiring requirements of the Policy will not apply.
- S. "Targeted Worker" means any Local Resident or Disadvantaged Worker.
- T. "Vertical DDA" has the meaning set forth in the DDA.
- U. "Vertical Developer" has the meaning set forth in the DDA.
- V. "Vertical Improvement" has the meaning set forth in the DDA.

### 1.3 LOCAL HIRING PARTICIPATION

- A. The Contractor will work with OEWD's CityBuild Program to achieve the following employment participation levels for all Construction Work:
  - 1. Total Construction Work Hours By Trade. For all contracts for Construction Work, the mandatory participation level in terms of Construction Work Hours within each trade to be performed by Local Residents is 30%, with a goal, which is not mandatory under this

agreement, of no less than 15% of Construction Work Hours within each trade to be performed by Disadvantaged Workers.

2. Apprentices. For all Construction Work, at least 30% of the Construction Work Hours performed by apprentices within each trade is required to be performed by local residents. OEWD has a goal of 50%, which is not mandatory under this agreement, and OEWD will work with contractors to look for feasible opportunities by trade to achieve the 50% goal. Where the candidate pool at a given time includes both apprentices referred by CityBuild and other apprentices, Contractors, shall undertake reasonable efforts to interview the apprentices referred by CityBuild first. This Local Hiring Agreement also establishes a goal, which is not mandatory under this agreement, of no less than 15% of Construction Work Hours performed by apprentices within each trade to be performed by Disadvantaged Workers.
  3. Out-of-State Workers. For all Construction Works, Construction Work Hours performed by residents of states other than California will not be considered in calculation of the number of Construction Work Hours to which the local hiring requirements apply. Contractors and Subcontractors shall report to OEWD the number of Construction Work Hours performed by residents of states other than California.
- B. Pre-construction or other Local Hire Meeting. Prior to commencement of construction on Construction Works, Contractor and its Subcontractors whom have been engaged by contract and, identified in the forms required under Section 1.6 below as contributing toward the mandatory local hiring requirement, shall attend a preconstruction or other Local Hire meeting convened by OEWD staff. Representatives from Contractor and the Subcontractor(s) who attend such pre-construction or other Local Hire meeting will have hiring authority. OEWD shall approve applicable Construction Work-specific Specialized Trade exemptions, in addition to the list of trades designated by OEWD as Specialized Trades in accordance with the Section 82.5 of the Policy, during such meeting. Contractor and its Subcontractors who are engaged after the commencement of construction shall attend a future preconstruction meeting or meetings as mutually agreed by Contractor and OEWD staff.
- C. The Policy does not limit Contractor's or its Subcontractors' ability to assess qualifications of prospective workers, and to make final hiring and retention decisions. In no event shall hiring preferences required hereunder prevent Contractor's or its Subcontractors' ability to comply with applicable labor agreements or union dispatch procedures. No provision of the Policy shall be interpreted so as to require a Contractor or Subcontractor to employ a worker not qualified for the position in question, or to employ any particular worker.
- D. Tenant Improvements. All future tenant improvements performed within a Construction Work subsequent to any initial tenant improvements within such

Construction Work ("Subsequent Tenant Improvements") shall not be subject to the mandatory participation levels set forth in subsection A above. With respect to Subsequent Tenant Improvements, Contractor or Subcontractor, as applicable, are required only to make good faith efforts to hire Local Residents and Disadvantaged Workers to perform construction work for Subsequent Tenant Improvements. Good faith efforts shall include Contractor's or Subcontractor's, as applicable, attendance at a pre-construction or other Local Hire meeting, requesting to connect with potential workers through Citybuild, considering Targeted Workers provided by CityBuild and submitting Local Hiring Forms 1 and 2.

**1.4 COMPLIANCE WITH PARTICIPATION OBLIGATIONS CITYBUILD  
WORKFORCE DEVELOPMENT PROGRAM: EMPLOYMENT NETWORKING  
SERVICES**

- A. OEWD administers the CityBuild Program. CityBuild shall be the primary resource for Contractor and Subcontractors to use to meet Contractor's local hiring requirements under the Policy. CityBuild has two main goals:
  - 1. Assist with local hiring requirements under the Policy by connecting Contractor and Subcontractors with qualified journey-level, apprentice, and pre-apprentice local residents.
  - 2. Promote training and employment opportunities for disadvantaged workers of all ethnic backgrounds and genders in the construction work force.
- B. Where Contractor's or its Subcontractors' preferred or preexisting hiring or staffing procedures or labor agreements for a Construction Work do not enable Contractor to satisfy the local hiring requirements of the Policy, the Contractor or Subcontractor shall use other procedures to identify and retain Targeted Workers, including the following:
  - 1. Requesting to connect with workers through CityBuild, with qualifications described in the request limited to skills directly related to performance of job duties.
  - 2. Considering Targeted Workers networked through CityBuild within three business days of the request and who meet the qualifications described in the request. Such consideration may include in-person interviews. All workers networked through CityBuild will qualify as Disadvantaged Workers under the Policy. Neither Contractor nor its Subcontractors are required to make an independent determination of whether any worker is "disadvantaged" as defined in the Policy.
- C. **Basis of Compliance:**

1. With regard to Horizontal Improvements, OEWD shall determine compliance with this Agreement for each trade on a Phase by Phase basis. OEWD shall measure compliance by dividing the number of Construction Work Hours performed by Local Residents or Apprentices, as applicable, within a trade by the total number of Construction Work Hours performed within the same trade on the Horizontal Improvements within a Phase. In lieu of a Phase by Phase basis, Developer may determine that it can best achieve compliance with this Local Hire Agreement on a Project-wide basis, and may elect to comply on a Project-wide basis by delivering notice to OEWD and the Port of such election during the submission of the penultimate Phase Submittal. After such election, compliance shall be established upon the completion of the Project. In each case, once compliance is established, any Excess Credit Hours shall be confirmed by OEWD and shall be available for Developer, provided developer remains a Giants Affiliate, as defined in the DDA, to use to offset shortfalls in the same trade elsewhere on the Project Site, provided, however that Excess Credits may only be transferred to Horizontal Improvements that complied with the procedures set forth in Sections 1.3B, 1.4B and 1.6 and at completion are still short of attaining the participation levels set forth in Section 1.3A.
2. With regard to Vertical Improvements, OEWD shall determine compliance with this Agreement for each trade on an individual Vertical Improvement basis. OEWD shall measure compliance by dividing the number of Construction Work Hours performed by Local Residents or Apprentices, as applicable, within a trade by the total number of Construction Work Hours performed within the same on the Vertical Improvement. In lieu of an individual Vertical Improvement basis, Developer may determine that it can best achieve compliance with this Local Hire Agreement on a Phase by Phase basis, and may elect to comply on a Phase by Phase basis by delivering notice to OEWD and the Port of such election during the submission of a Phase Submittal. After such election, compliance shall be established upon the completion of the Phase, as applicable. In each case, once compliance is established, any Excess Credit Hours shall be confirmed by OEWD and shall be available to the Vertical Developer of the Vertical Improvement that generated such Excess Credit Hours, to transfer to another Vertical Developer, provided that such Vertical Developer is a Giants Affiliate, as defined in the DDA, to offset shortfalls in the same trade on a Vertical Improvements elsewhere on the Project Site, provided, however that Excess Credits may only be transferred to Vertical Improvements that complied with the procedures set forth in Sections 1.3B, 1.4B and 1.6 and at completion are still short of attaining the participation levels set forth in Section 1.3A.

#### 1.5 WAIVER FROM LOCAL HIRING REQUIREMENTS

- A. Contractor or the Subcontractor may request waivers as follows: (1) Requests for waivers based on Specialized Trades or other non-availability of workers (subsection 1); and (2) other requests for waivers, which may be considered as conditional waivers by OEWD in its discretion, or based on credit for Non-Covered Construction Work or other construction work specified in subsection 3, and/or participation in the programs described in subsections 4 and 5 below or alternative programs identified by OEWD (subsection 2).

1. Specialized Trades and Other Non-Availability Waivers. Specialized Trades are exempt from local hiring requirements and established in accordance with Section 1.3(B). OEWD shall grant waivers based on a Specialized Trades exemption, provided that (a) the Specialized Trade appears on OEWD's approved list or has been approved as a Construction Work-specific Specialized Trade exemption, and (b) notwithstanding the exemption, Contractor and its Subcontractors have reported to OEWD for its records any Construction Work Hours utilized in each designated Specialized Trade and in each OEWD-approved Construction Work-specific Specialized Trade. As of the date of this Agreement, Specialized Trades include any marine diving, underwater, or marine-related pile-driving work, helicopter pilot, crane operators and oilers, boat, barge, dredge, and/or floating equipment operators, deck engineers, oilers, tunnel/underground work performed by operating engineers and laborers, lineman/cable splicer, stainless steel welders, ironworker connectors and millwrights.

In addition to Specialized Trades, Contractor or Subcontractor may from time to time seek a waiver based on non-availability of workers in one or more other trades ("Non-availability Waiver"). OEWD may apply any Excess Credit Hours (on a 1:1 basis of Excess Credit Hours to shortfall hours) to address any shortfalls identified with respect to a completed Construction Work that would otherwise be entitled to request a Non-availability Waiver under this subsection. At OEWD's discretion, Excess Credit Hours may be allocated anywhere within the Project Site, and to either the same or a different trade. Once Excess Credit Hours are allocated by OEWD such Excess Credit Hours shall no longer be available to Developer elsewhere on the Project Site. OEWD shall grant a Non-Availability Waiver pursuant to this subsection regardless of whether Excess Credit Hours are available to address any shortfall in a trade's Construction Work Hours with respect to a Construction Work, provided that Contractor or Subcontractor has submitted evidence of compliance with the procedures set forth in Sections 1.3B, 1.4B and 1.6.

2. Other Non-Compliance and Corrective Action Plan. In the event Contractor or Subcontractor fails to meet the requirements of Section 1.3 on a basis other than as set forth in subsection 1, OEWD may, in its discretion, negotiate a Corrective Action Plan with the Contractor or Subcontractor. The Corrective Action Plan may include a conditional

---

waiver that allows the Contractor or Subcontractor to avoid financial penalties. In determining whether to approve the waiver, OEWD may establish alternative means to achieve the participation levels set forth in Section 1.3, including, but not limited to, credit accumulated pursuant to subsection 3 or participation in the programs specified in subsections 4 and 5.

3. Credit for Hiring on Non-Covered Construction Work. Contractor and its Subcontractors may accumulate credit hours for hiring Targeted Workers on Non-Covered Construction Work or on other construction work for which the Contractor has exceeded project goals in the nine-county San Francisco Bay Area and apply those credit hours to contracts for Construction Work to meet the mandatory local hiring requirement. For hours performed by Targeted Workers on Non-Covered Construction Work, the hours shall be credited toward the local hiring requirement for the Contract provided that:
  - a. the Targeted Workers are paid the prevailing wages or union scale for work on the Non-Covered Construction Work; and
  - b. such credit hours shall be committed to by the Contractor on future projects to satisfy any shortfall the Contractor may have on a Construction Work. Such commitment shall be in writing by the Contractor, shall extend for a period of time negotiated between the contractor and OEWD, and shall commit to satisfying any assessed penalties should Contractor fail to achieve the required credit hours.
4. Sponsoring Apprentices. Contractor or a Subcontractor may agree to sponsor new apprentices in trades in which noncompliance is likely and retain those apprentices for the period of Contractor's or a Subcontractor's work on the Construction Work, provided that OEWD verifies with the California Department of Industrial Relations that the new apprentices are registered and active apprentices. Contractor will be required to write a sponsorship letter on behalf of the identified candidate to the appropriate Local Union and will make the necessary arrangements with the Union to hire the candidate as soon as s/he is indentured.
5. Direct Entry Agreements. OEWD is authorized to negotiate and enter into direct entry agreements with apprenticeship programs that are registered with the California Department of Industrial Relations' Division of Apprenticeship Standards. Contractor may avoid assessment of penalties for non-compliance with the Policy by Contractor or Subcontractor hiring and retaining apprentices who are enrolled through such direct entry agreements. Contractor may also utilize OEWD-approved organizations with direct entry agreements with Local Unions, such as Helmets to

Hardhats, to hire and retain Targeted Workers. Such exception from assessments of penalties is subject to review and approval by OEWD.

## 1.6 LOCAL HIRING FORMS

A. The Contractor shall provide CityBuild with information about the Contractor's employment needs under the Contract for each Construction Work by utilizing the City's online Project Reporting System ("PRS"). Contractor shall submit the following forms, as applicable, to OEWD:

1. Form 1: Local Hiring Workforce Projection. This Form 1 shall be initially submitted prior to the start of construction and updated quarterly by the Contractor until all subcontracting is completed.
2. Form 2: Local Hiring Plan. For Construction Works estimated to cost more than \$1,000,000, Contractor shall prepare and submit to Contracting City Agency and OEWD for approval a Local Hiring Plan for the Construction Work using OEWD Form 2. Form 2 shall be initially submitted prior to the start of construction and updated quarterly by the Contractor until all subcontracting is completed. Upon commencement of work, Contractor and its Subcontractors may submit Job Notifications to CityBuild to connect with local trades workers.
3. Form 3: Intentionally Omitted.
4. Form 4: Waivers. To be completed by Contractor in the event that Contractor or a Subcontractor believes the local hiring requirements cannot be met. Refer to Articles 1.4 and 1.5 for more information regarding such waivers.

## 1.7 ENFORCEMENT, RECORD KEEPING, NONCOMPLIANCE AND PENALTIES

- A. Subcontractor Compliance. Each Contractor and Subcontractor shall ensure that all Subcontractors agree to comply with applicable requirements of this Local Hiring Agreement. All Subcontractors performing construction work on the Construction Work shall be responsible for complying with the recordkeeping and reporting requirements set forth in this Local Hiring Agreement.
- B. Recordkeeping. Contractor and each Subcontractor shall keep, or cause to be kept, for a period of four years from the date of Substantial Completion of the Construction Work, certified payroll and basic records, including time cards, tax forms, and superintendent and foreman daily logs, for all workers within each trade performing work on the Construction Work.
1. Such records shall include the name, address and social security number of each worker who worked on the Construction Work, his or her

classification, a general description of the work each worker performed each day, the apprentice or journey-level status of each worker, daily and weekly number of hours worked, the self-identified race, gender, and ethnicity of each worker, whether or not the worker was a local resident, and the referral source or method through which the contractor or subcontractor hired or retained that worker for work on the Construction Work (e.g., core workforce, name call, union hiring hall, CityBuild referral source, or recruitment or hiring method).

2. Contractor and Subcontractors may verify that a worker is a Local Resident by following OEWD's domicile policy.
  3. All records described in this subsection shall at all times be open to inspection and examination by the duly authorized officers and agents of the City, including representatives of the OEWD.
- C. **Reporting.** Contractor shall submit certified payrolls to the City electronically using the Project Reporting System. OEWD will monitor compliance with the Policy electronically.
- D. **Monitoring.** From time to time and in its sole discretion, OEWD may monitor and investigate compliance of Contractor and Subcontractors working on a Construction Work with requirements of this Local Hiring Agreement and the Policy. Contractor shall allow representatives of OEWD, in the performance of its duties, to engage in random inspections of a Construction Work. Contractor and all Subcontractors shall also allow representatives of OEWD to have access to employees of Contractor and Subcontractors and the records required to be maintained under this Local Hiring Agreement.
- E. **Noncompliance and Penalties.** Failure of Contractor and/or its Subcontractors to comply with the requirements of this Local Hiring Agreement and the obligations set forth in the Local Hiring Plan may subject Contractor to the consequences of noncompliance, including but not limited to the assessment of penalties if a waiver is not granted. The assessment of penalties for noncompliance shall not preclude the City from exercising any other rights or remedies to which it is entitled.
- a. **Penalties Amount.** Any Contractor or Subcontractor who fails to satisfy Local Hiring Requirements of this agreement applicable to Construction Work Hours performed by Local Residents and who does not receive a waiver shall forfeit to the City, and, in the case of any Subcontractor so failing, the Contractor and Subcontractor shall jointly and severally forfeit to the City, an amount equal to the journeyman or Apprentice prevailing wage rate, as applicable, with such wage as established by the Board of Supervisors or the California Department of Industrial Relations under subsection 6.22(e)(3) of the Administrative Code, for the primary trade

used by the Contractor or Subcontractor on the Construction Work for each hour by which the Contractor or Subcontractor fell short of the Local Hiring Requirement. The assessment of penalties under this subsection shall not preclude the City from exercising any other rights or remedies to which it is entitled under this agreement.

- b. **Assessment of Penalties.** OEWD shall determine whether a Contractor and/or any Subcontractor has failed to comply with the Local Hire Requirement. If after conducting an investigation, OEWD determines that a violation has occurred, OEWD shall provide Contractor or Subcontractor, as applicable, notice of such failure and provide such entity a reasonable opportunity to cure its failure. If such entity does not cure such failure, OEWD shall issue and serve an assessment of penalties to the Contractor and/or any Subcontractor that sets forth the basis of the assessment and orders payment of penalties in the amounts equal to the journeyman or apprentice prevailing wage rates, as applicable, for the primary trade used by the Contractor or Subcontractor on the Construction Work for each hour by which the Contractor or Subcontractor fell short of the Local Hiring Requirement. Assessment of penalties under this subsection shall be made only upon an investigation by OEWD and upon written notice to the Contractor or Subcontractor identifying the grounds for the penalty and providing the Contractor or Subcontractor with the opportunity to respond pursuant to the recourse procedures prescribed in this agreement.
- c. **Recourse Procedure.** If the Contractor or Subcontractor disagrees with the assessment of penalties, then the following procedure applies:
  - i. The Contractor or Subcontractor may request a hearing in writing within 15 days of the date of the final notification of assessment. The request shall be directed to the City Controller. Failure by the Contractor or Subcontractor to submit a timely, written request for a hearing shall constitute concession to the assessment and the forfeiture shall be deemed final upon expiration of the 15-day period. The Contractor or Subcontractor must exhaust this administrative remedy prior to commencing further legal action.
  - ii. Within 15 days of receiving a proper request, the Controller shall appoint a hearing officer with knowledge and not less than five years' experience in labor law, and shall so advise the enforcing official and the Contractor or Subcontractor, and/or their respective counsel or authorized representative.
  - iii. The hearing officer shall promptly set a date for a hearing. The hearing must commence within 45 days of the notification of the appointment of the hearing officer and conclude within 75 days of such notification unless all parties agree to an extended period.

- 
- iv. Within 30 days of the conclusion of the hearing, the hearing officer shall issue a written decision affirming, modifying, or dismissing the assessment. The decision of the hearing officer shall consist of findings and a determination. The hearing officer's findings and determination shall be final.
  - v. The Contractor or Subcontractor may appeal a final determination under this by filing in the San Francisco Superior Court a petition for a writ of mandate under California Code of Civil Procedure Section 1084 *et seq.*, as applicable and as may be amended from time to time.

#### 1.8 COLLECTIVE BARGAINING AGREEMENT

Nothing in this Local Hiring Agreement shall be interpreted to prohibit the continuation of existing workforce training agreements or to interfere with consent decrees, collective bargaining agreements, project labor agreements or existing employment contracts (Collective Bargaining Agreements"). In the event of a conflict between this Local Hiring Agreement and a Collective Bargaining Agreement, the terms of the Collective Bargaining Agreement shall supersede this Local Hiring Agreement.

#### 1.9 DURATION OF THIS AGREEMENT

This Local Hiring Agreement shall be in full force and effect throughout the term of the Contract. Upon expiration of the Contract, or its earlier termination, this Local Hiring Agreement shall terminate and it shall be of no further force and effect on the parties hereto.

#### 1.10 NOTICE

All notices to be given under this Local Hiring Agreement shall be in writing and sent by: certified mail, return receipt requested, in which case notice shall be deemed delivered three (3) business days after deposit, postage prepaid in the United States Mail, a nationally recognized overnight courier, in which case notice shall be deemed delivered one (1) business day after deposit with that courier, or hand delivery, in which case notice shall be deemed delivered on the date received, all as follows:

Any party may change its address for notice purposes by giving the other parties notice of its new address as provided herein. A "business day" is any day other than a Saturday, Sunday or a day in which banks in San Francisco, California are authorized to close.

Notwithstanding the forgoing, any Job Notification or any other reports required of Contractor under this Agreement (collectively, "Contractor Reports") shall be delivered to the address of OEWD pursuant to this Section via first class mail, postage paid, and such Contractor Reports shall be deemed delivered two (2) business days after deposit in the mail in accordance with this Subsection.

#### **1.11 ENTIRE AGREEMENT**

This Local Hiring Agreement and the Transaction Documents contain the entire agreement between the parties to this Local Hiring Agreement and shall not be modified in any manner except by an instrument in writing executed by the parties or their respective successors in interest. This Local Hiring Agreement shall inure to the benefit of and be binding on the parties and their respective successors and assigns. If there is more than one party comprising Contractor, their obligations shall be joint and several.

#### **1.12 SEVERABILITY**

If any term or provision of this Local Hiring Agreement shall, to any extent, be held invalid or unenforceable, the remainder of this Local Hiring Agreement shall not be affected.

#### **1.13 COUNTERPARTS**

This Local Hiring Agreement may be executed in one or more counterparts. Each shall be deemed an original and all, taken together, shall constitute one and the same instrument.

#### **1.14 HEADINGS**

Section titles and captions contained in this Local Hiring Agreement are inserted as a matter of convenience and for reference and in no way define, limit, extend or describe the scope of this Local Hiring Agreement or the intent of any of its provisions

**1.15 GOVERNING LAW**

This Local Hiring Agreement shall be governed and construed by the laws of the State of California, and interpreted consistent with the requirements of Chapter 82.

CITY AND COUNTY OF SAN FRANCISCO  
OFFICE OF ECONOMIC AND WORKFORCE DEVELOPMENT  
CITYBUILD PROGRAM

LOCAL HIRING PROGRAM  
OEWD-FORM-1  
CONSTRUCTION CONTRACTS

## FORM 1: LOCAL HIRING WORKFORCE PROJECTION

Contractor: \_\_\_\_\_ Project Name: \_\_\_\_\_

The Contractor must complete and submit this *Local Hiring Workforce Projection* (Form 1) prior to the start of construction and quarterly until all subcontracting is complete. The Contractor must include information regarding all of its Subcontractors who will perform construction work on the project regardless of Tier and Value Amount.

### Will you be able to meet the mandatory Local Hiring Requirements?

- ☐ YES (Please provide information for all contractors performing construction work in Table 1 below.)
- ☐ NO (Please complete Table 1 below and Form 4: Conditional Waivers.)

### INSTRUCTIONS FOR COMPLETING TABLE 1:

1. Please organize the contractors' information based on their Trade Craft work.
2. For contractors performing work in various Trade Craft, please list contractor name in each Trade Craft (i.e. if Contractor X will perform two trades, list Contractor X under two Trade categories.)
3. If you anticipate utilizing apprentices on this project, please note the requirement that 30% of apprentice hours must be performed by San Francisco residents.
4. Additional blank form is available at our Website: [www.workforcedevelopsf.org](http://www.workforcedevelopsf.org). For assistance or questions in completing this form, contact (415) 701-4894 or Email @ [Local.hire.ordinance@sfgov.org](mailto:Local.hire.ordinance@sfgov.org).

| <i>Example:</i>         | TOTAL LABORER  | Journey    | 1300                        | 350                                  | 27%                                    |
|                         |  | Apprentice | 200                         | 100                                  | 50%                                    |
| <i>Example:</i>         | TOTAL  |            | 1500                        | 450                                  | 30%                                    |
|                         |  | Journey    |                             |                                      |  |
|                         |  | Apprentice |                             |                                      |  |
|                         |  | Journey    |                             |                                      |  |
|                         |  | Apprentice |                             |                                      |  |
|                         |  | Journey    |                             |                                      |  |
|                         |  | Apprentice |                             |                                      |  |

**DISCLAIMER:** If the Total Work Hours for a Trade Craft are less than 5% of the Total Construction Work Hours, the Trade Craft is exempt from the Mandatory Requirement. Subsequently, if the Trade Craft exceeds 5% of the Total Construction Work Hours at any time during the project, the Trade Craft is subject to the Mandatory Requirement.

**FORM 2: LOCAL HIRING PLAN**

**Contractor:** \_\_\_\_\_ **Project Name:** \_\_\_\_\_

If the Estimate for this Project exceeds **\$1 million**, then Contractor must submit a Local Hiring Plan using this Form 2 through the City's Project Reporting System. Form 2 shall be initially submitted prior to the start of construction and include all known subcontractors. Contractor shall update this Form 2 quarterly as subcontractors are identified and shall continue with updates until all subcontracting is complete. The OEWD-approved Local Hiring Plan will be a Contract Document and will be the basis for determining Contractor's and its Subcontractors' compliance with the local hiring requirements. Any OEWD-approved Conditional Waivers (Form 4) will be incorporated into the OEWD-approved Local Hiring Plan.

**COMPLETE AND SUBMIT A SEPARATE FORM 2 FOR EACH TRADE THAT WILL BE UTILIZED ON THIS PROJECT.**

**INSTRUCTIONS:**

1. Please complete tables below for Contractor and all Subcontractors that will be contributing Construction Work Hours to meet the Local Hiring Requirement.
2. Please note that a Form 2 will need to be developed and approved separately for each trade craft that will be utilized on this project.
3. If you anticipate utilizing apprentices on this project, please note the requirement that 30% of apprentice hours must be performed by San Francisco residents.
4. The Contractor and each Subcontractor identified in the Local Hiring Plan must sign this form before it will be considered for approval by OEWD.
5. If applicable, please attach all OEWD-approved Form 4 Conditional Waivers.
6. Additional blank form is available at our Website: [www.workforcedevelopsf.org](http://www.workforcedevelopsf.org). For assistance or questions in completing this form, contact (415) 701-4894 or Email @ [Local.hire.ordinance@sfgov.org](mailto:Local.hire.ordinance@sfgov.org).

*List Trade Craft. Add numerical values from Form 1: Local Hiring Workforce Projection and input in the table below.*

| Trade Craft             | Total Work Hours | Total Local Work Hours | Local Work Hours% | Total Apprentice Work Hours | Total Local Apprentice Work Hours | Local Apprentice Work Hours % |
|-------------------------|------------------|------------------------|-------------------|-----------------------------|-----------------------------------|-------------------------------|
| <i>Example: Laborer</i> | 1500             | 450                    | 30%               | 200                         | 100                               | 50%                           |

*List all contractors contributing to the Construction Work Hours to meet the Local Hiring Requirements for the above Trade Craft*

| Contractor and Authorized Representative | Local Journey Hours | Local Apprentice Hours | Total Local Work Hours | Start Date | Number of Working Days | *Contractor Signature |
|--|---------------------|------------------------|------------------------|------------|------------------------|-----------------------|
| Contractor X<br>Joe Smith                | 250                 | 100                    | 350                    | 3/25/13    | 60                     | Joe Smith             |
| Contractor Y<br>Michael Lee              | 100                 | 0                      | 100                    | 5/25/13    | 30                     | Michael Lee           |
|  |                     |                        |                        |            |                        |                       |

*\*We the undersigned, have reviewed Form 2 and agree to deliver the hours set forth in this document.*

**DDA EXHIBIT B6-B**

**LOCAL BUSINESS ENTERPRISE UTILIZATION PROGRAM**

**DDA Exhibit B6 - B**

---

**Local Business Enterprise (LBE) Utilization Program.**

The development plan for Mission Rock under the Transaction Documents provides for the development of a new mixed-use neighborhood composed of commercial/office, retail, garage, market rate and affordable residential uses and major new and expanded parks. This Workforce Development Plan sets forth the activities Developer and Vertical Developer shall undertake, and require their Contractors, Consultants, Subcontractors, Subconsultants, and Commercial Tenants, as applicable, to undertake, to support local business enterprises in both the construction and operations phases of the Project, as set forth in this Exhibit B6-B.<sup>1</sup>

The Port and Developer shall enter into the DDA which will provide for the development of the Project in a series of Phases. In connection with the DDA, the Port and the Developer will enter into a Master Lease providing Developer the right to construct Horizontal Improvements within the Project. Developer will enter into contracts with Contractors and Consultants to construct all Horizontal Improvements allowed under the Master Lease.

Developer will submit Phase Submittals to the Port pursuant to the Transaction Documents. Following each Phase Approval, the Port will authorize the Chief Harbor Engineer to issue Port permits necessary for Developer to begin to construct Horizontal Improvements in accordance with the DDA and the Master Lease. Upon exercise of an Option in accordance with the DDA, the Port will convey each Development Parcel through Parcel Leases to a Vertical Developer. A Vertical Developer will enter into contracts with Contractors and Consultants to construct the Vertical Improvements, including residential and commercial improvements, in accordance with the Parcel Lease and Vertical DDA. Upon completion of the Vertical Improvements, the applicable Parcel Lease, between the Port and the Vertical Developer, shall govern the operation and use of the Vertical Improvements.

The foregoing summary is provided for convenience and for informational purposes only. In case of any conflict, the provisions of the DDA and each Vertical DDA shall control.

---

<sup>1</sup> Any capitalized term used in this Exhibit B6-B, including its Attachments, that is not defined herein, or in such Attachments, or in the referenced Administrative Code Sections, shall have the meaning given to such term in the DDA.

### **LBE Utilization Plan.**

Developer, with respect to Horizontal Improvements, shall, and the Vertical Developer, with respect to each Vertical Improvement, shall comply and require their respective Contractors and Consultants to comply with the Local Business Enterprise Utilization Plan (the "LBE Utilization Plan") set forth in Attachment A hereto. The Port shall cause (i) Developer, pursuant to the DDA and Master Lease, to comply with the Plan by including such requirements as a material term in the DDA and Master Lease applicable to all phases of Horizontal Improvements and (ii) each Vertical Developer to comply with the Plan by including such requirements as a material term in the VDDA and Parcel Lease applicable to each Vertical Improvement. The Port and Developer will seek to, whenever practicable, engage contracting teams to reflect the diversity of the City and include participation of both businesses and residents from the City's most disadvantaged communities including, but not limited to the Bayview/Hunters Point, Chinatown, Mission, South of Market, Tenderloin, Visitacion Valley and Western Addition neighborhoods.

Compliance with the construction requirements of the LBE Utilization Plan for Horizontal Improvements shall be determined on a Phase by Phase basis. Compliance will be measured by dividing the cost of all Contracts for a Phase of Horizontal Improvement awarded to LBE Prime Contractors, Subcontractors, Prime Consultants or Subconsultants divided by the total cost of all Contracts awarded to Prime Contractors, Subcontractors, Prime Consultants or Subconsultants for such Phase of Horizontal Improvement. If Developer exceeds the goals set forth in the LBE Utilization Plan with respect to an individual Horizontal Improvement, Developer may, at its option, allocate such excess, subject to terms outlined below, towards the compliance of another Horizontal Improvement within the Project Site, subject to the requirements of Attachment A. Notwithstanding anything to the contrary, Developer may, at its election, require that compliance be determined on a Project-wide basis by giving notice to CMD and the Port of such election during the submission of the penultimate Phase Submittal.

Compliance with the construction requirements of the LBE Utilization Plan for Vertical Improvements shall be determined on an individual Vertical Improvement basis. Compliance will be measured by dividing the cost of all Contracts for a Vertical Improvement awarded to LBE Prime Contractors, Subcontractors, Prime Consultants or Subconsultants divided by the total cost of all Contracts awarded to Prime Contractors, Subcontractors, Prime Consultants or Subconsultants for such Vertical Improvement. If a Vertical Improvement exceeds goals set forth in the LBE Utilization Plan, the Vertical Developer of such Construction Work may, at its option, allocate such excess towards the compliance of another Vertical Improvement within the Project Site or transfer such excess to another Vertical Developer within the Project Site, subject to the requirements of Attachment A. Notwithstanding anything to the contrary, Developer may, at its election, require that compliance be determined on a Phase-wide basis by giving notice to CMD and the Port of such election, pursuant to Attachment A, during the submission of a Phase Submittal.

The Developer, Vertical Developer(s) and CMD seek to reduce barriers to LBE participation, cost, and time. As such, the Developer and Vertical Developer(s) shall work in

good faith with CMD to design and implement for each Horizontal and Vertical  
Improvement insurance programs which provides to LBE participating subcontractors access to the required coverage through either the owner, Owner-Controlled Insurance Policy (OCIP), general contractor, Contractor-Controlled Insurance Policy (CCIP), or such other insurance program as may become reasonably commercially available.

CMD shall notify Contractors, Consultants, Subcontractors and Subconsultants, as applicable, in writing, with a copy to the Port and Developer or Vertical Developer, as applicable, of any alleged breach on the part of that entity of its obligations under San Francisco Administrative Code Chapter 14B ("Chapter 14B") or its LBE Utilization Plan, as applicable, and provide such entity an opportunity to cure its failure before seeking an assessment of liquidated damages. CMD's sole remedies against a Contractor, Consultant, Subcontractor and Subconsultant shall be as set forth in the applicable LBE Utilization Plan, including the enforcement process. Upon CMD's request, Port, Developer or Vertical Developer, as applicable, shall reasonably cooperate with CMD in any such enforcement action against any Contractors, Consultants, Subcontractors and Subconsultants, provided that in no event shall Port, Developer or Vertical Developer, as applicable, be liable for any breach by a Contractor, Consultant, Subcontractor or Subconsultant.

If the Port, Developer or Vertical Developer, as applicable, fulfills its obligations as set forth in this Exhibit B2, it shall not be held responsible for the failure of a Contractor, Consultant, Subcontractor and Subconsultant or any other person or party to comply with the requirements of San Francisco Administrative Code Chapter 14B ("Chapter 14B") or this Exhibit B2. If Developer or Vertical Developer, as applicable, fails to fulfill its obligations under this Exhibit B6-B, the applicable provisions of Chapter 82 shall apply, though the Port and Developer, as applicable, shall have the right to invoke the process set forth in Article 10 of the DDA.

This Exhibit B6-B complies with the requirements of Chapter 14B, including Sections 14B.20.

Attachment A

**Local Business Enterprise Utilization Plan**

1. **Purpose and Scope.** This Local Business Enterprise Utilization Plan (this "LBE Utilization Plan") governs the Local Business Enterprise obligations of the Workforce Improvement or the Construction Work pursuant to San Francisco Administrative Code Section 14B.20 and satisfies the obligations of Developer, Vertical Developer and their Contractors and Consultants for a LBE Utilization Plan as set forth herein. In the event of any conflict between San Francisco Administrative Code Chapter 14B ("Chapter 14B") and this attachment, this LBE Utilization Plan shall govern.
2. **Roles of Parties.** In connection with the design and construction phases of each Construction Work (as defined below) and the operations of each Workforce Improvement, the Project will provide community benefits designed to foster employment opportunities for disadvantaged individuals by offering contracting and consulting opportunities to local business enterprises ("LBEs"). Developer and Vertical shall participate in a local business enterprise program, and the City's Contract Monitoring Division ("CMD") will serve the roles as set forth below.
3. **Definitions.** For purposes of this Attachment, the definitions shall be as follows:
  - a. "CMD" shall mean the Contract Monitoring Division of the City Administrator's Office.
  - b. "Commercially Useful Function" shall mean that the business is directly responsible for providing the materials, equipment, supplies or services to Developer, Vertical Developer, Contractor or professional services firm retained to work on a Construction Work or Workforce Improvement, as the case may be (each, a "Contracting Party") as required by the solicitation or request for quotes, bids or proposals. Businesses that engage in the business of providing brokerage, referral or temporary employment services shall not be deemed to perform a "commercially useful function" unless the brokerage, referral or temporary employment services are those required and sought by Developer or Vertical Developer or a Contractor or professional services firm. When Developer or Vertical Developer or a Contractor or professional services firm requires and seeks products from an LBE supplier or distributor, no more than sixty percent of the cost of the product shall be credited towards LBE participation goals. If the listed supplier or distributor does not regularly stock or is a specially manufactured item(s), the required product, no more than five percent of the cost of the product shall be credited towards LBE participation goals.
  - c. "Consultant" shall mean a person or company that has entered into a professional services contract for monetary consideration with Developer or Vertical Developer to provide advice or services to Developer directly related to the architectural or landscape design, physical planning, and/or civil, structural or

~~environmental engineering of a Construction Work or Workforce Improvement.~~

- d. "Construction Work" shall mean: (i) in the case of Horizontal Improvements, construction of all Horizontal Improvements required or permitted to be made to the Project Site during a Phase and to be carried out by Developer under the DDA subject to Chapter 14B; or (ii) in the case of Vertical Improvements, a Vertical Improvement and all tenant improvements therein, except for the construction of any tenant improvements within a leased premises comprised of less than 15,000 square feet in floor area, to be constructed by a Vertical Developer on a Development Parcel pursuant to an applicable Vertical DDA and Parcel Lease.
- e. "Contract(s)" shall mean an agreement, whether a direct contract or subcontract, for Consultant or Contractor services for all or a portion of a Construction Work or Workforce Improvement.
- f. "Contractor" shall mean a person or entity that enters into a direct Contract with Developer or Vertical Developer to build or construct all or a portion of a Construction Work or operate a Workforce Improvement.
- g. "DDA" means the Disposition and Development Agreement between Developer and the City and County of San Francisco, acting by and through the San Francisco Port Commission.
- h. "Developer" has the meaning set forth in the DDA, including any successor during the term of this LBE Utilization Plan.
- i. "Development Parcel" has the meaning set forth in the DDA.
- j. "Excess Credit" shall mean the total cost of all Contracts for a Construction Work awarded to LBE Prime Contractors, Subcontractors, Prime Consultants or Subconsultants that are Small and Micro-LBEs that exceeds the goals set forth in Section 4.
- k. "Horizontal Improvement" has the meaning set forth in the DDA.
- l. "Good Faith Efforts" shall mean procedural steps taken by Developer, Vertical Developer, Contractor or Consultant with respect to the attainment of the LBE participation goals, as set forth in Section 6 below.
- m. "Local Business Enterprise" or "LBE" means a business that is certified as an LBE under Chapter 14B.3.
- n. "LBE Liaison" shall mean Developer's and Vertical Developer's primary point of contact with CMD regarding the obligations of this LBE Utilization Plan. Each prime Contractor(s) shall likewise have a LBE Liaison.

- o. "Parcel Lease" has the meaning set forth in the DDA.
- p. "Phase" has the meaning set forth in the DDA.
- q. "Port" has the meaning set forth in the DDA.
- r. "Project" has the meaning set forth in the DDA.
- s. "Project Site" has the meaning set forth in the DDA.
- t. "Subconsultant" shall mean a person or entity that has a direct Contract with a Consultant to perform a portion of the work under a Contract for a Construction Work or Workforce Improvement.
- u. "Subcontractor" shall mean a person or entity that has a direct Contract with a Contractor to perform a portion of the work under a Contract for a Construction Work or Workforce Improvement.
- v. "Vertical DDA" has the meaning set forth in the DDA.
- w. "Vertical Developer" has the meaning set forth in the DDA.
- x. "Workforce Improvement" shall mean all completed Vertical Improvements, but excluding within: (a) any commercial premises occupying less than 15,000 square feet in floor area, and (b) any residential units therein, subject to Chapter 14B.

4. **LBE Participation Goal.** Developer and Vertical Developer agree to participate in this LBE Utilization Plan and CMD agrees to work with Developer and Vertical Developer in this effort, as set forth in this LBE Utilization Plan. As long as this LBE Utilization Plan remains in full force and effect, Developer, with respect to the construction of Horizontal Improvements, and Vertical Developer, with respect to the construction of Vertical Improvements, shall make good faith efforts as defined below to achieve an overall LBE participation goal of 20% of the total cost of all Contracts for a Construction Work awarded to LBE Prime Contractors, Subcontractors, Prime Consultants or Subconsultants that are Small and Micro-LBEs, as set forth in Administrative Code Section 14B.8(A) and a participation goal of 10% during the pre-construction phase of the Project.

5. **Developer/Vertical Developer Obligations.** Developer, with respect to the construction of Horizontal Improvements, and Vertical Developer, with respect to the construction of Vertical Improvements, shall comply with the requirements of this Attachment A as follows: Upon entering into a Contract with a Contractor or Consultant, Developer or Vertical Developer, as applicable, will include each such Contract a provision requiring the Contractor or Consultant to comply with the terms of this Attachment A, and setting forth the applicable percentage goal for such Contract, and provide a signed copy thereof to CMD and the Port within 10 business days of execution. Such Contract shall specify the notice information for the

~~Contractor or Consultant to receive notice pursuant to Section 16. Developer and each Vertical Developer shall identify a "LBE Liaison" as its main point of contact for outreach/compliance concerns and shall be available to meet with CMD staff on a regular basis or as necessary regarding the implementation of this Attachment A. If Developer, with respect to Horizontal Improvements, or a Vertical Developer, with respect to construction of the Vertical Improvements, fulfills its obligations as set forth in this Section 5 and otherwise cooperates in good faith at CMD's request with respect to any meet and confer process or enforcement action against a non-compliant Contractor, Consultant, Subcontractor or Subconsultant, then Developer or Vertical Developer, as applicable, shall not be held responsible for the failure of a Contractor, Consultant, Subcontractor or Subconsultant or any other person or party to comply with the requirements of this Attachment A.~~

6. Good Faith Efforts. City acknowledges and agrees that Developer, Vertical Developer, Contractor, Subcontractor, Consultant and Subconsultant shall have the sole discretion to qualify, hire or not hire LBEs. If a Contractor or Consultant does not meet the LBE hiring goal set forth above in Section 5, it will nonetheless be deemed to satisfy the good faith effort obligation of this Section 6 and thereby satisfy the requirements and obligations of this Attachment A if the Contractor, Consultants and their Subcontractors and Subconsultants, as applicable, perform the good faith efforts set forth in this Section 6 as follows:

- a. **Advance Notice.** Notify CMD and the Port in writing of all upcoming solicitations of proposals for work under a Contract at 15 business days before issuing such solicitations to allow opportunity for CMD to identify and outreach to any LBEs that it reasonably deems may be qualified for the Contract scope of work.
- b. **Contract Size.** Where practicable, Developer, Vertical Developer, Contractor, Consultant, Subcontractor or Subconsultant will divide the work in order to encourage maximum LBE participation or, encourage joint venturing. The Contracting Party will identify specific items of each Contract that may be performed by Subcontractors.
- c. **Advertise.** Developer, Vertical Developer, Contractor, Consultant, Subcontractor or Subconsultant will advertise for at least 30 days prior to the opening of bids or proposals, for professional services and contracting opportunities in media focused on small businesses including the Bid and Contract Opportunities website through the City's Office of Contract Administration (<http://mission.sfgov.org/OCABidPublication>) and other local and trade publications, and allowing subcontractors to attend outreach events, pre-bid meetings, and inviting LBEs to submit bids to Developer or Vertical Developer or their respective Prime Contractor or Consultant, as applicable. As practicable, convene pre-bid or pre-solicitation meetings no less than 15 days prior to the opening of bids and proposals to all for LBEs to ask questions about the selection process and technical specifications/requirements. Developer or Vertical Developer may request CMD's permission to award a contract without advertising if the work consists of specialty services or otherwise does not provide

opportunities for LBE participation.

- d. **CMD Invitation.** If a pre-bid meeting or other similar meeting is held with proposed Contractors, Subcontractors, Consultants or Subconsultants, invite CMD to the meeting to allow CMD to explain proper LBE utilization.
- e. **Public Solicitation.** Developer or Vertical Developer or their respective Prime Contractor(s) and/or Consultants, as applicable, will work with CMD to follow up on initial solicitations of interest by contacting LBEs to determine with certainty whether they are interested in performing specific items in a project.
- f. **Outreach and Other Assistance.** Developer or Vertical Developer or their respective Prime Contractor (s) and/or Consultants, as applicable, will a) provide LBEs with plans, specifications and requirements for all or part of the project; b) notify LBE trade associations that disseminate bid and contract information and provide technical assistance to LBEs. The designated LBE Liaison(s) shall be or work with a LBE Consultant with experience in and responsibility for making recommendations on how to maximize engagement of local small businesses from disadvantaged communities including, but not limited to the Bayview/Hunters Point, Chinatown, Mission, South of Market, Tenderloin, Visitacion Valley and Western Addition neighborhoods, and will work with CMD to conduct outreach to LBEs for all consulting/contracting opportunities in the applicable trades and services in order to encourage them to participate on the project.
- g. **Contacts.** Make contacts with LBEs, associations or development centers, or any agencies, which disseminate bid and contract information to LBEs and document any other efforts undertaken to encourage participation by LBEs.
- h. **Good Faith/Nondiscrimination.** Make good faith efforts to enter into Contracts with LBEs and give good faith consideration to bids and proposals submitted by LBEs. Use nondiscriminatory selection criteria (for the purpose of clarity, exercise of subjective aesthetic taste in selection decisions for architect and other design professionals shall not be deemed discriminatory and the exercise of its commercially reasonable judgment in all hiring decisions shall not be deemed discriminatory).
- i. **Incorporation into contract provisions.** Developer or Vertical Developer shall include in its Contracts provisions that require prospective Contractors and Consultants that will be utilizing Subcontractors or Subconsultants to follow the above good faith efforts to subcontract to LBEs, including overall LBE participation goal and any LBE percentage that may be required under such Contract.
- j. **Monitoring.** Allow CMD Contract Compliance unit to monitor Consultant/Contractor selection processes and, when necessary give suggestions as to how best to maximize LBEs ability to complete and win

procurement opportunities.

- k. **Insurance and Bonding.** Recognizing that lines of credit, insurance and bonding are problems common to local businesses, staff will be available to explain the applicable insurance and bonding requirements, answer questions about them, and, if possible, suggest governmental or third party avenues of assistance. Contractor, Subcontractor, Consultant and Subconsultant will work with the Developer, Vertical Developer and CMD in good faith to design and implement for each Horizontal and Vertical Improvement insurance programs which provides to LBE participating subcontractors access to the required coverage through either the owner, Owner-Controlled Insurance Policy (OCIP), general contractor, Contractor-Controlled Insurance Policy (CCIP), or such other insurance program as may become reasonably commercially available.
- l. **Maintain Records and Cooperation.** Maintain records of LBEs that are awarded Contracts, not discriminate against any LBEs, and, if requested, meet and confer with CMD as reasonably required in addition to the meet and confer sessions described in Section 9 below to identify a strategy to meet the LBE goal;
- m. **Quarterly Reports.** During design and construction, the LBE Liaison(s) shall prepare a quarterly report of LBE participation goal attainment and submit to CMD as required by Section 9 herein; and
- n. **Meet and Confer.** Attend the meet and confer process described in Section 9.

7. **Good Faith Outreach.** Good faith efforts shall be deemed satisfied solely by compliance with Section 6. Contractors and Consultants, and Subcontractors and Subconsultants as applicable shall also work with CMD to identify from CMD's database of LBEs those LBEs who are most likely to be qualified for each identified opportunity under Section 6.b, and following CMD's notice under Section 8.a, shall undertake reasonable efforts at CMD's request to support CMD's outreach identified LBEs as mutually agreed upon by CMD and each Contractor or Consultant and its Subcontractors and Subconsultants, as applicable.

8. **CMD Obligations.** The following are obligations of CMD to implement this LBE Utilization Plan:

- a. During the fifteen (15) business day notification period for upcoming Contracts required by Section 6.b, CMD will work with Developer or its prime Contractor and/or Consultant as applicable to send such notification to qualified LBEs to alert them to upcoming Contracts.
- b. Provide assistance to Contractors, Subcontractors, Consultants and Subconsultants on good faith outreach to LBEs.
- c. Review quarterly reports of LBE participation goals; when necessary give

suggestions as to how best to maximize LBEs ability to compete and win procurement opportunities.

- d. Perform other tasks as reasonably required to assist Developer or Vertical Developer or their Contractors, Subcontractors, Consultants and Subconsultants in meeting LBE participation goals and/or satisfying good faith efforts requirements.

9. Meet and Confer Process. Commencing with the first Contract that is executed for a Construction Work, and every six (6) months thereafter, or more frequently if requested by either CMD, Developer or a Contractor or Consultant each Contractor and Consultant and the CMD shall engage in an informal meet and confer to assess compliance of such Contractor and Consultants and its Subcontractors and Subconsultants as applicable with this Attachment A. When deficiencies are noted, meet and confer with CMD to ascertain and execute plans to increase LBE participation.

10. Prohibition on Discrimination. Developer and Vertical Developer shall not discriminate in its selection of Contractors and Consultants, and such Contractors and Consultants shall not discriminate in their selection of Subcontractors and Subconsultants against any person on the basis of race, gender, or any other basis prohibited by law. As part of its efforts to avoid unlawful discrimination in the selection of Subconsultants and Subcontractors, Contractors and Consultants will undertake the Good Faith Efforts and participate in the meet and confer processes as set forth in Sections 6 and 9 above.

11. Collective Bargaining Agreements. Nothing in this Attachment A shall be interpreted to prohibit the continuation of existing workforce training agreements or to interfere with consent decrees, collective bargaining agreements, project labor agreement, project stabilization agreement, existing employment contract or other labor agreement or labor contract ("Collective Bargaining Agreements"). In the event of a conflict between this Attachment A and a Collective Bargaining Agreement, the terms of the Collective Bargaining Agreement shall supersede this Attachment A.

12. Reporting and Monitoring. Each Contractor, Consultant, and its Subcontractors and Subconsultants as applicable shall maintain accurate records demonstrating compliance with the LBE participation goals, including keeping track of the date that each response, proposal or bid that was received from LBEs, including the amount bid by and the amount to be paid (if different) to the non-LBE contractor that was selected, documentation of any efforts regarding good faith efforts as set forth in Section 6. Developer and Vertical Developer shall create a reporting method for tracking LBE participation. Data tracked shall include the following (at a minimum):

- a. Name/Type of Contract(s) let (e.g. Civil Engineering contract, Environmental Consulting, etc.)
- b. Name of prime Contractors (including identifying which are LBEs and non-LBEs)
- c. Name of Subcontractors (including identifying which are LBEs and non-LBEs)
- d. Scope of work performed by LBEs (e.g. under an Architect, an LBE could be procured to provide renderings)

- e. Dollar amounts associated with both LBE and non-LBE Contractors at both prime and Subcontractor levels.
- f. Total LBE participation is defined as a percentage of total Contract dollars.

13. Basis of Compliance:

- a. With regard to Horizontal Improvements, CMD shall determine compliance with this Agreement on a Phase-wide basis and measure compliance by dividing the cost of all Contracts for a Construction Work awarded to LBE Prime Contractors, Subcontractors, Prime Consultants or Subconsultants divided by the total cost of all Contracts awarded to Prime Contractors, Subcontractors, Prime Consultants or Subconsultants for such Construction Work. Notwithstanding anything to the contrary, Developer may, at its election, require that compliance be determined on a Project-wide basis by giving notice to CMD and the Port of such election not later than the submission of the penultimate Phase Submittal. After such election, compliance shall be measured upon the completion of the Project. In each case, once compliance is established, any Excess Credit shall be confirmed by CMD and shall be available for Developer, provided Developer remains a Giants Affiliate, as defined in the DDA, to offset shortfalls elsewhere on the Project Site, provided, however that Excess Credits may only be transferred to Horizontal Improvements that complied with the procedures set forth in Section 6 and at completion are short of attaining the participation levels set forth in Section 4.
- b. With regard to Vertical Improvements, CMD shall determine compliance with this Agreement on an individual Vertical Improvement basis and measure compliance by dividing the cost of all Contracts for a Construction Work awarded to LBE Prime Contractors, Subcontractors, Prime Consultants or Subconsultants divided by the total cost of all Contracts awarded to Prime Contractors, Subcontractors, Prime Consultants or Subconsultants for such Vertical Improvement. Notwithstanding anything to the contrary, Developer may, at its election, require that compliance be determined on a Phase-wide basis, as Developer plans to develop each Vertical Improvement in such Phase, by giving notice to CMD and the Port of such election during the submission of a Phase Submittal. After such election, compliance shall be measured upon the completion of the Phase, as applicable. In each case, once compliance is established, any Excess Credits shall be confirmed by CMD and shall be available to the Vertical Developer of the Vertical Improvement that generated such Excess Credits to transfer to another Vertical Developer, provided that such Vertical Developer is a Giants Affiliate, as defined in the DDA, to offset shortfalls in the same trade on Vertical Improvements elsewhere on the Project Site, provided, however that Excess Credits may only be transferred to Vertical Improvements that complied with the procedures set forth in Section 6 and at completion are still short of attaining the participation levels set forth in Section 4.

14. Workforce Improvement Operations. Each Vertical Developer will use good faith efforts to hire LBEs for ongoing service contracts within Workforce Improvements and advertise such contracting opportunities with CMD except to the extent impractical or infeasible. If a master association is responsible for the operation and maintenance of publicly owned improvements within the Project Site, CMD shall refer LBEs to such association for consideration with regard to contracting opportunities for such improvements. Such association will consider in good faith such LBE referrals, but hiring decisions shall be entirely at the discretion of such association.

15. Monitoring and Enforcement. CMD shall both monitor and enforce the standards and requirements, including the good faith efforts, of this Program. CMD Compliance Officers shall schedule meetings with the LBE Liaison(s) through the term of this Program to promote consistent communication and practice.

16. Written Notice of Deficiencies. If based on complaint, failure to report, or other cause, the CMD has reason to question the good faith efforts of a Developer, Vertical Developer, Contractor, Subcontractor, Consultant or Subconsultant, then CMD shall provide written notice to Developer or Vertical Developer, as applicable, each affected prime Contractor or Consultant and, if applicable, also to its Subcontractor or Subconsultant. The prime Contractor or Consultant and, if applicable, the Subcontractor or Subconsultant, shall have a reasonable period, based on the facts and circumstances of each case, to demonstrate to the reasonable satisfaction of the CMD that it has exercised good faith to satisfy its obligations under this Attachment A. When deficiencies are noted CMD staff will work with the appropriate LBE Liaison(s) to remedy such deficiencies.

17. Remedies. Notwithstanding anything to the contrary in the DDA, the following process and remedies shall apply with respect to any alleged violation of this Attachment A:

Mediation and conciliation shall be the administrative procedure of first resort for any and all compliance disputes arising under this Attachment A. The Director of CMD shall have power to oversee and to conduct the mediation and conciliation.

Non-binding arbitration shall be the administrative procedure of second resort utilized by CMD for resolving the issue of whether a Developer, Contractor, Consultant, Subcontractor or Subconsultant discriminated in the award of one or more LBE Contracts to the extent that such issue is not resolved through the mediation and conciliation procedure described above. Obtaining a final judgment through arbitration on LBE contract related disputes shall be a condition precedent to the ability of the City or Developer, Contractor, Consultant, Subcontractor or Subconsultant to file a request for judicial relief.

If a Developer, Vertical Developer, Contractor, Consultant, Subcontractor or Subconsultant is found to be in willful breach of the obligations set forth in this Attachment A, assess against the noncompliant Developer, Vertical Developer, Contractor, Consultant, Subcontractor or Subconsultant liquidated damages not to exceed \$25,000 or 5% of the Contract, whichever is less, for each such willful breach. In determining the amount of any liquidated damages to be assessed within the limits described above, the arbitrator or court of competent jurisdiction shall consider the

~~financial capacity of Developer, Vertical Developer, Contractor, Consultant,~~  
Subcontractor or Subconsultant. For purposes of this paragraph, "willful breach"  
means a knowing and intentional breach. For all other violations of this Attachment A,  
the sole remedy for violation shall be specific performance.

18. Duration of this Agreement. This Attachment A shall terminate (i) at the expiration of the Development Agreement, as defined in the DDA, and; (ii) for any Construction Work that has commenced before the termination of the Development Agreement, but is not yet complete upon the termination of the Development Agreement, upon the completion of such Construction Work. Upon such termination, this Attachment A shall be of no further force and effect.

19. Notice. All notices to be given under this Attachment A shall be in writing and sent by: certified mail, return receipt requested, in which case notice shall be deemed delivered three (3) business days after deposit, postage prepaid in the United States Mail, a nationally recognized overnight courier, in which case notice shall be deemed delivered one (1) business day after deposit with that courier, or hand delivery, in which case notice shall be deemed delivered on the date received, all as follows:

**DDA EXHIBIT B7**

**TRANSPORTATION EXHIBIT**

## TRANSPORTATION EXHIBIT

## I. Transportation Fee.

A. **Payment by Vertical Developers.** Each Vertical DDA will require that the Vertical Developer shall pay to SFMTA a "Transportation Fee" that SFMTA will use and allocate in accordance with Section I.B below. The Transportation Fee must meet all requirements of and will be payable on all vertical development on the Mission Rock Project Site in accordance with Planning Code sections 411A.1-411A.8., except as provided in this Exhibit. All references to the Planning Code in this Transportation Exhibit refer to the Planning Code as in effect on the DA Ordinance Effective Date. Under the Development Agreement (DA) and this Transportation Program:

- The Transportation Fee will be payable on any Development Parcel on the Mission Rock Project Site, except Affordable Housing Projects pursuant to Planning Code section 406(b).
- The Transportation Fee will be calculated at 100% of the applicable TSF rate without a discount under Section 411A.3(d). The Project shall be subject to 100% of the applicable TSF rate as if it were a Project submitted under Section 411A.3(d)(3).
- The amount of the Transportation Fee will equal the Transportation Sustainability Fee in effect on the DA Ordinance Effective Date for the same land use category with annual escalation in accordance with the methodology provided in Section 409 to the date that the Port issues the first construction permit for each Vertical Improvement. For example, the Transportation Sustainability Fee on the DA Ordinance Effective Date for residential buildings with up to 99 units is \$8.60/gsf, and \$9.71/gsf of residential use in all dwelling units at and above the 100<sup>th</sup> unit in the building.

B. **Accounting and Use of Transportation Fee by SFMTA.** Section 411A.7 will apply except as follows. The Treasurer-Tax Collector will account for all Transportation Fees paid for each development project on the Mission Rock Project Site (the "Total Fee Amount"). SFMTA will use an amount equal to or greater than the Total Fee Amount to pay for uses permitted by the TSF Fund under Planning Code section 411A.7, including SFMTA's and other agencies' costs to design, permit, construct, and install a series of transportation improvements in the area surrounding or serving the Mission Rock SUD Area. SFMTA and other implementing agencies will be responsible for all costs associated with the design, permitting, construction, installation, maintenance, and operation of these improvements above the Total Fee Amount. SFMTA will report to the Planning Director on any use of the Total Fee Amount in any reporting period for the Annual Review under the DA. Examples of projects that SFMTA may fund with the Total Fee Amount include:

- **Water Transit.** Construction of a new ferry terminal at 16<sup>th</sup> Street in Mission Bay and support of other water transit, including a network of water taxi/small water ferry docks along the Central Waterfront.
- **T-Third Enhancements.** Reliability and capacity enhancements, including flashing "Train Coming" signs, in-ground detectors at to-be-identified intersections, and additional light rail vehicles (LRV) as needed to serve the growing population along the line.
- **Existing and future MUNI lines that serve Project neighborhood.** Capital improvements, including buses, associated with newly proposed MUNI routes, and re-routing of existing MUNI lines to better serve transit riders in the Dogpatch, Mission Bay, and Potrero Hill neighborhoods. Operation plans for all MUNI service is contingent on the SFMTA Board of Directors adoption of an operating budget.
- **Muni Metro East.** Capital costs associated with an expanded facility for on-site rebuilds, capacity for expanded bus and LRV fleet, and tracks for storage.

- Mission Bay E-W Bike Connector. Implementation of a connection across tracks, likely between 17th Street and Owens Street, to connect the 4th Street bikeway on east side and the 17th Street bikeway on west side.
- Terry A. Francois Boulevard Cycletrack. Implementation of bicycle access on Terry A. Francois Boulevard, including multi-use (peds/bikes) access on the 3rd Street Bridge and associated signal modifications.
- North-south bike connection on Indiana Street. Implementation of bicycle connection along Indiana Street from Cesar Chavez Boulevard to Mariposa Street.
- Upgraded bicycle access on Cesar Chavez Boulevard. Implementation of a lane along Cesar Chavez Boulevard from US 1-280/Pennsylvania to Illinois Street, including elements such as bulbs, islands, and restriping.
- Pedestrian improvements. Implement improved sidewalks and crosswalks as needed at various gap locations throughout the adjacent neighborhood, as identified in partnership with community and City partners.

Nothing in this Transportation Exhibit will prevent or limit the City's absolute discretion to: (i) conduct environmental review in connection with any future proposal for improvements; (ii) make any modifications or select feasible alternatives to future proposals that the City deems necessary to conform to any applicable laws, including CEQA; (iii) balance benefits against unavoidable significant impacts before taking final action; (iv) determine not to proceed with such future proposals; or (v) obtain any required approvals for the improvements.

## **II. TDM Plan.**

Developer shall implement the Transportation Demand Management ("TDM") Plan attached as **DDA Exhibit B7 Schedule 2** and otherwise comply with EIR Mitigation Measure M-AQ-2.3, as set forth in the MMRP, **DDA Exhibit A5**. The TDM Plan shall remain a component of the Project to be implemented for the duration of the Project. Monitoring, and submittal of monitoring reports and plan adjustments, shall be required as described in Mitigation Measure M-AQ-2.3. The City and Developer agree that the option for the offset fee discussed in the last paragraph of Mitigation Measure M-AQ-2.3 is not applicable, unless the Planning Department determines in its discretion that further TDM Plan adjustments will not achieve the reduction goal.

Developer's TDM Plan has a goal of reducing estimated aggregate daily one way vehicle trips by 20 percent compared to the aggregate daily one-way vehicle trips identified in the project's travel demand memo, prepared by Adavant Consulting, dated June 30, 2015. The project sponsors shall be responsible for monitoring implementation of the TDM Plan and proposing adjustments to the TDM Plan if its goal is not being achieved as described in Mitigation Measure M-AQ-2.3.

Developer's TDM Plan shall have been approved by the Planning Department prior to site permit application for the first building and the TDM Plan shall be implemented as to each new building upon the issuance of the certificate of occupancy for that building.

Notwithstanding any other provision of the DDA or DA, Planning Code Section 169.4 shall apply and, under Planning Code Section 169.4(e), the Zoning Administrator shall approve and order the recordation of the TDM Plan against the Project Site, and it shall be enforceable through the Notice of Violation procedures in the Planning Code, or any other applicable provision of law. The Zoning Administrator shall retain the discretion to determine what constitutes a separate violation in this context. The Planning Code procedures shall apply, except that the Zoning Administrator shall have discretion to impose a penalty of up to \$250 per violation. If the submittal of monitoring reports is no longer required in accordance with Mitigation Measure M-AQ-2.3, the provisions of Planning Code Section 169.5(b) shall apply.

### III. SFMTA Contact

SFMTA commits to designating a staff person to follow up on the transportation related components of the Project, including this Exhibit and associated Schedules, the DA, and the FEIR. This staff person will be a point person for Developer and the community.

### IV. Event Management Plan

*DDA § 3.2(j) (Event Management Plan)* requires inclusion of an Event Management Plan with each Phase Submittal. The scope of the Event Management Plan is outlined in Chapter 5 of the Mission Rock Transportation Plan (**DDA Exhibit B7 Schedule 1**). Any Parcel Lease for a Garage Parcel shall include provisions with respect to the Event Management Plan as described below.

Prior to entering into any agreement between the Garage operator and a third-party entity for use of the Garage by patrons of events not on-site or at AT&T Park (an "Event Parking Agreement"), the Garage operator will submit to the Port for its approval an updated Event Management Plan to address use of the Garage by patrons of such events.

The Garage operator will pay for, or cause to be paid by third parties (e.g., off-site third-party event operators), all direct and indirect expenses incurred by SFMTA associated with incremental enforcement on the Project Site required under the Event Management Plan beyond the SFMTA current enforcement levels described below. SFMTA will deploy such enforcement to the extent that enforcement resources are available.

SFMTA's current enforcement levels refers to the following deployment of SFMTA Parking Control Officers (PCOs) on the Project Site for events at AT&T Park:

|                       | Total PCO hours | Total PCO Supervisor hours |
|-----------------------|-----------------|----------------------------|
| Weekday Daytime Event | 178             | 16                         |
| Weekend Daytime Event | 168             | 16                         |
| Weekday Evening Event | 168             | 16                         |
| Weekend Evening Event | 168             | 16                         |

### V. Dedicated Storage Space

Developer will provide a 10' by 10' street-level secure storage space at no cost to SFMTA for the purpose of storage of SFMTA event management-related equipment. This space will be provided in interim phases as well as at final build-out.

### VI. Garage Consultation

Developer and the City will follow the provisions of *DDA § 2.5(c) (Garage Recommendations)* related to consultation regarding Garage sizing and operations.

### VII. Transportation Plan

Developer and the City will follow the Mission Rock Transportation Plan (**DDA Exhibit B7 Schedule 1**) for the Project Site.

# MISSION ROCK DESIGN DOCUMENTS

The Transportation Plan comprises the fifth in a set of five documents which together describe the requirements for the development of Mission Rock.

**MISSION ROCK VISION & DESIGN INTENT**

This document contains the big picture thinking and aspirations that will guide the process for the design and implementation of Mission Rock.

**MISSION ROCK DESIGN CONTROLS (DC)**

This document guides the development of the open spaces, streets, and buildings at Mission Rock. The DC ensures that the site will be developed in a way that is consistent with the vision as defined in the Mission Rock Vision and Design Intent document.

## MISSION ROCK

SUSTAINABILITY  
STRATEGY

### MISSION ROCK SUSTAINABILITY STRATEGY

This document identifies the high level sustainability goals for Mission Rock, details the requirements for the horizontal and vertical development and summarizes the anticipated reduction in greenhouse gas (GHG) emissions resulting from the district's approach to sustainable design.

## MISSION ROCK

INFRASTRUCTURE  
PLAN

### MISSION ROCK INFRASTRUCTURE PLAN

The design of the landscape, buildings, and sustainability strategies will be closely coordinated with the infrastructure planning at Mission Rock. This plan regulates the complex coordination of streets, utilities, and services.

## MISSION ROCK

TRANSPORTATION  
PLAN

### MISSION ROCK TRANSPORTATION PLAN

This plan describes the ways in which the site will be designed to support the mobility choices of all users, with a special emphasis on safe and comfortable conditions for pedestrians and cyclists.

Located just steps from the center of the Bay Area's transportation system and along one of the premiere bicycle and pedestrian routes in the region, Mission Rock is poised to be a model for sustainable transportation. With a multitude of mobility choices built directly into the site's DNA, it will be one of the first true 21st Century developments in San Francisco.

Small, walkable blocks, wide sidewalks, and a diverse mix of uses will make it easy for those who live or work at Mission Rock to avoid traveling far to eat or shop for everyday necessities. A range of cycling facilities will ensure that cyclists of all ages and skill levels are comfortable navigating the site on two wheels. The opening of the Central Subway will mean frequent, rapid service to Market Street and downtown is just

steps away via the T-Third Muni Metro line, and access to the Peninsula and South Bay is just a few minutes further at Caltrain's 4th and King Street terminal. Supplemented by a suite of services and incentives that will make it easy to choose any mode, this wide range of mobility options mean the site will truly be a good fit for any modern lifestyle.

# 01

## INTRODUCTION

## 1.1 OVERVIEW

This document details how Mission Rock will achieve this vision. It starts by laying out the elements of the project's context that make it an ideal fit for a moment in which San Franciscans are choosing to accomplish more and more each year by a range of modes (Chapter 2). It walks through plans for the design of the site's internal streets, describing how bikes, pedestrians, and vehicles will circulate through the site and connect to its surroundings (Chapter 3). Mission Rock is committed to a robust set of infrastructure investments and ongoing programs that will make it easy to choose modes like walking, biking, and taking transit, and Chapter 4 details the planned package of transportation demand management (TDM) programs. With AT&T Park just steps away from the site, event-related travel will have an important impact on circulation patterns. Chapter 5 walks through how circulation will be managed around events to help reduce impacts on residents and employees, both on the site and in the surrounding neighborhood.

Note that this document focuses on the site's transportation programs at full build-out. The Infrastructure Plan discusses how the project will be phased and implications for the site's physical infrastructure, including transportation.

The proposed project, aerial view simulation from the northwest

## 1.2 GOALS

Mission Rock aims to do the following through its transportation program:

1. Facilitate lifestyles low in vehicle miles traveled (VMT) by providing a robust set of sustainable choices for movement to and from the site
2. Create a vibrant, pedestrian-oriented, and visually interesting public realm within the site
3. Connect seamlessly to the site's broader context, including the City's growing bike network, the Mission Bay neighborhood's developing network of streets and sidewalks, and the city and region's transit systems
4. Ensure that the site is adaptable to new transportation technologies and changing travel habits over time
5. Play a productive role in the City's efforts to manage event-related travel

Shared Public Way, the shared street that will serve as the primary north-south pedestrian route through the site

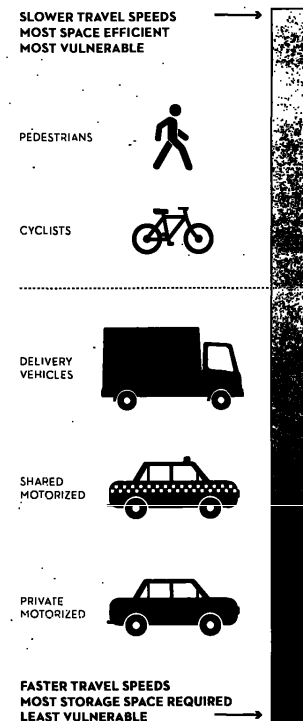

Terry A. Francois Boulevard, another shared street, will have a more maritime-industrial character

## 1.3 STRATEGIES

The project will accomplish those goals through the following primary strategies:

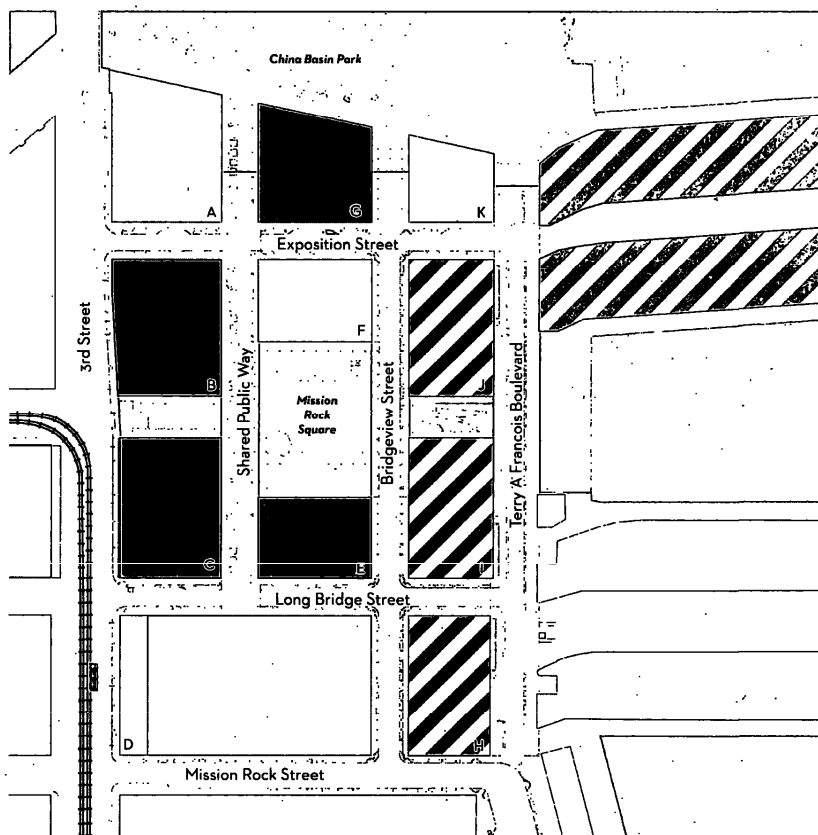

- ▶ Prioritize movement on-site using a modal hierarchy that puts the focus on the most space-efficient and environmentally sustainable modes
- ▶ Encourage walking, biking, and taking transit through convenience and meaningful incentives
- ▶ Design a highly connective street grid with generous and active pedestrian areas
- ▶ Allow for a diverse mix of uses that enables residents and employees to avoid long trips for daily necessities
- ▶ Design for safety through smart deployment of traffic calming strategies on internal streets
- ▶ Facilitate bike connectivity by adding an important link to City and regional bike networks through the site and providing safe and comfortable routing options for people of all cycling skill levels
- ▶ Create generous curb-side loading areas to:
  - ▶ Facilitate site access for people with mobility limitations and for families with small children
  - ▶ Facilitate the use of taxis and ride hail services, which can help obviate the need to bring a personal automobile to the site
  - ▶ Help site users avoid vehicle trips by facilitating convenient delivery of goods
- ▶ Actively manage parking to ensure it is used efficiently as part of the larger multimodal network
- ▶ Work in concert with neighborhood groups to help in responsibly managing event-related travel

A modal hierarchy for travel through Mission Rock

The figure on this page shows the site's urban street grid and mixed land-use plan. The site plan and approach to circulation are two key ingredients in making the transportation vision come to life.

-  Residential
-  Commercial
-  Flex
-  Working Waterfront
-  Structured Parking

Mission Rock's location, mix of uses, density, and design approach are all consistent with regional trends in land use and transportation and supportive of Bay Area planning agencies' efforts to direct new housing toward urban infill locations near transit stations.

The site's mix of uses, including residential, commercial, and retail, will make it easy for residents and employees to take care of most needs within a short walk, and the project's location will naturally facilitate the use of transit and other shared modes for longer-distance trips.

This chapter details the context into which Mission Rock fits. It looks at the broader trends and policy context, as well as the array of local transportation resources that will help make the site's sustainable, multimodal vision come to life.

# 02

## PROJECT CONTEXT

## 2.1 TRENDS IN POLICY AND TRAVEL BEHAVIOR

Mission Rock fits into a larger context of city, regional, and state policy encouraging transit-oriented mixed-use development, as well as the emergence of new transportation options that are changing the way Bay Area residents travel to work and play. The project is poised to both take advantage of the new mobility options and further encourage these shifts.

### 2.1.1 STATE, REGIONAL, AND CITY POLICIES

Starting in 2006, the State of California began laying out a constellation of policies aimed at reducing the state's carbon footprint. Assembly Bill (AB) 32, signed into law in 2006, required that the state reduce greenhouse gas emissions to 1990 levels by 2020, a 15 percent reduction relative to expected trends. Senate Bill (SB) 375 was the first major policy aimed at implementing AB 32. It required that each major region in the state create a "sustainable communities strategy" that would use a combination of land use and transportation planning to create more sustainable development patterns. Furthermore, the City of San Francisco's Climate Action Strategy specifically calls for shifting 80% of all trips to non-automobile trips by 2030.

Plan Bay Area is this Bay Area's sustainable communities strategy, and concentrating growth around the existing transit system is a key pillar of the plan. The plan identified Priority Development Areas with strong transit access and higher existing densities, and Mission Rock sits along a major axis of priority development areas along the eastern edge of San Francisco.

Infill and transit-oriented development are the two most important strategies for developing in a more sustainable fashion. When projects are located in areas that are already developed, they generally allow their inhabitants to travel shorter distances to reach jobs,

grocery stores, and other daily destinations. When located near existing transit networks, they make transit the default mobility option.

Infill development has long been a priority for the City of San Francisco, and the City has an array of policies aimed at aligning the transportation system to denser development patterns. Policies include the city's long-standing "transit first" policy, a 20% bicycle mode share goal, and a collection of recent policy changes - known as the Transportation Sustainability Program - that aim to further invest in transit, bike, and pedestrian network improvements, align the environmental review process for development with other city policies, and shift travel behavior toward non-motorized or shared modes while ensuring access and mobility. Mission Rock's transportation program is consistent with this approach.

With these policies in the background, travel behavior in San Francisco seems to be steadily shifting toward transit and non-motorized modes, and the market for developments that enable transit-, bicycle-, and pedestrian-oriented lifestyles has strengthened. The last few years have seen increases in transit ridership (including record ridership levels on BART and Caltrain in recent years) and major increases in cycling, particularly for commutes.

### 2.1.2 THE IMPACT OF TECHNOLOGY

New technology-enabled travel options have also emerged, making it easier to routinely travel longer distances or make trips that do not align well to the transit network without owning a car. Car share companies like Zipcar and City Car Share have made it easy to rent vehicles, stored conveniently in small pods across the city, for short periods. This allows people who

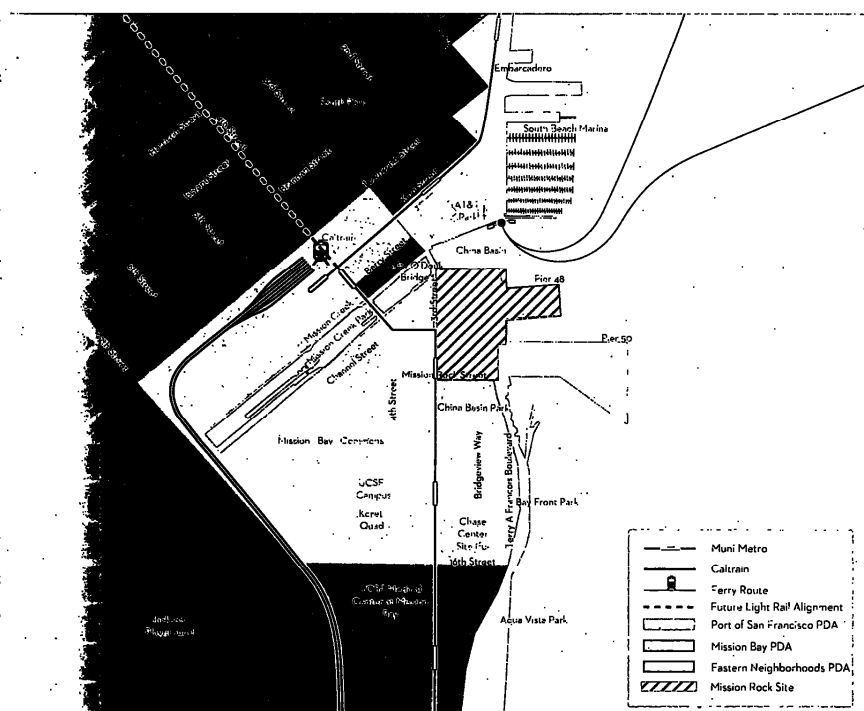

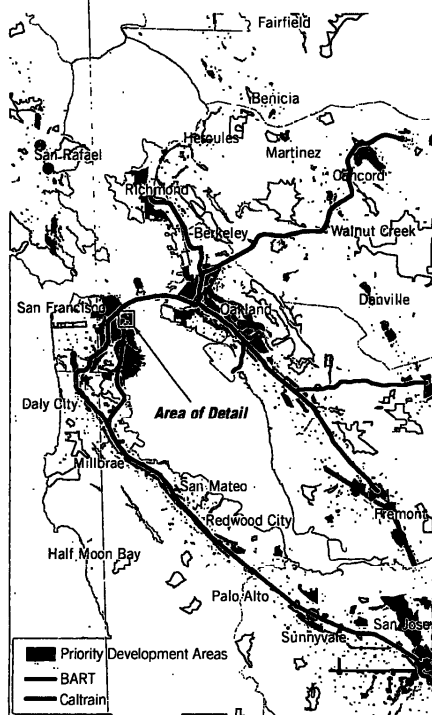

SFMTA has installed "red carpet" transit-only treatments around the city in recent years (SFMTA)

Cycling rates have increased dramatically in recent years (FLICKR USER RICHARD MASONER)

Plan Bay Areas Priority Development Areas (PDAs) and regional transit connections

do not own a car to conveniently accomplish errands that require hauling more than one can carry on transit or a bicycle. Transportation network companies (TNCs) like Uber and Lyft and taxi hailing apps like Flywheel have made it far easier and more convenient to hail rides for trips the transit system is less well set up to handle – across town or late at night.

These trends and the new suite of travel options seem to be affecting people's behavior. A recent study showed that newcomers to the city began taking advantage of them as they emerged, with nine in 10 net new households in the city since 2000 not owning an automobile, according to data from the U.S. Census Bureau. Additional evidence from the Shared Use Mobility Center (TCRP Report 188) shows that individuals who use car sharing frequently tend to own vehicles at lower rates.

### 2.1.3 THE FUTURE OF TRANSPORTATION

More dramatic changes could be in the offing. In the middle of 2016, several companies announced the first limited public use of autonomous vehicles, in Pittsburgh (Uber) and Singapore (nuTonomy). Google has been developing its own autonomous vehicles and testing them around its Mountain View headquarters for several years, and several other major Bay Area companies are also working hard – sometimes in partnership with more traditional auto companies – to develop their own models. When autonomous vehicles emerge in large numbers, the Bay Area is likely to be an area that adopts them quickly.

The precise effects self-driving cars will have on urban environments is unclear, given that the technology

is still in the early stages of development. What is clear, though, is that they have the potential to dramatically change the way we get around, as the advent of motorized mobility did 100 years ago. Indeed, the emergence of automobiles in the early 1900s reshaped the economics and urban space needs of the transportation system.

If autonomous vehicles are used mainly as shared mobility resources, rather than privately held ones in the pattern of the vast majority of small vehicles today, they could lead to shifts like a major drop in parking demand and a major increase in the need for passenger loading space. Even if they emerge as privately owned mobility resources, though, the urban parking footprint is likely to go down. For example, if autonomous vehicles are able to communicate with each other while parking, they could theoretically squeeze together more efficiently, in much the same way as cars parked by valet can be lined up and parked in more narrow columns than can self-parked cars.

Mission Rock is set up to weather these changes well. As Chapter 3 describes, the site's curbs prioritize loading and delivery activities, which have already taken on increasing importance with growth in online shopping and, more recently, the earliest releases of new mobility technologies. The ways in which the site's transportation program has been shaped by its location will also help its design stay current in a world of changing mobility patterns. As detailed in the following sections, Mission Rock is located at the heart of the region's bicycle, pedestrian, transit, and roadway networks, giving future residents, employees, and visitors a wide range of natural options for getting around, even in the absence of new technologies.

## 2.2 NEARBY NETWORKS

### 2.2.1 NON-MOTORIZED NETWORKS

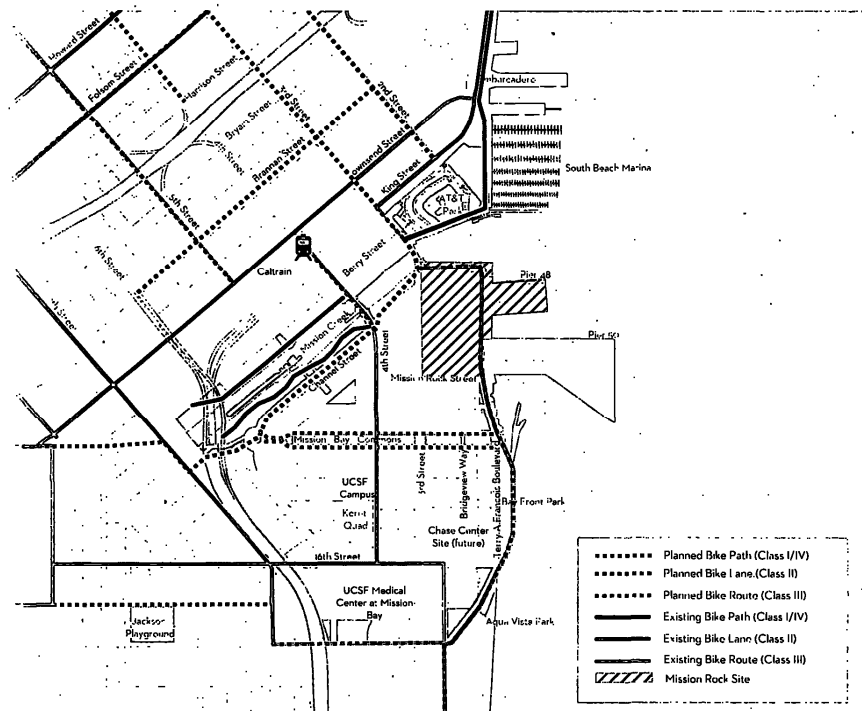

#### Pedestrian

Most trips begin or end on foot, so safe and robust pedestrian space is the backbone of any high quality transportation system.

The Embarcadero, 3rd Street, and Fourth Street are the major pedestrian routes between Mission Rock and the jobs and transit connections in SoMa and Downtown San Francisco. Pedestrian facilities on the Embarcadero are wide and spacious, while sidewalks through SoMa are typically more narrow and less well maintained. The City's Central Corridor Plan aims to steadily improve pedestrian conditions as the area grows and changes in the coming years. Mission Bay's street network is also in the process of being built out. Once the area's development is complete, all streets in the area will have sidewalks on both sides that are six feet wide, and in many places 10 or 12 feet.

#### Bicycle

San Francisco continues to build bicycle lanes of various class distinctions throughout San Francisco as part of its implementation of the 2009 San Francisco Bicycle Plan. In Mission Bay, dedicated bicycle lanes exist on Terry A. Francois Boulevard, Fourth Street, and 16th Street. The facilities on Terry A. Francois Boulevard will soon be improved to a full two-way cycle track as part of the larger San Francisco Bay Trail, which will ultimately be a high quality bicycle and pedestrian route along the entire bay-front. New or improved bicycle facilities are slated for multiple streets running north to Market Street, including 2nd, 3rd, and 5th streets.

Mission Rock's connections to the broader bicycle network and planned routes

### 2.2.2 TRANSIT NETWORKS

Mission Rock is served by several local and regional transit networks within a half-mile walk, including bus, light rail, and commuter rail. More regional connections are available a bit further to the north, along Market Street, the Embarcadero and in eastern SoMa, where there are additional regional rail, bus, and ferry options.

#### Local Transit - Muni

Muni provides local transit service throughout San Francisco. The following Muni routes have stops within a quarter-mile of Mission Rock:

- ▶ **Light Rail** - N-Judah, T-Third, and E-Embarcadero
- ▶ **Bus** - 10-Townsend, 30-Stockton, 45-Union-Stockton, 47-Van Ness, 55-16th Street, 81X-Caltrain Express, 83X-Mid-Market Express

Notable investments and plans underway by SFMTA include:

The Central Subway project will place the T-Third line in a subway along Fourth Street north of Bryant Street and along Stockton Street, extending it 1.7 miles north through the SoMa, Union Square, and Chinatown neighborhoods. This will provide a more direct connection between the Mission Bay neighborhood and BART at Powell Station, as well as transit-, job-, and destination-rich neighborhoods near and north of Market Street. The project is due to open to the public in 2019.

Muni Forward is a comprehensive update to Muni routes and service plans. A subset of lines called the Rapid Network is receiving particular attention through the project, including increases in service frequency and other improvements. Service along 16th Street, through

the Mission and into Mission Bay, will see notable improvements through the project, including transit-only lanes, stop consolidation, transit signal priority, and additional transit bulbs and islands. An early Muni Forward improvement that directly affected Mission Bay was the implementation of the 55-16th Street bus, creating a direct connection between the BART station at 16th and Mission streets and the center of Mission Bay, at 3rd and Mission Bay Boulevard North. In several years, that route will be replaced by a re-routed 22-Fillmore, a trolley bus that provides crosstown connections along 16th Street through the Mission and north along Church and Fillmore streets to the Lower Height, Fillmore, Pacific Heights, and the Marina. Other routes in the vicinity of the project that will see updates include the 10-Townsend and the 12-Folsom/Pacific (the latter will be replaced by the 11-Downtown Connector).

#### Regional Transit

##### Caltrain

Caltrain provides commuter rail service between San Francisco and the South Bay, with stops along the Peninsula, into San Jose and, during peak periods, south to Gilroy. Caltrain offers local, limited stop and "baby bullet" express routes which all serve San Francisco. Caltrain's northernmost station is located about a quarter mile from the Mission Rock site at the intersection of 4th and King streets in San Francisco and is the busiest in the Caltrain system:

Notable planned Caltrain investments include:

- ▶ **Caltrain electrification** will replace the existing diesel service with electrified service between San Francisco and San Jose by 2020, allowing for increased speeds and service levels along the

Caltrain/CALTRAIN

SF Bay Ferry (TUCKER USER PHOTO 2004)

Peninsula corridor. The electrification project will also accommodate shared use of the corridor by Caltrain and planned high-speed rail service.

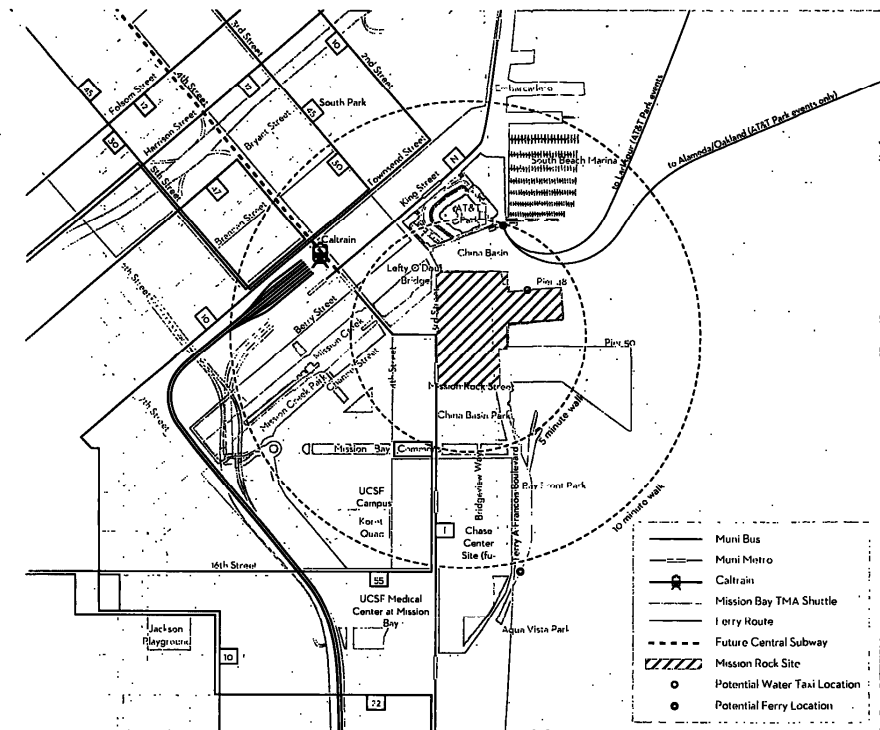

- Caltrain's **Downtown Extension** would connect Caltrain to the new Transbay Transit Center. The alignment of the extension is still being determined and is among the items being advanced in the Planning Department's Railyard Alternatives and I-280 Boulevard Feasibility Study.

#### BART (Bay Area Rapid Transit)

BART provides regional transit service to the East Bay, Peninsula, and other parts of San Francisco. The closest stations to Mission Rock – Embarcadero and Montgomery – are a little more than one mile from the neighborhood. When it opens, the Central Subway will provide a rapid light rail connection between the site and Powell Station. BART is the region's rail spine, and it operates every 5 to 15 minutes on lines serving downtown San Francisco during the afternoon peak and every 20 minutes during non-peak times, including weekends.

#### Ferries

SF Bay Ferry (operated by the Water Emergency Transportation Authority, or WETA) and Golden Gate Ferry provide daily ferry service between the San Francisco Ferry Building and the North and East Bay. Aside from services at the San Francisco Ferry Building, the nearest terminal is currently just beyond AT&T Park's center field gate, where ferries provide service to and from home baseball games. WETA and the City are exploring the potential for a new terminal in Mission Bay near 16th Street, though planning is in the very initial stages.

Local transit connections as of 2017

### Transbay Transit Center: Regional Bus and High Speed Rail

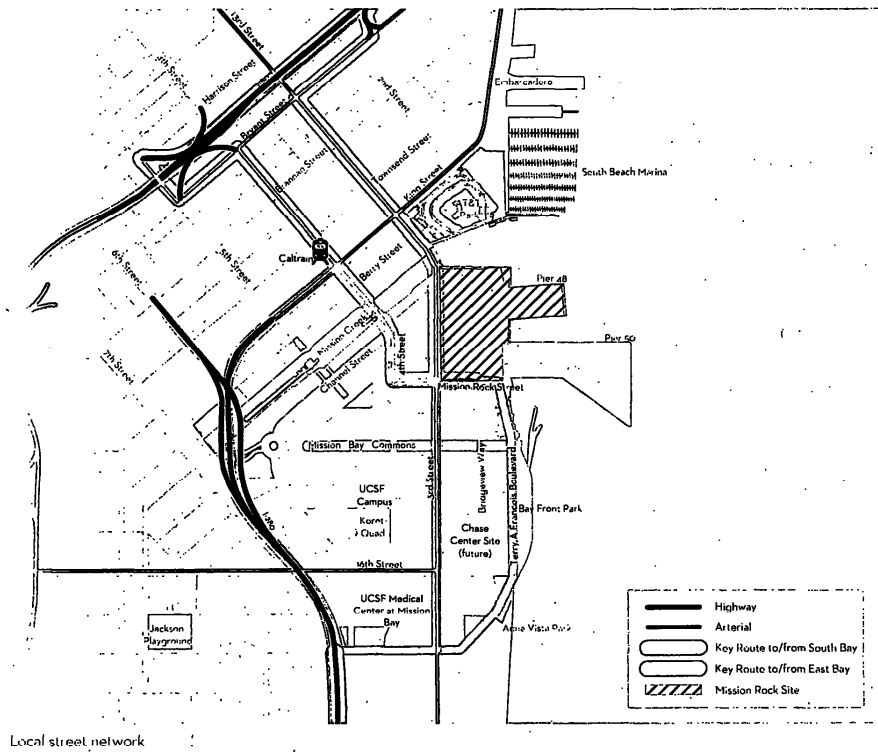

The under-construction Transbay Transit Center is located approximately one mile northeast of Mission Rock and will be open by the time the development is built out. The Transit Center will provide bus connections to regional destinations, as well as access to Greyhound and Amtrak Thruway Connection buses. Once the Downtown Extension is complete, the center will also be the terminal for California High-Speed Rail and Caltrain. Upon completion, the terminal will be served by 11 transit systems: AC Transit, BART, Caltrain, Golden Gate Transit, Greyhound, Muni, SamTrans, WestCAT Lynx, Amtrak, Paratransit, and High Speed Rail.

### 2.2.3 VEHICULAR CIRCULATION AND PARKING

Mission Rock is located near the center of the Bay Area's auto network, providing easy access to the region's freeway system but also exposing drivers in the area to congestion resulting from the large number of daily trips to, from, and through northeast San Francisco.

#### Local Streets

Third, 4th, and 16th streets are the key arterials providing vehicular access to and from Mission Rock and the broader Mission Bay neighborhood. Lefty O'Doul Bridge is also a drawbridge that is used several times per day, causing traffic congestion at one of the key access/egress points for the site on 3rd Street. The bridge is a historic landmark for which major structural modification is not an option, though the city is planning to realign lanes traveling across the bridge in the

coming years to make space along its the eastern edge for bicycle and pedestrian facilities as part of the San Francisco Bay Trail.

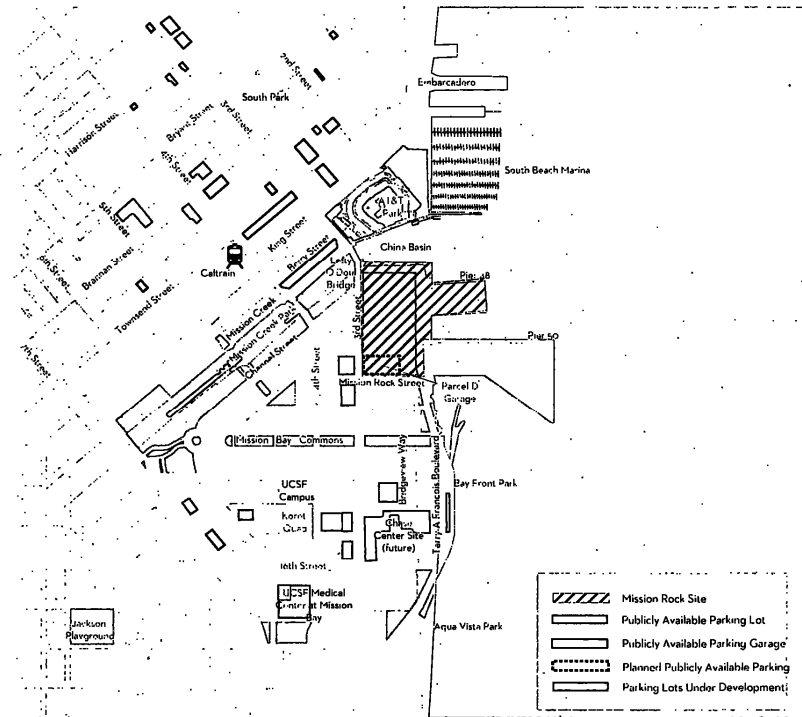

#### Regional Connections

For connections to the region, ramps to Interstate-80 and access to the East Bay are located approximately a half mile north of the site, via 4th and 5th streets. Interstate 280 provides the main connection to the South Bay, and ramps are located less than a half mile of the site to the west, via King Street, or slightly further to the southwest, at Mariposa Street.

#### Parking

As of SFMTA's most recent parking inventory in 2011, the Mission Bay and the Central Waterfront area (bound by the Bay to the east, Mission Creek Channel to the north, 7th Street and Iowa Street to the west, and Pier 80 to the south) had approximately 7,000 off-street parking spaces, and SoMa (bound by the Bay, Market Street, 7th Street, and the Channel) had an additional 26,000 spaces. Many of the spaces in Mission Bay are reserved for the users of specific sites like University of California, San Francisco's hospital and medical campus, but a sizable share of the spaces in SoMa are in paid publicly accessible lots and garages. Parking supplies in that area have shrunk somewhat in recent years, as surface parking lots have been redeveloped.

Many streets in SoMa and Mission Bay also have on-street parking. A large share of the on-street parking in both neighborhoods is currently metered per SFPark pricing policies to manage demand during nearby special events.

Parking facilities near Mission Rock (2015)

## 2.3 TECHNOLOGY-BASED TRANSPORTATION

As noted earlier, technology-based transportation companies offering car share, bike share, and app-based ride hailing (e.g. Lyft and Uber) are changing the way people travel. Although it has yet to be determined how ride hailing trips affect the number of overall driving trips, these innovative services have enjoyed early and growing adoption by Bay Area residents, particularly San Franciscans, and they are widely available in the areas around the project.

**Car-share** has emerged as a strong mobility option for households without cars. Efforts to quantify the impacts of car sharing have found that car share members drive 40% fewer miles than the average driver and take 46% more public transit trips, 10% more bicycle trips, and 26% more walking trips. The average household reduces its vehicle ownership by 50% after joining a car-share service.

**Bike share** provides another short-term mobility option, offering hourly rental of bicycles. Unlike car share programs offered in San Francisco, bike share allows for one-way rentals. Bay Area Bike Share is poised to expand dramatically throughout San Francisco by the

City Car Share (WIKIMEDIA COMMONS, USER MARLODD)

Bay Area Bike Share (WIKIMEDIA COMMONS, USER MARLODD)

Scoot (FLICKR USER MARTIN BICHARTY)

Water taxi service in Chicago (FLICKR USER LONE GORDON)

time Mission Rock opens, with a plan to expand to 7,000 bicycles by 2018.

**Scooter sharing** is another service that has emerged in San Francisco in recent years. Scoot offers \$3 one-way rentals of its fleet of more than 400 small two- and four-wheeled vehicles. The two-wheelers travel as fast as 30 miles per hour, and the four-wheeled "mini-cars" travel 25 miles per hour. Users of the service find nearby vehicles and unlock them using the company's smartphone app.

TNCs like Lyft and Uber provide on-demand booking of one-way car trips via smart phone app, and have recently expanded to facilitate shared vehicle trips (through Lyft Line and UberPool).

The rest of the private transit market is an evolving landscape, consisting of long-distance employer shuttles, short-distance institutional and transportation management association (TMA) shuttles, on-demand commuter shuttles, and other services.

**Long-distance employer-sponsored shuttles** currently make trips to many office campuses outside of San Francisco (e.g. technology companies in the South Bay). An SFMTA program that designated certain Muni bus stop and other designated curb locations is ongoing.

There are a number of **short-distance shuttles** in operation in the project area. Currently, the Mission Bay TMA operates five routes from Mission Bay to Market Street and points throughout SoMa. Most of the routes operate only during peak periods Monday through Friday. Numerous companies and institutions also offer shuttle service within San Francisco. For example, Levi's operates a shuttle between Caltrain and BART stations and the company's headquarters in Levi's Plaza.

Chariot, which offers a **demand-responsive microtransit service** using 14-passenger vans, operated nine public routes during the morning and evening commute periods as of August 2017. The service typically utilizes white curb loading zones for passenger drop-off and pick-up. Chariot recently expanded many of its routes

and now serves points in the South Bay and East Bay, in addition to intra-San Francisco routes.

Two **water taxi** companies currently run limited service between points along the Bay, including the San Francisco Ferry Building. Over time, water taxi operations may expand with growing demand, and there is potential for a landing at Pier 48 and, with the exception of winter, at AT&T Park's ferry dock.

These evolving transportation services provide people in San Francisco with new options to move around the city and the region, further supporting a multimodal lifestyle not dependent upon ownership or use of a private vehicle.

Mission Rock will be designed to give all users high quality choices for how they move about the site and how they get to and from it.

# 03

## GETTING AROUND AT MISSION ROCK

The site will feature generous and active pedestrian areas throughout, and the bicycle network will give cyclists of different ages and skill levels high quality options. Wide sidewalks and wayfinding will help people find the variety of nearby transit options, and Mission Rock's entire street grid will provide comfortable access

to the waterfront and, at Pier 48, a variety of water transportation options as well.

This chapter expands on these ideas, laying out the vision for how people will get around Mission Rock. Note that the project's Design Controls go into more detail on dimensions and materials.

## 3.1 NON-MOTORIZED CIRCULATION

Mission Rock's streets will be designed with the site's modal hierarchy in mind, prioritizing the safe and comfortable movement of pedestrians. Streets will include a variety of features that will help ensure that pedestrians feel safe and comfortable moving throughout the site by keeping vehicle speeds slow and ensuring that those on foot or on bicycles are highly visible to motorists.

As specified in the Design Controls, all crossings will be marked using high visibility paint and other treatments, and all curbs will include ramps to facilitate accessible paths of travel. Some will be reinforced by bulbouts that bring curbs to the edge of travel lanes, shortening crossing distances and making pedestrians who are readying to cross more visible to drivers. At others, "tabletop" treatments will bring the roadway to sidewalk level and change paving materials through intersections. The changes in grade and visual treatment have been shown to make motorists instinctively slow down through these sensitive zones.

On the site's curbed streets, a combination of street furnishings, lighting treatments, and generous sidewalks will make pedestrian space vibrant, inviting, and comfortable even when pedestrian volumes are higher before and after events. Lighting will be at a pedestrian scale, and furnishings like benches and planters will create variety and a sense of protection from vehicle flows between the curbs. All three north-south streets will transition seamlessly into China Basin Park via vehicle-free zones at their northern ends.

### 3.1.1 SHARED STREETS

Shared streets, in which all modes mix across the entire street cross-section, will form the backbone of north-south pedestrian circulation, strategically placed along key paths of travel. These streets will be curbless, following street design approaches seen in Europe along key walking corridors and high streets. Visual and tactile cues like changes in the color or texture of pavers, bollards, street furniture, light fixtures, plantings, and tactile warning strips will differentiate between areas dedicated to pedestrian movement and areas shared by pedestrians, bicycles, and vehicles. These types of streets are somewhat rare in San Francisco, but the Mission Rock team has worked closely with the City to design the streets in a way that works with local norms and regulations. The Design Controls document describes the design of these streets in more detail.

The Shared Public Way will be a key retail corridor through the site, creating a vibrant connection between AT&T Park to the north and the ballpark's main parking facility at the southern end of Mission Rock. Lined with ground-floor shops and cafes, the street will feature

Street types on the Mission Rock site

patio seating and displays that extend the ground-floor uses into the right-of-way, creating "street rooms" that invite people to stroll and linger. The street will only allow northbound vehicle movement, and entrances to the zone will feature signs and other visual cues to make clear that vehicle access is for drop-off, pick-up, and deliveries only.

Terry A. Francois Boulevard, along the eastern edge of the site, will be a slightly different shared street, mixing the area's maritime history with a newer identity as a place where people come together for all kinds of activities. The boulevard will feature a slow two-way, plaza-like shared zone for all modes between wide zones reserved for walking, biking, and loading. The San Francisco Bay Trail will extend through the site on the east side of the street, and the west side will allow pedestrian and loading access to ground-floor maker spaces, which will be raised slightly above street level in an ode to traditional industrial and warehouse building vocabulary.

### 3.1.2 BICYCLE FACILITIES AND CIRCULATION

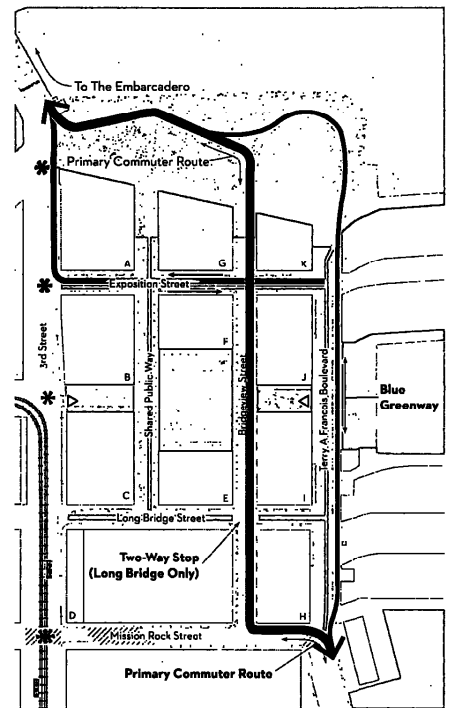

In keeping with the rest of the transportation program, Mission Rock's approach to bicycle circulation is about providing a multitude of choices, with facilities designed for leisurely riders along the waterfront and higher speed facilities along more direct routes to SoMa, Downtown, and other points north of the site.

Even in cities with higher rates of bicycle commuting like San Francisco, researchers estimate that a considerable number of additional people might consider cycling if there were a network of slower, more protected facilities that made them feel safe and comfortable while riding. Mission Rock will provide routes to and through the site that speak to this need, and these facilities will connect to a large and growing network of bicycle facilities in the surrounding area.

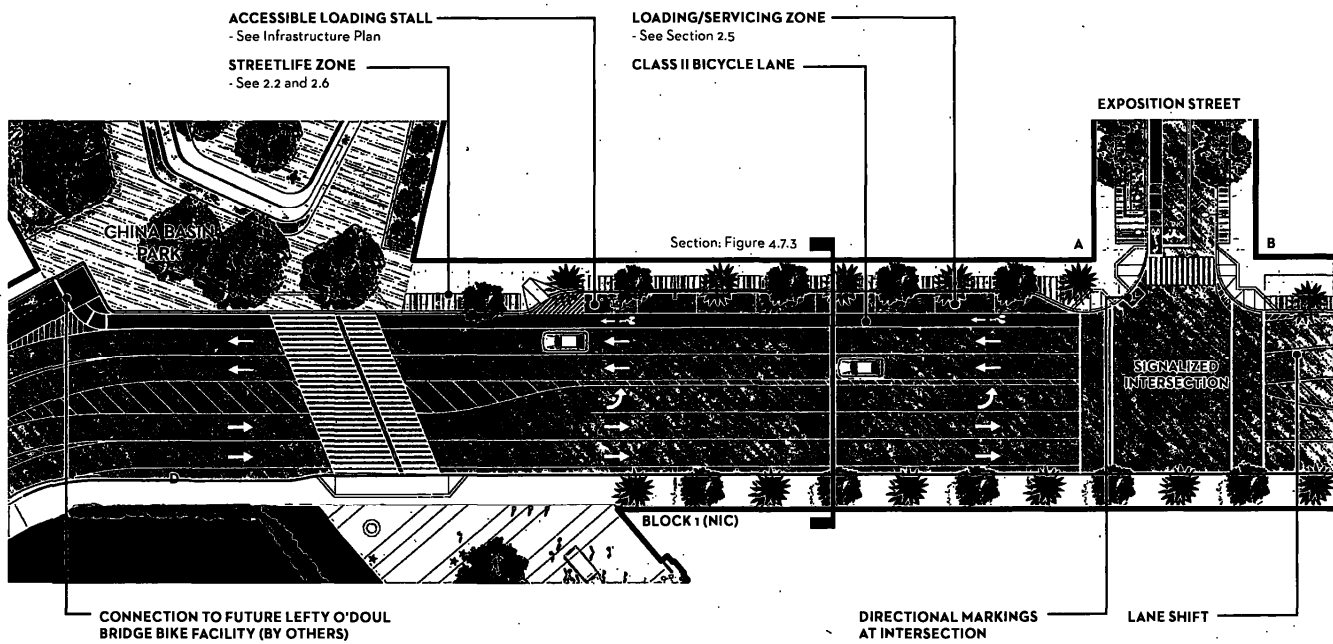

The San Francisco Bay Trail's connection through the site will provide a comfortable route for cyclists of all ages. Visual cues at north and south gateways to the multi-use path will encourage slower bicycle speeds, opening space for younger and older cyclists, as well as pedestrians. The figures on the following pages show how the bicycle facility is anticipated to connect into the City's bicycle network on the north and south ends. For more detail on the proposed design of these intersections or other streets, see Chapter 4 of the Design Controls.

A cycle track route along Bridgeview Street will provide a higher speed connection between the Embarcadero and points south of the site for commuters and more

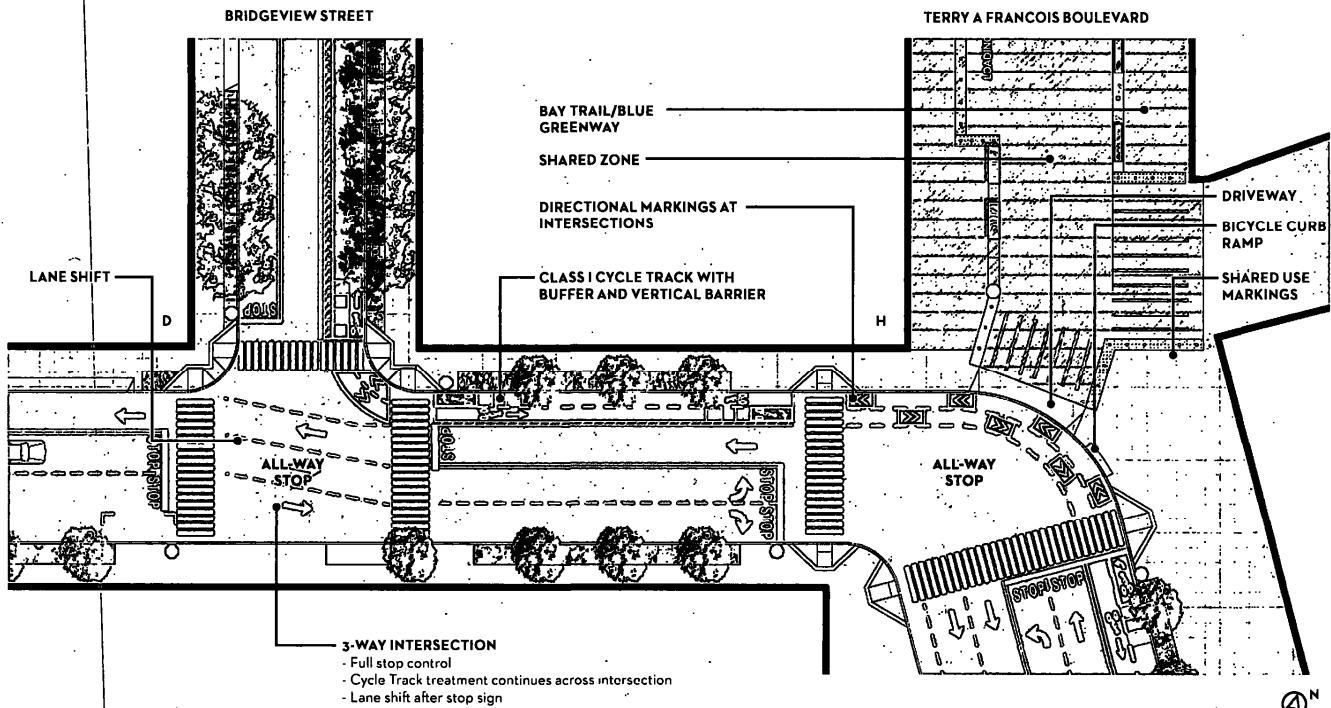

-  Planned Bike Path (Class I/IV)
-  Planned Bike Lane (Class II)
-  Planned Bike Route (Class III)
-  Existing Signal Location
-  Planned Signal Location
-  Access to Below-Grade Parking (if provided)

Bicycle circulation concept

A northbound buffered bicycle lane would provide commuters an alternative to traveling through China Basin Park to connect to a planned two-way cycle track across Lefty O'Doul Bridge.

Cyclists on a planned two-way cycle track along Terry A. Francois Boulevard to the south will have two high quality options at the southeastern corner of Mission Rock. Some may choose to continue on Terry A. Francois Boulevard, but those seeking a faster route will be able to connect seamlessly to a two-way cycle track on Bridgeview Street via Mission Rock Street.

experienced cyclists. A raised and green-painted two-way track protected by a painted buffer zone and soft-hit posts or another buffering approach will clearly reserve a piece of the right-of-way for cyclists. A two-way stop will control cross-traffic on Long Bridge Street to enable a faster and smoother ride for north- and south-bound cyclists. The intersection will be raised to the level of the cycle track to slow cars as they approach and move through the intersection. To connect to high quality bicycle facilities planned for Lefty O'Doul Bridge and the Embarcadero, the route will rejoin the San Francisco Bay Trail in China Basin Park. Northbound cyclists will be able to bypass the park via a painted bicycle lane along Exposition and 3rd streets.

The Design Controls document contains more detail on the planned design of these facilities. That document will be updated as the design team works with the City to ensure that bicycle facilities on the site connect seamlessly to improved facilities north and south of the site, to be implemented in the next several years.

For cyclists with destinations in Mission Rock, the site will provide a variety of bicycle storage options, including a network of spaces in public areas and conveniently located secure spaces inside the site's residential and office buildings. The project team anticipates that an existing bike share provider will install at least one bike share pod on the site, connecting to the much expanded bike share network that hit San Francisco streets in 2017.

Bridgeview Street imagined, with a two-way cycle track providing a faster option for commuters.

## 3.2 TRANSIT ACCESS

The Mission Rock site offers close, comfortable connections to several fast, high frequency, and high capacity transit options. By the time Mission Rock opens for occupancy, the T-Third Muni light rail line will have begun providing quick access to Market Street via 4th Street and the Central Subway (Mission Rock Station is located adjacent to the site, at the intersection of 3rd and Mission Rock streets). Caltrain's San Francisco terminal is a 10-minute walk from the site at 4th and King streets, and BART will be a 20-minute walk or quick T-Third ride away. Bay Area Bike Share will also provide a fast and convenient way to get to transit nodes like Market Street's subway stations and the Transbay Terminal.

The project team will implement a multi-pronged signage and wayfinding strategy to ensure that residents, employees, and visitors understand just how convenient it is to access these high quality mobility options. Outdoor static wayfinding will show basic directions and distances to nearby transit stops, and interactive information kiosks in key places on the site will provide access to more specific directions and real-time transit service information. For residents and employees, a Mission Rock website and screens in building lobbies will both show real-time transit information.

Elements of the site's transportation demand management program will also encourage transit use. See Chapter 4 and the Mission Rock TDM Strategy for more information on transit-supportive programs and incentives.

Transit screens set up in an office lobby (TRANSITSCREEN.COM)

Wayfinding signage in Amsterdam (FLICKR, ANDREY KARMAZEV)

Interactive information kiosk (USDOT)

Directional wayfinding to transit (FLICKR, CHRIS HEATHCOTE)

### 3.3 VEHICULAR CIRCULATION

Mission Rock's street network will be dense, highly connective, and strongly tied into its surroundings. The interior street grid will link up with the developing Mission Bay street network at several points, continuing east-west and north-south streets that currently dead-end at the edges of the project site. Bridgeview Way, which today runs between South Street and the southern border of the project site at Mission Rock Street, will continue as Bridgeview Street through the site to China Basin Park. Long Bridge Street, which today links Third and Fourth Streets will extend to the waterfront at Terry A. Francois Boulevard.

Most vehicles will enter the site from 3rd Street, the main north-south vehicular route through Mission Bay. The figures on this page show estimated relative vehicle flows through the site at peak periods, extrapolated from traffic modeling done for the Transportation Impact Study.

The site's approach to providing parking would place a single garage near the southwestern corner of the project site, which would keep most private vehicle traffic at the southern and western edges of the site. The project's entitlement documents also include an alternative parking approach that would distribute the site's parking supply between an above-ground facility at the site's southwest corner and a smaller facility under Mission Rock Square.

Vehicular circulation through the rest of the site should mostly consist of delivery vehicles and cars dropping off

or picking up passengers. Mission Rock will proactively manage commercial delivery activity, discouraging deliveries during commute periods and encouraging them instead in the early morning hours or late at night. The Mission Rock team will put together a detailed loading management plan for each phase of the project. The team will also work with tenants that are likely to regularly receive large-truck deliveries, such as potential tenants in Pier 48, to ensure that individual deliveries are appropriately staffed to maintain safe conditions for other street users.

As specified in the Design Controls, passenger loading spaces on the Shared Public Way, Bridgeview Street, Long Bridge Street, and Terry A. Francois Boulevard each have curb conditions that meet the standards of the Americans with Disabilities Act, for pick-up and drop-off of passengers with mobility limitations. During specified hours, parcel delivery will be concentrated around commercial loading zones on 3rd, Exposition, and Long Bridge streets and Terry A. Francois Boulevard. Outside of those hours, these spaces would open up to use by private cars picking up and dropping off passengers and for-hire passenger vehicles like taxis and TNCs.

The shared streets - Shared Public Way and Terry A. Francois Boulevard - are expected to see very low traffic volumes, consisting mainly of loading for passengers with mobility limitations. "Traffic calming" treatments like changes in paving materials and changes in roadway grades will help ensure that volumes and speeds stay low

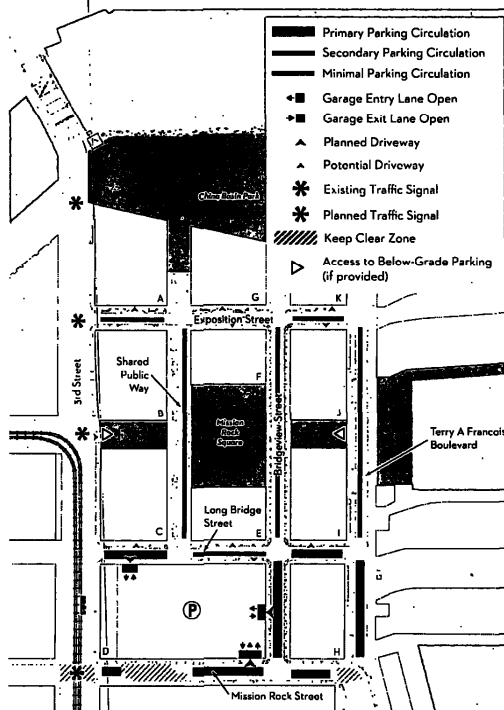

(see the Design Controls for more detail). If all parking is concentrated in a single facility at the southwest corner of the site, Channel Lane and Channel Street will each be closed to vehicle traffic. If the project ultimately includes a parking facility under Mission Rock Square, one or both streets may provide vehicle access to the facility.

#### 3.3.1 INTERSECTION CONTROLS

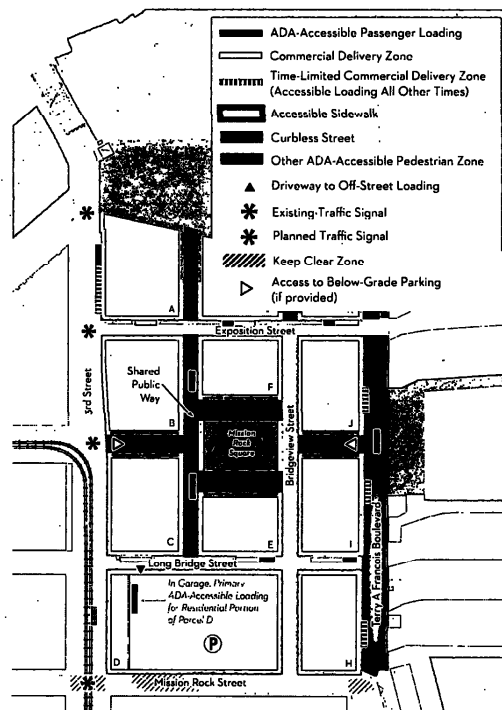

Most internal intersections will be controlled by all-way stop signs. As noted earlier, one intersection along Bridgeview Street will only stop cross traffic on Long Bridge Street to allow for smooth and efficient cycling along the route.

Third Street's interfaces with Mission Rock and Channel streets will be controlled by traffic signals, as they are today. A signal that currently controls the intersection of 3rd Street and Terry A. Francois Boulevard and halts traffic when Lefty O'Doul Bridge is raised for boat traffic entering Mission Creek is anticipated to remain where it is, allowing for signalized control of what will be an important pedestrian and bicycle connection between China Basin Park and a linear park on the west side of 3rd Street. An additional signal is planned at the intersection of 3rd and Exposition streets. The exact sequence of signals along 3rd Street will be determined by the San Francisco Municipal Transportation Agency and the Department of Public Works.

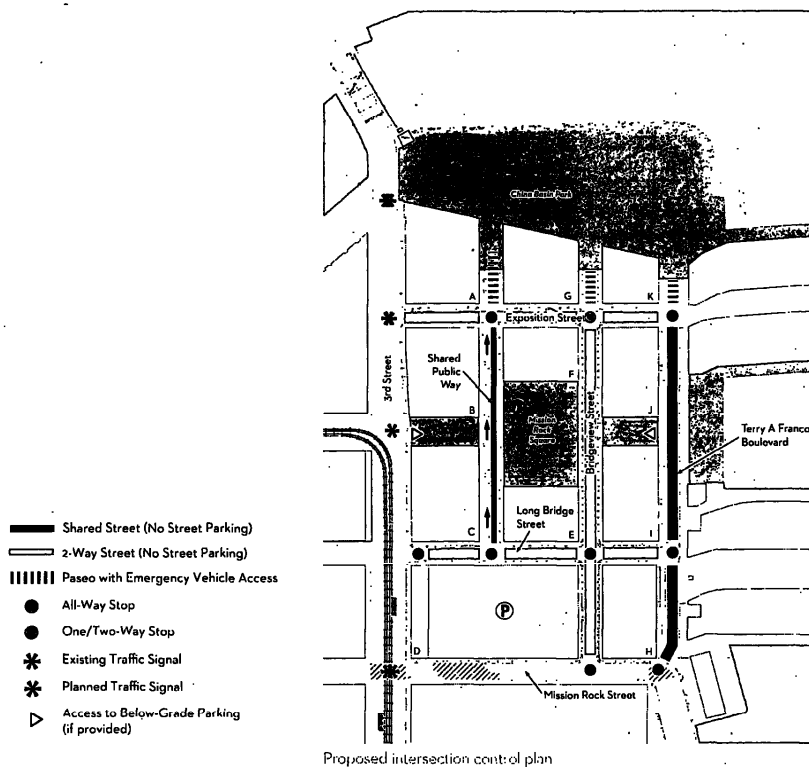

In keeping with the way major entries and exits from AT&T Park's main parking lot are managed before and after events today, intersections around the site's

Relative parking-related vehicle flows and garage access control plan (one-garage scenario)

Planned passenger loading zones

parking garage may be controlled by traffic control personnel (also known as parking control officers, or PCOs) before and after events. The number and location of PCOs will be identified in the project's development agreement with the City. See Chapter 5 for more on traffic control before and after major events.

### 3.3.2 PARKING

Strategic parking management is a cornerstone of the Mission Rock transportation program. A parking garage on the site's southwestern parcel will be the site's main parking facility, with 2,300 to 3,000 of the maximum of 3,100 parking spaces allowed on-site, per the development's entitlement documents. The garage will be used to serve the needs of both users of Mission Rock and users of AT&T Park, replacing the surface parking lot that currently covers the entire site. The site's entitlement documents include an alternative parking approach that could reduce the size of the main garage and locate some of the site's parking supply in a smaller facility under Mission Rock Square.

The site's parking supply will be managed around major AT&T Park events in much the same way as the surface lot is today: To ensure that there is adequate space available for event attendees, prices will be raised around event times to clear the garage at the site's southwest corner. When there is not an AT&T Park event on the calendar, available capacity in the facility could serve the needs of some users of Chase Center (the Golden State Warriors' planned arena and event center at 16th and 3rd streets) as well.

Outside of event times, most parking at Mission Rock will be a resource shared flexibly by all of the users of the site. This arrangement is an alternative to the traditional suburban model of requiring that a certain number of spaces be reserved for each individual use (i.e. office, residential, retail, or restaurant), with enough to accommodate each use's estimated peak demand. Sharing allows a more limited number of spaces to go further by taking advantage of the fact that different uses have different peak periods. For example, peak demand for parking related to office uses tends to take place in the late morning or early afternoon, while peak demand for residential uses is typically overnight. One set of parking spaces can serve both needs. The figures at the right illustrate how this approach to parking management typically results in the need for fewer spaces.

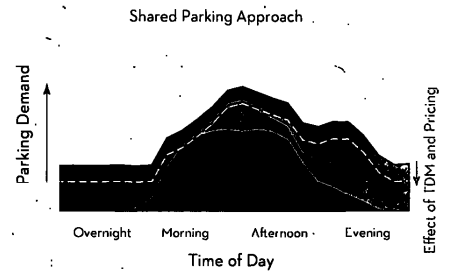

While most spaces will be designed for a typical self-park arrangement, with parking stall widths of eight to nine feet and vehicle circulation lanes, a portion of the spaces for long-term users could be in more

space-efficient vehicle stackers. Approximately 60 of the vehicle spaces will also be reserved for car share and scooter share vehicles (see additional information about vehicle sharing programs in Chapter 4).

### 3.3.2.1 Parking Pricing

The price of parking has been shown to be a highly effective mechanism in changing parking and travel behavior. Parking prices at Mission Rock will be set according to levels of demand: During times with higher levels of typical demand, parking might have a higher price, encouraging the use of other modes. Prices would not change in real time based on current occupancy, but might be adjusted overall a few times a year based on recent occupancy data. Prices might automatically increase by a pre-set amount during peak periods, based on typical demand patterns, or for scheduled events.

Given the project's desire to encourage people to the most sustainable mode that fits their lifestyle, hourly, daily, and monthly parking prices will be set based

*These figures illustrate how the concept of shared parking often results in reduced parking supplies overall. Because different users see peak demand at different times, the total parking needed at any given time in a shared arrangement can be as much as one third less than what would be needed if each use had to accommodate peak demand separately. Pricing and TDM can reduce demand further.*

on market prices in the surrounding neighborhood. Disseminating pricing and availability information is critical to ensuring that users are able to change behavior in response to changes in price. Real-time parking information will be shared in a variety of ways, including the Mission Rock website and dynamic signs at entrances to the site.

The price of parking at Mission Rock will be unbundled from residential and commercial leases, which means parking will not be included in rental agreements by default – residents and employees will need to purchase a daily or monthly parking permit separately. This approach is in-line with City of San Francisco policy and ensures that site users who do not own a car or do not plan to commute to the site by single-occupancy vehicle are not burdened with the price of parking they do not plan to use.

### 3.3.3 EMERGENCY ACCESS

All of Mission Rock's streets have been designed to provide appropriate clearance for emergency vehicles like large fire trucks. Corners have also been designed to accommodate the turning needs of large vehicles. The site's highly connective street grid will help facilitate emergency access to all of the site's buildings. Streets closed to general vehicle traffic will be made accessible to emergency vehicles as needed. The Infrastructure Plan contains further detail on the streets' technical specifications that allow for the safe circulation of emergency and other larger vehicles.

## 3.4 CONCLUSIONS

Mission Rock's design reflects the future of transportation in San Francisco. More and more, people count on having convenient access to several ways of getting around, and Mission Rock provides comfortable facilities for all kinds of lifestyles. Mission Rock is designed to be safe and comfortable to pedestrians and cyclists, to create easy paths of access to the wealth of nearby public transit options, and to ensure that those who rely on motorized transportation can be dropped off or picked up in convenient locations around the site.

Of course, circulation infrastructure is only part of the program. The next chapter details the strategies and up-front investments that will help further provide incentives for the use of sustainable, space-efficient modes of transportation.

Mission Rock's transit-rich context and its bicycle and pedestrian-oriented approach make the site a prime candidate for robust and effective transportation demand management (TDM).

This chapter summarizes a comprehensive TDM program that will enable Mission Rock to actively manage travel demand through a variety of up-front infrastructure investments and ongoing programs. Ultimately, a robust TDM program will reinforce Mission Rock's forward-thinking vision and its aspirations to be an active and vibrant district that is inclusive and safe for all users.

# 04

## TRANSPORTATION DEMAND MANAGEMENT

# 4.1 PLANNED STRATEGIES

Cities and campuses alike have implemented TDM programs to reduce single-occupancy vehicle (SOV) travel and find the optimal balance of transportation modes to accommodate growth. New residents and office tenants increasingly demand convenient access to quality multimodal infrastructure, and in urban areas like San Francisco, they assume that parking will be treated as a limited commodity that will be priced based on occupancy levels and market rates. The Mission Rock TDM Plan is in line with these expectations and exceeds them in important ways to maximize user satisfaction and foster travel choices that are sustainable in all senses of the word.

As summarized in this chapter, the Mission Rock TDM Plan consists of a package of cost-effective strategies that will work together to affect behavioral change. Strategies include incentives, programs, and infrastructure improvements, and they include many that have been successfully implemented in other mixed-use and urban environments. The package of strategies aims to reduce the number of daily SOV trips to the project site (as projected in the site's environmental impact report) by 20%.

The tables on this and the opposite page give an overview of the individual programs that comprise the site's overall TDM Plan. The text that follows provides some information on these programs; complete operational details are included in a separate TDM Plan document. A few of these recommendations have also been directly integrated into the design of Mission Rock, as codified in the Design Controls and other design documents.

Note that TDM programs work together to reduce demand, providing users with a complete package of incentives and infrastructure that can allow them the flexibility to use the mode that makes the most sense for them on a given day. This is in-line with the overall approach to transportation at Mission Rock - providing a variety of high quality mobility choices.

The collection of programs has been thoughtfully crafted into the cohesive strategy outlined in this chapter and further detailed in the TDM Plan document. While some TDM strategies like parking pricing have a more direct effect on travel behavior, others like facilitating delivery services play a more supportive role. Individual strategies would be unlikely to have the same impact in the absence of other strategies.

#### 4.1.1 TRANSIT STRATEGIES

##### 4.1.1.1 Real-time Transit Information and Marketing Screens

Dynamic transit information and transportation marketing to residents, employees, and visitors will be displayed on screens in building lobbies, or a similar approach will be used based on state-of-the-practice technology at the time of occupancy. Information will be also displayed in other high traffic areas, such as collaborative work spaces inside residential and office buildings around the site or childcare facility entrances. Making such information readily available can increase residents' awareness of local transit options and facilitate efficient trip planning.

##### 4.1.1.2 Transit Subsidies

Clipper Cards pre-loaded with some cash value will be provided to all residents upon move-in, and business tenants will be required to offer employees the same. Clipper is the Bay Area's transit fare payment card and can be used on more than 20 of the region's transit agencies, including BART, Muni, and the ferries. Providing Clipper Cards upon move-in can increase residents' awareness of nearby transit options and increases the ease with which they can start using it. Clipper Cards can also be customized through a bulk purchase through the Metropolitan Transportation Commission, helping site users further associate Mission Rock with transit access.

Providing Clipper Cards could increase the ease of using transit for employees and residents who currently do not have Clipper. For individuals who already have cards, the one-time financial subsidy could help lower

one barrier to increased transit use.

#### 4.1.2 BICYCLE STRATEGIES

##### 4.1.2.1 On-Site Bike Share

At least one high visibility space will be made available for a Ford GoBike dock on-site, with the possibility of additional docks depending on Ford GoBike's intended Mission Bay expansion. Prominently located bike share docks can increase awareness of bike share as a viable transportation option while also facilitating use. Each bicycle dock would be provided and maintained by the Ford GoBike management company, Motivate, and the project team will work with the company to identify appropriate dock locations on the Mission Rock site.

##### 4.1.2.2 Bike Share Memberships

Single-year Ford GoBike memberships will be offered to all residents 18 years or older upon move-in. Members of Ford GoBike can take free, unlimited 45-minute one-way bicycle rides between bike share stations.

Providing residents with bike-share memberships could help tenants with minimal experience cycling in San Francisco a low-cost and low-obligation opportunity to try cycling, and it would provide residents with a quick and easy way to get to the Transbay Transit Center and Market Street, for BART connections and a variety of other transit options and recreational activities.

##### 4.1.2.3 Bicycle Community Programming

Through the site transportation staff, regular bicycle parties or happy hours for the bicycling community will be hosted at Mission Rock, potentially paired with gear giveaways. Bicycle-oriented programs and events encourage bicycling by raising public acceptance and

Real-time transit information in Seattle (FLICKR USER DEAN VIRVADY)

Bay Area Bike Share (FLICKR USER DAVID GOENHONG)

support for non-motorized transportation and building connections between residents who regularly bicycle, making biking a fun, social activity. Integrating bicycling into the social fabric of the Mission Rock community will raise the profile of bicycling as a viable mode of transportation and encourage people to try biking for a portion of trips.

#### 4.1.2.4 Bicycle Resource Centers

Each building's secure bicycle parking area will be equipped with a bicycle maintenance space, with resources like a bicycle stand, a workbench, tools, and a basic repair kit. These dedicated spaces contribute to social acceptance of bicycling and reduce one key barrier associated with owning a bicycle - concern about complications related to ongoing maintenance - by providing tools and parts through a vending machine at low prices.

This measure will also include working to incorporate a bicycle store in the site retail plan and establishing a resource center containing a vending machine for bicycle parts, a "fix-it" work station with basic tools, and bicycle pumps somewhere else within the site at an easily accessible location.

#### 4.1.2.5 Bicycle Parking

Given the importance of non-motorized transportation to the site's overall design concept, more bicycle parking will be provided than is required by San Francisco City Code. This will include secure Class I parking spaces in residential and office buildings and a network of Class II bicycle parking spaces throughout public areas.

Class I parking consists of secure long-term bicycle parking, including bicycle lockers, bicycle cages, and bicycle rooms. Class II bicycle parking refers to more short-term bicycle parking, including on-street bicycle racks. The site's location in a flat part of San Francisco and the numerous planned bicycle facilities through the site imply a strong potential for very high rates of bicycle usage, and this will be encouraged through easy access to ample, convenient bicycle parking. Bicycle parking facilities will also be available to accommodate various types of bicycles including those with cargo and trailer attachments.

There are several methods of providing secure (Class I) bicycle parking spaces for residents and employees. The site will employ approaches that reflect best practices regarding secure short-term and long-term bicycle parking. For instance, one approach may be to locate bicycle cages at convenient locations within buildings, and bicycle owners who qualify can receive a key or access card to use the cages for a set period of time (e.g. during work hours). The access card can be the same as one used to access an elevator or parking garage. Public bicycle parking is often considered secure when it is situated in well-lit, highly visible areas.

#### 4.1.2.6 Showers and Lockers

The site will meet the San Francisco Code requirement to provide shower and clothes locker facilities for tenants and employees in buildings with certain uses. Offices (including childcare, business services, and light manufacturing) that exceed 10,000 square feet must provide at least one shower and six clothes lockers;

Bicycle fix it station (FLICKR USER JOE)

Bicycle room (Class I parking) (NELSONWHYGAARD)

for facilities between 20,000 and 50,000 square feet, the building must provide two showers and 12 lockers. Those exceeding 50,000 square feet must provide four showers and 24 lockers. Retail sales and restaurants exceeding 25,000 square feet must also provide one shower and six clothes lockers; those exceeding 50,000 square feet must provide at least two showers and 12 lockers.

#### 4.1.2.7 Bicycle Valet

Free bicycle valet services will be provided for large on-site events (per code requirements). Complementing the bicycle parking available on a daily basis, bicycle valet services during special events can encourage people to travel to and from events by bicycle by eliminating the challenge of finding safe and convenient bicycle parking in an area crowded with event attendees. These services also raise public acceptance and support for non-motorized transportation by building connections with visitors.

### 4.1.3 MOTORIZED VEHICLE STRATEGIES

#### 4.1.3.1 On-Site Shared Scooters

Off-street parking spaces will be reserved for 15 to 20 shared scooters (approximately six car parking spaces in total). These spaces will be made available to scooter share companies at no cost. Electric scooters are highly convenient in a dense urban environment and may have additional marketing value, given the cache scooters carry among certain population segments. Scoot is a current provider of this type of service. One of the benefits of Scoot's network is the ability to travel point-to-point, instead of needing to return scooters

to their point of origin. Scoot already has pods within a short walk of Mission Rock. The parking garage would accommodate space for a scooter dock, which the scooter share vendor would provide and maintain.

#### 4.1.3.2 Electric Scooter Memberships

Pending a partnership with Scoot Networks, a one-year Scoot membership will be offered to all new residents, and Scoot Networks could provide its scooter orientation on-site. Like a bike share membership, a scooter share membership could help establish new travel behavior patterns upon move-in. This measure would entail forming a partnership with Scoot or another electric scooter share vendor to provide free memberships in exchange to reserving space for electric scooter parking on-site.

#### 4.1.3.3 On-Site Car Share Parking Spaces

Designated car share spaces will be provided in the parking garage, with flexibility to increase over time in response to demand. The number of spaces provided will exceed the amount required by the San Francisco Zoning Code. These spaces will be made available to car share companies at no cost.

Research indicates that a single car-share vehicle can remove as many as 20 private cars from the transportation network. Spaces will be located in high-visibility parking spots within the parking garage, which will be publicly accessible. Clear exterior signage will increase these spaces' visibility and emphasize the convenience of car share. Depending on the car share vendor provided, additional partnerships with ChargePoint may be required to provide infrastructure

SP: Bicycle Coalition bicycle valet AT&T Park (NELSON/STEWART)

for electric vehicle charging.

#### 4.1.3.4 Car Share Memberships

Car share memberships will be offered to all households for their first year of residency. Depending on specifics of agreements with car share vendors, membership fees could be reduced or waived and some rental credit could be provided. These memberships could help establish new behavioral patterns upon moving in. Pairing access to car sharing vehicles with car sharing memberships is also shown to be more effective than implementing one or the other on its own.

#### 4.1.4 PARKING STRATEGIES

Priced and actively managed parking is a cornerstone of the Mission Rock transportation program. The following measures will ensure that driving is not the default choice for access to the site.

##### 4.1.4.1 Parking Pricing

The price of parking has been shown to be a highly effective mechanism in changing travel behavior, and as such, parking will be priced strategically at Mission Rock. During times of higher demand, parking might have a higher price, encouraging a higher rate of turnover and the use of other modes. Prices will not change in real time based on current occupancy, but instead might automatically increase by a pre-set amount during peak periods, based on typical demand patterns, or for scheduled events. Prices might be adjusted overall a few times a year based on recent occupancy data.

By refining the price of parking periodically, it would be possible to keep parking occupancy rates relatively close to the optimal level, typically around 90% for off-street parking. Researchers have found that parking facilities function efficiently (i.e. without requiring excessive parking-search time) up to roughly this level of occupancy. Demand-responsive pricing has been successfully piloted in San Francisco, Berkeley, Los Angeles, and other cities, and the AT&T Park lot on which Mission Rock will be built currently employs a form of this concept.

##### 4.1.4.2 Real-Time Parking Pricing and Availability Information

Dynamic displays (or another state-of-the-practice price-information sharing strategy) will be installed to show real-time parking price and availability information. This information will also be made available through other channels like a Mission Rock transportation website; this will require installing technology and associated information systems to automatically monitor parking usage. For market-based parking pricing to be truly effective, the dynamic between price and availability must be clearly communicated to drivers. Making such information readily available to potential drivers, particularly at parking garage entrances, decreases the likelihood of drivers' circling for parking or potentially increases the possibility of choosing other modes.

##### 4.1.4.3 Unbundled Parking

Parking costs will be unbundled from all residential, commercial, and retail leases and ensure that the users of parking are the ones who ultimately pay for it. In other words, individuals desiring parking will be required to pay the cost of parking themselves, and the price of parking will not be included in the leases of any residential or commercial tenants. "Unbundling" parking means that the cost for parking is separate from the cost of residential and commercial units. It is an increasingly common practice in urban areas, and it is required in San Francisco. Thirty percent of San Francisco households do not own a vehicle, and unbundled parking makes housing more affordable, particularly for those who do not need a parking space.

Car share spaces (NELSON\NYGAARD)

Parking pricing information sign (NELSON\NYGAARD)

This approach provides financial savings to households who decide to dispense with one of their cars, and it can help attract households who wish to live in a transit-oriented neighborhood where it is possible to live well with only one car, or even no car, per household. Unbundling parking costs changes parking from a required purchase to an optional amenity, so that households can freely choose how many spaces they wish to lease.

Unbundling parking tends to reduce demand for parking by specifically calling out and making optional the previously hidden cost of "free" parking. This in turn allows developers to provide less parking, which increases the area that can be developed with more lucrative land uses such as additional housing units. For this measure to work optimally for office users, the users of parking – not their employers – must be the ones who ultimately pay daily or monthly costs.

#### 4.1.5 BUILDING STRATEGIES

##### 4.1.5.1 In-Building Concierge Services

Mission Rock will work with the managers of individual buildings to appoint an in-building concierge to provide information about local merchants and coordinate/facilitate delivery services for residents. In-building concierge services and/or multi-purpose front-desk staff can facilitate valet parking, farm-to-table produce delivery, cold and dry storage for grocery or produce delivery, and secure package delivery. Concierge staff could also provide information about the nearest stores and services like dry cleaning and laundry service, as well as pickup/delivery services from local merchants.

Residents would pay for all services.

The site-wide transportation staff would provide centralized transportation support to the in-building concierges. The combination of these services will provide targeted travel information, consolidating or eliminating the need for additional trips.

##### 4.1.5.2 Coordinated Delivery Services

Mission Rock will consider partnering with delivery service companies, in addition to establishing a centralized staging location for parcel delivery and a distribution system that relies on non-motorized transportation to deliver packages to the various buildings within the development. In the absence of an official partnership, ways of making ordering in more appealing instead of making separate trips off the property for daily needs would be facilitated, thus reducing vehicle trips in the process. One potential way to do this would be to offer direct ordering through the Mission Rock website. Each building would manage these services individually as needed.

##### 4.1.5.3 Community-Supported Agriculture Partnerships

Local community-supported agriculture (CSA) deliveries will be coordinated. Fostering the use of local CSA organizations has the potential to reduce greenhouse gas emission and vehicle-trips by providing project residents convenient access to locally sourced food, reducing the number of trips and vehicle miles traveled by both vendors and consumers. This measure could also have marketing benefits and reinforce the site's overall message about sustainability.

In-building concierge (Flicker User: ALAN LIGHT)

CSA box (Flicker User: NINI SOBELME)

#### 4.1.5.4 Cold and Dry Delivery Storage Space

Mission Rock will work with individual building managers to provide storage space near the concierge and elevators to store packages, perishables, laundry, and other deliveries. Storage should be family friendly, including room to store car seats and strollers and near to car share locations. Providing storage space for groceries, laundry, and other packages can have a direct effect on reducing trips by encouraging and facilitating online ordering. A centralized storage facility within each building can also consolidate delivery trips by enabling delivery vehicles to only make one stop for multiple recipients instead of several.

#### 4.1.5.5 Convenient Zones for Loading and Building Servicing

Passenger loading and building servicing zones are integrated into Mission Rock's overall street design. These zones will reduce the need for personal vehicle trips by facilitating deliveries and also enabling easy pick-up and drop-off of seniors and people with disabilities by locating them near elevators and at corners with curb ramps.

#### 4.1.5.6 Childcare Facilities and Services

Mission Rock will aim to attract a provider of on-site childcare services and facilities to ensure easy access for Mission Rock residents and employees. Ensuring that childcare services are provided on-site at Mission Rock would break down a key barrier for parents to taking non-auto modes to work by bringing such services within walking distance and near the many commute options around the Mission Rock site. The

childcare services could be provided on the ground floor of a northern parcel, near China Basin Park. Other family-friendly amenities will also be established, including storage spaces with room to store car seats, strollers, and other family-related equipment.

#### 4.1.5.7 Collaborative Work Space

Mission Rock will work with the developers of individual parcels to establish a collaborative work space in each residential building. A typical offering in residential buildings today, business services rooms can help encourage and facilitate working from home, which can directly reduce trips to and from the site.

Work spaces could include for-rent work rooms that can be reserved in advance, equipped with video conference equipment, high-speed internet connections, projectors, white boards, basic office supplies, and printing, scanning, and faxing services. For residents interested in using this work space long term, dedicated mailboxes for businesses could be set aside and located nearby. The developers and managers of individual buildings will ultimately be responsible for developing and maintaining these business services rooms and ensuring that they are equipped with appropriate equipment.

#### 4.1.5.8 Affordable Housing

Forty percent of on-site units will be restricted to inclusionary affordable housing, to be provided in a balanced manner throughout the phasing of the development. Affordable units are generally associated with lower rates of auto trip-making, as residents living in affordable housing typically own fewer cars

per household than residents of market-priced units. They are more likely to use transit and are less likely to require parking, reducing overall vehicle trip generation.

#### 4.1.6 ALL-REALM STRATEGIES

##### 4.1.6.1 Signage and Wayfinding across Modes

ADA compliant signage and wayfinding will be installed at key points throughout the development. Signs can help indicate points of connection between different modes, as well as estimated travel times and directions by mode, and they can help increase people's understanding of travel options. Clear signage is also important for ensuring safety for all types of users, differentiating spaces for different users within shared public spaces.

Transit-focused wayfinding (NELSON\NYAARD)

#### 4.1.6.2 Mobile-Friendly Mission Rock Transportation Website

An ADA compliant site-wide website will be maintained with a dynamic and engaging section dedicated to transportation information and services, with specific portals for each user type (or the state-of-the-practice equivalent to this measure, per changes in technology by the time of first occupancy). A mobile-friendly website oriented toward all residents, employees, and visitors providing online access to concierge services and transportation programs can help raise awareness and visibility of transportation options and facilitates connections among transportation modes. The transportation information on the website will likely include but not be limited to real-time transit information and a transportation tab with all nearby options (e.g. Muni, car share, scooter share, ride-sourcing apps) showing locations and availability.

The informative website of a TMA in Mountain View. The site is mobile friendly, as the images on the next page show.

#### 4.1.6.3 On-Site Transportation Staff

A site-wide, dedicated transportation staff will be hired and tasked with providing individualized advice and information on transportation options to residents and employees. This can help raise awareness and understanding of transportation options and ensure that site users can find non-auto transportation options that meet their unique travel needs.

Other staff, such as the in-building concierge or those tasked with organizing bicycle events and maintaining the bicycle resource room, could also provide similar targeted information and facilitate discussions around using different modes. This dedicated transportation staff would act as a centralized transportation resource to the in-building concierges, providing up-to-date transportation information and expert support to front-line staff that are less likely to have the same depth of knowledge of the transportation system. Staff responsibilities may include active campaigns encouraging sustainable trip-making.

#### 4.1.6.4 Improved Walking Conditions

High-quality pedestrian design features (high connectivity, wide sidewalks, highly visible crossings, and others) are directly integrated in the design of Mission Rock. As described in the Mission Rock Design Controls, the development will add over half a mile of complete streets, including new and improved sidewalks and pedestrian crossings. Today, many sidewalks in Mission Bay are narrow or missing in areas. The new streets within Mission Rock will greatly improve the overall walking conditions of the neighborhood and facilitate safer and more convenient pedestrian connections. A pedestrian-oriented urban design is essential for residents, employees, and visitors to fully take advantage of the other TDM strategies, supporting access to all of the available transportation options and programs throughout the site and nearby. These improvements help shape the environment for the other TDM strategies to succeed.

High-quality design for pedestrians (NELSON\WYGAARD)

## 4.2 MARKETING AND COMMUNICATIONS

A strong communication strategy is critical to the success of any TDM program, ensuring that residents, employees, and visitors receive information about relevant resources and incentives at appropriate times and through channels that are easily accessible. Incorporating consistent branding into all communications can help create a sense of place and establish a cohesive identity for the transportation program. Branding can be used to support marketing and communication efforts, particularly on signage and wayfinding, to emphasize that residents, employees, and visitors can travel seamlessly through the area.

The TDM strategies cited in the chapter include three main channels for transportation-related communications: its site-wide transportation staff, a mobile-friendly web portal for site users, and physical signage and other wayfinding mechanisms on site. This section includes examples of communication tactics and channels to illustrate how specific channels can help reach target audiences.

### 4.2.1 SITE-WIDE TRANSPORTATION STAFF

Led by a coordinator, Mission Rock transportation staff would be responsible for maintaining information about TDM programs and acting as a point of contact to assist residents, employees, and visitors with transportation-related questions, concerns, or general assistance. The transportation coordinator would have the authority to implement TDM strategies, oversee the management and marketing of all measures, manage the TDM program budget, and monitor success of the TDM program.

The transportation staff might also be responsible for compiling a print and/or electronic transportation handbook to be distributed to residents on move-in and employees on hiring. This handbook could include information on transportation programs, policies, and service options, in addition to the following information:

- ▶ Transportation staff contact information, including information for the in-building concierges (if relevant)
- ▶ How to access transportation information in other media and locations, such as the website, relevant mobile applications, and real-time screens
- ▶ Commute trip planning information, including links to the regional 511 Rideshare program
- ▶ Clipper Card and vehicle (including car, bicycle, and scooter) share membership subsidies and parking policies
- ▶ Information on accessing other TDM program details and amenities, such as the in-building storage facilities
- ▶ Walking and biking routes within the area, estimated walking and cycling times to key locations, including transit hubs, and a link to the San Francisco bicycle map
- ▶ Local transit options and schedules, including links to Muni, BART, and Caltrain schedules, route maps, and existing trip planner mobile applications

The handbook would be distributed to all prospective residential tenants and all prospective employees who receive an offer to work within the development as part of welcome packets or employee orientation, or posted

Signage that combines directional and map-based wayfinding (NELSON/NEYAARD)

in prominent locations for all residents and employees.

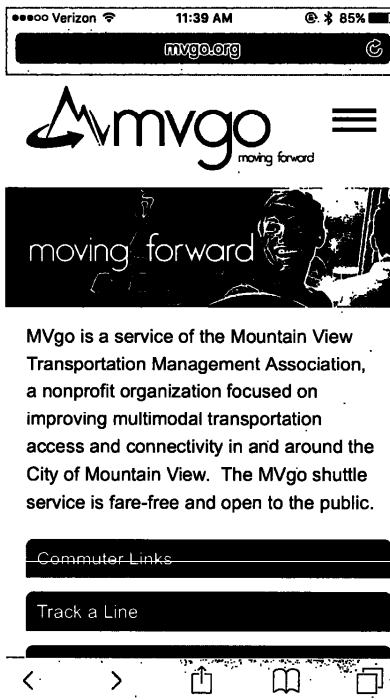

To make sure information stays useful to residents and employees over time, transportation staff will endeavor to keep all information and materials up to

date and relevant. Staff may also consider developing other transportation tools in addition to or instead of a handbook as appropriate, drawing on available best practices.

#### 4.2.2 MOBILE-FRIENDLY WEBSITE

Mobile-friendly websites are a way to create a dynamic and engaging repository for transportation information, point-to-point navigation tools, travel suggestions, user engagement campaigns, and other efforts to raise awareness of alternatives to drive-alone travel options and residents, employees, and visitors to use them. In addition to supporting the information already provided in the resident and employee handbook, this website could include the following:

- ▶ Real-time transit information
- ▶ Real-time parking pricing and availability information
- ▶ Notifications of upcoming transportation-related events, such as bicycle parties and farmers' markets, and alerts
- ▶ Integration with internet delivery services for ordering
- ▶ Registration for car share, bicycle share, and/or scooter share memberships
- ▶ Room reservations for the collaborative workspace
- ▶ On-site childcare services enrollment
- ▶ Specific pages or portals for residents, employees, and visitors so that each of these audiences has access to the appropriate and relevant travel information

The mobile-friendly version of the Mountain View TMA's website. The TMA offers real time transit information and links to a variety of other resources.

- Functionality which allows for tracking travel behavior and enables gamification for incentives

This website will be ADA/Section 508 compliant to ensure that users of all abilities are able to easily access this information. Establishing specific portals for each audience can allow for the delivery of targeted, individualized TDM information for each of the audience groups. Each of the portals could also provide specific information on costs and multimodal options available for traveling to and from Mission Rock, as well as information on nearby attractions and services and links to citywide or regional information. The images on the previous pages show an example of computer and mobile-friendly versions of landing pages for this type of website.

#### 4.2.3 SIGNAGE AND WAYFINDING

Clear, consistent, and predictable signage and wayfinding can help residents, employees, and visitors navigate the site easily. Signage can also bring awareness to important information such as parking prices and availability, bicycle parking locations, estimates of bicycle and pedestrian travel times, and other information on Mission Rock programs or services. Simply providing information on non-motorized travel prominently can increase the likelihood that people will select biking or walking as their mode of transportation.

The efficacy of signage and wayfinding is dependent on the design and placement of signs. Signage should be clear and provide relevant information at key decision points in people's journeys, in areas that are highly

visible, and in clear lines of sight. For instance, when entering the site, cyclists should be able to clearly understand their route options through the site. This signage will be especially important for safety along the shared public ways, to ensure that users understand the encouraged forms of travel and appropriate behavior on each mode. Temporary signage may be used in areas more highly trafficked by residents or employees, to provide information on specific events or programs, such as CSA pick up locations.

Wayfinding examples throughout the chapter show how it can be used in vibrant, mixed-use areas. Some signs offer clear guidance for the nearby area at several scales while providing clear directional guidance to nearby transportation hubs and popular destinations.

For further information on the design considerations that will be accounted for in designing signage for the Mission Rock site, see section 2.10 of the Design Controls.

##### 4.2.3.1 Transportation Information Kiosks

Transportation information kiosks in the public realm can provide centralized locations for relevant transportation information for trips within Mission Rock and to nearby services and attractions. These kiosks could be placed throughout the site, at strategic decision-making locations where residents, employees, and visitors might need the information, such as the intersection of Terry A. Francois Boulevard and Mission Rock Street, China Basin Park, and Mission Rock Square. The kiosks could include transit schedules and fare information, walking and cycling routes, real-time

transit information, and Bay Area Bike Share dock locations and bicycle availability.

It is recommended that these kiosks be digital, interactive displays (as shown in the accompanying image) to allow information to be updated easily and regularly. These boards would be maintained and updated as needed by the transportation staff.

While the information kiosks can provide detailed information on transportation options to visitors and others new or unfamiliar with Mission Rock and the surrounding area, real-time transit screen technology is designed to offer an opportunity to understand transportation options at a quick glance. This would be particularly useful for employees and residents, those who make recurring trips frequently and don't need detailed guidance.

Each of the communication-based TDM measures are pertinent to residents, employees, and visitors at different times during their life cycle at Mission Rock. As such, it is critical to think strategically about when to share what with each of these key segments to reach certain groups of users.

The mobile-friendly Mission Rock website will be an important avenue for sharing information about programs, policies, and services. It is reasonable to assume that the website will act as a front-line communications vehicle to reach all of those who have or may be interested in having a connection with the site. Signage and wayfinding will be seen on a daily basis and is an important element for users of the development to efficiently navigate Mission Rock.

## 4.3 CONCLUSIONS

Establishing a robust TDM program reaffirms Mission Rock's commitment to sustainability and inclusivity. The program will encourage the site's residents, employees, and visitors to use the most environmentally friendly and spatially efficient mode possible for each trip, with an emphasis on cycling, walking, and shared rides.

| TDM MEASURE                           | TARGET AUDIENCE |          |         |
|---------------------------------------|-----------------|----------|---------|
|                                       | RESIDENT        | EMPLOYEE | VISITOR |
| 4.1.1.1 Real-Time Transit Information |                 |          |         |
| 4.1.1.2 Clipper Cards                 |                 |          |         |

Target audience for each TDM program

The energy and excitement generated by people visiting parks and event venues will be part of what makes Mission Rock a fun and interesting place to live, work, and play.

# 05

## EVENT MANAGEMENT

These visitors will bring the area to life throughout the year. Mission Rock will be designed and actively managed to maximize the best aspects of festivities in these spaces while responsibly managing the potential inconveniences that large crowds can cause. This

chapter outlines the basic site's anticipated approach to managing pedestrian activity, vehicle flows, and bicycle parking around them to ensure that residents and employees can enjoy the energy without the hassle.

As the team has since it moved to AT&T Park in 2000, the San Francisco Giants will continue to work closely with the City and with citizens advisory committees in the area to manage the effects of event crowds on surrounding neighborhoods, through measures like deploying traffic control officers (known in San Francisco as parking control officers, or PCOs). In addition to such measures, the Mission Rock transportation staff might also be empowered to take additional actions like closing on-site streets or individual lanes to vehicle traffic and encouraging the use of non-auto modes for travel to on-site events.

This chapter describes how these types of strategies might be combined for three scenarios, representing the likely range of common events: A primary event at AT&T Park (35,000+ attendees), a secondary event at AT&T Park (15,000 to 35,000 attendees), and on-site events in China Basin Park, Mission Rock Square, or potential event venues in Pier 48 or Block E (500 to 4,000 attendees). A more detailed Event Management

Plan will be developed in concert with City agencies before construction of the first phase of the project, and it will be updated ahead of each subsequent phase of the site's build-out. The Event Management Plan will include the topics listed in the table of contents referenced below.

Given their storage-space needs, automobiles naturally pose challenges for organizers of any large event. As such, most scenarios include some restrictions on vehicle movement through the site, and the TDM Plan's efforts to reduce reliance on single-occupancy vehicles for travel to and from the site will be particularly crucial during these times. However, some vehicle movement will be accommodated. An up-to 3,000-space parking garage at the southwest corner of the site will serve as AT&T Park's main parking facility, replacing the surface lot on which Mission Rock will be built. During AT&T Park and Mission Rock events, curb space around the site will also provide important capacity for passenger loading.

Parking control officers (PCOs) (NELSON/NTG/ARND)

## EVENT MANAGEMENT PLAN TOPICS

An Event Management Plan will be developed for submission and approval as part of the first phase application for the Mission Rock site, then updated and submitted (for informational purposes) as part of each subsequent phase application. The plan will cover all events on-site at Mission Rock. Section V will identify the full universe of potential TDM and traffic management strategies. The subsets of such strategies that will apply to different events (by size/type and location) will also be identified in Section V.

### I. Introduction

- a. Purpose of the Document
- b. Goals of the Mission Rock Event Management Program

### II. Mission Rock Project Update

- a. Description of Current Phase Land Use
- b. Description of Cumulative Project To Date
- c. Interim Transportation Network (Phases 1-3 only)

### III. Transportation Context

- a. Transit Network
- b. Bicycle and Pedestrian Networks
- c. Key Local and Regional Roadways
- d. Parking Facilities

### IV. Events at Mission Rock

- a. On-Site Event Venues
- b. Characteristics of Potential Event Types (would include: location, event format/type, number of attendees, likely days of week, likely times of day, attendee arrival/departure windows and concentrations, estimated attendee trips linked with other nearby events/land uses, and likely frequency)
- c. Project Phasing & Implications for Events
  - i. Phase I
  - ii. Phase II
  - iii. Phase III
  - iv. Phase IV

### d. Relationship with Other Venues and Potential Events in the Area

- i. Other Venues and Event Types
  - 1. AT&T Park
  - 2. Chase Center

### ii. Concurrent Events: Type and Frequency of Overlaps

### V. Managing On-Site Event-Related Travel Demand

#### a. Desired Outcomes

- i. Ensure Safe Conditions for Pedestrians and Cyclists
- ii. Avoid Transit Delays Related to Garage Queuing Impacts
- iii. Minimize Mission Bay Traffic Impacts during Sensitive Times

#### b. Universe of Event-Specific TDM and Traffic Management Tools

- i. Transportation Demand Management Strategies (e.g. communications/information distribution, temporary or permanent multimodal wayfinding, incentives/disincentives for using particular modes at particular times, etc.)
- ii. Traffic Control Strategies (e.g. curb management, the use of temporary or permanent static and/or dynamic signs, PCOs, traffic flow/lane adjustments, other strategies to prevent transit delays on T-Third & support safety of all users, etc.)

#### c. Matrix: Event Types + Tools/Strategies To Be Used + Responsible Party/ies + Additional Considerations

### d. Event-Specific Nuances (as applicable; e.g. differences in the location of PCOs, differences in the use of dynamic or temporary signage, differences for events on different days/at different times, at different phases of build-out, etc.)

### e. Emergency Vehicle Access/Circulation On-Site

### f. Event-Related Loading & Servicing

### g. Managing Concurrent Event Scenarios: Coordinating with Other Venues through Ballpark Mission Bay Transportation Coordinating Committee (BMBTCC) and/or Other Applicable Body

### VI. Implementation and Refinement

#### a. Mission Rock Transportation Coordinator Responsibilities

#### b. Coordinating with City Agencies

- i. Port of San Francisco (e.g. manage efforts to involve relevant city agencies, staff-level approval with rest of relevant phase application materials)
- ii. San Francisco Municipal Transportation Agency (e.g. involved in development of initial content, involved in approval process)

#### c. Coordinating with Venue Managers and Neighborhood through BMBTCC and/or Other Applicable Body

#### d. Monitoring and Plan Refinement

\* Note that while this plan will focus on events on-site at Mission Rock, there is a separate event-management plan in place to manage traffic associated with AT&T Park.

## 5.1 PRIMARY EVENTS

### **AT&T Park, 35,000 to 40,000+ Attendees**

A primary event at AT&T Park will be the most common scenario, occurring between 80 and 100 times per year, depending on whether the Giants make the playoffs and on how many non-baseball events (like concerts or other sporting events) AT&T Park hosts.

#### **5.1.1 MANAGEMENT STRATEGIES**

##### **Parking Pricing**

As noted in Chapter 4, it is anticipated that the Mission Rock garage will be actively managed around event times to ensure that there is space available for AT&T Park event attendees. To encourage regular users of the garage to find alternative ways to get to the site on event days, parking prices could be raised during a period covering a few hours before and after AT&T Park events. This approach has already been successfully employed to manage parking demand in the existing main AT&T Park lots, Lot A and Pier 48. People arriving at the garage around event times could pay a flat event rate that might amount to a total that is higher than typical hourly rates would be (i.e. if the event period is six hours long, the flat event rate would exceed the total cost of parking for six hours at typical hourly rates).

##### **Vehicle Flows and Curb Space**

Vehicular circulation through Mission Rock could be restricted during primary events in anticipation of high pedestrian volumes through the site. The Shared Public Way is a particularly critical north-south pedestrian route, providing the most direct path of travel between the main garage and the ballpark. As such, it is anticipated that the street would be closed

Giants games at AT&T Park regularly sell out, bringing a festive atmosphere to the neighborhood

to vehicle traffic around major event times. Right turns from Mission Rock Street to 3rd Street could also be prohibited before events, to reduce volumes on Mission Rock Street in front of the Public Safety Building. Left turns into and out of the site at 3rd Street's intersections with Long Bridge will be prohibited at all times. The eastern-most lane on 3rd Street between Exposition and King streets will also likely be closed before and after events, as it is today, to facilitate the movement of large volumes of pedestrians near the ballpark.

Traffic flows will be actively managed through PCOs and strategically placed signs, and garage entrances and exits will be managed to allow for efficient processing of major vehicle flows. To ensure that emergency vehicles have clear access to Public Safety Building driveways on the south side of Mission Rock Street, keep clear zones will be maintained and could be reinforced by one or more PCOs. Traffic flows on Mission Rock Street could also be managed to maintain an open lane for potential emergency vehicle movement. Event vehicles will also be encouraged, via signs and PCOs strategically located at points south of

the site, to enter and exit the area via Terry A. Francois Boulevard. Specific PCO locations will be determined by the SFMTA with the goal of supporting pedestrian safety, limiting impacts on transit, and keeping intersections clear of vehicles.

Most vehicular circulation through the site is expected to be for passenger pick-up and drop-off. Key passenger loading locations will include the north side of Exposition Street and the east side of the block of 3rd Street just north of Exposition Street. Primary loading zones for people with mobility limitations include the east side of 3rd Street north of Exposition Street and an accessible loading zone on Exposition Street between the Shared Public Way and Bridgeview Street.

To manage vehicle movement at points of potential conflict between modes, this plan recommends the use of PCOs in key places along 3rd Street and through the site, including the intersections of Mission Rock and 3rd, Mission Rock and Bridgeview, and Mission Rock and Terry A. Francois Boulevard, and the 3rd Street crossing just south of Lefty O'Doul Bridge.

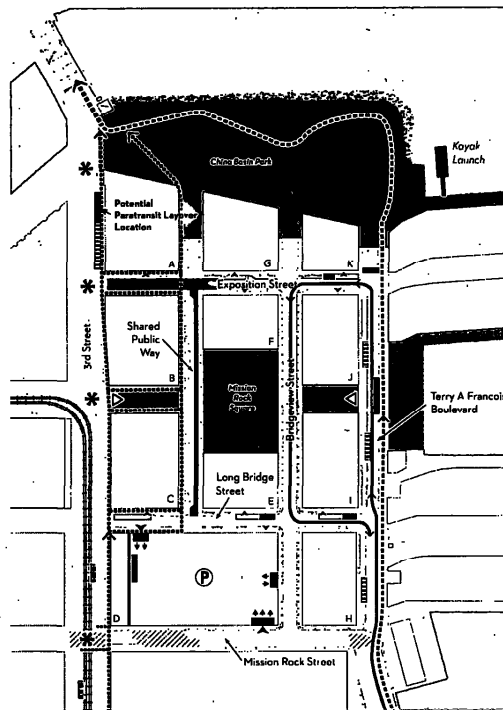

## **Pedestrians**

It is anticipated that all pedestrian paths of travel will be open, but pedestrian activity is likely to concentrate along the Shared Public Way and 3rd Street, the two key north-south routes between Long Bridge Street and the ballpark.

## **Bicycles**

Primary bicycle flows south of China Basin are expected to be along the San Francisco Bay Trail to and from bicycle parking facilities immediately around AT&T Park. Some cyclists may also use Bridgeview Street, but they might be less likely to do so than in normal conditions due to larger numbers of vehicles turning into and out of the garage. Cyclists will be encouraged to dismount at the western end of China Basin Park to reduce conflicts with the heavy pedestrian flows across Lefty O'Doul Bridge. Some event attendees will also likely lock their bicycles on the Mission Rock site, to visit on-site restaurants before or after games or to avoid crowds closer to the venue. An additional ballpark bicycle valet facility could also be located on the Mission Rock site, if usage of the main valet facility warrants it.

Pre-event circulation patterns

Post-event circulation patterns

## 5.2 SECONDARY EVENTS

### **AT&T Park, 15,000 to 35,000 Attendees**

Circulation patterns at Mission Rock are anticipated to be similar around smaller events at AT&T Park. The Shared Public Way could be closed, and the relative intensity of different vehicle flows should be consistent with the basic patterns seen for the biggest events at the ballpark, though overall flows should be much smaller. Bicycle and pedestrian circulation patterns are also expected to be consistent with those anticipated for larger events.

Given lower levels of expected parking demand, it is anticipated that the garage at the southwest corner of the site would generally not need to use flat-rate event pricing around secondary events. Event attendees would be able to park in available spaces as long as spaces are available. However, communications related to AT&T Park events would likely still encourage the use of other modes to access the ballpark, in the interest of reducing congestion and parking demand overall.

Concert at AT&T Park (FLICKR USER REBECCA WILLIAMS)

Stern Grove concert series (WILSONNYGAARD)

## 5.3 ON-SITE EVENTS

### **Mission Rock, 500 to 4,000 Attendees**

Mission Rock will have two spaces equipped to host large events. The Great Lawn in China Basin Park will have room to host concerts, movie nights, and other large gatherings. Mission Rock Square will likely host a broader range of events, from staged performances to farmers markets or craft fairs, with thousands of people flowing through the space over a several-hour period.

The garage at the southwest corner of the site's parking prices could be converted to event rates for a period covering several hours before and after the biggest events, to discourage use by regular users.

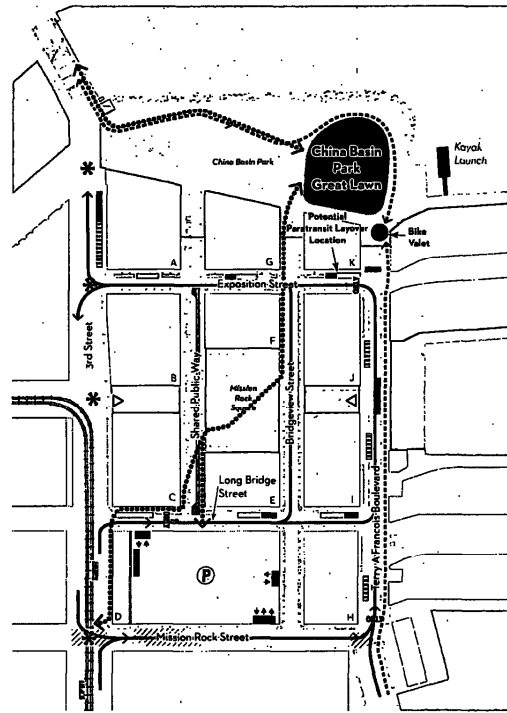

#### **5.3.1 CHINA BASIN PARK EVENT**

##### **5.3.1.1 Vehicle Circulation and Passenger Loading**

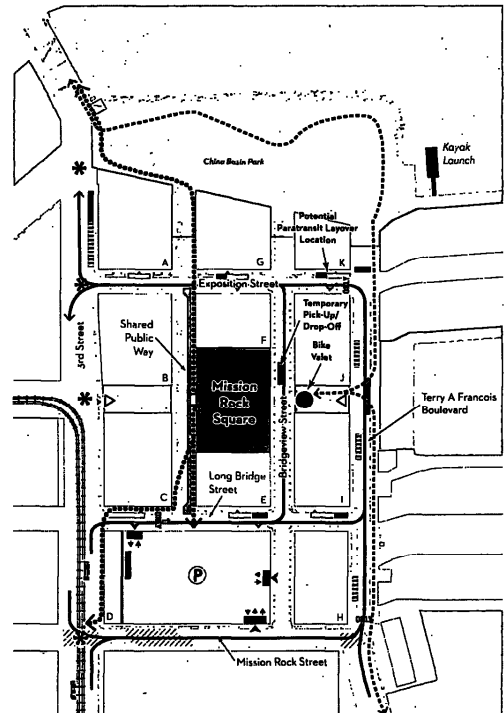

For the biggest China Basin Park events, Terry A. Francois Boulevard and Exposition Street could be closed to through traffic (the project team will apply for street closure permits through the standard City process), with the streets reserved for event-related pick-up and drop-off. To make vehicle flows predictable for pedestrians crossing these key streets, Terry A. Francois Boulevard could be converted to a one-way street northbound, and Exposition Street could be one-way westbound to complete a site-wide circuit.

It is anticipated that the north end of Terry A. Francois Boulevard, at or north of the intersection with Exposition Street, would be the main drop-off and pick-up location for people with mobility limitations. Taxi, TNC, and other vehicular loading could be focused along Exposition Street west of Terry A. Francois Boulevard.

- ▷ Access to Below-Grade Parking (if provided)

#### 5.3.1.2 Pedestrian Circulation

Pedestrian traffic is likely to focus along two major routes: 1) through China Basin Park and up 3rd Street to/from the Caltrain terminal at 4th and King streets and toward BART on Market Street, and 2) through the site to/from the parking garage and the Muni light rail station on 3rd Street south of Channel Lane. Flows through the site can be expected to concentrate on Bridgeview Street north of Mission Rock Square, in the square, and along the Shared Public Way and Long Bridge Street, en-route to the parking facility and the Muni station at the southwestern corner of the site. PCOs may be helpful on Exposition Street at Shared Public Way and Bridgeview Street, to enable vehicles picking up or dropping off passengers to exit the site.

#### 5.3.1.3 Bicycle Circulation and Parking

Bicycle valet facilities could be located along the San Francisco Bay Trail, just southeast of the event space, and cyclists will also be able to use the network of public bicycle parking spaces throughout the site.

Cyclists from the north could be encouraged to dismount at the edge of China Basin Park and walk their bicycles around the event space to the bicycle valet facility. Cyclists from the south could be encouraged to dismount as they approach the area for pick-up and drop-off of attendees with mobility limitations.

#### 5.3.2 MISSION ROCK SQUARE EVENT

##### 5.3.2.1 Vehicle Circulation and Passenger Loading

For the biggest Mission Rock Square events, Shared Public Way could be closed to vehicle traffic (with

appropriate City permits), and Bridgeview Street between Long Bridge and Exposition streets will be closed to all but pick-up and drop-off of people with mobility limitations. As for China Basin Park events, Terry A. Francois Boulevard and Exposition Street could create a one-way loop for taxi, TNC, and other vehicular drop-off, and they could be closed to through traffic.

##### 5.3.2.2 Pedestrian Circulation

Major pedestrian flows to transit nodes north and northwest of the site are anticipated to follow the Shared Public Way through China Basin Park to 3rd Street. Flows southwest to the main garage and the T-Third Muni light rail stop would follow Shared Public Way to the south and Long Bridge Street between Shared Public Way and 3rd Street.

##### 5.3.2.3 Bicycle Circulation and Parking

Bicycle valet could be located on Channel Lane east of Mission Rock Square. The main flows of cyclists from points south would follow the San Francisco Bay Trail to Channel Lane. Temporary signage at the north end of the site would encourage cyclists to follow the San Francisco Bay Trail to Channel Lane. The cycle track on Bridgeview Street could be closed to bicycle traffic temporarily, to make way for large pedestrian flows and for the primary loading area for event attendees with mobility limitations.

Mission Rock residents, employees, and visitors would also be encouraged to travel to and from the site on foot, bike, or transit on days with events on-site or at AT&T Park. Site transportation staff would keep and

prominently display a calendar of major events as a planning resource for regular users of the site.

#### 5.3.3 EVENTS IN POTENTIAL VENUES AT PIER 48 AND BLOCK E

As the figures on page 63 show, circulation patterns related to events at potential Pier 48 and Block E event venues would be similar to those for events at China Basin Park and Mission Rock Square respectively. The following subsections describe slight differences.

##### 5.3.3.1 Vehicle Circulation and Passenger Loading

For events at Pier 48, vehicular circulation through the site are anticipated to be the same as for events at China Basin Park. For events at Block E, paratransit loading could be moved to Long Bridge Street. To account for increased flows of cyclists along Bridgeview Street, vehicles could be discouraged from using that street by on-site personnel or temporary signs.

##### 5.3.3.2 Pedestrian Circulation

Pedestrian flows are expected to be broadly similar to those for China Basin Park (Pier 48 events) and Mission Rock Square (Block E events).

##### 5.3.3.3 Bicycle Circulation and Parking

For Pier 48 events, bicycle valet services could be sited on the China Basin Park Great Lawn. Cyclists from the south could be encouraged to use Bridgeview Street, to clear space for pedestrian circulation between Pier 48 and Block K. For Block E events, bicycle valet services could be sited in Mission Rock Square, and cyclists would be expected to gravitate to Bridgeview Street for access from both north and south.

## 5.4 CONCLUSIONS

Those who live and work near AT&T Park enjoy the exciting, festive atmosphere created by such a premiere urban event space, and they also know it takes some extra planning to make trips to and from the area as smooth as possible. The Giants and the transportation staff at Mission Rock will work hard to aid in this planning by providing users of the site ready access to an abundance great information and a range of travel choices.

In the same spirit, the Giants and the Mission Rock team are committed to working with neighborhood organizations to responsibly manage event-related transportation conditions and make sure inconveniences related to events are kept to a minimum.

# **1 OVERVIEW**

The development context and overall design profile of Mission Rock make it a prime candidate for robust and effective transportation demand management (TDM). Travel demand generated by Mission Rock will be affected by locational and land use factors, such as proximity to high quality transit, the presence of transit-supportive land use densities, and mixed land use patterns.

This TDM Plan describes measures that will enable Mission Rock to actively manage travel demand through a variety of up-front infrastructure investments and ongoing programs, including unbundled parking, pedestrian- and bicycle-friendly design, transportation marketing, vehicle share facilities and memberships, and others. Ultimately, implementing a robust TDM program will reinforce the forward-thinking vision and brand of Mission Rock as an active and vibrant district that is inclusive and safe for all users.

## **DEVELOPMENT CONTEXT AND DESIGN PROFILE**

Establishing new and enhanced links to and along San Francisco's waterfront, Mission Rock's mixed-used, multi-phase development will be a dynamic addition to the Mission Bay neighborhood. Encompassing approximately 27 acres, Mission Rock is slated to include 11 parcels of residential, office, and retail development as well as a refurbished and reactivated Pier 48, an expanded China Basin Park, and a variety of smaller open space areas. Including Pier 48, Mission Rock will include approximately 1,000 to 1,500 dwelling units, 1.4 to 1.8 million square feet of commercial development, and more than five acres of new open space, for a total of approximately 3.9 million gross square feet of development and eight acres of open space. The site plan calls for a tight and highly walkable urban street grid, with more than half a mile of complete streets. In addition, between 2,400 and 3,000 parking spaces could be provided in off-street facilities.

Mission Rock is located near a busy, increasingly congested part of San Francisco and is readily accessible via car, transit, walking, and bicycling. The site is accessible to I-280 and US-101/I-80 through SoMa's urban street grid, with bicycle connections to the north via the Embarcadero bike route as well as to the south via the Blue Greenway. More importantly, the project is well served by transit, both local and regional. Multiple lines of Muni bus and light rail are within a quarter-mile of the site, with moderate to high frequency of service for most of the day and late into the evening.

Although narrow sidewalks, missing crosswalks, long blocks, and the amount of on-going construction in the surrounding area all currently challenges for pedestrians and bicyclists, the Mission Rock development includes multiple street design improvements to create a safe and inviting environment, such as:

- A highly connective grid of internal streets
- Sidewalks that are to be between 12 and 15 feet wide throughout the project site

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

- High visibility sidewalks, bulb-outs, and raised pedestrian crossings
- Completion of the portion of the Blue Greenway that runs through the site, with a 16-foot-wide shared bike and pedestrian right-of-way running along Terry Francois Boulevard and the northern edge of China Basin Park
- Designated bicycle lanes or bicycle-friendly low-traffic blocks on all internal roadways
- Bicycle treatments at internal intersections

Mission Rock will also provide important neighborhood amenities – groceries, childcare, personal services – establishing destinations that are easily accessible by all modes of transportation. The existing and future transportation infrastructure in the area (see Figure 1) will further promote the use of all modes of active transportation.

**Figure 1 Mission Rock Context Map**

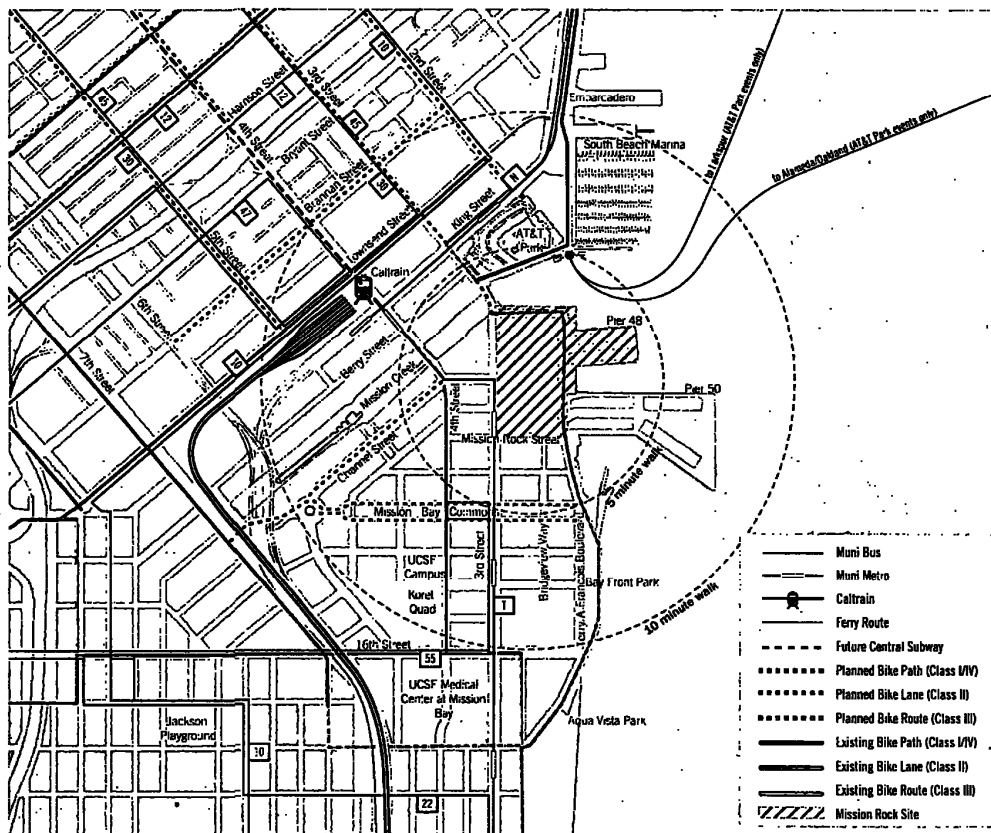

Figure 2 summarizes Mission Rock's development components, associated vehicle trip estimates, and the anticipated trip reduction goal, per commitments made in the project's Environmental Impact Report (EIR).

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

**Figure 2 Estimated Vehicle Trip Generation and Trip Reduction Goal<sup>1</sup>**

| Scenario                         | Proposed Development Components (approximate)   | Aggregate Daily One-Way Vehicle Trips (a) | Number of Trips to be Reduced (b = a * 20%) | Target Threshold (c = a - b) |
|----------------------------------|---|---|---|------------------------------|

## WHY TRANSPORTATION DEMAND MANAGEMENT

This TDM Plan reaffirms Mission Rock's commitment to sustainability and inclusivity. It encourages the site's residents, employees, and visitors to use the most environmentally friendly and spatially efficient mode possible for each trip, with an emphasis on cycling, walking, and shared rides.

The measures outlined below are designed to work together to affect site users' travel habits. Targeted programs strengthen the benefits of investments in bicycle and pedestrian infrastructure and the site's proximity to major transit nodes by reinforcing awareness of these options, breaking down barriers to incorporating them in travel routines, and incentivizing habitual use.

The site plan and TDM program are consistent with several decades of City of San Francisco climate and sustainability policies that aim to encourage the use of transit and other non-auto modes of transportation. It is also consistent with the City's efforts to manage the transportation impacts of new development. The Plan was developed with San Francisco's new TDM Ordinance in mind, and the Mission Rock team used the Ordinance's framework to scale the site's programs appropriately.

Many campuses have implemented similar TDM programs to reduce single-occupancy vehicle (SOV) travel and find the optimal balance of transportation modes to accommodate growth.

<sup>1</sup> Seawall Lot 337 and Pier 48 Mixed-Use Project Environmental Impact Report, Appendix 4-1 – Transportation Impact Analysis, April 2017. Pg. 486.

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

Genentech implemented an aggressive TDM strategy in 2006 that included programs such as shuttle service and parking cash-out accompanied by comprehensive marketing and communications through an online employee portal. Since implementation, drive-alone mode share has decreased by almost 30%, decreasing carbon emissions from 4.5 tons per employee to 1.9. Similarly, Stanford University's extensive TDM program, which has for years included meaningfully priced parking, transit subsidies, and incentive programs, has effected a substantial decrease in SOV commuting, from 72% in 2002 to 46% in 2011. Moreover, these programs serve campuses that grew rapidly during the periods noted, but this growth was not accompanied by substantial increases in parking.

In a similarly urban environment, the City of Cambridge implemented a parking and TDM ordinance in 1998, made permanent in 2006. In the Kendall Square area, which predominantly houses large biotechnology firms and research and academic institutions, such as the Massachusetts Institute of Technology, the ordinance has been particularly effective. Although the neighborhood has added 4.6 million square feet of commercial and institutional development over the past 10 years, automobile traffic has *decreased* on major streets, with vehicle counts decreasing as much as 14 percent.<sup>2</sup> In this way, citywide TDM measures in Cambridge have not deterred the development market while still having a positive impact on quality of life and the environment.

Given these successes, robust TDM programs are becoming expected aspects of new developments, in central cities and suburbs alike. San Francisco is no exception. The City has established a TDM ordinance that would require developers to establish TDM programs scaled to the amount of parking they plan to build on-site. This ordinance reinforces existing multimodal policies, such as the city's Transit First Policy, which was established in 1973 and amended to include pedestrians and bicyclists in 1999. New residents and office tenants increasingly demand convenient access to quality multimodal infrastructure, and in urban areas like San Francisco, they assume that parking will be treated as a limited commodity that will be priced based on occupancy levels and market rates. The Mission Rock TDM Plan reflects the values outlined in City policies by striving to maximize user satisfaction and foster travel choices that are sustainable in all senses of the word.

## **PLAN OVERVIEW**

This Plan is comprised of the following chapters:

- Chapter 2 presents a slate of recommended TDM measures for Mission Rock to reduce SOV trip and parking demand for the development.
- Chapter 3 presents the marketing and communications strategy for Mission Rock's TDM program, discussing the interplay between the primary communication mechanisms, the TDM measures, and the various user groups of Mission Rock.
- Chapter 4 presents Mission Rock's approach to monitoring the TDM Plan's implementation to ensure that it achieves the 20% vehicle-trip reduction target.

This TDM Plan will be incorporated into the Transportation Plan for Mission Rock, which will coordinate daily circulation of people, bicycles, and vehicles to, from, and around the site.

## 2 PLANNED MEASURES

The Mission Rock TDM Plan consists of a package of measures that will work together to effect behavioral change in a way that is both cost effective and highly marketable. Measures include incentives, programs, and infrastructure improvements; and they include many that have been successfully implemented in other mixed-use and urban environments; those case studies are cited as possible below each measure.

The measures balance the desire to provide innovative transportation amenities with the need to maintain a cost-effective program and an acknowledgement that Seawall Lot 337 Associates, LLC will not hold a primary relationship with site tenants over the long term – vertical developers or the management companies that take ownership of individual buildings once they are developed will ultimately play this role, and will be required to be responsible for any relevant ongoing programs. As such, programs that necessitate ongoing operational expenditures are included but deemphasized in favor of one-time, up-front investments that give new tenants and visitors immediate experiences with and exposure to the array of non-auto transportation options available to them. These will form lifelong patterns of choosing sustainable transportation options. Figure 2 gives an overview of the measures included in the Plan, and identifies the likely responsible party for implementing the measure, the target audience for the measure, the communication channels used and associated level of impact. The remaining chapter provides further detail. As in the table's column headings, colors are used to differentiate infrastructural (❖) and operational (❖) measures in the text below. A few of these recommendations have been directly integrated into the design of Mission Rock, as codified in the Design Controls and other design documents.

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

**Figure 3 Summary of Planned TDM Measures by Mode**

● = High Impact ○ = Medium Impact ○ = Low Impact      Infrastructural = ❖ Operational = ❖

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

Some TDM measures like parking pricing have a more direct effect on travel behavior, while others like facilitating delivery services play a more supportive role. For another example, providing car share membership leverages the potential impact of providing easily accessible car share spaces. In other words, the effectiveness of these combined measures is more than the sum of the parts.

The importance of monitoring cannot be overstated; regular monitoring enables management to effectively address and adjust these measures over time in response to changing residential and employee needs.

## **TRANSIT MEASURES**

### **❖❖ Real-time Transit Information and Marketing Screens**

This programmatic measure consists of providing real-time transit information to Mission Rock residents, employees, and visitors. Information will be displayed on screens in lobbies (see Figure 3) and other high traffic areas, such as the collaborative work space or the childcare facilities. Making such information readily available increases residents' awareness of local transit options and facilitates efficient trip planning and use of other modes.

**Mission Rock will display dynamic transit information and transportation marketing in building lobbies or use a similar approach based on state-of-the-practice technology at the time of occupancy.**

**Figure 4      TransitScreen Display in an Office Lobby**

### **Implementation Examples**

Parkmerced, the largest apartment community in San Francisco, began a partnership in 2014 with TransitScreen, a company that provides this service. TransitScreen is working with the Metropolitan Transportation Commission to modernize transit displays in over 46 locations throughout the San Francisco Bay Area. Another residential development, NEMA, provides real-time transit information on their resident app and website.

### **❖ One-Time Transit Subsidies**

The Clipper card is the Bay Area's transit fare payment card and can be used on more than 20 of the region's transit agencies, including BART, Muni, and the ferries. Providing a one-time transit subsidy in the form of Clipper cards upon move-in can increase residents' awareness of nearby transit options and increases the ease with which they can start using it. Clipper cards through a bulk purchase through the Metropolitan Transportation Commission, the regional public agency that manages Clipper. A custom-designed Clipper card can help tie the Mission Rock brand more closely to lifestyles that incorporate frequent transit use.

Providing Clipper cards increases the ease of using transit for employees and residents who currently do not have Clipper. For individuals who already have cards, the one-time financial subsidy could help lower one barrier to increased transit use.

**Mission Rock will provide a one-time transit subsidy in the form of a Clipper card pre-loaded with \$50 cash value to all residents over the age of 18 upon move-in, and will require that business tenants offer employees the same.**

### **Implementation Examples**

The City TDM Ordinance lists one-time financial incentives paired with outreach to employees and residents as a possible measure. Although other residential developments in the Bay Area have provided free/discounted monthly transit passes to residents, providing a Clipper Card with a set value pre-loaded would be a new measure.

## BICYCLE MEASURES

Figure 5 Ford GoBike Bike Share Dock

### ❖ Bike Share Memberships

Members of Ford GoBike can take free, unlimited 30-minute one-way bike rides between bike share stations. Once the system's expansion is complete (planned for November 2016 through 2018), annual memberships will cost \$149 per year. Providing residents and employees with bike share memberships could help tenants with minimal experience bicycling in San Francisco a low-cost and low-obligation opportunity to try cycling, and it would provide residents with a quick and easy way to get to the Transbay Transit Center and Market Street, for BART connections and a variety of other transit options and recreational activities.

**Mission Rock will offer bike share memberships for all residents 18 years and older for one year upon move-in.**

### **Implementation Examples**

While many property owners partner with bike share services to locate bike share docks nearby, offering a bike share membership to residents would be a new measure. Multiple tech companies in the Bay Area, such as Microsoft and Facebook, partner with Bikes Make Life Better, a company that specializes in bicycle program management, to develop and administer their bike programs.

#### **❖ Space for On-Site Bike Share**

This measure would involve partnering with Ford GoBike to locate one or more bike share docks in Mission Rock. The system is primarily concentrated in downtown San Francisco, but has recently expanded to Oakland and Berkeley. In May 2017, they announced their plans to establish 7,000 GoBikes across San Francisco, San Jose, Oakland, Berkeley, and Emeryville by 2018. As bike share placement is most effective every 1,000 feet, Mission Rock should examine where Ford GoBike is already planning to establish bike docks near the development and consider sponsoring at least one dock within the site itself. Currently, there is one bike station planned at Terry Francois Boulevard and 3<sup>rd</sup> Street. Prominently located bike share docks can increase awareness of bike share as a viable transportation option while also facilitating convenient use. Each bicycle dock would be provided and maintained by Ford GoBike, but sponsoring a bicycle dock would allow control over the specific siting and design of the dock, including incorporation of developer-specific branding on the bikes, docks, and other materials.

**Mission Rock will establish a high visibility space for a Ford GoBike (or similar provider) dock, with the possibility of additional docks depending on the bike share provider's intended Mission Bay expansion. If sponsorship is necessary, Mission Rock will take it into consideration.**

#### **❖ Bike Valet**

Complementing the bike parking available on a daily basis, bike valet services during special events can encourage people to travel to and from events by bicycle by eliminating the challenge of finding safe and convenient bike parking in an area crowded with event attendees. These services also raise public acceptance and support for non-motorized transportation by building connections with visitors.

**Mission Rock will provide free bike valet services for all on-site events, as required by code.**

### **Implementation Examples**

San Francisco Administrative Code Section 2.76 requires that events that require a street closure and anticipate over 2,000 attendees provide monitored bicycle parking. Currently, the San Francisco Bicycle Coalition provides these services for many events, including those at AT&T Park.

#### **❖ Bike Community Programming**

Bike-oriented programs and events encourage bicycling by raising public acceptance and support for non-motorized transportation and building connections between residents who regularly bike, making biking a fun, social activity. These events could include evening bike parties, bike-oriented happy hours, periodic bike gear giveaways, and bicycle campaigns that involve contests

and prizes. Integrating bicycling into the social fabric of the Mission Rock community will raise the profile of bicycling as a viable mode of transportation and encourage people to try biking for a portion of trips.

**Through the site transportation staff, Mission Rock will host regular bike parties or happy hours for the bicycling community, potentially paired with gear giveaways.**

### **Implementation Examples**

Although private and non-profit organizations such as the San Francisco Bike Coalition often host these types of events, bike event programming led by a mixed-use development would be a new measure. Some Bay Area employers, such as LinkedIn and Google, sponsor special events around Bike to Work Day paired with regular giveaways and bike valet.

### **❖ Bicycle Resource Center**

A bicycle resource center can provide a dedicated space for residents and employees to get information about bicycling as well as tools and parts for bike repairs and maintenance. A dedicated space contributes to social acceptance of bicycling and reduces one key barrier associated with owning a bike – concern about complications related to ongoing maintenance – by providing tools and parts through a vending machine at low prices. This measure will also include working to incorporate a bicycle store in the site retail plan and establishing a resource center containing a vending machine for bicycle parts, a “fix-it” work station with basic tools, and bicycle pumps somewhere else within the site at an easily accessible location.

**Mission Rock will establish bicycle maintenance space near a major secure bike parking area within each building with resources like a bike stand, a workbench, tools, and a basic repair kit. This space will be available over the life of the project. The team will work to include a bike store as part of the site retail plan.**

### **Implementation Examples**

In Seattle, Via6 is a 654-unit mixed-use apartment complex that provides a bike wash station for residents, as well as a bike shop on the ground floor that is owned and operated separately from the development. The Velo Room at Solera (Denver) provides tools, bike stands, work benches, air pumps, tubes, and other supplies, as well as gel packs, energy bars, and bike trail maps. Several university campuses, including Ponce Health Science University in Portland and the University of California-Davis, have bicycle repair stations in key facilities.

### ❖ Bike Parking

Following San Francisco Zoning Code Section 155, Table 155.2, the Mission Rock project is required to provide at least 710 secure bike parking spaces (Class I), in addition to at least 371 spaces for bikes in publicly-accessible locations (Class II), under the Maximum Commercial Scenario. Under the Maximum Residential Scenario, the Mission Rock project is required to provide at least 765 Class I spaces, and 388 Class II spaces.

Given the importance of non-motorized transportation to the site's overall design concept, this measure goes above that requirement to provide one Class I space per dwelling unit, one Class I space per 2,500 square feet of commercial development, one Class I space per 3,750 square feet of retail, and one Class I space per 5,000 square feet of open space, in addition to around 700 Class II spaces. Class I parking consists of secure long-term bicycle parking, including bicycle lockers, bike cages, and bike rooms. Class II bike parking refers to more short-term bicycle parking, including on-street bike racks. The site's location on a Class I north-south bicycle facility and in a flat part of San Francisco implies a strong potential for very high rates of bicycle usage, and this should be encouraged through easy access to ample, convenient bicycle parking. Bike parking facilities will also accommodate various types of bicycles including those with cargo and trailer attachments.

There are several methods of providing secure (Class I) bicycle parking spaces for residents and employees. Bike cages can be placed at convenient locations within buildings or on sidewalks in the area, and bike owners who qualify can receive a key or access card to use the cages. This space

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

will serve as a common, secure bike room, where residents or employees can use a key or access card (often the same card used to access an elevator or parking garage). Moreover, public bike parking is often considered secure when it is situated in well-lit, highly visible areas.

**Exceeding the bike parking required by City code, Mission Rock will construct 1 Class I bike parking space per dwelling unit, an additional 511 (under the High Residential Scenario) or 667 (under the High Commercial Scenario) Class I spaces for commercial development, and 675 (under the High Commercial Scenario) or 692 (under the High Residential Scenario) Class II bike parking spaces and will work with vertical developers to set aside necessary square footage for secure bike parking in the ground floor or another convenient area of each building.**

#### **Implementation Examples**

As it is required by San Francisco zoning code, any new construction, including the addition of new units or an increase of off-street vehicle parking capacity, must include bicycle parking spaces. For residential development, one Class I (secure) space per unit is required; for buildings with more than 100 units, 100 spaces plus one space per every four units over 100 are required. The requirements for commercial development vary; retail development must provide one Class I (secure) space for every 7,500 square feet of occupied floor area, and office developments must provide one space for every 5,000 square feet.

#### **❖ Showers and Lockers for Employees**

Following San Francisco Zoning Code Section 155.4, specific land uses exceeding a certain square footage threshold are required to provide shower and clothes locker facilities for tenants and employees. Offices (including childcare, business services, and light manufacturing) that exceed 10,000 square feet must provide at least one shower and six clothes lockers; for facilities between 20,000 and 50,000 square feet, the building must provide two showers and 12 lockers. Those exceeding 50,000 square feet must provide four showers and 24 lockers. Retail sales and restaurants exceeding 25,000 square feet must provide one shower and six clothes lockers; those exceeding 50,000 square feet must provide at least two showers and 12 lockers.

**Mission Rock will work with the vertical developers to meet this requirement.**

#### **Implementation Examples**

San Francisco first implemented this requirement in 1998, and amended it to include office land uses in 2013.

### **PERSONAL MOTORIZED VEHICLE MEASURES**

#### **❖ On-site Shared Scooters**

Electric scooters are highly convenient in a dense urban environment and may have additional marketing value, given the cache scooters carry among certain population segments. The main company providing scooter share services is called Scoot, providing access to both single-rider scooters and quad vehicles, which have four wheels and can carry up to two people. One of the benefits of Scoot's network is the ability to travel point-to-point, instead of needing to return scooters to their point of origin. Scoot already has pods within about a half-mile of Mission Rock.

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

Providing scooter share access to residents on-site will magnify the effectiveness of offering Scoot memberships. The parking garage would accommodate space for a scooter dock, which the scooter share vendor would provide and maintain.

**Mission Rock will reserve off-street parking space for 20 scooters (approximately six car parking spaces), and will pursue a potential marketing partnership opportunity with a provider of scooter share (e.g. Scoot) or a similar service.**

**Implementation Examples**

This would be a new measure.

**Figure 7 Scoot Networks**

Source: Flickr. Marcin Wichary

**❖ Electric Scooter Share Memberships**

Like a bike share membership, a scooter share membership for Mission Rock residents can help establish new travel behavior patterns upon move-in. This measure would entail partnering with Scoot or another electric scooter share vendor to provide free memberships in exchange to reserving space for electric scooter parking on-site.

**Mission Rock will offer a one-year membership for Scoot or a similar service to all new residents aged 21 and over who meet the scooter share provider's membership requirements, and will offer on-site scooter orientation (provided by Scoot Networks or a similar provider).**

**Implementation Examples**

Offering scooter share memberships would be a new measure.

## ❖ On-site Car Share Parking Spaces

According to San Francisco Zoning Code<sup>3</sup>, Mission Rock is required to provide 31 to 38 car share spaces. Research indicates that a single car-share vehicle can remove as many as 20 private cars from the transportation network. Spaces will be located in high-visibility parking spots within the publicly-accessible parking garage, with clear exterior signage to increase visibility and emphasize the convenience of car share. City Car Share offers electric vehicles which appear to be equally popular, though others have found barriers to adoption as people are still becoming comfortable with using the technology; this may not be the case in five years. Depending on the car share vendor provided, additional partnerships with ChargePoint may be required to provide infrastructure for electric vehicle charging.

**Exceeding this code requirement, Mission Rock will negotiate an agreement with one or more local car share vendors to provide 50 designated car share spaces in initial design with flexibility to increase over time in response to demand. Mission Rock will also consider partnering with ChargePoint to provide electrical hookups adjacent to spaces to allow for the potential for electric shared vehicles, with the ability to increase over time in response to demand.**

## Case Studies

Fox Plaza (San Francisco) has 443 units with a 0.77 parking ratio and provides 14 car share vehicles on site, with 12 additional spaces located within 1/4 mile. Madera Apartments (Mountain View) has 203 units with a 1.37 parking ratio and provides two car share vehicles on site, with two additional Zipcar locations within 1/4 mile. The Uptown (Oakland) has 665 units with a 0.80 parking ratio and provides one car share vehicle on site, with an additional four car share locations within a 1/4 mile.

## ❖ Car Share Memberships

New residents will receive a car share membership for their first year of residency to help establish new behavioral patterns upon moving in (opt-out allowed, but default to providing for all). Pairing access to car sharing vehicles with car sharing memberships is also shown to be more effective than implementing one or the other on its own.

**Mission Rock will offer memberships to all households for their first year of residency. Depending on the agreement with the on-site car share vendor, membership fees will likely be reduced or waived and some rental credit may be provided.**

## Implementation Examples

Several Bay Area residential projects cover the full price of car share memberships for residents (New Californian - Berkeley; Madera Apartments - Mountain View; Fruitvale Transit Village - Oakland; Fox Plaza - San Francisco; The Uptown - Oakland). Many of these developments have parking ratios of less than one per unit, and all of them have seen parking utilization rates of well below capacity.

---

<sup>3</sup> San Francisco Planning Code Section 166, Table 166.

## PARKING MEASURES

### ❖ Parking Pricing

The price of parking has been shown to be a highly effective mechanism in changing parking and travel behavior. Demand-responsive pricing involves altering the cost of parking according to the level of demand. During times of higher demand, parking has a higher price and thus encourages both a higher rate of turnover and the use of other modes; during times of lower demand, parking has a lower price. Prices generally do not change in real time based on current occupancy, but instead might automatically increase by a pre-set amount during peak periods, based on typical demand patterns, or for scheduled events. Prices might be adjusted overall a few times a year based on recent occupancy data. By refining the price of parking periodically, it is possible to keep parking occupancy rates relatively close to the optimal level, typically around 90% for off-street parking. Researchers have found that parking facilities function efficiently (i.e. without requiring excessive parking-search time) up to roughly this level of occupancy.<sup>4</sup>

**At the time when the site is fully built out, Mission Rock's parking facilities will be priced to keep demand below a threshold occupancy rate and to encourage site users to avoid parking during AT&T Park events. Non-event rates will be comparable to off-street parking prices at other facilities in SoMa and Northern Mission Bay.**

### Implementation Examples

Demand-based parking pricing has been implemented to various degrees in multiple cities. The *SFPark* program in San Francisco regulates parking prices for off-street as well as on-street parking facilities, adjusting hourly parking rates every three months based on the parking demand at each garage during five different time bands throughout the day. When occupancy exceeds 80%, hourly rates for the following three-month period are increased by 50 cents. Unlike approach planned for Mission Rock, *SFPark* also decreases prices when occupancy falls below a low-end threshold of 40%. When it was first implemented, the program also adjusted early bird parker time requirements and added off-peak discounts to discourage commuting at peak hours, reducing congestion around the garages. Since implementation, San Francisco has seen higher garage occupancy at lower prices overall, resulting in a marginal increase in revenue.

### ❖ Unbundled Parking

"Unbundling" parking means that the cost for parking is separate from the cost of residential and commercial units. It is an increasingly common practice in urban areas; the City of San Francisco requires residential developments to unbundle parking. Thirty percent of San Francisco households do not own a vehicle<sup>5</sup> and unbundled parking makes housing more affordable those who do not need a parking space. This approach provides a cost savings to households who decide to dispense with one of their cars, and it can help attract households who wish to live in a transit-

<sup>4</sup> See: Levy, Nadav, Karel Martens, and Itzhak Benenson. Exploring Cruising Using Agent-Based and Analytical Models of Parking. *Transportmetrica*, DOI: 10.1080/18128602.2012.664575, 2012. AND Millard-Ball, Adam, Rachel Weinberger, and Robert Hampshire. Is the curb 80% full or 20% empty? Assessing the impacts of San Francisco's parking pricing experiment. *Transportation Research Part A: Policy and Practice*, No 63, 2014, pp. 76-92.

<sup>5</sup> U.S. Census, American Community Survey 2013, 5-year estimates

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

oriented neighborhood where it is possible to live well with only one car, or even no car, per household. Unbundling parking costs changes parking from a required purchase to an optional amenity, so that households can freely choose how many spaces they wish to lease.

Unbundling parking tends to reduce demand for parking by specifically calling out and making optional the previously hidden cost of “free” parking. This in turn allows developers to provide less parking, which increases the developable area for more lucrative land uses such as additional housing units. For this measure to work optimally for office users, the users of parking – not their employers – must be the ones who ultimately pay daily or monthly costs.

**Mission Rock will unbundle parking costs from all residential, commercial, and retail leases and ensure that the users of parking are the ones who ultimately pay for it.**

❖ **Reduced Parking Supply**

Overbuilding parking supply leads to increased automobile use, contributing to more vehicle trips, traffic congestion, higher housing costs, and greenhouse gas emissions. Providing parking at a rate below the surrounding neighborhood reduces the parking supply from what would be typically provided for this kind of development, which in turn reduces the number of trips the development may generate. Given the large number of households with no vehicle and the demand for housing in San Francisco, a limited supply of parking could be expected to attract a high proportion of residents without vehicles, which in turn would result in fewer vehicle trips from the development. Mission Rock is within a few blocks of frequent high-quality transit to downtown and is in a neighborhood that is already facing vehicular congestion, which further discourages driving and parking.

**Mission Rock will establish maximum parking ratios that are lower than the neighborhood average; if anticipated needs related to AT&T Park require providing parking at a rate higher than the neighborhood average, Mission Rock will still price parking at or above market rates for northern Mission Bay or SoMa, rather than reducing prices to fill the facility.**

❖ **Real-time Parking Pricing and Availability Information**

This programmatic measure consists of providing real-time parking pricing and availability information to Mission Rock residents, employees, and visitors who utilize the off-street parking facilities on-site. Information could be displayed on signs outside of the parking garage, and could also be accessible on the mobile-friendly Mission Rock website. For market-based parking pricing to be truly effective, the dynamic between price and availability must be clearly communicated to drivers. Making such information readily available to potential drivers, particularly at parking garage entrances, decreases the likelihood of drivers’ circling for parking or potentially increases the possibility of choosing other modes.

Real-time availability information for an overall facility can be derived from the access control of the parking garage, calculated based on the number of entries and exits at any given time. To provide garage floor-specific information on where spaces are available, each parking space needs a sensor (typically embedded in the floor) that communicates wirelessly with a central system to sense when the space is occupied.

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

**Mission Rock will install dynamic displays (or use another state-of-the-practice price-information sharing measure) to show real-time parking price and availability information, and will endeavor to make this information available through other channels like a Mission Rock transportation website; this will require installing technology and associated information systems to automatically monitor parking usage.**

**Figure 8      Dynamic Parking Signage, SoMa**

**Implementation Examples**

All City-owned garages that participate in the demand-based parking pricing program, *SFpark*, provide real-time pricing and availability information on the *SFpark* website; there are several dynamic message signs at key intersections in SoMa that indicate the number of parking spaces available and general wayfinding to those garages.

## BUILDING MEASURES

### ❖ In-Building Concierge Services

In-building concierge services and/or multi-purpose front-desk staff can facilitate valet parking, farm-to-table produce delivery, cold and dry storage for grocery or produce delivery, and secure package delivery. Concierge staff could also provide information about the nearest stores and services like dry cleaning and laundry service, as well as pickup/delivery services from local merchants. Residents would pay for all services.

This concierge will be supported by the site-wide transportation staff who would provide centralized transportation support to the in-building concierges (see section on the site-wide transportation staff below). The combination of these services will consolidate or eliminate the need for additional trips and could be a resource for residents, providing targeted travel information. In buildings where a concierge service isn't feasible, the site-wide transportation staff will provide this service to the building tenants.

**Mission Rock will encourage vertical developers to appoint an in-building concierge to provide information about local merchants and coordinate/facilitate delivery services for residents.**

#### Implementation Examples

Though many residential buildings provide a concierge, explicitly pairing in-building concierge staff with a transportation specialist would be a new measure for reducing trips and demand for parking. Crafting and marketing the concierge's role as such may increase the program's effectiveness.

### ❖ Coordinated Delivery Services

Mission Rock will aim to partner with online personal service providers (i.e. Instacart, Postmates, Taskrabbit) or facilitate other ways of making ordering in, instead of making separate trips off the property for daily needs, more appealing and reduce vehicle trips in the process. One potential way to do this would be to offer direct ordering through the Mission Rock website. Each building would manage these services individually as needed.

**Mission Rock will aim to establish site-wide partnerships with internet delivery services companies.**

#### Implementation Examples

NEMA on Market Street facilitates local organic produce and wine delivery, which is part of its overall suite of concierge services. This type of amenity could be coupled with an app-based ordering system, such as Instacart or Postmates, or Mission Rock may want to develop one specific to its services.

### ❖ CSA Partnerships

Partnering with local community-supported agriculture (CSA) organizations has the potential to reduce greenhouse gas emission and vehicle-trips by providing project residents convenient access to locally sourced food, reducing the number of trips and vehicle miles traveled by both

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

vendors and consumers. This measure could also have marketing benefits and reinforce the site's overall message about sustainability. Initial conversations about bringing a farmers' market to Mission Rock have yielded a cost estimate of approximately \$75,000 to \$100,000 annually for Mission Rock to manage it in-house. Alternatively, hiring a farmers market management company could reduce costs to as low as \$15,000. However, providing a farmers market may result in generating more trips rather than it offsets; as such, a partnership with a local CSA might be more cost-effective.

**Mission Rock will coordinate with local CSAs to provide group deliveries, and continue exploring the possibility of hosting regular farmers' markets on the premises.**

**Implementation Examples**

This would be a new measure; although there are multiple farmers' markets throughout San Francisco, they are not specific to a certain development or community, nor were they started with a specific development's needs in mind.

❖ **Cold and Dry Delivery Storage Space**

Providing storage space for groceries, laundry, and other packages can have a direct effect on reducing trips by encouraging and facilitating online ordering. A centralized storage facility within each building can also consolidate delivery trips by enabling delivery vehicles to only make one stop for multiple recipients instead of several. Where this type of measure has been implemented without direct staff monitoring at all times, building residents typically access deliveries through a locker system with unique pick-up codes that include the locker number and access times for the delivery recipient.

**Mission Rock will work with the vertical developers to provide storage space near the concierge and elevators to store packages, perishables, laundry, and other deliveries.**

**Implementation Examples**

Presidio Landmark has a wine cellar with climate controlled lockers; separate storage lockers are also provided.

❖ **Family Supportive Amenities**

Providing secure storage space for personal car seats, strollers, athletic or other extracurricular gear, and other large equipment can address challenges families face while traveling. Locating this space near car share parking spaces make it easier for families to travel without feeling a personal vehicle is necessary. If this measure is implemented without direct staff monitoring at all times, building residents can access the space with an access code or key card.

**Mission Rock will provide storage space for family-related equipment near car share parking spaces.**

### ❖ Convenient Loading Zones

While the site does not contain on-street parking, Mission Rock is planning to dedicate a portion of the site's curb space for loading and deliveries of goods and people to reduce the need to make personal vehicle trips. Curb designations will be consistent with City of San Francisco regulations. Under those regulations, taxis, transportation network companies, and private vehicles may drop off along any curb space not designated by a red curb or marked otherwise. Vehicles may not idle in these locations as per San Francisco Transportation Code Section 7.2.86. As noted earlier, the project team will work with the City to develop a loading management plan during a future phase of project development.

Drop-off locations for seniors and people with disabilities will be located near building entrances, elevators, and at corners with curb ramps. The location of loading zones will also take into consideration the moving needs of residents and businesses. See the Mission Rock Transportation Plan and the Design Controls for more detail on the planned location of loading and delivery zones and for more information on Americans with Disabilities Act (ADA) accessibility on the site.

**Mission Rock is integrating loading zones into the site's overall street design.**

### ❖ ❖ Childcare Facilities and Services

Providing childcare services on site at Mission Rock would break down a key barrier for parents to taking non-auto modes to work by bringing such services within walking distance and near the many commute options around the Mission Rock site. Mission Rock will aim to attract a childcare provider, likely on the ground floor of a northern parcel, near China Basin Park.

**Mission Rock will aim to attract a provider of on-site childcare services and facilities to ensure easy access for Mission Rock residents and employees.**

### Implementation Examples

Many residential developments in major cities provide childcare services as part of their amenities; NEMA on Market Street provides childcare, and North Beach Place provides day care and children's play areas. A housing development at 8<sup>th</sup> and Market instituted unbundled parking to free up space for an on-site childcare center. Parkmerced includes a Montessori School on its premises, with full daycare and after-school care.

### ❖ Collaborative Work Space

A business services room can help encourage and facilitate working from home, which can have a direct impact on reducing trips to and from the site. Such an amenity is a typical part of large rental buildings, though the size and specific services included vary.

At Mission Rock, work spaces could include rentable work rooms that can be reserved in advance, equipped with video conferencing equipment, high-speed internet connections, projectors, white boards, basic office supplies, and printing, scanning, and faxing services. For residents interested in using this work space long term, dedicated mailboxes for businesses could be set aside and located nearby. Vertical developers will ultimately be responsible for developing and maintaining these business services rooms and ensuring that they are equipped with appropriate equipment.

**Mission Rock will work with vertical developers to implement this measure.**

### Implementation Examples

NEMA (Market Street, San Francisco) has a business lounge with Apple computers, printers, fax machines, and scanners, and a board room with phone, touch screen monitor, and computer hook-ups. Many newer residences also offer Wi-Fi throughout all common areas.

Figure 9 Co-Working Space

Source: Wikimedia. Chris Gallegos

### ❖ Convenient Elevator Design

By designing elevators that easily accommodate bicycles, strollers, and wheelchairs, Mission Rock will be able to increase the visibility and communicate the importance of bicycling and improve the family friendliness and accessibility of the project. Building codes already require elevators to be large enough to accommodate a variety of users, but the project will also aim to provide appropriate wayfinding and signage for elevators to educate residents about using the appropriate elevators to transport bicycles and other wheeled conveyances.

**Mission Rock will work with vertical developers to implement this measure and meet building code requirements.**

### Implementation Examples

Many residential developments have gone to great lengths to design their facilities as bicycle friendly, but none have specifically called out adaptations to their elevators as an accommodation or amenity.

### ❖ On-Site Affordable Housing

Residents living in affordable housing typically own fewer cars per household than residents of market-priced units. They are more likely to use transit and are less likely to require parking, reducing overall vehicle trip generation.

**Mission Rock will restrict 40% of on-site units to inclusionary affordable housing, to be provided in a balanced manner throughout the phasing of the development.**

## **ALL-REALM MEASURES**

### **❖ On-Site Transportation Staff**

The Mission Rock team aims to hire at least one on-site transportation staff person proficient in the planning and implementation of a TDM program, with an annual budget for TDM staffing, communications, and programs. The site-wide transportation staff will provide customized travel guidance to residents and employees, helping raise awareness and understanding of transportation options and ensuring that site users can find non-auto transportation options that meet their unique travel needs. They may also provide resources to support employers, such as helping them enrolled in pre-tax benefits and/or San Francisco's Emergency Ride Home program, setting up flexible work schedules, developing employee mobility management programs and organizing sitewide marketing and incentive campaigns. Other staff, such as the in-building concierge or those tasked with organizing bike events and maintaining the bike resource room, could also provide similar targeted information and facilitate discussions around using different modes. This dedicated transportation staff would act as a centralized transportation resource to the in-building concierges, providing up-to-date transportation information and expert support to front-line staff that are less likely to have the same depth of knowledge of the transportation system.

The on-site transportation staff will also support efforts to collect data to evaluate the effectiveness of the overall TDM program and to understand opportunities to adjust the program to meet changing needs of Mission Rock residents, employees, and visitors. Chapter 3 provides additional detail about how the other TDM measures will leverage the transportation staff for marketing and communications.

**Mission Rock will hire and task dedicated transportation staff with providing individualized advice and information on transportation options to residents and employees.**

### **Implementation Examples**

This would likely be a new measure, as other developments have not explicitly instituted and integrated transportation information with residential or employee services. Several cities have used something similar to this measure at a neighborhood level. Portland, Ore. has seen notable mode shifts from its Smart Trips program, which provides targeted marketing and information on non-auto transportation options in particular neighborhoods.

### **❖ Mobile-Friendly Mission Rock Transportation Website**

A mobile-friendly website oriented toward all residents, employees, and visitors providing online access to concierge services and transportation programs can help raise awareness and visibility of transportation options and facilitates connections among transportation modes. The transportation information on the Mission Rock site will likely include but not be limited to real-time transit information and a transportation tab with all nearby options (e.g. Muni, car share, scooter share, ride-sourcing apps) showing locations and availability. Chapter 3 provides

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

additional detail about how the other TDM measures will leverage the website for marketing and communications.

**Mission Rock will create a site-wide website with a dynamic and engaging section dedicated to transportation information and services, with specific portals for each user type (or the state-of-the-practice equivalent to this measure, per changes in technology by the time of first occupancy).**

**Implementation Examples**

NEMA (Market Street, San Francisco) has a "resident portal" where residents can submit work orders, track packages, pay rent, alert the valet, and communicate with management regarding car charging, car share, bike share, and bike repair.

**❖ Signage and Wayfinding across Modes**

Signage and wayfinding to indicate points of connection between different modes, as well as estimated travel times and directions by mode, can help increase people's understanding of travel options. Clear signage is also important for ensuring safety for all types of users, differentiating spaces for different users within shared public spaces. Signage will also indicate the nature and location of nearby bicycle routes. Mission Rock will coordinate with the City on the project's overall signage and wayfinding program to ensure the project conforms to City standards. Chapter 3 provides additional detail about how the other TDM measures will leverage signage and wayfinding for marketing and communications.

**Mission Rock will design and install signage and wayfinding at key points throughout the development, including signage for safety along the shared streets.**

**Implementation Examples**

Interactive signage and wayfinding has been instituted in a variety of cities, academic institutions, and transportation hubs.

**❖ Improved Walking Conditions**

As described in the Mission Rock Design Controls, the development will add over half a mile of complete streets, including new and improved sidewalks and pedestrian crossings. Complete streets are streets designed and operated to enable safe access for users of all ages, abilities, and transportation modes with the ultimate goal of fostering more livable communities. Today, many sidewalks in Mission Bay are narrow or missing in areas. The new streets within Mission Rock will greatly improve the overall walking conditions of the neighborhood and facilitate safer and more convenient pedestrian connections. A pedestrian-oriented urban design is essential for residents, employees, and visitors to fully take advantage of the other TDM measures, supporting access to all of the available transportation options and programs throughout the site and nearby. These improvements help shape the environment for the other TDM measures to succeed.

**Mission Rock has integrated high-quality pedestrian design features (high connectivity, wide sidewalks, highly visible crossings, and others) into its design.**

### **3 MARKETING AND COMMUNICATIONS**

A strong communication measure is critical to the success of any TDM program, ensuring that residents, employees, and visitors receive information about relevant resources and incentives at appropriate times and through channels that are easily accessible. Incorporating consistent branding into all communications can help create a sense of place and establish a cohesive identity for the transportation program. Branding can be used to support marketing and communication efforts, particularly on signage and wayfinding, to emphasize that residents, employees, and visitors can travel seamlessly through the area.

The Plan anticipates that Mission Rock will likely have three main channels for transportation-related communications: Its site-wide transportation staff, a mobile-friendly web portal for site users, and physical signage and other wayfinding mechanisms on site. This section includes examples of communication tactics and channels to illustrate how specific channels can help reach target audiences. Given the diverse mix of ways different people process information, any good communications plan relies on a mix of measures and channels. The Communications Timeline section matches the mix of channels outlined in this section to the key audiences for the information: residents, employees, and visitors.

Communications technology and norms are changing rapidly, and as such, this portion of the Plan will necessarily be updated as the projects approaches first occupancy. As such, the details for each of these measures are presented as a set of recommendations. Regardless of how they are implemented, these measures remain part of the TDM Plan.

#### **SITE-WIDE TRANSPORTATION STAFF**

Mission Rock transportation staff would be responsible for maintaining information about TDM programs and acting as a point of contact to assist residents, employees, and visitors with transportation-related questions, concerns, or general assistance. The Mission Rock team envisions that a transportation coordinator would have the authority to implement TDM measures, oversee the management and marketing of all measures, and monitor success of the TDM program. Whether the coordinator would need support from additional staff and how large the team would be will be figured out as the communications measure is solidified closer to occupancy.

Transportation staff might also be responsible for compiling a print and/or electronic transportation handbook to be distributed to residents on move-in and employees on hiring. This handbook could include information on transportation programs, policies, and service options, in addition to the following information:

- Transportation staff contact information, including information for the in-building concierges (if relevant)

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

- Commute trip planning information, including links to the regional 511 Rideshare program
- Clipper card and vehicle (including car, bike, and scooter) share membership subsidies and parking policies
- Information on accessing other TDM program details and amenities, such as the in-building storage facilities
- Walking and biking routes within the area, estimated walk and bike times to key locations, including transit hubs, and a link to the San Francisco bike map
- Local transit options and schedules, including links to Muni, BART, and Caltrain schedules, route maps, and existing trip planner mobile applications

It is envisioned that this handbook would be distributed to all prospective residential tenants and all prospective employees who receive an offer to work within the development. It might also be included as a component of resident and employee welcome packets or employee orientation. The information provided in the handbook, as well as relevant website addresses, may also be posted in prominent locations for all residents and employees, such as apartment lobbies or lunchrooms. Print materials with information on various programs, maps, and amenities could also be provided to the in-building concierge staff for easy distribution when questions arise.

The transportation coordinator will also be responsible for supporting employers by providing information and guidance regarding tools and programs for flex work or telecommuting.

To make sure information stays useful to residents and employees over time, it is important that Mission Rock transportation staff keep all information and materials up to date and relevant.

## **MOBILE-FRIENDLY MISSION ROCK WEBSITE**

Mobile-friendly websites are an easy way to create a dynamic and engaging repository for transportation information, point-to-point navigation tools, travel suggestions, user engagement campaigns, and other efforts to raise awareness of alternatives to drive-alone travel options and residents, employees, and visitors to use them. In addition to supporting the information already provided in the resident and employee handbook, this website could include the following:

- Real-time transit information
- Real-time parking pricing and availability information
- Notifications of upcoming transportation-related events, such as bike parties and farmers' markets, and alerts
- Integration with internet delivery services for ordering
- Registration for car share, bike share, and/or scooter share memberships
- Room reservations for the collaborative workspace
- On-site childcare services enrollment
- Specific pages or portals for residents, employees, and visitors so that each of these audiences has access to the appropriate and relevant travel information
- Functionality which allows for tracking travel behavior and enables gamification for incentives

Establishing specific portals for each audience can allow for the delivery of targeted, individualized TDM information for each of the audience groups. For example, the resident and employee portals could have features to receive notifications for coordinated delivery services,

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

should Mission Rock choose to develop a centralized delivery facility. Each of the portals could also provide specific information on costs and multimodal options available for traveling to and from Mission Rock, as well as information on nearby attractions and services and links to citywide or regional information. Figure 9 shows an example of a landing page for this type of website. Advantages of a webpage similar to that shown in the figure include prominent links to a trip planning service, alerts for riders, and individual operator websites for more information.

**Figure 10** Sample Site-Wide Transportation Website, Mountain View Transportation Management Association (TMA)

## SIGNAGE AND WAYFINDING

Clear, consistent, and predictable signage and wayfinding can help residents, employees, and visitors navigate the site easily. Signage can also bring awareness to important information such as parking prices and availability, bike parking locations, estimates of bike and pedestrian travel times, and other information on Mission Rock programs or services. Simply providing information on non-motorized travel prominently can increase the likelihood that people will select biking or walking as their mode of transportation.

The efficacy of signage and wayfinding is dependent of the design and placement of signs. Signage should be clear and provide relevant information at key decision points in people's journeys, in areas that are highly visible, and in clear lines of sight. For instance, when entering the site, cyclists should be able to clearly understand the route options along Terry Francois Boulevard, Exposition Street, and Bridgeview Street. This signage will be especially important for safety along the shared public ways, to ensure that users understand the encouraged forms of travel and

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

appropriate behavior on each mode. Temporary signage may be used in areas more highly trafficked by residents or employees, to provide information on specific events or programs, such as CSA pick up locations.

Figure 10 and Figure 11 are examples of wayfinding signage used in vibrant, mixed-use areas. The wayfinding signage in Figure 10 offers clear guidance for the nearby area at two different scales while providing clear directional guidance to nearby transportation hubs and popular destinations. Figure 11 offers examples of bike directional signage, as well as digital, dynamic parking availability signage.

**Figure 11**     **Area Wayfinding Signage – London, UK**

Figure 12 Bike Route and Parking Signage

Source: NelsonNygaard, signal-tech.com

## Transportation Information Kiosks

Transportation information kiosks can provide centralized locations for relevant transportation information for trips within Mission Rock and to nearby services and attractions. These kiosks could be placed throughout the site, at strategic decision-making locations where residents, employees, and visitors might need the information. For instance, kiosks located at the primary entrances to Mission Rock such as the intersection of Terry Francois Boulevard and Mission Rock Street could include all information necessary to navigate to specific places throughout the site. Similarly, kiosks could be placed in and around primary points of congregation on the site, including China Basin Park and Mission Rock Square. The kiosks could include transit schedules and fare information, walking and cycling routes, real-time transit information, and Ford GoBike dock locations and bike availability.

Source: Kansas City example from transit.dot.gov

It is recommended that these kiosks be digital, interactive displays (as shown in the accompanying image) to allow information to be updated easily and regularly. These boards would be maintained and updated as needed by the transportation staff.

Real-time transit information signage, such as the technology provided by TransitScreen, would be a similar dynamic information-distribution mechanism aimed mostly at residents, employees, and their visitors, located in the site's residential and office building lobbies (see more information on this measure in Chapter 2). While the information kiosks can provide detailed information on transportation options to visitors and others new or unfamiliar with Mission Rock

**MISSION ROCK TRANSPORTATION DEMAND MANAGEMENT PLAN**  
Seawall Lot 337 Associates, LLC

and the surrounding area, real-time transit screen technology is designed to offer an opportunity to understand transportation options at a quick glance. This would be particularly useful for employees and residents, those who make recurring trips frequently and don't need detailed guidance.

## **COMMUNICATION TIMELINE**

Each of the communication-based TDM measures are pertinent to residents, employees, and visitors at different times during their lifecycle at Mission Rock. As such, it is critical to think strategically about when to share what with each of these key segments.

The mobile-friendly Mission Rock website will be an important avenue for sharing information about programs, policies, and services. It is reasonable to assume that the website will act as a front-line communications vehicle to reach all of those who have or may be interested in having a connection with the site. Signage and wayfinding will be seen on a daily basis and is an important element for users of the development to efficiently navigate Mission Rock. The site-wide transportation staff will provide key information for residents and employees at the time of move-in or hire, and will provide as needed services over time. See Figure 12 through Figure 14 for more detail on the progression of anticipated touch points for transportation-related communication for residents, employees, and visitors of Mission Rock.

## 4 MONITORING AND COMPLIANCE WITH SF TDM ORDINANCE

A robust monitoring program that allows the site's transportation team to adjust offerings over time is key to the success of the Mission Rock TDM Plan. Monitoring will allow the Mission Rock team to better understand the effects of different measures on travel behavior and determine how programs are meeting the needs of residents, employees, and visitors.

The objectives of an annual monitoring program are:

1. To measure progress toward achieving, or retaining, compliance with the TDM's goal of reducing estimated aggregate daily one-way vehicle trips by 20%<sup>6</sup>; and
2. To identify the most and least effective TDM measures, so that the former can be strengthened and the latter can be replaced or significantly improved.

This chapter describes the tools the transportation team will use to effectively monitor the program and ensure that the program complies with City of San Francisco monitoring requirements. It starts with a look at how the TDM Plan compares to the San Francisco TDM Ordinance.

### USING THE SAN FRANCISCO TDM ORDINANCE AS GUIDANCE

San Francisco adopted a citywide TDM Ordinance that created a TDM Program for new development in 2017. The goal of the Program is to reduce driving trips associated with new development. The Ordinance calls for development projects negotiated through Development Agreements, such as Mission Rock, to comply with the spirit of the Program, allowing that there may be unique opportunities because of project scale and mixes of use to meet the goals of the Program. Mission Rock's TDM Plan aims to reduce anticipated driving trips by 20% compared with what is estimated without TDM.

At the heart of the Ordinance is a menu of potential TDM measures, with points or credits assigned to different measures based on their documented effectiveness. Developers are required to implement measures that get them to a point total established based on the number of net new parking spaces planned as part of a given project. For example, residential and office projects with 20 or fewer parking spaces (including zero) need to implement measures with point values adding up to 13 points; each additional 10 spaces require projects to generate an additional point through additional TDM efforts. Retail projects with four or fewer spaces (including zero) need to

---

<sup>6</sup> This goal is a 20% reduction compared to the aggregate daily one-way vehicle trips identified in Mission Rock's travel demand memo prepared by Adavant Consulting, dated June 30, 2015.

implement measures worth a total of nine points, and each additional two spaces will require another point.

Figure 16 estimates how the Mission Rock TDM Plan rates against the City's TDM Menu of Options and the range of associated point values. As the table shows, the measures included in this Plan are expected to garner 21 points for the residential component of the project, 20 points for the office component, and 12 points for the retail/restaurant component.

**Figure 16 Comparing Mission Rock TDM Measures to Ordinance Measures, with Estimated Point Values**

| Program  | Ordinance Category | Estimated Point Values by Use |         |         |
|--|--------------------|-------------------------------|---------|---------|
|  |                    | Res                           | Office  | Retail  |
| Real-time transit information and marketing screens  | INFO-2             | 1                             | 1       | 1       |
| One-time transit subsidies   |                    |                               |         |         |
| Bike share memberships   | ACTIVE-4           |                               |         |         |
| Space for on-site bike share   |                    |                               |         |         |
| Bicycle valet beyond code requirements   | ACTIVE-7           |                               |         | 1       |
| Bike community programming with periodic giveaways   |                    |                               |         |         |
| Bicycle resource center, including vending machine with parts and tools and fix-it station | ACTIVE-5a          | 2                             | 2       |         |
| Secure bike parking in buildings and along desire lines beyond code requirements           | ACTIVE-2           | 2                             | 2       | 2       |
| Showers and clothes lockers for employees  | ACTIVE-3           |                               | 1       |         |
| On-site shared scooters  | CSHARE-1           | Covered                       | Covered | Covered |
| Electric scooter share memberships   |                    |                               |         |         |
| On-site car share parking spaces beyond code requirements                                  | CSHARE-1           | 2                             | 2       | 2       |
| Car share memberships  |                    |                               |         |         |
| Market-based off-street parking pricing  |                    |                               |         |         |

| Program   | Ordinance Category | Estimated Point Values by Use |         |        |
|---|--------------------|-------------------------------|---------|--------|
|   |                    | Res                           | Office  | Retail |
| Reduced parking supply  |                    |                               |         |        |
| Real-time information on parking pricing and availability             |                    |                               |         |        |
| In-building concierge services  | DELIVERY-1         | 1                             | 1       |        |
| Delivery coordination for online personal services                    | DELIVERY-1         | - Covered                     | Covered |        |
| Partnerships with CSAs  |                    |                               |         |        |
| Cold, dry storage space for grocery and package delivery              | DELIVERY-1         | Covered                       |         |        |
| Family supportive amenities   | FAM-1              | 1                             |         |        |
| Convenient loading zones  |                    |                               |         |        |
| Childcare services and facilities                                     | FAM-2              | 2                             | 2       |        |
| Collaborative work space with business services                       |                    |                               |         |        |
| Convenient elevator design for bicycles, strollers, wheelchairs, etc. |                    |                               |         |        |
| On-site affordable housing  | LU-2               | 2                             |         |        |
| Site-wide transportation staff  | INFO-3             | 4                             | 4       | 1      |
| Mobile-friendly Mission Rock transportation website                   |                    |                               |         |        |
| Intuitive signage and wayfinding for trip planning across all modes   | INFO-1             | 1                             | 1       | 1      |
| Improved walking conditions to, from, and within Mission Rock         | ACTIVE-1           | 1                             | 1       | 1      |
|   |                    | 21                            | 20      | 12     |

There are several measures recommended in this Plan that do not clearly align with any of those specified in documents related to the Ordinance. As noted earlier, many of these measures play important roles in supporting programs that might more directly affect travel behavior. Others may deserve recognition in the City's framework. Regardless, the specifics of Mission Rock's TDM monitoring will be worked out through discussions with the City.

## TDM PLAN MONITORING AND REPORTING

With the 20% trip reduction goal in mind, Mission Rock will monitor vehicle trips to and from the site for all buildings that have received a Certificate of Occupancy, and compare these vehicle trips to the aggregate daily one-way vehicle trips anticipated for the those buildings based on the trip generation rates specified in the EIR supporting documents.

Monitoring will include the following elements:

- **Trip counts and intercept surveys.** This will consist of site-wide counts of persons and vehicles arriving and leaving the project site on a non-ballgame or major event day. Counts will take place over at least two days between 6 a.m. and 8 p.m.
- **Travel demand information.** The trip count and intercept survey data will provide the key inputs to calculating travel demand for the site in line with the San Francisco Planning Department's transportation impact analysis guidelines.
- **Documentation of Plan implementation.** Mission Rock transportation staff will document the implementation of the TDM Plan's elements.

### Timeframe for Monitoring

Per commitments made under the EIR, Mission Rock transportation staff will monitor and adjust the TDM Plan accordingly until 1) the Development Agreement expires, or 2) the site meets the reduction goal for up to eight consecutive reporting periods, whichever comes first. This monitoring will begin 18 months after the completion and commencement of operation of the proposed parking garage. After that point, the site transportation staff will submit annual monitoring reports until five consecutive reporting periods show that the reduction goal has been reached. After this point, staff will submit monitoring reports every three years.

If the TDM Plan's measures are not achieving the reduction goal after three consecutive reporting periods, Mission Rock will work with the Planning Department to adjust the program as necessary, which may include refining or removing existing measures, or adding new measures. If Mission Rock has adjusted the TDM program and has not met the reduction goal for up to eight consecutive reporting periods, the project may pay an additional emissions offset fee to address any shortfall in meeting the TDM Plan reduction target. At that point, monitoring and reporting requirements will be lifted.

## EXECUTIVE SUMMARY

Mission Rock is one of the most prominent sites and a key gateway development in the Mission Bay neighborhood of San Francisco. It will be developed as a leading example of sustainable design, construction, community, and operations.

The project's ambitious sustainability vision includes a development in which 100% of building operational energy use comes from renewable sources. The project will also target zero water waste, where 100% of non-potable water demands will be met with non-potable sources; a healthy site with high outdoor air quality, active design, and occupant access to daylight and views; and construction materials that will be selected for low environmental impact.

### MISSION ROCK PERFORMANCE GOALS

|   |
|---|
| Resilient and Adaptive: Design to be resistant to San Francisco sea level rise projections for the year 2100            |
| Energy: Target 100% operational energy use from renewable sources   |
| Zero water waste: Target 100% of non-potable water to be met with non-potable sources                                   |
| Transportation: Target 20% reduction in single occupancy vehicle trips  |
| Healthy site: High quality outdoor environment, active design, daylight and views                                       |
| Low Impact Materials: Encourage manufacturer transparency and select low impact materials through material optimization |

### SITE-WIDE SYSTEMS

The new infrastructure anticipated as part of the horizontal development will include an elevated site to mitigate future sea level rise, a central energy plant (CEP) with bay source cooling, and a central water treatment plant. These horizontal development features are essential to the district's ability to achieve its ambitious sustainability goals. They also provide a significant benefit to vertical developers by providing an easy connection to carbon-free cooling and a non-potable water source to meet all of the site's non-potable demands.

The Mission Rock Development is participating in the San Francisco Eco-District program. Eco-Districts are neighborhood scale public-private partnerships that strengthen the economy and reduce environmental impacts while creating a stronger sense of place and community. The Mission Rock development is looking to maximize this potential to deliver a sustainable, low-carbon neighborhood.

Mission Rock's Sustainability Strategy provides a comprehensive strategy to achieve Mission Rock's goal of becoming a model for sustainable development in the city. Multiple sustainable site strategies have been evaluated in order to inform the targets and strategies included in the Sustainability Strategy.

It is a critical objective to define strategies that are ambitious but achievable, so that the performance goals remain relevant throughout the project's longer-term delivery time frame (10-15 years) and the overall project lifespan (75-100 years). While due consideration

is given to current code requirements, the impact of future codes can only be evaluated to the point that the information is known.

The specifics of this Sustainability Strategy have been developed in consultation with the SFGiants, the project design team, the Port Planning Department, and Planning Division.

Sustainable development is influenced and defined by a wide array of environmental, economic, and social factors. The key performance areas at Mission Rock are identified as those that will maximize the environmental performance and benefits to the community. The Mission Rock development has the following key performance areas:

- ▶ Adaptability & Resilience
- ▶ Water
- ▶ Energy
- ▶ Transport
- ▶ Health and Wellness
- ▶ Waste Reduction Management
- ▶ Sustainable Materials
- ▶ Habitat and Ecosystem Function
- ▶ Community Identity

These correspond to the focus areas for San Francisco Eco-Districts, of which Mission Rock is a Type-1 Eco-District. Type 1 Eco-districts are 'blank slate' developments, where little or no existing development exists. As a new-build development on an existing parking lot without utility infrastructure connections,

FIGURE 0.1: Site-Wide Greenhouse Gas Emissions

the development is considered to be one of the first Type 1 Eco-districts in San Francisco. The potential environmental performance of a Type 1 Eco-district can be influenced by the delivery of new infrastructure in the ground (horizontal development), new buildings (vertical development), community engagement, and management and participation strategies.

In addition, the greenhouse gas (GHG) impacts of proposed measures for energy, water, transport and waste at Mission Rock have been evaluated. The GHG assessment indicates that transport strategies are the overriding driver for GHG emissions on the

site. Energy used in the buildings has the second largest influence on total GHG emissions, while water is relatively minor in terms of GHG emissions impacts. Mission Rock intends to minimize its future GHG emissions through an innovative Transportation Demand Management strategy (TDM) and off-site renewables for the operational GHG emissions for the buildings on site.

Other key performance areas, which may not directly impact GHG emissions, should be considered in terms of regional and local impacts, economic costs, and social benefits, both now and into the future.

# MISSION ROCK DESIGN DOCUMENTS

The Sustainability Strategy comprises one section of the Mission Rock Design Documents and has been developed in conjunction with the Vision & Design Intent, Design Controls (DCDG), Transportation Plan and the Infrastructure Masterplan. These design documents are part of a larger set of Transaction Documents which make up the Lease Disposition Development Agreement (LDDA). All of these documents contain requirements and recommendations for the project

**MISSION ROCK VISION & DESIGN INTENT**

This document contains the big picture thinking and aspirations that will guide the process for the design and implementation of Mission Rock.

**MISSION ROCK DESIGN CONTROLS (DC)**

This document guides the development of the open spaces, streets, and buildings at Mission Rock. The DC ensures that the site will be developed in a way that is consistent with the vision as defined in the Mission Rock Vision and Design Intent document.

## MISSION ROCK

SUSTAINABILITY  
STRATEGY

### MISSION ROCK SUSTAINABILITY STRATEGY

This document identifies the high level sustainability goals for Mission Rock, details the requirements for the horizontal and vertical development and summarizes the anticipated reduction in greenhouse gas (GHG) emissions resulting from the district's approach to sustainable design.

## MISSION ROCK

INFRASTRUCTURE  
PLAN

### MISSION ROCK INFRASTRUCTURE PLAN

The design of the landscape, buildings, and sustainability strategies will be closely coordinated with the infrastructure planning at Mission Rock. This plan regulates the complex coordination of streets, utilities, and services.

## MISSION ROCK

TRANSPORTATION  
PLAN

### MISSION ROCK TRANSPORTATION PLAN

In addition to coordinating the daily circulation of people, bicycles, and vehicles to and around the site, the Transportation Plan describes how access to the site functions during peak event times.

# DOCUMENT OVERVIEW

The content in the Sustainability Strategy focuses primarily on the horizontal and vertical development of Mission Rock. Requirements for tenant spaces are limited to water fixture efficiency requirements to ensure that the designed conditions for water reuse align with the assumptions made during the masterplanning phase. However, there are a number of recommendations pertaining to the tenants which should be reviewed and targeted by all project teams.

The diagram to the right shows the different areas of the Mission Rock development addressed by the Sustainability Strategy.

Each section of the Sustainability Strategy follows the same basic structure. The sections starts with an executive summary to provide a high level overview of the goals relevant to that topic. This is followed by a description of the horizontal development and how it supports or enables the district or individual buildings to achieve the targets related to that topic. Certain sections have background information which describe the aspects of each topic that are relevant to the Mission Rock site. Most sections have a series of Requirements & Recommendations.

The overall vision for Mission Rock is to create a resilient and adaptive district that is protected against coastal sea level rise and supports passive survivability and vibrance in a future climate which is hotter, drier, and less predictable.

# 01

## ADAPTABILITY & RESILIENCE

For the city of San Francisco, changes to climate conditions are expected to manifest in:

- ▶ Continuing coastal sea level rise
- ▶ Increasing temperatures with a greater number of days over 80°F
- ▶ Decreased precipitation rates and continuing regional drought

"Adaptability" is the capacity to withstand changing environmental conditions over the lifespan of the building or system. Mission Rock's approach to adaptability is to find strategies that also provide environmental benefits in terms of reduced resource consumption.

"Resilience" refers to the ability to withstand and recover quickly from an extreme event. In San Francisco, resilience often refers to its ability to protect occupant lives and return to partial or full function after an earthquake.

The enabling work completed as part of Mission Rock's horizontal development addresses the fact that the site is located in a sea rise vulnerability zone and includes a number of adaptive measures as described on the following page.

## HORIZONTAL DEVELOPMENT: ADAPTIVE STRATEGIES

The measures taken by the horizontal development provide vertical developers with an adaptive site condition and alleviate the need for each vertical developer to invest in adaptive measures building by building. The benefits provided to the vertical developer by the horizontal development are described below and highlighted in the diagram to the right.

To protect the Mission Rock development against sea level rise and storm surges, the development blocks will be elevated to 104ft above the Mission Bay Datum (MBD). This elevation accommodates the 2100 sea level rise (SLR) projection of 66 inches above 2000 mean higher high water (MHHW) and the 100-year storm surge. China Basin Park acts as a buffer during storm events, protecting buildings and critical infrastructure. Saline-tolerant native or climate-appropriate plant species shall be included in the stormwater gardens to increase vegetation resilience in the case of a Bay flood event.

Mission Rock will require all vertical developers to connect to Mission Rock's anticipated central thermal energy plant and water treatment plant. These two on-site resources can provide heating, cooling, and recycled water sources, even during failures of local supplies.

In addition, the site pilings provided as part of the horizontal infrastructure reduce liquefaction potential in the event of an earthquake.

All buildings on site will benefit from these strategies to increase resiliency and adaptability. Vertical developers can further increase the district's adaptive ability by designing their buildings with high performance envelopes, and focusing on passive heating and cooling strategies to support passive survivability in the event of a power failure and loss of mechanical conditioning.

1

Development blocks will be elevated to 104ft MBD to accommodate the upper level 2100 SLR projections and the 100-year storm surge.

2

The anticipated central energy and water treatment plants may maintain function during failure of city supplies, and increase resilience in a major event and long term adaptability to drought.

3

Recommended building design strategies can increase passive survivability and interior comfort in the event of power failure and comfort for long term climate change.

4

China Basin Park provides a buffer on the North side for rising sea level and storm surges between the bay and the buildings and critical site infrastructure.

5

Large stormwater treatment area contains saline tolerant planting and can help mitigate storm surges.

# ADAPTIVE SITE BACKGROUND INFORMATION

## SEA LEVEL RISE & FLOOD PROOFING

Increasing sea levels and the greater likelihood of storm surges have influenced site-wide planning decisions for Mission Rock. The district will take the following measures to future proof against rising sea levels:

Development blocks will be elevated to 104 ft MBD to protect against the maximum 2100 Sea Level Rise projection and 100-year storm surge.

China Basin Park is located along the seawall while the commercial and residential buildings on site will be set back from the bay edge. This strategy provides a buffer zone between the Bay and the site's critical infrastructure of roads and buildings.

The largest storm water treatment area for the site will be located along the seawall in China Basin Park. Locating this site amenity here can help protect against storm surges. The DCDG specifies that planting in this treatment area must be salient tolerant and native or climate-appropriate in order to survive a potential storm surge event.

FIGURE 1.1: Programmatic Relationships and Grade Changes

## SEA LEVEL RISE PROJECTIONS FOR SAN FRANCISCO RELATIVE TO THE YEAR 2000

Lower range projections are excluded as they are not recommended for planning purposes.  
SOURCE: SAN FRANCISCO SEA LEVEL RISE ACTION PLAN, NRC (2012)

**NOTE:** These SLR projections do not include extreme tides or coastal storms, which could add up to 41 inches of temporary flooding on top of rising sea levels, for a total of up to 107 inches above today's average high tide.

## ANNUAL TEMPERATURE DISTRIBUTION PRESENT AND 2050 CLIMATE SCENARIOS

### PASSIVE SURVIVABILITY IN A FUTURE CLIMATE

Future climate models predict a gradual increase in local annual temperatures over the coming years. These regional temperature escalations are exacerbated by local heat island conditions.

The resulting increase in building cooling demands may contribute to an overburdened energy grid and increase the likelihood of blackouts and brownouts. For this reason and for assurance during disaster events, it is important that buildings on the Mission Rock site can maintain an acceptable indoor environment without heating, cooling or electricity.

### REGIONAL DROUGHT AND WATER CONSERVATION

With the regional drought, there is increasing water uncertainty around California's water resources. The Mission Rock site includes over 8 acres of open space, much of which incorporates vegetated space for recreation, provision of native habitat, and gardens. Trees lining the streets provide shade and contribute to a human scale pedestrian environment throughout the site. All vegetation on the Mission Rock site will be irrigated with recycled water from the central graywater treatment facility. The Public Realm guidelines also include recommendations for drought tolerant and low water species. This approach reduces the site's water

consumption and ensures that the site's vegetation will remain vibrant even in worsening drought conditions. Additionally, the minimization of on-site cooling towers through use of bay source cooling and graywater reuse for flushing reduces overall site water demand. More information can be found in the following water section.

## REQUIREMENTS

### SEA LEVEL RISE PROTECTION

All building finished floors to be elevated above 10.4 ft (MBD) or 15.3 ft (NAVD88). Parking garages and building frontages along the perimeter of the site adjacent to existing grades are exempt from this requirement.

### STORM SURGE PROTECTION

Saline-tolerant native or climate appropriate plant species shall be included in the design and maintenance and management strategy of the stormwater gardens to increase resilience of treatment gardens in the case of inundation in a Bay flood event.

### PASSIVE SURVIVABILITY

Pursue a central energy plant (CEP) and a centralized graywater treatment plant to increase likely-hood that heating, cooling and non-potable water could be provided during times when City supplies become unavailable. [subject to confirmation of feasibility]

## RECOMMENDATIONS

### PASSIVE SURVIVABILITY

#### Vertical Development

- ▶ Target 40% window-to-wall ratio (WWR), with a maximum WWR of 60%
- ▶ Highly insulated envelope including high performance glazing that abate temperature swings within buildings
- ▶ Optimize shading to maximize usable daylight access and minimize solar gains
- ▶ Operable windows for natural ventilation
- ▶ For residential buildings, provide access to common area drinking water that can be supplied without power

ZERO WATER WASTE

Meet 100% Of Non-Potable Water Demand  
With Non-Potable Sources

\*

The Mission Rock district has established a goal of Zero Water Waste, meaning that 100% of non-potable water demands would be met with recycled water. This goal can be achieved through a combination of a water-efficient central energy plant, water efficient fixtures and landscape, and a centralized graywater treatment system.

02

WATER

At full build out, this combination of strategies is estimated to save roughly 16.5 million gallons of potable water per year over a typical San Francisco development.

The Mission Rock site was a salt marsh and lagoon in the 1880s before it was developed. Given its history, it is only appropriate that the district's most significant water conservation measure comes from maintaining a direct connection to the Bay. The largest water savings come from the elimination of cooling towers through anticipated bay source cooling at the central energy plant or other low energy cooling options. This strategy alone reduces the site's water demand by more than 6 million gallons per year.

The following page describes how the centralized energy and water systems anticipated as part of the horizontal development will contribute to site-wide water conservation, enable vertical developers to meet San Francisco's water reuse ordinance, and assist developers in meeting the SF Green Building Code.

## HORIZONTAL DEVELOPMENT: WATER CONSERVATION

It is anticipated that the horizontal development at Mission Rock will include two critical elements that are key to achieving Zero Water Waste on site: the anticipated bay source cooling connection at the central energy plant and the central graywater treatment system.

All vertical developers are required, by local code, to provide plumbing for recycled water - or "purple pipe" - within their buildings, and to connect to the site-wide purple pipe system. Vertical developers will also be required, by code, to comply with San Francisco's Onsite Water Reuse for Commercial, Multi-family, and Mixed Use Development Ordinance (more commonly known as the Non-potable Water Ordinance), and the water efficiency requirements related to the SF Green Building Code.

Mission Rock's horizontal infrastructure will leverage the diversity of program types within the development to provide recycled water for 100% of the site and buildings' flushing and irrigation demands at each phase of development. Instead of collecting graywater from all buildings, the Sustainability Strategy mandates graywater collection for only buildings A (Phase I), K (Phase I), and F (Phase III). This approach can provide all of the buildings on site with a source of recycled water while minimizing plumbing for graywater collection.

This district approach will eliminate the need for separate graywater treatment systems throughout the site and, in doing so, reduce the spatial needs and maintenance requirements associated with a series of distributed treatment systems. In addition, it provides a path for all vertical developers to comply with SF's Non-potable Water Ordinance.

Each vertical developer will support the site's water conservation approach by installing efficient domestic fixtures and water conserving equipment.

1

The anticipated bay source cooling connection will reduce site-wide water demand by more than 6 million gallons/year

2

Buildings A, K, and F collect graywater and send it to a graywater treatment plant

3

Anticipated central graywater treatment provides recycled water to meet 100% of flushing and irrigation demands of the entire site. Recycled water is distributed to buildings using "purple pipe"

4

Drought-tolerant vegetation and efficient irrigation will minimize irrigation demand

5

Efficient fixtures and equipment will reduce domestic and process water demand

## WATER BACKGROUND INFORMATION

### NON-POTABLE WATER DEMANDS

The anticipated non-potable water demand for each building has been calculated to determine the total recycled water demand on site. The water required for cooling towers would have been one of the largest water demand on the Mission Rock site, but the project is considering cooling strategies that eliminate cooling towers and the associated water demand. This demand would have amounted to more than 6 million gallons per year, as shown by the dashed bars in Figure 2.1.

The projects is considering using centralized bay source cooling, geothermal energy wells, or wastewater heat recovery cooling to reducing cooling tower water demand. In the bay source cooling strategy, water would be drawn from the bay and pumped through the central plant to cool the chillers and then discharged back to the bay without negatively affecting the bay ecosystem. For the geothermal case, several wells would be installed on site. Heat exchangers would transfer heat from the closed loop well system to the district energy system. For the wastewater energy capture system, it may be possible to use the main trunk sewer line that passes the site as a heat sink for the cooling and heating system. Any of these strategies would effectively reduce water consumption in the central plant cooling towers.

Residential buildings produce far more graywater than they consume, and can export water to the commercial buildings that cannot meet their own demand. Treatment can occur at the individual building level, but a centralized system is more efficient and minimizes required treatment capacity, storage, and infrastructure while delivering the required reclaimed water. Figure 2.3 shows the net supply of graywater and non potable demand for each building.

FIGURE 2.1 Monthly Reclaimed Water Demand

## INFRASTRUCTURE

### Treatment

A centralized water treatment system is intended to provide the buildings on the Mission Rock site with recycled water.

### Collection

It is anticipated that graywater would be collected from buildings A and K in Phase I, and from building F in Phase III. The graywater supplied by these residential buildings alone is sufficient to meet the non-potable demand of the project due to the large volume of graywater produced by domestic uses, especially showers.

### Distribution

The recycled, or "purple pipe," water distribution will be installed in the street and the project team is working to ensure that they can be charged with the recycled water produced on site. Mission Rock will require each building onsite to connect to this piping network, as shown in the Infrastructure Plan.

### San Francisco Recycled Water Ordinance

San Francisco has ambitious regulations in place that limit water consumption and mandate water reuse. The anticipated recycled water system on the Mission Rock site exceeds the current version of San Francisco's Non-potable Water Ordinance, and is expected to meet future revisions. The development will reuse water in all buildings, where current code only require reuse in buildings larger than 250,000 square feet.

FIGURE 2.3: Mission Rock Annual Nonpotable Water Balance

#### OTHER DEMANDS & SUPPLIES

If the project uses on-site cooling towers to provide site-wide cooling the mechanical water demand is estimated to be more than 6 million of gallons of water per year. A centralized graywater treatment system will not be sufficient to meet this demand, and other sources of non-potable water would need to be considered in order to achieve the project's goal of zero water waste. These sources could include blackwater, rainwater, or other process water sources. If blackwater treatment is included, sewer mining will have to be coordinated with the SFPUC as necessary.

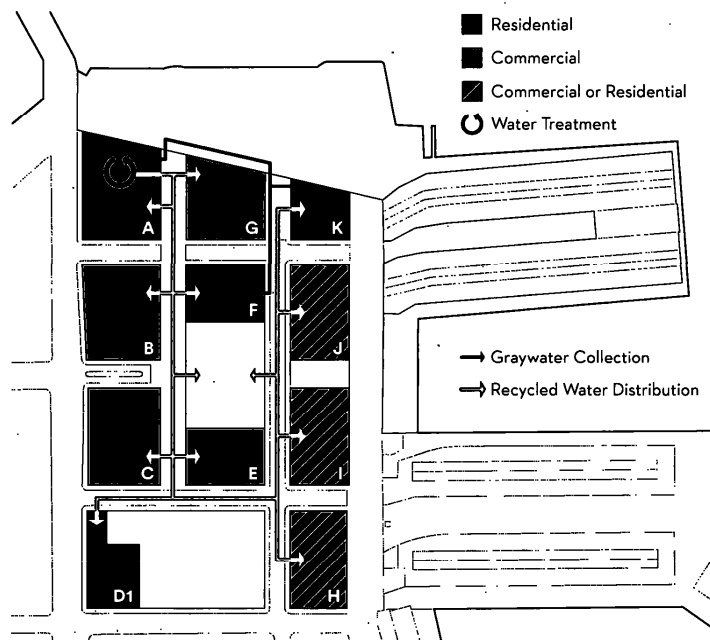

FIGURE 2.4: Graywater Collection and Reclaimed Water Distribution Infrastructure

## REQUIREMENTS

### WATER EFFICIENCY STANDARDS

Vertical developer must install or implement a tenant lease agreement that requires tenant to install domestic water efficient fixtures that meet or exceed the following performance requirements. All eligible fixtures must be WaterSense or ENERGY STAR labeled.

#### Commercial

- ▶ water closet: 1.1 gpf, WaterSense certified
- ▶ urinal: 0.125 gpf, WaterSense certified
- ▶ shower: 1.5 gpm, WaterSense certified
- ▶ lavatory: 0.5 gpm with sensors, WaterSense certified

#### Residential

- ▶ water closet: 1.1 gpf, WaterSense certified
- ▶ shower: 1.5 gpm, WaterSense certified
- ▶ lavatory: 1.5 gpm, WaterSense certified
- ▶ kitchen sink: 1.5 gpm, WaterSense certified
- ▶ clothes washer: 3.7 gal/cycle/ft<sup>3</sup>, ENERGY STAR certified
- ▶ standard size dishwasher: 3.5 gal/cycle, ENERGY STAR certified
- ▶ compact size dishwasher: 3.1 gal/cycle, ENERGY STAR certified

#### Retail & Restaurant

- ▶ commercial clothes washer: 4.5 gal/cycle/ft<sup>3</sup>, ENERGY STAR certified
- ▶ commercial dishwasher: ENERGY STAR certified
- ▶ commercial ice maker: ENERGY STAR certified
- ▶ commercial pre-rinse spray valves: 1.6 gpm, WaterSense certified

### CENTRAL WATER TREATMENT

Pursue a central water treatment plant that has sufficient capacity to treat, store, and distribute recycled water to all buildings and vegetated open space on site. [subject to confirmation of feasibility]

### RECYCLED WATER DISTRIBUTION

All building, vegetated open space, and streetscapes must connect non-potable demands to the recycled water distribution system. This includes toilets, urinals, and irrigation at minimum.

### GRAYWATER COLLECTION

- ▶ Graywater collection piping should be provided in buildings A, K, and F, or alternative locations that are projected to collect graywater sufficient to meet all non-potable demands on the Mission Rock site. This quantity is currently projected to require collection from all showers, lavatory sinks, and washing machines at a minimum.
- ▶ Graywater collection lines shall be provided to facilitate graywater collection.
- ▶ Any pumps required to maintain pressurization of the site-wide graywater collection lines will be provided by the vertical developer on a building by building basis.

[Graywater collection will not be required if the site uses a centralized blackwater treatment system or another source of recycled water that is sufficient to meet the SFPUC's Non-potable Water Ordinance]

### IRRIGATION AND VEGETATION

- ▶ All vegetation on site must use recycled water provided from the non-potable water treatment system to meet 100% of their irrigation demand.

100% RENEWABLE ENERGY

100% of Building Energy Demand Met with  
Renewable Energy Sources

\*

Mission Rock has established the ambitious goal of meeting 100% of its building energy demands with renewable energy. This approach will eliminate or offset all of the project's operational greenhouse gas (GHG) emissions.

03

ENERGY

This vision will be made possible by investing in energy conservation plus on-site and off-site renewable energy generation projects. Mission Rock will require vertical developers to purchase off-site renewable energy equal to the amount of anticipated energy consumption from their buildings.

Mission Rock's energy approach positions the development as a leading example of how California's policy goals may be achieved in a new construction

development in a dense urban location. The project's horizontal development includes consolidated critical energy infrastructure, and the Mission Rock district will establish investment structures to allow vertical developers to purchase off-site renewable energy infrastructure to overcome the spatial challenges associated with on-site renewable production.

## HORIZONTAL DEVELOPMENT: ENERGY RESOURCES

It is anticipated that the Mission Rock horizontal development will include a central energy plant that provides both heating and cooling energy to buildings on site.

The development is considering an array of low-energy central plant options for cooling and heating, including bay source cooling, geothermal energy wells, or wastewater heat recovery. A bay source cooling loop provides cooling by rejecting heat from central plant chillers to the bay water. By using the bay as a heat sink, cooling can be provided using very little energy. For the geothermal wells, heat exchangers would transfer heat from the district energy system to several wells drilled on site. A wastewater heat recovery system would exchange heat with the main trunk sewer line that passes near the site. With any of these strategies, the high volume of water consumed in conventional cooling towers will be eliminated. There may be backup cooling towers for peak capacity or times when the bay source cooling is taken offline for maintenance. Eliminating cooling towers also frees-up roof space that would have been dedicated to mechanical equipment for living roofs, urban agriculture, open space, and renewable energy.

Mission Rock will require all vertical developers to connect their buildings to the anticipated central energy plant. This connection provides vertical developers with an efficient source of cooling energy and frees up space within each of the buildings and on building rooftops that otherwise would have been required for local mechanical systems. In addition, the elimination of cooling towers will remove the largest water demand for each of the buildings saving annual water use and water utility cost.

The Mission Rock team will work with the central plant provider to determine options to purchase renewable power to offset central plant operations.

1

The anticipated central energy plant (CEP) provides heating and cooling to all buildings on site. It is anticipated that the CEP will use bay source cooling to minimize energy and water used to meet the site-wide cooling demand.

2

Vertical developers will purchase off-site renewable energy infrastructure to meet their anticipated building energy demand.

3

Requirements for purchasing renewable energy based on building performance incentivize building efficiency.

4

All buildings will have to meet the following:

- T24 State Requirements
- SF Green Building Code

## ENERGY BACKGROUND INFORMATION

To reach the site wide goal of 100% power provided by renewable energy, Mission Rock will require vertical developers to purchase off-site renewable energy infrastructure equal to the total energy consumed in the building. This approach incentivizes building developers to purchase energy efficiency measures at the building scale by creating a cost tradeoff between building energy efficiency and the cost of renewable energy.

Plant efficiencies, in combination with efficiency measures at the building scale, will assist each developer in exceeding the energy requirements from the state of California and the SF Green Building Code.

Finally, the purchase structure off-site renewable energy may allow each vertical developer to capitalize on the economy of scale gained from their purchase as part of a larger project. This economy of scale can decrease up front cost and streamline negotiations with local utilities and renewable energy providers.

### CALIFORNIA'S 2030 NET ZERO GOAL

California has a goal of reaching net zero for all new construction by 2030, which will be enforced through Title 24, Part 6 Building Energy Efficiency Standards for Residential and Nonresidential Buildings. San Francisco also has a goal of a 50 percent renewable electricity supply by 2020.

Building efficiency is always the first step towards the 100% renewable energy goal, but renewable energy will always be required to make it all the way to zero. It is not possible for high-rise projects with limited roof area in dense urban environments to meet this requirement through efficiency and on-site renewable energy alone.

FIGURE 3.1: California Path to Net Zero Energy Buildings by 2030: Projected Energy Use Intensity (EUI) for Commercial / High-Rise Residential Buildings

The San Francisco Green Building Code currently requires that renewable energy be installed on buildings less than 10 stories, but this will be insufficient capacity to meet the 100% renewable energy target for the Mission Rock Development.

The chart in Figure 3.1 shows the decreasing building energy use intensity (EUI) that will be required to meet California's net zero goal. The minimum energy performance of buildings on site are set by the current version of Title 24 and the San Francisco Green Building Ordinance. Efficiency will be sufficient to meet the EUI

target for some years to come, but, at some point, the remaining steps towards the net zero goal will have to be made through on-site or off-site renewable energy generation.

The Mission Rock development will be prototyping an approach through building efficiency and off-site renewable energy to meeting a goal of 100% renewable energy for building operations before it will be required in California.

The anticipated energy end use distribution for the building types on site is shown in Figure 3.2 (next page).

FIGURE 3.2: Anticipated Energy End Use Breakdown by Program Type

#### OFFICE BUILDING ENERGY SUMMARY

Office energy use is driven primarily by lighting and plug loads (computers, printers, etc.). The energy required for heating and cooling accounts for only a small portion of the annual energy use.

The design of the building envelope can have a significant impact on energy use, as daylight access reduces energy demand for electric lighting. The tenant has the largest ability to impact energy use and associated costs by reducing the electricity used within the building through efficient lighting, extensive lighting controls, and plug load management. Energy efficiency requirements in the tenant guidelines incorporated into the lease agreement can be used to document performance improvements.

#### RESIDENTIAL BUILDING ENERGY SUMMARY

Residential energy use is driven primarily by space heating, cooling, and domestic hot water consumption,

which accounts for around a third of annual energy use. Efficiency improvements in the heating system will have the greatest energy savings.

Beyond the use of a central plant, the tenant and vertical developer have the greatest ability to reduce annual energy cost by minimizing the energy use of appliances such as refrigerators and dishwashers. In this climate, it is recommended that the developer consider eliminating mechanical cooling from all units. This is possible if the building skin includes external shading, high performance glazing to control heat gain, and enough operable windows for effective natural ventilation.

#### RETAIL & RESTAURANT BUILDING ENERGY SUMMARY

The retail program in the Mission Rock development is a relatively small amount of area when compared to the distribution of office and residential space.

Retail spaces will receive the most significant energy savings benefits through tenant installation of efficient lighting fixtures, as lighting accounts for over half of energy use. This results in energy savings from both decreased electricity for lighting and decreased cooling loads within the space.

Restaurants will receive the most significant energy benefit from installation of efficient, ENERGYSTAR equipment, as more than half of end-use energy comes from equipment and refrigeration.

#### OFF-SITE RENEWABLE ENERGY

The amount of renewable energy purchased by each developer is determined by the anticipated energy performance of the building and quantified as part of the energy modelling conducted for LEED certification.

As shown in Figure 3.3, the vertical developers will participate in an agreement with a renewable energy developer. The local electrical utility (SFPUC or PG&E) then delivers this energy to the building. The electrical utility which will serve the site is still under discussion. The off-site options will be similar with either utility.

The off-site renewable energy development opportunities, and the legal and metering structure that enables buildings to receive the benefit of the off-site renewable energy will be identified. The following utility and legal structures could be designed as the mechanism for building developers to purchase renewable energy projects:

- ▶ Green Tariff Shared Renewables Program (GTSRP): California is implementing a program where utilities will be responsible for billing, administration,

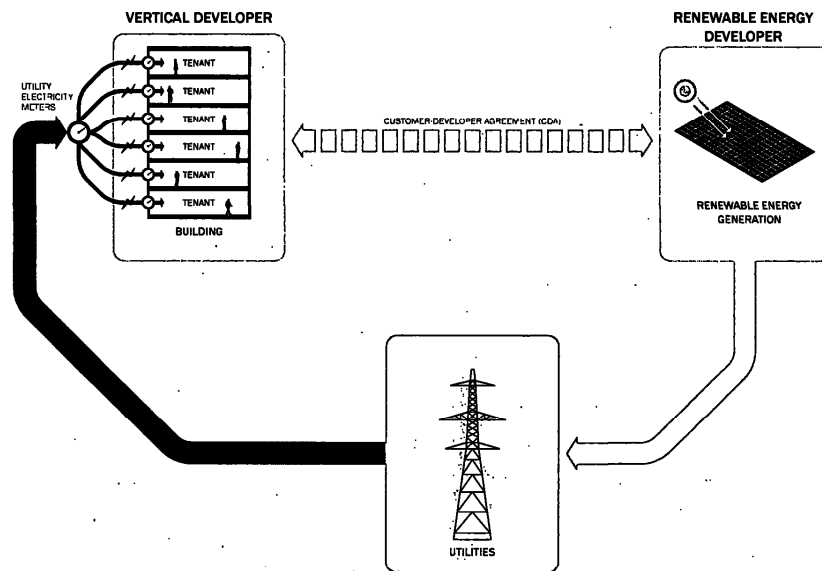

FIGURE 3.3: Off-site Renewable Energy Structure

metering and transmission, but meter owners contract directly with a solar developer to generate and provide renewable energy. The GTSRP program currently has a 2019 closing date and maximum generation cap, but the program cap may be expanded and the timeline extended once reviewed by the CPUC.

- **Direct access:** In a direct access program, large customers purchase generated energy directly and can negotiate energy purchases from the generation source of their choice. Aggregating all of the service points on the Mission Rock site may make this approach viable, but would have to be negotiated with the utility directly.
- **Virtual Direct Access:** The development can engage in a power purchase agreement with a renewable energy developer for ongoing power generation. This energy would then be sold back into the grid at wholesale prices on an ongoing basis. The revenue from these sales would then be used to offset the energy costs on site. This acts as a hedge against the increasing cost of power.

The renewable energy program selected will depend on the utility on site and the metering structures available at the time of development.

One of the most important concepts for the renewable energy is the idea of **additionality**, where the renewable energy purchase creates renewable energy generation that would not have existed and is not counted towards any other goal or standard. California's Renewables Portfolio Standard (RPS) requires that 33% of the energy

in California is from renewable sources by 2020 and 50% by 2030, but the Mission Rock purchase would not contribute to this standard.

The SFPUC may be the electricity utility provider on the Mission Rock site. SFPUC power is generated entirely by Hetch Hetchy hydro power, meaning the power consumed on site would be 100% carbon free. However, the Hetch Hetchy power would not meet the additionality requirement for Mission Rock because the generation infrastructure is existing and the project would not be purchasing renewable generation whose benefit could be directly attributed to the projects utility meters.

Renewable energy certificates (RECs) represent the

positive environmental attributes of renewable energy generation. These RECs can be unbundled from the actual energy and sold to someone other than the energy purchaser. The renewable energy that the Mission Rock project purchases will generate RECs for the energy produced, but instead of selling these RECs, the RECs will be retired to ensure that the environmental benefits of the renewable energy is attributable to the Mission Rock development.

While it may be considered more favorable to provide renewable energy sources on site, Mission Rock's dense urban location limits opportunities for on-site solar development. By purchasing off-site renewable energy

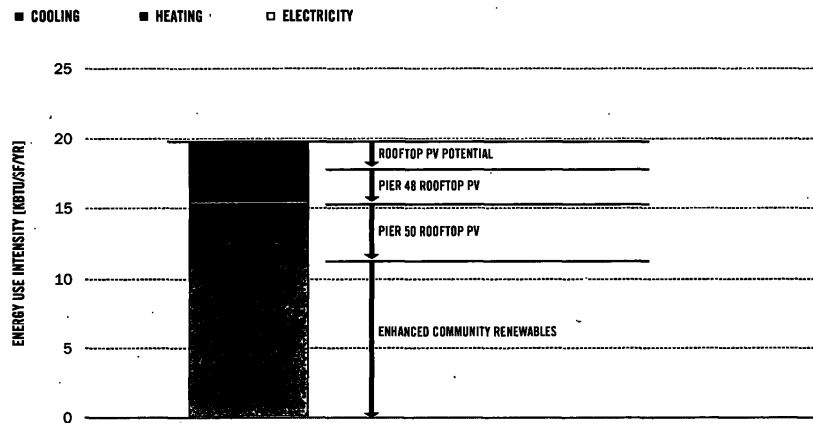

FIGURE 3.4: On-site and Off-site Renewable Potential

sources, the renewable generation for the Mission Rock project can be placed in the optimal location for increased renewable energy generation.

Figure 3.4 shows the potential for on-site renewable energy to meet the energy demand of a typical building on the Mission Rock Site. Renewable potential is broken down into rooftop PV and a proportional share of Pier 48 and adjacent Pier 50. Even with all of these sources, a typical building will be able to meet less than half its annual energy demand with on-site renewable sources.

#### REQUIREMENTS

##### CENTRAL ENERGY PLANT

Pursue one or more central utility plants on site that supply chilled water and heating hot water to all buildings on site. The plant shall utilize bay water for heat rejection to increase the efficiency of the energy system. [subject to confirmation of feasibility]

##### CENTRAL ENERGY PLANT CONNECTION

Connect buildings to central energy plant thermal utilities.

[subject to confirmation of feasibility of central plant]

##### OFF-SITE RENEWABLE ENERGY

Building developers shall model the anticipated energy demand. Developers will be required to submit the final energy documentation provided for LEED certification along with the GBCI review comments. The anticipated energy use will define the developer's purchase of off-site renewable energy generation.

The GBCI-reviewed LEED energy model shall determine the kWh that must be offset through off-site renewable energy. The developer shall purchase off-site renewable energy through a power purchase agreement.

##### ENERGY REPORTING

Report energy use for each building on an ongoing basis. At a minimum, energy reporting should be on an annual basis and include all energy types. All vertical developers must enter their modeled energy use in ENERGY STAR Portfolio Manager and use Portfolio Manager to track energy use on an ongoing basis.

#### RECOMMENDATIONS

##### RENEWABLE PURCHASE ADJUSTMENT

If measured energy use exceeds anticipated energy use, it is recommended that vertical developers update their renewable energy contribution every two years to match measured energy use.

## RECOMMENDATIONS

### COMMERCIAL DEVELOPMENT

#### Lighting Power Density

Target lighting power density (LPD) of less than 0.6 W/ft<sup>2</sup>

#### Plug Load Occupancy Sensors

Install plug load occupancy sensors for non-essential equipment in all spaces. Non-essential equipment includes, but is not limited to:

- ▶ desktop computers and lap tops
- ▶ monitors
- ▶ imaging equipment (copiers, fax machines)
- ▶ task lights
- ▶ television screens
- ▶ projectors
- ▶ vending machines

#### Advanced Lighting Controls

Provide occupant sensors throughout open office, corridors and rest rooms in addition to the locations required by Title 24. Provide daylight dimming and daylight sensors in all spaces with access to daylight. This shall include offices and meeting rooms in addition to the spaces required by Title 24.

#### Vertical Transportation Optimization

Optimize vertical transportation through:

- ▶ regenerative elevators
- ▶ destination control elevators
- ▶ occupancy sensors on escalators
- ▶ reduced elevator fan and lighting energy

### RESIDENTIAL DEVELOPMENT

#### Equipment

Install only ENERGY STAR or equivalent equipment, appliances, lighting, and fixtures (refer to [www.energystar.gov](http://www.energystar.gov) and [www.aceee.org](http://www.aceee.org) for latest list of energy-efficiency appliances), including, but not limited to, refrigerators and dishwashers.

#### Domestic Hot Water Demand Reduction

Install showers (1.5gpm) and sinks (1.5gpm aerators) with WaterSense label.

#### Domestic Hot Water Heating

Employ electric heat pump water heaters for domestic hot water heating loads.

#### Plug Controls

Provide a "master switch" in all apartments located adjacent to the front door that controls all ambient lighting and switched outlets. Outlets connected to the master switch should be clearly identified.

#### Advanced Lighting controls

Install daylight dimming and sensors in all common areas with daylight access

#### Energy Dashboard

Provide each residence with a system which enables tenants to see and understand their energy use in real time, control temperature settings and master switch from a remote location, and create an auto schedule and away settings for temperature and master switch

#### Natural Ventilation

Eliminate mechanical cooling by providing external shading on glazing to block unwanted heat gain and install operable windows to enable natural ventilation.

### RETAIL & RESTAURANT DEVELOPMENT

#### Lighting Power Density

Target lighting power density (LPD) of less than 1.8 W/ft<sup>2</sup>

#### Reduced Exhaust

Install variable flow exhaust hoods with heat recovery in restaurants

#### Efficient Equipment

Install only ENERGY STAR certified equipment

#### Hot Water Demand Reduction

- ▶ Use rest room flush and flow fixtures that are WaterSense labeled
- ▶ Install commercial dishwashers that are ENERGY STAR qualified
- ▶ Ensure pre-rinse spray valves have a max flow rate of 1.6 gallons per minute (gpm)

**20% Reduction In Transportation-Related Carbon Emissions**

\*

Mission Rock is committed to shifting travel behavior towards more environmentally beneficial transportation modes.

04

## TRANSPORTATION

The Mission Rock site is in a prime location for transportation alternatives to single occupancy vehicle trips. The site is close to high quality transit, is located in a developing mixed use area, and will include on-site services that will encourage the use of alternative modes of transportation.

Mission rock will implement a Transportation Demand Management (TDM) Program to increase the use of environmentally friendly transportation modes. The Mission Rock site design and the transportation demand

management strategies selected for implementation encourage occupants, employees, and visitors to use alternative modes, with an emphasis on cycling, walking, and shared rides. The strategies implemented on site are estimated to reduce single occupancy vehicle trips by more than 20%.

The Mission Rock Transportation Demand Management Plan contains details of the transportation strategies that will be implemented on site and demonstrates Mission Rocks commitment to sustainability.

## SITE CONNECTIVITY

The Mission Rock site is located near many transportation resources.

From a regional standpoint, the San Francisco Caltrain station is less than a 10 minute walk and BART stations are around a mile from the site. These transit services provide regular and rapid service to the greater Bay Area region.

Multiple Muni bus and light rail lines have existing stops within a quarter mile of the site providing transit access to the rest of San Francisco.

The San Francisco Bay Trail, which is planned to circumnavigate the San Francisco Bay, passes through the site. Existing bicycle lanes serve the site.

### Site Design

The Mission Rock program mix, street design, and site connectivity further encourage occupants to select alternative modes of transportation including transit services, walking, cycling, and ride sharing.

The pedestrian- and bicycle-friendly street and

sidewalk design plays an important role in encouraging the use of non-motorized transportation modes. The site design includes a well connected grid of internal streets, wide sidewalks, pedestrian-safety oriented street design, and designated bike lanes that connect to external infrastructure.

These site features establish a strong foundation for the additional transportation demand management strategies to effectively reduce single occupancy vehicle trips.

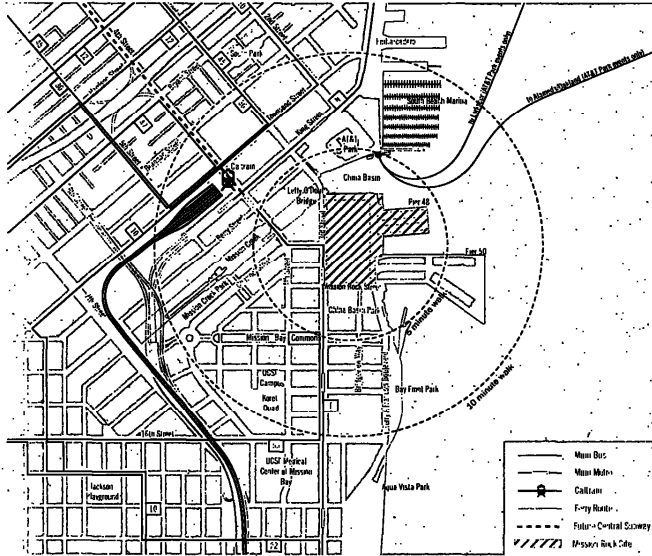

TABLE 4.1: Transit Context

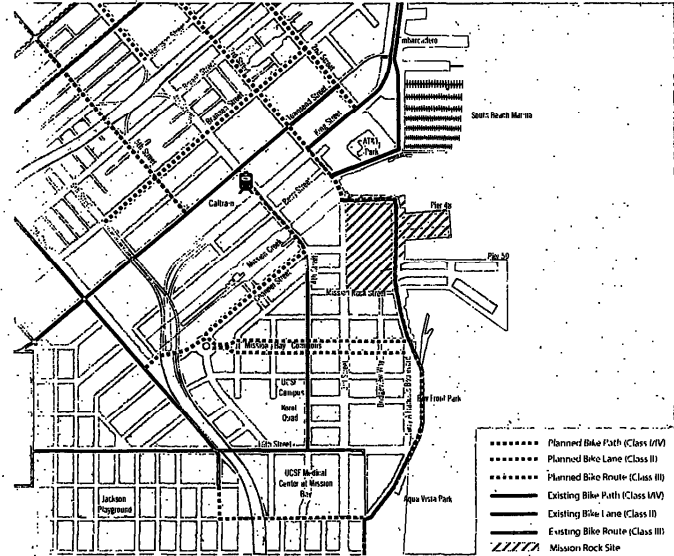

TABLE 4.2: Bike Context

## TDM STRATEGIES

The Mission Rock Transportation Plan combines both infrastructure and operational strategies to reduce single occupancy vehicle use. A high level summary of the strategies being considered for the site are summarized in Table 4.3. The effects of these strategies are interactive and supportive of each other and most effective in combination.

In some cases these strategies shift auto trips to other modes of transportation while, in other cases, they eliminate the need for trips altogether. Both cases reduce the overall use of single occupancy vehicles. These strategies are designed to effect a permanent change in transportation decisions by occupants, employees, and visitors.

The effectiveness of the TDM strategies will be assessed regularly by tracking through occupancy surveys, program utilization studies, and parking occupancy. The results of these studies can be used to refine and the TDM program to increase the effectiveness and better serve occupants.

Further details on each of these strategies can be found in the Mission Rock Transportation Plan.

| TRANSIT                            | PARKING   |
|------------------------------------|---|
| Real-time transit information      | Market-based parking pricing                                  |
| Pre-loaded Clipper Cards           | Real-time parking pricing and availability information        |
| BICYCLE                            | Unbundled parking   |
| Bike share memberships             | Low parking ratio   |
| On site bike share stations        | BUILDING SCALE STRATEGIES                                     |
| Bike event programming             | In-building concierge services                                |
| Bicycle resource center            | Coordinated delivery services                                 |
| Bicycle parking                    | CSA delivery partnerships                                     |
| Showers and clothes lockers        | Storage space for grocery and package delivery                |
| Bike valet                         | Childcare services and facilities                             |
| PERSONALIZED MOTORIZED TRANSPORT   | Collaborative work space                                      |
| Electric scooter share memberships | SITE SCALE STRATEGIES   |
| On-site shared scooters            | Mobile-friendly Mission Rock website                          |
| On-site car share parking spaces   | Signage and wayfinding across modes                           |
| Car share memberships              | Site-wide transportation staff                                |
|                                    | Coordination with local Transportation Management Association |

TABLE 4.3: Transportation demand management strategies proposed for Mission Rock

San Francisco has committed to achieving zero waste to landfill by 2020. The primary means of achieving this goal are source control (i.e. limiting plastic bags/Styrofoam) and user education (to properly divert waste), which are all required through mandatory city ordinances.

The city of San Francisco currently diverts 80% of its waste from landfill, one of the highest waste diversion rates in the country. However, over half the material which goes into San Francisco's landfill bins can be recycled or composted. If all materials were sent to the proper bin San Francisco could increase their diversion rate to 90%.

Mission Rock will primarily contribute to waste reduction efforts through construction waste management and user education to increase proper separation of waste and increase in San Francisco's overall diversion rate.

# 05

## RESOURCE CONSERVATION

## REFUSE BACKGROUND INFORMATION

### CONSTRUCTION WASTE

The Mission Rock district will establish site-wide construction waste diversion requirements and recommendations to ensure that the material going to landfills during demolition and construction is minimized.

### OPERATIONAL WASTE

Operational refuse sent to landfill will be reduced in the Mission Rock development primarily through enhanced user education. This will augment the policies and programs the City of San Francisco already has in place.

The pie charts to the right show the typical breakdown of divertible refuse streams. The largest refuse streams in a typical residential building are Other (comprising furniture, goods and electronics) and Compostable Food. The largest refuse stream in a typical commercial building also comes from compostable food. Providing residents with education about San Francisco's composting program and easy access to composting facilities will be critical to minimizing divertible refuse sent to landfill.

Refuse collected in San Francisco is sent to the Hay Road Landfill in Vacaville. Several smaller landfills receive municipal solid waste from the city, but Hay Road receives roughly 90% of non-recovered materials. The diagram to the right shows the destinations which were used to generate the GHG emissions associated with Mission Rock refuse removal.

Nearly all of the compost collected by Recology is processed by Blossom Valley Organics North located in Modesto, and then sold to local farms and city gardens. As of 2006, San Francisco composted roughly 47% of the organic material generated in the city.

RESIDENTIAL DIVERTIBLE REFUSE

■ Recyclable Paper  
□ Other Recyclable

COMMERCIAL DIVERTIBLE REFUSE

□ Compostable Food  
□ Other Compostables

□ Other (Non Recyclable / Non Compostable)

## REQUIREMENTS

### CONSTRUCTION WASTE MANAGEMENT

All construction and demolition projects will be required to achieve a minimum 75% waste diversion rate as defined by the LEED v4 Reference Guide

### INFRASTRUCTURE AND REFUSE RECEPTACLES

- ▶ Vertical developers will be required to provide adequate and easily accessible space in all buildings for the three primary refuse streams collected in San Francisco: landfill, recycle, and compost.
- ▶ If waste chutes are provided, one for each refuse stream will be required.
- ▶ All three refuse receptacle types to be provided at any refuse collection point both inside the buildings and throughout the Mission Rock site.
- ▶ Work with the SFE Zero Waste Team to design refuse collection on site.
- ▶ Refuse chutes and receptacles to include pest prevention features

## RECOMMENDATIONS

### CONSTRUCTION WASTE MANAGEMENT

All construction and demolition projects should target a 95% waste diversion rate as defined by the LEED v4 Reference Guide

### INFRASTRUCTURE AND REFUSE RECEPTACLES

Provide adequate refuse collection areas. Allocate sufficient space on site for on-site sorting of refuse stream to meet the Recycling and Composting Ordinance. Coordinate facility design to maximize source separation with the SF Environment Zero Waste Team.

### USER EDUCATION PROGRAMS

Increased training and occupant/resident education to improve diversion rate.

### SOURCE CONTROL PROGRAMS

Limit purchasing to materials that can be recycled or composed ensures that refuse can be diverted.

Provide Site With High Outdoor Air Quality, Active Design Opportunities, And Daylight & Views

The Mission Rock development will be committed to delivering a project that protects occupant health, promotes occupant wellness, and prevents environmental harm.

# 06

## HEALTH & WELLNESS

The development will focus on a few key areas of the vertical and horizontal development that result in the most significant benefits with regard to health and wellness. The key topic areas addressed by the Sustainability Strategy are active design, outdoor environmental quality, daylight and views. Active design principles integrated into the street fabric and open space encourage occupants and the public to bike, walk, run, and actively engage with the site. The district will provide 8 acres of public parks and open space, as well as public waterfront access. The open space network will become a starting point for the Blue Greenway, a waterfront trail that will connect to Hunters Point Shipyard. These amenities will establish

the site as an active destination for the surrounding neighborhoods. The open spaces and vegetated areas will provide occupants with a connection to nature, improving personal and community health. Details on the green spaces can be found in chapter 08: Habitat and Ecosystem Function.

The Mission Rock development will be built in phases and, as a result, will be an active construction site throughout its early years of development. The Sustainability Strategy focuses on maintaining a high level of outdoor environmental quality both during construction and after project completion.

This section does not directly address tenant fit-out because of the challenges in communicating and enforcing tenant requirements at this level. Many health and wellness controls and improvements for tenant spaces are covered by CALGreen and LEEDv4, which are anticipated to apply to the Mission Rock development.

#### ACTIVE DESIGN

Active design encourages stair climbing, walking, bicycling, transit use, active recreation, and healthy eating. A growing body of research suggests that evidence-based architectural and urban design strategies can increase occupants' regular physical activity and healthy food choices. Designing the Mission Rock site from a blank slate provides a series of unique opportunities to address physical activity across the entire site and connections to the rest of the city.

The Mission Rock district includes eight new acres of parks and open spaces which include walking and bike trails, as well as programmed open spaces such as Little Giants Field and other sports areas. In addition, the development is adjacent to many existing surrounding recreational opportunities, including parks, playgrounds, boating, and, sports fields.

Site-wide active design strategies are recorded in the DCDG, and include integration with the Blue Greenway that runs along the waterfront, a baseball diamond, multi-use open-space, and water access for recreation. The street design for Mission Rock also encourages many transportation modes and emphasizes walking

and cycling. The cycling paths on site connect to the larger citywide cycling network. A bikeshare station will be located on site as part of the existing program.

Vertical developers also play a role in encouraging active use of the site. Designing staircases as a prominently visible, unlocked, and well daylit amenity encourages occupants to use stairs instead of elevators for vertical circulation.

#### OUTDOOR ENVIRONMENTAL QUALITY

The Mission Rock development will remain an active construction site after the first commercial, retail and residential occupants move onto the site. The Sustainability Strategy focuses on maintaining a high level of environmental quality during construction. Reducing pollution from construction activity minimizes environmental impacts and improves construction side-effects for both workers and local inhabitants.

Construction pollutants originate from a variety of activities: machines and equipment, building materials, site conditions, and human behavior. All project teams will be expected to develop and implement a construction activity pollution prevention plan (CAPP) that addresses emissions from construction activities, including light pollution, equipment emissions, dust and odor control, and noise control. Pollution should be defined broadly to address a variety of construction-related issues, from airborne particulates to noise control.

For construction lighting, OSHA sets standards to ensure safe working conditions for construction

workers. Temporary lighting installed on timers or manual scheduling will reduce light pollution on site. Construction managers and contractors will select energy efficient equipment for temporary lighting, site lighting, and heating, with turn-off power to non-critical equipment and lighting during non-construction hours.

Tier 4 or higher engines and limited truck and equipment idling minimizes emissions on site. Water spraying for dust control, covering powder materials, and capturing dust before it leaves the site will reduce the airborne particulates from site work before they leave the site.

#### DAYLIGHT AND VIEWS

Access to daylight regulates circadian rhythms and production of serotonin and melatonin, which modulate sleep patterns, energy and psychological moods. Providing views of nature has been associated with reductions in stress through physiological changes in cortisol levels, blood pressure, and heart rates.

For the Mission Rock site, individual buildings will take advantage of the extensive open space on site by maximizing daylight and views out while minimizing the risk of glare for occupants within the buildings. Careful coordination between the daylight and electric lighting strategies will ensure that users maintain a connection to the outdoors through daylit spaces. While improving occupant satisfaction, daylight also reduces electric lighting use during daylight hours, contributing to energy savings in the buildings.

## REQUIREMENTS

Provide a construction activity pollution prevention plan (CAPP) that addresses the following issues:

### CONSTRUCTION LIGHT POLLUTION

Lighting shall be controlled by timers or scheduled manual switching to turn off the lighting when it is not required.

### TEMPORARY LIGHTING EFFICIENCY

LED lighting shall be used for any temporary lighting during and after construction.

### CONSTRUCTION EQUIPMENT EMISSIONS

Have a policy in place that limits vehicle and equipment idle time to no more than 5 minutes in any hour long period. All construction equipment on site shall have Tier 4 or higher engines.

### DUST AND ODOR CONTROL

Spray down site work, equipment, and vehicles with water for dust control. Cover powdered materials and provide walk-off mats. Recycled water shall be used for all dust control unless it is legally unfeasible to do so.

### DUST CONTROL WITH NON-POTABLE WATER

If feasible, the contractor should use on-site recycled water from the Mission Rock graywater treatment facility before using other sources non-potable water.

### GENERATOR CONTROLS

Any temporary generators used on site shall have a Tier 4 or higher rating.

## RECOMMENDATIONS

### ACCESS TO DAYLIGHT & GLARE CONTROL

Create usable, glare free daylight by designing the building such that at least 50% of the area of the daylight zone achieves a spatial daylight autonomy of 50% (sDA(300/50%))\* . Design the building such that the daylight zone (25ft from the perimeter) has an annual sunlight exposure (ASE(1000/250))\* of less than 10%.

\*As defined in illumination engineering society (IES) LM-83-12

### ACCESS TO VIEWS

Provide access to exterior views for 80% of the floor area within the daylight zone.

### CONSTRUCTION LIGHT POLLUTION

In addition to timers, consider other lighting controls such as daylight and vacancy sensors. Construction light fixtures shall provide cut-off shielding to prevent uplighting.

### SMOKING PROHIBITION

Prohibit smoking or restrict to designated areas on site to reduce impact on other occupants.

### ACTIVE CIRCULATION

Provide staircases that allow occupants to easily travel between floors of the building. To ensure basic function, the stairs should remain unlocked and accessible to occupants. The stairs should incorporate features that make them more desirable to use, including daylight, high visibility from the building entrance, lighting equivalent to the rest of the building, and adequate signage.

### NATURAL VENTILATION

Provide operable windows in regularly occupied areas to enable natural ventilation when climate conditions allow. Consider eliminating mechanical cooling where possible.

### NOISE CONTROL

Identify sensitive areas adjacent to the site and establish construction work schedules to minimize disturbances. Organize construction sites to reduce movement alarms and vehicle traffic.

Encourage Manufacturer Transparency And Selection  
Of Low Impact Materials

\*

As a large development with a progressive sustainability agenda, Mission Rock has the ability to advance efforts in product transparency, and will leverage its position within the building industry to push manufacturers towards full life-cycle and chemical ingredient assessments of their products.

07

## SUSTAINABILITY MATERIALS

The contemporary definition of "sustainable building products" exceeds conventional notations of recycled content and regional sourcing to encompass the environmental and health impacts of building materials. A critical advancement in today's building industry, furthered by LEED version 4, is the call for manufacturers to publicly disclose information on the chemical content and manufacturing process of their products.

an emphasis on transparency for the largest material packages for horizontal development and core and shell vertical developers: concrete, steel, and insulation. Recommendations have also been included for tenant-selected materials such as interior finishes. The table to the left provides a summary of the certification bodies referenced in the Requirements and Recommendations of this section.

Similar to other sections, the sustainable material requirements for Mission Rock focus on the areas within horizontal and vertical developer control which will have the most significant environmental impact. This means

# MANUFACTURING PROCESS TRANSPARENCY

Building materials can heavily impact natural resources and the Mission Rock district must consider the full life-cycle of the materials included in its construction. Materials used for the horizontal and vertical core and shell development will account for the majority of the global warming potential associated with on-site materials and, for that reason, Mission Rock's material requirements in the Sustainability Strategy focus on minimizing this impact.

Steel and concrete will contribute to the majority of the global warming potential for the materials used in the horizontal development of site, roads and infrastructure. For vertical development steel and concrete account for over 1/3 of the global warming potential associated with a typical commercial building. An illustration of this breakdown can be seen in the diagram below.

## ENVIRONMENTAL PRODUCT DECLARATIONS (EPDS)

Multi-attribute product reports evaluate the full life-cycle environmental, health, and social impacts of a product, from extraction of raw materials and manufacturing processes, to the use disposal methods. They are becoming increasingly popular in the sustainable building industry.

An Environmental Product Declaration (EPD) is an intensive product certification based on a full life-cycle assessment of products surveying the global warming potential, ozone depletion and creation, water pollution, and greenhouse gas emissions. EPDs should not be used to compare different categories of products (i.e. steel vs concrete), but may be used to compare different manufacturers or suppliers of the same product (i.e. two different concrete manufacturers).

Mission Rock will prioritize large package products from manufacturers with publicly available EPDs and consider the global warming potential as a criteria alongside quality and cost when selecting a manufacturer. While products with EPDs may be limited, best practices in material selection policies should, at the very least, be followed by contractors on the Mission Rock site to minimize the development's environmental footprint:

- ▶ Select building products with high recycled or reuse content, biobased or rapidly renewable materials, FSC certified wood
- ▶ Prioritize products extracted, manufactured, and purchased within 100 miles of the site.
- ▶ Select products that are durable, easy to maintain, adaptable in use, and are recyclable or retrieved by the vendor after use.

FIGURE 7.1 Lifecycle Global Warming Potential by Building System in a typical U.S. Commercial Building

## MATERIAL INGREDIENTS

Only 15% of the 60,000 chemicals in use today have publicly available human health impact data and 65% of chemicals have no publicly available information. Hazardous chemicals can be categorized into various categories depending on the behavior of the compounds: persistent bioaccumulative toxins (PBTs) and volatile organic compounds (VOCs). The prevalence of these hazardous chemicals span across all categories of building products, from structural components to finishes and furnishings, harming both the environment and human health. To curb the manufacturing of products with toxins, leading organizations like the EPA and the Living Building Challenge have published "Red Lists" of hazardous chemicals.

The materials recommendations of the Sustainability Strategy include strategies to encourage increased manufacturer transparency with regard to product ingredients and provide a guideline for vertical developers and tenants to consider when selecting materials and finishes.

## REQUIREMENTS

### GLOBAL WARMING POTENTIAL: STEEL

- ▶ Request EPDs from steel manufacturers

### GLOBAL WARMING POTENTIAL: CONCRETE

- ▶ Require EPDs from all concrete manufacturers
- ▶ Review concrete EPDs and consider lower global warming potential as a criteria in selecting a concrete provider

### SUSTAINABLE MATERIAL CERTIFICATION BODIES

- ▶ Require contractors to provide subcontractors with list of certification bodies for materials as seen in Figure 7.2: Sustainable Material Certification Bodies

## RECOMMENDATIONS

### GLOBAL WARMING POTENTIAL

- ▶ Require EPDs from all steel manufacturers and consider lower global warming potential as a criteria in selecting a steel provider.
- ▶ Complete a Life Cycle Assessment (LCA) for concrete use and confirm at least a 10% reduction in global warming potential.
- ▶ Prioritize products with third-party verified Environmental Product Declarations (structural packages) and/or Cradle-to-cradle certifications (interior finishes and furnishings)
- ▶ Specify high recycled content and local (within 100 miles of the site) materials, rapidly renewable products, and FSC certified wood

### MATERIAL INGREDIENTS

- ▶ Request product Health Product Declarations (HPDs) and Prioritize products that disclose material ingredients and hazardous chemicals through Health Product Declarations.
- ▶ Prioritize finish products or furnishings with third-party certifications such as Greenguard, Floorscore, Greenlabel, Greenseal, and BIFMA Level Standard.
- ▶ Select products that minimize or replace PVCs, CPVCs, and neoprenes. Alternatives include copper, cast iron, HDPE, and ABS.
- ▶ Eliminate use of mercury, lead, cadmium and other heavy metals where possible

| Certification Bodies  |   |
|---|---|
|  | <b>ENVIRONMENTAL PRODUCT DECLARATION</b> An intensive product certification based on a full life-cycle assessment of products surveying the global warming potential, ozone depletion and creation, water pollution, and greenhouse gas emissions.  |
|  | <b>CRADLE TO CRADLE CERTIFICATION</b> An tiered product certification assessing five categories: material health, material reutilization, renewable energy and carbon management, water stewardship, and social fairness. This certification process is offered by MBDC, a global sustainability consulting and product certification firm. |
|  | <b>ECOLOGO</b> A multi-attribute, life-cycle based environmental certification body for products, services and packaging that assesses materials, energy, manufacturing, health and environment, product performance, use, and innovation.  |
|  | <b>SMART CERTIFIED</b> Comprehensive sustainable standards established for materials and products, including social impact. These comprehensive standards have been established by the Institute for Market Transformation to Sustainability.   |
|  | <b>BIFMA LEVEL CERTIFICATION</b> A third-party certification program for furniture that evaluates the following criteria: energy & atmosphere, human & ecosystem health, and social responsibility for all certified products.  |
|  | <b>HEALTH PRODUCT DECLARATION</b> A product transparency reporting tool issued by the HPD Collaborative that identifies the associated health effects of product material ingredients.  |
|  | <b>GREENSCREEN</b> A multilevel certification body that assesses hazardous chemicals within products. GreenScreen publishes the GreenScreen List Translator.  |
|  | <b>GREENGUARD</b> A performance-based standard to define products and processes with low chemical and particle emissions to achieve high indoor environmental quality indoors.  |
|  | <b>FLOORSCORE</b> A certifying body for hard-surface flooring and adhesives that meet strict indoor air quality requirements set forth by SCAQMD Rule 1113.   |
|  | <b>GREEN LABEL / GREEN LABEL PLUS</b> A certifying body for carpet emissions levels of TVOC, formaldehyde and other substances known to contribute to Sick Building Syndrome.   |
|  | <b>GREEN SEAL</b> A certifying body that evaluates the total environmental impact and health effects of a product, with periodic audits of manufacturing facilities.  |
|  | <b>DECLARE</b> A certifying body associated with the Living Building Challenge that reports the chemical ingredients of the product. DECLARE RED LIST has not red list chemicals.   |

FIGURE 7.2: Sustainable Material Certification Bodies

Provide Ecosystem Services Which Enhance The Outdoor  
Environment And Benefit Those On Site And Beyond

The open space design for the Mission Rock district contributes a number of essential ecosystem services to residents and visitors on the site. These include the provision of comfortable microclimates, access to nature and recreation, coastal protection, stormwater mitigation, and promotion of biodiversity.

These services are fundamental to the concept of a sustainable EcoDistrict as they benefit not only those directly on site, but also humans and species on neighboring sites. This is especially critical in a dense, urban environment such as downtown San Francisco.

The guidelines and recommendations for Mission Rock's open spaces have been captured in the Mission Rock Development Controls and Design Guidelines. This section of the Sustainability Strategy highlights the sustainability benefit that is provided by these guidelines.

08

## HABITAT & ECOSYSTEM FUNCTION

The Mission Rock development will support and further biophilic design for both the site and buildings. Biophilia is defined as humans' inherent affinity for nature and research increasingly shows that regular access to nature improves health, happiness and performance. Biophilic design principles include a broad variety of physical elements and spatial characteristics found in nature that can be applied in the built environment to elicit positive physiological, psychological and emotional outcomes for humans as well as other species. The strategies implemented on the Mission Rock site align with the City of San Francisco's 0-50-100-Roots framework aimed at protecting urban green spaces and improving San Francisco's urban forest and gardens. Other features of the Mission Rock site are described below.

#### COMFORTABLE MICROCLIMATES

Mission Rock's vegetated landscape offers a wide array of benefits from lowering heat island effects to creating comfortable areas of respite.

Introducing vegetation throughout the site reduces the heat island effect by shading pervious surfaces, limiting localized discomfort due to overheated concrete. The shading provided by trees creates variable microclimates. In addition, carefully located trees will act as windbreaks and provide sheltered gathering spaces in the open spaces and parks. The building heights, locations, and massing will be optimized to minimize overshadowing the central square and China Basin Park, and allow as much sunlight as possible to

reach the open space while reducing exposure to high winds from the Bay.

#### COASTAL PROTECTION

While all new building sites and infrastructure will be above the predicted 2100 sea level rise, the resilient waterfront park accommodates sea level rise through elevation change. The grade change in the parks and streets around the perimeter of the site acts as a buffer for storm surges and sea level rise. The plantings in the lower areas of the open space areas will be salt tolerant to protect them from potential intermittent seawater inundation.

#### ACCESS TO NATURE AND RECREATION

As a regional waterfront park, China Basin Park will be a model for sustainable ecological systems and management over time. Its active programming and location on the Bay will make it a learning environment where visitors can engage with the plants and animals that thrive in the local habitat.

The stormwater gardens integrated with the streets bring understory planting and habitat directly to the different program types and site visitors distributed throughout the entire project.

#### STORMWATER TREATMENT

Mission Rock's landscapes and building systems will

work together to detain and filter water to minimize impact on city infrastructure and improve water quality. The stormwater management infrastructure is integrated with the streetscape design and open space and serve as an amenity to site occupants and species. The stormwater gardens areas on site will accommodate treatment for all impervious surfaces within the development.

#### BIODIVERSITY

The low-maintenance native and regionally appropriate plantings on site will require minimal irrigation. Native or climate appropriate grasses, shrubs, and ground cover will provide as much species diversity as feasible in Mission Rock's planting areas. The rain gardens and bioswales will not only retain and filter rainwater, but provide comfortable and visually appealing outdoor environments for humans and wildlife. The green roofs, which reduce the heat island effect, promote biodiversity by providing both food and habitat for local bird species.

The landscape design and plant selection controls invasive species by limiting the opportunities for undesirable species to establish themselves. Landscaping is Bay-Friendly Rated to minimize opportunities for weed establishment and optimize other environmental benefits.

The San Francisco Plant Finder is a resource published by the City for finding plants adapted to microclimates throughout the city. The can be used to find appropriate and water saving plants for the Mission Rock site.

Create a Unique Identity and Sense of Place for  
the Mission Rock Development

The diverse mix of uses, careful street design, new parks and open space, will create a distinct identity for the Mission Rock development.

09

COMMUNITY  
IDENTITY

Mission Rock has a unique identity within the larger San Francisco context based on the ample open space, human scale oriented streetscapes, and mix of unique uses. A coherent identity contributes to a successful Type One Ecodistrict.

The neighborhood will have a complete set of uses where the commercial and residential areas directly

support the businesses, and the services available on site will make Mission Rock a desirable and distinctive place to live and work.

The unique features that contribute to the identity of the Mission Rock development are described in more detail in the Vision and Design Intent and Development Controls and Design Guidelines documents.

#### EQUITABLE DEVELOPMENT

Mission Rock will be an inclusive and diverse neighborhood with a mix of residential unit sizes, commercial uses, and retail services. The commercial space in the project will allow more businesses to locate in the city, increasing employment. At completion, the site will include around 1,500 residential units. To ensure the residential units will be available to a broad range of people, 40% of the units have been reserved for low and middle income residents.

The working waterfront adjacent to Pier 48 is reserved for production spaces that are struggling to find space along the waterfront in San Francisco. The waterfront zone will mix these production uses with pedestrian access to showcase the waterfront economy.

The retail spaces along the pedestrian streets and square are designed to enable and encourage local business to operate at the Mission Rock site by providing smaller, more affordable spaces. A diverse retail and service mix is critical to a vibrant and successful street culture.

#### OPEN SPACE

Open space is distributed throughout the site to serve both occupants of the Mission Rock site and visitors from the rest of the city. Mission Rock Square, located in the middle of the site, will be surrounded by active uses to ensure it acts as the focal point of the neighborhood, a community amenity and gathering space. The native and climate appropriate vegetation contributes to creating a sense of place for occupants and visitors.

China Basin Park, located along the north of the site and across McCovey cove, is a large waterfront park capable of accommodating many types and scales of gatherings and uses. The park will connect visitors and residents with the bay and shoreline.

The Mission Rock site fits into the Bay Trail System, linking the waterfront north of the ballpark with the cycling network below Mission Rock Street.

#### ACTIVE STREETS

The streets in the Mission Rock development are designed as a tight grid of walkable streets to serve as the setting for a vibrant and lively public life.

Sidewalks are generously sized to encourage businesses to spill beyond the building footprint and the diverse mix of retail storefronts, restaurants, and cafes ensure that the square and streets will have visitors throughout the day. The streets will include more smaller public Street Rooms defined by fixed and moveable furniture and plantings in order to foster social interaction. Vehicle access will be limited to prioritize pedestrians and cyclists, further cementing the development's identity as a community oriented project.

The high density retail, with regular access points, permeable storefronts, and transparency guarantee there will be regular "eyes on the street" which ensure the safety of residents and visitors. By creating an active and well-used site, residents are more likely meet and interact, creating resilient social networks.

#### WORKING WATERFRONT

The Mission Rock development includes a working waterfront along Terry Francois Boulevard for small scale industrial and production-related businesses. These uses are tied to the historic use of the site as a shipping terminal and industrial production site.

The historic Pier 48 will be preserved and upgraded to provide a new home for the expanded Anchor Brewing. Locating all of these production uses together creates the opportunity to share facilities such as loading facilities and truck access.

Most of the global climate change over the past 50 years is due to increases in greenhouse gas (GHG) emissions from sources originating from human activity, according to the Intergovernmental Panel on Climate Change (IPCC).

This global average warming causes changes to physical and biological systems that are detrimental to our environment and economic stability. Mission Rock intends to minimize its future GHG emissions through an innovative Transportation Demand Management strategy (TDM) and the purchase of on and off site renewable energy to offset operational GHG emissions for all of the buildings.

The expected greenhouse gas emissions (carbon dioxide equivalents or CO<sub>2</sub>e) have been assessed for Energy, Water, Transport and Waste for the proposed development at Mission Rock, based on the performance measures that are required by this Sustainability Strategy. These four key performance areas are quantifiable and can be translated to an equivalent impact on greenhouse gas (GHG) emissions.

# 10

## GHG EMISSION ASSESSMENT

#### METHODOLOGY

A methodology for accounting and reporting GHG emissions associated with the Mission Rock development was selected to estimate an equivalent GHG code compliant baseline based on the proposed masterplan and compare potential GHG emission reduction strategies to the GHG baseline in order to track projected GHG emission performance.

This GHG calculation is based on an independent and internationally vetted GHG accounting and reporting protocol, to ensure accuracy and transparency. Atelier Ten evaluated different GHG accounting and reporting protocols and the ICLEI U.S. Community Protocol was determined to be the most appropriate standard to assess the Mission Rock development because it provides guidance on quantifying GHG emissions across a community-wide scope. More information about the accounting methodology can be found in the appendix of this report.

#### NATIONAL AND LOCAL COMPARISONS

For this assessment, Mission Rock has been compared to a code-compliant equivalent development in San Francisco and also the US national average for greenhouse gas emissions. San Francisco, as a city, has significantly less greenhouse gas emissions per year than the national average. This is predominantly due to state regulations and the renewable component of the local energy supply.

#### TRANSPORTATION

San Francisco is predominantly a commuter city, so emissions associated with transportation in the City are only marginally different compared to a national case. On average, approximately 86% of national commuters use private vehicles to get to work, while 78% of Bay Area commuters use private vehicles (including carpoolers). The key impact is finding viable alternatives to the use of private vehicles, and by converting private vehicles to lower carbon fuel supply. The Mission Rock development is aiming to be better than a standard San Francisco development and strategies included in the transportation plan are expected to result in at least a 20% reduction in annual carbon emissions associated with transportation.

#### ENERGY

Due to progressive building codes in California (Title 24, including Part 6.11, and CALGreen) and San Francisco (SF Green Building Code) and local climate conditions, the energy use intensity of new buildings in San Francisco is significantly lower than the national average. In addition, electricity supplied to San Francisco is more than three times cleaner than the average energy supply in the US (due to contributions from renewable and hydroelectric power). This means that carbon emissions associated with energy use in San Francisco are already less than a quarter of the national average. The Mission Rock development looks to improve upon the city's leading emissions performance by requiring all energy used on site to come from 100% renewable sources, eliminating annual carbon emissions associated with operational energy use.

#### WASTE

Municipal solid waste diversion in San Francisco is about twice the national average, significantly decreasing the GHG emissions associated with landfill waste disposal. As there is still room for improvement in waste diversion, Mission Rock is targeting a further 10% reduction in annual carbon emissions associated with waste by increasing diversion; compared to the current San Francisco diversion rate of 80%.

#### WATER

Water contributes a relatively small percentage of the total GHG emissions both nationwide and in San Francisco. Carbon emissions result from conveyance and treatment. Water conservation is a critical local priority in San Francisco driven by resource scarcity, rather than carbon emissions. However, the exemplar strategies for water conservation and reuse proposed at Mission Rock are expected to result in up to 38% reduction in annual carbon emissions associated with water.

## CONCLUSION

For Mission Rock as a whole, the above performance factors combined contribute to an estimated 79% reduction in GHG emissions compared to the US national average. The Mission Rock development will result in an estimated 50% reduction in GHG emissions compared to a San Francisco code compliant development. These carbon emissions reductions may be further improved by the inclusion of the recommended measures detailed in this Sustainability Strategy.

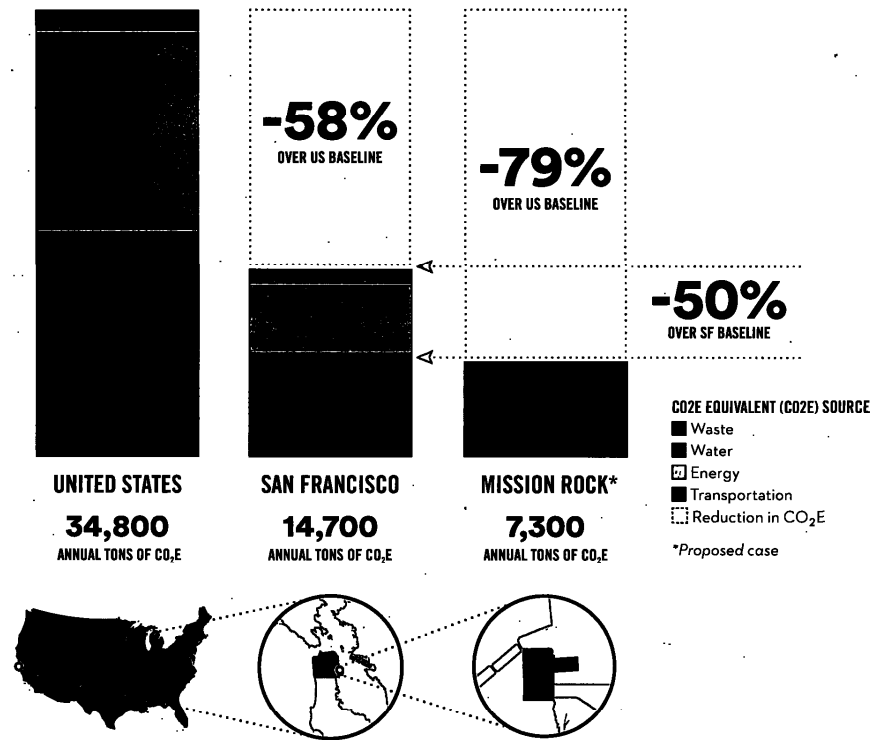

FIGURE 10.1: Site-Wide Carbon Footprint

## ENERGY & CARBON

The Mission Rock district has a goal of eliminating all GHG emissions from building operations by requiring that 100% of the site's operational energy demand be met by renewable sources.

Mission Rock requires the central energy plant (CEP) and all buildings on the Mission Rock site to offset their predicted energy use by purchasing on-site or off-site renewable energy infrastructure.

Bay source cooling at the Mission Rock CEP will minimize the energy demand for cooling across the entire site. Mission Rock's requirements for renewable energy investment is based on predicted energy use and will incentivize vertical developers to purchase energy efficiency measures. The Sustainability Strategy also outlines recommendations for tenants to further minimize energy use.

The graph below shows how operations for each building type contribute to carbon emissions before the purchase of renewable energy.

ENERGY CARBON EMISSIONS DISTRIBUTION BY BUILDING TYPE

## WATER & CARBON

The greenhouse gas (GHG) emissions associated with water primarily originate from the following water processes:

- ▶ Supply and conveyance
- ▶ Treatment to potable standards
- ▶ Municipal distribution
- ▶ End-use pumping
- ▶ Wastewater collection
- ▶ Conventional aerobic treatment

GHG emissions associated with water can be decreased by more than 38% through the use of bay source cooling, centralized graywater reuse, efficient fixtures and water efficient landscape design.

WATER CARBON EMISSIONS DISTRIBUTION BY BUILDING TYPE

## TRANSPORTATION & CARBON

The dominant mode of transportation in the area of San Francisco that contains the Mission Rock development is personal automobile. The design of the Mission Rock site is intended to encourage pedestrian use and alternative transportation through smaller city block, MUNI extensions, bicycle lanes, and an enhanced pedestrian realm.

A comprehensive transportation management plan further reduces vehicle miles traveled (VMT) for the site. The combination of the following strategies results in a reduction in carbon emission of 20% or more through reductions in automobile use:

- ▶ ease of access to public transit
- ▶ on-site bicycle amenities and a safe biking environment
- ▶ personal motorized transport
- ▶ parking management
- ▶ on-site amenities
- ▶ site-wide transportation services

## WASTE & CARBON

San Francisco has a goal of zero waste by 2020. Currently San Francisco diverts 80% of its waste from landfill.

However, over half of the material which goes into San Francisco's landfill bins can be recycled or composted. If all materials were sent to the proper bin San Francisco's waste diversion rate could increase to an overall landfill diversion rate of 90%.

Moving from an 80% diversion rate to a 90% diversion rate requires exemplary occupant participation in on-site waste separation. Mission Rock seeks to improve the on-site diversion rate through outreach, education and increased consumer responsibility. Specific measures to achieve this additional 10% reduction are outlined in the Waste section of the Sustainability Strategy.

## A2: GLOSSARY & TERMINOLOGY

| WORD / PHRASE    | DEFINITION / INFORMATION   |
|------------------|--|
| CALIFORNIA AB 32 | Set into law California State's GHG emissions reductions goals of returning to 1990 levels by 2020, and 80% below 1990 levels by 2050, through the development of discrete early action plans in the following areas: 1) transportation, fuels, and infrastructure, 2) energy generation, transmission and efficiency, 3) waste, 4) water, 5) agriculture, and 6) natural and working lands. |
| CARBON DIOXIDE   | A naturally occurring gas, and also a by-product of burning fossil fuels and biomass, as well as land-use changes and other industrial processes. It is the principal human caused greenhouse gas that affects the Earth's radiative balance. It is the reference gas against which other greenhouse gases are measured and therefore has a Global Warming Potential of 1.                   |
| CEP              | Central Energy Plant   |
| CO <sub>2</sub>  | Carbon Dioxide Equivalents: A metric measure used to compare the emissions from various greenhouse gases based upon their global warming potential (GWP). The carbon dioxide equivalent for a gas is derived by multiplying the tons of the gas by the associated GWP.   |
| EMISSION FACTOR  | A representative value that relates the quantity of a pollutant released to the atmosphere with an activity associated with the release of that pollutant  |

| WORD / PHRASE                  | DEFINITION / INFORMATION  |
|--------------------------------|---|
| FUGITIVE EMISSION              | Emissions of gasses or vapors from pressurized equipment due to leaks and other unintended or irregular releases of gases, mostly from industrial activities  |
| GLOBAL WARMING POTENTIAL (GWP) | A relative measure of how much heat a greenhouse gas traps in the atmosphere as compared to the amount of heat trapped by a similar mass of carbon dioxide. Expressed as a factor of carbon dioxide.  |
| GHG                            | Greenhouse Gas. Any gas that absorbs infrared radiation in the atmosphere. Greenhouse gases include, carbon dioxide, methane, nitrous oxide, ozone, chlorofluorocarbons, hydrochlorofluorocarbons, hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride. |
| GREENHOUSE GAS PROTOCOL        | The most widely used international accounting tool for government and business. Developed by the World Resource Institute (WRI) and World Business Council for Sustainable Development (WBCSD)  |

## A3: CODES & STANDARDS

### CALIFORNIA CODE

California Code of Regulations, Title 24, Green Building Standards

Part 6 - California Energy Code

Part 11 - California Green Building Standards Code (also referred to as CALGreen)

AB 32: California Global Warming Solutions Act of 2006, Reduce GHG emissions to 1990 levels by 2020

### ENTITLEMENTS

Environmental Impact (EIR)

Soil Management Plan (SMP)

### STORMWATER & WATER REUSE

San Francisco Stormwater Requirements and Design Guidelines

San Francisco (City and County): Recycled Water Ordinance
