[Building Code - Earthquake Performance Evaluation of Private School Structures]

Ordinance amending the Building Code to require that existing private elementary and secondary schools obtain an evaluation by a licensed structural engineer for performance during a future earthquake, to assess a fee for Building Department review and related evaluation processing, to exempt certain buildings from the evaluation requirements, to provide that buildings where voluntary seismic retrofit work is done to specified standards shall not be identified as a seismic hazard under later-enacted local building standards, and to require that a building changing to a school occupancy classification comply with the evaluation requirements; making environmental findings and findings under the California Health and Safety Code; and directing the Clerk of the Board of Supervisors to forward this Ordinance to the California Building Standards Commission upon final passage.

NOTE: Unchanged Code text and uncodified text are in plain Arial font.
Additions to Codes are in single-underline italics Times New Roman font.
Deletions to Codes are in ~~strikethrough italics Times New Roman font~~.
Board amendment additions are in double-underlined Arial font.
Board amendment deletions are in ~~strikethrough Arial font~~.
Asterisks (* * * *) indicate the omission of unchanged Code subsections or parts of tables.

Be it ordained by the People of the City and County of San Francisco:

Section 1. General Findings.

(a) The Planning Department has determined that the actions contemplated in this ordinance comply with the California Environmental Quality Act (California Public Resources Code Sections 21000 et seq.). The Board of Supervisors hereby affirms this determination. Said determination is on file with the Clerk of the Board of Supervisors in File No. 140120 and is incorporated herein by reference.

1 (b) Pursuant to Charter Section D3.750-5, the Building Inspection Commission
2 considered this ordinance on February 19, 2014 at a duly noticed public hearing.
3

4 Section 2. Findings under the California Health and Safety Code. The Board of
5 Supervisors hereby finds that this ordinance does not modify a State "building standard," as
6 that term is defined in Section 18909 of the California Health and Safety Code. Therefore, the
7 finding of local climactic, geological, or topographical conditions required by Sections 18941.5
8 and 17958.7 is not required.
9

10 Section 3. Specific Findings. The Board of Supervisors hereby finds and declares as
11 follows:

12 (a) In Section 19160 of the California Health and Safety Code, the Legislature
13 declared that because of the generally acknowledged fact that California will experience
14 moderate to severe earthquakes in the foreseeable future, increased efforts to reduce
15 earthquake hazards should be encouraged and supported. Section 19161 authorizes each
16 city, city and county, or county to assess the earthquake hazard in its jurisdiction and identify
17 buildings that may be potentially hazardous to life in the event of an earthquake.

18 (b) In December 2004, the California Seismic Safety Commission (SSC) issued a
19 report on "Seismic Safety in California's Schools," which contains Findings and
20 Recommendations on Seismic Safety Policies and Requirements for Public, Private, and
21 Charter Schools. The SSC report was made in response to inquiries from members of the
22 Legislature, the public and parents, and to concerns about the risks posed by older school
23 buildings, the different seismic standards for public, private and charter schools, and the
24 safety of buildings converted to school use.
25

1 (c) The data collected by the SSC for its 2004 report showed that almost 9% of
2 California's school children attended private schools, ten counties had more than 10% of their
3 total students enrolled in private schools, and of these ten counties San Francisco was the
4 highest at 29.1%. Because under State law private schools are not required to meet the
5 stringent safety requirements of public schools unless they are new buildings or have been
6 extensively remodeled, private schools pose a greater risk than comparably aged public
7 schools in a future moderate or large earthquake.

8 (d) San Francisco's Community Action Plan for Seismic Safety and Earthquake Safety
9 Implementation Program.

10 (1) On October 17, 2011, the Office of the Mayor released the first draft of the
11 City's Earthquake Safety Implementation Program (ESIP), which is a 30-year Workplan to
12 update building codes, retrofit privately-owned buildings, and prepare for post-disaster
13 recovery that encompasses 50 objectives with the goal of making San Francisco as safe as it
14 can be before the next earthquake hits.

15 (2) The ESIP Workplan is based upon, and incorporates the goals and
16 recommendations of, the Community Action Plan for Seismic Safety (CAPSS) that was
17 unanimously endorsed in December 2010 by an advisory group of over 60 representative
18 stakeholders, community leaders, professional experts, and City officials. The CAPSS
19 program was developed over a ten-year period, resulting in agreement upon acceptable
20 earthquake impacts for San Francisco and, through dozens of meetings and workshops,
21 development of a plan to achieve the City's resilience goals.

22 (3) The CAPSS recommendations are consistent with the proposed goals and
23 policies of the Resilient City initiative, a multi-year study program by San Francisco Planning
24 and Urban Research Association's (SPUR), as well as the Planning Department's Community
25 Safety Element and the City's Hazard Mitigation Plan.

1 (e) The first legislative enactment under the ESIP was an ordinance mandating the
2 seismic retrofit of certain wood-frame buildings in San Francisco, which was approved by the
3 Mayor on April 18, 2013 (Ordinance No. 66-13). The next category of buildings to be
4 evaluated under the ESIP is private elementary and secondary (K-12) schools.

5 (f) Among California towns and cities, San Francisco has the highest percentage of
6 children attending private schools. Since the collapse of or extensive damage to even a few
7 schools is an unacceptable risk, it is essential that all private schools be evaluated to assess
8 their ability to perform in an earthquake.

9 (g) A Private Schools Earthquake Working Group was formed under the ESIP to study
10 the issue of the seismic safety of private schools in San Francisco. It met for over a year, with
11 publicly-noticed open meetings. In its December 31, 2013 report entitled "Earthquake Risk
12 and San Francisco's Private Schools," the Working Group found that:

13 (1) San Francisco's private school buildings appear to have approximately
14 double the risk of the City's public school buildings in future earthquakes;

15 (2) 43% of the City's private school buildings have characteristics that indicate
16 they are likely to perform well in future earthquakes;

17 (3) 33% of the City's private school buildings have characteristics that indicate
18 they might perform poorly in future earthquakes; and

19 (4) for 24% of the City's private school buildings, the Working Group did not
20 have enough information to determine likely seismic performance in future earthquakes.

21 (h) As the next phase in the City's implementation of its program for earthquake
22 preparedness and post-earthquake resilience, this ordinance mandates that all private
23 elementary and secondary schools in San Francisco obtain an evaluation of structural safety
24 and be rated for performance during a future earthquake.
25

(i) In 2013 The Board of Supervisors unanimously approved legislation to expand the City's existing GreenFinanceSF program to provide public financing for commercial property owners to conduct both voluntary and mandatory seismic upgrades. This Mello-Roos style funding program allows property owners to repay their loan in the form of special tax financing assessments.

Section 4. The Building Code is hereby amended by adding Sections 3428, 3428.1, 3428.2, 3428.3, 3428.4, 3428.5, 3428.6, 3428.7, and 3428.8, to read as follows:

Chapter 34

EXISTING STRUCTURES

* * * *

SECTION 3428 – EARTHQUAKE EVALUATION OF PRIVATE SCHOOL STRUCTURES

3428.1 General. Every building classified as an Educational Group E occupancy under section 305 of this code that is not under the jurisdiction of the Division of State Architect's Structural Safety section, and all non-building structures accessory to such buildings, shall be evaluated in accordance with the provisions of this Section 3428. All evaluations required by Section 3428 shall be conducted under the supervision of a licensed structural engineer.

Exceptions:

1. Evaluation is not required for buildings occupied by 25 or more persons for less than 12 hours per week or four hours in any given day.
2. Evaluation is not required for schools with an enrollment of 25 or fewer students.
3. Evaluation is not required for buildings not classified as Group E occupancy such as churches, accessory residential buildings or similar non-educational uses.

1 **Section 3428.1.1. Retroactivity.** The requirements of Section 3428 are retroactive and shall apply to all
2 buildings and non-building structures within the scope of Section 3428 that are in existence as of the
3 effective date of Section 3428 regardless of the date of construction.

4
5 **3428.2 Scope and Criteria.** Each building and non-building structure shall be evaluated using ASCE
6 41-13 with the evaluation objective of Structural Life Safety with the BSE-1E hazard and Nonstructural
7 Life Safety with the BSE-1E hazard as modified by an Administrative Bulletin to be adopted by the
8 Department. An Evaluation required by Section 3428 shall not in itself trigger any additional non-
9 earthquake related work.

10
11 **3428.3 Evaluation Scope Submittal.** Within one year of the effective date of Section 3428, the building
12 owner or the owner's authorized agent shall submit to the Department an Evaluation Scope document
13 listing each structure to be evaluated, the evaluation objective to be applied, and other information
14 requested by the Department.

15
16 **3428.4 Evaluation Report Submittal.** No later than three years after the effective date of Section 3428,
17 the building owner or the owner's authorized agent shall submit an Evaluation Report to the
18 Department. The Evaluation Report shall conform to content and format requirements provided in the
19 Administrative Bulletin adopted by the Department pursuant to Section 3428.6.

20
21 **3428.5 Minimum Life-Safety Retrofit.** For a period of 20 years after the effective date of Section 3428,
22 any building or non-building structure within the scope of Section 3428 for which voluntary seismic
23 strengthening is performed that meets or exceeds the criteria of ASCE 41-13, S-3 N-C with the BSE-1E
24 hazard shall not be identified as a seismic hazard pursuant to any local building standards adopted
25 after the effective date of Section 3428 unless the building incurred disproportionate damage, or

1 otherwise has been damaged or altered so that it no longer meets the engineering criteria under which
2 it was retrofitted.

3
4 **3428.6 Administrative Bulletin.** The Department shall prepare an Administrative Bulletin detailing the
5 procedural implementation requirements for this Section 3428.

6
7 **3428.7 Enforcement.** Buildings and non-building structures in violation of this Section 3428 may be
8 considered to be unsafe. The Department may apply the provisions of Section 102A, including 102A.13,
9 Repair and Demolition Fund, in remedying such unsafe conditions. Enforcement action may be
10 initiated by the Department for failure to comply with any of the requirements of Section 3428,
11 including failure to submit an Evaluation Scope document or Evaluation Report within the time
12 designated by Sections 3428.3 and 3428.4.

13
14 **3428.8 Fees.** Fees based on standard hourly rates in accordance with the SFBC Table 1-A-D –
15 Standard Hourly Rates shall be charged to compensate the Department for review and for related
16 evaluation processing.

17
18 Section 5. The Building Code is hereby amended by revising Section 3408.4.1, to read
19 as follows:

20 **3408.4.1 Change of occupancy.** In addition to the other requirements of this code, the term
21 “comply with the requirements of this code for such division or group of occupancy,” as used
22 in this section, shall also mean compliance with the lateral force provisions of Section 3401.10
23 when the change results in an increase of more than 10 percent in the occupant load of the
24 entire building or structure, and which also increases the occupant load by more than 100
25 persons as compared to the occupant load of the existing legal use or the use for which the

1 building was originally designed. A building changing occupancy to an E occupancy shall comply
2 with Section 3428.

3
4 Section 6. City Outreach and Assistance. The City shall develop a program focused on
5 providing case management to school building owners, schools, and parents through
6 providing technical information, identifying resources, and assisting schools and school
7 building owners to comply with the requirements of Section 3428. Among other functions, this
8 program will serve as a resource for parents, school building owners, and schools – especially
9 those schools leasing their space – by providing the status of evaluations, assistance in
10 completing evaluations, and any information related to seismic work and potential building
11 impacts and costs.

12
13 Section 7. Inter-departmental working group. The City shall convene an inter-
14 departmental working group of all agencies involved in the building permit approval process to
15 assist with expediting and prioritizing permits for those seeking to comply with section 3428.5,
16 and to the extent allowable by law help alleviate the requirements for any non-seismic related
17 work required, including State and Federal mandates as well as any work subject to local
18 discretion including but not limited to the Unreasonable Hardship provisions of Chapter 11B of
19 the San Francisco Building Code.

20
21 Section 8. Evaluations, plans, supporting documents and other materials are subject to
22 the standard procedures for making such information available as directed by the
23 Department's Records Management Division.
24
25

1 Section 9. Effective Date. This ordinance shall become effective 30 days after
2 enactment. Enactment occurs when the Mayor signs the ordinance, the Mayor returns the
3 ordinance unsigned or does not sign the ordinance within ten days of receiving it, or the Board
4 of Supervisors overrides the Mayor's veto of the ordinance.

5
6 Section 10. Scope of Ordinance. In enacting this ordinance, the Board of Supervisors
7 intends to amend only those words, phrases, paragraphs, subsections, sections, articles,
8 numbers, punctuation marks, charts, diagrams, or any other constituent parts of the Municipal
9 Code that are explicitly shown in this ordinance as additions, deletions, Board amendment
10 additions, and Board amendment deletions in accordance with the "Note" that appears under
11 the official title of the ordinance.

12
13 Section 11. Directions to Clerk. The Clerk of the Board of Supervisors is hereby
14 directed to forward a copy of this ordinance to the California Building Standards Commission
15 upon final passage.

16
17 APPROVED AS TO FORM:
18 DENNIS J. HERRERA, City Attorney

LEGISLATIVE DIGEST

[Building Code - Earthquake Performance Evaluation of Private School Structures]

Ordinance amending the Building Code to require that existing private elementary and secondary schools obtain an evaluation by a licensed structural engineer for performance during a future earthquake, to assess a fee for Building Department review and related evaluation processing, to exempt certain buildings from the evaluation requirements, to provide that buildings where voluntary seismic retrofit work is done to specified standards shall not be identified as a seismic hazard under later-enacted local building standards, and to require that a building changing to a school occupancy classification comply with the evaluation requirements; making environmental findings and findings under the California Health and Safety Code; and directing the Clerk of the Board of Supervisors to forward this Ordinance to the California Building Standards Commission upon final passage.

Existing Law

Among other things, the Building Code regulates and controls the design, construction, use and occupancy, location, maintenance and demolition of buildings and structures. Chapter 34 deals with additions, alterations, or repairs to existing structures. Public schools are regulated by the State but private schools are under the jurisdiction of the local Building Department.

Amendments to Current Law

The proposed ordinance adds Section 3428 to Chapter 34 of the Building Code to require certain private elementary and secondary schools (K-12) in San Francisco to be evaluated by a licensed structural engineer in order to assess how they are expected to perform in a future earthquake. Section 3408.4.1 is amended to require any building that changes its occupancy class to a private school use to comply with the requirements. Evaluations are not required for buildings occupied by 25 or more persons for less than 12 hours per week or four hours in any given day, for schools with an enrollment of 25 or fewer students, or for buildings such as churches, accessory residential buildings or similar non-educational uses.

Within one year of the effective date of the ordinance, the building owner or owner's agent must submit an Evaluation Scope document to the Department of Building Inspection ("DBI") that lists each structure to be evaluated, the evaluation objective to be applied, and other information requested by DBI. An Evaluation Report must be submitted not later than three years from the ordinance's effective date. Evaluations, plans, supporting documents and other materials are subject to the standard procedures for making such information available as directed by DBI's Records Management Division.

The Department's standard hourly rates will be charged to compensate the Department for review and related evaluation processing. Buildings and non-building structures in violation of the evaluation requirements may be considered to be unsafe and are subject to enforcement action. If a property owner chooses to perform voluntary seismic strengthening work that meets or exceeds specified criteria, the building undergoing the retrofit shall not be identified as a seismic hazard pursuant to any local building standards adopted within a period of 20 years after the effective date of the ordinance unless the building incurred disproportionate damage, or otherwise has been damaged or altered so that it no longer meets the engineering criteria under which it was retrofitted.

The ordinance mandates the City to develop an outreach and assistance program focused on providing case management to school building owners, schools, and parents through providing technical information, identifying resources, and assisting schools and school building owners to comply with the requirements. The City is also required to convene an inter-departmental working group of all agencies involved in the building permit approval process to assist with expediting and prioritizing permits for those seeking to perform voluntary seismic strengthening work on their buildings and, to the extent authorized by law, to help alleviate the requirements for any non-seismic related work that may be required.

Background Information

In Section 19160 of the California Health and Safety Code, the State Legislature declared that because of the generally acknowledged fact that California will experience moderate to severe earthquakes in the foreseeable future, increased efforts to reduce earthquake hazards should be encouraged and supported. Section 19161 authorizes each city, city and county, or county to assess the earthquake hazard in its jurisdiction and identify buildings that may be potentially hazardous to life in the event of an earthquake.

In December 2004, the California Seismic Safety Commission (SSC) issued a report on "Seismic Safety in California's Schools," containing Findings and Recommendations on Seismic Safety Policies and Requirements for Public, Private, and Charter Schools. The data collected by the SSC for the report showed that 10 counties had more than 10% of their students enrolled in private schools, and of these 10 counties San Francisco was the highest at 29.1%. Because private schools are not required to meet the safety standards of public schools unless they are in new or extensively remodeled buildings, the SSC found that they posed a greater risk in a future moderate or large earthquake if housed in older buildings.

On October 17, 2011, the Office of the Mayor released the first draft of the City's Earthquake Safety Implementation Program (ESIP), which is a 30-year Workplan to update building codes, retrofit privately-owned buildings, and prepare for post-disaster recovery that encompasses 50 objectives with the goal of making San Francisco as safe as possible before the next earthquake hits. The ESIP Workplan is based upon, and incorporates the goals and recommendations of, the Community Action Plan for Seismic Safety (CAPSS) that was unanimously endorsed in December 2010 by an advisory group of over 60 stakeholders,

community leaders, professional experts, and City officials. The CAPSS program was developed over a 10-year period, resulting in agreement upon acceptable earthquake impacts for San Francisco and, through dozens of meetings and workshops, development of a plan to achieve the City's resilience goals. The CAPSS recommendations coordinate with the proposed goals and policies of the Resilient City initiative, a multi-year study program by San Francisco Planning and Urban Research Association's (SPUR), as well as the Planning Department's Community Safety Element and the City's Hazard Mitigation Plan. The first legislative enactment under the ESIP was an ordinance mandating the seismic retrofit of certain wood-frame buildings in San Francisco, which was finally passed by the Board of Supervisors on April 9 and approved by the Mayor on April 18, 2013.

A Private Schools Earthquake Working Group was formed under the ESIP to study the issue of the seismic safety of private schools in San Francisco. It met for over a year, with publicly-noticed open meetings. A special effort was made to encourage representatives of private schools to attend the meetings. The Group found that: while San Francisco's private school buildings appear to have about double the risk of the City's public school buildings in future earthquakes, (1) 43% have characteristics indicating that they are likely to perform well in future earthquakes; (2) 33% have characteristics indicating that they might perform poorly in future earthquakes; and (3) for 24%, there was not enough information to determine their likely seismic performance in future earthquakes. As the next phase in implementation of the City's program for earthquake preparedness and post-earthquake resilience, this ordinance mandates that all private elementary and secondary schools in San Francisco obtain an evaluation of their structural safety and ability to perform during a future earthquake.

Seismic Safety in California's Schools

EXECUTIVE SUMMARY

The California Seismic Safety Commission has responded to inquiries from members of the Legislature, the public, and parents about the seismic safety requirements for schools in California. Concerns have been raised about the risks posed by older school buildings, the different seismic standards for public, private and charter schools, and the safety of buildings converted to school use. The public concern was increased when a pre-Field Act California public school, seismically retrofitted in 1959, was damaged in the moderate December 22, 2003 San Simeon earthquake. A common theme in these questions is that parents have a right and a desire to know if their children's schools, whether public, private or chartered, are safe. A review of policies and standards was conducted and this report was developed to answer these questions.

The Field Act was enacted on April 10, 1933, one month after the Long Beach Earthquake in which many schools were destroyed or suffered major damage. Since the passage of the Field Act, Californians have expected that their children would be safe if an earthquake occurred while they were attending school. To a very great extent their expectations are being met. This report considers those situations where schools may fall short of our expectations. The goal of this investigation is to ensure that similar seismic safety be provided to all school children in California, whether they attend public, private or charter schools in new or old buildings.

The review detailed in this report found that several issues impact the relative seismic safety of school children in California. The principal findings are:

- In any community, public schools constructed under the Field Act after 1978 are likely to be among the safest buildings in which to experience a major earthquake;
- Private schools are not required by law to meet the Field Act standards, and therefore are not likely to be as safe as public schools of similar age;
- Private schools located in older buildings can pose a serious risk to the life-safety of their students. The full extent of the problem cannot be assessed because of the lack of information about historical regulation and enforcement during design and construction of private school buildings. No survey has been done for private schools. In some jurisdictions, no special provisions for private school safety may be in force because of the confusion about the applicable regulations;
- Certain older public school buildings may not be as safe as modern buildings and have the potential to be a life-safety risk to their occupants, because they were constructed to pre-1978 building code standards;
- Only some charter school buildings are subject to the Field Act provisions. What rules do apply when the Field Act does not is unclear to many school and building officials;
- Non-structural components that are not anchored or braced in older schools, public, private and charter, such as mechanical, electrical and architectural elements, can pose significant life-safety risks;
- No regulations cover the anchoring and bracing of the contents of buildings installed after construction is complete. These contents, if not properly secured, can pose significant risks of injury and possibly death to students even in recently constructed public school buildings.

The Commission recognizes that only limited governmental funding is available and has focused its recommendations on little-or no-cost steps that can improve school safety now and provide information to policy makers that could be used to establish priorities for later funding. The Commission recommends that the State undertake several actions to reduce the risk faced by our children. These are:

- Complete the process of rating the seismic safety of existing public and private school buildings constructed prior to 1978 and 1986, respectively. About 7500 public school buildings were rated as potentially at risk by the Division of the State Architect (DSA) in a study mandated by AB 300 (Chapter 62, Statutes of 1999). Current ratings of seismic safety should be required for all existing schools and whenever a building is converted to public, private, or charter school use. Explore options, such as interactive websites, for disseminating the resulting ratings to interested parties, including parents. This seismic safety rating should be given to prospective parents when they apply to a public, private, or charter school;
- Modify the Private Schools Building Safety Act and Charter School Act to clarify seismic safety provisions. This could be done at minimal cost to the taxpayers and need not wait until better economic times;
- Provide education and training to local jurisdictions to improve consistency and enforcement of the current building codes and regulations. Provide training for private and charter schools to help them understand how to ensure seismic safety in their buildings, especially the benefits of building or retrofitting to the current Field Act standards;
- Explore options for funding the seismic upgrading of the public schools identified as hazardous under AB 300, and support private schools in their efforts to improve the seismic safety of their buildings. If retrofitting is not financially feasible, provide disclosure of risks;
- Include in the seismic safety ratings for all schools the potentially hazardous architectural, electrical and mechanical elements that are not anchored or braced and develop and apply mitigation guidelines;
- Regulate and enforce securing of school contents. Mandatory regulations could be enforced by local fire departments as part of their annual fire inspection of public schools.

INTRODUCTION

In response to damage to school buildings in recent earthquakes, the California Seismic Safety Commission established a Committee to determine and report to the Commission the standards for seismic safety that are currently applied to public, private and charter schools in the State of California. The committee held six meetings and received testimony from the Division of State Architect and the building officials from seven Californian communities. The goal was an in-depth look at the earthquake-resistant building design and construction policies for schools, in order to provide legislators and decision makers

enough information to determine if additional legislation is required to protect the safety of California's schoolchildren. The Committee also considered how to help parents judge if there is a significant difference in earthquake risk to their children among the various choices they may have for schools (public, private or charter). The report considers the risks posed by new construction, existing buildings of differing ages, and the contents of the buildings for public, private, and charter schools. The Committee received input from the Office of the Secretary for Education, Office of the State Superintendent of Public Instruction, California Association of Private School Organizations (CAPSO), California Catholic Conference (CCC), State Superintendents of Private Schools Advisory Committee (PSAC), California Charter Schools Association (CCSA), and Western Association of Schools and Colleges-Western Region Joint Accreditation of Public and Private Schools (WASC).

This school building collapsed when a 5.4-magnitude earthquake struck San Giuliano Di Puglia in Italy in October 2002.

DISTRIBUTION OF K-12 SCHOOLS IN CALIFORNIA

In the 2003-2004 school year, almost 9% of California's school children attended private schools and that percentage exceeded 15% in some counties. In addition, charter schools in California served 2.2% of our students and some of these schools are not covered by public school regulations. The distribution of students in these three types of schools is shown below.

Type of K-12 Schools	Number of Schools	Enrollment
Public	9,221	6,298,769
Private >25 Enrollment	2,755	586,764
Private >5<26 Enrollment	996	12,841
Charter Schools	443	164,798

Data compiled by DataQuest and the Specialized Programs Division, California Department of Education (CDE), 2004 (www.cde.ca.gov). This table includes only private schools with enrollment of at least six or more students.

Students in private schools accounted for 8.7% of the total 2003-2004 enrollment of schools. Almost 64% of the students enrolled in private schools attended church-affiliated schools. Counties having more than 10% of their total students enrolled in private schools in 2003-2004 were: Alameda (11.8), Contra Costa (10.3), Los Angeles (10.5), Marin (19.7), Napa (13.4), Orange (10.1), San Francisco (29.1), San Mateo (15.4), Santa Clara (12.4), and Santa Cruz (11.2).

CONSTRUCTION OF NEW SCHOOLS

The seismic safety standards for construction of new private schools are not as stringent as those for new public schools. Public school construction has been governed by the Field Act since 1933 and enforced by the Division of the State Architect. There were no special standards for construction of private schools before 1986. Since then, their construction has been governed by the Private School Act and enforced by local jurisdiction building departments. The two processes will be discussed separately.

Public Schools and the Field Act. The Field Act was enacted on April 10, 1933, one month after the Long Beach earthquake in which 70 schools were destroyed, 120 schools suffered major damage, and 300 schools received minor damage. Since: (a) public schools are funded with public money, (b) schools house the children of the electorate, and (c) the State Constitution requires children to attend schools, the state is liable and thus responsible for protecting children and staff from injury in public schools grades K-12 and community colleges, and for protecting the public's investment in school buildings during and after earthquakes.

Public school damaged in the 1933 Long Beach earthquake.

The Field Act requires:

- School building construction plans be prepared by qualified California licensed structural engineers and architects;
- Designs and plans be checked by the Division of the State Architect (DSA) for compliance with the Field Act before a contract for construction can be awarded;
- Qualified inspectors, independent of the contractors and hired by the school districts, continuously inspect construction and verify full compliance with plans;
- The responsible architects and/or structural engineers observe the construction periodically and prepare changes to plans (if needed) subject to approval by DSA;
- Architects, engineers, inspectors and contractors file reports, under penalty of perjury, to verify compliance of the construction with the approved plans emphasizing the importance of testing and inspections to achieve seismically safe construction. Any person who violates the provisions or makes any false statement in any verification report or affidavit required pursuant to the Act, is guilty of a felony.

Private Schools and the Private Schools Building Safety Act. Private schools are not subject to the Field Act and fall solely under the jurisdiction of the local building departments and their requirements. Private schools are covered under the Private Schools Building Act of 1986, with the legislative intent that children attending private schools be afforded life safety protection similar to that of children attending public schools.

The Private Schools Building Safety Act requires:

- School construction plans be prepared under the responsible charge of California-licensed architects, civil engineers or structural engineers;
- Designs and plans be checked by the enforcement agencies using structural engineers, either on staff or under contract, that are responsible for all design review;
- During construction or alteration of a school structure, special inspections by qualified inspectors when need is determined by the enforcement agencies. Continuous inspection is not required;
- Jurisdictions that do not have an enforcement agency meeting the requirements of the Act obtain necessary qualified personnel to meet the requirements by contracting with other public agencies, private sector firms or individuals qualified to perform the necessary services;
- The projects' architects, civil engineers or structural engineers exercise general responsibility over construction for compliance with the approved plans. If they are unable, other architects, civil engineers or structural engineers shall be retained to exercise general responsible charge of construction. Any person who willfully violates the Act is guilty of a misdemeanor.

Charter Schools. Charter schools must comply with the Field Act requirements if their charter requires it. Moreover, to qualify for the 2002 and 2004 K-12 Bond (Prop. 47 and Prop. 55) funds allotted for new charter school construction, they must comply with Field Act requirements. Which building regulations apply when the Field Act does not apply, appears to be subject to debate and interpretation. Some building officials during this study stated that some charter schools have argued that they should be exempt from any plan review of the design or inspection of the construction, by either the State Architect or the local building departments.

Finding 1. The differences in governing regulations do produce different standards for seismic safety. Because private schools are not required to meet the same rigid requirements for design and inspection for construction control as public schools, they may be less safe than public schools of a similar age.

The Private Schools Act states that it is “the intent of the Legislature that children attending private schools be afforded life safety protection similar to that of children attending public schools” (Education Code Section 17322). Appendix A presents a summary of the differences in the requirements of the Field Act and Private Schools Act requirements. The most significant differences are:

- The Field Act requires more comprehensive field control of construction through continuous inspection;
- The Field Act requires more rigorous checking of the engineering designs and plans to ensure compliance with the Act;
- Although the Private Schools Act called for similar seismic safety, it cites the California Building Code, and not the portion of that code governing Field Act buildings as the standard, resulting in many instances in lower standards (see Appendix A);

- Because the Private Schools Act is in the Education Code, apparently many local building departments are unaware of its existence.

If the requirements of the Private Schools Building Safety Act are carefully followed, the resulting buildings should provide a level of safety about the same as other “non-school” buildings in the local community. Unfortunately, many local building departments do not have the resources to ensure full compliance with the Private Schools Building Safety Act. Because of the lack of continuous inspection, substandard construction is more likely in a non-Field Act building.

The application of the Field Act has been estimated to add 3-4% to the cost of construction of new school buildings (DSA, Field Act Cost Impact Study, 1992). However, the long-term costs are less, because in addition to protecting the lives and safety of the students, these buildings experience less damage when large earthquakes do occur. One study of the 1971 San Fernando earthquake showed that Field Act buildings within 25 miles of that earthquake’s epicenter suffered losses equal to 0.3% of the buildings’ value while other buildings in the same area suffered losses on average equal to 18% of their value (Assessing Seismic Safety Policy, Daniel Barclay, Seismological Research Letters [SRL], Vol. 74, No. 1, Jan./Feb. 2003).

OLDER STRUCTURES

Older buildings are less safe than new buildings for both public and private schools because they were designed and constructed to now out-dated codes. Moreover, the disparity in safety levels between public and private schools of similar age is even greater for older structures. The problems posed by older public and private school buildings are discussed separately below.

Public Schools – Pre-1978. In the late 1960s (Section 15516, Appendix X, Education Code, 1968) regulations were put in place to have pre-Field Act (1933) buildings retrofitted, removed from school use or demolished. The Field Act also prohibits use of unreinforced masonry buildings as schools buildings. Seismic building standards in general were greatly strengthened after significant damage to buildings was observed, especially in the 1971 San Fernando earthquake. The Field Act regulations in place since 1978 are considered adequate for most public school buildings in most cases.

Finding 2. Buildings built or retrofitted under the Field Act between 1933 and 1977 pose one of the most significant safety issues for public schools. In 2003, the Division of State Architect determined that about 7,500 pre-1978 public school buildings are potentially a risk and require further evaluation. Those potentially at risk buildings amount to approximately 15% of the total number of public school buildings. DSA recommended that the standard for rehabilitation be to the performance objectives for new public school construction. The findings from the 2003 DSA study have not been generally forwarded to the individual school districts involved. DSA notified the districts that the information was available if the district wished to pursue the matter. Only 70 of more than 1,400 school districts have requested the information as of November 2004.

Finding 3. Further risks can be found in older structures from un-anchored and/or unbraced mechanical, electrical, and architectural features in the school buildings. Since the 1980s, the installation of these features has been regulated to ensure adequate anchoring or bracing of these heavy items. The features in older unmodified buildings can pose a significant safety risk.

Private Schools. An unknown, but probably large number of private school buildings were constructed before the Private School Act of 1986. Some of those buildings likely pose a significant life safety risk to their students and teachers, especially those constructed of unreinforced masonry, concrete tilt-up, reinforced concrete or in some cases, steel frame. The regulations covering the original construction of these buildings, and any retrofitting upon their conversion to school use, vary widely between jurisdictions.

Because private schools are not subject to Field Act standards, and many private schools are housed in older buildings, older private schools are of the greatest concern for the life safety of students. Compilations of historical earthquake damage to private schools are not available, but there is no reason to think that private school buildings will behave differently than the general building stock. As cited earlier, a study in the 1971 earthquake showed that Field Act buildings performed substantially better than the general building stock.

Damage to a private school in the 1994 Northridge earthquake.

Finding 4. A current inventory of pre-1986 private school buildings does not exist. This makes it difficult to describe the regulations applicable to private schools in all situations. The major issues are:

- Unreinforced masonry buildings (URM) are widely recognized as the most dangerous type of construction in earthquakes. These buildings have not been built in California since 1935 and no public schools are in a URM. However, 40 private schools were in URM buildings in 1995. Any URM building that has been retrofitted to the requirements of the Uniform Code for Building Conservation, Appendix Chapter 1 (i.e., 75% of the seismic loads required for design by the current code) can be converted to private or certain charter school use. In some cases URMs have been retrofitted to even lesser standards. Many engineers feel that the 75% seismic load criterion may provide protection against collapse but may not provide for life safety protection;
- The California Building Code requires that when a building is converted to a higher occupancy use, it must be retrofitted to modern safety standards for that level of use. However, this required retrofit may not have been triggered if the building was small or if the change of occupancy did not come to the attention of the local building authority;
- There are no requirements for private schools of long standing to upgrade the seismic safety of their older buildings. Generally these buildings do not come to the attention of the local building department. Moreover, because enforcement lies with local building jurisdictions rather than DSA, enforcement can be variable. There was testimony to the Committee that not all local building officials were aware of the Private Schools Act, because it is in the Education Code and not in the Building Code;

Charter Schools. There is no inventory of the buildings occupied by charter schools. The Charter School Act of 1992 left it unclear what seismic safety regulations would apply to charter schools. To qualify for

the 2002 and 2004 K-12 Bond (Prop. 47 and Prop. 55) funds allotted for new charter school construction, they must comply with Field Act requirements.

Finding 5. Charter school buildings that do not fall under the Field Act are left in a regulatory limbo. Because of misunderstanding in interpretation of applicable building codes, local building officials have indicated that some charter schools moving into existing buildings have not been required to perform seismic upgrades of those buildings.

CONTENTS OF BUILDINGS

As building standards have improved, the risks to occupants posed by the contents of buildings, including furniture and equipment, have become more significant. Four of the deaths in the Northridge earthquake were directly caused by the movement of the contents of buildings, such as falling bookcases. The securing of most of the contents of school buildings is currently unregulated.

Finding 6. The movements of contents of buildings during earthquakes pose a significant risk to student safety in all types of schools, new and old, public and private. In general, these items are brought into the building after initial construction inspections are over. Guidelines (Guide and Checklist for Nonstructural Earthquake Hazards in California Schools, January 2003) (SB 1122, Statutes of 1999 mandated by Government Code Section 8587.7) for securing these contents have been prepared by the Office of Emergency Services (OES) in a joint project with DSA, Seismic Safety Commission (CSSC) and Department of Education (CDE), but the use of these guidelines is completely voluntary. The application of these safety measures is often left to the PTA, resulting in higher safety levels for those schools with more active PTAs.

Damage to non-structural components of a school in the Northridge earthquake.

RECOMMENDATIONS

Clearly, California schools cannot guarantee the safety of schoolchildren even in some buildings constructed in accordance with the Field Act if an earthquake were to happen during school hours. Because children are in school less than 1/3 of the 24 hours of the day on less than one-half the days of the year, most earthquakes happen when they are not at school. Indeed, California has been lucky in that the large damaging earthquakes of the last 70 years have all occurred outside of school hours. Nevertheless, it is only a matter of time until our luck will run out. If nothing is done to improve the safety of certain schools, occupants will die in future moderate and large earthquakes.

Ideally, all the deficient schools would be retrofitted and regulations developed to secure the non-structural items and building contents that pose a risk. However, this will require substantial financial resources. The largest risks are posed by private schools, and some charter schools that are housed in older buildings, especially those in unreinforced masonry buildings. Given that a complete elimination of the problem is

unlikely in the foreseeable future, the Seismic Safety Commission believes that parents need to be able to determine the safety risks of a school building so that they can make informed decisions about their children's educational options.

Recommendation 1. Complete the process of rating the seismic safety of existing public and private school buildings constructed prior to 1978 and 1986, respectively. About 7500 public school buildings were identified as potentially at risk by the DSA in a study mandated by AB 300 (Chapter 62, Statutes of 1999). This evaluation should be required for all existing schools and whenever a building is converted to public, private, or charter school use. Explore options, such as interactive websites, for disseminating the resulting ratings to interested parties, including parents. This seismic safety evaluation should be given to prospective parents when they apply to a public, private, or charter school.

Of course, actually eliminating the risk is preferable. A minimum step is to assure that no future school buildings are created without adequate design and construction to resist damage from earthquakes. Existing building codes provide protection at about the same level as other non-school buildings in the community, as long as they are consistently enforced. This is not equivalent to the protection provided by the Field Act provisions, and the community must understand that there will be greater risk to children in these buildings and greater damage to the buildings themselves during earthquakes.

Recommendation 2. Modify the Private Schools Building Safety Act and Charter School Act to clarify seismic safety provisions. Provisions should be developed to ensure that charter schools must conform to the applicable local building codes when the Field Act does not apply.

Recommendation 3. Provide education and training to local jurisdictions to improve consistency and enforcement of the regulations. Provide training for private and charter schools to help them understand how to ensure seismic safety in their buildings.

The State has always expressed a great responsibility for the safety of public schools because students are required to attend school. The risk posed by older public schools needs to be addressed.

Recommendation 4. Explore options for funding the seismic upgrading of the public schools identified as hazardous under AB 300 and to support private schools in their efforts to improve the seismic safety of their buildings.

Recommendation 5. Evaluate the types of potentially hazardous architectural, electrical and mechanical elements in older schools that are not anchored or braced and develop mitigation guidelines. Require compliance with these improvements.

Recommendation 6. Regulate and enforce securing the anchoring and bracing of school contents installed, especially after construction is complete. Voluntary guidelines from DSA and OES provide the information needed to accomplish this goal. Made mandatory, these regulations could be enforced by local fire departments as part of their annual fire inspection of public schools. This should not be left to local parent groups to complete. Doing so increases the disadvantages experienced by schools without active parent participation.

APPENDIX A: Side-by-Side Comparison Field Act and the Uniform Building Code

General: The Field Act gives the Division of the State Architect (DSA) authority to write regulations for design and construction of public schools from kindergarten through community colleges. The DSA writes amendments to the model code to create Title 24, California Code of Regulations (CCR) as they relate to public schools. The model building code has been the Uniform Building Code (UBC) ever since the Field Act went into effect. Below is a side-by-side comparison of the significant differences between Title 24, CCR and the UBC as applied to private schools.

Field Act Title 24, CCR for Public Schools	Uniform Building Code for Private Schools
Administrative Requirements	
Design Professionals	
An architect or a structural engineer must be in general responsible charge of the design and construction.	In addition to an architect and structural engineer, a civil engineer is also allowed to be, in general, responsible charge of the design and construction.
Plan Approval Process	
Requirements for submitting the site data, geologic hazard reports, calculations, change orders are provided in detail. The process of reviewing, marking the plans, and verification of corrections are delineated.	Detailed requirements are not provided.
Inspection	
Continuous inspection by an inspector approved by DSA is required.	Periodic special inspection at construction milestones (i.e. before concrete placement, before covering structural framing, gypsum board inspection).

Field Act Title 24, CCR for Public Schools	Uniform Building Code for Private Schools
Verified Reports	
The inspector is required to provide a verified report under penalty of perjury attesting that the construction is in compliance with the approved plans and specifications based on personal knowledge provided by continuous inspection.	No similar report is required.
The architects, engineers, and contractors are required to provide a verified report under penalty of perjury attesting that the construction is in compliance with the approved plans and specifications based on periodic visits to the site and the reporting of others.	No similar report is required.
Structural Requirements	
Bleachers	
Additional details and inspection requirements above the UBC.	No similar requirements.
Dynamic Analysis	
A calculation is required to determine if an earthquake with a 10% probability of exceedance in 100 years would cause a collapse is required, in addition to the 10% in 50 years calculation of the design of a structural system.	The structural design to resist the forces for the 10% probability in 50 years earthquake is the same as Title 24, CCR. There is no similar 10% probability in 100 years collapse evaluation required.

Field Act Title 24, CCR for Public Schools	Uniform Building Code for Private Schools
Foundation Strength	
Additional requirements above the UBC for foundation and superstructure-to-foundation connections	
Elevators	
The design for stability of the elevator system is subject to additional requirements above the UBC.	
Classroom Floor Loads	
50 pounds per square foot.	40 pounds per square foot.
Seismic Importance Factor for Occupancy over 300	
I = 1.15	I = 1.00
Wind Importance Factor for Occupancy over 300	
I = 1.15	I = 1.00
Precast Concrete Walls	
Additional reinforcing is required above the UBC.	
Post-tensioned Precast Concrete	
Additional requirements for anchorages and couplers, lift slab construction, and flat slab construction are indicated.	

Field Act Title 24, CCR for Public Schools	Uniform Building Code for Private Schools
Expansion Anchors in Concrete	
Tension testing is required.	Testing not required
Bolts Embedded in Concrete	
Allowable loads are much smaller when the force on the bolt is directed towards the edge of the concrete. For example a 1-inch diameter bolt placed 6 inches from the edge would have an allowable shear value of 1,700 pounds.	A 1-inch bolt placed 6 inches from the edge would have an allowable shear value of 4,500 pounds.
Masonry Construction	
All cells filled solid with grout.	Optional based on stresses.
Wall reinforcing spacing 2 feet on center.	Wall reinforcing spacing 4 feet on center.
Masonry core testing required.	Not required.
Wood Construction	
Glue-laminated beams special inspection required.	Not required.
Gypsum sheathing board not allowed to resist lateral forces.	Gypsum sheathing board allowed to resist lateral forces.
"Conventional" wood framing design is not allowed: Project specific design required.	"Conventional" wood framing design allowed – Use of standard sizes and spacing of wood members for design.

This side-by-side comparison of the Title 24 (Field Act) with the Uniform Building Code doesn't address enforcement of the code provisions. The staffing of the over 500 jurisdictions that review designs and enforce the code provisions during construction varies considerably. Some jurisdictions rely almost entirely on the expertise of the designer and the contractor. Others perform a rigorous review and have an active presence during the construction. Necessarily the depth and breath of enforcement is inconsistent and can outweigh the difference in the code provisions as to the safety of the design and construction.

File No. 140120

Sarah Jones
Environmental Review Officer
Planning Department
1650 Mission Street, 4th Floor
San Francisco, CA 94103

Dear Ms. Jones:

On July 22, 2014, Mayor Lee introduced the following legislation:

File No. 140120

Ordinance amending the Building Code to require that existing private elementary and secondary schools obtain an evaluation by a licensed structural engineer for performance during a future earthquake, to assess a fee for Building Department review and related evaluation processing, to exempt certain buildings from the evaluation requirements, to provide that buildings where voluntary seismic retrofit work is done to specified standards shall not be identified as a seismic hazard under later-enacted local building standards, and to require that a building changing to a school occupancy classification comply with the evaluation requirements; making environmental findings and findings under the California Health and Safety Code; and directing the Clerk of the Board of Supervisors to forward this Ordinance to the California Building Standards Commission upon final passage.

This legislation is being transmitted to you for environmental review.

Angela Calvillo, Clerk of the Board

MEMORANDUM

TO: Tom Hui, Director, Department of Building Inspection
Sonya Harris, Secretary, Building Inspection Commission

FROM: Andrea Ausberry, Assistant Clerk, Land Use and Economic Development
Committee, Board of Supervisors

DATE: July 31, 2014

SUBJECT: LEGISLATION INTRODUCED

The Board of Supervisors' Land Use and Economic Development Committee has received the following legislation, introduced by Mayor Lee on July 22, 2014:

File No. 140120

Ordinance amending the Building Code to require that existing private elementary and secondary schools obtain an evaluation by a licensed structural engineer for performance during a future earthquake, to assess a fee for Building Department review and related evaluation processing, to exempt certain buildings from the evaluation requirements, to provide that buildings where voluntary seismic retrofit work is done to specified standards shall not be identified as a seismic hazard under later-enacted local building standards, and to require that a building changing to a school occupancy classification comply with the evaluation requirements; making environmental findings and findings under the California Health and Safety Code; and directing the Clerk of the Board of Supervisors to forward this Ordinance to the California Building Standards Commission upon final passage.

The proposed ordinance is being transmitted pursuant to Charter Section D3.750-5 for public hearing and recommendation. It is pending before the Land Use & Economic Development Committee and will be scheduled for hearing upon receipt of your response.

Please forward me the Commission's recommendation and reports at the Board of Supervisors, City Hall, Room 244, 1 Dr. Carlton B. Goodlett Place, San Francisco, CA 94102.

RE: Proposed Ordinance (File No. 140120) amending the Building Code to require that existing private elementary and secondary schools obtain an evaluation by a licensed structural engineer for performance during a future earthquake, and assessing a fee for Building Department review and related evaluation processing; requiring that a building changing to a school occupancy classification comply with the evaluation requirements; making environmental findings and findings under the California Health and Safety Code; and directing the Clerk of the Board of Supervisors to forward this ordinance to the California Building Standards Commission upon final passage.

Dear Ms. Calvillo:

On February 19, 2014 the Building Inspection Commission held a public hearing on the proposed amendment to the San Francisco Building Code referenced above. The Commissioners voted unanimously to support this proposed amendment.

The Commissioners voted as follows:

President McCarthy	Yes	Vice-President Mar	Yes
Commissioner Clinch	Yes	Commissioner Lee	Yes
Commissioner McCray	Yes	Commissioner Melgar	Yes

Should you have any questions, please do not hesitate to call me at 558-6164.

Sincerely,

Sonya Harris
Commission Secretary

Dear Ms. Jones:

On February 11, 2014, the Mayor introduced the following legislation:

File No. 140120

Ordinance amending the Building Code to require that existing private elementary and secondary schools obtain an evaluation by a licensed structural engineer for performance during a future earthquake, and assessing a fee for Building Department review and related evaluation processing; requiring that a building changing to a school occupancy classification comply with the evaluation requirements; making environmental findings, and findings under the California Health and Safety Code; and directing the Clerk of the Board of Supervisors to forward this Ordinance to the California Building Standards Commission upon final passage.

This legislation is being transmitted to you for environmental review.

Angela Calvillo, Clerk of the Board

Tom Hui, Director, Department of Building Inspection

FROM: Andrea Ausberry, Clerk, Land Use and Economic Development Committee
Board of Supervisors

DATE: February 28, 2014

SUBJECT: LEGISLATION INTRODUCED

The Board of Supervisors' Land Use and Economic Development Committee has received the following proposed legislation, introduced by the Mayor on February 11, 2014:

File No. 140120

Ordinance amending the Building Code to require that existing private elementary and secondary schools obtain an evaluation by a licensed structural engineer for performance during a future earthquake, and assessing a fee for Building Department review and related evaluation processing; requiring that a building changing to a school occupancy classification comply with the evaluation requirements; making environmental findings, and findings under the California Health and Safety Code; and directing the Clerk of the Board of Supervisors to forward this Ordinance to the California Building Standards Commission upon final passage.

If you have any additional comments or reports to be included with the file, please forward them to me at the Board of Supervisors, City Hall, Room 244, 1 Dr. Carlton B. Goodlett Place, San Francisco, CA 94102.

c: William Strawn, Department of Building Inspection
Carolyn Jayin, Department of Building Inspection

NOTICE OF PUBLIC HEARING

LAND USE AND ECONOMIC DEVELOPMENT COMMITTEE

SAN FRANCISCO BOARD OF SUPERVISORS

NOTICE IS HEREBY GIVEN THAT the Land Use and Economic Development Committee will hold a public hearing to consider the following proposal and said public hearing will be held as follows, at which time all interested parties may attend and be heard:

Date: Monday, September 8, 2014

Time: 1:30 p.m.

Location: Committee Room 263, located at City Hall
1 Dr. Carlton B. Goodlett Place, San Francisco, CA

Subject: **File No. 140120.** Ordinance amending the Building Code to require that existing private elementary and secondary schools obtain an evaluation by a licensed structural engineer for performance during a future earthquake, to assess a fee for Building Department review and related evaluation processing, to exempt certain buildings from the evaluation requirements, to provide that buildings where voluntary seismic retrofit work is done to specified standards shall not be identified as a seismic hazard under later-enacted local building standards, and to require that a building changing to a school occupancy classification comply with the evaluation requirements; making environmental findings and findings under the California Health and Safety Code; and directing the Clerk of the Board of Supervisors to forward this Ordinance to the California Building Standards Commission upon final passage.

If the legislation passes, a fee based on standard hourly rates in accordance with the Building Code Table 1-A-D-Standard Hourly Rates, shall be charged. The proposed fee will compensate the Department of Building Inspection for review and related evaluation processing of private elementary and secondary schools' structural performance during an earthquake.

In accordance with Administrative Code, Section 67.7-1, persons who are unable to attend the hearing on this matter may submit written comments to the City prior to the time the hearing begins. These comments will be made a part of the official public

record and shall be brought to the attention of the Members of the Committee. Written comments should be addressed to Angela Calvillo, Clerk of the Board, Room 244, City Hall, 1 Dr. Carlton Goodlett Place, San Francisco CA 94102.

Information relating to the proposed fee is available in the Office of the Clerk of the Board. Agenda information relating to this matter will be available for public review on Friday, September 5, 2014.

Angela Calvillo, Clerk of the Board

Strengthen Our Schools
COALITION

April 8, 2014

Patrick Otellini, Chief Resiliency Officer
 City and County of San Francisco
 1 Dr. Carlton B. Goodlett Place
 City Hall, Room 12
 San Francisco, CA 94102

Dear Patrick:

The meeting you set for April 10, 2014 at 3 pm can be an important opportunity to improve the dialogue and raise the level of information and awareness regarding the Private Schools Earthquake Evaluation Ordinance introduced on February 11, 2014 by Mayor Ed Lee.

As we noted in earlier communications, securing attendance could be challenging given Spring Break for schools along with Passover, Easter and Orthodox Easter celebrations. It is our hope that the meeting will yield an informed, broad-based coalition of schools that can work alongside your Working Group, which you have also encouraged to attend.

Since the meeting on March 19, 2014 convened by Supervisor Scott Wiener, Chair of the Land Use and Economic Development Committee, concerns about this ordinance have amplified among the private schools that serve almost 30,000 students in San Francisco.

Many of these schools' concerns served as the focus of an in-depth discussion held yesterday morning at St. Mary's Cathedral. More than 60 principals, vice-principals, parent volunteers and other representatives were in attendance, representing the diverse communities served by private schools – including large independent schools, schools serving low-income and working families, cultural and language-based schools, schools serving special needs and learning-challenged populations, as well as religious schools of various denominations.

In more than two hours of discussion, these schools shared the common goals of increased, dedicated outreach on the ordinance and for improving seismic safety of their facilities while articulating their concerns. Private school students, their families, and faculty and staff deserve the same reassurance that San Francisco's public schools can offer their constituencies that the seismic safety process is inclusive and informed by real dialogue.

Yet, several concerns emerged again and again. I've taken the liberty of outlining them below in the hope that these can be incorporated into the agenda you are planning for Thursday's meeting, which most of Monday's attendees indicated they would be attending, so that we can move forward in a collaborative way:

- 1. There needs to be greater and more effective outreach to, and inclusion of, San Francisco's diverse private school communities in this process given the wide-ranging impacts of the proposed ordinance.**

A significant number of schools had simply not heard anything about the ordinance; others were only partially aware of the advanced state of its development. It's fair to say that most of the schools represented Monday were apprehensive, even fearful, because they knew so little about this legislation.

One school said it had participated earnestly in the working group process, made a simple but significant request to adopt the “state definition” of schools and have it incorporated into the ordinance, only to have it ignored in the ordinance draft.

On Thursday, perhaps you can address these concerns and set forth a program that would build better knowledge and ultimately support among San Francisco’s private schools. These schools simply need more time to educate their diverse constituencies in a way that supports the goals of this legislation, not just studies of building conditions – but actual improvement of seismic safety, without engendering unnecessary fears about seismic issues.

2.

There must be greater emphasis on transparency and shared goals. The very real effects of the legislation should be disclosed and discussed candidly.

There is a concern, based on some of your discussion with us and representations in the media, that an “us vs. them” dynamic is developing. Collaboration should be the order of the day when the safety of San Francisco schoolchildren is the goal.

Your characterization of this ordinance as requiring “just a study” masks the very real chain of events that will be put in motion once this legislation passes. Representations that such studies can be done “for as little as \$8,000” suggest that private schools’ concerns are simply economic. Finally, many schools expressed frustration at your repeated representations to the Mayor, elected officials, decision-makers and City Hall staff that private schools’ concerns had been “worked out” or “smoothed over”. Clearly, there are many unresolved and serious issues.

The schools we heard from would greatly appreciate a toning down of such divisive characterizations, with a greater emphasis on how we can work *together* to make San Francisco more resilient and seismically safe for our children.

Better yet, we think it would be useful to collaborate on a set of shared goals and objectives that recognizes the aspirations and challenges this legislation incorporates. **As written, this ordinance will result in the closing of schools:** that is not a scare tactic but an inevitability for schools who serve poorer communities. Like all private schools, their tuitions cover only a portion of overall costs; unlike larger, more affluent schools, they cannot readily access or raise necessary funds.

We would like to see a strong statement from the City that private schools play an important role for San Francisco’s educational and economic future, that they contribute to the quality of life, economic and social diversity and values of our City, and that their concerns deserve to be addressed in the face of this proposed legislation so that none will be forced to shut its doors in the name of seismic safety.

What was clear from the discussion this morning, is the following events will almost certainly ensue after these seemingly simple studies are completed and posted as public information:

First, schools will feel a moral obligation to take action on whatever problems may surface. They will feel such an obligation without the benefit of necessary resources.

Second, there will be widespread concern among our parent communities that children may not be attending “safe” schools, with ensuing pressure to act quickly, again without the necessary resources to do so.

Third, it will be only a matter of time before private lawsuits are filed against private schools. As a practical matter, this will be the rough and expensive mechanism that moves a “simple study” to enforcement, however well intended the “study-only” language is.

Finally, as another practical matter, once permits are pulled for any seismic upgrades resulting from these studies, the City will compel schools to immediately comply with other building-safety statutes (ADA, energy efficiency, lead and asbestos abatement) that may apply. Some of the schools we heard from Monday indicated these related expenses could cost twice the amount of their seismic improvements.

3. Vague portions of the legislation will have devastating impacts on some private schools; these need to be clarified and made more specific.

It would be very helpful in the Thursday meeting if you could address very specifically what school facilities are covered by the ordinance. As you know, many private schools are located in older, sometimes historic, facilities. Many schools make use of facilities for very different purposes than those originally intended. What, in The City's view, is a "school building" as it pertains to the ordinance?

Likewise, it would also be important to specify which types of schools or facilities are specifically excluded from the ordinance, for example, pre-K services or optional enrichment programs such as dance, music, art, or gymnastics.

4. The City's flexibility with regard to timelines will not only mitigate some of the unintended negative consequences of this legislation, but it will show the same kind of consideration extended to public schools in meeting their seismic safety obligations.

It was noted this morning that schools in the San Francisco Unified School District (SFUSD) have been working to achieve seismic safety for more than 25 years after the ordinance affecting public schools became law. SFUSD schools had the benefit of a long-term comprehensive facilities planning process, a broad and ongoing funding mechanism from several sources (federal, state, and local), and flexibility when it came to recognizing the special circumstances of certain facilities. Private schools do not, at the moment, believe this same level of recognition, funding, and flexibility is being extended to them.

For religious schools in particular, the offer of City-endorsed loans is a nonstarter given church-state concerns. Realistically, private schools are left without a dedicated funding mechanism or even time to determine if and how to raise these funds privately.

Additionally, we spoke this morning of the significant number of private schools located in leased facilities (there are seven such Catholic schools alone). In this hot real estate market, many property owners will simply choose to discontinue renting to schools if they are required to adhere to the ordinance as written. San Francisco can ill-afford the spectacle of private schools essentially orphaned, and possibly closing, in the headlong rush to attain the requirements of imprecisely written legislation.

I want to reiterate our interest in working with City Hall to achieve our shared seismic safety goals. I hope that this preview of some of the concerns that may arise on Thursday will provide you with time to address them accordingly and to improve the process going forward. Let's continue to work together to achieve common goals.

Sincerely,

Denise M. LaPointe

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Steve Pehanich

RE: Proposed Private School Seismic Evaluation Ordinance

Dear Mr. Otellini

Thank you for your time meeting with us this morning to discuss the proposed ordinance requiring seismic evaluation of private schools. As you know, during this meeting we believe we made progress toward helping the City understand the concerns held by the Archdiocese of San Francisco and are grateful for the opportunity finally to present them to you.

The most important point of our discussion was the reality that the study process which produced the draft ordinance was marked by a nearly total absence of participation by the private schools of the city of San Francisco. I can only believe that it is the absence of these key constituencies which produced a proposed ordinance which professes to demand no retrofitting, but in the real world produces a series of moral, legal and financial obligations upon our private schools to carry out a prohibitively expensive series of seismic and code related upgrades which will inevitably result in the closure of many schools serving the poor and people of color. Because this proposed ordinance has such serious consequences for the educational community of the City, and because this legislation has been rushed so rapidly and without public notice to the affected communities, we believe that it is essential for our legislative leaders to remove the ordinance from the calendar until all of the private school communities have been brought meaningfully into the conversation.

We are grateful for your willingness to try to revise the ordinance in the three specific areas which we raised with you: 1) revising the ordinance to demand studies at a life safety level rather than a recovery level; 2) demarcating clearly that only specifically school buildings are included in the ordinance; and 3) substantively addressing in the text of the ordinance pathways through which the non-seismic code requirements triggered by seismic safety upgrades could be meaningfully and substantially mitigated.

THE ARCHDIOCESE OF SAN FRANCISCO

Mr. Patrick Otellini
March 19, 2014
Page 2

We look forward to working with you and the Board of Supervisors, as well as the Mayor's Office in order to craft an ordinance that does advance seismic safety within the private schools in a manner which does not burden those school communities unduly.

Sincerely yours

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Shanti Googins

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Patty Phleger

San Francisco, CA 94102-4603

Dear City and County of San Francisco:

I am writing to you on behalf of myself and my family who send our daughter to St. Cecilia School in the Parkside, a Catholic school that has been serving our community for decades. As you may be aware, fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

There is a proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve. This ordinance, as currently proposed could be crippling financially for many Catholic schools that survive on the support, in many instances, from middle class families.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city and middle class students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids served by Catholic schools are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

San Francisco, CA 94102-4603

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this discussion.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard.

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Sincerely,
Michael Fogarty

Subject: Seismic Evaluation of Private Schools - File No. 140120

Hello colleagues,

Thank you to our supporters and co-sponsors of this ordinance. As you all know this ordinance will require the seismic evaluation of all of the City's 120 non-public schools over the next three years.

This morning all SF Archdiocese schools notified their parents asking them to contact Mayor Lee and the Board of Supervisors expressing concern about this ordinance. Unfortunately this notice contains factually incorrect information. Most importantly it assumes that this ordinance requires seismic retrofits of these schools and this is not the case. The proposed ordinance only requires evaluation of these structures and any construction work is completely voluntary. The letter also points out three specific concerns. After discussing these issues at length with the Archdiocese, as well as many other schools that participated in the working group process, we are going to make revisions to the ordinance as noted below. This will address their concerns and once these changes are made we should have consensus-based support moving forward:

1. The current language requires a higher level of evaluation for larger schools. The revision will be made to evaluate all private schools to a standard of life-safety only.
2. More clear language will be added to ensure the only structures that are evaluated are buildings used for education and school administration (exempting churches, residential accessory buildings, and similar uses)
3. Additional clarifications that non-earthquake related work is not triggered by this ordinance.

Our office is happy to address any concerns that come up from constituents as a result of this.

Thank you,

Patrick Otellini

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Jean Chagniot

San Francisco, CA 94102-4603

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard.

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Maurice Wong

RE: Substitute Ordinance - File # 140120 - Building Code - Earthquake
Performance Evaluation of Private School Structures
DATE: July 22, 2014

Attached for substitution to the Board of Supervisors is the ordinance amending the Building Code to require that existing private elementary and secondary schools obtain an evaluation by a licensed structural engineer for performance during a future earthquake, to assess a fee for Building Department review and related evaluation processing, to exempt buildings for which voluntary seismic strengthening is performed that meets or exceeds 2013 Building Code requirements from new San Francisco seismic strengthening requirements for 15 years, and to require that a building changing to a school occupancy classification comply with the evaluation requirements; making environmental findings and findings under the California Health and Safety Code; and directing the Clerk of the Board of Supervisors to forward this ordinance to the California Building Standards Commission upon final passage.

Please note that this item is cosponsored by Supervisors Breed, Campos, Chiu, Farrell, Mar, Tang, Wiener, and Yee.

Dear City and County of San Francisco:

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is extremely broad measured, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

We seek a diverse set of views, and input, to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,
Amber K. Ovalle

FROM: Youth Commission

DATE: Monday, March 24, 2014

RE: Youth Commission actions at the March 17, 2014 meeting: Support on BOS file no. 140120 and BOS File No. 140123; Support and statement on BOS file no. 131208 [Health Code-Restrictions on Sale and Use of Electronic Cigarettes]; Motion calling for BOS hearing on services and solutions for youth with incarcerated parents; Resolution calling for MUNI's fare structure to make 18 year olds eligible for youth discounts; and Motion to sponsor the Take a Stand for SF youth event on April 5, 2014.

At our regular meeting on Monday, March 17, 2014, the Youth Commission voted to unanimously support the following from the Board of Supervisors:

- **[BOS File No. 140120] Building Code- Earthquake Performance Evaluation of Private School Structures.**
- **[BOS File NO. 140123] Urging State Community College Chancellor Brice Harris to Restore City College of San Francisco's Duly Elected Board of Trustees**

At the same meeting, the Youth Commission also voted to unanimously support and provide the following comments to BOS File No. 131208:

- To support BOS File No. 131208, Ordinance amending the Health Code to prohibit the use of electronic cigarettes where smoking is otherwise prohibited; require a tobacco permit for the sale of electronic cigarettes; prohibit the sale of electronic cigarettes where the sale of tobacco products is otherwise prohibited; and making environmental findings.
- The Youth Commission urges the BOS to request the DPH to conduct a study on how electronic cigarette products affect nicotine consumption rates among young people and how this type of legislation can prevent nicotine addiction among young people.

In addition, the Youth Commission adopted the following two motions:

- Motion 1314-05 to call on the BOS to hold a timely hearing regarding the unmet needs of youth with an incarcerated parent(s) and various City departments efforts to provide services and support for young people with incarcerated parents.
- Motion 1314-06 to support and co-sponsor the Taking a Stand SF event which will be held on April 5th, 2014 at the Center for Political Education.

Finally, the Youth Commission adopted resolution 1314—03 urging the SFMTA to expand MUNI's discounted youth rate to include 18 year olds. This resolution acknowledges the approximately 400 18-year-old high school students within the SFUSD schools, and even more enrolled in private and parochial schools in San Francisco. 18 year old high school students face similar financial barriers to accessing transportation in comparison with their younger peers. It also notes that other Bay Area transportation agencies such as the East Bay's AC transit and North Bay's Golden Gate transit include 18 year olds in their youth fare discounts. This resolution urges the SFMTA to expand MUNI's discounted youth rate to include 18 year olds and to consider looking into ways in which the population of high school students older than 18 years of age and transitionally aged youth can qualify for free or reduced fares.

If you have any questions about these items or anything related to the Youth Commission, please don't hesitate to contact our office at (415) 554-6446 or your Youth Commissioner.

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools communities.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

I believe we're rushing this ordinance unnecessarily, when we should be more thoughtful about the deep impact this legislation has on our schools, especially those that serve inner city students. Input from the private school community, which has extensive knowledge and expertise, has been limited in this debate.

The number of working families and kids we serve are dwindling in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard.

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance.

Sincerely,

Jennifer Killian

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Gilbert L. Casarez

Dear City and County of San Francisco:

I believe that it is totally wrong to demand that Catholic schools earthquake buildings that are not strictly for classroom safety. They should not be forced to earthquake buildings so that they can be used for emergency shelters. I believe that is the job of the city. The schools do NOT have the resources to do what the ordinance requires.

Please give this request serious thought.

This e-mail is both for the Mayor and the Board of Supervisors.

March 24, 2014

City and County of San Francisco
1 Drive Carlton B. Goodlett Place
San Francisco, CA 94102-4603

Dear City and County of San Francisco:

"www.sfusd.edu/‎
San Francisco Unified School District
The San Francisco Unified School District (SFUSD) is the eighth largest school district in ... over 53000 students who live in the City and County of San Francisco. ... are expected to fully implement the CCSS-M in the 2014-2015 school year and ... California's new way of funding public schools, and how you can participate in"

Of some 75,800 San Francisco school children enrolled in Grades K-12, fully 30 percent, some 22,000 children, attend private schools. Catholic private schools, which serve working class and inner-city families, are largely supported by tuition and local parishes.

Under the circumstances, why is the proposed ordinance for seismic evaluation of private school buildings (file no. 140152) being pushed?
Why is the proposed ordinance failing fully 30 percent of San Francisco Grades K-12 schools in these ways?

- Failure to study evaluation levels to the standard of life-safety;
- Failure to limit the ordinance to school buildings;
- Failure to encourage the seismic safety work by adding catastrophic expenses of unrelated code requirements.

Further, in the best of all worlds and worthy of consideration but scarcely expected: Why is the proposed ordinance failing to appropriate public funding for seismic upgrading of all fully accredited Grades K-12 schools?

Your district and all of San Francisco will benefit by working with us.
Please amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Sincerely,

M. Vota

- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Dr. Stephanie Lowe

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Will Lucey

March 24, 2014

City and County of San Francisco
1 Drive Carlton B. Goodlett Place
San Francisco, CA 94102-4603

Dear City and County of San Francisco:

I am considering sending my daughter, who is currently in a public pre-school, to the neighborhood Catholic school because I do not have a public neighborhood elementary school and like many of my neighbors will be forced to send my child across town to attend public school. Many families are shut out of public schools in this city and are left with only the option to move or find a private solution. Catholic schools are an affordable option for many families as they are subsidized by local parishes.

I am a single, working mother and have limited options, and I am not alone. Catholic schools disproportionately serve working class and lower income families. As members of this community, we deserve a voice.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, is problematic and punitive to private schools and to the thousands of children and families they serve.

This ordinance must to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance should be carefully re-crafted to limit its potentially fatal impact on our Catholic schools, especially those serving low-income communities. Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you for giving our independent community schools, and our children, a chance.

Sincerely,

Andrea Bornstein

- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Carol Bulgatti

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Helen A. Vydra

San Francisco, CA 94102-4603

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance.

Sincerely,

Michael Innes

Many of parochial schools are on a shoestring budget and don't have huge endowments and donations from alumni, unlike some private schools. Safety is of utmost importance, but the laws constructed to ensure this should be well thought out and subsidies should be made available to the schools to help finance the renovations. Don't lump ADA legislation into this either, that could put many of these schools out of business.

Thank you...for giving our religious, independent, and community schools a chance.

Sincerely,

S. Singh

- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

John Bankovitch

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Jean Shriver

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Erika Leon

March 23, 2014

City and County of San Francisco
1 Drive Carlton B. Goodlett Place
San Francisco, CA 94102-4603

Dear City and County of San Francisco:

To Whom It May Concern,

I am writing to urge you to re-consider the proposed ordinance for seismic evaluation of private school buildings, particularly given the City's supposed interest in keeping families with young children from fleeing to the suburbs.

As we all know, there are not enough spots at quality public schools for all the children in the city of San Francisco. As a result, fully 30% attend private schools. Most of these schools are extravagantly expensive, even for professional families. The one notable exception has been the Catholic schools, which provide a quality education at a fraction of the cost, to both Catholic and non-Catholic families. Not surprisingly, Catholic schools disproportionately serve working class and inner-city families.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152) should be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage not discourage the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

The ordinance should be carefully crafted and its drastic impact limited. The working families and kids we serve are becoming an endangered species in San Francisco. Do you really want to be the cause of a fresh exodus of middle-class families and further deterioration of inner-city education?

Thank you for giving our schools and our families a chance.

Sincerely yours,

Ann von Germeten

San Francisco, CA 94102-4603

Dear City and County of San Francisco:

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

One has to suspect that the interests pushing this ill-conceived ordinance have an ulterior motive: reduce the availability and affordability of private--especially church supported--schools in San Francisco. The obvious motive would be to increase enrollment at San Francisco's abominable public schools. That would be a forlorn hope: what this ordinance would ensure is that there would be fewer school age children in San Francisco.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no legitimate reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited--and ignored. We have a great deal of knowledge and expertise to contribute to this debate.

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Hoping reason prevails,

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Elosia A. Mills

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Carl Christensen

Dear City and County of San Francisco:

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is extremely broad measured, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

We seek a diverse set of views, and input, to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Shana Combatalade

- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Doug

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Shahriar Mostarshed

- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

In the alternative, find a constitutional way to fund all affected entities (with sufficient public money) to alleviate the otherwise unnecessary burdens on Catholic education of the ordinance as currently written. Failing to either adopt the suggested amendments to tailor the ordinance or provide the suggested funding amounts to a tax on Catholic thought.

Thank you...for giving our religious, independent, and community schools a chance.

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Beth Lucey

March 24, 2014

City and County of San Francisco
1 Drive Carlton B. Goodlett Place
San Francisco, CA 94102-4603

Dear City and County of San Francisco:

I am considering sending my daughter, who is currently in a public pre-school, to the neighborhood Catholic school because I do not have a public neighborhood elementary school and like many of my neighbors will be forced to send my child across town to attend public school. Many families are shut out of public schools in this city and are left with only the option to move or find a private solution. Catholic schools are an affordable option for many families as they are subsidized by local parishes.

I am a single, working mother and have limited options, and I am not alone. Catholic schools disproportionately serve working class and lower income families. As members of this community, we deserve a voice.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, is problematic and punitive to private schools and to the thousands of children and families they serve.

This ordinance must to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance should be carefully re-crafted to limit its potentially fatal impact on our Catholic schools, especially those serving low-income communities. Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you for giving our independent community schools, and our children, a chance.

Sincerely,

Andrea Bornstein

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Jan England

- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Eamonn Fane

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Oscar Gonzalez Gomez

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Matt Shelley

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

PATRICIA MELGAR

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Guillaume J. Charmes

Dear City and County of San Francisco:

Catholic schools serve a very large number of children from working class and inner-city families. These schools are supported mostly by local parishes.

I believe that the proposed ordinance for private school seismic (file no. 140152), is being rushed through, and is punitive to private schools. It will adversely impact thousands of San Francisco families with kids.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage the seismic safety work by not triggering upgrades of unrelated code requirements.

This ordinance needs to be carefully thought through to limit its adverse impact on our schools. There needs to be more input from the private school community.

Please allow consider many different views to heard and be part of process on this proposed ordinance.

Any new regulation should incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you for your attention to this important issue.

Sincerely,

Michael J. Matin, MD

San Francisco, CA 94102-4603

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Robert L Valdez

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Maureen Barry

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Brigid Murphy

March 27, 2014

City and County of San Francisco
1 Drive Carlton B. Goodlett Place
San Francisco, CA 94102-4603

Dear City and County of San Francisco:

I am contacting you as a parent of a first-grader and an incoming kindergartner and as a parishioner at St. Vincent de Paul Parish.

Catholic schools in San Francisco disproportionately serve working class and inner-city families and are largely supported by local parishes, not by the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152) is problematic and punitive to Catholic schools, as well as to the thousands of families they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance should be carefully crafted to limit its drastic impact on our schools, especially those that serve poor students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

In a time of flight of families to the suburbs because of cost of living in the City, Catholic Schools are keeping working families with children in San Francisco. Please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard.

Please work with the Catholic schools and parishes to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you!

Sincerely,

Mary Noonan

- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Jennifer martinez

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Walter McCall

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Triffiny Lau

Dear City and County of San Francisco:

As a San Francisco homeowner and parent of a Kindergartener at St. Brendan School, I am asking for your support to enact a more reasonable approach to seismic retrofitting required for Catholic schools in San Francisco.

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance.

Sincerely,

Cinta Telfer

Subject: Seismic Evaluation of Private Schools - File No. 140120

Hello colleagues,

Thank you to our supporters and co-sponsors of this ordinance. As you all know this ordinance will require the seismic evaluation of all of the City's 120 non-public schools over the next three years.

This morning all SF Archdiocese schools notified their parents asking them to contact Mayor Lee and the Board of Supervisors expressing concern about this ordinance. Unfortunately this notice contains factually incorrect information. Most importantly it assumes that this ordinance requires seismic retrofits of these schools and this is not the case. The proposed ordinance only requires evaluation of these structures and any construction work is completely voluntary. The letter also points out three specific concerns. After discussing these issues at length with the Archdiocese, as well as many other schools that participated in the working group process, we are going to make revisions to the ordinance as noted below. This will address their concerns and once these changes are made we should have consensus-based support moving forward:

1. The current language requires a higher level of evaluation for larger schools. The revision will be made to evaluate all private schools to a standard of life-safety only.
2. More clear language will be added to ensure the only structures that are evaluated are buildings used for education and school administration (exempting churches, residential accessory buildings, and similar uses)
3. Additional clarifications that non-earthquake related work is not triggered by this ordinance.

Our office is happy to address any concerns that come up from constituents as a result of this.

Thank you,

Patrick Otellini

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Jorge A. Portillo

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Tara Moriarty

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Margaret McMackin

Strengthen Our Schools
COALITION

April 8, 2014

Patrick Otellini, Chief Resiliency Officer
 City and County of San Francisco
 1 Dr. Carlton B. Goodlett Place
 City Hall, Room 12
 San Francisco, CA 94102

Dear Patrick:

The meeting you set for April 10, 2014 at 3 pm can be an important opportunity to improve the dialogue and raise the level of information and awareness regarding the Private Schools Earthquake Evaluation Ordinance introduced on February 11, 2014 by Mayor Ed Lee.

As we noted in earlier communications, securing attendance could be challenging given Spring Break for schools along with Passover, Easter and Orthodox Easter celebrations. It is our hope that the meeting will yield an informed, broad-based coalition of schools that can work alongside your Working Group, which you have also encouraged to attend.

Since the meeting on March 19, 2014 convened by Supervisor Scott Wiener, Chair of the Land Use and Economic Development Committee, concerns about this ordinance have amplified among the private schools that serve almost 30,000 students in San Francisco.

Many of these schools' concerns served as the focus of an in-depth discussion held yesterday morning at St. Mary's Cathedral. More than 60 principals, vice-principals, parent volunteers and other representatives were in attendance, representing the diverse communities served by private schools – including large independent schools, schools serving low-income and working families, cultural and language-based schools, schools serving special needs and learning-challenged populations, as well as religious schools of various denominations.

In more than two hours of discussion, these schools shared the common goals of increased, dedicated outreach on the ordinance and for improving seismic safety of their facilities while articulating their concerns. Private school students, their families, and faculty and staff deserve the same reassurance that San Francisco's public schools can offer their constituencies that the seismic safety process is inclusive and informed by real dialogue.

Yet, several concerns emerged again and again. I've taken the liberty of outlining them below in the hope that these can be incorporated into the agenda you are planning for Thursday's meeting, which most of Monday's attendees indicated they would be attending, so that we can move forward in a collaborative way:

1. There needs to be greater and more effective outreach to, and inclusion of, San Francisco's diverse private school communities in this process given the wide-ranging impacts of the proposed ordinance.

A significant number of schools had simply not heard anything about the ordinance; others were only partially aware of the advanced state of its development. It's fair to say that most of the schools represented Monday were apprehensive, even fearful, because they knew so little about this legislation.

One school said it had participated earnestly in the working group process, made a simple but significant request to adopt the “state definition” of schools and have it incorporated into the ordinance, only to have it ignored in the ordinance draft.

On Thursday, perhaps you can address these concerns and set forth a program that would build better knowledge and ultimately support among San Francisco’s private schools. These schools simply need more time to educate their diverse constituencies in a way that supports the goals of this legislation, not just studies of building conditions – but actual improvement of seismic safety, without engendering unnecessary fears about seismic issues.

2.

There must be greater emphasis on transparency and shared goals. The very real effects of the legislation should be disclosed and discussed candidly.

There is a concern, based on some of your discussion with us and representations in the media, that an “us vs. them” dynamic is developing. Collaboration should be the order of the day when the safety of San Francisco schoolchildren is the goal.

Your characterization of this ordinance as requiring “just a study” masks the very real chain of events that will be put in motion once this legislation passes. Representations that such studies can be done “for as little as \$8,000” suggest that private schools’ concerns are simply economic. Finally, many schools expressed frustration at your repeated representations to the Mayor, elected officials, decision-makers and City Hall staff that private schools’ concerns had been “worked out” or “smoothed over”. Clearly, there are many unresolved and serious issues.

The schools we heard from would greatly appreciate a toning down of such divisive characterizations, with a greater emphasis on how we can work *together* to make San Francisco more resilient and seismically safe for our children.

Better yet, we think it would be useful to collaborate on a set of shared goals and objectives that recognizes the aspirations and challenges this legislation incorporates. **As written, this ordinance will result in the closing of schools:** that is not a scare tactic but an inevitability for schools who serve poorer communities. Like all private schools, their tuitions cover only a portion of overall costs; unlike larger, more affluent schools, they cannot readily access or raise necessary funds.

We would like to see a strong statement from the City that private schools play an important role for San Francisco’s educational and economic future, that they contribute to the quality of life, economic and social diversity and values of our City, and that their concerns deserve to be addressed in the face of this proposed legislation so that none will be forced to shut its doors in the name of seismic safety.

What was clear from the discussion this morning, is the following events will almost certainly ensue after these seemingly simple studies are completed and posted as public information:

First, schools will feel a moral obligation to take action on whatever problems may surface. They will feel such an obligation without the benefit of necessary resources.

Second, there will be widespread concern among our parent communities that children may not be attending “safe” schools, with ensuing pressure to act quickly, again without the necessary resources to do so.

Third, it will be only a matter of time before private lawsuits are filed against private schools. As a practical matter, this will be the rough and expensive mechanism that moves a “simple study” to enforcement, however well intended the “study-only” language is.

Finally, as another practical matter, once permits are pulled for any seismic upgrades resulting from these studies, the City will compel schools to immediately comply with other building-safety statutes (ADA, energy efficiency, lead and asbestos abatement) that may apply. Some of the schools we heard from Monday indicated these related expenses could cost twice the amount of their seismic improvements.

3. Vague portions of the legislation will have devastating impacts on some private schools; these need to be clarified and made more specific.

It would be very helpful in the Thursday meeting if you could address very specifically what school facilities are covered by the ordinance. As you know, many private schools are located in older, sometimes historic, facilities. Many schools make use of facilities for very different purposes than those originally intended. What, in The City's view, is a "school building" as it pertains to the ordinance?

Likewise, it would also be important to specify which types of schools or facilities are specifically excluded from the ordinance, for example, pre-K services or optional enrichment programs such as dance, music, art, or gymnastics.

4. The City's flexibility with regard to timelines will not only mitigate some of the unintended negative consequences of this legislation, but it will show the same kind of consideration extended to public schools in meeting their seismic safety obligations.

It was noted this morning that schools in the San Francisco Unified School District (SFUSD) have been working to achieve seismic safety for more than 25 years after the ordinance affecting public schools became law. SFUSD schools had the benefit of a long-term comprehensive facilities planning process, a broad and ongoing funding mechanism from several sources (federal, state, and local), and flexibility when it came to recognizing the special circumstances of certain facilities. Private schools do not, at the moment, believe this same level of recognition, funding, and flexibility is being extended to them.

For religious schools in particular, the offer of City-endorsed loans is a nonstarter given church-state concerns. Realistically, private schools are left without a dedicated funding mechanism or even time to determine if and how to raise these funds privately.

Additionally, we spoke this morning of the significant number of private schools located in leased facilities (there are seven such Catholic schools alone). In this hot real estate market, many property owners will simply choose to discontinue renting to schools if they are required to adhere to the ordinance as written. San Francisco can ill-afford the spectacle of private schools essentially orphaned, and possibly closing, in the headlong rush to attain the requirements of imprecisely written legislation.

I want to reiterate our interest in working with City Hall to achieve our shared seismic safety goals. I hope that this preview of some of the concerns that may arise on Thursday will provide you with time to address them accordingly and to improve the process going forward. Let's continue to work together to achieve common goals.

Sincerely,

Denise M. LaPointe

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Brian Zarka

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:

- Limit the study evaluation levels to the standard of life-safety;
- Limit the ordinance to school buildings;
- Encourage, rather than discourage, the seismic safety work by not triggering the catastrophic expense of unrelated code requirements.

This ordinance is being rushed for no reason, when instead it should be carefully crafted to limit its drastic impact on our schools, especially those that serve inner city students. Input from the private school community has been limited. We have a great deal of knowledge and expertise to contribute to this debate.

The working families and kids we serve are becoming an endangered species in San Francisco. So, please allow a diverse set of views to be part of process on this proposed ordinance so that affected communities in San Francisco can be heard

Please work with us to amend the legislation to incorporate the life-safety standard, limit the ordinance to school buildings, and grant relief from unrelated code requirements.

Thank you...for giving our religious, independent, and community schools a chance

Sincerely,

Elvie Bast

Dear City and County of San Francisco:

Fully 30 percent of all San Francisco students attend private schools. Catholic schools disproportionately serve working class and inner-city families and are largely supported by local parishes, not the Archdiocese.

The proposed ordinance for seismic evaluation of private school buildings (file no. 140152), is being pushed too fast, and is problematic and punitive to private schools, as well as to the thousands of families with kids in San Francisco that they serve.

This ordinance needs to be revised to:
