As a resident of San Francisco, I am glad to see the Resolution urging the Retirement Board of the Employees' Retirement System to divest from publicly-traded fossil fuel companies (file #130123) introduced by Supervisor John Avalos. I urge you to support it.

This would be a good way for us to show our support for alternative sources of energy. We shouldn't be supporting fossil fuel

As a coastal city surrounded by water, San Francisco is extremely vulnerable to climate change. As the sea level rises due to increasing temperature, the effects on Bay Area wetlands, infrastructure, and industry could cost taxpayers like me billions of dollars.

San Francisco should be making investments that are consistent with our climate change policies and that support the public good. It's time for our pension fund to freeze and divest from fossil fuels and invest in the future.

As a resident of San Francisco, I am writing to urge your support for the Resolution urging the Retirement Board of the Employees' Retirement System to divest from publicly-traded fossil fuel companies (file #130123) introduced by Supervisor John Avalos.

In the fight to reverse catastrophic climate change we really don't have time to wait for others to take action first. San Francisco has always prided itself in being the first city to stand up for what's right, even if it isn't popular. From gay marriage support to the ban on plastic bags, the city of San Francisco has never been fearful of the status quo, and on this most important issue of our time it can least afford to be.

In their single-minded quest for short-term profit, fossil fuel companies are wrecking our beloved planet. SF can make a big statement by not supporting these private interests that do nothing to support the interest of people and planet.

I urge you to support this resolution!

Sincerely,
Sven Eberlein

As a resident of San Francisco, I am writing to urge your support for the Resolution urging the Retirement Board of the Employees' Retirement System to divest from publicly-traded fossil fuel companies (file #130123) introduced by Supervisor John Avalos.

Our city has been a leader in addressing climate change and reducing our greenhouse gas emissions. However, the San Francisco Employee's Retirement System has over \$1 billion invested in fossil fuels. If we are serious about ending climate change, then we should not be investing our city funds in oil, gas and coal companies that plan to burn a catastrophic amount of carbon. Instead, our public money should ensure the safety of our communities and promote renewable alternatives.

As a coastal city surrounded by water, San Francisco is extremely vulnerable to climate change. As the sea level rises due to increasing temperature, the effects on Bay Area wetlands, infrastructure, and industry could cost taxpayers like me billions of dollars.

Subject: Please support divestment from fossil fuels (file #130123)

As a resident of San Francisco, I am writing to urge your support for the Resolution urging the Retirement Board of the Employees' Retirement System to divest from publicly-traded fossil fuel companies (file #130123) introduced by Supervisor John Avalos.

Our city has been a leader in addressing climate change and reducing our greenhouse gas emissions. However, the San Francisco Employee's Retirement System has over \$1 billion invested in fossil fuels. If we are serious about ending climate change, then we should not be investing our city funds in oil, gas and coal companies that plan to burn a catastrophic amount of carbon. Instead, our public money should ensure the safety of our communities and promote renewable alternatives.

As a coastal city surrounded by water, San Francisco is extremely vulnerable to climate change. As the sea level rises due to increasing temperature, the effects on Bay Area wetlands, infrastructure, and industry could cost taxpayers like me billions of dollars.

San Francisco should be making investments that are consistent with our climate change policies and that support the public good. It's time for our pension fund to freeze and divest from fossil fuels and invest in the future.

Subject: Please support divestment from fossil fuels (file #130123)

As a resident of San Francisco, I am writing to urge your support for the Resolution urging the Retirement Board of the Employees' Retirement System to divest from publicly-traded fossil fuel companies (file #130123) introduced by Supervisor John Avalos.

Our city has been a leader in addressing climate change and reducing our greenhouse gas emissions. However, the San Francisco Employee's Retirement System has over \$1 billion invested in fossil fuels. If we are serious about ending climate change, then we should not be investing our city funds in oil, gas and coal companies that plan to burn a catastrophic amount of carbon. Instead, our public money should ensure the safety of our communities and promote renewable alternatives.

As a coastal city surrounded by water, San Francisco is extremely vulnerable to climate change. As the sea level rises due to increasing temperature, the effects on Bay Area wetlands, infrastructure, and industry could cost taxpayers like me billions of dollars.

San Francisco should be making investments that are consistent with our climate change policies and that support the public good. It's time for our pension fund to freeze and divest from fossil fuels and invest in the future.

Subject: Please support divestment from fossil fuels (file #130123)

As a resident of San Francisco, I am writing to urge your support for the Resolution urging the Retirement Board of the Employees' Retirement System to divest from publicly-traded fossil fuel companies (file #130123) introduced by Supervisor John Avalos.

Our city has been a leader in addressing climate change and reducing our greenhouse gas emissions. However, the San Francisco Employee's Retirement System has over \$1 billion invested in fossil fuels. If we are serious about ending climate change, then we should not be investing our city funds in oil, gas and coal companies that plan to burn a catastrophic amount of carbon. Instead, our public money should ensure the safety of our communities and promote renewable alternatives.

As a coastal city surrounded by water, San Francisco is extremely vulnerable to climate change. As the sea level rises due to increasing temperature, the effects on Bay Area wetlands, infrastructure, and industry could cost taxpayers like me billions of dollars.

San Francisco should be making investments that are consistent with our climate change policies and that support the public good. It's time for our pension fund to freeze and divest from fossil fuels and invest in the future.

Subject: Please support divestment from fossil fuels (file #130123)

As a resident of San Francisco, I am writing to urge your support for the Resolution urging the Retirement Board of the Employees' Retirement System to divest from publicly-traded fossil fuel companies (file #130123) introduced by Supervisor John Avalos.

Our city has been a leader in addressing climate change and reducing our greenhouse gas emissions. However, the San Francisco Employee's Retirement System has over \$1 billion invested in fossil fuels. If we are serious about ending climate change, then we should not be investing our city funds in oil, gas and coal companies that plan to burn a catastrophic amount of carbon. Instead, our public money should ensure the safety of our communities and promote renewable alternatives.

As a coastal city surrounded by water, San Francisco is extremely vulnerable to climate change. As the sea level rises due to increasing temperature, the effects on Bay Area wetlands, infrastructure, and industry could cost taxpayers like me billions of dollars.

San Francisco should be making investments that are consistent with our climate change policies and that support the public good. It's time for our pension fund to freeze and divest from fossil fuels and invest in the future.

Instead, our public money should ensure the safety of our communities and promote renewable alternatives.

As a coastal city surrounded by water, San Francisco is extremely vulnerable to climate change. As the sea level rises due to increasing temperature, the effects on Bay Area wetlands, infrastructure, and industry could cost taxpayers like me billions of dollars.

San Francisco should be making investments that are consistent with our climate change policies and that support the public good. It's time for our pension fund to freeze and divest from fossil fuels and invest in the future.

As a resident of San Francisco, I am writing to urge your support for the Resolution urging the Retirement Board of the Employees' Retirement System to divest from publicly-traded fossil fuel companies.

The UN predicts trillions in capital opportunities in the green economy and if our city's pension managers are truly managing against the time period of our retirement assets - 30, 50, 80 years down the road - there is no doubt that the upside of green investment far exceeds the downside risks of fossil fuel investments. If we don't get aggressive on this, we risk devaluation of assets, and even stranded assets that become worthless in a post-carbon economy. More importantly, we are a coastal city and our children and grandchildren have a lot to lose.

San Francisco should and must lead the way on this.

As a resident of San Francisco, I am writing to urge your support for the Resolution urging the Retirement Board of the Employees' Retirement System to divest from publicly-traded fossil fuel companies (file #130123) introduced by Supervisor John Avalos.

Our city has been a leader in addressing climate change and reducing our greenhouse gas emissions. However, the San Francisco Employee's Retirement System has over \$1 billion invested in fossil fuels. If we are serious about ending climate change, then we should not be investing our city funds in oil, gas and coal companies that plan to burn a catastrophic amount of carbon. Instead, our public money should ensure the safety of our communities and promote renewable alternatives.

As a coastal city surrounded by water, San Francisco is extremely vulnerable to climate change. As the sea level rises due to increasing temperature, the effects on Bay Area wetlands, infrastructure, and industry could cost taxpayers like me billions of dollars.
