ORDINANCE NO.

[Contracting Process - Van Ness Bus Rapid Transit Project]

Ordinance modifying the requirements of Administrative Code, Section 6.68, as applied to the proposed construction of the Van Ness Bus Rapid Transit Project to authorize the Municipal Transportation Agency to, instead of a formal Request for Qualifications, issue a Request for Proposals (RFP) to potential construction managers/general contractors (CM/GC), to include their teams of core trade subcontractors, which RFP will contain minimum qualifications for the CM/GC and certain subcontractors; evaluate the CM/GC primarily on non-cost criteria; negotiate a guaranteed maximum price with the selected CM/GC when the design is sufficiently complete, provided the price is fair and reasonable; and making environmental findings.

NOTE: Unchanged Code text and uncodified text are in plain Arial font. Additions to Codes are in <u>single-underline italics Times New Roman font</u>. Deletions to Codes are in <u>strikethrough italics Times New Roman font</u>. Board amendment additions are in <u>double-underlined Arial font</u>. Board amendment deletions are in strikethrough Arial font. Asterisks (\* \* \* \*) indicate the omission of unchanged Code subsections or parts of tables.

Be it ordained by the People of the City and County of San Francisco:

Section 1. General Background and Findings.

(a) The Van Ness Bus Rapid Transit (BRT) Project, now known as the Van Ness Corridor Transit Improvement Project (the Project), is a large-scale plan to implement "fullfeature" BRT on one of the busiest transit routes that is also a major "north-south" transportation corridor for all transportation modes in San Francisco; once completed, it will be an integral part of the Muni "Rapid" network of transit service proposed in 2008 that will gradually be implemented on all major transportation corridors in San Francisco. The San Francisco Municipal Transportation Agency (SFMTA) anticipates that the Federal Transit Administration (FTA) of the U.S. Department of Transportation will provide \$75,000,000 in funding for the Project as part of its Small Starts Program.

(b) On September 13, 2013, the San Francisco County Transportation Authority ("SFCTA"), as the lead agency under the California Environmental Quality Act ("CEQA") adopted Resolution No. 14-18, in which it certified the Final Environmental Impact Statement/Environmental Impact Report (EIS/EIR) for the Project as adequate, accurate and objective, and reflecting the independent judgment of the SFCTA in accordance with the adopted CEQA Findings, including a statement of overriding considerations and a mitigation monitoring and reporting program; and approved the locally preferred alternative ("LPA"), "The Center-running BRT with Right Side Boarding Platforms Single Median and Limited Left Turns," along with the Vallejo Northbound Station Variant. The SFCTA determined that the LPA has the transit performance attributes of a center-running BRT (e.g., faster, more reliable service), while avoiding the need to acquire left-right door vehicles and completely rebuild the median; further, the Vallejo Northbound Station Variant would provide enhanced access for residents in the northern part of the Project corridor.

(c) On September 17, 2013, the SFMTA Board of Directors, acting in its capacity as a responsible agency under CEQA, considered the Final EIS/EIR; adopted CEQA Findings, including a statement of overriding considerations, and a mitigation monitoring and reporting program; and approved the Project by Resolution No. 13-214. The previously adopted CEQA Findings are incorporated by reference.

(d) The Board of Supervisors finds that this approval action is within the scope of the Project analyzed in the Final EIS/EIR and approved by the SFMTA Board by Resolution No. 13-214. The documents related to the Final EIS/EIR have been made available to this

Board and the public and are on file with the Clerk of the Board of Supervisors in File No. 141148.

(e) The Board of Supervisors has considered the Final EIS/EIR, the previously adopted CEQA Findings, which it adopts as its own in support of this approval, and finds, on the basis of substantial evidence and in light of the whole record, that since the approval of the Project no further environmental review beyond the Final EIS/EIR is required under CEQA for the following reasons: there have been no changes in the Project, the circumstances under which the Project will be undertaken, or new information that has become available about the Project that would require major revisions to the Final EIS/EIR due to new significant impacts or a substantial increase in the severity of previously identified significant impacts; and no new information has become available to indicate that mitigation measures or alternatives found not feasible, which would reduce one or more significant impacts have become feasible, or considerably different mitigation measures or alternatives would substantially reduce one or more significant effects on the environment.

Section 2. Construction Manager/General Contractor and Core Trade Subcontractors Contracting Procedure for the Van Ness BRT Project.

(a) Administrative Code, Section 6.68, allows the City to procure construction services for public works projects by a process known as "integrated project delivery" (IPD), whereby the City retains a construction manager/general contractor (CM/GC) during the design process to review and comment on the constructability of the design within the established budget for the project. Under the IPD process, Section 6.68(C) requires that a request for qualifications (RFQ) be issued to pre-qualify firms prior to issuance of a request for proposals (RFP); pre-qualified firms are then invited to submit competitive proposals for the project in response to the RFP. Under Section 6.68(D), each proposal is ranked to determine which proposal provides the overall best value to the City with respect to non-cost and cost

criteria, with the cost criteria (the fees proposed for pre-construction services and for construction phase services, including overhead, profit, and general conditions) constituting not less than 65 percent of the overall evaluation.

(b) The City held a charrette regarding the Project with potential CM/GC proposers, and the SFMTA issued a request for information to solicit feedback from firms not present at the charrette. Based on those activities, the SFMTA has determined that it will not be necessary to pre-qualify firms under an RFQ process; rather, the SFMTA intends to issue an RFP with minimum qualifications listed for the CM/GC and certain core subcontractors.

(c) Other CM/GC transit projects that have been funded through the FTA have placed more weight on non-cost considerations, such as experience, qualifications, diversity and workforce approaches, than what is permitted under Administrative Code Section 6.68. In order to meet and exceed federal disadvantaged business and workforce hiring requirements, and obtain the most qualified CM/GC team for the Project, the SFMTA also wishes to give more weight to non-cost criteria. SFMTA will ask for price proposals to include (1) pre-construction costs, and (2) a fixed fee (profit and other fixed expenses) for all construction work, based on the estimated cost of the construction, which may be adjusted if actual construction costs differ significantly from the estimate. The evaluation of the price proposals will constitute not less than 30 percent of the overall evaluation; evaluation of non-cost criteria will constitute a maximum of 70 percent of the overall evaluation.

(d) Other CM/GC transit projects have negotiated a guaranteed maximum price (GMP) with the selected CM/GC after the final design is sufficiently completed. The SFMTA intends to negotiate portions of the GMP, including the general conditions and the cost of all construction work for the Project. The fixed fee referred to in subsection (c) above will also become part of the GMP. The SFMTA will retain independent estimators who shall provide the SFMTA with cost estimates of all Project construction work. After receiving a GMP

\_5

proposal from the CM/GC, the SFMTA will meet with the CM/GC to discuss and negotiate elements of the proposal. The SFMTA will conduct a cost/price analysis in accordance with FTA requirements to ensure that the final GMP is fair and reasonable. If the SFMTA and the CM/GC are unable to agree on what the SFMTA considers to be a reasonable price for the work, the SFMTA may terminate the contract with the CM/GC, issue an invitation for bids, and award a contract for the Project to the lowest responsive and responsible bidder.

(e) Under Administrative Code section 6.68(H), the selected CM/GC procures subcontracts for the trade work by inviting pre-qualified trade subcontractors to submit competitive bids. Those bids are evaluated on price alone, and the CM/GC awards the subcontract to the lowest responsive bidder.

(f) The SFMTA has determined that selection of all subcontractors according to the procedures in Section 6.68(H) would not be the most cost- and time-efficient way of implementing the Project, which is unusual relative to other CM/GC projects that have been constructed in San Francisco, given that it is a "horizontal" project that will be constructed in the middle of a major traffic corridor in San Francisco (as opposed to construction of an office building or other "vertical" project). Of great advantage in the pre-construction final design and construction planning process will be the assistance of core subcontractors, such as those with specialties in overhead contact system/traction power construction, paving, sewer/water main replacement, and traffic control, to develop the best plan for scheduling construction in the corridor. Non-core subcontractors who meet the minimum qualifications will be solicited competitively by the CM/GC, based on low bid.

(g) On October 7, 2014, the SFMTA Board of Directors adopted Resolution No. 14-147, which authorized the SFMTA to use a Construction Manager/General Contractor project delivery method for the Van Ness BRT Project, and further authorized the Director of Transportation, in his discretion, to seek approval from the Board of Supervisors for a Project-

7,08

Page 5

specific ordinance to implement the CM/GC delivery method in a manner that is most efficient for the Project. Section 3. Modification of Requirements of Administrative Code Section 6.68.

Notwithstanding the provisions of Administrative Code Section 6.68, the Board of Supervisors authorizes the SFMTA to take all necessary steps to procure the CM/GC and its core trade work subcontractor team for the Van Ness BRT Project as described in and in conformance with Sections 2(b), 2(c), 2(d) and 2(f) of this ordinance.

Section 4. No Conflict with Federal or State Law. Nothing in this ordinance shall be interpreted or applied so as to create any requirement, power, or duty in conflict with any federal or state law, regulation or other requirement.

Section 5. Effective Date. This ordinance shall become effective 30 days after enactment. Enactment occurs when the Mayor signs the ordinance, the Mayor returns the ordinance unsigned or does not sign the ordinance within ten days of receiving it, or the Board of Supervisors overrides the Mayor's veto of the ordinance.

APPROVED AS TO FORM: DENNIS J. HERRERA, City Attorney

M.)Reîtze

Deputy City Attorney

### LEGISLATIVE DIGEST

[Contracting Process - Van Ness Bus Rapid Transit Project]

Ordinance modifying the requirements of Administrative Code, Section 6.68, as applied to the proposed construction of the Van Ness Bus Rapid Transit Project, to authorize the Municipal Transportation Agency to, instead of a formal Request for Qualifications, issue a Request for Proposals (RFP) to potential construction managers/general contractors (CM/GC), to include their teams of core trade subcontractors, which RFP will contain minimum qualifications for the CM/GC and certain subcontractors; evaluate the CM/GC primarily on non-cost criteria; negotiate a guaranteed maximum price with the selected CM/GC when the design is sufficiently complete, provided the price is fair and reasonable; and making environmental findings.

#### Existing Law

- The existing ordinance requires that a request for qualifications (RFQ) be issued to prequalify firms prior to issuance of a request for proposals (RFP) to select a CM/GC for a project; pre-qualified firms are then invited to submit competitive proposals for the project in response to the RFP.
- The existing ordinance specifies that cost criteria (the fees proposed for preconstruction services and for construction phase services, including overhead, profit and general conditions) constitute not less than 65 percent of the overall evaluation of the proposals in response to an RFP.
- The existing ordinance does not provide for negotiation of a guaranteed maximum price (GMP).
- Under the existing ordinance, the selected CM/GC procures subcontracts for the trade work by inviting pre-qualified trade subcontractors to submit competitive bids. Those bids are evaluated on price alone, and the CM/GC awards the subcontract to the lowest responsive bidder.

#### Amendments to Current Law

- The existing ordinance is amended for this project to allow the SFMTA to issue an RFP with minimum qualifications listed for the CM/GC and certain core subcontractors, rather than issuing a separate RFQ.
- The existing ordinance is amended for this project to allow the SFMTA to ask for price proposals for (a) pre-construction costs and (b) a fixed fee (profit and other fixed expenses) for all construction work, based on the estimated cost of the construction, which fee may be adjusted if actual construction costs differ significantly from the estimate. Evaluation of the price proposals will constitute not less than 30 percent of

the overall evaluation; evaluation of non-cost criteria will constitute a maximum of 70 percent of the evaluation.

- The existing ordinance is amended for this project to allow the SFMTA to negotiate the guaranteed maximum price (GMP) with the CM/GC. The GMP will include the cost of all construction work for the Project, as well as the costs for general conditions and the fixed fee referred to above. The proposed GMP will be subject to a cost/price analysis under FTA requirements to determine whether the amount is fair and reasonable. If the SFMTA and the CM/GC are unable to agree on what the SFMTA considers to be a reasonable price for the work, the SFMTA will terminate the contract with the CM/GC, issue an invitation for bids, and award a contract for the Project to the lowest responsive and responsible bidder.
- The existing ordinance is amended to allow the SFMTA to procure for the preconstruction phase of the project, as part of the CM/GC team, the assistance of core subcontractors, such as those with specialties in overhead contact system/traction power construction, paving, sewer/water main replacement, and traffic control, to develop the best plan for scheduling construction in the Van Ness corridor.

#### **Background Information**

The Van Ness Bus Rapid Transit (BRT) Project (now known as the Van Ness Corridor Transit Improvement Project) (the Project) is a large-scale plan to implement "full-feature" BRT on one the Van Ness corridor. The SFMTA anticipates that the Federal Transit Administration of the U.S. Department of Transportation will provide \$75,000,000 in federal funding for the Project as part of its Small Starts Program.

Administrative Code Section 6.68 allows the City to procure construction services for public work projects by a process known as "integrated project delivery," whereby the City retains a construction manager/general contractor (CM/GC) during the design process to review and comment on the constructability of the design within the established budget for the project. To complete the design and construct the Project, the SFMTA has decided to employ a CM/GC project delivery method that differs in certain respects from the process in Section 6.68, but that is similar to the method used by the public transit agency in Portland, Oregon (TriMet) for a project that extended light rail into Portland's downtown area.

On October 7, 2014, the SFMTA Board of Directors adopted Resolution No. 14-147, which authorized the SFMTA to use a CM/GC project delivery method for the Van Ness BRT Project, and further authorized the Director of Transportation to seek approval from the Board of Supervisors for a Project-specific ordinance to implement the CM/GC delivery method in a manner that is most efficient for the Project.

Tom Nolan, *Chairman* Gwyneth Borden, *Director* Jerry Lee, *Director* Cristina Rubke, *Director* 

Cheryl Brinkman, Vice-Chairman Malcolm Heinicke, Director Joël Ramos, Director

Edward D. Reiskin, Director of Transportation

The Honorable Members of the Board of Supervisors City and County of San Francisco 1 Dr. Carlton Goodlett Place, Room 244 San Francisco, CA 94102

#### Subject: Request for Approval of a Project Specific Ordinance for the Van Ness Bus Rapid Transit Project

#### Honorable Members of the Board of Supervisors:

The San Francisco Municipal Transportation Agency (SFMTA) requests that the San Francisco Board of Supervisors approve a Project-Specific Ordinance for the Van Ness Bus Rapid Transit (BRT) Project (also known as the Van Ness Corridor Transit Improvement Project).

#### Background

The Van Ness BRT Project will be the first BRT service in San Francisco. In addition to promoting pedestrian safety and comfort and enhancing the urban design of Van Ness Avenue, the Project will improve transit reliability for the 47 and 49 Muni routes, and provide reliable transit connections to transfer routes. The transit service and infrastructure changes are expected to reduce transit travel times by over 30 percent from approximately 20 minutes to between 13 and 14 minutes. By 2035, following implementation of BRT, ridership is projected to be greater than 60,000 passengers per day, up from the approximately 45,000 passengers a day that currently ride the 47 and 49 bus lines. Strengthening transit along this two-mile stretch of Van Ness will also positively affect the efficiency of connecting routes.

The SFMTA has determined that the most efficient way to deliver the work being performed under the Van Ness BRT Project is to employ the contracting method known as Construction Manager/ General Contractor (CM/GC). Under CM/GC, the prime contractor on the project is brought in early to support the completion of the project design. This minimizes change orders and construction costs because the Contractor can influence the design directly to reduce time and correct errors and omissions. The goal is to achieve construction of the Project in the shortest amount of time, while maintaining a satisfactory level of service for public transit, pedestrian and vehicular traffic, and the overall welfare of the neighboring communities and businesses. Construction is scheduled to begin in late 2015 and be substantially complete by the summer of 2018.

#### **Description of Work**

The Van Ness Corridor Transit Improvement Project consists of the core BRT Project and five parallel projects. These parallel projects have their own funding separate from the BRT project, but the design and construction will be integrated with the BRT project. The parallel projects include:

San Francisco Board of Supervisors Project Specific Ordinance for Van Ness Bus Rapid Transit Project November 3, 2014 Page 2 of 4

- The SFMTA Overhead Contact System (OCS) and Poles Replacement Project, which will replace existing deteriorated OCS, poles and streetlights.
- The SFMTA SFgo Project, which will modernize and improve the traffic signal system including pedestrian countdown signals and Accessible Pedestrian Signals (APS).
- The San Francisco Public Utilities Commission (SFPUC) Sewer Replacement Project, Water Line Replacement Project, and Green Infrastructure Project.

#### Ordinance

Administrative Code Section 6.68 allows the City to procure construction services for public works projects by a process known as "integrated project delivery," whereby the City retains a CM/GC during the design process to review and comment on the constructability of the design within the established budget for the project. The proposed ordinance modifies Administrative Code Section 6.68 to accommodate the Van Ness BRT Project in the following ways: elimination of the requirement for a Request for Qualifications (RFQ); authorizing price proposals to include preconstruction costs and a fixed fee and giving more weight in scoring to non-cost considerations; addition of core subcontractors as part of the CM/GC's team; and negotiation of a Guarantee Maximum Price (GMP).

#### Elimination of RFQ

Administrative Code Section 6.68(C) requires that an RFQ be issued to pre-qualify firms prior to issuance of a request for proposals (RFP); pre-qualified firms are then invited to submit competitive proposals for the project in response to the RFP. The City held a charrette regarding the project with potential CM/GC proposers, and the SFMTA issued a request for information to solicit feedback from firms not present at the charrette. Based on those activities, the SFMTA has determined that it will not be necessary to pre-qualify firms under an RFQ process; rather, the SFMTA intends to issue an RFP with minimum qualifications listed for the CM/GC and certain core subcontractors:

#### Price Proposal/Scoring Criteria

Under Administrative Code Section 6.68(D), each proposal is ranked to determine which proposal provides the overall best value to the City with respect to non-cost and cost criteria, with the cost criteria (the fees proposed for pre-construction services and for construction phase services, including overhead, profit, and general conditions) constituting not less than 65 percent of the overall evaluation.

Under the proposed ordinance, the SFMTA will ask for price proposals for (a) pre-construction costs and (b) a fixed fee (profit and other fixed expenses) for all construction work, based on the estimated cost of the construction, which fee may be adjusted if actual construction costs differ significantly from the estimate.

Other CM/GC transit projects have placed more weight on non-cost considerations, such as experience, qualifications, diversity and workforce approaches. Recognizing this, the ordinance provides that the evaluation of the price proposals will constitute not less than 30 percent of the

San Francisco Board of Supervisors Project Specific Ordinance for Van Ness Bus Rapid Transit Project November 3, 2014 Page 3 of 4

overall evaluation, and evaluation of non-cost criteria will constitute a maximum of 70 percent of the overall evaluation.

#### Core Subcontractors on Team

Under Administrative Code section 6.68(H), the selected CM/GC procures subcontracts for the trade work by inviting pre-qualified trade subcontractors to submit competitive bids. Those bids are evaluated on price alone, and the CM/GC awards the subcontract to the lowest responsive bidder.

The SFMTA has determined that the nature and complexity of this project makes the selection of all subcontractors according to the procedures in Section 6.68(H) inefficient, and would greatly reduce the effectiveness of using a CM/GC. The assistance of a core team of subcontractors, such as those with specialties in overhead contact system/traction power construction, paving, sewer/water main replacement, and traffic management will be of great advantage in the pre-construction final design and construction planning process. This team would develop the best plan for scheduling and sequencing the construction in the corridor so as to maximize speed of construction while minimizing community impact. Non-core subcontractors who meet minimum qualifications will be solicited competitively by the CM/GC, based on low bid.

#### Guaranteed Maximum Price

Like other Federal Transportation Agency (FTA)-funded transit projects, this ordinance authorizes the SFMTA to negotiate a Guaranteed Maximum Price (GMP) with the selected CM/GC prior to construction. The GMP will include the general conditions and the cost of all construction work for the Project, and will also incorporate a fixed fee (profit) submitted by the CM/GC at the time of its proposal. The SFMTA will retain independent estimators who shall provide the SFMTA with cost estimates of all Project construction work. After receiving a GMP proposal from the CM/GC, the SFMTA will meet with the CM/GC to discuss and negotiate elements of the proposal. The SFMTA will conduct a cost/price analysis in accordance with FTA requirements to ensure that the final GMP is fair and reasonable. If the SFMTA and the CM/GC are unable to agree on what the SFMTA considers to be a reasonable price for the work, the SFMTA may terminate the contract with the CM/GC, issue an invitation for bids, and award a contract for the Project to the lowest responsive and responsible bidder.

#### Project Delivery Alternatives Considered

The SFMTA hosted a project delivery selection and risk assessment workshop in early 2014. The goal of this workshop was to allow for an open exchange of ideas between public agency stakeholders in order to come up with innovative ideas and recommendations for best project delivery methods, including construction sequencing and execution that would result in an efficient and timely completion of the Project with the least amount of interruption to residents, businesses, and all users of the public right-of-way.

Some of the findings from the workshop include:

• The complexities of maintaining access to transit and traffic in the public right-of-way during construction of the Van Ness BRT will require detailed traffic management planning and decisions on phasing, sequencing, and staging of construction.

San Francisco Board of Supervisors Project Specific Ordinance for Van Ness Bus Rapid Transit Project November 3, 2014 Page 4 of 4

- Pre-planning efforts should be implemented with communities, residents, developers, hotels, businesses, and other active construction projects regarding pre-designated access ways, delivery schedules, and special interim parking.
- The CM/GC method reduces duplicate work during pre-bid planning for permits, community outreach, and sequencing. CM/GC will not save money, but it may save time on the front end for design, permitting, sequencing, and minimizing disruption to the community, and incorporating design changes.
- While the City has some experience in CM/GC, neither the SFMTA nor other City agencies have experience in using CM/GC in a horizontal/roadway construction project. While this lack of experience poses some risk to the project schedule this approach will allow for significant opportunity to minimize the impacts to the community. Street reconstruction projects can have a significant impact on local businesses and residents. The more time that the Contractor has to understand the local conditions and stake holders needs the better the Project mitigation measures will be.
- The "Design Build" delivery method was found to be inappropriate for this Project. The high risk of significant public disruption during construction and the sensitivities of the communities along the length of the corridor will require that the SFMTA maintain a level of control over the project that would not be possible under a "Design Build" construction contract.
- "Design Bid Build", the traditional method for delivering such projects, offers no advantages for accelerating the delivery of the Project or minimizing community impacts.

#### **Funding Impact**

The current estimated cost for the Van Ness BRT Project is \$162.1 million. The funding plan for the project currently includes approximately \$75 million in FTA Small Starts Funds, \$36 million in Proposition K sales taxes (\$15M of which is subject to SFCTA Board approval anticipated in October 2014), and \$51.1 million other state and local funds, including State Highway Operation and Protection Program funds, SFMTA Revenue Bonds and local development impact fees.

#### Recommendation

The SFMTA recommends that the Board of Supervisors authorize this project-specific ordinance for the Van Ness Corridor Transit Improvement Project.

Thank you for your consideration of this proposed agreement. Should you have any questions or require more information, please do not hesitate to contact Peter Gabancho at (415) 701-4306.

Sincerely,

Edward D. Reiskin Director of Transportation

#### SAN FRANCISCO MUNICIPAL TRANSPORTATION AGENCY BOARD OF DIRECTORS CITY AND COUNTY OF SAN FRANCISCO

#### RESOLUTION No. 13-214

WHEREAS, The San Francisco Municipal Transportation Agency (SFMTA) and the San Francisco County Transportation Authority (SFCTA) are partnered in the development of Bus Rapid Transit (BRT) for Van Ness Avenue (the Project); and,

WHEREAS, The goals of BRT are robust and stable ridership, efficient, effective and equitable transit service, neighborhood livability and community vitality, and links to a citywide rapid transit network; and,

WHEREAS, The SFCTA released the draft Environmental Impact Statement / Environmental Impact Report (EIS/EIR) for public review and comment from November 4 – December 23, 2011, which included a public meeting where comments could be submitted, and information about the project provided at a webinar and at neighborhood briefings; and,

WHEREAS, After a long period of analysis by staff at SFMTA and SFCTA, and after considering the information in the draft EIS/EIR and incorporating public comments received during the review period of the draft EIS/EIR, the staff recommendation for the locally preferred alternative (LPA) for the Project, for analysis in the Final EIS/EIR, was "The Center-running BRT with Right Side Boarding Platforms Single Median and Limited Left Turns," which combines key elements contained in Alternatives 3 and 4; and,

WHEREAS, On May 15, 2012, the Municipal Transportation Agency Board of Directors adopted Resolution No. 12-070, which identified and endorsed the LPA for the Van Ness Avenue Bus Rapid Transit Project, "The Center-running BRT with Right Side Boarding Platforms Single Median and Limited Left Turns" for further analysis in the Final EIS/EIR; and,

WHEREAS, The SFCTA has completed a combined Final EIS/EIR, which analyzes the environmental impacts of the LPA; and,

WHEREAS, The Final EIS/EIR analyzed the LPA, "The Center-running BRT with Right Side Boarding Platforms Single Median and Limited Left Turns," and determined that it has the transit performance attributes of a center-running BRT (e.g., faster, more reliable service), while avoiding the need to acquire left-right door vehicles and completely rebuild the median, and is therefore the preferred alternative for project implementation; and,

WHEREAS, The Final EIS/EIR was prepared to respond to comments on the Draft EIS/EIR and was distributed on July 5, 2013; and,

WHEREAS, The Vallejo Northbound Station Variant described in the Final EIS/EIR would provide enhanced access for residents in the northern part of the project corridor; and WHEREAS, The SFCTA certified the EIS/EIR as adequate, accurate and objective and reflecting the independent judgment of the SFCTA on September 10, 2013, including an amendment to include the Vallejo Northbound Station Variant in the approval of the LPA; and,

WHEREAS, The SFMTA Board has reviewed and considered the information contained in the EIS/EIR; now, therefore, be it

RESOLVED, That the San Francisco Municipal Transportation Agency Board of Directors approves the Van Ness Avenue Bus Rapid Transit Project, analyzed as the Locally Preferred Alternative (LPA) in the Final EIS/EIR for the Project, including the Vallejo Northbound Station Variant; and be it further

RESOLVED, That the SFMTA Board adopts the CEQA Findings and Statement of Overriding Considerations for the EIS/EIR, attached to this Resolution as Attachment A and incorporated herein as those fully set forth; and adopts the Mitigation Monitoring and Reporting Plan attached to this Resolution as Exhibit 1 to Attachment A; and be it further

RESOLVED, That the SFMTA Board authorizes the Director of Transportation to direct staff to continue with obtaining otherwise necessary approvals and to carry out the actions to implement the Project.

I certify that the foregoing resolution was adopted by the Municipal Transportation Agency Board of Directors at its meeting of September 17, 2013.

R. Browner

Secretary, Board of Directors San Francisco Municipal Transportation Agency

#### SAN FRANCISCO MUNICIPAL TRANSPORTATION AGENCY BOARD OF DIRECTORS

#### RESOLUTION No. 14-147

WHEREAS, The goals of the Van Ness Bus Rapid Transit Project are robust and stable ridership, efficient, effective and equitable transit service, neighborhood livability and community vitality, and links to a citywide rapid transit network; and,

WHEREAS, On May 15, 2012, the Municipal Transportation Agency Board of Directors adopted Resolution No. 12-070, which identified and endorsed the Locally Approved Alternative (LPA) for the Van Ness Avenue Bus Rapid Transit Project, "The Center-running BRT with Right Side Boarding Platforms Single Median and Limited Left Turns," for further analysis in the Final Environmental Impact Statement/Environmental Impact Report (EIS/EIR); and,

WHEREAS, The San Francisco County Transportation Authority (SFCTA) Board certified the EIS/EIR as adequate, accurate and objective and reflecting the independent judgment of the SFCTA on September 10, 2013; and,

WHEREAS, On September 17, 2013, the Municipal Transportation Agency Board of Directors adopted Resolution No. 13-214, approving the Van Ness Avenue Bus Rapid Transit Project, analyzed as the Locally Preferred Alternative in the Final EIS/EIR for the Project, and adopted the CEQA Findings and Statement of Overriding Considerations for the EIS/EIR; and,

WHEREAS, On June 6, 2014, the SFMTA completed the Conceptual Engineering Report (CER), bringing the project to the 30 percent design level, and staff began an analysis of the best delivery method to complete the project on schedule; and

WHEREAS, Construction Manager/General Contractor (CM/GC) is an integrated alternative project delivery method whereby the CM/GC, selected during the design process to provide input on the constructability of the project, acts as the prime contractor and assumes the risks for full performance of all construction work, for financial overruns, and schedule delays not caused by the SFMTA; and

WHEREAS, The Director of Transportation has determined under Administrative Code Section 6.68(A) that an integrated project delivery method will be the most effective way to achieve time efficiencies to implement construction of the Project and that such a process is in the public interest; and

WHEREAS, Administrative Code Section 6.68(B) requires that the SFMTA obtain approval from this Board to solicit proposals for a CM/GC; and

WHEREAS, The SFMTA requires authority from this Board to seek approval from the Board of Supervisors for an ordinance that amends Administrative Code Section 6.68 specifically for the Project if the Director, in his discretion, deems it necessary; now, therefore, be it RESOLVED, That the SFMTA Board of Directors authorizes the SFMTA to use a Construction Manager/General Contractor project delivery method for the Van Ness Bus Rapid Transit Project; and be it further

RESOLVED, That the SFMTA Board of Directors authorizes the Director of Transportation, in his discretion, to seek approval from the Board of Supervisors for a Projectspecific ordinance to implement the CM/GC delivery method in a manner that is most efficient for the Project.

I certify that the foregoing resolution was adopted by the San Francisco Municipal Transportation Agency Board of Directors at its meeting of October 7, 2014.

R. Boomer

Secretary, Board of Directors San Francisco Municipal Transportation Agency

# Exhibit 1

# Mitigation Monitoring & Reporting Program for the Van Ness Avenue BRT Project

### City and County of San Francisco, California

### By the

## San Francisco County Transportation Authority and San Francisco Municipal Transportation Agency

July-2013

#### Introduction

This Mitigation Monitoring and Reporting Program (MMRP) is for the Van Ness Bus Rapid Transit (BRT) Project. The California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA) regulations require an enforceable mitigation monitoring program for projects. CEQA Section 21081.6 and CEQA Guideline 15097(a), require public agencies to adopt a program for monitoring and reporting on the measures required to mitigate or avoid significant environmental impacts identified in the Final Environmental Impact Report (EIR). Under NEPA regulations, a monitoring and enforcement program shall be adopted and summarized where applicable for any mitigation (40 CFR Section 1505.2(c) and 23 CFR 771.27A). Under CEQA, the MMRP must be adopted when a public agency makes its findings pursuant to CEQA so that the mitigation requirements can be made conditions of project approval. Consistent with these requirements, this MMRP ensures compliance with all mitigation requirements set forth in the Final EIS/EIR that have been determined to be feasible under the CEQA Findings. These measures include, but are not limited to, elements that would be designed into the new facility and implementation of best management practices during construction. This MMRP will be kept on file in the offices of the San Francisco County Transportation Authority (Authority), 1455 Market Street, 22<sup>nd</sup> Floor, San Francisco, CA 94103.

#### Mitigation Monitoring & Reporting Program

Analysis of each environmental factor in Chapters 3 through 7 of the Final EIS/EIR includes discussion of the affected environment, environmental consequences (including permanent/project operational impacts, construction impacts, and cumulative impacts), and avoidance, minimization, and compensation measures for each project alternative, including the LPA. This MMRP includes all feasible mitigation measures that are applicable to the adopted project, the LPA. The avoidance, minimization, and compensation measures are identified in the following two categories: "mitigation measures" and "improvement measures." Mitigation measures are contained in Table A and are measures required to address a potentially significant impact. Improvement measures are contained in Table B. Improvement measures identified in the Final EIS/EIR are not needed to avoid or reduce significant impacts, but either embody regulatory requirements or are standard construction procedures or best practices that are recommended to reduce or avoid impacts that are less than

significant... The purpose of the MMRP is to list all mitigation and improvement measures adopted for the Van Ness Avenue BRT Project, and the milestones at which measures must be implemented. It also identifies the implementing, enforcing, and monitoring entities. The Authority, as the lead agency under CEQA, will oversee the implementation of the mitigation and monitoring program through project implementation, including construction, testing and initial operations. The Authority will designate a Mitigation Monitoring Manager at the Authority to oversee the monitoring and reporting of all mitigation and improvement measures. The San Francisco Municipal Transportation Agency (SFMTA), as a responsible agency under CEQA, will be the entity that will construct and operate the project and will be responsible for carrying out mitigation measures that mustbe implemented as part of project design, construction and operation. The SFMTA shall designate a mitigation and monitoring coordinator to oversee the implementation of all relevant mitigation measures.

To ensure compliance with the MMRP, further agreements between the Authority and SFMTA will require SFMTA to implement or, through contracts, ensure implementation of, the mitigation measures and improvement measures. The Authority (or its Consultant) will conduct periodic audits of the construction site, and through the agreements will have authority to resolve with SFMTA any issues that arise concerning compliance with mitigation requirements on the part of SFMTA or its contractor. Through its CEQA Findings, the Authority will also urge other agencies that will issue permits for the work, including the Department of Public Works and Caltrans to require compliance with the mitigation measures through their permits.

Table A (Mitigation Measures) and Table B (Improvement Measures) are organized by environmental discipline, or affected resource. They provide a summary of the mitigation measures or improvement measures identified in the Final EIS/EIR. Table A and Table B include a summary of the following information:

- Affected Resource: Provides a broad title of the impact or effect that is to be mitigated or improved.
- Contractor: Refers to any contractor hired by SFMTA to implement the project.
- Mitigation or Improvement Measures: Provides a brief description of the mitigation or improvement measures. The MMRP includes all mitigation measures and improvement measures identified in the Final EIS/EIR that the Authority and the SFMTA found feasible and adopted as part of the CEQA Findings for the Project. The Authority will ensure that these measures are fully enforceable, in most cases by SFMTA, by making them conditions of project funding. Through agreements with SFMTA, the Authority will require SFMTA to incorporate the measures into design documents, construction specifications and project operational procedures. Other agencies may assist Authority in monitoring compliance with mitigation measures, such as the FTA, Department of Public Works, or Caltrans through their permitting and funding authority.
- Implementation Procedure: Describes by whom and when the mitigation and/or improvement measures must be implemented.
- Implementation Responsibility: Describes who is responsible for implementing the mitigation and/or improvement measures. In most cases it is the SFMTA or the Contractor.
- Implementation Schedule: Identifies the project phase or milestone at which the mitigation and/or improvement measures must be implemented. The Mitigation Monitoring Manager must approve that the mitigation measure is adequately addressed at each phase of project development.
- Monitoring Responsibility: Identifies the agency responsible for ensuring that mitigation measures are implemented. In most cases it is the SFMTA.
- Report Recipient: Identifies the agencies who will be notified that the mitigation measures have been implemented adequately. The Authority and the FTA are always reporting recipients.

#### Table A. Mitigation Monitoring & Reporting Program for the Van Ness Avenue BRT Project (Mitigation Measures)

SUBJECT: Filing of Notice of Determination in compliance with Section 21 Public Resources Code. SEP 13, 2013

Deputy County Clerk

Project Title: Van Ness Avenue Bus Rapid Transit Project

**Project Location (include county):** Van Ness Avenue and South Van Ness Avenue, from Van Ness Avenue at Lombard Street to South Van Ness Avenue at Mission Street, City and County of San Francisco.

State Clearinghouse Number (if submitted to State Clearinghouse): 2007092059 by: JENNIFER WONG

**Project Description:** Bus Rapid Transit (BRT) is a new mode of transit in San Francisco and represents a package of features that together create rapid and reliable transit service for the benefit of passengers along a given corridor, and the transit system as a whole. The Van Ness Avenue BRT Project will operate existing bus service in a dedicated transit lane for a two-mile-long stretch from South Van Ness Avenue at Mission Street to Van Ness Avenue at Lombard Street by converting a northbound and a southbound mixed-flow traffic lane in the center of the roadway to dedicated transit lanes. Project features include: at or near level boarding, consolidated transit stops, high quality stations, platform proof of payment, traffic signal optimization, fewer left turn pocket lanes, transit signal priority, pedestrian safety enhancements, and replacement of the overhead contact support system/streetlight system, including poles.

This is to advise that the San Francisco County Transportation Authority has approved the above described project on September 10, 2013, by SFCTA Resolution No. 14-18, and has made the following determinations regarding the above described project:

1. The project [ will i will not] have a significant effect on the environment.

2. An Environmental Impact Report was prepared for this project pursuant to the provisions of CEOA.

□ A Negative Declaration was prepared for this project pursuant to the provisions of CEQA.

3. Mitigation measures [ were 🗆 were not] made a condition of the approval of the project.

4. A mitigation reporting or monitoring plan [⊠ was □ was not ] adopted for this project.

5. A statement of Overriding Considerations  $[\boxtimes was \square was not]$  adopted for this project.

6. Findings [ were in were not ] made pursuant to the provisions of CEQA.

POSTED	SEP 1 3 2013

Notice of Determination (continued) San Francisco County Transportation Authority: Van Ness Avenue BRT Project

This is to certify that the final EIR with comments and responses and record of project approval, or the Negative Declaration, is available to the General Public at: 1455 Market Street, 22<sup>nd</sup> Floor, San Francisco, CA 94103.

Signature: 🛕 Date Name: Maria Lombardo Title: Interim Executive Director

Date Received for filing at OPR

#### Record of Decision on the Van Ness Avenue Bus Rapid Transit Project in San Francisco, California by the Federal Transit Administration

#### **Decision**

The Federal Transit Administration (FTA) has determined that the requirements of the National Environmental Policy Act of 1969 (NEPA) and related federal environmental statutes, regulations, and executive orders have been satisfied for the Van Ness Avenue Bus Rapid Transit (BRT) Project (the Project) located in San Francisco, California.

This environmental Record of Decision (ROD) applies to the transit alternative consisting of dedicated bus travel lanes and related facilities on Van Ness Avenue, which was described as the Project (defined as the Locally Preferred Alternative [LPA]: Center-Lane BRT with Right-Side Boarding/Single Median and Limited Left Turns), and was evaluated in the *Van Ness Avenue Bus Rapid Transit Project Final Environmental Impact Statement/Environmental Impact Report*, dated July 2013 (Final EIS). FTA served as the federal lead agency under NEPA. The San Francisco County Transportation Authority (SFCTA), in partnership with the San Francisco Metropolitan Transportation Agency (SFMTA), served as the local lead agency for environmental review under the California Environmental Quality Act (CEQA). The California Department of Transportation of Van Ness and South Van Ness Avenues, designated as U.S. Highway 101 (US 101), within the project limits. Caltrans also served as a cooperating agency under NEPA as delegated by the Federal Highway Administration. SFMTA also participated as a responsible agency under CEQA and a participating agency under NEPA because it will implement the Project.

SFMTA will seek financial assistance from FTA for the Project and carry out the Project final design and construction. If FTA provides financial assistance for the final design or construction of the Project, FTA will require the Project to be designed and built as presented in the Final EIS and in this ROD. Any proposed change must be evaluated in accordance with 23 CFR § 771.130 and must be approved by FTA before the agency requesting the change can proceed.

#### **Background**

The Project's purpose is to improve transit reliability, speed, and connectivity in the corridor; to improve pedestrian safety; to enhance the urban design and identity of Van Ness Avenue; to create a more livable and attractive street for local residential and commercial activities; and to accommodate safe multimodal circulation and access within the corridor. Van Ness Avenue is a heavily-traveled, north-south primary arterial and a part of US 101. It serves as a key north/south route in the SFMTA transit system (Muni). Strong demand for transit service and future ridership growth potential exist in this corridor. Transit speeds and reliability are poor on Van Ness Avenue, due in large part to transit operations in congested, mixed flow traffic. The Project is intended to support San Francisco's growth and transportation demands by improving transit system performance.

The Project includes a two mile, dedicated bus lane on Van Ness Avenue, extending from Mission Street in the south to Lombard Street in the north. Two mixed-flow lanes (one northbound [NB] and one southbound [SB] lane) would be converted into dedicated transit lanes. The Project also includes replacement of the Overhead Contact System (OCS) support poles/streetlights from Mission Street north to North Point Street and streetscaping throughout the corridor. The Project proposes consolidation and removal of existing bus stops in each direction to reduce dwell time delays and improve service reliability. Nine NB and nine SB stations are included as center lane stations with single median configuration. The NB stations are located at the following intersections: Market Street, McAllister Street, Eddy Street, O'Farrell to Geary streets, Bush Street, Clay Street, Pacific Avenue, Vallejo Street, and Union Street. The SB stations are located at the following blocks: Market Street, McAllister Street, Vallejo Street, O'Farrell to Geary streets, Sutter Street, Sacramento Street, Jackson Street, Vallejo Street, and Union Street. The project also reduces left turns in the corridor.

#### Planning for the Project

FTA published the Notice of Intent (NOI) to prepare an EIS for this Project in the Federal Register on September 24, 2007. The scoping process concluded on November 30, 2007. The Notice of Availability (NOA) of the Draft EIS was published in the Federal Register on November 4, 2011 as well as the local San Francisco Examiner, the Sing Tao Daily (In Cantonese), El Mensajero (In Spanish), and the Marina Times within one week of the appearance in the Federal Register. The Draft EIS was circulated for public review and comment over a 49-day period, which concluded on December 23, 2011. In 2012, after consideration of the environmental analysis and public feedback on the Draft EIS, the SFCTA and SFMTA Boards identified a Locally Preferred Alternative (LPA) as center-lane BRT with right-side boarding/single median and limited left turns for the Van Ness Avenue corridor.

The NOA for the Final EIS was published on July 12, 2013 in the *Federal Register*. The review and comment period for the Final EIS concluded on August 12, 2013. FTA extended the review period by 15 days, ending on August 27, 2013, for one individual in response to a request for additional review time.

#### **Alternatives Considered**

FTA and SFCTA, in collaboration with SFMTA, considered a broad range of alternatives in various studies prior to the initiation of the NEPA process and continuing through the Draft and Final EIS.

Between 1995 and 2005, numerous adopted local and regional studies and plans, including a voter-approved transportation sales tax expenditure plan, identified Van Ness Avenue as part of a citywide BRT network. Prior to the initiation of the environmental study process, the SFCTA and SFMTA Boards adopted the *Van Ness Avenue BRT Feasibility Study* in 2006. The study described several possible BRT configurations for Van Ness Avenue. In addition to recommendations in the Feasibility Study, agency and public input during the scoping process in 2007 helped refine the range of alternatives carried forward into the environmental process.

In 2008, the *Alternatives Screening Report* applied screening criteria to the alternatives analyzed during scoping to determine the ability of each alternative to meet the purpose and need for the Project. The screening criteria measured the performance of alternatives with regard to achieving benefits in terms of transit operations, transit rider experience, urban design, and multimodal

system performance, as well as impacts to traffic and parking, cost, and construction impacts. The alternatives analyzed in this report included a No Build Alternative; transit preferential street (TPS) improvements; multiple BRT alignments, including center running and side running BRT; and surface light rail and subway alternatives. The TPS improvements, surface light rail and subway alternatives were not recommended for further analysis in the Draft EIS based on their low performance in meeting the screening criteria. The report recommended the following alternatives for further study in a Draft EIS, as described below:

- No Build Alternative;
- Build Alternative 2 Side Lane BRT with Street Parking;
- Build Alternative 3 Center Lane BRT with Right-Side Boarding and Dual Median; and
- Build Alternative 4 Center Lane BRT with Left-Side Boarding and Single Median.

The report also recommended a design option termed "Design Option B" for Build Alternatives 3 and 4. Design Option B would eliminate all left turns on the Van Ness Avenue corridor, except for one NB left turn at Lombard Street and one SB left turn at Broadway. The design option reduces weaving and aids the flow of north-south traffic on Van Ness Avenue.

Alternative 1 - No Build Alternative. The No Build Alternative would not alter the existing transit network within the project area and would not include any major service improvements or new transportation infrastructure aside from improvement projects planned to occur within the near-term horizon year of 2015. This includes planned pavement rehabilitation, OCS and support pole/streetlight replacement, traffic signal upgrades, bus vehicle improvements such as low floor boarding and all door boarding, and installation of bus arrival displays. These improvements would not change sidewalk, intersection crossing, and median configurations.

Build Alternative 2 – Side Lane BRT with Street Parking. Build Alternative 2 proposes dedicated transit lanes along the side of the roadway where the right-most travel lane in each direction currently exists, adjacent to the curbside parking area. Construction of Build Alternative 2 would not require replacement or relocation of segments of the sewer pipeline, as would occur in varying degrees under the other build alternatives. Alternative 2 is the environmentally preferable alternative as it would result in less traffic impacts at intersections during operations and would remove fewer trees compared to the other build alternatives. However, compared to the other build alternatives, Alternative 2 had the lowest performance in meeting the Purpose and Need, particularly in regard to transit performance, bicycle and pedestrian access and safety enhancement, and system performance, as discussed in Chapter 10 of the Final EIS.

Build Alternative 3 – Center Lane BRT with Right-Side Boarding and Dual Median. Build Alternative 3 proposes dedicated transit lanes in the center of the roadway where the median currently exists, with two medians separating bus lanes from mixed-flow traffic. The BRT stations would be located in the center medians. Build Alternative 3 requires the removal and complete reconstruction of the center median and, therefore, would remove the associated street trees. It would also require extensive replacement of the sewer pipeline.

Build Alternative 4 – Center Lane BRT with Left-Side Boarding and Single Median. Build Alternative 4 proposes dedicated transit lanes in the center of the roadway where the left-most travel lane in each direction currently exists along both sides of a single center median. The BRT stations would be located in the single center median. This alternative requires left-side boarding and the acquisition of left-side door vehicles, which adds cost to the Project. Further, this type of

Van Ness BRT Record of Decision

left-side door vehicle, which uses electric propulsion through an overhead contact system, is not known to be operating anywhere in North America.

<sup>1</sup> Locally Preferred Alternative – Center-running BRT with Right-Side Boarding Platforms Single Median and Limited Left Turns: On May 15, 2012, the SFMTA Board selected the Center-Lane BRT with Right-Side Boarding Platforms Single Median and Limited Left Turns as the LPA for inclusion in the Final EIS for the Van Ness Avenue BRT Project. On June 26, 2012, the SFCTA Board also selected this alternative as the LPA for inclusion in the Final EIS. The LPA is a combination and refinement of the two center-running alternatives with limited left turns (Build Alternatives 3 and 4 with Design Option B) presented in the Draft EIS. The LPA has similar impacts as both Alternatives 3 and 4; however, the LPA rebuilds a smaller portion of the median than Build Alternative 3 and avoids a complete removal of median trees and rebuilding of the sewer. The LPA would not need left-side boarding vehicles as is the case with Build Alternative 4.

Additionally, in response to public comments, the Final EIS evaluated a northbound station at the Vallejo Street/Van Ness Avenue intersection as a design variant (Vallejo Northbound Station Variant). Like the other stations, it would be a center lane station with single median configuration. The SFCTA Board approved implementation of the LPA with the Vallejo Northbound Station Variant on September 10, 2013. On September 17, 2013, the SFMTA Board also approved implementation of the LPA with the design variant.

#### **Description of the Project**

The Project as described in the Final EIS is the subject of this ROD. The Van Ness Avenue BRT Project is scheduled to begin construction in 2016 with operation commencing in 2018. The LPA is a combination and refinement of the center-running alternatives with limited left turns (Build Alternatives 3 and 4 with Design Option B) and is referred to as Center-Lane BRT with Right-Side Boarding/Single Median and Limited Left Turns.

The Project would operate along a dedicated transit lane, or transitway, for the two-mile-long project corridor from Mission Street to Lombard Street. The Project would occur entirely within the existing street right of way. Two mixed-flow traffic lanes (one SB and one NB) would be converted into two dedicated transit lanes (one SB and one NB) to accommodate the BRT transitway. BRT vehicles would run alongside a single median for most of the corridor; however, at station locations, BRT vehicles would transition to the center of the roadway, allowing right-side loading at station platforms.

The existing curbside Muni bus stops within the corridor would be removed and replaced with center lane BRT stations. With the Vallejo Northbound Station Design Variant, nine NB and nine SB stations are included as center lane stations with single median configuration.

The LPA also incorporates Design Option B, which eliminates all left turns in the Project corridor, except for one NB left turn at Lombard Street and one SB left turn at Broadway. Existing left-turn pockets for mixed-flow traffic would be eliminated at twelve intersections (six NB movements and six SB movements) to reduce conflicts with the BRT operation and oncoming vehicles. Right-turn pockets would be provided at three intersections (Mission/Otis/South Van Ness, Market Street, and Pine Street) along SB Van Ness Ayenue.

Pedestrian improvements at the South Van Ness Avenue and Mission Street intersection will be implemented as part of the Van Ness Avenue BRT Project consistent with the Market and

4

Van Ness BRT Record of Decision

Octavia Area Plan, which was approved in 2007 by the City and County of San Francisco Board of Supervisors. Those improvements include including pedestrian bulbouts to reduce crossing distances and would also convert the turn from South Van Ness Avenue onto 12<sup>th</sup> Street such that traffic would be allowed to access South Van Ness Avenue from 12<sup>th</sup> Street (i.e., converting it from 1-way to 2-way). This would allow the Project to close the southern part of the roadway connecting 12<sup>th</sup> Street to South Van Ness Avenue, increasing the pedestrian space without reducing traffic access.

The following transportation system and infrastructure improvements are included in the Project:

- Bus vehicles with level or near level boarding capability;
- High quality BRT stations;
- Platform proof of payment/all-door boarding;
- Traffic signal optimization;
- Transit signal priority; and
- Pedestrian safety enhancements such as median upgrade/nose cones, curb ramp upgrades, curb bulbs, pedestrian countdown signals, accessible pedestrian signals, and OCS and support pole/streetlight replacement.

The Project would require modification of some of the existing median landscaping, including removal of trees and landscaping at station platform locations and transition blocks leading to and from station locations. Existing trees would be retained where feasible, and new trees would be planted in the median and along the sidewalk at former bus stop locations. The Project provides an approximately two-foot-wide buffer between pedestrians and traffic in the form of planters located between existing sidewalk trees. Those buffers are located on the block between O'Farrell and Geary streets on the east side of the street and on the two blocks between Broadway and Green Street on both sides of the street.

## **Basis for Decision**

FTA has determined that the Project meets the Purpose and Need of the proposed action as outlined in Chapter 10 of the Final EIS and discussed below.

*Transit Performance* - The Project would significantly improve transit travel time, reliability, and ridership along Van Ness Avenue. In 2015, relative to the No Build Alternative described in the EIS, the LPA would reduce transit travel time by 33 percent (up to 7 minutes in each direction between Mission and Lombard streets), reducing the travel time gap between autos and transit by as much as 50 percent. The likelihood of a bus unexpectedly stopping (excluding loading and unloading passengers) would decrease by 52 percent, allowing more reliable travel times. Transit boardings would increase by 37 percent (more than 14,000 additional riders) throughout the routes of Muni bus lines 47 and 49 when compared with the existing conditions, and up to half of the additional riders could be former automobile occupants. The Van Ness Avenue BRT Project would increase the street's transit mode share to 44 percent of all motorized trips, relative to 30 percent under the No Build Alternative.

*Passenger Experience* - The proposed project offers numerous enhancements to the passenger experience, including bus vehicles with level or near level boarding, dedicated bus lanes (transitway), new stations, and platform proof of payment/all-door boarding. Additionally, the number of lane-weaves made by buses along Van Ness Avenue would reduce by more than 50 percent compared with the No-Build Alternative.

Access and Pedestrian Safety - The Project would incorporate features to increase pedestrian safety at intersections, including pedestrian countdown signals, additional curb bulbs, and enhanced median refuges. With the proposed Project, the median refuges within all of the crosswalks in the project corridor would be at least six feet wide, compared with existing conditions in which 47 percent of the median refuges are less than five feet wide. These features would shorten crossing distances, allowing nearly all intersections to meet local and federal standards for minimum pedestrian crossing speed, while giving pedestrians more information about when it is safe to cross. New ADA curb ramps and Accessible Pedestrian Signals (APS) along Van Ness Avenue would enhance safety and access for all users.

Urban Design - A main component of the Van Ness Avenue BRT Project is to provide a consistent landscaped median treatment and pedestrian lighting, as well as establish a more unified identity for Van Ness Avenue as one of the City's most prominent arterials with a visible rapid transit service. The improved streetscape features of the Project would enhance the amenity and urban design of Van Ness Avenue as a gateway into the city and support recently approved nearby high-density mixed-use development plans. The Project would help transform the street into a vibrant pedestrian promenade that supports the Civic Center and commercial uses. Placement of BRT infrastructure would demonstrate an investment in the corridor and would provide a greater sense of permanence than existing bus facilities. Such facilities can support place-making and livability, while helping to stimulate further transit-oriented development.

*Multimodal Circulation* - The Project would increase the total number of people (in cars and on transit) that use each lane of Van Ness Avenue. While the No Build Alternative moves approximately 605 transit patrons and 630 people in private vehicles in each lane on Van Ness Avenue, the proposed project would move approximately 930 transit patrons and 680 people in private vehicles in each lane during the PM peak hour. Overall person delays on Van Ness Avenue would be similar to the No Build Alternatives and the total number of people traveling through the corridor would be maintained (within 1% in Year 2035) with implementation of BRT.

#### Public Involvement and Outreach

As discussed in Chapter 8 of the Final EIS, an extensive public outreach and involvement program was implemented throughout the development of the Project, beginning with scoping in 2007 and throughout the NEPA process. Public outreach will continue through construction. SFCTA staff met with over 35 local community and business groups, provided publicity on Muni vehicles and in bus shelters, disseminated press releases, held public meetings, and established a Community Advisory Committee (CAC) comprised of nine citizens living in or near the project area, which held 27 meetings between September 2007 and September 2013. During the scoping period and circulation of the Draft EIS, the project team met with stakeholders and held briefings with elected officials. Two public meetings were held during the scoping period, a public hearing and webinar were held during circulation of the Draft EIS, and public meetings and hearings were also held after the Final EIS was issued.

Various techniques and venues were used to encourage participation by the public, including environmental justice communities, as well as stakeholder groups and agencies. Informational materials were disseminated through multilingual mailings (Spanish and Cantonese), multilingual print media notices, e-mail, flyers, a project information phone line (415-593-1655),

a project website (www.vannessbrt.org), social media networks (Facebook), and media relations (press releases and press advisories).

A particular focus of the public information process was to address concerns of residents and businesses within the project area. Local concerns included displacement of parking, traffic congestion, noise, and the consolidation of existing bus stops into a fewer number of BRT stations. Meetings were held with business and neighborhood associations, as well as community leaders and representatives of individual businesses. Public meetings were held at various locations in the corridor and were accessible by public transit.

Prior to the selection of the LPA, the project team gave presentations at more than 15 public and stakeholder meetings. Additional presentations regarding the LPA were made following the SFCTA Board's selection of the LPA on June 26, 2012. The SFCTA Board considered public comments as part of its LPA selection process. The SFCTA maintained an email list of stakeholders located throughout the project area. Stakeholders were notified of station planning workshops, which focused on urban and streetscape design concepts and station area planning along the project corridor. E-mail updates outlining the staff-recommended LPA were sent to the project e-mail list, a postcard containing similar information was mailed to constituents without email addresses, and a media advisory and press release were sent to announce consideration of the LPA.

Responses to public comments received during the circulation period of the Draft EIS were incorporated into the Final EIS, Appendix I. Further, Attachment B to this ROD provides a summary of comments received after the Final EIS was issued and responses to those comments. A Statement of Overriding Considerations and a Mitigation Monitoring and Reporting Program was prepared and the SFCTA's Board certified the Final EIR on September 10, 2013 under CEQA.

FTA and SFCTA also identified other Federal and non-Federal agencies that may have had an interest in the Project and involved them in project briefings and preliminary reviews of the Draft and Final EIS. Caltrans and SFMTA were involved as responsible agencies under CEQA. Other participating agencies included Golden Gate Bridge Highway & Transportation District, Metropolitan Transportation Commission, San Francisco Department of Public Works, San Francisco Planning Department, San Francisco Public Utilities Commission, and the San Francisco Mayor's Office on Disability.

#### **Determinations and Findings**

#### Section 106 of the National Historic Preservation Act

Seven historic properties and property-type resources listed in or eligible for listing in the National Register of Historic Places (NRHP) are located in the area of potential effects for this Project. The majority of the improvements occur within the existing curb-to-curb pavement. The Project would not affect the historic integrity of any historic resource or the features for which the properties are eligible for the NRHP. There is a potential for excavation associated with the Project if undiscovered buried archaeological resources are encountered during construction. The Project includes measures for the treatment of unanticipated archaeological resources discovered during construction, as set forth in the Final EIS and Attachment A to this ROD. As a result, the FTA determined that the Project would have no adverse effect on historic resources within the

area of potential effects, and the State Historic Preservation Officer concurred in this finding in a letter, dated May 17, 2013, which is included in Attachment C.

## Air Quality Conformity

The Project satisfies the Environmental Protection Agency (EPA) air quality conformity requirements under 40 C.F.R. Part 93, as documented in Section 4.10.5 of the Final EIS. The Project was included in the regional emissions analysis completed by the Metropolitan Transportation Commission (MTC) for the conforming Regional Transportation Plan (Transportation 2035 Plan, approved in August 2013). This analysis found that the plan and, therefore, the individual projects contained in the plan, are conforming projects and will have air quality impacts consistent with those identified in the State Implementation Plan (SIP) for achieving the national ambient air quality standards. The Federal Highway Administration (FHWA) and FTA determined the Transportation 2035 Plan to conform to the SIP in 2013. The proposed project is also included in the federal 2013 Transportation Improvement Program (TIP). The 2013 TIP and accompanying Transportation-Air Quality Conformity Analysis were adopted by MTC on July 18, 2013. FHWA and FTA determined the TIP to conform to the SIP on August 12, 2013.

The Project is not considered a Project of Air Quality Concern (POAQC) as defined in EPA's Transportation Conformity Guidance. The Project would not increase the percentage of diesel vehicles on the roadway, does not involve a bus or rail terminal that significantly increases diesel vehicles, and is not identified in the SIP as a possible PM<sub>2.5</sub> or PM<sub>10</sub> violation site. The MTC has confirmed that the LPA is not considered a POAQC.

## Section 4(f) Findings

Twenty park and recreational facilities and seven historic properties, including one historic landmark/district, are located in the vicinity of the Project. Pursuant to Title 49 U.S.C. § 303, the Project would not result in the direct use, temporary occupancy, or constructive use of any Section 4(f) resources.

#### Endangered Species Act

No sensitive species or habitats protected under the Endangered Species Act were identified in the project area. The only sensitive species from the California Natural Diversity Database potentially found in the study area are raptors, including the peregrine falcon. Due to lack of suitable habitat, there are no reports that these sensitive species have nested in buildings within the study area. The Project is not likely to have any direct or indirect effects on these species, due to the limited nature of proposed construction which will be confined to the street and sidewalk area. No formal consultation with the United States Fish and Wildlife Service was required. No adverse effects pursuant to the Endangered Species Act would occur.

## Section 404 of the Clean Water Act and Section 10 of the Rivers and Harbors Act

No surface water bodies are located in the immediate vicinity of the corridor. As part of San Francisco's combined wastewater and stormwater sewer system, the storm drain inlets on Van Ness Avenue collect and convey surface runoff to a wastewater treatment plant, where it receives secondary treatment prior to discharge to receiving waters. The Project will comply with Title III

and Title IV of the Clean Water Act and National Pollution Discharge Elimination System (NPDES) standards during and following construction. To comply with the NPDES General Construction Permit, a Notice of Intent would be filed with the State Water Resources Control Board (SWRCB) prior to construction. The Project would include preparation of a Storm Water Pollution Prevention Plan (SWPPP) that includes the identification and implementation of applicable Best Management Practices (BMPs) to control erosion and to ensure that dirt, construction materials, pollutants or other human-associated materials are not discharged from the project area into surface waters or into areas that would eventually drain to storm drains. The SWPPP also includes a monitoring program to ascertain the effectiveness of the prescribed BMPs. Upon completion of construction, a Notice of Termination would be filed with the SWRCB.

#### Executive Order 11988: Floodplain Management

The Project is not located within any 100 or 500 year flood zones and, therefore, no modifications to any established floodplains would result from the implementation of the Project. The Project is located in a developed area with impervious surfaces and well-developed drainage infrastructure. There is no net increase in impervious area under the proposed project. The Project would increase the pervious (landscaped) area by approximately 0.2-acre. It would not increase the risk of flooding. No adverse effects relative to Executive Order 11988 (Flood Plain Management) would occur.

#### Executive Order 12898: Environmental Justice

The study area has a lower percentage of minority population (approximately 43 percent) than that of the City and County of San Francisco (approximately 56 percent) as a whole. However, minority and low income populations exist in the study area. Figure 4.14-2 on page 4.14.10 of the Final EIS shows Census Block Groups with greater than 50% minority population. Field observations indicate a presence of homeless people in the southern portion of the corridor, namely near the Civic Center and Market Street vicinities, and a number of Census Block Groups (shown in Figure 4.14-1 on page 4.14-9 of the Final EIS) were identified as having more than a 10 percent greater number of households with incomes below the poverty threshold than the City of San Francisco as a whole.

The Project would result in improved transit reliability and travel time savings that would benefit all communities in the study area and citywide, including minority and low-income groups. Within the Van Ness Avenue corridor, implementation of the Project would improve transit service for the transit-dependent populations and provide improvements to pedestrian signals and curb ramps.

The effects of the Project would be distributed throughout the project corridor. The Project includes measures to avoid, minimize or mitigate adverse impacts, as set forth in the Final EIS and Attachment A to this ROD. Accordingly, FTA has concluded, in accordance with Executive Order 12898, *Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations*, that environmental justice communities would not be subject to disproportionately high and adverse human health or environmental effects as a result of the Project.

Van Ness BRT Record of Decision

## Measures that Mitigate the Adverse Effects of the Project

Measures to mitigate the effects of the Project were considered during planning and development in coordination with interested agencies. The mitigation commitments are described in the Mitigation Monitoring and Reporting Program to ensure fulfillment of all environmental and related commitments in the Final EIS (see Attachment A). Any change in such mitigation from the description in the Final EIS will require a review in accordance with 23 CFR § 771.130 and must be approved by FTA.

DATE: November 13, 2014

SUBJECT: LEGISLATION INTRODUCED

The Board of Supervisors' Land Use and Economic Development Committee has received the following proposed legislation, introduced by Supervisor Kim on November 4, 2014:

File No. 141148

Ordinance modifying the requirements of Administrative Code, Section 6.68, as applied to the proposed construction of the Van Ness Bus Rapid Transit Project to authorize the Municipal Transportation Agency to, instead of a formal Request for Qualifications, issue a Request for Proposals (RFP) to potential construction managers/general contractors (CM/GC), to include their teams of core trade subcontractors, which RFP will contain minimum qualifications for the CM/GC and certain subcontractors; evaluate the CM/GC primarily on non-cost criteria; negotiate a guaranteed maximum price with the selected CM/GC when the design is sufficiently complete, provided the price is fair and reasonable; and making environmental findings.

If you have any additional comments or reports to be included with the file, please forward them to me at the Board of Supervisors, City Hall, Room 244, 1 Dr. Carlton B. Goodlett Place, San Francisco, CA 94102.
