[Building Code - Repeal of Existing 2013 Code and Enactment of 2016 Edition]

Ordinance repealing the 2013 Building Code in its entirety and enacting a 2016 Building Code consisting of the 2016 California Building Code and the 2016 California Residential Code, as amended by San Francisco; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing for an operative date of January 1, 2017; and directing the Clerk of the Board to forward the legislation to the California Building Standards Commission as required by State law.

NOTE: **Unchanged Code text and uncodified text** are in plain Arial font.
Additions to Codes are in *single-underline italics Times New Roman font*.
Deletions to Codes are in ~~*strikethrough italics Times New Roman font*~~.
Board amendment additions are in double-underlined Arial font.
Board amendment deletions are in ~~strikethrough Arial font~~.
Asterisks (* * * *) indicate the omission of unchanged Code subsections or parts of tables.

Be it ordained by the People of the City and County of San Francisco:

Section 1. Environmental Findings. The Planning Department has determined that the actions contemplated in this ordinance comply with the California Environmental Quality Act (California Public Resources Code Sections 21000 et seq.). Said determination is on file with the Clerk of the Board of Supervisors in File No. 160944 and is incorporated herein by reference. The Board affirms this determination.

Section 2. General Findings.

(a) The State of California adopts a new California Building Standards Code every three years (the "triennial State Code") with supplements published in intervening years. The triennial State Code goes into effect throughout the State of California 180 days after its

publication by the California Building Standards Commission or at a later date established by the Commission.

(b) The California Building Standards Code is contained in Title 24 of the California Code of Regulations. It consists of 12 Parts based upon model codes that are amended by the State agencies with jurisdiction over the subject matter. The California Building Code is Part 2 of Title 24 of the California Code of Regulations; the California Residential Code is Part 2.5. The 2016 California Building Code and 2016 California Residential Code will go into effect throughout California on January 1, 2017.

(c) Local jurisdictions must enforce the California Building Standards Code but they may also enact more restrictive building standards that are reasonably necessary because of local conditions caused by climate, geology, or topography. Local amendments may be made to a triennial State Code and also throughout the intervening years. However, local amendments previously adopted are not automatically applicable to a new triennial State Code. Rather, they must be re-enacted with the required findings of local conditions, expressly made applicable to the new triennial State Code, and with an operative date no earlier than the effective date of the new State Code.

(d) As in past triennial State Code adoption cycles, by this ordinance the Board of Supervisors repeals the 2013 San Francisco Building Code in its entirety, enacts the 2016 San Francisco Building Code, and re-enacts the existing local amendments and makes them applicable to the 2016 California Building Code. Incorporation of the 2016 California Residential Code with local amendments into the 2016 San Francisco Building Code is as described in a separate companion ordinance.

(e) Pursuant to Charter Section D3.750-5, the Building Inspection Commission considered and approved San Francisco's amendments to the 2016 California Building Code at a duly noticed public hearing that was held on August 17, 2016.

Section 3. Findings regarding Local Conditions.

(a) California Health and Safety Code Sections 17958.7 and 18941.5 provide that before making any changes or modifications to the California Building Code and any other applicable provisions published by the California Building Standards Commission, the governing body must make an express finding that each such change or modification is reasonably necessary because of specified local conditions. The local amendments together with the required findings must be filed with the California Building Standards Commission before the local changes or modifications can go into effect.

(b) The City and County of San Francisco is unique among California communities with respect to local climatic, geological, topographical, and other conditions. A specific list of findings that support San Francisco's modifications to the 2016 California Building Code, with a section-by-section correlation of each modification with a specific numbered finding, are contained in Exhibit A entitled "Standard Findings for San Francisco Building Standards Code Amendments."

(c) Pursuant to California Health and Safety Code Sections 17958.7 and 18941.5, the Board of Supervisors finds and determines that the local conditions described in Exhibit A constitute a general summary of the most significant local conditions giving rise to the need for modification of the 2016 California Building Code provisions published by the California Building Standards Commission. The Board of Supervisors further finds and determines that the proposed modifications are reasonably necessary based upon the local conditions set forth in Exhibit A.

Section 4. Repeal of 2013 San Francisco Building Code and Enactment of the 2016 San Francisco Building Code.

(a) The 2013 San Francisco Building Code is hereby repealed in its entirety. The San Francisco Building Code being repealed was enacted on November 5, 2013, by Ordinance Nos. 254-13 and 255-13, with an operative date of January 1, 2014. It was amended by Ordinances 043-14, 046-14, 063-14, 164-14, 169-14, 182-14, 202-14, 224-14, 032-15, 070-15, 159-15, 208-15, 014-16, 023-16, 051-16, 059-16, 060-16, 067-16, and 165-16. These ordinances are available on the website of the Board of Supervisors.

(b) The 2016 San Francisco Building Code is hereby enacted. It consists of (1) the 2016 California Building Code, (2) the 2016 California Residential Code, and (3) San Francisco's existing local amendments which are re-enacted and expressly made applicable to said 2016 California Codes. Copies of the 2016 California Building Code and the stand-alone San Francisco amendments to the 2016 California Building Code and 2016 California Residential Code are declared to be part of Board File No. 160944 and are incorporated into this ordinance by reference as though fully set forth. Additions to the 2016 California Building Code and 2016 California Residential Code are shown in bold underlined type; deletions are shown with bold strikethrough type. Incorporation of the 2016 California Residential Code with local amendments into the 2016 San Francisco Building Code is as described in a separate companion ordinance.

Section 5. Continuance of Actions Under Prior Code. Nothing contained in this ordinance shall be construed as abating any action now pending under or by virtue of any ordinance of the City and County of San Francisco hereby repealed, nor shall this ordinance be construed as discontinuing, abating, modifying or altering any penalties accruing, or to accrue, or as waiving any right of the City under any such ordinance.

Section 6. Severability. If any section, subsection, sentence, clause, or phrase of this ordinance is, for any reason, held to be invalid, such decision shall not affect the validity of the remaining portions of this ordinance. The Board of Supervisors hereby declares that it would have passed this ordinance, and each section, subsection, sentence, clause, or phrase of this Ordinance, irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared invalid.

Section 7. Effective and Operative Dates. This ordinance shall become effective 30 days after enactment. Enactment occurs when the Mayor signs the ordinance, the Mayor returns the ordinance unsigned or does not sign the ordinance within ten days of receiving it, or the Board of Supervisors overrides the Mayor's veto of the ordinance. This ordinance shall take effect and be in full force on and after either January 1, 2017 or its effective date if the effective date is later.

Section 8. Directions to Clerk. Upon final passage of this ordinance, the Clerk of the Board of Supervisors is hereby directed to transmit this ordinance with the Exhibit A attachment and the San Francisco modifications to the 2016 California Building Code and the 2016 California Residential Code to the California Building Standards Commission pursuant to the applicable provisions of State law.

APPROVED AS TO FORM:
DENNIS J. HERRERA, City Attorney

FILE NO. 160944

LEGISLATIVE DIGEST

[Building Code - Repeal of Existing 2013 Code and Enactment of 2016 Edition]

Ordinance repealing the 2013 Building Code in its entirety and enacting a 2016 Building Code consisting of the 2016 California Building Code and the 2016 California Residential Code, as amended by San Francisco; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing for an operative date of January 1, 2017; and directing the Clerk of the Board to forward the legislation to the California Building Standards Commission as required by State law.

Existing Law

The Building Code regulates and controls the design, construction, quality of materials, use and occupancy, location, maintenance and demolition of all buildings and structures, and quarrying, grading, excavation and filling of land. The current San Francisco Building Code consists of the 2013 California Building Code (which incorporates the 2012 International Building Code), the 2013 California Residential Code (which incorporates the 2012 International Residential Code), and San Francisco's local amendments to those California Codes ("San Francisco Amendments"). Chapter 36 of the San Francisco Building Code serves as a directory of where the provisions of the California Residential Code may be found in the San Francisco Building Code.

Amendments to Current Law

On January 1, 2017, a 2016 California Building Code and 2016 California Residential Code ("California Codes") will go into effect throughout the State. The San Francisco Amendments to the 2013 editions of these California Codes must be re-enacted and made applicable to the 2016 California Codes. Therefore, as in past State Code adoption cycles, San Francisco will repeal its existing Building Code in its entirety and adopt a new Building Code consisting of the new model code, as amended by the State of California, and as further amended by San Francisco. The San Francisco Amendments to the 2013 California Codes will be carried forward and made applicable to the 2016 California Codes with no or only minor technical changes.

The San Francisco Amendments are not integrated into the text of the California Codes but rather are separately printed in a stand-alone document. Therefore, the user must consult both texts in order to determine the complete code requirement. In the San Francisco Amendments, additions to the 2016 California Codes are shown in bold type; deletions are shown with strikethrough.

Background Information

The State of California adopts a new California Building Standards Code every three years (the "triennial State Code") with supplements published in intervening years. The triennial State Code goes into effect throughout the State 180 days after its publication by the California Building Standards Commission or at a later date established by the Commission. In the current triennial State Code adoption cycle, the California Building Standards Code will go into effect on January 1, 2017. The California Building Standards Code is contained in Title 24 of the California Code of Regulations, and consists of several parts that are based upon model codes with amendments made by the State agencies with jurisdiction over the subject matter. The California Building Code is Part 2 of Title 24 of the California Code of Regulations; the California Residential Code is Part 2.5.

Local jurisdictions must enforce the California Building Standards Code but they may also enact more restrictive building standards that are reasonably necessary because of local conditions caused by climate, geology, or topography. Local amendments may be made to a triennial State Code and also throughout the intervening years. However, local amendments previously adopted are not automatically applicable to a new triennial State Code. Rather, they must be re-enacted with the required findings of local conditions, expressly made applicable to the new triennial State Code, and with an operative date no earlier than the effective date of the new State Code.

BOARD of SUPERVISORS

City Hall
Dr. Carlton B. Goodlett Place, Room 244
San Francisco 94102-4689
Tel. No. 554-5184
Fax No. 554-5163
TDD/TTY No. 554-5227

October 6, 2016

Lisa Gibson
Acting Environmental Review Officer
Planning Department
1650 Mission Street, Ste. 400
San Francisco, CA 94103

Dear Ms. Gibson:

On September 6, 2016, Building Inspection Commission introduced the following proposed legislations:

File No. 160944
Ordinance repealing the 2013 Building Code in its entirety and enacting a 2016 Building Code consisting of the 2016 California Building Code and the 2016 California Residential Code, as amended by San Francisco; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing for an operative date of January 1, 2017; and directing the Clerk of the Board to forward the legislation to the California Building Standards Commission as required by State law.

File No. 160945
Ordinance adding the provisions of the 2016 California Residential Code with local amendments into various chapters of the 2016 San Francisco Building Code, and adding Chapter 36 to the Building Code to serve as a directory of where such provisions may be found; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing for an operative date of January 1, 2017; and directing the Clerk of the Board to forward the legislation to the California Building Standards Commission as required by State law.

File No. 160946
Ordinance repealing the 2013 Electrical Code in its entirety and enacting a 2016 Electrical Code consisting of the 2016 California Electrical Code as amended by San Francisco; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing an operative date of January 1, 2017; and directing the Clerk of the Board of Supervisors to forward the legislation to the California Building Standards Commission as required by State law.

File No. 160947
Ordinance enacting a 2016 San Francisco Existing Building Code consisting of the 2016 California Existing Building Code with San Francisco amendments; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing for an operative date of January 1, 2017; and directing the Clerk of the Board to forward the legislation to the California Building Standards Commission as required by State law.

File No. 160948
Ordinance repealing the 2013 Green Building Code in its entirety and enacting a 2016 Green Building Code consisting of the 2016 California Green Building Standards Code as amended by San Francisco; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing for an operative date of January 1, 2017; and directing the Clerk of the Board of Supervisors to forward the legislation to the California Building Standards Commission as required by State law.

File No. 160949
Ordinance repealing the 2013 Mechanical Code in its entirety and enacting a 2016 Mechanical Code consisting of the 2016 California Mechanical Code as amended by San Francisco; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing an operative date of January 1, 2017; and directing the Clerk of the Board of Supervisors to forward the legislation to the California Building Standards Commission as required by State law.

File No. 160950
Ordinance repealing the 2013 Plumbing Code in its entirety and enacting a 2016 Plumbing Code consisting of the 2016 California Plumbing Code as amended by San Francisco; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing an operative date of January 1, 2017; and directing the Clerk of the Board of Supervisors to forward the legislation to the California Building Standards Commission as required by State law.

This legislation is being transmitted to you for environmental review.

Angela Calvillo, Clerk of the Board

By: Alisa Somera, Legislative Deputy Director
Land Use and Transportation Committee

Not defined as a project under CEQA Guidelines Sections 15378 and 15060(c)(2) because they do not result in a physical change in the environment.

2016
San Francisco Building Code

Amendments to the

2016 California Building Code
2016 California Residential Code

Operative date: January 1, 2017

PROPOSED SAN FRANCISCO BUILDING CODE AMENDMENTS 2016 Edition

Chapter 1
SCOPE AND ADMINISTRATION

Division I
CALIFORNIA ADMINISTRATION

No San Francisco Building Code Amendments.

Division II
SCOPE AND ADMINISTRATION

See Chapter 1A for the Administration provisions of the San Francisco Building Code.

Chapter 1A
SAN FRANCISCO ADMINISTRATION

The City and County of San Francisco adopts the following Chapter 1A for the purpose of administration of the ~~2013~~ 2016 San Francisco Building Code. Certain specific administrative and general code provisions as adopted by various state agencies may be found in Chapter 1, Divisions I and II of this code.

SECTION 101A – TITLE, SCOPE AND GENERAL

101A.1 Title. These regulations shall be known as the "~~2013~~ 2016 San Francisco Building Code," may be cited as such and will be referred to herein as "this code." The ~~2013~~ 2016 San Francisco Building Code amends the ~~2013~~ 2016 California Building Code and the ~~2013~~ 2016 California Residential Code which is Part 2 & 2.5 respectively of the 12 parts of the official compilation and publication of the adoption amendment and repeal of the building regulations to the California Code of Regulations, Title 24, also referred to as the California Building Standards Code. The California Building Code and California Residential Code incorporates by adoption the ~~2012~~ 2015

International Building Code and ~~2012~~ 2015 International Residential Code respectively of the International Code Council with necessary California amendments.

101A.2 Purpose. The purpose of this code is to establish the minimum requirements to safeguard the public health, safety and general welfare through structural strength, means of egress facilities, stability, access to persons with disabilities, sanitation, adequate lighting and ventilation and energy conservation, and safety to life and property from fire and other hazards attributed to the built environment; to regulate and control the demolition of all buildings and structures, and the quarrying, grading, excavation, and filling of land; and to provide safety to fire fighters and emergency responders during emergency operations.

The further purpose of this code is to ensure that barrier-free design is incorporated in all buildings, facilities, site work and other developments to which this code applies and to ensure that they are accessible to and usable by persons with disabilities.

101A.3 Scope. The provisions of this code shall apply to the construction, alteration, movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every building or structure or any appurtenances connected or attached to such buildings or structures.

101A.3.1 Non-state-regulated buildings, structures and applications. Except as modified by local ordinance pursuant to Section 1.1.8, the following standards in the California Code of Regulations, Title 24, Parts 2, 2.5, 3, 4, 5, 6, 9, 10, and 11 shall apply to all occupancies and applications not regulated by a state agency.

101A.4 Effective Date of this code.

101A.4.1 Only those standards approved by the California Building Standards Commission and code amendments, additions or deletions adopted by the City and County of San Francisco that are effective at the time an application for building permit is deemed acceptable for building plan review by the Department of Building Inspection shall apply to the plans and specifications for, and to the construction performed under, that permit. For the effective dates of the provisions contained in this code, see History Notes page of this code.

101A.4.2 Appendices. Provisions contained in the appendices of this code shall not apply unless specifically adopted by a state agency or adopted by a local enforcing agency in compliance with Health and Safety Code Section 18901 et. Seq. for Building Standards Law, Health and Safety Code Section 17950 for State Housing Law and Health and Safety Code Section 13869.7 for Fire Protection Districts.

101A.5 Validity. If any chapter section, subsection, sentence, clause or phrase of this code is for any reason held to be unconstitutional, contrary to statute, exceeding the authority of the state as stipulated by statutes, or otherwise inoperative, such decision shall not affect the validity of the remaining portion of this code.

101A.6 Reference Documents. The codes, standards and publications adopted and set forth in this code, including other codes, standards and publications referred to therein are, by title and date of publication, hereby adopted as standard reference documents of this code.

When this code does not specifically cover any subject relating to building design and construction, recognized architectural or engineering practices shall be employed. The National Fire Codes and Fire Protection Handbook of the National Fire Protection Association are permitted to be used as authoritative guides in determining recognized fire-prevention engineering practices.

In the event of any differences between these building standards and the standard reference documents, the text of these building standards shall govern.

101A.7 Order of Precedence.

101A.7.1 Specific provisions. Where a specific provision varies from a general provision, the specific provision shall apply.

101A.7.2 Conflicts. When the requirements of this code conflict with the requirements of any other part of the California Building Standards Code, Title 24, any provision contained elsewhere in the San Francisco Municipal Code, or any regulation or requirement adopted by the Public Utilities Commission or other City agency under its Charter authority, the most restrictive requirement shall prevail.

101A.7.3 Fire Codes. Nothing in these building standards shall diminish the requirements of the state fire marshal.

Sections 101A.8 – 101A.19 are reserved

101A.20 Central Permit Bureau. A Central Permit Bureau is hereby established in the Department of Building Inspection. The Central Permit Bureau shall process applications for permits required in Section 106A.1 of this code and for certain other permits required by ordinance or regulation for other departments and bureaus of the City and County of San Francisco. Permit processing procedures are detailed in an Administrative Bulletin issued by the Building Official in cooperation with other departments and bureaus. The Central Permit Bureau shall arrange for the review of permit applications, the issuance of permits and the collection of fees as fixed by law.

The fees collected by the Central Permit Bureau shall be credited to the account of the department or bureau authorized by ordinance or Charter to approve such permits. The Controller, in conjunction with the Central Permit Bureau and the concerned departments and bureaus, shall analyze the cost to the City and County of San Francisco of regulation and inspection required by each such class of permit and shall propose the rates to be fixed therefor by ordinance, which shall not be less than the cost to the City and County of San Francisco of such regulation and inspection.

101A.21 Safety assessment placards. This section establishes standard placards to be used to indicate the condition of a building or structure after a natural or human-created disaster. A description of the placards to be used is set forth in this Section. The Building Official and their authorized representatives are authorized to post the appropriate placard at each entry point to a building or structure upon completion of a safety assessment. A safety assessment is a visual, nondestructive examination of a building or structure for the purpose of determining the condition for continued occupancy.

101A.21.1 Application of provisions. The provisions of this section are applicable to all buildings and structures of all occupancies regulated by the City and County of San Francisco.

101A.21.2 Description of placards. The Department of Building Inspection shall use the form of standard placards that the Applied Technology Council has recommended and revises from time to time. The actual placards shall be in a form that the Building Official approves. In addition, the ordinance number, the name of the department, its address, and phone number shall be permanently affixed to each placard. In addition, each placard shall include the following language or its equivalent as determined by the Building Official: Any unauthorized removal, alteration, or

covering of this placard shall be considered a violation of the San Francisco Building Code and the responsible person(s) shall be subject to applicable penalties set forth in the code. A general description of the placards is as follows:

1. INSPECTED – LAWFUL OCCUPANCY PERMITTED. This placard is to be posted on any building or structure where no apparent structural hazard has been found. This placard is not intended to mean that there is no damage to the building or structure.

2. RESTRICTED USE. This placard is to be posted on each building or structure that is damaged to such an extent that restrictions on continued occupancy are required. The person or persons authorized to post this placard will note in general terms the type of damage encountered and will note with specificity any restrictions on continued occupancy.

3. UNSAFE – DO NOT ENTER OR OCCUPY. This placard is to be posted on each building or structure that is damaged to such an extent that continued occupancy poses a threat to life safety. Buildings or structures posted with this placard shall not be entered under any circumstance except as authorized in writing by the Building Official of Building Inspection or his or her authorized representative. Authorized safety assessment individuals or teams may enter these buildings at any time. This placard is not to be used or considered to be a demolition order. The person or persons authorized to post this placard will note in general terms the type of damage encountered.

101A.21.3 Removal or alteration prohibited. Once it has been attached to a building or structure, a placard is not to be removed, altered, or covered except by an authorized representative of the Department or upon written notification from the Department. Any unauthorized removal, alteration, or covering of a placard shall be considered a violation of this code and the responsible person(s) shall be subject to the penalties set forth herein.

SECTION 102A – UNSAFE BUILDINGS, STRUCTURES OR PROPERTY

All buildings, structures, property, or parts thereof, regulated by this code that are structurally unsafe or not provided with adequate egress, or that constitute a fire hazard, or are otherwise dangerous to human life, safety or health of the occupants or the occupants of adjacent properties or the public by reason of inadequate maintenance, dilapidation, obsolescence or abandonment, or by reason of occupancy or use in violation of law or ordinance, or were erected, moved, altered, constructed or maintained in violation of law or ordinance are, for the purpose of this chapter, unsafe.

Whenever the Building Official determines by inspection that property or properties either improved or unimproved are unstable because of landslide, subsidence or inundation or that such occurrences are deemed imminent as described above, the Building Official shall give written notice to the owner or owners that said property or properties are unsafe. The notice shall specify the conditions creating the unsafe classification.

All such unsafe buildings, structures, property, or portions thereof, are hereby declared to be public nuisances and shall be vacated, repaired, altered or demolished as hereinafter provided.

102A.1 Fire Hazard. No person, including but not limited to the state and its political subdivisions, operating any occupancy subject to these regulations shall permit any fire hazard, as defined in this section, to exist on premises under their control, or fail to take immediate action to abate a fire hazard when requested to do so by the enforcing agency.

Note: "Fire hazard" as used in these regulations means any condition, arrangement or act which will increase, or may cause an increase of, the hazard or menace of fire to a greater degree

than customarily recognized as normal by persons in the public service of preventing, suppressing or extinguishing fire; or which may obstruct, delay or hinder, or may become the cause of obstruction, delay or hindrance to the prevention, suppression or extinguishment of fire.

102A.2 Authority to Enforce. Subject to other provisions of law, for administration, enforcement, actions, proceedings, abatement, violations and penalties in structures subject to State Housing Law, refer to Health and Safety Code Sections 17910 through 17995.5 and California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 1.

102A.2.1 Mobilehome parks and special occupancy parks. Subject to other provisions of law, for administrative, enforcement, actions, proceedings, abatement, inspections and penalties applicable to the Mobilehome Parks Act, refer to California Health and Safety Code, commencing with Section 18200 and California Code of Regulations, Title 25, Division 1, Chapter 2.

102A.2.2 Employee Housing. Subject to other provisions of law, for administrative, enforcement, actions, proceedings, violations and penalties applicable to the Employee Housing Act, refer to Safety Code, Sections 17000 through 17062.5 and California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 3.

102A.3 Inspections. The Building Official may inspect or cause the inspection of any building, structure or property for the purpose of determining whether it is unsafe whenever:
(a) The Building Official, with reasonable discretion, determines that such inspection is necessary or desirable; or,
(b) Any person or any agency or department of the City submits to the Building Official a complaint which, in the Building Official's opinion, establishes reasonable cause to believe that the building, structure or property or any portion thereof is unsafe.

102A.3.1. Dwelling Units constructed or installed without required permit(s). In the case of an unauthorized Dwelling Unit constructed or installed in an existing building without the required permit or permits, in addition to the above requirements the written notice of violation shall order the property owner to file an application for a building and other permits required to legalize the unit pursuant to Building Code Section 106A.3.1.3 and Planning Code Section 207.3.

EXCEPTIONS:
1. Removal of the unit has been approved by the Planning Commission pursuant to Planning Code Section 317; or
2. After performing a screening under Section 106A.3.1.3(a) of this Code, the Department has determined that the unauthorized Dwelling Unit is not able to be legalized under Section 106A.3.1.3 of this Code; or
3. The Building Official has determined that a serious and imminent hazard under Section 102A.16 of this Code exists on the subject property.
Upon submission of an application for legalization or removal of an unauthorized Dwelling Unit by the owner or the owner's authorized agent, the Department will suspend a notice of violation issued pursuant to this Section 102A.3.1 pending a decision on the application unless the Building Official has determined that a serious and imminent hazard exists on the property. If approval of either legalization or removal of the unauthorized welling Unit occurs within one year of issuance of the notice of violation, the notice of violation and any liens recorded against the property with respect to the violation will be rescinded. The Building Official may extend this time if a delay in obtaining approval is not the fault of the property owner.

102A.4 Notice of Municipal Code Violation.

(a) When the Building Official observes or otherwise determines any condition which renders the building, structure or property unsafe, the Building Official shall, within 15 days, serve a Notice of Municipal Code Violation ("NOV") upon the building owner. The Building Official shall not issue successive NOVs for the same violation or violations as a means of extending the filing time or the enforcement process or as a means of following up with the building owner.

(b) The NOV shall identify each violation observed or otherwise established, including the violations which render the building, structure or property unsafe, and shall state a deadline for the building owner to abate the violations and a date for reinspection. The NOV shall also set forth the penalties, fees and costs as prescribed in Sections 102A.7(d) and 103A of this code. The NOV shall be a public record subject to disclosure pursuant to Administrative Code Chapter 67.

(c) The Building Official shall mail a copy of the NOV to the building owner by first class mail at the address listed with the Assessor-Recorder's Office. The Building Official shall post the NOV in a conspicuous place on the subject property and make a copy of the NOV available to each tenant of the subject property.

102A.5 Notice of Administrative Hearing.

(a) If the Building Official determines that the building owner has not corrected the code violations by the deadline provided in the NOV, the Building Official shall schedule an administrative hearing on the violations, to be heard within 60 days of the deadline, unless the building owner demonstrates to the Building Official's satisfaction that the building owner has made substantial progress in abating the violations.

(b) The Building Official shall issue a Notice of Administrative Hearing ("Hearing Notice") to the building owner. The Hearing Notice shall state the date, hour and place of the hearing and contain a conspicuous warning setting forth the penalties, fees and costs prescribed in Sections 102A.7(d) and 103A of this Code. The Hearing Notice shall include a copy of the NOV. The Hearing Notice shall inform all interested parties who desire to be heard in the matter that they may appear to show cause why the property, building or structure, or portion thereof, should not be ordered repaired, altered, vacated and repaired or altered, or vacated and demolished.

(c) The Building Official shall serve the Hearing Notice on the building owner by certified mail to the building owner at the address listed with the Assessor-Recorder's Office and shall post the NOV in a conspicuous place on the subject property. The Building Official shall mail the Hearing Notice on the building owner at least 10 days prior to the date set for the hearing.

(d) In addition to serving the NOV on the building owner, the Building Official shall send a copy of the NOV by certified mail to:

(1) The person, if any, in real or apparent charge and control of the premises involved;

(2) The holder of any mortgage, deed oftrust, lien or encumbrance of record;

(3) The owner or holder of any lease of record; and,

(4) The record holder of any other estate or interest in the building, structure or property, or the land upon which it is located.

The failure of any owner or other person to receive such notice shall not affect in any manner the validity of any proceedings taken hereunder.

(e) The person serving the Hearing Notice shall complete a declaration under penalty of perjury, certifying the date and manner in which such Hearing Notice was given, and the Building Official shall retain the certified mail receipt card, if any, for the Hearing Notice.

(f) In addition to the Hearing Notice, the Building Official shall provide the building owner with an information sheet regarding the enforcement process, the building owner's rights and duties prior to the hearing, and the information the building owner must bring to the hearing.

102A.6 Conduct of Administrative Hearing.

(a) The Building Official shall conduct the Administrative Hearing, or may designate a Hearing Officer who shall have the same authority as the Building Official to hear and decide the case and

to make any orders consistent with this Code. For purposes of Sections 102A.6 through 102A.7, "Hearing Officer" shall include the Building Official if the Building Official conducts the Administrative Hearing. The Hearing Officer shall not be the same individual who signed the NOV.

(b) The Hearing Officer shall hold the Administrative Hearing at the time and place designated in the Hearing Notice. The Hearing Officer may, in his or her discretion and for good cause shown, continue the hearing one time, for a period not to exceed 30 days. All persons having an interest in the building, structure or property or having knowledge of facts material to the allegations of the NOV, including the list of code violations, may present evidence for consideration by the Hearing Officer, subject to any rules adopted by the Hearing Officer for the orderly conduct of the hearing.

102A.7 Administrative Order.

(a) Within 30 days following the conclusion of the Administrative Hearing, the Hearing Officer shall issue a written decision ("Administrative Order").

(b) The Administrative Order shall state in reasonable detail which conditions render the building, structure, or property, or portion thereof, unsafe, and shall state the work required to be done to satisfy the Administrative Order. The Administrative Order shall include a copy of the NOV. The Administrative Order may direct the building owner to repair, alter, vacate, and/or demolish the subject property.

(c) The Administrative Order shall specify the time within which the building owner shall repair, alter, vacate, and/or demolish the building, structure, or property, or portion thereof, or otherwise comply with the Order. The time for compliance with the Administrative Order shall not to exceed 180 days from permit issuance. The Hearing Officer may, in his or her discretion and for good cause shown, extend the time for compliance with the Administrative Order once, for a period limited to the minimum time necessary for completion and not to exceed 90 days, following a written request by the building owner.

(d) In addition to any monetary penalties authorized in Section 103A, the Department shall be entitled to its costs of preparation for and appearance at the Administrative Hearing, and all prior and subsequent attendant and administrative costs, and the Department shall assess these costs upon the building owner monthly, at the rates set under Section 110A, Tables 1A-D (Standard Hourly Rates) and 1A-K (Penalties, Hearings, Code Enforcement Assessments), until the costs are paid in full. In addition, the Department shall be entitled to its attorneys fees and costs, including but not limited to expert witness fees, incurred in bring the administrative enforcement action. The violations cited in the Administrative Order will not be deemed legally abated until the building owner makes full payment of the penalties and costs, and failure to pay the assessment of costs shall result in tax lien proceedings against the property.

(e) The Hearing Officer shall serve the Administrative Order on the building owner in the same manner as the Hearing Notice. The Building Official shall record a copy of the Administrative Order in the Assessor-Recorder's Office. When the Building Official determines that the work required under the Administrative Order has been completed and the building, structure, or property, or portion thereof, no longer is unsafe, the Building Official shall issue and record a rescission of the Administrative Order with the Assessor-Recorder's Office.

(f) Any person may appeal an Administrative Order pursuant to Section 105A.2. The Hearing Officer shall inform the building owner, at the Administrative Hearing and in the Administrative Order, of the right of appeal to the Abatement Appeals Board provided that the appeal is made in writing and filed with the Secretary of the Abatement Appeals Board within 15 days after the Order is posted and served. The 15-day limitation shall not apply when any type of a moratorium authorized in Section 105A.2 is sought. Where construction materials, methods, types of construction, or compliance with the time limits set forth in Table No. 16B-A are the bases, in whole or in part, of the Building Official's finding that an unreinforced masonry building, or portion thereof, is unsafe, the Abatement Appeals Board shall refer these matters to the Board of Examiners established in Section 105A.1 of this Code. Where construction materials, methods, and

types of construction are the bases, in whole or in part, of the Building Official's finding that the building, or structure, or portion thereof, is unsafe, the Abatement Appeals Board shall refer these matters to the Board of Examiners for its examination and determination with respect to such materials, methods, and types of construction. The Board of Examiners shall approve or disapprove such materials, methods, and types of construction, and may attach conditions to its approval, and shall forward a copy of its report to the Abatement Appeals Board. The Abatement Appeals Board shall include in its decision the findings of the Board of Examiners.

102A.8 Remedies are Non-Exclusive. Notwithstanding the provisions of Sections 102A.4 through 102A.7, the City Attorney may institute civil proceedings for injunctive and monetary relief, including civil penalties, against a building owner for violations of the Municipal Code under any circumstances, without regard to whether a complaint has been filed or the Building Official has issued a NOV or an Administrative Order. In any civil action filed by the City Attorney under this Section 102A.8, the City Attorney may seek recovery of and the court may award the City its attorneys fees and costs, including but not limited to expert witness fees, incurred in bringing the proceedings.

102A.11 Violation – Penalties for Disregarding Order.

102A.11.1 Failure to comply. The owner of any building, structure, or property or portion thereof determined by the Building Official to be unsafe who has failed to comply with any order shall be guilty of a misdemeanor as set forth in Section 103A.

102A.11.2 Failure to vacate. The occupant or lessee in possession who fails to comply with the order to vacate said building or portion thereof in accordance with any order given as provided for hereinabove shall be guilty of a misdemeanor as set forth in Section 103A.

102A.11.3 Removal of notice. Any person who removes any notice or order posted as required in this section shall be guilty of a misdemeanor as set forth in Section 103A.

102A.12 Costs of Abatement by the City and County of San Francisco. Whenever the Building Official, pursuant to authority conferred by this code, causes a building, structure, or property, or portion thereof, to be barricaded, secured, repaired or altered, demolished, or have other actions taken by the Department or its contractor to remedy an unsafe condition, the cost thereof shall be paid from the Repair and Demolition Fund and assessed against said property.

102A.13 Repair and Demolition Fund. A special revolving fund, to be known as the Repair and Demolition Fund, may be used for the purpose of defraying the costs and expenses (including Department administrative costs) which may be incurred by the Building Official in carrying out the actions described in Section 102A.12.

The Board of Supervisors may, by transfer or by appropriation, establish or increase the special revolving fund with such sums as it may deem necessary in order to expedite the performance of the work of securing, repairing, altering or demolition. The Repair and Demolition Fund shall be replenished with all funds collected under the proceedings hereinafter provided for, either upon voluntary payments or as the result of the sale of the property after delinquency, or otherwise. Balances remaining in the Repair and Demolition Fund at the close of any fiscal year shall be carried forward in such fund.

102A.14 Failure to Comply with Order. Whenever an order to repair, alter, vacate and alter or repair, or vacate and demolish any building, structure or property, or portion thereof, has not been complied with within the time set by the Building Official, or within such additional time as the

Building Official may for good cause extend, or within the time fixed by the Abatement Appeals Board, the Building Official shall have the power, in addition to any other remedy provided herein or by law or any other ordinance, to:

1. Cause the building, structure, property, or portion thereof, to be vacated, barricaded, or otherwise secured against use or occupancy pending the correction of all conditions ordered to be corrected, or pending demolition; or

2. Cause the building, structure, property, or portion thereof, to be dismantled or demolished and the site cleared by such means as the Building Official shall deem advisable; or

3. Cause the building, structure, property, or portion thereof, to be repaired or altered, so as to render it safe and in compliance with applicable laws and ordinances, by such means as the Building Official shall deem advisable.

Any work done pursuant to the authority herein shall be performed in accordance with the limitations as to repair expenditure as contained in Section 102A.16 and with the established practices applicable to the Department.

102A.15 Forfeiture of Owner's Right to Do Work. Whenever, pursuant to Section 102A.14, the Building Official intends to cause to be done any of the work described therein, the Building Official shall provide notice in the manner set forth in Section 102A.4, of the Building Official's intention to do such work, and shall specify a date certain upon which the Building Official shall solicit bids to accomplish the necessary work, which shall be not sooner than 10 days from the date such notice is given. From and after said date certain the owner and every other person having charge or control over said building, structure or property shall be deemed to have forfeited all right to do such work and is thereafter prohibited from doing any such work except as the Building Official may allow.

102A.16 Serious and Imminent Hazards – Emergency Orders. Notwithstanding any other provisions of this chapter, whenever, in the judgment of the Building Official, it appears from an inspection or notice of violation that there exists in, on, or near any building, structure, property, or portion thereof, any condition constituting an imminent and substantial hazard to the life, health or safety of the occupants or other persons, or to such building, structure, or property requiring prompt action to correct said condition, the Building Official shall have the power to issue an order in writing detailing the serious and imminent hazard conditions and requiring:

1. That the building, structure, property, or portion thereof, be vacated and thereafter be kept vacant until the Building Official gives written permission that the same may be reoccupied, without giving the notice and holding the hearing prescribed in Sections 102A.4 through 102A.6, whenever, by reason of serious and imminent danger, prompt vacating of the premises, building, structure or property, or a portion thereof, appears necessary in the judgment of the Building Official;

2. That the building, structure, property, or a portion thereof, be barricaded, boarded up, or otherwise secured against entry, occupancy or use by all persons, except as permitted by said order;

3. That the building, structure, property, or a portion thereof, be demolished or that serious and imminent hazard conditions be repaired, altered, corrected or eliminated in accordance with the particulars set forth in the order.

The order shall contain time frames required for compliance with the order and shall set forth the street address of the building or structure and a description of the building, structure, or property sufficient for identification.

In such cases of serious and imminent hazard, the order may be issued by the Building Official without giving the notice and holding the hearing specified in Sections 102A.4 through 102A.6. A copy of said order shall be posted in a conspicuous place upon the building, structure, or

property, a copy shall be served in the manner prescribed in Section 102A.4, and a copy shall be recorded in the Assessor-Recorder's Office.

The Building Official shall have the further power under this section to cause or compel the work required under the order to be undertaken by such means as the Building Official may deem advisable if the owner and all other persons having an interest in the building, structure, or property have failed, for a period of not more than 48 hours after the posting and service of the order, to comply with the order.

Whenever the Building Official orders that repairs or alterations be made pursuant to this Section, the authority of the Building Official to repair or alter, or cause repairs or alterations to be made to comply with the order, shall be limited to repairs or alterations whose cost does not exceed 50 percent of the value, as defined by the Assessor, of the building, structure, property, or portion thereof.

102A.17 Assessment of Costs. The Building Official shall take action to have the costs of all work done or caused to be done pursuant to the provisions of Section 102A.14 or Section 102A.16 assessed against the parcel or parcels of land upon which said building, structure, property or portion thereof is situated. Such costs shall include, in addition to the cost of barricading, securing, repairing, or demolishing the building and the clearing of the site, the cost to the City and County of San Francisco of administration and supervision of such work. See Section 110A, Table 1A-K – Penalties, Hearings, Code Enforcement Assessments – for applicable rates.

102A.18 Report of Costs, Notice of Hearing on Confirmation.

102A.18.1 Preparation of delinquency report. If any penalty or assessment imposed pursuant to Section 102A is not received within the required time period, the Building Official shall initiate proceedings to make the penalty or assessment, plus accrued interest, a special assessment lien against the real property which is the subject of the penalty or assessment. The Building Official shall prepare a delinquency report for the Board of Supervisors. For each delinquent account, the report shall contain the owner's name, the amount due, including interest, and a description of the real property. The report shall also indicate which of the delinquent accounts should be exempted from the lien procedure because of the small amounts involved, or because another debt collection procedure is more appropriate. The descriptions of the parcels shall be those used for the same parcels on the Recorder/Assessor's Office records for the current year.

102A.18.2 Notice. Five days prior to forwarding the delinquency report to the Board of Supervisors, the Building Official shall serve copies of the report in the manner prescribed in Section 102A.4 and shall post the report at the subject properties. Upon receipt of the report, the Board of Supervisors shall fix a time, date and place for hearing the report and any protests or objections thereto, and shall mail notice of the hearing not less than ten days prior to the date of hearing to each owner of real property described in the report.

102A.19 Hearing and confirmation of report for special assessment of costs.

102A.19.1 Hearing and confirmation. The Board of Supervisors shall hold a hearing on the report along with protests or objections by the representatives of the real property liable to be assessed for such delinquent accounts. The Board of Supervisors may make such revisions, corrections, or modifications of the report as it may deem just, after which, by motion or resolution, the report shall be confirmed. The Board of Supervisor's decision on the report and on all protests or objections thereto shall be final and conclusive and shall constitute confirmation of the report; provided, however, that any delinquent account may be removed from the report by payment in

full at any time prior to confirmation of the report. The Clerk of the Board of Supervisors shall cause the confirmed report to be verified in form sufficient to meet recording requirements.

102A.19.2 Collection of assessment. Upon confirmation of the report by the Board of Supervisors, the delinquent charges contained therein shall constitute a special assessment against the property identified in the report. Each such assessment shall be subordinate to all existing special liens previously imposed upon such property and shall be paramount to all other liens except those for State, County and municipal taxes with which it shall be in parity. The lien shall continue until the assessment and all interest due and payable thereon are paid. All laws applicable to the levy, collection and enforcement of municipal taxes shall be applicable to said special assessment.

102A.19.3 Recordation charges. The Clerk of the Board of Supervisors shall cause the confirmed and verified report to be recorded in the Assessor- Recorder's Office within 10 days of its confirmation. The special assessment lien on each parcel or property described in said report shall include additional charges for administrative expenses. See Section 110A, Table 1A-K – Penalties, Hearings, Code Enforcement Assessments – for Lien Recordation charges.

102A.19.4 Filing with Controller and Tax Collector; Distribution of proceeds. After the report is recorded, the Clerk of the Board of Supervisors shall file a certified copy with the Controller and Tax Collector, whereupon it shall be the duty of said officers to add the amount of said special assessment to the next regular bill for taxes levied against said parcel or parcels, and thereafter said amount shall be collected at the same time and in the same manner as ordinary taxes are collected for the City and County of San Francisco, and shall be subject to the same penalties and the same procedures for foreclosure and sale in case of delinquency as is provided for property taxes.

102A.19.5 Release of lien, recording fee. Upon payment to the Tax Collector of the special assessment, the Tax Collector shall cause a release lien to be recorded with the Assessor-Recorder's Office, and from the sum collected pursuant to Section 102A.19.3 above, shall pay to the Assessor-Recorder's Office the required recording fee.

102A.20 Continuance of gas and electricity. In the event that electricity or gas service to a building, structure, property, or portion thereof is about to be discontinued by the utility company for nonpayment of bills, the Building Official, through the issuance of an Emergency Order, may order that the utility company continue said service to protect the life, health and safety of the occupants. Said order shall be issued pursuant to the provisions of Section 102A.16 of this code and shall remain in force for six months, unless otherwise specified by the Building Official.

The funds for the continuance of said services shall be provided from the Repair and Demolition Fund. Said costs and administrative costs incurred by the City and County of San Francisco shall be assessed against the parcel or parcels of land upon which said building, structure or property is situated. See Section 110A, Table 1A-K – Penalties, Hearings, Code Enforcement Assessments – for applicable rate.

If payment is not received from the property owner within the required time period, a Report of Costs pursuant to Section 102A.18 shall be prepared for all such costs. Submittal, confirmation, recordation and collection of the special assessment shall follow the procedures provided in Section 102A.19.

The provisions of Section 102A.20 shall only apply to buildings, structures, property, or portions thereof for which the owner, and not the tenant, is responsible for payment of said utility bills.

(Amended by Ord. 23-16, File No. 150494, App. 3/4/2016, Eff. 4/3/2016; Ord. 33-16, File No. 160115, App. 3/11/2016,

Eff. 4/10/2016; Ord. 60-16, File No. 151085, App. 4/27/2016, Eff. 5/27/2016, Oper. 6/1/2016)

SECTION 103A – VIOLATIONS

It shall be unlawful for any person, firm or corporation to erect, construct, enlarge, alter, repair, move, improve, remove, convert or demolish, equip, use, occupy or maintain any building, structure, property, or portions thereof or cause or permit the same to be done in violation of this code.

Any person, the owner or the owner's authorized agent, who violates, disobeys, omits, neglects, or refuses to comply with, or resists or opposes the execution of any of the provisions of this code, shall be liable for a civil penalty, not to exceed $500 for each day such violation is committed or permitted to continue, which penalty shall be assessed and recovered in a civil action brought in the name of the people of the City and County of San Francisco by the City Attorney in any court of competent jurisdiction. Any penalty assessed and recovered in an action brought pursuant to this paragraph shall be paid to the City Treasurer and credited to the Department's Special Fund.

Any person, the owner or the owner's authorized agent, who violates, disobeys, omits, neglects, or refuses to comply with, or who resists or opposes the execution of any of the provisions of this code, shall be guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not exceeding $500, or by imprisonment not exceeding six months, or by both such fine and imprisonment, unless otherwise provided in this code, and shall be deemed guilty of a separate offense for every day such violation, disobedience, omission, neglect or refusal shall continue. Any person who shall do any
work in violation of any of the provisions of this code, and any person having charge of such work who shall permit it to be done, shall be liable to the penalty provided.

It shall be unlawful for any person to interfere with the posting of any notice provided for in this code, or to tear down or mutilate any such notice posted by the Department.

103A.1 Pursuant to Health and Safety Code Section 13112, any person who violates any order, rule or regulation of the state fire marshal is guilty of a misdemeanor punishable by a fine of not less than $100.00 or more than $500.00, or by imprisonment for not less than six months, or by both. A person is guilty of a separate offense each day during which he or she commits, continues or permits a violation of any provision of, or any order, rule or regulation of, the state fire marshal as contained in this code.

Any inspection authority who, in the exercise of his or her authority as a deputy state fire marshal, causes any legal complaints to be filed or any arrest to be made shall notify the state fire marshal immediately following such action.

103A.2 Actions and proceedings. Subject to other provisions of law, California Code of Regulations, Title 25, Division 1, Chapter 1 commencing with Section 1 and Health and Safety Code, Sections 17980 through 17995.5 address punishments, penalties and fines for violations of building standards in structures subject to the State Housing Law.

103A.2.1 Actions and proceedings. Subject to other provisions of law, California Code of Regulations, Title 25, Division 1, Chapter 2 commencing with Section 1000 and Health and Safety Code, Section 18700 addresses punishments, penalties and fines for violations of building standards subject to the Mobilehome Parks Act.

103A.2.2 Actions and proceedings. Subject to other provisions of law, California Code of Regulations, Title 25, Division 1, Chapter 1 commencing with Section 600 and Health and Safety Code, Sections 17060 through 17062.5 address punishments, penalties and fines for violations of building standards subject to the Employee Housing Act.

103A.3 Restrictions of unlawful residential demolition replacement.

103A.3.1 Demolition without permit. Whenever the demolition of any building or structure containing one or more residential units takes place without the issuance of a demolition permit as required by this code, the site on which the unlawful demolition occurred shall be subject to the following restriction: For five years from the date of the unlawful demolition, no permit authorizing the construction or alteration of any building or structure for that site shall be issued, except for a permit for the construction or alteration of a building or structure with the same number of residential units, with the same proportion of residential to nonresidential units, and with the same or fewer square feet as the building or structure that was unlawfully demolished.

103A.3.2 Definitions. For the purposes of this section, the following definitions shall apply:

DEMOLITION means the total tearing down or destruction of a building containing one or more residential units, or any alteration which destroys or removes, as those terms are defined by the Building Official of the Department of Building Inspection, principal portions of an existing structure containing one or more residential units.

PRINCIPAL PORTION means that construction which determines the shape and size of the building envelope (such as the exterior walls, roof and interior bearing elements), or that construction which alters two-thirds or more of the interior elements (such as walls, partitions, floors or ceilings).

RESIDENTIAL UNIT means any dwelling unit, as defined in this code, or any guest room, as defined in the San Francisco Housing Code, other than the following:

1. Any guest room in a building classified as a residential hotel pursuant to the Residential Hotel Unit Conversion and Demolition Ordinance

2. Any residential unit in a building where the demolition or alteration is required to comply with
this code, the Housing Code or the City Planning Code.

103A.3.3 Hearing. The Building Official shall hold a hearing within a reasonable period of time after discovering that an unlawful demolition may have taken place. The Building Official shall cause notice to be given to the owners of the affected property, and to the owners and occupants of property on the same block as the affected property's site and across the street from the site for one block (that is, on lots which abut the same street as that which abuts the site to the nearest intersections on either side of the site), using the names and addresses of the owners as shown on the last assessment rolls of the City and County of San Francisco. For corner lots, notice shall be provided to the owners and occupants of property on the same block as the affected property's site and for one block along both streets which the lot abuts (that is, on lots which abut the two streets which the site abuts to the nearest intersection on either side of the site) and, in addition, to the other corner lots at the intersection where the site is located. Notice may be given either by personal service or any mail, not less than 30 days before the scheduled date of the hearing. Immediately after giving such notice, the Building Official shall cause a copy of the notice, printed on a card of not less than 8 inches by 10 inches (203.2 mm × 254 mm), to be posted in a conspicuous place on the affected property. The notice shall specify the date and nature of the hearing and that the following issues will be determined at the hearing: whether an unlawful demolition has taken place as described in Sections 103A.3.1 and 103A.3.2, and, if so, the number of residential units that existed on the site, the proportion of residential to nonresidential units that existed on the site and the total

square feet of the building or structure that existed on the site. Upon determination that an unlawful demolition has taken place, the Building Official shall promptly record a notice in the official records of the Recorder of the City and County of San Francisco; the recorded notice shall state that the property is subject to the restrictions set forth in Section 103A.3.1 of this code.

Upon determination that an unlawful demolition has taken place, the Building Official shall assess the owner all costs incurred by the City and County of San Francisco in detecting violations of this section and conducting the Building Official's hearing by sending a notice of payment due to the property owner at the address shown on the City's last assessment rolls. The notice shall list the costs incurred by the City in detecting violations of the ordinance and conducting the Building Official's hearing, advise the owner that he or she is liable for these costs and advise the owner that payment to the City is due within 60 days of the mailing date of the notice. The notice shall also advise that, if payment of the costs is not received within 30 days of the due date, a lien may be imposed on the property pursuant to the report and confirmation procedure set forth in Sections 102A.18 and 102A.19 of this code.

103A.3.4 Civil penalties. Any agent, contractor or other person acting on behalf of the owner of a building or structure containing one or more residential units who causes or permits the demolition of the building or structure with the knowledge that a demolition permit has not been issued as required by this code shall be subject to a civil penalty of $5,000. Any owner who causes or permits the demolition of his or her building or structure containing one or more residential units with the knowledge that no demolition permit has been issued as required by this code shall be subject to a civil penalty of $1,000.

103A.3.5 Penalties nonexclusive. The penalties set forth in this section are not exclusive, but are in addition to any other penalties set forth in this code.

103A.4. Vacant or abandoned buildings – Annual registration; registration fee; maintenance and security requirements.

103A.4.1. Definition. A building shall be defined as a vacant or abandoned if it (1) is unoccupied and unsecured; or (2) is unoccupied and secured by boarding or other similar means; or (3) is unoccupied and unsafe as defined in Section 102A of this Code; or (4) is unoccupied and has multiple code violations; or (5) has been unoccupied for over 30 days. A building which is partially unoccupied and has been cited for blight under Chapter 80 of the San Francisco Administrative Code, shall also be deemed a vacant or abandoned building that is subject to this Section. Commercial Storefronts, as defined in Section 103A.5.1 of this Code, located within vacant or abandoned buildings shall be subject to the enforcement provisions in Sections 103A.5-103A.5.6 of this Code.

For purposes of this Section 103A.4. a building shall not be considered vacant or abandoned if:

(1) There is a valid building permit for repair, rehabilitation, or construction of a building on the parcel and the owner completes the repair, rehabilitation, or construction within one year from the date the initial permit was issued; or

(2) The building complies with all codes, does not contribute to blight as defined in Chapter 80 of the San Francisco Administrative Code, is ready for occupancy, and is actively being offered for sale, lease, or rent.

(3) The building complies with all codes, does not contribute to blight as defined in Chapter 80 of the San Francisco Administrative Code, and is undergoing a probate process that does not exceed two years. Upon expiration of the two-year period, the building shall become subject to the requirements of Section 103A.4.

103A.4.2. Property owner's obligation to register a vacant or abandoned building. The owner of a building defined as vacant or abandoned under Section 103A.4.1 shall register that building with the Department 30 days after it has become vacant or abandoned on a form provided by the Department. The form shall describe the methods by which the owner has secured the property against unauthorized entry, declare any future plans for the property, state whether or not there is fire and liability insurance coverage, and provide such other information as the Department may require. A registration fee shall be paid at the time of registration and annually thereafter. See Section 110A, Table 1A-J for applicable fee.

103A.4.3. Notice. Whenever the Director has probable cause to believe, based upon an inspection, complaint, or report from another agency of the City and County of San Francisco or other governmental agency, that a building is vacant or abandoned and it has not been registered as required by this Section 103A.4, the Director shall serve the owner of record, as shown on the Assessor's Records, or authorized agent with a written notice requiring the owner to register the building with the Department as vacant or abandoned and pay the registration fee within the period of time specified in the notice, which shall be no greater than 30 days.

103A.4.4. Sign posting. The owner of record of the vacant or abandoned building is required to post a sign at the front of the building, in a conspicuous location protected from the weather, that provides the current name, address, and phone number of the owner of record and authorized agent if different from the owner. If a notice of default or foreclosure has been recorded for the property, the lender's name, address, and telephone number must also be provided. The sign shall be no smaller than 8-1/2 inches by 11 inches.

103A.4.5. Maintenance and security requirements. The following maintenance and security requirements shall apply to a vacant or abandoned building. The Director has the discretion to modify these requirements in the case of a partially vacant building, and to modify or waive some or all of these requirements in the case of a building that has been damaged by fire, a natural disaster, or other calamity.

103A.4.5.1 Maintenance of property – exterior. The property owner shall actively maintain and monitor the exterior of the building and the grounds so that they remain in continuing compliance with all applicable codes and regulations, and do not contribute to and are not likely to contribute to blight as defined in Chapter 80 of the Administrative Code. Active maintenance and monitoring shall include, but not be limited to:

(1) Maintenance of landscaping and plant materials in good condition;

(2) Regular removal of all exterior trash, debris, and graffiti;

(3) Maintenance of the exterior of the building in a good condition that is structurally safe and preserves the physical integrity of the structure, including but not limited to paint and finishes, foundation, roof, chimneys, flues, gutters, downspouts, scuppers, flashing, skylights, windows, exterior stairs and decks;

(4) Prevention of criminal activity on the premises and trespass by unauthorized persons; and

(5) Turning off all utilities that are not necessary for the upkeep and maintenance of the building.

103A.4.5.2. Maintenance of property – interior. The property owner shall preserve the interior of the building from damage by the elements or plumbing leaks, and keep it free from accumulation of garbage and other debris, and from infestation by rodents, insects, or other pests.

103A.4.5.3. Security. The building shall be secured against unauthorized entry. The methods of security shall be as approved by the Director, who shall take into consideration whether the property has been cited for nuisance activities or criminal conduct by another department of the City and County of San Francisco or other government agency.

103A.4.6. Insurance. The owner of record shall maintain whatever fire and liability insurance coverage the Director determines is necessary. Any insurance policy shall require notice to the Department in the event of cancellation of insurance or a reduction in coverage.

103A.4.7. Violation a public nuisance; enforcement. A property in violation of the provisions of this section is deemed to be a public nuisance and subject to enforcement by the Department and penalties under Section 102A and 103A of this Code or under other applicable sections of the San Francisco Municipal Code.

103A.5 Vacant or Abandoned Commercial Storefronts – Annual Registration; Registration Fees; Maintenance and Security Requirements.

103A.5.1 Definitions. For the purposes of Section 103A.5, including Sections 103A.5.1-103A.5.3.6:

COMMERCIAL STOREFRONT. **A Commercial Storefront shall be any area within a building that may be individually leased or rented for any purpose other than Residential Use as defined in Planning Code Sections 790.88 and 890.88.**

VACANT OR ABANDONED. **A Commercial Storefront shall be Vacant or Abandoned if it (1) is unoccupied and unsecured; or (2) is unoccupied and secured by boarding or other similar means; or (3) is unoccupied and unsafe as defined in Section 102A of this Code; or (4) is unoccupied and has multiple code violations; or (5) has been unoccupied for over 30 days. Notwithstanding the foregoing sentence, a Commercial Storefront shall not be considered Vacant or Abandoned if**

(1) There is a valid building permit for repair, rehabilitation, or construction of the Commercial Storefront and the owner completes the repair, rehabilitation, or construction within one year from the date the initial permit was issued, unless the Department, in its sole discretion, determines that the owner needs additional time to complete the repair, rehabilitation, or construction of the Commercial Storefront; or

(2) The owner or leaseholder has filed an application for, and is actively seeking to obtain, authorization, permits or a license required by state or local law permitting the lawful use and occupancy of the Commercial Storefront; or

(3) The Commercial Storefront complies with all provisions of state and local law, does not contribute to blight as defined in Chapter 80 of the Administrative Code, is ready for occupancy, and the owner provides evidence satisfactory to the Department that the Commercial Storefront is actively being offered for sale, lease, or rent. Satisfactory evidence shall include, but is not limited to, evidence that the owner has hired a real estate agent or other rental agent who advertises and promotes the Commercial Storefront for rent, lease or sale, or proof that the Commercial Storefront is offered for sale on the Multiple Listing Service or any other comparable real estate listing service.

103A.5.2 Property owner's obligation to register a vacant or abandoned commercial storefront; registration fee. The owner of a Vacant or Abandoned Commercial Storefront shall, within 30 days after it has become vacant or abandoned, register the Commercial Storefront with the Department on a form provided by the Department. The form shall describe the methods by which the owner has secured the Commercial Storefront against unauthorized entry, provide a contact phone

number for the Commercial Storefront owner or party responsible for maintenance of the Commercial Storefront, state the most recent legal use of the Commercial Storefront, state the square footage of the Commercial Storefront, declare any future plans for the Commercial Storefront, state whether there is fire and liability insurance coverage, and provide such other information as the Department may require. A registration fee shall be due 270 days after the Commercial Storefront has become vacant or abandoned, unless the Director has issued a notice to register under Section 103A.5.4, in which case the registration fee shall be due 270 days after the issuance of the notice ("registration payment deadline"). The registration payment deadline will serve as the date for calculating an annual renewal fee which shall be paid every year the Commercial Storefront remains Vacant or Abandoned. However, if the owner rents the Commercial Storefront to a tenant who occupies the premises in a manner that complies with all provisions of state and local law prior to the registration payment deadline, the Commercial Storefront shall be removed from the Department's registry and the owner need not pay the registration fee. The registration fee shall be equal to the amount due under Section 103A.4.2 of this Code. See Section 110A, Table 1A-J for applicable fees.

103A.5.3 Maintenance of vacant or abandoned commercial storefront registry. The Department shall maintain a registry of all Vacant or Abandoned Commercial Storefronts within the City and shall furnish a copy of the registry to the Office of Economic and Workforce Development at least once per fiscal quarter.

103A.5.4 Notice. Whenever the Director has probable cause to believe, based upon an inspection, complaint, or report from another agency of the City or other governmental agency, that a Commercial Storefront is Vacant or Abandoned and has not been registered as required by Section 103A.5.2, the Director shall serve the owner of record, as shown on the Assessor's Records, or authorized agent with a written notice requiring the owner to register the Commercial Storefront with the Department as Vacant or Abandoned within the period of time specified in the notice, which shall be no greater than 30 days. Additionally, the owner shall pay the associated registration fee within 270 days of the issuance of the notice to register if required by Section 103A.5.2.

103A.5.5 Sign posting, maintenance, security, and insurance. All requirements listed in Sections 103A.4.4-103A.4.6 of this Code shall also apply to Vacant or Abandoned Commercial Storefronts. All such requirements shall be fulfilled by the owner within 30 days of the Commercial Storefront becoming Vacant or Abandoned, or within 30 days of the issuance of notice to register, regardless of the owner's intentions to rent the Commercial Storefront before the registration payment deadline lapses.

103A.5.6 Violation a public nuisance; enforcement. A Commercial Storefront in violation of this Section 103A.5, including Sections 103A.5.1-103A.5.6, is deemed to be a public nuisance and subject to enforcement by the Department and penalties under Sections 102A and 103A of this Code or other applicable sections of the Municipal Code.

(Amended by Ord. 182-14, File No. 140284, App. 8/7/2014, Eff. 9/6/2014; Ord. 14-16, File No. 151079, App. 2/18/2016, Eff. 3/19/2016)

SECTION 104A – ORGANIZATION AND ENFORCEMENT

104A.1 Enforcement agency. The Department of Building Inspection shall be the administering and enforcing agency under this code.

104A.2 Powers and duties of Building Official.

104A.2.1 General. The Building Official is hereby authorized and directed to enforce all the provisions of this code. For such purposes, the Building Official shall have the powers of a law enforcement officer.
Pursuant to Health and Safety Code Section 13108, upon the written request of the chief fire official of any city, county or fire-protection district, the State Fire Marshal may authorize such chief fire official and his or her authorized representatives, in their geographical area of responsibility, to make fire- prevention inspections of state-owned or state- occupied buildings, other than state institutions, for the purpose of enforcing the regulations relating to fire and panic safety adopted by the State Fire Marshal pursuant to this section and building standards relating to fire and panic safety published in the California Building Standards Code. Authorization from the State Fire Marshal shall be limited to those fire departments or fire districts which maintain a fire-prevention bureau staffed by paid personnel.
Pursuant to Health and Safety Code Section 13108, any requirement or order made by any chief fire official who is authorized by the State Fire Marshal to make fire-prevention inspections of state-owned or state occupied buildings, other than state institutions, may be appealed to the State Fire Marshal. The State Fire Marshal shall, upon receiving an appeal and subject to the provisions of Chapter 5 (commencing with Section 18945) of Part 2, 5 of Division 13 of the Health and Safety Code, determine if the requirement or order made is reasonably consistent with the fire and panic safety regulations adopted by the Office of the State Fire Marshal and building standards relating to fire and panic safety published in the California Building Code.
The Building Official shall have the power to render interpretations of this code and to adopt and enforce rules and supplemental regulations to clarify the application of its provisions. Such interpretations, rules and regulations shall be in conformance with the intent and purpose of this code. Such rules and regulations, commonly referred to as Code Rulings and Administrative Bulletins supplemental to this code shall not take effect until approved by the Building Inspection Commission and signed by the Building Official except in unusual circumstances where the Building Official has determined that there is an immediate need to protect the public health and safety. When the Building Official finds that such circumstances exist, the Building Official may order immediate enforcement of a particular rule or regulation. The Building Official shall arrange for a subscription service to such rules and regulations, the entire cost of which is to be borne by the subscribers.
NOTE: "Code Rulings" and "Administrative Bulletins" may be found in the Department's Rules and Regulations printed at the back of this code.

104A.2.2 Deputies. In accordance with prescribed procedures and with the approval of the appointing authority, the building official may appoint such number of technical officers and inspectors and other employees as shall be authorized from time to time. The building official may deputize such inspectors or employees as may be necessary to carry out the functions of the code enforcement agency.

104A.2.3 Right of entry. When it is necessary to make an inspection to enforce the provisions of this code or other codes or ordinances, or when the Building Official has reasonable cause to believe that there exists in a building or upon a premises a condition that is contrary to or in violation of this code or other codes or ordinances that makes the building or premises unsafe, dangerous or hazardous, the Building Official may enter the building or premises at reasonable times to inspect or to perform the duties imposed by this code or other codes or ordinances, provided that if such building or premises be occupied that credentials be presented to the occupant and entry requested. If such building or premises be unoccupied, the Building Official shall first make a reasonable effort to locate the owner or other person having charge or control of the building or premises and

request entry. If entry is refused, the Building Official shall have recourse to the remedies provided by law to secure entry.

104A.2.4 Stop orders.

(a) Whenever any work is being done contrary to the provisions of this code, or other pertinent laws or ordinances implemented through the enforcement of this code, the building official may order the work stopped by notice in writing served on any persons engaged in the doing or causing such work to be done, and any such persons shall forthwith stop such work until authorized by the building official to proceed with the work.

(b) If the building official determines that a project has a history of repeated violations of this code or other pertinent laws or ordinances implemented through the enforcement of this code, the building official may stop all work on the project until all the code violations have been fully investigated and resolved. The director of any department with permitting authority for the project, including but not limited to the Director of Public Works and the Director of Planning, may request the building official to stop all work on the project pending an investigation and resolution of the code violations at issue.

104A.2.5 Occupancy violations. Whenever any building, structure, property or portion thereof regulated by this code is being used contrary to the provisions of this code or the code in effect at the time the use was commenced, the Building Official may order such use discontinued and the building, structure, property or portion thereof, vacated by notice served on any person involved in said use or causing such use to be continued. Such person shall discontinue the use within the time prescribed by the Building Official after receipt of such notice to make the building, structure, property or portion thereof, comply with the requirements of this code; provided, however, that in the event of an unsafe building, structure or property the provisions of Section 102A shall apply.

104A.2.6 Liability. The Building Official charged with the enforcement of this code, acting in good faith and without malice in the discharge of the duties required by this code or other pertinent law or ordinance shall not thereby be rendered personally liable for damages that may accrue to persons or property as a result of an act or by reason of an act or omission in the discharge of such duties. A suit brought against the building official or employee because of such act or omission performed by the building official or employee in the enforcement of any provision of such codes or other pertinent laws or ordinances implemented through the enforcement of this code or enforced by the code enforcement agency shall be defended by this jurisdiction until final termination of such proceedings, and any judgment resulting therefrom shall be assumed by this jurisdiction. This code shall not be construed to relieve from or lessen the responsibility of any person owning, operating or controlling any building or structure for any damages to persons or property caused by defects, nor shall the code enforcement agency or its parent jurisdiction be held as assuming any such liability by reason of the inspections authorized by this code or any permits or certificates issued under this code.

104A.2.7 Modifications. When there are practical difficulties involved in carrying out the provisions of this code, the building official may grant modifications for individual cases. The building
official shall first find that a special individual reason makes the strict letter of this code impractical and that the modifications are in conformance with the intent and purpose of this code and that

such modifications does not lessen any fire-protection requirements or any degree of structural integrity. The details of any action granting modifications shall be recorded and entered in the files of the code enforcement agency.

104A.2.7.1 Local equivalencies. Due to unique topographical conditions in the City and County of San Francisco, including but not limited to the City's built environment and historic pattern of development, equivalencies to certain code requirements have been developed by the Department and are approved on an individual basis if specific conditions are met. Wherever in this code a reference to Local Equivalency is made, details of the equivalency to the specific code requirement may be found in the Department's Rules and Regulations printed at the back of this code.

104A.2.8 Alternate materials, design, and methods of construction. The provisions of this code are not intended to prevent the use of any material, alternate design or method of construction not specifically prescribed by this code, provided any alternate has been approved and its use authorized by the building official.

The building official may approve any such alternate, provided the building official finds that the proposed design is satisfactory and complies with the provisions of this code and that the material, method or work offered is, for the purpose intended, at least the equivalent of that prescribed in this code in suitability, strength, effectiveness, fire resistance, durability, safety and sanitation.

The building official shall require that sufficient evidence or proof be submitted to substantiate any claims that may be made regarding its use. The details of any action granting approval of an alternate shall be recorded and entered in the files of the code enforcement agency.

104A.2.8.1 Alternate for materials, design, tests and methods of construction. Subject to other provisions of law, alterations, repairs, replacements, occupancy, use and maintenance provisions, and moved buildings are referenced in the State Housing Law, Health and Safety Code, Sections 17912, 17920.3, 17922 (c), 17922.3, 17958.8 and 17958.9 and California Code of Regulations, Title 25, Chapter 1 commencing with Section 1. Health and Safety Code Sections 17958.8 and 17958.9 are repeated here to provide clarity and read as follows:

Section 17958.8. Local ordinances or regulations governing alterations and repair of existing buildings shall permit the replacement, retention, and extension of original materials and the use of original methods of construction for any building or accessory structure subject to this part, including a hotel, lodging house, motel, apartment house, or dwelling, or portions thereof, as long as the portion of the building and structure subject to the replacement, retention, or extension of original materials and the use of original methods of construction complies with the building code provisions governing that portion of the building or accessory structure at the time of construction, and the other rules and regulations of the department or alternative local standards governing that portion at the time of its construction and adopted pursuant to Section 13143.2 and the building or accessory structure does not become or continue to be a substandard building.

Section 17958.9. Local ordinances or regulations governing the moving of apartment houses and dwellings shall, after July 1, 1978, permit the retention of existing materials and methods of construction so long as the apartment house or dwelling complies with the building standards for foundation applicable to new construction, and does not become or continue to be a substandard building.

104A.2.8.2 Reserved

104A.2.8.3 Approval and evaluation of materials or systems, methods and types of construction, fabricators, and testing or plan review agencies. General. This section is applicable to evaluations conducted and to approvals granted by the Department, for use in San Francisco, for alternate materials not covered in this code; for plant fabrications of building components which normally require special inspection; for testing or plan review agencies; for evaluation of materials, product methods and types of construction.

Any approval shall be void if, after approval, the design or nature of the device or material, the method of construction, the quality control program, or the capabilities of the agency, are found to deviate in any way from that represented to the Department or the conditions of approval, without first obtaining written authorization from the Building Official.

Any approval may be suspended or revoked if the Building Official finds the approved device or material, method of construction, or quality control program does not meet the requirements of Sections 104A.2.8 or 1701 to such an extent that the approval should not have been granted. See Section 110A, Table 1A-J – Product Approvals – for applicable fees. The fees specified are application fees and are not refundable regardless of whether the action taken is an approval or a denial or whether a subsequent request for hearing by the Board of Examiners is filed, except for the case where an application was filed at the request or on the advice of the Department for situations which subsequently are determined to not require an approval.

Each approval shall become null and void unless renewed within the specified period.

104A.2.9 Tests. Whenever there is insufficient evidence of compliance with any of the provisions of this code or evidence that any material or construction does not conform to the requirements of this code, the building official may require tests as proof of compliance to be made at no expense to this jurisdiction

Test methods shall be as specified by this code or by other recognized test standards. If there are no recognized and accepted test methods for the proposed alternate, the building official shall determine test procedures.

All tests shall be made by an approved agency. Reports of such tests shall be retained by the building official for the period required for the retention of public records.

104A.2.10 Cooperation of other officials and officers. The building official may request, and shall receive, the assistance and cooperation of other officials of this jurisdiction so far as is required in the discharge of the duties required by this code or other pertinent law or ordinance.

104A.2.11 Code revisions. The Building Official shall transmit to the Building Inspection Commission, at intervals not exceeding three years, recommendations for changes to this code, based on studies of the following:

1. Requests of the Board of Examiners for modifications from the code, and for approvals of alternate materials, alternate designs and methods of construction.

2. Code changes recommended by the Board of Examiners.

3. Code changes recommended by the Code Advisory Committee or other bodies subordinate to the Building Inspection Commission.

4. Results obtained and problems encountered in legal actions taken to correct code violations.

5. Changes or improvements in materials, methods of construction or design, and changes proposed by interested persons.

6. Investigations of fire and structural damage to buildings, and of determination of unsatisfactory building performance.

7. Periodic changes to the California Building Code and other State regulations which may affect this code.

8. Administrative Bulletins and Code Rulings currently in effect.

9. Violations of the code found on inspections or investigations.

104A.3 Service of notices.

104A.3.1 Notices sent. Whenever a notice is required to be given under this code, unless different provisions are otherwise specifically made, such notice may be given either by personal delivery to the person to be notified or by deposit in the United States mail in a sealed envelope, postage prepaid, addressed to the person to be notified at such person's last known business or residence address. Service by mail shall be deemed to be have been completed at the time of deposit in the United States mail.

104A.3.2 Proof of notice. Proof of giving any notice may be made by the certificate of any officer or employee of the City and County of San Francisco or by affidavit of any person over the age of eighteen years, which shows service in conformity with the San Francisco Municipal Code or other provisions or law applicable to the subject matter concerned.

104A.4 Code enforcement and rehabilitation fund.

104A.4.1 Establishment. There is hereby established in the Treasury of the City and County of San Francisco a special fund to be known and designated as the Code Enforcement and Rehabilitation Fund, into which shall be deposited all funds allocated by the State Controller from the Local Agency Code Enforcement and Rehabilitation Fund.

104A.4.2 Use of funds. The Code Enforcement and Rehabilitation Fund shall be used exclusively to defray costs incurred in the enforcement of local code provisions mandated by State law.

104A.5 Building Inspection Fund. All fees collected pursuant to this code shall be deposited into the Building Inspection Fund established by the City Controller pursuant to Section 10.117-78 of the San Francisco Administrative Code. This fund shall be used by the Department, subject to the approval of the Building Inspection Commission, to defray costs incurred for, but not limited to, personnel, supplies, and equipment used in evaluating the applications, maintaining files and records, and for disseminating information, reviewing plans and making inspections to determine compliance with the conditions of approvals. Any charges established by the Building Official or the Building Inspection Commission for copies of approvals, publications or other Department records shall be deposited into this fund.

104A.6 Multiple Languages in Notices

104A.6.1 Definitions. For the purposes of this section, the following definitions shall apply:

DEDICATED TELEPHONE NUMBER means a telephone number for a recorded message in a language of limited English proficient residents. The recorded message shall advise callers as to what information they should leave on the message machine so that the Department may return the call with information about the notice in the requested language.

LANGUAGE OF LIMITED ENGLISH PROFICIENT RESIDENTS means each of the two languages other than English spoken most commonly by San Francisco residents of English proficiency as determined by the Planning Department based on its annual review of United States census and other data as required by San Francisco Administrative Code Section 91.2(j).

104A.6.2 Applicability of multiple language requirement. The requirements of Section 104A.6.3 shall apply to the following notices:

1. Notices required by Section 103A.3.3 that are mailed or personally served.

2. Notices required by Section 106A.3.2.2.1.
3. Notices required by Section 106A.3.2.3.
4. Notices required by Section 106A.4.6, Subsection 2.
5. Notices required by Section 106A.4.6, Subsection 3.
6. Notices required by San Francisco Existing Building Code Section ~~3426.3.2~~ 328.3.2.
7. Any other notices required by the Building Code to be mailed or personally served to property owners or occupants adjacent to or near a property for which Building Department development approval is sought.

104A.6.3 Multiple language statement in notices. The Building Department shall prepare a cover sheet as specified below and include it with each notice of the type listed in Section 104A.6.2 that is mailed or personally served. For posted notices listed in Section 104A.6.2, the Department shall post
the cover sheet next to the posted notice. The cover sheet shall contain the following statement, printed in each language of limited English proficient residents and, to the extent available Department resources allow, such other languages that the Department determines desirable, with the name of the language in which the statement is made, the time period for a decision on the matter and the dedicated telephone number for the language of the statement inserted in the appropriate blank spaces:
"The attached notice is provided under the Building Code. It concerns property located at the address shown on the attached notice. A hearing may occur, a right to request review may expire or a development approval may become final unless appealed within [insert days until a hearing or deadline for requesting review or appealing a decision]. To obtain information about this notice in [insert name of language] please call [insert dedicated telephone number]. Please be advised that the Building Department will require at least one business day to respond to any call. Provision of information in [insert name of language] is provided as a service by the Building Department and does not grant any additional rights or extend any time limits provided by applicable law."

The Department shall maintain a dedicated telephone number for each language of limited English proficient residents. The Department shall place a return telephone call by the end of the following business day to each person who leaves a message concerning a neighborhood notice at a dedicated telephone number and, when the caller is reached, provide information to the caller about the notice in the language spoken by the caller.

(Amended by Ord. 59-16, File No. 151081, App. 4/27/2016, Eff. 5/27/2016)

SECTION 105A – BOARDS, COMMISSIONS AND COMMITTEES

105A.1 Board of Examiners.

105A.1.1 Establishment. There is hereby created a Board of Examiners who are qualified by experience and training to pass upon matters pertaining to building design and construction. The functions of the Board of Examiners shall be:

105A.1.1.1 To determine whether specific new materials, new methods and types of construction comply with the standards of safety established by this code, and to recommend the approval or disapproval of such new materials, new methods and types of construction.

105A.1.1.2 To determine whether variances from the requirements of this code should be approved for specific cases where new materials, new methods and types of construction are not involved, and where the enforcement of compliance therewith would result in unreasonable hardship.

105A.1.1.3 To recommend to the Building Official reasonable interpretations of the provisions of this code.

105A.1.1.4 To hear appeals from any Abatement Order of the Building Official involving construction methods, assemblies or materials or where safety is involved.
A copy of the findings of the Board of Examiners shall be forwarded to the Abatement Appeals Board.
Matters involving compliance with Chapters 16B and 16C and other related structural provisions of this code regulating the strengthening of unreinforced masonry bearing wall buildings shall be heard by the Board of Examiners as provided in Section 105A.1.

105A.1.2 Definition. The term "standard of safety," as used in this section, shall mean the general degree of safety conforming to the provisions of this code as required to safeguard life or limb, health and public welfare.

105A.1.3 Intent. It is the intent of this section that new materials, new methods and types of construction which do not comply with the standards of safety established by this code shall in no event be approved; but that the requirements of this code, other than those involving such standards of safety, may be modified or waived under the circumstances set forth in this section.

105A.1.4 Membership. The Board of Examiners shall consist of 13 members, which shall include one plumbing member and one electrical member, who shall serve only when cases related to plumbing or electrical code issues are being considered, and one high-rise sprinkler member who shall serve only when cases related to high-rise sprinkler issues are being considered, and three seismic improvement members who shall serve only when cases related to San Francisco Existing Building Code Chapter ~~34B~~ 4D seismic retrofit issues are being considered. All members are to be appointed by the Building Inspection Commission and shall serve at the Building Inspection Commission's pleasure for a three-year term or until a successor is appointed. The present members shall be continued in office until the expiration of their terms.
In the event a vacancy occurs during the term of office of any member of the Board of Examiners, a new appointment shall be made in a manner similar to that described herein for new members. The membership shall consist of:

1. **A registered structural engineer.**
2. **A registered mechanical engineer.**
3. **A registered electrical engineer.**
4. **A registered fire protection engineer.**
5. **A licensed general contractor.**
6. **A licensed architect.**
7. **A building trades representative.**
8. **As the plumbing member, a licensed plumbing contractor.**
9. **As the electrical member, a licensed electrical contractor.**
10. **As a high-rise sprinkler member, one building owner representative.**
11. **As a Seismic Improvement member, one tenant also a licensed or registered architect, civil or structural engineer.**
12. **As a Seismic Improvement member, one property owner also a licensed or registered architect, civil or structural engineer.**
13. **As a Seismic Improvement member, one registered structural engineer specializing in seismic improvement.**

The terms "registered" and "licensed" shall be understood to mean by the State of California. The Building Inspection Commission shall make such appointments after giving careful consideration to nominations made by technical associations and general contractor organizations including the Consulting Engineers Association of California, the Structural Engineers Association of Northern California, the San Francisco District of the Associated General Contractors of California, the Plumbing and Mechanical Cooling Contractors of San Francisco, the San Francisco Electrical Contractors Association, the San Francisco Chapter of the American Institute of Architects, and the San Francisco Building Trades Council. Each member of the Board of Examiners shall receive compensation of $125 per meeting attended.

The following shall constitute ex officio members of the Board of Examiners, without vote and without compensation: The Building Official, who shall act as Secretary of the Board of Examiners, and the Fire Marshal.

In the event a member cannot attend meetings of the Board of Examiners for a period of three or more consecutive meetings due to illness, work away from San Francisco, or any other valid reason, the Building Inspection Commission may appoint an alternate member representing the same profession or trade as the absent member and meeting the same registration or licensing requirements as the absent member. The appointment of such alternate need not require solicitation of nominees from the respective organizations. The alternate shall serve on the Board of Examiners until the return of the absent member or until the expiration of the absent member's term, whichever comes first. The compensation indicated in section 4 above shall be paid the alternate member for each meetings attended. The alternate member shall, during the time of service on the Board of Examiners, have all the rights, duties, and privileges of a duly appointed member of the Board of Examiners.

105A.1.5 Board of Examiners's authority with respect to applications for approval of materials, methods and types of construction. Where application has been made to the Building Official to approve new materials, new methods and types of construction which the applicant believes meet the standards of safety set by this code, and where the approval of such application has been denied by the Building Official, the Board of Examiners shall have authority, at the request of the applicant, to determine whether such materials, methods and types of construction comply therewith.

105A.1.5.1 The Board of Examiners shall adopt rules and specifications for examining and testing proposed materials and methods of construction. A copy of such rules and specifications shall be furnished to the applicant.

105A.1.5.2 The applicant shall cause to be made, at the applicant's expense, all reasonable tests and examinations required by the Board of Examiners to substantiate the applicant's claims that any proposed new materials, new methods and types of construction comply with the standards of safety established by this code.

105A.1.5.3 The Board of Examiners shall have power to call upon such experts as it deems necessary to consider and report upon the technical matters concerning such application. The engagement of the services of such experts shall be with the consent of and at the expense of the applicant, and the Board of Examiners shall have power to require security for the payment of such expense. Such expense shall be in addition to the required filing fees as set forth in Section 110A, Table 1A-K – Penalties, Hearings, Code Enforcement Assessments. Any official or employee of the City and County of San Francisco called upon by the Board of Examiners shall serve without compensation beyond their normal salary.

105A.1.5.4 The Board of Examiners shall certify the results of examinations and tests, together with its recommendation on the application, to the Building Official. If the Board of Examiners recommends approval, the Building Official shall thereupon approve the materials or methods of construction. The Board of Examiners shall have power to attach such conditions to its recommendations as it deems necessary in the interest of public safety, and the Building Official's approval shall be granted subject to such conditions.

105A.1.6 Board of Examiners' authority with respect to applications for variances from code requirements. Where new materials, new methods and types of construction are not involved, the Board of Examiners shall have authority to consider the application for a permit, the approval of which would require a variance from the provisions of this code.
If the Board of Examiners finds that such variance will not result in a condition less safe and less desirable from the viewpoint of public welfare than would result from the enforcement of compliance with such provisions, it shall recommend to the Building Official the approval of such permit. Upon receipt of such recommendation, the Building Official shall approve such permit. The Board of Examiners may attach to such recommendations any conditions which public safety and welfare may require, and the Building Official in approving such permit shall incorporate such conditions therein.

105A.1.7 Application for consideration by Board of Examiners. All applications to the Board of Examiners shall be made in writing and shall be filed with the Secretary of the Board of Examiners. The Board of Examiners shall act upon each application without unreasonable or unnecessary delay. See Section 110A, Table 1A-K – Penalties, Hearings, Code Enforcement Assessments – for applicable fee.

105A.1.8 Procedure. The Board of Examiners shall establish reasonable rules and regulations for its own procedures not inconsistent with the provisions of this code and the Charter of the City and County of San Francisco. The Board of Examiners, by a majority vote, shall choose its officers, which shall consist of the President and Vice-President.

105A.1.9 Meetings. Meetings of the Board of Examiners shall be held at the call of the Secretary of the Board of Examiners and at such times and places as the Board of Examiners may determine. All meetings of the Board of Examiners shall be public meetings.

105A.1.10 Quorum. Four members of the Board of Examiners shall constitute a quorum, and action of the Board of Examiners shall require the affirmative votes of not less than three members. No member of the Board of Examiners shall pass upon any question in which the member, or any corporation in which the member is a shareholder or holds an interest.

105A.1.11 Decisions by resolution. Every decision and recommendation of the Board of Examiners shall be by resolution filed with the Building Official. A copy shall be mailed to the applicant. A copy shall also be sent to other interested bureaus or departments charged with the enforcement of this code. The Board of Examiners shall arrange for a subscription service to its agenda and decisions, the entire cost of which shall be borne by the subscribers.

105A.1.12 Record of meetings. The Board of Examiners shall maintain a tape recording of each meeting. Upon request, these tape recordings shall be made available for duplication by independent agencies with proper security afforded as determined by the Building Official. All costs of duplication shall be borne by the party requesting duplication.

105A.2 Abatement Appeals Board.

105A.2.1 Establishment. There is hereby established an Abatement Appeals Board, consisting of the seven members of the Building Inspection Commission, to pass upon matters pertaining to housing, building and construction.

105A.2.2 Membership. Members of the Abatement Appeals Board shall be the Building Inspection Commission who are appointed and serve for the terms as prescribed by the Charter of the City and County of San Francisco. The Building Official or designee shall act as Secretary to the Abatement Appeals Board.

105A.2.3 Powers. Except for cases involving disabled access, which shall be heard by the Access Appeals Commission, the Abatement Appeals Board shall have the power to hear and decide appeals from Orders of Abatement after public hearing by the Building Official of Building Inspection, and to hear appeals –regarding- the issuance of a final bill for assessment of costs imposed pursuant to Section 102A upon a showing of substantial error by the Department. Appeals for assessment of cost must be filed by the property owner in writing with the Secretary of the Abatement Appeals Board within 15 days of the mailing of the assessment of cost notice. See Section 110A, Table 1A-D-Standard Hourly Rates, and Table 1A-K – Penalties, Hearings, Code Enforcement Assessments – for applicable fees. The Abatement Appeals Board may uphold, modify or reverse such orders, provided that the public health, safety and public welfare are secured most nearly in accordance with the intent and purpose of this code and the San Francisco Housing Code.

105A.2.4 Procedure. The Abatement Appeals Board shall establish reasonable rules and regulations for its own procedures consistent with the provision of this code and the Charter of the City and County of San Francisco. The Abatement Appeals Board, by majority vote, shall choose its officers which shall consist of the President and Vice-President.

105A.2.5 Quorum. Four members of the Abatement Appeals Board shall constitute a quorum. Any action of the Abatement Appeals Board shall require the concurrence of four members. No member of the Abatement Appeals Board shall pass upon any case in which the member, or any corporation in which the member is a shareholder, or holds an interest.

105A.2.6 Hearings. All hearings of the Abatement Appeals Board shall be public hearings. Within 10 days after the filing of an appeal, the Abatement Appeals Board shall fix the time and place for a hearing, which shall not be more than 30 days after the date of filing. The notice of the hearing of such appeal shall be posted in a conspicuous place upon the property that is the subject of the appeal and shall be served upon the appellant and transmitted to the Building Official of Building Inspection at least 10 days prior to the date set for the hearing. Once an appeal is filed, the order of the Building Official shall be stayed until a decision is rendered.

For good cause shown, one continuance of a hearing may be granted by the Abatement Appeals Board; such continuance shall not exceed 60 days.

105A.2.7 Rehearing. The Abatement Appeals Board may rehear an appeal upon which a decision has been rendered, provided a request for a rehearing has been made in writing within 10 days of the date of issuance of the decision.

105A.2.8 Findings and decisions. The Abatement Appeals Board shall issue its findings and decisions no later than 10 days after the conclusion of the hearing. Such findings and decisions shall within five days thereafter be posted in a conspicuous place upon the property that is the subject of the appeal, served on the appellant, and transmitted to the Building Official.

105A.2.8.1. Failure of appellant to appear. In the event the appellant fails to appear at the hearing or if the Abatement Appeals Board fails to issue its findings and decisions within the time set forth above, or denies the appeal, the order of the Building Official shall be immediately effective from the date the order was issued; however the time that the matter was under appeal shall not be counted toward the time set in the order for compliance.

EXCEPTION: Except in cases of lack of quorum, failure of the Abatement Appeals Board to meet any of the time periods specified herein shall result in the Building Official's order taking effect immediately.

105A.2.8.2 Life-safety hazards. In any appeal of a decision where the Abatement Appeals Board finds that there exists in, on, or near any building, structure or property, any condition constituting a serious and imminent hazard to the life, health, or safety of any person, structure, or property, any decision of the Abatement Appeals Board modifying the order of the Building Official shall provide for immediate protection of the public, and that work to correct each such hazard commence within 30 days and be completed within 90 days after service of such decision. With respect to violations which are not found by the Abatement Appeals Board to constitute a serious and imminent hazard, any decision of the Abatement Appeals Board modifying the order of the Building Official shall provide that the work to repair such violations commence within 60 days and be completed within a reasonable time, not to exceed 18 months.

105A.2.8.3 Moratorium – financial hardship. In any case of extreme financial hardship, the Abatement Appeals Board may grant a moratorium to correct conditions which are not serious and imminent hazards. Such a moratorium shall be granted only to an owner occupant of a single- or two-family dwelling where all such serious and imminent hazards, as found by the Building Official, have been corrected. The decision of the Abatement Appeals Board in any case in which a moratorium is granted shall contain the duration of the moratorium and the conditions for its termination. A copy of the decision granting a moratorium shall be recorded in the Assessor-Recorder's Office.

105A.2.8.4 Moratorium – displacement. Notwithstanding the provisions of this code and the San Francisco Housing Code, the Abatement Appeals Board, upon the written appeal of any person, may grant a moratorium from enforcement of an order of the Building Official made pursuant to Section 102A in order to prevent displacement of low and moderate income persons from affordable housing, if the Board finds that:

1. The Building Official's order from which the appeal is taken was issued after April 1, 1986; and

2. The property is a Group R, Division 1 building as defined in this code; and

3. The building was constructed prior to January 1, 1956; and

4. The condition does not constitute a serious and imminent hazard or a life hazard as defined in Section 213 of this code; and

5. The condition does not violate the Fire Code or any code other than this code and the San Francisco Housing Code; and

6. The condition does not affect adequate egress from the building; and

7. The condition does not endanger the life, limb, health, property, safety, or welfare of the public or the occupants of the building; and

8. Fifty percent or more of the households living in the building are paying annual rent equal to or less than 30 percent of the annual rent of low and moderate income as determined in Section 104A.4 of the Building Code; and

9. The abatement of the condition will have a reasonable probability of resulting in the displacement of occupants who are of low and moderate income as defined above.

105A.2.8.5 Findings. The Board shall serve the Building Official, the property owner, and the person requesting the moratorium if other than the property owner, by sending a copy of its findings and decision by certified mail to such persons at their last known address. A copy of the findings and the decision granting a moratorium shall be recorded in the Assessor-Recorder's Office.

105A.2.8.6 Term of moratorium. The maximum term of the moratorium shall be 10 years from the date that the Board's findings and decision are served on the Building Official. At any time during the term of a moratorium under this section, any person may request that the Abatement Appeals Board extend the moratorium for one or more five-year periods by filing a written request with the Secretary of the Board. The Board shall hold a hearing on the request and shall issue separate findings and decisions regarding each request for an extension. The findings must address the nine criteria listed in this section. Any request for an extension of the moratorium shall be subject to the notice and hearing procedures of this section.

105A.2.8.7 Rescission of moratorium. At any time during the term of a moratorium, any person, including the Building Official, may request that the Abatement Appeals Board rescind the moratorium by filing a written request with the Board. The Board shall hold a hearing on the request and issue separate findings and decisions regarding each such request for a rescission. Any request for a rescission of the moratorium shall be subject to the notice and hearing procedures of this section.

105A.2.8.8 Violations listed. The moratorium shall apply only to those code violations expressly listed therein. All other violations which exist and are not so listed in the findings and decisions granting the moratorium shall be abated in accordance with Section 102A.

105A.2.8.9 Duration. Once the Board's order granting a moratorium is issued, the building is no longer considered a nuisance or a substandard building for the duration of the moratorium with respect to those code violations expressly listed in the Board's findings and decisions.

105A.2.9 Failure to comply. Upon the failure of any owner to comply with the order of the Building Official or the Abatement Appeals Board, the matter shall be referred within five days to the City Attorney's Office for appropriate legal action.

105A.2.10 Compensation. The members of the Abatement Appeals Board shall serve without compensation.

105A.3 Access Appeals Commission.

105A.3.1 Establishment; composition; purpose. Pursuant to the provisions of Section 19957.5 of the Health and Safety Code of the State of California, there is hereby established an Appeals Board to be known as the Access Appeals Commission composed of five members to hear written appeals brought by any person regarding action taken by the Department in the enforcement of the requirements of Part 5.5 (commencing with Section 19955), Division 13 of the Health and Safety Code of the State of California, including the exceptions contained in Section 19957 thereof, as well as action taken by the Department in the enforcement of the disabled access and adaptability provisions of this code.

105A.3.2 Appointments; qualifications; terms; vacancies; compensation. Members of the Access Appeals Commission shall be qualified and appointed as follows:

1. Two members of the Access Appeals Commission shall be persons with a physical disability, two members shall be experienced in construction, and one member shall be a public member. All shall be appointed by the Building Inspection Commission and serve at its pleasure. The terms shall be staggered and the term of each member shall be four years. Members shall continue in office until the expiration of his or her term and until his or her successor is appointed and qualified.

2. Upon a vacancy occurring in the membership of the Access Appeals Commission and upon the expiration in the term of office of any member, a successor shall be appointed by the Building Inspection Commission. When a vacancy occurs for any reason other than the expiration of a term of office, the appointee to fill such vacancy shall hold office for the unexpired term of his or her predecessor. The members of the Access Appeals Commission shall be reimbursed at $125 per meeting attended. The Building Official or his or her designated representative shall act as Secretary of the Access Appeals Commission, without vote and without additional compensation. The Department shall provide necessary staff service to the Access Appeals Commission.

105A.3.3 Powers and duties; finality. The Access Appeals Commission shall conduct hearings on written appeals made under Section 105A.3.4 hereof. In hearing such appeals, the Access Appeals Commission may approve or disapprove the Department's interpretations of Part 5.5, Division 13 of the Health and Safety Code of the State of California and of the disability access and adaptability requirements of this code and actions taken by the Department to enforce said requirements and abate violations. The Commission shall also make determinations on equivalent facilitation, technical infeasibility, unreasonable hardship, extensions of time, and such other matters as Chapter 11D – Mandatory Accessibility Improvements for Buildings with a Place of Public Accommodation may require or authorize. All such approvals or disapprovals shall be final and conclusive as to the Department, in the absence of fraud or prejudicial abuse of discretion. See Section 110A, Table 1A-K – Penalties, Hearings, Code Enforcement Assessments – for applicable fee.

105A.3.4 Form of appeal – action on. All appeals to the Access Appeals Commission shall be made in writing and shall be filed with the Secretary of the Access Appeals Commission. The Access Appeals Commission shall act upon each appeal without unreasonable or unnecessary delay.

105A.3.4.1 Rehearings. The Access Appeals Commission may rehear an appeal upon which a decision has been rendered upon motion of a member of the Access Appeals Commission and upon the affirmative vote of at least three of its members, provided that a request for a rehearing has been made in writing within 10 days of the date of the decision. See Section 110A, Table 1A-K – Penalties, Hearings, Code Enforcement Assessments – for applicable fee.

105A.3.5 Procedure. The Access Appeals Commission shall establish reasonable rules and regulations for its own procedure not inconsistent with the provisions of this code and the Charter of the City and County of San Francisco. The Access Appeals Commission, by a majority vote, shall choose its officers, other than the Secretary.

105A.3.6 Meetings. Meetings of the Access Appeals Commission shall be at such times as the Access Appeals Commission may determine. All meetings of the Access Appeals Commission shall be public meetings.

105A.3.7 Agenda and record. The Access Appeals Commission shall arrange for the maintenance of a record of its agenda, actions and recommendations which shall be available to the public upon request for the cost of reproduction.

105A.3.8 Decisions by resolution. Every decision and recommendation of the Access Appeals Commission shall be by resolution, which shall be retained as part of the Access Appeals Commission's official records. A copy shall be mailed to the appellant.

105A.3.9 Waiver of fee. An exemption from paying the Access Appeals Commission Filing Fees specified in Section 110A, Table 1A-K – Penalties, Hearings, Code Enforcement Assessments – may be granted upon the appellant's filing with the Department a declaration of indigency under penalty of perjury. The declaration shall be made on a form provided by the Department and shall be accompanied by such documentary proof as the Building Official shall require.

105A.3.10 Notice to Mayor's Office of Disability. Materials for each matter to be decided by the Commission shall be sent to the Mayor's Office of Disability, together with a copy of the meeting agenda, at the same time and in the same manner as the materials and agenda are provided to members of the Commission.

105A.4 Code Advisory Committee.

105A.4.1 Establishment. There is hereby created a Code Advisory Committee consisting of seventeen members who are qualified by experience and training to pass upon matters pertaining to the development and improvement of the content of this code and the San Francisco Housing Codes and their related rules and regulations as well as provisions of other parts of the Municipal Code that the Building Official and the Building Inspection Commission determines have an impact on construction permits.

105A.4.2 Functions. Its functions shall be:

1. To review recommendations for code changes made by the Building Official the Building Inspection Commission pursuant to Section 104A.2.11.

2. To develop, review and recommend code changes to the Building Official and the Building Inspection Commission.

3. To review rules and regulations promulgated by the Building Official and the Building Inspection Commission pursuant to Section 104A.2.1.

4. To recommend to the Building Official and the Building Inspection Commission, within 30 days after the effective date of a new edition of a code, which existing Section 104A.2 rules and regulations should remain in effect, be modified or be canceled.

105A.4.3 Membership. The Code Advisory Committee shall consist of 17 members appointed by the Building Inspection Commission to serve at the Building Inspection Commission's pleasure for a three-year term or until a successor is appointed and qualified.

105A.4.3.1 Members. In the event that a vacancy occurs during the term of office of any member of the Code Advisory Committee, a new member shall be appointed in a manner similar to that described herein for new members. The membership shall consist of:

1. A licensed architect whose practice is primarily in the area of major commercial and institutional projects of Type I and II construction.

2. A licensed architect whose practice is primarily in the area of smaller commercial and residential projects of Type III and V construction.

3. A registered civil engineer whose practice is primarily in the area of major commercial and institutional projects of Type I and II construction and who has the authority to use the title "Structural Engineer."

4. A registered civil engineer whose practice is primarily in the area of smaller commercial and residential projects of Type III and V construction.

5. A registered mechanical engineer or licensed mechanical contractor.

6. A registered fire protection engineer who practices in the area of fire protection.

7. A registered electrical engineer or licensed electrical contractor.

8. A representative of a licensed general contractor whose work is primarily in the area of major commercial and institutional projects of Type I and II construction.

9. A representative of a licensed general contractor whose work is primarily in the area of alterations, remodeling or restoration.

10. A representative of a licensed general contractor whose work is primarily the construction of single- and multifamily residential construction for its own account.

11. A commercial property owner or a person practicing in the area of property management.

12. A representative of the general business community.

13. A person qualified in the area of historical preservation.

14. A person, preferably with a disability, who is knowledgeable about disability access regulations.

15. Three at-large members who may, but need not, possess technical skills or knowledge.

The terms "registered and "licensed" shall be understood to mean registered or licensed by the State of California.

The Building Inspection Commission shall make appointments after giving careful consideration to nominations made by technical associations and other organizations, including the San Francisco Chapter of the American Institute of Architects, the Structural Engineers Association of Northern California, the Society of Fire Protection Engineers, the San Francisco District of the Associated General Contractors of California, American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Sheet Metal and Air Conditioning Contractors National Association, San Francisco Bay Area Chapter of the National Association of the Remodeling Industry, National Electrical Contractors Association, the Residential Builders Association of San Francisco, Inc., the San Francisco Chapter of the Building Owners and Managers Association of California, the San Francisco Chamber of Commerce and the Foundation for San Francisco's Architectural Heritage.

The following shall constitute ex officio members of the Code Advisory Committee without vote: The Building Official of the Department, who shall act as Secretary of the Code Advisory Committee, and the Fire Marshal.

105A.4.4 Procedure. The Code Advisory Committee shall establish reasonable rules for its own procedures not inconsistent with the provisions of this code and the Charter of the City and County of San Francisco. The Code Advisory Committee, by a majority vote, shall choose its officers, which shall consist of the Chairperson and the Vice- Chairperson.

105A.4.4.1 Quorum. A majority of the voting members of the Code Advisory Committee shall constitute a quorum. Any action taken by the Code Advisory Committee shall require an affirmative vote of not less than a majority of the Code Advisory Committee members present and voting. No member of the Code Advisory Committee shall pass upon any question in which the member, the firm that employs the member or any corporation in which the member is a shareholder, holds a financial interest.

105A.4.4.2 Meetings. Meetings of the Code Advisory Committee shall be scheduled at a regular place and time but not less than once monthly. The exact time and place shall be established by the

Code Advisory Committee in its rules and regulations of procedure. All meetings of the Code Advisory Committee shall be open to the public.

105A.4.4.3 Agenda and record. The Code Advisory Committee shall arrange for the maintenance of a record of its agenda, actions and recommendations which shall be available to the public upon request for the cost of reproduction.

105A.5 Reserved.

105A.6 Structural Advisory Committee.

105A.6.1 Establishment. There is hereby created a three-member Structural Advisory Committee, to advise the Building Official on matters pertaining to the design and construction of buildings with special features or special design procedures. Upon request by the Building Official, the engineer of record for such a project shall demonstrate to the Structural Advisory Committee how the structural concepts, designs, details, erection methods and quality control will produce a structure that would meet the intent of Section 101A.2.

105A.6.2 Members. For consideration of each building with such special features, the Structural Advisory Committee shall consist of members who are knowledgeable in the structural engineering and construction issues presented by those special features. Members shall be selected from a list of qualified engineers submitted by the Structural Engineers Association of Northern California and approved by the Building Official. One member shall be selected by the Building Official, one member shall be selected by the owner, and the third member shall be selected jointly. Compensation of the Structural Advisory Committee members shall be by the owner. However, when the project for which Committee review is required is located in the Edgehill Mountain Slope Protection Area, as defined by Building Code Section 106A.4.1.2 or the Northwest Mt. Sutro Slope Protection Area as defined by Building Code Section 106A.4.1.3 or is subject to Committee review pursuant to the Slope Protection Act, Building Code Section 106A.4.1.4.5, (a) the Committee shall consist of a structural engineer, a geologist and a geotechnical engineer; (b) the Committee shall consult with an architect, who shall be a voting member of the Committee; (c) the selection of the Committee members shall be as follows: one member shall be selected jointly by the Building Official and the Director of Public Works, one member shall be selected solely by the Building Official and one member shall be selected by the Building Official and the owner from recommendations made by interested persons, including but not limited to residents of the neighborhood surrounding the project location; and (d) to the extent feasible, the Committee members should be selected from a list submitted by the Structural Engineers Association of Northern California.

105A.6.3 Report. The Structural Advisory Committee shall submit to the Building Official a written report which shall include professional opinions concerning, but not limited to, the following:

1. The validity and appropriateness of the structural design concepts and criteria.

2. An evaluation of the structural design of the building or structure to determine its capability to perform satisfactorily beyond the elastic stresses stipulated by the code, with sufficient redundancy to accommodate overloads or failures of specific structural components.

3. The constructability of proposed structural details and erection methods.

4. The sufficiency of the proposed inspection, testing and monitoring to be provided during prior to and during construction.

105A.7 Reserved

105A.8. Appellate authority of the Building Inspection Commission. The appellate authority of the Building Inspection Commission is as set forth in Section D3.750-4 of the San Francisco Charter, as implemented by Chapter 77 of the San Francisco Administrative Code.

(Amended by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 106A – PERMITS

106A.1 Permits required. Except as specified in Section 106A.2, no building or structure regulated by this code shall be erected, constructed, enlarged, altered, repaired, moved, improved, removed, converted or demolished unless a separate permit for each building or structure has first been obtained from the Building Official.
When considering an application for a permit for development of "dwellings" as defined in Chapter 87 of the San Francisco Administrative Code, the Department of Building Inspection shall comply with that chapter which requires, among other things, that the Department of Building Inspection not base any decision regarding the development of "dwellings" in which "protected class" members are likely to reside on information which may be discriminatory to any member of a "protected class" (as all such terms are defined in Chapter 87 of the San Francisco Administrative Code).

106A.1.1 Separate permits required. Where buildings or structures are constructed on top of a base structure, and such structures are likely to have their own addresses or functional identities, separate permits shall be required for the base structure and for each of the top buildings or structures.

106A.1.2 Permit and fees for grading, excavation, or filling of land. The valuation for the permit shall be based on the volume of material to be handled, and on a cost schedule posted in the Department. The permit issuance and plan review fees shall be the same as those for new construction. See Section 110A, Table 1A-A – Building Permit Fees, and Table 1A-B – Other Building Permit and Plan Review Fees. See Chapter 33 and Appendix J for general grading provisions.

106A.1.3 Permits and fees for subsidewalk space. A building permit shall be obtained for construction of subsidewalk space. The fee for said permit shall be the fee set for building permits. See Section 110A, Table 1A-F – Specialty Permit Fees – for applicable fees.
Permits for the use of subsidewalk space, except for subsurface space used to connect a building, structure or property with the San Francisco Bay Area Rapid Transit district facilities, shall be granted after approval by the Building Official and the City Engineer. Permission for the use of subsurface space to connect with the San Francisco Bay Area Rapid Transit District facilities, shall be granted only as set forth in Section 106A.1.3.1. The City may reserve any part of the subsidewalk space for its own use or the use of the public. The Board of Supervisors reserves the right to suspend or annul the privilege of maintaining such subsidewalk space or to exact a license or rental for the use thereof. The granting of a permit to use the subsidewalk space shall carry with it the right to excavate the space and to build the necessary retaining walls. If the street in front of the building is paved, a deposit will be required of the subsidewalk space. See Section 110A, Table 1A-F – Specialty Permit Fees – for required deposit. The deposit will be refunded to the permittee upon the endorsement of the permit issued therefor and a certificate from the Department of Public Works, Bureau of Engineering, certifying to the satisfactory condition of such roadway at the end of two years after the time the pavement was restored. Should the permittee fail to restore any

pavement, the Director of the Department of Public Works may, after 10 days' notice in writing posted on the building, restore the pavement and deduct the cost of such restoration from the deposit. In lieu of the deposit required herein, a bond in the amount of the deposit may be accepted in the manner set forth in Article 8 of the San Francisco Public Works Code.

No permit shall hereafter be issued by any officer, board or commission of San Francisco to make use of the subsidewalk space within the street lines of Market Street between Steuart Street and Castro Street, except a permit may be granted for the use as subsidewalk space for the following:

1. The space lying contiguous to the property line and extending along a line parallel thereto and up to 22 feet distant therefrom wherever such space is located in Market Street between Steuart Street and Van Ness Avenue.

2. The space lying contiguous to the property line and extending along a line parallel thereto and up to 10 feet distant there from wherever such space is located in Market Street between Van Ness Avenue and Castro Street.

Due consideration shall be given to the needs and requirements for the use of subsidewalk space by public utilities.

The remainder of the subsidewalk space is hereby expressly reserved for public use.

106A.1.3.1 Subsurface connection to San Francisco Bay Area Rapid Transit District facilities. Permission to use subsurface space to connect any building or structure or premises with the San Francisco Bay Area Rapid Transit District facilities shall be first obtained from the Board of Supervisors of San Francisco by resolution, prior to filing a permit to construct the connection. The Board of Supervisors reserves the right to suspend or annul the permission to use any subsurface space to connect any building, structure or premises with the San Francisco Bay Area Rapid Transit District facilities or to exact a license or rental for the use thereof. Upon the Board of Supervisors passing a resolution approving the connection, an application for a building permit to construct the connection shall be filed with the Department. The application, together with plans and specifications, shall be referred for approval to the Planning Department, the Department of Public Works, Bureau of Engineering, and any other department having jurisdiction. If approved, the approvals shall be endorsed in writing on the application by the respective departments and bureaus. The Department shall issue a building permit when the application has been approved by the Building Official, and upon payment of all required permit fees. In addition to the building permit and plan checking fees, the deposit required in Section 106A.1.3 shall also be paid to the Department and refunded as set forth in Section 106A.1.3, provided that all work under the building permit has been satisfactorily completed.

106A.1.4 Permits and fees for moving buildings.

106A.1.4.1 General. The applicant for a permit for moving a building shall pay a permit fee for documentation and inspection of the moving work. See Section 110A, Table 1A-F – Specialty Permit Fees – for applicable fee. A permit and plan review fee for work required at the building's new site shall be per Section 110A, Table 1A-A – Building Permit Fees, and Table 1A-B – Building Permit Application and Plan Review Fees.

106A.1.4.2 Permit application for new site. Before a permit may be issued for moving a building, a building permit must be obtained for the necessary alterations and additions to the building on the new site. The application for the alterations at the new site is to be accompanied by complete plans showing floor plans, elevations, plot plan, and such other information as contained in Section 106A.3.3 as may be required by the Building Official.

106A.1.5 Permit and fees for demolition of buildings. A permit shall be required for demolishing any structure. See Section 110A, Table 1A-F – Specialty Permit Fees – and Section 110, Table 1A-L – Public Information – for applicable fees. See Section 3303 for general requirements.

106A.1.6 Permits and fees for chimneys, flues. A flue permit shall be required to erect, construct, alter or repair any chimney or flue except when it is a Type 1 grease hood or is constructed of masonry. A separate flue permit shall be required for each flue or chimney. Grease and masonry flues and chimneys shall require building permits per Section 106A. See Section 110A, Table 1A-F – Specialty Permit Fees – for applicable fees.

106A.1.6.1 Permits for boiler flues. A boiler flue permit shall be required to:

1. **Install, alter, or replace any boiler flue or section thereof;**
2. **Install any approved type heat reclaimer or other approved type device within a boiler gas flue.**

106A.1.7 Permits and fees for temporary buildings or structures. A permit is required for the construction and erection of temporary reviewing stands, bleachers, grandstands and other miscellaneous structures. The Building Official may require that any temporary building or structure be inspected by a registered civil engineer and found to be in compliance with all provisions of this code before it is permitted to be used by the public. See Section 110A, Table 1A-F – Specialty Permit Fees – for applicable fee.

106A.1.8 Garage door permits and fees. A garage door permit shall be required for the installation of such doors in existing buildings. See Section 110A, Table 1A-F – Specialty Permit Fees – for applicable fee.
The provisions of this section shall not apply where structural alterations are made, or are required in connection with the installation of garage doors. This section also shall not apply to the alteration, repair, or replacement of garage doors in public garages. In all these cases, the permit and fee requirements of Sections 106A, 107A and 110A shall apply.

106A.1.9 Permits and fees for signs.

106A.1.9.1 General. A sign regulated under Chapter 31 shall not be erected or altered until a sign permit has been obtained for such work. Application for a permit shall be made at the Department on supplied forms. Where signs are illuminated by electric lighting, a separate permit shall be obtained as required in the Electrical Code. Replacement of copy on the face of a sign, without affecting the structural members or the attachment to a building, structure, or the ground, shall not require a sign permit.

106A.1.9.2 Permit fees. Permit fees for signs shall be based upon job valuation. See Section 110A, Table 1A-A – Building Permit Fees – for applicable fees.

106A.1.9.3 Plan review fees for signs. See Section 110A, Table 1A-A – Building Permit Fees – for applicable fee.

106A.1.10 Permit and fees for residential elevators and lifts.

106A.1.10.1 General. An elevator or lift regulated under Chapter 30 shall not be installed or altered until a building permit has been obtained for such work.

106A.1.10.2 Fees. The permit fees and plan review fees shall be those required in Section 110A, Tables 1A-A and 1A-B. The valuation shall be based on the total installation, including those portions, if any, which are regulated by the State.

106A.1.10.3 Exemption. Elevators regulated by the State of California are exempt from permits and the provisions of this code. However, the elevator shafts and enclosures, and any structural alterations or strengthening work to accommodate the installation, shall comply with the permit and other requirements of this code.

106A.1.11 Permit and fees for boilers. A separate building permit shall be required for a new boiler installation or replacement except where a building permit has been issued which included such work, the fee for which shall be the minimum fee per Section 110A, Table 1A-A – Building Permit Fees. In addition, a permit to operate the boiler is required and shall be charged a fee based on the schedule in Section 110A, Table 1A-M – Boiler Fees. The fee for renewal of a permit to operate shall be based on the same schedule. Such fee shall be paid whether or not a permit to operate is issued. All fees shall be paid at the time of application for permits. Any additional fees billed will be increased to twice the billed amount when payment is not received by the Department within 30 days of billing. Failure to pay required fees will result in cancellation of the issued permit to operate. See Chapter 10 of the Mechanical Code for boiler requirements.

106A.1.12 Permit and fees for change in occupancy or use. Whenever a change in occupancy or use is made, a building permit shall be required to legalize the changed use or occupancy. The fee shall be the minimum fee required for filing for a permit and must be secured prior to the change of occupancy.
In the event any alteration work is required, the alteration permit shall be considered sufficient for this requirement and no additional permit will be required or additional fee required for the change in use or occupancy except as set forth in Section 109A.8.

106A.1.13 Permits and fees for construction of an impervious surface in a front yard setback.
1. General. It shall be unlawful for any person, firm or corporation to commence or proceed with the construction of an impervious surface in a front yard setback area, other than a driveway as defined in the Planning Code Section 136(c) (30), unless a permit is first obtained. See Section 110A, Table 1A-F – Specialty Permit Fees – for applicable fee.
2. Referral to Planning Department. The Department shall refer all applications for a permit pursuant to this section to the Planning Department for a determination regarding the proposed construction's compliance with Sections 132(g) and 136(c) (30) of the Planning Code. The Department may not issue the permit unless Planning determines the proposed construction to be compliant.
3. Penalty for violation. Any person, firm or corporation violating the provisions of this Section shall be guilty of an infraction. Every violation determined to be an infraction is punishable by (1) a fine not exceeding $100 for a first violation, (2) a fine not exceeding $200 for a second violation within one year, and (3) a fine not exceeding $500 for a third violation within one year.

106A.1.14. Damaged apartment houses where residential occupants have been displaced, preliminary information and Action Plan required. Whenever an Apartment House, as defined in the Housing Code, has been damaged by fire or other emergency that results in the displacement of residential occupants, the property owner shall submit to the Department's Building Inspection Division, with a copy to the Housing Inspection Division, the following information and an Action Plan within the timeframe specified. The Department shall include a statement in all applicable Notices of Violation issued pursuant to this Section that allowing the residential occupants to

retrieve their personal property in a safe manner through a visit supervised by the property owner's engineer, general contractor, or other industry professional for a short duration is not in conflict with the issued Notice of Violation.

106A.1.14.1. Information submittal. Within 72 hours of the posting of a Notice of Violation on the subject site, the property owner shall provide the following information in writing:

- **(a) a description of the steps taken and the methods used to stabilize and secure the subject building and premises, including but not limited to the following, as appropriate: (1) fencing the building perimeter, (2) securely barricading all windows, openings, and other points of entry to the building from the outside, (3) assessing the property at least weekly to ensure that no unauthorized entry is occurring and that any fencing and barricades are secure and remain in place, and (4) providing 24-hour security;**
- **(b) if the City has determined that the subject building, or portions thereof, is unsafe for occupancy, a description of the steps taken and the methods used to either secure the personal property of the residential occupants or allow them to retrieve their personal property, including but not limited to the following: (1) fencing the building perimeter, barricading all points of entry, or taking the other steps listed in Section 106A.l.l 4.l (a) above, and (2) obtaining the recommendations of a structural engineer or other appropriate consultant for allowing the residential occupants access to the building or undamaged portions thereof for the purpose of obtaining their personal belongings; and**
- **(c) the name and contact information of the owner or an agent of the owner who is able to respond to questions and concerns from the residential occupants and others.**

106A.l.14.2. Action Plan submittal. Within 30 days from release of the scene by the Fire Department and other emergency responders, the property owner shall submit an Action Plan in the form required by the Department that contains the following elements:

- **(a) a description of the steps taken and the methods used to stabilize and secure the subject building and premises, including supporting documentation by a structural engineer or other industry professional as specified in the Notice of Violation, including but not limited to the following, as appropriate: (1) fencing the building perimeter, (2) securely barricading all windows, openings, and other points of entry to the building from the outside, (3) assessing the property at least weekly to ensure that no unauthorized entry is occurring and that any fencing and barricades are secure and remain in place, and (4) providing 24-hour security;**
- **(b) a summary of the extent of fire or water damage to the building, describing with specificity the damage to individual dwelling units that were occupied prior to the damage by fire or other emergency;**
- **(c) a description of the repairs necessary to bring the building into compliance with any Notices of Violation issued by the Department of Building Inspection, Fire Department, or Health Department;**
- **(d) a general schedule an description of the permits that will be filed to comply with (3) above;**
- **(e) the contact information of the individuals who will perform the work under (3) above, which information shall be updated as necessary and kept current;**
- **(f) an estimated date (month and year) when the displaced residential occupants can reoccupy the building. The estimated date shall be within a time reasonably necessary to accomplish the required repairs;**
- **(g) proof that the owner has complied with the notice requirements of Section 106A. l.14. 3; and**

(h) information about prior complaints, notices of violation, and the status of their abatement or compliance with code requirements.

106A.1.14.3. Updating information. Within 90 days from the submission of the Action Plan to the Department required by Section 106A.1.14.2, and every 90 days thereafter, the property owner shall provide to the Department any new or corrected information concerning items (a) through (h) in Section 106A.1.14. 2 above, including but not limited to any change to the estimated date by which the displaced residential occupants can reoccupy the building.

106A.1.14.4. Notice of filing of Action Plan. Within 72 hours of the filing of the required Action Plan with the Department, the property owner shall (a) post a notice of the filing in a prominent location at the building site and (b) mail or personally deliver a notice of the filing to each displaced residential occupant at their last known location.

106A.1.14.5. Re-inspection of the premises. Following a fire that has resulted in the displacement of residential occupants, the Department shall re-inspect the premises at least every 90 days until the property owner has responded to and abated all pending Notices of Violation. If the property owner does not give the Department access to the premises necessary to conduct such re-inspection(s), the Department shall request assistance from the City Attorney to gain access to the premises or take such other action as the City Attorney deems appropriate.

106A.2 Work exempt from permit. Exemptions from the permit requirements of this code shall not be deemed to grant authorization for any work to be done in any manner in violation of the provisions of this code or any other laws or ordinances of this jurisdiction. A building permit shall not be required for the following:

1. One-story detached accessory buildings or structures used as tool and storage sheds, playhouses and similar uses, provided the projected roof area does not exceed 100 square feet (9.29 m^2).
2. Fences not over 6 feet (1829 mm) high located at the rear and side lot lines at the rear of the property, and all fences not over 3 feet (914.4 m) in height.
3. Amusement devices not on fixed foundations.
4. Movable cases, counters and partitions not over 5 feet 9 inches (1753 mm) high.
5. Retaining walls that are not over 4 feet (1219 mm) in height measured from the bottom of the footing to the top of the wall, unless supporting a surcharge or impounding Class I, II or III-A liquids.
6. Water tanks supported directly upon grade if the capacity does not exceed 5,000 gallons (18 927 L) and the ratio of height to diameter or width does not exceed 2.1.
7. Platforms, sidewalks, walks and driveways when not part of an exit, and not more than 30 inches (762 mm) above grade and not over any basement or story below and which, for residential buildings required to be accessible to persons with disabilities, are not part of a required accessible route.
8. Painting, papering and similar finish work.
9. Temporary motion picture, television and theater stage sets and scenery.
10. Minor repairs to existing interior plaster or wallboard, except when part of a fire-resistive assembly.
11. Prefabricated swimming pools accessory to a Group R, Division 3 Occupancy in which the pool walls are entirely above the adjacent grade and if the capacity does not exceed 5,000 gallons (18 927 L).

12. State-owned buildings under the jurisdiction of the state fire marshal. Unless otherwise exempted, separate plumbing, electrical and mechanical permits will be required for the above-exempted items.

13. Reroofing without the installation, repair or removal of roof sheathing, if the total surface area of the roof reroofed in any 12-month period does not exceed 25 percent of the entire surface area of the roof.

14. Surface mounting of readily removable materials on interior walls.

15. Work performed on structures owned and occupied by the Federal or State government. This exemption shall not apply to privately operated structures erected on government-owned land, or to privately owned land or structures leased to the Federal or State government, or to structures owned and operated by State educational institutions unless such structures are owned and used exclusively for educational purposes or other uses related to the institution's educational purposes, such as student cafeterias or dormitories.

16. Installations or replacement of floor coverings in areas other than bathrooms and toilet rooms not requiring the removal of existing required flooring.

17. Repair and replacement of glazing in conformity with this code, and provided wire glass shall be replaced in kind.

18. Replacement of doors, except garage doors, in all occupancies, provided they are not part of fire- resistive assemblies required by this code.

19. Work performed on structures owned or leased by the City and County of San Francisco where the construction or modification of said structure is financed in whole or in part by the issuance of lease revenue bonds prior to July 1, 1989.

20. See Section 3107.1.1 for exempt signs.

21. See Section J103.2 for grading permit exemptions.

22. See Section 106A.1.10.3 for Elevators regulated by the state exemption.

106A.3.1 Application. To obtain a permit, the applicant shall first file an application therefor in writing on a form furnished by the code enforcement agency for that purpose. Every such application shall:

1. Identify and describe the work to be covered by the permit for which application is made.

2. Describe the land on which the proposed work is to be done by legal description, street address or similar description that will readily identify and definitely locate the proposed building or work.

3. For new buildings or structures, indicate the use or occupancy of all parts of the building or structure for which the proposed work is intended. For alteration work, indicate the proposed use or occupancy and the most current legal use or occupancy of all portions of the building or structure affected by or relevant to the proposed work.

4. Be accompanied by plans, diagrams, computations and specifications and other data as required in Section 106A.3.2.

5. State the valuation of any new building or structure or any addition, remodeling or alteration to an existing building.

6. Be signed by the owner, or the owner's authorized agent, who may be required to submit evidence to indicate such authority. Such agent shall be responsible for advising the owner of all conditions attached to the application by the various approving agencies.

7. Give such other data and information as may be required by the building official.

8. Include, when available, the name, address and telephone number of the owner or contractor. When applicable, State and City license numbers shall be indicated.

9. Contain an agreement by the owner of the premises to hold harmless the City and County of San Francisco and its officials and employees from all costs, liability and damages resulting, whether directly or indirectly, from use or occupancy of the sidewalk, street or

subsidewalk space, or from anything in connection with the work included in the permit. The agreement shall run with the land and be binding on all of the owner's successors in title.

10. Include an affidavit, signed under penalty of perjury, that the owner, or the owner's authorized representative, is not removing a legal or illegal dwelling unit, as defined in the Housing Code, when the work included in the permit is removal of a stove, kitchen, as defined in the Housing Code, or bathroom, as defined in the Housing Code. Such affidavit shall be posted prominently for at least fifteen (15) days in a conspicuous common area within the building where the work is proposed and shall be provided via hand delivery or U.S. mail to all tenants residing in the building.

106A.3.1.1 Application processing. The application, plans, specifications and other information submitted shall be referred for such review and approval as is required under applicable ordinances and laws. Each such reviewing bureau, department or agency shall indicate in a manner determined by the Building Official its approval, approval with conditions, or disapproval.

106A.3.1.2 Transfer of application. Applications are transferable with payment of additional fees when the new owner submits a letter to the Department agreeing to all conditions of approval, stipulations and agreements contained on the application, per Table 1A-D.

106A.3.1.3 Authorization of dwelling units installed without a permit.

(a) Screening required. Prior to filing a permit application to legalize an existing unauthorized dwelling unit under Section 207.3 of the Planning Code, the owner of the building or the owner's authorized agent shall submit the following information to the Department for the purpose of determining whether the unauthorized dwelling unit can comply with the requirements of this Code or other codes administered and enforced by the Department, or whether equivalencies from Code requirements can be obtained:

(1) a Dwelling Unit Legalization Checklist form, created by the Department, together with floor plans for the entire building and a plan showing the location of all structures on the subject lot;

(2) evidence from the San Francisco Water Department, telephone, gas or electric records, written lease agreements, or other evidence acceptable to the Department showing that the dwelling unit for which approval is sought existed prior to January 1, 2013;

(3) an assessment prepared by a licensed contractor, architect, or engineer that outlines a plan to comply with all applicable requirements of the Building Code and other Codes administered and enforced by the Department; and

(4) other information as the Building Official shall require.

(b) Imminent and substantial hazard. If the Department identifies an imminent and substantial hazard as described in Section 102A.16 of this Code during the screening process, the Department shall inform the applicant of the appropriate remedial actions and notifications to tenants. The Department shall not pursue remedial code enforcement actions and notifications to tenants based solely on information provided by the applicant during the screening process, unless the Department identifies an imminent and substantial hazard or the applicant consents.

(c) Application process; required permit(s). After completion of the screening process required by subsection (a) a property owner or the owner's authorized agent may file applications with the Department, Fire Department, or other City department for any building or other permits that are required in order to legalize one existing unauthorized dwelling unit on the property. The

application(s) shall refer explicitly to this Section 106A.3.1.3 and Section 207.3 of the Planning Code. If there is more than one existing unauthorized unit on the site, the owner or agent shall designate the unauthorized unit for which legalization is sought. The approval, issuance, expiration, or cancellation of an application filed pursuant to this Section 106A.3.1.3 and any resulting permits shall be in accordance with the provisions of all City codes, except as provided below. Cancellation or disapproval of the application or any resulting permit shall terminate all rights under this Section created by the application. A dwelling unit is not lawful unless and until all necessary approvals have been obtained.

(d) Notices of violation. If the Department has issued a notice of violation for the unauthorized unit for which legalization is being sought and all violations would be corrected by legalization of the unit, the Director shall:

(1) temporarily suspend the notice of violation and enforcement action upon initiation of the process set forth in subsection (a) by the owner or owner's authorized agent and acceptance of the required applications by the City; and

(2) rescind the notice of violation and remove any related liens on the property if legalization of the unit is approved within one year of initiation of the process set forth in subsection (a).

(e) Funding resources information. The Department shall provide information about the Mayor's Office of Housing and Community Development Code Enforcement Rehabilitation Fund and other potential funding sources that may be available for code compliance.

106A.3.2 Submittal documents. Plans, specifications, engineering calculations, diagrams, soil investigation reports, special inspection and structural observation programs and other data shall constitute the submittal documents for a permit. When such plans are not prepared by an architect, land surveyor, or an engineer, the Building Official may require the applicant submitting such plans or other data to demonstrate that state law does not require that the plans be prepared by a licensed architect, land surveyor, or engineer. The Building Official may require plans, computations and specifications to be prepared and designed by an engineer or architect licensed by the state to practice as such even if not required by State law. Materials submitted by a licensed architect, land surveyor, or engineer must be signed and sealed with an original signature on the first sheet of each set of documents, and facsimile stamps plus the required registration seal of the architect, land surveyor, or engineer on the balance of the sheets.
Two complete sets of plans and specifications and three copies of the soil investigation report (when required) shall be submitted. Additional complete sets of plans and specifications may be required for special permit processing services that may be offered by the City and County of San Francisco.

EXCEPTIONS:

1. The requirements for plans or specifications may be waived by the Building Official, provided that the nature and extent of the proposed construction can be clearly described in writing, and such a description is filed with the application.

2. In addition to all other requirements of Section 106A.3.2, the following requirements shall apply to: (a) applications for construction of new buildings or structures, and to alterations that involve a substantial increase in the building envelope of an existing building or structure, within the Edgehill Mountain Slope Protection Area, created by Building Code Section 106A.4.1.2, and within the Northwest Mt. Sutro Slope Protection Area, created by Section 106A.4.1.3 and (b) application for construction on property subject to the Slope Protection Act created by Building Code Section 106A.4.1.4:
The Building Official may not waive the requirements for submittal documents set forth in Section 106A.3.2.

Submittal documents shall substantiate that the building or structure will comply with applicable codes and regulations.
Submittal documents shall include (1) plans prepared by a State-licensed architect, land surveyor, or engineer and (2) a construction/staging plan establishing that the proposed construction will not compromise the health, safety or welfare of neighboring property owners. Submittal documents shall demonstrate to the satisfaction of the Building Official, based on consultation with and written communications from appropriate City officials, including the Director of the Department of Public Works, that there is sufficient infrastructure (including utilities and streets) to support the proposed residential development and that the proposed emergency vehicle access routes comply with the standards in use by the Fire Department or similar agency in effect at the time the application is submitted.

106A.3.2.1 Incomplete applications. The Department will not process an application which is not completely or properly filled out pursuant to the requirements of this section. When the submittal documents do not contain the information required by this the application shall not be accepted.

106A.3.2.2 Demolition. An application for a permit to demolish a building or structure shall not be deemed complete until (a) the applicant declares under penalty of perjury that every party who has a recorded interest in the property that is the subject of the application has been notified of the filing of the application. See Section 110A, Table 1A-L – Public Information – for fee to defray the cost of maintaining records of such declarations and other attendant costs and (b) the Department receives written notice from the Department of Environment that the Department of the Environment has approved the applicant's waste diversion plan in accordance with Chapter 14 of the Environment Code.

106A.3.2.2.1 Demolition application and notification. Upon receipt of an application which would authorize the tearing down or demolition of a building or structure, the Department shall mail written notice to the owners of properties at least 300 feet (91.44 m) in every direction from the edge of the property on which the proposed demolition work will take place, as shown on the last annual tax roll, and shall provide notice to each residential tenant of the property that is the subject of the application and of the property immediately adjacent to such property. Said notice shall include the street address of the proposed work and the name and address of the property owner and, if known, of the contractor.

106A.3.2.2.2 Notice to interested parties. Any of the following organizations or groups may request notification of the receipt by the Department of an application for a demolition permit and of the issuance thereof:

1. **Architectural or historic preservation or housing conservation groups.**
2. **Recycling companies.**

Such request shall be in writing to the Department, on forms furnished by the Department. The organization or group shall specify the area(s) of the City and County of San Francisco for which notification is requested, and the Building Official shall establish the boundaries of such areas for purposes of such notification. Requests shall be made annually, within 30 days after July 1 of each year. See Section 110A, Table 1A-L – Public Information – for fees. Fees may be prorated by the Department for any requests which are received at other times during the year.

106A.3.2.3 Substantial alterations – Notification, sign posting and affidavits. In addition to any other requirements for notice set forth in this code, the following shall apply:
Any person filing an application to (1) substantially alter, as that term is defined by the Building Official, an apartment house or residential hotel (as defined in Section 41.4(p) of the Administrative Code) that contains five or more dwelling units, or (2) remove a legal or illegal dwelling unit, as

defined in the Housing Code, shall post a sign at least 15 inches by 15 inches (381 mm × 381 mm) in a conspicuous common area of the apartment house or residential hotel for at least 15 days with the following information: notice that the application has been made, the nature of the work to be performed, the means of obtaining information from the Department, and the procedure for appealing the issuance of building permits. When the permit application proposes to remove a legal or illegal dwelling unit, the posted sign shall also contain a list of tenant counseling or legal services that can provide assistance to tenants with understanding and participating in the City's processes, and notice of such application shall be delivered via hand delivery or U.S. mail to all tenants in the building. Such notice shall also include contact information for translation services into Spanish, Chinese, and Russian. In occupied residential unreinforced masonry buildings, required signs shall also include specified information provided by the Building Official. The applicant shall thereafter submit an affidavit signed under penalty of perjury stating that the sign has been posted as required by this section. See Section 110A, Table 1A-L – Public Information – for fee to defray the cost of maintaining records of said affidavits. The Building Official shall not approve the application until this affidavit is submitted. If there is reason to believe that the sign was not posted as required, the Building Official shall investigate the matter, shall provide the applicant an opportunity to respond to any complaint of noncompliance, shall determine whether the requirements of this section have been substantially met, and shall cancel an application or revoke the permit if it is determined they have not been substantially met.

106A.3.2.4 Hazardous Substances.

106A.3.2.4.1 Soil and/or groundwater sampling and analysis required. Applicants for any building or grading permit which involves the disturbance of at least 50 cubic yards (38.23 m^3) of soil shall comply with the requirements for soil and/or groundwater sampling and analysis of Article 22A of the Public Health Code, unless such property is subject to Health Code 22A.9 when any part of the work will occur ~~either~~

- **(a) bayward of the 1851 high-tide line as indicated on the Map of the City and County of San Francisco (adopted June 27, 1986) (see Figure 1A-1) which is maintained for public distribution by the Building Official;**
- **(b) ~~or~~ in any area of the City designated by the Director of Public Health under Article 22A of the Health Code;**
- **(c) on any lot within the City either presently or previously zoned for industrial use as defined in Article 22A of the Health Code;**
- **(d) on any lot within the City either presently or previously permitted for industrial use;**
- **(e) on any lot within the City within 150 feet of any of the elevated portions of the following highways: U.S. Highway 101, Interstate 80, Interstate 280;**
- **(f) on any lot in the City known or suspected by the Department of Public Health to contain hazardous substances in the soil and/or groundwater, using the definition of hazardous substance contained in Article 22A of the Health Code, or;**
- **(g) on any lot of the City known or suspected by the Department of Public Health to contain or to be within 100 feet of an underground storage tank.**

Note: Figure 1A-1 is included at the end of this chapter.

106A.3.2.4.2 Permit approval.

(a) Except as provided in subsection (b), no building permit application subject to the requirements of this Section shall be considered acceptable for review and approved until the Department receives written notification from the Director of Public Health that the applicant has complied with all applicable provisions of Article 22A of the Health Code that can be completed without a permit, or that the requirements have been waived.

(b) Subsection (a) does not apply to the following extent:

(1) The Building Official may consider an application acceptable for review and issue a site permit pursuant to Section 106A.3.4.2 prior to the time an applicant complies with this Section.

(2) The Building Official may consider an application acceptable for review and issue site permit addenda and other permit(s) to undertake soil sampling or mitigation measures to comply with this section.

106A.3.2.4.3 No time limits. For the purposes of completing the requirements of this Section, the time limitations set forth in Section 106A.3.7 of the San Francisco Building Code do not apply.

106A.3.2.4.4 Permit notification and warning.

(a) The Building Department shall provide information to all permit applicants of Bay Area Air Quality Management District and California Air Resources Board regulations, as well as San Francisco Health Code Article 22B and Building Code requirements regarding construction dust control to mitigate potential adverse public health effects from dust in general, and from naturally occurring asbestos that may be released during construction activities.

(b) All building permits and grading permits issued by the Building Department under this Section 106A.3.2.4 shall bear the following printed warning:

WARNING

Under San Francisco Building Code Section 106A.3.2.4.2, certain building permits may be issued only after the permittee analyzes the soil and/or groundwater for the presence of hazardous substances and, where applicable, the Department of Public Health has approved the permittee's site mitigation plan. In issuing this permit, neither the City nor any of its officers or employees make any representation that the soil and/or groundwater on or about the site is free from the presence of hazardous substances. Nor does the City's implementation of this process relieve any person from their duties and responsibilities relating to hazardous substance contamination under state and federal low. Neither subsurface soil analysis under Building Code Section 106A.3.2.4.2 nor the issuance of this permit is intended to alter extinguish, or transfer these responsibilities.

106A.3.2.5 Hunters Point Shipyard.

106A.3.2.5.1 Compliance required. Applicants for any building or grading permit for Hunters Point Shipyard, which involves subsurface disturbance of soil or the extraction or management of groundwater, except where such permit is for purposes of environmental characterization, and except, in the case of property determined by the applicable ROD to be suitable for unrestricted residential use, where such permit involves subsurface disturbance of less than 50 cubic yards (38.23 m^3) of soil, shall comply with the requirements of Article 31 of the Health Code. Hunters Point Shipyard is that area of the City and County of San Francisco shown on Article 31 Map-Figure 1, which is maintained for public distribution by the Building Official. A copy of said Figure is on file with the Clerk of the Board of Supervisors in File No. 100577.

106A.3.2.5.2 Permit approval. No building permit application subject to the requirements of this section shall be deemed to be complete until the Department receives written notification from the Director of Public Health that the applicant has complied with all applicable provisions of Article 31 of the Health Code. Approvals or conditions imposed in writing by the Department of Public Health shall become conditions of the permit issued by the Department, and violation of such approvals or conditions shall be deemed a violation of the permit.

EXCEPTION:

1. The Building Official may issue a site permit pursuant to Section 106A.3.4.2 prior to the time an applicant complies with this section.

2. Site permit addenda and other permit(s) may be issued to excavate soil or undertake soil sampling or implement other requirements of Article 31 of the Health Code.

106A.3.2.5.3 No time limits. For the purposes of completing the requirements of this section, the time limitations set forth in Section 106A.3.7 of the San Francisco Building Code do not apply.

106A.3.2.5.4 Permit notification. All building permits and grading permits issued by the Department of Building Inspection shall bear notice of the above requirements and of the permittee's responsibility to comply.

106A.3.2.6 Construction dust control.

106A.3.2.6.1 Dust control required. All applicants for a building, demolition, excavation, grading, foundation, or other permit required by this Code to construct a new building, to demolish a building, to substantially alter or to add to an existing building shall comply with the requirements for dust control and, in addition, for projects over a half acre the applicant will be required to submit a Dust Control Plan for approval by the San Francisco Health Department as set forth in Article 22B of the San Francisco Health Code.

106A.3.2.6.2 Permit approval. For projects of over one half acre in size, no building or other permit application subject to the requirements of this section shall be approved until the Department of Building Inspection receives either

(a) written notification from the Director of Public Health that the applicant either has a site- specific dust control plan for the project approved by the Director of Public Health or the Director of Public Health has waived the requirement or

(b) the applicant qualifies as an interior only tenant improvement project that will not produce exterior visible dust and therefore is exempt from complying with Article 22B of the San Francisco Health Code.

EXCEPTION: The Director may issue a site permit pursuant to Section 106A.3.4.2 prior to the time an applicant complies with this section.

106A.3.2.6.3 General dust control requirements.

(a) All site preparation work, demolition or construction activities within the City and County of San Francisco that have the potential to create dust or will expose or disturb more than 10 cubic yards or 500 square feet of soil shall comply with the requirements of this Section whether or not the activity requires a permit from the Department of Building Inspection.

(b) For projects over one half acre in size, the project sponsor shall designate a person or persons who will be responsible for monitoring compliance with dust control requirements. The designated person or persons shall be on the site or available by telephone or other means during all times that site preparation, demolition or construction activities may be in progress, including holidays and weekends. The name and telephone number where such person or persons may be reached at all times shall be provided to the Director and to the Director of Public Health prior to commencement of work on the project.

(c) The project sponsor and the contractor responsible for construction activities at the project site shall use the following practices to control construction dust on the site or other practices that result in equivalent dust control that are acceptable to the Director.

(1) Water all active construction areas sufficiently to prevent dust from becoming airborne. Increased watering frequency may be necessary whenever wind speeds exceed 15 miles per hour. Reclaimed water must be used if required by Article 21, Section 1100 et seq. of the San Francisco Public Works Code. If not required, reclaimed water should be used whenever possible.

(2) Provide as much water as necessary to control dust (without creating run-off) in any area of land clearing, earth movement, excavation, drillings, and other dust-generating activity.

(3) During excavation and dirt-moving activities, wet sweep or vacuum the streets, sidewalks, paths, and intersections where work is in progress at the end of the workday.

(4) Cover any inactive (no disturbance for more than seven days) stockpiles greater than ten cubic yards or 500 square feet of excavated materials, backfill material, import material, gravel, sand, road base, and soil with a 10 mil (0.01 inch) polyethylene plastic or equivalent tarp and brace it down or use other equivalent soil stabilization techniques.

(5) Use dust enclosures, curtains, and dust collectors as necessary to control dust in the excavation area.

106A.3.2.6.4 Large projects. If the project is over one half acre in size and the project does not qualify for an interior only tenant improvement project exemption or the Department of Public Health has not issued a waiver for a site-specific dust control plan for the project; construction, demolition, excavation, grading, foundation work, or other permitted activities may not commence until the owner or the owner's agent has submitted to the Department a copy of the Director of Public Health's written approval of the dust control plan. All site preparation and construction activities on the job site shall comply with the general requirements for dust control and the site-specific dust control plan approved by the Director of Public Health. The failure to comply with all provisions of the approved site-specific dust control plan shall be considered a violation of this Code.

106A.3.2.6.5 Waiver of requirements for compliance for small sites; rescission of waiver. For sites less than a half acre in size:

(a) The Director may waive these requirements if the applicant demonstrates to the Director's satisfaction that the proposed site preparation, demolition or construction activities are unlikely to result in any visible windblown dust.

(b) If at any time, contrary to the applicant's assertions, the construction activities produce visible windblown dust, the Director may issue a written order rescinding the waiver. A copy of the rescission order shall be personally served on the owner of the property at the address on file with the Department of Building Inspection and posted on the job site.

(c) If the Director orders rescission of the waiver, the owner of the property and the contractor or other persons responsible for construction activities at the site shall comply immediately with the above dust control requirements.

106A.3.2.6.6 Permit notification. All building, demolition, excavation, grading, foundation, or other permit subject to this section issued by the Department of Building Inspection shall bear notice of the above requirements and of the owner's responsibility to control construction dust on the site.

106A.3.2.6.7 Violations. Upon receipt of complaints, the Director is authorized to administer and enforce all provisions of this Section and may enforce the provisions of this Section by any lawful means available for such purpose, including taking actions authorized pursuant to Section 103 of this Code.

106A.3.2.6.8 Fees. The Department shall determine and recommend to the Board of Supervisors the amount of fee that is required to compensate the Department for the costs of enforcing these dust control requirements.

106A.3.3 Information on plans and specifications. Plans and specifications shall be drawn to scale on substantial paper of a size not less than 11-inch by 17-inch (279.4 mm × 431.8 mm) and shall be

of sufficient clarity to indicate the location, nature and extent of the work proposed and show in detail that it will conform to the provisions of this code and all relevant laws, ordinances, rules and regulations. Specific plans and information required shall include any of the following that is appropriate for the work being proposed:

1. The Assessor's block and lot number on the first sheet or page of each set of plans and other submittal documents.

2. A dimensioned plot plan showing sidewalk widths, street widths, lot lines, locations of proposed or existing buildings or structures on the property, and full widths, heights and setbacks of buildings on adjacent properties where their locations or heights affect the code requirements of the subject building or structure. Locations of parking or loading spaces and of aboveground hydrants and utility poles shall also be shown. The Building Official may require the owner to have the lot surveyed and staked by a registered land surveyor or registered civil engineer so that the proper location of the building on the lot may be determined. A copy of this survey shall be filed with the application for the permit.

3. All existing and future finished grades for new buildings or structures and additions to existing buildings or structures, including official curb and street grades.

4. Complete dimensioned exterior elevations showing types of wall materials, locations and sizes of wall openings, roof heights and setbacks from property lines. The existing and future exterior grade profiles on each side of the building extending to any adjoining buildings, structures or properties which might be affected by this work shown on the elevations unless a topographic map prepared by a licensed surveyor is submitted.

5. Dimensioned architectural floor plan for each floor, basement and roof unless the floor plans are identical. The scale shall be not less than 1/8 inch (3.175 mm) to 1 foot (304.8 mm) unless otherwise permitted by the Building Official. The floor plan shall show the gross area of each use area on each floor, and the total area of each floor. Structural, mechanical and other detailed information shall not be superimposed unless the resultant floor plans are clearly legible and understandable.

6. For alteration work, all existing partitions and construction that are to be removed or altered and all that are to remain unchanged.

7. Identification on the architectural floor plans of the use or occupancy classifications of all new and existing areas of the building.

8. Cross-sections as necessary, including information on location and depth of footings of adjacent buildings or structures which might be affected by this work.

9. Information regarding all architectural and structural materials to be installed in the building.

10. Details of all fire-resistive assemblies and elements, and provisions for maintaining the integrity of fire-resistive assemblies or elements where penetrated.

11. Information regarding the installation, location and support of building utilities, including plumbing systems, and electrical equipment, wiring and systems.

12. Structural plans and calculations detailing all components of the vertical load carrying system, including joists, beams, girders, columns, bearing walls and locations and depths of footings. Connection details and cross-sections to show how the loads are transferred and carried from the roof to the foundation. Live load clearly designated on the plan for each use area.

13. Structural plans and calculations detailing all elements of the lateral force resisting system, including horizontal and vertical diaphragms, connections and details that completely identify the lateral force load path from the roof to the foundation.

14. Special inspection and structural observation program required by Sections 106A.3.5, 1704 and 1709.

15. Geotechnical report when work involves significant grading, excavation or fill, or uses special foundations; or when the site is included in the State of California Seismic Hazard

Zones Map, Special Soils Map or other area identified by the Building Official. See Appendix J, for additional grading permit requirements.

16. Hydraulic design drawings and calculations for sprinkler systems and standpipes.

17. Information on plans demonstrating compliance with energy conservation requirements.

18. Information on plans demonstrating compliance with applicable sound transmission requirements.

19. Information on plans demonstrating compliance with applicable disabled access requirements.

20. Information on plans demonstrating compliance with water conservation and reclamation requirements.

21. Landscaping and irrigation plans, when required by the Planning Department, Department of Public Works or other agencies.

22. Photographs when required by the Planning Department or other agencies.

23. For a building that is an unsafe structure as defined in Section 102A, sufficient information to show how all unsafe conditions will be corrected.

24. All other information necessary for determining compliance with applicable codes and regulations.

106A.3.4 Architect or engineer of record.

106A.3.4.1 General. When it is required that documents be prepared by an architect or engineer, the building official may require the owner to engage and designate on the building permit application an architect or engineer who shall act as the architect or engineer of record. If the circumstances require, the owner may designate a substitute architect or engineer of record who shall perform all of the duties required of the original architect or engineer of record. The building official shall be notified in writing by the owner if the architect or engineer of record is changed or is unable to continue to perform the duties.

The architect or engineer of record shall be responsible for reviewing and coordinating all submittal documents prepared by others, included deferred submittal items, for compatibility with the design of the building.

106A.3.4.2 Site permit. A site permit may be issued for the construction or major alteration, as that term is defined by the Building Official, of a building or structure upon approval of preliminary drawings and before the entire working drawings and specifications of the building or structure have been completed and submitted for approval.

Such preliminary drawings and specifications shall clearly indicate the nature, character and extent of the work proposed. The application procedure shall comply with Sections 106A.1 through 106A.4 except for the completeness of plans. The permit issuance fees and plan review fees shall be as set forth in Section 110A, Table 1A-A – Building Permit Fees, and Table 1A-B – Other Building Permit and Plan Review Fees, and shall be calculated on the basis of the total valuation of the work. No construction work shall be done under the site permit. Construction may proceed after the appropriate addenda have been issued. In no case shall construction exceed the scope of the issued addenda.

Site Permit must be issued prior to submittal of 1st addendum.

Plans for construction may be divided and submitted in accordance with an addenda schedule submitted on the site permit drawings or on the first addendum drawings. See Section 110A, Table 1A-B – Other Building Permit and Plan Review Fees – for applicable fee.

The holder of such permit and addenda shall proceed with approved addenda work at the permittee's own risk, without assurance that approvals for the remaining addenda or for the entire building or structure will be granted.

Each addendum must be approved and issued before work shown on that addendum may commence. The time allowed for review, approval and issuance of all addenda is governed by the maximum time allowed per Section 106A.4.4 and Table B – Maximum Time Allowed to Complete All Work Authorized by Building Permit. The extension times may be applied upon payment of fee per Section 110A, Table 1A-J – Miscellaneous Fees. If all required addenda are not approved and issued by the maximum time allowed, the site permit, all previously approved addenda, and all remaining addenda shall be deemed to be canceled. When a site permit has been canceled, an alteration work application shall be required to resume processing. The provisions of Section 107A.3.3 shall apply to such alteration work application.

106A.3.5 Inspection and observation program. When special inspection is required under Chapter 17, the architect or engineer of record shall prepare an inspection program that shall be submitted to the building official for approval prior to issuance of the building permit. The inspection program shall designate the portions of the work that require special inspection and the name or names of the individuals or firms who are to perform the special inspections, and indicate the duties of the special inspectors.
The special inspector shall be employed by the owner, the engineer or architect of record, or an agent of the owner, but not the contractor or any other person responsible for the work.
When structural observation is required under Chapter 17, the inspection program shall name the individuals or firms who are to perform structural observation and describe the stages of construction at which structural observation is to occur.
The inspection program shall include samples of inspection reports and provide time limits for submission of reports.

106A.3.6 Permit facilitator. Any permit applicant may use the services of a Permit Facilitator. The Permit Facilitator shall be under the jurisdiction of the Building Official. The duties of the Permit Facilitator include distributing permit application submittals to various review disciplines, departments or agencies; and providing the project sponsor with a single point of contact regarding permit application status, procedures or requirements. The fee for such service shall be per Table 1A-B – Other Building Permit and Plan Review Fees – and shall be paid upon filing of a permit application.

106A.3.7 Application expiration. The Building Official may hold in abeyance or reject any application, plans, or specifications filed which in the Building Official's opinion, do not provide the necessary information in a clear and concise manner as required in Section 106A.3.3, and shall cancel such an application upon the expiration of the time period set forth per Table A.
[i]At the time the application has been deemed acceptable for building plan review by the Department of Building Inspection, any corrections, additional information, plans or documents that are necessary to complete the processing by the Department of Building Inspection shall be submitted and approved within the following time limitations:

TABLE A – APPLICATION EXPIRATION

Valuation	Time Limitation	Extension Limitation
$1.00 to $1 million	360 calendar days	360 calendar days
Over $1 million	720 calendar days	720 calendar days

[ii]The time limitation shall apply until the application has been approved and permit is issued. A one-time extension per Table A may be granted by the Building Official at any point during the approval process, upon written request by the applicant and payment of fee. Additional extensions

may be granted by the Building Official prior to extension expiration upon written request from the applicant and payment of fee. See Section 110A, Table 1A-J – Miscellaneous Fees – for applicable fee. In the event an extension of time extends the life of an application beyond the effective date of the adoption of a new code, the Building Official may require that all or part of the application be subject to the provisions of the new code and payment of an additional plan review fee per Table 1A-A – Building Permit Fees. In the event the application has not been approved and issued within 60 days before the end of the stated time period in Table A, the Department shall notify the applicant that the application will be canceled in 60 days unless the application is extended. An application which exceeds the stated or extended time period after such notice shall be deemed canceled without further action by the Department.

EXCEPTIONS:

1. For applications resulting from enforcement actions initiated by the Building Official to abate code violations, the above time limits shall be reduced to 30 days and 10 days, respectively. The Building Official may grant an extension for hardship or procedural error. Upon cancellation, such cases shall be referred to the City Attorney for legal action.

2. The above time limits shall not apply to applications which are subject to the work without permit investigation fee per Section 110A, Table 1A-K – Penalties, Hearings, Code Enforcement Assessments. Such applications shall be canceled only through specific action by the Building Official.

3. The above time limits shall be suspended whenever an application is returned to the Planning Department for review due to a design change that the Building Code(s) requires.

106A.3.8 Disapproval of application. Any application that does not meet the requirements of this code or any other laws, ordinances or regulations enforced by any interested departments or agencies shall be disapproved by the Building Official or upon request by the applicant. If such a request is not made by the applicant to disapprove an application, the Building Official shall notify the applicant that the application will be disapproved in 60 days and the application revoked.

106A.3.8.1 Withdrawal of application. Applications filed for permits may be withdrawn by the owner, provided that no part of the work proposed on the application has been performed. All applicable fees must be paid before an application can be withdrawn.

106A.4 Permits issuance.

106A.4.1 Issuance. The application, plans, specifications, computations and other data filed by an applicant for a permit shall be reviewed by the building official. Such plans may/shall be reviewed by other departments of this jurisdiction to verify compliance with any applicable laws under their jurisdiction. If the Building Official finds that the work described in an application for a permit and the plans, specifications and other data filed therewith conform to the requirements of this code and other pertinent laws and ordinances, and that the fees specified in Section 107A have been paid, the building official shall issue a permit therefor to the applicant.

[iii]When the building official issues the permit where plans are required, the building official shall stamp each page of the plans and the first page of the specifications APPROVED. Such approved plans and specifications shall not be changed, modified or altered without authorizations from the building official, and all work regulated by this code shall be done in accordance with the approved plans.

The building official may issue a permit for the construction of part of a building or structure before the entire plans and specifications for the whole building or structure have been submitted or approved, provided adequate information and detailed statements have been filed complying with all pertinent requirements of this code. The holder of a partial permit shall proceed without assurance that the permit for the entire building or structure will be granted.

106A.4.1.1 Transfer of permit. Permits are transferable without payment of fees per Table 1A-D when the new owner submits a letter to the Department agreeing to all conditions of approval, stipulations and agreements contained on the approved application.

106A.4.1.2 Edgehill Mountain Slope Protection Area.

106A.4.1.2.1 Creation. There is hereby created the Edgehill Mountain Slope Protection Area, which is generally bounded by Garcia Avenue, Vasquez Avenue, Kensington Way and Ulloa Street and traversed by Edgehill Way. The Edgehill Mountain Slope Protection Area is comprised of the following Assessor's Block Numbers: 2875, 2876, 2923, 2933, 2934, 2935, 2936A and 2936B. Heightened review of certain permit applications, as provided in this section, shall be made in this area.

106A.4.1.2.2 Purpose. Because landslides, earth movement, ground shaking and subsidence are likely to occur on or near the Edgehill Mountain Slope Protection Area, causing severe damage and destruction to public and private improvements, the Board of Supervisors finds that the public health, safety and welfare is best protected if the Building Official of Building Inspection causes permit applications within the Edgehill Mountain Slope Protection Area for either (1) construction of new buildings or structures or (2) alterations that involve a substantial increase in the envelope of an existing building or structure, to be peer reviewed for structural integrity and effect on hillside stability. The requirements herein for projects in the Edgehill Mountain Slope Protection Area are in addition to all other applicable laws and regulations, including any and all requirements for environmental review under the California Environmental Quality Act; compliance with the requirements contained herein does not excuse a project sponsor from compliance with any other applicable laws and regulations.

106A.4.1.2.3 Mandatory review by Structural Advisory Committee and other city officials. All permit applications submitted to the Central Permit Bureau for construction of new buildings or structures or alterations that involve a substantial increase in the envelope of an existing building or structure (as determined by the Building Official) within the Edgehill Mountain Slope Protection Area shall be submitted to and reviewed by the Structural Advisory Committee, as defined by Building Code Section 105A.6. No permits for such properties located within the Edgehill Mountain Slope Protection Area shall be issued unless and until the Building Official has consulted with and received a written communication from representatives of the Department of Planning, Department of Public Works and Fire Department, each of whom has made a visit to the site for which the project is proposed, and the Building Official has received a written report from the Structural Advisory Committee concerning the safety and integrity of the proposed design and construction. As part of its review, the Structural Advisory Committee shall consider the effect that construction activity related to the proposed project will have on the safety and stability of the Edgehill Mountain Slope Protection Area.

106A.4.1.2.4 Mandatory denial by Building Official. In the event that the Structural Advisory Committee determines that there is a reasonable likelihood that the proposed design and construction would result in unsafe conditions or would increase the likelihood of hillside instability, and such unsafe conditions or instability cannot be mitigated to the satisfaction of the Structural Advisory Committee, the Building Official shall deny the permit. The Building Official's decision to deny the permit is appealable only to the Board of Appeals.

106A.4.1.3 Northwest Mt. Sutro Slope Protection Area.

106A.4.1.3.1 Creation. There is hereby created the Northwest Mt. Sutro Slope Protection Area, which is generally bounded on the east by Crestmont Drive and its undeveloped northern extension, on the south along Oak Park to its intersection with Christopher Boulevard, west to Warren Drive, north along Warren Drive to the 6th Avenue and Kirkham Street intersection, and Kirkham Street in an easterly direction to its end at the undeveloped extension of Crestmont Drive. The Northwest Mt. Sutro Slope Protection Area is comprised of the following Assessor's Block Numbers: 1850, 1851, 2635, 2636, 2638, 2674, 2675, 2676, 2677, and 2686. Heightened review of certain permit applications, as provided in this section, shall be made in this area.

106A.4.1.3.2 Purpose. Because landslides, earth movement, ground shaking and subsidence are likely to occur on or near the Northwest Mt. Sutro Slope Protection Area, causing severe damage and destruction to public and private improvements, the Board of Supervisors finds that the public health, safety and welfare is best protected if the Building Official of Building Inspection causes permit applications within the Northwest Mt. Sutro Slope Protection Area for either (1) construction of new buildings or structures or (2) alterations that involve a substantial increase in the envelope of an existing building or structure, to be peer reviewed for structural integrity and effect on hillside stability. The requirements herein for projects in the Northwest Mt. Sutro Slope Protection Area are in addition to all other applicable laws and regulations, including any and all requirements for environmental review under the California Environmental Quality Act; compliance with the requirements contained herein does not excuse a project sponsor from compliance with any other applicable laws and regulations.

106A.4.1.3.3 Mandatory review by Structural Advisory Committee and other city officials. All permit applications submitted to the Central Permit Bureau for construction of new buildings or structures or alterations that involve a substantial increase in the envelope of an existing building or structure (as determined by the Building Official) within the Northwest Mt. Sutro Slope Protection Area shall be submitted to and reviewed by the Structural Advisory Committee, as defined by Building Code Section 105A.6. No permits for such properties located within the Northwest Mt. Sutro Slope Protection Area shall be issued unless and until the Building Official has consulted with and received a written communication from representatives of the Department of Planning, Department of Public Works and Fire Department, each of whom has made a visit to the site for which the project is proposed, and the Building Official has received a written report from the Structural Advisory Committee concerning the safety and integrity of the proposed design and construction. As part of its review, the Structural Advisory Committee shall consider the effect that construction activity related to the proposed project will have on the safety and stability of the Northwest Mt. Sutro Slope Protection Area.

106A.4.1.3.4 Mandatory denial by Building Official. In the event that the Structural Advisory Committee determines that there is a reasonable likelihood that the proposed design and construction would result in unsafe conditions or would increase the likelihood of hillside instability, and such unsafe conditions or instability cannot be mitigated to the satisfaction of the Structural Advisory Committee, the Building Official shall deny the permit. The Building Official's decision to deny the permit is appealable only to the Board of Appeals.

106A.4.1.4 The Slope Protection Act. This Section of the San Francisco Building Code shall be known as the Slope Protection Act.

106A.4.1.4.1 Creation. The Slope Protection Act shall apply to all property within San Francisco that falls within certain mapped areas of the City, except those properties already subject to the Edgehill Mountain Slope Protection Area or the Northwest Mt. Sutro Slope Protection Area. For

purposes of this Section "property" shall mean a legal lot of record. Heightened review of certain permit applications, as provided in this section, shall be given to all property subject to this Act.

106A.4.1.4.2 Purpose. Because landslides, earth movement, ground shaking and subsidence are likely to occur on or near steeply sloped properties and within other defined areas causing severe damage and destruction to public and private improvements, the Board of Supervisors finds that the public health, safety and welfare is best protected if the Building Official causes permit applications for the construction of new buildings or structures and certain other construction work on property subject to the Slope Protection Act to undergo additional review for structural integrity and effect on slope stability. The requirements for projects subject to the Slope Protection Act are in addition to all other applicable laws and regulations, including any and all requirements for environmental review under the California Environmental Quality Act; compliance with the requirements contained herein does not excuse a project sponsor from compliance with any other applicable laws and regulations.

106A.4.1.4.3 Scope. Properties are subject to these requirements where any portion of the property lies within the areas of "Earthquake-Induced Landslide" in the Seismic Hazard Zone Map, released by California Department of Conservation, Division of Mines and Geology, dated November 17, 2000, or amendments thereto; or within the "Landslide Hazard Areas" mapped as "Landslide Locations" in Figure 4 of the San Francisco Seismic Safety Investigation report prepared by URS/John A. Blume & Associates, Engineers, June 1974, or any successor map thereto.

106A.4.1.4.4 Mandatory submittal of reports and geotechnical engineering review. All permit applications submitted to the Department of Building Inspection for construction subject to the Slope Protection Act shall include report(s) prepared and signed by both a licensed geologist and a licensed geotechnical engineer identifying areas of potential slope instability, defining potential risks of development due to geological and geotechnical factors, and drawing conclusions and making recommendations regarding the proposed development. These reports shall undergo design review by a licensed geotechnical engineer. Such design review shall verify that appropriate geological and geotechnical issues have been considered and that appropriate slope instability mitigation strategies, including drainage plans if required, have been proposed.

106A.4.1.4.5 Structural Advisory Committee and mandatory denial by Building Official. After reviewing all submitted information pursuant to Section 106A.4.1.4.4, the Director, in his or her sole discretion, may require that the permit application be subject to review by a Structural Advisory Committee, as defined by Building Code Section 105A.6. When subject to such Structural Advisory Committee review, no permits shall be issued unless and until the Building Official has consulted with and received a written communication from representatives of the Department of Planning, Department of Public Works and Fire Department, each of whom has made a visit to the site for which the project is proposed, and the Building Official has received a written report from the Structural Advisory Committee concerning the safety and integrity of the proposed design and construction. As part of its review, the Structural Advisory Committee shall consider the effect that construction activity related to the proposed project will have on the safety and stability of the property subject to the Slope Protection Act and properties within the vicinity of such property. In the event that the Building Official establishes a Structural Advisory Committee, and such Committee determines that there is a reasonable likelihood that the proposed design and construction would result in unsafe conditions or would increase the likelihood of hillside instability, and such unsafe conditions or instability cannot be mitigated to the satisfaction of the Committee, the Building Official shall deny the permit. The Building Official's decision to deny the permit is appealable only to the Board of Appeals.

106A.4.1.4.6 Regulations to implement the Slope Protection Act. The Building Official is hereby authorized to adopt rules, regulations, administrative bulletins, or other written guidelines to assist the Department in implementing this Section, including, but not limited to, requirements for applicants to demonstrate that a project site is not subject to the Slope Protection Act.

106A.4.2 Retention of approved construction documents. One set of approved construction documents shall be provided to the party obtaining the permit. The owner shall be responsible for keeping these documents on the building site at all times and making them available for inspection and use by the inspector during such construction until final inspection has been made; failure to do so shall result in stoppage of work. The approved construction documents shall not be changed, modified or altered without authorization from the Building Official; all work shall be done in accordance with these documents.
One set of approved construction documents for all building permits shall be retained by the Department in reproducible form as public records.

106A.4.3 Validity of permit. The issuance of a permit or approval of plans and specifications shall not be construed to be a permit for, or an approval of, any violation of any of the provisions of this code or of any other applicable laws and regulations. Permits presuming to give authority to violate or cancel the provisions of this code or other ordinances of the jurisdiction shall not be valid.
The issuance of a permit based on plans, specifications and other data shall not prevent the Building Official from thereafter requiring the correction of errors in said plans, specifications and other data, or from preventing building operations being carried on thereunder when in violation of this code or other applicable laws and regulations.

106A.4.4 Permit expiration. Every permit issued by the Building Official under the provisions of this code, unless an extension of time has been specifically approved by the Building Official, shall expire by limitation and become null and void when the time allowed in Table B is reached, or when any of the following circumstances is applicable:

1. For Building Official-initiated code compliance permits, the work shall start within 30 days from the date of such permit.

2. If the building or work authorized is suspended or abandoned at any time after the work has started, for a period as follows:

2.1. Thirty days for Building Official- initiated code compliance permits.

2.2. One-hundred-eighty days for all other permits.

3. An extension of time from the stated periods may be permitted for good reason, provided such requests for an extension are submitted to the Building Official in writing prior to the end of the time period accompanied by payment of a fee. Unless approved by the Building Official, no more than one extension of time may be granted.

3.1. For all other permits, see Table B – Maximum Time Allowed to Complete All Work Authorized by Building Permit. The maximum time allowed for Building Official-initiated code compliance permits shall be 12 months for all permits exceeding $25,000 total valuation.

[iv] **4. A demolition permit shall expire 180 days after issuance. Only one extension of time of 180 days shall be granted upon written request to the Building Official, accompanied by payment of a fee. If there is a permit for a replacement structure, the demolition permit shall expire concurrently with the permit for that replacement structure.**

5. The Building Official may administratively authorize the processing of applications involving compliance actions initiated by the Department, in a manner other than set forth in this code, so as to effect said compliance most expeditiously; provided, however, that due process is assured all applicants. In this regard, the Building Official may reduce the time periods set forth in

this section as they apply to a second application and permit required by the Building Official to effect full compliance with this code and other applicable laws and regulations if by doing so code compliance would be more expeditiously accomplished.
EXCEPTION: In order to avoid repetitive filings and processing of applications to effect code compliance, the Building Official is hereby authorized to establish alternate procedures and extensions of time from cancellation pursuant to Section 106A.4.1 and from expiration pursuant to this section; provided, however, that the Building Official, in establishing alternate procedures and extension of time, shall proceed as expeditiously as possible toward abatement of the violations. When a permit is issued but delayed due to actions before the Board of Appeals or other City agencies, or cases in any court of competent jurisdiction, or is under review by a State or regional regulatory body, the time allowable shall be computed from the date of the final action of the agency or court of jurisdiction.

TABLE B – MAXIMUM TIME ALLOWED TO COMPLETE ALL WORK AUTHORIZED BY BUILDING PERMIT

Valuation	Time Allowed (1)	Extension Limitation
$1.00 to $100,000	360 days	360 days
$100,001 to $2,499,999	1,080 days	720 days
$2,500,000 and above	1,440 days	720 days

NOTES:

(1) For site permits with a valuation of $2,500,000 or more, the time allowed to complete work authorized by the building permit may be increased by 50 percent. For site permits with a valuation less than $2,500,000, use Table B.

106A.4.4.1 Commencement of work on permit expired due to work not started. Before work can be commenced on an expired permit on which no work was performed, a new application shall be filed and a new permit shall be obtained. If not more than one year has elapsed since the expiration of the original permit, the applicant is eligible for reduced fee on the new permit. See Section 110A-Table 1A-B — Commencement of Work Not Started. All other applicable fees in Section 110A - Table 1A-A or any other table in this code, shall be collected in the full amount. To qualify for the reduced fees, the original approved plans and specifications in the possession of the owner shall be submitted with the new application, together with a notarized certification that there are no changes made on those plans and specifications.
In the event a refund has been granted upon the request of the applicant prior to the commencement of the work, the provisions of this section shall not apply and a new permit shall be applied for and all fees will be required to be paid.

106A.4.4.2 Recommencement of work on permit expired due to work not completed. An alteration permit shall be secured for the work not completed. See Section 110A, Table 1A-F — Specialty Permit Fees — for applicable fee to defray cost of certifying site conditions. The permit fee shall be based upon the valuation of the uncompleted work. When the permit is for completing the work as shown on the original approved plans, no additional plan review fee shall be required.

106A.4.5 Suspension or revocation. The building official may, in writing, suspend or revoke a permit issued under the provisions of this code whenever the permit is issued in error or on the basis of incorrect information supplied, or in violation of any ordinance or regulation of any of the provisions of this code.
Any permit issued for which less than the correct permit and plan checking fees were paid shall be considered an invalid permit and shall be suspended until the complete bill of fees has been paid. Failure to pay the correct fees shall be sufficient grounds for denial of a temporary permit of occupancy or a permit of occupancy.

106A.4.6 Notice of permit issuance. Within 24 hours after the issuance of a building permit authorizing the types of work described below, notice of such issuance shall be given in the manner set forth below.

1. For permits to demolish or erect a building or structure, or to move a structure to a new site, the permittee shall obtain from the Department a sign containing the following information: permit number; filing date; address and phone number of the agency to contact for information regarding permit issuance; the date of permit issuance; address and phone of agency to contact to appeal issuance of permit; name, address and phone number of permittee.
For unreinforced masonry buildings, additional information shall be provided, as required by the Building Official.
See Section 110A, Table 1A-L – Public Information – for applicable fee.
The permittee shall cause the sign to be erected on the site of the property to which the application applies.
Location of sign. The sign shall be clearly visible to passing motorists and passing pedestrians. In the case of moved buildings, the sign shall be posted at the site onto which the building is to be moved. The minimum dimensions shall be 30 inches by 30 inches (762 mm × 762 mm), unless the permit relates to a vacant site or a vacant building, in which case the Building Official may require a sign up to 8 feet (2.438 m) wide and 4 feet (1.219 m) high upon a determination that the larger sign will provide better public notice. If a larger sign is required, the permittee shall provide it, and it shall contain the information set forth above. The sign required herein shall be installed as follows: The bottom edge of the sign shall be at least 6 feet (1.829 m) above grade; the face of the sign shall be parallel to the main street frontage and shall be located 5 feet (1.524 m) or less from the street property line; the sign shall be attached to one or more posts substantially embedded into the ground in order to withstand wind or other load factors, or may be attached to an existing front building wall. The background color of the sign shall be white, and the color of the text shall be black; the letter size of the first line shall be a minimum of 8 inches (203.2 mm) high; the size and style of the text shall be such that the message is clear and legible from a distance of 10 feet (3.048 m) to a viewer with normal vision.
Duration of sign posting. The permittee shall cause the sign to be erected within 24 hours after a permit is issued. The sign shall remain posted until either the conclusion of the hearing on the permit before the Board of Appeals or the time for filing such appeal has lapsed without an appeal being filed. Work under a demolition permit shall not begin until 15 days after the date on which the permit is issued.
Revocation for noncompliance. The Building Official shall, after providing the permittee an opportunity to respond to any complaint of noncompliance, revoke any permit where the applicant

has not substantially complied with the provisions of this section or Section 106A.3.2.3 requiring notice of permit application and issuance.
The requirements contained in this code relating to notice are not intended to give any right to any person to challenge in any administrative or judicial proceeding any action for which notice is given if such person would not otherwise have the legal right to do so.

2. For a permit which would authorize a structural addition to an existing building, the Department shall mail written notice to the owners of properties immediately adjacent to the subject building as shown on the current tax roll. See Section 110A, Table 1A-L – Public Information – for applicable fee.

3. For a permit which would authorize the demolition or moving of a building or structure, written notice shall be mailed to the owners of properties within 300 feet (91.44 m) in every direction from the edge of the property on which the proposed demolition work will take place, or from which the building will be moved. Owners notified shall be as shown on the last annual tax roll. Notice to interested organizations or groups shall be made as provided in Section 106A.4 of this code.

4. For changes in occupancy per this code, notice shall be provided as specified in Section 6 of the San Francisco Business and Tax Regulations Code. See Section 110A, Table 1A-L – Public Information – for applicable fee.

5. For a permit that would authorize removal of a legal or illegal dwelling unit, as defined in the Housing Code, permittee shall post a sign at least 15 inches by 15 inches (381 mm x 381 mm) in a conspicuous common area of the building where the work will occur, with the following information: permit number; filing date; address and phone number of the agency to contact for information regarding permit issuance; the date of permit issuance; address and phone number of agency to contact to appeal issuance of permit; name, address and phone number of permittee. The sign shall also contain a list of tenant counseling or legal services that can provide assistance to tenants with understanding and participating in the City's processes. The sign shall remain posted until either the conclusion of the hearing on the permit before the Board of Appeals or the time for filing such appeal has lapsed without an appeal being filed. Such notice shall also include contact information for translation services into Spanish, Chinese, and Russian.

Revocation for noncompliance. The Building Official shall, after providing the permittee an opportunity to respond to any complaint of noncompliance, revoke any permit where the applicant has not substantially complied with the provisions of this section or Section 106A.3.2.3 requiring notice of permit application and issuance.

106A.4.7 Additional work, permit required. When an approved permit has been issued, a separate permit for alteration work shall be required for any change in work or additional work as set forth hereafter. The fees for such additional work shall be as set forth in Section 110A, fee tables, based on the difference in the valuation between the changed work and that of the original permit. The valuation shall be not less than $1. Situations which require a separate permit include the following:

1. Construction differing from the approved construction documents sufficiently to require revised plans or additional plans to be submitted to the Department for approval, including changes in partition layout that impact other code requirements, changes in framing directions, spans, and locations of concentrated loads, and changes in types of materials used. See Section 110A, Table 1A-F – Specialty Permit Fees – for the assessment for this type of additional work.

2. Changes proposed to any building or structure which alter the exterior dimensions more than 6 inches (152.4 mm) either in vertical or horizontal dimension, alter the visual appearance through changes in exterior wall materials or windows, change the number of residential dwelling units or decrease the amount of off-street parking provided.

3. Value of additional work or of changes exceeding 10 percent of the valuation of the approved permit work or $50,000 whichever is the lesser amount.

4. A change in occupancy or use, as defined in this code.

5. A change in the construction type of any portion of the building.

6. An unusual condition requiring a permit procedure to protect the interest of the public.

A separate alteration permit shall not be required where the change or additional work is required by the Board of Appeals as a condition of approving an appealed permit; however, revised plans and plan review fees, including back check fees, shall be required for any such change or additional work. The Board of Appeals may require, as a condition of approval, that revised plans be submitted to the Board for review.

106A.4.8 Replacement of approved construction documents. When the permit holder's set of approved construction documents is not available as required by Section 106A.4.2, a duplicate set of documents shall be submitted to the Department along with a notarized certification that such documents are identical to the approved construction documents except for notations by City agencies. The Department shall then copy such notations from its retained set to the duplicate set and shall stamp the duplicate set APPROVED.
See Section 110A, Table 1A-L – Public Information – for applicable fee.

106A.4.9 Preapplication plan review or inspection. When a party wishes to discuss specific design issues or submit preliminary designs for review and comment by the Department prior to formal application for a permit, a request for preapplication plan review must be submitted in writing to the Building Official. See Section 110A, Table 1A-B – Other Building Permit and Plan Review Fees – for applicable fees. Payment of the minimum fee must be submitted with the letter of request. In cases where on-site discussion with a field inspector is desired, the same request requirements apply. See Section 110A, Table 1A-G – Inspections, Surveys and Reports – for applicable fee.

106A.4.10 Review of mechanical plans. When an application for a permit contains a mechanical component (separate from or in addition to energy conservation design) sufficient in scope or complexity to require review by a mechanical specialist, a fee for this service shall be assessed and is payable before issuance of the permit. See Section 110A, Table 1A-B – Other Building Permit and Plan Review Fees – for applicable fee.

106A.4.11 Review of electrical plans. When an application for a permit contains an electrical component (separate from or in addition to energy conservation design) sufficient in scope or complexity to require review by an electrical specialist, a fee for this service shall be assessed and is payable before issuance of the permit. See Section 110A, Table 1A-B – Other Building Permit and Plan Review Fees – for applicable fee.

106A.4.12 Review of plumbing plans. When an application for a permit contains a plumbing component sufficient in scope or complexity to require review by a plumbing plan reviewer, a fee for this service shall be assessed and is payable before issuance of the permit. See Section 110A, Table 1A-B – Other Building Permit and Plan Review Fees – for applicable fee.

106A.4.13 Premium plan review. At the request of the applicant and upon payment of an additional fee per Table 1A-B – Other Building Permit Application and Plan Review Fees, building permit applications shall be reviewed by the Department of Building Inspection within a guaranteed plan review time set by the Building Official. This building plan review time will be less than normal turnaround times and will be developed on a case-by-case basis depending on the

scope of work and the quality of completeness of the submittal documents. At or before the due date of the guaranteed building plan review time, a thorough set of plan review comments and/or corrections will be sent to the applicant for response. Premium Plan Review does not guarantee plan review times during the recheck process, nor building permit approval and issuance. If the Department fails to complete its plan review within the guaranteed plan review time, the additional fee paid shall be refunded to the applicant upon written request by the applicant. This service is offered for plan review by the Department of Building Inspection only and does not commit any other City agencies or departments to the turnaround times.

(Amended by Ord. 43-14 , File No. 131148, App. 4/17/2014, Eff. 5/17/2014; Ord. 208-15 , File No. 150587, App. 12/9/2015, Eff. 1/8/2016)

SECTION 107A – FEES

107A.1 General. Fees shall be assessed in accordance with the provisions of this section or shall be as set forth in the fee schedule adopted by the jurisdiction.

107A.1.2 Exemption from fees. The fees provided for in this chapter shall not apply to permits issued to perform work on buildings which are owned and occupied by the Federal or State governments. The San Francisco Housing Authority shall be exempt from all permit fees in this chapter except State mandated fees and record retention fees. Permits required under this code for buildings and sites owned or leased by the City and County of San Francisco shall be subject to all fees set forth in this chapter.

107A.2 Permit issuance fees. The minimum permit fee per Section 110A, Table 1A-A – Building Permit Fees – shall be paid at the time an application for a building permit is issued. The New Construction Permit Fee Schedule applies to new buildings or structures. The Alteration Permit Fee Schedule applies to alterations, repairs, additions or other work on an existing building or structure, or to the modification of the scope of an approved permit as required by Section 106A.4.7.

The determination of value or valuation under any of the provisions of this code shall be made by the Building Official. The value to be used in computing the permit issuance and plan review fees shall be the final valuation upon completion of all construction work for which the permit is issued, as well as all finish work, painting, roofing, mechanical, electrical, plumbing, heating, air conditioning, elevators, fire-extinguishing systems and all other permanently installed equipment and construction, even though other permits to perform such work may be required.

The valuation shall be calculated at the time of permit issuance according to a cost schedule posted in the office of the Department or by actual construction cost, whichever is greater. The valuation shall be recalculated at the time of any addenda and/or revision issuance. Any additional fees due resulting from the recalculation of valuation shall be paid prior to addenda and/or revision issuance. The cost schedule shall be adjusted annually based on construction cost data reported by a variety of sources, including without limitation, local contractors, design professionals, cost estimators or nationally published construction cost data books or websites. Contractor overhead and profit shall be reflected in the schedule. The Building Inspection Commission is authorized to waive the annual cost schedule adjustment if it determines that increasing the fees will exceed the cost of providing the services for which the fees are paid.

107A.3 Plan review fees.

(a) When submittal documents are required by Section 106A.3.2, a plan review fee shall be paid at the time of filing an application for a permit for which plans are required pursuant to Section 106A.3.2. Said plan review fee shall be based on the valuation determined by Section 107A.1. See Section 110A, Table 1A-A – Building Permit Fees – for applicable fee.
The plan review fees specified in this section are separate fees from the permit issuance fees specified in Section 107A.2 and are in addition to the permit fees.
When submittal documents are incomplete or changed so as to require additional plan review or when the project involves deferred submittal items as defined in Section 106A.3.4.2, an additional plan review fee shall be charged as shown in Section 110A, Table 1A-B – Other Building Permit and Plan Review Fees.

(b) If a project involves voluntary seismic retrofit upgrades to soft-story, wood-frame buildings, as defined by the Building Official, the applicant for said project shall be exempt from the proportionate share of plan review fees specified under this Chapter that is related to such retrofit work, provided all permit conditions and timelines are met.

107A.3.1 Reduced plan review fee. A reduced plan review fee shall be collected for reviewing submittal documents identical to those filed within one year of the original approved construction documents for which the full plan review fee was paid. For this purpose, plans may be considered identical when they contain only such minor differences as exterior finishes, or if they are identical but opposite hand. See Section 110A, Table 1A-B – Other Building Permit and Plan Review Fees – for the second and each subsequent set of identical submittal documents within the stated time period. To obtain this reduction, the applicant shall submit a copy of the original approved construction documents for which the full plan review fee was paid.
When the submittal documents are substantially changed from those that were previously approved, an additional full plan review fee shall be charged. See Section 110A, Table 1A-B – Other Building Permit and Plan Review Fees – for applicable fee.

107A.3.2 Tenant improvement work. An application for tenant improvement work shall state at the time of filing whether the permit is to include the partition and other improvement work for the entire building. If this work is not to be included, the valuation shall be reduced accordingly. The installation of such work shall then require permits for alteration work, the fees for which shall be in accordance with Section 110A, Table 1A-A – Building Permit Fees.

107A.3.3 Improvement work. When the application is for first-time improvement work in a new building and the valuation of such work was included in the valuation of the original building permit, the valuation for each alteration permit for part or all of such work shall be shown as $500, and the permit fee shall be collected accordingly.

107A.3.4 Site permit and addenda fees. The permit fee for projects submitted under the site permit and addenda process shall be based on Section 110A, Table 1A-A – Building Permit Fees and additional fees as stated in Table 1A-B – Other Building Permit and Plan Review Fees. Twenty-five percent of the plan review fee shall be paid at the time of site permit application submittal, and shall be credited toward the final plan review fee payment at the time of the first construction addendum submittal as determined by the Building Official. One hundred percent of the permit issuance fee shall be paid at the time of the first construction addendum issuance as determined by the Building Official.

107A.4 Expiration of plan review. (See Section 106A.3.7.)

107A.5 Investigation Fees: Work Without a Permit. Whenever any work, for which a permit is required under the provisions of this code, has been started without a permit and where no specific

additional fees are imposed as penalties as provided in this chapter, a special investigation shall be made before a permit may be issued for such work. See Section 110A, Table 1A-K – Penalties, Hearings, Code Enforcement Assessments – for applicable fee. Where only a portion of the work has been commenced without a permit, the investigation fee shall be based upon the portion of the work done without a permit. The cost of any penalty for any work done, in conjunction with the investigation fee, shall be borne by the owner.

The owner or owner's agent may appeal the amount of the investigation fee if they can provide just cause, such as unfamiliarity with this code or demonstrable negligence on the part of one of their employees.

The Building Official may reduce the investigation fee to two times the amount of the permit fee as called for in Section 110A, Table 1A-A – Building Permit Fees – of this code for work that was constructed prior to the current building ownership, provided that substantiating documentation is provided.

Where the Building Official rules against the applicant, appeals of such investigation fee shall be filed with the Board of Appeals in the manner provided in Part III of the San Francisco Municipal Code. Such filing shall be subject to the fees and rules of the Board of Appeals. The Board of Appeals, in re-viewing the appeal of the investigation fee assessed for doing work without a permit, may reduce the amount of said fee, but in no case shall such reduced investigation fee be less than two times the amount of the permit fee as called for in Section 110A, Table 1A-A – Building Permit Fees – of this code.

107A.6 Fee refunds. When no work has been done and the project has been abandoned or the permit expired per Section 106A.4.4, by limitation, a portion of the building issuance fee paid shall be refunded upon written request of the owner when such request is made within six months of permit expiration. See Section 110A, Table 1A-R – Refunds – for applicable refund.

107A.6.1 Plan review fees. When an application is withdrawn, the plan review fee paid may be partially refunded upon written request in the case no site inspection had been made by Department personnel, and plan review had not started within any division of the Department. See Section 110A, Table 1A-R – Refunds – for applicable refund. For other cases, the amount of refund, if any, shall be determined by the Building Official, based on the amount of permit processing work already completed on the application at the time it was withdrawn. Requests for refunds must be made within 30 days of withdrawal by the applicant to the Building Official.

107A.6.2 Fees in error. If the Building Official determines that an error has been made in the assessment of fees, a refund for the portion determined to be in error may be made upon written request by the applicant. See Section 110A, Table 1A-R – Refunds – for applicable refund.

107A.7 Strong Motion Instrumentation Program fee. Pursuant to the provisions of Section 2705 of the Public Resources Code of the State of California, a fee shall be assessed for all building permits except demolitions. See Section 110A, Table 1A-F – Specialty Permit Fees – for applicable fee. All such fees collected shall be handled in accordance with the provisions of Section 2706 of said Public Resources Code.

107A.7.1 Strong Motion Revolving Fund. That portion of the strong motion instrumentation fee retained by the Department as provided for in Section 2705 of the Public Resources Code of the State of California shall be deposited into a special Strong Motion Revolving Fund established by the City Controller. Funds from this revolving fund shall be used, subject to the approval of the

Building Official and the Building Inspection Commission, to defray personnel and equipment costs incurred in carrying out the State mandate. The Strong Motion Revolving Fund shall continue from year to year, and shall not be included in the Cash Reserve Fund.

107A.7.2 California Building Standards Commission administration fee. Pursuant to the provisions of California Health and Safety Code Sections 18930.5, 18931.6, 18931.7 and 18938.39 relating to building materials, cities and counties are required to assess a fee for all building permits. See Section 110A, Table 1A-J for applicable fee. All such fees shall be handled in accordance with the provisions of Section 18931.7 of said Health and Safety Code.

107A.7.2A California Building Standards Commission Fund. That portion of the fee assessed pursuant to Section 107A.7.2 relating to building materials that is retained by the Department of Building Inspection shall be deposited into the California Building Standards Commission Fund established by the City Controller. Funds from this category 2 fund shall be used, subject to the approval of the Building Official and the Building Inspection Commission, for administrative costs and code enforcement education, including but not limited to, certification in the voluntary construction inspector certification program. The California Building Standards Commission Fund shall continue from year to year and shall not be included in the Cash Reserve Fund.

107A.7.3 Technology surcharge on permits. A technology surcharge is hereby established on the cost of permit applications that the Department of Building Inspection processes for all departments and bureaus of the City and County of San Francisco. The surcharge proceeds are to be used solely for the implementation and maintenance of the City-wide Permit and Project Tracking System. The funds shall continue from year to year and shall not be included in the Cash Reserve Fund. See Section 110A, Table 1A-J for the applicable surcharge.

107A.8 Delinquent fees/dishonored checks. Permits will not be issued to any person having outstanding or delinquent balances or dishonored checks on file with the Department of Building Inspection.

107A.9 Survey. A building survey may be requested when a building inspector's assistance is desired to establish code compliance of existing or proposed construction. See Section 110A, Table 1A-G – Inspections, Surveys and Reports – for applicable fees.

107A.10 Building numbers and fees. Every person shall obtain an official street number assignment at the time the person files a permit application or establishes a new parcel and shall place the numbers so assigned on the building in such a position that the number is easily visible to approaching emergency vehicles. The numerals shall not be less than 4 inches (101.6 mm) in height with a minimum stroke width of 1/2 inch (12.7mm) [Reference CRC R319.1] and shall be a contrasting color to the background. All numbers must be made of substantial and permanent material and must be so affixed as not to be easily effaced or removed. Any additional or changed numbers assigned to a building shall be subject to the provisions of this section. See Section 110A, Table 1A-J – Miscellaneous Fees – for applicable fee.

107A.11 Fees for reproduction of reports, records and documents for the public.

107A.11.1 General. In order to provide for the cost of reproducing inspection reports, records, documents and other material in the Department files for the public, including but not limited to records on microfilm, a fee shall be required, payable in advance. Fees shall be chargeable to all persons, as well as City departments; when such reproduction is in response to subpoenas of

records, the attorney requesting such records shall pay the fees. All fees collected shall be deposited into the Building Inspection Fund.

107A.11.2 Reproduction fees. The fees shall be determined based upon the number of pages, type of record, size of microfilm reproduced and the number of copies required. All costs of reproduction shall require the pickup of said reproduced material at the office of the Department unless costs of delivery are provided. The Building Official may make any other rules or regulations necessary to provide for the reproduction of material consistent with the intent of this section. See Section 110A, Table 1A-L – Electrostatic Reproduction – for applicable fees.

107A.12 Fees for services and regulatory functions of the Department. Fees for all services and regulatory functions of the Department as established in various chapters of the San Francisco Municipal Code shall be imposed pursuant to Section 110A et seq.

107A.13 Development impact and in-lieu fees.

107A.13.1 Definitions. (a) The following definitions shall govern interpretation of this Section:

(1) "City" shall mean the City and County of San Francisco.

(2) "Department" shall mean the Department of Building Inspection.

(3) "Development fee" shall mean either a development impact fee or an in-lieu fee. It shall not include a fee for service or any time and material charges charged for reviewing or processing permit applications.

(4) "Development impact fee" shall mean a fee imposed on a development project as a condition of approval by the various departments and agencies of the City and levies against development projects by the San Francisco Unified School District under Section 17620 of the California Education Code and other provisions of State law to mitigate the impacts of increased demand for public services. facilities or housing caused by the development project that may or may not be an impact fee governed by the California Mitigation Fee Act (California Government Code Section 66000 et seq.)

(5) "Development impact requirement" shall mean a requirement to provide physical improvements, facilities or below market rate housing units imposed on a development project as a condition of approval to mitigate the impacts of increased demand for public services, facilities or housing caused by the development project that may or may not be governed by the California Mitigation Fee Act (California Government Code Section 66000 et seq.).

(6) "Development project" shall mean a project that is subject to a development impact or in-lieu fee or development impact requirement.

(7) "First certificate of occupancy" shall mean either a temporary certificate of occupancy or a Certificate of Final Completion and Occupancy as defined in San Francisco Building Code Section 109A, whichever is issued first.

(8) "First construction document" shall mean the first building permit issued for a development project or, in the case of a site permit, the first building permit addendum issued or other document that authorizes construction of the development project. Construction document shall not include permits or addenda for demolition, grading, shoring, pile driving, or site preparation work.

(9) "In-lieu fee" is a fee paid by the project sponsor in lieu of complying with a City requirement that is not a development impact fee within the meaning of the Mitigation Fee Act.

(10) "Neighborhood Infrastructure Seed Fund" shall mean the fund or funds established by the Controller's Office for the purpose of collecting the 20 percent pre-paid portion of the development fees intended to fund pre-development work on any neighborhood infrastructure project funded by any of the six neighborhood infrastructure impact development fees listed in Subsection 107A.13.13.1. In addition, third-party grant monies or loans may also be deposited into

this fund for the purpose of funding pre-development or capital expenses to accelerate the construction start times of any neighborhood infrastructure project funded by any of the six neighborhood infrastructure impact development fees listed in Subsection 107A.13.13.1.

(11) "Project sponsor" or "sponsor" shall mean an applicant seeking approval for construction of a development project subject to this Section, such applicant's successor and assigns, and/or any entity which controls or is under common control with such applicant.

(12) "Unit" shall mean the Department's Development Fee Collection Unit.

107A.13.2 Collection by Department. The Department shall be responsible for collecting all development impact and in-lieu fees, including (a) fees levied by the San Francisco Unified School District if the District authorizes collection by the Department, and (b) fees levied by the San Francisco Public Utilities Commission, if the Commission's General Manager authorizes collection by the Department, deferral of payment of any development fee, and/or resolution of any development fee dispute or appeal in accordance with this Section 107A.13.

107A.13.3 Timing of development fee payments and satisfaction of development impact requirements.

(a) All development impact or in-lieu fees owed for a development project shall be paid by the protect sponsor prior to issuance of the first construction document; provided, however, that the project sponsor may elect to defer payment of said fees under Section 107A.13.3.1.

(b) Any development impact requirement shall be completed prior to issuance of the first certificate of occupancy for the development project.

107A.13.3.1 Fee deferral program; development fee deferral surcharge. A project sponsor may elect to defer payment of any development impact or in-lieu fee collected by the Department to a due date prior to issuance by the Department of the first certificate of occupancy; provided, however, that the project sponsor shall pay 15 percent of the total amount of the development fees owed prior to issuance of the first construction document. If a project is subject to one of the six neighborhood infrastructure impact development fees listed in Subsection 107A.13.3.1.1, the project sponsor shall pay 20 percent of the total amount of the development fees owed prior to issuance of the first construction document. These pre-paid funds shall be deposited as provided in Subsection 107A.13.3.1. 1 below. A project sponsor that received project approval prior to July 1, 2010 and has not yet paid a development impact or in-lieu fee may elect to defer payment under the provisions of this Section notwithstanding a condition of approval that required the fee to be paid prior to issuance of a building or site permit.

This option to defer payment may be exercised by (1) submitting a deferral request to the Department on a form provided by the Department prior to issuance of the first construction document, and (2) agreeing to pay a Development Fee Deferral Surcharge. This deferral option shall not be available to a project sponsor who paid the fee prior to the operative date of July 1, 2010; the project sponsor's reapplication for a building or site permit after expiration of the original permit and refund of the development fees paid shall not authorize the project sponsor to elect the deferral option. The deferral option shall expire on July 1, 2013 unless the Board of Supervisors extends it.

107A.13.3.1.1. Deposit of pre-paid portion of deferred development fees. If a development project is not subject to one of the six neighborhood infrastructure impact fees listed below, the pre-paid portion of the development fees shall be deposited into the appropriate fee account. If there is more than one fee account, the pre-paid portion of the fees shall be apportioned equally.
If a development project is subject to one of the six neighborhood infrastructure impact development fees listed below, the entire 20 percent development fee pre-payment shall be deposited in the appropriate neighborhood infrastructure impact fee account. These pre-paid funds

shall be dedicated solely to replenishing the Neighborhood Infrastructure Seed Fund for that specific neighborhood infrastructure impact fee account. In no event shall a neighborhood infrastructure impact fee specific to one Area Plan be mixed with neighborhood infrastructure impact fees specific to a different Area Plan. If the 20 percent development fee pre-payment exceeds the total amount owed for the neighborhood infrastructure impact fee account, the remaining pre-paid portion of the 20 percent development fee pre-payment shall be apportioned equally among the remaining applicable development fees.

The neighborhood infrastructure development fees subject to the 20 percent pre-payment provision of this Subsection 107A.13.3.1.1 are as follows: (1) the Rincon Hill Community Infrastructure Impact Fee, as set forth in Planning Code Section 418.3(b)(1); (2) the Visitacion Valley Community Facilities and Infrastructure Fee, as set forth in Planning Code Section 420.3(b); (3) the Market and Octavia Community Infrastructure Fee, as set forth in Planning Code Section 421.3(b); (4) the Balboa Park Community iInfrastructure Impact Fee, as set forth in Planning Code Section 422.3(b); (5) the Eastern Neighborhoods Infrastructure Impact Fee, as set forth in Planning Code Section 423.3(b); and (6) the Van Ness and Market Neighborhood Infrastructure Impact Fee, as set forth in Planning Code Section 424.3(b)(ii).

107A.13.3.2 Payment of development fees; payment and calculation of Development Fee Deferral Surcharge. Except for any pre-paid fees, all deferred development fees remaining unpaid shall be paid in full prior to issuance of the first certificate of occupancy at the end of the deferral period. The Development Fee Deferral Surcharge shall be paid when the deferred fees are paid and shall accrue at the Development Fee Deferral Surcharge Rate.

The Development Fee Deferral Surcharge Rate shall be calculated monthly by the Unit as a blended interest rate comprised of 50% of the Treasurer's yield on a standard two-year investment and 50% of the latest updated Monthly Earned Income Yield Rate for the City and County of San Francisco's Pooled Funds, as posted on the San Francisco Treasurer's website and 50% of the Annual Infrastructure Construction Cost Inflation Estimate published by the Office of the City Administrator's Capital Planning Group and approved by the City's Capital Planning Committee consistent with its obligations under Section 409(b) of the San Francisco Planning Code. The annual Infrastructure Construction Cost Inflation Estimate shall be updated by the Office of the City Administrator's Capital Planning Group on an annual basis, in consultation with the Capital Planning Committee, with the goal of establishing a reasonable estimate of construction cost inflation for the next calendar year for a mix of public infrastructure and facilities in San Francisco. The Capital Planning Group may rely on past construction cost inflation data, market trends, and a variety of national, state and local commercial and institutional construction cost inflation indices in developing their annual estimates for San Francisco. Commencing on the effective date of this ordinance, the Unit shall publish the Development Fee Deferral Surcharge on the Department of Building Inspection website at or near the beginning of each month. The accrual of any deferred development fees begins on the first day that a project sponsor elects to defer development fees, but never later than immediately after issuance of the first construction document. The Development Fee Collection Unit shall calculate the final Development Fee Deferral Surcharge for individual projects by multiplying the total development fees otherwise due prior to issuance of the construction document by the Development Fee Deferral Surcharge Rate by the actual day count of the entire Development Fee Deferral Period, which shall be the number of days between the project sponsor's election to defer to final payment of the deferred development fees. The Development Fee Deferral Surcharge shall be apportioned among all development fee funds according to the ratio of each development fee as a percentage of the total development fees owed on the specific project.

107A.13.4 Development Fee Collection Unit. There shall be a Development Fee Collection Unit established within the Department. The Unit's duties include: (1) receiving and organizing

information from various City agencies concerning the amount of development fees owed or specific development impact requirements imposed under various sections of the San Francisco Municipal Code or other legal authority, (2) working with the project sponsor and relevant agencies to resolve any disputes or questions concerning the development fees or development impact requirements applied to specific development projects, (3) ensuring that the first construction document, or first certificate of occupancy if the project sponsor elects to defer payment, is not issued prior to payment of all development fees that are due and owing, (4) confirming with the Planning Department that any outstanding development impact requirements are satisfied prior to issuance of the first certificate of occupancy for projects subject to such requirements, (5) generating Project Development Fee Reports, (6) processing any development fee refunds, (7) publishing and updating the Citywide Development Fee Register, (8) initiating lien proceedings to collect any unpaid development impact or in-lieu fees, and (9) performing such other duties as the Building Official requires. The fee for the Department's services shall be as provided in Section 107A.13.14.

107A.13.5 Citywide Development Fee Register. The Unit shall publish a Citywide Development Fee Register that lists all current San Francisco development impact and in-lieu fees. The Unit shall update the Register whenever a development impact or in-lieu fee is newly enacted, rescinded or amended. The Unit shall make the Register available to the public upon request, including but not limited to posting it on the Department's website.

107A.13.6 Required City Agency or Department Notice to Development Fee Collection Unit. Prior to issuance of any building or site permit for a project, any department or agency responsible for calculating a development fee collected by the Unit or imposing a development impact requirement shall send written or electronic notification to the Development Fee Collection Unit that (i) identifies the development project, (ii) lists which specific development fees and/or development impact requirements are applicable and the legal authorization for their application. (iii) specifies the amount of the development fee or fees that the department or agency calculates is owed to the City or that the project sponsor has elected to satisfy a development impact requirement through the direct provision of public benefits, and (iv) lists the name and contact information for the staff person at each agency or department responsible for calculating the development fee or monitoring the development impact requirement.

107A.13.7 Project Development Fee Report. Prior to the issuance of the building or site permit for a development project that owes a development fee or fees or is subject to development impact requirements, and at any time thereafter, the Development Fee Collection Unit shall prepare and provide to the project sponsor, or any member of the public upon request, a Project Development Fee Report. The Report shall: (i) identify the development project, (ii) list which specific development fees and/or development impact requirements are applicable and the legal authorization for their application, (iii) specify the amount of the development fee or fees that the department or agency calculates is owed or that the project sponsor has elected to satisfy a development impact requirement through the direct provision of physical improvements, (iv) list the name and contact information for the staff person at each agency or department responsible for calculating the development fee or monitoring the development impact requirement, and (v) state whether the development fee or fees are due and payable prior to issuance of the first construction document or whether the project sponsor has requested deferral under Section 107A.13.3.1, and note the status of payment. A copy of the Project Development Fee Report shall always be made available to the project sponsor immediately prior to issuance of the site or building permit for a development project subject to any development fee or fees to provide adequate notice of the proposed development fee or fees. The Development Fee Collection Unit shall not issue a Final Development Fee Report and the respective site or building permit for a development project until

it has received written confirmation from the First Source Hiring Administration (FHSA) that the project sponsor has executed a first source hiring agreement(s) with the FHSA consistent with Administrative Code Section 83.11.

107A.13.8 Failure to give notice of a development fee owed or development impact requirement. The failure of the Unit or a fee-assessing department or agency to give any notice of a development fee owed or development impact requirement shall not relieve the project sponsor of the obligation to pay the development fee when it is due. The procedure set forth in this Section is not intended to preclude enforcement of the development fee or development impact requirements pursuant to any other section of this Code, the Planning Code or other parts of the Municipal Code or under the laws of the State of California.

107A.13.9 Development fee dispute resolution; appeal to Board of Appeals.

107A.13.9.1 Procedure for resolution by Development Fee Collection Unit. If a dispute or question arises concerning the accuracy of the final Project Development Fee Report, including the mathematical calculation of any development fee listed thereon, the Development Fee Collection Unit shall attempt to resolve it in consultation with the department or agency affected by the disputed fee and the project sponsor. A person protesting the accuracy of the Report must submit the issue or issues in writing to the Unit with a copy to the department or agency whose development fee is in dispute. Any public notice of the issuance of the building or site permit shall notify the public of the right to request a copy of the Project Development Fee Report and of the right of appeal to the Board of Appeals under Section 107A.13.9.2.

107A.13.9.2 Appeal to Board of Appeals.

(a) If the Development Fee Collection Unit is unable to resolve the dispute or question, the project sponsor or a member of the public may appeal the Project Development Fee Report to the Board of Appeals within 15 days of the issuance of the building or site permit under Article 8 et seq. of the San Francisco Business & Tax Regulations Code.

(b) In cases where a project sponsor is not using the site permit process and is required to pay a development fee or fees prior to issuance of the development project's building permit, and chooses not to defer payment under Section 107A.13.3.1, the sponsor may pay a disputed fee under protest and file an appeal within 15 days of the issuance of the permit.

(c) In order to appeal to the Board of Appeals under this Section, a project sponsor appellant must first have attempted to resolve the dispute or question by following the procedure in Section 107A.13.9.1. Evidence of this prior attempt must be submitted to the Board of Appeals in order for the Board to accept the appeal. Members of the public may file an appeal under this Section without providing such evidence.

(d) Promptly after an appeal has been filed, the Board of Appeals shall notify the department or agency whose development fee or development impact requirement is at issue of the fact that an appeal has been filed and the date scheduled for hearing. A representative of the Department of Building Inspection and of the department or agency whose development fee or development impact requirement is in dispute must be present at the appeal hearing.

(e) In hearing any appeal of the Project Development Fee Report, the Board's jurisdiction is strictly limited to determining whether the mathematical calculation of the development fee or the scope of a development impact requirement is accurate and resolving any technical disputes over the use, occupancy, floor area, unit count and mix, or other objective criteria that calculation of the challenged development fee or development impact requirement is based upon.

(f) If a decision by the Board of Appeals requires a refund of all or any portion of the disputed development fee, the refund shall be processed promptly by the Development Fee

Collection Unit under Section 107A.13.11. If a decision requires a new determination regarding the scope of a development impact requirement, such new determination shall be made by the relevant City agency or department prior to issuance of the first certificate of occupancy. Where the Board determines that an additional amount of the fee or fees is due and owing, the additional amount shall be paid prior to issuance of the first certificate of occupancy for the development project.

107A.13.10 Violation of this section deemed a violation of the Building Code. In addition to the lien proceedings authorized Section 107A.13.15, a violation of this Section 107A.13 shall be deemed a violation of the Building Code and subject to the provisions of Section 103A and any investigation or other fees authorized under other sections of this Code to compensate the Department for the cost of abating violations.

107A.13.11 Development fee refunds. Upon notification by the property owner or project sponsor and confirmation by the applicable department or agency that a fee refund is due, the Unit shall process the refund. The fee for processing the refund shall be as set forth in Table 1A-D – Other Building Permit and Plan Review Fees.

107A.13.12 Development fee information a public record. Any notice of development fees due or development impact requirements imposed sent to the Development Collection Unit by any fee-assessing departments and agencies, the Project Development Fee Report issued by the Unit, and any development fee refunds or development impact requirement revisions made are a matter of public record.

107A.13.13 Administrative fee. The fee for services provided by the Department under this Section 107A.13 shall be the Standard Hourly Rate for Administration set forth in Table 1A-D of this Code. The administrative fee is payable within 30 days of the Department's notice that payment is due.

107A.13.14 Administrative procedures. The Building Official is empowered to adopt such administrative procedures as he or she deems necessary to implement this Section. Such administrative procedures shall be generally consistent with the procedural requirements set forth in this Section 107A.

107A.13.15 Wrongful issuance of first construction document or certificate of occupancy; assessment lien; notice. In addition to any other remedy established in this Code or under other authority under the laws of the State of California, if DBI inadvertently or mistakenly issues the first construction document or first certificate of occupancy, whichever applies, for a development project that has not paid a development fee that is due and owing and payment has not been received within 30 days following notice that payment is due, or, in the case where a sponsor has elected to satisfy a development impact requirement through direct provision of physical improvements and where non- compliance with any such requirement is not corrected within 30 days following notice, the Department shall initiate proceedings in accordance with Article XX of Chapter 10 of the San Francisco Administrative Code to make the entire unpaid balance of the fee that is due, including interest at the rate of one and one-half percent per month or fraction thereof on the amount of unpaid fee, a lien against all parcels used for the development project. The penalty fee provisions of this section shall also apply to projects that have elected to provide physical improvements in lieu of paying a development fee, as if they had elected to pay the relevant development fee.
The Department shall send all notices required by Article XX to the owner or owners of the property and to the project sponsor if different from the owner. The Department shall also prepare a preliminary report, and notify the owner and sponsor of a hearing by the Board of Supervisors to confirm such report at least ten days before the date of the hearing. The report shall contain the

owner and sponsor's names, a description of the development project, a description of the parcels of real property to be encumbered as set forth in the Assessor's Map Books for the current year, a description of the alleged violation of this Section, and shall fix a time, date, and place for hearing. The Department shall mail this report to the sponsor and each owner of record of the parcels of real property subject to the lien.

Any notice required to be given to an owner or sponsor shall be sufficiently given or served upon the owner or sponsor for all purposes in this Section if personally served upon the owner or sponsor or if deposited, postage prepaid, in post office letterbox addressed to the owner or sponsor at the official address of the owner or sponsor maintained by the Tax Collector for the mailing of tax bills or, if no such address is available, to the sponsor at the address of the development project, and to the applicant for the site or building permit at the address on the permit application.

Except for the release of the lien recording fee authorized by Administrative Code Section 10.237, all sums collected by the Tax Collector under this Section shall be held in trust by the Treasurer and deposited in the City's appropriate fee account.

(Amended by 54-15, File No. 150150, App. 4/30/2015, Eff. 5/30/2015)

SECTION 108A – INSPECTIONS

108A.1 General. All construction or work for which a permit is required shall be subject to inspection by the building official, and all such construction or work shall remain accessible and exposed for inspection purposes until approved by the building official. In addition, certain types of construction shall have continuous inspection by special inspectors as specified in Section 1701. Approval as a result of an inspection shall not be construed to be an approval of a violation of the provisions of this code or of other ordinances of the jurisdiction. Inspections presuming to give authority to violate or cancel the provisions of this code or of other ordinances of the jurisdiction shall not be valid.

It shall be the duty of the permit applicant to cause the work to remain accessible and exposed for inspection purposes. Neither the building official nor the jurisdiction shall be liable for expense entailed in the removal or replacement of any material required to allow inspection.

In the absence of evidence as to the proper location of the lot on which a building is to be erected, for which a building permit has been or may be issued, the Building Official may require the owner to have the lot surveyed and staked by a registered land surveyor, or registered civil engineer, so that the proper location of the building on the lot may be determined. A copy of this survey shall be filed with the application for the permit.

108A.2 Inspection record card. Any work requiring a permit shall not begin until the permit holder or the permit holder's agent posts an inspection record "Job Card," on the site. This card shall be issued at the time of permit issuance by the Department. The card must be posted in a conspicuous, readily accessible location to allow inspectors to make necessary entries; it must remain on the job site until a final inspection of all work stated in that permit has been completed. After final inspection, the card may be removed and retained as part of the building owner's record.

108A.3 Inspection requests. It shall be the duty of the person doing the work authorized by a permit to notify the building official that such work is ready for inspection. The building official may require that every request for inspection be filed at least one working day before such inspection is desired. Such request may be in writing or by telephone at the option of the building official.

It shall be the duty of the person requesting any inspections required by this code to provide access to and means for inspections of such work.

108A.3.1 Off-hour inspections. Those desiring inspections outside normal business hours (7:30 a.m. to 4:00 p.m., Monday through Friday, excluding legal holidays) may avail themselves of this service by prior arrangement and prepayment. See Section 110A, Table 1A-G – Inspections, Surveys and Reports – for applicable fee.

108A.3.2 Permits by other departments. Those applying for permits issued by other City departments which require an inspection, certification or report by the Department as a condition of issuance of said permits shall apply to the Department for said inspection, certification or report and pay a fee at the Department of Building Inspection. See Section 110A, Table 1A-G – Inspections, Surveys and Reports – for applicable fee.

108A.4 Approval required. No work shall be done on any part of the building or structure beyond the point indicated in each successive inspection without first obtaining the approval of the Building Official. Such approval shall be given only after an inspection shall have been made of each successive step in the construction as indicated by each of the inspections required in Section 108A.5. Any portions which do not comply with the provisions of this code and with the approved construction documents shall be corrected, and no such portion shall be covered or concealed until approved.

108A.5. Required inspections.

108A.5.1 General. The structural framework of any part of any building or structure shall not be covered or concealed without first obtaining the approval of the building official. Protection of joints and penetrations in fire-resistive assemblies shall not be concealed from view until inspected and approved.

108A.5.2 Foundation inspection. Inspection shall be made after excavations for footings is complete and any required reinforcing steel is in place. For concrete foundations, any required forms shall be in place prior to inspection. All materials for the foundation shall be on the job site; however, where concrete is ready mixed in accordance with approved nationally recognized standards, the concrete need not be on the job site. Where the foundation is to be constructed of approved treated wood, additional inspections may be required by the building official.

108A.5.3 Concrete slab or under-floor inspection. Inspection shall be made after all in-slab or under- floor reinforcing steel building service equipment, conduit, piping accessories and other ancillary equipment items are installed, before any concrete is placed or floor sheathing installed, including the subfloor.

108A.5.4 Reinforcing steel. Inspection shall be made when reinforcing steel is in place in walls, floor and roof framing and other concrete members, and before any concrete is poured or placed. All reinforcing steel shall be visible for inspection.

108A.5.5 Structural steel. Inspection shall be made when structural steel framework, or any structural steel member of a building, is in place and before being covered or concealed in any manner.

108A.5.6 Frame inspection. Inspection shall be made after the roof, roof deck or sheathing, all framing, fire blocking and bracing are in place and all conduits, plumbing pipes, chimneys and vents to be concealed are complete and the rough electrical, plumbing, and heating wires, conduits, plumbing pipes and ducts are approved.

108A.5.7 Lath or gypsum board inspection. Inspection shall be made after all lathing and gypsum board, interior and exterior, are in place, but before any plastering is applied or before gypsum board joints and fasteners are taped and finished.

108A.5.8 Fire-rated suspended ceilings. Inspection shall be made after the installation of the hangers, lighting fixtures and air diffusers, the protective fixture boxes and main suspended ceiling members and before the ceiling is installed.

108A.5.9 Final inspection. A final inspection shall be made when the construction work has been completed, and the structure is ready for occupancy, but before it is occupied. There shall be a final inspection and approval on all buildings and structures when completed and ready for occupancy or use after plumbing, electrical and special inspection, and any other applicable approvals have been obtained. See Section 109A for certificate of occupancy requirements.

An exclusive electrical or plumbing final approval shall not be given or posted unless it is ascertained by the Building Official that no building permit is required.

108A.6 Special inspections. For special inspections, see Chapter 17.

108A.7 Other inspections. In addition to the called inspections specified above, the building official may make or require other inspections of any construction work to ascertain compliance with the provisions of this code and other laws which are enforced by the code enforcement agency.

108A.7.1 Concealed work. Whenever any work for which called inspections are required is covered or concealed without inspection, or whenever work is performed and concealed without a permit, and in cases where it is necessary to determine if the building or parts thereof are considered unsafe due to any of the conditions as set forth in Section 102A, the Building Official may require that such work be exposed for examination. The work of exposing or recovering or reconstructing such portions of the building or structure shall not entail expense to the City and County of San Francisco or any of its officials or employees, but shall be at the expense of the owner.

108A.8 Reinspection. A reinspection fee shall be assessed for each inspection or reinspection made necessary by any of the following conditions:

1. **When such portion of work for which inspection is called is not complete.**
2. **When corrections called for are not made.**
3. **When the inspection record "Job Card" is not properly posted on the work site.**
4. **When the approved plans are not readily available to the inspector.**
5. **For failure to provide access on the date for which inspection is requested.**
6. **For deviating from plans requiring the approval of the Building Official.**

The first reinspection for failure to comply with requirements shall not be assessed a reinspection fee. All subsequent reinspections on a job for the same or subsequent errors or omissions shall be charged a reinspection fee.

Subsequent to inspector determination of reinspection fee requirements, no required or requested inspections shall be made nor shall the job be given a Certificate of Final Completion and Occupancy or final approval until the required fees are paid at the Central Permit Bureau. See Section 110A, Table 1A-G – Inspections, Surveys and Reports – for applicable fee.

SECTION 109A – CERTIFICATE OF OCCUPANCY; AMENDED CERTIFICATE OF OCCUPANCY FOR EXISTING BUILDING

109A.1 Use and occupancy. No building or structure shall be used or occupied, and no change in the existing occupancy classification of a building or structure or portion thereof shall be made until the building official has issued a certificate of final completion and occupancy or an amended certificate of final completion and occupancy therefor as provided herein, or otherwise has been approved for use by the Department of Building Inspection.
Issuance of a certificate of final completion and occupancy or an amended certificate of final completion and occupancy shall not be construed as an approval of a violation of the provisions of this code or of other ordinances of the jurisdiction. Certificates presuming to give authority to violate or cancel the provisions of this code or other ordinances of the jurisdiction shall not be valid. It shall be the duty of the Police Department, when called upon by the Building Official, to enforce this provision.

109A.2 Change in occupancy or use. Changes in the character or use of a building shall not be made except as specified in San Francisco Existing Building Code Section ~~3408~~ 407 of this code. A certificate of final completion and occupancy shall be required for changes in use or occupancy as set forth in San Francisco Existing Building Code Section ~~3408~~ 407, except for Group R-1 and R-2 Occupancies; Group R-1 and R-2 occupancies shall be subject to the requirements of Sections 109A.7 and 109A.8.

109A.3 Certificate issued. The Building Official shall issue certificates of final completion And Occupancy for buildings or structures erected or enlarged; for each change in occupancy classification in any building, structure or portion thereof; and for buildings or structures seismically upgraded in accordance with the provisions of this code. An Amended certificate of final completion and occupancy shall be issued for an existing building where there is an increase in the number of legal dwelling units resulting in a change of occupancy. The amended certificate of occupancy shall indicate the date the first certificate of occupancy and any subsequent certificates of occupancy for the building or structure were issued. If there is no original certificate of occupancy, the amended certificate of occupancy shall refer to the date of initial construction on file in the records of the Department. The provisions of this section shall not be available for use in RH-1 or RH-1(D) zoning districts, nor shall it apply to any residential dwelling that is inconsistent with existing law.
EXCEPTION: For Group R-1 and R-2 Occupancies, see Sections 109A.7 and 109A.8.

109A.4 Temporary certificate. Temporary certificates of occupancy may be issued if the Building Official finds that no substantial hazard will result from occupancy of any building, or portion thereof, before the same is completed and satisfactory evidence is submitted that the work could not have been completed prior to occupancy. The request for such temporary certificate shall be in writing, and no occupancy of the building shall be made until such certificate is issued. Such temporary certificate shall be valid for a period not to exceed 12 months, unless an extension of time is approved by the Building Official. See Section 110A, Table 1A-G – Inspections, Surveys and Reports – for applicable fee.

109A.5 Posting. No requirements.

109A.6 Revocation. The building official may, in writing, suspend or revoke a certificate of occupancy or an amended certificate of occupancy issued under the provisions of this code whenever the certificate is issued in error, or on the basis of incorrect information supplied, or when it is determined that the building or structure or portion thereof is in violation of any ordinance or regulation or any of the provisions of this code.

109A.7 Certificate or amended certificate of final completion and occupancy, Group R-1 and R-2 occupancy. Before the Department may issue a certificate of final completion and occupancy for a newly-erected building or structure, an amended certificate of final completion and occupancy for an existing building pursuant to Section 109A.3, or Apartment House / Hotel License, a written report of compliance with applicable codes, standards and regulations and any conditions of approval to the building, structure or property shall be obtained from those agencies having jurisdiction. An amended certificate of final completion and occupancy issued for changes to an existing building shall indicate the date the first certificate of occupancy and any subsequent certificates of occupancy for the building or structure were issued. If there is no original certificate of occupancy, the amended certificate of occupancy shall refer to the date of initial construction on file in the records of the Department.

Where any permit for the building, structure or property was appealed to the Board of Appeals and the Board imposed conditions on appeal, the Department may not issue a certificate of final completion and occupancy, an amended certificate of final completion and occupancy, or apartment house / hotel license until it determines that the conditions have been met. A copy of the certificate of final completion and occupancy or amended certificate of final completion and occupancy shall be forwarded to the Board of Appeals.

109A.8 Group R-1 and R-2 occupancy, apartment house /Hotel License. A license shall be required for every Group R-1 and R-2 occupancy structure. The license shall be obtained by paying the necessary fees as set forth in Section 110A, Table 1A-P – apartment house and hotel license fees.

The apartment house / hotel license is not transferable, and a new license must be applied for by the new owner within 30 days of change of ownership.

The apartment house / hotel license shall not be construed as authority to violate, cancel, alter or set aside any of the provisions or requirements of any laws or ordinances of the City and County of San Francisco, nor shall such issuance thereafter prevent requiring corrections of errors or of violations of any applicable law or ordinance of the City and County of San Francisco.

NOTES:

1. These permit fees do not include other fees that may be required by other Departments: Public Works, Planning, Fire, Public Health, etc., nor do they include plumbing, electrical or mechanical permit fees unless so stated in the other fee tables.

2. A surcharge of $5.00 shall be added to those alteration permits sought for buildings classified as R3 (one/two-family dwelling) and E3 (licensed day care) that were constructed prior to 1979 to implement the interior lead safe work practices provisions of Section 3407 *et seq.* of this code.

3. All permit fees related to reviewing the structural integrity of awning replacements for permits submitted "over the counter" at the Central Permit Bureau are hereby waived for any permit issued to a Small Business Enterprise for such activities during the month of May. For purposes of this Section, a Small Business Enterprise shall be a business that has 100 or fewer employees. The Planning Department and the Department of Building Inspection shall establish process by which those two departments will certify that an applicant is a Small Business Enterprise for the purpose of this Section and Section 355 of the Planning Code.

(Amended by Ord. 63-14 , File No. 140312, App. 5/8/2014, Eff. 6/7/2014; Ord. 159-15 , File No. 150559, App. 9/17/2015, Eff. 10/17/2015)

TABLE 1A-B – OTHER BUILDING PERMIT AND PLAN REVIEW FEES

1. Plan Review Fees Not Covered in Table 1A-A:	Plan Review Hourly Rate - Minimum One Hour
2. Back Check Fee:	Plan Review Hourly Rate - Minimum One Hour
3. Commencement of work not started: a. Building, Plumbing, Mechanical, or Electric Permit Fee: b. Plan Review Fee:	See SFBC Section 106A.4.4.1 Note: Compliance with additional codes is required. 75% of current fee 100% of current fee
4. Permit Facilitator Fee:	Plan Review Hourly Rate Hourly - Minimum Three Hours See SFBC Section 106A.3.6
5. Pre-application Plan Review Fee:	Plan Review Hourly Rate - Minimum Two Hours Per Employee
6. Reduced Plan Review Fee:	50% of the Plan Review Fee
7. Sign Plan Review Fee:	See Table 1A-A– Building Permit Fees
8. Site Permit Fee:	25% of Plan Review Fee based on Table 1A-A. Minimum fee $500.00
9. Premium Plan Review Fee– Submitted application:	50% of Plan Review Fee plus $1,000.00
10. Premium Plan Review Fee– Over the counter building plan review by appointment:	50% of Plan Review Fee plus $400.00
11. Other Services:	Hourly Rates per Table 1A-D

NOTES:

1. See Table 1A-D-Standard Hourly Rates.
2. "Back check" is defined as: (1) that time spent reviewing applicant-initiated revisions to plans that do not affect the valuation, scope or size of the project; or (2) any additional plan review performed on required corrections to plans beyond the standard review process, as determined by the Building Official. Plan review required for applicant-initiated revisions effecting valuation, scope, or size or project may be assessed a new plan review fee in addition to the initial plan review fee as determined by the Building Official.

TABLE 1A-C – PLUMBING/MECHANICAL PERMIT ISSUANCE AND INSPECTION FEES

A. Permit applicants shall show a complete itemization of the proposed scope of work and select the appropriate fee category.

B. A separate permit is required for each structure, condominium unit, existing apartment unit, high- rise office floor, suite, or tenant space.

C. Standard hourly issuance/inspection rates will apply for installations not covered by the fee categories below.

D. Fees shall be paid in full prior to approval for occupancy, job card signature, gas tags, or final signoff, as applicable.

E. See Table 1A-R for refund policy.

1. Permit Issuance Fees by Category:

CATEGORY 1P	Single Residential Unit– water service, sewer replacement, single plumbing fixture installation, shower pan installation, or kitchen or bathroom remodels	$148.80
CATEGORY 1M	Single Residential Unit– mechanical gas appliance (furnace, hydronic heat, heat pump)	$139.50
CATEGORY 2PA	Plumbing installation for residential construction with 6 or less dwelling units or guest rooms; without underground plumbing installation (includes water, gas, waste, and vent)	$255.75
CATEGORY 2PB	Plumbing installation for residential construction with 6 dwelling units or guest rooms or less; with underground plumbing installation (includes water, gas, waste, and vent)	$372.00
CATEGORY 2M	Mechanical gas appliances for residential construction with 6 dwelling units or guest rooms or less	$223.20
CATEGORY 3PA	7– 12 Dwelling Units	$534.75
CATEGORY 3PB	13– 36 Dwelling Units	$1,069.50
CATEGORY 3PC	Over 36 Dwelling Units	$4,464.00
CATEGORY 3MA	7– 12 Dwelling Units	$534.75
CATEGORY 3MB	13– 36 Dwelling Units	$1,069.50
CATEGORY 3MC	Over 36 Dwelling Units	$4,464.00
CATEGORY 4PA	Fire sprinklers– one and two family dwelling units	$139.50
CATEGORY 4PB	Fire sprinklers– 3 or more dwelling units or guest rooms, commercial and office– per floor	$232.50

CATEGORY 5P/5M	Office, mercantile & retail buildings: New or Tenant Improvements; heating/cooling equipment to piping connected thereto– per tenant or per floor, whichever is less	$302.25
CATEGORY 6PA	Restaurants (new and remodel) fee includes 5 or less drainage and or gas outlets– no fees required for public or private restroom	$289.23
CATEGORY 6PB	Restaurants (new and remodel) fee includes 6 or more drainage and/or gas outlets– no fees required for public or private restroom	$818.40
CATEGORY 8	New boiler installations over 200 kbtu	$255.75
CATEGORY 9P/M	Surveys	$279.00
CATEGORY 10P/M	Condominium conversions	$339.45
BOILER MAINTENANCE PROGRAM	(Permit to operate– PTO) See Table 1A-M– Boiler Fees for additional boiler- related fees.	$48.36 each
2.	Standard inspection fees Reinspection or additional inspection per SFBC Section 108A.8	Hourly inspection rate

A permit may include more than one category, and each category will be charged separately.

(Amended by Ord. 159-15 , File No. 150559, App. 9/17/2015, Eff. 10/17/2015)

TABLE 1A-D – STANDARD HOURLY RATES

1. Plan Review $173.91 per hour
2. Inspection $158.10 per hour, $167.40 per hour for OSHPD inspection
3. Administration $96.72 per hour, with a minimum charge of $48.36 for 30 minutes or less

(Amended by Ord. 159-15 , File No. 150559, App. 9/17/2015, Eff. 10/17/2015)

TABLE 1A-E – ELECTRICAL PERMIT ISSUANCE AND INSPECTION FEE SCHEDULE

A. Permit applicants are required to itemize the proposed scope of work and select the appropriate category and fee amount.

B. Separate permits are required for each structure, condominium unit, existing dwelling unit (except in R3 occupancies), common area, commercial office floor or individual tenant space.

C. Standard hourly permit issuance and inspection rates shall apply for installations not covered by this fee schedule.

D. Fees shall be paid in full prior to obtaining: occupancy approval, job card signature, permission to energize, or final signoff, as applicable.

E. For the purpose of fee calculation: appliances and utilization equipment each count as one outlet or device in addition to receptacles, switches, and light outlets.

F. All permit fees related to reviewing the installation of pedestrian level lighting are hereby waived for any permit issued for such activities for Small Business Enterprises during the month of May. For purposes of this Section, a Small Business Enterprise shall be a business that has 100 or fewer employees. The Planning Department and the Department of Building Inspection shall establish process by which those two departments will certify that an applicant is a Small Business Enterprise for the purpose of this Section and Section 355 of the Planning Code.

See Table 1A-R for refund policy.

See Table 1A-J for permit extensions.

Category 1
General Wiring: Residential Buildings up to 10,000 sq. ft.

Up to 10 outlets and/or devices $148.80

11 to 20 outlets and/or devices $223.20

Up to 40 outlets and/or devices, includes up to 200 Amp service upgrade $279.00

* More than 40 outlets and/or devices $390.60

* Buildings of 5,000 to 10,000 sq. ft. $558.00

Category 2
General Wiring: Nonresidential Buildings & Residential Buildings over 10,000 sq. ft.

Up to 5 outlets and/or devices $223.20

6 to 20 outlets and/or devices $334.80

* Areas up to 2,500 sq. ft. $446.40

* 2,501 to 5,000 sq. ft. $669.60

* 5,001 to 10,000 sq. ft. $1,116.00

* 10,001 to 30,000 sq. ft. $2,232.00

*** 30,001 to 50,000 sq. ft. $4,464.00**

*** 50.001 to 100,000 sq. ft. $6,696.00**

*** 100,001 to 500,000 sq. ft. $13,392.00**

*** 500,001 to 1,000,000 sq. ft. $30,132.00**

*** More than 1,000,000 sq. ft. $60,264.00**

*** Includes Category 3 & 4 installations in new buildings or major remodel work**

Category 3
Service Distribution and Utilization Equipment
Includes: Generators, UPS, Transformers and Fire Pumps
(Use Category 3 for installations separate from the scope of work in Categories 1 or 2)

225 amps rating or less $223.20

250 to 500 amps $334.80

600 to 1000 amps $446.40

1,200 to 2,000 amps $669.60

More than 2,000 amps $892.80

600 volts or more $892.80

150 kva or less $223.20

151 kva or more $334.80

Fire Pump installations $446.40

Category 4
Installations of Fire Warning and Controlled Devices
(Use Category 4 for installations separate from the scope of work in Categories 1 or 2)

Up to 2,500 sq. ft. $223.20

2,501 to 5,000 sq. ft. $334.80

5,001 to 10,000 sq. ft. $669.60

10,001 to 30,000 sq. ft. $1,116.00

30,001 to 50,000 sq. ft. $2,232.00

50,001 to 100,000 sq. ft. $4,464.00

100,001 to 500,000 sq. ft. $6,696.00

500,001 to 1,000,000 sq. ft. $15,066.00

More than 1,000,000 sq. ft. $30,132.00

Fire Warning and Controlled Devices (Retrofit Systems)

Buildings of not more than 6 dwelling units $334.80

Buildings of not more than 12 dwelling units $446.40

Buildings with more than 12 dwelling units and non-residential occupancy

Building up to 3 floors $669.60

4-9 floors $1,339.20

10-20 floors $2,232.00

21-30 floors $4,464.00

More than 30 floors $6,696.00

Category 5
Miscellaneous Installations

Remodel/Upgrade of Existing Hotel Guest/SRO Rooms

Up to 6 rooms $279.00

Each additional group of 3 rooms $139.50

Data, Communications, and Wireless Systems

10 cables or less Exempt

11 to 500 cables $158.10

Each additional group of 100 cables $23.25

Security Systems, 10 components or less $158.10

Each additional group of 10 components $9.30

Includes installations and devices that interface with life safety systems; excludes installations in R3 Occupancies

Office Workstations, 5 or less $158.10

Each additional group of 10 workstations $46.50

Temporary Exhibition Wiring, 1 to 100 booths (1 inspection) $223.20

Each additional group of 10 booths $23.25

Exterior Electrical Sign $158.10

Interior Electrical Sign $158.10

Each Additional Sign, at the same address $37.20

Garage Door Operator (Requiring receptacle installation) $158.10

Quarterly Permits $348.75

Maximum five outlets in any one location

Survey, per hour or fraction thereof $158.10

Survey, Research, and Report preparation, per hour or fraction thereof $279.00

Witness Testing: life safety, fire warning, emergency, and energy management systems

Hourly Rate $158.10

Additional hourly rate $158.10

Off-hour inspections: (two hour minimum) $316.20

Additional off-hourly rate $237.15

Energy Management, HVAC Controls, and Low-Voltage Wiring Systems

1-10 floors (3 inspections) $446.40

Each additional floor $46.50

Solar Photovoltaic Systems

10 KW rating or less $158.10

Each additional 10 KW rating $93.00

Standard Hourly Inspection Rate See Table 1A-D

(Amended by Ord. 63-14 , File No. 140312, App. 5/8/2014, Eff. 6/7/2014; Ord. 159-15 , File No. 150559, App. 9/17/2015, Eff. 10/17/2015)

TABLE 1A-F – SPECIALTY PERMIT FEES

1. Bleachers Permit Fee:	See Table 1A-A for New Construction Fees
2. Chimney and Flue Permit Fee:	See Table 1A-A for New Construction Fees
3. Demolition Permit Fee:	See Table 1A-A for New Construction Fees
4. Extra Permit Work: (exceeding scope)	2 times the standard fees for work remaining to be done or not covered in original permit scope
5. Garage Door Permit Fee: Each garage door in an existing building	$148.80
6. Grading Permit Fee:	See Table 1A-A for New Construction Fees
7. House Moving Permit Fee:	Standard Hourly Inspection Rate - Minimum 3 Hours
8. Recommencement of Work Not Completed:	Standard Inspection Fee per Table 1A-G; See also Table 1A-B– Commencement of Work Not Started
9. Reroofing Permit Fee:	$148.80 for Single-Family homes and duplexes $223.20 for all others
10. Strong Motion Instrumentation Program Fee:	
Group R Occupancies of 3 stories or less, except hotels and motels	0.00013 times the valuation
Hotels and motels, all buildings greater than 3 stories, all occupancies other than Group R	0.00024 times the valuation
Minimum fee	$1.60
11. Subsidewalk Construction Permit Fee:	
Construction	See Table 1A-A for New Construction Fees
12. Construction of impervious surface in the required front and setback area	$148.80

(Amended by Ord. 159-15 , File No. 150559, App. 9/17/2015, Eff. 10/17/2015)

TABLE 1A-G – INSPECTIONS, SURVEYS AND REPORTS

1. Standard Hourly Rate	See Table 1A-D
2. Off-hours inspection	Standard Hourly Inspection Rate - Minimum Two Hours plus permit fee
3. Pre-application inspection	Standard Hourly Inspection Rate - Minimum Two Hours
4. Re-inspection fee	Standard Hourly Inspection Rate
5. Report of residential records (3R)	$148.80
6. Survey of nonresidential buildings:	Standard Hourly Inspection Rate - Minimum Two Hours
7. Survey of residential buildings for any purpose or Condo Conversions:	
Single unit	$1,627.50
Two to four units	$2,139.00
Five + units	$2,139.00 plus Standard Hourly Inspection Rate
Hotels:	
Includes 10 guestrooms	$1,627.50
11 + guestrooms	$2,139.00 plus $39.53 per guestroom over 11
8. Temporary Certificate of Occupancy	Standard Hourly Inspection Rate - Minimum Two Hours

(Amended by Ord. 159-15 , File No. 150559, App. 9/17/2015, Eff. 10/17/2015)

TABLE 1A-H – SIGN PERMIT FEES

Nonelectric and electric sign permit fee– See Table 1A-A for New Construction Fees

NOTE: See also Table 1A-E for required Electrical Sign Permits and Inspections

TABLE 1A-I – RESERVED

TABLE 1A-J – MISCELLANEOUS FEES

1. Central Permit Bureau Processing Fee for Miscellaneous	Standard Administration Hourly Rate -

Permits from other disciplines	Minimum One- Half Hour
2. Building numbers (each entrance)	$96.72 NEW ADDRESSES $195.30 CHANGE OF EXISTING ADDRESS OR LOT NUMBER
3. Extension of time: application cancellation and permit expiration:	
Each application extension (in plan review)	$148.80 plus 20% of All Plan Review Fees
Each permit extension	$148.80 plus 10% of All Permit Issuance Fees
4. Product approvals:	
General approval - initial or reinstatement	Standard Hourly Plan Review Rate - Minimum Three Hours
General approval - modification or revision	Standard Hourly Plan Review Rate - Minimum Three Hours
General approval - biannual renewal	Standard Hourly Plan Review Rate - Minimum Three Hours
5. California Building Standards Commission Fee	Pursuant to the provisions of California Health and Safety Code Sections 18930.5, 18931.6, 18931.7 and 18938.39
6. Vacant building - Initial and annual registration fee	Standard Inspection Hourly Rate - Minimum Four and One-Half Hours

(Amended by Ord. 159-15 , File No. 150559, App. 9/17/2015, Eff. 10/17/2015)

TABLE 1A-K – PENALTIES, HEARINGS, CODE ENFORCEMENT ASSESSMENTS

1. Abatement Appeals Board hearing, filing fee	$158.10 per case
2. Board of Examiners filing fees:	
Each appeal for variance from interpretation of code requirements	Standard Hourly Plan Review Rate - Minimum Two Hours
Each appeal for approval of substitute materials or methods of construction	Standard Hourly Plan Review Rate - Minimum Four Hours
3. Building Official's abatement order hearing	Standard Hourly Plan Review Rate - Minimum Two Hours
4. Emergency order	Standard Hourly Plan Review Rate - Minimum

	Two Hours
5. Exceeding the scope of the approved permit	2 times the issuance fee
6. Access Appeals Commission:	
Filing fee	Standard Hourly Plan Review Rate - Minimum Two Hours per appeal
Request for a rehearing	Standard Hourly Plan Review Rate - Minimum Two Hours
7. Lien recordation charges	$173.91 or 10 percent of the amount of the unpaid balance, including interest, whichever is greater
8. Work without permit: investigation fee:	
Building, Electrical, Plumbing or Mechanical Code violations	9 times the Permit Issuance Fee plus the original permit fee
9. Building Inspection Commission hearing fees:	
Notice of appeal	Standard Hourly Plan Review Rate - Minimum Four Hours
Request for jurisdiction	Standard Hourly Plan Review Rate - Minimum Four Hours
Request for rehearing	Standard Hourly Plan Review Rate - Minimum Two Hours
10. Additional hearings required by Code	Standard Hourly Plan Review Rate - Minimum Four Hours
11. Violation monitoring fee (in-house)	Standard Administration Hourly Rate– Minimum One- Half Hour Monthly

(Amended by Ord. 159-15 , File No. 150559, App. 9/17/2015, Eff. 10/17/2015)

TABLE 1A-L – PUBLIC INFORMATION

1. Public notification and record keeping fees:	
Structural addition notice	Standard Administration Hourly Rate - Minimum One- Half Hour
Affidavit record maintenance	$15.00
Posting of notices (change of use)	Standard Administration Hourly Rate - Minimum One- Half Hour

Requesting notice of permit issuance (each address) per year	Standard Administration Hourly Rate - Minimum One- Half Hour
30-inch by 30-inch (762 mm by 762 mm) sign	$15.00

2. Demolition:

Notice of application and permit issuance by area/interested parties:	
1 area (1 area = 2 blocks)	$96.72 per annum per each area

3. Notices:

300-foot (91.44 m) notification letters	Standard Administration Hourly Rate - Minimum One and One-Half Hour
Residential tenants notification	Standard Administration Hourly Rate - Minimum One- Half Hour

4. Reproduction and dissemination of public information:

Certification of copies:	
1 to 10 pages	$15.00
Each additional 10 pages or fraction thereof	$3.50
Electrostatic reproduction:	
Each page photocopy	$0.10
35 mm duplicards from microfilm rolls (Diazo card)	$3.50
Hard copy prints:	
8 1/2 inch by 11 inch copy from microfilm roll	$0.10
11 inch by 17 inch copy of plans	$0.10
8 1/2 inch by 11 inch copy from aperture cards or from electronic copies of building records (scanned or computer generated)	$0.10

5. Replacement of approved construction documents:

Each sheet of plans (Larger than 11 × 17)	ACTUAL COST CHARGED BY VENDOR

6. Records Retention Fee

Each page of plans per page of plans	$3.00
Each page of supporting documentation (e.g., soil reports, structural calculations, acoustical reports, energy calculations, etc.) per page of documentation	$0.10

(Amended by Ord. 159-15 , File No. 150559, App. 9/17/2015, Eff. 10/17/2015)

TABLE 1A-M – BOILER FEES

Permit to install or replace	See Table 1A-C - Category 8
Permit to operate (certificate issued)	Standard Administration Hourly Rate - Minimum One- Half Hour
Renew permit to operate (certificate issued)	Standard Administration Hourly Rate - Minimum One- Half Hour
Replacement of issued permit to operate	Standard Administration Hourly Rate - Minimum One- Half Hour
Connection to utility company provided steam (includes permit to operate)	Standard Administration Hourly Rate - Minimum One- Half Hour
Boiler Maintenance Program	$48.36

Renewal required:

1. Low-pressure boilers every 12 months. (See definition of low-pressure boilers in Chapter 2.)
2. Water heaters when alteration or replacement permits are issued.

(Amended by Ord. 159-15 , File No. 150559, App. 9/17/2015, Eff. 10/17/2015)

TABLE 1A-N – ENERGY CONSERVATION

	INITIAL INSPECTION	*COMPLIANCE INSPECTION*
Single-family dwellings and two-family dwellings	$158.10	$79.05
Apartment houses and residential hotels:		
Up to 20 rooms	$237.15	$118.58
Each additional 10 rooms or portion thereof	$79.05	$48.36
Energy reports and certificates:		$48.36
Filing fee for appeals:		$96.72

Certification of qualified energy inspector:		$186.00

(Amended by Ord. 159-15 , File No. 150559, App. 9/17/2015, Eff. 10/17/2015)

TABLE 1A-O – RESERVED

TABLE 1A-P – RESIDENTIAL CODE ENFORCEMENT AND LICENSE FEES

1. One- and Two-family dwelling unit fees:	$52.00 per rental unit
2. Apartment house license fees:	
Apartment houses of 3 to 12 units	$326.00 per annum
Apartment houses of 13 to 30 units	$488.00 per annum
Apartment houses of more than 30 units	$488.00 and $55.00 for each additional 10 units or portion thereof
3. Hotel license fees:	
Hotels of 6 to 29 rooms	$256.00 per annum
Hotels of 30 to 59 rooms	$470.00 per annum
Hotels of 60 to 149 rooms	$584.00 per annum
Hotels of 150 to 200 rooms	$660.00 per annum
Hotels of more than 200 rooms	$660.00 and $55.00 for each additional 25 rooms or portion thereof

TABLE 1A-Q – HOTEL CONVERSION ORDINANCE FEES

Annual unit usage report	$96.72
1. Appeal of initial or annual status determination:	Standard Inspection Hourly Rate pursuant to Section 110A of this code shall apply for Department Inspector's work on such request plus fees for Hearing Officer
2. Challenge to claims of exemption:	
Usage report	$48.36
Claim of exemption based on low-income housing	$316.20

Claim of exemption based on partially completed conversion	$474.30
3. Complaint of unlawful conversion	$48.36
Determination by Department of Real Estate and cost of independent appraisals	Actual costs
4. Initial unit usage report	$316.20
5. Permit to convert	$474.30
6. Request for hearing to exceed 25% tourist season rental limit:	
Inspection staff review - standard hourly inspection fee	Standard Inspection Hourly Rate
Statement of exemption - Hearing Officer fee	$316.20
7. Unsuccessful challenge:	
Usage report:	
Inspection staff review - standard hourly inspection fee	Standard Inspection Hourly Rate
Statement of exemption - Hearing Officer fee	$316.20
Request for winter rental:	
Standard hourly inspection fee	Standard Inspection Hourly Rate

(Amended by Ord. 159-15 , File No. 150559, App. 9/17/2015, Eff. 10/17/2015)

TABLE 1A-R – REFUNDS

Partial or complete refunds of only those fees contained herein will be given, provided the applicant meets the refund requirements of the applicable section of this code. No other fees are refundable, except as follows:

1. Application or Permit Issuance Fee:	
Building, plumbing, electrical or mechanical permit issuance fee	Amount paid less $160.00 or actual costs, whichever is greater. No refunds given after work started.
Plan Review Fees (each)	Amount determined by the Building Official less $160.00 No Refund due after application deemed acceptable for Department of Building Inspection Plan Review
2. Miscellaneous Fees:	Amount paid less $52.00

No refunds less than $52.00

No existing permittee who paid a fee under the fee schedules in effect at the time the fee was paid shall be eligible for a refund or subject to a fee reassessment as a result of an amendment to the fee schedules. If the Building Official determines that an error has been made in the assessment of fees, a refund for the portion determined to be in error may be made upon written request by the applicant.

(Amended by Ord. 159-15 , File No. 150559, App. 9/17/2015, Eff. 10/17/2015)

TABLE 1A-S – UNREINFORCED MASONRY BEARING WALL BUILDING RETROFIT

Review of Inventory Form (Section 1604B.2.1)	Standard Plan Review Hourly Rate - Minimum Two Hours
Review of the summary of the engineering report (Section 1604B.2.3)	Standard Plan Review Hourly Rate - Minimum Two Hours
Board of Examiners filing fees (Section 105A7.4):	
Each appeal for a variance from or interpretation of code requirements	Standard Plan Review Hourly Rate - Minimum Two Hours
Each appeal for the approval of substitute materials or methods of design or construction (Section 105A.7.3)	Standard Plan Review Hourly Rate - Minimum Four Hours

Chapter 2
DEFINITIONS

SECTION 202 – DEFINITIONS

202 Add this definition as follows:

KITCHEN. That portion in a residential dwelling unit that is a room or area used for cooking, food storage and preparation and washing dishes, including associated counter tops and cabinets, refrigerator, stove, ovens and floor area.

*202 Revise the first sentence of the following two definitions under **STANDPIPE SYSTEM**:*

STANDPIPE SYSTEM, CLASSES OF. Standpipe classes are as follows:

Class I system. A system providing **3" (76.2 mm)** hose connections to supply water for use by fire

departments and those trained in handling heavy fire streams.

Class III system. A system providing 1-1/2-inch (38 mm) hose stations to supply water for use by building occupants and **3" (76.2 mm)** hose connections to supply a larger volume of water for use by fire departments and those trained in handling heavy fire streams.

Chapter 3
USE AND OCCUPANCY CLASSIFICATION

No San Francisco Building Code Amendments

Chapter 4
SPECIAL DETAILED REQUIREMENTS BASED ON USE AND OCCUPANCY

SECTION 406 – MOTOR-VEHICLE-RELATED OCCUPANCIES

406.3 Change the section numbering to include the new added section:

406.3 Private garages and carports. Private garages and carports shall comply with Section 406.3.1 through **406.3.7.**

406.3.7 Add the following section:

406.3.7 Ventilation.

Ventilation shall be provided as follows: Natural ventilation shall be required, and such space shall be provided with ventilation outlets in the walls or exterior doors. The total net area of such ventilation outlets shall be 200 square inches (0.129 m^2) for a space up to 1,000 square feet (92.903 m^2) in area and shall be increased 30 square inches (0.0194 m^2) for each additional 200 square feet (18.58 m^2) of floor area up to maximum floor area of 3,000 square feet (278.709 m^2).

SECTION 435 – SPECIAL PROVISIONS FOR LICENSED 24-HOUR CARE FACILITIES IN A GROUP R-2.1, R-3.1, R-4

435.3 Add the following section:

435.3.5 For detached one- and two-family dwellings, and townhouses not more than three stories above grade plane in height with a separate means of egress, buildings housing protective social-care homes or in occupancies housing inmates who are not restrained need not be of one-hour fire-resistive construction when not more than two stories in height. In no case shall individual floor areas exceed 3,000 square feet (279 m^2). The fire-resistive protection of the exterior walls shall not

be less than one hour where such walls are located within 5 feet (1524 nn) of the property line. Openings within such walls are not permitted. Openings within non-rated walls need not be protected. [CRC ~~R325.3.2~~*R335.9*]

SECTION 456 – FENCES

456 Add the following section:

456.1 Fences. Fences on any property containing a Group R Occupancy shall not be higher than 10 feet (3.048 mm). Fences located less than 10 feet (3.048 mm) from any public sidewalk shall not be higher than 10 feet (3.048 mm) unless they are of open-type materials such as chain link fabric. Fence height shall be measured from the level of general existing adjacent ground of the general area prior to the improvement of the properties. A fence or railing placed on top of the retaining wall shall be measured from the top of the wall.
Fences constructed wholly or in part of barbed wire are prohibited, except when permitted with the express written permission of the Building Official, and the Fire Department in the following situations:

1. On top of a fence more than 7 feet (2.134 m) high, protecting a dangerous or hazardous area.

2. Within a private area, enclosed by a seven- foot-high (2.134 m) fence, such that entry to the area is limited by the outer, nonbarbed fence.

3. In special instances for localized protection, and in areas within or atop a building to isolate dangerous conditions.

Chapter 5
GENERAL BUILDING HEIGHTS AND AREAS

No San Francisco Building Code Amendments

Chapter 6
TYPES OF CONSTRUCTION

No San Francisco Building Code Amendments

Chapter 7
FIRE AND SMOKE PROTECTION FEATURES

SECTION 707 – FIRE BARRIERS

707.1 Add a second paragraph to this section as follows:

Information technology rooms shall be in accordance with the Fire Code and Electrical Code.

Chapter 7A [SFM]
MATERIALS AND CONSTRUCTION METHODS FOR EXTERIOR WILDFIRE EXPOSURE

No San Francisco Building Code Amendments

Chapter 8
INTERIOR FINISHES

No San Francisco Building Code Amendments

Chapter 9
FIRE PROTECTION SYSTEMS

SECTION 901 – GENERAL

901.4 Add a second paragraph as follows:

Notwithstanding any other provisions of the California Building Code or other codes or regulations, Fire Department connections shall have 3-inch (76.2 mm) National Standard hose threads.

SECTION 903 – AUTOMATIC SPRINKLER SYSTEMS

903.2.8 Add exception 5 as follows:

5. An automatic residential fire sprinkler system shall not be required when additions or alterations are made to existing townhouses, one- and two- family dwellings not more than three stories above grade plane that do not have an automatic residential fire sprinkler system installed. [CRC 1.1.3, R313.1, R313.2]

Table 903.2.11.6 Add a new line to the end of the Table as follows:

TABLE 903.2.11.6
ADDITIONAL REQUIRED SUPPRESSION SYSTEMS

SECTION	SUBJECT
3202.3.4	**Pedestrian Walkways over Public Streets**

SECTION 905 – STANDPIPE SYSTEMS

905.3.4 Revise this section as follows:

905.3.4 Stages. Stages greater than 1,000 square feet in area (93 m^2) shall be equipped with a Class III wet standpipe system with 1-1/2-inch and **3-inch (38 mm and 76.2 mm)** hose connections on each side of the stage.

SECTION 907 – FIRE ALARM AND DETECTION SYSTEMS

907.2.9.1 Revise Item 3 and Item 4 as follows:

3. The building contains more than **6** dwelling units or sleeping units.

4. Congregate living facilities or congregate residences **three or more stories in height or having an occupant load of 11 or more.**

907.2.9.5 Add the following section:

907.2.9.5 Automatic smoke detection system. An automatic smoke detection system that activates the occupant notification system in accordance with Section 907.6 shall be installed throughout all interior corridors serving sleeping units.

Exceptions:

1. An automatic smoke detection system is not required in buildings that do not have interior corridors serving sleeping units and where each sleeping unit has a means of egress door opening directly to an exit or to an exterior exit access that leads directly to an exit.

2. An automatic smoke detection system is not required in buildings when all of the following conditions are met:

2.1. The building is equipped throughout with a supervised automatic sprinkler system installed in accordance with Section 903.3.1.1 or 903.3.1.2.

2.2. The notification devices will activate upon sprinkler water flow; and

2.3. At least one manual ~~fire alarm box~~ pull station is installed in an approved location.

907.2.11.6 Add a second paragraph as follows:

Group R-3 congregate living facilities having an occupant load of 6 or more shall be provided with

a manual fire alarm system.

SECTION 912 – FIRE DEPARTMENT CONNECTIONS

912 Add the following section:

912.7 Number of connections required. Sprinkler systems requiring a 4-inch (101.6 mm) or larger water service shall have two or more inlet connections as necessary to meet hydraulic demand.

Chapter 10
MEANS OF EGRESS

SECTION 1010 – DOORS, GATES AND TURNSTILES

1010.1.2 Revise item 4 as follows:

4. **Other than the main egress door at the primary entry,** doors within or serving a single dwelling unit in Groups R-2 and R-3.

SECTION 1011 – STAIRWAYS

1011.5.5 Modify the first sentence of the first paragraph as follows:

For all occupancies except R-3 one and two family dwellings and townhouses nosings shall have a curvature or bevel of not less than $^{1}/_{16}$ (1.6 mm) but not more than $^{9}/_{16}$ (14.3 mm) from the foremost projection of the tread. Risers shall be solid and vertical or sloped under the tread above from the underside of the nosing above at an angle not more than 30 degree (0.52 rad) from the vertical.

1011.5.5 Add a second paragraph as follows:

For R-3 one and two family dwellings and townhouses, the radius of curvature at the nosing shall be no greater than 9/16 inch (14mm). A nosing not less than 3/4 inch (19 mm) but not more than 1-1/4 inches (32 mm) shall be provided on stairways with solid risers. The greatest nosing projection shall not exceed the smallest nosing projection by more than 3/8 inch (9.5 mm) between two stories, including the nosing at the level of floors and landings. Beveling of nosings shall not exceed 1/2 inch (12.7 mm).

***Exception*: A nosing projection is not required where the tread depth is no less than 11 inches (279 mm). [*CRC R311.7.5.3*]**

1011.5.5.1 Modify the first sentence of the first paragraph as follows:

For all occupancies except R-3 one and two family dwellings and townhouses the leading edge (nosings) of treads shall project not more than $1^{1}/_{4}$ inches (32 mm) beyond the tread below.

1011.12 Add a sentence to the end of the Exception as follows:

Exception: Other than where required by Section 1011.12.1, in buildings without an occupied roof access

to the roof from the tip story shall be permitted to be by an alternating tread device, a ships ladder or a permanent ladder. **Stairs or ladders used only to attend equipment or window wells are exempt from the requirements of this chapter.**

1011.12.3 Add new sections as follows:

1011.12.3 Stairway replacement. Stairways that replace existing stairways in residential occupancies and which complied with the code in effect at the time they were constructed, and which have been adequately maintained and increased in relation to any increase in occupant load, alteration or addition, or any change in occupancy, may be reconstructed in the same configuration and construction as the existing stairways.

SECTION 1012 – RAMPS

1012.2 Add an exception as follows:

***Exception*: For R-3 one and two family dwellings and townhouses, where it is technically infeasible to comply because of site constraints, ramps may have a maximum slope of one unit vertical in eight horizontal (12.5 percent). [CRC R311.8.1]**

SECTION 1013 – EXIT SIGNS

1013.1 Add the following sentence after the exceptions:

Doorways or other openings leading to a fire escape, except within individual dwelling units, shall be provided with a sign reading "FIRE ESCAPE" in letters not less than 6 inches (152 mm) high, in high contrast with the background.

SECTION 1015 – GUARDS

1015.4 Revise exception 1 as follows:

1. **For occupancies other than R-3 and Townhouses,** from a height of 36 inches (914 mm) to 42 inches (1067 mm), guards shall not have openings which allow passage of a sphere 4 3/8 inches (111 mm) in diameter.

SECTION 1016 – EXIT ACCESS

1016.2 Add item 5 as follows:

7. [Reference CRC R311.1] For one- and two- family dwellings and townhouses, means of egress is allowed to pass through rooms and intervening spaces except garages.

1016.3 Add a section as follows:

1016.3 [Reference CRC R311.4] Vertical egress. For habitable levels or basements in R-3 occupancies or townhouses that are located more than one story above or more than one story

below an egress door, the maximum travel distance from any occupied point to a stairway or ramp that provides egress from such habitable level or basement shall not exceed 50 feet (15240 mm).

Add chapter as follows:

Chapter 10A
SECURITY REQUIREMENTS

SECTION 1001A – SCOPE

1001A.1 General. This chapter shall apply to all Group R, Division 1 and R, Division 2 Occupancies.

1001A.2 Apartment houses. Apartment houses (Group R, Division 1 and R, Division 2 Occupancies) and buildings containing more than two residential condominium units shall meet the security requirements of this chapter.

1001A.3 Hotels and motels. Hotels and motels shall comply with the security requirements of this chapter. For the purpose of this chapter, any building open to the public and offering accommodations to transient persons for compensation shall be considered as a hotel or motel.

SECTION 1002A – DEFINITIONS

For the purpose of this chapter, certain terms are defined as follows:

AUXILIARY LOCKING DEVICE is a secondary locking system added to the primary locking system to provide additional security.

BURGLARY-RESISTANT GLAZING MATERIALS are materials which are defined in ANSI/UL Standard 972.

DEADBOLT is a lock bolt which must be actuated by a key, a knob or thumb-turn and when projected becomes locked against return by end pressure, and does not have spring action, as a latch bolt does. A SINGLE CYLINDER DEADBOLT is a deadbolt lock which is activated from the outside by a key and from the inside by a knob, thumb-turn lever or similar mechanism. A DOUBLE CYLINDER DEADBOLT is a deadbolt which can only be activated by a key from both interior and exterior.

DEADLATCH or DEADLOCKING LATCH BOLT is a spring-actuated latch bolt having a beveled end and an incorporated plunger which, when depressed, automatically locks the projected latch bolt against return by end pressure.

PRIMARY LOCKING DEVICE is the single locking system on a door or window unit whose function is to prevent unauthorized intrusion.

WINDOW LOCKING DEVICE is part of a window assembly which is intended to prevent movement of the movable sash, and may be the sash lock or sash operator.

SECTION 1003A – GENERAL REQUIREMENTS FOR SECURITY

1003A.1 Clearances. The clearance between the door and the frame and between meeting edges of doors swinging in pairs shall not exceed 1/8 inch (3.2 mm). The clearance between the door and the floor with either flush or raised sill shall be not more than 3/4 inch (19.1 mm).

1003A.2 Door assemblies. Excluding main entry doors, all exterior swinging doors, and swinging interior and exterior entry doors, including assemblies and related hardware, which are directly accessible from the ground level or by stairs or by ramp, or from roof areas, or parking lot, or garage areas, shall meet the requirements of Grade 20 of ANSI/ASTM F476, Standard Test Methods for Security of Swinging Door Assemblies.

All such doors shall be self-closing continuously locked, and openable from the interior with no special effort or knowledge or key. Where electrically operated locks are used, they must be self-latching and locking and shall have manual release capability from the interior requiring no special effort or knowledge or key.

1003A.2.1 Main entrance. All main entry doors, including electrically operated main entry doors, shall be provided with a primary locking device. "Main entry doors" shall be defined as exterior doors leading directly into the lobby, registration areas or employee entrances.

1003A.2.2 Viewer. Each door shall be provided with a minimum 135-degree viewer which does not have sighting capability when viewed from the outside. Mounting height shall not exceed 58 inches (1473 mm).

1003A.3 Fire-rated door assemblies. Fire-rated door assemblies shall meet the requirements of Grade 20, ANSI/ASTM F476.

1003A.4 Glazing. All glazing within 40 inches (1016 mm) of any locking mechanism of exterior and interior dwelling unit doors shall be of safety glass or burglar-resistant glazing. This requirement shall not exempt the swinging door assembly standards of Grade 20 of ANSI/ASTM F476.

1003A.5 Metal gates. Metal gates shall conform to the following:

1. Latch bolt protected by a security plate.
2. Hinges, bolts, screws shall be nonremovable.
3. Areas within 40 inches (1016 mm) of latch mechanism protected by mesh screen or approved equal.
4. Interior release mechanism protected with cover.
5. For electrically operated locks, see Section 1003A.2.

1003A.6 Sliding glass doors. Sliding glass door assemblies shall be so designed that the door cannot be lifted from the track when the door is in a locked position.

In addition to the primary locking device, all sliding glass doors shall have an auxiliary locking device permanently mounted and not accessible from the exterior of the building but easily accessible from the interior.

1003A.7 Sliding glass windows. Sliding glass window assemblies shall be so designed that the moving panel cannot be lifted from the track while in a closed position.

1003A.8 Parking areas. Parking space numbering shall not correspond to the guest room or dwelling unit number.

Exterior parking areas and access thereto shall be provided with a minimum of 1/2 foot-candle (5.38 lx) of light on the parking surface when the area is unoccupied. Lighting devices shall be protected by weather- and vandalism-resistant covers.

SECTION 1004A – SPECIAL HOTEL AND MOTEL SECURITY REQUIREMENTS

1004A.1 Entry doors to guest rooms.
EXCEPTION: Residential care facilities licensed by the State of California under Title 22 of the California Code of Regulations shall not be required to comply with the requirements of this subsection.

Locks shall be a combination of minimum 1/2-inch (12.7 mm) throw deadlatch with a minimum 1-inch (25.4 mm) deadbolt.

All locks shall be capable of locking out all keys, except the emergency keys for guest privacy while inside the room, and so constructed that both deadlatch and deadbolt are retracted simultaneously by a single knob or lever.

1004A.2 Communicating door between guest rooms. Communicating doors between guest rooms if not required to be fire-rated shall meet the requirements of Grade 20 of ANSI/ASTM F476 and be of minimum 1 3/8-inch (35 mm) bonded wood core or approved equal.

1004A.3 Roof openings. All skylights leading directly to guest rooms, offices and enclosed commercial space shall be provided with burglary- resistant glazing as defined in Section 1002A.

1004A.4 Message and key box – front desk. The message and room key location at the front desk shall not be visible from public view so as to determine an unoccupied room.

SECTION 1005A – SPECIAL APARTMENT HOUSE AND CONDOMINIUM SECURITY REQUIREMENTS

1005A.1 Voice communications. A two-way voice communication system shall be provided between the common entry door and all interior dwelling units. All systems shall provide direct communication.

1005A.2 Lighting. Lighting shall be a minimum of 1/2 foot-candle (5.38 lx) of light on the ground surface from the street to the entry door. Lighting devices shall be protected by weather- and vandalism-resistant covers.

1005A.3 Master keying. Exterior and main entrance door locks shall not be on any master key system.

1005A.4 Entry doors. Entry doors and door assemblies shall comply with the following:

1005A.4.1 Locks shall be combination 1/2-inch (12.7 mm) throw deadlatch with a minimum 1-inch (25.4 mm) throw deadbolt, and so constructed that both the deadlatch and deadbolt retract simultaneously by knob or lever. The deadbolt shall have the ability to be thrown from the exterior.

1005A.5 Exit doors. All exit doors from corridors to exit stairways and from interior stairwells and interior fire escapes shall meet the requirements of Grade 20 of ANSI/ASTM F476 and be continuously locked from the outside.

Locking devices shall be self-latching or self- locking and shall be openable from the interior with no special effort or knowledge or key. [See Section 1008.1.9]

1005A.6 Glazed openings. Glazed openings accessible from the ground level, by stairs, ramps, parking lots or garage areas, shall be with approved safety glass or burglar-resistant glazing as defined in Section 1002A. Protective iron grill work may only be installed where it does not interfere with the required means of egress.

1005A.7 Roof openings. All skylights leading directly to interior corridors, stairwells, dwelling units and utility rooms shall be provided with burglary-resistant glazing as defined in Section 1002A.

1005A.8 Garage doors. All doors of the sectional overhead, one-piece overhead, swing or sliding types used on the exterior of a building shall conform to the following standards:

1005A.8.1 Panels of wood doors shall be at least 5/16-inch (7.94 mm) thick, except sectional overhead doors may have panels 1/4-inch (6.35 mm) thick.

1005A.8.2 Aluminum doors shall be constructed of at least 0.025-inch (0.635 mm) thick sheet aluminum, riveted, welded or bolted to framing members at least 12 inches (305 mm) on center.

1005A.8.3 Steel doors shall be constructed of at least 0.023-inch (0.584 mm) thick galvanized steel, riveted, welded or bolted to framing members at least 12 inches (305 mm) on center.

1005A.8.4 Fiberglass sectional doors shall be constructed of formed fiberglass panels of density of at least 5 1/2 oz. per square foot (1678 g/m^2), pressure sealed to aluminum framing members.

1005A.8.5 Overhead doors shall be made lockable by either:

For doors 16 feet (4877 mm) wide or less, a slide bolt - minimum diameter 3/8-inch (9.5 mm) minimum projection 1-1/2 inches (38 mm) - locking into the door jamb, capable of utilizing a padlock with a minimum 9/32-inch (7.14 mm) shackle. For doors over 16 feet (4877 mm) wide, except sectional doors, two slide bolt locks shall be required. Slide bolt assemblies shall be attached to the door with bolts which are nonremovable from the exterior.

Electrical operator with automatic locking capability, either inherently in the mechanism or as an added feature.

By at least one single-bar lock mounted in the end stile, with locking bar or bolt extending into the receiving guide a minimum of 1 inch (25.4 mm), and with minimum five-pin tumble operation. For doors over 16 feet (4877 mm) wide, except sectional doors, two single-bar locks shall be required.

Center locking-handle devices will require actuating straps to be enclosed by rigid conduits securely fastened to the door.

1005A.8.6 Swinging garage doors shall be lockable by a cylinder deadbolt.

1005A.8.7 Doors operated by electrical means shall be provided with manual release capability from the interior, requiring no special effort or knowledge or key.

1005A.8.8 Manually operated chain-driven garage doors shall require approval of the Authority Having Jurisdiction.

Chapter 11D
MANDATORY ACCESSIBILITY IMPROVEMENTS FOR BUILDINGS WITH A PLACE OF PUBLIC ACCOMMODATION

SECTION 1101D – SCOPE

Any building or portion of a building with a Place of Public Accommodation subject to the requirements of Chapter 11B of this Code is within the scope of this Chapter.

Exception: A building that was constructed under a building or site permit application filed on or after January 1, 2002.

A building constructed under the Building Code in effect on or after January 1, 2002 is presumed to be accessible to persons with disabilities and will be exempt from this Chapter 11D upon receipt by the Department of a written notice of exemption from the Owner or the Owner's authorized agent that provides a construction permit application number dated on or after January 1, 2002 and contact information for the Owner and/or Owner's authorized agent.

1101D.1. Compliance with Federal or State Laws. Nothing in this Chapter 11D is intended to relieve the Owner or the operator of a Place of Public Accommodation of their obligation to comply with the requirements of any Federal or State law, including but not limited to the Americans with Disabilities Act, or to modify or extend the time for compliance with any such law.

1101D.2. Contractual Obligations. Nothing in this Chapter 11D is intended to interfere with any contractual obligations between the Owner of a building within the scope of this Chapter and any lessee of space within the building.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1102D – DEFINITIONS

For the purposes of this Chapter 11D, the following definitions shall apply:

" *Accessible Entrance Route.* " An identifiable path of travel by means of which a Primary Entry may be approached, entered and exited, and which connects the Primary Entry with an exterior approach (including any adjacent sidewalks, streets and parking areas).

" *Building Official.* " The Director of the Department or the Director's designee.

" *California Construction-Related Accessibility Standards Compliance Act.* " Sections 55.51 through 55.53 of the California Civil Code as amended from time to time.

" *California Historical Building Code.* " Part 8 of Title 24, California Code of Regulations.

" *CASp Inspector.* " A person who has been certified by the State of California as a certified access specialist authorized to inspect a Place of Public Accommodation for compliance with construction-related accessibility standards.

" *Checklist for Alterations to Commercial Storefront for Accessibility.* " A Checklist developed by or with the input of City departments or agencies with review authority over the subject buildings.

" *Department.* " The Department of Building Inspection.

" *Design Professional.* " A "Registered Design Professional" as defined in Chapter 2 of the Building Code.

" *Disability Access Compliance Unit* " or " *Compliance Unit.* " The Unit within the Department established under Section 1112D of this Chapter.

" *Equivalent Facilitation.* " As defined in Chapter 2 of the Building Code.

" *Historic Resource.* " A building designated pursuant to Articles 10 and 11 of the Planning Code, listed on or determined eligible for listing on the California Register of Historic Resources or the National Register of Historic Places, or that is a 'qualified historical building' as defined in the California Historical Building Code.

" *Inspector.* " A CASp Inspector or a Design Professional approved by the Building Official as qualified to evaluate compliance with disability access requirements.

" *Owner.* " The owner of a building within the scope of this Chapter 11D.

" *Place of Public Accommodation.* " As defined in Section 55.52 of the California Construction-Related Accessibility Compliance Act and 42 USC Section 12181(7) of the Americans with Disabilities Act of 1990, as those Acts are amended from time to time.

" *Primary Entry.* " As defined in Chapter 2 of this Code, the principal entrance through which most people enter the building, as designated by the Building Official. If there are multiple commercial tenants or spaces, a building may have multiple Primary Entries.

" *Technically Infeasible.* " As defined in Chapter 2 of the Building Code.

" *Technical Infeasibility.* " A Code requirement is Technically Infeasible.

" *Unreasonable Hardship.* " As defined in Chapter 2 of the Building Code.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1103D – COMPLIANCE CATEGORIES

The Department shall assign each building within the scope of this Chapter 11D to one of the following four categories. If a building does not clearly fall within one of these categories, the Building Official shall assign it to the category he or she determines is the

most appropriate. The Building Official's decision is appealable to the Building Inspection Commission pursuant to Section 77.3(b) of the Administrative Code.

Category One: The Primary Entry or Entries and the Accessible Entrance Route(s) comply with Code requirements. A building qualifies under Category One if any of the following descriptions applies:

(a) A building or portion thereof was constructed or altered under a permit application filed prior to July 1, 1992 and all Primary Entries and Accessible Entrance Routes are in compliance with the requirements of the 1998 California Building Code.

(b) A building or portion thereof was constructed or altered under a permit application filed on or after July 1, and prior to January 1, 2002, all Primary Entries and Accessible Entrance Routes are in compliance with the requirements of the 1998 California Building Code or a later Building Code in effect at the time of any permit application for a tenant improvement or other alteration, and the Department gave final approval of the accessible entry work under the construction permit or any alteration permits.

(c) A building is eligible to use the California Historical Building Code, a permit application was filed on or after January 1,1995, all Primary Entries and Accessible Entrance Routes are in compliance with the California Historical Building Code in effect at the time of the permit application, and the Department gave final approval of the accessible entry work under the construction permit or any alteration permits.

Category Two: There are no steps to the Primary Entry or Entries and one or more elements of the Primary Entry or Entries or the Accessible Entrance Route(s) do not comply with Code requirements. A building qualifies under Category Two if any of the following descriptions applies:

(a) A building or portion thereof was constructed or altered under a permit application filed prior to July 1, 1992, the building has a Primary Entry or Entries with no steps, and one or more elements of the Primary Entry or Entries or the Accessible Entrance Route(s) are not in compliance with the requirements of the 1998 California Building Code.

(b) A building or portion thereof was constructed or altered on or after July 1, 1992 and prior to January l, 2002, the building has a Primary Entry or Entries with no steps, and one or more elements of the Primary Entry or Entries or the Accessible Entrance Route(s) are not in compliance with the requirements of the 1998 California Building Code or a later Building Code in effect at the time of any permit application for a tenant improvement or other alteration, or the Department did not give final approval of the accessible entry work under the construction permit or any alteration permit.

(c) A building is eligible to use the California Historical Building Code, a permit application was filed on or after January l, 1995, the Primary Entry or Entries has no steps, and one or more elements of the Primary Entry or Entries or the Accessible Entrance Route(s) are not in compliance with the California Historical Building Code in effect at the time of permit application, or the Department did not give final approval of the accessible entry work under a construction permit or any alteration permit.

Category Three: There is one step to the Primary Entry or Entries and one or more

elements of the Primary Entry or Entries or the Accessible Entrance Route(s) do not comply with Code requirements. A building qualifies under Category Three if the building or portion thereof was constructed or altered under a permit application filed prior to July 1, 1992, the Department gave final approval of the work under the permit, the building has a Primary Entry or Entries with one step and one or more elements of the Primary Entry or Entries or the Accessible Entrance Route(s) are not in compliance with the requirements of the 1998 California Building Code.

Category Four: The building has a Primary Entry or Entries with more than one step and one or more elements of the Primary Entry or Entries and/or the Accessible Entrance Route(s) do not comply with minimum Code requirements. A building qualifies under Category Four if the building or portion thereof was constructed or altered under a permit application filed prior to July 1, 1992, the building has a Primary Entry or Entries with more than one step, and one or more elements of the Primary Entry or Entries or the Accessible Entrance Route(s) are not in compliance with the requirements of the 1998 California Building Code, or the Department did not give final approval of the accessible entry work under the construction permit.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1104D – INSPECTION AND SUBMISSION OF PRIMARY ENTRY COMPLIANCE CHECKLIST

1104D.1. Category One Buildings. The Owner of a building classified in Section 1103D as Category One shall obtain an inspection of the elements on the Department's Category One Primary Entry Compliance Checklist by an Inspector. On or before the time for compliance specified in Section 1107D, the Owner shall submit to the Department's Disability Access Compliance Unit a copy of the Checklist completed and signed by the person who performed the inspection and including his or her business contact information and a professional stamp, CASp number, or California State License Bureau contractor's license number, whichever is applicable.

If any elements on the Checklist are found by the Inspector or licensed general contractor to be not in compliance with the standards for accessible entries set forth in the applicable California Building Code or California Historical Building Code, or the Department did not give final approval of the accessible entry work, the noncomplying elements shall be clearly specified in detail, the building shall be reassigned by the Building Official to the appropriate Category, and the Owner shall comply with all requirements of that Category. The Building Official's decision is appealable to the Building Inspection Commission pursuant to Section 77.3(b) of the Administrative Code.

1104D.2. Category Two Buildings. The Owner of a building classified in Section 1103D as Category Two shall obtain an inspection of the elements on the Department's Category Two Primary Entry Compliance Checklist by an Inspector. On or before the time for compliance specified in Section 1107D, the Owner shall submit to the Department's Disability Access Compliance Unit a copy of the Checklist completed and signed by the person who performed the inspection and including his or her business contact information and a professional stamp or CASp number.

Each element on the Checklist found by the Inspector to be not in compliance with the applicable standards for accessible entries set forth in the applicable Building Code or California Historical Building Code, including a failure to obtain final Department approval of the accessible entry work, shall be specified in detail and one of the following four options selected by the Owner as the method by which the Owner will address the Code deficiency within the time specified for compliance in Section 1107D:

(a) Option 1. The Owner shall submit to the Disability Access Compliance Unit:

(1) Plans showing how the non-complying element or elements will be brought into full compliance with the applicable standards for accessible entries set forth in either the California Building Code or the California Historical Building Code, and.

(2) If the Owner elects to use the California Historical Building Code, documentation showing that the building is qualified to use the California Historical Building Code.

The Owner must subsequently apply for and obtain a building permit to do the required work within the time specified for compliance in Section 1107D.

(b) Option 2. The Owner shall submit to the Disability Access Compliance Unit:

(1) Plans, drawings, or other documentation required by the Compliance Unit demonstrating that bringing the non-complying element or elements into full compliance with the applicable Code standards for accessible entries is Technically Infeasible, and

(2) Plans, drawings, a written explanation, or other documentation required by the Compliance Unit showing what Equivalent Facilitation will be provided.

The Owner must subsequently apply for and obtain a building permit to do the work required within the time specified for compliance in Section 1107D.

(c) Option 3. The Owner shall submit to the Disability Access Compliance Unit a Request for Approval of an Unreasonable Hardship form together with plans, drawings, a written explanation, or other documentation required by the Compliance Unit showing what Equivalent Facilitation will be provided. The Compliance Unit will review the request and either approve or deny it, and then forward the request and equivalency submittal information to the Access Appeals Commission for a hearing pursuant to Section 1110D and Section 105A.3.3 of this Code.

The Owner must subsequently apply for and obtain a building permit to do the work required within the time specified for compliance in Section 1107D.

(d) Option 4. The Owner shall submit to the Disability Access Compliance Unit a statement of intent to request a hearing by the Access Appeals Commission to review the matter pursuant to Section 1110D and Section 105A.3.3 of this Code.

The request for a hearing by the Access Appeals Commission shall be submitted pursuant to the procedures of Section 105A.3 of this Code and in sufficient time to obtain a decision prior to the other compliance timelines in Table 1107D.

1104D.3. Category Three Buildings. The Owner of a building classified in Section 1103D

as Category Three shall obtain an inspection of the elements on the Department's Category Three Primary Entry Compliance Checklist by an Inspector (as defined in Section 1102D). On or before the time for compliance specified in Section 1107D, the Owner shall submit to the Department's Disability Access Compliance Unit a copy of the Checklist completed and signed by the person who performed the inspection and including his or her business contact information and a professional stamp or CASp number.

Each element on the Checklist found by the Inspector to be not in compliance with the applicable standards for accessible entries set forth in the applicable California Building Code or California Historical Building Code shall be specified in detail and one of the options set forth in Section 1104D.2 (a) through (d) selected by the Owner as the method by which the Owner will address the Code deficiency within the time specified for compliance in Section 1107D.

1104D.4. Category Four Buildings. The Owner of a building classified in Section 1103D as Category Four shall obtain an inspection of the elements on the Department's Category Four Primary Entry Compliance Checklist by an Inspector. On or before the time for compliance specified in Section 1107D, the Owner shall submit to the Department's Disability Access Compliance Unit a copy of the Checklist completed and signed by the person who performed the inspection and including his or her business contact information and a professional stamp or CASp number.

Each element on the Checklist found by the Inspector to be not in compliance with the applicable standards for accessible entries set forth in the applicable California Building Code or California Historical Building Code shall be specified in detail and one of the options set forth in Section 1104D.2 (a) through (d) selected by the Owner as the method by which the Owner will address the Code deficiency within the time specified for compliance in Section 1107D.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1105D – EQUIVALENT FACILITATION; TECHNICAL INFEASIBILITY, OR UNREASONABLE HARDSHIP.

1105D.1. Equivalent Facilitation. The Department shall develop an Approved Barrier Removal Standard in consultation with the Access Appeals Commission, the Planning Department, and the Department of Public Works. The Disability Access Compliance Unit shall maintain the Approved Barrier Removal Standard and review any proposal for Equivalent Facilitation under this Chapter 11D for compliance with that Standard. Any proposal for Equivalent Facilitation that does not comply with the Approved Barrier Removal Standard must be approved by the Access Appeals Commission.

1105D.2. Technically Infeasible. A request for a finding that compliance is Technically Infeasible can be based upon either a structural or a non-structural condition.

(a) Structural Technical Infeasibilify. A structural Technical Infeasibility is an existing condition of the building where full compliance would require the removal or alteration of

a load-bearing structural element that is an essential part of the structural frame.

(b) Non-structural Technical Infeasibility. A non-structural Technical Infeasibility may include conditions where full compliance would require encroaching into the required egress width, interfering with pedestrian use of the sidewalk or a permanent easement, and similar conditions that do not impact the structural elements or frame. The Disability Access Compliance Unit shall compile a list of non-structural conditions that the Department would accept as supporting a request for a finding of Technical Infeasibility and provide other written guidance, and may require that a request based on a non-structural condition be ratified by the Access Appeals Commission pursuant to Section 105A.3.3 of this Code.

1105D.2.1. Acceptance of previously-granted determinations of Technical Infeasibility. Under the California Building Code, all findings of Technical Infeasibility must be documented by the Department and can only be made on a case-by-case basis. The Department will accept and record a previously-approved finding of Technical Infeasibility for a building within the scope of this Chapter 11D if: (1) the finding of Technical Infeasibility was approved by the Department and can be documented, (2) the finding of Technical Infeasibility is applicable to the elements covered by this Chapter 11D, and (3) an Inspector has submitted written documentation acceptable to the Department that all conditions and requirements of the Technical Infeasibility are unchanged and remain applicable.

1105D.3. Unreasonable Hardship. The Compliance Unit, in consultation with the Access Appeals Commission, shall develop and publish guidelines specifying the conditions under which an Unreasonable Hardship would be approved by the Department. All Unreasonable Hardships must be ratified by the Access Appeals Commission pursuant to Section 11B-202.4, Exception 8, and Section 1.9.1.5 of the California Building Code.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1106D – BUILDING PERMIT REQUIRED; INSPECTION AND COMPLETION OF WORK; VALUATION APPLIED TO FUTURE PROJECTS

1106D.1. Building Permit Required. A building permit is required to make any and all modifications to a building either mandated or authorized by this Chapter 11D. All work required by this Chapter 11D shall be considered by the Department to be barrier removal and no additional path of travel upgrade shall be required. Only those elements that are actually altered will be required to comply with the current requirements of this Code.

1106D.1.1. Historic Resources.

(a) For a building considered to be a Historic Resource, the plans submitted with the building permit application shall be prepared in conjunction with a Design Professional and in compliance with the California Historical Building Code, requirements of the San Francisco Planning Department, and guidelines developed and published by the

Compliance Unit.

(b) As required by Articles 10 and 11 of the Planning Code, a permit application for a Historic Resource designated pursuant to Article 10 or 11 of the Planning Code must be approved by the Historic Preservation Commission unless delegated for review and approval without a hearing to Planning Department staff.

1106D.2. Alteration Work That May Be Included in the Permit Application. The only work that may be included in the permit required by Section 1106D.1 is: (a) the work to a Primary Entry or Accessible Entrance Route mandated by Section 1104D or (b) any voluntary disability access improvements authorized by Section 1109D.

1106D.3. Inspection of Work. All work completed by permit under Option 1 of Section 1104D.2 for Category Two, Category Three, and Category Four buildings shall be inspected by the Department's field inspector that is assigned to that district. If the work complies with requirements of this Chapter 11D, the inspector shall issue to the Owner a Certificate of Final Completion stipulating that the work complies with the requirements and shall provide a copy of the Certificate of Final Completion to the Disability Access Compliance Unit. Upon request, the Owner may obtain a final inspection and approval by a Department inspector who is certified as a CASp Inspector; the inspection fee set forth in Table IA-D of Section 110[1] of this Code shall apply.

All work completed by permit under Options 3 and 4 of Section 1104D.2 for Category Two, Category Three, and Category Four buildings shall be inspected by a Department CASp Inspector. If the work complies with requirements of this Chapter 11D, the inspector shall issue to the Owner a Certificate of Final Completion stipulating that the work complies with the requirements of this Chapter and shall list his or her CASp number where applicable on both the Certificate of Final Completion and the completed job card.

1106D.4. Completion of Work; Certificate of Final Completion. Notwithstanding any other provision of this Code, all work mandated by this Chapter 11D must be completed within the time periods specified in Section 106A.4.4 of this Code for Permit Expiration unless an extension of time is granted pursuant to Section 1108D. Any Certificate issued by the Department upon final completion of the work required by this Chapter 11D shall state that compliance is with Chapter 11D of this Code and not with the requirements of either the Americans with Disability Act or the California Building Code.

1106D.5. Valuation Applied to Future Projects. As authorized by the Building Code, the valuation of both the mandatory and the voluntary disability access improvements performed under this Chapter 11D may be used to comply with path of travel upgrade requirements in Building Code Section 11B-202.4 Exception #8 of this Code for any future project within the same building of portion of a building for a period of time not to exceed four years from the completion date of the work; provided, however, that only the valuation of the work described in 1106D.2(a) or (b) shall be allowed for this purpose. In order to use the valuation of voluntary disability improvements for this purpose, the Owner must follow the recommended order of priority for making accessibility improvements set forth in Section 11B-202.4 of this Code.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1107D – COMPLIANCE SCHEDULE; OPTION TO COMPLY WITH CURRENT CODE REQUIREMENTS

The time for compliance with the requirements of this Chapter 11D are set forth in the following Table 1107D. The Owner of a building within the scope of this Chapter must submit all required forms, documents and permit applications to the Department prior to the deadlines set forth in Table 1107D but may comply with the requirements of this Chapter 11D, or elect to comply with the requirements and procedures of the Building Code then in effect, at any time prior to the deadlines set forth in Table 1107D.

TABLE 1107D
COMPLIANCE SCHEDULE[1]

	Submit compliance Checklist and specify compliance Option	File application for required building permit(s)	Obtain required building permit(s) [2]
Category One Buildings	12	N/A	N/A
Category Two Buildings	12	15	27
Category Three Buildings	24	27	39
Category Four Buildings	30	33	45

1 Unless otherwise specified, time period is in months measured from the effective date of this Chapter 11D.

2 Pursuant to Section 1106D.4, all mandated work must be completed within the time periods specified in Section 106A.4.4 of this Code for Permit Expiration unless an extension of time of time is granted pursuant to Section 1108D

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1108D – EXTENSIONS OF TIME

(a) For good cause shown, the Building Official may grant one extension of time for up to six months from the compliance timelines in Table 1107D. For good cause shown, one or more additional extensions of time may be granted by the Access Appeals Commission pursuant to Section 1110D; provided, however, that in no event shall the Commission extend the time to complete the mandatory work required by this Chapter 11D beyond six years from the effective date of this Chapter 11D. The Commission's decision shall be

final.

(b) A written request for an extension of time shall be submitted to the Department or to the Access Appeals Commission prior to the time for compliance.

(c) For purposes of this Chapter 11D, good cause may include but is not limited to:

(1) The pendency of a request for a finding of Equivalent Facilitation or Technical Infeasibility;

(2) The desirability of coordinating the mandatory work required by this Chapter 11D with voluntary disability access improvements;

(3) Financial hardship;

(4) A legal hardship such as an existing lease; or

(5) A undue procedural delay by the Department or another reviewing City agency.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1109D – VOLUNTARY DISABILITY ACCESS IMPROVEMENTS

In addition to the mandatory requirements of this Chapter 11D, the Owner may elect to make additional corrections to the building or a portion thereof to comply with other State or Federal disability access requirements.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1110D – APPEAL PROCEDURE

Any procedure provided under this Code to appeal accessibility issues is available in order to achieve compliance with this Chapter 11D. In addition, appeals to the Access Appeals Commission may be made in accordance with the provisions of this Chapter 11D and 105A.3 of this Code.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1111D – ENFORCEMENT

Whenever the Owner of a building within the scope of this Chapter 11D fails to undertake or complete any action required by this Chapter within the time for compliance set forth in Table 1107D, the Owner shall be considered to be in violation of this Code and the Building Official is authorized to abate the violation in accordance with Section 102A of this Code.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1112D – DISABILITY ACCESS COMPLIANCE UNIT

The Building Official shall establish within the Department a Disability Access

Compliance Unit to enforce this Chapter 11D and to perform such other duties as the Building Official shall require. The Unit shall have at least one CASp Inspector from the Department and such other departmental employees as the Building Official deems appropriate. The Compliance Unit shall consult and coordinate with other City agencies with review authority over the permits necessary to comply with the requirements of this Chapter, including but not limited to the Planning Department and Department of Public Works, and any other City agencies that the Building Official determines are necessary or desirable to achieve the purposes of this Chapter.

The Compliance Unit shall track and maintain records; coordinate review of checklists, documents, and permits; provide information to the owners of buildings subject to this Chapter, tenants of said buildings, and members of the public; provide guidance, training and assistance to the Department's plan review staff and field inspectors; develop the informational material described in Section 1113D; and provide such progress reports on the effectiveness of this Chapter as the Compliance Unit deems appropriate or as the Building Official or the Access Appeals Commission may require.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1113D – COORDINATION WITH OTHER CITY AGENCIES; REPORT TO THE BOARD OF SUPERVISORS

1113D.1. Coordination with Other Agencies. The Department shall coordinate with the Planning Department, the Department of Public Works, and other City departments with review authority over the accessibility improvements mandated or authorized by this Chapter 11D, as well as with the Office of Small Business, the Mayor's Office on Disability, and other appropriate City agencies, to develop and implement (1) outreach tools, (2) pre-screening procedures, (3) methods to streamline the process, (4) proposed Code revisions, and (5) administrative bulletins, brochures, checklists, and guidelines or other documents to implement the purpose and objectives of this Chapter. The Checklist for Alterations to Commercial Storefront for Accessibility in existence on the effective date of this Chapter 11D, as amended from time to time, and other guidance documents shall be used to review and approve the disability access improvements mandated or authorized by this Chapter 11D.

1113D.2. Report to the Board of Supervisors. Within one year from the effective date of this Chapter 11D, and following consultation and coordination with other appropriate City departments and agencies, the Department shall submit a report in writing to the Board of Supervisors concerning the effectiveness of this Chapter and including recommendations, if any, for amendments to this Chapter. A progress report shall be submitted to the Board of Supervisors once a year thereafter until completion of this Chapter's disability access improvement program.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1114D – NOTICE

The Department shall post on its website the requirements of this Chapter 11D. The Department shall also prepare any administrative bulletins, brochures, or other materials

that the Building Official determines are necessary or desirable to notify property owners and tenants about the requirements of this Chapter and shall coordinate with the Office of Small Business and, in the Building Official's discretion, other City departments concerning appropriate methods for providing notice about the requirements.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

SECTION 1115D – ADMINISTRATIVE FEE

In addition to any other permit fees that may apply, the Department shall charge the Owner of each property within the scope of this Chapter 11D an administrative fee to compensate the Department for the cost of the services necessary to implement and enforce Chapter 11D's disability access improvement program. The administrative fee shall be the Standard Hourly Rate for Administration set forth in Table 1A-D of this Code. The administrative fee is payable within 30 days of the Department's notice that payment is due.

(Added by Ord. 51-16, File No. 150732, App. 4/22/2016, Eff. 5/22/2016, Oper. 6/21/2016)

Chapter 12
INTERIOR ENVIRONMENT

SECTION 1203 – VENTILATION

1203.5 Add a second paragraph and a third paragraph as follows:

In other than high-rise buildings, public corridors, public hallways and other public spaces having openings into adjoining dwelling units, guest rooms, or congregate residences within R-1 and R-2 Occupancies, shall be provided with natural ventilation by means of openable exterior openings with an area of not less than 1/25 of the floor area of such rooms or spaces with a minimum of 4 square feet (0.37 m^2).

In lieu of required exterior openings for natural ventilation, a mechanical ventilating system may be provided. Such system shall be capable of providing two air changes per hour in public corridors, public hallways and other public spaces having openings into adjoining dwelling units, guest rooms, or congregate residences with R-2 occupancies, with a minimum of 7-1/2 cubic feet per minute (3-1/2 L/s) of outside air per occupant during such time as the building is occupied.

1203.6 Add a second paragraph as follows:

For all buildings containing any sensitive land use located within the Air Pollutant Exposure Zone, as determined by the Director of Public Health pursuant to Article 38 of the San Francisco Health Code, that are:

(a) Newly constructed;

(b) Undergoing a "Major Alteration to Existing Building" as defined by the San Francisco Green Building Code; or

(c) Applying for a San Francisco Planning Department-permitted Change of Use, such buildings shall incorporate an enhanced ventilation system designed and constructed to be in compliance with San Francisco Health Code Article 38.

(Amended by Ord. 224-14, File No. 140806, App. 11/7/2014, Eff. 12/7/2014)

SECTION 1205 – LIGHTING

1205.1 Add an exception after the first paragraph:

Exception: Habitable rooms (excluding kitchens, home offices and media rooms) within a dwelling unit or congregate residence shall be provided with natural light by means of exterior glazed openings in accordance with Section 1205.2.

1205.2.2 Add the following paragraphs after the Exceptions:

The depth of all structural projections, including balconies, decks, porches, rooms or roofs, shall not exceed 9 feet (2.134 m) when extending over exterior wall openings that provide required natural light or natural ventilation for spaces intended for human occupancy.

The height of a balcony, deck or porch shall not be less than 7 feet (2.134 m) measured from the floor to the lowest projection above.

1205.4 Revise this section as follows:

1205.4 Stairway illumination. Stairways within dwelling units and exterior stairways serving a dwelling unit shall have an illumination level on tread runs **and landings** of not less than 1 foot-candle (11 lux). Stairs in other occupancies shall be governed by Chapter 10.
Exception: **An artificial light source is not required at the top and bottom landing, provided an artificial light source is located directly over each stairway section.**

SECTION 1207 – SOUND TRANSMISSION

1207 Add the following sections:

1207.6 Definitions. The following definitions apply to Sections 1207.4 through 1207.9 of this Code.

COMMUNITY NOISE EQUIVALENT LEVEL (CNEL) **is a metric similar to the Ldn, except that a 5 dB adjustment is added to the equivalent continuous sound exposure level for evening hours (7 p.m. to 10 p.m.) in addition to the 10 dB nighttime adjustment used in the Ldn.**

DAY-NIGHT AVERAGE SOUND LEVEL (Ldn) **is the A-weighted equivalent continuous sound exposure level for a 24-hour period with a 10 dB adjustment added to sound levels occurring during nighttime hours (10 p.m. to 7 a.m.).**

NORMALIZED A-WEIGHTED SOUND LEVEL DIFFERENCE (Dn) means for a specified source room sound spectrum, the difference, in decibels, between the average sound levels produced in two rooms after adjustment to the expected acoustical conditions when the receiving room under test is normally furnished.

1207.7 Exterior Sound Transmission Control.

1207.7.1 Application. Residential structures located in noise critical areas, such as in proximity to highways, county roads, city streets, railroads, rapid transit lines, airports, nighttime entertainment venues, or industrial areas, shall be designed to prevent the intrusion of exterior noises beyond levels prescribed by the Municipal Code. Proper design to accomplish this goal shall include, but not be limited to, orientation of the residential structure, setbacks, shielding, and sound insulation of the building.

1207.7.2 Allowable interior noise levels. Interior noise levels attributable to exterior sources shall not exceed 45 dB in any habitable room. The noise metric shall be either the day-night average sound level (Ldn) or the community noise equivalent level (CNEL), whichever results in a higher measurement of noise level.

1207.7.3 Other noise sources. Residential structures to be located where the Ldn or CNEL exceeds 60 dB shall require an acoustical analysis showing that the proposed design will limit exterior noise to the prescribed allowable interior level. The Planning Department's map titled Areas Potentially Requiring Noise Insulations, and similar maps and guidance produced by the Planning Department, shall be used where possible to identify sites with noise levels potentially greater than 60 dB.

1207.8 Compliance.

(a) Evidence of compliance with Section 1207.7 shall consist of submittal of an acoustical analysis report, prepared under the supervision of a person experienced in the field of acoustical engineering, with the application for a building permit. The report shall show topographical relationships of noise sources and dwelling sites, identification of noise sources and their characteristics, predicted noise spectra and levels at the exterior of the proposed dwelling structure considering present and future land usage, the basis or bases for the prediction (measured or obtained from published data), noise attenuation measures to be applied and an analysis of the noise insulation effectiveness of the proposed construction showing that the prescribed interior noise level requirements are met.

(b) If interior allowable noise levels are met by requiring that windows be unopenable or closed the design for the structure must also specify a ventilation or air-conditioning system to provide a habitable interior environment. The ventilation system must not compromise the dwelling unit or guest room noise reduction.

1207.9 Field Testing.

(a) When inspection indicates that the construction is not in accordance with the approved design, or that the noise reduction is compromised due to sound leaks or flanking paths, field testing may be required. A test report showing compliance or noncompliance with prescribed interior allowable levels shall be submitted to the building official.

(b) Field measurements of outdoor sound levels shall generally follow the guidelines prepared by the American Society for Testing and Materials (ASTM) in ASTM E 1014.

(c) Field measurements of the A-weighted airborne sound insulation of buildings from exterior sources shall generally follow the guidelines prepared by the American Society for Testing and Materials (ASTM) in ASTM E 966.

(d) For the purpose of this Section ~~1207.7,~~[1] 1207.9, sound level differences measured in unoccupied units shall be normalized to a receiving room reverberation time of one-half second. Sound level differences measured in occupied units shall not be normalized to a standard reverberation time.

1207.10 The Department of Building Inspection shall consult with the Planning Department to ensure that notice to sponsors of residential development projects affected by Sections 1207.6 through 1207.9 are provided with notice of the requirements of this Section as soon as practicable in the project approval process.

(Amended by Ord. 70-15, File No. 141298, App. 5/21/2015, Eff. 6/20/2015)

SECTION 1208 – INTERIOR SPACE DIMENSIONS

1208.4 Revise paragraph 1 this section and add paragraphs 5 and 6 of this section as follows:

1208.4. Efficiency dwelling units. ~~An efficiency living unit shall conform to the requirements of the code except as modified herein:~~ **Efficiency dwelling units shall comply with the following:**

1. The unit shall **be occupied by no more than two persons and** have a living room of not less than **150** square feet of floor area. **An additional 100 square feet (9.3 m^2) of floor area shall be provided for each occupant of such unit in excess of two.**
2. The unit shall be provided with a separate closet.
3. The unit shall be provided with a kitchen sink, cooking appliance and refrigeration facilities, each having a clear working space of not less than 30 inches (762 mm) in front. Light and ventilation conforming to this code shall be provided.
4. The unit shall be provided with a separate bathroom containing a water closet, lavatory and bathtub or shower.
5. **The total area of the unit shall be no less than 220 square feet, which area shall be measured from the inside perimeter of the exterior walls of the unit and shall include closets, bathrooms, kitchen, living, and sleeping areas.**

6. **Subsections 1 - 5 apply only to new construction of a structure or building. For purposes of the preceding sentence, new construction shall mean the creation of an entirely new structure or building and shall not apply to improvement, renovation, rehabilitation, or any other change to an existing structure or building. Existing buildings or structures are subject only to Subsections 1 - 4 except that for purposes of Subsection 1 the unit shall have a living room of not less than 220 square feet (20.4 m^2) of floor area for up to two occupants.**

Chapter 13
ENERGY EFFICIENCY

No San Francisco Building Code Amendments

Add chapters as follows:

Chapter 13A
COMMERCIAL WATER CONSERVATION

SECTION 1301A – TITLE

This chapter shall be known as the "Commercial Water Conservation Ordinance."

SECTION 1302A – INTENT

It is the intent of this chapter to conserve existing water supplies by managing the overall demand for water in commercial buildings, including tourist hotels and motels, by requiring the installation of water conservation devices in commercial buildings upon the occurrence of specific events and in any event no later than January 1, 2017.

SECTION 1303A – DEFINITIONS

For the purpose of this chapter, certain terms are defined as follows:

ACCESSIBLE means there is sufficient space in which to install the specified water and energy conservation measure without significant alteration to the structure. For ducts, plenums or pipes, "accessible" shall mean all ductwork, plenums or pipes located in mechanical rooms, on roofs and around all air handling units. In addition, pipes located above movable ceiling panels shall be considered accessible, but not ducts or plenums.

ACCESSIBLE ATTIC SPACE means a space between a ceiling joist and roof rafter where the vertical clear height from the top of the bottom chord of the truss or ceiling joist to the underside of the roof sheeting at the roof ridge is greater than 18 inches (957 mm).

BUILDING OCCUPANCY means OCCUPANCY as defined in Chapter 3 of this code and shall also, where practicable, include the primary business activity of the property as classified by Standard Industrial Classification (SIC).

BUILDING TYPE means the type of building construction, as defined in Chapter 6 of this code, and shall take into consideration whether the building is a high-rise building as defined by Section 403 of this code.

COMMERCIAL BUILDING means any privately owned building except those residential buildings and portions of mixed residential- commercial buildings that are subject to the energy or water conservation requirements of Chapter 12 or Chapter 12A of the San Francisco Housing Code (Residential Energy Conservation Ordinance and Residential Water Conservation Ordinance).

COST-EFFECTIVE means having a simple economic payback that does not exceed four years or the expected life of an energy conservation measure, whichever is shorter.

ESTABLISHED CONTRACTOR'S COST means the contractor's fee, including labor and material, plus the engineer's fee to do the required work, provided that the engineer's fees do not exceed the schedule of fees provided by the Building Official.

PERMIT APPLICANT means the person listed on the building permit application as the owner or lessee of the building.

QUALIFIED INSPECTOR means an inspector defined in Section 1314A, who is authorized to perform a water conservation inspection.

QUALIFIED PROFESSIONAL means a person regularly engaged in the field of making repairs, adjustments and inspection of energy-using equipment contained in HVAC, lighting or service hot water systems.

SERVICE HOT WATER means the supply of hot water for domestic or commercial purposes other than comfort heating.

SIMPLE ECONOMIC PAYBACK means the time needed to recover a conservation investment on the basis of expected energy savings at current energy costs. Simple economic payback is expressed in years, and is calculated by dividing the established contractor's cost of a conservation measure by the estimated dollar savings in the first year. Available tax credits, incentives and future energy costs are not considered in the calculation.

WATER CONSERVATION INSPECTION means inspection of a commercial building for compliance with the requirements of this chapter.

SECTION 1304A – RULES AND GUIDELINES

1304A.1 Adopt rules. The Building Official, in cooperation with the General Manager of the Public Utilities Commission and other advisors as the Building Official may deem appropriate,

shall adopt reasonable rules and guidelines implementing the provisions and intent of this chapter and shall make them available to the public along with the informational brochure described in Section 1307A. The Building Official, in cooperation with the General Manager of the Public Utilities Commission, may amend these rules and guidelines from time to time after considering public input.

1304A.2 Inspection procedures. The Building Official shall include coverage of this chapter's requirements in the Water Inspection Procedures established by the Department.

SECTION 1305A – CIVIL REMEDIES

1305A.1 Abatement. A commercial building shall constitute a nuisance under the terms of Section 102A of this code when the installation of a water conservation measure in a commercial building is required pursuant to this chapter and the water conservation measure has not been installed.

The nuisance shall be abated by civil action pursuant to procedures set forth in Section 102A of this code for unsafe buildings; provided, however, that in no event shall any violation constitute a misdemeanor.

SECTION 1306A – REQUIREMENTS

1306A.1 Building additions. For building additions where the sum of concurrent building permits by the same permit applicant would increase the floor area of the space in a building by more than ten percent, the permit applicant shall obtain a valid water conservation inspection and shall comply with the applicable water conservation measures required by this chapter as a condition for issuance of a Certificate of Final Completion and Occupancy by the Department upon completion of the addition.

1306A.1.1 Scope. This subsection shall apply to the entire building.

1306A.2 Building alterations and improvements.

1306A.2.1 For alterations or improvements where the total construction cost estimated in the building permit is greater than $150,000, as a condition for issuance of a Certificate of Final Completion and Occupancy, or final permit sign off, by the Department upon completion of the alterations or improvements, the permit applicant shall obtain a valid water conservation inspection and shall install the applicable water conservation devices required by this chapter that serve the specific area of alteration or improvement.

1306A.2.2 Notwithstanding Section 1306A.2.1, for any alterations or improvements to a room containing any of the water conservation devices identified in Section 1313A, as a condition for issuance of a Certificate of Final Completion and Occupancy or final permit sign off by the Department upon completion of the alterations or improvements, the permit applicant shall install the applicable water conservation devices required by this chapter in that room.

1306A.3 On or before January 1, 2017, all commercial buildings shall be in compliance with this chapter, and the owner or the owner's authorized representative shall cause a water conservation inspection to be completed, and shall have a certificate of compliance on file with the Department

for the entire building, or the entire portion of the mixed residential and commercial building that is subject to the required water compliance measures identified in Section 1313A.

SECTION 1307A – INFORMATIONAL BROCHURE

1307A.1 The Department shall make available to the public an informational brochure specifying the water conservation requirements.

SECTION 1308A – POSTPONEMENTS OF REQUIREMENTS

1308A.1 Postponement for demolition. The duty of an owner or permit applicant to comply with inspection and water conservation requirements applicable to any portion of a building subject to this chapter shall be postponed for one year from the date of issuance of a demolition permit for said building. If the building is demolished and a certificate of completion is issued by the Department before the end of the one-year postponement, the requirements of this chapter shall not apply. If the building is not demolished after the expiration of one year, the provisions of this chapter shall apply, subject to appeal, even though the demolition permit is still in effect or a new demolition permit has been issued.

SECTION 1309A – EARLY COMPLIANCE WITH WATER CONSERVATION MEASURES

1309A.1 Early compliance. To encourage early compliance with the requirements of this chapter, compliance pursuant to Section 1311A may be completed at any time before compliance would otherwise be required. In the event of early compliance, a water conservation inspection shall be completed and a certificate of compliance shall be filed with the Department in accordance with Section 1311A.

SECTION 1310A – WATER CONSERVATION INSPECTIONS

1310A.1 Inspections. A water conservation inspection which satisfies the requirements of this chapter shall be performed as required by this chapter.

SECTION 1311A – PROOF OF COMPLIANCE WITH WATER CONSERVATION MEASURES

1311A.1 Inspection form. The Department shall provide standardized forms, that may be paper and/or electronic suitable for conducting a valid water conservation inspection and certifying compliance with the requirements of this chapter. The inspection form shall be completed and

signed by a qualified inspector, furnished to the permit applicant, building owner or the owner's authorized representative, and submitted to the Department in accordance with this Section.

1311A.2 Certificate of compliance. When all of the water conservation requirements have been met, a certificate of compliance shall be signed and submitted to the Department.

1311A.3 Public records. Water conservation inspection results and certificates of compliance shall be public information, shall be available for inspection by any interested person during regular business hours at the Department, and may be made available electronically via the internet.

1311A.4 Fees. Reasonable fees may be required to pay for, but not exceed, the costs of implementing this chapter. Such fees shall be established by the Board of Supervisors upon recommendation of the Director of the Department and shall include:

1. The cost of inspections performed by the Department;
2. The cost of the appeal process and the request for exemption process;
3. The cost of filing and processing documents at the Department;
4. The cost of printing forms and informational brochures by the Department;
5. Other expenses incurred by the City and County of San Francisco in implementing this Chapter.

1311A.4.1 Fee schedule. See Building Code Section 110A, Table 1A-N for the applicable fees, once established.

1311A.4.2 Fee review. The Director of the Department of Building Inspection shall cause an annual report of fees to be made and filed with the Controller as set forth in Section 3.17-2 of the San Francisco Administrative Code. The Controller shall review the report and file it with the Board of Supervisors along with a proposed ordinance readjusting the fee rates as necessary.

SECTION 1312A – APPEALS FROM RESULTS OF A WATER CONSERVATION INSPECTION OR REQUEST FOR EXEMPTION

1312A.1 Notice of appeal. Any person with an interest in the property subject to a water conservation inspection who contests the determination of a qualified inspector regarding required water conservation measures may appeal said decision to the Director within ten working days from the date the completed inspection form was filed with the Department. The notice of appeal shall state, clearly and concisely, the grounds upon which the appeal is based. The burden of proof shall be on the applicant to demonstrate that the water conservation measure is not required under this chapter. The determination of the Director may be appealed to the Building Inspection Commission pursuant to the appeal procedures established in the Administrative Code Chapter 77.

1312A.2 Exemptions. Any person with an interest in the property subject to a water conservation inspection who claims an exemption pursuant to Section 1313A.3 and 1313A.4 of this chapter may request a determination of exemption from the Director by filing the request and stating the basis for the claim. The burden of proof shall be on the applicant to demonstrate the qualifications for the exemption. The determination of the Director may be appealed to the Building Inspection Commission pursuant to the appeal procedures established in the Administrative Code Chapter 77. Any appeal or request for exemption to the Director pursuant to this Section shall be accompanied by payment of a filing fee, pursuant to Section 1216 of the San Francisco Housing Code.

SECTION 1313A – REQUIRED WATER CONSERVATION MEASURES

The following water conservation measures are required for commercial buildings:

1313A.1 Showerheads. Replace all showerheads having a maximum flow rate exceeding 2.5 gallons (9.46 liters) per minute, with showerheads not exceeding the maximum flow rate established by the California Energy Commission, as set forth in the Appliance Efficiency Regulations, California Code of Regulations, Title 20, Sections 1601 to 1608, as it may be amended. Showers shall have no more than one showerhead per valve. For purposes of this subsection, the term "showerheads" includes rain heads, rain tiles, or any other fitting that transmits water for purposes of showering.

1313A.2 Faucet aerators. Replace all faucets and faucet aerators having a maximum flow rate exceeding 2.2 gallons per minute at a water pressure of 60 pounds per square inch, with plumbing fittings not exceeding the maximum flow rate established by the California Energy Commission, as set forth in the Appliance Efficiency Regulations, California Code of Regulations, Title 20, Sections 1601 to 1608, as it may be amended. Health-care facilities that are required by this chapter to install faucet aerators may satisfy that requirement by installing other flow restricting devices, such as laminar flow control devices.

1313A.3 Water closets. Replace all water closets that have a rated water consumption exceeding 1.6 gallons per flush with fixtures not exceeding the rated maximum water consumption established in the San Francisco Plumbing Code Chapter 4, Section 402.2, as it may be amended. An owner of a commercial building may request an exemption from replacing a water closet in the building if the replacement would detract from the historical integrity of the building, as determined by the Director of the Department of Building Inspection pursuant to the California Historic Building Code and Section 1312A.2.

1313A. 4 Urinals. Replace all urinals that have a flow rate exceeding one gallon per flush with fixtures not exceeding the maximum flow rate established in the San Francisco Plumbing Code, Section 402.3, as it may be amended. An owner of a commercial building may request an exemption from replacing a urinal in the building if the replacement would detract from the historical integrity of the building, as determined by the Director of the Department of Building Inspection pursuant to the California Historical Building Code and Section 1312A.2.

1313A.5 Leak repair. All water leaks shall be located and repaired. To determine the existence of leaks, the following is required.

1. Visual inspection or water meter registration. If water meter registration is used, compliance is achieved if there is no meter movement for ten minutes while all fixtures are shut off.

2. All tank type water closets shall be tested with leak detector tablets or dye to detect slow valve leaks and all flushometer type fixtures shall be visually checked for proper operation with respect to timing and leaks.

SECTION 1314A – WATER CONSERVATION INSPECTIONS

1314A.1 Inspections. Inspections to determine compliance with the water conservation requirements of this chapter may be conducted by one of the following:

1. An authorized inspector of the Department;
2. A private inspector authorized by the Building Official pursuant to established rules and guidelines;
3. A private inspector hired by the Department, or Public Utilities Commission, on a contractual basis under terms and fees to be recommended by the Departments and established by the Board of Supervisors.

1314A.2 Qualified inspector duties. The duties of a qualified inspector shall be as follows:

1. To inspect portions of a building that are subject to this chapter to determine whether the water conservation standards specified in Section 1313A have been met and, if met, to sign a certificate of compliance, pursuant to Section 1311A, and to furnish it to the permit applicant, building owner or owner's agent;
2. To record on an official inspection form, pursuant to Section 1311A, all measures required by this chapter for which the building is in noncompliance, and to sign the inspection form and furnish it to the permit applicant, building owner or owner's agent.

1314A.3 Private water inspectors. Private inspectors shall be required to demonstrate financial responsibility by being insured and / or bonded in amounts to be determined by the Building Official.

1314A.4 Conflict of interest. No authorized inspector may conduct a water inspection on any building in which that inspector has a financial interest. For the purposes of this section, an inspector shall be deemed to have a financial interest in a building if the inspector:

1. Is an owner of the building or the property upon which the building is located in full or in part;
2. Is a full- or part-time employee of the building or its owners;
3. Is regularly placed on the building staff by a company that provides building engineering, operations and maintenance, or other building services to the property.

1314A.5 Inspector as employee. No inspector may approve a certificate of water conservation compliance for a building where that inspector is an employee or officer of a company that performed construction or repair work required by this chapter.

1314A.6 Limitation. Water conservation inspections are intended to enforce the provisions of this chapter only, and are not intended to determine compliance or noncompliance with any other portions of this code.

Add the chapter as follows:

Chapter 13B
CONSTRUCTION AND DEMOLITION DEBRIS RECOVERY PROGRAM

SECTION 1301B – TITLE

This chapter shall be known as the "Construction and Demolition Debris Recovery Program."

SECTION 1302B – RECOVERY OF CONSTRUCTION AND DEMOLITION DEBRIS

Under the requirements set forth herein and in Chapter 14 of the Environment Code, all construction and demolition debris in amounts of one cubic yard or greater generated in the course of a construction or demolition project must be transported off the site by a registered transporter, unless transported by the owner of the site, and handled, processed and otherwise managed by a registered facility for recovery of the materials. All persons subject to these requirements, including an applicant for any building or demolition permit shall comply with the requirements for construction and demolition debris recovery set forth in Chapter 14 of the Environment Code.

SECTION 1303B – DEFINITIONS

"Construction and demolition debris" shall mean building materials and solid waste generated from construction and demolition activities, including, but not limited to, fully-cured asphalt, concrete, brick, rock, soil, lumber, gypsum wallboard, cardboard and other associated packaging, roofing material, ceramic tile, carpeting, fixtures, plastic pipe, metals, tree stumps, and other vegetative matter resulting from land clearing and landscaping for construction, deconstruction, demolition or land developments. This term does not include refuse regulated under the 1932 Refuse Collection and Disposal Initiative Ordinance or sections of the Municipal Code that implement the provisions of that ordinance; materials from the public right-of-way; or, unless specified in Chapter 14 of the Environment Code, materials source separated for reuse or recycling. Hazardous waste, as defined in California Health and Safety Code section 25100 et seq., as amended, is not Construction and Demolition Debris for purposes of this Chapter.

"Registered Transporter" or "Registered Facility" shall mean a person who holds a valid registration issued by the Director of the Department of the Environment pursuant to Chapter 14 of the Environment Code. "Transporter" does not include a person that owns and operates only vehicles with no more than two axles and no more than two tires per axle.

SECTION 1304B – PERMIT CONDITION

The provisions of Chapter 14 of the Environment Code and any approvals or conditions imposed in writing by the Department of the Environment are conditions of the permit issued by the Department under Section 106A.1, and a violation of Chapter 14 or such approvals or conditions shall be deemed non-compliance with the permit.

SECTION 1305B – PERMIT NOTIFICATION

Permit application materials shall bear notice of and reference to the above requirements and the owner's responsibility for compliance with such requirements.

Add the chapter as follows:

Chapter 13C
[RESERVED]

Note: For Green Building Requirements see the San Francisco Green Building Code.

Add the chapter as follows:

Chapter 13D
COMMERCIAL LIGHTING EFFICIENCY ORDINANCE

The City and County of San Francisco adopts the following Chapter 13D for the purpose of reducing public demand for electricity and the associated detriment to the environment of energy production and delivery by requiring commercial buildings to install or adopt more energy efficient lighting measures.

SECTION 1301D – TITLE

This Chapter shall be known as the "Commercial Lighting Efficiency Ordinance."

SECTION 1302D – PURPOSE

The purpose of this Chapter is to reduce public demand for electricity and the associated detriment to the environment of energy production and delivery by requiring commercial buildings to install or adopt more energy efficient lighting measures.

SECTION 1303D – SCOPE

The provisions of this Chapter shall apply to all privately owned non-residential buildings, including school facilities, the non-residential portions of mixed-use commercial and residential buildings, tourist hotels, and the common areas of residential hotels and multiple-unit residential buildings, all as herein defined.

EXCEPTIONS:

The provisions of this Chapter do not apply to:

1. Residential buildings and residential hotels, except that it shall apply to their common areas.

2. The residential portions of mixed-use commercial and residential buildings, except that it shall apply to their common areas.

SECTION 1304D – DEFINITIONS

For the purpose of this Chapter, certain terms are defined as follows:

COMMERCIAL BUILDING is any privately owned building that is occupancy group A, B, E, F, H, I, L, M or S as defined in this Code and any tourist hotels, as herein defined. When a building is designated for more than one type of occupancy, "Commercial Building" shall mean those spaces within the mixed use building designated as A, B, E, F, H, I, L, M or S or tourist hotel, as herein defined. Except for tourist hotels as herein defined, "Commercial Building" shall include only the common areas of any R ("residential") occupancy buildings for the common areas of any R ("residential") occupancy portions of mixed use buildings.

COMMON AREA is any area, space or room of a building that is made available to the general public as either a client or guest.

DIRECTOR is the Director of the Department of Building Inspection, or his or her designee

EXIT SIGNS are signs located and illuminated as required by the Building Code

LINEAR FLUORESCENT LAMP is a "tube" or "bulb" formed in a straight shape, as distinguished from a circular or u-shape, but not including linear specialty lamps such as black lights.

LUMENAIRE is an interior or exterior complete lighting unit, including internally or externally illuminated signs, consisting of the lamp and the parts designed to distribute the light, to protect the lamp, and to connect the lamp to the power supply, but not including illuminated utilization equipment or exit signs as defined herein.

OCCUPANCY SENSOR CONTROL DEVICE is a device that automatically turns off a luminaires or series of luminaires not more than 30 minutes after it senses that the area is vacated.

TOURIST HOTEL is any residential building, or portion thereof, which is occupied as a hotel, motel or inn and which has a certificated of use for tourist occupancy, or any portion of a residential building which is converted to tourist hotel use pursuant to the Residential Hotel Conversion Ordinance (S.F. Administrative Code, Article 41) or other City law.

UTILIZATION EQUIPMENT is commercial, retail or industrial equipment, including but not limited to refrigeration equipment, fully enclosed retail display cases, vending machines,

printing equipment or conveyors, which uses 4-foot or 8-foot linear fluorescent lamps as an integrated part of such equipment. "Utilization Equipment" shall not include furniture or workstations.

SECTION 1305D – COMPLIANCE REQUIREMENTS

1305D.1 Compliance deadline. No later than December 31, 2011 ("Compliance Deadline"), the owner of each building subject to this Chapter shall self-certify that the entire building meets the standards specified in this Chapter 13D, and if the building is not certified, the building owner shall make such repairs as may be required to conform to this Chapter.

1305D.2 Stay of compliance deadline. The Compliance Deadline stated in Section 1305D.1 shall be stayed for up to two years form the date of an application for a demolition permit for any building subject to this Chapter. If the building is demolished and a Certificate of Completion issued by the Department before the end of the two-year postponement, the requirements of this Chapter shall not apply. If the building is not demolished after the expiration of two year, the provisions of this Chapter shall apply even though the demolition permit is till in effect or a new demolition permit has been issued.

SECTION 1306D – LIGHTING EFFICIENCY MEASURES

1306D.1. Mercury content. The mercury content of each 4-foot linear fluorescent lamp installed after the Compliance Deadline in a luminaires in a building subject to this Chapter shall not exceed 5 mg. The mercury content of each 8-foot linear fluorescent lamp installed after the Compliance Deadline in a luminaires in a building subject to this Chapter shall not exceed 10 mg.

1306D.2. Energy efficiency. The lamp and ballast system in each luminaires that utilizes one or more 4-foot of 8-foot linear fluorescent lamps to provide illumination in a building subject to this Chapter must meet at least one of the following requirements:

1. The lamp and ballast system emits 81 or more lumens per watt of electricity consumed.
2. The luminaires is controlled by an occupancy sensor control device that does not control an area in the building of more than 250 square feet.
3. The luminaires is fitted with a lighting efficiency measure approved by the Director as equivalent to the measures in subsection (1) or (2).
4. The Director finds, based on the facts of the particular building and luminaires, that the energy savings from installing lighting efficiency measures meeting the requirements of this Section will be so insignificant over the life of the luminaires that the measure is not cost efficient.
5. If the owner of a Commercial Building elects to meet the requirements of this Section 1306D.2 with measures that require permits, such permits shall comply with all other applicable requirements of this Code and all other applicable state and local laws.

SECTION 1307D – ENFORCEMENT

Any building maintained in violation of this Chapter shall constitute a public nuisance under the terms of Section 102A of this Code and such nuisance may be abated pursuant to the procedures set forth in Section 102A of this code for unsafe buildings.

SECTION 1308D – RULES

The director, after consulting with the Department of the Environment, and in accordance with Section 104A.2.1 of this Code, shall adopt, and may amend, reasonable rules, guidelines and forms for implementing the provisions and intent of this Chapter.

SECTION 1309D – UNDERTAKING FOR THE GENERAL WELFARE

In undertaking the enforcement of this Chapter, the City and County of San Francisco is assuming an undertaking only to promote the general welfare. It is not assuming, nor is it imposing on its officers and employees, an obligation for breach of which it is liable in money damages to any person who claims that such breach proximately caused injury.

SECTION 1310D – PREEMPTION

Nothing in this Chapter shall be interpreted or applied so as to create any power or duty in conflict with any federal or state law or regulation.

SECTION 1311D – SEVERABILITY

If any provision or clause of this Chapter or the application thereof to any person or circumstance is held to be unconstitutional or to be otherwise invalid by any court of competent jurisdiction, such invalidity shall not affect other provisions, and clauses of this Chapter are declared to be severable.

Chapter 14
EXTERIOR WALLS

SECTION 1403 – PERFORMANCE REQUIREMENTS

1403.8 Add a section as follows:

1403.8 Projections and appendages. Provisions shall be made at the outer edge of all projections and appendages to control rainwater backflow under the projection. Ventilation shall be provided for all enclosed spaces of exposed soffits, bays and other projections in wood framed construction.

Where an uncovered balcony or deck with an impervious surface exceeds 200 square feet (18.58 m^2) in area, drainage shall be conveyed directly to a building drain or building sewer or be conveyed to an approved alternate location based on approved geotechnical and engineering design.

Chapter 15
ROOF ASSEMBLIES AND ROOFTOP STRUCTURES

SECTION 1501 – GENERAL

1501.1 Add a second paragraph as follows:

For qualified historical buildings or properties, see ~~Section 3409~~ 2016 California Existing Building Code, Chapter 12.

SECTION 1503 – WEATHER PROTECTION

1503.4 Add a second paragraph as follows:

All storm- or casual water from roof areas which total more than 200 square feet (18.58 m^2) shall drain or be conveyed directly to the building drain or storm drain or to an approved alternate location based on approved geotechnical and engineering design. Such drainage shall not be directed to flow onto adjacent property or over public sidewalks. Building projections not exceeding 12 inches (305 mm) in width are exempt from drainage requirements without area limitations.

SECTION 1505 – FIRE CLASSIFICATION

1505.1 Revise the first sentence as follows:

1505.1 General. Roof assemblies shall be divided into the classes defined below. Class A **or** B ~~and C~~ roof assemblies and roof coverings required to be listed by this section shall be tested in accordance with ASTM E 108 or UL 790.

1505.1 Add the following at the end of the first paragraph:

Class B or better roof coverings shall be used on all buildings.

1505.1 Add the following second exception:

2. Detached accessory structures with a roof of less than 200 square feet (18.58 $m^{2)}$ may have roof coverings of Class A, B or C.

Table 1505.1 Revise the table as follows:

TABLE 1505.1 – MINIMUM ROOF COVERING CLASSIFICATION FOR TYPES OF CONSTRUCTION

IA	IB	IIA	IIB	IIIA	IIIB	IV	VA	VB
B	B	B	~~B C~~	B	~~B C~~	B	B	~~B C~~

SECTION 1507 – REQUIREMENTS FOR ROOF COVERINGS

1507.8 Add the following sentence at the end of the paragraph:

Untreated wood shingles shall not be permitted.

1507.9 Add the following sentence at the end of the paragraph:

Untreated wood shakes shall not be permitted.

SECTION 1510 – ROOF TOP STRUCTURES

1510.2.2 Add the following sentence at the end of this section:

Penthouses shall be of a size no larger than the minimum clearances required for the mechanical equipment to be installed or no larger than the vertical shaft opening in the roof.

1510.10 Add the following section:

1510.10 Occupied Roof decks. May be constructed of wood when the following conditions are met:

1. The occupied roof deck is less than 500 square feet (46.45 m^2) in area.

2. The deck boards are spaced not greater than 1/8 inch (3.2 mm) apart.

3. Any open space around the perimeter between the deck and the roof surface shall be enclosed to within 1 inch (25.4 mm) of the roof surface.

4. The decking is constructed of fire-retardant- treated wood approved for exterior use, or 2-inch (50.8 mm) nominal all heart redwood. Guardrails and fences may be constructed of any material permitted by this code.

5. The deck is installed on top of a Class A or B fire-resistive roof assembly. The deck shall not be considered part of such roof assembly.

~~**6. Building Construction Type 3, 4, 5**~~

Chapter 16
STRUCTURAL DESIGN

[Editor's Note: 2013 SFBC Chapter 16B, 16C and 16D Amendments have been relocated to the San Francisco Existing Building Code.]

SECTION 1604 – GENERAL DESIGN REQUIREMENTS

1604.11 Add the following section:

1604.11 Earthquake Recording Instrumentation. The City and County of San Francisco adopts Appendix L.

SECTION 1607 – LIVE LOADS

TABLE 1607.1 — MINIMUM UNIFORMLY DISTRIBUTED LIVE LOADS AND CONCENTRATED LIVE LOADS

Table 1607.1 Add the following footnote o to Occupancy or Use 29, Sidewalks and Driveways

o Driveways subject to vehicle loading shall be designed in accordance with the American Association of State Highway and Transportation Officials (AASHTO) HS-20 Standard Specification for Highways and Bridges. Sidewalks subject to vehicle loading shall be designed for a concentrated load of 10,000 pounds placed upon any space 2½ feet (762 mm) square, wherever this load upon an otherwise unloaded sidewalk would produce stresses greater than those caused by the uniform load of 250 psf required therefor.

Chapter 16A
STRUCTURAL DESIGN

No San Francisco Building Code Amendments

Chapter 17
SPECIAL INSPECTIONS AND TESTS

SECTION 1704 – SPECIAL INSPECTIONS AND TESTS, CONTRACTOR RESPONSIBILITY AND STRUCTURAL OBSERVATION

1704.2 *Replace Exception 2 as follows:*

2. ~~Unless otherwise required by the building official, special inspections are not required for Group U occupancies that are accessory to a residential occupancy including ,but not limited to, those listed in Section 312.1.~~

The special inspections and verifications for foundation concrete, other than cast-in-place drilled piles or caissons, are not required for occupancies in Group R-3 and occupancies in Group U that are accessory to a residential occupancy, but not limited to, those listed in Section 312.1.

This exception shall not apply to foundations serving as retaining walls of soil over 5 feet (1829 mm) in height measured from the base of the foundation, or the structural design of the footing based on a specified compressive strength, f'_c, greater than 2,500 pounds per square inch (psi) (17.2 MPa), regardless of the compressive strength specified in the construction documents or used in the footing construction.

SECTION 1705 – REQUIRED SPECIAL INSPECTIONS AND TESTS

1705.1.1. Add item 4 as follows:

4. Work which, in the opinion of the Director, involves unusual hazards or conditions such as underpinning, shoring, removal of hazardous materials and new construction methods not covered by this code.

1705.4.3 Add the following section:

1705.4.3 Exterior facing. Special inspection is required during fastening of all exterior veneer and ornamentation facing units constructed of concrete, masonry, stone or similar materials, and all curtain walls weighing more than 15 pounds per square foot (73.23 kg/m^2) of wall.

EXCEPTIONS:

1. **Veneers weighing less than 5 pounds per square foot (24.46 kg/m^2) located less than 15 feet (4.57 m) above grade.**
2. **Anchored veneer located less than 10 feet (3.048 m) above grade.**

1705.4.4 Add the following section:

1705.4.4 Retrofit of unreinforced masonry bearing wall buildings. Special inspection is required:

1 **During the testing of mortar quality and performance of masonry shear tests in accordance with SFEBC Section 414B when required by SFEBC Sections 406B.3.3 and 407B.2.**

2 **During repointing operations in accordance with SFEBC Section 416B when required by SFEBC Sections 406B.3.3.7 and 407B.1.**

3 **During the installation of new shear bolts when required by the exception to SFEBC Section 407B.4.**

4 **Prior to the placement of the bolt and grout or adhesive for embedded bolts as required by**

SFEBC Section 407B.4.

5 During the prequalification tests in accordance with SFEBC Section 415B.3 as permitted by Footnote 8 to SFEBC Table 4B-E.

1705.5.4 Add the following section:

1705.5.4 Shear walls and floor systems used as shear diaphragms. All connections, including nailing, tiedowns, framing clips, bolts and straps, for those parts of a lateral force resisting system utilizing the following components:

1 Plywood diaphragms, where shear values exceed 2/3 the values in Tables 2306.3.1 and 2306.3.2.

2 Double sheathed shear walls, in all cases.

3 Plywood shear walls, wherever nailing or hardware are not visible to the district inspector at the time of cover-up inspection.

If nailing is not visible to the inspector at the called inspection, or if the special inspector has not inspected the work prior to the concealment, all work concealing such nailing shall be removed in order to permit a complete inspection.

4 Gypsum wallboard shearwalls where shear values exceed one-half of the values permitted by Footnote a of Table 2306.4.5.

5 Fiberboard shearwalls where shear values exceed one-half of the values in Table 2306.4.4.

6 Particle-board diaphragms, where shear values exceed one-half of the values in Table 2306.4.3.

1705.19 Add the following section:

1705.19 Demolition. Demolition of buildings more than two stories or 25 feet (7.62 m) in height. See Section 3303 for demolition requirements.

EXCEPTION: Type V buildings.

1705.20 Add the following section:

1705.20 Bolts Installed in Existing Masonry or Concrete. Except for through bolts with plate washers conforming to SFEBC Table 4B-E, bolts that are newly installed in existing masonry or concrete shall be tested in accordance with SFEBC Section 415B. The number and type of tests required shall be the same as required by SFEBC Section 407B.

1705.21 Add the following section:

1705.21 Construction subject to the Slope Protection Act, created by Section 106A.4.1.4; or construction of a new building or structure, or alterations that involve a substantial increase in the envelope of an existing building or structure within the Edgehill Mountain Slope Protection Area, created by Building Code Section 106A.4.1.2, or the Northwest Mt. Sutro Slope Protection Area,

created by Building Code Section 106A.4.1.3; provided, however, that, until the special inspection reports required by Building Code Section 1704.2.4 are submitted to and approved by the Department, the phase of construction subsequent to the phase or element for which the report was completed cannot commence.

1705.22 Add the following section:

1705.22 Crane Safety. No owner or other person shall operate, authorize or permit the operation of a tower crane on a high-rise building structure until a signed Crane Site Safety Plan, Submittal Form and Crane Safety Compliance Agreement have been accepted by the Building Official.

SECTION 2304 – GENERAL CONSTRUCTION REQUIREMENTS

2304.12.1.5 Add the following second paragraph:

Walls not accessible for maintenance shall have exterior covering of siding or plywood that are either treated wood or wood of natural resistance to decay. Plywood shall be exterior type, C-C Grade minimum, and not less than 1/2-inch (12.7 mm) thickness unless applied over sheathing.

Plywood manufactured with redwood or cedar faces but with inner plys of other species conforming to DOC Standard PS1-95 may be used, provided the exposed outer face is plugged and not grooved or patterned.

2304.12.3.2 Add the following section:

2304.12.3.2 Wood structural members. Wood structural members that support moisture permeable floors or roofs that are exposed to the weather, such as concrete or masonry slabs, shall be of naturally durable or preservative-treated wood unless separated from such floors or roofs by an impervious moisture barrier **extending up the walls not less than 4 inches (101.6 mm) or shall otherwise be adequately flashed and counter flashed.**

Regardless of finish flooring type or structural materials, the wood sub-floor of toilet rooms and bathrooms shall be protected by a waterproof membrane. Where a single ply sheet membrane is used, all adhesives shall be of a waterproof type and shall be applied so as to form a full unbroken coat between the backing and the membrane being applied. All seams and joints shall be thoroughly sealed.

***Exception*: Interior floors in Group R, Division 3 Occupancies.**

2304.12.2.3 Add the following 2nd paragraph with exception, and 3rd paragraph:

Weather-exposed stairways constructed with concrete, masonry, brick, tile or terrazzo shall be supported on hot-dipped galvanized steel or reinforced concrete stringers.

EXCEPTION: In Group R, Division 3 Occupancies, wood construction on masonry or concrete foundations may be used as supports, and the area under the stair shall be ventilated in compliance with 2304.12.7.

Weather-exposed stairs of precast concrete or metal pan treads may be supported on wood stringers, provided the entire stairway is exposed and the treads are connected to the stringers by hot-dipped galvanized steel or other approved corrosion-resistant fasteners.

Chapter 24
GLASS AND GLAZING

SECTION 2405 – SLOPED GLAZING AND SKYLIGHTS

2405.3 revise this exception as follows:

3. Any glazing material, including annealed glass, is permitted to be installed without screens in the sloped glazing systems of commercial or detached noncombustible green houses used exclusively for growing plants and not open to the public, provided that the height of the greenhouse at the ridge does not exceed 30 feet (9144 mm) above grade **except that for R-3 occupancies and townhouses, *the greenhouse height at the ridge does not exceed 20 feet (6096 mm) above grade. 3. Foam plastic insulation that is part of a Class A~~,~~ **or** B ~~or C~~, roof-covering assembly provided the assembly with the foam plastic insulation satisfactorily passes ~~FM 4450~~ **NFPA 276** or UL 1256.

2603.4.1.5. Revise this section as follows:

2603.4.1.5 Roofing. Foam plastic insulation under a roof assembly or roof covering that is installed in accordance with the code and the manufacturer's instructions shall be separated from the interior of the building by wood structural panel sheathing not less than 0.47 inch (11.9mm) in thickness bonded with exterior glue, **and identified as Exposure 1** with edges supported by blocking, tongue-and-groove joints or other approved type of edge support, or an equivalent material. A thermal barrier is not required for foam plastic insulation that is a part of a Class A~~,~~ **or** B ~~or C~~, roof- covering assembly, provided the assembly with the foam plastic insulation satisfactorily passes ~~FM 4450~~ **NFPA 276** or UL 1256

2603.6 Revise this section as follows:

2603.6 Roofing. Foam plastic insulation meeting the requirements of Sections 2603.2, 2603.3 and 2603.4 shall be permitted as a part of a roof-covering assembly, provided the assembly with the foam plastic insulation is a Class A~~,~~ **or** B ~~or C~~, roofing assembly where tested in accordance with ASTM E 108 or UL 790.

Chapter 30
ELEVATORS AND CONVEYING SYSTEMS

3010 Add the following section:

SECTION 3010 – PRIVATE RESIDENCE ELEVATORS

3010.1 PRIVATE RESIDENCE TYPE ELEVATOR is a power passenger elevator which is limited in size, capacity, rise and speed and is installed in a private residence or in a multiple dwelling as a means of access to a private residence.

3010.2 Construction. The construction and installation of private residence elevators, dumbwaiters, and private residence special access lifts shall comply with ANSI/ASME 17.1-2013.

[Note: For other than private residence elevators, dumbwaiters, and private residence special access lifts, see Title 8, California Code of Regulations, California Elevator Safety Regulations.]

Chapter 31
SPECIAL CONSTRUCTION

SECTION 3103 – TEMPORARY STRUCTURES

3103.1.1 Add this sentence to the end of the paragraph.

See Section 106A.1.7 for permit requirements.

SECTION 3107 – SIGNS

Replace this section with the following sections:

3107.1 General. Except as otherwise provided herein, all signs placed upon or attached to any building, structure or property shall comply with this chapter and shall be installed under a valid sign permit.

The electrical portion of the sign shall be constructed in accordance with the requirements of the Electrical Code, and an electrical permit shall be obtained in accordance with that code.

Plans shall be filed with the application for a permit for any sign. When required, computations shall be provided.

3107.1.1 Exempt signs. The following signs are exempt from the requirements of this code:

1. Signs painted on structures. However, such signs must comply with the San Francisco Planning Code, and an application shall be filed with the Department.
2. Bulletin boards for public, charitable or religious institutions, when such boards are located on the premises of said institutions.
3. Real estate signs advertising the sale, rental or lease of the premises on which they are maintained, which do not exceed 15 square feet (1.39 m^2) in size, and which are mounted flush to the building.
4. Professional occupation signs denoting only the name and profession of an occupant in a commercial building, public institutional building or dwelling house, and not exceeding 3 square feet (0.278 m^2) in area for each occupant.

3107.1.2 Prohibitions. The following prohibitions apply to signs:

1. No signs shall be erected, relocated or maintained so as to block any exits or required windows. No sign shall be attached to a standpipe, gutter drain, stairway or fire escape, or interfere with the function or operation of any standpipe or fire escape. No roof sign shall be located within 6 feet (1.829 m) of a standpipe outlet.
2. No sign shall be increased in size, altered in shape or changed by the addition of other signs or advertising matter not specifically allowed by the provisions of this code and the San Francisco Planning Code.
3. No wall sign shall extend across or in front of any window or other exterior opening located above the first story of a building, except as approved by the Building Official.
4. No wall sign erected on a wall adjacent to and facing a street, public space or yard shall project above the parapet walls.

EXCEPTIONS:

1. On a building located on a corner lot, a wall sign may project a maximum of 7 feet (2.134 m) above the roof line on only one street.
2. On any frontage, signs not more than 10 feet (3.048 m) long for any 40-foot (12.19 m) frontage and occupying no more than 25 percent of the lot frontage may project a maximum of 7 feet (2.134 m) above the roof line.

3107.1.3 Permit number on sign. Every sign shall have the permit number clearly painted and maintained on its face or edge, and of such size and location as to be legible from the sidewalk level, ground level or an easily accessible location. Electric signs may have an approved metal tag attached to them instead of painted characters.

3107.1.4 Revocable permits. The permit for any sign over public property may be revoked. A permit granted under Chapter 1A and this chapter for a sign over public property shall not be construed to create any perpetual right but is a revocable license which may be terminated by revocation by the Board of Supervisors.

3107.1.5 Existing signs. This chapter shall not render unlawful the existence or maintenance of any sign erected or maintained by a lawful permit issued prior to the adoption of this ordinance. EXCEPTION: Signs for which lawful permits were issued and which, due to a sidewalk narrowing or street widening project, no longer conform to the requirements of Section 3107.3 shall be altered to conform not later than 90 days following completion of such project.

3107.2 Definitions. For the purposes of this chapter, certain terms are defined as follows:
APPROVED PLASTIC is a plastic material found to be suitable functionally for the purpose for which it is intended and which complies with the requirements of Chapter 26. For outdoor signs, the approval of the plastic shall be based upon considerations of flame spread value only. For indoor signs, the approval shall be based upon flame spread and smoke density values.
AREA OF A SIGN is that area of exposed vertical surface which is included within a rectangle enclosing all the features of the sign. In cases of an irregular sign, it is the sum of the areas of the enclosing rectangles estimated to the nearest 5 square feet (0.465 m^2).
BUSINESS SIGN is a sign which directs attention to a business, commodity, service, industry or other activity which is sold, offered or conducted on the premises upon which such sign is located, or to which it is affixed.
SIGN is any structure, part thereof, or device or inscription which is located upon, attached to or painted, projected or represented on the exterior of any building or structure, including an awning, canopy, marquee or similar appendage, or affixed to the glass on the outside or inside of a window so as to be seen from the outside of the building, and which displays or includes any numeral, letter, word, model, banner, emblem, insignia, symbol, device, light, trademark or other representation used as, or in the nature of, an announcement, advertisement or designation by or of any person, firm, group, organization, place, commodity, product, service, business, profession, enterprise or industry. A sign includes the support, uprights and framework of the display.

3107.3 Height, projection, and location.

Height, projection and location of all signs shall be as specified in Article 6 of the San Francisco Planning Code. No sign shall project past the curbline of any street, alley or public way.

The minimum vertical clearance of signs over public sidewalks shall be 10 feet (3.048 m). Additionally, signs or portions within the outer one- third of a sidewalk shall have 12-foot (3.658 m) clearance, and when within 2 feet (0.61 m) of the curbline shall have 14-foot (4.267 m) clearance.

Roof signs shall be not less than 5 feet (1.524 m) above the roof. Supports shall be spaced at least 6 feet (1.829 m) apart.

3107.4 Design.

The design shall make allowances for the effects of corrosion and lack of maintenance.

No anchor or support of any sign shall be connected to, or suspended by, an unbraced parapet wall, unless such wall is designed in accordance with the requirements for parapet walls specified in Chapter 16.

Fasteners and braces shall be of noncombustible construction, except that stringers for attachment of roof signs may be of 6-inch (152.4 mm) minimum dimension redwood or approved preservative-treated lumber.

3107.5 Construction.

3107.5.1 General. All signs shall be constructed of noncombustible materials except that approved plastics may be used in sign facings as described in Section 3107.5.2. All ferrous metal and all fastenings used in construction or installation, excluding stainless steel, shall be hot-dipped galvanized, porcelain-enameled or otherwise protected in an approved manner against corrosion.

Aluminum may only be used for minor internal members, such as stiffeners and closures, and for sign faces and nonstructural trim. The minimum thickness shall be 0.0299 inch (0.76 mm).

Steel shapes or plates used for primary support shall be not less than 3/16 inch (4.76 mm) in thickness. Sheet metal formed integrally with the sign face or used as cabinet cover shall be not less than 0.0239 inch (24 gauge). Secondary support members not formed integrally with the design face shall be not less than 0.1046 (12 gauge) inch.

The minimum material thickness requirements in this section pertain to the base metal before application of protective covering and need not apply to signs located inside a building.

3107.5.2 Plastics. Where plastics are included in a sign, the application to install a sign shall set forth the manufacturer's trade name, or the common name of the plastic material to be used in the sign, thickness of plastic, aspect ratio, corrugation type, if any, and span. The plastic employed in the signs shall be identified as set forth in Chapter 26 with the manufacturer's trade name, or with the common name of the plastic material.

Plastic sign facing shall conform to the provisions of this section. Plastic sign faces, formed or flat, letters and decorations shall be of sufficient thickness or so formed or supported that they will withstand all loads required by this code.

Plastic facing shall be mounted in a metal frame. Proper provision shall be made for the difference in thermal expansion between plastic members and the frame.

3107.5.3 Electric plastic signs. Every electric sign containing approved plastics shall comply with the minimum requirements set forth in the Standard for Electric Signs, UL No. 48. The attachment of Underwriters Laboratories label, or other approved laboratory per the Electrical Code, shall be sufficient proof that a sign has complied with the requirements of the Electrical Code.

3107.5.4 Wood-faced signs. Projecting signs with wood facing or backing are permitted on any building.

Plywood used for signs shall be exterior grade and not less than 5/8-inch (15.88 mm) thickness. Lumber shall be not less than 1-inch (25.4 mm) nominal and shall be finished to provide a weather- resistant finish.

3107.6 Ground signs.

3107.6.1 Height. The maximum height of a ground sign constructed with wood supports shall be 30 feet (9.14 m), as measured from the top of the sign to the sidewalk in front of the sign or the existing ground under the sign, whichever is higher.

3107.6.2 Design and construction. The design and construction of wood signs shall comply with Chapters 16 and 23 of this code. All wood within 12 inches of the ground shall be pressure-treated wood.

3107.7 Removal of business signs. It shall be unlawful for any person to allow any business sign to remain posted more than 180 days after the activity for which the business sign has been posted has ceased operation on the premises if such person (1) owns, leases or rents the property on which the sign is posted, or (2) owns or operates such business, service, industry or other activity.

SECTION 3112 – WOODBURNING APPLIANCES

3112 Add a section as follows

3112.1 Woodburning appliances. All woodburning appliances installed in new buildings or woodburning appliances being added, reconstructed or replaced in existing buildings shall comply with this section.
Gas fireplaces shall be exempt from the requirements of this section. However, the conversion of a gas fireplace to burn wood shall constitute the installation of a woodburning appliance and shall be subject to the requirements of this section.

3112.2 Definitions. The definitions set forth in this section shall govern the application and interpretation of this section.

BAY AREA AIR QUALITY MANAGEMENT DISTRICT means the air quality agency for the San Francisco Bay Area established pursuant to California Health and Safety Code Section 40200.

EPA means the United States Environmental Protection Agency.

EPA CERTIFIED WOOD HEATER means any wood heater that meets the standards in Title 40, Part 60, Subpart AAA, Code of Federal Regulations in effect at the time of installation and is certified and labeled pursuant to those regulations.

FIREPLACE means any permanently installed masonry or factory-built appliance that burns wood, except a pellet-fueled wood heater, designed to be used with an air-to-fuel ratio greater than or equal to 35 to one.

GARBAGE means all solid, semisolid and liquid wastes generated from residential, commercial and industrial sources, including trash, refuse, rubbish, industrial wastes, asphaltic products, manure, vegetable or animal solids and semisolid wastes, and other discarded solid and semisolid wastes.

GAS FIREPLACE means any device designed to burn natural gas in a manner that simulates the appearance of a woodburning fireplace.

PAINTS means all exterior and interior house and trim paints, enamels, varnishes, lacquers, stains, primers, sealers, undercoatings, roof coatings, wood preservatives, shellacs, and other paints or paint-like products.

PAINT SOLVENTS means all original solvents sold or used to thin paints or to clean up painting equipment.

PELLET-FUELED WOOD HEATER means any appliance that burns wood and operates exclusively on wood pellets.

RECONSTRUCTION means the complete rebuilding of the woodburning appliance such that all or a substantial portion of its parts are new. It does not include repairs made to the appliance in order to make it safer or more efficient.

SOLID FUEL means wood or any other nongaseous or nonliquid fuel.

TREATED WOOD means wood of any species that has been chemically impregnated, painted or similarly modified to improve resistance to insects or weathering. It does not include products such as Duraflame or Presto logs that are specifically designed and sold to be burned in a woodburning appliance.

WASTE PETROLEUM PRODUCTS means any petroleum product other than gaseous fuels that has been refined from crude oil and has been used, and as a result of use has been contaminated with physical or chemical impurities.

WOODBURNING APPLIANCE means fireplace, wood heater, or pellet-fueled wood heater or any similar device burning any solid fuel used for aesthetic or space-heating purposes.

WOOD HEATER means a stove that burns wood.

3112.3 Unauthorized appliances prohibited. No person shall install a woodburning appliance that is not one of the following:

1. **A pellet-fueled wood heater;**
2. **An EPA-certified wood heater; or**

3. A fireplace certified by the Northern Sonoma Air Pollution Control District.

Exceptions:

1. Woodburning appliances that are designed primarily for food preparation in new or existing restaurants or bakeries.

2. Historic woodburning appliances installed in historic structures, as determined by the Building Official of the Department of Building Inspection in consultation with the Director of the Department of Planning.

3112.4 Prohibited fuels. The following fuels are prohibited from use in a woodburning appliance:

1. Garbage;
2. Treated wood;
3. Plastic products;
4. Rubber products;
5. Waste petroleum products;
6. Paints or paint solvents;
7. Coal;
8. Glossy or colored paper;
9. Particle board; or
10. Saltwater driftwood.

3112.5 Certification. Any person who plans to install a woodburning appliance must submit documentation to the Building Official demonstrating that the appliance is a pellet-fueled wood heater, a certified wood heater, or a fireplace certified by Northern Sonoma Air Pollution Control District.

NOTE: Ordinance 13-02, adopted 1-14-2002, which amended Section 3102.8, contained the following findings:

(a) In 1982, the State Air Resources Board (ARB) adopted a particulate matter (PM10) Ambient Air Quality Standard (AAQS). Levels for the PM10 AAQS were selected pursuant to California Code of Regulations Title 17 Section 70200 to protect the health of people who are sensitive to exposure to fine particles.

(b) Research indicates that wood smoke is a significant contributor to PM10 levels that pose significant health risks.

(c) The City and County of San Francisco desires to lessen the risk to life and property from air pollution from woodburning appliances.

(d) The City and County of San Francisco finds that the proposed regulation will significantly reduce the increases in particulate emissions from future installation and construction activities.

(e) The City and County of San Francisco finds a need exists to adopt regulations which apply to woodburning combustion emissions.

Chapter 32
ENCROACHMENTS INTO PUBLIC RIGHT-OF-WAY

SECTION 3201 – GENERAL

3201.4 Revise this section as follows:

3201.4 Drainage. Drainage water collected from a roof, awning, canopy, or marquee, and condensate from mechanical equipment **shall be conducted to the building drain or building sewer, and** shall not flow over a public walking surface.

SECTION 3202 – ENCROACHMENTS

3202.3.1 Replace this section as follows:

3202.3.1 Awnings, canopies, marquees and signs. Awnings, canopies, marquees and signs shall be constructed so as to support applicable loads as specified in Chapter 16. **Canopies shall be allowed only over entrance doorways and only for Occupancy Groups A, B, F-1, M, S-1, S-2 and R. Canopies may be constructed as awnings and with the same limitations except that:**

1. **The maximum width shall be 10 feet (3.048 m); and**
2. **The maximum extension over public sidewalk may be to a point 2 feet (0.61 m) from the curb; and**
3. **The outer column support shall be located in the outer one-third of the sidewalk.**

3202.3.2 Replace this section as follows:

3202.3.2 Windows, balconies, architectural features and mechanical equipment.

A 3-foot (0.914 m) projection shall be permitted for bay and oriel windows when the clearance above grade is at least 10 feet (3.048 m) and the width of the sidewalk is greater than 9 feet (2.74 m). Where the sidewalk width is 9 feet (2.74 m) or less, the projection shall not exceed 2 feet (0.61 m).

For all other appendages, a 2-foot (0.61 m) projection is permitted when the clearance above grade is at least 10 feet (3.048 m). The projection may be increased 1 inch (25.4 mm) for each additional foot of clearance over 10 feet (3.048 m), to a maximum of 4 feet (1.219 m).

3202.3.4 Add the following after the first paragraph as follows:

A covered pedestrian walkway may be constructed over a street between buildings of only Types I-A and I-B construction. Permission from the Board of Supervisors and approval of the Department of Public Works and Planning Commission is required. The pedestrian walkway shall comply with the following conditions:

1. **The pedestrian walkway shall be equipped with an automatic sprinkler system. The supporting structure shall be three-hour fire-resistive construction. Columns located within 8 feet (2.438 m) of the curb, or otherwise vulnerable to vehicle impact, shall either be designed for such impact or protected from the impact.**

2. **The openings in the exterior walls of the buildings at the ends of the pedestrian walkway shall be protected by 1½ hour fire assemblies.**

SECTION 3203 – SIDEWALK CONSTRUCTION

3203 Add a section as follows:

3203.1 General. Sidewalks shall be constructed in accordance with the Public Works Code.

Sidewalks over excavated areas shall be supported on noncombustible construction with 3-hour fire-rated protection. The sidewalk shall be waterproofed by use of a hot mopped asphalt membrane or other approved means.

3203.2 Openings in Sidewalks.

3203.2.1 Sidewalk trapdoor. Every basement extending under the sidewalk shall have an approved sidewalk trapdoor. The minimum size of the trapdoor opening shall be 4 feet by 4 feet (1.219 m by 1.219 m). However, trapdoors shall not be required where the basement is provided with an automatic sprinkler system.

3203.2.2 Sidewalk elevators. All openings hereafter constructed in sidewalks for sidewalk elevators shall be located in the outer half of the sidewalks, next to the curb. The outer edges of the openings shall be not more than 30 inches (762 mm) from the outer line of the curb. The length of the sides of the openings at right angles to the curb shall not exceed one-half of the width of the sidewalk and in no case shall it exceed 5 feet (1.524 m).

3203.2.3 Any other purpose. Openings on the sidewalks for any other purpose, if placed outside the property line, shall be covered with approved gratings having a maximum opening between bars of ½ inch (12.7 mm), or with covers having a rough surface, and rabbeted flush with the sidewalk. When a cover is placed in any sidewalk, it shall be placed as near as practicable to the line of the curb. All spaces under sidewalks shall be thoroughly ventilated.

3203.2.4 Framing. All framing supporting only the sidewalk opening shall be of noncombustible material.

3203.2.5 Guards. Metal guards will be required for openings in sidewalks in accordance with the Police Code.

3203.3 Electrical Transformers. No portion of any electrical transformer pad shall be constructed, nor electrical transformer installed on the surface of any portion of any public sidewalk.

Chapter 33
SAFEGUARDS DURING CONSTRUCTION

SECTION 3302 – CONSTRUCTION SAFEGUARDS

3302 Add a new section as follows:

3302.4 Fencing. Provide for the enclosing, fencing, and boarding up or by fire watch or other means of preventing access to the site by unauthorized persons when work is not in progress.

SECTION 3303 – DEMOLITION

3303.1 Add new sections as follows:

3303.1.1 Buildings other than Type V. The demolition of structures of Types I, II, III and IV construction greater than two stories or 25 feet (7.62 m) in height shall comply with the requirements of this section.

The requirements of this section shall also apply to the demolition of post-tensioned and pre- tensioned concrete structures.

3303.1.2 Required plans. Prior to approval of an application for a demolition permit, two sets of detailed plans shall be submitted for approval, showing the following:

1. **The sequence of operation floor by floor, prepared by a registered civil engineer or licensed architect.**
2. **The location of standpipes.**
3. **The location and details of protective canopies.**
4. **The location of truck crane during operation.**
5. **Any necessary fence or barricade with lights.**
6. **Any floor or wall left standing.**
7. **The schedule of the days when the demolition will be done, i.e., on weekdays or on Sundays.**

3303.4 Replace this section with the following:

3303.4 Vacant Lot. When a building is demolished, the permittee must remove all debris and remove all parts of the structure above grade except those parts that are necessary to provide support for the adjoining property.

3303.8 Add a new section as follows:

3303.8 Special inspection. A registered civil engineer or licensed architect shall supervise the demolition work in accordance with rules and regulations adopted by the Building Official pursuant to Section 104A.2.1 to assure the work is proceeding in a safe manner and shall submit written progress reports to the Department in accordance with Section 1704.2.4.

SECTION 3304 – SITE WORK

3304.1 Add a second paragraph as follows:

The City and County of San Francisco adopts Appendix J for the purpose of regulating excavation and grading.

3304.1 Add a third paragraph as follows:

Temporary wood shoring and forms. All wood used for temporary shoring, lagging or forms that will be backfilled against or otherwise left permanently in place below grade shall be treated wood as defined in Section 2302.

SECTION 3306 – PROTECTION OF PEDESTRIANS

3306.10 Add a section as follows:

3306.10 Chutes. Chutes for the removal of materials and debris shall be provided in all parts of demolition operations that are more than 20 feet (6.096 m) above the point where the removal of material is effected. Such chutes shall be completely enclosed. They shall not extend in an unbroken line for more than 25 feet (7.62 m) vertically but shall be equipped at intervals of 25 feet (7.62 m) or less with substantial stops or offsets to prevent descending material from attaining dangerous speeds.

The bottom of each chute shall be equipped with a gate or stop with a suitable means for closing or regulating the flow of material.

Chutes, floors, stairways and other places affected shall be watered sufficiently to keep down the dust.

3306.11 Add a section as follows:

3306.11 Falling debris. Wood or other construction materials shall not be allowed to fall in large pieces onto an upper floor. Bulky materials, such as beams and columns, shall be lowered and not allowed to fall.

3306.12 Add a section as follows:

3306.12 Structure stability. In buildings of wood frame construction, the supporting structure shall not be removed until the parts of the structure being supported have been removed.

In buildings with basements, the first floor construction shall not be removed until the basement walls are braced to prevent overturning, or an analysis acceptable to the Building Official is submitted which shows the walls to be stable without bracing.

SECTION 3307 – PROTECTION OF ADJOINING PROPERTY

3307.1 Insert a note at the end of this section as follows:

3307.1 Protection required. Adjoining public and private property shall be protected from damage during construction, remodeling and demolition work. Protection must be provided for footings, foundations, party walls, chimneys, skylights, and roofs. Provisions shall be made to control water runoff and erosion during construction or demolition activities. The person making or causing an excavation to

be made shall provide written notice to the owners of adjoining buildings advising them that the excavation is to be made and that the adjoining buildings should be protected. Said notification shall be delivered not less than 10 days prior to the scheduled starting date of the excavation.

Note: Other requirements for protection of adjacent property of adjacent and depth to which protection is requested are defined by California Civil Code Section 832, and is reprinted herein for convenience.

Section 832. Each coterminous owner is entitled to the lateral and subjacent support which his land receives from the adjoining land, subject to the right of the owner of the adjoining land to make proper and usual excavations on the same for purposes of construction or improvement, under the following conditions:

1. Any owner of land or his lessee intending to make or to permit an excavation shall give reasonable notice to the owner or owners of adjoining lands and of buildings or other structures, stating the depth to which such excavation is intended to be made, and when the excavating will begin.

2. In making any excavation, ordinary care and skill shall be used, and reasonable precautions taken to sustain the adjoining land as such, without regard to any building or other structure which may be thereon, and there shall be no liability for damage done to any such building or other structure by reason of the excavation, except as otherwise provided or allowed by law.

3. If at any time it appears that the excavation is to be of a greater depth than are the walls or foundations of any adjoining building or other structure, and is to be so close as to endanger the building or other structure in any way, then the owner of the building or other structure must be allowed at least 30 days, if he so desires, in which to take measures to protect the same from any damage, or in which to extend the foundations thereof, and he must be given for the same purposes reasonable license to enter on the land on which the excavation is to be or is being made.

4. If the excavation is intended to be or is deeper than the standard depth of foundations, which depth is defined to be a depth of nine feet below the adjacent curb level, at the point where the joint property line intersects the curb and if on the land of the coterminous owner there is any building or other structure the wall or foundation of which goes to standard depth or deeper then the owner of the land on which the excavation is being made shall, if given the necessary license to enter on the adjoining land, protect the said adjoining land and any such building or other structure thereon without cost to the owner thereof, from any damage by reason of the excavation, and shall be liable to the owner of such property for any such damage, excepting only for minor settlement cracks in buildings or other structures.

SECTION 3311 – STANDPIPES

3311.2 Replace this section and title with the following:

3311.2 ~~Buildings being demolished.~~Fire Safety During Demolition ~~Where a building is being demolished and a standpipe exists within such a building, such standpipe shall be maintained in an operable condition so as to be available for use by the fire department. Such standpipe shall be demolished with the building but shall not be demolished more than one floor below the floor being~~

~~demolished.~~ **All existing dry standpipes shall be maintained in an operative condition and with all inlets and outlets accessible for use within two floors of the highest remaining portion of a floor of the building. The inlets shall be so identified at the street level as to be easily located by the Fire Department. They shall be removed in place with floor removal and the upper ends capped above the highest remaining valve. The remaining system on the lower floors shall continue operative until all construction above the third floor has been removed.**

SECTION J103 – PERMITS REQUIRED

JI03.2 Add the following five exemptions:

8. **An excavation that (1) is less 2 feet (610 mm) in depth or (2) does not create a cut slope greater than 5 feet (1524 mm) in height and steeper than 1 unit vertical in 1-1/2 units horizontal (66.7% slope).**

9. **A fill less than 1 foot (305 mm) in depth and placed on natural terrain with a slope flatter than 1 unit vertical in 5 units horizontal (20% slope), or less than 3 feet (914 mm) in depth, not intended to support structures, that does not exceed 50 cubic yards (38.3 m^3) on any one lot and does not obstruct a drainage course.**

10. **Grading performed incidental to and in connection with the construction of a building or structure on a single lot, pursuant to a valid building permit issued therefor. The cost of such grading shall be included in the total valuation of the building for determining permit fees, and a separate grading permit will not be required.**

11. **Grading necessary for and incidental to and in connection with the construction of any parks, public streets or roadways, or the construction of sewers, or utilities under or within the boundaries of such roadways or streets when such work is under the direct supervision of the Recreation and Park Department, the Department of Public Works, the Public Utilities Commission or other governmental agencies.**

12. **Grading operations which in the opinion of the Director are of such a minor nature that the proposed work will not affect the adjoining land, or any existing structures, either those on the same or adjoining land. For such grading operations, the requirements of this chapter may be waived in whole or in part.**

SECTION J104 – PERMIT APPLICATION AND SUBMITTALS

J104.3 Replace the exception as follows:

Exception: ~~A geotechnical report is not required where the building official determines that the nature of the work applied for is such that a report is not necessary.~~ **Grading conforming to all of the following requirements:**

1. **No cut section is greater than 10 feet (3.048 m) in vertical height.**
2. **No cut slope is steeper than 2 horizontal to 1 vertical.**
3. **The tops of cut banks are separated from any structure or major improvement by a distance, measured horizontally, equal to not less than the height of the bank.**
4. **Not more than 5,000 cubic yards (3825 m^3) shall be involved in grading.**
5. **Grading performed at a site outside the limits of known slide areas.**

All other grading shall require soils report and the grading plans shall include, but not limited to, the following information:

(1) The design of retaining walls or other structures used to support cuts or fills. Such retaining walls or structures, except when part of a building, may be constructed under this permit, provided the cost of same is included in the valuation shown on the application.

(2) The sequencing of cut and fill operations in a manner that assures interim stability of the site.

SECTION J106 – EXCAVATIONS

J106.1 Delete all exceptions.

SECTION J109 – DRAINAGE AND TERRACING

J109 Add the following section:

J109.5 Surface Drainage. All areas which are surfaced with asphalt, concrete or other paving of similar imperviousness, and which exceed a total area of 200 square feet (18.58 m^2), shall have storm- and casual water drained directly to a public sewer or storm drain.

Drainage shall not be directed to flow onto adjacent property or to drain onto public sidewalks. See Section 1503.4 for roof drainage.

SECTION J112 – GRADING FEES

J112 Add the following section:

SECTION J112 GRADING FEES

The permit and the plan review fees shall be per Section 110A, Table 1A-F - Specialty Permit Fees, Table 1A-A - Building Permit Fees. The valuation shall be based on the volume of earthwork.

Ms. Angela Calvillo
Clerk of the Board
Board of Supervisors, City Hall
1 Dr. Carlton B. Goodlett Place, Room 244
San Francisco, CA 94102-4694

RE: Code amendments to the 2016 California Building Standards Code, including the Building, Existing Building, Residential, Mechanical, Plumbing, Electrical, and Green Building Codes and recommend approval to the Board of Supervisors.

Dear Ms. Calvillo:

On August 17, 2016 the Building Inspection Commission held a public hearing on the proposed Code amendments referenced above.

The Commission voted unanimously (7-0) to recommend that the Board of Supervisors approve the amendments.

The Commissioners voted as follows:

President McCarthy	Aye	Vice-President Melgar	Aye
Commissioner Clinch	Aye	Commissioner Gilman	Aye
Commissioner Konstin	Aye	Commissioner Lee	Aye
Commissioner Walker	Aye		

Enclosed please find the Code Advisory Committee's recommendation to the BIC. Under separate cover, copies of the proposed amendments will follow from the Technical Services Division of the Department of Building Inspection.

Should you have any questions, please do not hesitate to call me at 558-6164.

Sincerely,

Sonya Harris
Commission Secretary

August 26, 2016

Angela Calvillo, Clerk of the Board
Board of Supervisors
#1 Dr. Carlton B. Goodlett Place, Room 244
San Francisco, CA 94102-4689

Dear Ms. Calvillo:

Attached please find an original and two copies (1 electronic CD) of seven proposed ordinances (approved by the Building Inspection Commission on August 17, 2016) for the Board of Supervisors approval, which repeal the San Francisco amendments to the 2013 California Building Standards Codes and adopt replacement amendments to the new 2016 California Building Standards Codes effective January 1, 2017. (One copy of these 2016 California Building Standards Codes are hereby provided for your reference in the form of each California adopted model code and their associated California amendments to them.)

The following is a list of accompanying documents:

1) Approval letter from the Building Inspection Commission
2) Exhibit A, Standard Findings
3) San Francisco Building Code Ordinance, Legislative Digest (Includes Residential Code below), Findings, proposed amendment text (Building)
4) San Francisco Building Code; Residential Building Requirements Ordinance, Legislative Digest (included in Building Code above). Findings, proposed amendment text. (Residential)
5) San Francisco Existing Building Code Ordinance, Legislative Digest, Findings, proposed amendment text. (Existing Building)
6) San Francisco Electrical Code Ordinance, Legislative Digest, Findings, proposed amendment text (Electrical)
7) San Francisco Mechanical Code Ordinance, Legislative Digest, Findings, proposed amendment text (Mechanical)
8) San Francisco Plumbing Code Ordinance, Legislative Digest, Findings, proposed amendment text (Plumbing)
9) San Francisco Green Building Code Ordinance, Legislative Digest, Findings, proposed amendment text (Green), Cost effectiveness study.

In order for the San Francisco code amendments to coordinate with the California codes, which have an effective date of January 1, 2017, the timeline for approval and adoption requires that the codes be submitted to the Board of Supervisors on or before August 29, 2016 for introduction and assignment to the Land Use Committee (on September 6, 2016), a thirty-day review and comment period follows prior to hearing at the Land Use Committee on October 17, 2016. When approved, it is proposed that

the Board of Supervisor agendize Readings on October 25, 2016 and November 1, 2016. Upon their approval, the ordinances will be forwarded to the Mayor for signature within 10 days, followed by a 30-day wait period (ending approximately December 12, 2016) before filing with the California Building Standards Commission to become effective for an implementation date of January 1, 2017.

Lisa Gibson
Acting Environmental Review Officer
Planning Department
1650 Mission Street, Ste. 400
San Francisco, CA 94103

Dear Ms. Gibson:

On September 6, 2016, Building Inspection Commission introduced the following proposed legislations:

File No. 160944
Ordinance repealing the 2013 Building Code in its entirety and enacting a 2016 Building Code consisting of the 2016 California Building Code and the 2016 California Residential Code, as amended by San Francisco; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing for an operative date of January 1, 2017; and directing the Clerk of the Board to forward the legislation to the California Building Standards Commission as required by State law.

File No. 160945
Ordinance adding the provisions of the 2016 California Residential Code with local amendments into various chapters of the 2016 San Francisco Building Code, and adding Chapter 36 to the Building Code to serve as a directory of where such provisions may be found; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing for an operative date of January 1, 2017; and directing the Clerk of the Board to forward the legislation to the California Building Standards Commission as required by State law.

File No. 160946
Ordinance repealing the 2013 Electrical Code in its entirety and enacting a 2016 Electrical Code consisting of the 2016 California Electrical Code as amended by San Francisco; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing an operative date of January 1, 2017; and directing the Clerk of the Board of Supervisors to forward the legislation to the California Building Standards Commission as required by State law.

File No. 160947
Ordinance enacting a 2016 San Francisco Existing Building Code consisting of the 2016 California Existing Building Code with San Francisco amendments; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing for an operative date of January 1, 2017; and directing the Clerk of the Board to forward the legislation to the California Building Standards Commission as required by State law.

File No. 160948
Ordinance repealing the 2013 Green Building Code in its entirety and enacting a 2016 Green Building Code consisting of the 2016 California Green Building Standards Code as amended by San Francisco; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing for an operative date of January 1, 2017; and directing the Clerk of the Board of Supervisors to forward the legislation to the California Building Standards Commission as required by State law.

File No. 160949
Ordinance repealing the 2013 Mechanical Code in its entirety and enacting a 2016 Mechanical Code consisting of the 2016 California Mechanical Code as amended by San Francisco; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing an operative date of January 1, 2017; and directing the Clerk of the Board of Supervisors to forward the legislation to the California Building Standards Commission as required by State law.

File No. 160950
Ordinance repealing the 2013 Plumbing Code in its entirety and enacting a 2016 Plumbing Code consisting of the 2016 California Plumbing Code as amended by San Francisco; adopting environmental findings and findings of local conditions under the California Health and Safety Code; providing an operative date of January 1, 2017; and directing the Clerk of the Board of Supervisors to forward the legislation to the California Building Standards Commission as required by State law.

This legislation is being transmitted to you for environmental review.

Angela Calvillo, Clerk of the Board

PROPOSED BUILDING STANDARDS
OF THE
CALIFORNIA BUILDING STANDARDS COMMISSION

REGARDING PROPOSED CHANGES TO
CALIFORNIA BUILDING CODE
CALIFORNIA CODE OF REGULATIONS, TITLE 24, PART 2

(The State agency shall draft the regulations in plain, straightforward language, avoiding technical terms as much as possible and using a coherent and easily readable style. The agency shall draft the regulation in plain English. A Notation: shall follow the express terms of each regulation listing the specific statutes authorizing the adoption and listing specific statutes being implemented, interpreted, or made specific. (PART 1 – ADMINISTRATIVE CODE)

LEGEND FOR EXPRESS TERMS
1. Existing California amendments or code language being modified are in italics when they appear in the model code text: All such language appears in *italics*, modified language is underlined.
2. New California amendments: All such language appears *underlined and in italics*.
3. Repealed text: All such language appears in ~~strikeout~~.
4. Information for the reader is shown as *[bracketed and in italics]*.

FINAL EXPRESS TERMS

ITEM 1. CBSC proposes to bring forward existing California amendments in Chapter 1, Division I, Section 1.1 General, from the 2013 California Building Code for adoption into the 2016 California Building Code with additional amendments as follows:

CHAPTER 1
SCOPE AND ADMINISTRATION
DIVISION I
CALIFORNIA ADMINISTRATION

SECTION 1.1
GENERAL

1.1.1 ***Title.*** *These regulations shall be known as the California Building Code, may be cited as such and will be referred to herein as "this code." The California Building Code is Part 2 of ~~twelve~~ thirteen parts of the official compilation and publication of the adoption, amendment and repeal of building regulations to the California Code of Regulations, Title 24, also referred to as the California Building Standards Code. This part incorporates by adoption the ~~2012~~ 2015 International Building Code of the International Code Council with necessary California amendments.*

1.1.2 ***Purpose.*** *The purpose of this code is to establish the minimum requirements to safeguard the public health, safety and general welfare through structural strength, means of egress facilities, stability, access to persons with disabilities, sanitation, adequate lighting and ventilation and energy conservation; safety to life and property from fire and other hazards attributed to the built environment; and to provide safety to fire fighters and emergency responders during emergency operations.*

1.1.3 Scope. *The provisions of this code shall apply to the construction, alteration, movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every building or structure or any appurtenances connected or attached to such buildings or structures throughout the State of California.*

1.1.3.1 Nonstate-regulated buildings, structures and applications. *Except as modified by local ordinance pursuant to Section 1.1.8, the following standards in the California Code of Regulations, Title 24, Parts 2, 2.5, 3, 4, 5, 6, 9, 10 and 11 shall apply to all occupancies and applications not regulated by a state agency.*

1.1.3.2 State-regulated buildings, structures and applications. *The model code, state amendments to the model code, and/or state amendments where there are no relevant model code provisions shall apply to the following buildings, structures, and applications regulated by state agencies as specified in Sections 1.2 through 1.14, except where modified by local ordinance pursuant to Section 1.1.8. When adopted by a state agency, the provisions of this code shall be enforced by the appropriate enforcing agency, but only to the extent of authority granted to such agency by the state legislature.*

Note: See ~~Preface~~ "How to Distinguish Between Model Code Language and California Amendments" in the front of the code.

1. *State-owned buildings, including buildings constructed by the Trustees of the California State University, and to the extent permitted by California laws, buildings designed and constructed by the Regents of the University of California, and regulated by the Building Standards Commission. See Section 1.2 for additional scope provisions.*

2. *Local detention facilities regulated by the Board of State and Community Corrections ~~Corrections Standards Authority~~. See Section 1.3 for additional scope provisions.*

3. *Barbering, cosmetology or electrolysis establishments, acupuncture offices, pharmacies, veterinary facilities and structural pest control locations regulated by the Department of Consumer Affairs. See Section 1.4 for additional scope provisions.*

4. *~~Energy efficiency standards regulated by the~~ Section 1.5 reserved for the California Energy Commission. ~~See Section 1.5 for additional scope provisions.~~*

5. *Dairies and places of meat inspection regulated by the Department of Food and Agriculture. See Section 1.6 for additional scope provisions.*

6. *Organized camps, laboratory animal quarters, public swimming pools, radiation protection, commissaries serving mobile food preparation vehicles and wild animal quarantine facilities regulated by the Department of Public Health. See Section 1.7 for additional scope provisions.*

7. *Hotels, motels, lodging houses, ~~apartment houses~~ apartments, dwellings, dormitories, condominiums, shelters for homeless persons, congregate residences, employee housing, factory-built housing and other types of dwellings containing sleeping accommodations with or without common toilets or cooking facilities. See Section 1.8.2.1.1 for additional scope provisions.*

8. *Accommodations for persons with disabilities in buildings containing newly constructed covered multifamily dwellings, new common use spaces serving existing covered multifamily dwellings, additions to existing buildings where the addition alone meets the definition of "COVERED MULTIFAMILY DWELLING," and new common-use ~~spaces~~ areas serving new covered*

multifamily dwellings, which are regulated by the Department of Housing and Community Development. See Section 1.8.2.1.2 for additional scope provisions.

. . .

16. *Section 1.13 reserved for ~~Graywater systems regulated by~~ the Department of Water Resources. ~~See Section 1.13 for additional scope provisions.~~*

. . .

1.1.7 Order of precedence and use.

1.1.7.1 Differences. *In the event of any differences between these building standards and the standard reference documents, the text of these building standards shall govern.*

1.1.7.2 Specific provisions. *Where a specific provision varies from a general provision, the specific provision shall apply.*

1.1.7.3 Conflicts. *When the requirements of this code conflict with the requirements of any other part of the California Building Standards Code, Title the most restrictive requirements shall prevail.*

1.1.7.3.1 Detached one-and two-family dwellings. *Detached one-and two-family dwellings, efficiency dwelling units, lodging houses, live/work units, townhouses not more than three stories above grade plane in height with a separate means of egress, and their accessory structures, may be designed and constructed in accordance with this code or the California Residential Code, but not both, unless the proposed structure(s) or element(s) exceed the design limitations established in the California Residential Code, and the code user is specifically directed by the California Residential Code to use this code.*

1.1.8 City, county, or city and county amendments, additions or deletions. *The provisions of this code do not limit the authority of city, county, or city and county governments to establish more restrictive and reasonably necessary differences to the provisions contained in this code pursuant to complying with Section 1.1.8.1. The effective date of amendments, additions or deletions to this code by a city, county, or city and county filed pursuant to Section 1.1.8.1 shall be the date filed. However, in no case shall the amendments, additions or deletions to this code be effective any sooner than the effective date of this code. Local modifications shall comply with Health and Safety Code Section 18941.5 for Building Standards Law, Health and Safety Code Section 17958 for State Housing Law or Health and Safety Code Section 13869.7 for Fire Protection Districts.*

1.1.8.1 Findings and filings.

1. The city, county, or city and county shall make express findings for each amendment, addition or deletion based upon climatic, topographical or geological conditions.

Exception: Hazardous building ordinances and programs mitigating unreinforced masonry buildings.

2. The city, county, or city and county shall file the amendments, additions or deletions expressly marked and identified as to the applicable findings. Cities, counties, cities and counties, and fire departments shall file the amendments, additions or deletions, and the findings with the California Building Standards Commission at 2525 Natomas Park Drive, Suite 130, Sacramento, CA 95833.

3. Findings prepared by fire protection districts shall be ratified by the local city, county or city and county and filed with the California Department of Housing and Community Development, Division

of Codes and Standards, P. 0. Box 1407, Sacramento, CA 95812-1407 or ~~1800 3rd Street, Room 260, Sacramento, CA 95811~~ 2020 West El Camino Avenue, Suite 250, Sacramento, CA 95833-1829.

1.1.8.2 Locally adopted energy standards – California Energy Code, Part 6

In addition to the provisions of Section 1.1.8.1 of this Part, the provisions of this section shall apply to a city, county, and city and county adopting local energy standards applicable to buildings and structures subject to the California Energy Code, Part 6.

Applicable provisions of Public Resources Code Section 25402.1(h)(2) and applicable provisions of Section 10-106, Chapter 10 of the California Administrative Code, Part 1 apply to locally adopted energy standards amending the California Energy Code, Part 6.

1.1.9 Effective date of this code. *Only those standards approved by the California Building Standards Commission that are effective at the time an application for building permit is submitted shall apply to the plans and specifications for, and to the construction performed under, that permit. For the effective dates of the provisions contained in this code, see the History Note page of this code.*

1.1.10 Availability of codes. *At least one complete copy each of Titles 8, 19, 20, 24 and 25 with all revisions shall be maintained in the office of the building official responsible for the administration and enforcement of this code. Each state department concerned and each city, county, or city and county shall have an up-to-date copy of the code available for public inspection. See Health and Safety Code Section 18942 (~~d~~ e) (1) and (2).*

ITEM 2. CBSC proposes to bring forward existing California amendments in Chapter 1, Division I, Section 1.2 Building Standards Commission, from the 2013 California Building Code for adoption into the 2016 California Building Code with additional amendments as follows:

SECTION 1.2
BUILDING STANDARDS COMMISSION

1.2.1 BSC. *Specific scope of application of the agency responsible for enforcement, the enforcement agency and the specific authority to adopt and enforce such provisions of this code, unless otherwise stated.*

1. State buildings for all occupancies.

Application-*State buildings (all occupancies), including buildings constructed by the Trustees of the California State University (CSU) and the Regents of the University of California (UC) where no state agency has the authority to adopt building standards applicable to such buildings.*

Enforcing agency-*State or local agency specified by the applicable provisions of law.*

***Authority cited**-Health and Safety Code Section 18934.5.*

***Reference**-Health and Safety Code, Division 13, Part 2.5, commencing with Section 18901.*

2. University of California, California State Universities and California Community Colleges.

***Application**-Standards for lighting for parking lots and primary campus walkways at the University of California, California State Universities and California Community Colleges.*

***Enforcing agency**-State or local agency specified by the applicable provisions of law.*

***Authority cited**-Government Code Section 14617.*

***Reference**-Government Code Section 14617.*

3. Existing state-owned buildings, including those owned by the University of California and by the California State University.

***Application**-Building seismic retrofit standards including abating falling hazards of structural and nonstructural components and strengthening of building structures. See also Division of the State Architect.*

***Enforcing agency**-State or local agency specified by the applicable provisions of law. Authority cited-Health and Safety Code Section 16600.*

***Authority cited**- Health and Safety Code Sections 16600.*

***Reference**-Health and Safety Code Sections 16600 through 16604.*

4. Unreinforced masonry-bearing wall buildings.

***Application**-Minimum seismic strengthening standards for buildings specified in Appendix Chapter A1 of the California Existing Building Code, except for buildings subject to building standards pursuant to Health and Safety Code (commencing) with Section 17910.*

***Enforcing agency**-State or local agency specified the applicable provisions of law.*

***Authority cited**-Health and Safety Code Section 18934.~~6.~~7*

***Reference**-~~Health and Safety Code Sections 18901 through 18949.~~ Health and Safety Code, Division 13, Part 2.5, commencing with Section 18901.*

***1.2.1.1 State building.** For purposes of this code, a "state building" is a structure for which a state agency or state entity has authority to construct, alter, enlarge, replace, repair or demolish.*

***1.2.1.2 Enforcement.** [CSU, UC, Judicial Council and California Department of Corrections and Rehabilitation ~~CDCR~~] State agencies or state entities authorized to construct state buildings may appoint a building official who is responsible to the agency for enforcement of the provisions of the California Building Standards Code.*

Exception: *State buildings regulated by other sections of this code remain the enforcement responsibility of the designated entities.*

1.2.1.3 Enforcement. Reserved for DGS.

~~*1.2.3*~~ *1.2.1.4* ***Adopting agency identification.*** *The provisions of this code applicable to buildings identified in this section will be identified in the Matrix Adoption Tables under the acronym* ***BSC.***

1.2.2 ***BSC-CG.*** *Specific scope of application of the agency responsible for enforcement, the enforcement agency and the specific authority to adopt and enforce such provisions of this code, unless otherwise stated.*

Application*-All occupancies where no state agency has the authority to adopt green building standards applicable to those occupancies.*

Enforcing agency*-State or local agency specified by the applicable provisions of law.*

Authority cited*-Health and Safety Code Sections 18930.5(a), 18938, and 18940.5.*

Reference*-Health and Safety Code, Division 13, Part 2.5, commencing with Section 18901.*

1.2.2.1 Adopting agency identification. *The provisions of this code applicable to buildings identified in this section will be identified in the Matrix Adoption Tables under the acronym* ***BSC-CG.***

~~*1.2.2*~~ *1.2.3* ***Alternative materials, design and methods of construction and equipment.*** *The provisions this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code, provided that any such alternative has been approved. An alternative material, design or method of construction shall be approved where the building official finds that the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, at least the equivalent of that prescribed in this code in quality, strength, effectiveness, fire resistance, durability and safety.*

~~*1.2.2.1*~~ *1.2.3.1* ***Research reports.*** *Supporting data, where necessary to assist in the approval of materials or assemblies not specifically provided for in this code, shall consist of valid research reports from approved sources.*

~~*1.2.2.2*~~ *1.2.3.2* ***Tests.*** *Whenever there is insufficient evidence of compliance with the provisions of this code, or evidence that a material or method does not conform to the requirements of this code, or in order to substantiate claims for alternative materials or methods, the building official shall have the authority to require tests as evidence of compliance to be made at no expense to the jurisdiction. Test methods shall be as specified in this code or by other recognized test standards. In the absence of recognized and accepted test methods, the building official shall approve the testing procedures. Tests shall be performed by an approved agency. Reports of such tests shall be retained by the building official for the period required for retention of public records.*

Notation:
Authority: Government Code §14617; Health and Safety Code § 16600, 18928, 18930.5, 18934.5, 18934.6, 18938 & 18940.5

References: Government Code §14617; Health and Safety Code §§16600 & 18901-18949

ITEM 3. CBSC does not adopt Chapter 1 SCOPE AND ADMINISTRATION, but proposes to carry forward existing editorial amendments and make additional editorial amendments for code consistency.

DIVISION II
SCOPE AND ADMINISTRATION

Note: *Sections adopted or amended by state agencies are specifically indicated by and agency banner. ~~or indicated in the Matrix Adoption Table.~~*

Reference: Health and Safety Code §§18928, 18928.1, 18934.5, 18938(b) & 18940.5

ITEM 7. CBSC proposes to adopt Chapters 9 and 10 of the 2015 IBC without amendment.

CHAPTER 9
FIRE PROTECTION SYSTEMS

. . .

CHAPTER10
MEANS OF EGRESS

. . .

Notation:
Authority: Health and Safety Code §18928 & 18934.5
References: Health and Safety Code §§18928, 18928.1, & 18934.5

ITEM 8. CBSC does not adopt Chapter 11 Accessibility of the 2015 IBC.

CHAPTER 11
ACCESSIBILITY

Notation:
Authority: Health and Safety Code §18928 & 18934.5
References: Health and Safety Code §§18928, 18928.1, & 18934.5

ITEM 9. CBSC proposes to adopt Chapter 12 Interior Environment of the 2015 IBC with new amendments and carry forward the existing amendment to Section 1205.7 (formerly 1205.6) Campus lighting for parking facilities and primary walkways at California state universities, colleges and community colleges and its sub-sections.

CHAPTER 12
INTERIOR ENVIRONMENT

. . .

SECTION 1205
LIGHTING

. . .

1205.6 Light pollution reduction. [BSC-CG] *See California Green Building Standards Code, Chapter 5, Division 5.1 for additional light pollution reduction requirements.*

~~1205.6~~ 1205.7 Campus lighting for parking facilities and primary walkways at California state universities, colleges and community colleges. [BSC] *Artificial light shall be provided for parking facilities and primary walkways at California State Universities, colleges, and community colleges in accordance with provisions of this subsection. This subsection shall not apply to the University of California unless the Regents of the University of California, by resolution, make it applicable.*

~~1205.6.1~~ 1205.7.1 Lighting Requirements. *Based on the recommendations of the most current edition of the Illumination Engineering Society lighting handbook, for the following lighting standards shall be used for all new construction of open parking facilities, covered parking facilities and primary walkways:*

1. *Open and covered parking facilities.*
   - *1.1 Medium-level activity usage when medium usage is present.*
   - *1.2 High-level activity usage when high usage is present.*

2. *Primary campus walkways.*
   - *2.1 Medium-level activity usage when medium usage is present.*
   - *2.2 High-level activity usage when high usage is present*

SECTION 1207
SOUND TRANSMISSION

. . .

1207.5 Acoustical control. [BSC-CG] *See California Green Building Standards Code, Chapter 5, Division 5.5 for additional sound transmission requirements.*

. . .

Reference: Government Code §14617, Health and Safety Code §§18928, 18928.1, 18934.5, 18938(b) & 18940.5

ITEM 10. CBSC does not adopt Chapter 13 Energy Efficiency of the 2015 IBC.

CHAPTER 13
ENERGY EFFICIENCY

Notation:
Authority: Health and Safety Code §18928 & 18934.5
References: Health and Safety Code §§18928, 18928.1, & 18934.5

ITEM 11. CBSC proposes to adopt Chapter 14 Exterior Walls of the 2015 IBC with amendments.

CHAPTER 14
EXTERIOR WALLS

. . .

1403.2.1 [BSC-CG] See California Green Building Standards Code, Chapter 5, Division 5.4 for additional weather protection requirements.

. . .

Notation:
Authority: Health and Safety Code §18928, 18934.5 & 18940.5
References: Health and Safety Code §§18928, 18928.1, 18934.5 & 18940.5

ITEM 12. CBSC proposes to adopt Chapter 15 Roof Assemblies and Roof Top Structures of the 2015 IBC with amendments. Carry forward the existing amendment to Section 1510.7.1 (Formerly 1509.7.1) Wind resistance.

CHAPTER 15
ROOF ASSEMBLIES AND ROOF TOP STRUCTURES

. . .

SECTION 1510 (FORMERLY 1509)
ROOFTOP STRUCTURES

. . .

~~1509.7.1~~ **1510.7.1 Wind resistance.** Rooftop mounted photovoltaic panels and modules shall be designed for component and cladding wind loads in accordance with Chapter 16 using an effective wind area based on the dimensions of a single unit frame.

Exception: [BSC] *The effective wind area shall be in accordance with Chapter 16 and ASCE 7 Section 26.2.*

. . .

Notation:
Authority: Health and Safety Code §18928 & 18934.5
References: Health and Safety Code §§18928, 18928.1, & 18934.5

ITEM 13. CBSC adopts Chapter 16 Structural Design of the 2015 IBC with new amendments. Carry forward existing California amendments with minimal changes to Section 1613.1.2 and 1613.1.3 for state-owned buildings. Repeal Section 1613.5 and its sub-section which amended ASCE 7.

CHAPTER 16
STRUCTURAL DESIGN

SECTION 1613
EARTHQUAKE LOADS

1613.1 Scope. Every structure, and portion thereof,...

. . .

1613.1.2. State-owned buildings. ***[BSC]*** *State-owned buildings, including those of the University of California, CSU and Judicial Council, shall not be constructed where any portion of the foundation would be within a mapped area of earthquake-induced liquefaction of landsliding or within 50 feet of a mapped fault rupture hazard as established by Section 1803.7*

1613.1.3 Existing state buildings. ***[BSC]*** *Additions, alterations, repairs, or change of occupancy category of existing buildings shall be in accordance with the California Existing Building Code, Part 10. ~~Chapter 34.~~*

. . .

~~***1613.5 [BSC] Modifications to ASCE 7.*** *The text of ASCE 7 shall be modified as indicated in Sections 1613.5.1 through 1613.5.2.~~

~~***1613.5.1 [BSC] Modify ASCE 7 DEFINITIONS*** *as follows:~~

~~**1.2 DEFINITIONS.**~~

~~***BALLASTED PHOTOVOLTAIC SYSTEM:*** *A roof mounted system composed of solar photovoltaic panels and supporting members that are unattached or partially attached to the roof and must rely on its weight, aerodynamics and friction to counter the effect of wind and seismic forces.~~

~~***1613.5.2 [BSC] Modify ASCE 7 Section 13.4*** *as follows:~~

~~***Section 13.4 NONSTRUCTURAL COMPONENT ANCHORAGE.***~~

~~*Components and their supports shall be attached (or anchored) to the structure in accordance with the requirements of this section and the attachment shall satisfy the requirements for the parent material as set forth elsewhere in this standard. Component attachments shall be bolted, welded, or otherwise positively fastened without consideration of frictional resistance produced by the effects of gravity. A continuous load path of sufficient strength and stiffness between the component and the supporting structure shall be provided. Local elements of the structure including connections shall be designed and constructed for the component forces where they control the design of the elements or their connections. The component forces shall be those determined in Section 13.3.1, except that modifications to Fp and R, due to anchorage conditions need not be considered. The design documents shall include sufficient information relating to the attachments to verify compliance with the requirements of this section~~

~~***Exception:*** *Ballasted photovoltaic systems when designed is based on Section 13.4.7 and approved by the enforcing agency.~~

~~*13.4.7. Solar PV panels or modules installed on a roof as a balasted system need not be rigidly attached to the roof or supporting structure. Ballasted systems shall be designed and installed only on roofs with slopes 1 inch per foot or less. The ballasted system shall be designed to resist sliding and uplift resulting from lateral and vertical forces, using a coefficient of friction determined by acceptable engineering practices. In sites where the Seismic Design category is C or above, the system shall be designed to accommodate seismic displacement determined by approved analysis or shake-table testing, using input motions consistent with ASCE 7 lateral and vertical seismic forces for non-structural components on roofs.~~

Notation:
Authority: Health and Safety Code §18928 & 18934.5

References: Health and Safety Code §§18928, 18928.1, & 18934.5

ITEM 14. CBSC proposes to adopt Chapter 17 Special Inspections and Tests of the 2015 IBC without new amendments. Carry forward existing California amendments to Sections 1704.2.3 and 1707.1. See Item 26.

Notation:
Authority: Health and Safety Code §18928 & 18934.5
References: Health and Safety Code §§18928, 18928.1, & 18934.5

ITEM 15. CBSC proposes to adopt Chapter 18 Soils and Foundation of the 2015 IBC without new amendments. Carry forward existing California amendments to Section 1810.3.10.4 Seismic Reinforcement.

Notation:
Authority: Health and Safety Code §18928 & 18934.5
References: Health and Safety Code §§18928, 18928.1, & 18934.5

ITEM 16. CBSC proposes to adopt Chapter 19 Concrete of the 2015 IBC with amendments. CBSC proposes to repeal the amendment to the 2013 CBC, Section 1905.1.8 (Formerly 1905.1.9) American Concrete Institute (ACI), Section D.3.3 and adopt the 2015 IBC Section 1905.1.8, ACI 318, Section 17.2.3 with minor amendments.

CHAPTER 19
CONCRETE

. . .

1905.1.3 ACI 318, Section 18.5 (formerly 21.4).
Modify ACI 318, (formerly Section 21.4), by adding new Section 18.5.2.2 and renumbering existing Section 18.5.2.2 and 18.5.2.3 to become 18.5.2.3 and 18.5.2.4, respectively.

18.5.2.2 - Connections that are designed to yield shall be capable of maintaining 80 percent of their design strength at the deformation induced by the design displacement or shall use Type 2 mechanical splices.

18.5.2.3 - Elements of the connection that are not designed to yield shall develop at least 1.5 S_y.

~~*18.5.2.4 - Wall piers in Seismic Design Category D, E or F shall comply with Section 1905.1.4 of the California Building Code.*~~

18.5.2.4 – In structures assigned to SDC D, E or F, wall piers sha;; be designed in accordance with 18.10.8 or 18.14 in ACI 318.

. . .

1905.1.8 (formerly) ~~1905.1.9 ACI 318, Section D.3.3.~~ Modify ACI 318, Sections D.3.3.4.2, D.3.3.4.3 (d) and D.3.3.5.2 to read as follows:

~~*D.3.3.4.2 – Where the tensile component of the strength-level earthquake force applied to anchors exceeds 20 percent of the total factored anchor tensile force associated with the same load combination, anchors and their attachments shall be designed in accordance with Section D.3.3.4.3. The anchor design tensile strength shall be determined in accordance with Section D.3.3.4.4.*~~

~~***Exception:** Anchors designed to resist wall out-of-plane forces with design strengths equal to or greater than the force determined in accordance with ASCE 7 Equation 12.11-1 or 12.14-10 and Section 1604A.8.2 of this code shall be deemed to satisfy Section D.3.3.4.3 (d).*~~

~~*D.3.3.4.3 (d) – The anchor or group of anchors shall be designed for the maximum tension obtained from design load combinations that include E, with E increased by Ω_0. The anchor design tensile strength shall be calculated from Section D.3.3.4.4.*~~

~~*D.3.3.5.2 – Where the shear component of the strength-level earthquake force applied to anchors exceeds 20 percent of the total factored anchor shear force associated with the same load combination, anchors and their attachments shall be designed in accordance with Section D.3.3.5.3. The anchor design shear strength for resisting earthquake forces shall be determined in accordance with Section D.6.*~~

~~***Exceptions:***~~

~~*1. For the calculation of the in-plane shear strength of anchor bolts attaching wood sill plates of bearing or non-bearing walls of light-frame wood structures to foundations or foundation stem walls, the in-plane design shear strength in accordance with Sections D.6.2 and D.6.3 need not be computed and Section D.3.3.5.3 shall be deemed to be satisfied provided all of the following are met:*~~

~~*1.1. The allowable in-plane shear strength of the anchor is determined in accordance with AF&PA NDS Table 11E for lateral design values parallel to grain.*~~

~~*1.2. The maximum anchor nominal diameter is $\frac{5}{8}$ inches (16 mm).*~~

~~*1.3. Anchor bolts are embedded into concrete a minimum of 7 inches (178 mm).*~~

~~*1.4. Anchor bolts are located a minimum of $1\frac{3}{4}$ inches (45 mm) from the edge of the concrete parallel to the length of the wood sill plate.*~~

~~*1.5. Anchor bolts are located a minimum of 15 anchor diameters from the edge of the concrete perpendicular to the length of the wood sill plate.*~~

~~*1.6. The sill plate is 2-inch or 3-inch nominal thickness.*~~

~~*2. For the calculation of the in-plane shear strength of anchor bolts attaching cold-formed steel track of bearing or non-bearing walls of anchor bolts attaching cold-formed steel track of bearing or non-bearing walls of light-frame construction to foundations or foundation stem walls the in-plane design shear strength in accordance with Sections D.6.2 and D.6.3 need not be computed and Section D.3.3.5.3 shall be deemed to be satisfied provided all of the following are met:*~~

~~*2.1. The maximum anchor nominal diameter is $\frac{5}{8}$ inches (16 mm).*~~

~~*2.2. Anchors are embedded into concrete a minimum of 7 inches (178 mm).*~~

~~*2.3. Anchors are located a minimum of $1\frac{3}{4}$ inches (45 mm) from the edge of the concrete parallel to the length of the track.*~~

~~*2.4. Anchors are located a minimum of 15 anchor diameters from the edge of the concrete perpendicular to the length of the track.*~~
~~*2.5. The track is 33 to 68 mil designation thickness.*~~

~~*Allowable in-plane shear strength of exempt anchors, parallel to the edge of concrete shall be permitted to be determined in accordance with AISI S100 Section E3.3.1.*~~

~~*3. In light-frame construction, bearing or nonbearing walls, shear strength of concrete anchors less than or equal to 5/8 inch [16mm] in diameter of sill plate or track to foundation or foundation stem wall need not satisfy*~~
~~*Section D.3.3.5.3 (a) through (c) when the design strength of the anchors is determined in accordance with Section D.6.2.1(c).*~~

1905.1.8 (Formerly 1905.1.9) ACI 318, Section 17.2.3. Modify ACI 318, Sections 17.2.3.4.2, 17.2.3.4.3(d) and 17.2.3.5.2 to read as follows:

17.2.3.4.2 - Where the tensile component of the strength-level earthquake force applied to anchors exceeds 20 percent of the total factored anchor tensile force associated with the same load combination, anchors and their attachments shall be designed in accordance with Section 17.2.3.4.3. The anchor design tensile strength shall be determined in accordance with Section 17.2.3.4.4.

Exception: Anchors designed to resist wall out-of-plane forces with design strengths equal to or greater than the force determined in accordance with ASCE 7 Equation 12.11- or 12.14-10 and *Section 1604.8.2 of this code* shall be deemed to satisfy Section D.3.3.4.3 (d).

17.2.3.4.3(d) - The anchor or group of anchors shall be designed for the maximum tension obtained from design load combinations that include **E**, with **E** increased by Ω_0. The anchor design tensile strength shall be calculated from Section 17.2.3.4.4.

17.2.3.5.2 – Where the shear component of the strength-level earthquake force applied to anchors exceeds 20 percent of the total factored anchor shear force associated with the same load combination, anchors and their attachments shall be designed in accordance with Section 17.2.3.5.3. The anchor design shear strength for resisting earthquake forces shall be determined in accordance with Section 17.5.

Exceptions:

1. For the calculation of the in-plane shear strength of anchor bolts attaching wood sill plates of bearing or non-bearing walls of light-frame wood structures to foundations or foundation stem walls, the in-plane design shear strength in accordance with Sections 17.5.2 and 17.5.3 need not be computed and Section 17.2.3.5.3 shall be deemed to be satisfied provided all of the following are met:

1.1. The allowable in-plane shear strength of the anchor is determined in accordance with AWC NDS Table 11E for lateral design values parallel to grain.

1.2. The maximum anchor nominal diameter is $^5/_8$ inches (16 mm).

1.3. Anchor bolts are embedded into concrete a minimum of 7 inches (178 mm).

1.4. Anchor bolts are located a minimum of $1\frac{3}{4}$ inches (45 mm) from the edge of the concrete parallel to the length of the wood sill plate.

1.5. Anchor bolts are located a minimum of 15 anchor diameters from the edge of the concrete perpendicular to the length of the wood sill plate.

1.6. The sill plate is 2-inch or 3-inch nominal thickness.

2. For the calculation of the in-plane shear strength of anchor bolts attaching cold-formed steel track of bearing or non-bearing walls of anchor bolts attaching cold-formed steel track of bearing or non-bearing walls of light-frame construction to foundations or foundation stem walls the in-plane design shear strength in accordance with Sections 17.5.2 and 17.5.3 need not be computed and Section 17.2.3.5.3 shall be deemed to be satisfied provided all of the following are met:

2.1. The maximum anchor nominal diameter is $\frac{5}{8}$ inches (16 mm).

2.2. Anchors are embedded into concrete a minimum of 7 inches (178 mm).

2.3. Anchors are located a minimum of $1\frac{3}{4}$ inches (45 mm) from the edge of the concrete parallel to the length of the track.

2.4. Anchors are located a minimum of 15 anchor diameters from the edge of the concrete perpendicular to the length of the track.

2.5. The track is 33 to 68 mil designation thickness.

Allowable in-plane shear strength of exempt anchors, parallel to the edge of concrete shall be permitted to be determined in accordance with AISI S100 Section E3.3.1.

3. In light-frame construction, bearing or nonbearing walls, shear strength of concrete anchors less than or equal to **1 inch** [16mm] in diameter of sill plate or track to foundation or foundation stem wall need not satisfy Section 17.2.3.5.3(a) through (c) when the design strength of the anchors is determined in accordance with Section 17.5.2.1(c).

ITEM 19. CBSC proposes to adopt Chapter 30 Elevators and Conveying Systems of the 2015 IBC without amendment.

ITEM 20. CBSC does not adopt Chapter 31; however, CBSC proposes to carry forward existing amendments to Chapter 31 Special Construction. Sections 3109.4.4 through 3109.6 contain provisions for private swimming pools (statewide). See Item 26 for existing California amendments being carried forward.

ITEM 21. CBSC proposes to adopt Chapter 32 Encroachments into the Public Right-of-Way of the 2015 IBC and carry forward existing amendment. See Item 26 for editorial amendment being carried forward.

ITEM 22. CBSC proposes to adopt Chapter 33 Safeguards during Construction of the 2015 IBC without amendment.

ITEM 23. CBSC proposes to repeal existing amendments to Chapter 34 Existing Structures as its contents were moved to the 2015 International Existing Building Code. CBSC will relocate amendments of Chapter 34, CBC, to the 2016 California Existing Building Code (CEBC), Part 10. The rulemaking for the CEBC, Part 10 will be heard by the SD/LF Code Advisory Committee.

CHAPTER 34
RESERVED
(formerly EXISTING STRUCTURES)

Action taken during the 2012 Code Development process removed Chapter 34, Existing Structures, from the IBC. The provisions of this chapter *and California amendments* are contained in the ~~International~~ *California* Building Code. See Section 101.4.7

~~SECTION 3401~~
~~GENERAL~~

~~**3401.1 Scope.** The provisions of this chapter shall control the alteration, repair, addition and change of occupancy of existing buildings and structures, *including state-regulated structures in accordance with sections 3401.1.1 and 3401.1.2.*~~

~~...~~

~~***3401.1.1 Existing state-owned structures.*** *The provisions of Sections 3417 through 3422 establish minimum standards for earthquake evaluation and design for retrofit of existing state-owned structures, including buildings owned by the University of California and the California State University.*~~

> ~~*The provisions of Section 3417 through 3422 may be adopted by a local jurisdiction for earthquake evaluation and design for retrofit of existing buildings.*~~

~~...~~

~~***3401.9 Dangerous conditions. [BSC]*** *Regardless of the extent of structural or nonstructural damage, the building official shall have the authority to require the elimination of conditions deemed dangerous.*~~

~~SECTION 3402~~
~~DEFINITIONS~~

~~**3402.1 Definitions.** The following terms are defined in Chapter 2:~~

~~**DANGEROUS.**~~

~~**EXISTING STRUCTURE.**~~

~~**PRIMARY FUNCTION.**~~

~~**SUBSTANTIAL STRUCTURAL DAMAGE.**~~

~~**TECHNICALLY INFEASIBLE.**~~

...

~~SECTION 3403~~
~~ADDITIONS~~

~~**3403.1 General.** Additions to any building or structure shall comply ...~~

~~***Exception:** For state-owned buildings, including those owned by the University of California and the California State University and the judicial council, the requirements of Sections 3403.3 and 3403.4 are replaced by the requirements of Sections 3417 through 3422.~~

~~SECTION 3404~~
~~ALTERATIONS~~

~~**3404.1 General.** Except as provided by Section 3401.4 ...~~

~~**Exceptions:**~~
~~1. An existing...~~
~~2. Handrails ...~~
~~3. *For state-owned buildings, including those owned by the University of California and the California State University and the judicial council, the requirements of Sections 3404.3 through 3404.5 are replaced by the requirements of Sections 3417 through 3422.*~~

~~SECTION 3405~~
~~REPAIRS~~

~~**3405.1 General.** Buildings and structures, and parts thereof, shall be repaired in compliance with Section 3405 and 3401.2. Work on nondamaged components that is necessary for the required repair of damaged components shall be considered part of the repair and shall not be subject to the requirements for alterations in this chapter, Routine maintenance required by Section 3401.2, ordinary repairs exempt from permit in accordance with Section 105.2, and abatement of wear due to normal service conditions shall not be subject to the requirements for repairs in this section.~~

~~***Exception:** For state-owned buildings, including those owned by the University of California and the California State University and the judicial council, the requirements of Sections 3403.3 and 3403.4 are replaced by the requirements of Sections 3417 through 3422.~~

...

~~SECTION 3406~~
~~FIRE ESCAPES~~

3406.1 Where permitted. Fire escapes shall be permitted only as provided for in Section 2406.1.1 through 3406.1.4.

3406.1.1 New buildings. . . .

. . .

SECTION 3408
CHANGE OF OCCUPANCY

3408.1 Conformance. No change shall be made in the use or occupancy of any building that would place the building in a different division of the same group of occupancies or in a different group of occupancies, unless such building is made to comply with the requirements . . .

SECTION 3417
EARTHQUAKE EVALUATION AND DESIGN FOR RETROFIT OF EXISTING BUILDINGS

3417.1 Purpose.

3417.1.1 Existing state-owned structures. *The provisions of Sections 3417 through 3423 establish minimum standards for earthquake evaluation and design for retrofit of existing state-owned structures, including buildings owned by the University of California and the California State University.*

The provisions of Sections 3417 through 3423 may be adopted by a local jurisdiction for earthquake evaluation and design for retrofit of existing buildings.

. . .

3417.2 Scope. *All modifications, structurally connected additions and/or repairs to existing structures or portions thereof shall, at a minimum, be designed and constructed to resist the effects of seismic ground motions as provided in this section. The structural system shall be evaluated by a registered design professional and, if not meeting or exceeding the minimum seismic design performance requirements of this section, shall be retrofitted in compliance with these requirements.*

Exception: *Those structures for which Section 3417.3 determines that assessment is not required, or for which Section 3417.4 determines that retrofit is not needed, then only the requirements of Section 3417.11 apply.*

3417.3 Applicability.

3417.3.1 Existing state-owned buildings. *For existing state-owned structures including all buildings owned by the University of California and the California State University, the requirements of Section 3417 apply whenever the structure is to be retrofitted, repaired or modified and any of the following apply:*

1. *Total construction cost, not including cost of furnishings, fixtures and equipment, or normal maintenance, for the building exceeds 25 percent of the construction cost for the replacement of the existing building.*
   The changes are cumulative for past modifications to the building that occurred after adoption of the 1995 California Building Code and did not require seismic retrofit.
2. *There are changes in risk category.*
3. *The modification to the structural components increases the seismic forces in or strength requirements of any structural component of the existing structure by more than 10 percent cumulative since the original construction, unless the component has the capacity to resist the*

~~increased forces determined in accordance with Section 3419. If the building's seismic base shear capacity has been increased since the original construction, the percent change in base shear may be calculated relative to the increased value.~~

~~4. Structural elements need repair where the damage has reduced the lateral-load-resisting capacity of the structural system by more than 10 percent.~~

~~5. Changes in live or dead load increase story shear by more than 10 percent.~~

~~....~~

~~**3417.4 Evaluation required.** If the criteria in Section 3417.3 apply to the project under consideration, the design professional of record shall provide an evaluation in accordance with Section 3417 to determine the seismic performance of the building in its current configuration and condition. If the structure's seismic performance as required by Section 3417.5 is evaluated as satisfactory and the peer reviewer(s), when Method B of Section 3421 is used, concur, then no structural retrofit is required.~~

~~**3417.5 Minimum seismic design performance levels for structural and nonstructural components.** Following the Notation:s of ASCE 41, the seismic requirements for design and assessment are based upon a prescribed Earthquake Hazard Level (BSE-1, BSE-2, BSE-R or BSE-C), a specified structural performance level (S-1 through S-5) and a non-structural performance level (N-A through N-E). The minimum seismic performance criteria are given in Table 3417.5 according to the Building Regulatory Authority and the Risk Category as determined in Chapter 16 or by the regulatory authority. The building shall be evaluated at both the Level 1 and Level 2 performance levels, and the more restrictive requirements shall apply.~~

~~Basic Safety Earthquake 2 (BSE-2) in ASCE 41 shall be same as Risk-Targeted Maximum Considered Earthquake (MCER) in ASCE 7. Probabilistic response spectra defining other Earthquake Hazard Levels shall be developed using site-specific ground motions in accordance with ASCE 7 Section 21.2 utilizing the Next Generation Attenuation (NGA) relations used for the 2008 USGS seismic hazards maps for Western United States (WUS). When supported by data and analysis, other NGA relations, that were not used for the 2008 USGS maps, shall be permitted as additions or substitutions. No fewer than three NGA relations shall be utilized. Response spectra shall incorporate the risk coefficient C_R per ASCE 7 Section 21.2.1.1~~

~~Ground-motion response history analysis shall be as set forth in ASCE 7 Chapter 16, Section 17.3 or Section 18.2.3.~~

~~**Exception:** If the floor area of an addition is greater than the larger of 50 per cent of the floor area of the original building or 1,000 square feet (93 m^2), then the Table 3417.5 entries for BSE-R and BSE-C are replaced by BSE-1 and BSE-2, respectively.~~

~~**TABLE 3417.5 SEISMIC PERFORMANCE REQUIREMENTS BY BUILDING REGULATORY AUTHORITY AND RISK CATEGORY. ALL BUILDINGS NOT REGULATED BY DSA ARE ASSIGNED AS "STATE-OWNED."**~~

		PERFORMANCE CRITERIA	
Building Regulatory Authority	**Risk Category**	**Level 1**	**Level 2**
State-Owned	I, II, III	BSE-R, S-3, N-D	BSE-C, S-5, N-E
State-Owned	IV	BSE-R, S-2, N-B	BSE-C, S-4, N-C
Division of the State Architect - Public schools	I	BSE-1,S-3,N-C	BSE-2,S-5, N-E
Division of the State Architect - Public schools	II, III	BSE-1, S-2, N-C	BSE-2, S-4, N-D
Division of the State Architect - Public schools	IV	BSE-1, S-2, N-C	BSE-2, S-4,N-C
Division of the State Architect - Community college	I, II, III	BSE-R, S-3, N-D	BSE-2, S-5, N-E
Division of the State Architect - Community college	IV	BSE-R, S-2, N-B	BSE-2, S-4, N-C

1. ASCE 41 provides acceptance criteria (e.g. m, rotation) for Immediate Occupancy (S1), Life Safety (S3), and Collapse Prevention (S5), and specifies that values for S-2 and S-4 are to be determined by interpolation between the adjacent performance level values.

   The required method of interpolation is as follows:

   For level S-2, the acceptance value is $^{1}/_{3}$ of the sum of the tabulated value for Immediate Occupancy (IO level) and twice the tabulated value for the Life Safety (LS level).

   For level S-4, the acceptance value is one-half the sum of the value for the LS level and the value for the Collapse Prevention (CP) level.

   For nonstructural components, N-A corresponds to the IO level, N-C to the LS level, and N-D to the Hazards Reduced (HR level).

   For evaluation procedures, N-B shall be the same as for N-A. Where numerical values are used, the values for N-B are one half the sum of the appropriate IO and LS values. Where IO or CP values are not given by ASCE 41, then the LS values are permitted to be substituted.

2. Buildings evaluated and retrofitted to meet the requirements for a new building, Chapter 16, Part 2, Title 24, in accordance with the exception in Section 3419.1, are deemed to meet the seismic performance requirements of this section.

3417.6 Retrofit required. Where the evaluation indicates the building does not meet the required performance objectives of this section, the owner shall take appropriate steps to ensure that the building's structural system is retrofitted in accordance with the provisions of Section 3417. Appropriate steps are either: 1) undertake the seismic retrofit as part of the additions, modifications and/or repairs of the structure; or 2) provide a plan, acceptable to the building official, to complete the seismic retrofit in a timely manner. The relocation or moving of an existing building is considered to be an alteration requiring filing of the plans and specifications approved by the building official.

3417.7 The additions, modification or repair to any existing building are permitted to be prepared in accordance with the requirements for a new building, Chapter 16, Part 2, Title 24, C.C.R., 2007 edition, applied to the entire building.

3417.8 The requirements of ASCE 41 Chapter 9 are to apply to the use of seismic isolation or passive energy systems for the repair, modification or retrofit of an existing structure. When seismic isolation or passive energy dissipation is used, the project must have project peer review as prescribed in Section 3422.

3417.9 Any construction required by this chapter shall include structural observation by the registered design professional who is responsible for the structural design in accordance with Section 3419.10.

3417.10 Where Method B of Section 3421 is used or is required by Section 3419.7, the proposed method of building evaluation and design procedures must be accepted by the building official prior to the commencement of the work.

3417.11 Voluntary lateral-force-resisting system modifications. Where the exception of Section 3417.2 applies, modifications of existing structural components and additions of new structural components that are initiated for the purpose of improving the seismic performance of an existing structure and that are not required by other portions of this chapter are permitted under the requirements of Section 3419.12.

~~SECTION 3418~~
~~DEFINITIONS~~

~~**3418.1.** In addition to the definitions given in Section 3402, for the purposes of Sections 3417 through 3423, certain terms are defined as follows:~~

~~**ADDITION** means any work that increases the floor or roof area or the volume of enclosed space of an existing building, and is structurally attached to the existing building by connections that are required for transmitting vertical or horizontal loads between the addition and the existing structure.~~

~~**ALTERATION** means any change within or to an existing building, which does not increase and may decrease the floor or roof area or the volume of enclosed space.~~

~~**BSE-C RESPONSE ACCELERATION PARAMETERS** are the parameters (S_{XS} and S_{X1} taken from 5-percent /50-year maximum direction spectral response acceleration curves or by a Site Specific Response Spectrum developed in accordance with Section 3417.5. Values for BSE-C need not be greater than those for BSE-2.~~

~~**BSE-R RESPONSE ACCELERATION PARAMETERS** are the parameters (S_{XS} and S_{X1}) taken from 20-percent /50-year maximum direction spectral response acceleration curves or by a Site Specific Response Spectrum developed in accordance with Section 3417.5. Values for BSE-R need not be greater than those for BSE-1.~~

~~**BUILDING OFFICIAL** is that individual within the agency or organization charged with responsibility for compliance with the requirements of this code. For some agencies this person is termed the "enforcement agent."~~

~~**DESIGN** is the procedure that includes both the evaluation and retrofit design of an existing component, element or structural system, and design of a new component, element or structural system.~~

~~**ENFORCEMENT AGENCY (Authority Having Jurisdiction in ASCE 41)** is the agency or organization charged with responsibility for agency or organization compliance with the requirements of this code.~~

~~**METHOD A** refers to the procedures prescribed in Section 3420.~~

~~**METHOD B** refers to the procedures allowed in Section 3421.~~

~~**MODIFICATIONS.** For this chapter, modification is taken to include repairs to structures that have been damaged.~~

~~**N-A, N-B, N-C, N-D, N-E** are seismic nonstructural component performance measures as defined in ASCE 41. N-A corresponds to the highest performance level, and N-D the lowest, while N-E is not considered.~~

~~**PEER REVIEW** refers to the procedures contained in Section 3422.~~

~~**REPAIR** as used in this chapter means the design and construction work undertaken to restore or enhance the structural and nonstructural load-resisting system participating in the lateral response and stability of a structure that has experienced damage from earthquakes or other destructive events.~~

~~**S-1, S-2, S-3, S-4, S-5, S-6** are seismic structural performance measures as defined in ASCE 41. S-1 corresponds to the highest performance level, and S-5 the lowest, while S-6 is not considered.~~

~~***SPECIFIC PROCEDURES*** *are the procedures listed in Section 3419.1.1.*~~

~~***STRUCTURAL REPAIRS*** *are any changes affecting existing or requiring new structural components primarily intended to correct the effects of damage, deterioration or impending or actual failure, regardless of cause.*~~

~~*SECTION 3419*~~
~~*SEISMIC CRITERIA SELECTION FOR EXISTING BUILDINGS*~~

~~***3419.1 Basis for evaluation and design.*** *This section determines what technical approach is to be used for the seismic evaluation and design for existing buildings. For those buildings or portions of buildings for which Section 3417 requires action, the procedures and limitations for the evaluation of existing buildings and design of retrofit systems and/or repair thereof shall be implemented in accordance with this section.*~~

~~*One of the following approaches must be used:*~~

~~*1. Method A of Section 3420;*~~

~~*2. Method B of Section 3421, with independent review of a peer reviewer as required in Section 3422; or*~~

~~*3. For state-owned buildings only, the use of one of the specific procedures listed in Section 3419.1.1.*~~

~~*When Method B is chosen it must be approved by the building official, and, where applicable, by the peer reviewer. All referenced standards in ASCE 41 shall be replaced by referenced standards listed in Chapter 35 of this code.*~~

~~***Exceptions:***~~

~~*1.* ***[BSC]*** *For buildings constructed to the requirements of California Building Code, 1998 or later edition as adopted by the governing jurisdiction, that code is permitted to be used in place of those specified in Section 3419.1.*~~

~~*2.* *[Reserved for DSA]*~~

~~***3419.1.1 Specific procedures.*** *For state-owned buildings, the following specific procedures taken from the International Existing Building Code (IEBC) Appendix A may be used, without peer review, for their respective types of construction to comply with the seismic performance requirements for Risk Category I, II or III buildings:*~~

~~*1. Seismic Strengthening Provisions for Unreinforced Masonry Bearing Wall Buildings (Chapter A1 of the IEBC).*~~

~~*2. Prescriptive Provisions for Seismic Strengthening of Cripple Walls and Sill Plate Anchorage of Light Wood-Frame, Residential Buildings (Chapter A3 of the IEBC).*~~

~~*3. Earthquake Hazard Reduction in Existing Reinforced Concrete and Reinforced Masonry Wall Buildings with Flexible Diaphragms (Chapter A2 of the IEBC).*~~

~~***3419.1.2*** *When a design project is begun under Method B the selection of the peer reviewer is subject to the approval of the building official. Following approval by the peer reviewer, the seismic criteria for the project and the planned evaluation provisions must be approved by the building official. The approved seismic criteria and evaluation provisions shall apply. Upon approval of the building official these are permitted to be modified.*~~

~~**3419.1.3** *For state-owned and community college buildings, where unreinforced masonry is not bearing, it may be used only to resist applied lateral loads. Where unreinforced masonry walls are part of the structure they must be assessed for stability under the applicable nonstructural evaluation procedure.*~~

~~...~~

~~**3419.2 Existing conditions.** *The existing condition and properties of the entire structure must be determined and documented by thorough inspection of the structure and site, review of all available related construction documents, review of geotechnical and engineering geologic reports, and performance of necessary testing and investigation. Where samples from the existing structure are taken or in situ tests are performed, they shall be selected and interpreted in a statistically appropriate manner to ensure that the properties determined and used in the evaluation or design are representative of the conditions and structural circumstances likely to be encountered in the structure as a whole. Adjacent structures or site features that may affect the retrofit design shall be identified.*~~

~~*The entire load path of the seismic-force-resisting system shall be determined, documented and evaluated. The load path includes all the horizontal and vertical elements participating in the structural response: such as diaphragms, diaphragm chords, diaphragm collectors, vertical elements such as walls frames, braces; foundations and the connections between the components and elements of the load path. Repaired or retrofitted elements and the standards under which the work was constructed shall be identified.*~~

~~*Data collection in accordance with ASCE 41 Section 2.2 shall meet the following minimum levels:*~~

~~*1. For state-owned buildings, the requirements shall be met following the data collection requirements of ASCE 41 Section 2.2.*~~

~~....~~

~~*Qualified test data from the original construction may be accepted, in part or in whole, by the enforcement agency to fulfill the data collection requirements.*~~

~~***Exceptions:***~~

~~*1. The number of samples for data collection may be adjusted with approval of the enforcement agency when it has been determined that adequate information has been obtained or additional information is required.*~~
~~*2. Welded steel moment frame connections of buildings that may have experienced potentially damaging ground motions shall be inspected in accordance with Chapters 3 and 4, FEMA 352, Recommended Post Earthquake Evaluation and Repair Criteria for Welded Moment Frame Construction for Seismic Applications (July 2000).*~~

~~*Where original building plans and specifications are not available, "as-built" plans shall be prepared that depict the existing vertical and lateral structural systems, exterior elements, foundations and nonstructural systems in sufficient detail to complete the design.*~~

~~*Data collection shall be directed and observed by the project structural engineer or design professional in charge of the design.*~~

~~**3419.3 Site geology and soil characteristics.** *Soil profile shall be assigned in accordance with the requirements of Chapter 18.*~~

~~**3419.4 Risk categories.** For purposes of earthquake-resistant design, each structure shall be placed in one of the risk categories in accordance with the requirements of this code.~~

~~**3419.5 Configuration requirements.** Each structure shall be designated structurally regular or irregular in accordance with the requirements of ASCE 41, Sections 2.4.1.1.1. to 2.4.1.1.4.~~

~~**3419.6 General selection of the design method.** The requirements of Method B (Section 3421) may be used for any existing building.~~

~~**3419.7 Prescriptive selection of the design method.** The requirements of Method A (Section 3420) or the specific procedures for applicable building types given in Section 3419.1.1 are permitted to be used except under the following conditions, where the requirements of Method B (Section 3421) must be used.~~

~~**3419.7.1** When the building contains prestressed or post- tensioned structural components (beams, columns, walls or slabs) or contains precast structural components (beams, columns, walls or flooring systems).~~

~~**3419.7.2** When the building is classified as irregular in vertical or horizontal plan by application of ASCE/SEI 7 Section 12.3 and/or ASCE 41, Sections 2.4.1.1.1 to 2.4.1.1.4, unless the irregularity is demonstrated not to affect the seismic performance of the building.~~

~~**Exception:** If the retrofit design removes the configurational attributes that caused the building to be classified as irregular, then Section 3419.7.2 does not apply and Method A may be used.~~

~~**3419.7.3** For any building that is assigned to Risk Category IV.~~

~~**3419.7.4** For any building using undefined or hybrid structural systems.~~

~~**3419.7.5** When seismic isolation or energy dissipation systems are used in the retrofit or repair, either as part of the existing structure or as part of the modifications.~~

~~**3419.7.6** When the height of the structure exceeds 240 feet (73 152 mm).~~

~~**3419.8 Strength requirements.** All components of the lateral-force-resisting system must have the strength to meet the acceptance criteria prescribed in ASCE 41, Chapter 3, or as prescribed in the applicable Appendix A chapter of the IEBC if a specific procedure in Section 3419.1.1 is used. Any component not having this strength shall have its capacity increased by modifying or supplementing its strength so that it exceeds the demand, or the demand is reduced to less than the existing strength by making other modifications to the structural system.~~

~~**Exception:** A component's strength is permitted to be less than that required by the specified seismic load combinations if it can be demonstrated that the associated reduction in seismic performance of the component or its removal due to the failure does not result in a structural system that does not comply with the required performance objectives of Section 3417. If this exception is taken for a component, then it cannot be considered part of the primary lateral-load- resisting system.~~

~~**3419.9 Nonstructural component requirements.** Where the nonstructural performance levels required by Section 3417, Table 3417.5 are N-D or higher, mechanical, electrical and plumbing components shall comply with the provisions of ASCE 41, Chapter 11, Section 11.2.~~

~~**Exception:** Modifications to the procedures and criteria may be made subject to approval by the building official, and concurrence of the peer reviewer if applicable. All reports and correspondence shall also be forwarded to the building official.~~

~~**3419.10 Structural observation, testing and inspection.** Structural, geotechnical and construction observation, testing and inspection as used in this section shall mean meeting the requirements of Chapter 17, with a minimum allowable level of investigation corresponding to seismic design category~~

~~(SDC) D. At a minimum the project site will be visited by the responsible design professional to observe existing conditions and to review the construction work for general compliance with approved plans, specifications and applicable structural regulations. Such visits shall occur at significant construction stages and at the completion of the structural retrofit. Structural observation shall be provided for all structures. The plan for testing and inspection shall be submitted to the building official for review and approval with the application for permit.~~

~~**Additional requirements:** For public schools and community colleges, construction material testing, inspection and observation during construction shall also comply with Section 4-333, Part 1, Title 24.~~

~~**3419.10.1** The registered design professional, or their designee, responsible for the structural design shall be retained to perform structural observation and independently report to the owner of observations and findings as they relate to adherence to the permitted plans and good workmanship.~~

~~**3419.10.2** At the conclusion of construction, the structural observer shall submit to the enforcement agency and the owner a final written statement that the required site visits have been made, that the work, to the best of the structural observers knowledge and belief, is or is not in general conformity to the approved plans and that the observed structural deficiencies have been resolved and/or listing those that, to the best of the structural observers knowledge and belief, have not been satisfactorily corrected.~~

~~**3419.10.2.1** The requirement for structural observation shall be noted and prominently displayed on the front sheet of the approved plans and incorporated into the general notes on the approved plans.~~

~~**3419.10.2.2 Preconstruction meeting.** A preconstruction meeting is mandatory for all projects which require structural observation. The meeting shall include, but is not limited to, the registered design professional, structural observer, general constructor, affected subcontractors, the project inspector and a representative of the enforcement agency (designated alternates may attend if approved by the structural observer). The structural observer shall schedule and coordinate this meeting. The purpose of the meeting is to identify and clarify all essential structural components and connections that affect the lateral and vertical load systems and to review scheduling of the required observations for the project's structural system retrofit.~~

~~**3419.11 Temporary actions.** When compatible with the building use, and the time phasing for both use and the retrofit program, temporary shoring or other structural support is permitted to be considered. Temporary bracing, shoring and prevention of falling hazards are permitted to be used to qualify for Exception 1 in Section 3419.12 that allows inadequate capability in some existing components, as long as the required performance levels given in Section 3417 can be provided by the permanent structure. The consideration for such temporary actions shall be noted in the design documents.~~

~~**3419.12 Voluntary modifications to the lateral-force resisting system.** Where modifications of existing structural components and additions of new structural components are initiated for the purpose of improving the lateral-force resisting strength or stiffness of an existing structure and they are not required by other sections of this code, then they are permitted to be designed to meet an approved seismic performance criteria provided that an engineering analysis is submitted that follows:~~

~~1. The capacity of existing structural components required to resist forces is not reduced, unless it can be demonstrated that reduced capacity meets the requirements of Section 3419.8.~~

~~2. The lateral loading to or strength requirement of existing structural components is not increased beyond their capacity.~~

~~3. New structural components are detailed and connected to the existing structural components as required by this code for new construction.~~

~~*4. New or relocated nonstructural components are detailed and connected to existing or new structural components as required by this code for new construction.*~~

~~*5. A dangerous condition is not created.*~~

~~***3419.12.1 State-owned buildings.*** *Voluntary modifications to lateral-force-resisting systems conducted in accordance with Appendix A of the IEBC and the referenced standards of this code shall be permitted.*~~

~~***3419.12.1.1 Design documents.*** *When Section 3419.12 is the basis for structural modifications, the approved design documents must clearly state the scope of the seismic modifications and the accepted criteria for the design. The approved design documents must clearly have the phrase "The seismic requirements of Chapter 34 for existing buildings have not been checked to determine if these structural modifications meet CBC requirements: the modifications proposed are to a different seismic performance standard than would be required in Section 3419 if they were not voluntary as allowed in Section 3419.12."*~~

...

~~*SECTION 3420*~~
~~*METHOD A*~~

~~***3420.1 General.*** *The retrofit design shall employ the Linear Static or Linear Dynamic Procedures of ASCE 41, Section 3.3.1 or 3.3.2, and comply with the applicable general requirements of ASCE 41, Chapters 2 and 3. The earthquake hazard level and performance level given specified in Section 3417.5 for the building's risk category shall be used. Structures shall be designed for seismic forces coming from any horizontal direction.*~~

~~***Exception:*** *The ASCE 41 Simplified Rehabilitation Method of Chapter 10 may be used if the Level 1 seismic performance level is S-3 or lower, the building's structural system is one of the primary building types described in ASCE 41, Table 10-2, and ASCE 41, Table 10-1 permits it use for the building height.*~~

~~*SECTION 3421*~~
~~*METHOD B*~~

~~***3421.1*** *The existing or retrofitted structure shall be demonstrated to have the capability to sustain the deformation response due to the specified earthquake ground motions and meet the seismic performance requirements of Section 3417. The registered design professional shall provide an evaluation of the response of the existing structure in its modified configuration and condition to the ground motions specified. If the building's seismic performance is evaluated as satisfactory and the peer reviewer(s,) and the enforcement agency concurs, then no further structural modifications of the lateral-load-resisting system are required.*~~

~~*When the evaluation indicates the building does not meet the required performance levels given in Table 3417.5 for the risk category, then a retrofit and/or repair design shall be prepared that provides a structure that meets these performance objectives and reflects the appropriate consideration of existing conditions. Any approach to analysis and design is permitted to be used, provided that the approach shall be rational, shall be consistent with the established principals of mechanics and shall use the known performance characteristics of materials and assemblages under reversing loads typical of severe earthquake ground motions.*~~

~~***Exception:*** *Further consideration of the structure's seismic performance may be waived by the enforcement agency if both the registered design professional and peer reviewer(s) conclude that the*~~

~~*structural system can be expected to perform at least as well as required by the provisions of this section without completing an analysis of the structure's compliance with these requirements. A detailed report shall be submitted to the responsible building official that presents the reasons and basis for this conclusion. This report shall be prepared by the registered design professional. The peer reviewer(s) shall concur in this conclusion and affirm to it in writing. The building official shall either approve this decision or require completion of the indicated work specified in this section prior to approval.*~~

~~***3421.2** The approach, models, analysis procedures, assumptions on material and system behavior and conclusions shall be peer reviewed in accordance with the requirements of Section 3422 and accepted by the peer reviewer(s).*~~

~~***Exceptions:***~~

1. ~~*The enforcement agency may perform the work of peer review when qualified staff is available within the jurisdiction.*~~
2. ~~*The enforcement agency may modify or waive the requirements for peer review when appropriate.*~~

~~***3421.2.1** The approach used in the development of the design shall be acceptable to the peer reviewer and the enforcement agency and shall be the same method as used in the evaluation of the building. Approaches that are specifically tailored to the type of building, construction materials and specific building characteristics may be used, if they are acceptable to the independent peer reviewer. The use of Method A allowed procedures may also be used under Method B.*~~

~~***3421.2.2** Any method of analysis may be used, subject to acceptance by the peer reviewer(s) and the building official. The general requirements given in ASCE 41, Chapter 2, shall be complied with unless exceptions are accepted by the peer reviewer(s) and building official. Use of other than ASCE 41 procedures in Method B requires building official concurrence before implementation.*~~

~~***3421.2.3** Prior to implementation, the procedures, methods, material assumptions and acceptance/rejection criteria proposed by the registered design professional will be peer reviewed as provided in Section 3422. Where nonlinear procedures are used, prior to any analysis, the representation of the seismic ground motion shall be reviewed and approved by the peer reviewer(s) and the building official.*~~

~~***3421.2.4** The conclusions and design decisions shall be reviewed and accepted by the peer reviewer(s) and the building official.*~~

~~*SECTION 3422*~~
~~*PEER REVIEW REQUIREMENTS*~~

~~***3422.1 General.** Independent peer review is an objective, technical review by knowledgeable reviewer(s) experienced in the structural design, analysis and performance issues involved. The reviewer(s) shall examine the available information on the condition of the building, the basic engineering concepts employed and the recommendations for action.*~~

~~***3422.3 Qualifications and terms of employment.** The reviewer(s) shall be independent from the design and construction team.*~~

~~***3422.3.1** The reviewer(s) shall have no other involvement in the project before, during or after the review, except in a review capacity.*~~

~~***3422.3.2** The reviewer(s) shall be selected and paid by the owner and shall have technical expertise in the evaluation and retrofit of buildings similar to the one being reviewed, as determined by the enforcement agency.*~~

~~***3422.3.3*** *The reviewer (or in the case of review teams, the chair) shall be a California licensed structural engineer who is familiar with the technical issues and regulations governing the work to be reviewed.*~~

~~***Exception:*** *Other individuals with acceptable qualifications and experience may be a peer reviewer(s) with the approval of the building official.*~~

~~***3422.3.4*** *The reviewer shall serve through completion of the project and shall not be terminated except for failure to perform the duties specified herein. Such termination shall be in writing with copies to the enforcement agency, owner and the registered design professional. When a reviewer is terminated or resigns, a qualified replacement shall be appointed within 10 working days, and the reviewer shall submit copies of all reports, notes and correspondence to the responsible building official, the owner and the registered design professional within 10 working days of such termination.*~~

~~***3422.3.5*** *The peer reviewer shall have access in a timely manner to all documents, materials and information deemed necessary by the peer reviewer to complete the peer review.*~~

~~***3422.4 Scope of review.*** *Review activities shall include, where appropriate, available construction documents, design criteria and representative observations of the condition of the structure, all inspection and testing reports, including methods of sampling, analytical models and analyses prepared by the registered design professional and consultants, and the retrofit or repair design. Review shall include consideration of the proposed design approach, methods, materials, details and constructability. Changes observed during construction that affect the seismic-resisting system shall be reported to the reviewer in writing for review and recommendation.*~~

~~***3422.5 Reports.*** *The reviewer(s) shall prepare a written report to the owner and building official that covers all aspects of the review performed, including conclusions reached by the reviewer(s). Reports shall be issued after the schematic phase, during design development, and at the completion of construction documents but prior to submittal of the project plans to the enforcement agency for plan review. When acceptable to the building official, the requirement for a report during a specific phase of the project development may be waived.*~~

~~*Such reports should include, at the minimum, statements of the following:*~~

~~*1. Scope of engineering design peer review with limitations defined.*~~

~~*2. The status of the project documents at each review stage.*~~

~~*3. Ability of selected materials and framing systems to meet performance criteria with given loads and configuration.*~~

~~*4. Degree of structural system redundancy and the deformation compatibility among structural and nonstructural components.*~~

~~*5. Basic constructability of the retrofit or repair system.*~~

~~*6. Other recommendations that would be appropriate to the specific project.*~~

~~*7. Presentation of the conclusions of the reviewer identifying any areas that need further review, investigation and/or clarification.*~~

~~*8. Recommendations.*~~

~~*The last report prepared prior to submittal of permit documents to the enforcement agency shall include a statement indicating that the design is in conformance with the approved evaluation and design criteria*~~

~~***3422.6 Response and resolutions.*** *The registered design professional shall review the report from the reviewer(s) and shall develop corrective actions and responses as appropriate. Changes observed during*~~

~~*construction that affect the seismic-resisting system shall be reported to the reviewer in writing for review and recommendations. All reports, responses and resolutions prepared pursuant to this section shall be submitted to the responsible enforcement agency and the owner along with other plans, specifications and calculations required. If the reviewer resigns or is terminated prior to completion of the project, then the reviewer shall submit copies of all reports, notes and correspondence to the responsible building official, the owner and the registered design professional within 10 working days of such termination.*~~

~~***3422.7 Resolution of conflicts.** When the conclusions and recommendations of the peer reviewer conflict with the registered design professional's proposed design, the enforcement agency shall make the final determination of the requirement for the design.*~~

ITEM 25. APPENDIX CHAPTERS

CBSC proposes NOT to adopt Appendix A from the 2015 International Building Code. Carry forward editorial code reference amendments. See Item 26.

APPENDIX A
EMPLOYEE QUALIFICATIONS
The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

. . .

CBSC proposes NOT to adopt Appendix B from the 2015 International Building Code.

APPENDIX B
BOARD OF APPEALS
The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

. . .

CBSC proposes NOT to adopt Appendix C from the 2015 International Building Code.

APPENDIX C
GROUP U – AGRICULTURAL BUILDINGS
The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

. . .

CBSC proposes NOT to adopt Appendix D from the 2015 International Building Code.

APPENDIX D
FIRE DISTRICTS
The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

. . .

CBSC proposes NOT to adopt Appendix E from the 2015 International Building Code and the contents of Appendix E is not printed.

APPENDIX E
RESERVED

CBSC proposes NOT to adopt Appendix F from the 2015 International Building Code.

APPENDIX F
RODENTPROOFING
The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

. . .

CBSC proposes NOT to adopt Appendix G from the 2015 International Building Code. Carry forward editorial code reference amendments. See Item 26.

APPENDIX G
FLOOD-RESISTANT CONSTRUCTION
The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

. . .

CBSC proposes NOT to adopt Appendix H from the 2015 International Building Code.

APPENDIX H
SIGNS
The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

. . .

CBSC proposes NOT to adopt Appendix I from the 2015 International Building Code.

APPENDIX I
PATIO COVERS

The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

. . .

CBSC proposes NOT to adopt Appendix J from the 2015 International Building Code.

APPENDIX J
GRADING
The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

. . .

CBSC proposes NOT to adopt Appendix K from the 2015 International Building Code.

APPENDIX K
ADMINISTRATIVE PROVISIONS
The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

. . .

CBSC proposes NOT to adopt Appendix L from the 2015 International Building Code.

APPENDIX L
EARTHQUAKE RECORDING INSTRUMENTATION
The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

. . .

CBSC proposes NOT to adopt Appendix M from the 2015 International Building Code.

APPENDIX M
TSUNAMI-GENERATED FLOOD HAZARD
The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

. . .

Notation:
Authority: Health and Safety Code §18928 & 18934.5 18940.5
Reference: Health and Safety Code §§18928, 18928.1, 18934.5, 18938(b) & 18940.5

ITEM 26. CBSC proposes to carry forward existing CBSC amendments, non-substantive editorial and formatting amendments from the 2013 California Building Code for inclusion in the 2016 California Building Code.

CBSC does not adopt Chapter 1 SCOPE AND ADMINISTRATION, but proposes to carry forward existing editorial amendments and make additional editorial amendments for code consistency.

CHAPTER 1

DIVISION II
SCOPE AND ADMINISTRATION

101.2 Scope. . . .

Exception. Detached one- and two-family dwellings and multiple single-family dwellings (townhouses) not more than three stories above grade plane in height with a separate means of egress, and their accessory structures not more than three stories above grade plane in height, shall comply with the *California Residential Code.*

101.4.1 Gas. The provisions of the *California Mechanical Code* shall apply to the installation....

101.4.2 Mechanical. The provisions of the *California Mechanical Code* shall apply to the installation....

101.4.3 Plumbing. The provisions of the *California Plumbing Code* shall apply to the installation, alteration repair and replacement of plumbing systems, including equipment, appliances, fixtures, fittings and appurtenances, and were connected to a water or sewage system and all aspects of a medical gas system. The provisions of the International Private Sewage Disposal Code shall apply to the private sewage disposal system.

101.4.4 Property Maintenance. The provisions of the International Property Maintenance Code shall apply to the existing ....

101.4.5 Fire Prevention. The provisions of the *California Fire Code* shall apply to the matters ....

101.4.6 Energy. The provisions of the *California Energy Code* shall apply to all matters ....

102.4 Referenced Codes and Standards. The codes and standards referenced in this code shall be considered part of the requirements of this code to the prescribed extent of each such reference and as further regulated in Section 102.4.1 *through 102.4.4.*

102.4.1. Conflicts. Where conflicts occur between provisions of this code and referenced codes and standards, the provisions of this code shall apply.

102.4.2. Provisions in referenced codes and standards. Where the extent of the reference to a referenced code or standard includes subject matter that is within the scope of this code or the *California Codes* listed in Section 101.4, the provisions of this code or the *California Code* listed in Section 101.4, as applicable, shall take precedence over the provisions in the referenced code or standard.

102.4.6 Existing structures. The legal occupancy of any structure existing on the date of adoption of this code shall be permitted to continue without change, except as is specifically covered in this code, the *California Building Code* or the *California Fire Code*, or as is deemed necessary by the building official for the general safety and welfare of the occupants and the public.

CHAPTER 3
USE AND OCCUPANCY

307.1. High-hazard Group H. High-hazard Group H occupancy includes, . . . Hazardous occupancies are classified in Groups H-1, H-2, H-3, H-4 and H-5 and shall be in accordance with his section, the requirements of Section 415 and the *California Fire Code.* Hazardous material stored, or used on top of

roofs or canoOpies shall be classified as outdoor storage or use and shall comply with the *California Fire Code*.

Exceptions: the following shall not be classified as Group H, but shall be classified as the occupancy that they most nearly resemble.

1. Buildings and structures occupied for the application of flammable finishes, provided that such buildings or areas conform to the requirements of Section 416 and the *California Fire Code.*
2. Wholesale and retail sales and storage of flammable and combustible liquids in mercantile occupancies conforming to the *California Fire Code.*
3. . . .
4. . . .
5. . . .
6. . . .
7. . . .
8. . . .
9. Stationary batteries utilized for facility emergency power, uninterruptible power supply or telecommunication facilities, provided that the batteries are provided with safety venting caps and ventilation is provided in accordance with the *California Mechanical Code.*
10. . . .
11. Buildings and structures occupied for aerosol storage, shall be classified as Group S-1, provided that such building conform to the requirements of the *California Fire Code.*
12. . . .
13. The storage of black powder, smokeless propellant and small arms primers in Group M and R-3 and special industrial explosive devices in Groups B, F, M and S, provided such storage conforms to the quantity limits and requirements prescribed in the *California Fire Code.*
14. . . .

307.1.1 Hazardous materials. Hazardous materials in any quantity shall conform to the requirements of this code, including Section 414, and the *California Fire Code.*

2. Liquid or gaseous fuel in fuel tanks and motorized equipment operated in accordance with ~~International Fire Code~~ *California Fire Code*.
3. Gaseous fuels in piping systems and fixed appliance regulated by the International Fuel Gas Code.
4. Liquid fuels in piping systems and fixed appliances regulated by the *California Mechanical Code*.
5. Alcohol-based hand rubs classified as Class I and II liquids in dispensers that are installed in accordance with Sections 5705.5 and 5702.5.1 of the ~~International Fire Code~~ *California Fire Code*. The location of the alcohol-based hand rub (ANHR) dispensers shall be provided in the construction documents

310.1. Residential Group R. Residential Group R includes, among others, the use of building or structure, or a portion thereof, for sleeping purposes when not classified as and Institutional Group I or when not regulated by the *California Residential Code*.

. . .

CHAPTER 4
SPECIAL DETAILED REQUIREMENTS BASED ON USE AND OCCUPANCY

. . .

403.4.5 Emergency responder radio coverage. Emergency responder radio coverage shall be provided in accordance with Section 510 of the *California Fire Code*.

. . .

404.2 Use. The floor of the atrium shall not be used for other than low fire hazard uses and only approved materials and decorations in accordance with the *California Fire Code* shall be used in the atrium space.

CHAPTER 10
MEANS OF EGRESS

. . .

1001.3 Maintenance. Means of egress shall be maintained in accordance with the *California Building Code*.

1001.4 Fire safety and evacuation plans. Fire safety and evacuation plans shall be provided for all occupancies and buildings where required by the *California Fire Code*. Such fire safety and evacuation plans shall comply with the applicable provisions of Section 401.2 and 404 of the *California Fire Code*.

. . .

1006.2.2.3 (formerly 1015.5) Refrigerated rooms or spaces. Rooms or spaces having a floor area larger than 1,000 square feet (93 m^2), containing a refrigerant evaporator and maintained at a temperature below 68°F (20°C), shall have access to not less than two exits or exit access doorways.

Travel distance shall be determined as specified in Section 1016.1, but all portions of a refrigerated room or space shall be within 150 feet (45 720 mm) of an exit or exit access doorway where such rooms are not protected by an approved automatic sprinkler system. Egress is allowed through adjoining refrigerated rooms or spaces.

Exception: Where using refrigerants in quantities limited to the amounts based on the volume set forth in the *California Mechanical Code*.

. . .

CHAPTER 12
INTERIOR ENVIRONMENT

. . .

1203.1 General. Buildings shall be provided with natural ventilation in accordance with Section 1203.4, or mechanical ventilation in accordance with the *California Mechanical Code*.

. . .

1203.2.1 Openings into attic.
Exterior openings into the attic space of any building intended for human occupancy shall be protected to prevent the entry of birds, squirrels, rodents, snakes and other similar creatures. Openings for ventilation having a least dimension of not less than 1/16 inch (1.6 mm) and not more than ¼ inch (6.4 mm) shall be permitted. Openings for ventilation having a least dimension larger than ¼ inch (6.4 mm) shall be provided with corrosion-resistant wire cloth screening, hardware cloth, perforated vinyl or similar material with openings having a least dimension of not less than 1/16 inch (1.6 mm) and not more than ¼ inch (6.4 mm). Where combustion air is obtained from an *attic* area, it shall be in accordance with Chapter 7 of the *California Mechanical Code*.

. . .

1203.5.2 (formerly 1203.4.2) Contaminants exhausted. Contaminant sources in naturally ventilated spaces shall be removed in accordance with the *California Mechanical Code* and the *California Fire Code*.

. . .

1203.6 (formerly 1203.5) Other ventilation and exhaust systems. Ventilation and exhaust systems for occupancies and operations involving flammable or combustible hazards or other contaminant sources as covered in the *California Mechanical Code* or the *California Fire Code* shall be provided as required by both codes.

. . .

1205.4.1 Controls. The control for activation of the required stairway lighting shall be in accordance with *the California Electrical Code*.

. . .

1206.3.3 Court drainage. The bottom of every court shall be properly graded and drained to a public sewer or other approved disposal system complying with the *California Plumbing Code.*

. . .

1209.3 Mechanical appliances. Access to mechanical appliances installed in under-floor areas, in attic spaces and on roofs or elevated structures shall be in accordance with the *California Mechanical Code.*

. .

1210.1 Required fixtures. The number and type of plumbing fixtures provided in any occupancy shall comply with the *California Plumbing Code.*

. . .

CHAPTER 15
ROOF ASSEMBLIES AND ROOF TOP STRUCTURES

. . .

1503.4 Roof drainage. Design and installation of roof drainage systems shall comply with Section 1503 of this code and *Chapter 11* of the *California Plumbing Code.*

1503.4.1 Secondary (emergency overflow) drains or scuppers. Where roof drains are required, secondary (emergency overflow) roof drains or scuppers shall be provided where the roof perimeter construction extends above the roof in such a manner that water will be entrapped if the primary drains allow buildup for any reason. The installation and sizing of secondary emergency overflow drains, leaders and conductors shall comply with *Chapter 11* of the *California Plumbing Code.*

. . .

1507.16 Vegetative roofs, roof gardens and landscaped roofs. Vegetative roofs, roof gardens and landscaped roofs shall comply with the requirements of this chapter, Sections 1607.12.3 and 1607.12.3.1 and the *California Fire Code.*

CHAPTER 16
STRUCTURAL DESIGN

. . .

1603.1.9 Systems and components requiring special inspections for seismic resistance. Construction documents or specifications shall be prepared for those systems and components requiring special inspection for seismic resistance as specified in Section 1705.11 by the registered design professional responsible for their design and shall be submitted for approval in accordance with ~~Section 107.1, Chapter 1, Division II.~~ Reference to seismic standards in lieu of detailed drawings is acceptable.

. . .

TABLE 1604.5
RISK CATEGORY OF BUILDINGS AND OTHER STRUCTURES

Carry forward corrected code references of International Fire Code to *California Fire Code* in Table 1604.5.

• • •

1612.5 Flood hazard documentation.
The following documentation shall be prepared and sealed by a registered design professional and submitted to the building official:

1. For construction in flood hazard areas not subject to high-velocity wave action:

    1.1. The elevation of the lowest floor, including the basement, as required by the lowest floor elevation inspection in Section 110.3.3, *Chapter 1, Division II.*

    • • •

2. For construction in flood hazard areas subject to high-velocity wave action:

    2.1. The elevation of the bottom of the lowest horizontal structural member as required by the lowest floor elevation inspection in Section 110.3.3, *Chapter 1, Division II.*

• • •

CHAPTER 17
SPECIAL INSPECTIONS AND TESTS

• • •

1704.2.3 Statement of special inspections. The applicant shall submit a statement of special inspections in accordance with Section 107.1 *Chapter 1, Division II,* as a condition for permit issuance. This statement shall be in accordance with Section 1704.3.

• • •

1707.1 General. In the absence of approved rules or other approved standards, the building official shall make, or cause to be made, the necessary tests and investigations; or the building official shall accept duly authenticated reports from approved agencies in respect to the quality and manner of use of new materials or assemblies as provided for in Section 104.11 *Chapter 1, Division II.* The cost of all tests and other investigations required under the provisions of this code shall be borne by the applicant.

> ***[BSC]*** *In the absence of approved rules or other approved standards, the building official shall make, or cause to be made, the necessary tests and investigations; or the building official shall accept duly authenticated reports from approved agencies in respect to the quality and manner of use of new materials or assemblies as provided for in Section 1.2.2, Chapter 1, Division I. The cost of all tests and other investigations required under the provisions of this code shall be borne by the applicant.*

• • •

CHAPTER 18
SOILS AND FOUNDATIONS

. . .

1805.4.3 Drainage discharge. The floor base and foundation perimeter drain shall discharge by gravity or mechanical means into an approved drainage system that complies with the *California Plumbing Code.*

. . .

1810.3.10.4 Seismic reinforcement. For structures assigned to Seismic Design Category C...
...as an alternate system in accordance with Section 104.11, *Chapter 1, Division II.* The alternative system design, supporting documentation and test data shall be submitted to the building official for review and approval.

. . .

CHAPTER 19
CONCRETE

. . .

1905.1.2 ACI 318, 18.2.1 (formerly Section 21.1.1.)
Modify ACI 318 Sections 18.2.1.2 (formerly 21.1.1.3) and 18.2.1.6 (formerly 21.1.1.7) to read as follows:

18.2.1.2 - Structures assigned to Seismic Design Category A shall satisfy requirements of Chapters 1 through 17 and 19 through 26*; Chapter 18 does not apply.* Structures assigned to *Seismic Design Category* B, C, D, E or F also shall satisfy 18.2.1.3 through 18.2.1.7, as applicable. *Except for structural elements of plain concrete complying with* Section *1905.1.7 of the California Building Code, structural elements of plain concrete are prohibited in structures assigned to Seismic Design Category C, D, E or F*

. . .

1905.1.5 (formerly 1905.1.6) ACI 318, Section 18.13.1.1. Modify ACI 318, Section 18.13.1.1, to read as follows:

18.13.1.1 - Foundations resisting earthquake-induced forces or transferring earthquake-induced forces between a structure and ground shall comply with the requirements of Section 21.12 and other applicable provisions of ACI 318 unless modified by Chapter 18 of the *California Building Code.*

. . .

CHAPTER 21
MASONRY

. . .

2109.1 General. Empirically designed masonry shall conform to the requirements of Chapter 5 of TMS 402/ACI 530/ASCE 5, except where otherwise noted in this section.

2109.1.1 Limitations. . . .

Section A.1.2.2 of TMS 402/ACI 530/ASCE 5 shall be modified as follows:

A.1.2.2 Wind – Empirical requirements shall not apply to the design or construction of masonry for buildings, parts of buildings, or other structures to be located in areas where V_{asd} as determined in accordance with Section 1609.3.1 of the *California Building Code* exceeds 110 mph.

. . .

CHAPTER 23
WOOD

. . .

2304.5 Framing around flues and chimneys. Combustible framing shall be a minimum of 2 inches (51 mm), but shall not be less than the distance specified in Sections 2111 and 2113 and the *California Mechanical Code*, from flues, chimneys and fireplaces, and 6 inches (152 mm) away from flue openings.

. . .

2308.1 General. . . . accessory structures shall comply with the *California Residential Code.*

. . .

CHAPTER 26
PLASTIC

. . .

2603.4.1.12 Interior signs. Foam plastic used for interior signs in covered mall buildings in accordance with Section 402.6.4 shall be permitted without a thermal barrier. Foam plastic signs that are not affixed to interior building surfaces shall comply with Chapter 8 of the *California Fire Code*.

. . .

CHAPTER 27
ELECTRICAL

2701.1 Scope. This chapter governs the electrical components, equipment and systems used in buildings and structures covered by this code. Electrical components, equipment and systems shall be designed and constructed in accordance with the provisions of *California Electrical Code.*

. . .

2702.1 Installation. Emergency and standby power systems required by this code or the *California Fire Code* shall be installed in accordance with this code, NFPA 110 and 111.

. . .

2702.2.11 Highly toxic and toxic materials. Emergency power shall be provided for occupancies with highly *toxic* or *toxic* materials in accordance with the *California Fire Code.*

2702.2.12 (formerly 2702.2.9) Membrane structures. Standby power shall be provided for auxiliary inflation systems in accordance with Section 3102.8.2. Emergency power shall be provided for exit signs in temporary tents and membrane structures in accordance with the *California Fire Code.*

2702.2.13 Pyrophoric materials. E emergency power shall be provided for occupancies with silane gas in accordance with the *California Fire Code.*

. . .

2703.4 (formerly 2702.3) Maintenance. Emergency and standby power systems shall be maintained and tested in accordance with the *California Fire Code*.

. . .

CHAPTER 28
MECHANICAL SYSTEMS

2801.1 Scope. Mechanical appliances, equipment and systems shall be constructed, installed and maintained in accordance with the *California Mechanical Code*. Masonry chimneys, fireplaces and barbecues shall comply with the *California Mechanical Code* and Chapter 21 of this code

. . .

CHAPTER 29
PLUMBING SYSTEMS

(Not Adopted by the State of California)
Refer to California Plumbing Code, Title 24, Part 5)

. . .

CHAPTER 31
SPECIAL CONSTRUCTION

. . .

3102.1 General. The provisions of Sections 3102.1 through 3102.8 shall apply to air-supported, air-inflated, membranecovered cable and membrane-covered frame structures, collectively known as membrane structures, erected for a period of 180 days or longer. Those erected for a shorter period of time shall comply with the *California Fire Code*. Membrane structures covering water storage facilities, water clarifiers, water treatment plants, sewage treatment plants, greenhouses and similar facilities not used for human occupancy are required to meet only the requirements of Sections 3102.3.1 and 3102.7. Membrane structures erected on a building, balcony, deck or other structure for any period of time shall comply with this section.

. . .

3103.1 General.
The provisions of Sections 3103.1 through 3103.4 shall apply to structures erected for a period of less than 180 days. Tents and other membrane structures erected for a period of less than 180 days shall comply with the *California Fire Code*. Those erected for a longer period of time shall comply with applicable sections of this code.

. . .

3109.4.4 Private swimming pools (statewide).
These regulations are subject to local government modification. The applicable local government requirements at the time of application for a building permit should be verified. These standards become applicable commencing January 1, 1998, to a private, single-family home for which a construction permit for a new swimming pool has been issued on or after January 1, 1998.

3109.4.4.1 Definitions.
As used in this division, the following terms have the following meanings:

***ANSI/APSP PERFORMANCE STANDARD** means a standard that is accredited by the American National Standards Institute (ANSI) and published by the Association of Pool and Spa Professionals (APSP).*

APPROVED SAFETY POOL COVER *means a manually or power-operated safety pool cover that meets all of the performance standards of the American Society for Testing and Materials (ASTM), in compliance with Standard F 1346-91.*

ENCLOSURE *means a fence, wall or other barrier that isolates a swimming pool from access to the home.*

EXIT ALARMS *means devices that make audible, continuous alarm sounds when any door or window that permits access from the residence to the pool area, that is without any intervening enclosure, is opened or is left ajar. Exit alarms may be battery operated or may be connected to the electrical wiring of the building.*

PUBLIC SWIMMING POOL *means a swimming pool operated for the use of the general public with or without charge, or for the use of the members and guests of a private club. Public swimming pool does not include a swimming pool located on the grounds of a private single-family home.*

SUCTION OUTLET *means a fitting or fixture typically located at the bottom or on the sides of a swimming pool that conducts water to a recirculating pump.*

SWIMMING POOL or POOL *means any structure intended for swimming or recreational bathing that contains water over 18 inches (457 mm) deep. Swimming pool includes in-ground and above-ground structures and includes, but is not limited to, hot tubs, spas, portable spas and nonportable wading pools.*

Authority: Health and Safety Code Section 18942(b)

Reference: Health and Safety Code Section 115921

Ab 3305, Statutes 1996, c.925

3109.4.4.2 Construction permit; safety features required.
Commencing January 1, 2007, except as provided in Section 3109.4.4.5, whenever a building permit is issued for construction of a new swimming pool or spa, or any building permit is issued for remodeling of an existing pool or spa, at a private, single-family home, it shall be equipped with at least one of the following seven drowning prevention safety features:

1. *The pool shall be isolated from access to a home by an enclosure that meets the requirements of Section 3109.4.4.3.*

2. *The pool shall incorporate removable mesh pool fencing that meets American Society for Testing and Materials (ASTM) Specifications F 2286 standards in conjunction with a gate that is selfclosing and self-latching and can accommodate a key lockable device.*

3. *The pool shall be equipped with an approved safety pool cover that meets all requirements of the ASTM Specifications F 1346.*

4. *The residence shall be equipped with exit alarms on those doors providing direct access to the pool.*

5. *All doors providing direct access from the home to the swimming pool shall be equipped with a self-closing, self-latching device with a release mechanism placed no lower than 54 inches (1372 mm) above the floor.*

6. *Swimming pool alarms that, when placed in pools, will sound upon detection of accidental or unauthorized entrance into the water. These pool alarms shall meet and be independently certified to the ASTM Standard F 2208 "Standards Specification for Pool Alarms" which includes surface motion, pressure, sonar, laser and infrared type alarms. For purposes of this article, "swimming pool alarms" shall not include swimming protection alarm devices designed for individual use, such as an alarm attached to a child that sounds when the child exceeds a certain distance or becomes submerged in water.*

7. *Other means of protection, if the degree of protection afforded is equal to or greater than that afforded by any of the devices set forth in items 1-4, and have been independently verified by an approved testing laboratory as meeting standards for those devices established by the ASTM or the American Society of Testing Mechanical Engineers (ASME).*

Prior to the issuance of any final approval for the completion of permitted construction or remodeling work, the local building code official shall inspect the drowning safety prevention devices required by this act and if no violations are found, shall give final approval.

AB 3305 (Statutes 1996, c.925); AB 2977 (Statutes 2006, c.478); AB 382 (Statutes 2007, c.596)

3109.4.4.3 Enclosure; required characteristics.
An enclosure shall have all of the following characteristics:

1. *Any access gates through the enclosure open away from the swimming pool and are self-closing with a self-latching device placed no lower than 60 inches (1524 mm) above the ground.*

2. *A minimum height of 60 inches (1524 mm).*

3. *A maximum vertical clearance from the ground to the bottom of the enclosure of 2 inches (51 mm).*

4. *Gaps or voids, if any, do not allow passage of a sphere equal to or greater than 4 inches (102 mm) in diameter.*

5. *An outside surface free of protrusions, cavities or other physical characteristics that would serve as handholds or footholds that could enable a child below the age of five years to climb over.*

Authority: Health and Safety Code Section 18942(b)

Reference: Health and Safety Code Section 115923

AB 3305, Statutes 1996, c.925

3109.4.4.4 Agreements to build; notice of provisions.
Any person entering into an agreement to build a swimming pool or spa, or to engage in permitted work on a pool or spa covered by this article, shall give the consumer notice of the requirements of this article.

Pursuant to existing law, the Department of Health Services shall have available on the department's web site, commencing January 1, 2007, approved pool safety information available for consumers to download. Pool contractors are encouraged to share this information with consumers regarding the potential dangers a pool or spa poses toddlers. Additionally, pool contractors may provide the consumer with swimming pool safety materials produced from organizations such as the United States Consumer Product Safety Commission, Drowning Prevention Foundation, California Coalition for Children's Safety & Health, Safe Kids Worldwide, Association of Pool and Spa Professionals, or the American Academy of Pediatrics.

3109.4.4.5 Exempt facilities.
The requirements of this article shall not apply to any of the following:

1. *Public swimming pools.*
2. *Hot tubs or spas with locking safety covers that comply with the American Society for Testing Materials Emergency Performance Specification (ASTM ES 13-89).*
3. *Any pool within the jurisdiction of any political subdivision that adopts an ordinance for swimming pool safety that includes requirements that are at least as stringent as this division.*
4. *An apartment complex or any residential setting other than a single-family home.*

3109.4.4.6 Application to facilities regulated by Department of Social Services.
This division does not apply to any facility regulated by the State Department of Social Services even if the facility is also used as a private residence of the operator. Pool safety in those facilities shall be regulated pursuant to regulations adopted therefor by the State Department of Social Services.

3109.4.4.7 Modification and interpretation of division.
Notwithstanding any other provision of law, this article shall not be subject to further modification or interpretation by any regulatory agency of the state, this authority being reserved exclusively to local jurisdictions, as provided for in Item 5 of Section 3109.4.4.2 and Item 3 of Section 3109.4.4.5.

Authority: Health and Safety Code Section 18942(b)

AB 3305 (Statutes 1996, c.925); AB 2977 (Statutes 2006, c.478); AB 382 (Statutes 2007, c.596)

3109.4.4.8 Construction requirements for building a pool or spa.
Whenever a building permit is issued for the construction a new swimming pool or spa, the pool or spa shall meet all of the following requirements:

1. *The suction outlets of the pool or spa for which the permit is issued shall be equipped to provide circulation throughout the pool or spa as prescribed in Paragraphs 2 and 3.*

2. *The swimming pool or spa shall either have at least two circulation suction outlets per pump that shall be hydraulically balanced and symmetrically plumbed through one or more "T" fittings, and that are separated by a distance of at least three feet in any dimension between the suction outlets, or be designed to use alternatives to suction outlets including, but not limited to, skimmers or perimeter overflow systems to conduct water to the recirculation pump.*

3. *The circulation system shall have the capacity to provide a complete turnover of pool water, as specified in Section 3124B of Chapter 31B of the California Building Standards Code (Title 24 of the California Code of Regulations).*

4. *Suction outlets shall be covered with antientrapment grates, as specified in the ANSI/APSP-16 performance standard or successor standard designated by the federal Consumer Product Safety Commission, that cannot be removed except with the use of tools. Slots of openings in the grates or similar protective devices shall be of a shape, area and arrangement that would prevent physical entrapment and would not pose any suction hazard to bathers.*

5. *Any backup safety system that an owner of a new swimming pool or spa may choose to install in addition to the requirements set forth in subdivisions (1) through (4) above shall meet the standards as published in the document, "Guidelines for Entrapment Hazards: Making Pools and Spas Safer," Publication Number 363, March 2005, United States Consumer Products Safety Commission.*

6. *Whenever a building permit is for the remodel or modification of any existing swimming pool, toddler pool, or spa, the permit shall require that the suction outlet or suction outlets of the existing swimming pool, toddler pool, or spa be upgraded so as to be equipped with antientrapment grates, as specified in the ANSI/APSP-16 performance standard or a successor standard designated by the federal Consumer Product Safety Commission.*

3109.5 Entrapment avoidance.
Suction outlets shall be designed and installed in accordance with ANSI/APSP-7.

3109.6 Informative documents.

1. *The Legislature encourages a private entity, in consultation with the Epidemiology and Prevention for Injury Control Branch of the department, to produce an informative brochure or booklet, for consumer use, explaining the child drowning hazards of, possible safety measures for, and appropriate drowning hazard prevention measures for, home swimming pools and spas, and to donate the document to the department.*

2. *The Legislature encourages the private entity to use existing documents from the United States Consumer Product Safety Commission on pool safety.*

3. *If a private entity produces the document described in Subdivisions 1 and 2 and donates it to the department, the department shall review and approve the brochure or booklet.*

4. *Upon approval of the document by the department, the document shall become the property of the state and a part of the public domain. The department shall place the document on its Web site in a format that is readily available for downloading and for publication. The department shall review the document in a timely and prudent fashion and shall complete the review within 18 months of receipt of the document from a private entity.*

. . .

CHAPTER 31A
SYSTEMS FOR WINDOW CLEANING OR EXTERIOR BUILDING MAINTENANCE

See Title 8, California Code of Regulations, Division 1, Chapter 4, Subchapter 7, General Industry Safety Orders, Group 1, Articles 5 and 6.

. . .

CHAPTER 33
SAFEGUARDS DURING CONSTRUCTION

. . .

3302.3 Fire safety during construction. Fire safety during construction shall comply with the applicable requirements of this code and the applicable provisions of Chapter 33 of the *California Fire Code.*

. . .

3303.7 Fire safety during demolition. Fire safety during demolition shall comply with the applicable requirements of this code and the applicable provisions of Chapter 56 of the *California Fire Code.*

. . .

3305.1 Facilities required. Sanitary facilities shall be provided during construction, remodeling or demolition activities in accordance with the *California Plumbing Code.*

. . .

3309.2 Fire hazards. The provisions of this code and the *California Fire Code* shall be strictly observed to safeguard against all fire hazards attendant upon construction operations.

. . .

APPENDIX A
EMPLOYEE QUALIFICATIONS

. . .

A101.2 Chief inspector.
The building official can designate supervisors to administer the provisions of the *California Building*, *Mechanical* and *Plumbing Codes* and ~~*California*~~ International Fuel Gas Code. Each supervisor shall have at least 10 years' experience or equivalent as an architect, engineer, inspector, contractor or superintendent of construction, or any combination of these, five years of which shall have been in a supervisory capacity. They shall be certified through a recognized certification program for the appropriate trade.

APPENDIX G
FLOOD-RESISTANT CONSTRUCTION

. . .

G102.1 General.
This appendix, in conjunction with the *California Building Code*, provides minimum requirements for development located in flood hazard areas, including the subdivision of land; installation of utilities; placement and replacement of manufactured homes; new construction and repair, reconstruction, rehabilitation or additions to new construction; substantial improvement of existing buildings and structures, including restoration after damage, temporary structures, and temporary or permanent storage, utility and miscellaneous Group U buildings and structures, and certain building work exempt from permit under Section 105.2.

G102.2 Establishment of flood hazard areas.
Flood hazard areas are established in Section 1612.3 of the *California Building Code*, adopted by the applicable governing authority on [INSERT DATE].

. . .

G201.1 General.
The following words and terms shall, for the purposes of this appendix, have the meanings shown herein. Refer to Chapter 2 of the *California Building Code* for general definitions.

. . .

G301.2 Subdivision requirements. The following requirements shall apply in the case of any proposed subdivision, including proposals for manufactured home parks and subdivisions, any portion of which lies within a flood hazard area:

1. The flood hazard area, including floodways and areas subject to high velocity wave action, as appropriate, shall be delineated on tentative and final subdivision plats;

2. Design flood elevations shall be shown on tentative and final subdivision plats;

3. Residential building lots shall be provided with adequate buildable area outside the floodway; and

4. The design criteria for utilities and facilities set forth in this appendix and appropriate *California Codes* shall be met.

. . .

G1001.1 Utility and miscellaneous Group U.
Utility and miscellaneous Group U includes buildings that are accessory in character and miscellaneous structures not classified in any specific occupancy in the *California Building Code*, including, but not limited to, agricultural buildings, aircraft hangars (accessory to a one- or two-family residence), barns, carports, fences more than 6 feet (1829 mm) high, grain silos (accessory to a residential occupancy), greenhouses, livestock shelters, private garages, retaining walls, sheds, stables and towers.

. . .

G1001.3 Elevation.
Utility and miscellaneous Group U buildings and structures, including substantial improvement of such buildings and structures, shall be elevated such that the lowest floor, including basement, is elevated to or above the design flood elevation in accordance with Section 1612 of the *California Building Code.*

. . .

2. For First 45-Day, Second 45-Day, and 15-Day changes, repealed text appears in ~~strikeout~~.

FINAL EXPRESS TERMS

CHAPTER 1
SCOPE AND ADMINISTRATION
DIVISION I
CALIFORNIA ADMINISTRATION

DSA-AC proposes to carry forward its adoption of existing California amendments in Chapter 1, Division I, from the 2013 CA Building Code into the 2016 CA Building Code, with further amendment as indicated.

ITEM 1.1.00

CHAPTER 1, DIVISION I – MATRIX ADOPTION TABLE

Adopting Agency		DSA-AC
Adopt entire California Chapter		
Adopt entire California Chapter as amended (amended Sections listed below)		
Adopt only those Sections that are listed below		X
Chapter / Section		
1.1		X
1.2.2		X
1.9.1 – 1.9.1.8		X

ITEM 1.1.01

SECTION 1.1

GENERAL

1.1.1 Title. *These regulations shall be known as the California Building Code, may be cited as such and will be referred to herein as "this code." The California Building Code is Part 2 of twelve parts of the official compilation and publication of the adoption, amendment and repeal of building regulations to the California Code of Regulations, Title 24, also referred to as the California Building Standards Code. This part incorporates by adoption the ~~2012~~ 2015 International Building Code of the International Code Council with necessary California amendments.*

1.1.2 Purpose. *The purpose of this code is to establish the minimum requirements to safeguard the public health, safety and general welfare through structural strength, means of egress facilities, stability, access to persons with disabilities, sanitation, adequate lighting and ventilation and energy conservation; safety to life and property from fire and other hazards attributed to the built environment; and to provide safety to fire fighters and emergency responders during emergency operations.*

1.1.3 Scope. *The provisions of this code shall apply to the construction, alteration, movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every building or structure or any appurtenances connected or attached to such buildings or structures throughout the State of California.*

1.1.3.1 Nonstate-regulated buildings, structures and applications. *Except as modified by local ordinance pursuant to Section 1.1.8, the following standards in the California Code of Regulations, Title 24, Parts 2, 2.5, 3, 4, 5, 6, 9, 10 and 11 shall apply to all occupancies and applications not regulated by a state agency.*

1.1.3.2 State-regulated buildings, structures and applications. *The model code, state amendments to the model code, and/or state amendments where there are no relevant model code provisions shall apply to the following buildings, structures, and applications regulated by state agencies as specified in Sections 1.2 through 1.14, except where modified by local ordinance pursuant to Section 1.1.8. When adopted by a state agency, the provisions of this code shall be enforced by the appropriate enforcing agency, but only to the extent of authority granted to such agency by the state legislature.*

Note: *See Preface to distinguish the model code provisions from the California provisions.*

1. *State-owned buildings, including buildings constructed by the Trustees of the California State University, and to the extent permitted by California laws, buildings designed and constructed by the Regents of the University of California, and regulated by the Building Standards Commission. See Section 1.2 for additional scope provisions.*

2. *Local detention facilities regulated by the Corrections Standards Authority. See Section 1.3 for additional scope provisions.*

3. *Barbering, cosmetology or electrolysis establishments, acupuncture offices, pharmacies, veterinary facilities and structural pest control locations regulated by the Department of Consumer Affairs. See Section 1.4 for additional scope provisions.*

4. *Energy efficiency standards regulated by the California Energy Commission. See Section 1.5 for additional scope provisions.*

5. *Dairies and places of meat inspection regulated by the Department of Food and Agriculture. See Section 1.6 for additional scope provisions.*

6. *Organized camps, laboratory animal quarters, public swimming pools, radiation protection,*

commissaries serving mobile food preparation vehicles and wild animal quarantine facilities regulated by the Department of Public Health. See Section 1.7 for additional scope provisions.

7. *Hotels, motels, lodging houses, apartment houses, dwellings, dormitories, condominiums, shelters for homeless persons, congregate residences, employee housing, factory-built housing and other types of dwellings containing sleeping accommodations with or without common toilets or cooking facilities. See Section 1.8.2.1.1 for additional scope provisions.*

8. *Accommodations for persons with disabilities in buildings containing newly constructed covered multifamily dwellings, new common use spaces serving existing covered multifamily dwellings, additions to existing buildings where the addition alone meets the definition of "COVERED MULTIFAMILY DWELLINGS," and common-use spaces serving covered multifamily dwellings which are regulated by the Department of Housing and Community Development. See Section 1.8.2.1.2 for additional scope provisions.*

9. *Permanent buildings and permanent accessory buildings or structures constructed within mobile home parks and special occupancy parks regulated by the Department of Housing and Community Development. See Section 1.8.2.1.3 for additional scope provisions.*

10. *Accommodations for persons with disabilities regulated by the Division of the State Architect. See Section 1.9.1 for additional scope provisions.*

11. *Public elementary and secondary schools, community college buildings and state-owned or state-leased essential service buildings regulated by the Division of the State Architect. See Section 1.9.2 for additional scope provisions.*

12. *Qualified historical buildings and structures and their associated sites regulated by the State Historical Building Safety Board with the Division of the State Architect. See Section 1.9.3 for additional scope provisions.*

13. *General acute care hospitals, acute psychiatric hospitals, skilled nursing and/or intermediate care facilities, clinics licensed by the Department of Public Health and correctional treatment centers regulated by the Office of Statewide Health Planning and Development. See Section 1.10 for additional scope provisions.*

14. *Applications regulated by the Office of State Fire Marshal include but are not limited to the following in accordance with Section 1.11.*

    14.1. Buildings or structures used or intended for use as an:

    1. *Asylum, jail, prison*

    2. *Mental hospital, hospital, home for the elderly, children's nursery, children's home or institution, school or any similar occupancy of any capacity*

    3. *Theater, dancehall, skating rink, auditorium, assembly hall, meeting hall, nightclub, fair building or similar place of assemblage where 50 or more persons may gather together in a building, room or structure for the purpose of amusement, entertainment, instruction, deliberation, worship, drinking or dining, awaiting transportation, or education*

    4. *Small family day care homes, large family day-care homes, residential facilities and residential facilities for the elderly, residential care facilities*

5. *State institutions or other state-owned or state-occupied buildings*

6. *High rise structures*

7. *Motion picture production studios*

8. *Organized camps*

9. *Residential structures*

14.2. Tents, awnings or other fabric enclosures used in connection with any occupancy

14.3. Fire alarm devices, equipment and systems in connection with any occupancy

14.4. Hazardous materials, flammable and combustible liquids

14.5. Public school automatic fire detection, alarm, and sprinkler systems

14.6. Wildland-urban interface fire areas

15. *Public libraries constructed and renovated using funds from the California Library Construction and Renovation Bond Act of 1988 and regulated by the State Librarian. See Section 1.12 for additional scope provisions.*

16. *Graywater systems regulated by the Department of Water Resources. See Section 1.13 for additional scope provisions.*

17. *For applications listed in Section 1.9.1 regulated by the Division of the State Architect – Access Compliance, outdoor environments and uses shall be classified according to accessibility uses described in ~~Chapters~~ Chapter 11B.*

18. *Marine Oil Terminals regulated by the California State Lands Commission. See Section 1.14 for additional scope provisions.*

1.1.4 Appendices. *Provisions contained in the appendices of this code shall not apply unless specifically adopted by a state agency or adopted by a local enforcing agency in compliance with Health and Safety Code Section 18901 et. seq. for Building Standards Law, Health and Safety Code Section 17950 for State Housing Law and Health and Safety Code Section 13869.7 for Fire Protection Districts. See Section 1.1.8 of this code.*

1.1.5 Referenced codes. *The codes, standards and publications adopted and set forth in this code, including other codes, standards and publications referred to therein are, by title and date of publication, hereby adopted as standard reference documents of this code. When this code does not specifically cover any subject related to building design and construction, recognized architectural or engineering practices shall be employed. The National Fire Codes, standards, and the Fire Protection Handbook of the National Fire Protection Association are permitted to be used as authoritative guides in determining recognized fire prevention engineering practices.*

1.1.6 Nonbuilding standards, orders and regulations. *Requirements contained in the International Building Code, or in any other referenced standard, code or document, which are not building standards as defined in Health and Safety Code Section 18909, shall not be construed as part of the provisions of this code. For nonbuilding standards, orders, and regulations, see other titles of the California Code of Regulations.*

1.1.7 Order of precedence and use.

1.1.7.1 Differences. *In the event of any differences between these building standards and the standard reference documents, the text of these building standards shall govern.*

1.1.7.2 Specific provisions. *Where a specific provision varies from a general provision, the specific provision shall apply.*

1.1.7.3 Conflicts. *When the requirements of this code conflict with the requirements of any other part of the California Building Standards Code, Title 24, the most restrictive requirements shall prevail.*

1.1.8 City, county, or city and county amendments, additions or deletions. *The provisions of this code do not limit the authority of city, county, or city and county governments to establish more restrictive and reasonably necessary differences to the provisions contained in this code pursuant to complying with Section 1.1.8.1. The effective date of amendments, additions or deletions to this code by a city, county, or a city and county filed pursuant to Section 1.1.8.1 shall be the date filed. However, in no case shall the amendments, additions or deletions to this code be effective any sooner than the effective date of this code.*

Local modifications shall comply with Health and Safety Code Section 18941.5 for Building Standards Law, Health and Safety Code Section 17958 for State Housing Law or Health and Safety Code Section 13869.7 for Fire Protection Districts.

1.1.8.1 Findings and filings.

1. *The city, county, or city and county shall make express findings for each amendment, addition or deletion based upon climatic, topographical or geological conditions.*

   Exception: *Hazardous building ordinances and programs mitigating unreinforced masonry buildings.*

2. *The city; county, or city and county shall file the amendments, additions or deletions expressly marked and identified as to the applicable findings. Cities, counties, cities and counties, and fire departments shall file the amendments, additions or deletions, and the findings with the California Building Standards Commission at 2525 Natomas Park Drive, Suite 130, Sacramento, CA 95833.*

3. *Findings prepared by fire protection districts shall be ratified by the local city, county, or city and county and filed with the California Department of Housing and Community Development, Division of Codes and Standards, P.O. Box 1407, Sacramento, CA 95812-1407 or 2020 W. El Camino Avenue, Suite 250, Sacramento CA 95833-1829.*

1.1.9 Effective date of this code. *Only those standards approved by the California Building Standards Commission that are effective at the time an application for building permit is submitted shall apply to the plans and specifications for, and to the construction performed under, that permit. For the effective dates of the provisions contained in this code, see the History Note page of this code.*

1.1.10 Availability of codes. *At least one complete copy each of Titles 8, 19, 20, 24, and 25 with all revisions shall be maintained in the office of the building official responsible for the administration and enforcement of this code. Each state department concerned and each city, county or city and county shall have an up-to-date copy of the code available for public inspection. See Health and Safety Code Section 18942(d)(1) and (2).*

1.1.11 Format. *This part fundamentally adopts the International Building Code by reference on a chapter-*

by-chapter basis. When a specific chapter of the International Building Code is not printed in the code and is marked "Reserved" such chapter of the International Building Code is not adopted as a portion of this code. When a specific chapter of the International Building Code is marked "Not adopted by the State of California" but appears in the code, it may be available for adoption by local ordinance.

***Note:** Matrix Adoption Tables at the front of each chapter may aid the code user in determining which chapter or sections within a chapter are applicable to buildings under the authority of a specific state agency, but they are not to be considered regulatory.*

***1.1.12 Validity.** If any chapter, section, subsection, sentence, clause or phrase of this code is for any reason held to be unconstitutional, contrary to statute, exceeding the authority of the state as stipulated by statutes or otherwise inoperative, such decision shall not affect the validity of the remaining portion of this code.*

SECTION 1.2
BUILDING STANDARDS COMMISSION

***1.2.2 Alternative materials, design and methods of construction and equipment.** The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code, provided that any such alternative has been approved. An alternative material, design or method of construction shall be approved where the building official finds that the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, at least the equivalent of that prescribed in this code in quality, strength, effectiveness, fire resistance, durability and safety.*

SECTION 1.9
DIVISION OF THE STATE ARCHITECT

1.9.1 Division of the State Architect – Access Compliance.

***General.** The purpose of this code is to ensure that barrier-free design is incorporated in all buildings, facilities, site work and other improvements to which this code applies in compliance with state law to ensure that these improvements are accessible to and usable by persons with disabilities. Additions, alterations and structural repairs in all buildings and facilities shall comply with these provisions for new buildings, except as otherwise provided and specified herein.*

The provisions of these regulations shall apply to any portable buildings leased or owned by a school district, and shall also apply to temporary and emergency buildings and facilities. Temporary buildings and facilities are not of permanent construction but are extensively used or are essential for public use for a period of time. Examples of temporary buildings or facilities covered include, but are not limited to: reviewing stands, temporary classrooms, bleacher areas, exhibit areas, temporary banking facilities, temporary health screening services or temporary safe pedestrian passageways around a construction site.

In addition, to incorporate standards at least as restrictive as those required by the federal government for barrier-free design under (1) Title III (Public Accommodations and Commercial Facilities), Subpart D (New Construction and Alteration) (see 28 C.F.R., Part 36), and (2) Title II (Public Entities), Section 35.151 (New Construction and Alterations) (see 28 C.F.R., Part 35) both from the Americans with Disabilities Act of 1990, 2004 Americans with Disabilities Act Accessibility Guidelines, as adopted by the US Department of Justice (see 36 C.F.R. Part 1191, Appendices B and D), and (3) under the Fair Housing Amendments Act of 1988. Some of these regulations may be more stringent than state law in order to meet the federal requirement.

***1.9.1.1 Application.** See Government Code commencing with Section 4450.*

Publicly funded buildings, structures, sidewalks, curbs and related facilities shall be accessible to and usable by persons with disabilities as follows:

***1.9.1.1.1** All buildings, structures, sidewalks, curbs and related facilities constructed in the state by the use of state, county or municipal funds, or the funds of any political subdivision of the state.*

***1.9.1.1.2** All buildings, structures and facilities that are leased, rented, contracted, sublet or hired by any municipal, county or state division of government, or by a special district.*

***1.9.1.1.3** All publicly funded buildings used for congregate residences or for one- or two-family dwelling unit purposes shall conform to the provisions applicable to living accommodations.*

***1.9.1.1.4** All existing publicly funded buildings and facilities when alterations, structural repairs or additions are made to such buildings or facilities. For detailed requirements on existing buildings, see Chapter 11B, Division 2, Section 11B-202.*

***1.9.1.1.5** With respect to buildings, structures, sidewalks, curbs and related facilities not requiring a building permit, building standards published in the California Building Standards Code relating to access for persons with disabilities and other regulations adopted pursuant to Government Code Section 4450, and in effect at the time construction is commenced, shall be applicable.*

***1.9.1.2 Application.** See Health and Safety Code commencing with Section 19952.*

All privately funded public accommodations, as defined and commercial facilities, as defined, shall be accessible to persons with disabilities as follows:

***Exception:** Certain types of privately funded multistory buildings do not require installation of an elevator to provide access above and below the first floor. See Chapter 11B.*

***1.9.1.2.1** Any building, structure, facility, complex or improved area, or portions thereof, which are used by the general public.*

***1.9.1.2.2** Any sanitary facilities which are made available for the public, clients or employees in such accommodations or facilities.*

***1.9.1.2.3** Any curb or sidewalk intended for public use that is constructed in this state with private funds.*

***1.9.1.2.4** All existing privately funded public accommodations when alterations, structural repairs or additions are made to such public accommodations as set forth under Chapter 11B.*

***1.9.1.3 Application — public housing and private housing available for public use.** See Government Code Sections 4450 and 12955.1(c).*

1.9.1.4 Enforcing agency.

***1.9.1.4.1** The director of the Department of General Services where state funds are utilized for any project or where funds of counties, municipalities or other political subdivisions are utilized for the construction of elementary, secondary or community college projects.*

***1.9.1.4.2** The governing bodies where funds of counties, municipalities or other political subdivisions are utilized except as otherwise provided above.*

1.9.1.4.3 *The building department of every city, county, or city and county within the territorial area of its city, county, or city and county, where private funds are utilized. "Building department" means the department, bureau or officer charged with the enforcement of laws or ordinances regulating the erection or construction, or both the erection and construction, of buildings.*

1.9.1.5 Special conditions for persons with disabilities requiring appeals action ratification. *Whenever reference is made in these regulations to this section, the findings and determinations required to be rendered by the local enforcing agency shall be subject to ratification through an appeals process.*

1.9.1.6 Authority cited. *Government Code Section 4450.*

1.9.1.7 Reference cited. *Government Code Sections 4450 through 4461, 12955.1(c) and Health and Safety Code Sections 18949.1, 19952 through 19959.*

1.9.1.8 Adopting agency identification. *The provision of this code applicable to buildings identified in this Subsection 1.9.1 will be identified in the Matrix Adoption Tables under the acronym DSA-AC.*

CHAPTER 1
SCOPE AND ADMINISTRATION
DIVISION II
SCOPE AND ADMINISTRATION

DSA-AC proposes to carry forward its adoption of specific model code provisions in Chapter 1, Division II, from the 2013 CA Building Code into the 2016 CA Building Code, with existing amendments.

ITEM 1.2.01

PART 1—SCOPE AND APPLICATION

SECTION 101
GENERAL

101.1 Title. These regulations shall be known as the Building Code of **[NAME OF JURISDICTION]**, hereinafter referred to as "this code."

101.2 Scope. The provisions of this code shall apply to the construction, alteration, relocation, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every building or structure or any appurtenances connected or attached to such buildings or structures.

Exception: Detached one- and two-family dwellings and multiple single-family dwellings (townhouses) not more than three stories above grade plane in height with a separate means of egress, and their accessory structures not more than three stories above grade plane in height, shall comply with the ~~International~~ *California* Residential Code.

101.2.1 Appendices. Provisions in the appendices shall not apply unless specifically adopted.

101.3 Intent. The purpose of this code is to establish the minimum requirements to provide a reasonable level of safety, public health and general welfare through structural strength, means of egress facilities, stability, sanitation, adequate light and ventilation, energy conservation, and safety to life and property from fire and other hazards attributed to the built environment and to provide a reasonable level of safety to fire fighters and emergency responders during emergency operations.

101.4 Referenced codes. The other codes listed in Sections 101.4.1 through 101.4.7 and referenced elsewhere in this code shall be considered part of the requirements of this code to the prescribed extent of each such reference.

101.4.1 Gas. The provisions of the ~~International Fuel Gas~~ *California Mechanical* Code shall apply to the installation of gas piping from the point of delivery, gas appliances and related accessories as covered in this code. These requirements apply to gas piping systems extending from the point of delivery to the inlet connections of appliances and the installation and operation of residential and commercial gas appliances and related accessories.

101.4.2 Mechanical. The provisions of the ~~International~~ *California* Mechanical Code shall apply to the installation, alterations, repairs and replacement of mechanical systems, including equipment, appliances, fixtures, fittings and/or appurtenances, including ventilating, heating, cooling, air-conditioning and refrigeration systems, incinerators and other energy-related systems.

101.4.3 Plumbing. The provisions of the ~~International~~ *California* Plumbing Code shall apply to the installation, alteration, repair and replacement of plumbing systems, including equipment, appliances, fixtures, fittings and appurtenances, and where connected to a water or sewage system and all aspects of a medical gas system. The provisions of the International Private Sewage Disposal Code shall apply to private sewage disposal systems.

101.4.4 Property maintenance. The provisions of the International Property Maintenance Code shall apply to existing structures and premises; equipment and facilities; light, ventilation, space heating, sanitation, life and fire safety hazards; responsibilities of owners, operators and occupants; and occupancy of existing premises and structures.

101.4.5 Fire prevention. The provisions of the ~~International~~ *California* Fire Code shall apply to matters affecting or relating to structures, processes and premises from the hazard of fire and explosion arising from the storage, handling or use of structures, materials or devices; from conditions hazardous to life, property or public welfare in the occupancy of structures or premises; and from the construction, extension, repair, alteration or removal of fire suppression, automatic sprinkler systems and alarm systems or fire hazards in the structure or on the premises from occupancy or operation.

101.4.6 Energy. The provisions of the ~~International~~ *California* Energy Conservation Code shall apply to all matters governing the design and construction of buildings for energy efficiency.

101.4.7 Existing buildings. The provisions of the ~~International~~ *California Existing Building Code* shall apply to matters governing the *repair*, *alteration*, change of occupancy, *addition* to and relocation of existing buildings.

SECTION 104
DUTIES AND POWERS OF BUILDING OFFICIAL

104.11 Alternative materials, design and methods of construction and equipment. The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code, provided that any such alternative has been approved. An alternative material, design or method of construction shall be approved where the building official finds that the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, not less than the equivalent of that prescribed in this code in quality, strength, effectiveness, fire resistance, durability and safety. Where the alternative material, design or method of construction is not approved, the building official shall respond in writing, stating the reasons why the alternative was not approved.

SECTION 111
CERTIFICATE OF OCCUPANCY

111.2 Certificate issued. After the building official inspects the building or structure and does not find violations of the provisions of this code or other laws that are enforced by the department of building safety, the building official shall issue a certificate of occupancy that contains the following:

1. The building permit number.
2. The address of the structure.
3. The name and address of the owner or the owner's authorized agent.
4. A description of that portion of the structure for which the certificate is issued.
5. A statement that the described portion of the structure has been inspected for compliance with the requirements of this code for the occupancy and division of occupancy and the use for which the proposed occupancy is classified.
6. The name of the building official.
7. The edition of the code under which the permit was issued.
8. The use and occupancy, in accordance with the provisions of Chapter 3.
9. The type of construction as defined in Chapter 6.
10. The design occupant load.
11. If an automatic sprinkler system is provided, whether the sprinkler system is required.
12. Any special stipulations and conditions of the building permit.

CHAPTER 2
DEFINITIONS

DSA-AC proposes to carry forward its adoption of specific model code definitions and California amendments in Chapter 2, from the 2013 CA Building Code into the 2016 CA Building Code, with further amendment as indicated.

ITEM 2.01

SECTION 202
DEFINITIONS

ACCESS AISLE. [DSA-AC] *An accessible pedestrian space adjacent to or between parking spaces that provides clearances in compliance with this code.*

ACCESSIBILITY. [DSA-AC] *Accessibility is the combination of various elements in a building, facility, site, or area, or portion thereof which allows access, circulation and the full use of the building and facilities by persons with disabilities in compliance with this code.*

ACCESSIBILITY FUNCTION BUTTON. [DSA-AC] *A button on an elevator hall call console in a destination-oriented elevator system that when pressed will activate a series of visual and verbal prompts and announcements providing instruction regarding hall call console operation and direction to an assigned elevator.*

ACCESSIBLE ELEMENT. [DSA-AC] *An element specified by the regulations adopted by the Division of the State Architect-Access Compliance.*

ACCESSIBLE MEANS OF EGRESS. A continuous and unobstructed way of egress travel from any accessible point in a building or facility to a public way.

ACCESSIBLE SPACE. [DSA-AC] *A space that complies with the accessibility provisions of this code.*

ADAPTABLE. [DSA-AC] *Capable of being readily modified and made accessible.*

ADDITION. ...
[DSA-AC] *An expansion, extension or increase in the gross floor area or height of a building or facility.*

ADMINISTRATIVE AUTHORITY. [DSA-AC] *A governmental agency that adopts or enforces regulations and guidelines for the design, construction or alteration of buildings and facilities.*

AISLE. ...
[DSA-AC] *A circulation path between objects such as seats, tables, merchandise, equipment, displays, shelves, desks, etc., that provides clearances in compliance with this code.*

ALTERATION. ...
[DSA-AC] *A change, addition or modification in construction, change in occupancy or use, or structural repair to an existing building or facility. Alterations include, but are not limited to, remodeling, renovation, rehabilitation, reconstruction, historic restoration, resurfacing of circulation paths or vehicular ways, changes or rearrangement of the structural parts or elements, and changes or rearrangement in the plan configuration of walls and full-height partitions. Normal maintenance, reroofing, painting or wallpapering, or changes to mechanical and electrical systems are not alterations unless they affect the usability of the building or facility.*

AMUSEMENT ATTRACTION. [DSA-AC] *Any facility, or portion of a facility, located within an amusement park or theme park which provides amusement without the use of an amusement device. Amusement attractions include, but are not limited to, fun houses, barrels and other attractions without seats.*

AMUSEMENT RIDE. [DSA-AC] *A system that moves persons through a fixed course within a defined area for the purpose of amusement.*

AMUSEMENT RIDE SEAT. [DSA-AC] *A seat that is built-in or mechanically fastened to an amusement ride intended to be occupied by one or more passengers.*

ANSI. [DSA-AC] *The American National Standards Institute.*

APPROVED. ...
[DSA-AC] *"Approved" means meeting the approval of the enforcing agency, except as otherwise provided*

by law, when used in connection with any system, material, type of construction, fixture or appliance as the result of investigations and tests conducted by the agency, or by reason of accepted principles or tests by national authorities or technical, health or scientific organizations or agencies.

APPROVED TESTING AGENCY. [DSA-AC] *Any agency, which is determined by the enforcing agency, except as otherwise provided by law, to have adequate personnel and expertise to carry out the testing of systems, materials, type of construction, fixtures or appliances.*

AREA OF REFUGE. An area where persons unable to use stairways can remain temporarily to await instructions or assistance during emergency evacuation.

ASSEMBLY AREA. [DSA-AC] *A building or facility, or portion thereof, used for the purpose of entertainment, educational or civic gatherings, or similar purposes. For the purposes of these requirements, assembly areas include, but are not limited to, classrooms, lecture halls, courtrooms, public meeting rooms, public hearing rooms, legislative chambers, motion picture houses, auditoria, theaters, playhouses, dinner theaters, concert halls, centers for the performing arts, amphitheaters, arenas, stadiums, grandstands or convention centers.*

ASSISTIVE LISTENING SYSTEM (ALS). [DSA-AC] *An amplification system utilizing transmitters, receivers and coupling devices to bypass the acoustical space between a sound source and a listener by means of induction loop, radio frequency, infrared or direct-wired equipment.*

AUTOMATIC DOOR. [DSA-AC] *A door equipped with a power-operated mechanism and controls that open and close the door automatically upon receipt of a momentary actuating signal. The switch that begins the automatic cycle may be a photoelectric device, floor mat or manual switch.*

AUTOMATIC TELLER MACHINE (ATM). [DSA-AC] *Any electronic information processing device that accepts or dispenses cash in connection with a credit, deposit or convenience account. The term does not include devices used solely to facilitate check guarantees or check authorizations, or which are used in connection with the acceptance or dispensing of cash on a person-to-person basis, such as by a store cashier.*

BATHROOM. [DSA-AC] *For the purposes of Chapters 11A and 11B, a room which includes a water closet (toilet), a lavatory, and a bathtub and/or a shower. It does not include single-fixture facilities or those with only a water closet and lavatory. It does include a compartmented bathroom. A compartmented bathroom is one in which the fixtures are distributed among interconnected rooms. A compartmented bathroom is considered a single unit and is subject to the requirements of Chapters 11A and 11B.*

BLENDED TRANSITION. [DSA-AC] *A raised pedestrian street crossing, depressed corner or similar connection between the pedestrian access route at the level of the sidewalk and the level of the pedestrian street crossing that has a grade of 5 percent or less.*

BOARDING PIER. [DSA-AC] *A portion of a pier where a boat is temporarily secured for the purpose of embarking or disembarking.*

BOAT LAUNCH RAMP. [DSA-AC] *A sloped surface designed for launching and retrieving trailered boats and other water craft to and from a body of water.*

BOAT SLIP. [DSA-AC] *That portion of a pier, main pier, finger pier, or float where a boat is moored for the purpose of berthing, embarking, or disembarking.*

BUILDING. Any structure used or intended for supporting or sheltering any use or occupancy.

BUILDING OFFICIAL. The officer or other designated authority charged with the administration and enforcement of this code, or a duly authorized representative.

CATCH POOL. [DSA-AC] *A pool or designated section of a pool used as a terminus for water slide flumes.*

CCR. [DSA-AC] *The California Code of Regulations.*

CHARACTERS. [DSA-AC] *Letters, numbers, punctuation marks and typographic symbols.*

CHILDREN'S USE. [DSA-AC] *Describes spaces and elements specifically designed for use primarily by people 12 years old and younger.*

CIRCULATION PATH. ...
[DSA-AC] *An exterior or interior way of passage provided for pedestrian travel, including but not limited to, walks, hallways, courtyards, elevators, platform lifts, ramps, stairways and landings.*

CLEAR. [DSA-AC] *Unobstructed.*

CLEAR FLOOR SPACE. [DSA-AC] *The minimum unobstructed floor or ground space required to accommodate a single, stationary wheelchair and occupant.*

CLOSED-CIRCUIT TELEPHONE. [DSA-AC] *A telephone with a dedicated line such as a house phone, courtesy phone or phone that must be used to gain entry to a facility.*

COMMERCIAL FACILITIES. [DSA-AC] *Facilities whose operations will affect commerce and are intended for non-residential use by a private entity. Commercial facilities shall not include (1) facilities that are covered or expressly exempted from coverage under the Fair Housing Act of 1968, as amended (42 U.S.C. 3601 - 3631); (2) aircraft; or (3) railroad locomotives, railroad freight cars, railroad cabooses, commuter or intercity passenger rail cars (including coaches, dining cars, sleeping cars, lounge cars, and food service cars), any other railroad cars described in Section 242 of the Americans With Disabilities Act or covered under Title II of the Americans With Disabilities Act, or railroad rights-of-way. For purposes of this definition, "rail" and "railroad" have the meaning given the term "railroad" in Section 202(e) of the Federal Railroad Safety Act of 1970 (45 U.S.C. 431(e)).*

COMMON USE. Interior or exterior circulation paths, rooms, spaces or elements that are not for public use and are made available for the shared use of two or more people.

COMPLY WITH. [DSA-AC] *Comply with means to meet one or more provisions of this code.*

CROSS SLOPE. [DSA-AC] *The slope that is perpendicular to the direction of travel.*

CURB CUT. [DSA-AC] *An interruption of a curb at a pedestrian way, which separates surfaces that are substantially at the same elevation.*

CURB RAMP. [DSA-AC] *A sloping pedestrian way, intended for pedestrian traffic, which provides access between a walk or sidewalk and a surface located above or below an adjacent curb face.*

DESIGNATED PUBLIC TRANSPORTATION. [DSA-AC] *Transportation provided by a public entity (other than public school transportation) by bus, rail, or other conveyance (other than transportation by aircraft or intercity or commuter rail transportation) that provides the general public with general or special service, including charter service, on a regular and continuing basis.*

DESTINATION-ORIENTED ELEVATOR. [DSA-AC] *Destination-oriented elevators are operated by the user selecting a destination floor at a hall call console located at or near an elevator landing. The destination-oriented elevator system then assigns an elevator car which transports the user to the selected destination floor. Destination-oriented elevators do not provide floor selection within elevator cars.*

DETECTABLE WARNING. ...
[DSA-AC] *A standardized surface feature built in or applied to walking surfaces or other elements to warn of hazards on a circulation path.*

DIRECTIONAL SIGN. [DSA-AC] *A publicly displayed notice which indicates by use of words or symbols a recommended direction or route of travel.*

DISABILITY. [DSA-AC] *Disability is (1) a physical or mental impairment that limits one or more of the major life activities of an individual, (2) a record of such an impairment, or (3) being regarded as having such an impairment.*

DORMITORY. A space in a building where group sleeping accommodations are provided in one room, or in a series of closely associated rooms, for persons not members of the same family group, under joint occupancy and single management, as in college dormitories or fraternity houses.

ELEMENT. [DSA-AC] *An architectural or mechanical component of a building, facility, space or site.*

ELEVATED PLAY COMPONENT. [DSA-AC] *A play component that is approached above or below grade and that is part of a composite play structure consisting of two or more play components attached or functionally linked to create an integrated unit providing more than one play activity.*

ELEVATOR, PASSENGER. [DSA-AC] *An elevator used primarily to carry passengers.*

EMPLOYEE WORK AREA. All or any portion of a space used only by employees and used only for work. Corridors, toilet rooms, kitchenettes and break rooms are not employee work areas.

ENFORCING AGENCY. [DSA-AC] *Enforcing Agency is the designated department or agency as specified by statute or regulation.*

ENTRANCE. [DSA-AC] *Any access point to a building or portion of a building or facility used for the purpose of entering. An entrance includes the approach walk, the vertical access leading to the entrance platform, the entrance platform itself, vestibule if provided, the entry door or gate, and the hardware of the entry door or gate.*

EQUIVALENT FACILITATION. [DSA-AC] *The use of designs, products, or technologies as alternatives to those prescribed, resulting in substantially equivalent or greater accessibility and usability.*

> ***Note:*** *In determining equivalent facilitation, consideration shall be given to means that provide for the maximum independence of persons with disabilities while presenting the least risk of harm, injury or other hazard to such persons or others.*

EXISTING BUILDING OR FACILITY. [DSA-AC] *A facility in existence on any given date, without regard to whether the facility may also be considered newly constructed or altered under this code.*

EXIT. That portion of a means of egress system between the exit access and the exit discharge or public way. Exit components include exterior exit doors at the level of exit discharge, interior exit stairways and ramps, exit passageways, exterior exit stairways and ramps and horizontal exits.

FACILITY. ...
[DSA-AC] *All or any portion of buildings, structures, site improvements, elements, and pedestrian routes or vehicular ways located on a site.*

FUNCTIONAL AREA. [DSA-AC] *A room, space or area intended or designated for a group of related activities or processes.*

GANGWAY. [DSA-AC] *A variable-sloped pedestrian walkway that links a fixed structure or land with a floating structure. Gangways that connect to vessels are not addressed by this code.*

GOLF CAR PASSAGE. [DSA-AC] *A continuous passage on which a motorized golf car can operate.*

GRAB BAR. [DSA-AC] *A bar for the purpose of being grasped by the hand for support.*

GRADE (Adjacent Ground Elevation). [DSA-AC] *The lowest point of elevation of the finished surface of the ground, paving or sidewalk within the area between the building and the property line or, when the property line is more than 5 feet (1524 mm) from the building, between the building and a line 5 feet (1524 mm) from the building. See Health and Safety Code Section 19955.3(d).*

GRADE BREAK. [DSA-AC] *The line where two surface planes with different slopes meet.*

GROUND FLOOR. [DSA-AC] *The floor of a building with a building entrance on an accessible route. A building may have one or more ground floors.*

GROUND LEVEL PLAY COMPONENT. [DSA-AC] *A play component that is approached and exited at the ground level.*

GUARD ***[DSA-AC] OR GUARDRAIL.*** A building component or a system of building components located at or near the open sides of elevated walking surfaces that minimizes the possibility of a fall from the walking surface to a lower level.

HALL CALL CONSOLE. [DSA-AC] *An elevator call user interface exclusive to a destination-oriented elevator system that requires the user to select a destination floor prior to entering the elevator car.*

HANDRAIL. A horizontal or sloping rail intended for grasping by the hand for guidance or support.

HEALTH CARE PROVIDER. [DSA-AC] *See "Professional Office of a Health Care Provider"*

HISTORIC BUILDINGS. ...
[DSA-AC] *See "Qualified historical building or property," C.C.R., Title 24, Part 8.*

HOUSING AT A PLACE OF EDUCATION. [DSA-AC] *Housing operated by or on behalf of an elementary, secondary, undergraduate, or postgraduate school, or other place of education, including dormitories, suites, apartments, or other places of residence.*

IF, IF . . . THEN. [DSA-AC] *The terms "if" and "if ... then" denotes a specification that applies only when the conditions described are present.*

INTERNATIONAL SYMBOL OF ACCESSIBILITY. [DSA-AC] *The symbol adopted by Rehabilitation International's 11th World Congress for the purpose of indicating that buildings and facilities are accessible to persons with disabilities.*

KEY STATION. [DSA-AC] *Certain rapid and light rail stations, and commuter rail stations, as defined*

under criteria established by the Department of Transportation in 49 CFR 37.47 and 49 CFR 37.51, respectively.

KICK PLATE. [DSA-AC] *An abrasion-resistant plate affixed to the bottom portion of a door to prevent a trap condition and protect its surface.*

KITCHEN OR KITCHENETTE. [DSA-AC] *A room, space or area with equipment for the preparation and cooking of food.*

LAVATORY. [DSA-AC] *A fixed bowl or basin with running water and drainpipe, as in a toilet or bathing facility, for washing or bathing purposes. (As differentiated from the definition of "Sink".)*

MAIL BOXES. [DSA-AC] *Receptacles for the receipt of documents, packages, or other deliverable matter. Mail boxes include, but are not limited to, post office boxes and receptacles provided by commercial mail-receiving agencies, apartment facilities or schools.*

MARKED CROSSING. [DSA-AC] *A crosswalk or other identified path intended for pedestrian use in crossing a vehicular way.*

MAY. [DSA-AC] *May denotes an option or alternative.*

MEZZANINE. ...
[DSA-AC] *An intermediate level or levels between the floor and ceiling of any story with an aggregate floor area of not more than one-third of the area of the room or space in which the level or levels are located. Mezzanines have sufficient elevation that space for human occupancy can be provided on the floor below.*

MULTI-BEDROOM HOUSING UNIT. [DSA-AC] *A housing unit, intended for use by students at a place of education, with a kitchen and/or toilet and bathing rooms within the unit, such as an apartment, or dormitory. Multi-bedroom housing units are separate from one another and from common use spaces within a building.*

NFPA. [DSA-AC] *The National Fire Protection Association.*

NOSING. The leading edge of treads of stairs and of landings at the top of stairway flights.

OCCUPANT LOAD. The number of persons for which the means of egress of a building or portion thereof is designed.

OCCUPIABLE SPACE. A room or enclosed space designed for human occupancy in which individuals congregate for amusement, educational or similar purposes or in which occupants are engaged at labor, and which is equipped with means of egress and light and ventilation facilities meeting the requirements of this code.

OPEN RISER. [DSA-AC] *The space between two adjacent stair treads not closed by a riser.*

OPERABLE PART. [DSA-AC] *A component of an element used to insert or withdraw objects, or to activate, deactivate, or adjust the element.*

PASSENGER ELEVATOR. [DSA-AC] *See "Elevator, passenger"*

PATH OF TRAVEL. [DSA-AC] *An identifiable accessible route within an existing site, building or facility by means of which a particular area may be approached, entered and exited, and which connects a particular area with an exterior approach (including sidewalks, streets, and parking areas), an entrance to*

the facility, and other parts of the facility. When alterations, structural repairs or additions are made to existing buildings or facilities, the term "path of travel" also includes the toilet and bathing facilities, telephones, drinking fountains and signs serving the area of work.

PEDESTRIAN. [DSA-AC] *An individual who moves in walking areas with or without the use of walking assistive devices such as crutches, leg braces, wheelchairs, white cane, service animal, etc.*

PEDESTRIAN WAY. [DSA-AC] *A route by which a pedestrian may pass.*

PERMANENT. [DSA-AC] *Facilities which, are intended to be used for periods longer than those designated in this code under the definition of "Temporary."*

PERMIT. An official document or certificate issued by the building official that authorizes performance of a specified activity.

PICTOGRAM. [DSA-AC] *A pictorial symbol that represents activities, facilities, or concepts.*

PLACE OF PUBLIC ACCOMMODATION. [DSA-AC] *A facility operated by a private entity whose operations affect commerce and fall within at least one of the following categories:*

1. *Place of lodging, except for an establishment located within a facility that contains not more than five rooms for rent or hire and that actually is occupied by the proprietor of the establishment as the residence of the proprietor. For purposes of this code, a facility is a "place of lodging" if it is*

   (i) An inn, hotel, or motel; or

   (ii) A facility that

   (A) Provides guest rooms for sleeping for stays that primarily are short-term in nature (generally 30 days or less) where the occupant does not have the right to return to a specific room or unit after the conclusion of his or her stay; and

   (B) Provides guest rooms under conditions and with amenities similar to a hotel, motel, or inn, including the following:

   (1) On- or off-site management and reservations service;

   (2) Rooms available on a walk-up or call-in basis;

   (3) Availability of housekeeping or linen service; and

   (4) Acceptance of reservations for a guest room type without guaranteeing a particular unit or room until check-in, and without a prior lease or security deposit.

2. *A restaurant, bar, or other establishment serving food or drink;*

3. *A motion picture house, theater, concert hall, stadium, or other place of exhibition or entertainment;*

4. *An auditorium, convention center, lecture hall, or other place of public gathering;*

5. *A bakery, grocery store, clothing store, hardware store, shopping center, or other sales or rental establishment;*

6. *A Laundromat, dry-cleaner, bank, barber shop, beauty shop, travel service, shoe repair service, funeral parlor, gas station, office of an accountant or lawyer, pharmacy, insurance office, professional office of a health care provider, hospital, or other service establishment;*

7. *A terminal, depot, or other station used for specified public transportation;*

8. *A museum, library, gallery, or other place of public display or collection;*

9. *A park, zoo, amusement park, or other place of recreation;*

10. *A nursery, elementary, secondary, undergraduate, or postgraduate private school, or other place of education;*

11. *A day care center, senior citizen center, homeless shelter, food bank, adoption agency, or other social service center establishment;*

12. *A gymnasium, health spa, bowling alley, golf course, or other place of exercise or recreation;*

13. *A religious facility;*

14. *An office building; and*

15. *A public curb or sidewalk.*

PLATFORM. A raised area within a building used for worship, the presentation of music, plays or other entertainment; the head table for special guests; the raised area for lecturers and speakers; boxing and wrestling rings; theater-in-the-round stages; and similar purposes wherein, other than horizontal sliding curtains, there are no overhead hanging curtains, drops, scenery or stage effects other than lighting and sound. A temporary platform is one installed for not more than 30 days.

PLATFORM (WHEELCHAIR) LIFT. [DSA-AC] *A hoisting and lowering mechanism equipped with a car or platform or support that serves two landings of a building or structure and is designed to carry a passenger or passengers and/or luggage or other material a vertical distance as may be allowed.*

PLAY AREA. [DSA-AC] *A portion of a site containing play components designed and constructed for children.*

PLAY COMPONENT. [DSA-AC] *An element intended to generate specific opportunities for play, socialization, or learning. Play components are manufactured or natural; and are stand-alone or part of a composite play structure.*

POINT-OF-SALE DEVICE. [DSA-AC] *A device used for the purchase of a good or service where a personal identification number (PIN), zip code or signature is required.*

POWDER ROOM. [DSA-AC] *A room containing a water closet (toilet) and a lavatory, and which is not defined as a bathroom.*

POWER-ASSISTED DOOR. [DSA-AC] *A door used for human passage with a mechanism that helps to open the door, or relieves the opening resistance of a door, upon the activation of a switch or a continued force applied to the door itself.*

PRIVATE BUILDING OR FACILITY. [DSA-AC] *A place of public accommodation or a commercial*

building or facility subject to Chapter 1, Section 1.9.1.2.

PUBLIC BUILDING OR FACILITY. [DSA-AC] *A building or facility or portion of a building or facility designed, constructed, or altered by, on behalf of, or for the use of a public entity subject to Chapter 1, Section 1.9.1.1.*

PUBLIC ENTITY. [DSA-AC] *Any state or local government; any department, agency, special-purpose district, or other instrumentality of a state or local government.*

PUBLIC ENTRANCE. An entrance that is not a service entrance or a restricted entrance.

PUBLIC HOUSING. [DSA-AC] *Housing facilities owned, operated, or constructed by, for or on behalf of a public entity including but not limited to the following:*

1. *Publically owned and/or operated one- or two- family dwelling units or congregate residences;*
2. *Publically owned and/or operated buildings or complexes with three or more residential dwellings units;*
3. ***Reserved.***
4. *Publically owned and/or operated homeless shelters, group homes and similar social service establishments;*
5. *Publically owned and/or operated transient lodging, such as hotels, motels, hostels and other facilities providing accommodations of a short term nature of not more than 30 days duration;*
6. *Housing at a place of education owned or operated by a public entity, such as housing on or serving a public school, public college or public university campus;*
7. *Privately owned housing made available for public use as housing.*

PUBLIC USE. [DSA-AC] *Interior or exterior rooms, spaces or elements that are made available to the public. Public use may be provided at a building or facility that is privately or publicly owned. Private interior or exterior rooms, spaces or elements associated with a residential dwelling unit provided by a public housing program or in a public housing facility are not public use areas and shall not be required to be made available to the public. In the context of public housing, public use is the provision of housing programs by, for or on behalf of a public entity.*

PUBLIC WAY. A street, alley or other parcel of land open to the outside air leading to a street, that has been deeded, dedicated or otherwise permanently appropriated to the public for public use and which has a clear width and height of not less than 10 feet (3048 mm).

QUALIFIED HISTORIC BUILDING OR FACILITY. [DSA-AC] *A building or facility that is listed in or eligible for listing in the National Register of Historic Places, or designated as historic under an appropriate State or local law. See C.C.R. Title 24, Part 8.*

RAMP. A walking surface that has a running slope steeper than one unit vertical in 20 units horizontal (5-percent slope).

REASONABLE PORTION. [DSA-AC] *That segment of a building, facility, area, space or condition, which would normally be necessary if the activity therein is to be accessible by persons with disabilities.*

RECOMMEND. [DSA-AC] *Does not require mandatory acceptance, but identifies a suggested action that shall be considered for the purpose of providing a greater degree of accessibility to persons with disabilities.*

REMODELING. [DSA-AC] *See "Alteration."*

REPAIR. The reconstruction or renewal of any part of an existing building for the purpose of its maintenance or to correct damage.

RESIDENTIAL DWELLING UNIT. [DSA-AC] *A unit intended to be used as a residence that is primarily long-term in nature. Residential dwelling units do not include transient lodging, inpatient medical care, licensed long-term care, and detention or correctional facilities.*

RESTRICTED ENTRANCE. An entrance that is made available for common use on a controlled basis, but not public use, and that is not a service entrance.

RISER. [DSA-AC] *The upright part between two adjacent stairs treads.*

RUNNING SLOPE. [DSA-AC] *The slope that is parallel to the direction of travel. (As differentiated from the definition of "Cross Slope".)*

SELF-SERVICE STORAGE. [DSA-AC] *Building or facility designed and used for the purpose of renting or leasing individual storage spaces to customers for the purpose of storing and removing personal property on a self-service basis.*

SERVICE ENTRANCE. An entrance intended primarily for delivery of goods or services.

SHALL. [DSA-AC] *Denotes a mandatory specification or requirement.*

SHOPPING CENTER (or SHOPPING MALL). [DSA-AC] *One or more sales or rental establishments or stores. A shopping center may include a series of buildings on a common site, connected by a common pedestrian access route on, above or below the ground floor, that is either under common ownership or common control or developed either as one project or as a series of related projects. For the purposes of this section, "shopping center" or "shopping mall" includes a covered mall building.*

SHOULD. [DSA-AC] *Denotes an advisory specification or recommendation.*

SIDEWALK. [DSA-AC] *A surfaced pedestrian way contiguous to a street used by the public. (As differentiated from the definition of "Walk".)*

SINK. [DSA-AC] *A fixed bowl or basin with running water and drainpipe, as in a kitchen or laundry, for washing dishes, clothing, etc. (As differentiated from the definition of "Lavatory".)*

SITE. A parcel of land bounded by a lot line or a designated portion of a public right-of-way.

SLEEPING ACCOMMODATIONS. [DSA-AC] *Rooms intended and designed for sleeping.*

SOFT CONTAINED PLAY STRUCTURE. [DSA-AC] *A play structure made up of one or more play components where the user enters a fully enclosed play environment that utilizes pliable materials, such as plastic, netting, or fabric.*

SPACE. [DSA-AC] *A definable area, such as, a room, toilet room, hall, assembly area, entrance, storage room, alcove, courtyard, or lobby.*

SPECIFIED PUBLIC TRANSPORTATION. [DSA-AC] *Transportation by bus, rail, or any other conveyance (other than aircraft) provided by a private entity to the general public, with general or special service (including charter service) on a regular and continuing basis.*

STAGE. A space within a building utilized for entertainment or presentations, which includes overhead hanging curtains, drops, scenery or stage effects other than lighting and sound.

STAIR. A change in elevation, consisting of one or more risers.

STAIRWAY. One or more flights of stairs, either exterior or interior, with the necessary landings and platforms connecting them, to form a continuous and uninterrupted passage from one level to another.

STORY. ...
[DSA-AC] *That portion of a building or facility designed for human occupancy included between the upper surface of a floor and upper surface of the floor or roof next above. A story containing one or more mezzanines has more than one floor level. If the finished floor level directly above a basement or unused under-floor space is more than six feet (1829 mm) above grade for more than 50 percent of the total perimeter or is more than 12 feet (3658 mm) above grade at any point, the basement or unused under-floor space shall be considered as a story.*

STRUCTURAL FRAME. [DSA-AC] *The columns and the girders, beams and trusses having direct connections to the columns and all other members that are essential to the stability of the building or facility as a whole.*

STRUCTURE. That which is built or constructed.

TACTILE. [DSA-AC] *An object that can be perceived using the sense of touch.*

TACTILE SIGN. [DSA-AC] *A sign containing raised characters and/or symbols and accompanying Braille.*

TEEING GROUND. [DSA-AC] *In golf, the starting place for the hole to be played.*

TEMPORARY. [DSA-AC] *Buildings and facilities intended for use at one location for not more than one year and seats intended for use at one location for not more than 90 days.*

TEXT TELEPHONE. [DSA-AC] *Machinery or equipment that employs interactive text-based communications through the transmission of coded signals across the standard telephone network. Text telephones can include, for example, devices known as TTYs (teletypewriters) or computers.*

TRANSFER DEVICE. [DSA-AC] *Equipment designed to facilitate the transfer of a person from a wheelchair or other mobility aid to and from an amusement ride seat.*

TRANSIENT LODGING. [DSA-AC] *A building or facility containing one or more guest room(s) for sleeping that provides accommodations that are primarily short-term in nature (generally 30 days or less). Transient lodging does not include residential dwelling units intended to be used as a residence, inpatient medical care facilities, licensed long-term care facilities, detention or correctional facilities, or private buildings or facilities that contain no more than five rooms for rent or hire and that are actually occupied by the proprietor as the residence of such proprietor. See also the definition of Place of Public Accommodation.*

TRANSIT BOARDING PLATFORM. [DSA-AC] *A horizontal, generally level surface, whether raised above, recessed below or level with a transit rail, from which persons embark/disembark a fixed rail*

vehicle.

TRANSITION PLATE. [DSA-AC] *A sloping pedestrian walking surface located at the end(s) of a gangway.*

TREAD. [DSA-AC] *The horizontal part of a step.*

TTY. [DSA-AC] *An abbreviation for teletypewriter. Machinery that employs interactive text-based communication through the transmission of coded signals across the telephone network. TTYs may include, for example, devices known as TDDs (telecommunication display devices or telecommunication devices for deaf persons) or computers with special modems. TTYs are also called text telephones.*

UNREASONABLE HARDSHIP. [DSA-AC] *When the enforcing agency finds that compliance with the building standard would make the specific work of the project affected by the building standard infeasible, based on an overall evaluation of the following factors:*

1. *The cost of providing access.*
2. *The cost of all construction contemplated.*
3. *The impact of proposed improvements on financial feasibility of the project.*
4. *The nature of the accessibility which would be gained or lost.*
5. *The nature of the use of the facility under construction and its availability to persons with disabilities.*

The details of any finding of unreasonable hardship shall be recorded and entered in the files of the enforcing agency.

USE ZONE. [DSA-AC] *The ground level area beneath and immediately adjacent to a play structure or play equipment that is designated by ASTM F 1487 for unrestricted circulation around the play equipment and where it is predicted that a user would land when falling from or exiting the play equipment.*

VALUATION THRESHOLD. [DSA-AC] *An annually adjusted, dollar-amount figure used in part to determine the extent of required path of travel upgrades. The baseline valuation threshold of $50,000 is based on the January 1981, "ENR US20 Cities" Average Construction Cost Index (CCI) of 3372.02 as published in Engineering News Record, McGraw Hill Publishing Company. The current valuation threshold is determined by multiplying the baseline valuation threshold by a ratio of the current year's January CCI to the baseline January 1981 CCI.*

VARIABLE MESSAGE SIGNS (VMS). [DSA-AC] *Electronic signs that have a message with the capacity to change by means of scrolling, streaming, or paging across a background.*

VARIABLE MESSAGE SIGN (VMS) CHARACTERS. [DSA-AC] *Characters of an electronic sign are composed of pixels in an array. High resolution VMS characters have vertical pixel counts of 16 rows or greater. Low resolution VMS characters have vertical pixel counts of 7 to 15 rows.*

VEHICULAR WAY. [DSA-AC] *A route provided for vehicular traffic, such as in a street, driveway, or parking facility.*

WALK. [DSA-AC] *An exterior prepared surface for pedestrian use, including pedestrian areas such as plazas and courts. (As differentiated from the definition of "Sidewalk".)*

WET BAR. [DSA-AC] *An area or space with a counter equipped with a sink and running water but without cooking facilities.*

WHEELCHAIR. [DSA-AC] *A chair mounted on wheels to be propelled by its occupant manually or with the aid of electric power, of a size and configuration conforming to the recognized standard models of the trade.*

WHEELCHAIR SPACE. A space for a single wheelchair and its occupant.

WORKSTATION. ...
[DSA-AC] *An area defined by equipment and/or work surfaces intended for use by employees only, and generally for one or a small number of employees at a time. Examples include ticket booths; the employee side of grocery store check stands; the bartender area behind a bar; the employee side of snack bars, sales counters and public counters; guardhouses; toll booths; kiosk vending stands; lifeguard stations; maintenance equipment closets; counter and equipment areas in restaurant kitchens; file rooms; storage areas; etc.*

WORK AREA EQUIPMENT. [DSA-AC] *Any machine, instrument, engine, motor, pump, conveyor, or other apparatus used to perform work. As used in this document, this term shall apply only to equipment that is permanently installed or built-in in employee work areas. Work area equipment does not include passenger elevators and other accessible means of vertical transportation.*

ITEM 2.02

SECTION 202
DEFINITIONS

ACCESSIBLE. ~~A site, building, facility or portion thereof that complies with Chapter 11.~~
[DSA-AC] *A site, building, facility, or portion thereof that is approachable and usable by persons with disabilities in compliance with this code.*

ITEM 2.03

SECTION 202
DEFINITIONS

ACCESSIBLE ROUTE. ~~A continuous, unobstructed path that complies with Chapter 11.~~
[DSA-AC] *A continuous unobstructed path connecting accessible elements and spaces of an accessible site, building or facility that can be negotiated by a person with a disability using a wheelchair, and that is also safe for and usable by persons with other disabilities. Interior accessible routes may include corridors, hallways, floors, ramps, elevators and lifts. Exterior accessible routes may include parking access aisles, curb ramps, crosswalks at vehicular ways, walks, ramps and lifts.*

ITEM 2.04

SECTION 202
DEFINITIONS

ADJUSTED CONSTRUCTION COST. [DSA-AC] *All costs directly related to the construction of a project, including labor, material, equipment, services, utilities, contractor financing, contractor overhead and profit, and construction management costs. The costs shall not be reduced by the value of components, assemblies, building equipment or construction not directly associated with accessibility or usability. The*

adjusted construction cost shall not include; project management fees and expenses, architectural and engineering fees, testing and inspection fees, and utility connection or service district fees.

ITEM 2.05

SECTION 202
DEFINITIONS

AREA OF SPORT ACTIVITY. That portion of an indoor or outdoor space where the play or practice of a sport occurs.
[DSA-AC] ~~*That portion of a room or space where the play or practice of a sport occurs.*~~

ITEM 2.06

WITHDRAWN

ITEM 2.07

SECTION 202
DEFINITIONS

PROFESSIONAL OFFICE OF A HEALTH CARE PROVIDER. [DSA-AC] ~~*See Chapter 11B.*~~ *A location where a person or entity, regulated by the State to provide professional services related to the physical or mental health of an individual, makes such services available to the public. The facility housing the professional office of a health care provider only includes floor levels housing at least one health care provider, or any floor level designed or intended for use by at least one health care provider.*

ITEM 2.08

SECTION 202
DEFINITIONS

PUBLIC USE AREAS. ...
[DSA-AC] Interior or exterior rooms or spaces of a building or facility that are made available to the general public and do not include common use areas. Public use areas may be provided at a building or facility that is privately or publicly owned.

ITEM 2.09

SECTION 202
DEFINITIONS

~~***SIGNAGE. [DSA-AC]*** *Displayed verbal, symbolic, tactile, and/or pictorial information.*~~

SIGN. [DSA-AC] *An element composed of displayed textual, symbolic, tactile, and/or pictorial information.*

ITEM 2.10

SECTION 202
DEFINITIONS

TECHNICALLY INFEASIBLE. [DSA-AC] *An alteration of a building or a facility, that has little likelihood of being accomplished because the existing structural conditions require the removal or alteration of a load-bearing member that is an essential part of the structural frame, or because other existing physical or site constraints prohibit modification or addition of elements, spaces or features that are in full and strict compliance with the minimum requirements for new construction and which are necessary to provide accessibility.*

CHAPTER 4
SPECIAL DETAILED REQUIREMENTS BASED ON USE AND OCCUPANCY

DSA-AC proposes to carry forward its adoption of specific model code provisions and California amendments in Chapter 4, from the 2013 CA Building Code into the 2016 CA Building Code, with further amendment as indicated.

ITEM 10.01

SECTION 1003
GENERAL MEANS OF EGRESS

1003.1 Applicability. The general requirements specified in Sections 1003 through 1015 shall apply to all three elements of the means of egress system, in addition to those specific requirements for the exit access, the exit and the exit discharge detailed elsewhere in this chapter.

[DSA-AC] In addition to the requirement of this chapter, means of egress, which provide access to, or egress from, buildings or facilities where accessibility is required for applications listed in Section 1.8.2.1.2 regulated by the Department of Housing and Community Development, or Section 1.9.1 regulated by the Division of the State Architect-Access Compliance, shall also comply with Chapter 11A or Chapter 11B, as applicable.

1003.5 Elevation change. ...

Exceptions:

1. A single step with a maximum riser height of 7 inches (178 mm) is permitted for buildings with occupancies in Groups F, H, R-2, R-3, S and U at exterior doors not required to be *accessible* by Chapter ~~11~~ *11A or 11B*.

2. A *stair* with a single riser or with two risers and a tread is permitted at locations not required to be *accessible* by Chapter ~~11~~ *11A or 11B*, provided that the risers and treads comply with

Section 1011.5, the minimum depth of the tread is 13 inches (330 mm) and not less than one *handrail* complying with Section 1014 is provided within 30 inches (762 mm) of the centerline of the normal path of egress travel on the *stair*.

3. A step is permitted in *aisles* serving seating that has a difference in elevation less than 12 inches (305 mm) at locations not required to be *accessible* by Chapter ~~11~~ *11A or 11B*, provided that the risers and treads comply with Section 1029.13 and the *aisle* is provided with a *handrail* complying with Section 1029.15.

ITEM 10.02

SECTION ~~1007~~ 1009
ACCESSIBLE MEANS OF EGRESS

~~1007.1~~ 1009.1 **Accessible means of egress required.** Accessible means of egress shall comply with this section. Accessible spaces shall be provided with not less than one accessible means of egress. Where more than one means of egress are required by Section 1006.2 or 1006.3 from any accessible space, each accessible portion of the space shall be served by ~~not less than two~~ accessible means of egress *in at least the same number as required by Section ~~1015.1 or 1021.1~~ 1006.2 or 1006.3. In addition to the requirements of this chapter, means of egress, which provide access to, or egress from, buildings for persons with disabilities, shall also comply with the requirements of Chapter 11A or 11B as applicable.*

Exceptions:

1. Accessible means of egress are not required in alterations to existing buildings.

2. One accessible means of egress is required from an accessible mezzanine level in accordance with Section 1009.3, 1009.4 or 1009.5 *and Chapter 11A or 11B, as applicable.*

3. In assembly areas with sloped or stepped aisles, one accessible means of egress is permitted where the common path of travel is accessible and meets the requirements in Section 1029.8, *and Chapter 11A or 11B, as applicable.*

~~1007.2~~ 1009.2 **Continuity and components.** Each required accessible means of egress shall be continuous to a public way and shall consist of one or more of the following components:

1. Accessible routes complying with ~~Section 1104~~ *Chapter 11A, Section 1110A.1 and 1120A, or Chapter 11B, Sections 11B-206 and 11B-402, as applicable.*

2. Interior exit stairways complying with Sections 1009.3 and 1023, *Chapter 11A, Section 1123A, or Chapter 11B, Sections 11B-210 and 11B-504, as applicable.*

3. Exit access stairways complying with Sections 1009.3 and 1019.3 or 1019.4, *Chapter 11A, Section 1123A, or Chapter 11B, Sections 11B-210 and 11B-504, as applicable.*

4. Exterior exit stairways complying with Sections 1009.3, ~~and~~ 1027, *and Chapter 11A, Section 1115A, or Chapter 11B, Sections 11B-210 and 11B-504, as applicable.* ~~and serving levels other than the level of exit discharge.~~

5. Elevators complying with Section 1009.4, *and Chapter 11A, Section 1124A, or Chapter 11B, Sections 11B-206.6 and 11B-407, as applicable.*

6. Platform lifts complying with Section 1009.5 *and Chapter 11A, Section 1124A, or Chapter 11B, Sections 11B-206.7, 11B-207.2 and 11B-410 as applicable.*

7. Horizontal exits complying with Section 1026.

8. Ramps complying with Section 1012, *and Chapter 11A, Sections 1114A and 1122A, or Chapter 11B, Section 11B-405, as applicable.*

9. Areas of refuge complying with Section 1009.6.

10. Exterior areas for assisted rescue complying with Section 1009.7 serving exits at the level of exit discharge.

~~1007.2.1~~ **1009.2.1 Elevators required.** ...

~~1007.3~~ **1009.3 Stairways.** In order to be considered part of an accessible means of egress, a stairway between stories shall have a clear width of 48 inches (1219 mm) minimum between handrails and shall either incorporate an area of refuge within an enlarged floor-level landing or shall be accessed from an area of refuge complying with Section 1009.6. Exit access stairways that connect levels in the same story are not permitted as part an accessible means of egress. ***[DSA-AC]*** *In addition, exit stairways shall comply with Chapter 11A, Section 1115A and 1123A, or Chapter 11B, Sections 11B-210 and 11B-504, as applicable.*

Exceptions:

1. Exit access stairways providing means of egress from mezzanines are permitted as part of an accessible means of egress.
2. The clear width of 48 inches (1219 mm) between handrails is not required in buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1 or 903.3.1.2.
3. The clear width of 48 inches (1219 mm) between handrails is not required for stairways accessed from a refuge area in conjunction with a horizontal exit.
4. Areas of refuge are not required at exit access stairways where two-way communication is provided at the elevator landing in accordance with Section 1009.8.
5. Areas of refuge are not required at stairways in buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1 or 903.3.1.2.
6. Areas of refuge are not required at stairways serving open parking garages.
7. Areas of refuge are not required for smoke-protected assembly seating areas complying with Section 1029.6.2.
8. Areas of refuge are not required at stairways in Group R-2 occupancies.
9. Areas of refuge are not required for stairways accessed from a refuge area in conjunction with a horizontal exit.

~~1009.4~~ **1009.4 Elevators.** ...

~~1007.5~~ **1009.5 Platform lifts.** Platform lifts shall be permitted to serve as part of an accessible means of egress where allowed as part of a required accessible route in ~~Section 1109.8 except for Item 10~~ *Chapter 11A, Section 1121A, or Chapter 11B, Sections 11B-206.7.1 through 11B-206.7.10, as applicable.* Standby power for the platform lift shall be provided in accordance with Chapter 27. ***[DSA-AC]*** *See Chapter 11B, Section 11B-207.2 for additional accessible means of egress requirements at platform lifts.*

~~1007.6~~ **1009.6 Areas of refuge.** Every required area of refuge shall be accessible from the space it serves by an accessible means of egress. ***[DSA-AC]*** *Areas of refuge shall comply with the requirements of this code and shall adjoin an accessible route complying with Sections 11B-206 and 11B-402.*

~~1007.6~~ **1009.6.1 Travel distance.** ...

~~1007.6~~ 1009.6.2 **Stairway or elevator access.** ...

~~1007.6.1~~ 1009.6.3 **Size.** Each area of refuge shall be sized to accommodate ~~one~~ *two* wheelchair ~~space~~ *spaces that are not less than* ~~of~~ 30 inches by 48 inches (762 mm by 1219 mm). *The total number of such 30-inch by 48-inch (762 mm) by 1219 mm) spaces per story shall be not less than one for every 200 persons of calculated occupant load served by the area of refuge.* ~~for each 200 occupants or portion thereof, based on the occupant load of the area of refuge and areas served by the area of refuge.~~ Such wheelchair spaces shall not reduce the means of egress minimum width or required capacity. Access to any of the required wheelchair spaces in an area of refuge shall not be obstructed by more than one adjoining wheelchair space.

Exception: *The enforcing agency may reduce the size of each required area of refuge to accommodate one wheelchair space that is not less than 30 inches by 48 inches (762 mm by 1219 mm) on floors where the occupant load is less than 200.*

~~1007.6.2~~ 1009.6.4 **Separation.** ...

~~1007.6.3~~ 1009.6.5 **Two-way communication.** ...

~~1007.7~~ 1009.7 **Exterior areas for assisted rescue.** ...

~~1007.8~~ 1009.8 **Two-way communication.** ...

~~1007.8.1~~ 1009.8.1 **System requirements.** ...

~~1007.8.1.1~~ 1009.8.1.1 Visible communication method. [DSA-AC] *A button complying with Sections 11B-205 and 11B-309 in the area of refuge shall activate both a light in the area of refuge indicating that rescue has been requested and a light at the central control point indicating that rescue is being requested. A button at the central control point shall activate both a light at the central control point and a light in the area of refuge indicating that the request has been received.*

~~1007.8.2~~ 1009.8.2 **Directions.** Directions for the use of the two-way communication system, instructions for summoning assistance via the two-way communication system and written identification of the location shall be posted adjacent to the two-way communication system. Signage shall comply with ~~the ICC A117.1~~ *Section 11B-703.5* requirements for visual characters.

~~1007.9~~ 1009.9 **Signage.** Signage indicating special accessibility provisions shall be provided as shown:

1. Each door providing access to an area of refuge from an adjacent floor area shall be identified by a sign stating: AREA OF REFUGE.

2. Each door providing access to an exterior area for assisted rescue shall be identified by a sign stating: EXTERIOR AREA FOR ASSISTED RESCUE.

Signage shall comply with ~~the ICC A117.1~~ *Section 11B-703.5* requirements for visual characters and include the International Symbol of Accessibility *complying with Section 11B-703.7.2.1*. Where exit sign illumination is required by Section 1013.3, the signs shall be illuminated. Additionally, visual characters, raised character and braille signage complying with ~~ICC A117.1~~ *Sections 11B-703.1, 11B-703.2, 11B-703.3 and 11B-703.5 and the International Symbol of Accessibility complying with Section 11B-703.7.2.1* shall be located at each door to an area of refuge and exterior area for assisted rescue in accordance with Section 1011.4.

~~1007.10~~ 1009.10 **Directional signage.** Directional signage *complying with Section 11B-703.5* indicating the location of all other means of egress and which of those are accessible means of egress shall be provided at the following:

1. At exits serving a required accessible space but not providing an approved accessible means of egress.
2. At elevator landings.
3. Within areas of refuge.

~~1007.11~~ 1009.11 **Instructions.** In areas of refuge and exterior areas for assisted rescue, instructions on the use of the area under emergency conditions shall be posted. Signage shall comply with ~~the ICC A117.1~~ *Section 11B-703.5* requirements for visual characters. The instructions shall include all of the following:

1. Persons able to use the exit stairway do so as soon as possible, unless they are assisting others.
2. Information on planned availability of assistance in the use of stairs or supervised operation of elevators and how to summon such assistance.
3. Directions for use of the two-way communications system where provided.

~~1007.12~~ 1009.12 Alarms/emergency warning systems/accessibility. ...

ITEM 10.03

SECTION ~~1008~~ 1010
DOORS, GATES AND TURNSTILES

[DSA-AC] In addition to the requirements of this section, means of egress, which provide access to, or egress from, buildings or facilities where accessibility is required for applications listed in Section 1.9.1 regulated by the Division of the State Architect-Access Compliance, shall also comply with Chapter 11A or Chapter 11B, Sections 11B-206.5 and 11B-404, as applicable.

~~1008.1.4~~ 1010.1.4 **Special doors.** ...

~~1008.1.4.1~~ 1010.1.4.1 **Revolving doors.** Revolving doors shall comply with the following:

1. ...
2. ...
3. ...
4. ...
5. ...
6. ...
7. Revolving doors shall not be part of an accessible route required by Section 1009 and Chapter ~~11~~ *11A or 11B*.

~~1008.1.7~~ 1010.1.7 **Thresholds.** ...

Exceptions:

1. In occupancy Group R-2 or R-3, threshold heights for sliding and side-hinged exterior doors shall be permitted to be up to 7 $^{3}/_{4}$ inches (197 mm) in height if all of the following apply:
   1.1. ...
   1.2. The door is not part of an accessible route as required by Chapter ~~11~~ *11A or 11B*.
   1.3. ...
2. ...

~~1008.1.9~~ 1010.1.9 **Door operations.** ...

~~1008.1.9.1~~ **1010.1.9.1 Hardware.** Door handles, pulls, latches, locks and other operating devices on doors required to be accessible by Chapter ~~11~~ *11A or 11B* shall not require tight grasping, tight pinching or twisting of the wrist to operate.

~~1008.1.9.7~~ **1010.1.9.7 Delayed egress locks.** ...

1. ...
2. ...
3. ...
4. An attempt to egress shall initiate an irreversible process that shall allow such egress in not more than 15 seconds when a physical effort to exit is applied to the egress side door hardware for not more than 3 seconds. Initiation of the irreversible process shall activate an audible signal in the vicinity of the door. Once the delay electronics have been deactivated, rearming the delay electronics shall be by manual means only. *The time delay established for each egress-control device shall not be field adjustable. For applications listed in Section 1.9.1 regulated by the Division of the State Architect-Access Compliance, see Chapter 11B, Section 11B-404.2.9.*

   Exception: Where approved, a delay of not more than 30 seconds is permitted on a delayed egress door.
5. ...
6. A sign shall be provided on the door and shall be located above and within 12 inches (305 mm) of the door exit hardware:

   6.1. For doors that swing in the direction of egress, the sign shall read: ~~PUSH UNTIL ALARM SOUNDS. DOOR CAN BE OPENED IN 15 [30] SECONDS.~~ *"KEEP PUSHING. THIS DOOR WILL OPEN IN 15 [30] SECONDS. ALARM WILL SOUND."*

   6.2. For doors that swing in the opposite direction of egress, the sign shall read: ~~PULL UNTIL ALARM SOUNDS. DOOR CAN BE OPENED IN 15 [30] SECONDS.~~ *"KEEP PULLING. THIS DOOR WILL OPEN IN 15 [30] SECONDS. ALARM WILL SOUND."*

   6.3. The sign shall comply with the visual character requirements in ~~ICC A117.1~~ *Section 11B-703.5. Sign lettering shall be at least 1 inch (25 mm) in height and shall have a stroke of not less than 1/8 inch (3.2 mm).*

   ~~5.1~~ *6.3.1 A tactile sign shall also be provided in Braille and raised characters, which complies with Sections 11B-703.1, 11B-703.2, 11B-703.3 and 11B-703.5.*
7. ...
8. ...

ITEM 10.04

SECTION ~~1009~~ 1011
STAIRWAYS

[DSA-AC] *In addition to the requirements of this section, means of egress, which provide access to, or*

egress from, buildings or facilities where accessibility is required for applications listed in Section 1.9.1 regulated by the Division of the State Architect-Access Compliance, shall also comply with Chapter 11A or Chapter 11B, Sections 11B-210 and 11B-504, as applicable.

~~1009.7.2~~ 1011.5.2 Riser height and tread depth. ...

Exceptions:

1. ...
2. ...
3. ...
4. See Section 403.1 of the ~~International~~ *California* Existing Building Code for the replacement of existing stairways. ***[DSA-AC]*** *For applications listed in Section 1.9.1 regulated by the Division of the State Architect-Access Compliance, see Chapter 11B, Section 11B-202.*
5. ...

~~1009.15~~ 1011.11 Handrails. ...

[DSA-AC] *For applications listed in Section 1.9.1 regulated by the Division of the State Architect-Access Compliance, see Chapter 11B, Sections 11B-504.6 and 11B-505.*

ITEM 10.05

SECTION ~~1010~~ 1012
RAMPS

[DSA-AC] *In addition to the requirements of this section, means of egress, which provide access to, or egress from, buildings or facilities where accessibility is required for applications listed in Section 1.9.1 regulated by the Division of the State Architect-Access Compliance, shall also comply with Chapter 11A or Chapter 11B, Section 11B-405, as applicable.*

~~1010.1~~ 1012.1 Scope. ...

Exceptions:

1. ...
2. Curb ramps shall comply with ~~ICC A117.1~~ *Chapter 11A or 11B, Section 11B-406, as applicable.*
3. ...

1012.6.5 Doorways. Where doorways are located adjacent to a ramp landing, maneuvering clearances required ~~by ICC A117.1~~ *for accessibility* are permitted to overlap the required landing area *as specified in Chapter 11A or 11B, as applicable*.

1012.10 Edge protection. ...

Exceptions:

1. Edge protection is not required on ramps that are not required to have *handrails*, provided they have flared sides that comply with ~~the ICC A117.1~~ *Chapter 11A or 11B* curb ramp provisions.
2. ...
3. ...

ITEM 10.06

SECTION ~~1011~~ 1013
EXIT SIGNS

~~1011.4~~ 1013.4 Raised character and Braille exit signs. ~~A sign stating EXIT in visual characters, raised characters and braille and complying with *ICC A117.1* shall be provided adjacent to each door to an *area of refuge*, an exterior area for assisted rescue, an *exit stairway* or *ramp*, an *exit passageway* and the *exit discharge*.~~ *Tactile exit signs shall be required at the following locations:*

1. *Each grade-level exterior exit door that is required to comply with Section ~~1011.1~~ 1013.1, shall be identified by a tactile exit sign with the word, ~~"EXIT."~~ "EXIT".*

2. *Each exit door that is required to comply with Section ~~1011.1~~ 1013.1, and that leads directly to a grade-level exterior exit by means of a stairway or ramp shall be identified by a tactile exit sign with the following words as appropriate:*

   2.1. "EXIT STAIR DOWN"
   2.2. "EXIT RAMP DOWN"
   2.3. "EXIT STAIR UP"
   2.4. "EXIT RAMP UP"

3. *Each exit door that is required to comply with Section ~~1011.1~~ 1013.1, and that leads directly to a grade-level exterior exit by means of an exit enclosure or an exit passageway shall be identified by a tactile exit sign with the words, ~~"EXIT ROUTE."~~ "EXIT ROUTE".*

4. *Each exit access door from an interior room or area to a corridor or hallway that is required to comply with Section ~~1011.1~~ 1013.1, shall be identified by a tactile exit sign with the words ~~"EXIT ROUTE."~~ "EXIT ROUTE".*

5. *Each exit door through a horizontal exit that is required to comply with Section ~~1011.1~~ 1013.1, shall be identified by a sign with the words, ~~"TO EXIT."~~ "TO EXIT".*

Raised character and Braille exit signs shall comply with Chapter 11A, Section 1143A or Chapter 11B, Sections 11B-703.1, 11B-703.2, 11B-703.3 and 11B-703.5.

ITEM 10.07

SECTION ~~1012~~ 1014
HANDRAILS

[DSA-AC] *In addition to the requirements of this section, means of egress, which provide access to, or egress from, buildings or facilities where accessibility is required for applications listed in Section 1.9.1 regulated by the Division of the State Architect-Access Compliance, shall also comply with Chapter 11A or Chapter 11B, Section 11B-505, as applicable.*

ITEM 10.08

SECTION ~~1013~~ 1015
GUARDS

~~1013.2~~ 1015.2 Where required. ...

~~1013.3~~ **1015.3 Height.** Required guards shall not be less than 42 inches (1067 mm) high, measured vertically as follows:

1. From the adjacent walking surfaces.
2. On stairways and stepped aisles, from the line connecting the leading edges of the tread nosings.
3. On ramps and ramped aisles, from the ramp surface at the guard.

Exceptions:

~~1. For occupancies in Group R-3 not more than three stories above grade in height and within individual dwelling units in occupancies in Group R-2 not more than three stories above grade in height with separate means of egress, required guards shall not be less than 36 inches (914 mm) in height measured vertically above the adjacent walking surfaces or adjacent fixed seating.~~

~~2.~~ 1. For occupancies in Group R-3, and within individual dwelling units in occupancies in Group R-2, guards on the open sides of stairs shall have a height not less than 34 inches (864 mm) measured vertically from a line connecting the leading edges of the treads.

~~3.~~ 2. For occupancies in Group R-3, and within individual dwelling units in occupancies in Group R-2, where the top of the guard also serves as a handrail on the open sides of stairs, the top of the guard shall not be less than 34 inches (864 mm) and not more than 38 inches (965 mm) measured vertically from a line connecting the leading edges of the treads.

~~4.~~ 3. The guard height in assembly seating areas shall comply with Section 1029.16 as applicable.

~~5.~~ 4. Along alternating tread devices and ship ladders, guards whose top rail also serves as a handrail, shall have height not less than 30 inches (762 mm) and not more than 34 inches (864 mm), measured vertically from the leading edge of the device tread nosing.

ITEM 10.09

SECTION ~~1017~~ 1018
AISLES

[DSA-AC] *In addition to the requirements of this section, means of egress, which provide access to, or egress from, buildings or facilities where accessibility is required for applications listed in Section 1.9.1 regulated by the Division of the State Architect-Access Compliance, shall also comply with Chapter 11A or Chapter 11B, Section 11B-403, as applicable.*

~~1017.3~~ **1018.3 Aisles in Groups B and M.** In Group B and M occupancies, the minimum clear aisle width shall be determined by Section 1005.1 for the occupant load served, but shall be not less than that required for corridors by Section 1020.2.

Exception: Nonpublic aisles serving less than 50 people and not required to be accessible by ~~Chapter 11~~ *Chapter 11B (see Section 11B-403)* need not exceed 28 inches (711 mm) in width.

1018.5 Aisles in other than assembly spaces and Groups B and M. In other than rooms or spaces used for assembly purposes and Group B and M occupancies, the minimum clear *aisle* capacity shall be determined by Section 1005.1 for the occupant load served, but the width shall be not less than that required for corridors by Section 1020.2.

Exception: Nonpublic aisles serving less than 50 people and not required to be accessible by ~~Chapter 11~~ *Chapter 11B (see Section 11B-403)* need not exceed 28 inches (711 mm) in width.

ITEM 10.10

SECTION ~~1022~~ 1023
INTERIOR EXIT STAIRWAYS AND RAMPS

~~**1022.9**~~ **1023.9 Stairway identification signs.** A sign shall be provided at each floor landing in an interior exit stairway and ramp connecting more than three stories designating the floor level, the terminus of the top and bottom of the interior exit stairway and ramp and the identification of the stairway or ramp. The signage shall also state the story of, and the direction to, the exit discharge and the availability of roof access from the interior exit stairway and ramp for the fire department. The sign shall be located 5 feet (1524 mm) above the floor landing in a position that is readily visible when the doors are in the open and closed positions. ~~In addition to the stairway identification sign, a floor-level sign in visual characters, raised characters and braille complying with ICC A117.1 shall be located at each floor-level landing adjacent to the door leading from the interior exit stairway and ramp into the corridor to identify the floor level.~~

In addition to the stairway identification sign, raised characters and Braille floor identification signs that comply with Sections 11B-703.1, 11B-703.2, 11B-703.3 and 11B-703.5 shall be located at the landing of each floor level, placed adjacent to the door on the latch side, in all enclosed stairways in buildings two or more stories in height to identify the floor level. At the exit discharge level, the sign shall include a raised five pointed star located to the left of the identifying floor level. The outside diameter of the star shall be the same as the height of the raised characters.

CHAPTER 11A
HOUSING ACCESSIBILITY

DSA-AC proposes to carry forward its adoption of existing California amendments in Chapter 11A, from the 2013 CA Building Code into the 2016 CA Building Code.

Adopt entire California Chapter as amended (amended Sections listed below)		
Adopt only those Sections that are listed below		
Chapter / Section	Codes	

ITEM 11B.01

DIVISION 2: SCOPING REQUIREMENTS

***11B*-202 Existing buildings and facilities**

11B*-202.4 *Path of travel requirements in* alterations, *additions and structural repairs. *When alterations or additions are made to existing buildings or facilities, an accessible path of travel to the specific area of alteration or addition shall be provided. The primary accessible path of travel shall include:*

1. *A primary entrance to the building or facility,*
2. *Toilet and bathing facilities serving the area,*
3. *Drinking fountains serving the area,*
4. *Public telephones serving the area, and*
5. *Signs.*

Exceptions:

1. *...*

2. *If the following elements of a path of travel have been constructed or altered in compliance with the accessibility requirements of the immediately ~~preceeding~~ preceding edition of the California Building Code, it shall not be required to retrofit such elements to reflect the incremental changes in this code solely because of an alteration to an area served by those elements of the path of travel:*

    1. *A primary entrance to the building or facility,*
    2. *Toilet and bathing facilities serving the area,*
    3. *Drinking fountains serving the area,*
    4. *Public telephones serving the area, and*
    5. *Signs.*

3. ...

4. *Alterations solely for the purpose of barrier removal undertaken pursuant to the requirements of the Americans with Disabilities Act (Public Law 101-336, 28 C.F.R., Section 36.304) or the accessibility requirements of this code as those requirements or regulations now exist or are hereafter amended ~~consisting of~~ including, but not limited to, one or more of the following items shall be limited to the actual scope of work of the project and shall not be required to comply with Section 11B-202.4:*

    1. *Installing ramps.*
    2. *Making curb cuts in sidewalks and entrance.*
    3. *Repositioning shelves.*
    4. *Rearranging tables, chairs, vending machines, display racks, and other furniture.*
    5. *Repositioning telephones.*
    6. *Adding raised markings on elevator control buttons.*
    7. *Installing flashing alarm lights.*
    8. *Widening doors.*
    9. *Installing offset hinges to widen doorways.*
    10. *Eliminating a turnstile or providing an alternative accessible route.*
    11. *Installing accessible door hardware.*
    12. *Installing grab bars in toilet stalls.*
    13. *Rearranging toilet partitions to increase maneuvering space.*
    14. *Insulating lavatory pipes under sinks to prevent burns.*
    15. *Installing a raised toilet seat.*
    16. *Installing a full-length bathroom mirror.*
    17. *Repositioning the paper towel dispenser in a bathroom.*
    18. *Creating designated accessible parking spaces.*
    19. *Removing high-pile, low-density carpeting.*

5. ...

6. ...

7. ...

8. *When the adjusted construction cost, as defined, is less than or equal to the current valuation threshold, as defined ~~in Chapter 2, Section 202~~, the cost of compliance with Section 11B-202.4 shall be limited to 20 percent of the adjusted construction cost of alterations, structural repairs or additions. When the cost of full compliance with Section 11B-202.4 would exceed 20 percent, compliance shall be provided to the greatest extent possible without exceeding 20 percent.*

    When the adjusted construction cost, as defined, exceeds the current valuation threshold, as defined ~~in Chapter 2, Section 202~~, and the enforcing agency determines the cost of compliance with Section 11B-202.4 is an unreasonable hardship, as defined ~~in Chapter 2, Section 202~~, full compliance with Section 11B-202.4 shall not be required. Compliance shall be provided by equivalent facilitation or to the greatest extent possible without creating an unreasonable hardship; but in no case shall the cost of compliance be less than 20 percent of the adjusted construction cost of alterations, structural repairs or additions. The details of the finding of unreasonable hardship shall be recorded and entered into the files of the enforcing agency and shall be subject to Chapter 1, Section 1.9.1.5, Special Conditions for Persons with Disabilities Requiring Appeals Action Ratification.

For the purposes of this exception, the adjusted construction cost of alterations, structural repairs or additions shall not include the cost of alterations to path of travel elements required to comply with Section 11B-202.4.

In choosing which accessible elements to provide, priority should be given to those elements that will provide the greatest access in the following order:

1. *An accessible entrance;*
2. *An accessible route to the altered area;*
3. *At least one accessible restroom for each sex or ~~a single~~ one accessible unisex (single-user or family) restroom;*
4. *Accessible telephones;*
5. *Accessible drinking fountains; and*
6. *When possible, additional accessible elements such as parking, signs, storage and alarms.*

If an area has been altered without providing an accessible path of travel to that area, and subsequent alterations of that area or a different area on the same path of travel are undertaken within three years of the original alteration, the total cost of alterations to the areas on that path of travel during the preceding three-year period shall be considered in determining whether the cost of making that path of travel accessible is disproportionate.

9. *Certain types of privately funded, multistory buildings and facilities were formerly exempt from accessibility requirements above and below the first floor under this code, but as of, April 1, 1994, are no longer exempt due to more restrictive provisions in the federal Americans with Disabilities Act. In alteration projects involving buildings and facilities previously approved and built without elevators, areas above and below the ground floor are subject to the 20-percent ~~disproportionately~~ disproportionality provisions described in Exception 8, above, even if the value of the project exceeds the valuation threshold in Exception 8. The types of buildings and facilities are:*

    1. *Office buildings and passenger vehicle service stations of three stories or more and 3,000 or more square feet (279 m^2) per floor.*
    2. *Offices of physicians and surgeons.*
    3. *Shopping centers.*
    4. *Other buildings and facilities three stories or more and 3,000 or more square feet (279 m^2) per floor if a reasonable portion of services sought and used by the public is available on the accessible level.*

    For the general privately funded multistory building exception applicable to new construction and alterations, see Section 11B-206.2.3, Exception 1.

    The elevator exception set forth in this section does not obviate or limit in any way the obligation to comply with the other accessibility requirements in this code. For example, floors above or below the accessible ground floor must meet the requirements of this section except for elevator service. If toilet or bathing facilities are provided on a level not served by an elevator, then toilet or bathing facilities must be provided on the accessible ground floor.

ITEM 11B.02

DIVISION 2: SCOPING REQUIREMENTS

11B-202 Existing buildings and facilities

11B*-202.4 *Path of travel requirements in* alterations, *additions and structural repairs. *When alterations or additions are made to existing buildings or facilities, an accessible path of travel to the specific area of alteration or addition shall be provided. The primary accessible path of travel shall include:*

1. *A primary entrance to the building or facility,*
2. *Toilet and bathing facilities serving the area,*
3. *Drinking fountains serving the area,*
4. *Public telephones serving the area, and*
5. *Signs.*

Exceptions: ...

10. The cost of compliance with Section 11B-202.4 for seismic mitigation projects shall be limited to 20 percent of the adjusted construction cost.

For the purposes of this exception the adjusted construction cost of a seismic mitigation project shall not include the cost of alterations to path of travel elements required to comply with Section 11B-202.4.

When the path of travel elements for a seismic mitigation project cannot be fully upgraded to comply with Section 11B-202.4 within the 20 percent cost limitation, the priority list of Exception 8 shall be applied.

ITEM 11B.02.01 – RELATED CODE AMENDMENT

CHAPTER 2 – DEFINITIONS
SECTION 202 – Definitions

SEISMIC MITIGATION. [DSA-AC] *The strengthening of structural elements of an existing building or facility to increase its capacity to resist earthquake induced seismic loads. The scope of seismic mitigation projects shall be permitted to include the disturbance and replacement of non-structural elements and systems as necessary to complete the seismic mitigation work.*

DIVISION 2: SCOPING REQUIREMENTS

11B-216 Signs

~~**11B-216.13 Cleaner Air Symbol.**~~

~~**11B-216.13.1 Use of Cleaner Air Symbol.** Use of the Cleaner Air Symbol is voluntary. Where publicly funded facilities or any facilities leased or rented by the State of California, not including concessionaires, comply with the conditions of use identified in Section 11B-216.13.3, a Cleaner Air Symbol complying with Section 11B-703.7.2.5 is permitted to be posted in compliance with Section 11B-216.3 to indicate rooms, facilities, and path of travels that are accessible to and usable by people who are adversely impacted by airborne chemicals or particulates and/or the use of electrical fixtures and/or devices.~~

~~**11B-216.13.2 Removal of Cleaner Air Symbol.** If the path of travel, room and/or facility identified by the Cleaner Air Symbol should temporarily or permanently cease to meet the minimum conditions of use identified in Section 11B-216.13.3, the Cleaner Air Symbol shall be removed and shall not be replaced until the minimum conditions are again met.~~

~~**11B-216.13.3 Conditions of use.** The Cleaner Air Symbol shall be permitted for use to identify a path of travel, and a room or a facility when the following is met:~~

~~1. Floor or wall coverings, floor or wall covering adhesives, carpets, formaldehyde-emitting particleboard cabinetry, cupboards or doors have not been installed or replaced in the previous 12 months.~~

~~2. Incandescent lighting provided in lieu of fluorescent or halogen lighting, and electrical systems and equipment shall be operable by or on behalf of the occupant or user of the room, facility or path of travel.~~

~~3. Heating, ventilation, air conditioning and their controls shall be operable by or on behalf of the occupant or user.~~

~~4. To maintain "cleaner air" designation only nonirritating, nontoxic products will be used in cleaning, maintenance, disinfection, pest management or for any minimal touch-ups that are essential for occupancy of the area. Deodorizers or Fragrance Emission Devices and Systems (FEDS) shall not be used in the designated area. Pest control practices for cleaner air areas shall include the use of bait stations using boric acid, sticky traps and silicon caulk for sealing cracks and crevices. Areas shall be routinely monitored for pest problems. Additional nontoxic treatment methods, such as temperature extremes for termites, may be employed in the event of more urgent problems. These pest control practices shall not be used 48 hours prior to placement of the sign, and the facility shall be ventilated with outside air for a minimum of 24 hours following use or application.~~

~~5. Signage shall be posted requesting occupants or users not to smoke or wear perfumes, colognes or scented personal care products. Fragranced products shall not be used in the designated cleaner air room, facility or path of travel.~~

~~6. A log shall be maintained on site, accessible to the public either in person or by telephone, e-mail, fax or other accessible means as requested. One or more individuals shall be designated to maintain the log. The log shall record any product or practice used in the cleaner air designated room, facility or path of travel, as well as scheduled activities, that may impact the cleaner air designation. The log shall also include the product label as well as the Material Safety Data Sheets (MSDS).~~

DIVISION 2: SCOPING REQUIREMENTS

11B*-220 Automatic teller machines, fare machines *and point-of-sale devices

11B*-220.1 *Automatic teller machines and fare machines. Where automatic teller machines or self-service fare vending, collection, or adjustment machines are provided *they shall comply with Section 11B-220.1*. Where bins are provided for envelopes, waste paper, or other purposes, at least one of each type shall comply with *Section 11B*-811.

11B-220.1.1 One automatic teller machine or fare machine. *Where one automatic teller machine or fare machine is provided at a location, it shall comply with Sections 11B-707.2 through 11B-707.8.*

11B-220.1.2 Two automatic teller machines or fare machines. *Where two automatic teller machines or fare machines are provided at a location, one shall comply with Sections 11B-707.2 through 11B-707.8 and one shall comply with Sections ~~11B-309, 11B-707.2~~, 11B-707.3, 11B-707.4, 11B-707.5, 11B-707.6, 11B-707.7.2 and 11B-707.8.*

11B-220.1.3 Three or more automatic teller machines or fare machines. *Where three or more automatic teller machines or fare machines are provided at a location, at least 50 percent shall comply with Sections 11B-707.2 through 11B-707.8 and the rest shall comply with Sections ~~11B-309, 11B-707.2,~~ 11B-707.3, 11B-707.4, 11B-707.5, 11B-707.6, 11B-707.7.2 and 11B-707.8.*

ITEM 11B.15.01 – RELATED CODE AMENDMENT
DIVISION 7: COMMUNICATION ELEMENTS AND FEATURES

11B*-707 Automatic teller machines, fare machines *and point-of-sale devices

***11B*-707.1 General.** Automatic teller machines, fare machines *and point-of-sale devices* shall comply with *Section 11B*-707.

***11B*-707.2 Clear floor or ground space.** A clear floor or ground space complying with *Section 11B*-305 shall be provided.

Exception: Clear floor or ground space shall not be required at drive-up only automatic teller machines and fare machines.

***11B*-707.3 Operable parts.** Operable parts shall comply with *Section 11B*-309. Unless a clear or correct key is provided, each operable part shall be able to be differentiated by sound or touch, without activation.

~~**Exception:**~~ ***Exceptions:***

1. Drive-up only automatic teller machines and fare machines shall not be required to comply with *Sections 11B*-309.2 and *11B*-309.3.

2. *Where automatic teller machines and fare machines do not require compliance with Section 11B-707.2, compliance with Sections 11B-309.2 and 11B-309.3 shall not be required.*

ITEM 11B.16

DIVISION 2: SCOPING REQUIREMENTS

11B*-220 Automatic teller machines, fare machines *and point-of-sale devices

11B-220.2 Point-of-sale devices. *Where point-of-sale devices are provided, all devices at each location shall comply with Sections ~~11B-309.4,~~ 11B-707.3, ~~and~~ 11B-707.7.2, and 11B-707.9. ~~In addition, point-of-sale systems that include a video touch screen or any other non-tactile keypad shall comply with either Section 11B-707.9.1.1 or 11B-707.9.1.2.~~ Where point-of-sale devices are provided at check stands and sales and service counters required to comply with Sections 11B-227.2 and 11B-227.3, they shall comply with ~~Section~~ Sections 11B-707.2, 11B-707.3, 11B-707.7.2, and 11B-707.9. ~~11B-707.9.1, and shall also comply with Sections 11B-707.2, 11B-707.3 and 11B-707.4.~~*

~~***Exception:***~~ ***Exceptions:***

1. *Where a single point-of-sale device is installed for use with any type of motor fuel, it shall comply with Sections ~~11B-220.2 and 11B-309~~ 11B-707.2, 11B-707.3, 11B-707.7.2, and 11B-707.9. Where more than one point-of-sale device is installed for use with a specific type of motor fuel, a minimum of two for that type shall comply with Sections ~~11B-220.2 and 11B-309~~ 11B-707.2, 11B-707.3, 11B-707.7.2, and 11B-707.9. Types of motor fuel include, but are not limited to, gasoline, diesel, compressed natural gas, methanol, or ethanol ~~or electricity~~.*

2. *Point-of-sale devices at electric vehicle charging stations required to comply with Section 11B-812 shall comply with Section 11B-812.10.3.*

ITEM 11B.16.01 – RELATED CODE AMENDMENT
DIVISION 7: COMMUNICATION ELEMENTS AND FEATURES

11B*-707 Automatic teller machines, fare machines *and point-of-sale devices

***11B*-707.1 General.** Automatic teller machines, fare machines *and point-of-sale devices* shall comply with *Section 11B*-707.

***11B*-707.2 Clear floor or ground space.** A clear floor or ground space complying with *Section 11B*-305 shall be provided.

Exception: Clear floor or ground space shall not be required at drive-up only automatic teller machines and fare machines.

***11B*-707.3 Operable parts.** Operable parts shall comply with *Section 11B*-309. Unless a clear or correct key is provided, each operable part shall be able to be differentiated by sound or touch, without activation.

Exceptions:

1. Drive-up only automatic teller machines and fare machines shall not be required to comply with *Sections 11B*-309.2 and *11B*-309.3.

2. *Where automatic teller machines and fare machines do not require compliance with 11B-707.2, compliance with 11B-309.2 and 11B-309.3 shall not be required.*

3. *Where point-of-sale devices do not require compliance with Section 11B-707.2, compliance with Sections 11B-309.2 and 11B-309.3 shall not be required.*

ITEM 11B.16.02 – RELATED CODE AMENDMENT
DIVISION 7: COMMUNICATION ELEMENTS AND FEATURES

11B-707.9 Point-of-sale devices. *Point-of-sale devices shall comply with Section 11B-707.9.*

11B-707.9.1 General. ~~*Where point-of-sale devices are provided, all devices at each location shall comply with Sections 11B-309.4, 11B-707.3, and 11B-707.7.2. In addition, point-of-sale*~~ *Point-of-sale systems that include a video touch screen or any other non-tactile keypad shall be equipped with either of the following:*

11B-707.9.1.1 Tactilely discernible numerical keypad. *...*
11B-707.9.1.2 Other technology. *...*

~~***11B-707.9.2 Point-of-sale devices at check stands and sales or service counters.*** *Where point-of-sale devices are provided at check stands and sales or service counters, they shall comply with Section 11B-707.9.1, and shall also comply with Sections 11B-707.2, 11B-707.3 and 11B-707.4.*~~

ITEM 11B.17

DIVISION 2: SCOPING REQUIREMENTS

***11B*-221 Assembly areas**

***11B*-221.2 Wheelchair spaces.** Wheelchair spaces complying with *Section 11B*-221.2 shall be provided in assembly areas with fixed seating.

NOTE: When required wheelchair spaces are not occupied by persons eligible for those spaces, individual, removable seats may be placed in those spaces.

11B-221.2.4 Temporary structures. *Wheelchair spaces shall not be located on, or be obstructed by, temporary platforms or other movable structures.*

Exception: *When an entire seating section is placed on temporary platforms or other movable structures in an area where fixed seating is not provided, in order to increase seating for an event, wheelchair spaces may be placed in that section.*

~~*NOTE: When required wheelchair spaces are not occupied by persons eligible for those spaces, individual, removable seats may be placed in those spaces.*~~

ITEM 11B.18

DIVISION 2: SCOPING REQUIREMENTS

11B-224* Transient lodging guest rooms, *housing at a place of education and social service center establishments

11B-224.7 Housing at a place of education. *Housing at a place of education subject to this section shall comply with Sections 11B-224.1 through 11B-224.6 and 11B-806 for transient lodging guest rooms. For the purposes of the application of this section, the term "sleeping room" is interchangeable with "guest room" as used in the transient lodging standards.*

~~***Exceptions:***~~ ***Exception:***

1. ~~*Kitchens within housing units containing accessible sleeping rooms with mobility features (including suites and clustered sleeping rooms) or on floors containing accessible sleeping rooms with mobility features shall provide turning spaces that comply with Section 11B-809.2.2 and kitchen work surfaces that comply with Section 11B-804.3.*~~

2. ~~*Multi-bedroom housing units containing accessible sleeping rooms with mobility features shall have an accessible route throughout the unit in compliance with Section 11B-809.2.*~~

3. *Housing facilities that are provided by or on behalf of a place of education, with residential dwelling units leased on a year round basis exclusively to graduate students or faculty, and that do not contain any public use or common use areas available for educational programming, are not subject to Section 11B-224 and shall comply with Section 11B-233.*

11B-224.7.1 Multi-bedroom housing units with mobility features. *Multi-bedroom housing units containing accessible sleeping rooms with mobility features shall have an accessible route throughout the unit in compliance with Section 11B-809.2. Kitchens, when provided, within housing units containing accessible sleeping rooms with mobility features shall comply with Section 11B-804.*

11B-224.7.2 Multi-bedroom housing units with adaptable features. *Multi-bedroom housing units with adaptable features shall be provided as required by Section 11B-233.3.1.2. The number of required multi-bedroom housing units with adaptable features shall be reduced by the number of multi-bedroom housing units with mobility features required by Section 11B-224.2.*

ITEM 11B.19

WITHDRAWN

ITEM 11B.41

DIVISION 5: GENERAL SITE AND BUILDING ELEMENTS

***11B*-503 Passenger drop-off and loading zones**

~~***11B-503.6 Identification.*** *Each passenger loading zone designated for persons with disabilities shall be identified with a reflectorized sign complying with Section 11B-703.5. It shall be permanently posted immediately adjacent to and visible from the passenger loading zone stating "Passenger Loading Zone Only" and including the International Symbol of Accessibility complying with Section 11B-703.7.2.1 in white on a dark blue background.*~~

ITEM 11B.42

DIVISION 5: GENERAL SITE AND BUILDING ELEMENTS

***11B*-505 Handrails**

***11B*-505.2 Where required.** Handrails shall be provided on both sides of stairs and ramps.

Exceptions:

1. In assembly areas, handrails shall not be required on both sides of aisle ramps where a handrail is provided at either side or within the aisle width.
2. *Curb ramps do not require handrails.*

3. *At door landings, handrails are not required when the ramp run is less than 6 inches (152 mm) in rise or 72 inches (1829 mm) in length.*

11B-505.2.1 Orientation. *The orientation of at least one handrail shall be in the direction of the stair run, perpendicular to the direction of the stair nosing, and shall not reduce the minimum required width of the stair.*

ITEM 11B.43

DIVISION 6: PLUMBING ELEMENTS AND FACILITIES

***11B*-603 Toilet and bathing rooms**
***11B*-603.2 Clearances. ...**

***11B*-603.2.3 Door swing.** Doors shall not swing into the clear floor space or clearance required for any fixture. *Doors to accessible water closet compartments shall be permitted to encroach into the turning space without limitation. Other than ~~the door~~ doors to ~~the~~ accessible water closet ~~compartment~~ compartments, a door, in any position, ~~may~~ shall be permitted to encroach into the turning space by 12 inches (305 mm) maximum.*

Exceptions:

1. ***Reserved.***
2. Where the toilet room or bathing room is for individual use and a clear floor space complying with *Section 11B*-305.3 is provided within the room beyond the arc of the door swing, doors shall be permitted to swing into the clear floor space or clearance required for any fixture.

ITEM 11B.44

***11B*-603 Toilet and bathing rooms**
***11B*-603.2 Clearances. ...**

***11B*-603.2.3 Door swing.** Doors shall not swing into the clear floor space or clearance required for any fixture. *Other than the door to the accessible water closet compartment, a door, in any position, may encroach into the turning space by 12 inches (305 mm) maximum.*

Exceptions:

1. ***Reserved.***
2. Where the toilet room or bathing room is for individual use and a clear floor space complying with *Section 11B*-305.3 is provided within the room beyond the arc of the door swing, doors shall be permitted to swing into the clear floor space or clearance required for any fixture.

3. *In residential dwelling units complying with Section 11B-233.3.1.1, doors shall be permitted to swing over the turning space without limitation.*

ITEM 11B.45

DIVISION 6: PLUMBING ELEMENTS AND FACILITIES

***11B*-604 Water closets and toilet compartments**

***11B*-604.9 Water closets and toilet compartments for children's use.** Water closets and toilet compartments for children's use shall comply with *Section 11B*-604.9. *When the exception in Section 11B-604.1 is used, the suggested dimensions of Table 11B-604.9 for a single age group shall be applied consistently to the installation of a water closet and all associated components.*

Table 11B-604.9 Suggested Dimensions for Children's Use

Suggested Dimensions for Water Closets Serving Children Ages 3 through 12			
	Ages 3 and 4	**Ages 5 through 8**	**Ages 9 through 12**
Water Closet Centerline	12 inches (305 mm)	12 to 15 inches (305 to *381* mm)	15 to 18 inches (*381* to *457* mm)
Toilet Seat Height	11 to 12 inches (*279* to 305 mm)	12 to 15 inches (305 to *381* mm)	15 to 17 inches (*381* to *432* mm)
Grab Bar Height	18 to 20 inches (*457* to *508* mm)	20 to 25 inches (*508* to 635 mm)	25 to 27 inches (635 to *686* mm)
Dispenser Height	14 inches (*356* mm)	14 to 17 inches (*356* to *432* mm)	17 to 19 inches (*432* to *483* mm)

ITEM 11B.46

DIVISION 6: PLUMBING ELEMENTS AND FACILITIES

***11B*-608 Shower compartment**

***11B*-608.6 Shower spray unit and water.** A shower spray unit with a hose 59 inches (*1499* mm) long minimum that can be used both as a fixed-position shower head and as a hand-held shower shall be provided. The shower spray unit shall have an on/off control with a non-positive shut-off. If an adjustable-height shower head on a vertical bar is used, the bar shall be installed so as not to obstruct the use of grab bars. Shower spray units shall deliver water that is 120°F (49°C) maximum.

Exception: *Where subject to excessive vandalism, two fixed shower heads shall be ~~installed~~ permitted instead of a hand-held spray unit in facilities that are not medical care facilities, long-term care facilities, transient lodging guest rooms, or residential dwelling units. Each shower head shall be installed so it can be operated independently of the other and shall have swivel angle adjustments, both vertically and horizontally. One shower head shall be located at a height of 48 inches (1219 mm) maximum above the shower finish floor.*

ITEM 11B.47

DIVISION 7: COMMUNICATION ELEMENTS AND FEATURES

***11B*-705 Detectable warnings and detectable directional texture**
11B-705.1 Detectable warnings.

***11B-705.1.1* General. ...**

***11B-705.1.1.1* Dome size.** Truncated domes in a detectable warning surface shall have a base diameter of 0.9 inch *(22.9 mm)* minimum and *0.92 inch (23.4 mm)* maximum, a top diameter of *0.45 inch (11.4 mm) minimum and 0.47 inch (11.9 mm) maximum*, and a height of ~~*0.18 inch (4.6 mm) minimum and 0.22 inch (5.6 mm) maximum*~~ *0.2 inch (5.1 mm)*.

DIVISION 7: COMMUNICATION ELEMENTS AND FEATURES

***11B*-707 Automatic teller machines, fare machines and point–of-sale devices**
***11B*-707.7 Display screen.** ...

***11B*-707.7.1 Visibility.** The display screen shall be visible from a point located 40 inches (*1016* mm) above the center of the clear floor space in front of the machine.

11B-707.7.1.1 Vertically mounted display screen. *Where display screens are mounted vertically or ~~no more than 30 degrees~~ tipped away from the viewer less than 30 degrees, the center line of the display screen and other display devices shall be no more than 52 inches (1321 mm) above the floor or ground surface.*

11B-707.7.1.2 Angle-mounted display screen. *Where display screens are mounted ~~between 30 degrees and 60 degrees~~ tipped away from the viewer 30 degrees to less than 60 degrees from vertical, the center line of the display screen and other display devices shall be no more than 44 inches (1118 mm) above the floor or ground surface.*

11B-707.7.1.3 Horizontally mounted display screen. *Where display screens are mounted ~~no less than 60 degrees and no more than 90 degrees (horizontal)~~ tipped away from the viewer 60 degrees to 90 degrees (horizontal) from vertical, the center line of the display screen and other display devices shall be no more than 34 inches (864 mm) above the floor or ground surface.*

ITEM 11B.50

WITHDRAWN

ITEM 11B.51

DIVISION 8: SPECIAL ROOMS, SPACES, AND ELEMENTS

11B-812 Electric vehicle charging stations

11B-812.1 General. *Electric vehicle charging stations (EVCS) shall comply with Section 11B-812 as required by Section 11B-228.3. Where vehicle spaces and access aisles are marked with lines, measurements shall be made from the centerline of the markings.*

Exception: *Where vehicle spaces or access aisles are not adjacent to another vehicle space, access aisle, or parking space, measurements shall be permitted to include the full width of the line defining the vehicle space or access aisle.*

11B-812.2 Operable parts. *Operable parts shall comply with Section 11B-309.*

11B-812.3 Floor or ground surfaces. *Vehicle spaces and access aisles serving them shall comply with Section 11B-302. Access aisles shall be at the same level as the vehicle space they serve. Changes in level, slopes exceeding 1:48, and detectable warnings shall not be permitted in vehicle spaces and access aisles.*

11B-812.4 Vertical clearance. *Vehicle spaces, access aisles serving them, and vehicular routes serving them shall provide a vertical clearance of 98 inches (2489 mm) minimum. Where provided, overhead cable management systems shall not obstruct required vertical clearance.*

11B-812.5 Accessible routes

11B-812.5.1 Accessible route to building or facility. *EVCS complying with Section 11B-812 that serve a particular building or facility shall be located on an accessible route to an entrance complying with Section 11B-206.4. Where EVCS do not serve a particular building or facility, EVCS complying with Section 11B-812 shall be located on an accessible route to an accessible pedestrian entrance of the EV charging facility.*

Exception: *EVCS complying with Section 11B-812 shall be permitted to be located in different EV charging facilities if substantially equivalent or greater accessibility is provided in terms of distance from an accessible entrance or entrances, charging fee, and user convenience.*

11B-812.5.2 Accessible route to EV charger. *An accessible route complying with Section 11B-402 shall be provided between the vehicle space and the EV charger which serves it.*

11B-812.5.3 Relationship to accessible routes. *Vehicle spaces and access aisles shall be designed so that when the vehicle space is occupied the required clear width of adjacent accessible routes is not obstructed. A curb, wheel stop, bollards, or other barrier shall be provided if required to prevent encroachment of vehicles over the required clear width of adjacent accessible routes.*

11B-812.5.4 Arrangement. *Vehicle spaces and access aisles shall be designed so that persons using them are not required to travel behind vehicle spaces or parking spaces other than the vehicle space in which their vehicle has been left to charge.*

Exceptions:

1. *Ambulatory EVCS shall not be required to comply with Section 11B-812.5.4.*
2. *Vehicle spaces installed in existing facilities shall comply with Section 11B-812.5.4 to the maximum extent feasible.*

11B-812.5.5 Obstructions. *EVCS shall be designed so accessible routes are not obstructed by cables or other elements.*

11B-812.6 Vehicle spaces. *Vehicle spaces serving van accessible, standard accessible, ambulatory and drive-up EVCS shall be 216 inches (5486 mm) long minimum and shall comply with Sections 11B-812.6.1 through 11B-812.6.4 as applicable. All vehicle spaces shall be marked to define their width.*

Exceptions:

1. *Where the long dimension of vehicle spaces is parallel to the traffic flow in the adjacent vehicular way, the length of vehicle spaces shall be 240 inches (6096 mm) minimum.*
2. *Vehicle spaces at drive-up EVCS shall be 240 inches (6096 mm) long minimum and shall not be required to be marked to define their width.*

11B-812.6.1 Van accessible. *Vehicle spaces serving van accessible EVCS shall be 144 inches (3658 mm) wide minimum and shall have an adjacent access aisle complying with Section 11B-812.7.*

11B-812.6.2 Standard accessible. *Vehicle spaces serving standard accessible EVCS shall be 108 inches (2743 mm) wide minimum and shall have an adjacent access aisle complying with Section 11B-812.7.*

11B-812.6.3 Ambulatory. *Vehicle spaces serving ambulatory EVCS shall be 120 inches (3048 mm) wide minimum and shall not be required to have an adjacent access aisle.*

11B-812.6.4 Drive-up. *Vehicle spaces serving drive-up EVCS shall be 204 inches (5182 mm) wide minimum and shall not be required to have an adjacent access aisle.*

11B-812.7 Access aisle. *Access aisles shall adjoin an accessible route. Two vehicle spaces shall be permitted to share a common access aisle. Access aisles shall be 60 inches (1524 mm) wide minimum and shall extend the full required length of the vehicle spaces they serve.*

11B-812.7.1 Location. *Access aisles at vehicle spaces shall not overlap the vehicular way and may be placed on either side of the vehicle space they serve except for van accessible spaces which shall have access aisles located on the passenger side of the vehicle spaces.*

11B-812.7.2 Marking. *Access aisles at vehicle spaces shall be marked with a painted borderline around their perimeter. The area within the borderlines shall be marked with hatched lines a maximum of 36 inches (914 mm) on center. The color of the borderlines, hatched lines, and letters shall contrast with that of the surface of the access aisle. The blue color required for identification of access aisles for accessible parking shall not be used. Access aisle markings may extend beyond the minimum required length.*

11B-812.7.3 Lettering. *The words "NO PARKING" shall be painted on the surface within each access aisle in letters a minimum of 12 inches (305 mm) in height and located to be visible from the adjacent vehicular way.*

11B-812.8 Identification signs. *EVCS identification signs shall be provided in compliance with Section 11B-812.8.*

11B-812.8.1 Four or fewer. *Where four or fewer total EVCS are provided, identification with an International Symbol of Accessibility (ISA) shall not be required.*

11B-812.8.2 Five to twenty-five. *Where five to twenty-five total EVCS are provided, one van accessible EVCS shall be identified by an ISA complying with Section 11B-703.7.2.1. The required standard accessible EVCS shall not be required to be identified with an ISA.*

11B-812.8.3 Twenty-six or more. *Where twenty-six or more total EVCS are provided, all required van accessible and all required standard accessible EVCS shall be identified by an ISA complying with Section 11B-703.7.2.1.*

11B-812.8.4 Ambulatory. *Ambulatory EVCS shall not be required to be identified by an ISA.*

11B-812.8.5 Drive-up. *Drive-up EVCS shall not be required to be identified by an ISA.*

11B-812.8.6 Finish and size. *Identification signs shall be reflectorized with a minimum area of 70 square inches (45,161 mm^2).*

11B-812.8.7 Location. *Required identification signs shall be visible from the EVCS it serves. Signs shall be permanently posted either immediately adjacent to the vehicle space or within the projected*

vehicle space width at the head end of the vehicle space. Signs identifying van accessible vehicle spaces shall contain the designation "van accessible." Signs shall be 60 inches (1525 mm) minimum above the finish floor or ground surface measured to the bottom of the sign. Signs located within an accessible route shall be 80 inches (2032 mm) minimum above the finish floor or ground surface measured to the bottom of the sign. Signs may also be permanently posted on a wall at the interior end of the vehicle space.

11B-812.9 Surface marking. *EVCS vehicle spaces shall provide surface marking stating "EV CHARGING ONLY" in letters 12 inches (305 mm) high minimum. The centerline of the text shall be a maximum of 6 inches (152 mm) from the centerline of the vehicle space and its lower corner at, or lower side aligned with, the end of the parking space length.*

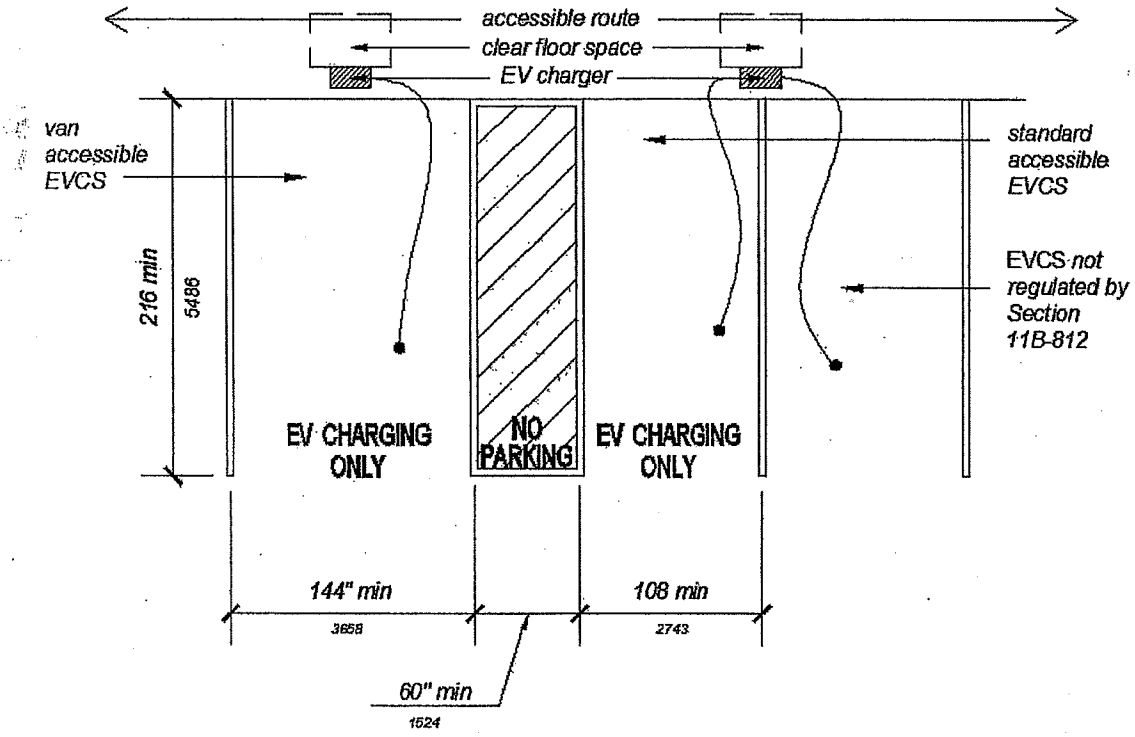

FIGURE 11B-812.9
SURFACE MARKING

11B-812.10 Electric vehicle chargers.

11B-812.10.1 General. *EV chargers shall comply with Section 11B-812.10.*

11B-812.10.2 Operable parts. *Operable parts and charging cord storage shall comply with Section 11B-309.*

11B-812.10.3 Point-of-sale devices. *Where provided, point-of-sale devices shall comply with Sections 11B-707.2, 11B-707.3, 11B-707.7.2, and 11B-707.9.*

11B-812.10.4 Location. *EV chargers shall be adjacent to, and within the projected width of the vehicle space being served.*

Exceptions:

1. *EV chargers serving more than one EVCS shall be adjacent to, and within the combined projected width of the vehicle spaces being served.*
2. *For alterations at existing facilities where an accessible route or general circulation path is not provided adjacent to the head end of the vehicle space or access aisle, the EV charger may be located within the projected width of the access aisle 36 inches (914 mm) maximum from the head end of the space.*
3. *Where the long dimension of a vehicle space is parallel to the vehicular way, the EV charger shall be adjacent to, and 48 inches (1219 mm) maximum from the head end or foot end of the vehicle space or access aisle being served.*

ITEM 11B.51.01 – RELATED CODE AMENDMENT

CHAPTER 2 – DEFINITIONS
SECTION 202 – Definitions

DRIVE-UP ELECTRIC VEHICLE CHARGING STATION. *An electric vehicle charging station in which use is limited to 30 minutes maximum and is provided at a location where the electric vehicle approaches in the forward direction, stops in the vehicle space, charges the vehicle, and proceeds forward to depart the vehicle space. The arrangement of a drive-up electric vehicle charger and its associated vehicle space is similar to a gasoline filling station island.*

ELECTRIC VEHICLE (EV). *An automotive-type vehicle for on-road use, such as passenger automobiles, buses, trucks vans, neighborhood electric vehicles, electric motorcycles, and the like, primarily powered by an electric motor that draws current from a rechargeable storage battery, fuel cell, photovoltaic array, or other source of electric current. Plug-in hybrid electric vehicles (PHEV) are considered electric vehicles. For the purpose of this code, off-road, self-propelled electric vehicles, such as industrial trucks, hoists, lifts, transports, golf carts, airline ground support equipment, tractors, boats, and the like, are not included.*

ELECTRIC VEHICLE (EV) CHARGER. *Off-board charging equipment used to charge an electric vehicle.*

ELECTRIC VEHICLE CHARGING SPACE (EV Space). *A space intended for charging electric vehicles.*

ELECTRIC VEHICLE CHARGING STATION (EVCS). *One or more electric vehicle charging spaces served by an electric vehicle charger or other charging equipment. Where a multiport electric vehicle charger can simultaneously charge more than one vehicle, the number of electric vehicle charging stations shall be considered equivalent to the number of electric vehicles that can be simultaneously charged.*

ELECTRIC VEHICLE (EV) CONNECTOR. *A device that, when electrically coupled (conductive or inductive) to an electric vehicle inlet, establishes an electrical connection to the electric vehicle for the purpose of power transfer and information exchange. This device is part of the electric vehicle coupler.*

***11B*-202 Existing buildings and facilities**

11B*-202.4 *Path of travel requirements in alterations, additions and structural repairs. *When alterations or additions are made to existing buildings or facilities, an accessible path of travel to the specific area of alteration or addition shall be provided. The primary accessible path of travel shall include:*

1. *A primary entrance to the building or facility,*
2. *Toilet and bathing facilities serving the area,*
3. *Drinking fountains serving the area,*
4. *Public telephones serving the area, and*
5. *Signs.*

Exceptions: *...*

11. Alterations solely for the purpose of installing electric vehicle charging stations (EVCS) at facilities where vehicle fueling, recharging, parking or storage is a primary function shall comply with Section 11B-202.4 to the maximum extent feasible without exceeding 20 percent of the cost of the work directly associated with the installation of EVCS.

Alterations solely for the purpose of installing EVCS at facilities where vehicle fueling, recharging, parking or storage is not a primary function shall not be required to comply with Section 11B-202.4.

CHAPTER 11B
DIVISION 2: SCOPING

11B*-228 Depositories, vending machines, change machines, mail boxes, ~~and~~ fuel dispensers, *and electric vehicle charging stations

***11B*-228.1 General.** Where provided, at least one of each type of depository, vending machine, change machine, and fuel dispenser shall comply with *Section 11B*-309. *Electric vehicle charging stations shall comply with Section 11B-228.3.*

Exception: Drive-up only depositories shall not be required to comply with *Section 11B*-309.

***11B*-228.2 Mail boxes.** Where mail boxes are provided...

11B-228.3 Electric vehicle charging stations

11B-228.3.1 General. *Where electric vehicle charging stations (EVCS) are provided, EVCS shall be provided in accordance with Section 11B-228.3.*

11B-228.3.1.1 Existing facilities. *Where new EVCS are added to a facility with existing EVCS, the requirements of Section 11B-812 shall apply only to the new EVCS installed. Alterations to existing EVCS shall comply with Section 11B-228.3.*

11B-228.3.1.2 Operable parts. *Where EV chargers are provided, operable parts on all EV chargers shall comply with Section 11B-309.4.*

11B-228.3.2 Minimum number. *EVCS complying with Section 11B-812 shall be provided in accordance with Section 11B-228.3.2. Where EVCS are provided in more than one facility on a site, the number of EVCS complying with Section 11B-228.3.2 provided on the site shall be calculated according to the number required for each facility. Where an EV charger can simultaneously charge more than one vehicle, the number of EV chargers provided shall be considered equivalent to the number of electric vehicles that can be simultaneously charged.*

Exceptions:

1. *EVCS not available to the general public and intended for use by a designated vehicle or driver shall not be required to comply with Section 11B-228.3.2. Examples include, but are not limited to, EVCS serving public or private fleet vehicles and EVCS assigned to an employee.*

2. *In public housing facilities, EVCS intended for use by an EV owner or operator at their residence shall not be required to comply with Section 11B-228.3.2.*

11B-228.3.2.1 Public use or common use EVCS. *Where EVCS are provided for public use or common use, EVCS complying with Section 11B-812 shall be provided in accordance with Table 11B-228.3.2.1. Where new EVCS are installed in facilities with existing EVCS, the "Total Number of EVCS at a Facility" in Table 11B-228.3.2.1 shall include both existing and new EVCS.*

Exception: *All drive-up EVCS shall comply with Section 11B-812.*

TABLE 11B-228.3.2.1

SECTION 3001
GENERAL

3001.1 Scope. This chapter governs the design, construction, installation, alteration and repair of elevators and conveying systems and their components.

~~***Exception: [DSA-AC]*** *For accessibility requirements for platform lifts and elevators, see California Code of Regulations, Title 8 and Title 24, Part 2, Sections 1124A, Sections 11B-206.6, 11B-206.7, 11B-407 and 11B-410.*~~

3001.3 Accessibility. Passenger elevators *and platform (wheelchair) lifts* required to be accessible or to serve as part of an accessible means of egress shall comply with ~~Sections 1009 and 1109.7 *by Chapter 11A or 11B shall conform to*~~ *Section 1009 and either Chapter 11A for applications listed in Section 108.2.1.2 regulated by the Department of Housing and Community Development or Chapter 11B for applications listed in Section 1.9.1 regulated by the Division of the State Architect–Access Compliance.*

CHAPTER 31
SPECIAL CONSTRUCTION

DSA-AC proposes to carry forward its adoption of specific model code provisions and California amendments in Chapter 31, from the 2013 CA Building Code into the 2016 CA Building Code, with further amendment as indicated.

ITEM 31B.01

SECTION 3101B
SCOPE

The provisions of this chapter shall apply to the construction, installation, renovation, alteration, addition, relocation, replacement or use of any public pool and to its ancillary facilities, mechanical equipment and related piping. Public pools include those located in or designated as the following: commercial building, hotel, motel, resort, recreational vehicle or mobile home park, campground, apartment house, condominium, townhouse, homeowner association, club, community building or area, public or private school, health club or establishment, water park, swim school, medical facility, bed and breakfast, licensed day-care facility, recreation and park district and municipal pools.

***Note:** Existing law limits application of building standards. Please see Health and Safety Code Sections 18938.5 and 116050.*

***[DSA-AC]** Refer to Chapter 11B for accessibility provisions applicable to public accommodations, commercial buildings and public housing.*

CHAPTER 33
SAFEGUARDS DURING CONSTRUCTION

DSA-AC proposes to carry forward its adoption of specific model code provisions and California amendments in Chapter 33, from the 2013 CA Building Code into the 2016 CA Building Code, with further amendment as indicated.

SECTION 3306
PROTECTION OF PEDESTRIANS

3306.2 Walkways. A walkway shall be provided for pedestrian travel in front of every construction and demolition site unless the applicable governing authority authorizes the sidewalk to be fenced or closed. Walkways shall be of sufficient width to accommodate the pedestrian traffic, but in no case shall they be less than 4 feet (1219 mm) in width. Walkways shall be provided with a durable walking surface. Walkways shall be accessible in accordance with ~~Chapter 11~~ *Chapter 11A or 11B as applicable,* and shall be designed to support all imposed loads and in no case shall the design live load be less than 150 pounds per square foot (psf) (7.2 kN/m2).

CHAPTER 35
REFERENCED STANDARDS

DSA-AC proposes to carry forward its adoption of specific model code provisions and existing California amendments in Chapter 35, from the 2013 CA Building Code into the 2016 CA Building Code, with further amendment as indicated.

FINAL EXPRESS TERMS
FOR
PROPOSED BUILDING STANDARDS
OF THE
DIVISION OF THE STATE ARCHITECT - STRUCTURAL SAFETY (DSA-SS AND DSA-SS/CC)

REGARDING PROPOSED CHANGES TO
CALIFORNIA BUILDING CODE
CALIFORNIA CODE OF REGULATIONS, TITLE 24, PART 2

The Division of the State Architect (DSA) proposes to adopt the 2015 edition of the International Building Code (IBC 2015) of International Code Council for codification and effectiveness in the 2016 edition of the California Building Code as presented on the following pages, including any necessary amendments. DSA further proposes to:

- Adopt new building standards that are not addressed by the 2015 model code proposed for adoption.
- Adopt new necessary amendments to the 2015 model code proposed for adoption.
- Relocate existing adopted and necessary amendments of the current model code into the format of the 2015 model code proposed for adoption. These amendments with editorial changes only are outside the rulemaking and are not subject to public comments. All amendments shown highlighted are existing and are not part of the rulemaking.

LEGEND FOR FINAL EXPRESS TERMS (combination of 45-day and 15-day changes)

1. For 45-day and 15-Day changes, existing California amendments or code language being modified appears in *italics*, with modified language underlined.
2. For 45-day and 15-Day changes, repealed text appears in ~~strikeout~~.

Note:
Following each chapter of the proposed regulations is a notation that cites specific statute(s) that authorizes the adoption of these regulations and statute that allows for regulations to clarify the subject matter being implemented, interpreted or made specific by the authority statute(s).

DIVISION I

CALIFORNIA ADMINISTRATION

SECTION 1.1

GENERAL

1.1.1 Title.
These regulations shall be known as the California Building Code, may be cited as such and will be referred to herein as "this code." The California Building Code is Part 2 of twelve parts of the official compilation and publication of the adoption, amendment and repeal of building regulations to the California Code of Regulations, Title 24, also referred to as the California Building Standards Code. This part incorporates by adoption the 2012 International Building Code of the International Code Council with necessary California amendments.

1.1.2 Purpose.
The purpose of this code is to establish the minimum requirements to safeguard the public health, safety and general welfare through structural strength, means of egress facilities, stability, access to persons with disabilities, sanitation, adequate lighting and ventilation and energy conservation; safety to life and property from fire and other hazards attributed to the built environment; and to provide safety to fire fighters and emergency responders during emergency operations.

1.1.3 Scope.
The provisions of this code shall apply to the construction, alteration, movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every building or structure or any appurtenances connected or attached to such buildings or structures throughout the State of California.

1.1.3.1 Nonstate-regulated buildings, structures and applications.
Except as modified by local ordinance pursuant to Section 1.1.8, the following standards in the California Code of Regulations, Title 24, Parts 2, 2.5, 3, 4, 5, 6, 9, 10 and 11 shall apply to all occupancies and applications not regulated by a state agency.

1.1.3.2 State-regulated buildings, structures and applications.
The model code, state amendments to the model code, and/or state amendments where there are no relevant model code provisions shall apply to the following buildings, structures, and applications regulated by state agencies as specified in Sections 1.2 through 1.14, except where modified by local ordinance pursuant to Section 1.1.8. When adopted by a state agency, the provisions of this code shall be enforced by the appropriate enforcing agency, but only to the extent of authority granted to such agency by the state legislature.

Note: *See Preface to distinguish the model code provisions from the California provisions.*

1. *State-owned buildings, including buildings constructed by the Trustees of the California State University, and to the extent permitted by California laws, buildings designed and constructed by the Regents of the University of California, and regulated by the Building Standards Commission. See Section 1.2 for additional scope provisions.*

2. *Local detention facilities regulated by the Corrections Standards Authority. See Section 1.3 for additional scope provisions.*

3. *Barbering, cosmetology or electrolysis establishments, acupuncture offices, pharmacies, veterinary facilities and structural pest control locations regulated by the Department of Consumer Affairs. See Section 1.4 for additional scope provisions.*

4. *Energy efficiency standards regulated by the California Energy Commission. See Section 1.5 for additional scope provisions.*

5. *Dairies and places of meat inspection regulated by the Department of Food and Agriculture. See Section 1.6 for additional scope provisions.*

6. *Organized camps, laboratory animal quarters, public swimming pools, radiation protection, commissaries serving mobile food preparation vehicles and wild animal quarantine facilities regulated by the Department of Public Health. See Section 1.7 for additional scope provisions.*

7. *Hotels, motels, lodging houses, apartment houses, dwellings, dormitories, condominiums, shelters for homeless persons, congregate residences, employee housing, factory-built housing and other types of dwellings containing sleeping accommodations with or without common toilets or cooking facilities. See Section 1.8.2.1.1 for additional scope provisions.*

8. *Accommodations for persons with disabilities in buildings containing newly constructed covered multifamily dwellings, new common use spaces serving existing covered multifamily dwellings, additions to existing buildings where the addition alone meets the definition of "COVERED MULTIFAMILY DWELLING," and common- use spaces serving covered multifamily dwellings, which are regulated by the Department of Housing and Community Development. See Section 1.8.2.1.2 for additional scope provisions.*

9. *Permanent buildings and permanent accessory buildings or structures constructed within mobile-home parks and special occupancy parks regulated by the Department of Housing and Community Development. See Section 1.8.2.1.3 for additional scope provisions.*

10. *Accommodations for persons with disabilities regulated by the Division of the State Architect. See Section 1.9.1 for additional scope provisions.*

11. *Public elementary and secondary schools, community college buildings and state-owned or state-leased essential service buildings regulated by the Division of the State Architect. See Section 1.9.2 for additional scope provisions.*

12. *Qualified historical buildings and structures and their associated sites regulated by the State Historical Building Safety Board with the Division of the State Architect. See Section 1.9.3 for additional scope provisions.*

13. *General acute care hospitals, acute psychiatric hospitals, skilled nursing and/or intermediate care facilities, clinics licensed by the Department of Public Health and correctional treatment centers regulated by the Office of Statewide Health Planning and Development. See Section 1.10 for additional scope provisions.*

14. *Applications regulated by the Office of the State Fire Marshal include, but are not limited to, the following in accordance with Section 1.11:*

    14.1. Buildings or structures used or intended for use as an:

        1. *Asylum, jail, prison*

        2. *Mental hospital, hospital, home for the elderly, children's nursery, children's home or institution, school or any similar occupancy of any capacity*

        3. *Theater, dancehall, skating rink, auditorium, assembly hall, meeting hall, nightclub, fair building or similar place of assemblage where 50 or more persons may gather together in a building, room or structure for the purpose of*

amusement, entertainment, instruction, deliberation, worship, drinking or dining, awaiting transportation, or education

4. *Small family day-care homes, large family day-care homes, residential facilities and residential facilities for the elderly, residential care facilities*

5. *State institutions or other state-owned or state- occupied buildings*

6. *High rise structures*

7. *Motion picture production studios*

8. *Organized camps*

9. *Residential structures*

14.2. Tents, awnings or other fabric enclosures used in connection with any occupancy

14.3. Fire alarm devices, equipment and systems in connection with any occupancy

14.4. Hazardous materials, flammable and combustible liquids

14.5. Public school automatic fire detection, alarm and sprinkler systems

14.6. Wildland-urban interface fire areas

15. *Public libraries constructed and renovated using funds from the California Library Construction and Renovation Bond Act of 1988 and regulated by the State Librarian. See Section 1.12 for additional scope provisions.*

16. *Graywater systems regulated by the Department of Water Resources. See Section 1.13 for additional scope provisions.*

17. *For applications listed in Section 1.9.1 regulated by the Division of the State Architect—Access Compliance, outdoor environments and uses shall be classified according to accessibility uses described in Chapters 11B.*

18. *Marine Oil Terminals regulated by the California State Lands Commission. See Section 1.14 for additional scope provisions.*

1.1.4 Appendices.
Provisions contained in the appendices of this code shall not apply unless specifically adopted by a state agency or adopted by a local enforcing agency in compliance with Health and Safety Code Section 18901 et. seq. for Building Standards Law, Health and Safety Code Section 17950 for State Housing Law and Health and Safety Code Section 13869.7 for Fire Protection Districts. See Section 1.1.8 of this code.

1.1.5 Referenced codes.
The codes, standards and publications adopted and set forth in this code, including other codes, standards and publications referred to therein are, by title and date of publication, hereby adopted as standard reference documents of this code. When this code does not specifically cover any subject related to building design and construction, recognized architectural or engineering practices shall be employed. The National Fire Codes, standards, and the Fire Protection Handbook of the National Fire Protection Association are permitted to be used as authoritative guides in determining recognized fire

prevention engineering practices.

1.1.6 Nonbuilding standards, orders and regulations.
Requirements contained in the California Building Code, or in any other referenced standard, code or document, which are not building standards as defined in Health and Safety Code Section 18909, shall not be construed as part of the provisions of this code. For nonbuilding standards, orders and regulations, see other titles of the California Code of Regulations.

1.1.7 Order of precedence and use.

1.1.7.1 Differences.
In the event of any differences between these building standards and the standard reference documents, the text of these building standards shall govern.

1.1.7.2 Specific provisions.
Where a specific provision varies from a general provision, the specific provision shall apply.

1.1.7.3 Conflicts.
When the requirements of this code conflict with the requirements of any other part of the California Building Standards Code, Title 24, the most restrictive requirements shall prevail.

1.1.8 City, county, or city and county amendments, additions or deletions.
The provisions of this code do not limit the authority of city, county, or city and county governments to establish more restrictive and reasonably necessary differences to the provisions contained in this code pursuant to complying with Section 1.1.8.1. The effective date of amendments, additions or deletions to this code by a city, county, or city and county filed pursuant to Section 1.1.8.1 shall be the date filed. However, in no case shall the amendments additions or deletions to this code be effective any sooner than the effective date of this code.

Local modifications shall comply with Health and Safety Code Section 18941.5 for Building Standards Law, Health and Safety Code Section 17958 for State Housing Law or Health and Safety Code Section 13869.7 for Fire Protection Districts.

1.1.8.1 Findings and filings.

1. *The city, county, or city and county shall make express findings for each amendment, addition or deletion based upon climatic, topographical or geological conditions.*

   Exception: *Hazardous building ordinances and programs mitigating unreinforced masonry buildings.*

2. *The city, county, or city and county shall file the amendments, additions or deletions expressly marked and identified as to the applicable findings. Cities, counties, cities and counties, and fire departments shall file the amendments, additions or deletions, and the findings with the California Building Standards Commission at 2525 Natomas Park Drive, Suite 130, Sacramento, CA 95833.*

3. *Findings prepared by fire protection districts shall be ratified by the local city, county or city and county and filed with the California Department of Housing and Community Development, Division of Codes and Standards, P.O. Box 1407, Sacramento, CA 95812-1407 or 1800 3rd Street, Room 260, Sacramento, CA 95811.*

1.1.9 Effective date of this code.
Only those standards approved by the California Building Standards Commission that are effective at the time an application for building permit is submitted shall apply to the plans and specifications for, and to the construction performed under, that permit. For the effective dates of the provisions contained in this code, see the History Note page of this code.

1.1.10 Availability of codes.
At least one complete copy each of Titles 8, 19, 20, 24 and 25 with all revisions shall be maintained in the office of the building official responsible for the administration and enforcement of this code. Each state department concerned and each city, county, or city and county shall have an up-to-date copy of the code available for public inspection. See Health and Safety Code Section 18942(d)(1) and (2).

1.1.11 Format.
This part fundamentally adopts the International Building Code by reference on a chapter-by-chapter basis. When a specific chapter of the International Building Code is not printed in the code and is marked "Reserved", such chapter of the International Building Code is not adopted as a portion of this code. When a specific chapter of the International Building Code is marked "Not adopted by the State of California" but appears in the code, it may be available for adoption by local ordinance.

> ***Note:*** *Matrix Adoption Tables at the front of each chapter may aid the code user in determining which chapter or sections within a chapter are applicable to buildings under the authority of a specific state agency, but they are not to be considered regulatory.*

1.1.12 Validity.
If any chapter, section, subsection, sentence, clause or phrase of this code is for any reason held to be unconstitutional, contrary to statute, exceeding the authority of the state as stipulated by statutes or otherwise inoperative, such decision shall not affect the validity of the remaining portion of this code.

...

1.9.2 Division of the State Architect—Structural Safety.

1.9.2.1 DSA-SS Division of the State Architect-Structural Safety.

Application*—Public elementary and secondary schools, community colleges and state-owned or state-leased essential services buildings.*

Enforcing agency*—The Division of the State Architect- Structural Safety (DSA-SS) has been delegated the responsibility and authority by the Department of General Services to review and approve the design and observe the construction of public elementary and secondary schools, community colleges and state-owned or state-leased essential services buildings.*

Authority cited*—Education Code Sections 17310 and 81142 and Health and Safety Code Section 16022.*

Reference*—Education Code Sections 17280 through 17317, and 81130 through 81147 and Health and Safety Code Sections 16000 through 16023.*

1.9.2.1.1 Applicable administrative standards.

1. ***Title 24, Part 1, California Code of Regulations:***

   1.1. Sections 4-301 through 4-355, Group 1, Chapter 4, for public elementary and secondary schools and community colleges.

   1.2. Sections 4-201 through 4-249, Chapter 4, for state-owned or state-leased essential services buildings.

2. ***Title 24, Part 2, California Code of Regulations:*** *[applies to public elementary and secondary schools, community colleges and state-owned or state-leased essential services building(s)]:*

   2.1. Sections 1.1 and 1.9.2.1 of Chapter 1, Division I.

   2.2. Sections 102.1, 102.2, 102.3, 102.4, 102.5, 104.9, 104.10, 104.11 and 106.1 of Chapter 1, Division II.

1.9.2.1.2 Applicable building standards.
California Building Standards Code, Title 24, Parts 2, 3, 4, 5, 6, 9, 10, 11 and 12, California Code of Regulations, for school buildings, community colleges and state-owned or state-leased essential service buildings.

The provisions of Title 24, Part 2, as adopted and amended by the Division of the State Architect—Structural Safety, shall apply to the applications listed in Section 1.9.2.1.

The Division of the State Architect—Structural Safety adopts the following building standards in Title 24, Part 2:

Chapters 2 through 10, 12, 14, 15, 16A, 17A, 18A, 19A, 20, 21A, 22A, 23, 24, 25, 26, 30, 31, 32, 33, ~~34,~~ and 35~~, and Appendix J~~.

1.9.2.1.3 Amendments.
Division of the State Architect—Structural Safety amendments in this code appear preceded with the acronym ***[DSA-SS].***

Exceptions:

1. *Chapters 16A, 17A, 18A, 19A, 21A, and 22A—Amendments appearing in these chapters without an acronym have been co-adopted by DSA-SS and OSHPD.*

~~*2. Chapter 34, Sections 3417-3423—DSA-SS adopts these sections without the use of the DSA-SS acronym.*~~

1.9.2.1.4 Reference to other chapters.
Where reference is made within this code to sections in Chapters 16, 17, 18, 19, 21, and 22, the respective sections in Chapters 16A, 17A, 18A, 19A, 21A, and 22A shall apply instead.

1.9.2.2 DSA-SS/CC Division of the State Architect-Structural Safety/Community Colleges

Application*—Community Colleges. The Division of the State Architect has been delegated the authority by the Department of General Services to promulgate alternate building standards for application to community colleges, which a community college may elect to use in lieu of standards promulgated by DSA-SS in accordance with Section 1.9.2.1.*

Enforcing agency—*Division of the State Architect-Structural Safety/Community Colleges (DSA-SS/CC)*

The Division of the State Architect has been delegated the authority by the Department of General Services to review and approve the design and oversee construction of community colleges electing to use the alternative building standards as provided in this section.

Authority cited—*Education Code Section 81053.*

Reference—*Education Code Sections 81052, 81053, and 81130 through 81147.*

1.9.2.2.1 Applicable administrative standards.

1. ***Title 24, Part 1, California Code of Regulations:***

   1.1. *Sections 4-301 through 4-355, Group 1, Chapter 4.*

2. ***Title 24, Part 2, California Code of Regulations:***

   2.1. *Sections 1.1 and 1.9.2 of Chapter 1, Division I.*

   2.2. *Sections 102.1, 102.2, 102.3, 102.4, 102.5, 104.9, 104.10, 104.11, and 106.1 of Chapter 1, Division II.*

1.9.2.2.2 Applicable building standards.
California Building Standards Code, Title 24, Parts 2, 3, 4, 5, 6, 9, 10, 11, and 12, California Code of Regulations.

The Division of the State Architect-Structural Safety/Community Colleges [DSA-SS/CC] adopts the following building standards in Title 24, Part 2:

Chapters 2 through 10, 12, 14, 15, 16, 17A, 18A, 19, 20, 21, 22, 23, 24, 25, 26, 30, 31, 32, 33, ~~34,~~ and 35~~, and Appendix J.~~

1.9.2.2.3 Amendments.
Division of the State Architect—Structural Safety/Community Colleges amendments in this code appear preceded with the acronym ***[DSA-SS/CC].***

Exceptions:

1. *Chapters 17A, and 18A—Amendments appearing in these chapters without an acronym have been co-adopted by DSA-SS, DSASS/CC, and OSHPD.*

2. ~~*Chapter 34, Sections 3417-3423—DSA-SS/CC adopts these sections without the use of the DSA-SS/CC acronym.*~~

1.9.2.2.4 Reference to other chapters.
Where reference is made within this code to sections in Chapters 17 and 18, the respective sections in Chapters 17A and 18A shall apply instead.

...

DIVISION II
SCOPE AND ADMINISTRATION

...

SECTION 102
APPLICABILITY

...

[A] 102.4 Referenced codes and standards. The codes and standards referenced in this code shall be considered part of the requirements of this code to the prescribed extent of each such reference and as further regulated in Sections 102.4.1 ~~and 102.4.2~~ *through 102.4.4.*

...

102.4.3 Code References. [DSA-SS & DSA-SS/CC] *All reference to International Codes or other similar codes in referenced standards shall be replaced by equivalent provisions in the California Building Standards Codes.*

102.4.4 Reference in Standards. [DSA-SS & DSA-SS/CC] *All references listed in reference standards shall be replaced by referenced standards listed in Chapter 35 of this code, where applicable, and shall include all amendments to the reference standards in this code.*

...

SECTION 104
DUTIES AND POWERS OF BUILDING OFFICIAL

...

[A] 104.11 Alternative materials, design and methods of construction and equipment. The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code, provided that any such alternative has been *approved*. An alternative material, design or method of construction shall be *approved* where the *building official* finds that the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, not less than the equivalent of that prescribed in this code in quality, strength, effectiveness, fire resistance, durability and safety. Where the alternative material, design or method of construction is not *approved*, the *building official* shall respond in writing, stating the reasons why the alternative was not *approved. [DSA-SS &*

DSA-SS/CC] Alternative system shall satisfy ASCE 7 Section 1.3, unless more restrictive requirements are established by this code for an equivalent system.

[DSA-SS & DSA-SS/CC] Alternative systems shall also satisfy the California Administrative Code, Section 4-304.

...

SECTION 106
FLOOR AND ROOF DESIGN LOADS

[A] 106.1 Live loads posted. In commercial, institutional or industrial buildings, for each floor or portion thereof designed for live loads exceeding 50 psf (2.40 kN/m2), such design live loads shall be conspicuously posted by the owner or owner's authorized agent in that part of each *story* in which they apply, using durable signs. It shall be unlawful to remove or deface such notices.

106.1.1 Snow Load Posting. [DSA-SS & DSA-SS/CC] *Snow loads used in design shall be posted as for live loads.*

...

(All existing amendments that are not revised above shall continue without any change)

...

SECTION 202

DEFINITIONS

...

ACTIVE EQUIPMENT/COMPONENT. [DSA-SS, DSA-SS/CC] *Equipment/Component containing moving or rotating parts, electrical parts such as switches or relays, or other internal components that are sensitive to earthquake forces and critical to the function of the equipment.*

...

[A] APPROVED AGENCY. An established and recognized agency that is regularly engaged in conducting tests or furnishing inspection services, where such agency has been *approved* by the *building official*.

[DSA-SS, DSA-SS/CC] *This term is synonymous with "laboratory of record" as referenced in Section 4-335 of the California Administrative Code.*

...

~~**Diaphragm, rigid.** [DSA-SS, DSA-SS/CC] A diaphragm is rigid for the purpose of distribution of story shear and torsional moment *where so indicated in Section 12.3.1 of ASCE 7.*~~

...

ENFORCEMENT AGENT. [DSA-SS, DSA-SS/CC] *That individual within the agency or organization charged with responsibility for agency or organization compliance with the requirements of this Code. Used interchangeably with Building Official and Code Official.*

...

NEXT GENERATION ATTENUATION (NGA). [DSA-SS, DSA-SS/CC] *Attenuation relations used for the 2008 United States Geological Survey (USGS) seismic hazards maps (for the Western United States) or their equivalent as determined by the enforcement agency.*

...

RETROFIT. [DSA-SS, DSA-SS/CC] *The construction of any new element or system, or the alteration of any existing element or system required to bring an existing building, or portion thereof, conforming to earlier code requirements, into conformance with standards of the currently effective California Building Standards Code.*

...

RUGGED EQUIPMENT. [DSA-SS, DSA-SS/CC] *Rugged equipment refers to an ampleness of construction that gives such equipment the ability to survive earthquake strong motions without significant loss of function.*

...

SIGNIFANT LOSS OF FUNCTION. [DSA-SS, DSA-SS/CC] *Significant loss of function for equipment or components means the equipment or component cannot be restored to its original function by competent technicians after a design earthquake because the equipment or component require parts that are not normally stocked by the owner or not readily available.*

...

TORQUE-CONTROLLED POST-INSTALLED ANCHOR. [DSA-SS, DSA-SS/CC] *A post-installed anchor that is set by the expansion of one or more sleeves or other elements against the sides of the drilled hole through the application of torque, which pulls the cone(s) into the expansion sleeve(s); after setting, tensile loading can cause additional expansion (follow-up expansion).*

~~*All existing amendments that are not revised above shall continue without any change.*~~

EXTERIOR WALLS

Adopt and/or codify chapter as amended below:

PROPOSED ADOPTION	DSA-SS	DSA-SS/CC	Comments
Adopt entire chapter without amendments			
Adopt entire chapter with amendments listed below	X	X	
Adopt only those sections listed below			
1405.1.1	X	X	
~~*1410*~~ *1411*	X	X	

(All existing California amendments that are not revised below shall continue without change)

...

SECTION 1405
INSTALLATION OF WALL COVERINGS

...

1405.1.1 Additional requirements. ***[DSA-SS & DSA-SS/CC]*** *In addition to the requirements of Sections 1405.6, 1405.7, 1405.8, 1405.9, and 1405.10, the installation of anchored or adhered veneer shall comply with applicable provisions of Section ~~1410~~ 1411.*

...

SECTION ~~1410~~ 1411 [DSA-SS & DSA-SS/CC]
ADDITIONAL REQUIREMENTS FOR ANCHORED AND ADHERED VENEER.

1411.1 ~~1410.1~~ General. *In no case shall veneer be considered as part of the backing in computing strength or deflection nor shall it be considered a part of the required thickness of the backing.*

Veneer shall be anchored in a manner which will not allow relative movement between the veneer and the wall.

Anchored or adhered veneer shall not be used on overhead horizontal surfaces.

1411.2 ~~1410.2~~ Adhered veneer. *Units of tile, masonry, stone or terra cotta which exceed 5/8 inch (16 mm) in thickness shall be applied as for anchored veneer where used over exit ways or more than 20 feet (6096 mm) in height above adjacent ground elevation.*

1411.2.1 ~~1410.2.1~~ Bond strength and tests. *Veneer shall develop a bond to the backing in accordance with TMS 402, Section ~~6.3.2.4~~ 12.3.2.4.*

Not less than two shear tests shall be performed for the adhered veneer between the units and the supporting element. At least one shear test shall be performed at each building for each 5,000 square feet (465 m^2) of floor area or fraction thereof.

[All section amendments that are not revised above shall remain without any change]

Notation for [DSA-SS]
Authority: Education Code § 17310 and 81142, and H&S Code §16022.

(All existing California amendments that are not revised below shall continue without change)

...

SECTION 1507

REQUIREMENTS FOR ROOF COVERINGS

...

1507.3.10 Additional requirements. [DSA-SS & DSA-SS/CC] *In addition to the requirements of 1507.3.6 and 1507.3.7, the installation of clay and concrete tile roof coverings shall comply with seismic anchorage provisions of Section 1513. ~~1512.~~*

...

1507.7.8 Additional requirements. [DSA-SS & DSA-SS/CC] *In addition to the requirements of Section~~s~~ 1507.7.5, the installation of slate shingle roof coverings shall comply with the requirements of Section~~s~~ 1507.3.6 and 1507.3.7, and the seismic anchorage provisions of Section ~~1512~~1513.*

...

~~1509.7.1~~ 1510.7.1 **Wind resistance.** Rooftop-mounted photovoltaic panels and modules shall be designed for component and cladding wind loads in accordance with Chapter 16 using an effective wind area based on the dimensions of a single unit frame.

Exception: [DSA-SS, DSA-SS/CC] *The effective wind area shall be in accordance with Chapter 16 and ASCE 7 Section 26.2.*

...

SECTION 1513 ~~1512~~ [DSA-SS & DSA-SS/CC]
SEISMIC ANCHORAGE OF SLATE SHINGLE, CLAY AND CONCRETE TILE ROOF COVERINGS

1513.1 ~~1512.1~~ Fasteners. *Nails shall be long enough to penetrate into the sheathing 3/4 inch (19 mm). Where sheathing is less than 3/4 inch (19 mm) in thickness, nails shall be driven into supports, unless nails with ring shanks are used.*

All fasteners shall be corrosion resistant and fabricated of copper, stainless steel, or brass, or shall have a hot dipped galvanized coating not less than 1.0 ounce of zinc per square foot (305 gm/m^2).

Nails for slate shingles and clay or concrete tile shall be copper, brass or stainless steel with gage and length per common ferrous nails.

1513.2 ~~1512.2~~ Wire. *Wire for attaching slate shingles and clay or concrete tile shall be copper, brass or stainless steel capable of supporting four times the weight of tile.*

Wire supporting a single tile or shingle shall not be smaller than 1/16 inch (1.6 mm) in diameter. Continuous wire ties supporting more than one tile shall not be smaller than 0.084 inch (2 mm) in diameter.

1513.3 ~~1512.3~~ Metal strips. *Metal strips for attaching slate shingles and clay or concrete tile shall be copper, brass or stainless steel capable of supporting four times the weight of tile.*

1513.4 ~~1512.4~~ Clay or concrete tiles. *Clay or concrete tile shall be installed in accordance with Table 1507.3.7 and as described herein.*

1. *On wood roofs or roofs of other material to which wood strips are secured, every cover or top tile when fastened with nails shall be nailed directly into 1-1/4 inches (32 mm) sound grain soft wood strips of sufficient height to support the tile.*

Pan or bottom tiles shall be nailed directly to the roof sheathing or to wood strips. Wood strips shall be secured to the roof by nails spaced not over 12 inches (305 mm) apart.

2. *On concrete roofs, wires shall be secured in place by wire loops embedded into the concrete not less than 2 inches (51 mm). The wire loops shall be spaced not more than 36 inches (914 mm) on center parallel to the eaves, and spaced vertically to allow for the minimum 3 inches (76 mm) lapping of the tile.*

3. *Where continuous ties of twisted wire, interlocking wires or metal strips extending from the ridge to eave are used to attach tile, the ties shall be attached to the roof construction at the ridge, eave, and at intervals not exceeding 10 feet 0 inch (3048 mm) on center. The ties within 2 feet 0 inch (610 mm) of the rake shall be attached at intervals of 5 feet 0 inch (1524 mm).*

   Attachment for continuous ties shall be nails, screws, staples or approved clips of the same material as the ties and shall not be subjected to withdrawal forces. Attachments for continuous ties shall have an allowable working stress shear resistance of not less than twice the dead weight of the tile tributary to the attachment, but not less than 300 pounds (136 kg).

4. *Tile with projecting anchor lugs at the bottom of the tiles shall be held in position by means of 1-inch by 2-inch (25mm by 51mm) wood stripping nailed to the roof sheathing over the underlay.*

5. *Clay or concrete tile on roofs with slopes exceeding 24 units vertical in 12 units horizontal (200 percent slope) shall be attached as required for veneer in Chapter 14. The nose of all tiles shall be securely fastened.*

6. *Clay or concrete tile shall have a minimum of two fasteners per tile. Tiles that are 8 inches (203 mm) in width or less are permitted to be fastened at the center of the head with one fastener per tile.*

7. *Interlocking clay or concrete tile shall have a minimum of one nail near center of head or two wire ties per tile.*

1513.5 ~~***1512.5***~~ ***Slate shingles.*** *Slate shingles on roofs with slopes exceeding 24 units vertical in 12 units horizontal (200 percent slope) shall be attached as required for veneer in accordance with Chapter 14.*

All existing amendments that are not revised above shall continue without any change.

Authority: Education Code § 81053.
Reference: Education Code §§ 81052, 81053, and 81130 through 81147.

CHAPTER 16

STRUCTURAL DESIGN

Adopt and/or codify chapter as amended below:

PROPOSED ADOPTION	DSA-SS	DSA-SS/CC	Comments
Adopt entire chapter without amendments			
Adopt entire chapter with amendments listed below		X	
Adopt only those sections listed below			
1601.1.1		X	
1601.1.2		X	
1601.1.3		X	
1601.1.4		X	
1601.2		X	
~~*1601.3*~~		~~X~~	
1616		X	

All existing California amendments that are not revised below shall continue without change.

SECTION 1601
GENERAL

1601.1 Scope. The provisions of this chapter shall govern the structural design of buildings, structures and portions thereof regulated by this code.

1601.1.1 Application. [DSA-SS/CC] *The scope of application of Chapter 16 is as follows:*

Community college buildings regulated by the Division of the State Architect-Structural Safety/Community Colleges (DSA-SS/CC), as listed in Section 1.9.2.2.

1601.1.2 Identification of amendments. [DSA-SS/CC]
Division of the State Architect-Structural Safety/Community Colleges (DSA-SS/CC) amendments appear in this chapter preceded with the appropriate acronym, as follows:

Division of the State Architect - Structural Safety/Community Colleges: ***[DSA-SS/CC]*** *- For community college buildings listed in Section 1.9.2.2*

1601.1.3 Reference to other chapters. [DSA-SS/CC]
Where reference within this chapter is made to sections in Chapters 17 and 18, the provisions in Chapters 17A and 18A respectively shall apply instead.

1601.1.4 Amendments. [DSA-SS/CC] *See Section 1616 for additional requirements.*

1601.2 Enforcement agency approval. [DSA-SS/CC] *In addition to requirements of the California Administrative Code and the California Building Code, any aspect of project design, construction, quality assurance or quality control programs for which this code requires approval by the Registered ~~d~~ Design ~~p~~ Professional (RDP), are also subject to approval by the enforcement agency.*

...

SECTION 1616
ADDITIONAL REQUIREMENTS FOR COMMUNITY COLLEGES [DSA-SS/CC]

1616.1 Construction documents.

1616.1.1 *Additional requirements for construction documents are included in Sections 4-210 and 4-317 of the California Administrative Code (Part 1, Title 24, C.C.R).*

1616.1.2 Connections. *Connections that resist design seismic forces shall be designed and detailed on the design drawings.*

1616.1.3 Construction procedures. *Where unusual erection or construction procedures are considered essential by the project structural engineer or architect in order to accomplish the intent of the design or influence the construction ~~design~~, such procedure shall be indicated on the plans or in the specifications.*

1616.2 General design requirements.

1616.2.1 Lateral load deflections.

1616.2.1.1 Horizontal diaphragms. *The maximum span-~~width~~ depth ratio for any roof or floor diaphragm consisting of steel and composite steel slab decking or concrete shall be based on ~~not exceed those given in Table 4.2.4 of AF & PA SDPWS for wood sheathed diaphragms. For other diaphragms,~~ test data and design calculations acceptable to the enforcement agency ~~shall be submitted and approved for span-width ratios~~.*

1616.2.1.2 Veneers. *The deflection shall not exceed l/600 for veneered walls, anchored veneers and adhered veneers over 1 inch (25 mm) thick, including the mortar backing.*

1616.2.1.3 Risk Category of buildings and other structures. *Risk Category IV includes structures as defined in the California Administrative Code, Section 4-207 and all structures required for their continuous operation or access/egress.*

1616.2.1.4 Analysis. *Structural analysis shall explicitly include consideration of stiffness of diaphragm in accordance with ASCE 7 Section 12.3.1. A diaphragm is rigid for the purpose of distribution of story shear and torsional moment where so indicated in Section 12.3.1 of ASCE 7.*

1616.2.2 Structural walls. *For anchorage of concrete or masonry walls to roof and floor diaphragms, the out-of plane strength design force shall not be less than 280 lb/linear ft (4.09 kN/m) of wall.*

1616.3 Load combinations.

1616.3.1 Stability. *When checking stability under the provisions of Section 1605.1.1 using allowable stress design, the factor of safety for soil bearing values shall not be less than the overstrength factor of the structures supported.*

1616.4 Roof dead loads. *The design dead load shall provide for the weight of at least one additional roof covering in addition to other applicable loadings if the new roof covering is permitted to be applied over the original roofing without its removal, in accordance with Section 1511. ~~1510~~.*

1616.5 Live loads.

1616.5.1 Modifications to Table 1607.1.

1616.5.1.1 Item 4. Assembly areas. *The following minimum loads for stage accessories apply:*

1. *Gridirons and fly galleries: 75 pounds per square foot uniform live load.*

2. *Loft block wells: 250 pounds per lineal foot vertical load and lateral load.*

3. *Head block wells and sheave beams: 250 pounds per lineal foot vertical load and lateral load. Head block wells and sheave beams shall be designed for all tributary loft block well loads. Sheave blocks shall be designed with a safety factor of five.*

4. *Scenery beams where there is no gridiron: 300 pounds per lineal foot vertical load and lateral load.*

5. *Ceiling framing over stages shall be designed for a uniform live load of 20 pounds per square foot. For members supporting a tributary area of 200 square feet or more, this additional load may be reduced to 15 pounds per square foot (0.72 kN/m2).*

1616.5.1.2 Item 24. Reviewing stands, grandstands and bleachers. *The minimum uniform live load for a press box floor or accessible roof with railing is 100 psf.*

1616.5.1.3 Item 35. Yards and terraces, pedestrians. *Item 35 applies to pedestrian bridges and walkways that are not subjected to uncontrolled vehicle access.*

1616.5.1.4 Item 36. Storage racks and wall-hung cabinets. *The minimum vertical design live load shall be as follows:*

Paper media:

12-inch-deep (305 mm) shelf - 33 pounds per lineal foot (482 N/m)
15-inch-deep (381 mm) shelf - 41 pounds per lineal foot (598 N/m), or 33 pounds per cubic foot (5183 N/m3) per total volume of the rack or cabinet, whichever is less.

Film media:

18-inch-deep (457 mm) shelf - 100 pounds per lineal foot (1459 N/m), or 50 pounds per cubic foot (7853 N/m3) per total volume of the rack or cabinet, whichever is less.

Other media:

20 pounds per cubic foot (311 N/m3) or 20 pounds per square foot (958 Pa), whichever is less, but not less than actual loads.

1616.5.2 Uncovered open-frame roof structures. *Uncovered open-frame roof structures shall be designed for a vertical live load of not less than 10 pounds per square foot (0.48 kN/m2) of the total area encompassed by the framework.*

1616.6 Determination of snow loads. *The ground snow load or the design snow load for roofs shall conform with the adopted ordinance of the city, county, or city and county in which the project site is located, and shall be approved by DSA.*

1616.7 Wind loads.

1616.7.1 Story drift for wind loads. *The calculated story drift due to wind pressures with ultimate design wind speed, Vult , shall not exceed 0.008 times the story height for buildings less than 65 feet (19,812 mm) in height or 0.007 times the story height for buildings 65 feet (19,812mm) or greater in height.*

Exception: *This story drift limit need not be applied for single-story open ~~structures~~ buildings in Risk Category I and II.*

1616.8 Establishment of flood hazard areas. *Flood hazard maps shall include, at a minimum, areas of special flood hazard as identified by the Federal Emergency Management Agency's Flood Insurance Study (FIS) adopted by the local authority having jurisdiction where the project is located, as amended or revised with the accompanying Flood Insurance Rate Map (FIRM) and Flood Boundary and Floodway Map (FBFM) and related supporting data along with any revisions thereto.*

1616.9 Earthquake loads.

1616.9.1 Seismic design category. *The seismic design category for a structure shall be determined in accordance with Section 1613.*

1616.9.2 Definitions. *In addition to the definitions in Section 1613.2, the following words and terms shall, for the purposes of this section, have the meanings shown herein.*

ACTIVE EARTHQUAKE FAULT. *A fault that has been the source of earthquakes or is recognized as a potential source of earthquakes, including those that have exhibited surface displacement within Holocene time (about 11,000 years) as determined by California Geological Survey (CGS) under the Alquist-Priolo Earthquake Fault Zoning Act, those included as type A or type B faults for the U.S. Geological Survey (USGS) National Seismic Hazard Maps, and faults considered to have been active in Holocene time by an authoritative source, federal, state or local governmental agency.*

~~***BASE.*** *The level at which the horizontal seismic ground motions are considered to be imparted to the structure or the level at which the structure as a dynamic vibrator is supported. This level does not necessarily coincide with the ground level.*~~

DISTANCE FROM AN ACTIVE EARTHQUAKE FAULT. *Distance measured from the nearest point of the building to the closest edge of an Alquist-Priolo Earthquake fault zone for an active fault, if such a map exists, or to the closest mapped splay of the fault.*

IRREGULAR STRUCTURE. *A structure designed as having one or more plan or vertical irregularities per ASCE 7 Section 12.3.*

~~***STRUCTURAL ELEMENTS.*** *Floor or roof diaphragms, decking, joists, slabs, beams, or girders, columns, bearing walls, retaining walls, masonry or concrete nonbearing walls exceeding one story in height, foundations, shear walls or other lateral-force-resisting members, and any other elements necessary to the vertical and lateral strength or stability of either the building as a whole or any of its parts, including connection between such elements.*~~

1616.9.3 Mapped acceleration parameters. *Seismic Design Category shall be determined in accordance with Section 1613.3.5.*

1616.9.4 Determination of seismic design category. *Structures not assigned to Seismic Design Category E or F, in accordance with Section 1613.3, shall be assigned to Seismic Design Category D.*

1616.9.4.1 Alternative seismic design category determination. *The alternative Seismic Design Category determination procedure of Section 1613.3.5.1 is not permitted by DSA-SS/CC.*

1616.9.4.2 Simplified design procedure. *The simplified design procedure of Section 1613.3.5.2 is not permitted by DSA-SS/CC.*

~~***1616.9.5 Automatic sprinkler systems.*** *The allowable values for design of anchors, hangers, and bracing elements shall be determined in accordance with material chapters of this code in lieu of those in NFPA 13.*~~

1616.10 Modifications to ASCE 7. *The text of ASCE 7 shall be modified as indicated in Sections 1616.10.1 through 1616.10.24.*

1616.10.1 ASCE 7, Section 1.3. *Modify ASCE 7 Section 1.3 by adding Section 1.3.6 as follows:*

1.3.6 Structural design criteria. *Where design is based on ASCE 7 Chapters 16, 17, 18, or 31, the ground motion, wind tunnel design recommendations, analysis, and design methods, material assumptions, testing requirements, and acceptance criteria proposed*

by the engineer shall be submitted to the enforcement agency in the form of structural design criteria for approval.

Peer review requirements in ~~Section 3422 of this code~~ Section 322 of the California Existing Buildings Code shall apply to design reviews required by ASCE 7 Chapters 17 and 18.

1616.10.2 ASCE 7, Section 11.4.7. *Modify ASCE 7 Section 11.4.7 by adding the following:*

For buildings assigned to Seismic Design Category E and F, or when required by the building official, a ground motion hazard analysis shall be performed in accordance with ASCE 7 Chapter 21, as modified by Section 1803A.6 of this code.

1616.10.3 ASCE 7, Table 12.2-1. *Modify ASCE 7 Table 12.2-1 as follows:*

A. BEARING WALL SYSTEMS

17. Light-framed walls with shear panels of all other materials - Not permitted by DSA-SS/CC.

B. BUILDING FRAME SYSTEMS

24. Light-framed walls with shear panels of all other materials - Not permitted by DSA-SS/CC.

C. MOMENT RESISTING FRAME SYSTEMS

12. Cold-formed steel — special bolted moment frame - Not permitted by DSA-SS/CC.

Exception:

1) Systems listed in this section can be used as an alternative system when preapproved by the enforcement agency.

2) Rooftop or other supported structures not exceeding two stories in height and 10 percent of the total structure weight can use the systems in this section when designed as components per ASCE 7 Chapter 13.

3) Systems listed in this section can be used for seismically isolated buildings when permitted by Section 1613.4.1.

1616.10.4 ASCE 7, Section 12.2.3.1. *Replace ASCE 7 Section 12.2.3.1, Items 1 and 2 by the following:*

The value of the response modification coefficient, R, used for design at any story shall not exceed the lowest value of R that is used in the same direction at any story above that story. Likewise, the deflection amplification factor, C_d, and the system over strength factor, Ω_0, used for the design at any story shall not be less than the largest value of these factors that are used in the same direction at any story above that story.

1616.10.5 ASCE 7, Section 12.2.3.2. *Modify ASCE 7 Section 12.2.3.2 by adding the following additional requirements for a two stage equivalent lateral force procedure or modal response spectrum procedure:*

f. Where design of elements of the upper portion is governed by special seismic load combinations, the special loads shall be considered in the design of the lower portions.

1616.10.6 ASCE 7, Section 12.2.5.6.1. *The exception in Item a is not permitted by DSA-SS/CC.*

1616.10.7 ASCE 7, Section 12.2.5.7.1. *The exception in Item a is not permitted by DSA-SS/CC.*

1616.10.8 ASCE 7, Section 12.2.5.7.2. *The exception in Item a is not permitted by DSA-SS/CC.*

1616.10.9 ASCE 7, Section 12.3.3.1. *Modify ASCE 7 Section 12.3.3.1 as follows:*

12.3.3.1 Prohibited horizontal and vertical irregularities for Seismic Design Categories D through F. *Structures assigned to Seismic Design Category E or F having horizontal structural irregularity Type 1b of Table 12.3-1 or vertical structural irregularities Type 1b, 5a or 5b of Table 12.3-2 shall not be permitted. Structures assigned to Seismic Design Category D having vertical irregularity Type 1b or 5b of Table 12.3-2 shall not be permitted.*

1616.10.10 ASCE 7, Section 12.7.2. *Modify ASCE 7 Section 12.7.2 by adding Item 6 to read as follows:*

6. Where buildings provide lateral support for walls retaining earth, and the exterior grades on opposite sides of the building differ by more than 6 feet (1829 mm), the load combination of the seismic increment of earth pressure due to earthquake acting on the higher side, as determined by a Geotechnical engineer qualified in soils engineering, plus the difference in earth pressures shall be added to the lateral forces provided in this section.

1616.10.11 ASCE 7, Section 12.8.1.3. *Replace ASCE 7 Section 12.8.1.3 by the following:*

~~***12.8.1.3 Maximum Ss value in determination of Cs .*** *For regular structures five stories or less above the base, as defined in Section 11.2 and with a period, T, of 0.5 s or less, CS is permitted to be calculated using the larger of either SS =1.5 or 80 percent of the value of SS determined per Section 11.4.1 or 11.4.7.*~~

12.8.1.3 Maximum S_{DS} Value in Determination of C_s and E_v
The value of Cs and E_v are permitted to be calculated using a value of S_{DS} equal to 1.0, but not less than 70% of S_{DS} as defined in Section 11.4.4, provided that all of the following criteria are met:

1. *The structure does not have irregularities, as defined in Section 12.3.2;*
2. *The structure does not exceed five stories above the base as defined in Section 11.2;*
3. *The structure has a fundamental period, T, that does not exceed 0.5 seconds, as determined using Section 12.8.2;*

4. *The structure meets the requirements necessary for the redundancy factor, ρ, to be permitted to be taken as 1.0, in accordance with Section 12.3.4.2;*
5. *The site soil properties are not classified as Site Class E or F, as defined in Section 11.4.2; and*
6. *The structure is classified as Risk Category I or II, as defined in Section 1.5.1.*

1616.10.12 ASCE 7, Section 12.9.4. *Replace ASCE 7 Section 12.9.4 as follows:*

12.9.4 Scaling design values of combined response. *Modal base shears used to determine forces and drifts shall not be less than the base shear calculated using the equivalent lateral force procedure of Section 12.8.*

1616.10.13 ASCE 7, Section 12.10.2.1. *Replace ASCE 7 Exception 1 of Section 12.10.2.1 by the following:*

Exception: *The forces calculated above need not exceed those calculated using the load combinations of Section 12.4.3.2 with seismic forces determined by Equation 12.10-3 and transfer forces, where applicable.*

1616.10.14 ASCE 7, Section 12.13.1. *Modify ASCE 7 Section 12.13.1 by adding Section 12.13.1.1 as follows:*

12.13.1.1 Foundations and superstructure-to-foundation connections. *The foundation shall be capable of transmitting the design base shear and the overturning forces from the structure into the supporting soil. Stability against overturning and sliding shall be in accordance with Section 1605.1.1.*

In addition, the foundation and the connection of the superstructure elements to the foundation shall have the strength to resist, in addition to gravity loads, the lesser of the following seismic loads:

1. The strength of the superstructure elements

2. The maximum forces that ~~would occur~~ can be delivered to the foundation in ~~the~~ a fully yielded structural system

3. Forces from the Load Combinations with overstrength factor in accordance with ASCE 7 Section 12.4.3.2

Exceptions:

1. Where referenced standards specify the use of higher design loads.

2. When it can be demonstrated that inelastic deformation of the foundation and superstructure-to-foundation connection will not result in a weak story or cause collapse of the structure.

3. Where ~~basic structural system~~ seismic force-resisting system consists of light-framed walls with shear panels, unless the reference standard specifies the use of higher design loads.

Where the computation of the seismic overturning moment is by the equivalent lateral-force method or the modal analysis method, reduction in overturning moment permitted by Section 12.13.4 of ASCE 7 may be used.

Where moment resistance is assumed at the base of the superstructure elements, the rotation and flexural deformation of the foundation as well as deformation of the superstructure-to-foundation connection shall be considered in the drift and deformation compatibility analyses.

1616.10.15 ASCE 7, Section 13.1.4. *Replace ASCE 7 Section 13.1.4 by the following:*

13.1.4 Exemptions. *The following nonstructural components are exempt from the requirements of this section:*

1. Furniture (except storage cabinets as noted in Table 13.5-1).

2. Temporary or moveable (mobile) equipment.

Exceptions:

1) Equipment shall be anchored if it is permanently attached to the building utility services such as electricity, gas, or water. For the purposes of this requirement, "permanently attached" shall include all electrical connections except plugs for duplex receptacles.

2) The enforcement agency shall be permitted to require temporary attachments for movable equipment which is usually stationed in one place and heavier than 400 pounds or has a center of mass located 4 feet (1.22 m) or more above the adjacent floor or roof level that directly support the component, when they are not in use for a period longer than 8 hours at a time.

3. Mechanical and electrical components in Seismic Design Categories D, E or F where all of the following apply:

a. The component is positively attached to the structure;

b. Flexible connections are provided at seismic separation joints and between the component and associated ductwork, piping and conduit; and either:

i. The component weighs 400 lb (1780N) or less and has a center of mass located 4 ft. (1.22 m) or less above the adjacent floor or roof level;

Exception: *Special Seismic Certification requirements of this code in accordance with Section 1705A.12.3 shall be applicable.*

Or

ii. The component weighs 20 lb (89 N) or less or, in the case of a distributed system, 5 lb/ft (73 N/m) or less.

Exception: *The enforcement agency shall be permitted to require attachments for equipment with hazardous contents to be shown on construction documents irrespective of weight.*

1616.10.16 ASCE 7, Section 13.5.6. *Replace ASCE 7, Section 13.5.6 by the following:*

13.5.6 Suspended ceilings. *Suspended ceilings shall be in accordance with this section.*

13.5.6.1 Seismic forces. *The weight of the ceiling, Wp, shall include the ceiling grid; ceiling tiles or panels; light fixtures if attached to, clipped to, or laterally supported by the ceiling grid; and other components that are laterally supported by the ceiling. Wp shall be taken as not less than 4 psf (19 N/m2).*

The seismic force, Fp, shall be transmitted through the ceiling attachments to the building structural elements or the ceiling-structure boundary.

13.5.6.2 Industry standard construction for acoustical tile or lay-in panel ceilings. *Unless designed in accordance with ASTM E 580 Section 5.2.8, or seismically qualified in accordance with Sections 13.2.5 or 13.2.6, acoustical tile or lay-in panel ceilings shall be designed and constructed in accordance with this section.*

13.5.6.2.1 Seismic Design Categories D through F. *Acoustical tile or lay-in panel ceilings in Seismic Design Categories D, E and F shall be designed and installed in accordance with ASTM C 635, ASTM C 636, and ASTM E 580, Section 5 - Seismic Design Categories D, E and F as modified by this section.*

Exception to Section 13.5.8.1 shall not be used in accordance with ASTM E 580 Section 5.5.

13.5.6.2.2 Modification to ASTM E 580. *Modify ASTM E 580 by the following:*

*1. **Exitways.** Lay-in ceiling assemblies in exitways of hospitals and essential services buildings shall be installed with a main runner or cross runner surrounding all sides of each piece of tile, board or panel and each light fixture or grille. A cross runner that supports another cross runner shall be considered as a main runner for the purpose of structural classification. Splices or intersections of such runners shall be attached with through connectors such as pop rivets, screws, pins, plates with end tabs or other approved connectors. Lateral force diagonal bracing may be omitted in the short or transverse direction of exitways, not exceeding 8 feet wide, when perimeter support in accordance with ASTM E 580 Sections 5.2.2 and 5.2.3 is provided and the perimeter wall laterally supporting the ceiling in the short or transverse direction is designed to carry the ceiling lateral forces. The connections between the ceiling grid, wall angle and the wall shall be designed to resist the ceiling lateral forces.*

*2. **Corridors and lobbies.** Expansion joints shall be provided in the ceiling at intersections of corridors and at junctions of corridors and lobbies or other similar areas.*

*3. **Lay-in panels.** Metal panels and panels weighing more than 1/2 pounds per square foot (24 N/m2) other than acoustical tiles shall be positively attached to the ceiling suspension runners.*

*4. **Lateral force bracing.** Lateral force bracing is required for all ceiling areas except that they shall be permitted to be omitted in rooms with floor areas up to 144 square feet when perimeter support in accordance with ASTM E 580 Sections 5.2.2 and 5.2.3 are provided and perimeter walls are designed to carry the ceiling lateral forces. The connections between the ceiling grid, wall angle and the wall shall be designed to resist the ceiling lateral forces. Horizontal restraint point spacing shall be justified by analysis or test and shall not exceed a spacing of 12 feet by 12 feet. ~~Restraint~~ Bracing wires shall be secured with four tight twists in 11/2 inches, or an approved alternate connection.*

5. Ceiling support and bracing wires shall be spaced a minimum of 6" from all pipes, ducts, conduits and equipment that are not braced for horizontal forces, unless approved otherwise by the building official.

~~*5. **Ceiling fixtures.** Fixtures installed in acoustical tile or lay-in panel ceilings shall be mounted in a manner that will not compromise ceiling performance.*~~

~~*All recessed or drop-in light fixtures and grilles shall be supported directly from the fixture housing to the structure above with a minimum of two 12-gage wires located at diagonally opposite corners. Leveling and positioning of fixtures may be provided by the ceiling grid. Fixture support wires may be slightly loose to allow the fixture to seat in the grid system. Fixtures shall not be supported from main runners or cross runners if the weight of the fixtures causes the total dead load to exceed the deflection capability of the ceiling suspension system.*~~

~~*Fixtures shall not be installed so that the main runners or cross runners will be eccentrically loaded.*~~

~~*Surface-mounted fixtures shall be attached to the main runner with at least two positive clamping devices made of material with a minimum of 14 gage. Rotational spring catches do not comply. A 12-gage suspension wire shall be attached to each clamping device and to the structure above.*~~

~~*6. **Partitions.** Where the suspended ceiling system is required to provide lateral support for the permanent or relocatable partitions, the connection of the partition to the ceiling system, the ceiling system members and their connections, and the lateral force bracing shall be designed to support the reaction force of the partition from prescribed loads applied perpendicular to the face of the partition. Partition connectors, the suspended ceiling system and the lateral force bracing shall all be engineered to suit the individual partition application and shall be shown or defined in the drawings or specifications.*~~

1616.10.17 ASCE 7, Section 13.6.5. *Modify ASCE 7, Section 13.6.5.6, Exceptions 1 and 2, as follows:*

Exceptions:

1. Design for the seismic forces of Section 13.3 shall not be required for raceways where either:

a. Trapeze assemblies are used to support raceways and the total weight of the raceway supported by trapeze assemblies is less than 10lb/ft (146 N/m), or

b. The raceway is supported by hangers and each hanger in the raceway run is 12 in. (305mm) or less in length from the raceway support point to the supporting structure. Where rod hangers are used, they shall be equipped with swivels to prevent inelastic bending in the rod.

2. Design for the seismic forces of Section 13.3 shall not be required for conduit, regardless of the value of Ip, where the conduit is less than 2.5 in. (64 mm) trade size.

1616.10.18 ASCE 7, Section 13.6.7. *Replace ASCE 7, Section 13.6.7, Exceptions 1 and 2, by the following:*

Exceptions:

The following exceptions pertain to ductwork not designed to carry toxic, highly toxic or flammable gases, or used for smoke control:

1. Design for the seismic forces of Section 13.3 shall not be required for ductwork where either:

a. Trapeze assemblies are used to support ductwork and the total weight of the ductwork supported by trapeze assemblies is less than 10 lb/ft (146 N/m); or

b. The ductwork is supported by hangers and each hanger in the duct run is 12 in. (305 mm) or less in length from the duct support point to the supporting structure. Where rod hangers are used, they shall be equipped with swivels to prevent inelastic bending in the rod.

2. Design for the seismic forces of Section 13.3 shall not be required where provisions are made to avoid impact with larger ducts or mechanical components or to protect the ducts in the event of such impact; and HVAC ducts have a cross-sectional area of 6 ft2 (0.557 m2) or less, or weigh 10 lb/ft (146 N/m) or less.

~~***1616.10.19 ASCE 7, Section 13.6.8.*** *Modify ASCE 7, Section 13.6.8.2 by adding exception as follows:~~

~~***Exception:*** *Anchor capacities shall be determined in accordance with material chapters of this code in lieu of using those in NFPA 13 and demand shall be based on ASCE 7.~~

1616.10.19 ~~***1616.10.20***~~ ***ASCE 7, Section 13.6.8.3.*** *Replace ASCE 7, Section 13.6.8.3 with the following:*

13.6.8.3 Exceptions. *Design of piping systems and attachments for the seismic forces of Section 13.3 shall not be required where one of the following conditions apply:*

1. Trapeze assemblies are used to support piping whereby no single pipe exceeds the limits set forth in 3a. or b. below and the total weight of the piping supported by the trapeze assemblies is less than 10 lb/ft (146 N/m).

2. The piping is supported by hangers and each hanger in the piping run is 12 in. (305 mm) or less in length from the top of the pipe to the supporting structure. Where pipes are supported on a trapeze, the trapeze shall be supported by hangers having a length of 12 in. (305 mm) or less. Where rod hangers are used, they shall be equipped with swivels, eye nuts or other devices to prevent bending in the rod.

3. Piping having an Rp in Table 13.6-1 of 4.5 or greater is used and provisions are made to avoid impact with other structural or nonstructural components or to protect the piping in the event of such impact and where the following size requirements are satisfied:

a. For Seismic Design Categories D, E or F and values of Ip greater than one, the nominal pipe size shall be 1 inch (25 mm) or less.

b. For Seismic Design Categories D, E or F where Ip = 1.0 the nominal pipe size shall be 3 inches (80 mm) or less.

The exceptions above shall not apply to elevator piping.

1616.10.20 ~~***1616.10.21***~~ ***ASCE 7, Section 13.6.10.1.*** *Modify ASCE 7 Section 13.6.10.1 by adding Section 13.6.10.1.1, as follows:*

13.6.10.1.1 Elevators guide rail support. *The design of guide rail support bracket fastenings and the supporting structural framing shall use the weight of the counterweight or maximum weight of the car plus not more than 40 percent of its rated load. The seismic forces shall be assumed to be distributed one-third to the top guiding members and two-thirds to the bottom guiding members of cars and counterweights, unless other substantiating data are provided. In addition to the requirements of ASCE 7 Section 13.6.10.1, the minimum seismic forces shall be 0.5g acting in any horizontal direction.*

1616.10.21 ~~***1616.10.22***~~ ***ASCE 7, Section 13.6.10.4.*** *Replace ASCE 7 Section 13.6.10.4, as follows:*

13.6.10.4 Retainer plates. *Retainer plates are required at the top and bottom of the car and counterweight, except where safety devices acceptable to the enforcement agency are provided which meet all requirements of the retainer plates, including full engagement of the machined portion of the rail. The design of the car, cab stabilizers, counterweight guide rails and counterweight frames for seismic forces shall be based on the following requirements:*

1. The seismic force shall be computed per the requirements of ASCE 7 Section 13.6.10.1. The minimum horizontal acceleration shall be 0.5g for all buildings.

2. Wp shall equal the weight of the counterweight or the maximum weight of the car plus not less than 40 percent of its rated load.

3. With the car or counterweight located in the most adverse position, the stress in the rail shall not exceed the limitations specified in these regulations, nor shall the deflection of the rail relative to its supports exceed the deflection listed below:

TABLE 1224.4.11
ACCEPTABLE CEILING AND CARPET LOCATIONS

RAIL SIZE (weight per foot of length, pounds)	***WIDTH OF MACHINED SURFACE (inches)***	***ALLOWABLE RAIL DEFLECTION (inches)***
8	$1^1/_4$	*0.20*
11	$1^1/_2$	*0.30*
12	$1^3/_4$	*0.40*
15	$1^{31}/_{32}$	*0.50*

$18^1/_2$	$1^{31}/_{32}$	0.50
$22^1/_2$	2	0.50
30	$2^1/_4$	0.50

For SI: 1 inch = 25 mm, 1 foot = 305 mm, 1 pound = 0.454 kg.

Note: Deflection limitations are given to maintain a consistent factor of safety against disengagement of retainer plates from the guide rails during an earthquake.

4. Where guide rails are continuous over supports and rail joints are within 2 feet (610 mm) of their supporting brackets, a simple span may be assumed.

5. The use of spreader brackets is allowed.

6. Cab stabilizers and counterweight frames shall be designed to withstand computed lateral load with a minimum horizontal acceleration of 0.5g.

1616.10.22 ~~***1616.10.23***~~ ***ASCE 7, Section 16.1.4.*** *Remove ASCE 7 Sections 16.1.4.1 and 16.1.4.2 and modify 16.1.4 by the following:*

Maximum scaled base shears used to determine forces and drifts shall not be less than the base shear calculated using the equivalent lateral force procedure of Section 12.8.

1616.10.23 ~~***1616.10.24***~~ ***ASCE 7, Section 16.2.4.*** *Modify ASCE 7 Section 16.2.4 by the following:*

a) Where site is located within 3.1 miles (5 km) of an active fault at least seven ground motions shall be analyzed and response parameters shall be based on larger of the average of the maximum response with ground motions applied as follows:

1. Each of the ground motions shall have their maximum component at the fundamental period aligned in one direction.

2. Each of the ground motion's maximum component shall be rotated orthogonal to the previous analysis direction.

b) Where site is located more than 3.1 miles (5 km) from an active fault at least 10 ground motions shall be analyzed. The ground motions shall be applied such that one-half shall have their maximum component aligned in one direction and the other half aligned in the orthogonal direction. The average of the maximum response of all the analyses shall be used for design.

~~***1616.10.25 ASCE 7, Section 17.2.1.*** *Modify ASCE 7 Section 17.2.1 by adding the following:~~

~~*The importance factor, Ip , for parts and portions of a seismically isolated building shall be the same as that required for a fixed-base building of the same risk category.*~~

1616.10.24 ~~***1616.10.26***~~ ***ASCE 7 Section 17.2.4.7.*** *Modify ASCE 7 Section 17.2.4.7 by adding the following to the end of the section:*

The effects of uplift ~~and/or rocking~~ shall be explicitly accounted for ~~in the analysis and~~ in the testing of the isolator units.

~~***1616.10.27 ASCE 7, Section 17.2.5.2.*** *Modify ASCE 7, Section 17.2.5.2 by adding the following:~~

~~*The separation requirements for the building above the isolation system and adjacent buildings shall be the sum of the factored displacements for each building. The factors to be used in determining separations shall be:*~~

~~*1. For seismically isolated buildings, the deformation resulting from the analyses using the maximum considered earthquake unmodified by RI.*~~

~~*2. For fixed based buildings, Cd times the elastic deformations resulting from an equivalent static analysis using the seismic base shear computed via ASCE 7 Section 12.8.*~~

CHAPTER 16*A*

STRUCTURAL DESIGN

Adopt and/or codify chapter as amended below:

PROPOSED ADOPTION	DSA-SS	DSA-SS/CC	Comments
Adopt entire chapter without amendments			
Adopt entire chapter as amended	X	-	
Adopt only those sections listed below			

(All existing California amendments that are not revised below shall continue without change)

SECTION 1601*A*

GENERAL

1601*A*.1 Scope. The provisions of this chapter shall govern the structural design of buildings, structures and portions thereof regulated by this code.

1601A.1.1 Application. *The scope of application of Chapter 16A is as follows:*

1. *Applications listed in Section 1.9.2.1, regulated by the Division of the State Architect-Structural Safety (DSASS). These applications include public elementary and secondary schools, community colleges and state-owned or state-leased essential services buildings.*

2. [Reserved for OSHPD]

Exception: [Reserved for OSHPD]

1601A.1.2 Amendments in this chapter. *DSA-SS adopt this chapter and all amendments.*

Exception: *Amendments adopted by only one agency appear in this chapter preceded with the appropriate acronym of the adopting agency, as follows:*

1. *Division of the State Architect-Structural Safety:* ***[DSA-SS]*** *– For applications listed in Section 1.9.2.1.*

2. [Reserved for OSHPD]

1601A.2 Enforcement Agency Approval. *In addition to requirements of the California Administrative Code and the California Building Code, any aspect of project design, construction, quality assurance, or quality control programs for which this code requires approval by the Registered ~~d~~ Design ~~p~~ Professional (RDP), are also subject to approval by the enforcement agency.*

SECTION 1602A
DEFINITIONS AND NOTATIONS

1602A.1 Definitions. The following terms are defined in Chapter 2 *except those defined below which shall, for the purposes of this section, have the meanings shown herein.*

...

~~***HOSPITAL BUILDING.*** *Any building defined in Section 129725, Health and Safety Code.*~~

...

SECTION 1603*A*
CONSTRUCTION DOCUMENTS

1603*A*.1 General. Construction documents shall show the size, section and relative locations of structural members with floor levels, column centers and offsets dimensioned. The design loads and other information pertinent to the structural design required by Sections 1603A.1.1 through ~~1603.1.8~~ *1603A.1.9* shall be indicated on the *construction documents*.

...

[DSA-SS] *Additional requirements are included in Section 4-210 and 4-317 of the California Administrative Code (Part 1,Title 24, C.C.R).*

(Reserved for OSHPD)

...

1603*A*.1.5 Earthquake design data. The following information related to seismic loads shall be shown, regardless of whether seismic loads govern the design of the lateral-force-resisting system of the building:

1. Risk Category
2. Seismic importance factor, I_e..
3. Mapped spectral response accelerations, S_S and S_1.
4. Site class.
5. Design spectral response acceleration parameters, S_{DS} and S_{D1}.
6. Seismic design category.
7. Basic seismic-force-resisting system(s).
8. Design base shear.
9. Seismic response coefficient(s), C_S.
10. Response modification factor(s), R.
11. Analysis procedure used.
12. *Applicable horizontal structural irregularities.*
13. *Applicable vertical structural irregularities.*

14. Location of base as defined in Section 1613A.2.

1603A.1.5.1 Connections. *Connections that resist design seismic forces shall be designed and detailed on the design drawings.*

...

1603A.1.9 ~~1603A.1.10~~ Construction Procedures. *Where unusual erection or construction procedures are considered essential by the Registered Design Professional (RDP) in order to accomplish the intent of the design or influence the construction ~~design~~, such procedure shall be indicated on the construction documents.*

1603A.2 Site Data Reports. *Geotechnical and Geohazard reports for review by the enforcement agency shall be accompanied by a description of the project prepared by the Registered Design Professional (RDP) in responsible charge, which shall include the following:*

1. *Type of service such as General Acute Care Facility, Skilled Nursing Facility, Intermediate Care Facility, Acute Psychiatric Facility, Central Utility Plants, K-12 school, community college, essential service, etc.*
2. *Construction materials used for the project such as Steel, Concrete. Masonry, Wood, etc.*
3. *Type of construction project such as new, addition, alteration, repair, etc.*
4. *For existing buildings, extent of construction such as incidental, minor, major, and/or voluntary seismic improvements as defined in Section 318, Part 10, Title 24, C.C.R ~~3418~~ **[DSA-SS]** Sections 202 and 3402A **[OSHPD 1 & 4]**.*
5. *Seismic Force Resisting System used for each structure in the project.*
6. *Foundation system that will be used for each structure in the project such as spread footing, drilled piers, etc.*
7. *Analysis procedure used and basis of design such as ASCE 7 Equivalent Lateral Force Procedure, ASCE 41 Nonlinear Dynamic Procedure, etc.*
8. *Building characteristics such as number of stories above and below grade, foot print area at grade, grade slope on site, etc.*
9. *Special features such as requirement for shoring, underpinning, retaining walls, etc.*

1603A.3 Structural Design Basis and Calculations. *The application for the approval of construction documents that involves structural elements or components shall be accompanied by complete and*

accurate structural design computations, which shall comply with requirements prescribed by the enforcement agency:

1. *The computations shall be preceded by a detailed index.*
2. *The computations including each major subsection shall be prefaced by a statement clearly and concisely outlining the basis for the structural design and indicating the manner in which the structure will resist the vertical loads and lateral forces.*
3. *The computations shall be sufficiently complete to the extent that calculations for the individual structural members and connections can be readily interpreted.*

SECTION 1604*A*
GENERAL DESIGN REQUIREMENTS

...

1604*A*.3 Serviceability. Structural systems and members thereof shall be designed to have adequate stiffness to limit deflections and lateral drift. See Section 12.12.1 of ASCE 7 for drift limits applicable to earthquake loading.

1604*A*.3.1 Deflections. The deflections of structural members shall not exceed the more restrictive of the limitations of Sections 1604*A*.3.2 through *1604A.3.6* or that permitted by Table 1604*A*.3.

TABLE 1604*A*.3 - DEFLECTION LIMITS[a, b, c, h, l]

CONSTRUCTION	*L* or L_r	*S* or *W*[i]	*D* + (*L* or L_r)[d,g]
...	...	...	...
...	...	...	...
Veneered walls, anchored veneers and adhered veneers over 1 inch (25 mm) thick,	—	*l/600*	—

including the mortar backing			
Farm buildings	—	—	*l/180*
Greenhouses	—	—	*l/120*

...

1604A.3.7 Horizontal diaphragms. *The maximum span ~~width~~ depth ratio for any roof or floor diaphragm consisting of steel and composite steel slab decking shall not exceed those given in ~~Table 4.2.4 of AF & PA SDPWS for wood or maximum span-depth ratio given in~~ Table 1604A.4 ~~for steel and composite steel slab decking~~, unless test data and design calculations acceptable to the enforcement agency are submitted and approved for the use of other ~~span-width or~~ span-depth ratios. Concrete diaphragms shall not exceed the span- depth ratios for the equivalent composite steel-slab diaphragm in Table 1604A.4.*

TABLE 1604A.4 – MAXIMUM HORIZONTAL DIAPHRAGM SPAN AND SPAN-DEPTH RATIOS[1,3,4]

FLEXIBILITY FACTOR(F)[2]	***MAXIMUM DIAPHRAGM SPAN FOR MASONRY OR CONCRETE WALLS (feet)***	***DIAPHRAGM SPAN-DEPTH LIMITATION***			
		Rotation (torsion) Not Considered in Diaphragm		***Rotation (torsion) Considered in Diaphragm***	
		Masonry or Concrete Walls	***Flexible Walls***	***Masonry or Concrete Walls***	***Flexible Walls***
More than 150	*Not to be used*	*Not to be used*	*2:1*	*Not to be used*	*1-1/2:1*
70-150	*200*	*2:1 or as required for deflection*	*3:1*	*Not to be used*	*2:1*
10-70	*400*	*2-1/2:1 or as required for deflection*	*4:1*	*As required for deflection*	*2-1/2:1*
1-10	*No limitation*	*3:1 or as required for deflection*	*5:1*	*As required for deflection*	*3:1*

Less than 1	*No limitation*	*As required for deflection*	*No limitation*	*As required for deflection*	*3-1/2:1*

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 plf = 14.6 N/m, 1 psi = 6894 Pa

[1] Diaphragms shall satisfy span-depth limitations based on flexibility.

[2] Flexibility Factor (F) is the average deflection in micro inches (10^{-6}) or µm of the diaphragm web per foot (m) of span stressed with a shear of 1 pound per foot (N/m).

[3] The total deflection Δ of the diaphragm may be computed from the equation: $\Delta = \Delta_f + \Delta_w$.

Where:

Δ_f = Flexural deflection of the diaphragm determined in the same manner as the deflection of beams. The flexural stiffness of the web of diaphragms consisting of bare steel decking shall be neglected.

Δ_w = Web deflection of the diaphragm may be determined solving the following equation:

$$F = \frac{\Delta_w x 10^6}{q_{ave} L}$$

Where:

L = Distance in feet (m) between the vertical resisting element (such as a shear wall) and the point to which the deflection is to be determined.

q_{ave} = Average shear in the diaphragm in pounds per foot (N/m) over length L.

[4] When applying these limitations to cantilevered diaphragms, the allowable span-depth ratio will be half of that shown.

1604A.3.8 Deflections. *Deflection criteria for materials not specified shall be developed by the project architect or structural engineer in a manner consistent with the provisions of this section and approved by the enforcement agency.*

1604A.4 Analysis. Load effects on structural members and their connections shall be determined by methods of structural analysis that take into account equilibrium, general stability, geometric compatibility and both short- and long-term material properties.

Members that tend to accumulate residual deformations under repeated service loads shall have included in their analysis the added eccentricities expected to occur during their service life.

Any system or method of construction to be used shall be based on a rational analysis in accordance with well-established principles of mechanics. Such analysis shall result in a system that provides a complete load path capable of transferring loads from their point of origin to the load-resisting elements.

The total lateral force shall be distributed to the various vertical elements of the lateral force-resisting system in proportion to their rigidities, considering the rigidity of the horizontal bracing system or diaphragm. Rigid elements assumed not to be a part of the lateral force-resisting system are permitted to be incorporated into buildings provided their effect on the action of the system is considered and provided for in the design. Structural analysis shall explicitly include consideration of stiffness of diaphragms in accordance with ASCE 7 Section 12.3.1. ~~A diaphragm is rigid for the purpose of distribution of story shear and torsional moment when the lateral deformation of the diaphragm is less than or equal to two times the average story drift.~~ Where required by ASCE 7, provisions shall be made for the increased forces induced on resisting elements of the structural system resulting from torsion due to eccentricity between the center of application of the lateral forces and the center of rigidity of the lateral force resisting system.

Every structure shall be designed to resist the overturning effects caused by the lateral forces specified in this chapter. See Section 1609 for wind loads, Section 1610 for lateral soil loads and Section 1613 for earthquake loads.

...

1604A.5 Risk category. Each building and structure shall be assigned a *risk category* in accordance with Table 1604A.5. Where a referenced standard specifies an occupancy category, the risk category shall not be taken as lower than the occupancy category specified therein. Where a referenced standard specifies that the assignment of a risk category be in
accordance with ASCE 7, Table 1.5-1, Table 1604.5 shall be used in lieu of ASCE 7, Table 1.5-1.

...

TABLE 1604A.5 - RISK CATEGORY OF BUILDINGS AND OTHER STRUCTURES

RISK CATEGORY	NATURE OF OCCUPANCY
...	...
III	Buildings and other structures that represent a substantial hazard to human life in the event of failure, including but not limited to: ... • ~~Group I-2 occupancies with an occupant load of 50 or more resident care recepients, but not having surgery or emergency treatment facilities.~~ ...
IV	Buildings and other structures designated as essential facilities, including but not limited to: • ~~Group I-2 occupancies having surgery or emergency treatment facilities.~~ ... • Designated emergency preparedness, communications and operations centers and other facilities required for emergency response~~.~~ ***[DSA-SS]*** *as defined in the California Administrative Code (Title 24, Part 1, CCR), Section 4-207 and all structures required for their continuous operation or access/egress.* ...

...

1604A.8.2 Structural walls. Walls that provide vertical load-bearing resistance or lateral shear resistance for a portion of the structure shall be anchored to the roof and to all floors and members that provide lateral support for the wall or that are supported by the wall. The connections shall be

capable of resisting the horizontal forces specified in Section 1.4.4 of ASCE 7 for walls of structures assigned to Seismic Design Category A and to Section 12.11 of ASCE 7 for walls of structures assigned to all other seismic design categories. *For anchorage of concrete or masonry walls to roof and floor diaphragms, the out-of-plane strength design force shall not be less than 280 lb/linear ft (4.09 kN/m) of wall.* Required anchors in masonry walls of hollow units or cavity walls shall be embedded in a reinforced grouted structural element of the wall. See Sections 1609*A* for wind design requirements and 1613*A* for earthquake design requirements.

...

SECTION 1605*A*
LOAD COMBINATIONS

1605*A*.1 General. Buildings and other structures and portions thereof shall be designed to resist:

...

1605*A*.1.1 Stability. Regardless of which load combinations are used to design for strength, where overall structure stability (such as stability against overturning, sliding, or buoyancy) is being verified, use of the load combinations specified in Section 1605*A*.2 or 1605*A*.3 shall be permitted. Where the load combinations specified in Section 1605*A*.2 are used, strength reduction factors applicable to soil resistance shall be provided by a *registered design professional.* The stability of retaining walls shall be verified in accordance with Section 1807*A*.2.3. *When using allowable stress design, factor of safety for soil bearing values shall not be less than the overstrength factor of the structures supported.*

...

SECTION 1606*A*
DEAD LOADS

...

1606A.3 Roof Dead Loads. *The design dead load shall provide for the weight of at least one additional roof covering in addition to other applicable loadings if the new roof covering is permitted to be applied over the original roofing without its removal, in accordance with Section 1511. ~~1510.~~*

...

SECTION 1607*A*
LIVE LOADS

...

1607*A*.1 General. Live loads are those loads defined in Chapter 2 of this code.

1607*A*.2 Loads not specified. For occupancies or uses not designated in Table 1607*A*.1, the live load shall be determined in accordance with a method approved by the building official.

1607*A*.3 Uniform live loads. The live loads used in the design of buildings and other structures shall be the maximum loads expected by the intended use or occupancy but shall in no case be less than the minimum uniformly distributed unit loads required by Table 1607*A*.1.

...

36. Storage racks and wall-hung cabinets.	*Total Loads [n]*	—

...

n. The minimum vertical design live load shall be as follows:

Paper media:
12-inch-deep (305 mm) shelf 33 pounds per lineal foot (482 N/m)
15-inch-deep (381 mm) shelf 41 pounds per lineal foot (598 N/m), or
33 pounds per cubic foot (5183 N/m^3) per total volume of the rack or cabinet, whichever is less.

Film media:
18-inch-deep (457 mm) shelf 100 pounds per lineal foot (1459 N/m), or
50 pounds per cubic foot (7853 N/m^3) per total volume of the rack or cabinet, whichever is less.

Other media:
20 pounds per cubic foot (311 N/m^3) or 20 pounds per square foot (958 Pa), whichever is less, but not less than actual loads.

*o. **[DSA-SS]** The following minimum loads for stage accessories apply:*

1. Gridirons and fly galleries: 75 pounds per square foot uniform live load.

2. Loft block wells: 250 pounds per lineal foot vertical load and lateral load.

3. Head block wells and sheave beams: 250 pounds per lineal foot vertical load and lateral load. Head block wells and sheave beams shall be designed for all tributary loft block well loads. Sheave blocks shall be designed with a safety factor of five.

4. Scenery beams where there is no gridiron: 300 pounds per lineal foot vertical load and lateral load.

5. Ceiling framing over stages shall be designed for a uniform live load of 20 pounds per square foot. For members supporting a tributary area of 200 square feet or more, this additional load may be reduced to 15 pounds per square foot.

*p. **[DSA-SS]** The minimum uniform live load for classroom occupancies is 50 psf. Live load reduction is not permitted for classrooms classified as Group A occupancies unless specific exception of Section 1607A.10 apply.*

*q. **[DSA-SS]** The minimum uniform live load for a press box floor or accessible roof with railing is 100 psf.*

*r. **[DSA-SS]** Item 35 applies to pedestrian bridges and walkways that are not subjected to uncontrolled vehicle access.*

...

***1607A.12.6** ~~1607A.12.5~~ **Uncovered open-frame roof structures.** Uncovered open-frame roof structures shall be designed for a vertical live load of not less than 10 pounds per square foot (0.48 kN/m^2) of the total area encompassed by the framework.*

...

1607A.14 Interior walls and partitions. Interior walls and partitions that exceed 6 feet (1829 mm) in height, including their finish materials, shall have adequate strength and stiffness to resist the loads to which they are subjected but not less than a horizontal load of 5 psf (0.240 kN/m^2). *The 5 psf (0.24 kN/m^2) ~~working~~ service load need not be applied simultaneously with wind or seismic loads. The deflection of such walls under a load of 5 psf (0.24 kN/m^2) shall not exceed the limits in Table 1604A.3.*

...

SECTION 1608A
SNOW LOADS

1608A.2 Ground snow loads. The ground snow loads to be used in determining the design snow loads for roofs shall be determined in accordance with ASCE 7 or Figure 1608A.2 for the contiguous United States ~~and Table 1608.2 for Alaska~~. Site-specific case studies shall be made in areas designated "CS" in Figure 1608A.2. Ground snow loads for sites at elevations above the limits indicated in Figure 1608A.2 and for all sites within the CS areas shall be approved. Ground snow load determination for such sites shall be based on an extreme value statistical analysis of data available in the vicinity of the site using a value with a 2-percent annual probability of being exceeded (50-year mean recurrence interval). ~~Snow loads are zero for Hawaii, except in mountainous regions as approved by the building official.~~

~~TABLE 1608.2 - GROUND SNOW LOADS, pg , FOR ALASKAN LOCATIONS~~

LOCATION	POUNDS PER SQUARE FOOT	LOCATION	POUNDS PER SQUARE FOOT	LOCATION	POUNDS PER SQUARE FOOT
Adak	30	Galena	60	Petersburg	150
Anchorage	50	Gulkana	70	St. Paul Islands	40

Fairbanks	60	Nome	70	Wrangell	60
Fort Yukon	60	Palmer	50	Yakutat	150

For SI: 1 pound per square foot = 0.0479 kN/m2.

FIGURE 1608A.2 Not shown (for Clarity)

...

1608A.4 Determination of snow loads. [DSA-SS] *The ground snow load or the design snow load for roofs shall conform with the adopted ordinance of the city, county, or city and county in which the project site is located, and shall be approved by DSA.*

SECTION 1609A
WIND LOADS

...

1609A.1.3 Story Drift for Wind Loads. *The calculated story drift due to wind pressures with ultimate design wind speed, V_{ult}, shall not exceed 0.008 times the story height for buildings less than 65 feet (19,812 mm) in height or 0.007 times the story height for buildings 65 feet (19,812 mm) or greater in height.*

Exception: ***[DSA-SS]*** *This story drift limit need not be applied for single-story open ~~structures~~ buildings in Risk Category I and II.*

...

SECTION 1612*A*
FLOOD LOADS

...

1612*A*.3 Establishment of flood hazard areas. To establish *flood hazard areas*, the applicable governing authority shall adopt a flood hazard map and supporting data. The flood hazard map shall include, at a minimum, areas of special flood hazard as identified by the Federal Emergency Management ~~Agency in an engineering report entitled "The Flood Insurance Study for [INSERT NAME OF JURISDICTION]," dated [INSERT DATE OF ISSUANCE],~~ *Agency's Flood Insurance Study (FIS) adopted by the local authority having jurisdiction where the project is located*, as amended or revised with the accompanying Flood Insurance Rate Map (FIRM) and Flood Boundary and Floodway Map (FBFM) and related supporting data along with any revisions thereto. The adopted flood hazard map and supporting data are hereby adopted by reference and declared to be part of this section.

...

SECTION 1613*A*
EARTHQUAKE LOADS

1613*A*.1 Scope. Every structure, and portion thereof, including nonstructural components that are permanently attached to structures and their supports and attachments, shall be designed and constructed to resist the effects of earthquake motions in accordance with ASCE 7 *with all the modifications incorporated herein*, excluding Chapter 14 and Appendix 11A. The seismic design category for a structure ~~is permitted to~~ *shall* be determined in accordance with Section 1613*A* ~~or ASCE 7~~.

Exceptions:

~~1. Detached one- and two-family dwellings, assigned to Seismic Design Category A, B or C, or located where the mapped short-period spectral response acceleration, SS, is less than 0.4 g.~~

~~2. The seismic-force-resisting system of wood-frame buildings that conform to the provisions of Section 2308 are not required to be analyzed as specified in this section.~~

~~3. Agricultural storage structures intended only for incidental human occupancy.~~

Structures that require special consideration of their response characteristics and environment that are not addressed by this code or ASCE 7 and for which other regulations provide seismic criteria, such as vehicular bridges, electrical transmission towers, hydraulic structures, buried utility lines and their appurtenances and nuclear reactors.

1613*A*.2 Definitions. The following terms are defined in Chapter 2 *except those defined below which shall, for the purposes of this section, have the meanings shown herein. Definition provided in ASCE 7 Section 11.2 and* ***[OSHPD 1 & 4]*** *Section 3402A.1 ~~and ASCE 7 Section 11.2~~ shall apply when appropriate in addition to terms defined in this section.*

ACTIVE EARTHQUAKE FAULT. *A fault that has been the source of earthquakes or is recognized as a potential source of earthquakes, including those that have exhibited surface displacement within Holocene time (about 11,000 years) as determined by California Geological Survey (CGS) under the Alquist-Priolo Earthquake Fault Zoning Act, those included as type A or type B faults for the U.S. Geological Survey (USGS) National Seismic Hazard Maps, and faults considered to have been active in Holocene time by any authoritative source, Federal, State or Local Governmental Agency.*

BASE. *~~The level at which the horizontal seismic ground motions are considered to be imparted to the structure or the level at which the structure as a dynamic vibrator is supported. This level does not~~*

~~*necessarily coincide with the ground level.*~~ *See ASCE 7.*

...

DISTANCE FROM AN ACTIVE EARTHQUAKE FAULT. *Distance measured from the nearest point of the building to the closest edge of an Alquist-Priolo Earthquake fault zone for an active fault, if such a map exists, or to the closest mapped splay of the fault.*

GENERAL ACUTE CARE HOSPITAL. *See Section 1224.3.*

~~***HOSPITAL BUILDINGS.*** *Hospital buildings and all other medical facilities as defined in Section 1250, Health and Safety Code.*~~

IRREGULAR STRUCTURE. *A structure designed as having one or more plan or vertical irregularities per ASCE 7 Section 12.3.*

...

~~***STRUCTURAL ELEMENTS.*** *Floor or roof diaphragms, decking, joists, slabs, beams, or girders, columns, bearing walls, retaining walls, masonry or concrete nonbearing walls exceeding one story in height, foundations, shear walls or other lateral-force-resisting members, and any other elements necessary to the vertical and lateral strength or stability of either the building as a whole or any of its parts, including connection between such elements.*~~

...

1613*A*.3 Seismic ground motion values. Seismic ground motion values shall be determined in accordance with this section.

1613A.3.1 Mapped acceleration parameters. The parameters S_s and S_1 shall be determined from the 0.2 and 1-second spectral response accelerations shown on Figures 1613.3.1(1) through 1613.3.1(8). ~~Where S_1 is less than or equal to 0.04 and S_s is less than or equal to 0.15, the structure is permitted to be assigned to Seismic Design Category A.~~

(Figures 1613.3.1(1) through 1613.3.1(8) were stricken in the CEC 2013 and will not be shown in Chapter 16A. These figures are shown in Chapter 16)

...

1613A.3.5 Determination of seismic design category. Structures classified as Risk Category I, II or III that are located where the mapped spectral response acceleration parameter at 1-second period, S_1, is greater than or equal to 0.75 shall be assigned to Seismic Design Category E. Structures classified as Risk Category IV that are located where the mapped spectral response acceleration parameter at 1-second period, S_1, is greater than or equal to 0.75 shall be assigned to Seismic Design Category F. All other structures shall be assigned to *Seismic Design Category D.* ~~a seismic design category based on their occupancy category and the design spectral response acceleration coefficients, S_{DS} and S_{D1}, determined in accordance with Section 1613.5.4 or the site-specific procedures of ASCE 7. Each building and structure shall be assigned to the more severe seismic design category in accordance with Table 1613.5.6(1) or 1613.5.6(2), irrespective of the fundamental period of vibration of the structure, T.~~

~~**TABLE 1613.3.5(1) - SEISMIC DESIGN CATEGORY BASED ON SHORT-PERIOD (0.2 second) RESPONSE ACCELERATIONS**~~

~~VALUE OF S_{DS}~~	~~RISK CATEGORY~~

1613*A*.3.5.1 Alternative seismic design category determination. *Not permitted by DSA-SS.* ~~Where S_1 is less than 0.75, the seismic design category is permitted to be determined from Table 1613.3.5(1) alone when all of the following apply:~~

~~1. In each of the two orthogonal directions, the approximate fundamental period of the structure, T_a, in each of the two orthogonal directions determined in accordance with Section 12.8.2.1 of ASCE 7, is less than 0.8 T_s determined in accordance with Section 11.4.5 of ASCE 7.~~

~~2. In each of the two orthogonal directions, the fundamental period of the structure used to calculate the story drift is less than T_s.~~

~~3. Equation 12.8-2 of ASCE 7 is used to determine the seismic response coefficient, C_s.~~

~~4. The diaphragms are rigid or are permitted to be idealized as rigid in accordance with Section 12.3.1 in ASCE 7 or for diaphragms permitted to be idealized as flexible in accordance with Section 12.3.1 of ASCE 7, the distance between vertical elements of the seismic-force-resisting system does not exceed 40 feet (12 192 mm).~~

1613*A*.3.5.2 Simplified design procedure. *Not permitted by DSA-SS.* ~~Where the alternate simplified design procedure of ASCE 7 is used, the seismic design category shall be determined in accordance with ASCE 7.~~

...

1613*A*.4.1 Additional seismic-force-resisting systems for seismically isolated structures. Add the following exception to the end of Section 17.5.4.2 of ASCE 7:

Exception: For isolated structures designed in accordance with this standard, the structural system limitations including the structural height limitations in Table 12.2-1 for ordinary steel concentrically braced frames (OCBFs) as defined in Chapter 11 and ~~ordinary~~ *intermediate*

moment frames ~~(OMFs)~~ *(IMFs)* as defined in Chapter 11 are permitted to be taken as 160 feet (48 768 mm) for structures assigned to Seismic Design Category D, E or F, provided that the following conditions are satisfied:

1. The value of R_I as defined in Chapter 17 is taken as 1.

2. For ~~OMFs and~~ OCBFs, design is in accordance with AISC 341.

3. *For IMFs, design is in accordance with AISC 341. In addition, requirements of Section E3.6e of AISC 341 shall be satisfied.*

...

SECTION 1615*A*
STRUCTURAL INTEGRITY

1615*A*.1 General. High-rise buildings that are assigned to Risk Category III or IV shall comply with the requirements of this section. Frame structures shall comply with the requirements of Section 1615*A*.3. Bearing wall structures shall comply with the requirements of Section 1615*A*.4.

1615*A*.2 Definitions. The following words and terms are defined in Chapter 2 *except those defined below shall, for the purposes of this section, have the meanings shown herein.*

...

HIGH-RISE BUILDING. *A building with an occupied floor located more than 75 feet (22 860 mm) above the base.*

...

SECTION 1616A
MODIFICATIONS TO ASCE 7

1616A.1 General. *The text of ASCE 7 shall be modified as indicated in Sections 1616A.1.1 through 1616A.1.40 ~~1616A.1.42~~.*

1616A.1.1 ASCE 7, Section 1.3. *Modify ASCE 7 Section 1.3 by adding Section 1.3.6 as follows:*

1.3.6 Structural Design Criteria. *Where design is based on ASCE 7 Chapters 16, 17, or 18, ~~and 31,~~ the ground motion, ~~wind tunnel design recommendations,~~ analysis, and design methods, material assumptions, testing requirements, and acceptance criteria proposed by the engineer shall be submitted to the enforcement agency in the form of structural design criteria for approval.* ~~relocated from above~~ ***[DSA-SS]*** *Structural design criteria including wind tunnel design recommendations are required where design is based on ASCE 7 Chapter 31.*
[DSA-SS] *Peer review requirements in ~~Section 3414A of this code~~ Section 322 of the California Existing Buildings Code shall apply to design reviews required by ASCE 7 Chapters 17 and 18.*

1616A.1.2 ASCE 7, Section 11.1.3. *Replace last paragraph of ASCE 7 Section 11.1.3 by the following:*

Buildings shall be designed and detailed in accordance with Chapter 12.

1616A.1.3 ASCE 7, Section 11.4.7. *Modify ASCE 7 Section 11.4.7 by adding the following:*

For buildings assigned to Seismic Design Category E or F, or when required by the building official, a ground motion hazard analysis shall be performed in accordance with ASCE 7 Chapter 21 as modified by Section 1803A.6 of this code.

1616A.1.4 ASCE 7, Table 12.2 -1. *Modify ASCE 7 Table 12.2-1 as follows:*

A. BEARING WALL SYSTEMS

5. ~~Reserved for CSHFD~~

17. Light-framed walls with shear panels of all other materials – Not permitted by DSA-SS.

B. BUILDING FRAME SYSTEMS

3. (Reserved for OSHPD)

8. (Reserved for OSHPD)

24. Light-framed walls with shear panels of all other materials – Not permitted by DSA-SS.

26. (Reserved for OSHPD)

C. MOMENT RESISTING FRAME SYSTEMS

2. (Reserved for OSHPD).

3. (Reserved for OSHPD).

4. (Reserved for OSHPD).

12. ~~5.~~ Cold-formed steel –special bolted moment frame - Not permitted by DSA-SS.

Exception:

1) Systems listed in this section can be used as an alternative system when pre-approved by the enforcement agency.

2) Rooftop or other supported structures not exceeding two stories in height and 10 percent of the total structure weight can use the systems in this section when designed as components per ASCE 7 Chapter 13.

3) Systems listed in this section can be used for seismically isolated buildings when permitted by Section 1613A.4.1.

1616A.1.5 ASCE 7, Section 12.2.3.1. *Replace ASCE 7 Section 12.2.3.1 Items # 1 and # 2 by the following:*

The value of the response modification coefficient, R, used for design at any story shall not exceed the lowest value of R that is used in the same direction at any story above that story. Likewise, the deflection amplification factor, C_d, and the system over strength factor, Ω_0, used for the design at any story shall not be less than the largest values of these factors that are used in the same direction at any story above that story.

1616A.1.6 ASCE 7, Section 12.2.3.2. *Modify ASCE 7 Section 12.2.3.2 by adding the following additional requirement:*

f. Where design of elements of the upper portion is governed by special seismic load combinations, the special loads shall be considered in the design of the lower portion.

1616A.1.7 *ASCE 7, Section 12.2.5.6.1 [DSA-SS] The exception after the first paragraph is not permitted by DSA-SS.*

1616A.1.8 *ASCE 7, Section 12.2.5.7.1 [DSA-SS] The exception after the first paragraph is not permitted by DSA-SS.*

1616A.1.9 *ASCE 7, Section 12.2.5.7.2 [DSA-SS] The exception after the first paragraph is not permitted by DSA-SS.*

1616A.1.10 ASCE 7, Section 12.3.3. *Modify first sentence of ASCE 7 Section 12.3.3.1 as follows:*

12.3.3.1 Prohibited Horizontal and Vertical Irregularities for Seismic Design Categories D through F. *Structures assigned to Seismic Design Category D, E, or F having horizontal structural irregularity Type 1b of Table 12.3-1 or vertical structural irregularities Type 1b, 5a or 5b of Table 12.3-2 shall not be permitted.*

1616A.1.11 ASCE 7, Section 12.7.2. *Modify ASCE 7 Section 12.7.2 by adding item 6 to read as follows:*

6. Where buildings provide lateral support for walls retaining earth, and the exterior grades on opposite sides of the building differ by more than 6 feet (1829 mm), the load combination of the seismic increment of earth pressure due to earthquake acting on the higher side, as determined

by a Geotechnical engineer qualified in soils engineering plus the difference in earth pressures shall be added to the lateral forces provided in this section.

1616A.1.12 ASCE 7, Section 12.8.1.3. *Replace ASCE 7 Section 12.8.1.3 by the following:*

~~***12.8.1.3 Maximum S_s Value in Determination of C_s.*** *For regular structures five stories or less above the base as defined in Section 11.2 and with a period, T, of 0.5 s or less, C_s is permitted to be calculated using the larger of either S_s =1.5 or 80% of the value of S_s determined per Sections 11.4.1 or 11.4.7.*~~

12.8.1.3 Maximum S_{DS} Value in Determination of C_s and E_v
The value of Cs and E_v are permitted to be calculated using a value of S_{DS} equal to 1.0, but not less than 70% of S_{DS} as defined in Section 11.4.4, provided that all of the following criteria are met:

7. *The structure does not have irregularities, as defined in Section 12.3.2;*
8. *The structure does not exceed five stories above the base as defined in Section 11.2;*
9. *The structure has a fundamental period, T, that does not exceed 0.5 seconds, as determined using Section 12.8.2;*
10. *The structure meets the requirements necessary for the redundancy factor, ρ, to be permitted to be taken as 1.0, in accordance with Section 12.3.4.2;*
11. *The site soil properties are not classified as Site Class E or F, as defined in Section 11.4.2; and*
12. *The structure is classified as Risk Category I or II, as defined in Section 1.5.1.*

[X] [Retained for OSHPD]

1616A.1.13 ASCE 7, Section 12.9.4. *Replace ASCE 7 Section 12.9.4 as follows:*

12.9.4 Scaling Design Values of Combined Response. *Modal base shears used to determine forces and drifts shall not be less than the base shears calculated using the equivalent lateral force procedure of section 12.8.*

1616A.1.14 ASCE 7, Section 12.10.2.1. *Replace ASCE 7 Exception 1. of Section 12.10.2.1 by the following:*

EXCEPTIONS:

1. The forces calculated above need not exceed those calculated using the load combinations with overstrength factor of Section 12.4.3.2 with seismic forces determined by Equation 12.10- 3 and transfer forces, where applicable.

1616A.1.15 ASCE 7, Section 12.12.3. [Reserved for OSHPD]

1616A.1.16 ASCE 7, Section 12.13.1. *Modify ASCE 7 section 12.13.1 by adding Section 12.13.1.1 as follows:*

12.13.1.1 Foundations and superstructure-to-foundation connections. *The foundation shall be capable of transmitting the design base shear and the overturning forces from the structure into the supporting soil. Stability against overturning and sliding shall be in accordance with Section 1605A.1.1.*

In addition, the foundation and the connection of the superstructure elements to the foundation shall have the strength to resist, in addition to gravity loads, the lesser of the following seismic loads:

1. *The strength of the superstructure elements.*

2. *The maximum forces that ~~would occur~~ can be delivered to the foundation in ~~the~~ a fully yielded structural system.*

3. *Forces from the Load Combinations with overstrength factor in accordance with ASCE 7 Section 12.4.3.2.*

Exceptions:

1. *Where reference standards specify the use of higher design loads.*

2. *When it can be demonstrated that inelastic deformation of the foundation and superstructure-to-foundation connection will not result in a weak story or cause collapse of the structure.*

3. *Where ~~basic structural system~~ seismic force-resisting system consists of light framed walls with shear panels, unless the reference standard specifies the use of higher design loads.*

Where the computation of the seismic overturning moment is by the equivalent lateral-force method or the modal analysis method, reduction in overturning moment permitted by section 12.13.4 of ASCE 7 may be used.

Where moment resistance is assumed at the base of the superstructure elements, the rotation and flexural deformation of the foundation as well as deformation of the superstructure-to-foundation connection shall be considered in the drift and deformation compatibility analyses.

1616A.1.17 ASCE 7, Section 13.1.3. Reserved for OSHPD

1616A.1.18 ASCE 7, Section 13.1.4. *Replace ASCE 7 Section 13.1.4 with the following:*

13.1.4 Exemptions. *The following nonstructural components are exempt from the requirements of this section:*

1. *Furniture (except storage cabinets as noted in Table 13.5-1).*
2. *Temporary or moveable (mobile) equipment.*

Exceptions:

a) Equipment shall be anchored if it is permanently attached to the building utility services such as electricity, gas, or water. For the purposes of this requirement, "permanently attached" shall include all electrical connections except plugs for duplex receptacles.

b) The enforcement agency shall be permitted to require temporary attachments for movable equipment which is usually stationed in one place and heavier than 400 pounds or has a center of mass located 4 feet (1.22 m) or more above the adjacent floor or roof level that directly support the component, when they are not in use for a period longer than 8 hours at a time.

3. Architectural, mechanical and electrical components in Seismic Design Categories D, E, or F where all of the following apply:

a. *The component is positively attached to the structure;*

b. *Flexible connections are provided at seismic separation joints and between the component and associated ductwork, piping, and conduit; and either:*

i. *The component weighs 400 pounds (1780 N) or less and has a center of mass located 4 feet (1.22 m) or less above the adjacent floor or roof level that directly support the component;*

Exception: *Special Seismic Certification requirements of this code in accordance with Section 1705A.13.3 ~~1705A.12.4~~ shall be applicable.*

or

ii. *The component weighs 20 pounds (89 N) or less or, in the case of a distributed system, 5 lb/ft (73 N/m) or less.*

Exception: *The enforcement agency shall be permitted to require attachments for equipment with hazardous contents to be shown on construction documents irrespective of weight.*

1616A.1.19 ASCE 7, Section 13.4. *Replace ASCE 7 Section 13.4.2.3 with the following:*

13.4.2.3 Prequalified ~~P~~ post-installed anchors and specialty inserts in Concrete and Masonry.

Post-installed anchors and specialty inserts in concrete that are ~~used for component anchorage shall be~~ pre-qualified for seismic applications in accordance with ACI 355.2, ACI 355.4, ICC-ES AC193, ICC-ES AC232, ~~or~~ ICC-ES AC308 or ICC-ES AC446 shall be permitted. Post-installed anchors in masonry ~~used for component anchorage~~ shall be pre-qualified for seismic applications in accordance with ICC-ES AC01, AC58, or AC106.

Use of screw anchors shall be limited to dry interior conditions and shall not be used in building enclosures. Re-use of screw anchors or screw anchor holes shall not be permitted.

Exception: [DSA-SS] *Screw anchors are not prohibited for use in building enclosures.*

1616A.1.20 ASCE 7, Section 13.4.5 *Modify ASCE 7 Section 13.4.5 by adding Section 13.4.5.1 as follows:*

~~Relocated from Section 1908A.1.1~~ ***13.4.5.1*** ~~***1908A.1.1***~~ ***Power Actuated Fasteners:*** *Power actuated fasteners qualified in accordance with ICC-ES AC 70 shall be deemed to satisfy the requirements of Section 13.4.5.* ~~*this section.*~~

Power actuated fasteners shall be permitted in seismic shear for components exempt from permit requirements by Section 1616A.1.18 of this code and for interior non-bearing non-shear wall partitions only. Power actuated fastener shall not be used to anchor seismic bracing, exterior cladding or curtain wall systems.

Exception: Power actuated fasteners in steel to steel connections prequalified for seismic application by cyclic tests in accordance with ICC-ES AC 70 shall be permitted for seismic design.

1616A.1.21 ~~***1616A.1.20***~~ ***ASCE 7, Section 13.5.6.*** *Replace ASCE 7, Section 13.5.6 with the following:*

13.5.6 Suspended Ceilings. *Suspended ceilings shall be in accordance with this section.*

13.5.6.1 Seismic Forces. *The weight of the ceiling, W_p, shall include the ceiling grid; ceiling tiles or panels; light fixtures if attached to, clipped to, or laterally supported by the ceiling grid; and other components that are laterally supported by the ceiling. W_p shall be taken as not less than 4 psf (19 N/m^2).*

The seismic force, F_p, shall be transmitted through the ceiling attachments to the building structural elements or the ceiling-structure boundary.

13.5.6.2 Seismic Design Requirements. *Suspended acoustical tile or lay-in panel ceilings shall be designed in accordance with ASTM E 580 Section 5.2.8 and the requirements of Sections 13.5.6.2.1 and 13.5.6.2.2, or be designed in accordance with Section 13.2.1.1, or be seismically qualified in accordance with Sections 13.2.5 or 13.2.6.*

13.5.6.2.1. Industry Standard Construction for Acoustical Tile or Lay-In Panel Ceilings. *Acoustical tile or lay-in panel ceilings in Seismic Design Categories D, E, and F shall be designed and installed in accordance with ASTM C635, ASTM C636, and ASTM E 580, Section 5 - Seismic Design Categories D, E, and F as modified by Section 13.5.6.2.2.*

Exception to Section 13.5.8.1 shall not be used in accordance with ASTM E 580 Section 5.5.

13.5.6.2.2 Modification to ASTM E 580. *Modify ASTM E 580 by the following:*

1. ***Exitways.*** *Lay-in ceiling assemblies in exitways of hospitals and essential services buildings shall be installed with a main runner or cross runner surrounding all sides of each piece of tile, board or panel and each light fixture or grille. A cross runner that supports another cross runner shall be considered as a main runner for the purpose of structural classification. Splices or intersections of such runners shall be attached with through connectors such as pop rivets, screws, pins, plates with end tabs or other approved connectors. Lateral force diagonal bracing may be omitted in the short or transverse direction of exitways, not exceeding 8 feet wide, when perimeter support in accordance with ASTM E 580 Sections 5.2.2 and 5.2.3 is provided and the perimeter wall laterally supporting the ceiling in the short or transverse direction is designed to carry the ceiling lateral forces. The connections between the ceiling grid, wall angle and the wall shall be designed to resist the ceiling lateral forces.*

2. ***Corridors and Lobbies.*** *Expansion joints shall be provided in the ceiling at intersections of corridors and at junctions of corridors and lobbies or other similar areas.*

3. ***Lay-in panels.*** *Metal panels and panels weighing more than 1/2 pounds per square foot (24 N/m^2) other than acoustical tiles shall be positively attached to the ceiling suspension runners.*

4. ***Lateral force bracing.*** *Lateral force bracing is required for all ceiling areas except that they shall be permitted to be omitted in rooms with floor areas up to 144 square feet when perimeter support in accordance with ASTM E 580 Sections 5.2.2 and 5.2.3 are provided and perimeter walls are designed to carry the ceiling lateral forces. The connections between the ceiling grid, wall angle and the wall shall be designed to*

resist the ceiling lateral forces. Horizontal restraint point spacing shall be justified by analysis or test and shall not exceed a spacing of 12 feet by 12 feet. ~~Restraint~~ Bracing wires shall be secured with four tight twists in 1 1/2 inches, or an approved alternate connection.

5. Ceiling support and bracing wires shall be spaced a minimum of 6" from all pipes, ducts, conduits and equipment that are not braced for horizontal forces, unless approved otherwise by the building official.

~~5. **Ceiling fixtures.** Fixtures installed in acoustical tile or lay-in panel ceilings shall be mounted in a manner that will not compromise ceiling performance.~~

~~All recessed or drop-in light fixtures and grilles shall be supported directly from the fixture housing to the structure above with a minimum of two 12 gage wires located at diagonally opposite corners. Leveling and positioning of fixtures may be provided by the ceiling grid. Fixture support wires may be slightly loose to allow the fixture to seat in the grid system. Fixtures shall not be supported from main runners or cross runners if the weight of the fixtures causes the total dead load to exceed the deflection capability of the ceiling suspension system.~~

~~Fixtures shall not be installed so that the main runners or cross runners will be eccentrically loaded.~~

~~Surface-mounted fixtures shall be attached to the main runner with at least two positive clamping devices made of material with a minimum of 14 gage. Rotational spring catches do not comply. A 12 gage suspension wire shall be attached to each clamping device and to the structure above.~~

~~6. **Partitions.** Where the suspended ceiling system is required to provide lateral support for the permanent or relocatable partitions, the connection of the partition to the ceiling system, the ceiling system members and their connections, and the lateral force bracing shall be designed to support the reaction force of the partition from prescribed loads applied perpendicular to the face of the partition. Partition connectors, the suspended ceiling system and the lateral force bracing shall all be engineered to suit the individual partition application and shall be shown or defined in the drawings or specifications.~~

1616A.1.22 ~~***1616A.1.21.***~~ ~~**[Reserved for OSHPD]**~~

1616A.1.23 ~~1616A.1.22~~ ASCE 7 Tables 13.5-1 and 13.6-1. *Modify ASCE 7, Tables 13.5-1 & 13.6-1 by the following:*

1. *For components with R_p greater than 1.5, overstrength factor (Ω_0) for design of anchorage to concrete and vibration isolators along with associated snubbers/connections shall be 2.0.*
2. *For Exterior Nonstructural Wall Elements and Connections, overstrength factor (Ω_0) shall be 1.0.*

1616A.1.24 ~~1616A.1.23~~ ASCE 7, Section 13.6.5. *Modify ASCE 7, Section 13.6.5.6 Exceptions 1 and 2 as follows:*

Exceptions:

1. *Design for the seismic forces of Section 13.3 shall not be required for raceways where either:*
   a. *Trapeze assemblies are used to support raceways and the total weight of the raceway supported by trapeze assemblies is less than 10 lb/ft (146 N/m), or*
   b. *The raceway is supported by hangers and each hanger in the raceway run is 12 in. (305 mm) or less in length from the raceway support point to the supporting structure. Where rod hangers are used with a diameter greater than 3/8 inch, they shall be equipped with swivels to prevent inelastic bending in the rod.*
2. *Design for the seismic forces of Section 13.3 shall not be required for conduit, regardless of the value of I_p, where the conduit is less than 2.5 in. (64 mm) trade size.*

1616A.1.25 ~~1616A.1.24~~ ASCE 7, Section 13.6.7. *Replace ASCE 7, Section 13.6.7 Exceptions 1 and 2 with the following:*

Exceptions:

The following exceptions pertain to ductwork not designed to carry toxic, highly toxic, or flammable gases or used for smoke control:

1. Design for the seismic forces of Section 13.3 shall not be required for ductwork where either:

a. *Trapeze assemblies are used to support ductwork and the total weight of the ductwork supported by trapeze assemblies is less than 10 lb/ft (146 N/m); or*

b. *The ductwork is supported by hangers and each hanger in the duct run is 12 in. (305 mm) or less in length from the duct support point to the supporting structure. Where rod hangers are used with a diameter greater than 3/8 inch, they shall be equipped with swivels to prevent inelastic bending in the rod.*

2. Design for the seismic forces of Section 13.3 shall not be required where provisions are made to avoid impact with larger ducts or mechanical components or to protect the ducts in the event of such impact; and HVAC ducts have a cross-sectional area of 6 ft^2 (0.557 m^2) or less, or weigh 10 lb/ft (146 N/m) or less.

~~***1616A.1.25 ASCE 7, Section 13.6.8.2.*** *Modify ASCE 7, Section 13.6.8.2 by adding Exception as follows:~~

~~*Exception: Anchor capacities shall be determined in accordance with material chapters of this code in lieu of using those in NFPA 13 and demand shall be based on ASCE 7.*~~

1616A.1.26 ASCE 7, Section 13.6.8.3. *Replace ASCE 7, Section 13.6.8.3 with the following:*

13.6.8.3 Exceptions. *Design of piping systems and attachments for the seismic forces of Section 13.3 shall not be required where one of the following conditions apply:*

1. *Trapeze assemblies are used to support piping whereby no single pipe exceeds the limits set forth in 3a. or b. below and the total weight of the piping supported by the trapeze assemblies is less than 10 lb/ft (146 N/m).*

2. *The piping is supported by hangers and each hanger in the piping run is 12 in. (305 mm) or less in length from the top of the pipe to the supporting structure. Where pipes are supported on a trapeze, the trapeze shall be supported by hangers having a length of 12 in. (305 mm) or less. Where rod hangers are used with a diameter greater than 3/8 inch, they shall be equipped with swivels to prevent inelastic bending in the rod.*

3. *Piping having an R_p in Table 13.6-1 of 4.5 or greater is used and provisions are made to avoid impact with other structural or nonstructural components or to protect the piping in the event of such impact and where the following size requirements are satisfied:*

    a. For Seismic Design Categories D, E, or F and values of I_p greater than one, the nominal pipe size shall be 1 inch (25 mm) or less.
    b. For Seismic Design Categories D, E, or F, where I_p = 1.0 the nominal pipe size shall be 3 inches (80 mm) or less.

The exceptions above shall not apply to elevator piping.

1616A.1.27 ASCE 7, Section 13.6.10.1. *Modify ASCE 7 Section 13.6.10.1 by adding Section 13.6.10.1.1 as follows:*

13.6.10.1.1 Elevators guide rail support. *The design of guide rail support-bracket fastenings and the supporting structural framing shall use the weight of the counterweight or maximum weight of the car plus not less than 40 percent of its rated load. The seismic forces shall be assumed to be distributed one third to the top guiding members and two thirds to the bottom guiding members of cars and counterweights, unless other substantiating data are provided. In addition to the requirements of ASCE 7 Section 13.6.10.1, the minimum seismic forces shall be 0.5g acting in any horizontal direction.*

1616A.1.28 ASCE 7, Section 13.6.10.4. *Replace ASCE 7, Section 13.6.10.4 as follows:*

13.6.10.4 Retainer plates. *Retainer plates are required at the top and bottom of the car and counterweight, except where safety devices acceptable to the enforcement agency are provided which meet all requirements of the retainer plates, including full engagement of the machined portion of the rail. The design of the car, cab stabilizers, counterweight guide rails and counterweight frames for seismic forces shall be based on the following requirements:*

1. *The seismic force shall be computed per the requirements of ASCE 7 13.6.10.1. The minimum horizontal acceleration shall be 0.5g for all buildings.*

2. *W_p shall equal the weight of the counterweight or the maximum weight of the car plus not less than 40 percent of its rated load.*

3. *With the car or counterweight located in the most adverse position, the stress in the rail shall not exceed the limitations specified in these regulations, nor shall the deflection of the rail relative to its supports exceed the deflection listed below:*

RAIL SIZE (weight per foot of length, pounds)	*WIDTH OF MACHINED SURFACE (inches)*	*ALLOWABLE RAIL DEFLECTION (inches)*
8	*1 ¼*	*0.20*
11	*1 ½*	*0.30*
12	*1 ¾*	*0.40*
15	*1 31/32*	*0.50*
18 ½	*1 31/32*	*0.50*
22 ½	*2*	*0.50*
30	*2 ¼*	*0.50*

For SI: 1 inch = 25 mm, 1 foot = 305 mm.

NOTE: Deflection limitations are given to maintain a consistent factor of safety against disengagement of retainer plates from the guide rails during an earthquake.

4. *Where guide rails are continuous over supports and rail joints are within 2 feet (610 mm) of their supporting brackets, a simple span may be assumed.*

5. *The use of spreader brackets is allowed.*

6. *Cab stabilizers and counterweight frames shall be designed to withstand computed lateral load with a minimum horizontal acceleration of 0.5g.*

1616A.1.29 ASCE 7, Section 16.1.4. *Remove ASCE 7 Sections 16.1.4.1 and 16.1.4.2 and modify Section 16.1.4 by the following:*

Maximum scaled base shears used to determine forces and drifts shall not be less than the base shears calculated using the equivalent lateral force procedure of Section 12.8.

1616A.1.30 ASCE 7, Section 16.2.2. *Modify ASCE 7 Section 16.2.2 by adding the following:*

Requirements of this section shall be deemed to be satisfied for new buildings, using acceptance criteria in Section 16.2.4.2, by the nonlinear modeling parameters in ASCE 41.

1616A.1.31 ASCE 7, Section 16.2.3. *Modify ASCE 7 Section 16.2.3 by adding the following:*

Requirements of this section shall be deemed to be satisfied by using load combinations in Sections 12.4.2.3 and 12.4.3.2 with 25% of the required live loads.

1616A.1.32 ASCE 7, Section 16.2.4. *Modify ASCE 7 Section 16.2.4 by the following:*

a) Where site is located within 3.1 miles (5 km) of an active fault at least seven ground motions shall be analyzed and response parameters shall be based on larger of the average of the maximum response with ground motions applied as follows:

1. *Each of the ground motions shall have their maximum component at the fundamental period aligned in one direction.*
2. *Each of the ground motion's maximum component shall be rotated orthogonal to the previous analysis direction.*

b) Where site is located more than 5 km from an active fault at least 10 ground motions shall be analyzed. The ground motions shall be applied such that one-half shall have their maximum component aligned in one direction and the other half aligned in the orthogonal direction. The average of the maximum response of all the analyses shall be used for design.

1616A.1.33 ASCE 7, Section 16.2.4.1. [Reserved for OSHPD]

1616A.1.34 ASCE 7, Section 16.2.4.2. [Reserved for OSHPD]

~~***1616A.1.35 ASCE 7, Section 17.2.1.*** *Modify ASCE 7, Section 17.2.1 by adding the following:*~~

~~*The importance factor, I_p, for parts and portions of a seismic-isolated building shall be the same as that required for a fixed-base building of the same risk category.*~~

1616A.1.35 ~~***1616A.1.36***~~ ***ASCE 7 Section 17.2.4.7.*** *Modify ASCE 7, Section 17.2.4.7 by adding the following:*

The effects of uplift ~~and/or rocking~~ shall be explicitly accounted for ~~in the analysis and~~ in the testing of the isolator units.

~~***1616A.1.37 ASCE 7, Section 17.2.5.2.*** *Modify ASCE 7, Section 17.2.5.2 by adding the following:~~

~~*The separation requirements for the building above the isolation system and adjacent buildings shall be the sum of the factored displacements for each building. The factors to be used in determining separations shall be:*~~

~~1. *For seismically isolated buildings, the deformation resulting from the analyses using the Risk-Targeted Maximum Considered Earthquake unmodified by R_I.*~~

~~2. *For fixed based buildings, C_d times the elastic deformations resulting from an equivalent static analysis using the seismic base shear computed via ASCE 7, Section 12.8.*~~

1616A.1.36 ~~***1616A.1.38***~~ ***ASCE 7, Section 17.4.*** *Modify ASCE 7, Section 17.4.2 by adding the following:*

17.4.2.3 Linear Procedure. *Linear procedures shall not be used in Seismic Design Category E & F structures. ~~be limited to structures located at sites where mapped value of S_1 is less than 0.6g.~~*

1616A.1.37 ~~***1616A.1.39***~~ ***ASCE 7, Section*** *17.6 Modify ASCE 7, Section 17.6 by adding the following:*

17.6.1.1 Minimum Seismic Force. *For the response spectrum and linear response history procedures, V_b and V_s, shall not be taken less than those calculated in accordance with Equations 17.5-7 and 17.5-8.*

1616A.1.38 ~~***1616A.1.40***~~ ***ASCE 7, Section 18.3.1.*** *Modify ASCE 7, Section 18.3.1 by replacing the third paragraph with the following:*

If the calculated force in an element of the seismic force resisting system does not exceed 1.5 times its nominal strength for the Risk-Targeted Maximum Considered Earthquake (MCE_R) nor its nominal strength for the Design Earthquake (DE), the element is permitted to be modeled as linear. For this section, the MCE_R and DE response shall be based on largest response due to a single ground motion and not the average response of suite of ground motions.

1616A.1.39 ~~*1616A.1.41*~~ [Reserved for OSHPD]

1616A.1.40 ~~*1616A.1.42*~~ [Reserved for OSHPD]

[All existing amendments that are not revised above shall continue without any change]

CHAPTER 17*A*

SPECIAL INSPECTIONS AND TESTS

Adopt and/or codify chapter as amended below:

PROPOSED ADOPTION	DSA-SS	DSA-SS/CC	Comments
Adopt entire chapter without amendments			
Adopt entire chapter as amended	X	X	
Adopt only those sections listed below			

[All existing California amendments that are not revised below shall continue without change]

SECTION 1701*A*

GENERAL

1701*A*.1 Scope. The provisions of this chapter shall govern the quality, workmanship and requirements for materials covered. Materials of construction and tests shall conform to the applicable standards listed in this code.

1701A.1.1 Application. *The scope of application of Chapter 17A is as follows:*

1. ***[DSA-SS & DSA-SS/CC]*** *Structures regulated by the Division of the State Architect-Structural Safety, which include those applications listed in Sections 1.9.2.1 (DSA-SS), and 1.9.2.2*

(DSA-SS/CC). These applications include public elementary and secondary schools, community colleges and state-owned or state leased essential services buildings

2. [Reserved for OSHPD]

Exception: [Reserved for OSHPD]

1701A.1.2 Amendments in this chapter. *DSA-SS adopts this chapter and all amendments.*

Exception: *Amendments adopted by only one agency appear in this chapter preceded with the appropriate acronym of the adopting agency, as follows:*

1. Division of the State Architect - Structural Safety:
[DSA-SS] *For applications listed in Section 1.9.2.1.*
[DSA-SS/CC] *For applications listed in Section 1.9.2.2.*

2. [Reserved for OSHPD]

1701A.1.3 Reference to other chapters.

1701A.1.3.1 [DSA-SS/CC] *Where reference within this chapter is made to sections in Chapters 16A, 19A, 21A, and 22A, ~~and 34A,~~ the provisions in Chapters 16, 19, 21, and 22, ~~and 34~~ respectively, shall apply instead.*

...

1701A.3 ~~1701A.4~~ Special ~~inspectors~~ inspections and tests. [Reserved for OSHPD]

1701A.4 ~~1701A.5~~ Special ~~inspectors~~ inspections and tests. [DSA-SS & DSA-SS/CC] *In addition to the project inspector required by the California Administrative Code (CCR, Title 24, Part 1), Section 4-333, the owner shall employ one or more approved agencies ~~special inspectors~~ to provide special inspections and tests as required by the enforcement agency during construction on the types of work*

listed under Chapters 17A, 18A, 19A, 20, 21A, 22A, 23, and 25 and ~~34 of~~ the California Existing Building Code and noted in the special test, inspection and observation plan required by Section 4-335 of the California Administrative Code.

SECTION 1702A
DEFINITIONS

1702A.1 Definitions. The following terms are defined in Chapter 2 *except those defined below which shall, for the purposes of this ~~section~~ chapter, have the meanings shown herein.*

...

PROJECT INSPECTOR. [DSA-SS, DSA-SS/CC] *The person approved to provide inspection in accordance with the California Administrative Code, Section 4-333(b). The term "project inspector" is synonymous with "inspector of record."*

...

Quality Assurance *(QA). Special inspections and testing provided by an approved agency employed by the Owner. Project specific testing required by approved construction documents shall be performed by the approved agency responsible for Quality Assurance (QA), unless approved otherwise by the building official.*

Quality Control (QC). *Inspections and materials/functionality testing provided by the fabricator, erector, manufacturer or other responsible contractor as applicable.*

...

SPECIAL INSPECTION.

Continuous special inspection. *The full-time observation of work requiring special inspection by a special inspector who is present in the area where the work is being performed.*

Periodic special inspection. *The part-time or intermittent observation of work requiring special*

inspection by a special inspector who is present in the area where the work has been or is being performed and at the completion of the work.

...

SECTION 1704*A*
SPECIAL INSPECTIONS, AND TESTS, CONTRACTOR RESPONSIBILITY AND STRUCTURAL OBSERVATION

...

1704*A*.2 Special inspections and tests. Where application is made to the building official for construction as specified in Section 105, the owner ~~or the owner's authorized agent, other than contractor,~~ shall employ one or more *approved agencies* to provide special inspections and tests during construction on the types of work specified in Section 1705*A* and identify the approved agencies to the building official. These special inspections and tests are in addition to the inspections by the building official that are identified in Section 110.

Exceptions:

1. *Special inspections* and tests are not required for construction of a minor nature or as warranted by conditions in the jurisdiction as *approved* by the *building official*.
2. *[DSA-SS, DSA-SS/CC] Reference to Section 105 and Section 110 shall be to the California Administrative Code instead.*
2. ~~Unless otherwise required by the building official, special inspections are not required for Group U occupancies that are accessory to a residential occupancy including, but not limited to, those listed in Section 312.1.~~
3. ~~Special inspections are not required for portions of structures designed and constructed in accordance with the cold-formed steel light-frame construction provisions of Section 2211.7 or the conventional light-frame construction provisions of Section 2308.~~
4. ~~The contractor is permitted to employ the approved agencies where the contractor is also the owner.~~

...

1704A.2.3 Statement of special inspections. The applicant shall submit a statement of *special inspections prepared by the registered design professional in responsible charge* in accordance with Section 107.1as a condition for ~~permit issuance~~ *construction documents review*. This statement shall be in accordance with Section 1704A.3.

[DSA-SS, DSA-SS/CC] Reference to Section 107.1 shall be to the California Administrative Code instead.

~~**Exception:** A statement of *special inspections* is not required for portions of structures designed and constructed in accordance with the cold-formed steel light frame construction provisions of Section 2211.7 or the conventional light-frame construction provisions of Section 2308.~~

1704A.2.4 Report requirement. *The inspector(s) of record and* ~~A~~ approved agencies shall keep records of special inspections and tests. The *inspector of record and* approved agency shall submit reports of special inspections and tests to the building official, and to the registered design professional in responsible charge *as required by the California Administrative Code*. Reports shall indicate that work inspected or tested was or was not completed in conformance to approved construction documents *as required by the California Administrative Code and this code.* ~~*Title 24 Parts 1 and 2.*~~ Discrepancies shall be brought to the immediate attention of the contractor for correction. If they are not corrected, the discrepancies shall be brought to the attention of the building official and to the registered design professional in responsible charge prior to the completion of that phase of the work. A final report documenting required special inspections and tests, and correction of any discrepancies noted in the inspections or tests, shall be submitted at a point in time agreed upon prior to the start of work by the owner or owner's authorized agent to the building official.

1704A.2.5 Special inspection of fabricated items. Where fabrication of structural, load-bearing or lateral load resisting members or assemblies is being conducted on the premises of a fabricator's shop, *special inspection* of the fabricated items shall be performed during fabrication.

Exceptions: ~~(Reserved for OSHPD)~~

~~1) Special inspections during fabrication are not required where the fabricator maintains approved detailed fabrication and quality control procedures that provide a basis for control of the workmanship and the fabricator's ability to conform to *approved construction documents* and this~~

~~code. Approval shall be based upon review of fabrication and quality control procedures and periodic inspection of fabrication practices by the building official.~~

~~2) *Special inspections* are not required where fabricator is registered and approved in accordance with Section 1704.2.5.1.~~

~~**1704.2.5.1 Fabricator approval.** *Special inspections* during fabrication are not required where the work is done on the premises of a fabricator registered and *approved* to perform such work without *special inspection*. Approval shall be based upon review of the fabricator's written procedural and quality control manuals and periodic auditing of fabrication practices by an *approved* agency. At completion of fabrication, the *approved* fabricator shall submit a *certificate of compliance* to the owner or owner's authorized agent for submittal to the *building official* as specified in Section 1704.5 stating that the work was performed in accordance with the *approved construction documents*.~~

...

1704*A*.3.2 Seismic requirements in the statement of special inspections. Where Section 1705*A*.12 or 1705*A*.13 specifies *special inspections* or tests for seismic resistance, the statement of special inspections shall identify the *equipment/components that require special seismic certification* ~~designated seismic systems~~ and seismic force resisting systems that are subject to *special inspections* or tests.

...

1704*A*.4 Contractor responsibility. Each contractor responsible for the construction of a main wind- or seismic force resisting system, *installation of equipment/components requiring special seismic certification* ~~designated seismic system~~ or a wind- or seismic-resisting component listed in the statement of special inspections shall submit a written statement of responsibility to the *building official* and the owner or the Owner's authorized agent prior to the commencement of work on the system or component. The contractor's statement of responsibility shall contain acknowledgement of awareness of the special requirements contained in the statement of *special inspections*.

1704A.5 Submittal to the Building official. In addition to the submittal of reports of *special inspections* and tests in accordance with Section 1704A.2.4, reports and certificates shall be submitted by the owner or owner's authorized agent to the building official for each of the following:

1. ~~[Retained for OSHPD]~~ ~~*Certificate of Compliance* for the fabrication of structural, load-bearing or lateral load-resisting members or assemblies on the premises of a registered and *approved fabricator* in accordance with Section 1704.2.5.1.~~
2. *Certificate of compliance* for the ~~seismic qualification~~ *manufacturer's certification* of non-structural components, supports and attachments in Section 1705*A*.13.2.
3. *Certificate of compliance* for the ~~designated seismic system~~ *equipment/components requiring special seismic certification* in accordance with Section 1705*A*.13.3.

...

1704*A*.6 Structural observations. ~~Where required by the provisions of Section 1704.6.1 or 1704.6.2, t~~ The owner ~~or the owner's authorized agent~~ shall employ a *registered design professional* to perform structural observations. Structural observation does not include or waive the responsibility for inspection in Section 110 or the special inspections in Section 1705A or other sections of this code.

Prior to the commencement of observations, the structural observer shall submit to the *building official* a written statement identifying the frequency and extent of structural observations.

At the conclusion of the work included in the permit, the structural observer shall submit to the *building official* a written statement that the site visits have been made and identify any reported deficiencies that, to the best of the structural observer's knowledge, have not been resolved.

[DSA-SS, DSA-SS/CC] Reference to Section 110 shall be to the California Administrative Code instead.

~~**1704.6.1 Structural observations for seismic resistance.** Structural observations shall be provided for those structures assigned to *Seismic Design Category* D, E or F where one or more of the following conditions exist:~~

~~1. The structure is classified as *Risk Category* III or IV.~~

~~2. The height of the structure is greater than 75 feet (22 860 mm) above the base as defined in ASCE 7.~~

~~3. The structure is assigned to *Seismic Design Category* E, is classified as *Risk Category* I or II, and is greater than two *stories above grade plane*.~~

~~4. When so designated by the *registered design professional* responsible for the structural design.~~

~~5. When such observation is specifically required by the *building official*.~~

~~**1704.6.2 Structural observations for wind requirements.** Structural observations shall be provided for those structures sited where *Vasd* as determined in accordance with Section 1609.3.1 exceeds 110 mph (49 m/sec), where one or more of the following conditions exist:~~

~~1. The structure is classified as *Risk Category* III or IV.~~

~~2. The *building height* is greater than 75 feet (22 860 mm).~~

~~3. When so designated by the *registered design professional* responsible for the structural design.~~

~~4. When such observation is specifically required by the *building official*.~~

SECTION 1705*A*
REQUIRED SPECIAL INSPECTIONS AND TESTS

...

1705A.2.1 Structural steel. *Special inspections* and nondestructive testing of structural steel elements in buildings, structures and portions thereof shall be in accordance with the quality assurance ~~inspection~~ requirements ~~of AISC 360~~ *of this section, ~~and~~ Chapter 22A* *and quality control requirements of AISC 360, AISC 341 and AISC 358*.

Exception: *Special inspection* of railing systems composed of structural steel elements shall be limited to welding inspection of welds at the base of cantilevered rail post.

AISC 360, Chapter N and AISC 341, Chapter J are adopted, except as noted below:

The following provisions of AISC 360, Chapter N are not adopted:

1. *N4., Item 2. (Quality Assurance Inspector Qualifications)*
2. *N5., Item 2. (Quality Assurance)*
3. ***[DSA-SS, DSA-SS/CC]*** *N5., Item 3. (Coordinated Inspection)*

4. ***[DSA-SS, DSA-SS/CC]*** *N5., Item 4. (Inspection of Welding)*
5. ***[DSA-SS, DSA-SS/CC]*** *N7 (Approved Fabricators and Erectors)*
6. ***[DSA-SS, DSA-SS/CC]*** *N8 (Nonconforming Material and Workmanship)*

In addition to the quality assurance inspection requirements contained in AISC 360, Section N5 ~~Item 6 (Inspection of High-Strength Bolting)~~ (Minimum Requirements for Inspection of Structural Steel Buildings), the requirements of Table 1705A.2.1 of the California Building Code shall apply.

In addition to the quality assurance requirements contained in AISC 360, Section N6 (Minimum Requirements for Inspection of Composite Construction), the requirements of Table 1705A.2.1 of the California Building Code shall apply.

In addition to the quality assurance requirements contained in AISC 341, Chapter J, Section J5 (Inspection Tasks), the requirements of Section 1704A.3 and Table 1705A.2.1 of the California Building Code shall apply.

TABLE 1705A.2.1 REQUIRED VERIFICATION AND INSPECTION OF STEEL CONSTRUCTION

VERIFICATION AND INSPECTION	*CONTINUOUS*	*PERIODIC*	*REFERENCED STANDARD*[a]	*CBC REFERENCE*
1. Material verification of high-strength bolts, nuts and washers:				
a. Identification markings to conform to ASTM standards specified in the approved construction documents.	-	*X*	*AISC 360, Section A3.3 and applicable ASTM material standards*	-
b. Manufacturer's certificate of compliance required.	-	*X*	-	-
2. Inspection of high-strength bolting:				
a. Snug-tight joints.	-	*X*	*AISC 360,*	-

b. Pretensioned and slip-critical joints using turn-of-nut with matchmarking, twist-off bolt or direct tension indicator methods of installation.	-	X	*Section M2.5*	
c. Pretensioned and slip-critical joints using turn-of-nut without matchmarking or calibrated wrench methods of installation.	X	-		
3. Material verification of structural steel and cold-formed steel deck:				
a. For structural steel, identification markings to conform to AISC 360.	-	X	*AISC 360, Section A3.1*	*2203A.1*
b. For other steel, identification markings to conform to ASTM standards specified in the approved construction documents.	-	X	*Applicable ASTM material standards*	
c. Manufacturer's certified test reports.	-	X		
4. Material verification of weld filler materials:				
a. Identification markings to conform to AWS specification in the approved construction documents.	-	X	*AISC 360, Section A3.5 and applicable AWS A5 documents*	-
b. Manufacturer's certificate of compliance required.	-	X	-	-
5. Inspection of welding:				
a. Structural steel and cold-formed steel deck:				
1) Complete and partial joint penetration groove welds.	X	-	*AWS D1.1 AWS D1.8*	*1705A.2.1*
2) Multipass fillet welds.	X	-		
3) Single-pass fillet welds > $^5/_{16}$"	X	-		
4) Plug and slot welds.	X	-		
5) Single-pass fillet welds ≤ $^5/_{16}$"	-	X		
6) Floor and roof deck welds.	-	X	*AWS D1.3*	

TABLE 1705A.2.1- continued

REQUIRED VERIFICATION AND INSPECTION OF STEEL CONSTRUCTION

VERIFICATION AND INSPECTION	*CONTINUOUS*	*PERIODIC*	*REFERENCED STANDARD[a]*	*CBC REFERENCE*
b. Reinforcing steel:				
1) Verification of weldability of reinforcing steel other than ASTM A 706.	-	X	*AWS D1.4 ACI 318: Sections 26.6.4.1, 18.2.8, 25.5.7.4 ~~3.5.2~~*	-
2) Reinforcing steel resisting flexural and axial forces in intermediate and special moment frames, and boundary elements of special structural walls of concrete and shear reinforcement.	X	-		
3) Shear reinforcement.	X	-		
4) Other reinforcing steel.	-	X		
6. Inspection of steel frame joint details for compliance:				
a. Details such as bracing and stiffening.	-	X	-	*1705A.2.1 ~~1705A.2.2~~*
b. Member locations.	-	X		
c. Application of joint details at each connection.	-	X		

For SI: 1 inch = 25.4 mm.

a. Where applicable, see also Section ~~1705A.11~~ 1705A.12, Special inspection for seismic resistance

1705A.2.2 Cold-formed steel deck. *Special inspections* ~~and qualification of welding special inspectors~~ for cold formed steel floor and roof deck shall be in accordance with the quality assurance inspection requirements of SDI QA/QC.

Deck weld special inspection shall also satisfy requirements in Table 1705A.2.1 and Section 1705A.2.5.

...

1705A.2.3.1 ~~***1705A.2.2.3***~~ ***Steel joist and joist girder inspection.*** *Special inspection is required during the manufacture and welding of steel joists or joist girders. The approved agency* ~~*special inspector*~~ *shall verify that proper quality control procedures and tests have been employed for all materials and the manufacturing process, and shall perform visual inspection of the finished product. The approved agency* ~~*special inspector*~~ *shall place a distinguishing mark, and/or tag with this distinguishing mark, on each inspected joist or joist girder. This mark or tag shall remain on the joist or joist girder throughout the job site receiving and erection process.*

...

1705A.2.4.1 ~~***1705A.2.2.4***~~ ***Light-framed steel truss inspection.*** *The manufacture of cold-formed light framed steel trusses shall be continuously inspected by an approved agency* ~~*a qualified special inspector approved by the enforcement agency*~~*. The approved agency* ~~*special inspector*~~ *shall verify conformance of materials and manufacture with approved plans and specifications. The approved agency* ~~*special inspector*~~ *shall place a distinguishing mark, and/or tag with this distinguishing mark, on each inspected truss. This mark or tag shall remain on the truss throughout the job site receiving and erection process.*

1705A.2.5 ~~***1705A.2.2.5***~~ ***Inspection of structural welding.*** *Inspection of all shop and field welding operations shall be made by a qualified welding inspector approved by the enforcement agency. The minimum requirements for a qualified welding inspector shall be as those for an AWS Certified Welding Inspector (CWI), as defined in the provisions of the AWS QC1.* ~~*All welding inspectors shall be as approved by the enforcement agency*~~*.*

Exception: [redacted]

The welding inspector shall make a systematic daily record of all welds. In addition to other records, this record shall include:

1. *Identification marks of welders.*

2. *List of defective welds.*

3. Manner of correction of defects.

The welding inspector shall check the material, details of construction and procedure, as well as workmanship of the welds. The inspector shall verify that the installation of end-welded stud shear connectors is in accordance with the requirements of AWS D1.1 and the approved plans and specifications. The ~~inspector~~ approved agency shall furnish the architect, structural engineer, and the enforcement agency with a verified report, that the welding ~~is proper and~~ has been done in conformance ~~conformity~~ with AWS D1.1, D1.3, D1.8, and the approved construction documents.

1705A.3 Concrete construction. *Special inspections* and tests of concrete construction shall be performed in accordance with this section and Table 1705*A*.3.

Exception: *Special inspections and tests* shall not be required for:

~~1. Isolated spread concrete footings of buildings three stories or less above *grade plane* that are fully supported on earth or rock.~~
~~2. Continuous concrete footings supporting walls of buildings three stories or less above *grade plane* that are fully supported on earth or rock where:~~
~~2.1. The footings support walls of light-frame construction;~~
~~2.2. The footings are designed in accordance with Table 1809.7; or~~
~~2.3. The structural design of the footing is based on a specified compressive strength, f'_c, no greater than 2,500 pounds per square inch (psi) (17.2 MPa), regardless of the compressive strength specified in the approved *construction documents* or used in the footing construction.~~
~~3. Nonstructural concrete slabs supported directly on the ground, including prestressed slabs on grade, where the effective prestress in the concrete is less than 150 psi (1.03 MPa).~~
~~4. Concrete foundation walls constructed in accordance with Table 1807.1.6.2.~~
~~5. C~~ concrete patios, driveways and sidewalks, on grade.

...

1705A.3.3 ~~1705A.3.2~~ Batch plant inspection. *Except as provided under this ~~S~~ section ~~1705A.3.3~~, the quality and quantity of materials used in transit-mixed concrete and in batched aggregates shall be continuously inspected by an approved agency ~~special inspector~~ at the location where materials are measured.*

1705A.3.3.1 ~~***1705A.3.3***~~ ***Waiver of continuous batch plant inspection.*** *Continuous batch plant inspection may be waived by the registered design professional, subject to approval by the enforcement agency under either of the following conditions:*

1. *The concrete plant complies fully with the requirements of ASTM C 94, Sections 9 ~~8~~ and 10 ~~9~~, and has a current certificate from the National Ready Mixed Concrete Association or another agency acceptable to the enforcement agency. The certification shall indicate that the plant has automatic batching and recording capabilities.*

2. *For single-story light-framed construction (without basement or retaining wall higher than 6' in height measured from bottom of footing to top of wall) ~~buildings~~ and isolated foundations supporting equipment only, where deep foundation elements are not used.~~, where the specified compressive strength f'c of the concrete delivered to the jobsite is 3,500 psi (24.13 MPa) and where the f'c used in design is not greater than 3,000 psi (20.68 MPa)~~.*

When continuous batch plant inspection is waived, the following ~~periodic inspection~~ requirements shall apply and shall be described in the construction documents:

1. *~~Qualified technician of the~~ An approved agency ~~testing laboratory~~ shall check the first batch at the start of the day to verify materials and proportions conform to the approved mix design.*

2. *A ~~L~~ licensed weighmaster shall ~~to~~ positively identify quantity of materials ~~as to quantity~~ and certify ~~to~~ each load by a batch ticket.*

3. *Batch tickets, including material quantities and weights shall accompany the load, shall be transmitted to the inspector of record by ~~a~~ the truck driver with load identified thereon. The load shall not be placed without a batch ticket identifying the mix. The inspector of record shall ~~will~~ keep a daily record of placements, identifying each truck, its load, and time of receipt at the jobsite, and approximate location of deposit in the structure and shall maintain ~~will transmit~~ a copy of the daily record as required by ~~to~~ the enforcement agency.*

1705A.3.3.2 Batch plant inspection not required. [DSA-SS, DSA-SS/CC] *Batch plant inspection is not required for any of the following conditions, provided they are identified on the approved construction documents and the licensed weighmaster and batch ticket requirements of Section 1705A.3.3.1 are implemented:*

1. *Site flatwork*
2. *Unenclosed site structures, including but not limited to lunch or car shelters, bleachers, solar structures, flag or light poles, or retaining walls.*
3. *Controlled low-strength material backfill*
4. *Single-story relocatable buildings less than 2,160 square feet.*

1705A.3.4 Inspection of prestressed concrete.

1. *In addition to the general inspection required for concrete work, all plant fabrication of prestressed concrete members or tensioning of posttensioned members constructed at the site shall be continuously inspected by an inspector specially approved for this purpose by the enforcement agency.*

2. *The prestressed concrete plant fabrication inspector shall check the materials, equipment, tensioning procedure and construction of the prestressed members and prepare daily written reports. The ~~inspector~~ approved agency shall make a verified report identifying the members by mark and shall include such pertinent data as lot numbers of tendons used, tendon jacking forces, age and strength of concrete at time of tendon release and such other information that may be required.*

3. *The inspector of prestressed members posttensioned at the site shall check the condition of the prestressing tendons, anchorage assemblies and concrete in the area of the anchorage, the tensioning equipment and the tensioning procedure and prepare daily written reports. The ~~inspector~~ approved agency shall make a verified report of the prestressing operation identifying the members or tendons by mark and including such pertinent data as the initial cable slack, net elongation of tendons, jacking force developed, and such other information as may be required.*

4. *The verified reports of construction shall show that of the inspector's own personal knowledge, the work covered by the report has been performed and materials used and installed in every material respect in compliance with the duly approved plans and specifications for plant fabrication inspection. The verified report shall be accompanied by test reports required for materials used. For site posttensioning inspections the verified report shall be accompanied by copies of calibration charts, certified by an approved testing laboratory, showing the relationship between gage readings and force applied by the jacks used in the prestressing procedure.*

1705A.3.5 Concrete pre-placement inspection. *Concrete shall not be placed until the forms and reinforcement have been inspected, all preparations for the placement have been completed, and the preparations have been checked by the inspector of Record.*

1705A.3.6 Placing record. *A record shall be kept on the site of the time and date of placing the concrete in each portion of the structure. Such record shall be kept until the completion of the structure and shall be open to the inspection of the enforcement agency.*

TABLE 1705A.3
REQUIRED SPECIAL INSPECTION AND TESTS OF CONCRETE CONSTRUCTION

TYPE	CONTINUOUS SPECIAL INSPECTION	PERIODIC SPECIAL INSPECTIO	REFERENCE STANDARDS	CBC REFERENCE
...				
4. Inspect anchors post installed in hardened concrete members. [b,c] a. Adhesive anchors installed in horizontally or upwardly inclined orientations to resist sustained tension loads. b. Mechanical anchors and adhesive anchors not defined in 4.a. ...	X	X	ACI 318: 17.8.2.4 ACI 318: 17.8.2	
...				
...				
~~13. Inspection of adhesive anchors in horizontal and upwardly inclined positions.[c]~~		~~X~~	~~ACI318: D.9.2.2~~	=

...

c. Installation of all adhesive anchors in horizontal and upwardly inclined positions shall be performed by an ACI/CRSI Certified Adhesive Anchor Installer, except where the factored design tension on the anchors is less than 100 lbs and those anchors are clearly noted on the approved construction documents or where the anchors are shear dowels across cold joints in slabs on grade where the slab is not part of the lateral force resisting system.

1705A.4 Masonry construction. *Special inspections* and tests of masonry construction shall be performed in accordance with the quality assurance program requirements of TMS 402/ACI 530/ASCE 5, *as set forth in Table 3.1.3 Level C requirements,* and TMS 602/ACI 530.1/ASCE 6. ~~, as set forth in Table 1.19.3 Level C~~ requirements. *Special* ~~I~~ *inspection and testing of post-installed anchors in masonry shall be required in accordance with requirements for concrete in Chapters 17A and 19A.*

~~**Exception:** *Special inspections and tests* shall not be required for:~~

~~1. Empirically designed masonry, glass unit masonry or masonry veneer designed in accordance with Section 2109, 2110 or Chapter 14, respectively, where they are part of structures classified as *Risk Category* I, II or III.~~
~~2. Masonry foundation walls constructed in accordance with Table 1807.1.6.3(1), 1807.1.6.3(2), 1807.1.6.3(3) or 1807.1.6.3(4).~~
~~3. Masonry fireplaces, masonry heaters or masonry chimneys installed or constructed in accordance with Section 2111, 2112 or 2113, respectively.~~

1705*A*.4.1 ~~Empirically designed masonry, g~~ *G*lass unit masonry and masonry veneer in Risk ~~Category~~ *Categories II, III or* IV. *Special inspections* and tests for ~~empirically designed masonry,~~ glass unit masonry or masonry veneer designed by Section ~~2109,~~ 2110*A* or Chapter 14, respectively, in structures classified as *Risk ~~Category~~ Categories II, III or* IV, shall be performed in accordance with TMS 402/ACI 530/ASCE 5 Level B Quality Assurance.

...

1705*A*.5 Wood construction. *Special inspections* of prefabricated wood structural elements and assemblies shall be in accordance with Section 1704*A*.2.5 *except as modified in this section. Special inspections* of site-built assemblies shall be in accordance with this section.

...

1705A.5.3 Wood structural elements and assemblies. *Special inspection of wood structural elements and assemblies is required, as specified in this section, to ensure conformance with ~~drawings and specifications~~ construction documents, and applicable standards.*

The approved agency ~~special inspector~~ shall furnish a verified report to the design professional in general responsible charge of construction observation, the structural engineer, and the enforcement agency, in accordance with the California Administrative code and this chapter. The verified report shall list all inspected members or trusses, and shall indicate whether or not the inspected members or trusses conform with applicable standards and the approved drawings and specifications. Any non-conforming items shall be indicated on the verified report.

1705A.5.4 Structural glued laminated timber. *Manufacture of all structural glued laminated timber shall be continuously inspected by an approved agency ~~a qualified special inspector approved by the enforcement agency~~.*

The approved agency ~~special inspector~~ shall verify that proper quality control procedures and tests have been employed for all materials and the manufacturing process, and shall perform visual inspection of the finished product. Each inspected member shall be stamped by the approved agency ~~special inspector~~ with an identification mark.

Exception: *Special Inspection is not required for non-custom members of 5-1/8 inch maximum width and 18 inch maximum depth, and with a maximum clear span of 32 feet, manufactured and marked in accordance with ANSI/AITC A 190.1 Section 6.1.1 for non-custom members.*

1705A.5.5 Manufactured open web trusses. *The manufacture of open web trusses shall be continuously inspected by an approved agency ~~a qualified special inspector approved by the enforcement agency~~.*

The approved agency ~~special inspector~~ shall verify that proper quality control procedures and tests have been employed for all materials and the manufacturing process, and shall perform visual inspection of the finished product. Each inspected truss shall be stamped with an identification mark by the ~~special inspector~~ approved agency.

1705A.5.6 Timber connectors. *The installation of all split ring and shear plate timber connectors, and timber rivets shall be continuously inspected by an approved agency ~~a qualified inspector approved by the enforcement agency~~. The approved agency ~~inspector~~ shall furnish the architect, structural engineer*

and the enforcement agency with a report verifying ~~duly verified by him~~ that the materials, timber connectors and workmanship conform to the approved ~~plans and specifications~~ construction documents.

...

1705A.6.1 Soil fill. *All fills used to support the foundations of any building or structure shall be continuously inspected by the geotechnical engineer or his or her qualified representative. It shall be the responsibility of the geotechnical engineer to verify that fills meet the requirements of the approved construction documents and to coordinate all fill inspection and testing during the construction involving such fills.*

The duties of the geotechnical engineer or his or her qualified representative shall include, but need not be limited to, the inspection of cleared areas and benches prepared to receive fill; inspection of the removal of all unsuitable soils and other materials; the approval of soils to be used as fill material; the inspection of placement and compaction of fill materials; the testing of the completed fills; the inspection or review of geotechnical drainage devices, buttress fills or other similar protective measures in accordance with the approved construction documents.

A verified report shall be submitted by the geotechnical engineer as required by the California Administrative Code. The report shall indicate that all tests and inspection required by the approved construction documents were completed and that the tested materials and/or inspected work meet the requirements of the approved construction documents.

...

1705A.7.1 ***Driven deep foundations observation.*** *The installation of driven deep foundations shall be continuously inspected by a qualified representative of the geotechnical engineer responsible for that portion of the project.*

The representative of the geotechnical engineer shall make a report of the deep foundation pile-driving operation giving such pertinent data as the physical characteristics of the deep foundation pile-driving equipment, identifying marks for each deep foundation pile, the total depth of embedment for each deep foundation; and when the allowable deep foundation pile loads are determined by a dynamic load formula, the design formula used, and the permanent

penetration under the last 10 blows. One copy of the report shall be sent to the enforcement agency.

...

1705*A*.11.1 Structural wood. Continuous special inspection is required during field gluing operations of elements of the main windforce-resisting system. Periodic special inspection is required for nailing, bolting, anchoring and other fastening of elements of the main windforce-resisting system, including wood shear walls, wood diaphragms, drag struts, braces and hold-downs.

~~**Exception:** *Special inspections are* not required for wood shear walls, shear panels and diaphragms, including nailing, bolting, anchoring and other fastening to other components of the main windforce-resisting system, where the fastener spacing of the sheathing is more than 4 inches (102 mm) on center.~~

1705*A*.11.2 Cold-formed steel light-frame construction. Periodic special inspection is required for welding operations of elements of the main windforce-resisting system. Periodic special inspection is required for screw attachment, bolting, anchoring and other fastening of elements of the main windforce-resisting system, including shear walls, braces, diaphragms, collectors (drag struts) and hold-downs.

~~**Exception:** *Special inspections are* not required for cold formed steel light-frame shear walls and diaphragms, including screwing, bolting, anchoring and other fastening to components of the windforce resisting system, where either of the following apply:~~

~~1. The sheathing is gypsum board or fiberboard.~~
~~2. The sheathing is wood structural panel or steel sheets on only one side of the shear wall, shear panel or diaphragm assembly and the fastener spacing of the sheathing is more than 4 inches (102 mm) on center (o.c.).~~

...

1705*A*.12 Special inspections for seismic resistance. *Special inspections* for seismic resistance shall be required as specified in Sections 1705*A*.12.1 through 1705*A*.12.9, unless exempted by the exceptions of Section 1704*A*.2.

~~**Exception:** The special inspections specified in Sections 1705.12.1 through 1705.12.9 are not required for structures designed and constructed in accordance with one of the following:~~

~~1. The structure consists of light-frame construction; the design spectral response acceleration at short periods, S_{DS}, as determined in Section 1613.3.4, does not exceed 0.5; and the building height of the structure does not exceed 35 feet (10 668 mm).~~

~~2. The seismic force-resisting system of the structure consists of reinforced masonry or reinforced concrete; the design spectral response acceleration at short periods, S_{DS}, as determined in Section 1613.3.4, does not exceed 0.5; and the building height of the structure does not exceed 25 feet (7620 mm).~~

~~3. The structure is a detached one- or two-family dwelling not exceeding two *stories above grade plane* and does not have any of the following horizontal or vertical irregularities in accordance with Section 12.3 of ASCE 7:~~

~~3.1. Torsional or extreme torsional irregularity.~~

~~3.2. Nonparallel systems irregularity.~~

~~3.3. Stiffness-soft story or stiffness-extreme soft story irregularity.~~

~~3.4. Discontinuity in lateral strength-weak story irregularity.~~

1705A.12.1 Structural steel. *Special inspections* for structural steel shall be in accordance with Section 1705A.12.1.1 or 1705A.12.1.2, as applicable.

1705A.12.1.1 Seismic Force-Resisting Systems. *Special inspections* of structural steel in the seismic force resisting systems of buildings and structures assigned to *Seismic Design Category* ~~B,~~ ~~C,~~ D, E or F shall be performed in accordance with quality assurance requirements of AISC 341 *as modified by Section 1705A.2.1 of this code.*

~~**Exception:** *Special inspections* the seismic force-resisting systems of buildings and structures assigned to *Seismic Design Category* B or C that are not specifically detailed for seismic resistance, with a response modification coefficient, *R*, of 3 or less, excluding cantilever column systems.~~

1705A.12.1.2 Structural Steel Elements. *Special inspections* of *structural steel elements* in the seismic force resisting systems of buildings and structures assigned to *Seismic Design Category* ~~B,~~

~~C,~~ D, E or F, other than those covered in Section 1705*A*.12.1.1, including struts, collectors, chords, and foundation elements, shall be performed in accordance with quality assurance requirements of AISC 341 *as modified by Section 1705A.2.1 of this code.*

~~**Exception:** *Special inspections* of *structural steel element* are not required in the seismic force-resisting systems of buildings and structures assigned to *Seismic Design Category* B or C with a response modification coefficient, *R*, of 3 or less.~~

1705*A*.12.2 Structural wood. For the seismic force-resisting system of structures assigned to *Seismic Design Category* ~~C,~~ D, E or F:

...

~~**Exception:** *Special inspections* are not required for wood shear walls, shear panels and diaphragms, including nailing, bolting, anchoring and other fastening to other elements of the seismic force-resisting system, where the fastener spacing of the sheathing is more than 4 inches (102 mm) on center.~~

1705*A*.12.3 Cold-formed steel light-frame construction. For the seismic force-resisting system of structures assigned to *Seismic Design Category* ~~C,~~ D, E or F, periodic special inspection shall be required:

...

~~**Exception:** *Special inspections* are not required for cold-formed steel light-frame shear walls and diaphragms, including screw installation, bolting, anchoring and other fastening to components of the seismic force-resisting system, where either of the following applies:~~

~~1. The sheathing is gypsum board or fiberboard.~~
~~2. The sheathing is wood structural panel or steel sheets on only one side of the shear wall, shear panel or diaphragm assembly and the fastener spacing of the sheathing is more than 4 inches (102 mm) on center.~~

...

1705A.12.4 *Special Inspection for Special Seismic Certification.* ~~**Designated seismic systems.**~~ For structures assigned to *Seismic Design Category* ~~C,~~ D, E or F, the special inspector shall examine *equipment and components* ~~designated seismic systems~~ requiring *special* seismic *certification* ~~qualification~~ in accordance with *Section* 1705A.13.3 *or* ASCE 7 Section 13.2.2 and verify that the *label*, anchorage and mounting conforms to the *certificate of compliance*.

1705A.12.5 Architectural components. *Periodic special inspection* is required for the erection and fastening of exterior cladding, interior and exterior nonbearing walls, *ceilings*, and interior and exterior veneer in structures assigned to *Seismic Design Category* D, E or F.

~~**Exceptions:** *Periodic special inspection* is not required for the following:~~

~~1. Exterior cladding, interior and exterior nonbearing walls and interior and exterior veneer 30 feet (9144 mm) or less in height above grade or walking surface.~~

~~2. Exterior cladding and interior and exterior veneer weighing 5 psf (24.5 N/m^2) or less.~~

~~3. Interior nonbearing walls weighing 15 psf (73.5 N/m^2) or less.~~

...

1705A.12.6 Plumbing, mechanical and electrical components. *Periodic special inspection* of plumbing, mechanical and electrical components shall be required for the following:

1. Anchorage of electrical equipment for emergency or standby power systems in structures assigned to *Seismic Design Category* ~~C,~~ D, E or F.
2. Anchorage of other electrical equipment in structures assigned to *Seismic Design Category D,* E or F.
3. Installation and anchorage of piping systems designed to carry hazardous materials and their associated mechanical units in structures assigned to *Seismic Design Category* ~~C,~~ D, E or F.
4. Installation and anchorage of ductwork designed to carry hazardous materials in structures assigned to *Seismic Design Category* ~~C,~~ D, E or F.
5. Installation and anchorage of vibration isolation systems in structures assigned to *Seismic Design Category* ~~C,~~ D, E or F where the approved *construction documents* require a nominal clearance of 1/4 inch (6.4 mm) or less between the equipment support frame and restraint.

...

1705A.12.8 Seismic isolation *and damping* systems. Periodic special inspection shall be provided for seismic isolation *and damping* systems in ~~seismically isolated~~ structures assigned to Seismic Design Category ~~B, C~~, D, E or F during the fabrication and installation of isolator units and energy dissipation devices. *Continuous special inspection is required for prototype and production testing of isolator units and damping devices.*

~~***1705.12.9 Cold-formed steel special bolted moment frames.** Periodic special inspection shall be provided for the installation of cold-formed steel special bolted moment frames in the seismic force-resisting systems of structures assigned to Seismic Design Category D, E or F.*~~

1705*A*.13 Testing for seismic resistance. Testing for seismic resistance shall be required as specified in Sections 1705*A*.13.1.1 through 1705*A*.13.4, unless exempted from special inspections by exceptions of Section 1704*A*.2.

1705A.13.1 Structural Steel. Nondestructive testing for seismic resistance shall be in accordance with Section 1705*A*.13.1.1 or 1705*A*.13.1.2, as applicable.

1705A.13.1.1 Seismic Force-Resisting Systems. Nondestructive testing of structural steel in the seismic force resisting systems of buildings and structures assigned to Seismic Design Category ~~B, C,~~ D, E or F shall be performed in accordance with the quality assurance requirements of AISC 341.

~~**Exception:** Nondestructive testing is not required in the seismic force-resisting systems of buildings and structures assigned to *Seismic Design Category* B or C that are not specifically detailed for seismic resistance, with a response modification coefficient, *R*, of 3 or less, excluding cantilever column systems.~~

1705A.13.1.2 Structural Steel Elements. Nondestructive testing of *structural steel elements* in the seismic force resisting systems of buildings and structures assigned to *Seismic design Category* ~~B, C,~~ D, E or F, other than those covered in Section 1705*A*.13.1.1, including struts, collectors, chords, and foundation elements, shall be performed in accordance with quality assurance requirements of AISC 341.

~~**Exception:** Nondestructive testing of *structural steel element* is not required in the seismic force-resisting systems of buildings and structures assigned to *Seismic Design Category* B or C with a response modification coefficient, *R*, of 3 or less.~~

1705A.13.2 Nonstructural Components. For structures assigned to *Seismic design Category* ~~B, C,~~ D, E or F, where requirements of Section 13.2.1 of ASCE 7 for non-structural components, supports, or attachments are met by *manufacturer's certification* ~~seismic qualification~~ as specified in Item 2 therein, the *registered design professional* shall specify on the *approved construction documents* the requirements for seismic *certification* ~~qualification~~ by analysis~~,~~ *or* testing. ~~or experience data.~~ *Certificates of compliance* for the ~~seismic qualification~~ *manufacturer's certification* shall be submitted to the building official as specified in Section 1704*A*.5.

Seismic sway braces satisfying requirements of FM 1950 shall be deemed to satisfy the requirements of this Section. Component tests shall be supplemented by assembly tests, when required by the building official.

1705A.13.3 *Special Seismic Certification*. ~~Designated Seismic System.~~ For structures assigned to *Seismic design Category* ~~C,~~ D, E or F, ~~and with *designated seismic systems*~~ *equipment and components* that are subject to the requirements of Section 13.2.2 of ASCE 7 for *special seismic* certification, the *registered design professional* shall specify on the *approved construction documents* the requirements to be met by analysis~~,~~ *or* testing ~~or experience data~~ as specified therein. *Certificate of compliance* documenting that the requirements are met shall be submitted to the building official as specified in Section 1704*A*.5.

Active or energized equipment and components shall be certified exclusively on the basis of approved shake table testing in accordance with ICC-ES AC 156. Minimum of two equipment/components shall be tested for a product line with similar structural configuration. Where a range of products are tested, the two equipment/components shall be either the largest and a small unit, or approved alternative representative equipment/components.

Exception: When a single product (and not a product line with more than one product with variations) is certified and manufacturing process is ISO 9001 certified, one test shall be permitted.

For a multi-component system, where active or energized components are certified by tests, connecting elements, attachments, and supports can be justified by supporting analysis.

1705A.13.3.1 ~~***1705A.12.4.1***~~ ~~[Reserved for OSHPD]~~

1705A.13.4 Seismic isolation *and damping* systems. Seismic isolation *and damping* systems in ~~seismically isolated~~ structures assigned to Seismic Design Category ~~B, C,~~ D, E or F shall be tested in accordance with Section 17.8 *and 18.9* of ASCE 7.

Prototype and production testing and associated acceptance criteria for isolator units and damping devices shall be subject to preapproval by the building official. Testing exemption for similar units shall require approval by the building official.

...

1705A.19 ~~***1705A.18***~~ ***Shotcrete.*** *All shotcrete work shall be continuously inspected during placing by an approved agency* ~~*inspector specially approved for that purpose by the enforcement agency.*~~ *The special shotcrete inspector shall check the materials, placing equipment, details of construction and construction procedure. The* ~~*inspector*~~ *an approved agency shall furnish a verified report that of his or her own personal knowledge the work covered by the report has been performed and materials used and installed in every material respect in compliance with the duly approved plans and specifications.*

1705A.19.1 ~~***1705A.18.1***~~ ***Visual examination for structural soundness of in-place shotcrete.*** *Completed shotcrete work shall be checked visually for reinforcing bar embedment, voids, rock pockets, sand streaks and similar deficiencies by examining a minimum of three 3-inch (76 mm) cores taken from three areas chosen by the design engineer which represent the worst congestion of reinforcing bars occurring in the project. Extra reinforcing bars may be added to noncongested areas and cores may be taken from these areas. The cores shall be examined by the special inspector and a report submitted to the enforcement agency prior to final approval of the shotcrete.*

Exception: *Shotcrete work fully supported on earth, minor repairs, and when, in the opinion of the enforcement agency, no special hazard exists.*

CHAPTER 18*A*

SOILS AND FOUNDATIONS

Adopt and/or codify chapter as amended below:

PROPOSED ADOPTION	DSA-SS	DSA-SS/CC	Comments
Adopt entire chapter WITHOUT AMENDMENTS			
Adopt entire chapter as amended	**X**	**X**	
Adopt only those sections listed below			

All existing California amendments that are not revised below shall continue without change.

SECTION 1801*A*

GENERAL

1801*A*.1 Scope. The provisions of this chapter shall apply to building and foundation systems.

~~*Refer to Appendix J, Grading, for requirements governing grading, excavation and earthwork construction, including fills and embankments.*~~

1801A.1.1 Application. *The scope of application of Chapter 18A is as follows:*

1. Structures regulated by the Division of the State Architect—Structural Safety, which include

those applications listed in Section 1.9.2.1 (DSA-SS), and 1.9.2.2 (DSA-SS/CC). These applications include public elementary and secondary schools, community colleges and state-owned or state-leased essential services buildings

2. *[Reserved for OSHPD]*

1801A.1.2 Amendments in this chapter. *DSA –SS & DSA –SS/CC adopt this chapter and all amendments.*

Exception: *Amendments adopted by only one agency appear in this chapter preceded with the appropriate acronym of the adopting agency, as follows:*

1. *Division of the State Architect-Structural Safety:*
   [DSA-SS] *For applications listed in Section 1.9.2.1.*
   [DSA-SS/CC] *For applications listed in Section 1.9.2.2.*

2. *[Reserved for OSHPD]*

1801A.1.3 Reference to other chapters.

1801A.1.3.1 ***[DSA-SS/CC]*** *Where reference within this chapter is made to sections in Chapters 16A,19A, 21A, and 22A, ~~and 34A~~, the provisions in Chapters 16, 19, 21, and 22, ~~and 34~~ respectively shall apply instead.*

...

SECTION 1803A
GEOTECHNICAL INVESTIGATIONS

1803A.1 General. Geotechnical investigations shall be conducted in accordance with Section 1803A.2 and reported in accordance with Section ~~1803.6~~ *1803A.7.* ~~Where required by the *building official* or where geotechnical investigations involve in-situ testing, laboratory testing or engineering calculations, such investigations shall be conducted by a *registered design professional.*~~ *The classification and investigation of the soil shall be made under the responsible charge of a California registered geotechnical engineer. All recommendations contained in geotechnical and geohazard reports shall be subject to the approval of the enforcement agency. All reports shall be prepared and signed by a registered geotechnical engineer,*

certified engineering geologist, and a registered geophysicist, where applicable.

1803*A*.2 Investigations required. Geotechnical investigations shall be conducted in accordance with Sections 1803*A*.3 through ~~1803*A*.5~~ *1803A.6.*

Exceptions: ~~The *building official* shall be permitted to waive the requirement for a geotechnical investigation where satisfactory data from adjacent areas is available that demonstrates an investigation is not necessary for any of the conditions in Sections 1803.5.1 through 1803.5.6 and Sections 1803.5.10 and 1803.5.11.~~

1. *Geotechnical reports are not required for one-story, wood-frame and light-steel-frame buildings of Type II or Type V construction and 4,000 square feet (371 m^2) or less in floor area, not located within Earthquake Fault Zones or Seismic Hazard Zones as shown in the most recently published maps from the California Geological Survey (CGS) or in seismic hazard zones as defined in the Safety Element of the local General Plan. Allowable foundation and lateral soil pressure values may be determined from Table 1806A.2.*

2. *A previous report for a specific site may be resubmitted, provided that a reevaluation is made and the report is found to be currently appropriate.*

...

1803*A*.3 Basis of investigation. Soil classification shall be based on observation and any necessary tests of the materials disclosed by borings, test pits or other subsurface exploration made in appropriate locations. Additional studies shall be made as necessary to evaluate slope stability, soil strength, position and adequacy of load-bearing soils, the effect of moisture variation on soil-bearing capacity, compressibility, liquefaction and expansiveness.

1803*A*.3.1 Scope of investigation. The scope of the geotechnical investigation including the number and types of borings or soundings, the equipment used to drill or sample, the in-situ testing equipment and the laboratory testing program shall be determined by a *registered design professional.*

There shall not be less than one boring or exploration shaft for each 5,000 square feet (465 m^2) of building area at the foundation level with a minimum of two provided for any one

building. A boring may be considered to reflect subsurface conditions relevant to more than one building, subject to the approval of the enforcement agency.

Borings shall be of sufficient size to permit visual examination of the soil in place or, in lieu thereof, cores shall be taken.

Borings shall be of sufficient depth and size to adequately characterize sub-surface conditions.

...

1803*A*.5.4 Ground-water table. A subsurface soil investigation shall be performed to determine whether the existing ground-water table is above or within 5 feet (1524 mm) below the elevation of the lowest floor level where such floor is located below the finished ground level adjacent to the foundation.

~~**Exception:** A subsurface soil investigation to determine the location of the ground-water table shall not be required where waterproofing is provided in accordance with Section 1805.~~

...

1803A.6. Geohazard Reports. *Geohazard reports shall be required for all proposed construction.*

Exceptions:

1. *Reports are not required for one-story, wood-frame and light-steel-frame buildings of Type II or Type V construction and 4,000 square feet (371m^2) or less in floor area, not located within Earthquake Fault Zones or Seismic Hazard Zones as shown in the most recently published maps from the California Geological Survey (CGS) or in seismic hazard zones as defined in the Safety Element of the local General Plan; nonstructural, associated structural or voluntary structural alterations, and incidental structural additions or alterations, and structural repairs for other than earthquake damage.*

2. *A previous report for a specific site may be resubmitted, provided that a reevaluation is made and the report is found to be currently appropriate.*

The purpose of the geohazard report shall be to identify geologic and seismic conditions that may require project mitigations. The reports shall contain data which provide an assessment of the nature of the site and potential for earthquake damage based on appropriate investigations of the regional and site geology, project foundation conditions and the potential seismic shaking at the site. The report shall be prepared by a California-certified engineering geologist in consultation with a California-registered geotechnical engineer.

The preparation of the geohazard report shall consider the most recent CGS Note 48: Checklist for the Review of Engineering Geology and Seismology Reports for California Public School, Hospitals, and Essential Services Buildings. In addition, the most recent version of CGS Special Publication 42, Fault Rupture Hazard Zones in California, shall be considered for project sites proposed within an Alquist-Priolo Earthquake Fault Zone. The most recent version of CGS Special Publication 117, Guidelines for Evaluating and Mitigating Seismic Hazards in California, shall be considered for project sites proposed within a Seismic Hazard Zone. All conclusions shall be ~~fully~~ supported by satisfactory data and analysis.

In addition to requirements in Sections 1803A.5.11 and 1803A.5.12, the report shall include, but shall not be limited to, the following:

1. *Site Geology.*

2. *Evaluation of the known active and potentially active faults, both regional and local.*

3. *Ground-motion parameters, as required by Sections 1613A, 1616A, & ASCE 7.*

The three Next Generation Attenuation (NGA) relations used for the 2008 USGS seismic hazards maps for Western United States (WUS) shall be utilized to determine the site-specific ground motion. When supported by data and analysis, other NGA (NGA West 1) relations, that were not used for the 2008 USGS maps, shall be permitted as additions or substitutions. No fewer than three NGA relations shall be utilized.

1803A.7 ~~**1803.6**~~ ***Geotechnical*** **Reporting.** Where geotechnical investigations are required, a written report of the investigations shall be submitted to the *building official* by the permit applicant at the time of *permit* application. *The geotechnical report shall provide completed evaluations of the foundation conditions of the site and the potential geologic/seismic hazards affecting the site. The geotechnical report shall include, but shall not be limited to, site-specific evaluations of design criteria related to the nature and extent of foundation materials, groundwater conditions, liquefaction potential, settlement potential and slope stability. The report shall contain the results of the analyses of problem areas identified in the geohazard report. The geotechnical report shall incorporate estimates of the characteristics of site ground motion provided in the geohazard report.* This geotechnical report shall include, but need not be limited to, the following information:

1. A plot showing the location of the soil investigations.
2. A complete record of the soil boring and penetration test logs and soil samples.
3. A record of the soil profile.
4. Elevation of the water table, if encountered. *Historic high ground water elevations shall be addressed in the report to adequately evaluate liquefaction and settlement potential.*
5. Recommendations for foundation type and design criteria, including but not limited to: bearing capacity of natural or compacted soil; provisions to mitigate the effects of expansive soils; mitigation of the effects of liquefaction, differential settlement and varying soil strength; and the effects of adjacent loads.
6. Expected total and differential settlement.
7. Deep foundation information in accordance with Section 1803*A*.5.5.
8. Special design and construction provisions for foundations of structures founded on expansive soils, as necessary.
9. Compacted fill material properties and testing in accordance with Section 1803*A*.5.8.
10. Controlled low-strength material properties and testing in accordance with Section 1803*A*.5.9.
11. *The report shall consider the effects of stepped footings addressed in Section 1809A.3.*
12. *The report shall consider the effects of seismic hazards in accordance with Section 1803A.6 and shall incorporate the findings of the associated geohazard report.*

...

1803A.8 Geotechnical peer review. [DSA-SS and DSA-SS/CC] *When alternate foundations designs or ground improvements are employed or where slope stabilization is required, a qualified peer review by a California-licensed geotechnical engineer, in accordance with Section 322 of Part 10, Title 24,*

C.C.R. ~~Section 3422~~, may be required by the enforcement agency. In Section 322 of Part 10, Title 24, C.C.R. ~~Section 3422~~, where reference is made to structural or seismic-resisting system, it shall be replaced with geotechnical, foundation, or ground improvement, as appropriate.

...

SECTION 1805*A*
DAMPPROOFING AND WATERPROOFING

1805*A*.1 General. Walls or portions thereof that retain earth and enclose interior spaces and floors below grade shall be waterproofed and damp proofed in accordance with this section, with the exception of those spaces containing groups other than residential and institutional where such omission is not detrimental
to the building or occupancy.

Ventilation for crawl spaces shall comply with Section 1203.4.

...

1805A.2 Dampproofing. Where hydrostatic pressure will not occur as determined by Section 1803*A*.5.4, floors and walls ~~for other than wood foundation systems~~ shall be dampproofed in accordance with this section. ~~Wood foundation systems shall be constructed in accordance with AF&PA PWF.~~

...

SECTION 1807*A*
FOUNDATION WALLS, RETAINING WALLS AND EMBEDDED POSTS AND POLES

1807A.1 Foundation walls. Foundation walls shall be designed and constructed in accordance with Sections 1807*A*.1.1 through 1807*A*.1.6. Foundation walls shall be supported by foundations designed in accordance with Section 1808A.

1807*A*.1.1 Design lateral soil loads. Foundation walls shall be designed for the lateral soil loads ~~set~~

~~forth in Section 1610A.~~ *determined by a geotechnical investigation in accordance with Section 1803A.*

1807A.1.2 Unbalanced backfill height. Unbalanced backfill height is the difference in height between the exterior finish ground level and the lower of the top of the concrete footing that supports the foundation wall or the interior finish ground level. Where an interior concrete slab on grade is provided and is in contact with the interior surface of the foundation wall, the unbalanced backfill height shall be permitted to be measured from the exterior finish ground level to the top of the interior concrete slab.

1807A.1.3 Rubble stone foundation walls. *Not permitted by DSA –SS, DSA –SS/CC.* ~~Foundation walls of rough or random rubble stone shall not be less than 16 inches (406 mm) thick. Rubble stone shall not be used for foundation walls of structures assigned to *Seismic Design Category* C, D, E or F.~~

1807A.1.4 Permanent wood foundation systems. *Not permitted by DSA –SS, DSA –SS/CC.* ~~Permanent wood foundation systems shall be designed and installed in accordance with AF&PAPWF. Lumber and plywood shall be treated in accordance with AWPA U1 (Commodity Specification A, Use Category 4B and Section 5.2) and shall be identified in accordance with Section 2303A.1.8.1.~~

1807A.1.5 Concrete and masonry foundation walls. Concrete and masonry foundation walls shall be designed in accordance with Chapter 19A or 21A, as applicable.

~~**Exception:** Concrete and masonry foundation walls shall be permitted to be designed and constructed in accordance with Section 1807.1.6.~~

~~**1807.1.6 Prescriptive design of concrete and masonry foundation walls.** Concrete and masonry foundation walls that are laterally supported at the top and bottom shall be permitted to be designed and constructed in accordance with this section.~~

~~**1807.1.6.1 Foundation wall thickness.** The thickness of prescriptively designed foundation walls shall not be less than the thickness of the wall supported, except that foundation walls of at least 8-inch (203 mm) nominal width shall be permitted to support brick veneered frame walls and 10-inch-wide (254 mm) cavity walls provided the requirements of Section 1807.1.6.2 or 1807.1.6.3 are met.~~

~~**1807.1.6.2 Concrete foundation walls.** Concrete foundation walls shall comply with the following:~~

~~1. The thickness shall comply with the requirements of Table 1807.1.6.2.~~
~~2. The size and spacing of vertical reinforcement shown in Table 1807.1.6.2 are based on the use of reinforcement with a minimum yield strength of 60,000 psi (414 Mpa). Vertical reinforcement with a minimum yield strength of 40,000 psi (276 Mpa) or 50,000 psi (345 Mpa) shall be permitted, provided the same size bar is used and the spacing shown in the table is reduced by multiplying the spacing by 0.67 or 0.83, respectively.~~

~~**TABLE 1807.1.6.2**~~
~~**CONCRETE FOUNDATION WALLS**[b,c]~~

~~(Deleted Table not shown for clarity)~~

~~3. Vertical reinforcement, when required, shall be placed nearest the inside face of the wall a distance, *d*, from the outside face (soil face) of the wall. The distance, *d*, is equal to the wall thickness, *t*, minus 1.25 inches (32 mm) plus one-half the bar diameter, *db*, [$d = t - (1.25 + db / 2)$]. The reinforcement shall be placed within a tolerance of ± 3/8 inch (9.5 mm) where *d* is less than or equal to 8 inches (203 mm) or ± 1/2 inch (12.7 mm) where *d* is greater than 8 inches (203 mm).~~
~~4. In lieu of the reinforcement shown in Table 1807.1.6.2, smaller reinforcing bar sizes with closer spacings that provide an equivalent cross-sectional area of reinforcement per unit length shall be permitted.~~
~~5. Concrete cover for reinforcement measured from the inside face of the wall shall not be less than ¾ inch (19.1 mm). Concrete cover for reinforcement measured from the outside face of the wall shall not be less than 11/2 inches (38 mm) for No. 5 bars and smaller, and not less than 2 inches (51 mm) for larger bars.~~
~~6. Concrete shall have a specified compressive strength, *fc'*, of not less than 2,500 psi (17.2 MPa).~~
~~7. The unfactored axial load per linear foot of wall shall not exceed $1.2\ t\ fc'$ where *t* is the specified wall thickness in inches.~~

~~**1807.1.6.2.1 Seismic requirements.** Based on the *seismic design category* assigned to the~~

~~structure in accordance with Section 1613, concrete foundation walls designed using Table 1905.1.7 shall be subject to the following limitations:~~

~~1. *Seismic Design Categories* A and B. No additional seismic requirements, except provide reinforcement around openings in accordance with Section 1909.6.3.~~

~~2. *Seismic Design Categories* C, D, E and F. Tables shall not be used except as allowed for plain concrete members in Section 1908.1.8.~~

~~**1807.1.6.3 Masonry foundation walls.** Masonry foundation walls shall comply with the following:~~

~~1. The thickness shall comply with the requirements of Table 1807.1.6.3(1) for plain masonry walls or Table 1807.1.6.3(2), 1807.1.6.3(3) or 1807.1.6.3(4) for masonry walls with reinforcement.~~

~~2. Vertical reinforcement shall have a minimum yield strength of 60,000 psi (414 Mpa).~~

~~3. The specified location of the reinforcement shall equal or exceed the effective depth distance, *d*, noted in Tables 1807.1.6.3(2), 1807.1.6.3(3) and 1807.1.6.3(4) and shall be measured from the face of the exterior (soil) side of the wall to the center of the vertical reinforcement. The reinforcement shall be placed within the tolerances specified in TMS 602/ACI 530.1/ASCE 6, Article 3.3.B.11 of the specified location.~~

~~**TABLE 1807.1.6.3(1)**~~
~~**PLAIN MASONRY FOUNDATION WALLS[a,b,c]**~~

~~(Deleted Table not shown for clarity)~~

~~4. Grout shall comply with Section 2103.12.~~

~~5. Concrete masonry units shall comply with ASTM C 90.~~

~~6. Clay masonry units shall comply with ASTM C 652 for hollow brick, except compliance with ASTM C 62 or ASTM C 216 shall be permitted where solid masonry units are installed in accordance with Table 1807.1.6.3(1) for plain masonry.~~

~~7. Masonry units shall be laid in running bond and installed with Type M or S mortar in accordance with Section 2103.2.1.~~

~~8. The unfactored axial load per linear foot of wall shall not exceed $1.2\,t\,f'_m$ where t is the specified wall thickness in inches and f'_m is the specified compressive strength of masonry in~~

~~pounds per square inch.~~

~~9. At least 4 inches (102 mm) of solid masonry shall be provided at girder supports at the top of hollow masonry unit foundation walls.~~

~~10. Corbeling of masonry shall be in accordance with Section 2104.2. Where an 8 inch (203 mm) wall is corbeled, the top corbel shall not extend~~

~~**TABLE 1807.1.6.3(2)**~~

~~**8 INCH MASONRY FOUNDATION WALLS WITH REINFORCEMENT WHERE d = 5 INCHES**[a,b,c]~~

~~(Deleted Table not shown for clarity)~~

~~higher than the bottom of the floor framing and shall be a full course of headers at least 6 inches (152 mm) in length or the top course bed joint shall be tied to the vertical wall projection. The tie shall be W2.8 (4.8 mm) and spaced at a maximum horizontal distance of 36 inches (914 mm). The hollow space behind the corbelled masonry shall be filled with mortar or grout.~~

~~**1807.1.6.3.1 Alternative foundation wall reinforcement.** In lieu of the reinforcement provisions for masonry foundation walls in Table 1807.1.6.3(2), 1807.1.6.3(3) or 1807.1.6.3(4), alternative reinforcing bar sizes and spacings having an equivalent cross-sectional area of reinforcement per linear foot (mm) of wall shall be permitted to be used, provided the spacing of reinforcement does not exceed 72 inches (1829 mm) and reinforcing bar sizes do not exceed No. 11.~~

~~**1807.1.6.3.2 Seismic requirements.** Based on the *seismic design category* assigned to the structure in accordance with Section 1613, masonry foundation walls designed using Tables 1807.1.6.3(1) through 1807.1.6.3(4) shall be subject to the following limitations:~~

~~1. *Seismic Design Categories* A and B. No additional seismic requirements.~~

~~2. *Seismic Design Category* C. A design using Tables 1807.1.6.3(1) through 1807.1.6.3(4) is~~

~~**TABLE 1807.1.6.3(3)**~~

~~**10 INCH MASONRY FOUNDATION WALLS WITH REINFORCEMENT WHERE d = 6.75 INCHES** [a, b, c]~~

~~(Deleted Table not shown for clarity)~~

~~subject to the seismic requirements of Section 7.4.3 of TMS 402/ACI 530/ASCE 5. 3. *Seismic Design Category* D. A design using Tables 1807.1.6.3(2) through 1807.1.6.3(4) is subject to the seismic requirements of Section 7.4.4 of TMS 402/ACI 530/ASCE 5. 4. *Seismic Design Categories* E and F. A design using Tables 1807.1.6.3(2) through 1807.1.6.3(4) is subject to the seismic requirements of Section 7.4.5 of TMS 402/ACI 530/ASCE 5.~~

~~**TABLE 1807.1.6.3(4)**~~
~~**12-INCH MASONRY FOUNDATION WALLS WITH REINFORCEMENT WHERE d _ 8.75 INCHES[a,b,c]**~~

~~(Deleted Table not shown for clarity)~~

1807*A*.2 Retaining walls. Retaining walls shall be designed in accordance with Sections 1807*A*.2.1 through 1807*A*.2.3. *Freestanding cantilever walls shall be design in accordance with Section 1807A.2.4.*

1807*A*.2.1 General. Retaining walls shall be designed to ensure stability against overturning, sliding, excessive foundation pressure and water uplift. Where a keyway is extended below the wall base with the intent to engage passive pressure and enhance sliding stability, lateral soil pressures on both sides of the keyway shall be considered in the sliding analysis.

1807*A*.2.2 Design lateral soil loads. Retaining walls shall be designed for the lateral soil loads ~~set forth in Section 1610.~~ *determined by a geotechnical investigation in accordance with Section 1803A and shall not be less than eighty percent of the lateral soil loads determined in accordance with Section 1610A. For use with the load combinations, lateral soil loads due to gravity loads surcharge shall be considered gravity loads and seismic earth pressure increases due to earthquake shall be considered as seismic loads.*

...

1807A.2.4 Freestanding Cantilever Walls. *A stability check against the possibility of overturning shall be performed for isolated spread footings which support freestanding cantilever walls. The stability check shall be made by dividing R_p used for the wall by 2.0. The allowable soil pressure may be doubled for this evaluation.*

Exception: *For overturning about the principal axis of rectangular footings with symmetrical vertical loading and the design lateral force applied, a triangular or trapezoidal soil pressure distribution which covers the full width of the footing will meet the stability requirement.*

...

SECTION 1808*A*
FOUNDATIONS

1808*A*.1 General. Foundations shall be designed and constructed in accordance with Sections 1808*A*.2 through 1808A.9. Shallow foundations shall also satisfy the requirements of Section 1809A. Deep foundations shall also satisfy the requirements of Section 1810*A*.

1808*A*.2 Design for capacity and settlement. Foundations shall be so designed that the allowable bearing capacity of the soil is not exceeded, and that differential settlement is minimized. Foundations in areas with expansive soils shall be designed in accordance with the provisions of Section 1808*A*.6.

The enforcing agency may require an analysis of foundation elements to determine subgrade deformations in order to evaluate their effect on the superstructure, including story drift.

...

1808*A*.8 Concrete foundations. The design, materials and construction of concrete foundations shall comply with Sections1808*A*.8.1 through 1808*A*.8.6 and the provisions of Chapter 19*A*.

~~Exception: Where concrete footings supporting walls of light-frame construction are designed in accordance with Table 1809.7, a specific design in accordance with Chapter 19 is not required.~~

...

TABLE 1808*A*.8.1

MINIMUM SPECIFIED COMPRESSIVE STRENGTH f'_c OF CONCRETE OR GROUT

FOUNDATION ELEMENT OR CONDITION	SPECIFIED COMPRESSIVE STRENGTH, f'_c
~~1. Foundations for structures assigned to Seismic Design Category A, B or C~~	~~2,500 psi~~
~~2a. Foundations for Group R or U occupancies of light-frame construction, two stories or less in height, assigned to Seismic Design Category D, E or F~~	~~2,500 psi~~
~~2b~~ *1.* Foundations for other structures assigned to Seismic Design Category D, E or F	3,000 psi
~~3~~ 2. Precast nonprestressed driven piles	4,000 psi
4 *3.* Socketed drilled shafts	4,000 psi
~~5~~ *4.* Micropiles	4,000 psi
~~6~~ *5.* Precast prestressed driven piles	5,000 psi

For SI: 1 pound per square inch = 0.00689MPa.

...

1808*A*.8.6 Seismic requirements. See Section 1905*A* for additional requirements for foundations of structures assigned to *Seismic Design Category* ~~C,~~ D, E or F.

For structures assigned to *Seismic Design Category* D, E or F, provisions of Sections 18.13 of ACI 318 shall apply where not in conflict with the provisions of Sections 1808*A* through 1810*A*.

~~**Exceptions:**~~

~~1. Detached one- and two-family dwellings of light-frame construction and two stories or less above~~

~~*grade plane* are not required to comply with the provisions of Section 18.13 od ACI 318.~~

~~2. Section 18.13.4.3(a) of ACI 318 shall not apply.~~

...

SECTION 1809*A*
SHALLOW FOUNDATIONS

1809*A*.1 General. Shallow foundations shall be designed and constructed in accordance with Sections 1809*A*.2 through 1809*A*.13.

1809*A*.2 Supporting soils. Shallow foundations shall be built on undisturbed soil, compacted fill material or controlled low-strength material (CLSM). Compacted fill material shall be placed in accordance with Section 1804*A*.5. CLSM shall be placed in accordance with Section 1804*A*.6.

1809*A*.3 Stepped footings. The top surface of footings shall be level. The bottom surface of footings shall be permitted to have a slope not exceeding one unit vertical in 10 units horizontal (10-percent slope). Footings shall be stepped where it is necessary to change the elevation of the top surface of the footing or where the surface of the ground slopes more than one unit vertical in 10 units horizontal (10-percent slope).

Individual steps in continuous footings shall not exceed 18 inches (457 mm) in height and the slope of a series of such steps shall not exceed 1 unit vertical to 2 units horizontal (50% slope) unless otherwise recommended by a geotechnical report. The steps shall be detailed on the drawings. The local effects due to the discontinuity of the steps shall be considered in the design of the foundation.

...

1809*A*.7 Prescriptive footings for light-frame construction. *Not permitted by DSA-SS, DSA-SS/CC.* ~~Where a specific design is not provided, concrete or masonry-unit footings supporting walls of light-frame construction shall be permitted to be designed in accordance with Table 1809.7.~~

~~TABLE 1809.7~~

~~PRESCRIPTIVE FOOTINGS SUPPORTING WALLS OFLIGHT-FRAME CONSTRUCTION[a,b,c,d,e]~~

~~(Table not shown for clarity)~~

1809*A*.8 Plain concrete footings. *Not permitted by DSA-SS, DSA-SS/CC.* ~~The edge thickness of plain concrete footings supporting walls of other than light-frame construction shall not be less than 8 inches (203 mm) where placed on soil or rock.~~

~~**Exception:** For plain concrete footings supporting Group R-3 occupancies, the edge thickness is permitted to be 6 inches (152 mm), provided that the footing does not extend beyond a distance greater than the thickness of the footing on either side of the supported wall.~~

1809*A*.9 Masonry-unit footings. *Not permitted by DSA-SS, DSA-SS/CC.* ~~The design, materials and construction of masonry-unit footings shall comply with Sections 1809.9.1 and 1809.9.2, and the provisions of Chapter 21.~~

~~**Exception:** Where a specific design is not provided, masonry-unit footings supporting walls of light-frame construction shall be permitted to be designed in accordance with Table 1809.7.~~

~~**1809.9.1 Dimensions.** Mansonry-unit footings shall be laid in Type M or S mortar complying with Section 2103.8 and the depth shall not be less than twice the projection beyond the wall, pier or column. The width shall not be less than 8 inches (203 mm) wider than the wall supported thereon.~~

~~**1809.9.2 Offsets.** The maximum offset of each course in brick foundation walls stepped up from the footings shall be 11/2 inches (38 mm) where laid in single courses, and 3 inches (76 mm) where laid in double courses.~~

1809*A*.10 *Reserved.* ~~**Pier and curtain wall foundations.** Except in *Seismic Design Categories* D, E and F, pier and curtain wall foundations shall be permitted to be used to support light-frame construction not more than two *stories above grade plane*, provided the following requirements are met:~~

~~1. All load-bearing walls shall be placed on continuous concrete footings bonded integrally with the *exterior wall* footings.~~

~~2. The minimum actual thickness of a load-bearing masonry wall shall not be less than 4 inches (102 mm) nominal or 35/8 inches (92 mm) actual thickness, and shall be bonded integrally with piers spaced 6 feet (1829 mm) on center (o.c.).~~

~~3. Piers shall be constructed in accordance with Chapter 21 and the following:~~

~~3.1. The unsupported height of the masonry piers shall not exceed 10 times their least dimension.~~

~~3.2. Where structural clay tile or hollow concrete masonry units are used for piers supporting beams and girders, the cellular spaces shall be filled solidly with concrete or Type M or S mortar.~~

~~**Exception:** Unfilled hollow piers shall be permitted where the unsupported height of the pier is not more than four times its least dimension.~~

~~3.3. Hollow piers shall be capped with 4 inches (102 mm) of solid masonry or concrete or the cavities of the top course shall be filled with concrete or grout.~~

~~4. The maximum height of a 4-inch (102 mm) load-bearing masonry foundation wall supporting wood frame walls and floors shall not be more than 4 feet (1219 mm) in height.~~

~~5. The unbalanced fill for 4-inch (102 mm) foundation walls shall not exceed 24 inches (610 mm) for solid masonry, nor 12 inches (305 mm) for hollow masonry.~~

...

1809A.12 Timber footings. *Not permitted by DSA-SS, DSA-SS/CC.* ~~Timber footings shall be permitted for buildings of Type V construction and as otherwise *approved* by the *building official*. Such footings shall be treated in accordance with AWPA U1 (Commodity Specification A, Use Category 4B). Treated timbers are not required where placed entirely below permanent water level, or where used as capping for wood piles that project above the water level over submerged or marsh lands. The compressive stresses perpendicular to grain in untreated timber footings supported upon treated piles shall not exceed 70 percent of the allowable stresses for the species and grade of timber as specified in the AF&PA NDS.~~

...

1809A.14 Pipes and Trenches. *Unless otherwise recommended by the soils report, open or backfilled trenches parallel with a footing shall not be below a plane having a downward slope of 1 unit vertical to 2 units horizontal (50% slope) from a line 9 inches (229 mm) above the bottom edge of the footing, and not closer than 18 inches (457 mm) from the face of such footing.*

Where pipes cross under footings, the footings shall be specially designed. Pipe sleeves shall be

provided where pipes cross through footings or footing walls and sleeve clearances shall provide for possible footing settlement, but not less than 1 inch (25 mm) all around pipe.

Exception: *Alternate trench locations and pipe clearances shall be permitted when approved by registered design professional in responsible charge and the enforcement agent.*

1809A.15 Grade beams: [DSA-SS, DSA-SS/CC] *For structures assigned to Seismic Design Category D, E or F, grade beams in shallow foundations shall comply with Section 1810A.3.12.*

SECTION 1810*A*
DEEP FOUNDATIONS

1810*A*.1 General. Deep foundations shall be analyzed, designed, detailed and installed in accordance with Sections 1810*A*.1 through 1810*A*.4.

...

1810*A*.3.1.5 Helical piles. Helical piles shall be designed and manufactured in accordance with accepted engineering practice to resist all stresses induced by installation into the ground and service loads.

1810A.3.1.5.1 Helical Piles Seismic Requirements. *For structures assigned to Seismic Design Category D, E or F, capacities of helical piles shall be determined in accordance with Section 1810A.3.3 by at least two project specific pre-production tests for each soil profile, size and depth of helical pile. At least two percent of all production piles shall be proof tested to the load determined in accordance with Section 1616A.1.16.~~1615A.1.10.~~*

Helical piles shall satisfy corrosion resistance requirements of ICC-ES AC 358. In addition, all helical pile materials that are subject to corrosion shall include at least 1/16" corrosion allowance.

Helical piles shall not be considered as carrying any horizontal loads.

...

1810*A*.3.2 Materials. The materials used in deep foundation elements shall satisfy the requirements of Sections 1810*A*.3.2.1 through 1810*A*.3.2.8, as applicable.

...

~~**1810.3.2.1.2 ACI 318 Equation (25.8.3.3).** Where this chapter requires detailing of concrete deep foundation elements in accordance with Section 18.7.5.4 of ACI 318, compliance with Equation (25.8.3.3) of ACI 318 shall not be required.~~

...

1810*A*.3.2.4 Timber. *Not permitted by DSA-SS, DSASS/CC.* ~~Timber deep foundation elements shall be designed as piles or poles in accordance with AF&PA NDS. Round timber elements shall conform to ASTM D 25. Sawn timber elements shall conform to DOC PS-20.~~

~~**1810.3.2.4.1 Preservative treatment.** Timber deep foundation elements used to support permanent structures shall be treated in accordance with this section unless it is established that the tops of the untreated timber elements will be below the lowest ground-water level assumed to exist during the life of the structure. Preservative and minimum final retention shall be in accordance with AWPA U1 (Commodity Specification E, Use Category 4C) for round timber elements and AWPA U1 (Commodity Specification A, Use Category 4B) for sawn timber elements. Preservative treated timber elements shall be subject to a quality control program administered by an *approved agency*. Element cutoffs shall be treated in accordance with AWPA M4.~~

...

1810A.3.3.1.2 Load tests. Where design compressive loads are greater than those determined using the allowable stresses specified in Section 1810A.3.2.6, where the design load for any deep foundation element is in doubt, *where driven deep foundation elements are installed by means other than a pile hammer,* or where cast-in-place deep foundation elements have an enlarged base formed either by compacting concrete or by driving a precast base, control test elements shall be tested in accordance with ASTM D 1143 *including Procedure G: Cyclic Loading Test* or ASTM D 4945. At least one element shall be load tested in each area of uniform subsoil conditions. Where required by the building official,

additional elements shall be load tested where necessary to establish the safe design capacity. The resulting allowable loads shall not be more than one-half of the ultimate axial load capacity of the test element as assessed by one of the published methods listed in Section 1810A.3.3.1.3 with consideration for the test type, duration and subsoil. The ultimate axial load capacity shall be determined by a registered design professional with consideration given to tolerable total and differential settlements at design load in accordance with Section 1810A.2.3. In subsequent installation of the balance of deep foundation elements, all elements shall be deemed to have a supporting capacity equal to that of the control element where such elements are of the same type, size and relative length as the test element; are installed using the same or comparable methods and equipment as the test element; are installed in similar subsoil conditions as the test element; and, for driven elements, where the rate of penetration (e.g., net displacement per blow) of such elements is equal to or less than that of the test element driven with the same hammer through a comparable driving distance, *or where the downward pressure and torque on such elements is greater than or equal to that applied to the test element that determined the ultimate axial load capacity at a comparable driving distance*.

...

1810A.3.3.1.5 Uplift capacity of a single deep foundation element. Where required by the design, the uplift capacity of a single deep foundation element shall be determined by an approved method of analysis based on a minimum factor of safety of three or by load tests conducted in accordance with ASTM D 3689. The maximum allowable uplift load shall not exceed the ultimate load capacity as determined in Section 1810A.3.3.1.2, using the results of load tests conducted in accordance with ASTM D3689 *including the Cyclic Loading Procedure*, divided by a factor of safety of two.

Exception: Where uplift is due to wind or seismic loading, the minimum factor of safety shall be two where capacity is determined by an analysis and one and a half where capacity is determined by load tests.

...

1810A.3.3.2 Allowable lateral load. Where required by the design, the lateral load capacity of a single deep foundation element or a group thereof shall be determined by an *approved* method of

analysis or by lateral load tests *in accordance with ASTM D3966, including the Cyclic Loading Procedure,* to at least twice the proposed design working load. The resulting allowable load shall not be more than one-half of the load that produces a gross lateral movement of 1 inch (25 mm) at the lower of the top of foundation element and the ground surface, unless it can be shown that the predicted lateral movement shall cause neither harmful distortion of, nor instability in, the structure, nor cause any element to be loaded beyond its capacity.

...

1810*A*.3.5.3.3 Structural Steel Sheet Piling. Individual sections of structural steel sheet piling shall conform to the profile indicated by the manufacturer, and shall conform to general requirements specified by ASTM A6.

Installation of sheet piling shall satisfy inspection, monitoring, and observation requirements in Sections 1812A.6 and 1812A.7.

...

1810*A*.3.8.3 Precast prestressed piles. Precast prestressed concrete piles shall comply with the requirements of Sections 1810*A*.3.8.3.1 through 1810*A*.3.8.3.3.

...

1810*A*.3.8.3.2 Seismic reinforcement in Seismic Design Category C. *Not permitted by DSA-SS, DSA-SS/CC.* ~~For structures assigned to *Seismic Design Category* C in accordance with Section 1613, precast prestressed piles shall have transverse reinforcement in accordance with this section. The volumetric ratio of spiral reinforcement shall not be less than the amount required by the following formula for the upper 20 feet (6096 mm) of the pile.~~

~~$\rho_s = 0.12 f'_c / f_{yh}$ **(Equation 18-5)**~~

~~where:~~

~~f'_c = Specified compressive strength of concrete, psi (MPa).~~

~~f_{yh} = Yield strength of spiral reinforcement ≤ 85,000 psi (586 MPa).~~

~~ρ_s = Spiral reinforcement index (vol. spiral/vol. core).~~

~~At least one-half the volumetric ratio required by Equation 18-5 shall be provided below the upper 20 feet (6096 mm) of the pile.~~

1810*A*.3.8.3.3 Seismic reinforcement in Seismic Design Categories D through F. For structures assigned to *Seismic Design Category* D, E or F, ~~*in accordance with Section 1613A,*~~ precast prestressed piles shall have transverse reinforcement in accordance with the following:

...

5. Where the transverse reinforcement consists of circular spirals, the volumetric ratio of spiral transverse reinforcement in the ductile region shall comply with the following:

...

~~This required amount of spiral reinforcement is permitted to be obtained by providing an inner and outer spiral.~~

...

1810*A*.3.9.4.2.1 Site Classes A through D. For Site Class A, B, C or D sites, transverse confinement reinforcement shall be provided in the element in accordance with Sections 18.7.5.2, 18.7.5.3 and 18.7.5.4 of ACI 318 within three times the least element dimension *at* ~~of~~ the bottom of the pile cap. A transverse spiral reinforcement ratio of not less than one-half of that required in Section 18.7.5.4 ~~(a)~~ of ACI 318 shall be permitted *for concrete deep foundation elements.*

1810*A*.3.9.4.2.2 Site Classes E and F. For Site Class E or F sites, transverse confinement reinforcement shall be provided in the element in accordance with Sections 18.7.5.2, 18.7.5.3 and 18.7.5.4 of ACI 318 within seven times the least element dimension *at* ~~of~~ the *bottom of the* pile cap and within seven times the least element dimension *at* ~~of~~ the interfaces of strata that are hard or stiff and strata that are liquefiable or are composed of soft- to medium-stiff clay.

...

1810*A*.3.10 Micropiles. Micropiles shall be designed and detailed in accordance with Sections 1810*A*.3.10.1 through 1810*A*.3.10.4.

...

~~**1810A.3.10.4 Seismic reinforcement.** For structures assigned to *Seismic Design Category* C, a permanent steel casing shall be provided from the top of the micropile down to the point of zero curvature. For structures assigned to *Seismic Design Category* D, E or F, the micropile shall be considered as an alternative system in accordance with Section 104.11. The alternative system design, supporting documentation and test data shall be submitted to the *building official* for review and approval.~~

***1810A.3.10.4 Seismic requirements**. For structures assigned to Seismic Design Category D, E, or F, a permanent steel casing having a minimum thickness of 3/8" shall be provided from the top of the micropile down to a minimum of 120 percent of the point of zero curvature. Capacity of micropiles shall be determined in accordance with Section 1810A.3.3 by at least two project specific pre-production tests for each soil profile, size and depth of micropile. At least two percent of all production piles shall be proof tested to the load determined in accordance with Section 1616A.1.16.~~1615A.1.10.~~*

Steel casing length in soil shall be considered as unbonded and shall not be considered as contributing to friction. Casing shall provide confinement at least equivalent to hoop reinforcing required by ACI 318 Section 18.13.4. ~~21.12.4.~~

Reinforcement shall have Class 1 corrosion protection in accordance with PTI Recommendations for Prestressed Rock and Soil Anchors. Steel casing design shall include at least 1/16" corrosion allowance.

Micropiles shall not be considered as carrying any horizontal loads.

...

1810*A*.4 Installation. Deep foundations shall be installed in accordance with Section 1810*A*.4. Where a single deep foundation element comprises two or more sections of different materials or different types spliced together, each section shall satisfy the applicable conditions of installation.

1810*A*.4.1 Structural integrity. Deep foundation elements shall be installed in such a manner and sequence as to prevent distortion or damage that may adversely affect the structural integrity of adjacent structures or of foundation elements being installed or already in place and as to avoid compacting the surrounding soil to the extent that other foundation elements cannot be installed properly.

...

1810*A*.4.1.5 Defective timber piles. *Not permitted by DSA-SS, DSA-SS/CC.* ~~Any substantial sudden increase in rate of penetration of a timber pile shall be investigated for possible damage. If the sudden increase in rate of penetration cannot be correlated to soil strata, the pile shall be removed for inspection or rejected.~~

...

SECTION 1811A
PRESTRESSED ROCK AND SOIL FOUNDATION ANCHORS

1811A.1 General. *The requirements of this section address the use of vertical rock and soil anchors in resisting seismic or wind overturning forces resulting in tension on shallow foundations.*

1811A.2 Adoption. *Except for the modifications as set forth in Sections 1811A.3 and 1811A.4, all Prestressed Rock and Soil Foundation Anchors shall ~~be designed~~ comply with ~~in accordance with~~ PTI Recommendations for Prestressed Rock and Soil Anchors.*

1811A.3 Geotechnical Requirements. *Geotechnical report for the Prestressed Rock & Soil Foundation Anchors shall address the following:*

1. *Minimum diameter and minimum spacing for the anchors including consideration of group effects.*
2. *Maximum unbonded length and minimum bonded length of the tendon.*

3. *Maximum recommended anchor tension capacity based upon the soil or rock strength / grout bond and anchor depth / spacing.*

4. *Allowable bond stress at the ground / grout interface and applicable factor of safety for ultimate bond stress.*

5. *Anchor axial tension stiffness recommendations at the anticipated anchor axial tension displacements, when required for structural analysis.*

6. *Minimum grout pressure for installation and post-grout pressure.*

7. *Class I Corrosion Protection is required for all permanent anchors. Geotechnical report shall specify the corrosion protection recommendations for temporary anchors.*

8. *Performance test shall be at a minimum of 1.6 times the design loads. There shall be a minimum of two preproduction test anchors. Preproduction test anchors shall be tested to ultimate load or 0.80 times the specified minimum tensile strength of the tendon. A Creep test is required for all prestressed anchors with greater than 10 kips of lock-off prestressing load.*

9. *Lock-off prestressing load requirements.*

10. *Acceptable Drilling methods.*

11. *Geotechnical observation and monitoring requirements.*

1811A.4 Structural Requirements.

1. *Tendons shall be thread-bar anchors conforming to ASTM A722.*

2. *The anchors shall be placed vertical.*

3. *Design Loads shall be based upon the load combinations in Section 1605A.3.1 and shall not exceed 60 percent of the specified minimum tensile strength of the tendons.*

4. *Ultimate Load shall be based upon Section 1616A.1.16 ~~1615A.1.10~~ and shall not exceed 80 percent of the specified minimum tensile strength of the tendons.*

5. *The anchor shall be designed to fail in grout bond to the soil or rock before pullout of the soil wedge by group effect.*

6. *Foundation design shall incorporate the effect of lock-off loads.*

7. *Design shall account for as-built locations of soil anchors considering all the acceptable construction tolerances.*

8. *Design shall account for both short and long term deformation.*

9. *Enforcement agency may require consideration of anchor deformation in evaluating deformation compatibility or building drift where it may be significant.*

SECTION 1812A
EARTH RETAINING SHORING

~~(Relocated from Section J106.2)~~ ***~~J106.2 Earth retaining shoring. [DSA-SS & DSA-SS/CC]~~***

1812A.1 ~~J106.2.1~~ General. *The requirements of this section shall apply to temporary and permanent earth retaining shoring using soldier piles and lagging with or without tie-back anchors in soil or rock, only when existing or new ~~DSA-SS & DSA-SS/CC~~ facilities are affected. Shoring used as construction means and methods only, which does not affect existing or new ~~DSA-SS & DSA-SS/CC~~ facilities, are not regulated by this section ~~DSA~~ and shall satisfy the requirements of the authorities having jurisdiction.*

Design, construction, testing, and inspection shall satisfy the requirements of this code except as modified in Sections 1812A.2 ~~J106.2.2~~ through ~~J106.2.8~~ 1812A.8.

1812A.2 ~~J106.2.2~~ Duration. *Shoring shall be considered temporary when elements of the shoring will be exposed to site conditions for a period of less than one (1) year, and shall be considered permanent otherwise. Permanent shoring shall account for the increase in lateral soil pressure due to earthquake. At the end of the construction period, the existing and new structures shall not rely on the temporary shoring for support in anyway. Wood components shall not be used for permanent shoring lasting more than two (2) years. Wood components of the temporary shoring that may affect the performance of permanent structure shall be removed after the shoring is no longer required.*

All components of the shoring shall have corrosion protection or preservative treatment for their expected duration. Wood components of the temporary shoring that will not be removed shall be treated in accordance with AWPA U1 (Commodity Specification A, Use Category 4B and Section 5.2), and shall be identified in accordance with Section 2303.1.9.1 ~~2303.1.8.1~~.

1812A.3 ~~***J106.2.3***~~ **Surcharge.** *Surcharge pressure due to footings, traffic, or other sources shall be considered in design. If the footing surcharge is located within the semi-circular distribution or bulb of earth pressure (when shoring is located close to a footings), lagging shall be designed for lateral earth pressure due to footing surcharge. Soil arching effects may be considered in the design of lagging. Underpinning of the footing may be used in lieu of designing the shoring and lagging for surcharge pressure. Alternatively, continuously contacting drilled pier shafts near the footings shall be permitted. The lateral surcharge design pressure shall be derived using Boussinesq equations modified for the distribution of stresses in an elastic medium due to a uniform, concentrated or line surface load as appropriate and soil arching effects.*

1812A.4 ~~***J106.2.4***~~ **Design and testing.** *Except for the modifications as set forth in Sections 1812A.4.1* ~~*J106.2.4.1 and J106.2.4.2*~~ *through 1812A.4.3 below, all Prestressed Rock and Soil Tie-back Anchors shall* ~~*be designed and tested in accordance*~~ *comply with PTI Recommendations for Prestressed Rock and Soil Anchors (PTI-2004).*

1812A.4.1 ~~***J106.2.4.1***~~ **Geotechnical requirements.** *The geotechnical report for the earth retaining shoring shall address the following:*

1. *Minimum diameter and minimum spacing for the anchors including consideration of group effects.*
2. *Maximum unbonded length and minimum bonded length of the tie-back anchors.*
3. *Maximum recommended anchor tension capacity based upon the soil or rock strength / grout bond and anchor depth / spacing.*
4. *Allowable bond stress at the ground / grout interface and applicable factor of safety for ultimate bond stress for the anchor. For permanent anchors, a minimum factor of safety of 2.0 shall be applied to ground soil interface as required by PTI-2004 Section 6.6.*
5. *Minimum grout pressure for installation and post-grout pressure for the anchor. The presumptive post grout pressure of 300 psi may be used for all soil type.*
6. *Class I Corrosion Protection is required for all permanent anchors. The geotechnical report shall specify the corrosion protection recommendations for temporary anchors.*
7. *Performance test for the anchors shall be at a minimum of two (2) times the design loads and shall not exceed 80% of the specified minimum tensile strength of the anchor rod. A creep test is required for all prestressed anchors that are*

performance tested. All production anchors shall be tested at 150% of design loads and shall not be greater than 70% of the specified minimum tensile strength of the anchor rod.

8. *Earth pressure, surcharge pressure, and the seismic increment of earth pressure loading, when applicable.*
9. *Maximum recommended lateral deformation at the top of the soldier pile, at the tie-back anchor locations, and the drilled pier concrete shafts at the lowest grade level.*
10. *Allowable vertical soil bearing pressure, friction resistance, and lateral passive soil resistance for the drilled pier concrete shafts and associated factors of safety for these allowable capacities.*
11. *Soil-pier shaft / pile interaction assumptions and lateral soil stiffness to be used in design for drilled pier concrete shaft or pile lateral loads.*
12. *Acceptable drilling methods.*
13. *Geotechnical observation and monitoring recommendations.*

1812A.4.2 ~~J106.2.4.2~~ Structural requirements:

1. *Tendons shall be thread-bar anchors conforming to ASTM A 722.*
2. *Anchor design loads shall be based upon the load combinations in Section 1605A.3.1 and shall not exceed 60 percent of the specified minimum tensile strength of the tendons.*
3. *The anchor shall be designed to fail in grout bond to the soil or rock before pullout of the soil wedge.*
4. *Design of shoring system shall account for as-built locations of soil anchors considering all specified construction tolerances in Section 1812A.8 ~~J106.2.8~~.*
5. *Design of shoring system shall account for both short and long term deformation.*

1812A.4.3 ~~J106.2.4.3~~ Testing of tie-back anchors:

1. *The geotechnical engineer shall keep a record at job site of all test loads, total anchor movement, and report their accuracy.*

2. *If a tie-back anchor initially fails the testing requirements, the anchor shall be permitted to be re-grouted and retested. If anchor continues to fail, the followings steps shall be taken:*

   a. *The contractor shall determine the cause of failure – variations of the soil conditions,*

installation methods, materials, etc.

b. Contractor shall propose a solution to remedy the problem. The proposed solution will need to be reviewed and approved by geotechnical engineer, shoring design engineer, and the building official.

3. After a satisfactory test, each anchor shall be locked-off in accordance with Section 8.4 of PTI 2004.

4. The shoring design engineer shall specify design loads for each anchor.

1812A.5 ~~***J106.2.5***~~ ***Construction:*** *The construction procedure shall address the following:*

1. Holes drilled for piles / tie-back anchors shall be done without detrimental loss of ground, sloughing or caving of materials and without endangering previously installed shoring members or existing foundations.

2. Drilling of earth anchor shafts for tie-backs shall occur when the drill bench reaches two to three feet below the level of the tie-back pockets.

3. Casing or other methods shall be used where necessary to prevent loss of ground and collapse of the hole.

4. The drill cuttings from earth anchor shaft shall be removed prior to anchor installation.

5. Unless tremie methods are used, all water and loose materials shall be removed from the holes prior to installing piles / tie-backs.

6. Tie-back anchor rods with attached centralizing devices shall be installed into the shaft or through the drill casing. Centralizing device shall not restrict movement of the grout.

7. After lagging installation, voids between lagging and soil shall be backfilled immediately to the full height of lagging.

8. The soldier piles shall be placed within specified tolerances in the drilled hole and braced against displacement during grouting. Fill shafts with concrete up to top of footing elevation, rest of the shaft can generally be filled with lean concrete. Excavation for lagging shall not be started until concrete has achieved sufficient strength for all anticipated loads as determined by the shoring design engineer.

9. Where boulders and / or cobbles have been identified in the geotechnical reports, contractor shall be prepared to address boulders and / or cobbles that may be encountered during the drilling of soldier piles and Tie-back anchors.

10. The grouting equipment shall produce grout free of lumps and indispensed cement. The grouting equipment shall be sized to enable the grout to be pumped in continuous operation.

The mixer shall be capable of continuously agitating the grout.

11. *The quantity of grout and grout pressure shall be recorded. The grout pressure shall be controlled to prevent excessive heave in soils or fracturing rock formations.*
12. *If post-grouting is required, post grouting operation shall be performed after initial grout has set for 24-hours in the bond length only. Tie-backs shall be grouted over a sufficient length (anchor bond length) to transfer the maximum anchor force to the anchor grout.*
13. *Testing of anchors may be performed after post-grouting operations provided grout has reached strength of 3,000 psi as required by PTI-2004 Section 6.11.*
14. *Anchor rods shall be tensioned straight and true. Excavation directly below the anchors shall not continue before those anchors are tested.*

1812A.6 ~~J106.2.6~~ Inspection, survey monitoring, and observation

1. The shoring design engineer or his designee shall make periodic inspections of the job site for the purpose of observing the installation of shoring system, testing of tie-back anchors, and monitoring of survey.

2. Testing, inspection, and observation shall be in accordance with testing, inspection and observation requirements approved by the building official. The following activities and materials shall be tested, inspected, or observed by the special inspector and geotechnical engineer:

- *a. Sampling and testing of concrete in soldier pile and tie-back anchor shafts.*
- *b. Fabrication of tie-back anchor pockets on soldier beams*
- *c. Installation and testing of tie-back anchors.*
- *d. Survey monitoring of soldier pile and tie-back load cells.*
- *e. Survey Monitoring of existing buildings.*

3. A complete and accurate record of all soldier pile locations, depths, concrete strengths, tie-back locations and lengths, tie-back grout strength, quantity of concrete per pile, quantity of grout per tie-back and applied tie-back loads shall be maintained by the special inspector and geotechnical engineer. The shoring design engineer shall be notified of any unusual conditions encountered during installation.

4. Calibration data for each test jack, pressure gauge, and master pressure gauge shall be verified

by the special inspector and geotechnical engineer. The calibration tests shall be performed by an independent testing laboratory and within 120 calender days of the data submitted.

5. *Monitoring points shall be established at the top and at the anchor heads of selected soldier piles and at intermediate intervals as considered appropriate by the geotechnical engineer.*

6. *Control points shall be established outside the area of influence of the shoring system to ensure the accuracy of the monitoring readings.*

7. *The periodic basis of shoring monitoring, as a minumum, shall be as follows:*

   a. *Intitial monitoring shall be performed prior to any excavation.*
   b. *Once excavation has begun, the periodic readings shall be taken weekly until excavation reaches the estimated subgrade elevation and the permanent foundation is complete.*
   c. *If performance of the shoring is within established guidelines, shoring design engineer may permit the periodic readings to be bi-weekly. Once initiated, bi-weekly readings shall continue until the building slab at ground floor level is completed and capable of transmitting lateral loads to the permanent structure. Thereafter, readings can be monthly.*
   d. *Where the building has been designed to resist lateral earth pressures, the periodic monitoring of the soldier piles and adjacent structure can be discontinued once the ground floor diaphragm and subterranean portion of the structure is capable of resisting lateral soil loads and approved by the shoring design engineer, geotechnical engineer, and the building official.*
   e. *Additional readings shall be taken when requested by special inspector, shoring design engineer, geotechnical engineer, or the building official.*

8. *Monitoring reading shall be submitted to shoring design engineer, engineer in responsible charge, and the building official within 3 working days after they are conducted. Monitoring readings shall be accurate to within 0.01 feet. Results are to be submitted in tabular form showing at least the intial date of monitoring and reading, current monitoring date and reading and difference between the two readings.*

9. *If the total cummulative horizontal or vertical movement (from start of construction) of the existing buildings reaches ½" or soldier piles reaches 1" all excavation activities shall be suspended. The geotechnical and shoring design engineer shall determine the cause of movement, if any,*

and recommend corrective measures, if necessary, before excavation continues.

10. *If the total cummulative horizontal or vertical movement (from start of construction) of the existing buildings reaches 3/4" or soldier piles reaches 1 ½" all excavation activities shall be suspended until the causes, if any, can be determined. Supplemental shoring shall be devised to eliminate further movement and the building official shall review and approve the supplemental shoring before excavation continues.*

11. *Monitoring of Tie-back Anchor Loads:*

    a. *Load cells shall be installed at the tie-back heads adjacent to buildings at maximum interval of 50', with a minimum of one load cells per wall.*
    b. *Load cell readings shall be taken once a day during excavation and once a week during the remainder of construction.*
    c. *Load cell readings shall be submitted to the geotechnical engineer, shoring design engineer, engineer in responsible charge, and the building official.*
    d. *Load cell readings can be terminated once the temporary shoring no longer provides support for the buildings.*

1812A.7 ~~*J106.2.7*~~ ***Monitoring of existing DSA-SS and DSA-SS/CC structures***

1. *The contractor shall complete a written and photographic log of all existing DSA-SS, DSA-SS/CC and structures within 100 ft or three times depth of shoring, prior to construction. A licensed surveyor shall document all existing substantial cracks in adjacent existing structures.*
2. *Contractor shall document existing condition of wall cracks adjacent to shoring walls prior to start of construction.*
3. *Contractor shall monitor existing walls for movement or cracking that may result from adjacent shoring.*
4. *If excessive movement or visible cracking occurs, contractor shall stop work and shore / reinforce excavation and contact shoring design engineer and the building official.*
5. *Monitoring of the existing structure shall be at reasonable intervals as required by the registered design professional subject to approval of the building official. Monitoring shall be performed by a licensed surveyor and shall consist of vertical and lateral movement of the*

existing structures. Prior to starting shoring installation a pre-construction meeting shall take place between the contractor, shoring design engineer, surveyor, geotechnical engineer, and the building official to identify monitoring locations on existing buildings.

6. *If in the opinion of the building official or shoring design engineer, monitoring data indicate excessive movement or other distress, all excavation shall cease until the geotechnical engineer and shoring design engineer investigates the situation and makes recommendations for remediation or continuing.*
7. *All reading and measurements shall be submitted to the building official and shoring design engineer.*

1812A.8 ~~J106.2.8~~ Tolerances. *Following tolerances shall be specified on the construction documents.*

1. *Soldier Piles:*

    i. *Horizontal and vertical construction tolerances for the soldier pile locations.*
    ii. *Soldier pile plumbness requirements (angle with vertical line).*

2. *Tie-back Anchors:*

    i. *Allowable deviation of anchor projected angle from specified vertical and horizontal design projected angle.*
    ii. *Anchor clearance to the existing/new utilities and structures.*

Relocated from Section J112

Section 1813A ~~J112~~

Vibro Stone Columns for Ground Improvement

1813A.1 ~~J112.1~~ General. ~~[DSA-SS & DSA-SS/CC]~~ *This section shall apply to Vibro Stone Columns (VSCs) for ground improvement using unbounded aggregate materials. Vibro stone column provisions in this section are intended to increase bearing capacity, reduce settlements, and mitigate liquefaction for shallow foundations. These requirements shall not be used for grouted or bonded stone columns, ground improvement for deep foundation elements, or changing site class. VSCs shall not be considered as a deep foundation element.*

Ground improvement shall be installed under the entire building/structure footprint and not under isolated foundation elements only.

Design, construction, testing, and inspection shall satisfy the requirements of this code except as modified in Sections 1813A.2 ~~J112.2~~ through ~~J112.5~~ 1813A.5.

1813A.2 ~~J112.2~~ Geotechnical Report. *The geotechnical report shall specify vibro stone column requirements to ensure uniformity in total and differential immediate settlement, long term settlement, and earthquake induced settlement.*

1. *Soil compaction shall be sufficient to mitigate potential for liquefaction as described in California Geological Survey (CGS) Special Publication 117A (SP-117A): Guidelines for Evaluating and Mitigating Seismic Hazard in California.*

2. *Area replacement ratio for the compaction elements and the basis of its determination shall be explained. Minimum factor of safety for soil compaction shall be in accordance with SP-117A.*

3. *Depth of soil compaction elements and extent beyond the footprint of structures/foundation shall be defined. Extent beyond the foundation shall be half the depth of the VSCs with a minimum of 10' or an approved alternative.*

4. *Minimum diameter and maximum spacing of soil compaction elements shall be specified. VSC's shall not be less than 2 feet in diameter and center to center spacing shall not exceed 8 feet.*

5. *The modulus of subgrade reactions for shallow foundations shall account for the presence of compaction elements.*

6. *The modulus of subgrade reactions, long-term settlement, and post-earthquake settlement shall be specified along with expected total and differential settlements for design.*

7. *The acceptance criteria for Friction Cone and Piezocone Penetration Testing ~~Cone Penetration Test (CPT)~~ in accordance with ASTM D 5778 ~~3441~~ complemented by Standard Penetration Test (SPT) in accordance with ASTM D 1586, if necessary, to verify soil improvement shall be specified*

8. *The requirements for special inspection and observation by the Geotechnical engineer shall be specified.*

9. *A Final Verified Report (FVR) documenting the installation of the ground improvement system and confirming that the ground improvement acceptance criteria have been met shall be prepared by the Geotechnical Engineer and submitted to the enforcement agency for review and approval.*

1813A.3 ~~***J112.3***~~ ***Shallow Foundations.*** *VSCs under the shallow foundation shall be located symmetrically around the centroid of the footing or load.*

1. *There shall be a minimum of four stone columns under each isolated or continuous/combined footing or approved equivalent.*

2. *The VSCs or deep foundation elements shall not be used to resist tension or overturning uplift from the shallow foundations.*

3. *The foundation design for the shallow foundation shall consider the increased vertical stiffness of the VSCs as point supports for analysis, unless it is substantiated that the installation of the VSCs result in improvement of the surrounding soils such that the modulus of subgrade reaction, long term settlement, and post-earthquake settlement can be considered uniform throughout.*

1813A.4 ~~***J112.4***~~ ***Installation.*** *VSCs shall be installed with vibratory probes. Vertical columns of compacted unbounded aggregate shall be formed through the soils to be improved by adding gravel near the tip of the vibrator and progressively raising and re-penetrating the vibrator which will results in the gravel being pushed into the surrounding soil.*

Gravel aggregate for VSCs shall be well graded with a maximum size of 6" and not more than 10% smaller than 3/8" after compaction.

1813A.5 ~~***J112.5***~~ ***Construction Documents.*** *Construction documents for VSCs, as a minimum, shall include the following:*

1. *Size, depth, and location of VSCs.*
2. *Extent of soil improvements along with building/structure foundation outlines.*
3. *Field verification requirements and acceptance criteria using CPT/SPT.*

4. *The locations where CPT/SPT shall be performed.*
5. *The Testing, Inspection and Observation (TIO) program shall indicate the inspection and observation required for the VSCs.*

(All existing amendments that are not revised above shall continue without any change)

~~All existing California amendments that are not revised below shall continue without change.~~

Italics are used for text within Sections 1903 through 1905 of this code to indicate provisions that differ from ACI 318.

SECTION 1901
GENERAL

1901.1 Scope. *The provisions of this chapter shall govern the materials, quality control, design and construction of concrete used in structures.*

1901.1.1 Application. *The scope of application of Chapter 19 is as follows:*

Community college buildings regulated by the Division of the State Architect—Structural Safety/Community Colleges (DSA-SS/CC), as listed in Section 1.9.2.2.

1901.1.2 Amendments in this chapter. *DSA-SS/CC adopts this chapter and all amendments.*

Exceptions: *Amendments adopted by only one agency appear in this chapter preceded with the appropriate acronym of the adopting agency, as follows:*

Division of the State Architect—Structural Safety/Community Colleges:

[DSA-SS/CC] *For applications listed in Section 1.9.2.2.*

1901.1.3 Reference to other chapters. [DSA-SS/CC] *Where reference within this chapter is made to sections in Chapters 17 and 18, the provisions in Chapters 17A, and 18A respectively shall apply instead.*

1901.1.4 Amendments. [DSA-SS/CC] *See Section 1909 ~~1913~~ for additional requirements applicable to community colleges.*

...

SECTION 1909 ~~1913~~
ADDITIONAL REQUIREMENTS FOR COMMUNITY COLLEGES [DSA-SS/CC]

1909.1 ~~1913.1~~ General.

1909.1.1 ~~1913.1.1~~ Construction documents. *Openings larger than 12 inches (305 mm) in any dimension shall be detailed on the structural drawings.*

1909.2 ~~1913.2~~ Tests and materials. *Where required, special inspections and tests shall be in accordance with Chapter 17A and this section.*

~~***1913.2.1 Glass fiber reinforced concrete.*** *Glass fiber reinforced concrete (GFRC) and the materials used in such concrete shall be in accordance with the PCI MNL 128 standard.~~

~~***1913.2.2 Fly ash.*** *Replace ACI 318 Section 3.2.2 as follows: Fly ash or other pozzolan can be used as a partial substitute for ASTM C 150 portland cement, as follows:~~

~~*1. Fly ash or other pozzolan shall conform to ASTM C 618 for Class N or Class F materials (Class C is not permitted), and*~~

~~2. More than 15 percent by weight of fly ash or other pozzolans shall be permitted to be substituted for ASTM C 150 portland cement if the mix design is proportioned per ACI 318 Section 5.3. See Section 1904 for durability requirements.~~

~~3. More than 40 percent by weight of ground granulated blast-furnace slag conforming to ASTM C 989 shall be permitted to be substituted for ASTM C 150 portland cement if the mix design is proportioned per ACI 318 Section 5.3. See Section 1904 for durability requirements.~~

1909.2.1 ~~***1913.2.3***~~ ***Aggregates*** - *ACI 318, Section 3.3.2.* Modify ACI 318 Section *26.4.1.2.1(a).(1)* ~~*3.3.2*~~ *as follows:* ~~*by adding the following:*~~

~~Aggregate size limitations waiver shall be approved by the enforcement agency.~~

~~Evidence that the aggregate used is not reactive in the presence of cement alkalis may be required by the enforcement agency. If new aggregate sources are to be used or if past experience indicates problems with existing aggregate sources, test the aggregate for potential reactivity according to ASTM C 289 to determine potential reactivity in the presence of cement.~~

~~If the results of the test are other than innocuous, selected concrete proportions using the aggregate (see Section 1905.2) shall be tested in accordance with ASTM C 1567. If the results of this test indicate an expansion greater than 0.10 percent at 16 days age, provide mitigation with one of the cementitious material systems noted below such that an expansion of less than 0.10 percent at 16 days age is obtained:~~

~~1. Low-alkali portland cement containing not more than 0.6 percent total alkali when calculated as sodium oxide, as determined by the method given in ASTM C 114.~~

~~2. Blended hydraulic cement, Type IS or IP, conforming to ASTM C 595, except that Type IS cement shall not contain less than 40 percent slag constituent.~~

~~3. Replacement of not less than 15 percent by weight of the portland cement used by a mineral admixture conforming to ASTM C 618 for Class N or F materials (Class C is not permitted).~~

~~4. Replacement of not less than 40 percent by weight of the portland cement used by a ground granulated blast-furnace slag conforming to ASTM C 989.~~

(1) ***Normal weight aggregate:*** *Aggregate shall be non-reactive as determined by one of the methods in ASTM C33 Appendix XI Methods for Evaluating Potential for Deleterious Expansion Due to Alkali Reactivity of an Aggregate. Aggregates deemed to be deleterious or potentially deleterious may be used with the addition of a material that has been shown to prevent harmful expansion in accordance with Appendix XI of ASTM C33, when approved by the building official.*

1909.2.2 ~~***1913.2.4***~~ ~~***Discontinuous***~~ ***Ssteel fibers reinforcement*** – *Not permitted.* ~~*Modify ACI 318 Section 3.5.1 by adding the following:*~~

~~Discontinuous steel fibers shall not be permitted~~

1909.2.3 ~~***1913.2.5***~~ ***Cementitious material.*** *The concrete supplier shall furnish to the enforcement agency certification that the cement proposed for use on the project has been manufactured and tested in compliance with the requirements of ASTM C 150 for portland cement and ASTM C 595 or ASTM C 1157 for blended hydraulic cement, whichever is applicable. When a mineral admixture or ground granulated blast-furnace slag is proposed for use, the concrete supplier shall furnish to the enforcement agency certification that they have been manufactured and tested in compliance with ASTM C 618 or ASTM C 989, whichever is applicable. The concrete producer shall provide copies of the cementitious material supplier's certificate of compliance that represents the materials used by date of shipment for concrete. Cementitious materials without certification of compliance shall not be used.*

1909.2.4 ~~***1913.2.6***~~ ***Tests of reinforcing bars.*** ~~*Where*~~ ~~*s*~~*Samples shall be* ~~*are*~~ *taken from bundles as delivered from the mill, with the bundles identified as to heat number and* ~~*provided*~~ *the accompanying mill certificate.* ~~*analyses accompany the report,*~~ ~~*o*~~ *One tensile test and one bend test shall be made from a sample* ~~*specimen*~~ *from each 10 tons (9080 kg) or fraction thereof of each size of reinforcing steel.*

Where positive identification of the heat number cannot be made or where random samples are to be taken, one series of tests shall be made from each 2 1/2 tons (2270 kg) or fraction thereof of each size of reinforcing steel.

Tests of reinforcing bars may be waived by the structural engineer with the approval of the Building Official for one-story buildings or non-building structures provided they are identified in the construction documents and certified mill test reports are provided to the inspector of record for each shipment of such reinforcement.

1909.2.5 ~~***1913.2.7***~~ ***Tests for prestressing steel and anchorage.*** *All wires or bars of each size from each mill heat and all strands from each manufactured reel to be shipped to the site shall be assigned an individual lot number and shall be tagged in such a manner that each lot can be accurately identified at the job site. Each lot of tendon and anchorage assemblies and bar couplers to be installed shall be likewise identified.*

The following samples of materials and tendons selected by the engineer or the designated testing laboratory from the prestressing steel at the plant or job site shall be furnished by the contractor and tested by an approved independent testing agency:

1. For wire, strand or bars, 7-foot-long (2134 mm) samples shall be taken of the coil of wire or strand reel or rods. A minimum of one random sample per 5,000 pounds (2270 kg) of each heat or lot used on the job shall be selected.

2. For prefabricated prestressing tendons other than bars, one completely fabricated tendon 10 feet (3048 mm) in length between grips with anchorage assembly at one end shall be furnished for each size and type of tendon and anchorage assembly.

Variations of the bearing plate size need not be considered.

The anchorages of unbonded tendons shall develop at least 95 percent of the minimum specified ultimate strength of the prestressing steel. The total elongation of the tendon under ultimate load shall not be less than 2 percent measured in a minimum gage length of 10 feet (3048 mm).

Anchorages of bonded tendons shall develop at least 90 percent of the minimum specified strength of the prestressing steel tested in an unbonded state. All couplings shall develop at least 95 percent of the minimum specified strength of the prestressing steel and shall not reduce the elongation at rupture below the requirements of the tendon itself.

3. If the prestressing tendon is a bar, one 7-foot (2134 mm) length complete with one end anchorage shall be furnished and, in addition, if couplers are to be used with the bar, two 4-foot (1219 mm) lengths of bar fabricated to fit and equipped with one coupler shall be furnished.

4. Mill tests of materials used for end anchorages shall be furnished. In addition, at least one Brinnell hardness test shall be made of each thickness of bearing plate.

1909.2.6 ~~***1913.2.8***~~ ***Composite construction cores.*** *Cores of the completed composite concrete construction shall be taken to demonstrate the shear strength along the contact surfaces. The cores shall be tested when the cast-in-place concrete is approximately 28 days old and shall be tested by a shear loading parallel to the joint between the precast concrete and the cast-in-place concrete. The minimum unit shear strength of the contact surface area of the core shall not be less than 100 psi (689 kPa).*

At least one core shall be taken from each building for each 5,000 square feet (465 m2) of area of composite concrete construction and not less than three cores shall be taken from each project. The architect or structural engineer in responsible charge of the project or his or her representative shall designate the location for sampling.

~~***1913.2.9 Tests of shotcrete.*** *Testing of shotcrete shall follow the provisions of Sections 1910, 1909.4, and the general requirements of ACI 318 Section 5.6.*~~

~~***1913.2.10 Gypsum field tests.*** *Field tests shall be made during construction to verify gypsum strength. One sample consisting of three specimens shall be made for each 5,000 square feet (465 m2) or fraction thereof of all gypsum poured, but not less than one sample shall be taken from each half day's pour.*~~

1909.2.7 ~~***1913.2.11***~~ ***Tests for post-installed anchors in concrete.*** *When post-installed anchors are used in lieu of cast-in place bolts, the installation verification test loads frequency and acceptance criteria shall be in accordance with this section.*

1909.2.7.1 ~~***1913.2.11.1***~~ ***General.*** *Test loads or torques and acceptance criteria shall be shown on the construction documents.*

If any anchor fails testing, all anchors of the same type shall be tested, which are installed by the same trade, not previously tested until twenty (20) consecutive anchors pass, then resume the initial test frequency.

1909.2.7.2 ~~***1913.2.11.5***~~ ***Testing procedure.*** *The test procedure shall be as permitted by an approved* ~~*test*~~ *evaluation report using criteria adopted in this code. All* ~~*other*~~ *post-installed anchors shall be tension tested.*

Exception: *Torque controlled post installed anchors and screw type anchors shall be permitted to be tested using torque based on an approved test report using criteria adopted in this code.*

Alternatively, the Mmanufacturer's recommendation for testing may be approved by the enforcement agency based on approved test report using criteria adopted in this code.

1909.2.7.3 ~~1913.2.11.3~~ Test frequency. *When post-installed anchors are used for sill plate bolting applications, 10 percent of the anchors shall be tested.*

When post-installed anchors are used for other structural applications, all such anchors shall be tested.

When post-installed anchors are used for nonstructural applications such as equipment anchorage, 50 percent or alternate bolts in a group, including at least one-half the anchors in each group, shall be tested.

The testing of the post-installed anchors shall be done in the presence of the special inspector and a report of the test results shall be submitted to the enforcement agency.

Exceptions:

1. Undercut anchors that allow visual confirmation of full set shall not require testing.

2. Where the factored design tension on anchors is less than 100 lb and those anchors are clearly noted on the approved construction documents, only 10 percent of those anchors shall be tested.

3. Where adhesive anchor systems are used to install reinforcing dowel bars in hardened concrete, only 25 percent of the dowels shall be tested if all the following conditions are met:

a. The dowels are used exclusively to transmit shear forces across joints between existing and new concrete.

b. The number of dowels in any one member equals or exceeds 12.

c. The dowels are uniformly distributed across seismic force resisting members (such as shear walls, collectors and diaphragms).

Anchors to be tested shall be selected at random by the special inspector/inspector of record (IOR).

4. Testing of shear dowels across cold joints in slabs on grade, where the slab is not part of the lateral force-resisting system shall not be required.

5. Testing is not required for power actuated fasteners used to attach tracks of interior nonshear wall partitions for shear only, where there are at least three fasteners per segment of track.

1909.2.7.4 ~~***1913.2.11.2***~~ ***Test loads.*** *Required test loads shall be determined by one of the following methods:*

1. Twice the maximum allowable tension load or one and a quarter (11/4) times the maximum design strength of anchors as provided in an approved test report using criteria adopted in this code or determined in accordance with Chapter 17 ~~Appendix D~~ of ACI 318.

Tension test load need not exceed 80 percent of the nominal yield strength of the anchor element (= 0.8 Ase fya).

2. The manufacturer's recommended installation torque based on an approved test report using criteria adopted in this code.

1909.2.7.5 ~~***1913.2.11.4***~~ ***Test acceptance criteria.*** *Acceptance criteria for post-installed anchors shall be based on an approved test report using criteria adopted in this code ~~or manufacturer's written instruction, acceptable to the enforcement agency~~. Field tests shall satisfy the following minimum requirements.*

1. Hydraulic ram method:

Anchors tested with a hydraulic jack or spring loaded ~~devices~~ apparatus shall maintain the test load for a minimum of 15 seconds and shall exhibit no discernible movement during the tension test, e.g., as evidenced by loosening of the washer under the nut.

For adhesive anchors, where other than bond is being tested, the testing apparatus support ~~device~~ shall not be located within 1.5 times the anchor's embedment depth to avoid restricting the concrete shear cone type failure mechanism from occurring.

2. Torque wrench method:

Torque controlled post installed ~~A~~ anchors tested with a calibrated torque wrench shall ~~must~~ attain the specified torque within ½ turn of the nut; or one-quarter (1/4) turn of the nut for a 3/8 in. sleeve anchor only.

~~***Exceptions:***~~

~~*1. Wedge or sleeve type: One-quarter (1/4) turn of the nut for a 3/8 in. sleeve anchor only.*~~

~~*2.*~~ *Screw~~Threaded~~ ~~T~~type: anchors tested with a calibrated torque wrench shall attain the specified torque within ~~O~~one-quarter (1/4) turn of the screw after initial seating of the screw head.*

1909.3 ~~1913.3~~ Modifications to ACI 318

1909.3.1 ~~1913.3.2~~ ACI 318, Section 11.9 ~~14.9~~. *Modify ACI 318 by adding Section 14.9 as follows:*

11.9 ~~14.9~~ - ***Foundation walls.*** *Horizontal reinforcing of concrete foundation walls for wood-frame or light-steel buildings shall consist of the equivalent of not less than one No. 5 bar located at the top and bottom of the wall. Where such walls exceed 3 feet (914 mm) in height, intermediate horizontal reinforcing shall be provided at spacing not to exceed 2 feet (610 mm) on center. Minimum vertical reinforcing shall consist of No. 3 bars at 24 inches (610 mm) on center.*

Where concrete foundation walls or curbs extend above the floor line and support wood-frame or light steel exterior, bearing or shear walls, they shall be doweled to the foundation wall below with a minimum of No. 3 bars at 24 inches (610 mm) on center. Where the height of the wall above the floor line exceeds 18inches (457 mm), the wall above and below the floor line shall meet the requirements of ACI 318 Section 11.6 and 11.7 ~~14.3~~.

1909.3.2 ~~1913.3.6~~ ACI 318, Section 12.7.3. *Add Section 12.7.3.4 to ACI 318 as follows:* ***~~ACI 318, Section 21.11.7.~~*** *~~Modify ACI 318 Section 21.11.7 by adding Section 21.11.7.7 as follows:~~*

~~21.11.7.7 - Where boundary members are not required by ACI 318 Section 21.11.7.5, minimum reinforcement parallel to the edges of all diaphragms and the boundaries of all openings shall consist of twice the cross sectional area of the minimum shear reinforcement required per linear foot of diaphragm.~~

12.7.3.4 *– At least two No. 5 bars in diaphragms having two layers of reinforcement in both directions and one No. 5 bar in diaphragms having a single layer of reinforcement in both directions shall be provided around openings larger than 12 inches in any dimension in addition to the minimum reinforcement required by Section 12.6.*

1909.3.3 ~~1913.3.7~~ ACI 318, Chapter 14 ~~22~~. *Plain concrete is not permitted.*

1909.3.4 ~~1913.3.3~~ ACI 318, Section 18.10.6.5 ~~21.9.2.2~~. *Modify ACI 318, Section 18.10.6.5 ~~21.9.2.2~~ by adding the following:*

Where boundary members are not required by ACI 318 Section 18.10.6.2 or 18.10.6.3 ~~21.9.6~~, minimum reinforcement parallel to the edges of all structural walls and the boundaries of all openings shall consist of twice the cross-sectional area of the minimum shear reinforcement required per lineal foot of wall. Horizontal extent of boundary element shall be per ACI 318 Section 18.10.6.4 (a), (b) and (c) ~~21.9.6.4 (a) and (b)~~.

~~1913.3.4 ACI 318, Section 21.9.4.~~ *~~Modify ACI 318 by adding Section 21.9.4.6 as follows:~~*

~~21.9.4.6 - Walls and portions of walls with Pu > 0.35Po shall not be considered to contribute to the calculated strength of the structure for resisting earthquake induced forces. Such walls shall conform to the requirements of ACI 318 Section 21.13.~~

1909.3.5 ~~1913.3.5~~ ACI 318, Section 18.12.6 ~~21.11.4~~. *Add Section 18.12.6.2 to ACI 318 as follows: ~~Modify ACI 318 Section 21.11.4 by adding the following:~~*

Collector and boundary elements in topping slabs placed over precast floor and roof elements shall not be less than 3 inches (76 mm) or 6 db thick, where db is the diameter of the largest reinforcement in the topping slab.

1909.3.6 ACI 318, Table 21.2.2. *Replace Table 21.2.2 as follows.:*

Table 21.2.2 – Strength reduction factor φ for moment, axial force, or combined moment and axial force

Net tensile strain ε_t	Classification	φ			
		Type of transverse reinforcement			
		Spirals conforming to 25.7.3		Other	
$\varepsilon_t \le \varepsilon_{ty}$	Compression-controlled	0.75	(a)	0.65	(b)
$\varepsilon_{ty} < \varepsilon_t < 0.005$	Transition[1][2]	$0.75 + 0.15\frac{\varepsilon_t - \varepsilon_{ty}}{\varepsilon_t^{*}\text{~~0.005~~} - \varepsilon_{ty}}$	(c)	$0.65 + 0.25\frac{\varepsilon_t - \varepsilon_{ty}}{\varepsilon_t^{*}\text{~~0.005~~} - \varepsilon_{ty}}$	(d)
$\varepsilon_t \ge 0.005$	Tension-controlled[3]	0.9	(e)	0.9	(f)

[1] For sections classified as transition, it shall be permitted to use φ corresponding to compression-controlled sections.

[2] *ε_t^{*} is the greater of net tensile strain calculated for $P_n = 0.1A_g f'_c$ and 0.005.*

[3] *For sections with factored axial compression force $Pu \ge 0.1A_g f'_c$, φ shall be calculated using equation (c) or (d) for sections classified as transition, as applicable.*

1909.3.7 ~~1913.3.1~~ ACI 318, Section ~~5.6.2.1~~ 26.12.2.1(a). *Replace ACI 318 Section 26.12.2.1(a) ~~5.6.2.1~~ by the following:*

26.12.2.1(a) ~~5.6.2.1~~ - Samples for strength tests of each class of concrete placed each day shall be taken not less than once a day, or not less than once for each 50 cubic yards (38.2 m3) of concrete, or not less than once for each 2,000 square feet (186 m2) of surface area for slabs or walls. Additional samples for seven-day compressive strength tests shall be taken for each class of concrete at the beginning of the concrete work or whenever the mix or aggregate is changed.

~~1913.3.8 ACI 318, Section D.3.3.~~ *~~Replace the requirements of Section 1905.1.9 with the following. Modify ACI 318, Sections D.3.3.4.2, D.3.3.4.3(d), and D.3.3.5.2 to read as follows:~~*

~~*D.3.3.4.2 - Where the tensile component of the strength-level earthquake force applied to anchors exceeds 20 percent of the total factored anchor tensile force associated with the same load combination, anchors and their attachments shall be designed in accordance with Section D.3.3.4.3. The anchor design tensile strength shall be determined in accordance with Section D.3.3.4.4.*~~

~~***Exception:***~~

~~*Anchors designed to resist wall out-of-plane forces with design strengths equal to or greater than the force determined in accordance with ASCE 7 Equation 12.11-1 or 12.14-10 and Section 1604.8.2 of this code shall be deemed to satisfy Section D.3.3.4.3(d).*~~

~~*D.3.3.4.3(d) - The anchor or group of anchors shall be designed for the maximum tension obtained from design load combinations that include E, with E increased by Ω 0. The anchor design tensile strength shall be calculated from Section D.3.3.4.4.*~~

~~*D.3.3.5.2 - Where the shear component of the strength-level earthquake force applied to anchors exceeds 20 percent of the total factored anchor shear force associated with the same load combination, anchors and their attachments shall be designed in accordance with Section D.3.3.5.3. The anchor design shear strength for resisting earthquake forces shall be determined in accordance with Section D.6.*~~

~~***Exceptions:***~~

~~*1. For the calculation of the in-plane shear strength of anchor bolts attaching wood sill plates of bearing or nonbearing walls of lightframe wood structures to foundations or foundation stem walls, the in-plane design shear strength in accordance with Sections D.6.2 and D.6.3 need not be computed and Section D.3.3.5.3 shall be deemed to be satisfied, provided all of the following are met:*~~

~~*1.1. The allowable in-plane shear strength of the anchor is determined in accordance with AF&PA NDS Table 11E for lateral design values parallel to grain.*~~

~~*1.2. The maximum anchor nominal diameter is 5/8 inches (16 mm).*~~

~~*1.3. Anchor bolts are embedded into concrete a minimum of 7 inches (178 mm).*~~

~~*1.4. Anchor bolts are located a minimum of 13/4 inches (45 mm) from the edge of the concrete parallel to the length of the wood sill plate.*~~

~~*1.5. Anchor bolts are located a minimum of 15 anchor diameters from the edge of the concrete perpendicular to the length of the wood sill plate.*~~

~~*1.6. The sill plate is 2-inch or 3-inch nominal thickness.*~~

~~*2. For the calculation of the in-plane shear strength of anchor bolts attaching cold formed steel track of bearing or nonbearing walls of anchor bolts attaching cold-formed steel track of bearing or nonbearing walls of light-frame construction to foundations or foundation stem walls the in-plane design shear strength in accordance with Sections D.6.2 and D.6.3 need not be computed and Section D.3.3.5.3 shall be deemed to be satisfied provided all of the following are met:*~~

~~*2.1. The maximum anchor nominal diameter is 5/8 inches (16 mm).*~~

~~*2.2. Anchors are embedded into concrete a minimum of 7 inches (178 mm).*~~

~~*2.3. Anchors are located a minimum of 13/4 inches (45 mm) from the edge of the concrete parallel to the length of the track.*~~

~~*2.4. Anchors are located a minimum of 15 anchor diameters from the edge of the concrete perpendicular to the length of the track.*~~

~~*2.5. The track is 33 to 68 mil designation thickness.*~~

~~*Allowable in-plane shear strength of exempt anchors, parallel to the edge of concrete shall be permitted to be determined in accordance with AISI S100, Section E3.3.1.*~~

~~*3. In light-frame construction, bearing or nonbearing walls, shear strength of concrete anchors less than or equal to 5/8 inch (16 mm) in diameter of sill plate or track to foundation or foundation stem wall need not satisfy Section D.3.3.5.3 (a) through (c) when the design strength of the anchors is determined in accordance with Section D.6.2.1(c).*~~

1909.4 ~~***1913.4***~~ ***Shotcrete.***

1909.4.1 ~~***1913.4.1***~~ ***Preconstruction tests.*** *A test panel prepared in accordance with Section 1908.5 is required. Approval from the enforcement agency must be obtained prior to performing test panels.*

1909.4.2 ~~***1913.4.2***~~ ***Surface preparation.*** *Concrete or masonry to receive shotcrete shall have the entire surface thoroughly cleaned and roughened by sand blasting, and just prior to receiving shotcrete, shall be thoroughly cleaned of all debris, dirt and dust. Concrete and masonry shall be wetted before shotcrete is deposited, but not so wet as to overcome suction.*

1909.4.3 ~~***1913.4.3***~~ ***Joints.*** *The film of laitance which forms on the surface of the shotcrete shall be removed within approximately two hours after application by brushing with a stiff broom. If this film is not removed within two hours, it shall be removed by thorough wire brushing or sand blasting. Construction joints over eight hours old shall be thoroughly cleaned with air and water prior to receiving shotcrete.*

1909.4.4 ~~***1913.4.4***~~ ***Forms and ground wires for shotcrete.*** *Forms for shotcrete shall be substantial and rigid. Forms shall be built and placed so as to permit the escape of air and rebound.*

Adequate ground wires, which are to be used as screeds, shall be placed to establish the thickness, surface planes and form of the shotcrete work. All surfaces shall be rodded to these wires.

1909.4.5 ~~***1913.4.5***~~ ***Placing.*** *Shotcrete shall be placed in accordance with ACI 506.*

1909.5 ~~***1913.5***~~ ***Existing concrete structures.*** *The structural use of existing concrete with a core strength less than 1,500 psi (10.3MPa) is not permitted in rehabilitation work.*

For existing concrete structures, sufficient cores shall be taken at representative locations throughout the structure, as designated by the architect or structural engineer, so that knowledge will be had of the in-place strength of the concrete. At least three cores shall be taken from each building for each 4,000 square feet (372 m2) of floor area, or fraction thereof. Cores shall be at least 4 inches (102 mm) in diameter. Cores as small as 2.75 inches (70 mm) in diameter may be allowed by the enforcement agency when reinforcement is closely spaced and the coarse aggregate does not exceed 3/4 inch (19 mm).

CHAPTER 19A

CONCRETE

Adopt and/or codify chapter as amended below:

PROPOSED ADOPTION	DSA-SS	DSA-SS/CC	Comments
Adopt entire chapter			
Adopt entire chapter as amended (amended sections listed below)	**X**	-	
Adopt only those sections listed below			

(All existing California amendments that are not revised below shall continue without change)

Italics are used for text within Sections 1903A through 1905A of this code to indicate provisions that differ from ACI 318. State of California amendments in these sections are shown in italics and underlined.

...

SECTION 1901A

GENERAL

1901A.1 Scope. The provisions of this chapter shall govern the materials, quality control, design and construction of concrete used in structures.

1901A.1.1 Application. *The scope of application of Chapter 19A is as follows:*

1. Structures regulated by the Division of the State Architect-Structural Safety (DSA-SS), which include those applications listed in Section 1.9.2.1. These applications include public elementary and secondary schools, community colleges and state-owned or state-leased essential services buildings.

2. [Reserved for OSHPD]

1901A.1.2 Amendments in this chapter. *DSA adopts this chapter and all amendments.*

Exception: *Amendments adopted by only one agency appear in this chapter preceded with the appropriate acronym of the adopting agency, as follows:*

1. Division of the State Architect-Structural Safety: ***[DSA-SS]*** *For applications listed in Section 1.9.2.1*

2. [Reserved for OSHPD]

...

1901A.5 Construction documents. The *construction documents* for structural concrete construction shall include:

1. The specified compressive strength of concrete at the stated ages or stages of construction for which each concrete element is designed.
2. The specified strength or grade of reinforcement.
3. The size and location of structural elements, reinforcement and anchors.
4. Provision for dimensional changes resulting from creep, shrinkage and temperature.
5. The magnitude and location of prestressing forces.
6. Anchorage length of reinforcement and location and length of lap splices.
7. Type and location of mechanical and welded splices of reinforcement.
8. Details and location of contraction or isolation joints specified for plain concrete.
9. Minimum concrete compressive strength at time of posttensioning.
10. Stressing sequence for post-tensioning tendons.
11. For structures assigned to *Seismic Design Category* D, E or F, a statement if slab on grade is designed as a structural diaphragm.
12. *Openings larger than 12 inches (305 mm) in any dimension shall be detailed on the structural drawings.*

1901A.6 Special inspections and tests. Special inspections and tests of concrete elements of buildings and structures and concreting operations shall be as required by Chapter *17A and Section 1910A.*

...

SECTION 1903A
SPECIFICATIONS FOR TESTS AND MATERIALS

1903A.1 General. Materials used to produce concrete, concrete itself and testing thereof shall comply with the applicable standards listed in ACI 318.

...

1903A.2 Special Inspections. *Where required, special inspections and tests shall be in accordance with Chapter 17A and Section 1910A.~~1913A.~~*

...

1903A.4 Flat wall insulating concrete form (ICF) systems. *Insulating concrete form material used for forming flat concrete walls shall conform to ASTM E 2634.*

~~***1903A.4 Reporting Requirements*** – *Modify ACI 318 Section 3.2.1 by adding the following:*~~

~~*Each component (a) through (g), when present, as a percentage of total cementitiious materials shall be reported for each mix design.*~~

1903A.5 ~~***1903A.6***~~ ***Aggregates*** - *Modify ACI 318 Section ~~3.3.2~~ 26.4.1.2.1(a).(1) as follows:* ~~*by adding the following:*~~

~~*Aggregate size limitations waiver shall be approved by the enforcement agency.*~~

~~*Evidence that the aggregate used is not reactive in the presence of alkalis may be required by the enforcement agency. If new aggregate sources are to be used or if past experience indicates problems with existing aggregate sources, test the aggregate for potential alkali-silica reactivity in accordance with to ASTM C 1260 or C 1293 to determine the potential alkali-silica reactivity of the aggregate. If the results indicate an expansion greater than 0.10 percent at 16 days age with ASTM C 1260, or an expansion greater than 0.04 percent at 12 months age with ASTM C 1293, provide mitigation with one of the cementitious material systems noted below such that an expansion of less than 0.10 percent at 16 days age is obtained with ASTM C 1567:*~~

~~*1. Low-alkali portland cement containing not more than 0.6 percent total alkali when calculated as sodium oxide, as determined by the method given in ASTM C 114.*~~

~~*2. Blended hydraulic cement, Type IS or IP, conforming to ASTM C 595, except that Type IS cement shall not contain less than 40 percent slag cement.*~~

~~*3. Replacement of not less than 15 percent by weight of the portland cement with a pozzolan conforming to ASTM C 618 for Class N or F materials (Class C is not permitted).*~~

~~*4. Replacement of not less than 40 percent by weight of the portland cement with slag cement conforming to ASTM C 989.*~~

~~*5. Replacement of not less than 5 percent nor more than 10 percent by weight of Portland cement with silica fume conforming to ASTM C 1240.*~~

~~*6. Replacement of portland cement with a ternary blend of portland cement, slag cement and pozzolan such that the resulting blend contains not more than 70 percent portland cement.*~~

~~*ASTM C 1567 test shall be performed separately on the fine and coarse aggregate with one requiring the higher percentage of supplementary cementitious materials dictating the required replacement.*~~

~~*ASTM C 1260, ASTM C 1293 and ASTM C 1567 tests must have been performed within the past three years.*~~

(1) ***Normal weight aggregate:*** *Aggregate shall be non-reactive as determined by one of the methods in ASTM C33 Appendix XI Methods for Evaluating Potential for Deleterious Expansion Due to Alkali Reactivity of an Aggregate. Aggregates deemed to be deleterious or potentially deleterious may be used with the addition of a material that has been shown to prevent harmful expansion in accordance with Appendix XI of ASTM C33, when approved by the building official.*

1903A.6 ~~**[Reserved for OSHPD]**~~ ~~***1903A.5 Fly Ash** - Add ACI 318 Section 3.2.3 as follows:*~~

~~*Fly ash or other pozzolan can be used as a partial substitute for ASTM C 150 portland cement, as follows:*~~

~~*1. Fly ash or other pozzolan shall conform to ASTM C 618 for Class N or Class F materials (Class C is not permitted), and*~~

~~*2. More than 15 percent by weight of fly ash or other pozzolans shall be permitted to be substituted for ASTM C 150 portland cement if the mix design is proportioned per ACI 318 Section 5.3. See Section 1904A for durability requirements.*~~

~~*3. More than 40 percent by weight of ground granulated blast furnace slag conforming to ASTM C 989 shall be permitted to be substituted for ASTM C 150 portland cement if the mix design is proportioned per ACI 318 Section 5.3. See Section 1904A for durability requirements.*~~

1903A.7 ~~***1903A.7 Discontinuous Steel Fibers***~~ ***fiber reinforcement*** *- Not permitted.* ~~*- Modify ACI 318 Section 3.5.1 by adding the following:*~~

~~*Discontinuous steel fibers are not permitted.*~~

1903A.8 ~~***1903A.8 Welding of reinforcing bars***~~ ***- Welding of reinforcing bars*** *- Modify ACI 318 Section* ~~*3.5.2*~~ *26.6.4.1(b) by adding the following:*

~~*If mill test reports are not available, chemical analysis shall be made of bars representative of the bars to be welded. Bars with a carbon equivalent (C.E.) above 0.75 shall not be welded. Welding shall not be done on or within two bar diameters of any bent portion of a bar that has been bent cold. Welding of crossing bars shall not be permitted for assembly of reinforcement unless authorized by the structural engineer and approved by the enforcement agency per approved procedures.*~~

Shop fusion welded stirrup/tie cage (or spiral assemblies) consisting of low-alloy steel reinforcing stirrups/ties conforming to ASTM A706 and longitudinal holding wires, conforming to ASTM A1064 shall be permitted. The fusion welds shall be made by machines using electric resistance welds. Tack welding of primary reinforcing bars together or to stirrups/ties is not permitted. Fusion welding of holding wires is not permitted on any portion of a reinforcing bar that is or will be bent in accordance with ACI 318 Section 25.3.

SECTION 1904A
DURABILITY REQUIREMENTS

...

1904*A*.1 Structural concrete. Structural concrete shall conform to the durability requirements of ACI 318.

~~***Exception:*** *For Group R-2 and R-3 occupancies not more than three stories above grade plane, the specified compressive strength, f□c, for concrete in basement walls, foundation walls, exterior walls and other vertical surfaces exposed to the weather shall be not less than 3,000 psi (20.7 MPa).*~~

...

SECTION 1905A
MODIFICATIONS TO ACI 318

1905*A*.1 General. The text of ACI 318 shall be modified as indicated in Sections 1905*A*.1.1 through ~~1905.1.21~~ *1905A.1.16*.

~~**1905*A*.1.1 ACI 318, Section 2.3.** Modify existing definitions and add the following definitions to ACI 318, Section 2.3.~~

~~**DESIGN DISPLACEMENT.** Total lateral displacement expected for the design-basis earthquake, *as specified by Section 12.8.6 of ASCE 7.*~~

~~**DETAILED PLAIN CONCRETE STRUCTURAL WALL.** A wall complying with the requirements of Chapter 14, including 14.6.2.~~

~~**ORDINARY PRECAST STRUCTURAL WALL.** A precast wall complying with the requirements of Chapters 1 through 13, 15, 16 and 19 through 26.~~

~~**ORDINARY REINFORCED CONCRETE STRUCTURAL WALL.** A *cast-in-place* wall complying with the requirements of Chapter 14, excluding 14.6.2.~~

~~**ORDINARY STRUCTURAL PLAIN CONCRETE WALL.** A wall complying with the requirements of Chapter 22, *excluding 22.6.7.*~~

~~**SPECIAL STRUCTURAL WALL.** A cast-in-place or precast wall complying with the requirements of 18.2.4 through 18.2.8, 18.10 and 18.11, as applicable, in addition to the requirements for ordinary reinforced concrete structural walls or ordinary precast structural walls, as applicable. Where ASCE 7 refers to a "special reinforced concrete structural wall," it shall be deemed to mean a "special structural wall."~~

1905A.1.1 ~~1905A.1.14~~ ACI 318 Section 4.12.2.2 ~~18.2.4.~~ *Modify ACI 318 Section 4.12.2.2 ~~18.2.4~~ by adding the following:*

Where prestressed concrete elements are restrained from movement, an analysis of the stresses in the prestressed elements and loads in the adjoining structural system induced by the above-described effects shall be made in accordance with PCI Design Handbook, ~~7~~ 7TH ~~Edition.~~

1905A.1.2 ~~1905A.1.13~~ ACI 318, Section 4.12.2.3 ~~18.2.3.~~ *Modify ACI 318 Section 4.12.2.3 ~~18.2.3~~ by adding the following:*

For prestressed concrete members with recessed or dapped ends, an analysis of the connections shall be made in accordance with procedures given in PCI Design Handbook, ~~7~~ 7TH ~~Edition.~~

1905A.1.3 ~~1905A.1.6~~ ACI 318, Section *9.6.1.3. ~~10.5.3.~~ Modify ACI 318 Section 9.6.1.3. ~~10.5.3~~ by adding the following:*

This section shall not be used for members that resist seismic loads, except that reinforcement provided for foundation elements for one-story wood-frame or one-story light steel buildings need not be more than one-third greater than that required by analysis for all loading conditions.

1905A.1.4 ~~1905A.1.8~~ ACI 318, Section 11.2.4.1 ~~14.2.6.~~ *Replace ACI 318 Section 11.2.4.1 ~~14.2.6~~ as follows:*

> ***11.2.4.1*** *~~14.2.6~~ - Walls shall be anchored to intersecting elements such as floors or roofs; or to columns, pilasters, buttresses, of intersecting walls; and footings with reinforcement at least equivalent to No. 4 bars at 12 inches (305 mm) on center for each layer of reinforcement.*

1905A.1.5 ~~1905A.1.11~~ ACI 318 Section ~~16~~ 11.7. *Add Section **11.7.6** ~~16.11~~ to ACI 318 as follows:*

11.7.6 ~~16.11~~ - Reinforcement. Perimeters of precast walls shall be reinforced continuously with a minimum of one No. 5 bar extending the full height and width of the wall panel. ~~Bars shall be continuous around corners.~~ Where wall panels do not connect to ~~abut~~ columns or other wall panels to develop at least 75 percent of the horizontal wall steel as noted below, vertical perimeter bars shall be retained by hooked wall bars. ~~Edges of openings in precast walls shall be reinforced with a minimum of one No. 5 bar continuous past corners sufficient to develop the bar.~~

A continuous tie or bond beam shall be provided at the roof line either as a part of the roof structure or part of the wall panels as described in the next paragraph below. This tie may be designed as the edge member of the roof diaphragm but, in any case, shall not be less than equivalent to two No. 6 bars continuous. A continuous tie equivalent to two No. 5 bars minimum shall also be provided either in the footing or with an enlarged section of the floor slab.

Wall panels of shear wall buildings shall be connected to columns or to each other in such a manner as to develop at least 75 percent of the horizontal wall steel. No more than ~~H~~ half of this continuous horizontal reinforcing shall ~~may~~ be concentrated in bond or tie beams at the top and bottom of the walls and at points of intermediate lateral support. If possible, cast in-place joints with reinforcing bars extending from the panels into the joint a sufficient distance to meet the splice requirements of ACI 318 Section 25.5.2 ~~12.15~~ for Class A shall be used. The reinforcing bars or welded tie details shall not be spaced over eight times the wall thickness vertically nor fewer than four used in the wall panel height. Where wall panels are designed for their respective overturning forces, the panel connections need not comply with the requirements of this paragraph.

~~Where splicing of reinforcement must be made at points of maximum stress or at closer spacing than permitted by ACI 318 Section 7.6, welding may be used when the entire procedure is suitable for the particular quality of steel used and the ambient conditions. Unless the welds develop 125 percent of the specified yield strength of the steel used, reinforcement in the form of continuous bars or fully anchored dowels shall be added to provide 25 percent excess steel area and the welds shall develop not less than the specified yield strength of the steel.~~

***Exception:** Nonbearing, nonshear panels such as nonstructural architectural cladding panels or column covers are not required to meet the provisions of this Section.*

1905A.1.6 ~~1905A.1.10~~ ACI 318, Section 11.9. ~~14.9.~~ *Modify ACI 318 by adding Section 11.9 ~~14.9~~ as follows:*

11.9 ~~14.9~~ - Foundation Walls. *Horizontal reinforcing of concrete foundation walls for wood-frame or light-steel buildings shall consist of the equivalent of not less than one No. 5 bar located at the top and bottom of the wall. Where such walls exceed 3 feet (914 mm) in height, intermediate horizontal reinforcing shall be provided at spacing not to exceed 2 feet (610 mm) on center. Minimum vertical reinforcing shall consist of No. 3 bars at 24 inches (610 mm) on center.*

Where concrete foundation walls or curbs extend above the floor line and support wood-frame or light-steel exterior, bearing or shear walls, they shall be doweled to the foundation wall below with a minimum of No. 3 bars at 24 inches (610 mm) on center. Where the height of the wall above the floor line exceeds 18 inches (457 mm), the wall above and below the floor line shall meet the requirements of ACI 318 Section 11.6 and 11.7. ~~14.3.~~

1905A.1.7 ACI 318, Section 12.7.3. *Add Section 12.7.3.4 to ACI 318 as follows:*

~~1905A.1.20 ACI 318, Section 21.11.7.~~ *~~Modify ACI 318 Section 21.11.7 by adding Section 21.11.7.7 as follows:~~*

~~21.11.7.7 — Where boundary members are not required by ACI 318 Section 21.11.7.5, minimum reinforcement parallel to the edges of all diaphragms and the boundaries of all openings shall consist of twice the cross-sectional area of the minimum shear reinforcement required per linear foot of diaphragm.~~

12.7.3.4 *– At least two No. 5 bars in diaphragms having two layers of reinforcement in both directions and one No. 5 bar in diaphragms having a single layer of reinforcement in both directions shall be provided around openings larger than 12 inches in any dimension in addition to the minimum reinforcement required by Section 12.6.*

1905A.1.8 ~~1905A.1.21~~ *(Chapter 19, Section 1905.1.8)* **ACI 318, Section 17.2.3.** Modify ACI 318 Sections 17.2.3.4.2, 17.2.3.4.3(d) and 17.2.3.5.2 to read as follows:

17.2.3.4.2 - Where the tensile component of the strength-level earthquake force applied to anchors exceeds 20 percent of the total factored anchor tensile force associated with the same

load combination, anchors and their attachments shall be designed in accordance with 17.2.3.4.3. The anchor design tensile strength shall be determined in accordance with 17.2.3.4.4.

Exception: *Anchors designed to resist wall out-of-plane forces with design strengths equal to or greater than the force determined in accordance with ASCE 7 Equation 12.11-1 or 12.14-10 and Section 1604A.8.2 of this code shall be deemed to satisfy Section 17.2.3.4.3(d).*

17.2.3.4.3(d) - The anchor or group of anchors shall be designed for the maximum tension obtained from design load combinations that include **E**, with **E** increased by Ω_0. The anchor design tensile strength shall *be calculated from* 17.2.3.4.4.

17.2.3.5.2 – Where the shear component of the strength-level earthquake force applied to anchors exceeds 20 percent of the total factored anchor shear force associated with the same load combination, anchors and their attachments shall be designed in accordance with 17.2.3.5.3. The anchor design shear strength for resisting earthquake forces shall be determined in accordance with 17.5.

Exceptions:

1. For the calculation of the in-plane shear strength of anchor bolts attaching wood sill plates of bearing or non-bearing walls of light-frame wood structures to foundations or foundation stem walls, the in-plane design shear strength in accordance with 17.5.2 and 17.5.3 need not be computed and 17.2.3.5.3 shall be deemed to be satisfied provided all of the following are met:

1.1. The allowable in-plane shear strength of the anchor is determined in accordance with AWC NDS Table 11E for lateral design values parallel to grain.

1.2. The maximum anchor nominal diameter is $^5/_8$ inches (16 mm).

1.3. Anchor bolts are embedded into concrete a minimum of 7 inches (178 mm).

1.4. Anchor bolts are located a minimum of $1^3/_4$ inches (45 mm) from the edge of the concrete parallel to the length of the wood sill plate.

1.5. Anchor bolts are located a minimum of 15 anchor diameters from the edge of the concrete perpendicular to the length of the wood sill plate.

1.6. The sill plate is 2-inch or 3-inch nominal thickness.

2. For the calculation of the in-plane shear strength of anchor bolts attaching cold-formed steel track of bearing or non-bearing walls of anchor bolts attaching cold-formed steel track of bearing or non-bearing walls of light-frame construction to foundations or foundation stem walls the in-plane design shear strength in accordance with 17.5.2 and 17.5.3 need not be computed and 17.2.3.5.3 shall be deemed to be satisfied provided all of the following are met:

2.1. The maximum anchor nominal diameter is $^5/_8$ inches (16 mm).

2.2. Anchors are embedded into concrete a minimum of 7 inches (178 mm).

2.3. Anchors are located a minimum of $1^3/_4$ inches (45 mm) from the edge of the concrete parallel to the length of the track.

2.4. Anchors are located a minimum of 15 anchor diameters from the edge of the concrete perpendicular to the length of the track.

2.5. The track is 33 to 68 mil designation thickness.

Allowable in-plane shear strength of exempt anchors, parallel to the edge of concrete shall be permitted to be determined in accordance with AISI S100 Section E3.3.1.

3. In light-frame construction, bearing or nonbearing walls, shear strength of concrete anchors less than or equal to ~~5/8~~ 1" inch [16mm] in diameter attaching sill plate or track to foundation or foundation stem wall need not satisfy 17.2.3.5.3(a) through (c) when the design strength of the anchors is determined in accordance with 17.5.2.1(c).

1905A.1.9 ~~1905A.1.1~~ ACI 318, Table 19.2.1.1 ~~Section 5.1.1.~~ *Modify ACI 318 Table 19.2.1.1 ~~Section 5.1.1~~ as follows.*

For concrete designed and constructed in accordance with this chapter, f'_c, shall not be less than 3,000 psi (20.7 MPa). Reinforced normal weight concrete with specified compressive strength higher than 8,000 psi (55 MPa) shall require prior approval of structural design method and acceptance criteria by the enforcement agency.

~~***1905A.1.3 ACI 318, Section 8.13.5.*** *Replace ACI 318 Section 8.13.5 as follows:*~~

~~*8.13.5 - Permanent burned clay or concrete tile fillers shall be considered only as forms and shall not be included in the calculations involving shear or bending moments.*~~

~~*The thickness of the concrete slab on the permanent fillers shall be designed as described in ACI 318 Section 8.13.6 as modified in Section 1905A.1.4.*~~

~~***1905A.1.4 ACI 318, Section 8.13.6.*** *Replace ACI 318 Section 8.13.6 as follows:*~~

~~*8.13.6 - Where removable forms or fillers are used, the thickness of the concrete slab shall not be less than 1/12 of the clear distance between joists and in no case less than 2 1/2 inches (64 mm). Such slab shall be reinforced at right angles to the joists with at least the amount of reinforcement required for flexure, considering load concentrations, if any, but in no case shall the reinforcement be less than that required by ACI 318 Section 7.12.*~~

~~***1905A.1.5 ACI 318, Section 8.13.*** *Add Section 8.13.9 to ACI 318 as follows:*~~

~~*8.13.9 Concrete bridging. Concrete bridging shall be provided as follows: one near the center of spans for 20 to 30 feet (6096 mm to 9144 mm) spans and two near the third points of spans over 30 feet (9144 mm). Such bridging shall be either:*~~

~~*(a) A continuous concrete web having a depth equal to the joist and a width not less than 3 1/2 inches (89 mm) reinforced with a minimum of one No. 4 bar in the top and bottom; or*~~

~~*(b) Any other concrete element capable of transferring a concentrated load of 1,000 pounds (4.5 kN) from any joist to the two adjacent joists.*~~

~~*Such bridging shall not be required in roof framing if an individual member is capable of carrying dead load plus a concentrated load of 1,500 pounds (6.7 kN) at any point.*~~

1905A.1.7 ACI 318, Section 12.14.3. *Add Section 12.14.3.6 to ACI 318 as follows:*

12.14.3.6 – Welded splices and mechanical connections shall maintain the clearance and coverage requirements of ACI Sections 7.6 and 7.7.

1905A.1.9 ACI 318, Section 14.5 - Empirical design method. *Not permitted by DSA.*

1905A.1.12 ACI 318, Section 17.5.1. *Modify ACI 318 Section 17.5.1 by adding Sections 17.5.1.1 and 17.5.1.2 as follows:*

17.5.1.1 – Full transfer of horizontal shear forces may be assumed when all of the following are satisfied:

1. Contact surfaces are clean, free of laitance, and intentionally roughened to full amplitude of approximately 1/4 inch (6.4 mm).

2. Minimum ties are provided in accordance with ACI 318 Section 17.6.

3. Web members are designed to resist total vertical shear, and

4. All shear reinforcement is fully anchored into all interconnected elements.

17.5.1.2 - If any of the requirements of ACI 318 Section 17.5.1.1 is not satisfied, horizontal shear shall be investigated in accordance with ACI 318 Section 17.5.3 or 17.5.4.

1905.1.2 ACI 318, Section 18.2.1. Modify ACI 318 Sections 18.2.1.2 and 18.2.1.6 to read as follows:

18.2.1.2 – Structures assigned to Seismic Design Category A shall satisfy requirements of Chapters 1 through 17 and 19 through 26; Chapter 18 does not apply. Structures assigned to *Seismic Design Category* B, C, D, E or F also shall satisfy 18.2.1.3 through 18.2.1.7, as applicable. *Except for structural elements of plain concrete complying with Section 1905.1.7 of the International*

~~*Building Code, structural elements of plain concrete are prohibited in structures assigned to Seismic Design Category C, D, E or F.*~~

~~18.2.1.6 – Structural systems designated as part of the seismic force-resisting system shall be restricted to those *permitted by ASCE 7.* Except for *Seismic Design Category* A, for which Chapter 18 does not apply, the following provisions shall be satisfied for each structural system designated as part of the seismic force-resisting system, regardless of the *Seismic Design Category:*~~

~~(a) Ordinary moment frames shall satisfy 18.3.~~
~~(b) Ordinary reinforced concrete structural walls *and ordinary precast structural walls* need not satisfy any provisions in Chapter 18.~~
~~(c) Intermediate moment frames shall satisfy 18.4.~~
~~(d) Intermediate precast *structural* walls shall satisfy 18.5.~~
~~(e) Special moment frames shall satisfy 18.6 through 18.9.~~
~~(f) Special structural walls shall satisfy 18.10.~~
~~((g) Special structural walls constructed using precast concrete shall satisfy 18.11.~~

~~All special moment frames and special structural walls shall also satisfy 18.2.4 through 18.2.8.~~

~~***1905A.1.18 ACI 318, Section 21.9.4.*** *Modify ACI 318 by adding Section 21.9.4.6 as follows:~~

~~*21.9.4.6 – Walls and portions of walls with $P_u > 0.35P_o$ shall not be considered to contribute to the calculated strength of the structure for resisting earthquake-induced forces. Such walls shall conform to the requirements of ACI 318 Section 21.13.*~~

1905A.1.10 ~~1905A.1.16~~ *(Chapter 19, Section 1905.1.3)* **ACI 318, Section 18.5. *[DSA-SS]*** Modify ACI 318, Section 18.5, by *replacing Section 18.5.2.1,* adding new Section 18.5.2.2 and renumbering existing Sections 18.5.2.2 and 18.5.2.3 to become 18.5.2.3 and 18.5.2.4, respectively:

18.5.2.1 – In connections between wall panels, yielding shall be restricted to steel elements or reinforcement. In connections between wall panels and the foundation, they shall be designed per Section 1616A.1.16.

18.5.2.2 – Connections that are designed to yield shall be capable of maintaining 80 percent of their design strength at deformation induced by the design displacement or shall use type 2 mechanical splices.

18.5.2.3 – Elements of the connection that are not designed to yield shall develop at least 1.5 S_y.

18.5.2.4 – In structures assigned to SDC D, E or F, Wall piers shall be designed in accordance with 18.10.8 or 18.14 in ACI 318.

1905A.1.11 ~~***1905A.1.17***~~ ***ACI 318, Section 18.10.6.5*** ~~***21.9.2.2.***~~ *Modify ACI 318, Section 18.10.6.5* ~~*21.9.2.2*~~ *by adding the following:*

(c) Where boundary members are not required by ACI 318 Section 18.10.6.2 or 18.10.6.3 ~~*21.9.6.*~~ *minimum reinforcement parallel to the edges of all structural walls and the boundaries of all openings shall consist of twice the cross-sectional area of the minimum shear reinforcement required per lineal foot of wall. Horizontal extent of boundary element shall be* ~~*per*~~ *in accordance with ACI 318 Section 18.10.6.4 (a), (b) and (c).* ~~*21.9.6.4 (a) & (b).*~~

~~**1908.1.4 ACI 318, Section 18.11.** Modify ACI 318, Section 18.11.2.1, to read as follows:~~

~~18.11.2.1 – Special structural walls constructed using precast concrete shall satisfy all the requirements of 18.10 for cast-in-place special structural walls in addition to Section 18.5.2.~~

1905A.1.12 ~~***1905A.1.19***~~ ***ACI 318, Section 18.12.6*** ~~***21.11.4.***~~ *Add Section 18.12.6.2 to ACI 318 as follows:* ~~*Modify ACI 318 Section 21.11.4 by adding the following:*~~

18.12.6.2 *Collector and boundary elements in topping slabs placed over precast floor and roof elements shall not be less than 3 inches (76 mm) or 6 d_b thick, where d_b is the diameter of the largest reinforcement in the topping slab.*

1905A.1.13 *(Chapter 19, Section 1905.1.5)* ~~**1905.1.5**~~ **ACI 318, Section 18.13.1.1.** Modify ACI 318, Section 18.13.1.1, to read as follows:

18.13.1.1 – Foundations resisting earthquake-induced forces or transferring earthquake-induced forces between a structure and ground shall comply with the requirements of Section 18.13 and other applicable provisions of ACI 318 *unless modified by Chapter 18A of the California Building Code.*

~~**1905.1.6 ACI 318, Section 14.6.** Modify ACI 318, Section 14.6, by adding new Section 14.6.2 to read as follows:~~

~~*14.6.2.1 – Detailed plain concrete structural walls.*~~

~~*14.6.2.1 – Detailed plain concrete structural walls are walls conforming to the requirements of ordinary structural plain concrete walls and 14.6.2.2.*~~

~~*14.6.2.2 – Reinforcement shall be provided as follows:*~~

~~*(a) Vertical reinforcement of at least 0.20 square inch (129 mm2) in cross-sectional area shall be provided continuously from support to support at each corner, at each side of each opening and at the ends of walls. The continuous vertical bar required beside an opening is permitted to substitute for one of the two No. 5 bars required by 14.6.1.*~~

~~*(b) Horizontal reinforcement at least 0.20 square inch (129 mm2) in cross-sectional area shall be provided:*~~

~~*1. Continuously at structurally connected roof and floor levels and at the top of walls;*~~
~~*2. At the bottom of load-bearing walls or in the top of foundations where doweled to the wall; and*~~
~~*3. At a maximum spacing of 120 inches (3048 mm).*~~

~~*Reinforcement at the top and bottom of openings, where used in determining the maximum spacing specified in Item 3 above, shall be continuous in the wall.*~~

~~**1905.1.7 ACI 318, Section 14.1.4.** Delete ACI 318, Section 14.1.4, and replace with the following:~~
~~*14.1.4 – Plain concrete in structures assigned to Seismic Design Category C, D, E or F.*~~
~~*14.1.4.1 – Structures assigned to Seismic Design Category C, D, E or F shall not have elements of structural plain concrete, except as follows:*~~

~~*(a) Structural plain concrete basement, foundation or other walls below the base are permitted in detached one- and two-family dwellings three stories or less in height constructed with stud-bearing walls. In dwellings assigned to Seismic Design Category D or E, the height of the wall*~~

~~*shall not exceed 8 feet (2438 mm), the thickness shall not be less than 71/2 inches (190 mm), and the wall shall retain no more than 4 feet (1219 mm) of unbalanced fill. Walls shall have reinforcement in accordance with 14.6.1.*~~

~~*(b) Isolated footings of plain concrete supporting pedestals or columns are permitted, provided the projection of the footing beyond the face of the supported member does not exceed the footing thickness.*~~

~~***Exception:** In detached one- and two-family dwellings three stories or less in height, the projection of the footing beyond the face of the supported member is permitted to exceed the footing thickness.*~~

~~*(c) Plain concrete footings supporting walls are permitted, provided the footings have at least two continuous longitudinal reinforcing bars. Bars shall not be smaller than No. 4 and shall have a total area of not less than 0.002 times the gross cross-sectional area of the footing. For footings that exceed 8 inches (203 mm) in thickness, a minimum of one bar shall be provided at the top and bottom of the footing. Continuity of reinforcement shall be provided at corners and intersections.*~~

~~***Exceptions:***~~

~~*1. In Seismic Design Category A, B, and C, detached one- and two-family dwellings three stories or less in height and constructed with stud bearing walls, plain concrete footings without longitudinal reinforcement supporting walls are permitted.*~~

~~*2. For foundation systems consisting of a plain concrete footing and a plain concrete stemwall, a minimum of one bar shall be provided at the top of the stemwall and at the bottom of the footing.*~~

~~*3. Where a slab on ground is cast monolithically with the footing, one No. 5 bar is permitted to be located at either the top of the slab or bottom of the footing.*~~

1905A.1.14 ACI 318, Table 21.2.2. *Replace Table 21.2.2 as follows.:*

Table 21.2.2 – Strength reduction factor φ for moment, axial force, or combined moment and axial force

Net tensile	Classification	φ

strain ε_t		Type of transverse reinforcement			
		Spirals conforming to 25.7.3		Other	
$\varepsilon_t \le \varepsilon_{ty}$	Compression-controlled	0.75	(a)	0.65	(b)
$\varepsilon_{ty} < \varepsilon_t < 0.005$	Transition[1][2]	$0.75 + 0.15\frac{\varepsilon_t - \varepsilon_{ty}}{\varepsilon_t^{*}\text{0.005} - \varepsilon_{ty}}$	(c)	$0.65 + 0.25\frac{\varepsilon_t - \varepsilon_{ty}}{\varepsilon_t^{*}\text{0.005} - \varepsilon_{ty}}$	(d)
$\varepsilon_t \ge 0.005$	Tension-controlled[3]	0.9	(e)	0.9	(f)

[1]For sections classified as transition, it shall be permitted to use φ corresponding to compression-controlled sections.

[2] *ε_t^* is the greater of net tensile strain calculated for $P_n = 0.1A_g f'_c$ and 0.005.*

[3] *For sections with factored axial compression force $P_u \ge 0.1A_g f'_c$, φ shall be calculated using equation (c) or (d) for sections classified as transition, as applicable.*

1905A.1.15 ~~1905A.1.15~~ ACI 318, Section 24.2.1 ~~18.2.~~ *Add Section 24.2.1.1 ~~18.2.7~~ to ACI 318 as follows:*

24.2.1.1 ~~18.2.7~~ *- Span to Depth Ratio. Prestressed Beam and Slab Span to depth ratios for continuous prestressed concrete members shall not exceed the following, except when calculations of deflections and vibration effects prove that greater values may be used without adverse effects:*

Beams 30
One-way Slabs 40
Two-way Floor Slabs..... 40
Two-way Roof Slabs 44

These ratios should be decreased for special conditions such as heavy loads and simple spans.

Maximum deflection criteria shall be in accordance with ACI 318 Sections 24.2.2 ~~9.5~~

1905A.1.16 ~~1905A.1.2~~ ACI 318, Section ~~5.6.2.1~~ 26.12.2.1(a). *Replace ACI 318 Section ~~5.6.2.1~~ 26.12.2.1(a) by the following.*

26.12.2.1(a) ~~5.6.2.1~~ Samples for strength tests of each class of concrete placed each day shall be taken not less than once a day, or not less than once for each 50 cubic yards (345m^3) of concrete, or not less than once for each 2,000 square feet (186 m^2) of surface area for slabs or walls. Additional samples for seven-day compressive strength tests shall be taken for each class of concrete at the beginning of the concrete work or whenever the mix or aggregate is changed.

SECTION 1906A
STRUCTURAL PLAIN CONCRETE

Not permitted by DSA-SS.

~~**1906.1 Scope.** The design and construction of structural plain concrete, both cast-in-place and precast, shall comply with the minimum requirements of ACI 318, as modified in Section 1905.~~

~~**Exception:** For Group R-3 occupancies and buildings of other occupancies less than two stories above grade plane of light-frame construction, the required footing thickness of ACI 318 is permitted to be reduced to 6 inches (152 mm), provided that the footing does not extend more than 4 inches (102 mm) on either side of the supported wall.~~

...

SECTION 1908A
SHOTCRETE

1908*A*.1 General. Shotcrete is mortar or concrete that is pneumatically projected at high velocity onto a surface. Except as specified in this section, shotcrete shall conform to the requirements of this chapter for ~~plain or~~ reinforced concrete *and the provisions of ACI 506. The specified compressive strength of shotcrete shall not be less than 3,000 psi (20.69 MPa).*

Concrete or masonry to receive shotcrete shall have the entire surface thoroughly cleaned and roughened by sand blasting, and just prior to receiving shotcrete, shall be thoroughly cleaned of all debris, dirt and dust. Concrete and masonry shall be wetted before shotcrete is deposited, but not so wet as to overcome suction. Sand for sand blasting shall be clean, sharp and uniform in size, with no particles that will pass a 50-mesh screen.

...

1908*A*.3 Aggregate. Coarse aggregate, if used, shall not exceed $^3/_4$ inch (19.1 mm).

For shear walls, when total rebar in any direction is more than 0.31 in^2 / ft. or rebar size is larger than # 5, shotcrete shall conform to course aggregate grading No. 2 per Table 1.1 of ACI 506.

...

1908*A*.5 Preconstruction tests. ~~Where preconstruction test are required by Section 1908.4, a~~ *A* test panel shall be shot, cured, cored or sawn, examined and tested prior to commencement of the project. The sample panel shall be representative of the project and simulate job conditions as closely as possible. The panel thickness and reinforcing shall reproduce the thickest and most congested area specified in the structural design. It shall be shot at the same angle, using the same nozzleman and with

the same concrete mix design that will be used on the project. The equipment used in preconstruction testing shall be the same equipment used in the work requiring such testing, unless substitute equipment is *approved* by the *building official*. Reports of preconstruction tests shall be submitted to the *building official* as specified in Section 1704A.5.

...

1908*A*.7 Joints. Except where permitted herein, unfinished work shall not be allowed to stand for more than 30 minutes unless edges are sloped to a thin edge. For structural elements that will be under compression and for construction joints shown on the approved construction documents, square joints are permitted. Before placing additional material adjacent to previously applied work, sloping and square edges shall be cleaned and wetted.

The film of laitance which forms on the surface of the shotcrete shall be removed within approximately two hours after application by brushing with a stiff broom. If this film is not removed within two hours, it shall be removed by thorough wire brushing or sand blasting. Construction joints over eight hours old shall be thoroughly cleaned with air and water prior to receiving shotcrete.

...

1908*A*.10 Strength tests. Strength tests for shotcrete shall be made *in accordance with ASTM* C1604 ~~*standards*~~ by an approved agency on specimens that are representative of the work and which have been water soaked for at least 24 hours prior to testing. When the maximum-size aggregate is larger than $^3/_8$ inch (9.5 mm), specimens shall consist of not less than three 3-inch-diameter (76 mm) cores or 3-inch (76 mm) cubes. When the maximum-size aggregate is $^3/_8$ inch (9.5 mm) or smaller, specimens shall consist of not less than 2-inch-diameter (51 mm) cores or 2-inch (51 mm) cubes.

1908*A*.10.1 Sampling. Specimens shall be taken from the in-place work or from test panels, and shall be taken at least once each shift, but not less than one for each 50 cubic yards (38.2 m^3) of shotcrete.

1908*A*.10.2 Panel criteria. When the maximum-size aggregate is larger than $^3/_8$ inch (9.5 mm), the test panels shall have minimum dimensions of 18 inches by 18 inches (457 mm by 457 mm). When the maximum-size aggregate is $^3/_8$ inch (9.5 mm) or smaller, the test panels shall have minimum dimensions of 12 inches by 12 inches (305 mm by 305 mm). Panels shall be shot in the same position as the work, during the course of the work and by the nozzlemen doing the work. The conditions under which the panels are cured shall be the same as the work. *Approval from the enforcement agency shall be obtained prior to performing the test panel method.*

...

1908A.11 ~~1910A.11~~ Forms and Ground Wires for Shotcrete. *Forms for shotcrete shall be substantial and rigid. Forms shall be built and placed so as to permit the escape of air and rebound.*

Adequate ground wires, which are to be used as screeds, shall be placed to establish the thickness, surface planes and form of the shotcrete work. All surfaces shall be rodded to these wires.

1908A.12 ~~1910A.12~~ Placing. *Shotcrete shall be placed in accordance with ACI 506.*

~~(Relocated to Section 2511)~~ **~~SECTION 1911A~~**
~~REINFORCED GYPSUM CONCRETE~~

~~**1911A.1 General.** Reinforced gypsum concrete shall comply with the requirements of ASTM C 317 and ASTM C 956. *Reinforced gypsum concrete shall be considered as an alternative system.*~~

...

~~*Amendments in the CBC, 2013 Sections 1905A and 1909A are deleted except those relocated as noted below, since model code deleted those sections.*~~

~~(Relocated to Section 1616A.1.20)~~ ~~***1908A.1.1 Power actuated fasteners.*** *Power actuated fasteners qualified in accordance with ICC-ES AC 70 shall be deemed to satisfy the requirements of this section.*~~

~~*Power actuated fasteners shall be permitted in seismic shear for components exempt from permit requirements by Section 1616A.1.18 of this code and for interior nonbearing non-shear wall partitions. Power actuated fastener shall not be used to anchor exterior cladding or curtain wall systems.*~~

...

~~(Relocated to Section 1616A.1.19)~~ ~~***1909A.1.1 Specialty inserts.*** *Specialty inserts, including cast-in-place specialty inserts, tested in accordance with ICC-ES AC 193 shall be deemed to satisfy the requirements of this section.*~~

SECTION 1909A

RESERVED

...

SECTION 1910A 1913A

CONCRETE, REINFORCEMENT AND ANCHOR TESTING

1910A.1 ~~***1913A.1***~~ ***Cementitious material.*** *The concrete supplier shall furnish to the enforcement agency certification that the cement proposed for use on the project has been manufactured and tested in compliance with the requirements of ASTM C 150 for portland cement and ASTM C 595 or ASTM C 1157*

for blended hydraulic cement, whichever is applicable. When a mineral admixture or ground granulated blast-furnace slag is proposed for use, the concrete supplier shall furnish to the enforcement agency certification that they have been manufactured and tested in compliance with ASTM C 618 or ASTM C 989, whichever is applicable. The concrete producer shall provide copies of the cementitious material supplier's Certificate of Compliance that represents the materials used by date of shipment for concrete. Cementitious materials without Certification of Compliance shall not be used.

1910A.2 ~~***1913A.2***~~ ***Tests of reinforcing bars.*** *~~Where~~ ~~s~~Samples shall be ~~are~~ taken from bundles as delivered from the mill, with the bundles identified as to heat number and ~~provided~~ the accompanying mill certificate. ~~analyses accompany the report, o~~ One tensile test and one bend test shall be made from a sample ~~specimen~~ from each 10 tons (9080 kg) or fraction thereof of each size of reinforcing steel.*

Where positive identification of the heat number cannot be made or where random samples are to be taken, one series of tests shall be made from each 2 1/2 tons (2270 kg) or fraction thereof of each size of reinforcing steel.

Tests of reinforcing bars may be waived by the structural engineer with the approval of the Building Official for one-story buildings or non-building structures provided they are identified in the construction documents and certified mill test reports are provided to the inspector of record for each shipment of such reinforcement.

1910A.3 ~~***1913A.3***~~ ***Tests for prestressing steel and anchorage.*** *All wires or bars of each size from each mill heat and all strands from each manufactured reel to be shipped to the site shall be assigned an individual lot number and shall be tagged in such a manner that each lot can be accurately identified at the jobsite. Each lot of tendon and anchorage assemblies and bar couplers to be installed shall be likewise identified.*

The following samples of materials and tendons selected by the engineer or the designated testing laboratory from the prestressing steel at the plant or jobsite shall be furnished by the contractor and tested by an approved independent testing agency:

1. *For wire, strand or bars, 7-foot-long (2134 mm) samples shall be taken of the coil of wire or strand reel or rods. A minimum of one random sample per 5,000 pounds (2270 kg) of each heat or lot used on the job shall be selected.*

2. *For prefabricated prestressing tendons other than bars, one completely fabricated tendon 10 feet (3048 mm) in length between grips with anchorage assembly at one end shall be furnished for each size and type of tendon and anchorage assembly.*

   Variations of the bearing plate size need not be considered.

   The anchorages of unbonded tendons shall develop at least 95 percent of the minimum specified ultimate strength of the pre-stressing steel. The total elongation of the tendon under ultimate load shall not be less than 2 percent measured in a minimum gage length of 10 feet (3048 mm).

   Anchorages of bonded tendons shall develop at least 90 percent of the minimum specified strength of the prestressing steel tested in an unbonded state. All couplings shall develop at least 95 percent of the minimum specified strength of the prestressing steel and shall not reduce the elongation at rupture below the requirements of the tendon itself.

3. *If the prestressing tendon is a bar, one 7-foot (2134 mm) length complete with one end anchorage shall be furnished and, in addition, if couplers are to be used with the bar, two 4-foot (1219 mm) lengths of bar fabricated to fit and equipped with one coupler shall be furnished.*

4. *Mill tests of materials used for end anchorages shall be furnished. In addition, at least one Brinnell hardness test shall be made of each thickness of bearing plate.*

1910A.4 ~~***1913A.4***~~ ***Composite construction cores.*** *Cores of the completed composite concrete construction shall be taken to demonstrate the shear strength along the contact surfaces. The cores shall be tested when the cast-in-place concrete is approximately 28 days old and shall be tested by a shear loading parallel to the joint between the precast concrete and the cast-in-place concrete. The minimum unit shear strength of the contact surface area of the core shall not be less than 100 psi (689 kPa).*

At least one core shall be taken from each building for each 5,000 square feet (465m2) of area of composite concrete construction and not less than three cores shall be taken from each project. The architect or structural engineer in responsible charge of the project or his or her representative shall designate the location for sampling.

~~***1913A.5 Tests of shotcrete.*** *Testing of shotcrete shall follow the provisions of Section 1910A and the general requirements of ACI 318 Section 5.6.*~~

~~***1913A.6 Gypsum field tests.*** *Field tests shall be made during construction to verify gypsum strength. One sample consisting of three specimens shall be made for each 5,000 square feet (465 m^2) or fraction thereof of all gypsum poured, but not less than one sample shall be taken from each half day's pour.*~~

1910A.5 ~~***1913A.7***~~ ***Tests for Post-Installed Anchors in Concrete.*** *When post-installed anchors are used in lieu of cast-in place bolts, the installation verification test loads, frequency, and acceptance criteria shall be in accordance with this section.*

1910A.5.1 ~~***1913A.7.1***~~ ***General.*** *Test loads or torques and acceptance criteria shall be shown on the construction documents.*

If any anchor fails testing, all anchors of the same type shall be tested, which are installed by the same trade, not previously tested until twenty (20) consecutive anchors pass, then resume the initial test frequency.

1910A.5.2 ~~***1913A.7.5***~~ ***Testing Procedure.*** *The test procedure shall be as permitted by an approved* ~~*test*~~ *evaluation report using criteria adopted in this code. All* ~~*other*~~ *post-installed anchors shall be tension tested.*

> ***Exception [DSA-SS]:*** *Torque controlled post installed anchors and screw type anchors shall be permitted to be tested using torque based on an approved test report using criteria adopted in this code.*

Alternatively, the ~~*M*~~*manufacturer's recommendation for testing may be approved by the enforcement agency based on an approved test report using criteria adopted in this code.*

1910A.5.3 ~~***1913A.7.3***~~ ***Test Frequency.*** *When post-installed anchors are used for sill plate bolting applications, 10 percent of the anchors shall be tested.*

When post-installed anchors are used for other structural applications, all such anchors shall be tested.

When post-installed anchors are used for nonstructural applications such as equipment anchorage, 50 percent or alternate bolts in a group, including at least one-half the anchors in each group, shall be tested.

The testing of the post-installed anchors shall be done in the presence of the special inspector and a report of the test results shall be submitted to the enforcement agency.

Exceptions:

1. *Undercut anchors that allow visual confirmation of full set shall not require testing.*

2. *Where the factored design tension on anchors is less than 100 lbs. and those anchors are clearly noted on the approved construction documents, only 10 percent of those anchors shall be tested.*

3. *Where adhesive anchor systems are used to install reinforcing dowel bars in hardened concrete, only 25% of the dowels shall be tested if all of the following conditions are met:*

   a. *The dowels are used exclusively to transmit shear forces across joints between existing and new concrete.*
   b. *The number of dowels in any one member equals or exceeds 12.*
   c. *The dowels are uniformly distributed across seismic force resisting members (such as shear walls, collectors and diaphragms).*

   Anchors to be tested shall be selected at random by the special inspector/Inspector Of Record (IOR).

4. *Testing of shear dowels across cold joints in slabs on grade, where the slab is not part of the lateral force-resisting system shall not be required.*

5. *Testing is not required for power actuated fasteners used to attach tracks of interior non-shear wall partitions for shear only, where there are at least three fasteners per segment of track.*

1910A.5.4 ~~1913A.7.2~~ Test Loads. *Required test loads shall be determined by one of the following methods:*

1. *Twice the maximum allowable tension load or one and a quarter (1- 1/4) times the maximum design strength of anchors as provided in an approved test report using criteria adopted in this code or determined in accordance with Chapter 17 ~~Appendix D~~ of ACI 318.*

Tension test load need not exceed 80% of the nominal yield strength of the anchor element (= 0.8 A_{se} f_{ya}).

2. *The manufacturer's recommended installation torque based on an approved test report using criteria adopted in this code.*

1910A.5.5 ~~1913A.7.4~~ Test Acceptance Criteria. *Acceptance criteria for post-installed anchors shall be based on an approved test report using criteria adopted in this code. Field tests shall satisfy the following minimum requirements.*

1. Hydraulic Ram Method:

Anchors tested with a hydraulic jack or spring loaded ~~devices~~ apparatus shall maintain the test load for a minimum of 15 seconds and shall exhibit no discernable movement during the tension test, e.g., as evidenced by loosening of the washer under the nut.

For adhesive anchors, where other than bond is being tested, the testing apparatus support ~~device~~ shall not be located within 1.5 times the anchor's embedment depth to avoid restricting the concrete shear cone type failure mechanism from occurring.

2. Torque Wrench Method:

Torque controlled post installed ~~A~~ anchors tested with a calibrated torque wrench shall ~~must~~ attain the specified torque within ½ turn of the nut; or one-quarter (1/4) turn of the nut for a 3/8 in. sleeve anchor only.

~~Exceptions:~~

~~a. Wedge or Sleeve type:~~
~~One-quarter (1/4) turn of the nut for a 3/8 in. sleeve anchor only.~~

*~~b.~~ **[DSA-SS]** Screw~~Threaded~~ ~~T~~type: anchors tested with a calibrated torque wrench shall attain the specified torque within ~~O~~one-quarter (1/4) turn of the screw after initial seating of the screw head.*

SECTION 1911A ~~1914A~~
EXISTING CONCRETE STRUCTURES

1911A.1 ~~1914A.1~~ Existing Concrete Structures.

The structural use of existing concrete with a core strength less than 1,500 psi (10.3MPa) is not permitted in rehabilitation work.

For existing concrete structures, sufficient cores shall be taken at representative locations throughout the structure, as designated by the architect or structural engineer, so that knowledge will be had of the in-place strength of the concrete. At least three cores shall be taken from each building for each 4,000 square feet (372 m2) of floor area, or fraction thereof. Cores shall be at least 4 inches (102 mm) in diameter. Cores as small as 2.75 inches (70 mm) in diameter may be allowed by the enforcement agency when reinforcement is closely spaced and the coarse aggregate does not exceed 3/4 inch (19 mm).

***1911A.2 ~~1914A.2~~ Crack Repair by Epoxy Injection.** Crack Repair of concrete and masonry member by epoxy injection shall conform to all requirements of ACI 503.7.*

***1911A.3 ~~1914A.3~~ Concrete Strengthening by Externally Bonded Fiber Reinforced Polymer (FRP).** Design and construction of externally bonded FRP systems for strengthening concrete structures shall be in accordance with ACI 440.2R.*

Exceptions: *1) Near-Surface Mounted (NSM) FRP bars shall not be permitted.*
2) Strengthening of shear walls and diaphragms (including chords and collectors)

All existing California amendments that are not revised below shall continue without change.

SECTION 2101
GENERAL

2101.1 Scope. This chapter shall govern the materials, design, construction and quality of masonry.

2101.1.1 Division of the State Architect-Structural Safety/Community Colleges (DSA-SS/CC)

Community college buildings regulated by the Division of the State Architect-Structural Safety/Community Colleges (DSA-SS/CC) as listed in Section 1.9.2.2.

2101.1.2 Amendments in this chapter. *DSA-SS/CC adopts this chapter and all amendments.*

Exception: *Division of the State Architect-Structural Safety/Community Colleges (DSA-SS/CC) amendments appear in this chapter preceded with the appropriate acronym, as follows:*

[DSA-SS/CC] *- For community college buildings listed in Section 1.9.2.2.*

2101.1.3 Reference to other chapters. [DSA-SS/CC] *Where reference within this chapter is made to sections in Chapters 17 and 18, the provisions in Chapters 17A and 18A respectively shall apply instead.*

2101.1.4 Amendments. [DSA-SS/CC] *See Section 2114 for additional requirements.*

...

SECTION 2114

ADDITIONAL REQUIREMENTS FOR COMMUNITY COLLEGES [DSA-SS/CC]

2114.1 General. *In addition to the provisions of this chapter, the following requirements shall apply to community college buildings regulated by the Division of the State Architect- Structural Safety/Community Colleges (DSA-SS/CC).*

2114.1.1 Prohibitions. *The following design, systems and materials are not permitted by DSA:*

1. Unreinforced masonry

2. Autoclaved aerated concrete (AAC) masonry

3. Empirical design of masonry

4. Ordinary reinforced masonry shear walls

5. Intermediate reinforced masonry shear walls

6. Prestressed masonry shear walls

7. Direct design of masonry

~~***2114.2 Mortar.*** *Type S mortar conforming to ASTM C 270 shall be used for glass unit masonry.*~~

~~***2114.3 Additives and Admixtures.***~~

~~***2114.3.1 General.*** *Additives and admixtures to mortar or grout shall not be used unless approved by the enforcement agency.*~~

~~***2114.3.2 Antifreeze compounds.*** *Antifreeze liquids, chloride salts or other such substances shall not be used in mortar or grout.*~~

2114.2 ~~***2114.3.3***~~ ***Air entrainment.*** *Air-entraining substances shall not be used in* ~~*mortar or*~~ *grout unless tests are conducted to determine compliance with the requirements of this code.*

~~***2114.4 Tolerances.*** *The maximum thickness of the initial bed joint in fully grouted masonry walls shall not exceed 11/4 in. (31.7 mm).*~~

~~***2114.5 Glass unit masonry.*** *All mortar for glass unit masonry contact surfaces shall be treated to ensure adhesion between mortar and glass.*~~

2114.3 ~~***2114.6***~~ ***Grouted masonry.***

2114.3.1 ~~***2114.6.1***~~ ***General conditions.*** *Prior to grouting, the grout space shall be clean so that all spaces to be filled with grout do not contain mortar projections greater than ¼ inch (6.4 mm), mortar droppings and other foreign material.*

All cells shall be solidly filled with grout~~*, except as provided in Section 2114.14.*~~

Exception: ~~*Relocated from 2013 CBC 2114.13*~~ *Reinforced hollow-unit masonry laid in running bond used for freestanding site walls* ~~*fences and*~~ *or interior nonbearing non-shear wall partitions may be* ~~*of hollow-unit masonry construction*~~ *grouted only in cells containing vertical and horizontal reinforcement.*

Reinforcement and embedded items shall be clean, properly positioned and securely anchored against moving prior to grouting. Bolts shall be accurately set with templates or by approved equivalent means and held in place to prevent dislocation during grouting. Reinforcement, embedded items and bolts shall be solidly embedded in grout. Anchor bolts in the face shells of hollow masonry
units shall be positioned to maintain a minimum of 1/2 inch of grout between the bolt and the face shell.

The grouting of any section of wall shall be completed in one day with no interruptions greater than one hour. At the time of laying, all masonry units shall be free of dust and dirt.

Grout pours greater than 12 inches (300 mm) in height shall be consolidated by mechanical vibration during placement to fill the grout space before loss of plasticity, and reconsolidated by mechanical vibration to minimize voids due to water loss. Grout pours less than 12 inches in height may be puddled.

Between grout pours or where grouting has been stopped more than an hour, a horizontal construction joint shall be formed by stopping all wythes at the same elevation and with the grout stopping a minimum of 11/2 inches (38 mm) below a mortar joint, except at the top of the wall. Where bond beams occur, the grout pour shall be stopped a minimum of 1/2 inch (12.7 mm) below the top of the masonry.

The construction documents shall completely describe grouting procedures, subject to approval of DSA.

2114.4 ~~***2114.7***~~ ***Aluminum equipment.*** *Grout shall not be handled nor pumped utilizing aluminum equipment unless it can be demonstrated with the materials and equipment to be used that there will be no deleterious effect on the strength of the grout.*

2114.5 ~~***2114.8***~~ ***Specified compressive strength.*** *The specified compressive strength, f 'm , assumed in design shall be not less than 2,000* ~~*1,500*~~ *psi (10.34 MPa) for all masonry construction using materials and details of construction required herein. Testing of the constructed masonry shall be provided in accordance with Section 2114.6.2* ~~*2114.9.3*~~*.*

In no case shall the f 'm assumed in design exceed 3,000 psi (20.68 MPa).

2114.6 ~~***2114.9***~~ ***Additional testing requirements.***

2114.6.1 ~~***2114.9.1***~~ ***Mortar and grout tests.*** *At the beginning of all masonry work, at least one test sample of the mortar* ~~*and grout*~~ *shall be taken on three successive working days and at least at one-week intervals thereafter. Where mortar is based on a proportion specification, mortar shall be sampled and tested during construction in accordance with ASTM C780 Annex 4 and 5 to verify the proportions specified in ASTM C270, Table 2. Where mortar is based on a property specification, mortar shall be laboratory prepared and tested prior to construction in accordance with ASTM C780 to verify the properties specified in ASTM C270, Table 1 and field sampled and tested during construction in accordance with ASTM C780 to verify the proportions with the laboratory tests. Mortar sampling and testing is not required for approved preblended mortars in conformance with ASTM C270.*

Samples of grout shall be taken for each mix design, each day grout is placed, and not less than every 5,000 square feet of masonry wall area. The grout ~~*They*~~ *shall meet the minimum strength requirement given in ASTM C476/TMS 602 Section 2.2.* ~~*Sections 2103A.9 and 2103A.13*~~ *for mortar and grout.* ~~*respectively.*~~ *Test specimens for* ~~*mortar and*~~ *grout shall be made as set forth in* ~~*ASTM C 1586 and*~~ *ASTM C 1019.*

Additional samples shall be taken whenever any change in materials or job conditions occur, as determined by the building official. ~~*or whenever in the judgment of the architect, structural engineer or the enforcement agency such tests are necessary to determine the quality of the material.*~~ *When the prism test method* ~~*of Section 2105A.2.2.2*~~ *is used during construction, the tests in this section are not required.*

Exception: *For non-bearing non-shear masonry walls not exceeding total wall height of 12' above wall base, mortar test shall be permitted to be limited to those at the beginning of masonry work for each mix design.*

~~***2114.9.2 Prism test method.***~~

~~***2114.9.2.1 Number of prisms per test.*** *Prior to the start of construction, three prisms shall be constructed and tested in accordance with ASTM C 1314. A set of three masonry prisms shall be built during construction in accordance with ASTM C 1314 for each 5,000 square feet (465 m2) of wall area, but not less than one set of three prisms for the project. Each set of prisms shall equal or exceed f 'm.*~~

2114.6.2 ~~***2114.9.3***~~ ***Masonry core testing.*** *Not less than two cores shall be taken from each building for each 5,000 square feet (465 m^2)* ~~*of the greater*~~ *of the masonry wall area* ~~*or the floor area*~~ *or fraction thereof.* ~~*The architect or structural engineer in responsible charge of the project or his/her representative or the inspector of record shall select the areas for sampling.*~~ *The* ~~*inspector of record*~~ *approved agency shall perform or observe the coring of the masonry walls and sample locations shall be subject to approval of the registered design professional.*

Cores samples shall comply with the following:

1. *Cored no sooner than 7 days after grouting of the selected area;*
2. *~~b~~ Be a minimum of 3-3/4" in nominal diameter; and*
3. *Sampled ~~shall be taken~~ in such a manner as to exclude any masonry unit webs, mortar joint, or ~~and~~ reinforcing steel. If all cells contain reinforcement, alternate core locations or means to detect void or delamination shall be selected by the registered design professional and approved by the building official.*

~~*If vertical reinforcing steel is placed such that cores will include reinforcing steel, core testing may be waived by the design professional in responsible charge, as approved by the enforcement agency.*~~

Visual examination of all cores shall be made by an approved agency ~~a laboratory acceptable to the building official~~ and the condition of the cores reported as required by the California Administrative Code. ~~The~~ Sshear test shall test both joints between the grout core and the outside wythes or face shell of the masonry.~~All cores taken shall be tested in shear~~ 28 days after grouting of the sample area using a shear test apparatus acceptable to the enforcement agency. ~~*Shear testing apparatus shall be of a design approved by the enforcement agency.*~~ *Core samples shall not be soaked before testing. Core samples to be tested shall be stored in sealed plastic bags or non-absorbent containers immediately after coring and for at least 5 days prior to testing. The average unit shear value for each pair of cores (4 shear tests) from each 5,000 square feet of wall area (or less) on the cross section of ~~all~~ the cores shall not be less than 2.5 $\sqrt{f'm}$ psi.*

All cores shall be submitted to an approved agency ~~the laboratory, acceptable to the building official,~~ for examination, ~~regardless of whether~~ even where the core specimens failed ~~outside wythe or face shells separated~~ during the cutting operation. The approved agency ~~laboratory~~ shall report the location where each core was taken, the findings of their visual examination of each core, identify which cores were selected for shear testing, and the results of the shear tests.

Exceptions:

1. *Core sampling and testing is not required for non-bearing non-shear masonry walls, not exceeding total wall height of 12' above wall base, built with single-wythe hollow unit concrete masonry that attaches opposite face shells using webs*

cast as single unit, when designed using an f'_m not exceeding 2,000 psi (13.79 MPa)..

2. An infrared thermographic survey or other nondestructive test procedures, shall be permitted to be approved as an alternative system to detect voids or delamination in grouted masonry in-lieu of core sampling and testing.

2114.7 ~~2114.10~~ Modifications to TMS 402/ACI 530/ASCE 5.

2114.7.1 ~~2114.10.1~~ *Modify TMS 402/ACI 530/ASCE 5, Section 7.4.4 ~~1.18~~ as follows:*

*1. **Minimum reinforcement requirements for masonry walls.** The total area of reinforcement in reinforced masonry walls shall not be less than 0.003 times the sectional area of the wall. Neither the horizontal nor the vertical reinforcement shall be less than one third of the total. Horizontal and vertical reinforcement shall be spaced at not more than 24 inches (610 mm) center to center. The minimum reinforcing shall be No. 4, except that No. 3 bars may be used for ties and stirrups. Vertical wall reinforcement shall have dowels of equal size and equal matched spacing in all footings. Reinforcement shall be continuous around wall corners and through intersections. Only reinforcement which is continuous in the wall shall be considered in computing the minimum area of reinforcement. Reinforcement with splices conforming to TMS 402/ACI 530/ASCE 5 ~~as modified by Sections 2107 and 2108~~ shall be considered as continuous reinforcement.*

Horizontal reinforcing ~~ement~~ bars in bond beams shall be provided in the top of footings, at the top of wall openings, at roof and floor levels, and at the top of parapet walls. For walls 12 inches (nominal) (305 mm) or more in thickness, horizontal and vertical reinforcement shall be equally divided into two layers, except where designed as retaining walls. Where reinforcement is added above the minimum requirements, such additional reinforcement need not be so divided.

In bearing walls of every type of reinforced masonry, there shall be trim reinforcement of not less than one No. 5 bar or two No. 4 bars on all sides of, and adjacent to, every opening which exceeds 16 inches (406 mm) in either direction, and such bars shall extend not less than 48 diameters, but in no case less than 24 inches (610 mm) beyond the corners of the opening. The bars required by this paragraph shall be in addition to the minimum reinforcement elsewhere required.

When the reinforcement in bearing walls is designed, placed and anchored in position as for columns, the allowable stresses shall be as for columns.

Joint reinforcement shall not be used as principal reinforcement in masonry ~~designed by the strength design method~~.

*2. **Minimum reinforcement for masonry columns.** The spacing of column ties shall be as follows: not greater than 8 bar diameters, 24 tie diameters, or one half the least dimension of the column for the full column height. Ties shall be at least 3/8 inch (10 mm) in diameter and shall be embedded in grout. Top tie shall be within 2 inches (51 mm) of*

the top of the column or of the bottom of the horizontal bar in the supported beam.

*3. **Anchor bolts.** Bent bar anchor bolts shall not be allowed. The maximum size anchor shall be 1/2-inch (13 mm) diameter for 6-inch (152 mm) nominal masonry, 3/4-inch (19 mm) diameter for 8-inch (203 mm) nominal masonry, 7/8-inch (22 mm) diameter for 10-inch (254 mm) nominal masonry, and 1-inch (25mm) diameter for 12-inch (304.8 mm) nominal masonry.*

2114.8 ~~2114.11~~ Additional requirements for allowable stress design.

2114.8.1 ~~2114.11.1~~ TMS 402/ACI 530/ASCE 5 ~~[DSA-SS/CC]~~ *Modify by adding Section 8.1.7 ~~2.1.8~~ as follows:*

8.1.7 ~~2.1.8~~ – Walls and piers.

Thickness of walls. *For thickness limitations of walls as specified in this chapter, nominal thickness shall be used. Stresses shall be determined on the basis of the net thickness of the masonry, with consideration for reduction, such as raked joints.*

The thickness of masonry walls shall be designed so that allowable maximum stresses specified in this chapter are not exceeded. Also, no masonry wall shall exceed the height or length-to-thickness ratio or the minimum thickness as specified in this chapter and as set forth in Table 2114.8.1 ~~2114.11.1~~.

Piers. *Every pier or wall section which width is less than three times its thickness shall be designed and constructed as required for columns if such pier is a structural member. Every pier or wall section which width is between three and five times its thickness or less than one half the height of adjacent openings shall have all horizontal steel in the form of ties except that in walls 12 inches (305 mm) or less in thickness such steel may be in the form of hair-pins.*

2114.8.2 ~~2114.11.2~~ TMS 402/ACI 530/ASCE 5, Section 2.1.7.7.1.1, lap splices. *Modify the requirements of Section 2107.2.1 by adding the following:*

Lap splices need not be greater than 72 bar diameters.

TABLE 2114.8.1 ~~2114.11.1~~

MINIMUM THICKNESS OF MASONRY WALLS[1, 2] ~~[DSA-SS/CC]~~

TYPE OF MASONRY	*MAXIMUM RATIO UNSUPPORTED HEIGHT OR LENGTH TO THICKNESS[2,3]*	*NOMINAL MINIMUM THICKNESS (inches)*
BEARING OR SHEAR WALLS:		
1. Stone masonry	14	16
2. Reinforced grouted masonry	25	6

3. Reinforced hollow-unit masonry	25	6
NONBEARING WALLS:		
4. Exterior reinforced walls	30	6
5. Interior partitions reinforced	36	4

For walls of varying thickness, use the least thickness when determining the height or length to thickness ratio.

2. In determining the height or length-to-thickness ratio of a cantilevered wall, the dimension to be used shall be twice the dimension of the end of the wall from the lateral support.

3. Cantilevered walls not part of a building and not carrying applied vertical loads need not meet these minimum requirements but their design must comply with stress and overturning requirements

2114.9 ~~***2114.12***~~ ***Glass unit masonry construction.*** *Masonry* ~~*of*~~ *glass blocks* ~~*walls or panels*~~ *shall be designed for seismic forces.* ~~*permitted in non-load-bearing exterior or interior walls and shall conform to the requirements of Section 2115A.*~~ *Stresses in glass block shall not be utilized.* ~~*Glass block may be solid or hollow and may contain inserts.*~~

~~***2114.13 Nonbearing walls.*** *All nonbearing masonry walls shall be reinforced as specified in Section 2114.10.1.1. Fences and interior nonbearing nonshear walls may be of hollow-unit masonry construction grouted in cells containing vertical and horizontal reinforcement. Nonbearing walls maybe used to carry a superimposed load of not more than 200 pounds per linear foot (2.92 kN/m).*~~

~~*1.* ***Thickness.*** *Every nonbearing masonry wall shall be so constructed and have a sufficient thickness to withstand all vertical loads and horizontal loads, but in no case shall the thickness of such walls be less than the values set forth in Table 2114.11.1. Plaster shall not be considered as contributing to the thickness of a wall in computing the height-to-thickness ratio.*~~

~~*2.* ***Anchorage.*** *All nonbearing walls shall be anchored as required by Section 1604.8.2 and ASCE 7 Chapter 13. Suspended ceilings or other nonstructural elements shall not be used to provide anchorage for masonry walls.*~~

~~***2114.14 Masonry screen walls.*** *Masonry units may be used in nonbearing decorative screen walls. Units may be laid up in panels with units on edge with the open pattern of the unit exposed in the completed wall.*~~

~~*1.* ***Horizontal forces.*** *The panels shall be capable of spanning between supports to resist the horizontal forces specified in Chapter 16. Wind loads shall be based on gross projected area of the block.*~~

~~*2.* ***Mortar joints.*** *Horizontal and vertical joints shall not be less than 1/4 inch (6 mm) thick. All joints shall be completely filled with mortar and shall be "shoved joint" work. The units of a panel shall be so arranged that either the horizontal or the vertical joint containing reinforcing is continuous without offset. This continuous joint shall be reinforced with a minimum of 0.03 square inch (19 mm2) of reinforcing steel and maximum spacing of 16 in. on center. Reinforcement may be embedded in mortar.*~~

~~*3. **Reinforcement.** Joint reinforcement may be composed of two wires made with welded ladder or trussed wire cross ties. In calculating the resisting capacity of the system, compression and tension in the spaced wires may be utilized. Ladder wire reinforcement shall not be spliced and shall be the widest that the mortar joint will accommodate, allowing 1/2 inch (13 mm) of mortar cover.*~~

~~*4. **Size of panels.** The maximum size of panels shall be 144 square feet (13.4 m2), with the maximum dimension in either direction of 15 feet (4572 mm). The specified thickness of the units for exterior applications shall not be less than 37/8 in.*~~

~~*5. **Panel support.** Each panel shall be supported on all edges by a structural member of concrete, masonry or steel. Supports at the top and ends of the panel shall be by means of confinement of the masonry by at least 1 inch (25 mm) into and between the flanges of a steel channel. The space between the end of the panel and the web of the channel shall be filled with resilient material. The use of equivalent configuration in other steel section or in masonry or concrete is acceptable.*~~

CHAPTER 21*A*

MASONRY

Adopt and/or codify chapter as amended below:

PROPOSED ADOPTION	DSA-SS	DSA-SS/CC	Comments
Adopt entire chapter			
Adopt entire chapter as amended	X	-	
Adopt only those sections listed below			

All existing California amendments that are not revised below shall continue without change

SECTION 2101*A*

GENERAL

2101*A*.1 Scope. This chapter shall govern the materials, design, construction and quality of masonry.

2101A.1.1 Application. *The scope of application of Chapter 21A is as follows:*

1. *Applications listed in Section 1.9.2.1 regulated by the Division of the State Architect-Structural Safety (DSASS). These applications include public elementary and secondary schools, community colleges and state-owned or state-leased essential services buildings.*

2. [Reserved for OSHPD]

2101A.1.2 Amendments in this chapter. *DSA-SS adopt this chapter and all amendments.*

Exception: *Amendments adopted by only one agency appear in this chapter preceded with the appropriate acronym of the adopting agency, as follows:*

1. *Division of the State Architect-Structural Safety: [DSA-SS] For applications listed in Section 1.9.2.1.*
2. [Reserved for OSHPD]

2101A.1.3 Prohibition: *The following design methods, systems, and materials are not permitted by DSA-SS:*

1. *Unreinforced Masonry.*
2. *Autoclaved Aerated Concrete (AAC) Masonry.*
3. *Empirical Design of Masonry.*
4. *Adobe Construction.*
5. *Ordinary Reinforced Masonry Shear Walls.*
6. *Intermediate Reinforced Masonry Shear Walls.*
7. *Prestressed Masonry Shear Walls.*
8. *Direct Design of Masonry.*

...

2101A.2 Design methods. Masonry shall comply with the provisions of TMS402/ACI 530/ASCE 5 ~~or TMS 403~~ as well as applicable requirements of this chapter.

...

SECTION 2102*A*
DEFINITIONS AND NOTATIONS

2102A.1 General. The following terms are defined in Chapter 2, *except those defined below which shall, for the purposes of this chapter, have the meanings shown herein:*

...

WALL. ...

. . . .

Hollow-unit Masonry Wall. *Type of construction made with hollow masonry units in which the units are laid and set in mortar, reinforced, and grouted.* ~~*solid, except as provided in Section 2114A.*~~

...

SECTION 2103*A*
MASONRY CONSTRUCTION MATERIALS

2103*A*.1 Masonry units. Concrete masonry units, clay or shale masonry units~~,~~ *and* glass unit masonry ~~and AAC masonry units~~ shall comply with Article 2.3 of TMS 602/ACI530.1/ASCE 6. Architectural cast stone shall conform to ASTM C 1364.

...

2103A.3 Grout. Grout shall comply with Article 2.2 of TMS 602/ACI 530.1/ASCE 6.

~~***2103A.13.1 Water.*** *Water content shall be adjusted to provide proper workability and to enable proper placement under existing field conditions, without segregation.*~~

~~***2103A.13.2 Selecting Proportions.*** *Proportions of ingredients and any additives shall be based on laboratory or field experience with the grout ingredients and the masonry units to be used. Coarse grout proportioned by weight shall contain not less than 564 pounds of cementitious material per cubic yard (335 kg / m^3).*~~

2103A.3.1 ~~***2103A.13.3***~~ ***Aggregate.*** *Coarse grout shall be used in grout spaces between wythes of 2 inches (51 mm) or more in width as determined in accordance with TMS 602 Table 7, footnote 3, and in all grouted ~~filled~~ cells of hollow unit masonry construction.*

...

~~***2103A.15 Additives and Admixtures.***~~

~~***2103A.15.1 General.*** *Additives and admixtures to mortar or grout shall not be used unless approved by the enforcement agency.*~~

~~***2103A.15.2 Antifreeze compounds.*** *Antifreeze liquids, chloride salts or other such substances shall not be used in mortar or grout.*~~

2103A.5 ~~***2103A.15.3***~~ ***Air entrainment.*** *Air-entraining substances shall not be used in ~~mortar or~~ grout unless tests are conducted to determine compliance with the requirements of this code.*

SECTION 2104*A*
CONSTRUCTION

2104*A*.1 Masonry construction. Masonry construction shall comply with the requirements of Sections 2104*A*.1.1 ~~and 2104A.1.2~~ *through 2104A.1.3* and with TMS 602/ACI 530.1/ASCE 6.

...

2104A.1.3 ~~***2104A.5***~~ ***Grouted Masonry.***

2104A.1.3.1 ~~***2104A.5.1***~~ ***General conditions.*** *Grouted masonry shall be constructed in such a manner that all elements of the masonry act together as a structural element. At the time of laying, all masonry units shall be free of dust and dirt. Prior to grouting, the grout space shall be clean so that all spaces to be filled with grout do not contain mortar projections greater than 1/4 inch (6.4 mm), mortar droppings and other foreign material. Grout shall be placed so that all spaces to be grouted do not contain voids.*

Grout materials and water content shall be controlled to provide adequate fluidity for placement without segregation of the constituents, and shall be mixed thoroughly. Segregation of the grout materials and damage to the masonry shall be avoided during the grouting process.

Reinforcement and embedded items shall be clean, properly positioned and securely anchored against movement prior to grouting. Bolts shall be accurately set with templates or by approved equivalent means and held in place to prevent dislocation during grouting. Reinforcement, embedded items and bolts shall be solidly embedded in grout. Anchor bolts in the face shells of hollow masonry units shall be positioned to maintain a minimum of ½ in. of grout between the bolt and the face shell.

The grouting of any section of wall shall be completed in one day with no interruptions greater than one hour.

Grout pours greater than 12 inches (300 mm) in height shall be consolidated by mechanical vibration during placement before loss of plasticity in a manner to fill the grout space, and reconsolidated by mechanical vibration to minimize voids due to water loss. Grout pours less than 12 inches in height may be puddled.

Between grout pours or where grouting has been stopped more than an hour, a horizontal construction joint shall be formed by stopping all wythes at the same elevation and with the grout stopping a minimum of 1 1/2 inches (38 mm) below a mortar joint, except at the top of the wall. Where bond beams occur, the grout pour shall be stopped a minimum of 1/2 inch (12.7 mm) below the top of the masonry.

Grout shall not be handled nor pumped utilizing aluminum equipment unless it can be demonstrated with the materials and equipment to be used that there will be no deleterious effect on the strength of the grout.

2104A.1.3.1.1 ~~2104A.5.1.1~~ Reinforced grouted masonry.

2104A.1.3.1.1.1 ~~2104A.5.1.1.1~~ General. *Reinforced grouted masonry is that form of construction made with clay or shale brick or made with solid concrete building brick in which interior joints of masonry are filled by pouring grout around reinforcement therein as the work progresses.*

2104A.1.3.1.1.1.1 ~~*2104A.5.1.1.1.1*~~ ***Low-lift grouted construction.*** *Requirements for construction shall be as follows:*

1. *All units in the two outer wythes shall be laid with full-shoved head joint and bed mortar joints. Masonry headers shall not project into the grout space.*

2. *The minimum grout space for low-lift grout masonry shall be 2 1/2 inches (64 mm). All reinforcement and wire ties shall be embedded in the grout. The thickness of the grout between masonry units and reinforcement shall be a minimum of one bar diameter.*

3. *One tier of a grouted reinforced masonry wall may be carried up 12 inches (305 mm) before grouting, but the other tier shall be laid up and grouted in lifts not to exceed one masonry unit in height. All grout shall be puddled with a mechanical vibrator or wood stick immediately after placing so as to completely fill all voids and to consolidate the grout. All vertical and horizontal steel shall be held firmly in place by a frame or suitable devices.*

4. *Toothing of masonry walls is prohibited. Racking is to be held to a minimum.*

2104A.1.3.1.1.1.2 ~~*2104A.5.1.1.1.2*~~ ***High-lift grouted construction.*** *Where high-lift grouting is used, the method shall be subject to the approval of the enforcement agency. Requirements for construction shall be as follows:*

1. *All units in the two wythes shall be laid with full head and bed mortar joints.*

2. *The two wythes shall be bonded together with wall ties. Ties shall not be less than No. 9 wire in the form of rectangles 4 inches (102 mm) wide and 2 inches (51 mm) in length less than the overall wall thickness. Kinks, water drips, or deformations shall not be permitted in the ties. One tier of the wall shall be built up not more than 16 inches (406 mm) ahead of the other tier. Ties shall be laid not to exceed 24 inches (610 mm) on center horizontally and 16 inches (406 mm) on center*

vertically for running bond, and not more than 24 inches (610 mm) on center horizontally and 12 inches (305 mm) on center vertically for stack bond.

3. *Cleanouts shall be provided for each pour by leaving out every other unit in the bottom tier of the section being poured or by cleanout openings in the foundation. The foundation or other horizontal construction joints shall be cleaned of all loose material and mortar droppings before each pour. The cleanouts shall be sealed after inspection and before grouting.*

4. *The grout space in high-lift grouted masonry shall be a minimum of 3 1/2 inches (89 mm). All reinforcement and wire ties shall be embedded in the grout. The thickness of the grout between masonry units and reinforcement shall be a minimum of one bar diameter.*

5. *Vertical grout barriers or dams of solid masonry shall be built across the grout space the entire height of the wall to control the flow of the grout horizontally. Grout barriers shall not more than 30 feet (9144 mm) apart.*

6. *An approved admixture of a type that reduces early water loss and produces an expansive action shall be used in high-lift grout.*

7. *Grouting shall be done in a continuous pour in lifts not exceeding 4 feet (1219 mm).Grout shall be consolidated by mechanical vibration only, and shall be reconsolidated after excess moisture has been absorbed, but before plasticity is lost. The grouting of any section of a wall between control barriers shall be completed in one day, with no interruptions greater than one hour.*

2104A.1.3.1.2 ~~***2104A.5.1.2***~~ ***Reinforced hollow-unit masonry.***

2104A.1.3.1.2.1 ~~***2104A.5.1.2.1***~~ ***General.*** *Reinforced hollow-unit masonry is that type of construction made with hollow-masonry units in which cells are continuously filled with grout, and in which reinforcement is embedded. All cells shall be solidly filled with grout in reinforced hollow-unit masonry.* ~~*, except as provided in Section 2114A.1.*~~

Exception: *(Relocated from 2013 CBC 2114A.1) Reinforced hollow-unit masonry laid in running bond used for freestanding site walls ~~fences and~~ or interior nonbearing non-shear wall partitions may be ~~of hollow-unit masonry construction~~ grouted only in cells containing vertical and horizontal reinforcement.*

Construction shall be one of the two following methods: The low-lift method where the maximum height of construction laid before grouting is 4 feet (1220 mm), or the high-lift method where the full height of construction between horizontal cold joints is grouted in one operation. General requirements for construction shall be as follows:

1. *Bond shall be provided by lapping units in successive vertical courses. Where stack bond is used in reinforced hollow-unit masonry, the open-end type of unit shall be used with vertical reinforcement spaced a maximum of 16 inches (406 mm) on center.*

2. *Vertical cells to be filled shall have vertical alignment sufficient to maintain a clear grout space dimension ~~unobstructed, continuous vertical cell measuring~~ of not less than 2 inches by 3 inches (51 mm by 76 mm), except the minimum cell dimension for high-lift grout shall be 3 inches (76 mm), as determined in accordance with TMS 602 Table 7, footnote 3.*

3. *Grout shall be a workable mix suitable for placing without segregation and shall be thoroughly mixed. Grout shall be placed by pumping or an approved alternate method and shall be placed before initial set or hardening occurs. Grout shall be consolidated by mechanical vibration during placing and reconsolidated after excess moisture has been absorbed, but before workability is lost.*

4. *All reinforcement and wire ties shall be embedded in the grout. The space between masonry unit surfaces and reinforcement shall be a minimum of one bar diameter.*

5. *Horizontal reinforcement shall be placed in bond beam units with a minimum grout cover of 1 inch (25 mm) above steel for each grout pour. The depth of the bond beam channel below the top of the unit shall be a minimum of 1 1/2 inches (38 mm) and the width shall be 3 inches (76 mm) minimum.*

2104A.1.3.1.2.2 ~~*2104A.5.1.2.2*~~ ***Low-lift grouted construction.*** *Units shall be laid a maximum of 4 feet (1220 mm) before grouting. Grouting shall follow each 4 feet (1220 mm) of construction laid and shall be consolidated so as to completely fill all voids and embed all reinforcing steel. Horizontal reinforcement shall be fully embedded in grout in an uninterrupted pour.*

2104A.1.3.1.2.3 ~~*2104A.5.1.2.3*~~ ***High-lift grouted construction.*** *Where high-lift grouting is used, the method shall be approved by the enforcement agency. Cleanout openings shall be provided in every cell at the bottom of each pour of grout. Alternatively, if the course at the bottom of the pour is constructed entirely of inverted double open-end bond beam units, cleanout openings need only be provided for access to every reinforced cell at the bottom of each pour of grout. The cleanouts shall be sealed before grouting. An approved admixture that reduces early water loss and produces an expansive action shall be used in the grout.*

SECTION 2105A
QUALITY ASSURANCE

...

2105A.2 Compressive Strength, f'_m. *The specified compressive strength, f'_m, assumed in design shall be 2,000 psi (13.79MPa)* ~~*1,500 psi (10.34 MPa)*~~ *for all masonry construction using materials and details of construction required herein. Testing of the constructed masonry shall be provided in accordance with Section 2105A.4* ~~*2105A.5 [DSA-SS]*~~*.*

Exception: ~~***[DSA-SS]***~~ *Subject to the approval of the enforcement agency, higher values of f'_m may be used in the design of reinforced grouted masonry and reinforced hollow-unit masonry. The approval shall be based on prism test results submitted by the architect or engineer which demonstrate the ability of the proposed construction to meet prescribed performance criteria for strength and stiffness. The design shall take into account the mortar joint depth. In no case shall the f'_m assumed in design exceed 3,000 psi (20.7 MPa).*
Where an f'_m greater than 2,000 psi (13.79 MPa) ~~*1,500 psi (10.34 MPa)*~~ *is approved, the architect or structural engineer shall establish a method of quality control of the masonry construction acceptable to the enforcement agency which shall be described in the contract specifications. Compliance with the requirements for the specified* ~~*compressive*~~ *strength of constructed masonry* ~~*f'_m*~~ *shall be provided using prism test method* ~~*in accordance with Section 2105A.2.2.1 or 2105A.2.2.2*~~ *and core shear testing in accordance with Section 2105A.4. Substantiation for the specified compressive strength*

prior to the start of construction shall be obtained by using prism test method ~~in accordance with Section 2105A.2.2.2.2. and Section 2105A.3. Testing of the constructed masonry shall be provided in accordance with Section 2105A.5.~~

2105A.3 ~~2105A.2.2.1.4~~ Mortar and grout tests. *These tests are to establish whether the masonry components meet the specified component strengths.*

At the beginning of all masonry work, at least one test sample of the mortar ~~and grout~~ shall be taken on three successive working days and at least at one-week intervals thereafter. Samples of grout shall be taken for each mix design, each day grout is placed, and not less than every 5,000 square feet of masonry wall area. They shall meet the minimum strength requirement given in ASTM C270 Table 1 and ASTM C476/TMS 602 Section 2.2 ~~Sections 2103A.9 and 2103A.13~~ for mortar and grout respectively. Additional samples shall be taken whenever any change in materials or job conditions occur, as determined by the building official. ~~or whenever in the judgment of the architect, structural engineer or the enforcement agency such tests are necessary to determine the quality of the material.~~ When the prism test method ~~of Section 2105A.2.2.2~~ is used during construction, the tests in this section are not required.

Test specimens for mortar and grout shall be made as set forth in ASTM C 1586 and ASTM C 1019.

Exceptions:

1. For non-bearing non-shear masonry walls not exceeding total wall height of 12' above wall base, mortar test shall be permitted to be limited to those at the beginning of masonry work for each mix design.

*2. **[DSA-SS]** Mortar sampling and testing shall be as follows: At the beginning of all masonry work, mortar test samples shall be taken on three successive working days and at least at one-week intervals thereafter. Where mortar is based on a proportion specification, mortar shall be sampled and tested during construction in accordance with ASTM C780 Annex 4 and 5 to verify the proportions specified in ASTM C270, Table 2. Where mortar is based on a property specification, mortar shall be laboratory prepared and tested prior to construction in accordance with ASTM C780 to verify the properties specified in ASTM C270, Table 1 and field sampled and tested during construction in accordance with ASTM C780 to verify the proportions with the laboratory tests. Mortar sampling and testing is not required for approved preblended mortars in conformance with ASTM C270.*

2105A.4 Masonry core testing. ***~~[OSHPD 1 & 4]~~*** *Not less than two cores shall be taken from each building for each 5,000 square feet (465 m^2) ~~of the greater~~ of the masonry wall area ~~or the floor area~~ or fraction thereof. ~~The architect or structural engineer in responsible charge of the project or his/her representative or the inspector of record shall select the areas for sampling.~~ The ~~inspector of record~~ approved agency shall perform or observe the coring of the masonry walls and sample locations shall be subject to approval of the registered design professional.*

Core~~s~~ samples shall comply with the following:

1. *Cored no sooner than 7 days after grouting of the selected area;*
2. *~~b~~ Be a minimum of 3-3/4" in nominal diameter; and*
3. *Sampled ~~shall be taken~~ in such a manner as to exclude any masonry unit webs, mortar joint, or ~~and~~ reinforcing steel. If all cells contain reinforcement, alternate core locations or means to detect void or delamination shall be selected by the registered design professional and approved by the building official.*

Visual examination of all cores shall be made by an approved agency ~~a laboratory acceptable to the building official~~ and the condition of the cores reported as required by the California Administrative Code. ~~The~~ ~~s~~Shear test ~~shall test~~ both joints between the grout core and the outside wythes or face shell of the masonry ~~One half of the number of cores taken shall be tested in shear~~ 28 days after grouting of the sample area using a shear test apparatus acceptable to the enforcement agency. ~~Shear testing apparatus shall be of a design approved by the enforcement agency.~~ Core samples shall not be soaked before testing. Core samples to be tested shall be stored in sealed plastic bags or non-absorbent containers immediately after coring and for at least 5 days prior to testing. The average unit shear value

for each pair of cores (4 shear tests) from each 5,000 square feet of wall area (or less) on the cross section of ~~the~~ core shall not be less than 2.5 $\sqrt{f'_m}$ psi.

All cores shall be submitted to an approved agency ~~the laboratory, acceptable to the building official,~~ for examination, ~~regardless of whether~~ even where the core specimens failed during the cutting operation. The approved agency ~~laboratory~~ shall report the location where each core was taken, the findings of their visual examination of each core, identify which cores were selected for shear testing, and the results of the shear tests.

Exceptions:

1. *Core sampling and testing is not required for non-bearing non-shear masonry walls, not exceeding total wall height of 12' above wall base, built with single-wythe hollow unit concrete masonry that attaches opposite face shells using webs cast as single unit, when designed using an f'_m not exceeding 2,000 psi (13.79 MPa).*
2. *An infrared thermographic survey or other nondestructive test procedures, shall be permitted to be approved as an alternative system to detect voids or delamination in grouted masonry in-lieu of core sampling and testing.*

~~2105A.5 Masonry core testing. [DSA-SS]~~ *~~Not less than two cores shall be taken from each building for each 5,000 square feet (465 m2) of the greater of the masonry wall area or the floor area or fraction thereof. The architect or structural engineer in responsible charge of the project or his/her representative or the inspector of record shall select the areas for sampling. Cores shall be a minimum of 33/4 inches (76mm) in diameter and shall be taken in such a manner as to exclude masonry unit webs and reinforcing steel. If vertical reinforcing steel is placed such that cores will include reinforcing steel, core testing may be waived by the design professional in responsible charge, as approved by the enforcement agency. The inspector of record shall observe the coring of the masonry walls.~~*

~~Visual examination of all cores shall be made by a laboratory acceptable to the building official and the condition of the cores reported as required by the California Administrative Code. All cores taken shall be tested in shear. The shear test shall test both joints between the grout core and the outside wythes or face shell of the masonry. Shear testing apparatus shall be of a design approved by the enforcement agency. Core samples shall not be soaked before testing. The average unit shear on the cross section of all the cores shall not be less than 2.5 $\sqrt{f'm}$ psi.~~

~~All cores shall be submitted to the laboratory, acceptable to the building official, for examination, regardless of whether the outside wythe or face shells separated during the cutting operation. The~~

~~*laboratory shall report the location where each core was taken, the findings of their visual examination of each core, and the results of the shear tests.*~~

SECTION 2106*A*
SEISMIC DESIGN

2106*A*.1 Seismic design requirements for masonry. Masonry structures and components shall comply with the requirements in Chapter 7 of TMS 402/ACI 530/ASCE 5 depending on the structure's *Seismic Design Category.*

2106A.1.1 Modifications to TMS 402 / ACI 530 / ASCE 5. *Modify TMS 402 / ACI 530 / ASCE 5 Section* <u>*7.4.4*</u> ~~*1.18*~~ *as follows:*

1. - Minimum reinforcement requirements for Masonry Walls *The total area of reinforcement in reinforced masonry walls shall not be less than 0.003 times the sectional area of the wall. Neither the horizontal nor the vertical reinforcement shall be less than one third of the total. Horizontal and vertical reinforcement shall be spaced at not more than 24 inches (610 mm) center to center. The minimum reinforcing shall be No. 4, except that No. 3 bars may be used for ties and stirrups. Vertical wall reinforcement shall have dowels of equal size and equal matched spacing in all footings. Reinforcement shall be continuous around wall corners and through intersections. Only reinforcement which is continuous in the wall shall be considered in computing the minimum area of reinforcement. Reinforcement with splices conforming to TMS 402 / ACI 530 / ASCE 5* ~~*as modified by Section 2107A and 2108A*~~ *shall be considered as continuous reinforcement.*

Horizontal reinforc<u>*ing*</u> ~~*ement*~~ <u>*bars in bond beams*</u> *shall be provided in the top of footings, at the top of wall openings, at roof and floor levels, and at the top of parapet walls. For walls 12 inches (nominal) (305 mm) or more in thickness, horizontal and vertical reinforcement shall be equally divided into two layers, except where designed as retaining walls. Where reinforcement is added above the minimum requirements, such additional reinforcement need not be so divided.*

In bearing walls of every type of reinforced masonry, there shall be trim reinforcement of not less than one No. 5 bar or two No. 4 bars on all sides of, and adjacent to, every opening which exceeds 16 inches (406 mm) in either direction, and such bars shall extend not less than 48 diameters, but in no case less than 24 inches (610 mm) beyond the corners of the opening. The

bars required by this paragraph shall be in addition to the minimum reinforcement elsewhere required.

When the reinforcement in bearing walls is designed, placed and anchored in position as for columns, the allowable stresses shall be as for columns.

Joint reinforcement shall not be used as principal reinforcement in masonry. ~~designed by the strength design method.~~

2. - Minimum reinforcement for masonry columns. *The spacing of column ties shall be as follows: not greater than 8 bar diameters, 24 tie diameters, or one half the least dimension of the column for the full column height. Ties shall be at least 3/8" in diameter and shall be embedded in grout. Top tie shall be within 2 inches (51 mm) of the top of the column or of the bottom of the horizontal bar in the supported beam.*

3. Lateral support. *Lateral support of masonry may be provided by cross walls, columns, pilasters, counterforts or buttresses where spanning horizontally or by floors, beams, girts or roofs where spanning vertically. Where walls are supported laterally by vertical elements, the stiffness of each vertical element shall exceed that of the tributary area of the wall.*

4. Anchor Bolts. *Bent bar anchor bolts shall not be allowed. The maximum size anchor shall be 1/2-inch (13 mm) diameter for 6-inch (152 mm) nominal masonry, 3/4-inch (19 mm) diameter for 8-inch (203 mm) nominal masonry, 7/8-inch (22 mm) diameter for 10-inch (254 mm) nominal masonry, and 1-inch (25mm) diameter for 12-inch (304.8 mm) nominal masonry.*

SECTION 2107A
ALLOWABLE STRESS DESIGN

2107*A*.1 General. The design of masonry structures using *allowable stress design* shall comply with Section 2106*A* and the requirements of Chapters 1 through 8 of TMS 402/ACI 530/ASCE 5 except as modified by Sections 2107*A*.2 through ~~2107*A*.4~~ *2107A.6*.

...

2107A.2 TMS 402/ACI 530/ASCE 5, Section 8.1.6.7.1.1, lap splices. In lieu of Section 8.1.6.7.1.1, it shall be permitted to design lap splices in accordance with Section 2107A.2.1.

2107A.2.1 Lap splices. The minimum length of lap splices for reinforcing bars in tension or compression, l_d, shall be

$l_d=0.002d_bf_s$ (Equation 21A-1)

For SI: $l_d=0.29d_bf_s$

but not less than 12 inches (305) mm). In no case shall the length of the lapped splice be less than 40 bar diameters, *and need not be greater than 72 bar diameters.*

where:

...

2107A.5 Modify TMS 402 / ACI 530/ASCE 5 by adding Section 8.1.7 ~~2.1.8~~ as follows:

8.1.7 ~~2.1.8~~ - Walls and Piers.

Thickness of Walls. *For thickness limitations of walls as specified in this chapter, nominal thickness shall be used. Stresses shall be determined on the basis of the net thickness of the masonry, with consideration for reduction, such as raked joints.*

The thickness of masonry walls shall be designed so that allowable maximum stresses specified in this chapter are not exceeded. Also, no masonry wall shall exceed the height or length-to-thickness ratio or the minimum thickness as specified in this chapter and as set forth in Table 2107A.5. ~~below.~~

Piers. *Every pier or wall section which width is less than three times its thickness shall be designed and constructed as required for columns if such pier is a structural member. Every pier or wall section which width is between three and five times its thickness or less than one half the height of adjacent openings shall have all horizontal steel in the form of ties except that in walls 12 inches (305 mm) or less in thickness such steel may be in the form of hair-pins.*

TABLE 2107A.5 - MINIMUM THICKNESS OF MASONRY WALLS[1, 2]

TYPE OF MASONRY	*MAXIMUM RATIO UNSUPPORTED HEIGHT OR LENGTH TO THICKNESS*[2,3]	*NOMINAL MINIMUM THICKNESS (inches)*
BEARING OR SHEAR WALLS:		
1. Stone masonry	*14*	*16*
2. Reinforced grouted masonry	*25*	*6*
3. Reinforced hollow-unit masonry	*25*	*6*
NONBEARING WALLS:		
4. Exterior reinforced walls	*30*	*6*
5. Interior partitions reinforced	*36*	*4*

[1]For walls of varying thickness, use the least thickness when determining the height or length to thickness ratio.

[2]In determining the height or length-to-thickness ratio of a cantilevered wall, the dimension to be used shall be twice the dimension of the end of the wall from the lateral support.

[3]Cantilevered walls not part of a building and not carrying applied vertical loads need not meet these minimum requirements but their design must comply with stress and overturning requirements.

2107A.6 ~~Reserved for OSHPD~~

SECTION 2108A
STRENGTH DESIGN OF MASONRY

2108.1 General. The design of masonry structures using strength design shall comply with Section 2106 and the requirements of Chapters 1 through 7 and Chapter 9 of TMS 402/ACI 530/ASCE 5, except as modified by Sections 2108.2 through 2108.3.

~~**Exception:** AAC masonry shall comply with the requirements of Chapters 1 and 8 of TMS 402/ACI 530/ASCE 5.~~

...

SECTION 2109A
EMPIRICAL DESIGN OF MASONRY

Not permitted by DSA.

~~*(Existing amendment deleting Section 2109 of IBC is retained and deleted Section 2109 is not shown here for clarity)*~~

SECTION 2110A
GLASS UNIT MASONRY

2110A.1 General. Glass unit masonry construction shall comply with Chapter 13 of TMS402/ACI 530/ASCE 5 and this section.

Masonry ~~of~~ glass blocks *walls or panels* *shall be* *designed for seismic forces.* ~~*permitted in non-load-bearing exterior or interior walls and shall conform to the requirements of Section 2115A.*~~ *Stresses in glass block shall not be utilized.* ~~*Glass block may be solid or hollow and may contain inserts.*~~

...

~~*SECTION 2114A*~~
~~*NONBEARING WALLS*~~

~~***2114A.1 General.*** *All nonbearing masonry walls shall be reinforced as specified in Section 2106A.1.1. Fences and interior nonbearing nonshear walls may be of hollow-unit masonry construction grouted in cells containing vertical and horizontal reinforcement. Nonbearing walls may be used to carry a superimposed load of not more than 200 pounds per linear foot (2.92 kN/m).*~~

~~***1. Thickness.*** *Every nonbearing masonry wall shall be so constructed and have a sufficient thickness to withstand all vertical loads and horizontal loads, but in no case shall the thickness of such walls be less than the values set forth in Table 2107A.5.*~~

~~*Plaster shall not be considered as contributing to the thickness of a wall in computing the height-to-thickness ratio.*~~

~~**2. Anchorage.** All nonbearing walls shall be anchored as required by Sections 1604A.8.2 and ASCE 7 Chapter 13. Suspended ceilings or other nonstructural elements shall not be used to provide anchorage for masonry walls.~~

~~SECTION 2115A~~
~~MASONRY SCREEN WALLS~~

~~**2115A.1 General.** Masonry units may be used in nonbearing decorative screen walls. Units may be laid up in panels with units on edge with the open pattern of the unit exposed in the completed wall.~~

~~**1. Horizontal Forces.** The panels shall be capable of spanning between supports to resist the horizontal forces specified in Chapter 16A. Wind loads shall be based on gross projected area of the block.~~

~~**2. Mortar Joints.** Horizontal and vertical joints shall not be less than 1/4 inch (6 mm) thick. All joints shall be completely filled with mortar and shall be "shoved joint" work. The units of a panel shall be so arranged that either the horizontal or the vertical joint containing reinforcing is continuous without offset. This continuous joint shall be reinforced with a minimum of 0.03 square inch (19 mm^2) of reinforcing steel and maximum spacing of 16 inches on center. Reinforcement may be embedded in mortar.~~

~~**3. Reinforcement.** Joint reinforcement may be composed of two wires made with welded ladder or trussed wire cross ties. In calculating the resisting capacity of the system, compression and tension in the spaced wires may be utilized. Ladder wire reinforcement shall not be spliced and shall be the widest that the mortar joint will accommodate, allowing 1/2 inch (13 mm) of mortar cover.~~

~~**4. Size of Panels.** The maximum size of panels shall be 144 square feet (13.4 m^2), with the maximum dimension in either direction of 15 feet (4572 mm). The specified thickness of the units for exterior applications shall not be less than 3 7/8 inches.~~

~~**5. Panel Support.** Each panel shall be supported on all edges by a structural member of concrete, masonry or steel. Supports at the top and ends of the panel shall be by means of confinement of the masonry by at least 1 inch (25 mm) into and between the flanges of a steel channel. The space between the end of the panel and the web of the channel shall be filled with resilient material. The use of equivalent configuration in other steel section or in masonry or concrete is acceptable.~~

(All existing amendments, except where section is deleted in the model code, that are not revised above shall continue without any change)

SECTION 2201

GENERAL

2201.1 Scope. *The provisions of this chapter govern the quality, design, fabrication and erection of steel used structurally in buildings or structures.*

2201.1.1 Application. [DSA-SS/CC] *The scope of application of Chapter 22 is as follows:*

Community college buildings regulated by the Division of the State Architect-Structural Safety/Community Colleges (DSA-SS/CC), as listed in Section 1.9.2.2.

2201.1.2 Identification of amendments. [DSA-SS/CC]

Division of the State Architect-Structural Safety/Community Colleges amendments appear in this chapter preceded with the appropriate acronym, as follows:

[DSA-SS/CC] *- For community college buildings listed in Section 1.9.2.2*

2201.1.3 Reference to other chapters. [DSA-SS/CC] *Where reference within this chapter is made to sections in Chapter 17 the provisions in Chapter 17A, shall apply instead.*

2201.1.4 Amendments. [DSA-SS/CC] *See Section 2212 for additional requirements.*

...

SECTION 2212

ADDITIONAL REQUIREMENTS <u>FOR COMMUNITY COLLEGES</u> [DSA-SS/CC]

2212.1 Connections.

2212.1.1 Column base plate. *When shear and/or tensile forces are intended to be transferred between column base plates and anchor bolts, provision shall be made in the design to eliminate the effects of oversized holes permitted in base plates by AISC 360 by use of shear lugs and/or welded shear transfer plates or other means acceptable to the enforcement agency, when the oversized holes are larger than the anchor bolt by more than 1/8 inch (3.2 mm). When welded shear transfer plates and shear lugs or other means acceptable to the enforcement agency are not used, the anchor bolts shall be checked for the induced bending stresses in combination with the shear stresses.*

2212.2 Modifications to AISC 341.

<u>2212.2.1 Section A4.</u> *<u>Replace Section A4.1 item (3) as follows:</u>*

<u>(3) Locations and dimensions of protected zones, including provision by the owner or owner's' designated representative for construction to permanently mark and maintain the protection.</u>

<u>2212.2.2</u> ***~~2212.2.1~~*** ***Section D1.*** *Add Section D1.6 as follows:*

6. Diaphragm bracing systems. *The required strength of diagonal bracing members used as the diaphragm shall be determined from either of the following:*

(1) The load effect resulting from the diaphragm analysis per the applicable building code provided the members satisfy all of the following requirements:

1. Diagonal bracing members comply with Section D1.1 for moderately ductile members.

2. Each diagonal bracing member resists no more than 30 percent of the diaphragm shear at each line of resistance.

3. Diagonal bracing members shall not support gravity loads other than self-weight.

4. The slenderness ratio (KL/r) of diagonal bracing members shall not exceed $4\sqrt{E/Fy}$*, except tension-only bracing.*

(2) The load effect required for collectors using the load combinations stipulated in the applicable building code.

2212.2.3 ~~***2212.2.2***~~ ***Section D2.*** *Modify Section D2.6c(b)(ii) as follows:*

(ii) the moment calculated using the load combinations of the applicable building code, including the amplified seismic load, provided the connection or other mechanism within the column base is designed to have the ductility necessary to accommodate the column base rotation resulting from the design story drift.

2212.2.4 ~~***2212.2.3***~~ ***Section D2.*** *Add Section D2.9 as follows:*

9. Diaphragm bracing systems. *The required strength of the connections of diagonal bracing members used as the diaphragm shall be the load effect required for collectors using the load combinations stipulated in the applicable building code.*

2212.2.5 ~~***2212.2.4***~~ ***Section F2.*** *Modify Section F2.3 Exception (2)(a) as follows:*

(a) The maximum of the forces determined using load combination stipulated by the applicable building code including the amplified seismic load, applied to the building frame model in which all compression braces have been removed and those determined with no compression braces removed per D1.4a(2).

2212.2.6 Section F1. *Add Section F1.4c as follows:*

4c. Multi-tiered Braced Frames: *Braced-frames configured with two or more tiers of bracing between diaphragm levels or locations of out-of-plane support shall comply with the additional requirements of section F2.4e.*

2212.2.7 ~~***2212.2.5***~~ ***Section F2.*** *Modify Section F2.4a by adding the following:*

Where each framing bay on a line of resistance does not have opposing diagonal braces within the same column bay, then the collector forces along that line shall be designed considering the redistribution of seismic forces to other bays as a result of the post buckled redistribution of loads using the analysis requirements of Section F2.3. The collector shall not be designed for a load less than that stipulated by the applicable building code:

The required strength of the collector need not exceed the forces determined using load combination stipulated by the applicable building code including the amplified seismic load, applied to the building model in which all compression braces have been removed.

2212.2.8 Section F2. *Add Section F2.4e as follows:*

4c. Multi-tiered Braced Frames*: Braced-frames configured with two or more tiers of bracing between diaphragm levels or locations of out-of-plane support shall comply with the additional requirements of this section:*

(1) Braces shall be used in symmetrical pairs at every tier level.

(2) Horizontal beams at intermediate tier levels for V- and inverted V-brace configurations shall have out-of-plane strength, stiffness, and beam-to-column connections adequate to resist torsional moments arising from brace buckling when braces are designed to buckle out-of-plane.

(3) Columns shall be restrained against rotation about their longitudinal axis at each intermediate tier level and shall resist out-of-plane bending moments due to second-order effects, geometric imperfections, and out-of-plane brace buckling.

2212.3 Seismic requirements for composite structural steel and concrete construction. *In addition to the requirements of Section 2206.2, steel and concrete composite special moment frame with the approved moment connections in accordance with AISC 358 Chapter 10 shall be permitted provided:*

1. Beams are provided with reduced beam sections (RBS),

~~*2. Columns shall be hollow structural sections (HSS) and completely filled with structural concrete having unit weight not less than 110 pounds per cubic foot (17 kN/ m3). Concrete shall have 28-day compressive strength not less than 4,000 psi (28 MPa).*~~

2. ~~*3.*~~*Web extension to beam web two sided fillet weld welds are sized to develop expected strength of the beam web and shall not be less than a ¼ inch fillet weld, and*

~~*4. The high strength bolt design shall consider interaction between shear and tension as required by AISC 360, and*~~

3. ~~*5.*~~ *The built-up box column wall thickness shall not be less than 1.25" and* ~~*T*~~ *the HSS column wall thickness shall not be less than 1/2 inch.*

2212.4 Steel joists.

2212.4.1 Design approval. *Joist and joist girder design calculations and profiles with member sizes and connection details, and joist placement plans shall be provided to the enforcement agency and approved prior to joist fabrication, in accordance with Title 24, Part 1. Joist and joist girder design calculations and profiles with member sizes and connection details shall bear the signature and stamp or seal of the registered engineer or licensed architect responsible for the joist design. Alterations to the approved joist and joist girder design calculations and profiles with member sizes and connection details, or to fabricated joists are subject to the approval of the enforcement agency.*

2212.4.2 Joist chord bracing. *The chords of all joists shall be laterally supported at all points where the chords change direction.*

2212.5 Cold-formed steel light-frame construction.

2212.5.1 Trusses.

2212.5.1.1 Analysis submittals. *Complete engineering analysis and truss design drawings shall accompany the construction documents submitted to the enforcement agency for approval. When load testing is required the test report shall be submitted with the truss design drawings and engineering analysis to the enforcement agency.*

2212.5.1.2 Deferred submittals. *AISI S214 Section B4.2 shall not be deleted.*

2212.5.2 Anchorage for shear. *Cold formed steel stud foundation plates or sills shall be bolted or fastened to the foundation or foundation wall in accordance with Section 2304.3.4, Item 2.*

2212.5.3 Limitations on shear wall assemblies. *Shear wall assemblies in accordance with ~~per~~ Section C2.2.3 of AISI- S213 are not permitted within the seismic force-resisting system of buildings or structures assigned to Occupancy Category II, III, IV., or buildings designed to be relocatable.*

2212.6 Testing.

2212.6.1 Tests of high-strength bolts, nuts and washers. *High-strength bolts, nuts and washers shall be sampled and tested by an approved independent testing laboratory for conformance with the requirements of Section 2205.*

2212.6.2 Tests of end-welded studs. *End-welded studs shall be sampled and tested in accordance with ~~per~~ the requirements of the AWS D1.1.*

CHAPTER 22A

STEEL

Adopt and/or codify chapter as amended below:

PROPOSED ADOPTION	DSA-SS	DSA-SS/CC	Comments
Adopt entire chapter without amendments			
Adopt entire chapter as amended	X	-	
Adopt only those sections listed below			

[All existing amendments that are not revised below shall continue without any change.]

...

SECTION 2201*A*
GENERAL

2201*A*.1 Scope. The provisions of this chapter govern the quality, design, fabrication and erection of steel construction.

2201A.1.1 Application. *The scope of application of Chapter 22A is as follows:*

1. *Structures regulated by the Division of the State Architect-Structural Safety (DSA-SS), which include those applications listed in Section 1.9.2.1. These applications include public elementary and secondary schools, community colleges and state- owned or state-leased essential services buildings.*
2. [Reserved for OSHPD]

Exception: [Reserved for OSHPD]

2201A.1.2 Identification of amendments. *DSA-SS adopts this chapter and all amendments.*

Exception: *Amendments adopted by only one agency appear in this chapter preceded with the appropriate acronym of the adopting agency, as follows:*

1. *Division of the State Architect-Structural Safety:* ***[DSA-SS]*** *For applications listed in Section 1.9.2.1.*

2. [Reserved for OSHPD]

SECTION 2202A
DEFINITIONS

2202A.1 Definitions. The following terms *are defined in Chapter 2.*

...

SECTION 2204*A*
CONNECTIONS

2204*A*.1 Welding. The details of design, workmanship and technique for welding and qualification of welding personnel shall be in accordance with the specifications listed in Sections 2205*A*, 2206*A*, 2207*A*, 2208*A*, 2210*A* and 2211*A*. For *Special inspection* of welding, see Section 1705*A*.2.

...

2204A.4 ~~***2204A.2.2***~~ ***Column base plate.*** *When shear and / or tensile forces are intended to be transferred between column base plates and anchor bolts, provision shall be made in the design to eliminate the effects of oversized holes permitted in base plates by AISC 360 by use of shear lugs and / or welded shear transfer plates or other means acceptable to the enforcement agency, when the oversized holes are larger than the anchor bolt by more than 1/8 inch (3.2 mm). When welded shear transfer plates and shear lugs or other means acceptable to the enforcement agency are not used, the anchor bolts shall be checked for the induced bending stresses in combination with the shear stresses.*

SECTION 2205A
STRUCTURAL STEEL

2205*A*.1 General. The design, fabrication and erection of structural steel elements in buildings, structures and portions thereof shall be in accordance with AISC 360.

Exception: [Reserved for OSHPD]

2205A.2 Seismic Design. Where required, the seismic design, fabrication and erection of buildings, structures and portions thereof shall be in accordance with Section 2205A.2.1 or 2205A.2.2.

~~**2205A.2.1 Seismic Design Category A, B or C.** *Not permittedby DSA-SS.*~~

2205A.2.1 Structural steel seismic force-resisting system. The design, detailing, fabrication and erection of structural steel seismic force-resisting systems shall be in accordance with the provisions of Section 2205A.2.1.1 or 2205A.2.1.2, as applicable.

2205A.2.1.1 Seismic Design Category B or C. *Not permitted by DSA.* ~~Structures assigned to Seismic Design Category B or C shall be of any construction permitted in Section 2205. Where a response modification coefficient, R, in accordance with ASCE 7, Table 12.2-1 is used for the design of structural steel structures assigned to Seismic Design Category B or C, the structures shall be designed and detailed in accordance with the requirements of AISC 341.~~

~~**Exception:** The response modification coefficient, R, designated for "Steel systems not specifically detailed for seismic resistance, excluding cantilever column systems" in ASCE 7, Table 12.2-1 shall be permitted for systems designed and detailed in accordance with AISC 360, and need not be designed and detailed in accordance with AISC 341.~~

2205A.2.1.2 Seismic Design Category D, E or F. Structures assigned to *Seismic Design Category* D, E or F shall be designed and detailed in accordance with AISC 341~~, except as permitted in ASCE 7, Table 15.4-1.~~

2205A.2.2 Structural steel elements. The design, detailing, fabrication and erection of structural steel elements in seismic force-resisting system other than those covered in Section 2205A.2.1, including struts, collectors, chords and foundation elements shall be in accordance with AISC 341~~, where either of following applies:~~

~~1. The structure is assigned to seismic design category D, E or F, except as permitted in ASCE 7, Table 15.4-1.~~

~~2. A response modification coefficient, R, greater than 3 in accordance with ASCE 7, Table 12.2-1, is used for the design of structure assigned to seismic design category B or C.~~

2205A.3 Modifications to AISC 341. [DSA-SS]

2205A.3.1 Section A4. *Replace Section A4.1 item (3) as follows:*

(3) Locations and dimensions of protected zones, including provision by the owner or owner's' designated representative for construction to permanently mark and maintain the protection.

2205A.3.2 ~~***2205A.3.1***~~ ***Section D1.*** *Add Section D1.6 as follows:*

6. Diaphragm bracing systems. *The required strength of diagonal bracing members used as the diaphragm shall be determined from either of the following:*

(1) The load effect resulting from the diaphragm analysis per the applicable building code provided the members satisfy all of the following requirements:

1. Diagonal bracing members comply with Section D1.1 for moderately ductile members.

2. Each diagonal bracing member resists no more than 30 percent of the diaphragm shear at each line of resistance.

3. Diagonal bracing members shall not support gravity loads other than self-weight.

4. The slenderness ratio (KL/r) of diagonal bracing members shall not exceed $4\sqrt{E/Fy}$*, except tension-only bracing.*

(2) The load effect required for collectors using the load combinations stipulated in the applicable building code.

2205A.3.3 ~~***2205A.3.2***~~ ***Section D2.*** *Modify Section D2.6c(b)(ii) as follows:*

(ii) the moment calculated using the load combinations of the applicable building code, including the amplified seismic load, provided the connection or other mechanism within the column base is designed to have the ductility necessary to accommodate the column base rotation resulting from the design story drift.

2205A.3.4 ~~***2205A.3.3***~~ ***Section D2.*** *Add Section D2.9 as follows:*

9. Diaphragm bracing systems. *The required strength of the connections of diagonal bracing members used as the diaphragm shall be the load effect required for collectors using the load combinations stipulated in the applicable building code.*

2205A.3.5 Section F1. *Add Section F1.4c as follows:*

***4c. Multi-tiered Braced Frames**: Braced-frames configured with two or more tiers of bracing between diaphragm levels or locations of out-of-plane support shall comply with the additional requirements of section F2.4e.*

***2205A.3.6 ~~2205A.3.4~~ Section F2.** Modify Section F2.3 Exception (2)(a) as follows:*

(a) The maximum of the forces determined using load combination stipulated by the applicable building code including the amplified seismic load, applied to the building frame model in which all compression braces have been removed and those determined with no compression braces removed per D1.4a(2).

***2205A.3.7 ~~2205A.3.5~~ Section F2.** Modify Section F2.4a by adding the following:*

Where each framing bay on a line of resistance does not have opposing diagonal braces within the same column bay, then the collector forces along that line shall be designed considering the redistribution of seismic forces to other bays as a result of the post-buckled redistribution of loads using the analysis requirements of Section F2.3. The collector shall not be designed for a load less than that stipulated by the applicable building code.

The required strength of the collector need not exceed the forces determined using load combination stipulated by the applicable building code including the amplified seismic load, applied to the building model in which all compression braces have been removed.

***2205A.3.8 Section F2.** Add Section F2.4e as follows:*

***4c. Multi-tiered Braced Frames**: Braced-frames configured with two or more tiers of bracing between diaphragm levels or locations of out-of-plane support shall comply with the additional requirements of this section:*

(1) Braces shall be used in symmetrical pairs at every tier level.

(2) Horizontal beams at intermediate tier levels for V- and inverted V-brace configurations shall have out-of-plane strength, stiffness, and beam-to-column connections adequate to resist torsional moments arising from brace buckling when braces are designed to buckle out-of-plane.

(3) Columns shall be restrained against rotation about their longitudinal axis at each intermediate tier level and shall resist out-of-plane bending moments due to second-order effects, geometric imperfections, and out-of-plane brace buckling.

***2205A.4 MODIFICATIONS TO AISC 341.** [Reserved for CSHPC]*

2205A.5 MODIFICATIONS TO AISC 358. ***[Reserved for OSHPD]***

SECTION 2206*A*
COMPOSITE STRUCTURAL STEEL AND CONCRETE STRUCTURES

2206*A*.1 General. Systems of structural steel elements acting compositely with reinforced concrete shall be designed in accordance with AISC 360 and ACI 318, excluding ACI 318 Chapter 14.

2206*A*.2 Seismic Design. Where required, the seismic design, fabrication and erection of composite steel and concrete systems shall be in accordance with the additional provisions of Section 2206*A*.2.1.

2206*A*.2.1 Seismic requirements for composite structural steel and concrete construction. Where a response modification coefficient, *R*, in accordance with ASCE 7, Table 12.2-1 is used for the design of systems of structural steel acting compositely with reinforced concrete, the structures shall be designed and detailed in accordance with the requirements of AISC 341 *and shall be considered as an alternative system.*

Exception: *Steel and concrete composite special moment frame with the approved moment connections in accordance with AISC 358 Chapter 10 shall be permitted provided:*

1. *Beams are provided with Reduced Beam Sections (RBS),*
2. ~~*Columns shall be Hollow Structural Sections (HSS) and completely filled with structural concrete having unit weight not less than 110 pounds per cubic foot (17 kN/m^3). Concrete shall have 28-day compressive strength not less than 4,000 psi (28 MPa).*~~
2. ~~3.~~*Web extension to beam web two sided fillet weld welds are sized to develop expected strength of the beam web and shall not be less than a ¼ inch fillet weld,* *and*
4. ~~*The high strength bolt design shall consider interaction between shear and tension as required by AISC 360, and*~~
3. ~~5.~~ *The built-up box column wall thickness shall not be less than 1.25" and* ~~*T*~~ *the HSS column wall thickness shall not be less than ½ inch.*

...

SECTION 2207A
STEEL JOISTS

...

2207*A*.4 Steel joist drawings. Steel joist placement plans shall be provided to show the steel joist products as specified on the *approved construction documents* and are to be utilized for field installation in accordance with specific project requirements as stated in Section 2207*A*.2. Steel joist placement plans shall include, at a minimum, the following:

...

~~Steel joist placement plans do not require the seal and signature of the joist manufacturer's registered design professional.~~

...

2207A.4.1 Design approval. [DSA-SS] *Joist and joist girder design calculations and profiles with member sizes and connection details, and joist placement plans shall be provided to the enforcement agency and approved prior to joist fabrication, in accordance with the California Administrative Code (Title 24, Part 1). Joist and joist girder design calculations and profiles with member sizes and connection details shall bear the signature and stamp or seal of the registered engineer or licensed architect responsible for the joist design. Alterations to the approved joist and joist girder design calculations and profiles with member sizes and connection details, or to fabricated joists are subject to the approval of the enforcement agency.*

...

2207A.6 Joist Chord Bracing. *The chords of all joists shall be laterally supported at all points where the chords change direction.*

...

SECTION 2208*A*
STEEL CABLE STRUCTURES

2208*A*.1 General. The design, fabrication and erection including related connections, and protective coatings of steel cables for buildings shall be in accordance with ASCE 19.

~~**2208.2 Seismic requirements for steel cable.** The design strength of steel cables shall be determined by the provisions of ASCE 19 except as modified by these provisions.~~

~~1. A load factor of 1.1 shall be applied to the prestress force included in T_3 and T_4 as defined in Section 3.12.~~

~~2. In Section 3.2.1, Item (c) shall be replaced with "1.5 T_3" and Item (d) shall be replaced with "1.5 T_4."~~

...

SECTION 2210*A*
COLD-FORMED STEEL

2210*A*.1 General. The design of cold-formed carbon and low alloy steel structural members shall be in accordance with AISI S100. The design of cold-formed stainless-steel structural members shall be in accordance with ASCE 8. Cold formed steel light-frame construction shall also comply with Section 2211*A*. Where required, the seismic design of cold formed steel structures shall be in accordance with the additional provisions of Section 2210*A*.2.

2210*A*.1.1 Steel decks. The design and construction of cold formed steel decks shall be in accordance with this section.

2210*A*.1.1.1 Noncomposite steel floor decks. Noncomposite steel floor decks shall be permitted to be designed and constructed in accordance with ANSI/SDI-NC1.0.

2210*A*.1.1.2 Steel roof deck. Steel roof decks shall be permitted to be designed and constructed in accordance with ANSI/SDI-RD1.0. *The base material thickness of steel deck shall not be less than 0.0359 inch (0.9 mm) (20 gage).*

Exception: [DSA-SS] *For single-story open structures, the minimum deck thickness may be waived if the steel roof deck need not be used as the diaphragm and there are no suspended hangers or bracing for nonstructural components attached to the deck.*

~~***2210A.1.1.3 Composite slabs on steel decks.*** *Composite slabs of concrete and steel deck shall be permitted to be designed and constructed in accordance with ANSI/SDI-C.*~~

2210A.1.1.3 Composite slabs on steel decks. Composite slabs of concrete and steel deck shall be permitted to be designed and constructed in accordance with SDI-C.

2210*A*.2 Seismic requirements for cold-formed steel structures. Where a response modification coefficient, *R*, in accordance with ASCE 7, Table 12.2-1 is used for the design of cold-formed steel structures, the structures shall be designed and detailed in accordance with the requirements of AISI S100~~,~~ *and* ASCE 8. ~~, or, for cold-formed steel special bolted moment frames, AISI S110.~~

SECTION 2211*A*
COLD-FORMED STEEL LIGHT-FRAME CONSTRUCTION

2211*A*.1 General. The design and installation of structural and nonstructural members utilized in cold-formed steel light-frame construction where the specified minimum base steel thickness is not greater than 0.1180 inches (2.997 mm) shall be in accordance with AISI S200 and Sections 2211*A*.2 through 2211*A*.7, or AISI S220, as applicable.

...

2211*A*.3 Truss design. Cold-formed steel trusses shall be designed in accordance with AISI S214, Sections 2211*A*.3.1 through 2211*A*.3.4 and accepted engineering practice.

Complete engineering analysis and truss design drawings shall accompany the construction documents submitted to the enforcement agency for approval. When load testing is required, the test report shall be submitted with the truss design drawings and engineering analysis to the enforcement agency.

2211*A*.3.1 Truss design drawings. The truss design drawings shall conform to the requirements of Section B2.3 of AISI S214 and shall be provided with the shipment of trusses delivered to the job site. The truss design drawings shall include the details of permanent individual truss member

restraint/bracing in accordance with Section B ~~6(a) or B 6(c)~~ of AISI S214 where these methods are utilized to provide restraint/bracing.

2211*A*.3.2 Deferred submittals. ~~AISI S214 Section B4.2 shall be deleted.~~ *Not permitted by DSA-SS.*

...

2211*A*.4 Structural wall stud design. Structural wall studs shall be designed in accordance with either AISI S211 or AISI S100.

Cold formed steel stud foundation plates or sills shall be bolted or fastened to the foundation or foundation wall in accordance with Section 2304.3.4, Item 2.

...

2211*A*.6 Lateral design. Light-frame shear walls, diagonal strap bracing that is part of a structural wall and diaphragms used to resist wind, seismic and other in-plane lateral loads shall be designed in accordance with AISI S213.

Shear wall assemblies <u>in accordance with</u> ~~per~~ Section C2.2.3 of AISI S213 are not permitted within the seismic force-resisting system of buildings.

2211*A*.7 Prescriptive framing. *Not permitted by DSA-SS.* ~~Detached one- and two-family *dwellings* and *townhouses*, less than or equal to three *stories above grade plane*, shall be permitted to be constructed in accordance with AISI S230 subject to the limitations therein.~~

SECTION 2212A [DSA-SS]
LIGHT MODULAR STEEL MOMENT FRAMES FOR PUBLIC ELEMENTARY AND SECONDARY SCHOOLS, AND COMMUNITY COLLEGES

2212A.1 General.

2212A.1.1 Configuration. *Light modular steel moment frame buildings shall be constructed of factory-assembled modules comprising a single-story moment-resisting space frame supporting a floor and roof. Individual modules shall not exceed a width of 14 feet (4.25 m) nor a length of 72*

feet (22 m). All connections of beams to corner columns shall be designed as moment-resisting in accordance with the criteria of Section 2212A.2. Modules may be stacked to form multistory structures not exceeding 35 feet or two stories in height. When stacked modules are evaluated separately, seismic forces on each module shall be distributed in accordance with Section 12.8.3 of ASCE 7, considering the modules in the stacked condition. See Section 2212A.2.5 of this code.

2212A.1.2 Design, fabrication and erection. *The design, fabrication and erection of light modular steel moment frame buildings shall be in accordance with the AISC Specification for Structural Steel Buildings (ANSI/AISC 360) and the AISI North American Specification for the Design of Cold Formed Structural Members (AISI/COS/ NASPEC), as applicable, and the requirements of this section. The maximum dead load of the roof and elevated floor shall not exceed 25 psf and 50 psf (1197 Pa and 2394 Pa), respectively. The maximum dead load of the exterior walls shall not exceed 45 psf (2155 Pa).*

2212A.2 Seismic requirements. *In addition to the other requirements of this code, the design, materials and workmanship of light modular steel moment frames shall comply with the requirements of this section. The response modification coefficient R shall be equal to 31/2. Cd and Ω0 shall be equal to 3.0.*

2212A.2.1 Base materials. *Beams, columns and connection materials shall be limited to those materials permitted under the AISC Specification for Structural Members (ANSI/AISC 360) and the AISI North American Specification for the Design of Cold Formed Structural Members (AISI/COS/NASPEC).*

2212A.2.2 Beam-to-column strength ratio. *At each moment-resisting connection the following shall apply:*

$$\frac{\sum S_{bi}F_{ybi}}{\sum S_{cj}F_{ycj}} \geq 1.4 \qquad \textbf{(Equation 22A-1)}$$

where:

F_{ybi} *= The specified yield stress of beam "i."*

F_{ycj} *= The specified yield stress of column "j."*

S_{bi} *= The flexural section modulus of each beam "i" that is moment connected to the column "j" at*

the connection.

S_{cj} = The flexural section modulus of each column "j" that is moment connected to the beam "i" at the connection.

Exceptions:

1. *Beam-to-column connections at the floor level beams of first or second-story modules need not comply with this requirement.*
2. *Beam-to-column strength ratios less than 1.4 are allowed if proven to be acceptable by analysis or testing.*

2212A.2.3 Welding. *Weld filler metals shall be capable of producing weld metal with a minimum Charpy V-Notch toughness of 20 ft-lb at 0°F. Where beam bottom flanges attach to columns with complete joint penetration groove welds and weld backing is used at the bottom surface of the beam flange, such backing shall be removed and the root pass back-gouged, repaired and reinforced with a minimum 3/16 inch (5 mm) fillet weld.*

2212A.2.4 Connection design. *Connections of beams to columns shall have the design strength to resist the maximum seismic load effect, E_m , calculated in accordance with Section 12.4.3 of ASCE 7.*

2212A.2.5 Multistory assemblies. *Analysis of multistory assemblies shall be permitted to consider the stacked modules as a single assembly, with restraint conditions between the stacked units that represent the actual method of attachment. Alternatively, it shall be permitted to analyze the individual modules of stacked assemblies independently, with lateral and vertical reactions from modules above applied as concentrated loads at the top of the supporting module.*

SECTION 2213A
TESTING AND FIELD VERIFICATION

2213A.1 Tests of High-strength Bolts, Nuts and Washers. *High-strength bolts, nuts and washers shall be sampled and tested by an approved independent testing laboratory for conformance with the requirements of applicable ASTM standards.*

2213A.2 Tests of End-welded Studs. *End-welded studs shall be tested in accordance with ~~per~~ the requirements of the AWS D1.1, Sections 7.7 and 7.8.*

All existing amendments that are not revised above shall continue without any change.

~~(All existing California amendments that are not revised below shall continue without change)~~

SECTION 2301
GENERAL

2301.1 Scope. The provisions of this chapter shall govern the materials, design, construction and quality of wood members and their fasteners.

2301.1.1 Application. [DSA-SS & DSA-SS/CC] *The scope of application of Chapter 23 is as follows:*

1. *Applications listed in Sections 1.9.2.1 and 1.9.2.2, regulated by the Division of the State Architect-Structural Safety (DSA-SS, and DSA-SS/CC). These applications include public elementary and secondary schools, community colleges and state-owned or state-leased essential services buildings.*

2. ~~(Reserved for OSHPD)~~

2301.1.2 Identification of amendments. [DSA-SS & DSA-SS/CC] *Amendments appear in this chapter preceded with the appropriate acronym, as follows:*

1. *Division of the State Architect - Structural Safety:*

[DSA-SS] *- For applications listed in Section 1.9.2.1.*

[DSA-SS/CC] - For applications listed in Section 1.9.2.2

2. [Reserved for OSHPD]

2301.1.3 Reference to other chapters.

2301.1.3.1 [DSA-SS] *Where reference within this chapter is made to sections in Chapters 16, 17, 18, 19, 21, and 22, ~~and 34~~, the provisions in Chapters 16A, 17A, 18A, 19A, 21A, and 22A, ~~and 34A~~ respectively shall apply instead.*

~~***Exception:*** *For DSA-SS, the requirements of Chapter 34 shall apply instead of Chapter 34A*~~

2301.1.3.2 [DSA-SS/CC] *Where reference within this chapter is made to sections in Chapters 17 and 18, the provisions in Chapters 17A and 18A respectively shall apply instead.*

2301.1.4 Prohibition. [Relocated from 2013 CBC, Section 2301.1.1] ***[DSA-SS & DSA-SS/CC]*** *The following design methods, systems, and materials are not permitted by DSA:*

1. *Straight-sheathed horizontal lumber diaphragms ~~are not permitted~~.*
2. *Gypsum-based sheathing shear walls and portland cement plaster shear walls, ~~are not permitted~~.*
3. *Shear wall foundation anchor bolt washers ~~shall be provided~~ in accordance with ~~AF & PA SDPWS Section 4.3.6.4.3. The~~ exception to ~~AF & PA~~ AWC SDPWS Section 4.3.6.4.3. ~~shall not apply.~~*
4. *Wood structural panel shear walls and diaphragms using staples as fasteners, ~~are not permitted.~~*
5. *Unblocked shear walls, ~~are not permitted.~~*
6. *Any wood structural panel sheathing used for diaphragms and shear walls that are part of the seismic force-resisting system, ~~shall be~~ not applied directly to framing members.*
7. *Single and double diagonally sheathed lumber walls ~~shall not be~~ used to resist seismic forces.*
8. [Relocated from 2013 CBC, 2301.2 Item 4] *Log structures in accordance with ICC 400, ~~are not permitted by DSA~~.*
9. *Cross-laminated timber used as part of the seismic force resisting system, unless approved as*

an alternative system in accordance with Section 104.11.

2301.2 General design requirements. The design of structural elements or systems, constructed partially or wholly of wood or wood-based products, shall be in accordance with one of the following methods:

...

5. The design and construction of log structures shall be in accordance with the provisions of ICC 400.

~~[Relocated to 2301.1.4 Item 8]~~ ~~***Exception: [DSA-SS & DSA-SS/CC]*** *Log structures are not permitted by DSA.*~~

...

SECTION 2302
DEFINITIONS

2302.1 Definitions. The following terms are defined in Chapter 2:

...

NATURALLY DURABLE WOOD.

Decay resistant.

Termite resistant.

...

SECTION 2303
MINIMUM STANDARDS AND QUALITY

2303.1 General. Structural sawn lumber; end-jointed lumber; prefabricated wood I-joists; structural glued-

laminated timber; wood structural panels, fiberboard sheathing (when used structurally); hardboard siding (when used structurally); particleboard; preservative-treated wood; structural log members; structural composite lumber; round timber poles and piles; fire-retardant-treated wood; hardwood plywood; wood trusses; joist hangers; nails; and staples shall conform to the applicable provisions of this section.

...

2303.1.3 Structural glued-laminated timber. Glued-laminated timbers shall be manufactured and identified as required in ANSI/AITC A190.1 and ASTM D 3737.

2303.1.3.1 Additional requirements. [DSA-SS & DSA-SS/CC] *The construction documents shall indicate the following:*

1. *Dry or wet service conditions.*
2. *Laminating combinations and stress requirements.*
3. *Species group.*
4. *Preservative material and retention, when preservative treatment is required.*
5. *Provisions for protection during shipping and field handling, such as sealing and wrapping in accordance with AITC 111.*

When mechanical reinforcement such as radial tension reinforcement is required, such reinforcement shall comply with AITC 404 and shall be detailed accordingly in the construction documents. Construction documents shall specify that the moisture content of laminations at the time of manufacture shall not exceed 12% for dry conditions of use.

The design of fasteners and connections shall comply with AITC 117, Section I, Item 6 (Connection Design), and NDS Appendix E.

~~*Refer to Section 1705A.5.4 for special inspection requirements during fabrication of structural glued laminated timbers.*~~

2303.1.4 Structural glued cross-laminated timber. Cross-laminated timbers shall be manufactured and identified as required in ANSI/APA PRG 320.

2303.1.4.1 Additional requirements. [DSA-SS & DSA-SS/CC] *Requirements in Section 2303.1.3.1 shall apply to glued cross-laminated timber.*

...

2303.4.1.4.1 Truss design drawings. Where required by the *registered design professional*, the *building official*, or the statutes of the jurisdiction in which the project is to be constructed, each individual truss design drawing shall bear the seal and signature of the truss designer.

Exceptions:

1. Where a cover sheet and truss index sheet are combined into a single sheet and attached to the set of truss design drawings, the single cover/truss index sheet is the only document required to be signed and sealed by the truss designer.
2. When a cover sheet and a truss index sheet are separately provided and attached to the set of truss design drawings, the cover sheet and the truss index sheet are the only documents required to be signed and sealed by the truss designer.

3. *[DSA-SS, DSA-SS/CC] Exceptions 1 and 2 are not permitted by DSA.*

2303.4.2 Truss placement diagram. The truss manufacturer shall provide a truss placement diagram that identifies the proposed location for each individually designated truss and references the corresponding truss design drawing. The truss placement diagram shall be provided as part of the truss submittal package, and with the shipment of trusses delivered to the job site. Truss placement diagrams that serve only as a guide for installation and do not deviate from the *permit* submittal drawings shall not be required to bear the seal or signature of the truss designer.

2303.4.3 Truss submittal package. The truss submittal package provided by the truss manufacturer shall consist of each individual truss design drawing, the truss placement diagram, the permanent individual truss member restraint/bracing method and details and any other structural details germane to the trusses; as applicable, the cover/truss index sheet.

2303.4.3.1 Additional Requirements. [DSA-SS, DSA-SS/CC] *In addition to Sections 2303.4.1 and 2303.4.2, the following requirements apply:*

1. ***Construction Documents.*** *The construction documents prepared by the registered engineer or licensed architect for the project shall indicate all requirements for the truss design, including:*

   1.1 Deflection criteria.

   1.2 Connection details to structural and non-structural elements (e.g. non-bearing partitions).

2. ***Requirements for Approval.*** *The truss design drawings and engineering analysis shall be provided to the enforcement agency and approved prior to truss fabrication, in accordance with the California Administrative Code. Alterations to the approved truss design drawings or manufactured trusses are subject to the approval of the enforcement agency.*

~~*3. **Special inspection during truss manufacture.** Refer to Section 1705A.5.5 for special inspection requirements during the manufacture of open web trusses.*~~

2303.4.4 Anchorage. The design for the transfer of loads and anchorage of each truss to the supporting structure is the responsibility of the *registered design professional.*

2303.4.5 Alterations to trusses. Truss members and components shall not be cut, notched, drilled, spliced or otherwise altered in any way without written concurrence and approval of a *registered design professional.* Alterations resulting in the addition of loads to any member (e.g., HVAC equipment, piping, additional roofing or insulation, etc.) shall not be permitted without verification that the truss is capable of supporting such additional loading.

2303.4.6 TPI 1 Specifications. In addition to Sections 2303.4.1 through 2303.4.5, the design, manufacture and quality assurance of metal-plate-connected wood trusses shall be in accordance with TPI 1. Job-site inspections shall be in compliance with Section 110.4, as applicable.

2303.4.7 Truss quality assurance. Trusses not part of a manufacturing process in accordance with either Section 2303.4.6 or a standard listed in Chapter 35, which provides requirements for quality control done under the supervision of a third-party quality control agency, shall be manufactured in compliance with Sections 1704.2 and 1704.6, as applicable.

...

SECTION 2304
GENERAL CONSTRUCTION REQUIREMENTS

2304.1 General. The provisions of this section apply to design methods specified in Section 2301.2.

2304.2 Size of structural members. Computations to determine the required sizes of members shall be based on the net dimensions (actual sizes) and not nominal sizes.

2304.3 Wall framing. The framing of exterior and interior walls shall be in accordance with the provisions

specified in Section 2308 unless a specific design is furnished.

2304.3.1 Bottom plates. Studs shall have full bearing on a 2-inch-thick (actual $1^1/_2$-inch, 38 mm) or larger plate or sill having a width at least equal to the width of the studs.

2304.3.2 Framing over openings. Headers, double joists, trusses or other approved assemblies that are of adequate size to transfer loads to the vertical members shall be provided over window and door openings in load-bearing walls and partitions.

2304.3.3 Shrinkage. Wood walls and bearing partitions shall not support more than two floors and a roof unless an analysis satisfactory to the building official shows that shrinkage of the wood framing will not have adverse effects on the structure or any plumbing, electrical or mechanical systems, or other equipment installed therein due to excessive shrinkage or differential movements caused by shrinkage. The analysis shall also show that the roof drainage system and the foregoing systems or equipment will not be adversely affected or, as an alternate, such systems shall be designed to accommodate the differential shrinkage or movements.

2304.3.4 Additional requirements. [DSA-SS, DSA-SS/CC] *The following additional requirements apply:*

1. *Engineering analysis shall be furnished that demonstrates compliance of wall framing elements and connections with Section 2301.2, Item 1 or 2.*

2. *Construction documents shall include detailing of sill plate anchorage to supporting masonry or concrete for all exterior and interior bearing, non-bearing and shear walls. Unless specifically designed in accordance with item 1 above, sills under exterior walls, bearing walls and shear walls shall be bolted to masonry or concrete with 5/8" diameter by 12 inch (16 mm by 305 mm) bolts spaced not more than four (4) feet (1219 mm) on center, with a minimum of two (2) bolts for each piece of sill plate. Anchor bolts shall have a 4 inch minimum and a 12 inch maximum clearance to the end of the sill plate, and 7 inch minimum embedment into concrete or masonry.*

   Unless specifically designed in accordance with item 1 above, sill plates under non-bearing interior partitions on concrete floor slabs shall be anchored at not more than four (4) feet (1219 mm) on center to resist a minimum allowable stress shear of 100 pounds per linear foot (1.4 kN/m) acting either parallel or perpendicular to the wall.

3. *Construction documents shall include detailing and limitations for notches and bored holes in wall studs, plates and sills.*

2304.4 Floor and roof framing. The framing of wood-joisted floors and wood framed roofs shall be in accordance with the provisions specified in Section 2308 unless a specific design is furnished.

2304.4.1 Additional requirements. [DSA-SS, DSA-SS/CC] *The following additional requirements apply:*

1. *Engineering analysis shall be furnished that demonstrates compliance of floor, roof and ceiling framing elements and connections with Section 2301.2, Items 1 or 2.*
2. *Construction documents shall include detailing and limitations for notches and bored holes in floor and roof framing members.*

...

2304.6.1 Wood structural panel sheathing.

...

~~***Exception: [DSA-SS]*** *Wind pressure shall be calculated in accordance with Section 1609A.*~~

...

2304.10 Connections and fasteners.

...

2304.10.1 Fastener requirements. Connections for wood members shall be designed in accordance with the appropriate methodology in Section 2301.2. The number and size of fasteners connecting wood members shall not be less than that set forth in Table 2304.10.1.

2304.10.1.1 ~~***2304.9.1.1***~~ ***Additional requirements. [DSA-SS]*** *Fasteners used for the attachment of exterior wall coverings shall be of hot-dipped zinc-coated galvanized steel, mechanically deposited zinc-coated steel, stainless steel, silicon bronze or copper. The coating weights for hot-dipped zinc-coated fasteners shall be in accordance with ASTM A 153. The coating weights for mechanically deposited zinc coated fasteners shall be in accordance with ASTM B 695, Class 55 minimum.*

...

2304.12.1.2 Wood supported by exterior foundation walls. Wood framing members, including wood sheathing, that rest on exterior foundation walls and are less than 8 inches (203 mm) from exposed earth shall be of naturally durable or preservative-treated wood.

Exception: [DSA-SS] *At exterior walls where the earth is paved with an asphalt or concrete slab at least 18 inches (457 mm) wide and draining away from the building, the bottom of sills are permitted to be 6 inches (152 mm) above the top of such slab. Other equivalent means of termite and decay protection may be accepted by the enforcement agency.*

...

2304.12.1.4 Sleepers and sills. Sleepers and sills on a concrete or masonry slab that is in direct contact with earth shall be of naturally durable or preservative-treated wood.

2304.12.1.4.1 ~~***2304.11.2.4.1***~~ ***Additional Requirements. [DSA-SS]*** *Stud walls or partitions at shower or toilet rooms with more than two plumbing fixtures, excluding floor drains, and stud walls adjacent to unroofed paved areas shall rest on a concrete curb extending at least 6 inches (152 mm) above finished floor or pavement level.*

...

SECTION 2305
GENERAL DESIGN REQUIREMENTS FOR LATERAL-FORCE-RESISTING SYSTEMS

...

2305.1.1 Openings in shear panels. Openings in shear panels that materially affect their strength shall be detailed on the plans, and shall have their edges adequately reinforced to transfer all shearing stresses.

2305.1.2 Additional Requirements. [DSA-SS, DSA-SS/CC] *See Section 2301.1.4 for modifications to AWC SDPWS.* ~~*The following limitations shall apply:*~~

~~Reserved to Section 2301.1.4~~

~~*1. Straight-sheathed horizontal lumber diaphragms are not permitted.*~~

~~*2. Gypsum-based sheathing shear walls and portland cement plaster shear walls are not*~~

~~*permitted.*~~

~~*3. Shear wall foundation anchor bolt washers shall be provided in accordance with AF & PA SDPWS Section 4.3.6.4.3. The exception to AF & PA SDPSWS Section 4.3.6.4.3 shall not apply.*~~

~~*4. Wood structural panel shear walls and diaphragms using staples as fasteners are not permitted.*~~

~~*5. Unblocked shear walls are not permitted.*~~

~~*6. Any wood structural panel sheathing used for diaphragms and shear walls that are part of the seismic force-resisting system shall be applied directly to framing members.*~~

~~*7. Single and double diagonally sheathed lumber walls shall not be used to resist seismic forces.*~~

2305.2 Diaphragm deflection.

...

~~***Exception: [DSA-SS, DSA-SS/CC]** Section 2305.2 is not permitted by DSA*~~

...

2305.3 Shear wall deflection

...

~~***Exception: [DSA-SS, DSA-SS/CC]** Section 2305.3 is not permitted by DSA.*~~

...

SECTION 2306
ALLOWABLE STRESS DESIGN

2306.1 Allowable stress design. The structural analysis and construction of wood elements in structures using *allowable stress design* shall be in accordance with the following applicable standards:

...

2306.2 Wood-frame diaphragms. Wood-frame diaphragms shall be designed and constructed in accordance with AWC SDPWS. Where panels are fastened to framing members with staples,

requirements and limitations of AWC SDPWS shall be met and the allowable shear values set forth in Table 2306.2(1) or 2306.2(2) shall be permitted. The allowable shear values in Tables 2306.2(1) and 2306.2(2) are permitted to be increased 40 percent for wind design.

~~***Exception: [DSA-SS, DSA-SS/CC]*** *Wood structural panel diaphragms using staples as fasteners are not permitted by DSA.*~~

...

2306.3 Wood-frame shear walls. Wood-frame shear walls shall be designed and constructed in accordance with AWC SDPWS. Where panels are fastened to framing members with staples, requirements and limitations of AWC SDPWS shall be met and the allowable shear values set forth in Table 2306.3(1), 2306.3(2) or 2306.3(3) shall be permitted. The allowable shear values in Tables 2306.3(1) and 2306.3(2) are permitted to be increased 40 percent for wind design. Panels complying with ANSI/APA PRP-210 shall be permitted to use design values for Plywood Siding in the AWC SDPWS.

~~***Exception: [DSA-SS, DSA-SS/CC]*** *Wood structural panel shear walls using staples as fasteners are not permitted by DSA.*~~

...

SECTION 2308
CONVENTIONAL LIGHT-FRAME CONSTRUCTION

...

2308.2.7 ~~*8.*~~ ***Additional requirements [DSA-SS & DSA-SS/CC]*** *The use of conventional light-frame construction provisions in this section is permitted, subject to the following conditions:*

1. ~~*8.1.*~~ *The design and construction shall also comply with Section 2304 and Section 2305.*
2. ~~*8.2.*~~ *In conjunction with the use of provisions in Section 2308.6* ~~*2308.3 (Braced Wall Lines*~~ *bracing), engineering analysis shall be furnished that demonstrates compliance of lateral-force-resisting systems with Section 2305.*

3. ~~8.3.~~ *In addition to the use of provisions in Section 2308.4 ~~2308.8~~ (Floor framing ~~Joists~~), engineering analysis shall be furnished that demonstrates compliance of floor framing elements and connections with Section 2301.2, Item 1 or 2.*
4. ~~8.4.~~ *In addition to the use of provisions in Section 2308.5 ~~2308.9~~ (Wall construction ~~Framing~~), engineering analysis shall be furnished that demonstrates compliance of wall framing elements and connections with Section 2301.2, Item 1 or 2.*
5. ~~8.5.~~ *In addition to the use of provisions in Section 2308.7 ~~2308.10~~ (Roof and Ceiling Framing), engineering analysis shall be furnished demonstrating compliance of roof and ceiling framing elements and connections with Section 2301.2, Item 1 or 2.*

...

SECTION 2309
WOOD FRAME CONSTRUCTION MANUAL

2309.1 Wood Frame Construction Manual. Structural design in accordance with AWC WFCM shall be permitted for buildings assigned to Risk Category I or II subject to the limitations of Section 1.1.3 of the AWC WFCM and the load assumption contained therein. Structural elements beyond these limitations shall be designed in accordance with accepted engineering practice.

2309.1.1 Additional requirements [DSA-SS & DSA-SS/CC] *The use of the AWC WFCM is permitted provided the design and construction also comply with Sections 2304, 2305, and 2301.2, Item 1 or 2 and engineering analysis is furnished demonstrating compliance.*

CHAPTER 24
GLASS AND GLAZING

Adopt and/or codify chapter as amended below:

PROPOSED ADOPTION	*DSA-SS*	DSA-SS/CC	Comments
Adopt entire chapter without amendments			
Adopt entire chapter with amendments listed below	***X***	**X**	
Adopt only those sections listed below			
2403.2.1	*X*	X	
Table 2403.2.1	*X*	X	
2410	*X*	X	

All existing amendments that are not revised below shall continue without any change.

...

SECTION 2401
GENERAL

2401.1 Scope. The provisions of this chapter shall govern the materials, design, construction and quality of glass, light- transmitting ceramic and light-transmitting plastic panels for exterior and interior use in both vertical and sloped applications in buildings and structures.

...

SECTION 2403
GENERAL REQUIREMENTS FOR GLASS

2403.1 Identification. Each pane shall bear the manufacturer's mark designating the type and thickness of the glass or glazing material. The identification shall not be omitted unless approved and an affidavit is furnished by the glazing contractor certifying that each light is glazed in accordance with approved construction documents that comply with the provisions of this chapter. Safety glazing shall be identified in accordance with Section 2406.2.

...

2403.2 Glass supports. Where one or more sides of any pane of glass are not firmly supported, or are subjected to unusual load conditions, detailed construction documents, detailed shop drawings and analysis or test data ensuring safe performance for the specific installation shall be prepared by a registered design professional.

2403.2.1 Additional Requirements. [DSA-SS, DSA-SS/CC] *In addition to the requirements of Section 2403.2, glass supports shall comply with the following:*

1. *The construction documents and analysis or test data required per Section 2403.2 shall be submitted to the enforcement agency for approval.*

2. *Glass firmly supported on all four edges shall be glazed with minimum laps and edge clearances set forth in Table 2403.2.1.*

TABLE 2403.2.1
MINIMUM GLAZING REQUIREMENTS

Fixed Windows and Openable Windows Other Than Horizontal Siding					
GLASS AREA	***UP TO 6 SQ. FT.***	***6 TO 14 SQ. FT.***	***14 TO 32 SQ. FT.***	***32 TO 50 SQ. FT.***	***OVER 50 SQ. FT.***

2.Minimum Glass Edge Clearance	*1/8"[1,2]*	*1/8"[1,2]*	*3/16"[1]*	*1/4"*	*1/4"[1]*
3. Continuous Glazing Rabbet and Glass Retainer[3]	*Required*				
4. Resilient Setting Material[4]	*Not Required*	*Required*			
Sliding Doors and Horizontal Sliding Windows					
GLASS AREA		*UP TO 14 SQ. FT.*	*14 TO 32 SQ. FT.*	*32 TO 50 SQ. FT.*	*OVER 50 SQ. FT.*
× 0.0929 for m^2, × 25.4 for mm					
5.Minimum Glass Frame Lap		*1/4"*	*5/16"*	*3/8"*	*1/2"*

6.Minimum Glass Edge Clearance	*1/8"[2]*	*3/16"*	*1/4"*	*1/4"*
7. Continuous Glazing Rabbet and Glass Retainer[3]	*Required above third story*	*Required*		
8. Resilient Setting Material[4]	*Not Required*		*Required*	

[1] Glass edge clearance in fixed openings shall not be less than required to provide for wind and earthquake drift.

[2] Glass edge clearance at all sides of pane shall be a minimum of 3/16 inch (4.8 mm) where height of glass exceeds 3 feet (914 mm).

[3] Glass retainers such as metal, wood or vinyl face stops, glazing beads, gaskets, glazing clips and glazing channels shall be of sufficient strength and fixation to serve this purpose.

[4] Resilient setting material shall include preformed rubber or vinyl plastic gaskets or other materials which are proved to the satisfaction of the building official to remain resilient.

...

Section 2410 [DSA-SS, DSA-SS/CC]
Structural Sealant Glazing (SSG)

2410.1 General. *The requirements of this section address the use of Structural Sealant Glazing (SSG). These requirements shall not be used for butt joint glazing, point supported glass, and glass fins.*

Design, construction, testing, and inspection shall satisfy the requirements of this code except as modified in Sections 2410.1.1 through 2410.1.4.

2410.1.1 Design. *Design of Structural Sealant Glazing (SSG) shall satisfy the following requirements:*

1. *SSG shall be weather tight and serviceable, as defined in AAMA 501.4, under design story drifts associated with the Design Earthquake and no glass fallout shall occur at the drifts determined by ASCE 7 Section 13.5.9.*

2. *The sealant utilized in the insulated glass units used in SSG shall be designed in accordance with ASTM C 1249. The insulated glass unit design shall be in accordance with ASTM C 1249 Section 6.7.2.*

3. *Allowable stress for SSG shall not exceed 20 psi and shall have a minimum factor of safety of 5 in accordance with ASTM C 1401.*

4. *Design methodology shall address seismic movement in accordance with ASTM C 1401 Section 30.3.4.*

5. *SSG systems shall be supported for self-weight and lateral loading at each floor level of the building.*

6. *Unitized SSG framing shall be anchored to the building floor bearing plate by screws or bolts and shall not rely upon gravity or frictional forces for attachment.*

7. *Framing shall satisfy the out-of-plane deflection requirements of this code.*

2410.1.2 Testing and Inspection. *Testing and inspection of Structural Sealant Glazing (SSG) shall satisfy the following requirements:*

a. *The seismic drift capability of structural sealant glazing shall be determined by tests in accordance with AAMA 501.6, AAMA 501.4 and ASCE 7 Section 13.5.9.2.*

b. *The applicability of the specific AAMA 501.6 and AAMA 501.4 testing shall be subject to approval by the building official.*

c. *The panel test specimens used in the AAMA 501.6 and AAMA 501.4 testing shall include all glass types (annealed, heat strengthened, laminated, tempered) and insulated glass units that comprise more than 5% of the total glass curtain wall area used in the building.*

d. *AAMA 501.4 test specimen shall include the same materials, sections, connections, and attachment details to the test apparatus as used in the building.*

e. *Serviceability tests of SSG test specimen shall be performed in accordance with AAMA 501.4 after seismic displacement tests to the design story drift.*

f. *The window wall system using structural sealant by different manufacturer/product category shall be qualified in accordance with AAMA 501.6 and AAMA 501.4 testing for the seismic drift required. Analysis as an alternative to testing is not acceptable for the purposes of satisfying the seismic drift requirements of the SSG system.*

g. *Where unitized SSG is used with horizontal stack joints at each floor level and split vertical mullions that can move independently, only a story height single unit need to be tested under AAMA 501.6. Where continuous horizontal bands of SSG are used in the building, either two or four sided, the aspect ratio (height-to-length) of the test specimen shall be less than 1.0, contain not less than two interior vertical joints and all joints (vertical in the case of two sided), including the perimeter of the glass, shall be glazed with SSG.*

h. *Where SSG continues around corners, the AAMA 501.4 test specimen shall include one corner panel to verify the kinematics of the corner condition under seismic drift.*

~~i.~~ *Quality assurance and inspection requirements shall include formalized post-installation tests using the Point Load Testing procedure in accordance with ASTM C 1392. The Point Load Tests shall be done after the initial installation.* ~~*, then once every year for 3 years, not less than one test per elevation each time.*~~

> ~~***Exception: [DSA-SS, DSA-SS/CC]*** *For two-sided SSG systems where the horizontal edges are mechanically attached to mullions, the yearly point load test for 3 years is not required.*~~

j. *Where the SSG is field assembled, hand pull tab tests in accordance with ASTM C1401 Section X2.1, one test every 100 linear feet, but not less than one test for each building elevation view shall be required.*

Existing AAMA 501.4 and 501.6 test results satisfying the requirements of this section shall be permitted, in lieu of project specific tests, when approved by the building official.

2410.1.3 Monitoring. *Short and Long term periodic performance monitoring shall be provided in accordance with ASTM C 1401, C 1392, and C 1394. Inspection frequencies recommended in ASTM C 1392 Section 5.1 shall be followed.*

After every significant seismic event, where the Peak ~~g~~ Ground ~~shaking a~~ Acceleration (PGA) at the site exceeds 0.3g, or the acceleration at any monitored building level (if any) exceeds 0.8g, as measured by the seismic monitoring system in the building, the owner shall retain a structural engineer to make an inspection of the SSG system. The inspection shall include viewing the performance of the panel, structural sealant, glass, reviewing the strong motion records, and a visual examination of the overall performance for deterioration, offset or physical damage. A report for each inspection, including conclusions on the continuing adequacy of the SSG system, shall be submitted to the enforcement agency.

> ***Exception: [DSA-SS, DSA-SS/CC]*** *The inspection requirements triggered by specific ground shaking acceleration or measured building acceleration is not required.*

2410.1.4 Construction Documents. *Complete design of the SSG system for gravity, wind, and seismic forces shall be subject to review by the enforcement agency. Construction documents shall show structural details of glass and curtain wall system including:*

1. *A design narrative explaining how the SSG is supported by the building and the mechanism used to accommodate seismic racking.*
2. *Type of SSG and whether field or shop built.*
3. *The means of supporting the glass during structural sealant curing time shall be shown in the construction documents.*
4. *Typical curtain wall panel elevation, plan view, and sections.*
5. *Details of building corner joint to verify how the corner vertical mullion will move to accommodate the seismic drift.*
6. *Joints between panel and floors at top and bottom.*
7. *Joint between panels – including vertical & horizontal stack joints at intermediate and edge mullion.*
8. *Member sizes for curtain wall panels.*
9. *Glass pane sizes, thickness and type of glass.*
10. *Contact width and thickness of structural sealant and sealant materials for shop and field installation/re-glazing.*

11. *Glass to aluminum joints (including primers, if any).*
12. *Maximum roof/floor dead and live load deflection of the roof/floor framing members supporting the exterior curtain wall system.*
13. *Required seismic separation or gap distance between the structural sealant glazing curtain wall and other adjacent cladding units.*
14. *Mitigation of galvanic reactions between the roof/floor slab anchors, steel screw connections of aluminum sections and the aluminum anchorage components, if any.*

CHAPTER 25

GYPSUM BOARD, GYPSUM PANEL PRODUCTS AND PLASTER

Adopt and/or codify chapter as amended below:

PROPOSED ADOPTION	DSA-SS	DSA-SS/CC	Comments
Adopt entire chapter without amendments			
Adopt entire chapter with amendments listed below	**X**	**X**	
Adopt only those sections listed below			
2501.1.1 ~~*2501.2*~~	X	X	
2503.2	X	X	
2504.2	X	X	
2504.2.1	X	X	
2505.3	X	X	
2507.3	X	X	

2508.5.6	X	X	
2514.1 Exception	X	-	

All existing California amendments that are not revised below shall continue without change.

...

SECTION 2501
GENERAL

2501.1 Scope. Provisions of this chapter shall govern the materials, design, construction and quality of gypsum board, gypsum panel products, lath, gypsum plaster, cement plaster and reinforced gypsum concrete.

...

2501.1.1 ~~2501.2~~ Additional Requirements. [DSA-SS, DSA-SS/CC] *Details of attachment for wall and ceiling coverings which are not provided for in this code ~~these regulations~~ shall be detailed in the approved construction documents.*

...

SECTION 2503
INSPECTION

2503.1 Inspection. Lath, gypsum board and gypsum panel products shall be inspected in accordance with Section 110.3.5.

2503.2 Additional requirements for inspection and testing. [DSA-SS, DSA-SS/CC]

1. *Lath, ~~and~~ gypsum board and gypsum panel products shall be inspected in accordance with Chapter 17A and the California Administrative Code.*

2. *No lath, gypsum board and gypsum panel products ~~or gypsum wallboard~~ or their attachments shall be covered or finished until it has been inspected and approved by the inspector of record and/or special inspector.*

3. The enforcement agency may require tests in accordance with Table 2506.2 to determine compliance with the provisions of this code. ~~these regulations~~.

4. The testing of gypsum board and gypsum panel ~~and gypsum~~ products shall conform with standards listed in Table 2506.2.

...

SECTION 2504
VERTICAL AND HORIZONTAL ASSEMBLIES

2504.1 Scope. The following requirements shall be met where construction involves gypsum board, gypsum panel products or lath and plaster in vertical and horizontal assemblies.

...

2504.2 Additional Requirements. [DSA-SS, DSA-SS/CC] *In addition to the requirements of this section, the horizontal and vertical assemblies of plaster, ~~or~~ gypsum board or gypsum panel products shall be designed to resist the loads specified in this code. ~~For suspended acoustical ceiling systems, see Section 2506. For gypsum construction, see Section 2508.~~*

2504.2.1 Wood Furring Strips. *Wood furring strips for ceilings fastened to floor or ceiling joist shall be nailed at each bearing with two common wire nails, one of which shall be a slant nail and the other a face nail, or by one nail having spirally grooved or annular grooved shanks approved by the enforcement agency for this purpose. All stripping nails shall penetrate not less than 1 3/4 inches (44.5 mm) into the member receiving the point. Holes in stripping at joints shall be subdrilled to prevent splitting.*

Where common wire nails are used to support horizontal wood stripping for plaster ceilings, such stripping shall be wire tied to the joists 4 feet (1219 mm) on center with two strands of No. 18 W&M gage galvanized annealed wire to an 8d common wire nail driven into each side of the joist 2 inches (51 mm) above the bottom of the joist or to each end of a 16d common wire nail driven horizontally through the joist 2 inches (51 mm) above the bottom of the joist, and the ends of the wire secured together with three twists of the wire.

SECTION 2505
SHEAR WALL CONSTRUCTION

...

2505.3 [DSA-SS, DSA-SS/CC] *Section 2505.1 and 2505.2 are not permitted.*

...

SECTION 2507
LATHING AND PLASTERING

2507.1 General. Lathing and plastering materials and accessories shall be marked by the manufacturer's designation to indicate compliance with the appropriate standards referenced in this section and stored in such a manner to protect them from the weather.

2507.2 Standards. Lathing and plastering materials shall conform to the standards listed in Table 2507.2 and Chapter 35 and, where required for fire protection, shall also conform to the provisions of Chapter 7.

2507.3 Lath attachment to horizontal wood supports. [DSA-SS, DSA-SS/CC] *Where interior or exterior lath is attached to horizontal wood supports, either of the following attachments shall be used in addition to the methods of attachment described in referenced standards listed in Table 2507.2.*

1. *Secure lath to alternate supports with ties consisting of a double strand of No. 18 W & M gage galvanized annealed wire at one edge of each sheet of lath. Wire ties shall be installed not less than 3 inches (76 mm) back from the edge of each sheet and shall be looped around stripping, or attached to an 8d common wire nail driven into each side of the joist 2 inches (51 mm) above the bottom of the joist or to each end of a 16d common wire nail driven horizontally through the joist 2 inches (51 mm) above the bottom of the joist and the ends of the wire secured together with three twists of the wire.*

2. *Secure lath to each support with 1/2-inch-wide (12.7 mm), 1 1/2-inch-long (38mm) No. 9 W & M gage, ring shank, hook staple placed around a 10d common nail laid flat under the surface of the lath not more than 3 inches (76 mm) from edge of each sheet. Such staples may be placed over*

ribs of 3/8-inch (9.5 mm) rib lath or over back wire of welded wire fabric or other approved lath, omitting the 10d nails.

SECTION 2508
GYPSUM CONSTRUCTION

2508.1 General.

...

2508.5.6 Diaphragm ceiling connection to partitions. *[DSA-SS, DSA-SS/CC] Gypsum board shall not be used in diaphragm ceilings to resist lateral forces imposed by partitions. Connection of diaphragm ceiling to the vertical lateral force resisting elements shall be designed and detailed to transfer lateral forces.*

...

SECTION 2514
REINFORCED GYPSUM CONCRETE

2514.1 General. Reinforced gypsum concrete shall comply with the requirements of ASTM C 317 and ASTM C 956.

Exception: [Redacted from Section 19.11.4] ***[DSA-SS]*** *Reinforced gypsum concrete shall be considered as an alternative system.*

...

CHAPTER 26
PLASTIC

PROPOSED ADOPTION	DSA-SS	DSA-SS/CC	Comments
Adopt entire chapter	X	X	
Adopt entire chapter with amendments listed below			
Adopt only those sections listed below			
2603.11.1	X	X	
2603.12.3	X	X	

...

SECTION 2603
FOAM PLASTIC INSULATION

...

2603.11 Cladding attachment over foam sheathing to masonry or concrete wall construction. Cladding shall be specified and installed in accordance with Chapter 14 and the cladding manufacturer's installation instructions or an approved design. Foam sheathing shall be attached to masonry or concrete construction in accordance with the insulation manufacturer's installation instructions or an approved design. Furring and furring attachments through foam sheathing shall be designed to resist design loads determined in accordance with Chapter 16, including support of cladding weight as applicable. Fasteners used to attach cladding or furring through foam sheathing to masonry or concrete substrates shall be approved for application into masonry or concrete material and shall be installed in accordance with the fastener manufacturer's installation instructions.

Exceptions:

1. Where the cladding manufacturer has provided approved installation instructions for application over foam sheathing and connection to a masonry or concrete substrate, those requirements

shall apply.

2. For exterior insulation and finish systems, refer to Section 1408.

3. For anchored masonry or stone veneer installed over foam sheathing, refer to Section 1405.

2603.11.1 Additional Requirements. [DSA-SS, DSA-SS/CC] *In addition to the requirements of Section 2603.11, cladding and foam sheathing supports and attachments shall be designed and submitted to the enforcement agency for approval.*

2603.12 Cladding attachment over foam sheathing to cold-formed steel framing. Cladding shall be specified and installed in accordance with Chapter 14 and the cladding manufacturer's approved installation instructions, including any limitations for use over foam plastic sheathing, or an approved design. Where used, furring and furring attachments shall be designed to resist design loads determined in accordance with Chapter 16. In addition, the cladding or furring attachments through foam sheathing to framing shall meet or exceed the minimum fastening requirements of Sections 2603.12.1 and 2603.12.2, or an approved design for support of cladding weight.

Exceptions:

1. Where the cladding manufacturer has provided approved installation instructions for application over foam sheathing, those requirements shall apply.

2. For exterior insulation and finish systems, refer to Section 1408. 3. For anchored masonry or stone veneer installed over foam sheathing, refer to Section 1405.

2603.12.1 Direct attachment. Where cladding is installed directly over foam sheathing without the use of furring, cladding minimum fastening requirements to support the cladding weight shall be as specified in Table 2603.12.1.

2603.12.2 Furred cladding attachment. Where steel or wood furring is used to attach cladding over foam sheathing, furring minimum fastening requirements to support the cladding weight shall be as specified in Table 2603.12.2. Where placed horizontally, wood furring shall be preservative-treated wood in accordance with Section 2303.1.9 or naturally durable wood and fasteners shall be corrosion resistant in accordance Section 2304.10.5. Steel furring shall have a minimum G60 galvanized coating.

2603.12.3 Additional Requirements. [DSA-SS, DSA-SS/CC] *In addition to the requirements of Section 2603.12, 2603.12.1, and 2603.12.2, cladding and foam sheathing supports and attachments shall be*

designed and submitted to the enforcement agency for approval.

~~CHAPTER 34~~

~~EXISTING STRUCTURES~~

~~SECTION 3401~~

~~GENERAL~~

~~. . .~~

~~Relocated to Section 301.1 Part 10, Title 24, C.C.R.~~

~~***3401.1.1 Existing state-owned structures.*** *The provisions of Sections 3417 through 3422 establish minimum standards for earthquake evaluation and design for retrofit of existing state-owned structures, including buildings owned by the University of California and the California State University.*~~

~~*The provisions of Sections 3417 through 3422 may be adopted by a local jurisdiction for earthquake evaluation and design for retrofit of existing buildings.*~~

~~***3401.1.2 Public school buildings. [DSA-SS]*** *The provisions of Sections 3417 through 3423 establish minimum standards for earthquake evaluation and design for the rehabilitation of existing buildings for use as public school buildings under the jurisdiction of the Division of the State Architect-Structural Safety (DSA-SS, refer to Section 1.9.2.1) where required by Sections 4-307 and 4-309(c) of the California Administrative Code.*~~

~~*The provisions of Section 3417 through 3423 also establish minimum standards for earthquake evaluation and design for rehabilitation of existing public school buildings currently under the jurisdiction of DSA-SS.*~~

~~***3401.1.3 Community college buildings. [DSA-SS/CC]*** *The provisions of Sections 3417 through 3423 establish minimum standards for earthquake evaluation and design for the rehabilitation of existing buildings for use as community college buildings under the jurisdiction of the Division of the State Architect-Structural Safety/Community Colleges (DSA-SS/CC, refer to Section 1.9.2.2) where required by Sections 4-307 and 4-309(c) of the California Administrative Code.*~~

~~*The provisions of Section 3417 through 3423 also establish minimum standards for earthquake*~~

~~evaluation and design for rehabilitation of existing community college buildings currently under the jurisdiction of DSA-SS/CC.~~

~~. . .~~

~~(Relocated to Sections 317 through 323 Part 10 Title 24 C.C.R.)~~

~~SECTION 3417~~
~~EARTHQUAKE EVALUATION AND DESIGN FOR RETROFIT OF EXISTING BUILDINGS~~

~~**3417.1 Purpose.**~~

~~. . .~~

~~**3417.1.2 Public school buildings.** The provisions of Sections 3417 through 3423 establish minimum standards for earthquake evaluation and design for the rehabilitation of existing buildings for use as public school buildings under the jurisdiction of the Division of the State Architect-Structural Safety (DSA-SS), refer to Section 1.9.2.1.~~

~~The provisions of Section 3417 through 3423 also establish minimum standards for earthquake evaluation and design for rehabilitation of existing public buildings currently under the jurisdiction of DSA-SS.~~

~~**3417.1.2.1 Reference to other chapters.** For public schools, where reference within this chapter is made to sections in Chapters 16, 17, 18, 19, 21 or 22, the provisions in Chapters 16A, 17A, 18A, 19A, 21A and 22A respectively shall apply instead.~~

~~**3417.1.3 Community college buildings.** The provisions of Sections 3417 through 3423 establish minimum standards for earthquake evaluation and design for the rehabilitation of existing buildings for use as community college buildings under the jurisdiction of the Division of the State Architect-Structural Safety/Community Colleges (DSA-SS/CC), refer to Section 1.9.2.2.~~

~~The provisions of Section 3417 through 3423 also establish minimum standards for earthquake evaluation and design for rehabilitation of existing community college buildings currently under the jurisdiction of DSA-SS/CC.~~

~~**3417.1.3.1 Reference to other chapters.** For community colleges, where reference within this chapter is made to sections in Chapters 17 or 18, the provisions in Chapters 17A and 18A respectively shall apply instead.~~

~~**3417.2 Scope.** All modifications, structurally connected additions and/or repairs to existing structures or portions thereof shall, at a minimum, be designed and constructed to resist the effects of seismic ground motions as provided in this section. The structural system shall be evaluated by a registered design professional and, if not meeting or exceeding the minimum seismic design performance requirements of this section, shall be retrofitted in compliance with these requirements.~~

~~**Exception:** Those structures for which Section 3417.3 determines that assessment is not required, or for which Section 3417.4 determines that retrofit is not needed, then only the requirements of Section 3417.11 apply.~~

~~**3417.3 Applicability.**~~

~~. . .~~

3417.3.2 Public school buildings. *For public schools, the provisions of Section 3417 apply when required in accordance with Sections 4-307 and 4-309(c), Title 24, Part 1.*

3417.3.3 Community college buildings. *For community colleges, the provisions of Section 3417 apply when required in accordance with Sections 4-307 and 4-309(c), Title 24, Part 1.*

3417.4 Evaluation required. *If the criteria in Section 3417.3 apply to the project under consideration, the design professional of record shall provide an evaluation in accordance with Section 3417 to determine the seismic performance of the building in its current configuration and condition. If the structure's seismic performance as required by Section 3417.5 is evaluated as satisfactory and the peer reviewer(s), when Method B of Section 3421 is used, concur, then no structural retrofit is required.*

3417.5 Minimum seismic design performance levels for structural and nonstructural components. *Following the notations of ASCE 41, the seismic requirements for design and assessment are based upon a prescribed Earthquake Hazard Level (BSE-1, BSE-2, BSE-R or BSE-C), a specified structural performance level (S-1 through S-5) and a non-structural performance level (N-A through N-E). The minimum seismic performance criteria are given in Table 3417.5 according to the Building Regulatory Authority and the Risk Category as determined in Chapter 16, or by the regulatory authority. The building shall be evaluated at both the Level 1 and Level 2 performance levels, and the more restrictive requirements shall apply.*

Basic Safety Earthquake 2 (BSE-2) in ASCE 41 shall be same as Risk-Targeted Maximum Considered Earthquake (MCE_R) in ASCE 7. Probabilistic response spectra defining other Earthquake Hazard Levels shall be developed using site-specific ground motions in accordance with ASCE 7 Section 21.2 utilizing the Next Generation Attenuation (NGA) relations used for the 2008 USGS seismic hazards maps for Western United States (WUS). When supported by data and analysis, other NGA relations, that were not used for the 2008 USGS maps, shall be permitted as additions or substitutions. No fewer than three NGA relations shall be utilized. Response spectra shall incorporate the risk coefficient C_R per ASCE 7 Section 21.2.1.1

Ground-motion response history analysis shall be as set forth in ASCE 7 Chapter 16, Section 17.3 or Section 18.2.3.

Exception: *If the floor area of an addition is greater than the larger of 50 per cent of the floor area of the original building or 1,000 square feet (93 m^2), then the Table 3417.5 entries for BSE-R and BSE-C are replaced by BSE-1 and BSE-2, respectively.*

3417.6 Retrofit required. *Where the evaluation indicates the building does not meet the required performance objectives of this section, the owner shall take appropriate steps to ensure that the building's structural system is retrofitted in accordance with the provisions of Section 3417. Appropriate steps are either: 1) undertake the seismic retrofit as part of the additions, modifications and/or repairs of the structure; or 2) provide a plan, acceptable to the building official, to complete the seismic retrofit in a timely manner. The relocation or moving of an existing building is considered to be an alteration requiring filing of the plans and specifications approved by the building official.*

3417.7 *The additions, modification or repair to any existing building are permitted to be prepared in accordance with the requirements for a new building, Chapter 16, Part 2, Title 24, C.C.R., 2007 edition, applied to the entire building.*

3417.8 *The requirements of ASCE 41 Chapter 9 are to apply to the use of seismic isolation or passive energy systems for the repair, modification or retrofit of an existing structure. When seismic isolation or passive energy dissipation is used, the project must have project peer review as prescribed in Section 3422.*

3417.9 *Any construction required by this chapter shall include structural observation by the registered design professional who is responsible for the structural design in accordance with Section 3419.10.*

***3417.10** Where Method B of Section 3421 is used or is required by Section 3419.7, the proposed method of building evaluation and design procedures must be accepted by the building official prior to the commencement of the work.*

***3417.11 Voluntary lateral-force-resisting system modifications.** Where the exception of Section 3417.2 applies, modifications of existing structural components and additions of new structural components that are initiated for the purpose of improving the seismic performance of an existing structure and that are not required by other portions of this chapter are permitted under the requirements of Section 3419.12.*

SECTION 3418
DEFINITIONS

***3418.1.** In addition to the definitions given in Section 3402, for the purposes of Sections 3417 through 3423, certain terms are defined as follows:*
***ADDITION** means any work that increases the floor or roof area or the volume of enclosed space of an existing building, and is structurally attached to the existing building by connections that are required for transmitting vertical or horizontal loads between the addition and the existing structure.*

***ALTERATION** means any change within or to an existing building, which does not increase and may decrease the floor or roof area or the volume of enclosed space.*
***BSE-C RESPONSE ACCELERATION PARAMETERS** are the parameters (S_{XS} and S_{X1} taken from 5-percent /50-year maximum direction spectral response acceleration curves or by a Site Specific Response Spectrum developed in accordance with Section 3417.5. Values for BSE-C need not be greater than those for BSE-2.*
***BSE-R RESPONSE ACCELERATION PARAMETERS** are the parameters (S_{XS} and S_{X1}) taken from 20-percent /50-year maximum direction spectral response acceleration curves or by a Site Specific Response Spectrum developed in accordance with Section 3417.5. Values for BSE-R need not be greater than those for BSE-1.*

***BUILDING OFFICIAL** is that individual within the agency or organization charged with responsibility for compliance with the requirements of this code. For some agencies this person is termed the "enforcement agent."*

***DESIGN** is the procedure that includes both the evaluation and retrofit design of an existing component, element or structural system, and design of a new component, element or structural system.*

***ENFORCEMENT AGENCY (Authority Having Jurisdiction in ASCE 41)** is the agency or organization charged with responsibility for agency or organization compliance with the requirements of this code.*

***METHOD A** refers to the procedures prescribed in Section 3420.*

***METHOD B** refers to the procedures allowed in Section 3421.*

***MODIFICATIONS.** For this chapter, modification is taken to include repairs to structures that have been damaged.*

***N-A, N-B, N-C, N-D, N-E** are seismic nonstructural component performance measures as defined in ASCE 41. N-A corresponds to the highest performance level, and N-D the lowest, while N-E is not considered.*

***PEER REVIEW** refers to the procedures contained in Section 3422.*

REPAIR *as used in this chapter means the design and construction work undertaken to restore or enhance the structural and nonstructural load-resisting system participating in the lateral response and stability of a structure that has experienced damage from earthquakes or other destructive events.*

S-1, S-2, S-3, S-4, S-5, S-6 *are seismic structural performance measures as defined in ASCE 41. S-1 corresponds to the highest performance level, and S-5 the lowest, while S-6 is not considered.*

SPECIFIC PROCEDURES *are the procedures listed in Section 3419.1.1.*

STRUCTURAL REPAIRS *are any changes affecting existing or requiring new structural components primarily intended to correct the effects of damage, deterioration or impending or actual failure, regardless of cause.*

TABLE 3417.5 SEISMIC PERFORMANCE REQUIREMENTS BY BUILDING REGULATORY AUTHORITY AND RISK CATEGORY. ALL BUILDINGS NOT REGULATED BY DSA ARE ASSIGNED AS "STATE-OWNED."

		PERFORMANCE CRITERIA	
Building Regulatory Authority	**Risk Category**	**Level 1**	**Level 2**
State-Owned	I, II, III	BSE-R, S-3, N-D	BSE-C, S-5, N-E
State-Owned	IV	BSE-R, S-2, N-B	BSE-C, S-4, N-C
Division of the State Architect - Public schools	I	BSE-1,S-3,N-C	BSE-2,S-5, N-E
Division of the State Architect - Public schools	II, III	BSE-1, S-2, N-C	BSE-2, S-4, N-D
Division of the State Architect - Public schools	IV	BSE-1, S-2, N-C	BSE-2, S-4,N-C
Division of the State Architect - Community college	I, II, III	BSE-R, S-3, N-D	BSE-2, S-5, N-E
Division of the State Architect - Community college	IV	BSE-R, S-2, N-B	BSE-2, S-4, N-C

1. *ASCE 41 provides acceptance criteria (e.g. m, rotation) for Immediate Occupancy (S1), Life Safety (S3), and Collapse Prevention (S5), and specifies that values for S-2 and S-4 are to be determined by interpolation between the adjacent performance level values.*

   The required method of interpolation is as follows:

   For level S-2, the acceptance value is $^1/_3$ of the sum of the tabulated value for Immediate Occupancy (IO level) and twice the tabulated value for the Life Safety (LS level).

   For level S-4, the acceptance value is one-half the sum of the value for the LS level and the value for the Collapse Prevention (CP) level.

   For nonstructural components, N-A corresponds to the IO level, N-C to the LS level, and N-D to the Hazards Reduced (HR level).

   For evaluation procedures, N-B shall be the same as for N-A. Where numerical values are used, the values for N-B are one half the sum of the appropriate IO and LS values. Where IO or CP values are not given by ASCE 41, then the LS values are permitted to be substituted.

2. *Buildings evaluated and retrofitted to meet the requirements for a new building, Chapter 16, Part 2, Title 24, in accordance with the exception in Section 3419.1, are deemed to meet the seismic performance requirements of this section.*

~~SECTION 3419~~
~~SEISMIC CRITERIA SELECTION FOR EXISTING BUILDINGS~~

~~**3419.1 Basis for evaluation and design.** This section determines what technical approach is to be used for the seismic evaluation and design for existing buildings. For those buildings or portions of buildings for which Section 3417 requires action, the procedures and limitations for the evaluation of existing buildings and design of retrofit systems and/or repair thereof shall be implemented in accordance with this section.~~

~~One of the following approaches must be used:~~

~~1. Method A of Section 3420;~~

~~2. Method B of Section 3421, with independent review of a peer reviewer as required in Section 3422; or~~

~~3. For state-owned buildings only, the use of one of the specific procedures listed in Section 3419.1.1.~~

~~When Method B is chosen it must be approved by the building official, and, where applicable, by the peer reviewer. All referenced standards in ASCE 41 shall be replaced by referenced standards listed in Chapter 35 of this code.~~

~~**Exceptions:**~~

~~1. Reserved for BSC~~

~~2. **[DSA-SS & DSA-SS/CC]** For public schools and community colleges constructed to the requirements of California Building Code, 2007 or later edition, that code is permitted to be used in place of those specified in Section 3419.1 provided the building complies with Seismic Design Category D or higher.~~

~~**3419.1.1 Specific procedures.** For state-owned buildings, the following specific procedures taken from the International Existing Building Code (IEBC) Appendix A may be used, without peer review, for their respective types of construction to comply with the seismic performance requirements for Risk Category I, II or III buildings:~~

~~1. Seismic Strengthening Provisions for Unreinforced Masonry Bearing Wall Buildings (Chapter A1 of the IEBC).~~

~~2. Prescriptive Provisions for Seismic Strengthening of Cripple Walls and Sill Plate Anchorage of Light Wood-Frame, Residential Buildings (Chapter A3 of the IEBC).~~

~~3. Earthquake Hazard Reduction in Existing Reinforced Concrete and Reinforced Masonry Wall Buildings with Flexible Diaphragms (Chapter A2 of the IEBC).~~

~~**3419.1.2** When a design project is begun under Method B the selection of the peer reviewer is subject to the approval of the building official. Following approval by the peer reviewer, the seismic criteria for the project and the planned evaluation provisions must be approved by the building official. The approved seismic criteria and evaluation provisions shall apply. Upon approval of the building official these are permitted to be modified.~~

~~**3419.1.3** For state-owned and community college buildings, where unreinforced masonry is not bearing, it may be used only to resist applied lateral loads. Where unreinforced masonry walls are part of the structure they must be assessed for stability under the applicable nonstructural evaluation procedure.~~

~~**3419.1.4 Public schools.** For public schools, unreinforced masonry shall not be used to resist in-plane or out-of-plane seismic forces or superimposed gravity loads.~~

~~**3419.1.5 Public schools.** For public schools of light-frame construction, horizontal diaphragms and vertical shear walls shall consist of either diagonal lumber sheathing or structural panel sheathing. Braced horizontal diaphragms may be acceptable when approved by DSA. Straight lumber sheathing may be used in combination with diagonal or structural panel sheathing as diaphragms or shear walls. Let-in bracing, plaster (stucco), hollow clay tile, gypsum wallboard and particleboard sheathing shall not be assumed to resist seismic forces.~~

~~**3419.2 Existing conditions.** The existing condition and properties of the entire structure must be determined and documented by thorough inspection of the structure and site, review of all available related construction documents, review of geotechnical and engineering geologic reports, and performance of necessary testing and investigation. Where samples from the existing structure are taken or in situ tests are performed, they shall be selected and interpreted in a statistically appropriate manner to ensure that the properties determined and used in the evaluation or design are representative of the conditions and structural circumstances likely to be encountered in the structure as a whole. Adjacent structures or site features that may affect the retrofit design shall be identified.~~

~~The entire load path of the seismic force-resisting system shall be determined, documented and evaluated. The load path includes all the horizontal and vertical elements participating in the structural response: such as diaphragms, diaphragm chords, diaphragm collectors, vertical elements such as walls frames, braces; foundations and the connections between the components and elements of the load path. Repaired or retrofitted elements and the standards under which the work was constructed shall be identified.~~

~~Data collection in accordance with ASCE 41 Section 2.2 shall meet the following minimum levels:~~

1. ~~For state-owned buildings, the requirements shall be met following the data collection requirements of ASCE 41, Section 2.2.~~
2. ~~For public schools and community college buildings constructed in conformance with the Field Act, the "Usual" level as defined in ASCE 41, Section 2.2.6.2.~~
3. ~~For public schools and community college buildings not constructed in conformance with the Field Act, the "Comprehensive" level as defined in ASCE 41, Section 2.2.6.3.~~

~~Concrete material requirements and testing for public school and community college buildings shall also comply with Sections 1914A and 1913.5, respectively.~~

~~Qualified test data from the original construction may be accepted, in part or in whole, by the enforcement agency to fulfill the data collection requirements.~~

~~**Exceptions:**~~

1. ~~The number of samples for data collection may be adjusted with approval of the enforcement agency when it has been determined that adequate information has been obtained or additional information is required.~~
2. ~~Welded steel moment frame connections of buildings that may have experienced potentially damaging ground motions shall be inspected in accordance with Chapters 3 and 4, FEMA 352, Recommended Post Earthquake Evaluation and Repair Criteria for Welded Moment-Frame Construction for Seismic Applications (July 2000).~~

~~Where original building plans and specifications are not available, "as-built" plans shall be prepared that depict the existing vertical and lateral structural systems, exterior elements, foundations and nonstructural systems in sufficient detail to complete the design.~~

~~*Data collection shall be directed and observed by the project structural engineer or design professional in charge of the design.*~~

~~***3419.3 Site geology and soil characteristics.*** *Soil profile shall be assigned in accordance with the requirements of Chapter 18.*~~

~~***3419.4 Risk categories.*** *For purposes of earthquake-resistant design, each structure shall be placed in one of the risk categories in accordance with the requirements of this code.*~~

~~***3419.5 Configuration requirements.*** *Each structure shall be designated structurally regular or irregular in accordance with the requirements of ASCE 41, Sections 2.4.1.1.1. to 2.4.1.1.4.*~~

~~***3419.6 General selection of the design method.*** *The requirements of Method B (Section 3421) may be used for any existing building.*~~

~~***3419.7 Prescriptive selection of the design method.*** *The requirements of Method A (Section 3420) or the specific procedures for applicable building types given in Section 3419.1.1 are permitted to be used except under the following conditions, where the requirements of Method B (Section 3421) must be used.*~~

~~***3419.7.1*** *When the building contains prestressed or post- tensioned structural components (beams, columns, walls or slabs) or contains precast structural components (beams, columns, walls or flooring systems).*~~

~~***3419.7.2*** *When the building is classified as irregular in vertical or horizontal plan by application of ASCE/SEI 7 Section 12.3 and/or ASCE 41, Sections 2.4.1.1.1 to 2.4.1.1.4, unless the irregularity is demonstrated not to affect the seismic performance of the building.*~~

~~***Exception:*** *If the retrofit design removes the configurational attributes that caused the building to be classified as irregular, then Section 3419.7.2 does not apply and Method A may be used.*~~

~~***3419.7.3*** *For any building that is assigned to Risk Category IV.*~~

~~***3419.7.4*** *For any building using undefined or hybrid structural systems.*~~

~~***3419.7.5*** *When seismic isolation or energy dissipation systems are used in the retrofit or repair, either as part of the existing structure or as part of the modifications.*~~

~~***3419.7.6*** *When the height of the structure exceeds 240 feet (73 152 mm).*~~

~~***3419.8 Strength requirements.*** *All components of the lateral force-resisting system must have the strength to meet the acceptance criteria prescribed in ASCE 41, Chapter 3, or as prescribed in the applicable Appendix A chapter of the IEBC if a specific procedure in Section 3419.1.1 is used. Any component not having this strength shall have its capacity increased by modifying or supplementing its strength so that it exceeds the demand, or the demand is reduced to less than the existing strength by making other modifications to the structural system.*~~

~~***Exception:*** *A component's strength is permitted to be less than that required by the specified seismic load combinations if it can be demonstrated that the associated reduction in seismic performance of the component or its removal due to the failure does not result in a structural system that does not comply with the required performance objectives of Section 3417. If this exception is taken for a component, then it cannot be considered part of the primary lateral load- resisting system.*~~

~~***3419.9 Nonstructural component requirements.*** *Where the nonstructural performance levels required by Section 3417, Table 3417.5 are N-D or higher, mechanical, electrical and plumbing components shall comply with the provisions of ASCE 41, Chapter 11, Section 11.2.*~~

Exception: *Modifications to the procedures and criteria may be made subject to approval by the building official, and concurrence of the peer reviewer if applicable. All reports and correspondence shall also be forwarded to the building official.*

3419.10 Structural observation, testing and inspection. *Structural, geotechnical and construction observation, testing and inspection as used in this section shall mean meeting the requirements of Chapter 17, with a minimum allowable level of investigation corresponding to seismic design category (SDC) D. At a minimum the project site will be visited by the responsible design professional to observe existing conditions and to review the construction work for general compliance with approved plans, specifications and applicable structural regulations. Such visits shall occur at significant construction stages and at the completion of the structural retrofit. Structural observation shall be provided for all structures. The plan for testing and inspection shall be submitted to the building official for review and approval with the application for permit.*

Additional requirements: *For public schools and community colleges, construction material testing, inspection and observation during construction shall also comply with Section 4-333, Part 1, Title 24.*

3419.10.1 *The registered design professional, or their designee, responsible for the structural design shall be retained to perform structural observation and independently report to the owner of observations and findings as they relate to adherence to the permitted plans and good workmanship.*

3419.10.2 *At the conclusion of construction, the structural observer shall submit to the enforcement agency and the owner a final written statement that the required site visits have been made, that the work, to the best of the structural observers knowledge and belief, is or is not in general conformity to the approved plans and that the observed structural deficiencies have been resolved and/or listing those that, to the best of the structural observers knowledge and belief, have not been satisfactorily corrected.*

3419.10.2.1 *The requirement for structural observation shall be noted and prominently displayed on the front sheet of the approved plans and incorporated into the general notes on the approved plans.*

3419.10.2.2 Preconstruction meeting. *A preconstruction meeting is mandatory for all projects which require structural observation. The meeting shall include, but is not limited to, the registered design professional, structural observer, general constructor, affected subcontractors, the project inspector and a representative of the enforcement agency (designated alternates may attend if approved by the structural observer). The structural observer shall schedule and coordinate this meeting. The purpose of the meeting is to identify and clarify all essential structural components and connections that affect the lateral and vertical load systems and to review scheduling of the required observations for the project's structural system retrofit.*

3419.11 Temporary actions. *When compatible with the building use, and the time phasing for both use and the retrofit program, temporary shoring or other structural support is permitted to be considered. Temporary bracing, shoring and prevention of falling hazards are permitted to be used to qualify for Exception 1 in Section 3419.12 that allows inadequate capability in some existing components, as long as the required performance levels given in Section 3417 can be provided by the permanent structure. The consideration for such temporary actions shall be noted in the design documents.*

3419.12 Voluntary modifications to the lateral-force resisting system. *Where modifications of existing structural components and additions of new structural components are initiated for the purpose of improving the lateral force resisting strength or stiffness of an existing structure and they are not required by other sections of this code, then they are permitted to be designed to meet an approved seismic performance criteria provided that an engineering analysis is submitted that follows:*

1. *The capacity of existing structural components required to resist forces is not reduced, unless it can be demonstrated that reduced capacity meets the requirements of Section 3419.8.*

2. The lateral loading to or strength requirement of existing structural components is not increased beyond their capacity.

3. New structural components are detailed and connected to the existing structural components as required by this code for new construction.

4. New or relocated nonstructural components are detailed and connected to existing or new structural components as required by this code for new construction.

5. A dangerous condition is not created.

3419.12.1 State-owned buildings. Voluntary modifications to lateral-force-resisting systems conducted in accordance with Appendix A of the IEBC and the referenced standards of this code shall be permitted.

3419.12.1.1 Design documents. When Section 3419.12 is the basis for structural modifications, the approved design documents must clearly state the scope of the seismic modifications and the accepted criteria for the design. The approved design documents must clearly have the phrase "The seismic requirements of Chapter 34 for existing buildings have not been checked to determine if these structural modifications meet CBC requirements: the modifications proposed are to a different seismic performance standard than would be required in Section 3419 if they were not voluntary as allowed in Section 3419.12."

3419.12.2 Public schools and community colleges. When Section 3419.12 is the basis for structural modifications, the approved design documents must clearly indicate the scope of modifications and the acceptance criteria for the design.

SECTION 3420
METHOD A

3420.1 General. The retrofit design shall employ the Linear Static or Linear Dynamic Procedures of ASCE 41, Section 3.3.1 or 3.3.2, and comply with the applicable general requirements of ASCE 41, Chapters 2 and 3. The earthquake hazard level and performance level given specified in Section 3417.5 for the building's risk category shall be used. Structures shall be designed for seismic forces coming from any horizontal direction.

Exception: The ASCE 41 Simplified Rehabilitation Method of Chapter 10 may be used if the Level 1 seismic performance level is S-3 or lower, the building's structural system is one of the primary building types described in ASCE 41, Table 10-2, and ASCE 41, Table 10-1 permits it use for the building height.

SECTION 3421
METHOD B

3421.1 The existing or retrofitted structure shall be demonstrated to have the capability to sustain the deformation response due to the specified earthquake ground motions and meet the seismic performance requirements of Section 3417. The registered design professional shall provide an evaluation of the response of the existing structure in its modified configuration and condition to the ground motions specified. If the building's seismic performance is evaluated as satisfactory and the peer reviewer(s,) and the enforcement agency concurs, then no further structural modifications of the lateral-load-resisting system are required.

When the evaluation indicates the building does not meet the required performance levels given in Table 3417.5 for the risk category, then a retrofit and/or repair design shall be prepared that provides a structure that meets these performance objectives and reflects the appropriate consideration of existing conditions. Any approach to analysis and design is permitted to be used, provided that the approach shall be rational.

~~*shall be consistent with the established principals of mechanics and shall use the known performance characteristics of materials and assemblages under reversing loads typical of severe earthquake ground motions.*~~

~~***Exception:** Further consideration of the structure's seismic performance may be waived by the enforcement agency if both the registered design professional and peer reviewer(s) conclude that the structural system can be expected to perform at least as well as required by the provisions of this section without completing an analysis of the structure's compliance with these requirements. A detailed report shall be submitted to the responsible building official that presents the reasons and basis for this conclusion. This report shall be prepared by the registered design professional. The peer reviewer(s) shall concur in this conclusion and affirm to it in writing. The building official shall either approve this decision or require completion of the indicated work specified in this section prior to approval.*~~

~~***3421.2** The approach, models, analysis procedures, assumptions on material and system behavior and conclusions shall be peer reviewed in accordance with the requirements of Section 3422 and accepted by the peer reviewer(s).*~~

~~***Exceptions:***~~

1. ~~*The enforcement agency may perform the work of peer review when qualified staff is available within the jurisdiction.*~~
2. ~~*The enforcement agency may modify or waive the requirements for peer review when appropriate.*~~

~~***3421.2.1** The approach used in the development of the design shall be acceptable to the peer reviewer and the enforcement agency and shall be the same method as used in the evaluation of the building. Approaches that are specifically tailored to the type of building, construction materials and specific building characteristics may be used, if they are acceptable to the independent peer reviewer. The use of Method A allowed procedures may also be used under Method B.*~~

~~***3421.2.2** Any method of analysis may be used, subject to acceptance by the peer reviewer(s) and the building official. The general requirements given in ASCE 41, Chapter 2, shall be complied with unless exceptions are accepted by the peer reviewer(s) and building official. Use of other than ASCE 41 procedures in Method B requires building official concurrence before implementation.*~~

~~***3421.2.3** Prior to implementation, the procedures, methods, material assumptions and acceptance/rejection criteria proposed by the registered design professional will be peer reviewed as provided in Section 3422. Where nonlinear procedures are used, prior to any analysis, the representation of the seismic ground motion shall be reviewed and approved by the peer reviewer(s) and the building official.*~~

~~***3421.2.4** The conclusions and design decisions shall be reviewed and accepted by the peer reviewer(s) and the building official.*~~

~~*SECTION 3422*~~
~~*PEER REVIEW REQUIREMENTS*~~

~~***3422.1 General.** Independent peer review is an objective, technical review by knowledgeable reviewer(s) experienced in the structural design, analysis and performance issues involved. The reviewer(s) shall examine the available information on the condition of the building, the basic engineering concepts employed and the recommendations for action.*~~

~~***3422.3 Qualifications and terms of employment.** The reviewer(s) shall be independent from the design and construction team.*~~

~~**3422.3.1** The reviewer(s) shall have no other involvement in the project before, during or after the review, except in a review capacity.~~

~~**3422.3.2** The reviewer(s) shall be selected and paid by the owner and shall have technical expertise in the evaluation and retrofit of buildings similar to the one being reviewed, as determined by the enforcement agency.~~

~~**3422.3.3** The reviewer (or in the case of review teams, the chair) shall be a California licensed structural engineer who is familiar with the technical issues and regulations governing the work to be reviewed.~~

~~**Exception:** Other individuals with acceptable qualifications and experience may be a peer reviewer(s) with the approval of the building official.~~

~~**3422.3.4** The reviewer shall serve through completion of the project and shall not be terminated except for failure to perform the duties specified herein. Such termination shall be in writing with copies to the enforcement agency, owner and the registered design professional. When a reviewer is terminated or resigns, a qualified replacement shall be appointed within 10 working days, and the reviewer shall submit copies of all reports, notes and correspondence to the responsible building official, the owner and the registered design professional within 10 working days of such termination.~~

~~**3422.3.5** The peer reviewer shall have access in a timely manner to all documents, materials and information deemed necessary by the peer reviewer to complete the peer review.~~

~~**3422.4 Scope of review.** Review activities shall include, where appropriate, available construction documents, design criteria and representative observations of the condition of the structure, all inspection and testing reports, including methods of sampling, analytical models and analyses prepared by the registered design professional and consultants, and the retrofit or repair design. Review shall include consideration of the proposed design approach, methods, materials, details and constructability. Changes observed during construction that affect the seismic-resisting system shall be reported to the reviewer in writing for review and recommendation.~~

~~**3422.5 Reports.** The reviewer(s) shall prepare a written report to the owner and building official that covers all aspects of the review performed, including conclusions reached by the reviewer(s). Reports shall be issued after the schematic phase, during design development, and at the completion of construction documents but prior to submittal of the project plans to the enforcement agency for plan review. When acceptable to the building official, the requirement for a report during a specific phase of the project development may be waived.~~

~~Such reports should include, at the minimum, statements of the following:~~

~~1. Scope of engineering design peer review with limitations defined.~~

~~2. The status of the project documents at each review stage.~~

~~3. Ability of selected materials and framing systems to meet performance criteria with given loads and configuration.~~

~~4. Degree of structural system redundancy and the deformation compatibility among structural and nonstructural components.~~

~~5. Basic constructability of the retrofit or repair system.~~

~~6. Other recommendations that would be appropriate to the specific project.~~

~~7. Presentation of the conclusions of the reviewer identifying any areas that need further review, investigation and/or clarification.~~

~~8. Recommendations.~~

The last report prepared prior to submittal of permit documents to the enforcement agency shall include a statement indicating that the design is in conformance with the approved evaluation and design criteria

3422.6 Response and resolutions. *The registered design professional shall review the report from the reviewer(s) and shall develop corrective actions and responses as appropriate. Changes observed during construction that affect the seismic-resisting system shall be reported to the reviewer in writing for review and recommendations. All reports, responses and resolutions prepared pursuant to this section shall be submitted to the responsible enforcement agency and the owner along with other plans, specifications and calculations required. If the reviewer resigns or is terminated prior to completion of the project, then the reviewer shall submit copies of all reports, notes and correspondence to the responsible building official, the owner and the registered design professional within 10 working days of such termination.*

3422.7 Resolution of conflicts. *When the conclusions and recommendations of the peer reviewer conflict with the registered design professional's proposed design, the enforcement agency shall make the final determination of the requirement for the design.*

SECTION 3423
ADDITIONAL REQUIREMENTS FOR PUBLIC SCHOOLS AND COMMUNITY COLLEGES

The requirements of Section 3423 apply only to public schools under the jurisdiction of the Division of the State Architect-Structural Safety (DSA-SS, refer to Section 1.9.2.1) and community colleges under the jurisdiction of the Division of the State Architect-Structural Safety/Community Colleges (DSA-SS/CC). Refer to Section 1.9.2.2.

3423.1 Evaluation and design criteria report. *During the schematic phase of the project, the owner or the registered design professional in charge of the design shall prepare and sign an Evaluation and Design Criteria Report in accordance with Part 1, Title 24, C. C. R., Section 4-306 or 4-307(a). The report shall be submitted to the DSA for review and approval prior to proceeding with design development of the rehabilitation.*

The Evaluation and Design Criteria Report shall:

1. *Identify the building(s) structural and nonstructural systems, potential deficiencies in the elements or systems and the proposed method for retrofit.*
2. *Identify geological and site-related hazards.*
3. *Propose the methodology for evaluation and retrofit design.*
4. *Propose the complete program for data collection (Section 3419.2).*
5. *Include existing or "as-built" building plans, reports and associated documents of the existing construction.*

3423.2 Rehabilitation involving only portions of structures. *Where only a portion(s) of a structure is to be rehabilitated, the public school or community college portion of the structure shall:*

1. *Be seismically separated from the unrehabilitated portion in accordance with Chapter 16 of Part 2, Title 24, or the entire structure shall be rehabilitated in accordance with this Section. For structures in which the unrehabilitated portion is above or below the school or community college portion, the entire structure shall be rehabilitated in accordance with this division.*
2. *Be retrofitted as necessary to protect the occupants from falling hazards of the unrehabilitated portion of the building, and;*

~~*3. Be retrofitted as necessary to protect required exitways being blocked by collapse or falling hazards of the unrehabilitated portion.*~~

...

SECTION J106
EXCAVATIONS

...

(Relocated to Chapter 18A) ~~***J106.2 Earth retaining shoring. [DSA-SS & DSA-SS/CC]***~~

~~***J106.2.1 General.*** *The requirements of this section shall apply to temporary and permanent earth retaining shoring using soldier piles and lagging with or without tie-back anchors in soil or rock, only when existing or new DSASS, DSA-SS/CC facilities are affected. Shoring used as construction means and methods only, which does not affect existing or new DSASS, DSA-SS/CC facilities, are not regulated by DSA and shall satisfy the requirements of the authorities having jurisdiction.*~~

~~*Design, construction, testing, and inspection shall satisfy the requirements of this code except as modified in Sections J106.2.2 through J106.2.8.*~~

~~***J106.2.2 Duration.*** *Shoring shall be considered temporary when elements of the shoring will be exposed to site conditions for a period of less than one (1) year, and shall be considered permanent otherwise. Permanent shoring shall account for the increase in lateral soil pressure due to*~~

~~earthquake. At the end of the construction period, the existing and new structures shall not rely on the temporary shoring for support in anyway. Wood components shall not be used for permanent shoring lasting more than two (2) years. Wood components of the temporary shoring that may affect the performance of permanent structure shall be removed after the shoring is no longer required.~~

~~All components of the shoring shall have corrosion protection or preservative treatment for their expected duration. Wood components of the temporary shoring that will not be removed shall be treated in accordance with AWPA U1 (Commodity Specification A, Use Category 4B and Section 5.2), and shall be identified in accordance with Section 2303.1.8.1.~~

~~**J106.2.3 Surcharge:** Surcharge pressure due to footings, traffic, or other sources shall be considered in design. If the footing surcharge is located within the semi-circular distribution or bulb of earth pressure (when shoring is located close to a footings), lagging shall be designed for lateral earth pressure due to footing surcharge. Soil arching effects may be considered in the design of lagging. Underpinning of the footing may be used in lieu of designing the shoring and lagging for surcharge pressure. Alternatively, continuously contacting drilled pier shafts near the footings shall be permitted. The lateral surcharge design pressure shall be derived using Boussinesq equations modified for the distribution of stresses in an elastic medium due to a uniform, concentrated or line surface load as appropriate and soil arching effects.~~

~~**J106.2.4 Design and testing:** Except for the modifications as set forth in Sections J106.2.4.1 and J106.2.4.2 below, all Prestressed Rock and Soil Tie-back Anchors shall be designed and tested in accordance with PTI Recommendations for Prestressed Rock and Soil Anchors (PTI-2004).~~

~~**J106.2.4.1 Geotechnical requirements**: The geotechnical report for the earth retaining shoring shall address the following:~~

~~12. Minimum diameter and minimum spacing for the anchors including consideration of group effects.~~

~~13. Maximum unbonded length and minimum bonded length of the tie-back anchors.~~

~~14. Maximum recommended anchor tension capacity based upon the soil or rock strength / grout bond and anchor depth / spacing.~~

~~15. Allowable bond stress at the ground / grout interface and applicable factor of safety for ultimate bond stress for the anchor. For permanent anchors, a minimum factor of safety of 2.0 shall be applied to ground soil interface as required by PTI-2004 Section 6.6.~~

~~16. Minimum grout pressure for installation and post-grout pressure for the anchor. The presumptive post grout pressure of 300 psi may be used for all soil type.~~

~~17. Class I Corrosion Protection is required for all permanent anchors. The geotechnical report shall specify the corrosion protection recommendations for temporary anchors.~~

~~18. Performance test for the anchors shall be at a minimum of two (2) times the design loads and shall not exceed 80% of the specified minimum tensile strength of the anchor rod. A creep test is required for all prestressed anchors that are performance tested. All production anchors shall be tested at 150% of design loads and shall not be greater than 70% of the specified minimum tensile strength of the anchor rod.~~

~~19. Earth pressure, surcharge pressure, and the seismic increment of earth pressure loading, when applicable.~~

~~20. Maximum recommended lateral deformation at the top of the soldier pile, at the tie-back anchor locations, and the drilled pier concrete shafts at the lowest grade level.~~

~~21. Allowable vertical soil bearing pressure, friction resistance, and lateral passive soil resistance for the drilled pier concrete shafts and associated factors of safety for these allowable capacities.~~

~~22. Soil-pier shaft / pile interaction assumptions and lateral soil stiffness to be used in design for drilled pier concrete shaft or pile lateral loads.~~

~~23. Acceptable drilling methods.~~

~~24. Geotechnical observation and monitoring recommendations.~~

~~**J106.2.4.2 Structural requirements:**~~

~~10. Tendons shall be thread-bar anchors conforming to ASTM A 722.~~

~~11. Anchor design loads shall be based upon the load combinations in Section 1605A.3.1 and shall not exceed 60 percent of the specified minimum tensile strength of the tendons.~~

~~12. The anchor shall be designed to fail in grout bond to the soil or rock before pullout of the soil wedge.~~

~~13. Design of shoring system shall account for as-built locations of soil anchors considering all specified construction tolerances in Section J106.2.8.~~

~~14. Design of shoring system shall account for both short and long term deformation.~~

~~**J106.2.4.3 Testing of tie-back anchors:**~~

~~5. The geotechnical engineer shall keep a record at job site of all test loads, total anchor movement, and report their accuracy.~~

~~6. If a tie-back anchor initially fails the testing requirements, the anchor shall be permitted to be re-grouted and retested. If anchor continues to fail, the followings steps shall be taken:~~

~~a. The contractor shall determine the cause of failure – variations of the soil conditions, installation methods, materials, etc.~~
~~b. Contractor shall propose a solution to remedy the problem. The proposed solution will need to be reviewed and approved by geotechnical engineer, shoring design engineer, and the building official.~~

~~7. After a satisfactory test, each anchor shall be locked-off in accordance with Section 8.4 of PTI 2004.~~

~~8. The shoring design engineer shall specify design loads for each anchor.~~

~~**J106.2.5 Construction:** The construction procedure shall address the following:~~

~~15. Holes drilled for piles / tie-back anchors shall be done without detrimental loss of ground, sloughing or caving of materials and without endangering previously installed shoring members or existing foundations.~~

~~16. Drilling of earth anchor shafts for tie-backs shall occur when the drill bench reaches two to three feet below the level of the tie-back pockets.~~

~~17. Casing or other methods shall be used where necessary to prevent loss of ground and collapse of the hole.~~

~~18. The drill cuttings from earth anchor shaft shall be removed prior to anchor installation.~~

~~19. Unless tremie methods are used, all water and loose materials shall be removed from the holes prior to installing piles / tie-backs.~~

~~20. Tie-back anchor rods with attached centralizing devices shall be installed into the shaft or through the drill casing. Centralizing device shall not restrict movement of the grout.~~

~~21. After lagging installation, voids between lagging and soil shall be backfilled immediately to the full height of lagging.~~

~~22. The soldier piles shall be placed within specified tolerances in the drilled hole and braced against displacement during grouting. Fill shafts with concrete up to top of footing elevation, rest of the shaft can generally be filled with lean concrete. Excavation for lagging shall not be started until concrete has achieved sufficient strength for all anticipated loads as determined by the shoring design engineer.~~

~~23. Where boulders and / or cobbles have been identified in the geotechnical reports, contractor shall be prepared to address boulders and / or cobbles that may be encountered during the drilling of soldier piles and Tie-back anchors.~~

~~24. The grouting equipment shall produce grout free of lumps and indispensed cement. The grouting equipment shall be sized to enable the grout to be pumped in continuous operation. The mixer shall be capable of continuously agitating the grout.~~

~~25. The quantity of grout and grout pressure shall be recorded. The grout pressure shall be controlled to prevent excessive heave in soils or fracturing rock formations.~~

~~26. If post-grouting is required, post grouting operation shall be performed after initial grout has set for 24 hours in the bond length only. Tie-backs shall be grouted over a sufficient length (anchor bond length) to transfer the maximum anchor force to the anchor grout.~~

~~27. Testing of anchors may be performed after post-grouting operations provided grout has reached strength of 3,000 psi as required by PTI 2004 Section 6.11.~~

~~28. Anchor rods shall be tensioned straight and true. Excavation directly below the anchors shall not continue before those anchors are tested.~~

~~J106.2.6 Inspection, survey monitoring, and observation~~

~~12. The shoring design engineer or his designee shall make periodic inspections of the job site for the purpose of observing the installation of shoring system, testing of tie-back anchors, and monitoring of survey.~~

~~13. Testing, inspection, and observation shall be in accordance with testing, inspection and observation requirements approved by the building official. The following activities and materials shall be tested, inspected, or observed by the special inspector and geotechnical engineer:~~

- ~~a. Sampling and testing of concrete in soldier pile and tie-back anchor shafts.~~
- ~~b. Fabrication of tie-back anchor pockets on soldier beams~~
- ~~c. Installation and testing of tie-back anchors.~~
- ~~d. Survey monitoring of soldier pile and tie-back load cells.~~
- ~~e. Survey Monitoring of existing buildings.~~

~~14. A complete and accurate record of all soldier pile locations, depths, concrete strengths, tie-back locations and lengths, tie-back grout strength, quantity of concrete per pile, quantity of grout per tie-back and applied tie-back loads shall be maintained by the special inspector and geotechnical engineer. The shoring design engineer shall be notified of any unusual conditions encountered during installation.~~

~~15. Calibration data for each test jack, pressure gauge, and master pressure gauge shall be verified by the special inspector and geotechnical engineer. The calibration tests shall be performed by an independent testing laboratory and within 120 calender days of the data submitted.~~

~~16. Monitoring points shall be established at the top and at the anchor heads of selected soldier piles and at intermediate intervals as considered appropriate by the geotechnical engineer.~~

~~17. Control points shall be established outside the area of influence of the shoring system to ensure the accuracy of the monitoring readings.~~

~~18. The periodic basis of shoring monitoring, as a minumum, shall be as follows:~~

~~a. Intitial monitoring shall be performed prior to any excavation.~~
~~b. Once excavation has begun, the periodic readings shall be taken weekly until excavation reaches the estimated subgrade elevation and the permanent foundation is complete.~~
~~c. If performance of the shoring is within established guidelines, shoring design engineer may permit the periodic readings to be bi-weekly. Once initiated, bi-weekly readings shall continue until the building slab at ground floor level is completed and capable of transmitting lateral loads to the permanent structure. Thereafter, readings can be monthly.~~
~~d. Where the building has been designed to resist lateral earth pressures, the periodic monitoring of the soldier piles and adjacent structure can be discontinued once the ground floor diaphragm and subterranean portion of the structure is capable of resisting lateral soil loads and approved by the shoring design engineer, geotechnical engineer, and the building official.~~
~~e. Additional readings shall be taken when requested by special inspector, shoring design engineer, geotechnical engineer, or the building official.~~

~~19. Monitoring reading shall be submitted to shoring design engineer, engineer in responsible charge, and the building official within 3 working days after they are conducted. Monitoring readings shall be accurate to within 0.01 feet. Results are to be submitted in tabular form showing at least the intial date of monitoring and reading, current monitoring date and reading and difference between the two readings.~~

~~20. If the total cummulative horizontal or vertical movement (from start of construction) of the existing buildings reaches ½" or soldier piles reaches 1" all excavation activities shall be suspended. The geotechnical and shoring design engineer shall determine the cause of movement, if any, and recommend corrective measures, if necessary, before excavation continues.~~

~~21. If the total cummulative horizontal or vertical movement (from start of construction) of the existing buildings reaches 3/4" or soldier piles reaches 1 ½" all excavation activities shall be suspended until the causes, if any, can be determined. Supplemental shoring shall be devised to eliminate further movement and the building official shall review and approve the supplemental shoring before excavation continues.~~

~~22. Monitoring of Tie-back Anchor Loads:~~

~~e. Load cells shall be installed at the tie-back heads adjacent to buildings at maximum interval of 50', with a minimum of one load cells per wall.~~
~~f. Load cell readings shall be taken once a day during excavation and once a week during the remainder of construction.~~
~~g. Load cell readings shall be submitted to the geotechnical engineer, shoring design engineer, engineer in responsible charge, and the building official.~~
~~h. Load cell readings can be terminated once the temporary shoring no longer provides support for the buildings.~~

~~**J106.2.7 Monitoring of existing DSASS, DSA-SS/CC structures**~~

~~8. The contractor shall complete a written and photographic log of all existing OSHPD 1 & 4 structures within 100 ft or three times depth of shoring, prior to construction. A licensed surveyor shall document all existing substantial cracks in adjacent existing structures.~~
~~9. Contractor shall document existing condition of wall cracks adjacent to shoring walls prior to start of construction.~~
~~10. Contractor shall monitor existing walls for movement or cracking that may result from adjacent shoring.~~
~~11. If excessive movement or visible cracking occurs, contractor shall stop work and shore / reinforce excavation and contact shoring design engineer and the building official.~~
~~12. Monitoring of the existing structure shall be at reasonable intervals as required by the registered design professional subject to approval of the building official. Monitoring shall be performed by a licensed surveyor and shall consist of vertical and lateral movement of the existing structures. Prior to starting shoring installation a pre-construction meeting shall take place between the contractor, shoring design engineer, surveyor, geotechnical engineer, and the building official to identify monitoring locations on existing buildings.~~
~~13. If in the opinion of the building official or shoring design engineer, monitoring data indicate excessive movement or other distress, all excavation shall cease until the geotechnical engineer and shoring design engineer investigates the situation and makes recommendations for remediation or continuing.~~
~~14. All reading and measurements shall be submitted to the building official and shoring design engineer.~~

~~**J106.2.8 Tolerances.** Following tolerances shall be specified on the construction documents.~~

~~3. Soldier Piles:~~

~~i. Horizontal and vertical construction tolerances for the soldier pile locations.~~
~~ii. Soldier pile plumbness requirements (angle with vertical line).~~

~~4. Tie-back Anchors:~~

~~i. Allowable deviation of anchor projected angle from specified vertical and horizontal design projected angle.~~
~~ii. Anchor clearance to the existing/new utilities and structures.~~

SECTION J107
FILLS

J107.1 General. Unless otherwise recommended in the soils report, fills shall conform to provisions of this section.

...

J107.5 Compaction. All fill material shall be compacted to 90 percent of maximum density as determined by ASTM D 1557, Modified Proctor, in lifts not exceeding 12 inches (305 mm) in depth.

~~*[DSA-SS, DSA-SS/CC] This section establishes minimum requirements only.*~~

...

~~*[Relocated to Chapter 18A]* **Section J112**~~
~~***Vibro Stone Columns for Ground Improvement***~~

~~***J112.1 General. [OSHPD 1, 2, & 4]** This section shall apply to Vibro Stone Columns (VSCs) for ground improvement using unbounded aggregate materials. Vibro stone column provisions in this section are intended to increase bearing capacity, reduce settlements, and mitigate liquefaction for shallow foundations. These requirements shall not be used for grouted or bonded stone columns, ground improvement for deep foundation elements, or changing site class. VSCs shall not be considered as a deep foundation element.*~~

~~*Ground improvement shall be installed under the entire building/structure footprint and not under isolated foundation elements only.*~~

~~*Design, construction, testing, and inspection shall satisfy the requirements of this code except as modified in Sections J112.2 through J112.5.*~~

~~***J112.2 Geotechnical Report.** Geotechnical report shall specify vibro stone column requirements to ensure uniformity in total and differential immediate settlement, long term settlement, and earthquake induced settlement.*~~

~~*10. Soil compaction shall be sufficient to mitigate potential for liquefaction as described in California Geological Survey (CGS) Special Publication 117A (SP-117A): Guidelines for Evaluating and Mitigating Seismic Hazard in California.*~~

~~*11. Area replacement ratio for the compaction elements and the basis of its determination shall be explained. Minimum factor of safety for soil compaction shall be in accordance with SP-117A.*~~

~~*12. Depth of soil compaction elements and extent beyond the footprint of structures/foundation shall be defined. Extent beyond the foundation shall be half the depth of the VSCs with a minimum of 10' or an approved alternative.*~~

~~*13. Minimum diameter and maximum spacing of soil compaction elements shall be specified. VSC's shall not be less than 2 feet in diameter and center to center spacing shall not exceed 8 feet.*~~

~~*14. The modulus of subgrade reactions for shallow foundations shall account for the presence of compaction elements.*~~

~~*15. The modulus of subgrade reactions, long-term settlement, and post-earthquake settlement shall be specified along with expected total and differential settlements for design.*~~

~~16. The acceptance criteria for Cone Penetration Test (CPT) in accordance with ASTM D 3441 complemented by Standard Penetration Test (SPT) in accordance with ASTM D 1586, if necessary, to verify soil improvement shall be specified~~

~~17. The requirements for special inspection and observation by the Geotechnical engineer shall be specified.~~

~~18. A Final Verified Report (FVR) documenting the installation of the ground improvement system and confirming that the ground improvement acceptance criteria have been met shall be prepared by the Geotechnical Engineer and submitted to the enforcement agency for review and approval.~~

~~**J112.3 Shallow Foundations.** VSCs under the shallow foundation shall be located symmetrically around the centroid of the footing or load.~~

~~4. There shall be a minimum of four stone columns under each isolated or continuous/combined footing or approved equivalent.~~

~~5. The VSCs or deep foundation elements shall not be used to resist tension or overturning uplift from the shallow foundations.~~

~~6. The foundation design for the shallow foundation shall consider the increased vertical stiffness of the VSCs as point supports for analysis, unless it is substantiated that the installation of the VSCs result in improvement of the surrounding soils such that the modulus of subgrade reaction, long term settlement, and post earthquake settlement can be considered uniform throughout.~~

~~**J112.4 Installation.** VSCs shall be installed with vibratory probes. Vertical columns of compacted unbounded aggregate shall be formed through the soils to be improved by adding gravel near the tip of the vibrator and progressively raising and re-penetrating the vibrator which will results in the gravel being pushed into the surrounding soil.~~

~~Gravel aggregate for VSCs shall be well graded with a maximum size of 6" and not more than 10% smaller than 3/8" after compaction.~~

~~**J112.5 Construction Documents.** Construction documents for VSCs, as a minimum, shall include the following:~~

~~6. Size, depth, and location of VSCs.~~
~~7. Extent of soil improvements along with building/structure foundation outlines.~~
~~8. Field verification requirements and acceptance criteria using CPT/SPT.~~
~~9. The locations where CPT/SPT shall be performed.~~
~~10. The Testing, Inspection and Observation (TIO) program shall indicate the inspection and observation required for the VSCs.~~

~~DSA is not adopting Appendix J since requirements are now covered in Chapter 18A.~~

FINAL EXPRESS TERMS
FOR
PROPOSED BUILDING STANDARDS
OF THE
DEPARTMENT OF HOUSING AND COMMUNITY DEVELOPMENT
REGARDING THE ADOPTION BY REFERENCE OF THE
2015 EDITION OF THE INTERNATIONAL BUILDING CODE
WITH PROPOSED AMENDMENTS INTO THE 2016 CALIFORNIA BUILDING CODE (CBC)
(NON-ACCESS)
CALIFORNIA CODE OF REGULATIONS, TITLE 24, PART 2

(HCD 03/15)

The Department of Housing and Community Development (HCD) proposes to adopt the 2015 edition of the International Building Code (IBC) for codification and effectiveness into the 2016 edition of the California Building Code (CBC) as presented on the following pages, including any necessary amendments. HCD further proposes to:

- Repeal the 2012 edition of the International Building Code;
- Repeal the 2013 edition of the California Building Code, which includes amendments to the model code that are no longer necessary;
- Repeal or amend building standards that are not addressed by a model code;
- Relocate or codify existing adopted and necessary amendments to the model code into the format of the model code proposed for adoption, the action of which has no regulatory effect; and/or
- Adopt new building standards that are not addressed by the model code proposed for adoption.

LEGEND FOR EXPRESS TERMS:

1. **IBC language with new California amendments:** IBC language shown in normal Arial 9-point; California amendments to IBC text shown *underlined and in italics* with vertical bar in left margin.

2. **Existing California amendments being modified:** All such language shown in *italics,* modified language is *underlined* or shown in ~~*strikeout*~~ with vertical bar in left margin.

3. **Existing California amendments with no modifications:** All such existing language shown in *italics,* modified model code language shown in ~~strikeout~~.

4. **Text not being modified:** All language not displayed in full is shown as "..." (i.e., ellipsis).

5. **Repealed text:** All language shown in ~~strikeout.~~

6. **Notation:** Authority and Reference citations are provided at the end of each action.

SUMMARY OF REGULATORY ACTION

HCD PROPOSES TO:

- Adopt standards from the 2015 International Building Code into the 2016 California Building Code **without amendments**.
- Adopt standards from the 2015 International Building Code into the 2016 California Building Code **with new amendments**.
- Bring forward existing California Amendments from the 2013 California Building Code for adoption into the 2016 California Building Code **with modifications**.
- Repeal 2013 California Amendments, which are **not** brought forward into the 2016 California Building Code.
- Bring forward existing California Amendments from the 2013 California Building Code for adoption into the 2016 California Building Code **without modifications**, except for editorial corrections.

1. HCD proposes to bring forward existing California amendments in Chapter 1, Division I, from the 2013 California Building Code for adoption into the 2016 California Building Code with modifications as follows:

CHAPTER 1
SCOPE AND ADMINISTRATION

DIVISION I
CALIFORNIA ADMINISTRATION

SECTION 1.1
GENERAL

1.1.1 Title. *These regulations shall be known as the California Building Code, may be cited as such and will be referred to herein as "this code." The California Building Code is Part 2 of twelve parts of the official compilation and publication of the adoption, amendment and repeal of building regulations to the California Code of Regulations, Title 24, also referred to as the California Building Standards Code. This part incorporates by adoption the ~~2012~~ 2015 International Building Code of the International Code Council with necessary California amendments.*

1.1.2 Purpose. *The purpose of this code is to establish the minimum requirements to safeguard the public health, safety and general welfare through structural strength, means of egress facilities, stability, access to persons with disabilities, sanitation, adequate lighting and ventilation and energy conservation; safety to life and property from fire and other hazards attributed to the built environment; and to provide safety to fire fighters and emergency responders during emergency operations.*

1.1.3 Scope. *The provisions of this code shall apply to the construction, alteration, movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every building or structure or any appurtenances connected or attached to such buildings or structures throughout the State of California.*

1.1.3.1 Nonstate-regulated buildings, structures, and applications. *Except as modified by local ordinance pursuant to Section 1.1.8, the following standards in the California Code of Regulations, Title 24, Parts 2, 2.5, 3, 4, 5, 6, 9, 10 and 11 shall apply to all occupancies and applications not regulated by a state agency.*

1.1.3.2 State-regulated buildings, structures, and applications. *The model code, state amendments to the model code, and/or state amendments where there are no relevant model code provisions shall apply to the following buildings, structures, and applications regulated by state agencies as specified in Sections 1.2 through 1.14, except where modified by local ordinance pursuant to Section 1.1.8. When adopted by a state agency, the provisions of this code shall be enforced by the appropriate enforcing agency, but only to the extent of authority granted to such agency by the state legislature.*

Note: *See Preface to distinguish the model code provisions from the California provisions.*

1. *State-owned buildings, including buildings constructed by the Trustees of the California State University, and to the extent permitted by California laws, buildings designed and constructed by the Regents of the University of California, and regulated by the Building Standards Commission. See Section 1.2 for additional scope provisions.*
2. *Local detention facilities regulated by the Corrections Standards Authority. See Section 1.3 for additional scope provisions.*
3. *Barbering, cosmetology or electrolysis establishments, acupuncture offices, pharmacies, veterinary facilities and structural pest control locations regulated by the Department of Consumer Affairs. See Section 1.4 for additional scope provisions.*
4. *Energy efficiency standards regulated by the California Energy Commission. See Section 1.5 for additional scope provisions.*
5. *Dairies and places of meat inspection regulated by the Department of Food and Agriculture. See Section 1.6 for additional scope provisions.*

6. *Organized camps, laboratory animal quarters, public swimming pools, radiation protection, commissaries serving mobile food preparation vehicles and wild animal quarantine facilities regulated by the Department of Public Health. See Section 1.7 for additional scope provisions.*

7. *Hotels, motels, lodging houses, ~~apartment houses~~ apartments, dwellings, dormitories, condominiums, shelters for homeless persons, congregate residences, employee housing, factory-built housing and other types of dwellings containing sleeping accommodations with or without common toilets or cooking facilities. See Section 1.8.2.1.1 for additional scope provisions.*

8. *Accommodations for persons with disabilities in buildings containing newly constructed covered multifamily dwellings, new common use ~~spaces~~ areas serving existing covered multifamily dwellings, additions to existing buildings where the addition alone meets the definition of ~~"COVERED MULTIFAMILY DWELLING,"~~ covered multifamily dwellings, and new common-use ~~spaces~~ areas serving new covered multifamily dwellings, which are regulated by the Department of Housing and Community Development. See Section 1.8.2.1.2 for additional scope provisions.*

9. *Permanent buildings and permanent accessory buildings or structures constructed within mobilehome parks and special occupancy parks regulated by the Department of Housing and Community Development. See Section 1.8.2.1.3 for additional scope provisions.*

10. *Accommodations for persons with disabilities regulated by the Division of the State Architect. See Section 1.9.1 for additional scope provisions.*

11. *Public elementary and secondary schools, community college buildings, and state-owned or state-leased essential service buildings regulated by the Division of the State Architect. See Section 1.9.2 for additional scope provisions.*

12. *Qualified historical buildings and structures and their associated sites regulated by the State Historical Building Safety Board with the Division of the State Architect. See Section 1.9.3 for additional scope provisions.*

13. *General acute care hospitals, acute psychiatric hospitals, skilled nursing and/or intermediate care facilities, clinics licensed by the Department of Public Health and correctional treatment centers regulated by the Office of Statewide Health Planning and Development. See Section 1.10 for additional scope provisions.*

14. *Applications regulated by the Office of the State Fire Marshal include, but are not limited to, the following in accordance with Section 1.11:*

    14.1 Buildings or structures used or intended for use as an:

    1. *Asylum, jail, prison.*
    2. *Mental hospital, hospital, home for the elderly, children's nursery, children's home or institution, school or any similar occupancy of any capacity.*
    3. *Theater, dancehall, skating rink, auditorium, assembly hall, meeting hall, nightclub, fair building or similar place of assemblage where 50 or more persons may gather together in a building, room or structure for the purpose of amusement, entertainment, instruction, deliberation, worship, drinking or dining, awaiting transportation, or education.*
    4. *Small family day-care homes, large family day-care homes, residential facilities and residential facilities for the elderly, residential care facilities.*
    5. *State institutions or other state-owned or state-occupied buildings.*
    6. *High rise structures.*
    7. *Motion picture production studios.*
    8. *Organized camps.*
    9. *Residential structures.*

    14.2. Tents, awnings or other fabric enclosures used in connection with any occupancy.

    14.3. Fire alarm devices, equipment and systems in connection with any occupancy.

    14.4. Hazardous materials, flammable and combustible liquids.

14.5. Public school automatic fire detection, alarm and sprinkler systems.

14.6. Wildland-urban interface fire areas.

15. Public libraries constructed and renovated using funds from the California Library Construction and Renovation Bond Act of 1988 and regulated by the State Librarian. See Section 1.12 for additional scope provisions.

16. Graywater systems regulated by the Department of Water Resources. See Section 1.13 for additional scope provisions.

17. For applications listed in Section 1.9.1 regulated by the Division of State Architect–Access Compliance, outdoor environments and uses shall be classified according to accessibility uses described in Chapters 11A, 11B and 11C.

18. Marine Oil Terminals regulated by the California State Lands Commission. See Section 1.14 for additional scope provisions.

1.1.4 Appendices. *Provisions contained in the appendices of this code shall not apply unless specifically adopted by a state agency or adopted by a local enforcing agency in compliance with Health and Safety Code Section 18901 et seq. for Building Standards Law, Health and Safety Code Section 17950 for State Housing Law and Health and Safety Code Section 13869.7 for Fire Protection Districts. See Section 1.1.8 of this code.*

1.1.5 Referenced codes. *The codes, standards and publications adopted and set forth in this code, including other codes, standards and publications referred to therein are, by title and date of publication, hereby adopted as standard reference documents of this code. When this code does not specifically cover any subject related to building design and construction, recognized architectural or engineering practices shall be employed. The National Fire Codes, standards and the Fire Protection Handbook of the National Fire Protection Association are permitted to be used as authoritative guides in determining recognized fire prevention engineering practices.*

1.1.6 Nonbuilding standards, orders and regulations. *Requirements contained in the International Building Code, or in any other referenced standard, code or document, which are not building standards as defined in Health and Safety Code Section 18909, shall not be construed as part of the provisions of this code. For nonbuilding standards, orders and regulations, see other titles of the California Code of Regulations.*

1.1.7 Order of precedence and use.

1.1.7.1 Differences. *In the event of any differences between these building standards and the standard reference documents, the text of these building standards shall govern.*

1.1.7.2 Specific provisions. *Where a specific provision varies from a general provision, the specific provision shall apply.*

1.1.7.3 Conflicts. *When the requirements of this code conflict with the requirements of any other part of the California Building Standards Code, Title 24, the most restrictive requirements shall prevail.*

> ***1.1.7.3.1 Detached one-and two-family dwellings.*** *Detached one-and two-family dwellings, efficiency dwelling units, lodging houses, live/work units, townhouses not more than three stories above grade plane in height with a separate means of egress, and their accessory structures, may be designed and constructed in accordance with this code or the California Residential Code, but not both, unless the proposed structure(s) or element(s) exceed the design limitations established in the California Residential Code, and the code user is specifically directed by the California Residential Code to use this code.*

1.1.8 City, county, or city and county amendments, additions or deletions. *The provisions of this code do not limit the authority of city, county, or city and county governments to establish more restrictive and reasonably necessary differences to the provisions contained in this code pursuant to complying with Section 1.1.8.1. The effective date of amendments, additions or deletions to this code by a city, county, or city and county filed pursuant to Section 1.1.8.1 shall be the date filed. However, in no case shall the amendments, additions or deletions to this code be effective any sooner than the effective date of this code.*

Local modifications shall comply with Health and Safety Code Section 18941.5 for Building Standards Law, Health and Safety Code Section 17958 for State Housing Law or Health and Safety Code Section 13869.7 for Fire Protection Districts.

1.1.8.1 Findings and filings.

1. *The city, county, or city and county shall make express findings for each amendment, addition or deletion based upon climatic, topographical or geological conditions.*

   Exception: *Hazardous building ordinances and programs mitigating unreinforced masonry buildings.*

2. *The city, county, or city and county shall file the amendments, additions or deletions expressly marked and identified as to the applicable findings. Cities, counties, cities and counties, and fire departments shall file the amendments, additions or deletions, and the findings with the California Building Standards Commission at 2525 Natomas Park Drive, Suite 130, Sacramento, CA 95833.*

3. *Findings prepared by fire protection districts shall be ratified by the local city, county, or city and county and filed with the California Department of Housing and Community Development, Division of Codes and Standards, P.O. Box 1407, Sacramento, CA 95812-1407 or ~~1800 3rd Street, Room 260, Sacramento, CA 95811~~ 2020 W. El Camino Avenue, Suite 250, Sacramento, CA 95833-1829.*

1.1.9 Effective date of this code. *Only those standards approved by the California Building Standards Commission that are effective at the time an application for building permit is submitted shall apply to the plans and specifications for, and to the construction performed under, that permit. For the effective dates of the provisions contained in this code, see the History Note page of this code.*

1.1.10 Availability of codes. *At least one complete copy each of Titles 8, 19, 20, 24 and 25 with all revisions shall be maintained in the office of the building official responsible for the administration and enforcement of this code. Each state department concerned and each city, county, or city and county shall have an up-to-date copy of the code available for public inspection. See Health and Safety Code Section 18942 (~~d~~ e) (1) and (2).*

1.1.11 Format. *This part fundamentally adopts the International Building Code by reference on a chapter-by-chapter basis. When a specific chapter of the International Building Code is not printed in the code and is marked "Reserved" such chapter of the International Building Code is not adopted as a portion of this code. When a specific chapter of the International Building Code is marked "Not adopted by the State of California" but appears in the code, it may be available for adoption by local ordinance.*

Note: *Matrix Adoption Tables at the front of each chapter may aid the code user in determining which chapter or sections within a chapter are applicable to buildings under the authority of a specific state agency, but they are not to be considered regulatory.*

1.1.12 Validity. *If any chapter, section, subsection, sentence, clause or phrase of this code is for any reason held to be unconstitutional, contrary to statute, exceeding the authority of the state as stipulated by statutes or otherwise inoperative, such decision shall not affect the validity of the remaining portion of this code.*

SECTION 1.8
DEPARTMENT OF HOUSING AND COMMUNITY DEVELOPMENT

1.8.1 Purpose. *The purpose of this code is to establish the minimum requirements necessary to protect the health, safety and general welfare of the occupants and the public by governing accessibility, erection, construction, reconstruction, enlargement, conversion, alteration, repair, moving, removal, demolition, occupancy, use, height, court, area, sanitation, ventilation, maintenance and safety to life and property from fire and other hazards attributed to the built environment.*

SECTION 1.8.2
AUTHORITY AND ABBREVIATIONS

1.8.2.1 General. *The Department of Housing and Community Development is authorized by law to promulgate and adopt building standards and regulations for several types of building applications. The applications under the authority of the Department of Housing and Community Development are listed in Sections 1.8.2.1.1 through 1.8.2.1.3.*

Note: *See the California Residential Code for detached one-and two-family dwellings and townhouses.*

1.8.2.1.1 Housing construction.

Application *- Hotels, motels, lodging houses, ~~apartment houses~~ apartments, dwellings, dormitories, condominiums, shelters for homeless persons, congregate residences, employee housing, factory-built housing and other types of dwellings containing sleeping accommodations with or without common toilet or cooking facilities including accessory buildings, facilities and uses thereto. Sections of this code which pertain to applications listed in this section are identified using the abbreviation "HCD 1."*

Enforcing Agency *– Local building department or the Department of Housing and Community Development.*

Authority cited *–Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.*

Reference *–Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and Sections 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.*

1.8.2.1.2 Housing accessibility.

Application *– ~~COVERED MULTIFAMILY DWELLINGS"~~ Covered multifamily dwellings as defined in Chapter 2 including, but not limited to, lodging houses, dormitories, timeshares, condominiums, shelters for homeless persons, congregate residences, ~~apartment houses~~ apartments, dwellings, employee housing, factory-built housing and other types of dwellings containing sleeping accommodations with or without common toilet or cooking facilities.*

Sections of this code identified by the abbreviation "HCD 1-AC" require specific accommodations for ~~PERSONS WITH DISABILITIES"~~ persons with disabilities as defined in Chapter 2. The application of such provisions shall be in conjunction with other requirements of this code and apply only to newly constructed ~~COVERED MULTIFAMILY DWELLINGS"~~ covered multifamily dwellings as defined in Chapter 2 ~~of the California Building Code~~. "HCD 1-AC" applications include, but are not limited to, the following:

1. *All newly constructed ~~"COVERED MULTIFAMILY DWELLINGS"~~ covered multifamily dwellings as defined in Chapter 2.*
2. *New ~~"COMMON USE AREAS"~~ common use areas as defined in Chapter 2, serving existing covered multifamily dwellings.*
3. *Additions to existing buildings, where the addition alone meets the definition of ~~"COVERED MULTIFAMILY DWELLINGS"~~ covered multifamily dwellings as defined in Chapter 2.*
4. *New common use areas serving new covered multifamily dwellings.*
5. *Where any portion of a building's exterior is preserved, but the interior of the building is removed, including all structural portions of floors and ceilings, the building is considered a new building for determining the application of Chapter 11A.*

"HCD 1-AC" building standards generally do not apply to public use areas or public accommodations such as hotels and motels and public housing. Public use areas, public accommodations, and public housing, as defined in Chapter 2 ~~of this code~~, are subject to the Division of the State Architect (DSA-AC) in Chapter 11B, and are referenced in Section 1.9.1.

Newly constructed covered multifamily dwellings, which can also be defined as public housing, shall be subject to the requirements of Chapter 11A and Chapter 11B.

Enforcing Agency *– Local building department or the Department of Housing and Community Development.*

Authority cited *–Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.*

Reference *– Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.*

1.8.2.1.3 Permanent buildings in mobilehome parks and special occupancy parks.

Application *– Permanent buildings, and permanent accessory buildings or structures, constructed within mobilehome parks and special occupancy parks that are under the control and ownership of the park operator. Sections of this code which pertain to applications listed in this section are identified using the abbreviation "HCD 2."*

Enforcing Agency *– The Department of Housing and Community Development, local building department or other local agency that has assumed responsibility for the enforcement of Health and Safety Code, Division 13, Part 2.1, commencing with Section 18200 for mobilehome parks and Health and Safety Code, Division 13, Part 2.3, commencing with Section 18860 for special occupancy parks.*

Authority cited *- Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17821.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.*

Reference *- Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.*

SECTION 1.8.3
LOCAL ENFORCING AGENCY

1.8.3.1 Duties and powers. *The building department of every city, county, or city and county shall enforce all the provisions of law, this code, and the other rules and regulations promulgated by the Department of Housing and Community Development pertaining to the installation, erection, construction, reconstruction, movement, enlargement, conversion, alteration, repair, removal, demolition or arrangement of ~~apartment houses~~ apartments, condominiums, hotels, motels, lodging houses and dwellings, including accessory buildings, facilities and uses thereto.*

The provisions regulating the erection and construction of dwellings and appurtenant structures shall not apply to existing structures as to which construction is commenced or approved prior to the effective date of these regulations. Requirements relating to use, maintenance and occupancy shall apply to all dwellings and appurtenant structures approved for construction or constructed before or after the effective date of this code.

For additional information regarding the use and occupancy of existing buildings and appurtenant structures, see California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 1, commencing with Article 1, Section 1.

1.8.3.2 Laws, rules and regulations. *Other than the building standards contained in this code, and notwithstanding other provisions of law, the statutory authority and location of the laws, rules, and regulations to be enforced by local enforcing agencies are listed by statute in Sections 1.8.3.2.1 through 1.8.3.2.5 below:*

1.8.3.2.1 State Housing Law. *Refer to the State Housing Law, California Health and Safety Code, Division 13, Part 1.5, commencing with Section 17910 and California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 1, commencing with Section 1, for the erection, construction, reconstruction, movement, enlargement, conversion, alteration, repair, removal, demolition or arrangement of ~~apartment houses~~ apartments, condominiums, hotels, motels, lodging houses and dwellings, including accessory buildings, facilities and uses thereto.*

1.8.3.2.2 Mobilehome Parks Act. *Refer to the Mobilehome Parks Act, California Health and Safety Code, Division 13, Part 2.1, commencing with Section 18200 and California Code of Regulations, Title 25, Division 1, Chapter 2, commencing with Section 1000 for mobilehome park administrative and enforcement authority, permits, plans, fees, violations, inspections and penalties both within and outside mobilehome parks.*

Exception: *Mobilehome parks where the Department of Housing and Community Development is the enforcing agency.*

1.8.3.2.3 Special Occupancy Parks Act. *Refer to the Special Occupancy Parks Act, California Health and Safety Code, Division 13, Part 2.3, commencing with Section 18860 and California Code of Regulations, Title 25, Division 1, Chapter 2.2, commencing with Section 2000 for special occupancy park administrative and enforcement authority, permits, fees, violations, inspections and penalties both within and outside of special occupancy parks.*

Exception: *Special occupancy parks where the Department of Housing and Community Development is the enforcing agency.*

1.8.3.2.4 Employee Housing Act. *Refer to the Employee Housing Act, California Health and Safety Code, Division 13, Part 1, commencing with Section 17000 and California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 3, commencing with Section 600 for employee housing administrative and enforcement authority, permits, fees, violations, inspections and penalties.*

1.8.3.2.5 Factory-Built Housing Law. *Refer to the Factory-Built Housing Law, California Health and Safety Code, Division 13, Part 6, commencing with Section 19960 and California Code of Regulations, Title 25, Division 1, Chapter 3, Subchapter 1, commencing with Section 3000 for factory-built housing administrative and enforcement authority, permits, fees, violations, inspections and penalties.*

SECTION 1.8.4
PERMITS, FEES, APPLICATIONS AND INSPECTIONS

1.8.4.1 Permits. *A written construction permit shall be obtained from the enforcing agency prior to the erection, construction, reconstruction, installation, moving or alteration of any building or structure.*

Exceptions:

1. *Work exempt from permits as specified in Chapter 1, Division II, Scope and Administration, Section 105.2.*
2. *Changes, alterations or repairs of a minor nature not affecting structural features, egress, sanitation, safety or accessibility as determined by the enforcing agency.*

Exemptions from permit requirements shall not be deemed to grant authorization for any work to be done in any manner in violation of other provisions of law or this code.

1.8.4.2 Fees. *Subject to other provisions of law, the governing body of any city, county, or city and county may prescribe fees to defray the cost of enforcement of rules and regulations promulgated by the Department of Housing and Community Development. The amount of the fees shall not exceed the amount reasonably necessary to administer or process permits, certificates, forms or other documents, or to defray the costs of enforcement. For additional information, see the State Housing Law, Health and Safety Code, Division 13, Part 1.5, Section 17951 and California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 1, Article 3, commencing with Section 6.*

1.8.4.3 Plan review and time limitations. *Subject to other provisions of law, provisions related to plan checking, prohibition of excessive delays and contracting with or employment of private parties to perform plan checking are set forth in the State Housing Law, Health and Safety Code Section 17960.1, and for employee housing, in Health and Safety Code Section 17021.*

1.8.4.3.1 Retention of plans. *The building department of every city, county, or city and county shall maintain an official copy, microfilm, electronic or other type of photographic copy of the plans of every building, during the life of the building, for which the department issued a building permit.*

Exceptions:

1. *Single or multiple dwellings not more than two stories and basement in height.*
2. *Garages and other structures appurtenant to buildings listed in Exception 1.*
3. *Farm or ranch buildings appurtenant to buildings listed in Exception 1.*
4. *Any one-story building where the span between bearing walls does not exceed 25 feet (7620 mm), except a steel frame or concrete building.*

All plans for common interest developments as defined in Section ~~1351~~ 4100 of the California Civil Code shall be retained. For additional information regarding plan retention and reproduction of plans by an enforcing agency, see Health and Safety Code Sections 19850 through 19852.

1.8.4.4 Inspections. *Construction or work for which a permit is required shall be subject to inspection by the building official, and such construction or work shall remain accessible and exposed for inspection purposes until approved. Approval as a result of an inspection shall not be construed to be an approval of a violation of the provisions of this code or other regulations of the Department of Housing and Community Development. Required inspections are*

listed in Chapter 1, Division II, Scope and Administration, Sections 110.3.1 through 110.3.6, 110.3.8, 110.3.9 and 110.3.10.

SECTION 1.8.5
RIGHT OF ENTRY FOR ENFORCEMENT

1.8.5.1 General. *Subject to other provisions of law, officers and agents of the enforcing agency may enter and inspect public and private properties to secure compliance with the rules and regulations promulgated by the Department of Housing and Community Development. For limitations and additional information regarding enforcement, see the following:*

1. *For applications subject to the State Housing Law as referenced in Section 1.8.3.2.1 of this code, refer to Health and Safety Code, Division 13, Part 1.5, commencing with Section 17910 and California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 1, commencing with Section 1.*
2. *For applications subject to the Mobilehome Parks Act as referenced in Section 1.8.3.2.2 of this code, refer to Health and Safety Code, Division 13, Part 2.1, commencing with Section 18200 and California Code of Regulations, Title 25, Division 1, Chapter 2, commencing with Section 1000.*
3. *For applications subject to the Special Occupancy Parks Act as referenced in Section 1.8.3.2.3 of this Code, refer to Health and Safety Code, Division 13, Part 2.3, commencing with Section 18860 and California Code of Regulations, Title 25, Division 1, Chapter 2.2, commencing with Section 2000.*
4. *For applications subject to the Employee Housing Act as referenced in Section 1.8.3.2.4 of this code, refer to Health and Safety Code, Division 13, Part 1, commencing with Section 17000 and California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 3, commencing with Section 600.*
5. *For applications subject to the Factory-Built Housing Law as referenced in Section 1.8.3.2.5 of this code, refer to Health and Safety Code, Division 13, Part 6, commencing with Section 19960 and California Code of Regulations, Title 25, Division 1, Chapter 3, Subchapter 1, commencing with Section 3000.*

SECTION 1.8.6
LOCAL MODIFICATION BY ORDINANCE OR REGULATION

1.8.6.1 General. *Subject to other provisions of law, a city, county, or city and county may make changes to the provisions adopted by the Department of Housing and Community Development. If any city, county, or city and county does not amend, add or repeal by local ordinances or regulations the provisions published in this code or other regulations promulgated by the Department of Housing and Community Development, those provisions shall be applicable and shall become effective 180 days after publication by the California Building Standards Commission. Amendments, additions and deletions to this code adopted by a city, county, or city and county pursuant to California Health and Safety Code Sections 17958.5, 17958.7 and 18941.5, together with all applicable portions of this code, shall also become effective 180 days after publication of the California Building Standards Code by the California Building Standards Commission.*

1.8.6.2 Findings, filings and rejections of local modifications. *Prior to making any modifications or establishing more restrictive building standards, the governing body shall make express findings and filings, as required by California Health and Safety Code Section 17958.7, showing that such modifications are reasonably necessary due to local climatic, geological, or topographical conditions. No modification shall become effective or operative unless the following requirements are met:*

1. *The express findings shall be made available as a public record.*
2. *A copy of the modification and express finding, each document marked to cross-reference the other, shall be filed with the California Building Standards Commission for a city, county, or city and county and with the Department of Housing and Community Development for fire protection districts.*
3. *The California Building Standards Commission has not rejected the modification or change.*

Nothing in this section shall limit the authority of fire protection districts pursuant to California Health and Safety Code Section 13869.7(a).

SECTION 1.8.7
ALTERNATE MATERIALS, DESIGNS, TESTS AND METHODS OF CONSTRUCTION

1.8.7.1 General. *The provisions of this code, as adopted by the Department of Housing and Community Development, are not intended to prevent the use of any alternate material, appliance, installation, device, arrangement, design or method of construction not specifically prescribed by this code. Consideration and approval of alternates shall comply with Section 1.8.7.2 for local building departments and Section 1.8.7.3 for the Department of Housing and Community Development.*

1.8.7.2 Local building departments. *The building department of any city, county, or city and county may approve alternates for use in the erection, construction, reconstruction, movement, enlargement, conversion, alteration, repair, removal, demolition or arrangement of ~~an apartment house~~ apartments, condominiums, hotels, motels, lodging houses, dwellings, or ~~an~~ accessory structures, except for the following:*

1. *Structures located in mobilehome parks as defined in California Health and Safety Code Section 18214.*
2. *Structures located in special occupancy parks as defined in California Health and Safety Code Section 18862.43.*
3. *Factory-built housing as defined in California Health and Safety Code Section 19971.*

1.8.7.2.1 Approval of alternates. *The consideration and approval of alternates by a local building department shall comply with the following procedures and limitations:*

1. *The approval shall be granted on a case-by-case basis.*
2. *Evidence shall be submitted to substantiate claims that the proposed alternate, in performance, safety and protection of life and health, conforms to, or is at least equivalent to, the standards contained in this code and other rules and regulations promulgated by the Department of Housing and Community Development.*
3. *The local building department may require tests performed by an approved testing agency at the expense of the owner or owner's agent as proof of compliance.*
4. *If the proposed alternate is related to accessibility in covered multifamily dwellings or in facilities serving ~~"COVERED MULTIFAMILY DWELLINGS"~~ covered multifamily dwellings as defined in Chapter ~~11A~~ 2, the proposed alternate must also meet the threshold set for ~~"EQUIVALENT FACILITATION"~~ equivalent facilitation as defined in Chapter ~~11A~~ 2.*

For additional information regarding approval of alternates by a building department pursuant to the State Housing Law, see California Health and Safety Code Section 17951(e) and California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 1.

1.8.7.3 Department of Housing and Community Development. *The Department of Housing and Community Development may approve alternates for use in the erection, construction, reconstruction, movement, enlargement, conversion, alteration, repair, removal or demolition of ~~an apartment house~~ apartments, condominiums, hotels, motels, lodging houses, dwellings or an accessory thereto and permanent buildings in mobilehome parks and special occupancy parks. The consideration and approval of alternates shall comply with the following:*

1. *The department may require tests at the expense of the owner or owner's agent to substantiate compliance with the California Building Standards Code.*
2. *The approved alternate shall, for its intended purpose, be at least equivalent in performance and safety to the materials, designs, tests or methods of construction prescribed by this code.*

SECTION 1.8.8
APPEALS BOARD

1.8.8.1 General. *Every city, county, or city and county shall establish a process to hear and decide appeals of orders, decisions, and determinations made by the enforcing agency relative to the application and interpretation of this code and other regulations governing construction, use, maintenance and change of occupancy. The governing body of any city, county, or city and county may establish a local appeals board and a housing appeals board to serve this purpose. Members of the appeals board(s) shall not be employees of the enforcing agency and shall be knowledgeable in the applicable building codes, regulations and ordinances as determined by the governing body of the city, county, or city and county.*

Where no such appeals boards or agencies have been established, the governing body of the city, county, or city and county shall serve as the local appeals board or housing appeals board as specified in California Health and Safety Code Sections 17920.5 and 17920.6.

1.8.8.2 Definitions. *The following terms shall for the purposes of this section have the meaning shown.*

HOUSING APPEALS BOARD. *The board or agency of a city, county, or city and county which is authorized by the governing body of the city, county, or city and county to hear appeals regarding the requirements of the city, county, or city and county relating to the use, maintenance and change of occupancy of buildings and structures, including requirements governing alteration, additions, repair, demolition and moving. In any area in which there is no such board or agency, "Housing Appeals Board" means the local appeals board having jurisdiction over the area.*

LOCAL APPEALS BOARD. *The board or agency of a city, county, or city and county which is authorized by the governing body of the city, county, or city and county to hear appeals regarding the building requirements of the city, county, or city and county. In any area in which there is no such board or agency, "Local Appeals Board" means the governing body of the city, county, or city and county having jurisdiction over the area.*

1.8.8.3 Appeals. *Except as otherwise provided in law, any person, firm or corporation adversely affected by a decision, order or determination by a city, county, or city and county relating to the application of building standards published in the California Building Standards Code, or any other applicable rule or regulation adopted by the Department of Housing and Community Development, or any lawfully enacted ordinance by a city, county, or city and county, may appeal the issue for resolution to the local appeals board or housing appeals board as appropriate.*

The local appeals board shall hear appeals relating to new building construction and the housing appeals board shall hear appeals relating to existing buildings.

SECTION 1.8.9
UNSAFE BUILDINGS OR STRUCTURES

1.8.9.1 Authority to enforce. *Subject to other provisions of law, the administration, enforcement, actions, proceedings, abatement, violations and penalties for unsafe buildings and structures are contained in the following statutes and regulations:*

1. *For applications subject to the State Housing Law as referenced in Section 1.8.3.2.1 of this code, refer to Health and Safety Code, Division 13, Part 1.5, commencing with Section 17910 and California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 1, commencing with Section 1.*
2. *For applications subject to the Mobilehome Parks Act as referenced in Section 1.8.3.2.2 of this code, refer to Health and Safety Code, Division 13, Part 2.1, commencing with Section 18200 and California Code of Regulations, Title 25, Division 1, Chapter 2, commencing with Section 1000.*
3. *For applications subject to the Special Occupancy Parks Act as referenced in Section 1.8.3.2.3 of this code, refer to Health and Safety Code, Division 13, Part 2.3, commencing with Section 18860 and California Code of Regulations, Title 25, Division 1, Chapter 2.2, commencing with Section 2000.*
4. *For applications subject to the Employee Housing Act as referenced in Section 1.8.3.2.4 of this code, refer to Health and Safety Code, Division 13, Part 1, commencing with Section 17000 and California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 3, commencing with Section 600.*
5. *For applications subject to the Factory-Built Housing Law as referenced in Section 1.8.3.2.5 of this code, refer to Health and Safety Code, Division 13, Part 6, commencing with Section 19960 and California Code of Regulations, Title 25, Division 1, Chapter 3, Subchapter 1, commencing with Section 3000.*

1.8.9.2 Actions and proceedings. *Subject to other provisions of law, punishments, penalties and fines for violations of building standards are contained in the following statutes and regulations:*

1. *For applications subject to the State Housing Law as referenced in Section 1.8.3.2.1 of this code, refer to Health and Safety Code, Division 13, Part 1.5, commencing with Section 17910 and California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 1, commencing with Section 1.*
2. *For applications subject to the Mobilehome Parks Act as referenced in Section 1.8.3.2.2 of this code, refer to Health and Safety Code, Division 13, Part 2.1, commencing with Section 18200 and California Code of Regulations, Title 25, Division 1, Chapter 2, commencing with Section 1000.*

3. *For applications subject to the Special Occupancy Parks Act as referenced in Section 1.8.3.2.3 of this code, refer to Health and Safety Code, Division 13, Part 2.3, commencing with Section 18860 and California Code of Regulations, Title 25, Division 1, Chapter 2.2, commencing with Section 2000.*

4. *For applications subject to the Employee Housing Act as referenced in Section 1.8.3.2.4 of this code, refer to Health and Safety Code, Division 13, Part 1, commencing with Section 17000 and California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 3, commencing with Section 600.*

5. *For applications subject to the Factory-Built Housing Law as referenced in Section 1.8.3.2.5 of this code, refer to Health and Safety Code, Division 13, Part 6, commencing with Section 19960 and California Code of Regulations, Title 25, Division 1, Chapter 3, Subchapter 1, commencing with Section 3000.*

SECTION 1.8.10
OTHER BUILDING REGULATIONS

~~***1.8.10.1 Existing structures.*** *Subject to the requirements of California Health and Safety Code Sections 17912, 17920.3, 17922, 17922.3, 17958.8 and 17958.9, the provisions contained in Chapter 34 relating to existing structures shall only apply as identified in the Matrix Adoption Table under the authority of the Department of Housing and Community Development as listed in Sections 1.8.2.1.1 through 1.8.2.1.3 of this code.~~

1.8.10.1 Existing structures. *Notwithstanding other provisions of law, the replacement, retention, and extension of original materials and the use of original methods of construction for any existing building or accessory structure, or portions thereof, shall be permitted in accordance with the provisions of this code and the California Existing Building Code, as adopted by the Department of Housing and Community Development. For additional information, see California Health and Safety Code, Sections 17912, 17920.3, 17922 and 17958.8.*

~~***1.8.10.2 Moved structures.*** *Subject to the requirements of California Health and Safety Code Sections 17922.3 and 17958.9, the provisions contained in Chapter 34 relating to a moved residential structure shall only apply as identified in the Matrix Adoption Table under the authority of the Department of Housing and Community Development as listed in Sections 1.8.2.1.1 through 1.8.2.1.3 of this code.~~

1.8.10.2 Moved structures. *Subject to the requirements of California Health and Safety Code Sections 17922, 17922.3 and 17958.9, local ordinances or regulations relating to a moved residential building or accessory structure thereto, shall permit the replacement, retention, and extension of original materials and the use of original methods of construction so long as the structure does not become or continue to be a substandard building.*

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

2. HCD proposes to adopt Chapter 1, Division II, Sections 105.2 (Building: 1 – 13 only), 107.1, 107.2.1, 107.2.3, 107.2.4, 107.2.5, 107.2.5.1, 107.2.6, 110.3.1, 110.3.2, 110.3.3, 110.3.4, 110.3.5, 110.3.6, 110.3.8, 110.3.9, 110.3.10, and 110.3.10.1 from the 2015 International Building Code into the 2016 California Building Code, and to bring forward existing California amendments as follows:

DIVISION II
SCOPE AND ADMINISTRATION

110.3.4 Frame inspection. ... (No change to text)

110.3.4.1 (HCD 1) Moisture content verification. *Moisture content of framing members shall be verified in accordance with the California Green Building Standards Code (CALGreen), Chapter 4, Division 4.5.*

110.3.10 Final inspection. ... (No change to text)

110.3.10.1 Flood hazard documentation. ... (No change to text)

110.3.10.2 (HCD 1) Operation and maintenance manual. *At the time of final inspection, a manual, compact disc, web-based reference or other media acceptable to the enforcing agency shall be placed in the building in accordance with the California Green Building Standards Code (CALGreen), Chapter 4, Division 4.4.*

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

3. HCD proposes to adopt Chapter 2 from the 2015 International Building Code into the 2016 California Building Code with new, existing, and modified existing amendments as follows:

CHAPTER 2
DEFINITIONS

SECTION 201
GENERAL

201.3 Terms defined in other codes. Where terms are not defined in this code and are defined in the ~~International Energy Conservation Code, International Fuel Gas Code, International~~ *California Residential Code*, *California Electrical Code*, *California Existing Building Code*, *California Green Building Standards Code*, *California* Fire Code, ~~International~~ *California* Mechanical Code or ~~International~~ *California* Plumbing Code, such terms shall have the meanings ascribed to them as in those codes.

SECTION 202
DEFINITIONS

ACCESSIBILITY. *The combination of various elements in a building, facility, site, or area, or portion thereof, which allows access, circulation and the full use of the building and facilities by persons with disabilities in compliance with this code.*

ACCESSIBLE. *A site, building, facility, or portion thereof that is approachable and usable by persons with disabilities in compliance with this code.*

ACCESSIBLE ROUTE. *A continuous unobstructed path connecting accessible elements and spaces of an accessible site, building or facility that can be negotiated by a person with a disability using a wheelchair, and that is also safe for and usable by persons with other disabilities. Interior accessible routes may include corridors, hallways, floors, ramps, elevators and lifts. Exterior accessible routes may include parking access aisles, curb ramps, crosswalks at vehicular ways, walks, ramps and lifts.*

ACCESSIBLE SPACE. A space that complies with the accessibility provisions of this code.

ADAPTABLE DWELLING UNIT. (HCD 1-AC) *An accessible dwelling unit within a covered multifamily building as designed with elements and spaces allowing the dwelling unit to be adapted or adjusted to accommodate the user. See Chapter 11A, Division IV.*

APPROVED. Acceptable to the building official.

(HCD 1 & HCD 2) "Approved" means meeting the approval of the enforcing agency, except as otherwise provided by law, when used in connection with any system, material, type of construction, fixture or appliance as the result of investigations and tests conducted by the agency, or by reason of accepted principles or tests by national authorities or technical, health or scientific organizations or agencies.

Notes: (HCD 1 & HCD 2)

1. *See Health and Safety Code Section 17920 for "Approved" as applied to residential construction and buildings or structures accessory thereto, as referenced in Section 1.8.2.1.1.*
2. *See Health and Safety Code Section 17921.1 for "Approved" as applied to the use of hotplates in residential construction referenced in Section 1.8.2.1.1.*
3. *See Health and Safety Code Section 19966 for "Approved" as applied to factory-built housing as referenced in Section 1.8.3.2.5.*
4. *See Health and Safety Code Section 18201 for "Approved" as applied to mobilehome parks as referenced in Section 1.8.2.1.3.*
5. *See Health and Safety Code Section 18862.1 for "Approved" as applied to special occupancy parks as referenced in Section 1.8.2.1.3.*

APPROVED AGENCY. An established and recognized agency that is regularly engaged in conducting tests or furnishing inspection services, when such agency has been approved by the building official.

(HCD 1 & HCD 2) "Approved agency" shall mean "Listing agency" and "Testing agency."

***APPROVED LISTING AGENCY. (HCD 1 & HCD 2)** Any agency approved by the enforcing agency, unless otherwise provided by law, which is in the business of listing and labeling and which makes available at least an annual published report of such listings in which specific information is included that the product has been tested to recognized standards and found to comply.*

***APPROVED TESTING AGENCY. (HCD 1 & HCD 2)** Any agency, which is determined by the enforcing agency, except as otherwise provided by law, to have adequate personnel and expertise to carry out the testing of systems, materials, types of construction, fixtures or appliances.*

***ASSISTIVE DEVICE. (HCD 1-AC)** An aid, tool or instrument used by persons with disabilities to assist in activities of daily living.*

***AUTOMATIC DOOR.** A door equipped with a power-operated mechanism and controls that open and close the door automatically upon receipt of a momentary actuating signal. The switch that begins the automatic cycle may be a photoelectric device, floor mat or manual switch.*

***BATHROOM.** For the purposes of Chapter 11A, a room which includes a water closet (toilet), a lavatory, and a bathtub and/or a shower. It does not include single-fixture facilities or those with only a water closet and lavatory. It does include a compartmented bathroom. A compartmented bathroom is one in which the fixtures are distributed among interconnected rooms. A compartmented bathroom is considered a single unit and is subject to the requirements of Chapter 11A.*

BUILDING. Any structure used or intended for supporting or sheltering any use or occupancy.

***Exception: (HCD 1, HCD 2 & HCD 1-AC)** For applications listed in Section 1.8.2 regulated by the Department of Housing and Community Development, "Building" shall not include the following:*

1. *Any mobilehome as defined in Health and Safety Code Section 18008.*
2. *Any manufactured home as defined in Health and Safety Code Section 18007.*
3. *Any commercial modular as defined in Health and Safety Code Section 18001.8 or any special purpose commercial modular as defined in Section 18012.5.*
4. *Any recreational vehicle as defined in Section Health and Safety Code 18010.*

5. Any multifamily manufactured home as defined in Health and Safety Code Section 18008.7.

For additional information, see Health and Safety Code Section 18908.

Note: Building shall have the same meaning as defined in Health and Safety Code section 17920 and 18908 for the applications specified in Section 1.11.

BUILDING ENTRANCE ON AN ACCESSIBLE ROUTE. (HCD 1-AC) An accessible entrance to a building that is connected by an accessible route to public transportation stops, to parking or passenger loading zones, or to public streets or sidewalks, if available.

BUILDING, EXISTING. (HCD 1 & HCD 2) A building erected prior to the adoption of this code, or one for which a legal building permit has been issued.

CELLULAR CONCRETE. (HCD 1 & HCD 2) A lightweight product consisting of portland cement and selected gas-forming chemicals or foaming agents which create homogeneous voids in the hardened concrete.

CHARACTERS. Letters, numbers, punctuation marks and typographic symbols.

CLEAR FLOOR SPACE. (HCD 1-AC) The minimum unobstructed floor or ground space required to accommodate a single, stationary wheelchair and occupant.

COMMON USE AREAS. (HCD 1-AC) Private use areas within multifamily residential facilities where the use of these areas is limited exclusively to owners, residents and their guests. The areas may be defined as rooms or spaces or elements inside or outside of a building.

COVERED MULTIFAMILY DWELLINGS. (HCD 1-AC) ~~Dwelling units in buildings consisting of 3 or more dwelling units or 4 or more condominium units. Covered multifamily dwellings include dwelling units listed in Section 1102A.1. Dwelling units within a single structure separated by firewalls do not constitute separate buildings.~~

~~**Note:** For buildings or complexes containing public housing, see Chapter 11B for provisions of the Division of the State Architect–Access Compliance (DSA-AC).~~

"Covered multifamily dwellings" means either of the following:

1. Buildings that consist of at least four condominium dwelling units or at least three apartment dwelling units if the buildings have at least one elevator.

2. The ground floor dwelling units in buildings that consist of at least four condominium dwelling units or at least three apartment dwelling units if the building does not have an elevator.

Covered multifamily dwellings include dwellings listed in Section 1102A.1. For purposes of this definition, dwelling units within a single structure separated by firewalls do not constitute separate buildings.

CROSS SLOPE. (HCD 1-AC) The slope that is perpendicular to the direction of travel. (As differentiated from the definition of "Running Slope".)

CURB CUT. An interruption of a curb at a pedestrian way, which separates surfaces that are substantially at the same elevation.

CURB RAMP. A sloping pedestrian way, intended for pedestrian traffic, which provides access between a walk or sidewalk and a surface located above or below an adjacent curb face.

DEPARTMENT. (HCD 1 & HCD 2) The Department of Housing and Community Development.

DETACHED SINGLE-FAMILY DWELLING. (HCD 1 & HCD 2) Any single-family dwelling which is separated (detached) from adjacent buildings.

DETECTABLE WARNING. A standardized surface feature built in or applied to walking surfaces or other elements to warn of hazards on a circulation path.

DIRECTIONAL SIGN. (HCD 1 & HCD 2) A publicly displayed notice which indicates by use of words or symbols a

recommended direction or route of travel.

DWELLING UNIT. A single unit providing complete, independent living facilities for one or more persons, including permanent provisions for living, sleeping, eating, cooking and sanitation.

(HCD 1-AC) *For the purposes of Chapter 11A, a single unit of residence for a family of one or more persons. Examples of dwelling units covered by Chapter 11A include condominiums, an apartment unit within an apartment building, and other types of dwellings in which sleeping accommodations are provided but toileting or cooking facilities are shared by occupants of more than one room or portion of the dwelling. Examples of the latter include dormitory rooms and sleeping accommodations in shelters intended for occupancy as residences for homeless persons.*

EFFICIENCY DWELLING UNIT. (HCD 1) *A dwelling unit containing only one habitable room and includes an efficiency unit as defined by Health and Safety Code Section 17958.1. See Section 1208.4.*

ELEVATOR, PASSENGER. (HCD 1 & HCD 2) *See "PASSENGER ELEVATOR."*

ENFORCEMENT. (HCD 1 & HCD 2) *The applicable section of the Health and Safety Code is repeated here for clarity and reads as follows:*

> ***Section 17920****. "Enforcement" means diligent effort to secure compliance, including review of plans and permit applications, response to complaints, citation of violations, and other legal process. Except as otherwise provided in this part, "Enforcement" may, but need not, include inspections of existing buildings on which no complaint or permit application has been filed, and effort to secure compliance as to these existing buildings.*

ENFORCING AGENCY. (HCD 1 & HCD 2) *The designated department or agency as specified by statute or regulation.*

ENTRANCE. *Any access point to a building or portion of a building or facility used for the purpose of entering. An entrance includes the approach walk, the vertical access leading to the entrance platform, the entrance platform itself, vestibule if provided, the entry door or gate, and the hardware of the entry door or gate.*

EQUIVALENT FACILITATION. *The use of designs, products or technologies as alternatives to those prescribed, resulting in substantially equivalent or greater accessibility and usability.*

Note: *In determining equivalent facilitation, consideration shall be given to means that provide for the maximum independence of persons with disabilities while presenting the least risk of harm, injury or other hazard to such persons or others.*

FAMILY (HCD 1). *An individual or two or more persons who are related by blood or marriage; or otherwise live together in a dwelling unit.*

GRAB BAR. *A bar for the purpose of being grasped by the hand for support.*

GRADE. (Adjacent Ground Elevation) (HCD 1-AC)*The lowest point of elevation of the finished surface of the ground, paving or sidewalk within the area between the building and the property line or, when the property line is more than 5 feet (1524 mm) from the building, between the building and a line 5 feet (1524 mm) from the building. See Health and Safety Code Section 19955.3(d).*

GROUND FLOOR. *The floor of a building with a building entrance on an accessible route. A building may have one or more ground floors.*

GUARD ***(HCD 1, & HCD 2 & HCD 1-AC) OR GUARDRAIL.*** A building component or a system of building components located at or near the open sides of elevated walking surfaces that minimizes the possibility of a fall from the walking surface to a lower level.

HOUSING AT A PLACE OF EDUCATION. *Housing operated by or on behalf of an elementary, secondary, undergraduate, or postgraduate school, or other place of education, including dormitories, suites, apartments, or other places of residence.*

HOTEL OR MOTEL. (HCD 1 & HCD 2) *Any building containing six or more guest rooms intended or designed to be used, or which are used, rented or hired out to be occupied, or which are occupied for sleeping purposes by guests.*

INTERNATIONAL SYMBOL OF ACCESSIBILITY. *The symbol adopted by Rehabilitation International's 11th World Congress for the purpose of indicating that buildings and facilities are accessible to persons with disabilities.*
KICK PLATE. *An abrasion-resistant plate affixed to the bottom portion of a door to prevent a trap condition and protect its surface.*

LABELED. Equipment, materials or products to which have been affixed a label, seal, symbol or other identifying mark of a nationally recognized testing laboratory, inspection agency or other organization concerned with product evaluation that maintains periodic inspection of the production of the above-labeled items and whose labeling indicates either that the equipment, material or product meets identified standards or has been tested and found suitable for a specified purpose.

(HCD 1 & HCD 2) *"Labeled" means equipment or materials to which has been attached a label, symbol or other identifying mark of an organization, approved by the Department, that maintains a periodic inspection program of production of labeled products, installations, equipment, or materials and by whose labeling the manufacturer indicates compliance with appropriate standards or performance in a specified manner.*

LAVATORY. *A fixed bowl or basin with running water and drainpipe, as in a toilet or bathing facility, for washing or bathing purposes. (As differentiated from the definition of "Sink".)*

LEVEL AREA. (HCD 1-AC) *A specified surface that does not have a slope in any direction exceeding 1/4 inch (6.4 mm) in 1 foot (305 mm) from the horizontal (2.083-percent gradient).*

LIFT, PLATFORM (WHEELCHAIR). (HCD 1-AC) *See "Platform (Wheelchair) Lift".*

LISTED. Equipment, materials, products or services included in a list published by an organization acceptable to the code official and concerned with evaluation of products or services that maintains periodic inspection of production of listed equipment or materials or periodic evaluation of services and whose listing states either that the equipment, material, product or service meets identified standards or has been tested and found suitable for a specified purpose.

(HCD 1 & HCD 2) *"Listed" means all products that appear in a list published by an approved testing or listing agency. For additional information, see Health and Safety Code Section 17920(h).*

LISTING AGENCY. (HCD 1 & HCD 2) *An agency approved by the department that is in the business of listing and labeling products, materials, equipment and installations tested by an approved testing agency, and that maintains a periodic inspection program on current production of listed products, equipment and installations, and that, at least annually, makes available a published report of these listings. For additional information, see Health and Safety Code Section 17920(i).*

LOBBY. (HCD 1 & HCD 2) *An area not defined as a waiting room at the entrance of a building through which persons must pass.*

LODGING HOUSE. (HCD 1 <u>& HCD 1-AC</u>) *Any building or portion thereof containing not more than five guest rooms where rent is paid in money, goods, labor or otherwise<u>, and that is occupied by the proprietor as the residence of such proprietor</u>.*

MARKED CROSSING. *A crosswalk or other identified marked path intended for pedestrian use in crossing a vehicular way.*

MOTEL. (HCD 1 & HCD 2) *See Hotel or Motel.*

MULTISTORY DWELLING UNIT. (HCD 1-AC) *A dwelling unit with finished living space located on one floor and the floor or floors immediately above or below it.*

NEWLY CONSTRUCTED. (HCD 1-AC) *A building that has never before been used or occupied for any purpose.*

NORMAL. (HCD 1 & HCD 2) *Conforming to a pattern or standard regarded as usual or typical.*

OPEN RISER. *The space between two adjacent stair treads not closed by a riser.*

OPERABLE PART. *A component of an element used to insert or withdraw objects, or to activate, deactivate, or adjust the element.*

PASSAGE DOOR. (HCD 1-AC) *A door other than an exit door through which persons may traverse.*

PASSENGER ELEVATOR. (HCD 1 & HCD 2) *~~"Passenger Elevator" is an~~ An elevator used primarily to carry ~~persons~~ passengers. For additional information, see California Code of Regulations, Title 8, Division 1, Chapter 4.*

PASSIVE SOLAR ENERGY COLLECTOR. (HCD 1 & HCD 2) *Uses architectural components, rather than mechanical components, to provide heating or cooling for a building interior.*

PEDESTRIAN. (HCD 1-AC) *An individual who moves within walking areas with or without the use of walking-assistive devices such as crutches, leg braces, wheelchairs, white cane, service animal, etc.*

PEDESTRIAN WAY. *A route by which a pedestrian may pass.*

PERSONS WITH DISABLITIES. (HCD 1-AC) *For purposes of Chapter 11A, "Persons with Disabilities" includes, but is not limited to, any physical or mental disability as defined in Government Code Section 12926.*

PICTOGRAM. *A pictorial symbol that represents activities, facilities, or concepts.*

PLACE OF PUBLIC ACCOMMODATION. *A facility operated by a private entity whose operations affect commerce and fall within at least one of the following categories:*

(1) Place of lodging, except for an establishment located within a facility that contains not more than five rooms for rent or hire and that actually is occupied by the proprietor of the establishment as the residence of the proprietor. For purposes of this code, a facility is a "place of lodging" if it is:

(i) An inn, hotel, or motel; or

(ii) A facility that:

(A) Provides guest rooms for sleeping for stays that primarily are short-term in nature (generally 30 days or less) where the occupant does not have the right to return to a specific room or unit after the conclusion of his or her stay; and

(B) Provides guest rooms under conditions and with amenities similar to a hotel, motel, or inn, including the following:

(1) On- or off-site management and reservations service;

(2) Rooms available on a walk-up or call-in basis;

(3) Availability of housekeeping or linen service; and

(4) Acceptance of reservations for a guest room type without guaranteeing a particular unit or room until check-in, and without a prior lease or security deposit.

(2) A restaurant, bar, or other establishment serving food or drink;

(3) A motion picture house, theater, concert hall, stadium, or other place of exhibition or entertainment;

(4) An auditorium, convention center, lecture hall, or other place of public gathering;

(5) A bakery, grocery store, clothing store, hardware store, shopping center, or other sales or rental establishment;

(6) A laundromat, dry-cleaner, bank, barber shop, beauty shop, travel service, shoe repair service, funeral parlor, gas station, office of an accountant or lawyer, pharmacy, insurance office, professional office of a health care provider, hospital, or other service establishment;

(7) A terminal, depot, or other station used for specified public transportation;

(8) A museum, library, gallery, or other place of public display or collection;

(9) A park, zoo, amusement park, or other place of recreation;

(10) A nursery, elementary, secondary, undergraduate, or postgraduate private school, or other place of education;

(11) A day care center, senior citizen center, homeless shelter, food bank, adoption agency, or other social service center establishment; and

(12) A gymnasium, health spa, bowling alley, golf course, or other place of exercise or recreation;

(13) A religious facility;

(14) An office building;

(15) A public curb or sidewalk.

PLATFORM (WHEELCHAIR) LIFT. *A hoisting and lowering mechanism equipped with a car or platform, or support, which serves two landings of a building or structure and is designed to carry a passenger or passengers and/or luggage or other material a vertical distance as may be allowed.*

POWDER ROOM. *A room containing a water closet (toilet) and a lavatory, and which is not defined as a bathroom.*

PRIMARY ENTRY. (HCD 1-AC) *The principal entrance through which most people enter the building, as designated by the building official.*

PRIMARY ENTRY LEVEL. (HCD 1-AC) *The floor or level of the building on which the primary entry is located.*

PUBLIC ENTITY. *Any State or local government; any department, agency, special-purpose district, or other instrumentality of a State or local government.*

PUBLIC HOUSING. *Housing facilities owned and/or operated by, for or on behalf of a public entity including but not limited to the following:*

1. *Publically owned and/or operated one- or two- family dwelling units or congregate residences;*
2. *Publically owned and/or operated buildings or compiexes with three or more residential dwellings units;*
3. *Reserved*
4. *Publically owned and/or operated homeless shelters, group homes and similar social service establishments;*
5. *Publically owned and/or operated transient lodging, such as hotels, motels, hostels and other facilities providing accommodations of a short term nature of not more than 30 days duration;*
6. *Housing at a place of education owned or operated by a public entity, such as housing on or serving a public school, public coliege or public university campus;*
7. *Privately owned housing made available for public use as housing.*

PUBLIC USE AREAS. (HCD 1-AC) *Interior or exterior rooms or spaces of a building <u>or facility</u> that are made available to the general public and do not include common use areas. Public use areas may be provided at a building <u>or facility</u> that is privately or publicly owned.*

RECOMMEND. (HCD 1 & HCD 2) *Does not require mandatory acceptance, but identifies a suggested action that shall be considered for the purpose of providing a greater degree of accessibility to persons with disabilities.*

RISER. *The upright part between two adjacent stair treads.*

RUNNING SLOPE. *The slope that is parallel to the direction of travel. (As differentiated from the definition of "Cross Slope".)*

SANITARY FACILITY. (HCD 1 & HCD 1-AC) *Any single water closet, urinal, lavatory, bathtub or shower, or a combination thereof, together with the room or space in which they are housed.*

SHOULD. (HCD 1 & HCD 2) *See "Recommend."*

SIDEWALK. *A surfaced pedestrian way contiguous to a street used by the public. (As differentiated from the definition of "Walk.")*

SINGLE-ACCOMMODATION SANITARY FACILITY. (HCD 1-AC) *A room that has not more than one of each type of sanitary fixture, is intended for use by only one person at a time, has no partition around the toilet, and has a door that can be locked on the inside by the room occupant.*

SITE DEVELOPMENT. (HCD 1-AC) *"On-site" and "Off-site" work, including, but not limited to, walks, sidewalks, ramps, curbs, curb ramps, parking facilities, stairs, planting areas, pools, promenades, exterior gathering or assembly areas and raised or depressed paved areas.*

SINK. *A fixed bowl or basin with running water and drainpipe, as in a kitchen or laundry, for washing dishes, clothing, etc. (As differentiated from the definition of "Lavatory".)*

SLEEPING ACCOMMODATIONS. *Rooms intended and designed for sleeping.*

SLOPE. (HCD 1-AC) *The relative steepness of the land between two points and is calculated as follows:*

The horizontal distance and elevation change between the two points (e.g., an entrance and a passenger loading zone). The difference in elevation is divided by the distance and the resulting fraction is multiplied by 100 to obtain the percentage of slope.

For example: if a principal entrance is 10 feet (3048 mm) from a passenger loading zone, and the principal entrance is raised 1 foot (305 mm) higher than the passenger loading zone, then the slope is 1/10 100 = 10 percent.

SPACE. *A definable area, e.g., a room, toilet room, hall, assembly area, entrance, storage room, alcove, courtyard, or lobby.*

TACTILE. *An object that can be perceived using the sense of touch.*

TACTILE SIGN. *A sign containing raised characters and/or symbols and accompanying Braille.*

TEXT TELEPHONE. *Machinery or equipment that employs interactive text-based communications through the transmission of coded signals across the standard telephone network. Text telephones can include, for example, devices known as TTYs (teletypewriters) or computers.*

TESTING AGENCY. (HCD 1 & HCD 2) *An agency approved by the department as qualified and equipped for testing of products, materials, equipment and installations in accordance with nationally recognized standards. For additional information, see Health and Safety Code Section 17920(m).*

TRANSIENT LODGING. *A building or facility containing one or more guest room(s) for sleeping that provides accommodations that are primarily short-term in nature. Transient lodging does not include residential dwelling units intended to be used as a residence, inpatient medical care facilities, licensed long-term care facilities, detention or correctional facilities, or private buildings or facilities that contain no more than five rooms for rent or hire and that are actually occupied by the proprietor as the residence of such proprietor.*

TREAD. *The horizontal part of a step.*

TTY. *An abbreviation for teletypewriter. Machinery that employs interactive text-based communication through the transmission of coded signals across the telephone network. TTYs may include, for example, devices known as TDDs (telecommunication display devices or telecommunication devices for deaf persons) or computers with special modems. TTYs are also called text telephones.*

UNREASONABLE HARDSHIP. *When the enforcing agency finds that compliance with the building standard would make the specific work of the project affected by the building standard infeasible, based on an overall evaluation of the following factors:*

1. *The cost of providing access.*
2. *The cost of all construction contemplated.*
3. *The impact of proposed improvements on financial feasibility of the project.*

4. *The nature of the accessibility, which would be gained or lost.*

5. *The nature of the use of the facility under construction and its availability to persons with disabilities.*

The details of any finding of unreasonable hardship shall be recorded and entered in the files of the enforcing agency.

VEHICULAR OR PEDESTRIAN ARRIVAL POINTS. (HCD 1-AC) *Public or resident parking areas, public transportation stops, passenger loading zones, and public streets or sidewalks.*

VEHICULAR WAY. *A route provided for vehicular traffic, such as in a street, driveway, or parking facility.*

WALK. (HCD 1-AC) *A surfaced pedestrian way not located contiguous to a street used by the public. (See definition for "Sidewalk.")*

WHEELCHAIR. (HCD 1-AC) *A chair mounted on wheels to be propelled by its occupant manually or with the aid of electric power, of a size and configuration conforming to the recognized standard models of the trade.*

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

4. HCD proposes to not adopt the following Chapter 2 definitions from the 2015 International Building Code:

~~**ACCESSIBLE.** A site, building, facility or portion thereof that complies with Chapter 11.~~

~~**ACCESSIBLE ROUTE.** A continuous, unobstructed path that complies with Chapter 11.~~

~~**ACCESSIBLE UNIT.** A dwelling unit or sleeping unit that complies with this code and the provisions for Accessible units in ICC A117.1.~~

~~**COMMON USE.** Interior or exterior circulation paths, rooms, spaces or elements that are not for public use and are made available for the shared use of two or more people.~~

CONCRETE.
.... (No change to text)
Cellular. ~~A lightweight insulating concrete made by mixing a preformed foam with Portland cement slurry and having a dry unit weight of approximately 30 pcf (480 kg/m3).~~ ***See CELLULAR CONCRETE.***

~~**DETECTABLE WARNING.** A standardized surface feature built in or applied to walking surfaces or other elements to warn visually impaired persons of hazards on a circulation path.~~

~~**INTENDED TO BE OCCUPIED AS A RESIDENCE.** This refers to a dwelling unit or sleeping unit that can or will be used all or part of the time as the occupant's place of abode.~~

~~**LODGING HOUSE.** A one-family dwelling where one or more occupants are primarily permanent in nature and rent is paid for guest rooms.~~

~~**MULTILEVEL ASSEMBLY SEATING.** Seating that is arranged in distinct levels where each level is comprised of either multiple rows, or a single row of box seats accessed from a separate level.~~

~~**MULTISTORY UNITS.** A dwelling unit or sleeping unit with habitable space located on more than one story.~~

~~**PUBLIC USE AREAS.** Interior or exterior rooms or spaces that are made available to the general public.~~

~~**SELF-SERVICE STORAGE FACILITY.** Real property designed and used for the purpose of renting or leasing individual storage spaces to customers for the purpose of storing and removing personal property on a self-service basis.~~

~~**TYPE A UNIT.** A dwelling unit or sleeping unit designed and constructed for accessibility in accordance with this code and the provisions for Type A units in ICC A117.1.~~

~~**TYPE B UNIT.** A dwelling unit or sleeping unit designed and constructed for accessibility in accordance with this code and the provisions for Type B units in ICC A117.1, consistent with the design and construction requirements of the federal Fair Housing Act.~~

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

5. HCD proposes to adopt Chapter 3, except Section 308.3, from the 2015 International Building Code into the 2016 California Building Code, with new and existing amendments as follows:

CHAPTER 3
USE AND OCCUPANCY CLASSIFICATION

SECTION 302
CLASSIFICATION

302.1 General. Structures or portions of structures shall be classified with respect to occupancy in one or more of the groups listed in this section. A room or space that is intended to be occupied at different times for different purposes shall comply with all of the requirements that are applicable to each of the purposes for which the room or space will be occupied. Structures with multiple occupancies or uses shall comply with Section 508. Where a structure is proposed for a purpose that is not specifically provided for in this code, such structure shall be classified in the group that the occupancy most nearly resembles, according to the fire safety and relative hazard involved.

1. Assembly (see Section 303): Groups A-1, A-2, A-3, A-4 and A-5
2. Business (see Section 304): Group B
3. Educational (see Section 305): Group E
4. Factory and Industrial (see Section 306): Groups F-1 and F-2
5. High Hazard (see Section 307): Groups H-1, H-2, H-3, H-4 and H-5
6. Institutional (see Section 308): Groups I-1, I-2, I-3 and I-4.
7. *(SFM) Laboratory (see Section 202): Group B, unless classified as Group L (see Section 443) or Group H (see Section 307).*
8. Mercantile (see Section 309): Group M
9. *(SFM) Organized Camps (see Section 440): Group C10.*
10. *(SFM) Research Laboratories (see Section 443): Group L*
11. Residential (see Section 310): Groups R-1, R-2, *R-2.1,* R-3, *R-3.1* and R-4
12. Storage (see Section 311): Groups S-1 and S-2
13. Utility and Miscellaneous (see Section 312): Group U

SECTION 305
EDUCATIONAL GROUP E

305.2.3 Five or fewer children in a dwelling unit. A facility such as the above within a dwelling unit and having five or fewer children receiving such day care shall be classified as a Group R-3 occupancy or shall comply with the ~~International~~ *California* Residential Code.

SECTION 310
RESIDENTIAL GROUP R

310.1 Residential Group R. Residential Group R includes, among others, the use of a building or structure, or a portion thereof, for sleeping purposes when not classified as an Institutional Group I or when not regulated by the ~~International~~ *California* Residential Code.

310.3 Residential Group R-1. Residential occupancies containing sleeping units where the occupants are primarily transient in nature, including:

Boarding houses (transient) with more than 10 occupants
Congregate living facilities (transient) with more than 10 occupants
Hotels (transient)
Motels (transient)
***(HCD 1)** Efficiency dwelling units (transient)*

310.4 Residential Group R-2. Residential occupancies containing sleeping units or more than two dwelling units where the occupants are primarily permanent in nature, including:

Apartment houses
Boarding houses (nontransient) with more than 16 occupants
Congregate living facilities (nontransient) with more than 16 occupants
Convents
Dormitories
Fraternities and sororities
Hotels (nontransient)
Live/work units
Monasteries
Motels (nontransient)
Vacation timeshare properties
***(HCD 1)** Efficiency dwelling units (nontransient)*

310.5 Residential Group R-3. Residential occupancies where the occupants are primarily permanent in nature and not classified as Group R-1, R-2, *R-2.1, R-3.1,* R-4 or I, including:

Buildings that do not contain more than two dwelling units
Boarding houses (nontransient) with 16 or fewer occupants
Boarding houses (transient) with 10 or fewer occupants
Care facilities that provide accommodations for ~~five~~ *six* or fewer ~~persons~~ *clients* receiving care
Congregate living facilities (nontransient) with 16 or fewer occupants
Congregate living facilities (transient) with 10 or fewer occupants
***(HCD 1)** Efficiency dwelling units.*

310.5.2 Lodging houses. Owner-occupied lodging houses with five or fewer guest rooms shall be permitted to be constructed in accordance with the ~~International~~ *California* Residential Code.

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

6. HCD proposes to adopt Chapter 4 from the 2015 International Building Code into the 2016 California Building Code with new and existing amendments as follows:

CHAPTER 4
SPECIAL DETAILED REQUIREMENTS BASED ON USE AND OCCUPANCY

SECTION 406
MOTOR-VEHICLE-RELATED OCCUPANCIES

406.3.2 Clear height. In private garages and carports, the clear height in vehicle and pedestrian traffic areas shall be not less than 7 feet (2134 mm). ~~Vehicle and pedestrian areas accommodating van accessible parking shall comply with Section 1106.5.~~ *(HCD 1-AC) The clear height of vehicle and pedestrian areas required to be accessible shall comply with Chapter 11A.*

406.3.6 (Formerly 406.3.5) Automatic garage door openers. Automatic garage door openers, where provided, shall be listed in accordance with UL 325. *See Health and Safety Code Sections 19890 and 19891 for additional provisions for residential garage door openers.*

406.4.1 Clear height. The clear height of each floor level in vehicle and pedestrian traffic areas shall not be less than 7 feet (2134 mm). ~~Vehicle and pedestrian areas accommodating van accessible parking shall comply with Section 1106.5.~~ *(HCD 1-AC) The clear height of vehicle and pedestrian areas required to be accessible shall comply with Chapter 11A.*

406.6.2 Ventilation. A mechanical ventilation system shall be provided in accordance with the ~~International~~ *California* Mechanical Code.

406.8.2 Ventilation. Repair garages shall be mechanically ventilated in accordance with the ~~International~~ *California* Mechanical Code. The ventilation system shall be controlled at the entrance to the garage.

406.8.4 Heating equipment. Heating equipment shall be installed in accordance with the ~~International~~ *California* Mechanical Code.

SECTION 409
MOTION PICTURE PROJECTION ROOMS

409.3 Projection room and equipment ventilation. Ventilation shall be provided in accordance with the ~~International~~ *California* Mechanical Code.

SECTION 414
HAZARDOUS MATERIALS

414.1.2 Materials. The safe design of hazardous material occupancies is material dependent. Individual material requirements are also found in Sections 307 and 415, and in the ~~International~~ *California* Mechanical Code and the ~~International~~ *California* Fire Code.

414.3 Ventilation. Rooms, areas or spaces in which explosive, corrosive, combustible, flammable or highly toxic dusts, mists, fumes, vapors or gases are or may be emitted due to the processing, use, handling or storage of materials shall be mechanically ventilated where required by this code, the ~~International~~ *California* Fire Code or the ~~International~~ *California* Mechanical Code.

Emissions generated at workstations shall be confined to the area in which they are generated as specified in the ~~International~~ *California* Fire Code and the ~~International~~ *California* Mechanical Code.

SECTION 415
GROUPS H-1, H-2, H-3, H-4 AND H-5

415.9.1 (Formerly 415.8.2) Flammable and combustible liquids. The storage, handling, processing and transporting of flammable and combustible liquids in Group H-2 and H-3 occupancies shall be in accordance with

Sections 415.9.1.1 through 415.9.1.9, the ~~International~~ *California* Mechanical Code and the ~~International~~ *California* Fire Code.

415.9.1.7 (Formerly 415.8.2.7) Room ventilation. Storage tank areas storing Class I, II or IIIA liquids shall be provided with mechanical ventilation. The mechanical ventilation system shall be in accordance with the ~~International~~ *California* Mechanical Code and the ~~International~~ *California* Fire Code.

415.9.2 (Formerly 415.8.3) Liquefied petroleum gas facilities. The construction and installation of liquefied petroleum gas facilities shall be in accordance with the requirements of this code, the ~~International~~ *California* Fire Code, the ~~International~~ *California* Mechanical Code, the ~~International Fuel Gas~~ *California* Plumbing Code and NFPA 58.

415.9.3 (Formerly 415.8.4) Dry cleaning plants. The construction and installation of dry cleaning plants shall be in accordance with the requirements of this code, the ~~International~~ *California* Mechanical Code, the ~~International~~ *California* Plumbing *Code* and NFPA 32. Dry cleaning solvents and systems shall be classified in accordance with the ~~International~~ *California* Fire Code.

415.11.11 (Formerly 415.10.11) Automatic sprinkler system protection in exhaust ducts for HPM. An approved automatic sprinkler system shall be provided in exhaust ducts conveying gases, vapors, fumes, mists or dusts generated from HPM in accordance with Sections 415.11.11.1 through 415.11.11.3 and the ~~International~~ *California* Mechanical Code.

SECTION 416
APPLICATION OF FLAMMABLE FINISHES

416.2.2 Ventilation. Mechanical ventilation and interlocks with the spraying operation shall be in accordance with the ~~International~~ *California* Mechanical Code.

416.3 Spraying spaces. Spraying spaces shall be ventilated with an exhaust system to prevent the accumulation of flammable mist or vapors in accordance with the ~~International~~ *California* Mechanical Code. Where such spaces are not separately enclosed, noncombustible spray curtains shall be provided to restrict the spread of flammable vapors.

SECTION 417
DRYING ROOMS

417.1 General. A drying room or dry kiln installed within a building shall be constructed entirely of approved noncombustible materials or assemblies of such materials regulated by the approved rules or as required in the general and specific sections of this chapter for special occupancies and where applicable to the general requirements of the ~~International~~ *California* Mechanical Code.

SECTION 419
LIVE/WORK UNITS

419.7 Accessibility. Accessibility shall be designed in accordance with ~~Chapter 11~~ *Chapter 11A* for the function served.

419.8 Ventilation. The applicable ventilation requirements of the ~~International~~ *California* Mechanical Code shall apply to each area within the live/work unit for the function within that space.

419.9 Plumbing facilities. The nonresidential area of the live/work unit shall be provided with minimum plumbing facilities as specified by ~~Chapter 29~~ *the California Plumbing Code*, based on the function of the nonresidential area. Where the nonresidential area of the live/work unit is required to be accessible ~~by Section 1103.2.13~~, the plumbing fixtures specified by ~~Chapter 29~~ *the California Plumbing Code* shall be accessible.

SECTION 420
GROUPS I-1, R-1, R-2, R-3

420.7 (HCD 1) Construction waste management. *Recycle and/or salvage for reuse a minimum of ~~50~~ 65 percent of the nonhazardous construction and demolition waste in accordance with the California Green Building Standards Code (CALGreen), Chapter 4, Division 4.4.*

420.8 Special provisions for residential hotels. (HCD1 & HCD 1-AC)

420.8.1 Locking mail receptacles. *A locking mail receptacle for each residential unit shall be provided in all residential hotels pursuant to the requirements specified in Health and Safety Code Section 17958.3.*

420.9 (HCD 1) Electric vehicle (EV) charging for new construction. *Newly constructed Group R-2 and R-3 buildings shall be provided with an infrastructure to facilitate future installation and use of electric vehicle (EV) chargers in accordance with the California Green Building Standards Code (CALGreen), Chapter 4, Division 4.1.*

SECTION 421
HYDROGEN FUEL GAS ROOMS

421.5 Exhaust ventilation. Hydrogen fuel gas rooms shall be provided with mechanical exhaust ventilation in accordance with the applicable provisions of Section 502.16.1 of the ~~International~~ *California* Mechanical Code.

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

7. HCD proposes to repeal and not bring forward Section 420.6 from the 2013 California Building Code.

CHAPTER 4
SPECIAL DETAILED REQUIREMENTS BASED ON USE AND OCCUPANCY

SECTION 420
GROUPS I-1, R-1, R-2, R-3

~~***420.6 Carbon monoxide alarms. (HCD1, HCD2 & HCD1-AC)***~~

~~***420.6.1 Carbon monoxide alarms in new construction.*** *Newly constructed Group R occupancies located in a building containing a fuel-burning appliance or a building that has an attached garage shall be equipped with single station carbon monoxide alarms. The carbon monoxide alarms shall be listed as complying with UL 2034 and shall be installed and maintained in accordance with NFPA 720 and the manufacturer's instructions. An open parking garage, as defined in the California Building Code, or an enclosed parking garage ventilated in accordance with the California Mechanical Code shall not be deemed to be an attached garage.*~~

~~***Exception:*** *Sleeping units or dwelling units that do not themselves contain a fuel-burning appliance or have an attached garage, but that are located in a building with a fuel-burning appliance or an attached garage, need not be provided with single station carbon monoxide alarms provided that:*~~
~~*1. The sleeping unit or dwelling unit is located more than one story above or below any story that contains a fuel-burning appliance or an attached garage; and*~~
~~*2. The sleeping unit or dwelling unit is not connected by duct work or ventilation shafts to any room containing a fuel-burning appliance or to an attached garage; and*~~
~~*3. The building is equipped with a common area carbon monoxide detection system that includes all enclosed common area spaces.*~~

~~***420.6.1.1 Carbon monoxide detection systems.*** *Carbon monoxide detection systems that include carbon monoxide detectors and audible notification appliances installed and maintained in accordance with this section for carbon monoxide alarms and NFPA 720 shall be permitted. The carbon monoxide detectors shall be listed as complying with UL 2075.*~~

~~**420.6.1.2 Power supply.** Carbon monoxide alarms shall receive their primary power from the building wiring where such wiring is served from a commercial source and shall be equipped with a battery back-up. Alarm wiring shall be directly connected to the permanent building wiring without a disconnecting switch other than as required for overcurrent protection.~~

~~**Exceptions:**~~

~~1. Where there is no commercial power supply, the carbon monoxide alarm may be solely battery operated.~~

~~2. Other power sources recognized for use by NFPA 720.~~

~~**420.6.1.3 Interconnection.** Where more than one carbon monoxide alarm is required to be installed within the dwelling unit or within a sleeping unit, the alarm shall be interconnected in a manner that activation of one alarm shall activate all of the alarms in the individual unit.~~

~~**420.6.1.4 Alarm requirements.** No person shall install, market, distribute, offer for sale, or sell any carbon monoxide device in the State of California unless the device and instructions have been approved and listed by the State Fire Marshal.~~

~~Carbon monoxide alarms required by Section 420.6.1 shall be installed and maintained in the following locations:~~

~~1. Outside of each separate dwelling unit sleeping area in the immediate vicinity of the bedroom(s).~~

~~2. On every level of a dwelling unit including basements.~~

~~3. Group R-1 Occupancies only.~~

~~a. On the ceiling of every sleeping unit or other locations within the sleeping unit in compliance with the manufacturer's installation instructions.~~

~~**420.6.1.5 Multiple-purpose alarms.** Carbon monoxide alarms combined with smoke alarms shall comply with Section 420.6, all applicable standards, and requirements for listing and approval by the Office of the State Fire Marshal, for smoke alarms.~~

~~**420.6.1.6 Visible alarms.** In buildings containing covered multifamily dwellings as defined in Chapter 2, with fuel-burning appliances and/or attached garages as described in Section 420.6.1, all required carbon monoxide alarms shall be equipped with the capability to support visible alarm notification in accordance with NFPA 720.~~

~~**420.6.2 Carbon monoxide alarms in existing dwellings or sleeping units.** Existing Group R occupancies located in a building with a fossil fuel-burning heater or appliance, fireplace or an attached garage shall have single station carbon monoxide alarms installed in accordance with this section. The carbon monoxide alarms shall be listed as complying with UL 2034 and be installed and maintained in accordance with NFPA 720 and the manufacturer's instructions.~~
~~An open parking garage, as defined in the California Building Code, or an enclosed parking garage ventilated in accordance with the California Mechanical Code shall not be deemed to be an attached garage.~~

~~**Exception:** Sleeping units or dwelling units that do not themselves contain a fossil fuel-burning heater or appliance, fireplace or an attached garage, but that are located in a building with a fossil fuel-burning appliance or an attached garage, need not be provided with single station carbon monoxide alarms provided that:~~
~~1. The sleeping unit or dwelling unit is located more than one story above or below any story that contains a fuel-burning appliance or an attached garage; and~~
~~2. The sleeping unit or dwelling unit is not connected by duct work or ventilation shafts to any room containing a fuel-burning appliance or to an attached garage; and~~
~~3. The building is equipped with a common area carbon monoxide detection system, carbon monoxide detector or combination detector in the same space as permanently installed fuel-burning appliance(s).~~

~~**420.6.2.1 Carbon monoxide detection systems.** Carbon monoxide detection systems that include carbon monoxide detectors and audible notification appliances, installed and maintained in accordance with this section for carbon monoxide alarms and NFPA 720 shall be permitted. The carbon monoxide detectors shall be listed as complying with UL 2075.~~

~~**420.6.2.2 Existing dwellings or sleeping units requiring a permit.** When a permit is required for alterations, repairs or additions with a total cost or calculated valuation exceeding one thousand dollars ($1,000), existing dwellings or sleeping units with a fossil fuel-burning heater or appliance, fireplace or an attached garage shall have a carbon monoxide alarm installed in accordance with Section 420.4.2 420.6.2. Carbon monoxide alarms shall only be required in the specific dwelling unit or sleeping unit for which the permit was obtained.~~

~~**420.6.2.3 Existing dwellings or sleeping units not requiring a permit (no construction taking place).** Pursuant to Health and Safety Code Section 17926, a carbon monoxide alarm(s) shall be installed in every existing dwelling unit or sleeping unit with a fossil fuel-burning heater or appliance, fireplace or an attached garage as follows:~~

~~**420.6.2.3.1 Carbon monoxide alarms on or after July 1, 2011.** Carbon monoxide alarms shall be installed in accordance with Section 420.6.2 in existing detached single-family dwellings or sleeping units intended for human occupancy that have a fossil fuel-burning heater or appliance, fireplace or an attached garage. Carbon monoxide alarms in existing buildings are permitted to be solely battery operated or plug-in type with battery back-up in areas where no construction is taking place.~~

~~**420.6.2.3.2 Carbon monoxide alarms on or after January 1, 2013.** Carbon monoxide alarms shall be installed in accordance with Section 420.4.2 420.6.2 in all other existing dwelling units intended for human occupancy as defined in Health and Safety Code Section 13262(b) that have a fossil fuel-burning heater or appliance, fireplace or an attached garage. Carbon monoxide alarms in existing buildings are permitted to be solely battery operated or plug-in type with battery back-up in areas where no construction is taking place.~~

~~**Note:** See Section 420.6.2.3.3, which extends the required carbon monoxide alarms installation date for existing hotel and motel dwelling units intended for human occupancy.~~

~~**420.6.2.3.3 Carbon monoxide alarms on or after January 1, 2016.** Carbon monoxide alarms shall be installed in accordance with Section 420.6.2 in existing hotel and motel dwelling units intended for human occupancy as defined in Health and Safety Code Section 13262(b) that have a fossil fuel-burning heater or appliance, fireplace or an attached garage. Carbon monoxide alarms in existing buildings are permitted to be solely battery operated or plug-in type with battery back-up in areas where no construction is taking place.~~

~~**420.6.2.4 Power supply.** Carbon monoxide alarms shall receive their primary power from the building wiring where such wiring is served from a commercial source and shall be equipped with battery back-up. Alarm wiring shall be directly connected to the permanent building wiring without a disconnecting switch other than as required for overcurrent protection.~~

~~**Exceptions:**~~

~~1. In existing dwelling units where there is no commercial power supply, the carbon monoxide alarm may be solely battery operated.~~

~~2. In existing dwelling units, a carbon monoxide alarm is permitted to be solely battery operated or plug-in with a battery backup where repairs or alterations do not result in the removal of wall and ceiling finishes.~~

~~3. In existing dwelling units, a carbon monoxide alarm is permitted to be solely battery operated or plug-in with battery backup where repairs or alterations are limited to the exterior surfaces of dwellings, such as the replacement of roofing or siding, or the addition or replacement of windows or doors, or the addition of a porch or deck.~~

~~4. In existing dwelling units, a carbon monoxide alarm is permitted to be solely battery operated or plug-in with battery backup when work is limited to the installation, alteration or repair of plumbing or mechanical systems or the installation, alteration or repair of electrical systems, which do not result in the removal of interior wall or ceiling finishes exposing the structure.~~

~~5. Other power sources recognized for use by NFPA 720.~~

~~***420.6.2.5 Interconnection.*** *Where more than one carbon monoxide alarm is required to be installed within the dwelling unit or within a sleeping unit, the alarm shall be interconnected in a manner that activation of one alarm shall activate all of the alarms in the individual unit.*~~

~~***Exceptions:***~~

~~*1. In existing dwelling units or within sleeping units, interconnection is not required where repairs do not result in the removal of wall and ceiling finishes and no previous method for interconnection existed.*~~

~~*2. In existing dwelling units, carbon monoxide alarms are not required to be interconnected where no construction is taking place.*~~

~~*3. In existing dwelling units, carbon monoxide alarms are not required to be interconnected where repairs or alterations are limited to the exterior surfaces of dwellings, such as the replacement of roofing or siding, or the addition or replacement of windows or doors, or the addition of a porch or deck.*~~

~~*4. In existing dwelling units, carbon monoxide alarms are not required to be interconnected when work is limited to the installation, alteration or repair of plumbing or mechanical systems or the installation, alteration or repair of electrical systems, which do not result in the removal of interior wall or ceiling finishes exposing the structure.*~~

~~***420.6.2.6 Alarm requirements.*** *No person shall install, market, distribute, offer for sale, or sell any carbon monoxide device in the State of California unless the device and instructions have been approved and listed by the State Fire Marshal.*~~

~~*Carbon monoxide alarms required by Section 420.4.2 420.6.2 shall be installed and maintained in the following locations:*~~

~~*1. Outside of each separate dwelling unit sleeping area in the immediate vicinity of the bedroom(s).*~~

~~*2. On every level of a dwelling unit including basements.*~~

~~*3. Group R-1 Occupancies only.*~~

~~*a. On the ceiling of every sleeping unit or other locations within the sleeping unit in compliance with the manufacturer's installation instructions.*~~

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

8. HCD proposes to adopt Chapter 5 from the 2015 International Building Code into the 2016 California Building Code with existing amendment as follows:

CHAPTER 5
GENERAL BUILDING HEIGHTS AND AREAS

SECTION 503
GENERAL BUILDING HEIGHT AND AREA LIMITATIONS

503.1 General. Unless otherwise specifically modified in Chapter 4 and this chapter, building height, number of stories and building area shall not exceed the limits specified in Sections 504 and 506 based on the type of construction as determined by Section 602 and the occupancies as determined by Section 302 except as modified

hereafter. Building height, number of stories and building area provisions shall be applied independently. Each portion of a building separated by one or more fire walls complying with Section 706 shall be considered to be a separate building.

Exception: (HCD 1) *Limited-density owner-built rural dwellings may be of any type of construction which will provide for a sound structural condition. Structural hazards which result in an unsound condition and which may constitute a substandard building are delineated by Section 17920.3 of the Health and Safety Code.*

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11, and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

9. HCD proposes to adopt Chapter 6 from the 2015 International Building Code into the 2016 California Building Code with existing and modified existing amendments as follows:

CHAPTER 6
TYPES OF CONSTRUCTION

SECTION 603
COMBUSTIBLE MATERIAL IN TYPE I AND II CONSTRUCTION

603.1 Allowable materials. Combustible materials shall be permitted in buildings of Type I or Type II construction in the following applications and in accordance with Sections 603.1.1 through 603.1.3:

1. Fire-retardant-treated wood shall be permitted in:

   .... (No change to text)

25. Materials exposed within plenums complying with Section 602 of the ~~*International*~~ *California Mechanical Code.*

    .... (No change to text)

603.1.1 Ducts. The use of nonmetallic ducts shall be permitted where installed in accordance with the limitations of the ~~International~~ *California* Mechanical Code.

603.1.2 Piping. The use of combustible piping materials shall be permitted where installed in accordance with the limitations of the ~~International~~ *California* Mechanical Code and the ~~International~~ *California* Plumbing Code.

603.1.3 Electrical. The use of electrical wiring methods with combustible insulation, tubing, raceways and related components shall be permitted when installed in accordance with the limitations of this code *and the California Electrical Code.*

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11, and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

10. HCD proposes to adopt Chapter 7 from the 2015 International Building Code into the 2016 California Building Code with new and existing amendments as follows:

CHAPTER 7
FIRE AND SMOKE PROTECTION FEATURES

SECTION 703
FIRE RESISTANCE RATINGS AND FIRE TESTS

703.4 Automatic sprinklers. Under the prescriptive fire resistance requirements of this code, the fire-resistance rating of a building element, component or assembly shall be established without the use of automatic sprinklers or any other fire suppression system being incorporated as part of the assembly tested in accordance with the fire exposure, procedures and acceptance criteria specified in ASTM E 119 or UL 263. However, this section shall not prohibit or limit the duties and powers of the building official allowed by Sections 104.10, ~~and~~ 104.11 *and 1.8.7, as applicable*.

SECTION 712
VERTICAL OPENINGS

712.1.6 (Formerly 712.1.5) Ducts and air transfer openings. Penetrations by ducts and air transfer openings shall be protected in accordance with Section 717. Grease ducts shall be protected in accordance with the ~~International~~ *California* Mechanical Code.

SECTION 717
DUCTS AND AIR TRANSFER OPENINGS

717.2.2 Hazardous exhaust ducts. Fire dampers for hazardous exhaust duct systems shall comply with the ~~International~~ *California* Mechanical Code.

717.5.3 Shaft enclosures. Shaft enclosures that are permitted to be penetrated by ducts and air transfer openings shall be protected with approved fire and smoke dampers installed in accordance with their listing.

Exceptions:

1. Fire dampers are not required at penetrations of shafts where:
   .... (No change to text)
5. Fire dampers and combination fire/smoke dampers are not required in kitchen and clothes dryer exhaust systems when installed in accordance with the ~~International~~ *California* Mechanical Code.

717.5.4 Fire partitions. Ducts and air transfer openings that penetrate fire partitions shall be protected with listed fire dampers installed in accordance with their listing.

Exceptions: In occupancies other than Group H, fire dampers are not required where any of the following apply:

1. Corridor walls in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2 and the duct is protected as a through penetration in accordance with Section 714.

   .... (No change to text)

3. The duct system is constructed of approved materials in accordance with the ~~International~~ *California* Mechanical Code and the duct penetrating the wall complies with all of the following requirements:

.... (No change to text)

717.6.1 Through penetrations. In occupancies other than Groups I-2 and I-3, a duct constructed of approved materials in accordance with the ~~International~~ *California* Mechanical Code that penetrates a fire-resistance-rated floor/ceiling assembly that connects not more than two stories is permitted without shaft enclosure protection, provided a listed fire damper is installed at the floor line or the duct is protected in accordance with Section 714.4. For air transfer openings, see Exception 7 to Section 712.1.9.

717.6.2 Membrane penetrations. Ducts and air transfer openings constructed of approved materials in accordance with the ~~International~~ *California* Mechanical Code that penetrate the ceiling membrane of a fire-resistance-rated floor/ceiling or roof/ceiling assembly shall be protected with one of the following:

... (No change to text)

717.6.3 Nonfire-resistance-rated floor assemblies. Duct systems constructed of approved materials in accordance with the ~~International~~ *California* Mechanical Code that penetrate nonfire-resistance-rated floor assemblies shall be protected by any of the following methods:

... (No change to text)

SECTION 718
CONCEALED SPACES

718.5 Combustible materials in concealed spaces in Type I or II construction. Combustible materials shall not be permitted in concealed spaces of buildings of Type I or II construction.

Exceptions:

1. Combustible materials in accordance with Section 603.
2. Combustible materials exposed within plenums complying with Section 602 of the ~~International~~ *California* Mechanical Code.

.... (No change to text)

5. Combustible piping within concealed ceiling spaces installed in accordance with the ~~International~~ *California* Mechanical Code and the ~~International~~ *California* Plumbing Code.

SECTION 720
THERMAL-AND SOUND-INSULATING MATERIALS

720.1 General. Insulating materials, including facings such as vapor retarders and vapor-permeable membranes, similar coverings and all layers of single and multilayer reflective foil insulations, shall comply with the requirements of this section. Where a flame spread index or a smoke-developed index is specified in this section, such index shall be determined in accordance with ASTM E 84 or UL 723. Any material that is subject to an increase in flame spread index or smoke-developed index beyond the limits herein established through the effects of age, moisture or other atmospheric conditions shall not be permitted.

Exceptions:

1. Fiberboard insulation shall comply with Chapter 23.

.... (No change to text)

3. Duct and pipe insulation and duct and pipe coverings and linings in plenums shall comply with the ~~International~~ *California* Mechanical Code.

.... (No change to text)

720.7 Insulation and covering on pipe and tubing. Insulation and covering on pipe and tubing shall have a flame spread index of not more than 25 and a smoke-developed index of not more than 450.

Exception: Insulation and covering on pipe and tubing installed in plenums shall comply with the ~~International~~ *California* Mechanical Code.

SECTION 721
PRESCRIPTIVE FIRE RESISTANCE

721.2 Cellular concrete. (HCD 1 & HCD 2)

721.2.1 Use and application. (HCD 1 & HCD 2) *Controlled-density cellular concrete, when used or applied, shall be in accordance with the use of materials in Bulletin No. 65 of the Federal Housing Administration, United States Department of Housing and Urban Development.*

Exceptions:

1. *Regardless of the provisions of Subsections 3.2, 3.3, 3.4 and 3.6 in Section 3, Bulletin No. 65 provisions relating to proportioning, mixing and testing, in the following shall apply to this chapter.*

   1.1. *Field-control weighings for control of the wet-unit weight shall be made. The design wet-unit weight for field control of the concrete shall be based on previously established data for the relation between the wet-unit weight and the air-dry-unit weight at 28 days for the mix being placed. Field-control weighings for determining the wet-unit weight shall be made at the mixer discharge and at the point of deposit. There should be one pair of weighings per batch for batch-type mixers unless equipment is provided with scales allowing the operator to adequately weigh materials.*

   For continuous weight-instrumented batch mixers, there should be one pair of weighings per 10 cubic yards (7.65 m^3). The gain in unit weight between the mixer discharge and point of deposit shall not exceed 5 percent. The wet-unit weight at the point of deposit of the concrete shall not exceed plus 5 percent of the design wet-unit weight. A variation exceeding plus 5 percent of the design wet-unit weight shall require a modification of the mix proportions, a change of materials or a change in the mixing procedure.

   1.2. *When tests are required by the enforcing agency, they shall be performed in the following manner:*
   Two test cylinders, for compressive strength tests, shall be made for each 8,000 square feet (743 m2) of surface area placed. A minimum of two test cylinders shall be made each day. Each strength test result shall be the average of two cylinders from the same sample tested at 28 days or at a specified earlier date.

   1.3. *The minimum air-dry density shall be 90 pounds per cubic foot (1,440 kg/m^3). The minimum design compressive strength shall be 1,000 psi (6,890 kPa) when the curing procedure specified herein is applied. The minimum design compressive strength shall be 1,250 psi (8,619 kPa) if the slab is placed in a covered area of a building and a specified curing medium is not applied. The specified design compressive strength shall be increased 20 percent when the specified strength is greater than 1,000 psi (6,890 kPa) and the slab is placed in a covered area of a building and a specified curing medium is not applied.*

   1.4. *The cellular concrete shall be sampled at the point of deposit in accordance with the applicable procedures of ASTM C 172, Sampling Fresh Concrete. Cylinder molds shall be either 3 inches by 6 inches (76 mm by 152 mm) or 6 inches by 12 inches (152 mmby 305 mm). Lightly tap the sides of the mold with a rubber hammer while filling the mold instead of rodding the mix. Moist cure the specimens for seven days at 73.4°F (40.8°C) plus or minus 3°F (1.7°C). At the age of seven days, remove the specimens from the moist condition and store in a temperature of 73.4°F (40.8°C) plus or minus 3°F (1.7°C) and a relative humidity of 50 plus or minus 10 percent for 21 days; remove and air dry until the time of test at 28 days. The compressive strength test shall be in accordance with ASTM C 39, Compressive Strength of Cylindrical Concrete Specimens. Determine the air-dry-unit weight at 28 days.*

2. *Regardless of the provisions of Subsections 4.1 and 4.2 in Section 4 of Bulletin No. 65, relating to placing, finishing and curing, the following shall apply to these regulations.*

   2.1. *The concrete shall be placed, finished and cured to produce a level, smooth surface. The concrete shall be placed in a single layer to a minimum thickness of 11/2 inches (38 mm). The deviation from a plan shall not exceed 1/4 inch (6 mm) in any 10 feet (3048 mm). The final finish of the concrete shall be suitable for the application of the specified wear- resistant covering. Cracks wider than 1/8 inch (3 mm) shall be repaired.*

   2.2. *Install a water-resistant membrane between wood or plywood subfloors and the cellular concrete to prevent leakage of the concrete and wetting of the subfloor. The membrane shall consist of waterproof paper or plastic sheets conforming to ASTM C 171, Sheet Materials for Curing Concrete, or Type 15 roofing felt conforming to ASTM D 226, D 250 or D 227, or Federal Specification UUB790, Building Paper Vegetable Fiber: (Kraft, Waterproofed, Water Repellent and Fire-resistant) Type 1, Grade B. The sheets shall be securely fastened to the subfloor.*

3. Regardless of the provisions of Subsections 6.1 and 6.2 in Section 6, of Bulletin No. 65, relating to applicator qualifications and warranty, these subsections are omitted from this chapter.

NOTE
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

11. HCD proposes to adopt Chapter 8 from the 2015 International Building Code into the 2016 California Building Code without amendments:

CHAPTER 8
INTERIOR FINISHES

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

12. HCD proposes to adopt Chapter 9, except Section 908.7, from the 2015 International Building Code into the 2016 California Building Code with new and existing amendments as follows:

CHAPTER 9
FIRE PROTECTION SYSTEMS

SECTION 903
AUTOMATIC SPRINKLER SYSTEMS

903.2.11.4 Ducts conveying hazardous exhausts. Where required by the ~~International~~ *California* Mechanical Code, automatic sprinklers shall be provided in ducts conveying hazardous exhaust, or flammable or combustible materials.

Exception: Ducts in which the largest cross-sectional diameter of the duct is less than 10 inches (254 mm).

903.3.5 Water supplies. Water supplies for automatic sprinkler systems shall comply with this section and the standards referenced in Section 903.3.1. The potable water supply shall be protected against backflow in accordance with the requirements of this section and the ~~International~~ *California* Plumbing Code. For connections to public waterworks systems, the water supply test used for design of fire protection systems shall be adjusted to account for seasonal and daily pressure fluctuations based on information from the water supply authority and as approved by the fire code official.

SECTION 904
ALTERNATIVE AUTOMATIC FIRE-EXTINGUISHING SYSTEMS

904.2.2 (Formerly 904.2.1) Commercial hood and duct systems. Each required commercial kitchen exhaust hood and duct system required by Section 609 of the ~~International~~ *California* Fire Code or ~~Chapter 5 of~~ the

~~International~~ *California* Mechanical Code to have a Type I hood shall be protected with an approved automatic fire-extinguishing system installed in accordance with this code.

904.3 Installation. Automatic fire-extinguishing systems shall be installed in accordance with this section.

904.3.1 Electrical wiring. Electrical wiring shall be in accordance with ~~NFPA 70~~ *the California Electrical Code.*

904.11.1.3 Water supply protection. Connections to a potable water supply shall be protected against backflow in accordance with the ~~International~~ *California* Plumbing Code.

SECTION 907
FIRE ALARM AND DETECTION SYSTEMS

907.3.1 Duct smoke detectors. Smoke detectors installed in ducts shall be listed for the air velocity, temperature and humidity present in the duct. Duct smoke detectors shall be connected to the building's fire alarm control unit when a fire alarm system is required by Section 907.2. Activation of a duct smoke detector shall initiate a visible and audible supervisory signal at a constantly attended location and shall perform the intended fire safety function in accordance with this code and the ~~International~~ *California* Mechanical Code. In facilities that are required to be monitored by a supervising station, duct smoke detectors shall report only as a supervisory signal and not as a fire alarm. They shall not be used as a substitute for required open area detection.

907.5.2.3.3 (Formerly 907.5.2.3.4) Group R-2. In Group R-2 occupancies required by Section 907 to have a fire alarm system, all dwelling units and sleeping units shall be provided with the capability to support visible alarm notification appliances in accordance with ~~Chapter 10 of ICC A117.1~~ *NFPA 72.* Such capability shall be permitted to include the potential for future interconnection of the building fire alarm system with the unit smoke alarms, replacement of audible appliances with combination audible/visible appliances, or future extension of the existing wiring from the unit smoke alarm locations to required locations for visible appliances.

907.6.1 Wiring. Wiring shall comply with the requirements of ~~NFPA 70~~ *California Electrical Code* and NFPA 72. Wireless protection systems utilizing radio-frequency transmitting devices shall comply with the special requirements for supervision of low-power wireless systems in NFPA 72.

SECTION 908
EMERGENCY ALARM SYSTEMS

908.6 Refrigerant detector. Machinery rooms shall contain a refrigerant detector with an audible and visual alarm. The detector, or a sampling tube that draws air to the detector, shall be located in an area where refrigerant from a leak will concentrate. The alarm shall be actuated at a value not greater than the corresponding TLV-TWA values for the refrigerant classification indicated in the ~~International~~ *California* Mechanical Code. Detectors and alarms shall be placed in approved locations.

SECTION 909
SMOKE CONTROL SYSTEMS

909.1 Scope and purpose. This section applies to mechanical or passive smoke control systems when they are required by other provisions of this code. The purpose of this section is to establish minimum requirements for the design, installation and acceptance testing of smoke control systems that are intended to provide a tenable environment for the evacuation or relocation of occupants. These provisions are not intended for the preservation of contents, the timely restoration of operations or for assistance in fire suppression or overhaul activities. Smoke control systems regulated by this section serve a different purpose than the smoke- and heat-venting provisions found in Section 910. Mechanical smoke control systems shall not be considered exhaust systems under Chapter 5 of the ~~International~~ *California* Mechanical Code.

909.10.2 Ducts. Duct materials and joints shall be capable of withstanding the probable temperatures and pressures to which they are exposed as determined in accordance with Section 909.10.1. Ducts shall be constructed and supported in accordance with the ~~International~~ *California* Mechanical Code. Ducts shall be leak tested to 1.5 times the maximum design pressure in accordance with nationally accepted practices. Measured leakage shall not exceed 5 percent of design flow. Results of such testing shall be a part of the documentation

procedure. Ducts shall be supported directly from fire-resistance-rated structural elements of the building by substantial, noncombustible supports.

Exception: Flexible connections, for the purpose of vibration isolation, complying with the ~~International~~ *California* Mechanical Code, that are constructed of approved fire-resistance-rated materials.

909.12.2 (Formerly 909.12.1) Wiring. In addition to meeting requirements of ~~NFPA 70~~ *California Electrical Code*, all wiring, regardless of voltage, shall be fully enclosed within continuous raceways.

909.13.1 Materials. Control-air tubing shall be hard drawn copper, Type L, ACR in accordance with ASTM B 42, ASTM B 43, ASTM B 68, ASTM B 88, ASTM B 251 and ASTM B 280. Fittings shall be wrought copper or brass, solder type in accordance with ASME B 16.18 or ASME B16.22. Changes in direction shall be made with appropriate tool bends. Brass compression-type fittings shall be used at final connection to devices; other joints shall be brazed using a BCuP-5 brazing alloy with solidus above 1,100°F (593°C) and liquids below 1,500°F (816°C). Brazing flux shall be used on copper-to-brass joints only.

Exception: Nonmetallic tubing used within control panels and at the final connection to devices provided all of the following conditions are met:

1. Tubing shall comply with the requirements of ~~Section 602.2.1.3~~ *Chapter 6* of the ~~International~~ *California* Mechanical Code.

909.16.3 Control action and priorities. The firefighter's control panel actions shall be as follows:

1. ON-OFF and OPEN-CLOSE control actions shall have the highest priority of any control point within the building. Once issued from the fire-fighter's control panel, no automatic or manual control from any other control point within the building shall contradict the control action. Where automatic means are provided to interrupt normal, nonemergency equipment operation or produce a specific result to safeguard the building or equipment (i.e., duct freezestats, duct smoke detectors, high-temperature cutouts, temperature-actuated linkage and similar devices), such means shall be capable of being overridden by the fire-fighter's control panel. The last control panel switch position shall prevail. In no case shall control actions require the smoke control system to assume more than one configuration at any one time.

   Exception: Power disconnects required by ~~NFPA 70~~ *California Electrical Code*.

SECTION 910
SMOKE AND HEAT REMOVAL

910.4.6 Control wiring. Wiring for operation and control of mechanical smoke removal systems shall be connected ahead of the main disconnect in accordance with Section 701.12E of ~~NFPA 70~~ *the California Electrical Code* and be protected against interior fire exposure to temperatures in excess of 1,000°F (538°C) for a period of not less than 15 minutes.

910.4.7 Controls. Where building air-handling and mechanical smoke removal systems are combined or where independent building air-handling systems are provided, fans shall automatically shut down in accordance with the ~~International~~ *California* Mechanical Code. The manual controls provided for the smoke removal system shall have the capability to override the automatic shutdown of fans that are part of the smoke removal system.

SECTION 912
FIRE DEPARTMENT CONNECTIONS

912.6 (Formerly 912.5) Backflow protection. The potable water supply to automatic sprinkler and standpipe systems shall be protected against backflow as required by the ~~International~~ *California* Plumbing Code.

SECTION 915
CARBON MONOXIDE DETECTION

915.1 General. Carbon monoxide detection shall be installed in new *and existing* buildings in accordance with Sections 915.1.1 through ~~915.6~~ *915.7*. ~~Carbon monoxide detection shall be installed in existing buildings in accordance with Chapter 11 of the International Fire Code.~~

Pursuant to Health and Safety Code Section 17926, carbon monoxide detection shall be installed in all existing Group R buildings as required in Section 915.

915.1.1 Where required. Carbon monoxide detection shall be provided in Group I-1, I-2, I-4 and R occupancies and in classrooms in Group E occupancies in the locations specified in Section 915.2 where any of the conditions in Sections 915.1.2 through 915.1.6 exist.

915.1.2 Fuel-burning appliances and fuel-burning fireplaces. Carbon monoxide detection shall be provided in dwelling units, sleeping units and classrooms that contain a fuel-burning appliance or a fuel-burning fireplace.

915.1.3 Forced-air furnaces. Carbon monoxide detection shall be provided in dwelling units, sleeping units and classrooms served by a fuel-burning, forced-air furnace.

Exception: Carbon monoxide detection shall not be required in dwelling units, sleeping units and classrooms if carbon monoxide detection is provided in the first room or area served by each main duct leaving the furnace, and the carbon monoxide alarm signals are automatically transmitted to an approved location.

915.1.4 Fuel-burning appliances outside of dwelling units, sleeping units and classrooms. Carbon monoxide detection shall be provided in dwelling units, sleeping units and classrooms located in buildings that contain fuel burning appliances or fuel-burning fireplaces.

Exceptions:

1. Carbon monoxide detection shall not be required in dwelling units, sleeping units and classrooms where there are no communicating openings between the fuel-burning appliance or fuel-burning fireplace and the dwelling unit, sleeping unit or classroom.
2. Carbon monoxide detection shall not be required in dwelling units, sleeping units and classrooms where carbon monoxide detection is provided in one of the following locations:
   2.1. In an approved location between the fuel burning appliance or fuel-burning fireplace and the dwelling unit, sleeping unit or classroom.
   2.2. On the ceiling of the room containing the fuel-burning appliance or fuel-burning fireplace.

915.1.5 Private garages. Carbon monoxide detection shall be provided in dwelling units, sleeping units and classrooms in buildings with attached private garages.

Exceptions:

1. Carbon monoxide detection shall not be required where there are no communicating openings between the private garage and the dwelling unit, sleeping unit or classroom.
2. Carbon monoxide detection shall not be required in dwelling units, sleeping units and classrooms located more than one story above or below a private garage.
3. Carbon monoxide detection shall not be required where the private garage connects to the building through an open-ended corridor.
4. Where carbon monoxide detection is provided in an approved location between openings to a private garage and dwelling units, sleeping units or classrooms, carbon monoxide detection shall not be required in the dwelling units, sleeping units or classrooms.

915.1.6 Exempt garages. For determining compliance with Section 915.1.5, an open parking garage complying with Section 406.5 or an enclosed parking garage complying with Section 406.6 shall not be considered a private garage.

915.2 Locations. Where required by Section 915.1.1, carbon monoxide detection shall be installed *in accordance with the manufacturer's published instructions* in the locations specified in Sections 915.2.1 through 915.2.3.

915.2.1 Dwelling units. Carbon monoxide detection shall be installed in dwelling units *in the following locations:*

1. ~~outside~~ *Outside* of each separate sleeping area in the immediate vicinity of the bedrooms.

2. On every occupiable level of a dwelling unit, including basements.

3. Where a fuel-burning appliance is located within a bedroom or its attached bathroom, carbon monoxide detection shall be installed within the bedroom.

915.2.2 Sleeping units. Carbon monoxide detection shall be installed in sleeping units.

Exception: Carbon monoxide detection shall be allowed to be installed outside of each separate sleeping area in the immediate vicinity of the sleeping unit where the sleeping unit or its attached bathroom does not contain a fuel-burning appliance and is not served by a forced air furnace.

915.2.3 Group E occupancies. Carbon monoxide detection shall be installed in classrooms in Group E occupancies. Carbon monoxide alarm signals shall be automatically transmitted to an on-site location that is staffed by school personnel.

Exception: Carbon monoxide alarm signals shall not be required to be automatically transmitted to an on-site location that is staffed by school personnel in Group E occupancies with an occupant load of 30 or less.

915.3 Detection equipment. Carbon monoxide detection required by Sections 915.1 through 915.2.3 shall be provided by carbon monoxide alarms complying with Section 915.4 or carbon monoxide detection systems complying with Section 915.5.

915.4 Carbon monoxide alarms. Carbon monoxide alarms shall comply with Sections 915.4.1 through 915.4.3 4.

915.4.1 Power source. Carbon monoxide alarms shall receive their primary power from the building wiring where such wiring is served from a commercial source, and when primary power is interrupted, shall receive power from a battery. Wiring shall be permanent and without a disconnecting switch other than that required for overcurrent protection.

Exceptions:

1. Where installed in buildings without commercial power, battery-powered carbon monoxide alarms shall be an acceptable alternative.

2. Carbon monoxide alarms in Group R occupancies shall be permitted to receive their primary power from other power sources recognized for use by NFPA 720.

3. Carbon monoxide alarms in Group R occupancies shall be permitted to be battery-powered or plug-in with a battery backup in existing buildings built prior to January 1, 2011, under any of the following conditions:

3.1. No construction is taking place.

3.2. Repairs or alterations do not result in the removal of interior wall and ceiling finishes exposing the structure in areas/spaces where carbon monoxide alarms are required.

3.3. Repairs or alterations are limited to the exterior surfaces of dwellings, such as the replacement of roofing or siding, or the addition or replacement of windows or doors, or the addition of a porch or deck.

3.4. Work is limited to the installation, alteration or repair of plumbing, mechanical or electrical systems, which do not result in the removal of interior wall or ceiling finishes exposing the structure in areas/spaces where carbon monoxide alarms are required.

915.4.2 Listings. Carbon monoxide alarms shall be listed in accordance with UL 2034.

No person shall install, market, distribute, offer for sale, or sell any carbon monoxide device in the State of California unless the device and instructions have been approved and listed by the Office of the State Fire Marshal.

915.4.3 Combination alarms. Combination carbon monoxide/smoke alarms shall be an acceptable alternative to carbon monoxide alarms. Combination carbon monoxide/smoke alarms shall be listed in accordance with UL 2034 and UL 217.

Combination carbon monoxide/smoke alarms shall comply with Section 915, and all requirements for listing and approval by the Office of the State Fire Marshal for smoke alarms.

915.4.4 Interconnection. *Where more than one carbon monoxide alarm is required to be installed within a dwelling unit or within a sleeping unit in Group R occupancies, the alarms shall be interconnected in a manner that activation of one alarm shall activate all of the alarms in the individual unit.*

Exception: *Interconnection is not required in existing buildings, built prior to January 1, 2011, under any of the following conditions:*

1. Physical interconnection is not required where listed wireless alarms are installed and all alarms sound upon activation of one alarm.

2. No construction is taking place.

3. Repairs or alterations do not result in the removal of interior wall and ceiling finishes exposing the structure in areas/spaces where carbon monoxide alarms are required.

4. Repairs or alterations are limited to the exterior surfaces of dwellings, such as the replacement of roofing or siding, or the addition or replacement of windows or doors, or the addition of a porch or deck.

5. Work is limited to the installation, alteration or repair of plumbing, mechanical, or electrical systems, which do not result in the removal of interior wall or ceiling finishes exposing the structure in areas/spaces where carbon monoxide alarms are required.

915.5 Carbon monoxide detection systems. Carbon monoxide detection systems shall be an acceptable alternative to carbon monoxide alarms and shall comply with Sections 915.5.1 through 915.5.3.

915.5.1 General. Carbon monoxide detection systems shall comply with NFPA 720. Carbon monoxide detectors shall be listed in accordance with UL 2075.

915.5.2 Locations. Carbon monoxide detectors shall be installed in the locations specified in Section 915.2 *or NFPA 720*. ~~These locations supersede the locations specified in NFPA 720.~~

915.5.3 Combination detectors. Combination carbon monoxide/smoke detectors installed in carbon monoxide detection systems shall be an acceptable alternative to carbon monoxide detectors, provided they are listed in accordance with UL 2075 and UL 268.

Combination carbon monoxide/smoke detectors shall comply with all requirements for listing and approval by the Office of the State Fire Marshal for smoke alarms.

915.6 Maintenance. Carbon monoxide alarms and carbon monoxide detection systems shall be maintained in accordance with ~~the International Fire Code~~ *NFPA 720*. *Carbon monoxide alarms and carbon monoxide detectors that become inoperable or begin producing end-of-life signals shall be replaced.*

915.7 Visible alarms. *In buildings containing covered multifamily dwellings as defined in Chapter 2, all required carbon monoxide alarms shall be equipped with the capability to support visible alarm notification in accordance with NFPA 720.*

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

---

13. HCD proposes to adopt Chapter 10 from the 2015 International Building Code into the 2016 California Building Code with new, existing, and modified existing amendments as follows:

CHAPTER 10
MEANS OF EGRESS

SECTION 1002
DEFINITIONS

GUARD *((HCD 1, & HCD 2 & HCD 1-AC) or GUARDRAIL).*

SECTION 1003
GENERAL MEANS OF EGRESS

1003.1 Applicability. The general requirements specified in Sections 1003 through 1015 shall apply to all three elements of the means of egress system, in addition to those specific requirements for the exit access, the exit and the exit discharge detailed elsewhere in this chapter.

(HCD 1-AC) In addition to the requirement of this chapter, means of egress, which provide access to, or egress from, buildings or facilities where accessibility is required for applications listed in Section 1.8.2.1.2 regulated by the Department of Housing and Community Development, shall also comply with Chapter 11A.

1003.2 Ceiling height. The means of egress shall have a ceiling height of not less than 7 feet 6 inches (2286 mm).

Exceptions:

1. Sloped ceilings in accordance with Section 1208.2.

... (No change to text)

7. The clear height of floor levels in vehicular and pedestrian traffic areas of public and private parking garages in accordance with Section 406.4.1.
~~*(HCD 1-AC) The clear height of vehicle and pedestrian areas required to be accessible, or identified as accessible, shall comply with Chapter 11A.*~~

8. Areas above and below mezzanine floors in accordance with Section 505.2.

1003.3 Protruding objects. ... (No change to text)

1003.3.4 Clear width. Protruding objects shall not reduce the minimum clear width of accessible routes *as required in Chapter 11A.*

1003.5 Elevation change. Where changes in elevation of less than 12 inches (305 mm) exist in the means of egress, sloped surfaces shall be used. Where the slope is greater than one unit vertical in 20 units horizontal (5 percent slope), ramps complying with Section 1012 shall be used. Where the difference in elevation is 6 inches (152 mm) or less, the ramp shall be equipped with either handrails or floor finish materials that contrast with adjacent floor finish materials.

Exceptions:

1. A single step with a maximum riser height of 7 inches (178 mm) is permitted for buildings with occupancies in Groups F, H, R-2, R-3, S and U at exterior doors not required to be accessible by Chapter 11*A*.
2. A stair with a single riser or with two risers and a tread is permitted at locations not required to be accessible by Chapter 11*A* where the risers and treads comply with Section 1011.5, the minimum depth of the tread is 13 inches (330 mm) and at least one handrail complying with Section 1014 is provided within 30 inches (762 mm) of the centerline of the normal path of egress travel on the stair.
3. A step is permitted in aisles serving seating that has a difference in elevation less than 12 inches (305 mm) at locations not required to be accessible by Chapter 11*A*, provided that the risers and treads comply with Section 1029.13 and the aisle is provided with a handrail complying with Section 1029.15.

Throughout a story in a Group I-2 occupancy, any change in elevation in portions of the means of egress that serve nonambulatory persons shall be by means of a ramp or sloped walkway.

SECTION 1006
NUMBER OF EXITS AND EXIT ACCESS DOORWAYS
(Formerly Section 1015
EXIT AND EXIT ACCESS DOORWAYS)

1006.2.2.3 (Formerly 1015.5) Refrigerated rooms or spaces. Rooms or spaces having a floor area larger than 1,000 square feet (93 m^2), containing a refrigerant evaporator and maintained at a temperature below 68°F (20°C), shall have access to not less than two exits or exit access doors.

Exit access travel distance shall be determined as specified in Section 1017.1, but all portions of a refrigerated room or space shall be within 150 feet (45 720 mm) of an exit or exit access doorway where such rooms are not protected by an approved automatic sprinkler system. Egress is allowed through adjoining refrigerated rooms or spaces.

Exception: Where using refrigerants in quantities limited to the amounts based on the volume set forth in the ~~International~~ *California* Mechanical Code.

SECTION 1009 (Formerly 1007)
ACCESSIBLE MEANS OF EGRESS

1009.1 (Formerly 1007.1) Accessible means of egress required. Accessible means of egress shall comply with this section. Accessible spaces shall be provided with not less than one accessible means of egress. Where more than one means of egress are required by Section 1006.2 or 1006.3 from any accessible space, each accessible portion of the space shall be served by ~~not less than two~~ accessible means of egress *in at least the same number as required by Sections ~~1015.1 or 1021.1~~ 1006.2 or 1006.3. In addition to the requirements of this chapter, means of egress, which provide access to, or egress from, buildings for persons with disabilities, shall also comply with the requirements of Chapter 11A.*

Exceptions:

1. Accessible means of egress are not required to be provided in existing buildings.
2. One accessible means of egress is required from an accessible mezzanine level in accordance with Section 1009.3, 1009.4 or 1009.5, *and Chapter 11A.*
3. In assembly areas with ramped aisles or stepped aisles, one accessible means of egress is permitted where the common path of egress travel is accessible and meets the requirements in Section 1029.8, *and Chapter 11A.*

1009.2 (Formerly 1007.2) Continuity and components. Each required accessible means of egress shall be continuous to a public way and shall consist of one or more of the following components:

1. Accessible routes complying with ~~Section 1104~~ *Chapter 11A, Sections 1110A.1 and 1120A.*
2. Interior exit stairways complying with Sections 1009.3 and 1023, *and Chapter 11A, Section 1123A.*
3. Exit access stairways complying with Sections 1009.3 and 1019.3 or 1019.4, *and Chapter 11A, Section 1123A.*
4. Exterior exit stairways complying with Sections 1009.3 and 1027, and *Chapter 11A, Section 1115A;* and serving levels other than the level of exit discharge.
5. Elevators complying with Section 1009.4 *and Chapter 11A, Section 1124A.*
6. Platform lifts complying with Section 1009.5 *and Chapter 11A, Section 1124A.*
7. Horizontal exits complying with Section 1026.
8. Ramps complying with Section 1012 *and Chapter 11A, Sections 1114A and 1122A.*
9. Areas of refuge complying with Section 1009.6.
10. Exterior areas for assisted rescue complying with Section 1009.7 serving exits at the level of exit discharge.

1009.3 (Formerly 1007.3) Stairways. In order to be considered part of an accessible means of egress, a stairway between stories shall have a clear width of 48 inches (1219 mm) minimum between handrails and shall either incorporate an area of refuge within an enlarged floor-level landing or shall be accessed from an area of refuge complying with Section 1009.6. Exit access stairways that connect levels in the same story are not permitted as part of an accessible means of egress.

***(HCD 1-AC)** In addition, exit stairways shall comply with Chapter 11A, Sections 1115A and 1123A.*

1009.5 (Formerly 1007.5) Platform lifts. Platform lifts shall be permitted to serve as part of an accessible means of egress where allowed as part of a required accessible route in ~~Section 1109.8 except for Item 10.~~ *Chapter 11A, Sections 1121A and 1124A.1.* Standby power for the platform lift shall be provided in accordance with Chapter 27.

1009.6 (Formerly 1007.6) Area of refuge....(No change to text)

1009.6.3 (Formerly 1007.6.1) Size. Each area of refuge shall be sized to accommodate ~~one~~ *two* wheelchair space*s that are not less than* ~~of~~ 30 inches by 48 inches (762 mm by 1219 mm). *The total number of such 30-inch by 48-inch (762 mm by 1219 mm) spaces per story shall be not less than one for every 200 persons of calculated occupant load served by the area of refuge.* ~~for each 200 occupants or portion thereof, based on occupant load of the area of refuge and areas served by the area of refuge.~~ Such wheelchair spaces shall not reduce the required means egress width. Access to any of the required wheelchair spaces in an area of refuge shall not be obstructed by more than one adjoining wheelchair space.

***Exception:** The enforcing agency may reduce the size of each required area of refuge to accommodate one wheelchair space that is not less than 30 inches by 48 inches (762 mm by 1219 mm) on floors where the occupant load is less than 200.*

1009.8 (Formerly 1007.8) Two way communication. ... (No change to text)

1009.8.1 (Formerly 1007.8.1) System requirements. ... (No change to text)

***1009.8.1.1* (Formerly 1007.8.1.1) *Visible communication method. (HCD 1-AC)** A button complying with Section 1138A.4 in the area of refuge shall activate both a light in the area of refuge indicating that rescue has been requested and a light at the central control point indicating that rescue is being requested. A button at the central control point shall activate both a light at the central control point and a light in the area of refuge indicating that the request has been received.*

1009.8.2 Directions. Directions for the use of the two-way communication system, instructions for summoning assistance via the two-way communication system and written identification of the location shall be posted adjacent to the two-way communication system. Signage shall comply with ~~the ICC A117.~~1 *Chapter 11A, Section 1143A* requirements for visual characters.

1009.9 (Formerly 1007.9) Signage. Signage indicating special accessibility provisions shall be provided as shown:

1. Each door providing access to an area of refuge from an adjacent floor area shall be identified by a sign stating: AREA OF REFUGE.
2. Each door providing access to an exterior area for assisted rescue shall be identified by a sign stating: EXTERIOR AREA FOR ASSISTED RESCUE.

Signage shall comply with ~~the ICC A117.~~1 *Chapter 11A, Section 1143A* requirements for visual characters and include the International Symbol of Accessibility. Where exit sign illumination is required by Section 1013.3, the signs shall be illuminated. Additionally, visual characters, raised character and braille signage complying with ~~ICC A117.1~~ *Chapter 11A, Section 1143A, and the International Symbol of Accessibility,* shall be located at each door to an area of refuge and exterior area for assisted rescue in accordance with Section 1013.4. *The International Symbol of Accessibility shall comply with Chapter 11A, Section 1143A.*

1009.11 Instructions. In areas of refuge and exterior areas for assisted rescue, instructions on the use of the area under emergency conditions shall be posted. Signage shall comply with ~~the ICC A117.~~1 *Chapter 11A, Section 1143A* requirements for visual characters. The instructions shall include all of the following:

1. Persons able to use the exit stairway do so as soon as possible, unless they are assisting others.

2. Information on planned availability of assistance in the use of stairs or supervised operation of elevators and how to summon such assistance.

3. Directions for use of the two-way communication system where provided.

~~1007.12~~ 1009.12 Alarms/emergency warning systems/accessibility. *If emergency warning systems are required, they shall activate a means of warning the hearing impaired. Emergency warning systems as part of the fire-alarm system shall be designed and installed in accordance with NFPA 72 as amended in Chapter 35.*

SECTION 1010 (Formerly 1008)
DOORS, GATES AND TURNSTILES

1010.1.1 (Formerly 1008.1.1) Size of doors. The required capacity of each door opening shall be sufficient for the occupant load thereof and shall provide a minimum clear width of 32 inches (813 mm). Clear openings of doorways with swinging doors shall be measured between the face of the door and the stop, with the door open 90 degrees (1.57 rad). Where this section requires a minimum clear width of 32 inches (813 mm) and a door opening includes two door leaves without a mullion, one leaf shall provide a clear opening width of 32 inches (813 mm). The maximum width of a swinging door leaf shall be 48 inches (1219 mm) nominal. Means of egress doors in a Group I-2 occupancy used for the movement of beds shall provide a clear width not less than 41 ½ inches (1054 mm). The height of door openings shall not be less than 80 inches (2032 mm).

Exceptions:

1. The minimum and maximum width shall not apply to door openings that are not part of the required means of egress in Group R-2 and R-3 occupancies.

2 ... (No change to text)

3. ... (No change to text)

4. ... (No change to text)

5. ... (No change to text)

6. ... (No change to text)

7. In other than Group R-1 occupancies, the minimum widths shall not apply to interior egress doors within a dwelling unit or sleeping unit that is not required to be ~~an Accessible unit, Type A unit or Type B unit~~ *adaptable or accessible as specified in Chapter 11A.*

~~8. Door openings required to be accessible within Type B units shall have a minimum clear width of 31.75 inches (806 mm).~~

~~9~~ 8. Doors to walk-in freezers and coolers less than 1,000 square feet (93 m2) in area shall have a maximum width of 60 inches (1524 mm).

~~10~~ 9. In Group R-1 dwelling units or sleeping units not required to be ~~Accessible units~~ *adaptable or accessible as specified in Chapter 11A*, the minimum width shall not apply to doors for showers or saunas.

1010.1.4.1 (Formerly 1008.1.4.1) Revolving doors. Revolving doors shall comply with the following:

1. Revolving doors shall comply with BHMA A156.27 and shall be installed in accordance with the manufacturer's instructions.

... (No change to text)

7. **(Formerly Item 5)** Revolving doors shall not be part of an accessible route required by Section 1009 and ~~Chapter 11~~ *Chapter 11A.*

1010.1.5 (Formerly 1008.1.5) Floor elevation. There shall be a floor or landing on each side of a door. Such floor or landing shall be at the same elevation on each side of the door. Landings shall be level except for exterior landings, which are permitted to have a slope not to exceed 0.25 unit vertical in 12 units horizontal (2-percent slope).

Exceptions:

1. Doors serving individual dwelling units in Groups R-2 and R-3 where the following apply:

2. ... (No change to text)

3. In Group R-3 occupancies not required to be ~~Accessible units, Type A units or Type B units~~ *adaptable or accessible*, the landing at an exterior doorway shall not be more than 7 3/4 inches (197 mm) below the top of the threshold, provided the door, other than an exterior storm or screen door, does not swing over the landing.

4. ... (No change to text)

5. Exterior decks, patios or balconies that are part of ~~*Type B*~~ *adaptable or accessible* dwelling units, have impervious surfaces and that are not more than 4 inches (102 mm) below the finished floor level of the adjacent interior space of the dwelling unit. *See also Chapter 11A, Section 1132A.4.*

6. Doors serving equipment spaces not required to be accessible in accordance with Section 1103.2.9 and serving an occupant load of five or less shall be permitted to have a landing on one side to be not more than 7 inches (178 mm) above or below the landing on the egress side of the door.

1010.1.7 (Formerly 1008.1.7) Thresholds. Thresholds at doorways shall not exceed 3/4 inch (19.1 mm) in height above the finished floor or landing for sliding doors serving dwelling units or 1/2 inch (12.7 mm) above the finished floor or landing for other doors. Raised thresholds and floor level changes greater than 1/4 inch (6.4 mm) at doorways shall be beveled with a slope not greater than one unit vertical in two units horizontal (50-percent slope).

Exceptions:

1. In occupancy Group R-2 or R-3, threshold heights for sliding and side-hinged exterior doors shall be permitted to be up to 7 3/4 inches (197 mm) in height if all of the following apply:

   1.1 The door is not part of the required means of egress.

   1.2 The door is not part of an accessible route as required by Chapter 11*A*.

   1.3 The door is not part of an ~~Accessible unit, Type A unit or Type B unit~~ *adaptable or accessible dwelling unit.*

2. In ~~Type B~~ *adaptable or accessible dwelling* units, where Exception 5 to Section 1010.1.5 permits a 4-inch (102 mm) elevation change at the door, the threshold height on the exterior side of the door shall not exceed 4 3/4 inches (120 mm) in height above the exterior deck, patio or balcony for sliding doors or 4 1/2 inches (114 mm) above the exterior deck, patio or balcony for other doors.

1010.1.8 (Formerly 1008.1.8) Door arrangement. Space between two doors in a series shall be 48 inches (1219 mm) minimum plus the width of a door swinging into the space. Doors in a series shall swing either in the same direction or away from the space between the doors.

Exceptions:

1. The minimum distance between horizontal sliding power-operated doors in a series shall be 48 inches (1219 mm).

2. ... (No change to text)

3. Doors within individual dwelling units in Groups R-2 and R-3 occupancies other than ~~within Type A~~ *adaptable or accessible* dwelling units.

1010.1.9.1 (Formerly 1008.1.9.1) Hardware. Door handles, pulls, latches, locks and other operating devices on doors required to be accessible by Chapter 11*A* shall not require tight grasping, tight pinching or twisting of the wrist to operate.

SECTION 1012 (Formerly 1010)
RAMPS

1012.1 (Formerly 1010.1) Scope. The provisions of this section shall apply to ramps used as a component of a means of egress.

Exceptions:

1. Ramped aisles within assembly rooms or spaces shall comply with the provisions in Section 1029.

2. Curb ramps shall comply with ~~ICC A117.1~~ *Chapter 11A*.

3. Vehicle ramps in parking garages for pedestrian exit access shall not be required to comply with Sections 1012.3 through 1012.10 where they are not an accessible route serving accessible parking spaces, other required accessible elements or part of an accessible means of egress.

1012.6.3 (Formerly 1010.7.3) Length. The landing length shall be 60 inches (1525 mm) minimum.

Exceptions:

1. In Group R-2 and R-3 individual dwelling and sleeping units that are not required to be ~~Accessible units, Type A units or Type B units~~ *accessible* in accordance with ~~Section 1107~~ *Chapter 11A*, landings are permitted to be 36 inches (914 mm) minimum.

2. Where the ramp is not a part of an accessible route, the length of the landing shall not be required to be more than 48 inches (1220 mm) in the direction of travel.

1012.6.4 (Formerly 1010.7.4) Change in direction. Where changes in direction of travel occur at landings provided between ramp runs, the landing shall be 60 inches by 60 inches (1524 mm by 1524 mm) minimum.

Exception: In Group R-2 and R-3 individual dwelling or sleeping units that are not required to be ~~Accessible units, Type A units or Type B units~~ *accessible* in accordance with ~~Section 1107~~ *Chapter 11A*, landings are permitted to be 36 inches by 36 inches (914 mm by 914 mm) minimum.

1012.6.5 (Formerly 1010.7.5) Doorways. Where doorways are located adjacent to a ramp landing, maneuvering clearances required ~~by ICC A117.1~~ *for accessibility* are permitted to overlap the required landing area *as specified in Chapter 11A*.

1012.10 (Formerly 1010.10) Edge protection. Edge protection complying with Section 1012.10.1 or 1012.10.2 shall be provided on each side of ramp runs and at each side of ramp landings.

Exceptions:

1. Edge protection is not required on ramps that are not required to have handrails, provided they have flared sides that comply with ~~the ICC A117.1 curb ramp provisions~~ *Chapter 11A*.

2. Edge protection is not required on the sides of ramp landings serving an adjoining ramp run or stairway.

3. Edge protection is not required on the sides of ramp landings having a vertical drop off of not more than 1/2 inch (12.7 mm) within 10 inches (254 mm) horizontally of the required landing area.

4. In assembly spaces with fixed seating, edge protection is not required on the sides of ramps where the ramps provide access to the adjacent seating and aisle access ways.

SECTION 1013 (Formerly 1011)
EXIT SIGNS

1013.4 (Formerly 1011.4) Raised character and braille exit signs. A sign stating EXIT in visual characters, raised characters and braille and complying with ~~ICC A117.1~~ *Chapter 11A, Section 1143A* shall be provided adjacent to each door to an area of refuge, an exterior area for assisted rescue, an exit stairway, an exit stairway or ramp, an exit passageway and the exit discharge.

SECTION 1014
HANDRAILS

1014.8 Projections. On ramps and on ramped aisles that are part of an accessible route, the clear width between handrails shall be 36 inches (914 mm) minimum. Projections into the required width of aisles, stairways and ramps at each side shall not exceed 4 1/2 inches (114 mm) at or below the handrail height. Projections into the required width shall not be limited above the minimum headroom height required in Section 1011.3. Projections due to intermediate handrails shall not constitute a reduction in the egress width. Where a pair of intermediate handrails are provided within the stairway width without a walking surface between the pair of intermediate handrails and the distance between the pair of intermediate handrails is greater than 6 inches (152 mm), the available egress width shall be reduced by the distance between the closest edges of each such intermediate pair of handrails that is greater than 6 inches (152 mm).

(HCD 1-AC) In addition, projections shall comply with Chapter 11A, when applicable.

SECTION 1015 (Formerly 1013)
GUARDS

1015.3 (Formerly 1013.3) Height. Required guards shall not be less than 42 inches (1067 mm) high, measured vertically as follows:

1. From the adjacent walking surfaces.
2. On stairways and stepped aisles, from the line connecting the leading edges of the tread nosings.
3. On ramps and ramped aisles, from the ramp surface at the guard.

Exceptions:

~~1. For occupancies in Group R-3 not more than three stories above grade in height and within individual dwelling units in occupancies in Group R-2 not more than three stories above grade in height with separate means of egress, required guards shall be not less than 36 inches (914 mm) in height measured vertically above the adjacent walking surfaces or adjacent fixed seating.~~

~~2.~~ *1.* For occupancies in Group R-3, and within individual dwelling units in occupancies in Group R-2, guards on the open sides of stairs shall have a height not less than 34 inches (864 mm) measured vertically from a line connecting the leading edges of the treads.

~~3.~~ *2.* For occupancies in Group R-3, and within individual dwelling units in occupancies in Group R-2, where the top of the guard also serves as a handrail on the open sides of stairs, the top of the guard shall not be less than 34 inches (864 mm) and not more than 38 inches (965 mm) measured vertically from a line connecting the leading edges of the treads.

~~4.~~ *3.* The guard height in assembly seating areas shall comply with Section 1029.16 as applicable.

~~5.~~ *4.* Along alternating tread devices and ship ladders, guards whose top rail also serves as a handrail shall have height not less than 30 inches (762 mm) and not more than 34 inches (864 mm), measured vertically from the leading edges of the device tread nosing.

1015.8 Window openings. Windows in Group *R1,* R-2 and R-3 buildings including dwelling units, where the top of the sill of an operable window opening is located less than 36 inches above the finished floor and more than 72 inches (1829 mm) above the finished grade or other surface below on the exterior of the building, shall comply with one of the following:

1. Operable windows where the top of the sill of the opening is located more than 75 feet (22 860 mm) above the finished grade or other surface below and that are provided with window fall prevention devices that comply with ASTM F 2006.
2. Operable windows where the openings will not allow a 4-inch-diameter (102 mm) sphere to pass through the opening when the window is in its largest opened position.
3. Operable windows where the openings are provided with window fall prevention devices that comply with ASTM F 2090.
4. Operable windows that are provided with window opening control devices that comply with Section 1015.8.1.

SECTION 1020 (Formerly 1018)
CORRIDORS

1020.5.1 (Formerly 1018.5.1) Corridor ceiling. Use of the space between the corridor ceiling and the floor or roof structure above as a return air plenum is permitted for one or more of the following conditions:

1. The corridor is not required to be of fire-resistance-rated construction;
2. (No change to text)...
3. The air-handling system serving the corridor is shut down upon activation of the air-handling unit smoke detectors required by the ~~International~~ *California* Mechanical Code.

SECTION 1023 (Formerly 1022)
INTERIOR EXIT STAIRWAYS AND RAMPS

1023.9 (Formerly 1022.9) Stairway identification signs. A sign shall be provided at each floor landing in an interior exit stairway and ramp connecting more than three stories designating the floor level, the terminus of the top and bottom of the interior exit stairway and ramp and the identification of the stair or ramp. The signage shall also state the story of, and the direction to, the exit discharge and the availability of roof access from the interior exit stairway and ramp for the fire department. The sign shall be located 5 feet (1524 mm) above the floor landing in a position that is readily visible when the doors are in the open and closed positions. In addition to the stairway identification sign, a floor-level sign in visual characters, raised characters and braille complying with ~~ICC A117.1~~ *Chapter 11A, Section 1143A* shall be located at each floor-level landing adjacent to the door leading from the interior exit stairway and ramp into the corridor to identify the floor level.

---

16. HCD proposes to adopt Chapter 12 from the 2015 International Building Code into the 2016 California Building Code with new and existing amendments as follows:

CHAPTER 12
INTERIOR ENVIRONMENT

SECTION 1203
VENTILATION

1203.1 General. Buildings shall be provided with natural ventilation in accordance with Section 1203.4, or mechanical ventilation in accordance with the ~~International~~ *California* Mechanical Code.

~~Where the air infiltration rate in a dwelling unit is less than 5 air changes per hour when tested with a blower door at a pressure 0.2 inch w.c. (50 Pa) in accordance with Section R402.4.1.2 of the International Energy Conservation Code – Residential Provisions, the dwelling unit shall be ventilated by mechanical means in accordance with Section 403 of the International Mechanical Code. Ambulatory care facilities and Group I-2 occupancies shall be ventilated by mechanical means in accordance with Section 407 of the International Mechanical Code.~~

1203.2 Ventilation required. Enclosed attics and enclosed rafter spaces formed where ceilings are applied directly to the underside of roof framing members shall have cross ventilation for each separate space by ventilation openings protected against the entrance of rain and snow. Blocking and bridging shall be arranged so as not to interfere with the movement of air. An airspace of not less than 1 inch (25 mm) shall be provided between the insulation and the roof sheathing. The net free ventilating area shall be not less than 1/150 of the area of the space ventilated. Ventilators shall be installed in accordance with manufacturer's installation instructions.

Exception: The net free cross-ventilation area shall be permitted to be reduced to 1/300 provided both of the following conditions are met:

1. In Climate Zones ~~6, 7 and 8~~ *14 and 16*, a Class I or II vapor retarder is installed on the warm-in-winter side of the ceiling.
2. At least 40 percent and not more than 50 percent of the required venting area is provided by ventilators located in the upper portion of the attic or rafter space. Upper ventilators shall be located not more than 3 feet (914 mm) below the ridge or highest point of the space, measured vertically, with the balance of the ventilation provided by eave or cornice vents. Where the location of wall or roof framing members conflicts with the installation of upper ventilators, installation more than 3 feet (914 mm) below the ridge or highest point of the space shall be permitted.

1203.2.1 Openings into attic. Exterior openings into the attic space of any building intended for human occupancy shall be protected to prevent the entry of birds, squirrels, rodents, snakes and other similar creatures. Openings for ventilation having a least dimension of 1/16 inch (1.6 mm) minimum and 1/4 inch (6.4 mm) maximum shall be permitted. Openings for ventilation having a least dimension larger than 1/4 inch (6.4 mm) shall be provided with corrosion-resistant wire cloth screening, hardware cloth, perforated vinyl or similar material with openings having a least dimension of 1/16 inch (1.6 mm) minimum and 1/4 inch (6.4 mm) maximum. Where combustion air is obtained from an attic area, it shall be in accordance with Chapter 7 of the ~~International~~ *California* Mechanical Code.

1203.3 Unvented attic and unvented enclosed rafter assemblies. Unvented attics and unvented enclosed roof framing assemblies created by ceilings that are applied directly to the underside of the roof framing members and structural roof sheathing applied directly to the top of the roof framing members/rafters, shall be permitted where all the following conditions are met:

1. The unvented attic space is completely within the building thermal envelope.
2. No interior Class I vapor retarders are installed on the ceiling side (attic floor) of the unvented attic assembly or on the ceiling side of the unvented enclosed roof framing assembly.
3. Where wood shingles or shakes are used, a minimum 1/4-inch (6.4 mm) vented airspace separates the shingles or shakes and the roofing underlayment above the structural sheathing.

4. In Climate Zones ~~5, 6, 7 and 8,~~ *14 and 16,* any air-impermeable insulation shall be a Class II vapor retarder, or shall have a Class II vapor retarder coating or covering in direct contact with the underside of the insulation.

See the California Energy Code, FIGURE 100.1-A —California Climate Zones.

4.1 (HCD 1 & HCD 2) In Climate Zones 14 and 16, a Class I or Class II vapor retarder shall be installed on the indirectly conditioned space side of all insulation in an unvented attic with air-permeable insulation, for condensation control.

5. Insulation shall be located in accordance with the following:

5.1. Item 5.1.1, 5.1.2, 5.1.3 or 5.1.4 shall be met, depending on the air permeability of the insulation directly under the structural roof sheathing. *No insulation shall be required when roof tiles, wood shingles or wood shakes, or any other roofing system using battens and no continuous underlayment is installed. A continuous underlayment shall be considered to exist if sheathing, roofing paper or any continuous layer having a perm rate of no more than one perm under the dry cup method is present.*

5.1.1. Where only air-impermeable insulation is provided, it shall be applied in direct contact with the underside of the structural roof sheathing.

5.1.2. Where air-permeable insulation is provided inside the building thermal envelope, it shall be installed in accordance with Item 5.1. In addition to the air-permeable insulation installed directly below the structural sheathing, rigid board or sheet insulation shall be installed directly above the structural roof sheathing in accordance with the R-values in Table 1203.3 for condensation control.

5.1.3. Where both air-impermeable and air-permeable insulation are provided, the air-impermeable insulation shall be applied in direct contact with the underside of the structural roof sheathing ~~in accordance with Item 5.1.1~~ and shall be in accordance with the R-values in Table 1203.3 for condensation control. The air-permeable insulation shall be installed directly under the air-impermeable insulation.

5.1.4. Alternatively, sufficient rigid board or sheet insulation shall be installed directly above the structural roof sheathing to maintain the monthly average temperature of the underside of the structural roof sheathing above 45°F (7°C). For calculation purposes, an interior air temperature of 68°F (20°C) is assumed and the exterior air temperature is assumed to be the monthly average outside air temperature of the three coldest months.

5.2. Where preformed insulation board is used as the ~~air-permeable~~ *air-impermeable* insulation layer, it shall be sealed at the perimeter of each individual sheet interior surface to form a continuous layer.

Exceptions:

1. Section 1203.3 does not apply to special use structures or enclosures such as swimming pool enclosures, data processing centers, hospitals or art galleries.
2. Section 1203.3 does not apply to enclosures in Climate Zones ~~5 through 8~~ *14 and 16* that are humidified beyond 35 percent during the three coldest months.

TABLE 1203.3
INSULATION FOR CONDENSATION CONTROL

CLIMATE ZONE	MINIMUM R-VALUE OF AIR-IMPERMEABLE INSULATION[a]
~~2B and 3B~~ *6-15* tile roof only	0 (none required)
~~1, 2A, 2B, 3A, 3B, 3C~~ *3-15*	R-5
~~4C~~ *1&2*	R-10
~~4A, 4B~~ *16*	R-15
~~5~~	~~R-20~~

~~6~~	~~R-25~~
~~7~~	~~R-30~~
~~8~~	~~R-35~~

a. Contributes to, but does not supersede, thermal resistance requirements for attic and roof assemblies in ~~Section C402.2.1 of~~ the ~~International~~ *California* Energy ~~Conservation~~ Code

1203.4.2 (Formerly 1203.3.2) Exceptions. The following are exceptions to Sections 1203.4 and 1203.4.1:

1. Where warranted by climatic conditions, ventilation openings to the outdoors are not required if ventilation openings to the interior are provided.
2. ... (No change to text)
3. ... (No change to text)
4. Ventilation openings are not required when the ground surface is covered with a Class I vapor retarder, the perimeter walls are insulated and the space is conditioned in accordance with the ~~International~~ *California* Energy ~~Conservation~~ Code.
5. ... (No change to text)

1203.5 (Formerly 1203.4) Natural ventilation. Natural ventilation of an occupied space shall be through windows, doors, louvers or other openings to the outdoors. The operating mechanism for such openings shall be provided with ready access so that the openings are readily controllable by the building occupants.

(HCD 1) In employee housing, all openable windows in rooms used for living, dining, cooking or sleeping purposes, and toilet and bath buildings, shall be provided and maintained with insect screening.

(HCD 1) Door openings of rooms used for dining, cooking, toilet and bathing facilities in employee housing shall be provided and maintained with insect screening or with solid doors equipped with self-closing devices in lieu thereof, when approved by the enforcement agency.

(HCD 1) The windows, doors, louvers or other approved closeable openings not required by Section 1029 may open into a passive solar energy collector for ventilation required by this section. The area of ventilation openings to the outside of the passive solar energy collector shall be increased to compensate for the openings required by the interior space.

1203.5.2 (Formerly 1203.4.2) Contaminants exhausted. Contaminant sources in naturally ventilated spaces shall be removed in accordance with the ~~International~~ *California* Mechanical Code and the ~~International~~ *California Fire Code.*

1203.5.2.1 (Formerly 1203.4.2.1) Bathrooms. Rooms containing bathtubs, showers, spas and similar bathing fixtures shall be mechanically ventilated in accordance with the ~~International~~ *California* Mechanical Code.

The minimum exhaust rate shall not be less than that established by Table 403.7 "Minimum Exhaust Rates." See California Mechanical Code, Chapter 5, for additional provisions related to environmental air ducts.

(HCD 1) In addition to the requirements in this section and in the California Mechanical Code, bathrooms in Group R occupancies shall be mechanically ventilated in accordance with the California Green Building Standards Code (CALGreen), Chapter 4, Division 4.5.

1203.6 (Formerly 1203.5) Other ventilation and exhaust systems. Ventilation and exhaust systems for occupancies and operations involving flammable or combustible hazards or other contaminant sources as covered in the ~~International~~ *California* Mechanical Code or the ~~International~~ *California* Fire Code shall be provided as required by both codes.

SECTION 1204
TEMPERATURE CONTROL

1204.1 Equipment and systems. Interior spaces intended for human occupancy shall be provided with active or passive space-heating systems capable of maintaining an indoor temperature of not less than 68°F (20°C) at a point 3 feet (914 mm) above the floor on the design heating day.

Exceptions:

1. Space heating systems are not required for:
   ~~1~~ *1.1.* Interior spaces where the primary purpose of the space is not associated with human comfort.
   ~~2~~ *1.2* Group F, H, S or U occupancies.
2. ***(HCD 1)*** *For limited-density owner-built rural dwellings, a heating facility or appliance shall be installed in each dwelling subject to the provisions of Subchapter 1, Chapter 1, Title 25, California Code of Regulations, commencing with Section 74; however, there shall be no specified requirement for heating capacity or temperature maintenance. The use of solid-fuel or solar-heating devices shall be deemed as complying with the requirements of this section. If nonrenewable fuel is used in these dwellings, rooms so heated shall meet current installation standards.*

3. ... (No change to text)

4. ***(HCD 1)*** *When a passive solar energy collector is designed as a conditioned area it shall comply with the California Energy Code~~, Title 24, Part 6~~. Nonconditioned passive solar energy collectors are exempt from ~~Title 24, Part 6~~ compliance with the California Energy Code.*

SECTION 1205
LIGHTING

1205.1 General. Every space intended for human occupancy shall be provided with natural light by means of exterior glazed openings in accordance with Section 1205.2 or shall be provided with artificial light in accordance with Section 1205.3. Exterior glazed openings shall open directly onto a public way or onto a yard or court in accordance with Section 1206.

(HCD 1) Glazed openings may open into a passive solar energy collector provided the area of exterior glazed openings in the passive solar energy collector is increased to compensate for the area required by the interior space.

1205.4 Stairway illumination. Stairways within dwelling units and exterior stairways serving a dwelling unit shall have an illumination level on tread runs of not less than 1 footcandle (11 lux). Stairways in other occupancies shall be governed by Chapter 10.

1205.4.1 Controls. The control for activation of the required stairway lighting shall be in accordance with ~~NFPA 70~~ *the California Electrical Code.*

SECTION 1206
YARDS OR COURTS

1206.3.3 Court drainage. The bottom of every court shall be properly graded and drained to a public sewer or other approved disposal system complying with the ~~International~~ *California* Plumbing Code.

SECTION 1207
SOUND TRANSMISSION

1207.3 Structure-borne sound. Floor/ceiling assemblies between dwelling units and sleeping units or between a dwelling unit or sleeping unit and a public or service area within the structure shall have an impact insulation class (IIC) rating of not less than 50, or not less than 45 if field tested, when tested in accordance with ASTM E 492.

Exception: *Impact sound insulation is not required for floor-ceiling assemblies over nonhabitable rooms or spaces not designed to be occupied, such as garages, mechanical rooms or storage areas.*

1207.4 Allowable interior noise levels. *Interior noise levels attributable to exterior sources shall not exceed 45 dB in any habitable room. The noise metric shall be either the day-night average sound level (Ldn) or the community noise equivalent level (CNEL), consistent with the noise element of the local general plan.*

SECTION 1208
INTERIOR SPACE DIMENSIONS

1208.1 Minimum room widths. Habitable spaces, other than a kitchen, shall not be less than 7 feet (2134 mm) in any plan dimension. Kitchens shall have a clear passageway of not less than 3 feet (914 mm) between counter fronts and appliances or counter fronts and walls.

(HCD 1) For limited-density owner-built rural dwellings, there shall be no requirements for room dimensions, provided there is adequate light and ventilation and adequate means of egress.

1208.4 Efficiency dwelling units. ~~An efficiency living unit shall conform to the requirements of the code except as modified herein:~~ *(HCD 1) Unless modified by local ordinance pursuant to Health and Safety Code Section 17958.1, efficiency dwelling units shall comply with the following:*

1. The unit shall have a living room of not less than 220 square feet (20.4 m^2) of floor area. An additional 100 square feet (9.3 m^2) of floor area shall be provided for each occupant of such unit in excess of two.

.... (No change to text)

4. The unit shall be provided with a separate bathroom containing a water closet, lavatory and bathtub or shower.

SECTION 1209
ACCESS TO UNOCCUPIED SPACES

1209.3 Mechanical appliances. Access to mechanical appliances installed in under-floor areas, in attic spaces and on roofs or elevated structures shall be in accordance with the ~~International~~ *California* Mechanical Code.

SECTION 1210
TOILET AND BATHROOM REQUIREMENTS

1210.1 Required fixtures. The number and type of plumbing fixtures provided in any occupancy shall comply with ~~Chapter 29~~ *the California Plumbing Code.*

SECTION 1211 (HCD 1 & HCD 2)
GARAGE DOOR SPRINGS

1211.1 General. *This section shall apply to applications listed in Sections 1.8.2.1.1 and 1.8.2.1.3 regulated by the Department of Housing and Community Development.*

1211.1.1 Extension garage door springs. *Every extension garage door spring sold or offered for sale, whether new or as a replacement, or installed in any garage or carport which is accessory to an apartment house, hotel, motel or dwelling shall conform to the following requirements:*

Hard-drawn spring wire shall conform to ASTM A 227- 06 (2011) or a more current version, and shall be made by the steel processes described therein, conforming to the chemical composition requirements listed and meeting the standards of steel heat as set forth by the ladle analysis. Wire tensile strength and dimension variations shall meet the prescribed properties of established standards.

Oil-tempered wire shall conform to ASTM A 229 - 12 or a more current version, and shall be made by the steel processes described therein, conforming to the chemical composition requirements listed and meeting the standards of steel heat as set forth by the ladle analysis. Wire tensile strength and dimension variations shall meet the prescribed properties of established standards.

Extension springs shall be fabricated from either hard-drawn spring wire or oil-tempered wire as specified above.

1211.2 Design standards. *Minimum design standard shall be 9,000 cycles. (One cycle is equal to door opening plus door closing at maximum working load.)*

1211.3 Certification. *Mill certification of wire physical tests and chemical properties shall be kept on file by the spring manufacturer.*

Physical cycling tests shall be performed for each extension spring design and shall be certified by an approved testing agency acceptable to the department and reports kept on file by the manufacturer.

Containment devices shall be physically tested for each extension spring design by installing the device on the spring and by destroying the spring at maximum recommended stretch. Containment tests shall be certified by an approved testing agency acceptable to the department and reports kept on file by the manufacturer.

1211.4 Containment devices. *Each extension spring shall be equipped with an approved device capable of restraining the spring or any part thereof in the event it breaks.*

1211.5 Identification. *Extension springs shall be permanently identified as to manufacturer and also to indicate maximum recommended stretch. Both extension springs and containment devices shall bear information stating that they have been manufactured in accordance with requirements of the California Department of Housing and Community Development.*

1211.6 Installation. *Installation of extension springs, containment devices and hardware shall be in accordance with the manufacturer's installation instructions. Instructions shall be provided by the manufacturer and shall specify the approved method of restraint and maximum recommended stretch. Unless otherwise permitted by the manufacturer's installation instructions, the hardware and extension springs shall be mounted to nominal 12 by 6 framing members, conforming to the applicable provisions of Section 2303.*

SECTION 1212 (HCD 1)
POLLUTANT CONTROL

1212.1 Finish material pollutant control. *Finish materials, including adhesives, sealants, caulks, paints and coatings, aerosol paints and coatings, carpet systems, carpet cushion, carpet adhesive, resilient flooring systems, and composite wood products shall meet the volatile organic compound (VOC) emission limits in accordance with the California Green Building Standards Code (CALGreen), Chapter 4, Division 4.5.*

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

17. HCD proposes to repeal and not bring forward the existing California amendments from the 2013 California Building Code, Section 1203.2, Exceptions.

CHAPTER 12
INTERIOR ENVIRONMENT

SECTION 1203
VENTILATION

1203.2 Attic spaces. Enclosed attics and enclosed rafter spaces formed where ceilings are applied directly to the underside of roof framing members shall have cross ventilation for each separate space by ventilation openings protected against the entrance of rain and snow. Blocking and bridging shall be arranged so as not to interfere with the movement of air. An airspace of not less than 1 inch (25 mm) shall be provided between the insulation and the roof sheathing. The net free ventilating area shall not be less than 1/150th of the area of the space ventilated.

Exceptions:

1. ~~***(Not adopted by HCD)***~~ The net free cross-ventilation area shall be permitted to be reduced to 1/300 provided that not less than 50 percent and not more than 80 percent of the required ventilating area

provided by ventilators located in the upper portion of the space to be ventilated at least 3 feet (914 mm) above eave of cornice vents with the balance of the required ventilation provided by eave or cornice vents.

2. ~~*(Not adopted by HCD)*~~ The net free cross-ventilation area shall be permitted to be reduced to 1/300 provided where a Class I or II vapor barrier is installed on the warm-in-winter side of the ceiling.

3. Attic ventilation shall not be required when determined not necessary by the building official due to atmospheric or climatic conditions.

~~*4. (HCD 1 & HCD 2) The net cross-ventilation area shall be permitted to be reduced to 1/300 provided that at least 40 percent and not more than 50 percent of the required ventilating area is provided by ventilators located in the upper portion of the attic or rafter space. Upper ventilators shall be located no more than 3 feet (914 mm) below the ridge or highest point of the space, measured vertically, with the balance of the required ventilation provided by eave or cornice vents. Where the location of wall or roof framing members conflicts with the installation of upper ventilators, installation more than 3 feet (914 mm) below the ridge or highest point of the space shall be permitted.*~~

~~*5. (HCD 1 & HCD 2) The net cross-ventilation area shall be permitted to be reduced to 1/300 in Climate Zones 14 and 16, where a Class I or II vapor retarder is installed on the warm-in-winter side of the ceiling.*~~

18. HCD proposes NOT to adopt Chapter 13 from the 2015 International Building Code.

CHAPTER 13
ENERGY EFFICIENCY

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11, and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

19. HCD proposes to adopt Chapter 14, except Table 1405.3.2, from the 2015 International Building Code into the 2016 California Building Code with modified existing amendments as follows:

CHAPTER 14
EXTERIOR WALLS

SECTION 1405
INSTALLATION OF WALL COVERINGS

1405.3 Vapor retarders. Vapor retarders as described in Section 1405.3.3 shall be provided in accordance with Sections 1405.3.1 and 1405.3.2, or an approved design using accepted engineering practice for hydrothermal analysis.

1405.3.1 Class I and II vapor retarders. Class I and II vapor retarders shall not be provided on the interior side of frame walls in Zones 1 and 2. Class I vapor retarders shall not be provided on the interior side of frame walls in Zones 3 and 4. Class I or II vapor retarders shall be provided on the interior side of frame walls in Zones 5, 6, 7, 8 and Marine 4. The appropriate zone shall be selected in accordance with Chapter 3 of the International Energy Conservation Code.

(Formerly in Section 1405.3) *(HCD 1 & HCD 2) Class I or II vapor retarders shall be provided on the interior side of frame walls of low-rise residential buildings in Climate Zones 14 and 16, as required in ~~Title 24, Part 6,~~ the California Energy Code (see definition of "Low-rise residential building").*

Exceptions:

1. Basement walls.
2. Below-grade portion of any wall.
3. Construction where moisture or its freezing will not damage the materials.
4. Conditions where Class III vapor retarders are required in Section 1405.3.2.

1405.3.2 (Formerly 1405.3.1) Class III vapor retarders. Class III vapor retarders shall be permitted where any one of the conditions in Table 1405.3.2 is met. Only Class III vapor retarders shall be used on the interior side of frame walls where foam plastic insulating sheathing with a perm rating of less than 1 is applied in accordance with Table 1405.3.2 on the exterior side of the frame wall.

(HCD 1 & HCD 2) Class III vapor retarders shall be permitted where any one of the conditions in Items 1, 2 or 3 below are met. This section shall apply to "Low-rise residential buildings" as defined in ~~Title 24, Part 6,~~ the California Energy Code.

1. *Vented cladding over fiberboard.*
2. *Vented cladding over gypsum.*
3. *Insulated sheathing with R-value ≥ R4.*

Spray foam with a minimum density of 2 lbs/ft^3 applied to the interior cavity side of OSB, plywood, fiberboard, insulating sheathing or gypsum is deemed to meet the insulating sheathing requirement where the spray foam R-value meets or exceeds the specified insulating sheathing R-value.

TABLE 1405.3.2 (Formerly TABLE 1405.3.1)
CLASS III VAPOR RETARDERS
(Not adopted by HCD 1 & HCD 2)

ZONE	CLASS III VAPOR RETARDERS PERMITTED FOR:[a]
Marine 4	Vented cladding over wood structural panels Vented cladding over fiberboard Vented cladding over gypsum Insulated sheathing with *R*-value ≥ R2.5 over 2×4 wall Insulated sheathing with *R*-value ≥ R3.75 over 2×6 wall
5	Vented cladding over wood structural panels Vented cladding over fiberboard Vented cladding over gypsum Insulated sheathing with *R*-value ≥ R5 over 2×4 wall Insulated sheathing with *R*-value ≥ R7.5 over 2×6 wall
6	Vented cladding over fiberboard Vented cladding over gypsum Insulated sheathing with *R*-value ≥ R7.5 over 2×4 wall Insulated sheathing with *R*-value ≥ R11.25 over 2×6 wall
7 and 8	Insulated sheathing with *R* value ≥ R10 over 2×4 wall Insulated sheathing with *R* value ≥ R15 over 2×6 wall

For SI: 1 pound per cubic foot = 16 kg/m^3.

a. Spray foam with a minimum density of 2 lbs/ft^3 applied to the interior cavity side of OSB, plywood, fiberboard, insulating sheathing or gypsum is deemed to meet the insulating sheathing requirement where the spray foam R-value meets or exceeds the specified insulating sheathing R-value.

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11, and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

20. HCD proposes to adopt Chapter 15 from the 2015 International Building Code into the 2016 California Building Code with existing amendments as follows:

CHAPTER 15
ROOF ASSEMBLIES AND ROOFTOP STRUCTURES

SECTION 1503
WEATHER PROTECTION

1503.4 Roof drainage. Design and installation of roof drainage systems shall comply with Section 1503 of this code and ~~Sections 1106 and 1108, as applicable,~~ *Chapter 11* of the ~~International~~ *California* Plumbing Code.

1503.4.1 Secondary (emergency overflow) drains or scuppers. Where roof drains are required, secondary (emergency overflow) roof drains or scuppers shall be provided where the roof perimeter construction extends above the roof in such a manner that water will be entrapped if the primary drains allow buildup for any reason. The installation and sizing of secondary emergency overflow drains, leaders and conductors shall comply with ~~Sections 1106 and 1108, as applicable,~~ *Chapter 11* of the ~~International~~ *California* Plumbing Code.

SECTION 1510 (Formerly 1509)
ROOFTOP STRUCTURES

1510.7 (Formerly 1509.7) Photovoltaic systems. Rooftop mounted photovoltaic panels and modules shall be designed in accordance with this section.

1510.7.1 (Formerly 1509.7.1) Wind resistance. Rooftop-mounted photovoltaic panels and modules shall be designed for component and cladding wind loads in accordance with Chapter 16 using an effective wind area based on the dimensions of a single unit frame.

Exception: (HCD-1, HCD-2) *The effective wind area shall be in accordance with Chapter 16 and ASCE 7 Section. 26.2.*

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11, and 19990; and Government Code Section 12955.1.
Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

21. HCD proposes to adopt Chapter 16 from the 2015 International Building Code into the 2016 California Building Code with existing amendments as follows:

CHAPTER 16
STRUCTURAL DESIGN

SECTION 1607
LIVE LOADS

1607.8 Loads on handrails, guards, grab bars, *shower* seats, *dressing room bench seats* and vehicle barriers. Handrails, guards, grab bars, accessible seats, accessible benches and vehicle barriers shall be designed and constructed to the structural loading conditions set forth in this section.

1607.8.1 Handrails and guards. (No change to text)

1607.8.2 Grab bars, shower seats and dressing room bench seats. Grab bars, shower seats and dressing room bench seats shall be designed to resist a single concentrated load of 250 pounds (1.11 kN) applied at any direction on the grab bar or seat so as to produce the maximum load effects.

(HCD 1-AC) See Chapter 11A, Section 1127A.4 for grab bars, shower seats and dressing room bench seats, as applicable.

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 8871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

22. HCD proposes to repeal and not bring forward the existing California amendments from the 2013 California Building Code, Section 1613.5.

CHAPTER 16
STRUCTURAL DESIGN

SECTION 1613
EARTHQUAKE LOADS

~~***1613.5 [HCD 1 & HCD 2] Modifications to ASCE 7.*** *The text of ASCE 7 shall be modified as indicated in Sections 1613.5.1 through 1613.5.2.*~~

~~***1613.5.1 [HCD 1 & HCD 2] Modify ASCE 7 DEFINITIONS*** *as follows:*~~

~~**1.2 DEFINITIONS.**~~

~~***BALLASTED PHOTOVOLTAIC SYSTEM:*** *A roof mounted system composed of solar photovoltaic panels and supporting members that are unattached or partially attached to the roof and must rely on its weight, aerodynamics and friction to counter the effect of wind and seismic forces.*~~

~~***1613.5.2 [HCD 1 & HCD 2] Modify ASCE 7 Section 13.4*** *as follows:*~~

~~**Section 13.4 NONSTRUCTURAL COMPONENT ANCHORAGE.**~~

~~Components and their supports shall be attached (or anchored) to the structure in accordance with the requirements of this section and the attachment shall satisfy the requirements for the parent material as set forth elsewhere in this standard. Component attachments shall be bolted, welded, or otherwise positively fastened without consideration of frictional resistance produced by the effects of gravity. A continuous load path of sufficient strength and stiffness between the component and the supporting structure shall be~~

~~provided. Local elements of the structure including connections shall be designed and constructed for the component forces where they control the design of the elements or their connections. The component forces shall be those determined in Section 13.3.1, except that modifications to Fp and R, due to anchorage conditions need not be considered. The design documents shall include sufficient information relating to the attachments to verify compliance with the requirements of this section~~

~~***Exception:** Ballasted photovoltaic systems when design is based on Section 13.4.7 and approved by the enforcing agency.*~~

~~*13.4.7. Solar PV panels or modules installed on a roof as a balasted system need not be rigidly attached to the roof or supporting structure. Ballasted systems shall be designed and installed only on roofs with slopes 1 inch per foot or less. The ballasted system shall be designed to resist sliding and uplift resulting from lateral and vertical forces, using a coefficient of friction determined by acceptable engineering practices. In sites where the Seismic Design category is C or above, the system shall be designed to accommodate seismic displacement determined by approved analysis or shake-table testing, using input motions consistent with ASCE 7 lateral and vertical seismic forces for non-structural components on roofs.*~~

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 8871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

23. HCD proposes to adopt Chapter 17 from the 2015 International Building Code into the 2016 California Building Code with new and modified existing amendments as follows:

CHAPTER 17
SPECIAL INSPECTIONS AND TESTS

SECTION 1704
SPECIAL INSPECTIONS AND TESTS, CONTRACTOR RESPONSIBILITY AND STRUCTURAL OBSERVATION

1704.2 Special inspections and tests. Where application is made to the building official for construction as specified in Sections 105 *or 1.8.4, as applicable*, the owner or the owner's authorized agent, other than the contractor, shall employ one or more approved agencies to provide special inspections and tests during construction on the types of work specified in Section 1705 and identify the approved agencies to the building official. These special inspections and tests are in addition to the inspections by the building official that are identified in Section 110.

Exceptions:

1. Special inspections and tests are not required for construction of a minor nature or as warranted by conditions in the jurisdiction as approved by the building official.
2. Unless otherwise required by the building official, special inspections and tests are not required for Group U occupancies that are accessory to a residential occupancy including, but not limited to, those listed in Section 312.1.
3. Special inspections and tests are not required for portions of structures designed and constructed in accordance with the cold-formed steel light-frame construction provisions of Section 2211.7 or the conventional light-frame construction provisions of Section 2308.
4. The contractor is permitted to employ the approved agencies where the contractor is also the owner.
4 *5. **(HCD 1)** The provisions of Health and Safety Code Division 13, Part 6 and the California Code of Regulations, Title 25, Division 1, Chapter 3, commencing with Section 3000, shall apply to the construction and inspection of factory-built housing as defined in Health and Safety Code Section 19971.*

SECTION 1707
ALTERNATIVE TEST PROCEDURE

1707.1 General. In the absence of approved rules or other approved standards, the building official shall make, or cause to be made, the necessary tests and investigations; or the building official shall accept duly authenticated reports from approved agencies in respect to the quality and manner of use of new materials or assemblies as provided for in Sections 104.11 *or 1.8.7, as applicable*. The cost of all tests and other investigations required under the provisions of this code shall be borne by the applicant.

~~*(HCD 1 & HCD 2) In the absence of approved rules or other approved standards, the building official shall make or cause to be made the necessary tests and investigations, or the building official shall accept duly authenticated reports from approved agencies with respect to the quality and manner of use of new materials or assemblies as provided for in Section 1.8.7, Chapter 1, Division 1. The cost of all tests and other investigations required under the provisions of this code shall be borne by the applicant.*~~

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

24. HCD proposes to adopt Chapter 18 from the 2015 International Building Code into the 2016 California Building Code with existing and modified existing amendments as follows:

CHAPTER 18
SOILS AND FOUNDATIONS

SECTION 1801
GENERAL

1801.2 Design basis. Allowable bearing pressures, allowable stresses and design formulas provided in this chapter shall be used with the allowable stress design load combinations specified in Section 1605.3. The quality and design of materials used structurally in excavations and foundations shall comply with the requirements specified in Chapters 16, 19, 21, 22 and 23 of this code. Excavations and fills shall also comply with Chapter 33.

(HCD 1) For limited-density owner-built rural dwellings, pier foundations, stone masonry footings and foundations, pressure-treated lumber, poles or equivalent foundation materials or designs may be used, provided that the bearing is sufficient for the purpose intended.

SECTION 1803
GEOTECHNICAL INVESTIGATIONS

1803.1 General. Geotechnical investigations shall be conducted in accordance with Section 1803.2 and reported in accordance with Section 1803.6. Where required by the building official, or where geotechnical investigations involve in-situ testing, laboratory testing or engineering calculations, such investigations shall be conducted by a registered design professional.

1803.1.1 General and where required for applications listed in Section 1.8.2.1.1 regulated by the Department of Housing and Community Development. (HCD 1) *Foundation and soils investigations shall be conducted in conformance with Health and Safety Code Sections 17953 through 17957 as summarized below.*

1803.1.1.1 Preliminary soil report. *Each city, county, or city and county shall enact an ordinance which requires a preliminary soil report, prepared by a civil engineer who is registered by the state. The report*

shall be based upon adequate test borings or excavations, of every subdivision, where a tentative and final map is required pursuant to Section 66426 of the Government Code.

The preliminary soil report may be waived if the building department of the city, county, or city and county, or other enforcement agency charged with the administration and enforcement of the provisions of Section 1803.1.1, shall determine that, due to the knowledge such department has as to the soil qualities of the soil of the subdivision or lot, no preliminary analysis is necessary.

1803.1.1.2 Soil investigation by lot, necessity, preparation, and recommendations. *If the preliminary soil report indicates the presence of critically expansive soils or other soil problems which, if not corrected, would lead to structural defects, such ordinance shall require a soil investigation of each lot in the subdivision.*

The soil investigation shall be prepared by a civil engineer who is registered in this state. It shall recommend corrective action which is likely to prevent structural damage to each dwelling proposed to be constructed on the expansive soil.

1803.1.1.3 Approval, building permit conditions, appeal. *The building department of each city, county, or city and county, or other enforcement agency charged with the administration and enforcement of the provisions of Section 1803.1.1, shall approve the soil investigation if it determines that the recommended action is likely to prevent structural damage to each dwelling to be constructed. As a condition to the building permit, the ordinance shall require that the approved recommended action be incorporated in the construction of each dwelling. Appeal from such determination shall be to the local appeals board.*

1803.1.1.4 Liability. *A city, county, city and county, or other enforcement agency charged with the administration and enforcement of the provisions of Section 1803.1.1, is not liable for any injury which arises out of any act or omission of the city, county, city and county, other enforcement agency, or a public employee or any other person under Section 1803.1.1.*

1803.1.1.5. Alternate procedures. *The governing body of any city, county, or city and county may enact an ordinance prescribing an alternate procedure which is equal to or more restrictive than the procedure specified in Section 1803.1.1.*

SECTION 1804
EXCAVATION, GRADING AND FILL

1804.4 (Formerly 1804.3) Site grading. The ground immediately adjacent to the foundation shall be sloped away from the building at a slope of not less than one unit vertical in 20 units horizontal (5-percent slope) for a minimum distance of 10 feet (3048 mm) measured perpendicular to the face of the wall. If physical obstructions or lot lines prohibit 10 feet (3048 mm) of horizontal distance, a 5-percent slope shall be provided to an approved alternative method of diverting water away from the foundation. Swales used for this purpose shall be sloped a minimum of 2 percent where located within 10 feet (3048 mm) of the building foundation. Impervious surfaces within 10 feet (3048 mm) of the building foundation shall be sloped a minimum of 2 percent away from the building.

Exception: Where climatic or soil conditions warrant, the slope of the ground away from the building foundation shall be permitted to be reduced to not less than one unit vertical in 48 units horizontal (2-percent slope).

The procedure used to establish the final ground level adjacent to the foundation shall account for additional settlement of the backfill.

> ~~*1804.3.1*~~ *1804.4.1 (HCD 1) Construction plans. Construction plans shall indicate how the site grading or drainage system will manage all surface water flows to keep water from entering buildings in accordance with the California Green Building Standards Code (CALGreen), Chapter 4, Division 4.1.*

SECTION 1805
DAMPPROOFING AND WATERPROOFING

1805.4 Subsoil drainage system. Where a hydrostatic pressure condition does not exist, dampproofing shall be provided and a base shall be installed under the floor and a drain installed around the foundation perimeter. A subsoil drainage system designed and constructed in accordance with Section 1805.1.3 shall be deemed adequate for lowering the groundwater table.

1805.4.1 Floor base course. Floors of basements, except as provided for in Section 1805.1.1, shall be placed over a floor base course not less than 4 inches (102 mm) in thickness that consists of gravel or crushed stone containing not more than 10 percent of material that passes through a No. 4 (4.75 mm) sieve.

Exceptions:

1. Where a site is located in well-drained gravel or sand/gravel mixture soils, a floor base course is not required.
2. ***(HCD1)*** *When a capillary break is installed in accordance with the California Green Building Standards Code (CALGreen), Chapter 4, Division 4.5*

1805.4.3 Drainage discharge. The floor base and foundation perimeter drain shall discharge by gravity or mechanical means into an approved drainage system that complies with the ~~International~~ *California* Plumbing Code.

Exception: Where a site is located in well-drained gravel or sand/gravel mixture soils, a dedicated drainage system is not required.

SECTION 1810
DEEP FOUNDATIONS

1810.3.10.4 Seismic reinforcement. For structures assigned to Seismic Design Category C, a permanent steel casing shall be provided from the top of the micropile down to the point of zero curvature. For structures assigned to Seismic Design Category D, E or F, the micropile shall be considered as an alternative system in accordance with Sections 104.11 *or 1.8.7, as applicable*. The alternative system design, supporting documentation and test data shall be submitted to the building official for review and approval.

~~*(HCD 1 & HCD 2) For structures assigned to Seismic Design Category D, E or F, the micropile shall be considered as an alternative system in accordance with Section 1.8.7, Chapter 1, Division 1. The alternative system design, supporting documentation and test data shall be submitted to the building official for review and approval.*~~

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11, and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

25. HCD proposes to adopt Chapter 19 from the 2015 International Building Code into the 2016 California Building Code with existing amendments as follows:

CHAPTER 19
CONCRETE

SECTION 1905
MODIFICATIONS TO ACI 318

1905.1.2 ACI 318, Section 18.2.1.2 (Formerly 21.1.1). Modify ACI 318 Sections 18.2.1.2 and 18.2.1.6 to read as follows:

18.2.1.2 – Structures assigned to Seismic Design Category A shall satisfy requirements of Chapters 1 through 17 and 19 through 26. Chapter 18 does not apply. Structures assigned to Seismic Design Category B, C, D, E or F also shall satisfy 18.2.1.3 through 18.2.1.7, as applicable. Except for structural elements of plain concrete complying with Section 1905.1.7 of the ~~International~~ *California* Building Code, structural elements of plain concrete are prohibited in structures assigned to Seismic Design Category C, D, E or F.

18.2.1.6.... (No change to text)

1905.1.5 (Formerly 1905.1.6) ACI 318, Section 18.13.1.1 (Formerly 21.12.1.1). Modify ACI 318, Section 18.13.1.1 to read as follows:

18.13.1.1 – Foundations resisting earthquake-induced forces or transferring earthquake-induced forces between a structure and ground shall comply with the requirements of 18.13 and other applicable provisions of ACI 318 unless modified by Chapter 18 of the ~~International~~ *California* Building Code.

SECTION 1907
MINIMUM SLAB PROVISIONS

1907.1 General. The thickness of concrete floor slabs supported directly on the ground shall not be less than 3 1/2 inches (89 mm). A 6-mil (0.006 inch; 0.15 mm) polyethylene vapor retarder with joints lapped not less than 6 inches (152 mm) shall be placed between the base course or subgrade and the concrete floor slab, or other approved equivalent methods or materials shall be used to retard vapor transmission through the floor slab.

Exceptions: A vapor retarder is not required:

1. For detached structures accessory to occupancies in Group R-3, such as garages, utility buildings or other unheated facilities.
2. For unheated storage rooms having an area of less than 70 square feet (6.5 m2) and carports attached to occupancies in Group R-3.
3. For buildings of other occupancies where migration of moisture through the slab from below will not be detrimental to the intended occupancy of the building.
4. For driveways, walks, patios and other flatwork which will not be enclosed at a later date.
5. Where *approved* based on local site conditions.

1907.1.1 (HCD 1) Capillary break. *When a vapor retarder is required, a capillary break shall be installed in accordance with the California Green Building Standards Code (CALGreen), Chapter 4, Division 4.5.*

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11, and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

26. HCD proposes to repeal and not bring forward the existing California amendments from the 2013 California Building Code, Section 1905.1.9.

CHAPTER 19
CONCRETE

SECTION 1905
MODIFICATIONS TO ACI 318

~~***1905.1.9 ACI 318, Section D.3.3.*** *Modify ACI 318, Sections D.3.3.4.2, D.3.3.4.3(d) and D.3.3.5.2 to read as follows:~~

~~*D.3.3.4.2 – Where the tensile component of the strength level earthquake force applied to anchors exceeds 20 percent of the total factored anchor tensile force associated with the same load combination, anchors and their attachments shall be designed in accordance with Section D.3.3.4.3. The anchor design tensile strength shall be determined in accordance with Section D.3.3.4.4.*~~

~~**Exception:** Anchors designed to resist wall out-of-plane forces with design strengths equal to or greater than the force determined in accordance with ASCE 7 Equation 12.11-1 or 12.14-10 and Section 1604A.8.2 of this code shall be deemed to satisfy Section D.3.3.4.3(d).~~

~~D.3.3.4.3(d) – The anchor or group of anchors shall be designed for the maximum tension obtained from design load combinations that include **E**, with **E** increased by Ω_0. The anchor design tensile strength shall be calculated from Section D.3.3.4.4~~

~~D.3.3.5.2 – Where the shear component of the strength-level earthquake force applied to anchors exceeds 20 percent of the total factored anchor shear force associated with the same load combination, anchors and their attachments shall be designed in accordance with Section D.3.3.5.3. The anchor design shear strength for resisting earthquake forces shall be determined in accordance with Section D.6.~~

~~**Exceptions:**~~

~~1. For the calculation of the in-plane shear strength of anchor bolts attaching wood sill plates of bearing or non-bearing walls of light-frame wood structures to foundations or foundation stem walls, the in-plane design shear strength in accordance with Sections D.6.2 and D.6.3 need not be computed and Section D.3.3.5.3 shall be deemed to be satisfied provided all of the following are met:~~

~~1.1. The allowable in-plane shear strength of the anchor is determined in accordance with AF&PA NDS Table 11E for lateral design values parallel to grain.~~

~~1.2. The maximum anchor nominal diameter is 5/8 inches (16 mm).~~

~~1.3. Anchor bolts are embedded into concrete a minimum of 7 inches (178 mm).~~

~~1.4. Anchor bolts are located a minimum of 1 3/4 inches (45 mm) from the edge of the concrete parallel to the length of the wood sill plate.~~

~~1.5. Anchor bolts are located a minimum of 15 anchor diameters from the edge of the concrete perpendicular to the length of the wood sill plate.~~

~~1.6. The sill plate is 2-inch or 3-inch nominal thickness.~~

~~2. For the calculation of the in-plane shear strength of anchor bolts attaching cold-formed steel track of bearing or non-bearing walls of anchor bolts attaching cold-formed steel track of bearing or non-bearing walls of light-frame construction to foundations or foundation stem walls the in-plane design shear strength in accordance with Sections D.6.2 and D.6.3 need not be computed and Section D.3.3.5.3 shall be deemed to be satisfied provided all of the following are met:~~

~~2.1. The maximum anchor nominal diameter is 5/8 inches (16 mm).~~

~~2.2. Anchors are embedded into concrete a minimum of 7 inches (178 mm).~~

~~2.3. Anchors are located a minimum of 1 3/4 inches (45 mm) from the edge of the concrete parallel to the length of the track.~~

~~2.4. Anchors are located a minimum of 15 anchor diameters from the edge of the concrete perpendicular to the length of the track.~~

~~2.5. The track is 33 to 68 mil designation thickness.~~

~~Allowable in-plane shear strength of exempt anchors, parallel to the edge of concrete shall be permitted to be determined in accordance with AISI S100 Section E3.3.1.~~

~~3. In light-frame construction, bearing or nonbearing walls, shear strength of concrete anchors less than or equal to 5/8 inch [16mm] in diameter of sill plate or track to foundation or foundation stem wall need not satisfy Section D.3.3.5.3 (a) through (c) when the design strength of the anchors is determined in accordance with Section D.6.2.1(c).~~

27. HCD proposes to adopt Chapter 20 from the 2015 International Building Code into the 2016 California Building Code without amendments:

CHAPTER 20
ALUMINUM

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

28. HCD proposes to adopt Chapter 21 from the 2015 International Building Code into the 2016 California Building Code with existing amendments as follows:

CHAPTER 21
MASONRY

SECTION 2109
EMPIRICAL DESIGN OF MASONRY

2109.1.1 Limitations. The use of empirical design of masonry shall be limited as noted in Section 5.1.2 of TMS 402/ACI 530/ASCE 5. The use of dry-stacked, surface bonded masonry shall be prohibited in Risk Category IV structures. In buildings that exceed one or more of the limitations of Section 5.1.2 of TMS 402/ACI 530/ASCE 5, masonry shall be designed in accordance with the engineered design provisions of Section 2101.2.1, 2101.2.2 or 2101.2.3 or the foundation wall provisions of Section 1807.1.5.

Section A.1.2.2 of TMS 402/ACI 530/ASCE 5 shall be modified as follows:

A.1.2.2 (Formerly 5.1.2.2) Wind – Empirical requirements shall not apply to the design or construction of masonry for buildings, parts of buildings, or other structures to be located in areas where V_{asd} as determined in accordance with Section 1609.3.1 of the ~~International~~ *California* Building Code exceeds 110 mph.

SECTION 2113
MASONRY CHIMNEYS

2113.11.1.2 Gas appliances. Flue lining systems for gas appliances shall be in accordance with the ~~International Fuel Gas~~ *California Mechanical* Code.

2113.15 Flue area (appliance). Chimney flues shall not be smaller in area than the area of the connector from the appliance. Chimney flues connected to more than one appliance shall not be less than the area of the largest connector plus 50 percent of the areas of additional chimney connectors.

Exceptions:

1. Chimney flues serving oil-fired appliances sized in accordance with NFPA 31.
2. Chimney flues serving gas-fired appliances sized in accordance with the ~~International Fuel Gas~~ *California Mechanical* Code.

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10,

17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, Sections 17910 through 17995.5, Sections 18200 through 18700, Sections 18860 through 18874, and Sections 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

29. HCD proposes to adopt Chapter 22 from the 2015 International Building Code into the 2016 California Building Code without amendments:

CHAPTER 22
STEEL

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

30. HCD proposes to adopt Chapter 23 from the 2015 International Building Code into the 2016 California Building Code with existing amendments as follows:

CHAPTER 23
WOOD

SECTION 2301
GENERAL

2301.1 Scope. The provisions of this chapter shall govern the materials, design, construction and quality of wood members and their fasteners.

(HCD 1) For limited-density owner-built rural dwellings, owner-produced or used materials and appliances may be utilized unless found not to be of sufficient strength or durability to perform the intended function; owner-produced or used lumber, or shakes and shingles may be utilized unless found to contain dry rot, excessive splitting or other defects obviously rendering the material unfit in strength or durability for the intended purpose.

SECTION 2304
GENERAL CONSTRUCTION REQUIREMENTS

2304.3.1 Bottom plates. Studs shall have full bearing on a 2-inch-thick (actual 11/2-inch, 38 mm) or larger plate or sill having a width at least equal to the width of the studs.

2304.3.1.1 (HCD 1) Rodent proofing. *Annular spaces around pipes, electric cables, conduits or other openings in bottom/sole plates at exterior walls shall be protected against the passage of rodents by closing such openings in accordance with the California Green Building Standards Code (CALGreen), Chapter 4, Division 4.4.*

2304.5 Framing around flues and chimneys. Combustible framing shall be a minimum of 2 inches (51 mm), but shall not be less than the distance specified in Sections 2111 and 2113 and the ~~International~~ *California* Mechanical Code, from flues, chimneys and fireplaces, and 6 inches (152 mm) away from flue openings.

SECTION 2308
CONVENTIONAL LIGHT-FRAME CONSTRUCTION

2308.1 General. The requirements of this section are intended for conventional light-frame construction. Other construction methods are permitted to be used, provided a satisfactory design is submitted showing compliance with other provisions of this code. Interior nonload-bearing partitions, ceilings and curtain walls of conventional light-frame construction are not subject to the limitations of Section 2308.3. ~~Detached one- and two-family dwellings and multiple single-family dwellings (townhouses) not more than three stories above grade plane in height with a separate means of egress and their accessory structures shall comply with the International Residential Code.~~

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

31. HCD proposes to adopt Chapter 24 from the 2015 International Building Code into the 2016 California Building Code without amendments:

CHAPTER 24
GLASS AND GLAZING

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

32. HCD proposes to adopt Chapter 25 from the 2015 International Building Code into the 2016 California Building Code without amendments:

CHAPTER 25
GYPSUM BOARD AND PLASTER

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

33. HCD proposes to adopt Chapter 26 from the 2015 International Building Code into the 2016 California Building Code without amendments:

CHAPTER 26
PLASTIC

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

34. HCD proposes NOT to adopt Chapter 27 from the 2015 International Building Code.

CHAPTER 27
ELECTRICAL

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

35. HCD proposes NOT to adopt Chapter 28 from the 2015 International Building Code.

CHAPTER 28
MECHANICAL SYSTEMS

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

36. HCD proposes NOT to adopt Chapter 29 from the 2015 International Building Code.

CHAPTER 29
PLUMBING SYSTEMS

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

37. HCD proposes to adopt Chapter 30, Sections 3001.1 and 3001.3 only, from the 2015 International Building Code into the 2016 California Building Code with existing amendment as follows:

CHAPTER 30
ELEVATORS AND CONVEYING SYSTEMS

SECTION 3001
GENERAL

3001.3 Accessibility. Passenger elevators *and platform (wheelchair) lifts* required to be accessible or to serve as part of an accessible means of egress shall comply with Sections 1009 and ~~1109.7~~ *Chapter 11A for applications listed in Section 1.8.2.1.2 regulated by the Department of Housing and Community Development.*

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

38. HCD proposes to adopt Chapter 31, except Section 3109, from the 2015 International Building Code into the 2016 California Building Code with existing amendment as follows:

CHAPTER 31
SPECIAL CONSTRUCTION

SECTION 3104
PEDESTRIAN WALKWAYS AND TUNNELS

3104.2 Separate structures. Buildings connected by pedestrian walkways or tunnels shall be considered to be separate structures.
Exceptions:
1. Buildings that are on the same lot and considered as portions of a single building in accordance with Section 503.1.2.

2. ***(HCD 1-AC)*** For purposes of *accessibility* ~~calculating the number of Type B units required by Chapter 11~~ *as required by Chapter 11A*, structurally connected buildings, *buildings connected by stairs, walkways, or roofs,* and buildings with multiple wings shall be considered one structure.

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

39. HCD proposes to adopt Chapter 32 from the 2015 International Building Code into the 2016 California Building Code without amendments:

CHAPTER 32
ENCROACHMENTS INTO THE PUBLIC RIGHT-OF-WAY

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

40. HCD proposes to adopt Chapter 33, Sections 3301, 3302, 3303, 3304, 3305, 3306, 3307, and 3308, from the 2015 International Building Code into the 2016 California Building Code with existing amendments as follows. HCD proposes to not adopt Sections 3309, 3310, 3311, 3312 and 3313.

CHAPTER 33
SAFEGUARDS DURING CONSTRUCTION

SECTION 3304
SITE WORK

3304.1.5 (HCD 1) Storm water drainage and retention during construction. *Projects which disturb less than one acre of soil and are not part of a larger common plan of development which in total disturbs one acre or more, shall manage storm water drainage during construction in accordance with the California Green Building Standards Code (CALGreen), Chapter 4, Division 4.1.*

SECTION 3305
SANITARY

3305.1 Facilities required. Sanitary facilities shall be provided during construction, remodeling or demolition activities in accordance with the ~~*International*~~ *California* Plumbing Code.

SECTION 3306
PROTECTION OF PEDESTRIANS

3306.2 Walkways. A walkway shall be provided for pedestrian travel in front of every construction and demolition site unless the applicable governing authority authorizes the sidewalk to be fenced or closed. Walkways shall be of sufficient width to accommodate the pedestrian traffic, but in no case shall they be less than 4 feet (1219 mm) in width. Walkways shall be provided with a durable walking surface. Walkways shall be accessible in accordance with ~~Chapter 11~~ *Chapter 11A* and shall be designed to support all imposed loads and in no case shall the design live load be less than 150 pounds per square foot (psf) (7.2 kN/m^2).

NOTE:

41. HCD proposes NOT to adopt Chapter 34 from the 2015 International Building Code.

CHAPTER 34
RESERVED

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

42. HCD proposes to repeal and not bring forward the existing California amendments from the 2013 California Building Code, Chapter 34 into the 2016 California Building Code.

CHAPTER 34
EXISTING STRUCTURES

SECTION 3401
GENERAL

3401.1 Scope. The provisions of this chapter shall control the alteration, repair, addition and change of occupancy of existing buildings and structures.

~~*[HCD 1] In addition to the requirements in this chapter, maintenance, alteration, repair, addition, or change of occupancy to existing buildings and accessory structures under the authority of the Department of Housing and Community Development, as provided in Section 1.8.2.1.1, shall comply with California Code of Regulations, Title 25, Division 1, Chapter 1, Subchapter 1.*~~

Exceptions:
1. Existing bleachers, grandstands and folding and telescopic seating shall comply with ICC 300-02.
2. ~~*[HCD 2] For moved buildings and maintenance, alteration, repair, addition, or change of occupancy to existing*~~

~~*buildings and accessory structures in mobilehome parks or special occupancy parks as provided in Section 1.8.2.1.3. See California Code of Regulations, Title 25, Division 1, Chapters 2 and 2.2.*~~

~~3. *[HCD 1] Limited-density owner built rural dwellings.*~~

3401.4.1 Existing materials. Materials already in use in a building in compliance with requirements or approvals in effect at the time of their erection or installation shall be permitted to remain in use unless determined by the building code official to be unsafe per Section 116.

~~*[HCD 1] Local ordinances or regulations shall permit the replacement, retention and extension of original materials, and the use of original methods of construction, for any building or accessory structure, provided such building or structure complied with the building code provisions in effect at the time of original construction and the building or accessory structure does not become or continue to be a substandard building. For additional information, see Health and Safety Code Sections 17912, 17920.3, 17922(d), 17922.3, 17958.8 and 17958.9.*~~

SECTION 3404
ALTERATIONS

3404.1 General. Except as provided by Section 3401.4 or this section, alterations to any building or structure shall comply with the requirements of the code for new construction. Alterations shall be such that the existing building or structure is no less complying with the provisions of this code than the existing building or structure was prior to the alteration.

Exceptions: (No change to text)

~~***3404.1.1 Replacement, retention and extension of original materials. [HCD 1]*** *Local ordinances or regulations shall permit the replacement, retention and extension of original materials, and the use of original methods of construction, for any building or accessory structure, provided such building or structure complied with the building code provisions in effect at the time of original construction and the building or accessory structure does not become or continue to be a substandard building. For additional information, see Health and Safety Code Sections 17912, 17920.3, 17922(d), 17922.3, 17958.8 and 17958.9.*~~

SECTION 3405
REPAIRS

3405.1 General. Buildings and structures, and parts thereof, shall be repaired in compliance with Section 3405 and 3401.2. Work on nondamaged components that is necessary for the required repair of damaged components shall be considered part of the repair and shall not be subject to the requirements for alterations in this chapter. Routine maintenance required by Section 3401.2, ordinary repairs exempt from permit in accordance with Section 105.2, and abatement of wear due to normal service conditions shall not be subject to the requirements for repairs in this section.

~~***3405.1.2 Replacement, retention and extension of original materials. [HCD 1]*** *Local ordinances or regulations shall permit the replacement, retention and extension of original materials, and the use of original methods of construction, for any building or accessory structure, provided such building or structure complied with the building code provisions in effect at the time of original construction and the building or accessory structure does not become or continue to be a substandard building. For additional information, see Health and Safety Code Sections 17912, 17920.3, 17922(d), 17922.3, 17958.8 and 17958.9.*~~

SECTION 3410
MOVED STRUCTURES

3410.1 Conformance. Structures moved into or within the jurisdiction shall comply with the provisions of this code for new structures.

~~***Exception: [HCD 1 & HCD 2]*** *After July 1, 1978, local ordinances or regulations for moved apartment houses and dwellings shall permit the retention of existing materials and methods of construction, provided the apartment house or dwelling complies with the building standards for foundations applicable to new construction and does not become or continue to be a substandard building. For additional information, see Health and Safety Code Section 17958.9.*~~

43. HCD proposes to adopt Chapter 35 from the 2015 International Building Code into the 2016 California Building Code with new and existing amendments as follows:

CHAPTER 35
REFERENCED STANDARDS

This chapter lists the standards that are referenced in various sections of this document. The standards are listed herein by the promulgating agency of the standard, the standard identification, the effective date and title, and the section or sections of this document that reference the standard. The application of the referenced standards shall be as specified in *Chapter 1, Scope and Administration, Division I, Sections 1.1.5 and 1.1.7, and in Chapter 1, Scope and Administration, Division II,* Section 102.4, *as applicable*.

RODENTPROOFING

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

50. HCD proposes NOT to adopt Appendix G from the 2015 International Building Code.

APPENDIX G
FLOOD-RESISTANT CONSTRUCTION

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

51. HCD proposes NOT to adopt Appendix H from the 2015 International Building Code.

APPENDIX H
SIGNS

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

52. HCD proposes to adopt Appendix I from the 2015 International Building Code into the 2016 California Building Code without amendments.

APPENDIX I
PATIO COVERS

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

53. HCD proposes to adopt Appendix J from the 2015 International Building Code into the 2016 California Building Code with new amendment as follows:

APPENDIX J
GRADING

SECTION J104
PERMIT APPLICATION AND SUBMITTALS

J104.1 Submittal requirements. In addition to the provisions of Sections 105.3 *or 1.8.4, as applicable*, the applicant shall state the estimated quantities of excavation and fill.

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

54. HCD proposes NOT to adopt Appendix K from the 2015 International Building Code.

APPENDIX K
ADMINISTRATIVE PROVISIONS

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

55. HCD proposes NOT to adopt Appendix L from the 2015 International Building Code.

APPENDIX L
EARTHQUAKE RECORDING INSTRUMENTATION

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

---

56. HCD proposes NOT to adopt Appendix M from the 2015 International Building Code.

APPENDIX M
TSUNAMI-GENERATED FLOOD HAZARD

NOTE:
Authority Cited: Health and Safety Code Sections 17040, 17050, 17920.9, 17921, 17921.3, 17921.6, 17921.10, 17922, 17922.6, 17922.12, 17927, 17928, 17959.6, 18300, 18552, 18554, 18620, 18630, 18640, 18670, 18690, 18691, 18865, 18871.3, 18871.4, 18873, 18873.1, 18873.2, 18873.3, 18873.4, 18873.5, 18938.3, 18944.11 and 19990; and Government Code Section 12955.1.

Reference: Health and Safety Code Sections 17000 through 17062.5, 17910 through 17995.5, 18200 through 18700, 18860 through 18874, and 19960 through 19997; and Government Code Sections 12955.1 and 12955.1.1.

FINAL EXPRESS TERMS
FOR
PROPOSED BUILDING STANDARDS
OF THE
OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT

REGARDING PROPOSED CHANGES TO
CALIFORNIA BUILDING CODE
CALIFORNIA CODE OF REGULATIONS, TITLE 24, PART 2, VOLUME 1

LEGEND FOR EXPRESS TERMS
1. Existing California amendments or code language being modified are in italics when they appear in the model code text: All such language appears in *italics*, modified language is underlined.
2. New California amendments: All such language appears *underlined and in italics*.
3. Repealed text: All such language appears in ~~strikeout~~.

INITIAL EXPRESS TERMS

CHAPTER 1
SCOPE AND ADMINISTRATION
DIVISION I
CALIFORNIA ADMINISTRATION

Carry forward existing California Chapter 1, Division I of the 2013 California Building Code (CBC) for OSHPD 1, 2, 3 & 4.

DIVISION II
SCOPE AND ADMINISTRATION

Adopt only those sections of the 2015 International Building Code (IBC) Chapter previously adopted and carry forward existing amendments of the 2013 California Building Code (CBC) for OSHPD 1, 2, 3 & 4 with the following modifications:

PART 1 – SCOPE AND APPLICATION

SECTION 101
GENERAL

...

[A] 101.4.6 Energy. The provisions of the *California Energy Code* shall apply to all matters governing the design and construction of buildings for energy efficiency.

~~Exception: [OSHPD 1, 2, & 4] Not required by OSHPD.~~

...

NOTATION:
Authority: Health and Safety Code Sections 1275, 18928, 129790 and 129850; Government 11152.5
Reference: Health and Safety Code Section 129850

CHAPTER 2
DEFINITIONS

Adopt entire 2015 International Building Code (IBC) Chapter and carry forward existing amendments of the 2013 California Building Code (CBC) for OSHPD 1, 2 & 4.

NOTATION:
Authority: Health and Safety Code Sections 1275, 18928, 129790 and 129850; Government 11152.5

Reference: Health and Safety Code Section 129850

CHAPTER 3
USE AND OCCUPANCY CLASSIFICATION

Adopt entire 2015 International Building Code (IBC) Chapter without amendments for OSHPD 1, 2 & 4.

NOTATION:
Authority: Health and Safety Code Sections 1275, 18928, 129790 and 129850; Government 11152.5
Reference: Health and Safety Code Section 129850

CHAPTER 4
SPECIAL DETAILED REQUIREMENTS BASED ON USE AND OCCUPANCY

Adopt entire 2015 International Building Code (IBC) Chapter without amendments for OSHPD 1, 2 & 4.

NOTATION:
Authority: Health and Safety Code Sections 1275, 18928, 129790 and 129850; Government 11152.5
Reference: Health and Safety Code Section 129850

CHAPTER 5
GENERAL BUILDING HEIGHTS AND AREAS

Adopt entire 2015 International Building Code (IBC) Chapter without amendments for OSHPD 1, 2 & 4.

NOTATION:
Authority: Health and Safety Code Sections 1275, 18928, 129790 and 129850; Government 11152.5
Reference: Health and Safety Code Section 129850

CHAPTER 6
TYPES OF CONSTRUCTION

Adopt entire 2015 International Building Code (IBC) Chapter without amendments for OSHPD 1, 2 & 4.

NOTATION:
Authority: Health and Safety Code Sections 1275, 18928, 129790 and 129850; Government 11152.5
Reference: Health and Safety Code Section 129850

CHAPTER 7
FIRE-RESISTANCE-RATED CONSTRUCTION

Adopt entire 2015 International Building Code (IBC) Chapter without amendments for OSHPD 1, 2 & 4.

NOTATION:
Authority: Health and Safety Code Sections 1275, 18928, 129790 and 129850; Government 11152.5
Reference: Health and Safety Code Section 129850

CHAPTER 8
INTERIOR FINISHES

Adopt entire 2015 International Building Code (IBC) Chapter without amendments for OSHPD 1, 2 & 4.

NOTATION:
Authority: Health and Safety Code Sections 1275, 18928, 129790 and 129850; Government 11152.5
Reference: Health and Safety Code Section 129850

CHAPTER 9
FIRE PROTECTION SYSTEMS

Adopt entire 2015 International Building Code (IBC) Chapter without amendments for OSHPD 1, 2 & 4.

NOTATION:
Authority: Health and Safety Code Sections 1275, 18928, 129790 and 129850; Government 11152.5
Reference: Health and Safety Code Section 129850

CHAPTER 10
MEANS OF EGRESS

Adopt entire 2015 International Building Code (IBC) Chapter and carry forward existing amendments of the 2013 California Building Code (CBC) for OSHPD 1, 2 & 4.

NOTATION:
Authority: Health and Safety Code Sections 1226, 1275, 18928, 129790 and 129850; Government 11152.5
Reference: Health and Safety Code Section 129850

CHAPTER 11
ACCESSIBILITY

Entire Chapter not adopted for OSHPD 1, 2, 3, & 4.

NOTATION:
Authority: Health and Safety Code Sections 1226, 1275, 18928, 129790 and 129850; Government 11152.5
Reference: Health and Safety Code Section 129850

CHAPTER 12
INTERIOR ENVIRONMENT

Adopt entire 2015 International Building Code (IBC) Chapter and carry forward existing amendments of the 2013 California Building Code (CBC) for OSHPD 1, 2, 3 & 4 with the following modifications:

SECTION 1210
TOILET AND BATHROOM REQUIREMENTS

...

1210.2 Finish materials. Walls, floors and partitions in toilet and bathrooms shall comply with Sections 1210.2.1 through 1210.2.4.

[OSHPD 1, 2 & 3] Facilities subject to OSHPD 1, 2, & 3 shall also comply with Section 1224.4.11.

[OSHPD 4] Facilities subject to OSHPD 4 shall also comply with Section 1227.9.

...

SECTION 1224 [OSHPD 1]
HOSPITALS

1224.1 Scope. *...*

1224.2 Application. *New buildings and additions, alterations or repairs to existing buildings subject to licensure shall comply with applicable provisions of the California Electrical Code, California Mechanical Code, California Plumbing Code, California Energy Code, California Fire Code (Parts 3, 4. 5, 6 and 9 of Title 24) and this section.*

Exceptions:

1. ...

2. A change in function shall require compliance with all the functional requirements for new construction in this code, including requirements in Sections 1224, 1225, 1226, and 1227.

~~2.~~ 3. The provisions of this section do ~~no~~ not prohibit the use of alternate space utilization...

~~3.~~ 4. Nothing in this section ...

~~4.~~ 5. Acute psychiatric hospitals ...

~~5.~~ 6. When the Corrections Standards Authority ...

...

1224.3 Definitions

Specific terms and definitions are provided to facilitate consistency in the interpretation and application of these requirements. Some of these terms may have a broader definition in other contexts, but the definitions provided here reflect the use of the terms for OSHPD requirements.

...

CHANGE IN FUNCTION. *A change in function is a change in activity, service or licensed service provided, within the project limits, that does not necessarily change the use, specific use, and/or occupancy. Conversion of a space that results in a change in activity such that the space will be required to satisfy the functional space requirements under a different code sub-section than that of the prior use is considered a change in function.*

...

CLEAR DIMENSION. *An unobstructed room dimension exclusive of built-in casework and equipment and available for functional use.*

...

LOCATION TERMINOLOGY *(terms for relationship to an area or room)*

IN. *Located within the identified area or room.*

DIRECTLY ACCESSIBLE. *Connected to the identified area or room through a doorway, pass-through, or other opening without going through an intervening room or public space.*

ADJACENT. *Located next to but not necessarily connected to the identified area or room.*

IMMEDIATELY ACCESSIBLE. *Available either in or adjacent to the identified area or room.*

READILY ACCESSIBLE. *Available on the same floor as the identified area or room.*

...

OPERATING ROOM. *A room specifically designed for the performance of surgical procedures. (In common understanding, this means most types of surgical procedures, especially those involving the administration of anesthesia, multiple personnel, recovery room access, and a fully controlled environment.*

HYBRID OPERATING ROOM. *A room that meets the definition of an operating room and is also equipped to enable diagnostic imaging before, during, and after surgical procedures. Imaging equipment is permanently installed in the room and may include MRI, fixed single-plane and bi-plane tomographic imaging systems, and computed tomographic equipment.* ***Note:*** *Use of portable imaging technology does not make an operating room a hybrid operating room.*

...

PATIENT CARE LOCATIONS

BAY (patient). *A space for human occupancy with one hard wall at the headwall and three soft walls (e.g., cubicle curtains or portable privacy screen).*

CUBICLE. *A space intended for human occupancy that has at least one opening and no door and is enclosed on three sides with full-height or partial-height partitions.*

PATIENT CARE STATION. *A designated space for a specific patient care function. This term does not imply any structural requirement (e.g., a Post-anesthesia Care Unit (PACU)) can have 10 patient care stations of which three are rooms, three are cubicles, and four are bays).*

...

ROOM. *A space enclosed by hard walls and having a door. Where the word "room" or "office" is used, a separate, enclosed space for the one named function is intended. Otherwise, the described area may be a specific space in another room or common area.*

...

1224.4 GENERAL CONSTRUCTION.

1224.4.1 Services/systems and utilities. *See Section 3416A ~~or 3424 for single-story light frame skilled nursing facilities and intermediate care facilities~~.*

1224.4.2 Environmental engineering and support ~~S~~service spaces. ...

...

1224.4.4 Support areas for ~~patients~~ patient care. *Identifiable spaces shall be provided for each function indicated in all Basic and applicable Supplemental Service Space sections with requirements for support areas. The following rooms and spaces are common to most types of health care facilities and the requirements associated with each, as listed below, shall be used unless modified under a specific Service Space section.*

Relocate *Section 1224.14.2.1 "Administrative center(s) or nurse station(s)"* to *Section 1224.4.4.2* and re-number *"Specimen and blood collection facilities"* as new *Section 1224.4.4.3:*

1224.4.4.2 Administrative center(s) or nurse station(s). *This area shall have space for counters and storage and ~~shall have convenient access to handwashing fixtures~~ at least one hand-washing station shall be located in, adjacent to, or directly accessible to the administrative center or nurse station. It may be combined with or include centers for reception, charting and communication.*

1224.4.4.3 ~~1224.4.4.2~~ Specimen and blood collection facilities.

1224.4.4.3.1 ~~1224.4.4.2.1~~ Specimen collection facilities.

Relocate *Section 1224.14.2.8 "Medication station"* to new *Section 1224.4.4.4* and format as a list:

1224.4.4.4 Medication station. *Provision shall be made for distribution of medications. This shall be done from a medication preparation room or from a self-contained dispensing unit.*

1224.4.4.4.1 Medication preparation room. *If provided, this room shall be directly accessible from the nursing station. ~~It shall contain a work counter, handwashing fixture, refrigerator, and locked storage for controlled drugs.~~ When a medicine preparation room is to be used to store one or more self-contained medicine dispensing units, the room shall be designed with adequate space to prepare medicines with the self-contained medicine dispensing unit(s) present. Medicine preparation rooms shall include:*

1. *Work counter.*
2. *Handwashing station.*
3. *Refrigerator.*
4. *Locked storage for controlled drugs.*

1224.4.4.4.2 Self-contained medication dispensing unit. *If provided, a self-contained medicine dispensing unit shall be located at the nurses' station, in the clean utility room, or in an alcove.*

Relocate *Section 1224.14.2.10 "Nourishment area"* to new *Section 1224.4.4.5* and format as a list:

1224.4.4.5 Nourishment area or room. *~~There shall be a nourishment area with~~ Nourishment areas or rooms required in patient care areas shall include the following:*

1. Sink
2. Work counter
3. Refrigerator
4. Storage cabinets~~, and~~
~~5.~~ Equipment for hot and cold nourishment between scheduled meals.
6. The nourishment shall include space for trays and dishes used for nonscheduled meal service.
7. Provisions and space shall be included for separate temporary storage of unused and soiled dietary trays not picked up at mealtime.
8. Handwashing fixtures separate from the nourishment sink shall be in or adjacent to the nourishment area.

Relocate *Section 1224.14.2.6 "Clean utility room"* to new *Section 1224.4.4.6* and format as a list:

***1224.4.4.6* Clean utility/workroom.** The clean workroom or clean supply room shall be separate from and have no connection with the soiled workroom or soiled holding room. If the room is used for preparing patient care items, it shall contain the following~~:~~

1. ~~a w~~Work counter
2. ~~a h~~Handwashing station ~~fixture, and~~
3. ~~s~~Storage facilities for clean and sterile supplies

***1224.4.4.6.1* Clean supply room.** If the room is used only for storage and holding as part of a system for distribution of clean and sterile materials, the work counter or a handwashing station may be omitted. ~~Soiled and clean utility or holding rooms shall be separated and have no direct connection.~~

Relocate *Section 1224.14.2.7 "Soiled workroom or soiled holding room"* as new *Section 1224.4.4.7* and format as a list:

***1224.4.4.7* Soiled utility/workroom ~~or soiled holding room~~.** ~~This~~ The soiled workroom or soiled holding room shall be separate from and have no connection with either ~~the~~ clean workrooms or clean supply rooms. The soiled ~~workroom utilities~~ utility/workroom shall contain ~~a~~

1. ~~c~~Clinical sink (or equivalent flushing-rim fixture). ~~The room shall contain~~
2. ~~a h~~Handwashing station ~~fixture. The above fixtures shall both have a hot and cold mixing faucet. The room shall have~~
3. ~~a w~~Work counter ~~and~~
4. ~~s~~Space for separate covered containers for soiled linen and/or waste~~.~~

***1224.4.4.7.1* Soiled holding room.** Rooms used only for temporary holding soiled material may omit the clinical sink and work counter. If the flushing-rim clinical sink is eliminated, facilities for cleaning bedpans shall be provided elsewhere.

Amend *Section 1224.4.5* with defined terms added to *Section 1224.3.*
***1224.4.5* Outpatient waiting rooms.** Waiting rooms for outpatients shall provide a seating area and space for wheelchairs and have public corridor access. ~~to, or provisions for,~~ p~~P~~ublic toilets, drinking fountains and telephone shall be readily accessible.

Amend *Section 1224.6.3* and *Table 1224.4.6.1 "Station Outlets for Oxygen, Vacuum (Suction), and Medical Air":*

1224.4.6 Miscellaneous requirements.

...

1224.4.6.3 Hyperbaric facilities. *The design and construction of hyperbaric facilities shall conform to NFPA 99; Health Care Facilities and Section 1224.39.5.*

...

TABLE 1224.4.6.1
STATION OUTLETS FOR OXYGEN, VACUUM (SUCTION), AND MEDICAL AIR [1, 6]

	LOCATION	OXYGEN	VACUUM	MEDICAL AIR

Electroconvulsive therapy procedure room			•				

Notes

1. One device shall be permitted to accommodate both patient station and emergency staff assistance station functionality.

2. A visible signal shall be activated in the corridor at the patient's door, at the nurse/control station, and at all duty stations. In multi-corridor nursing units, additional visible signals shall be installed at corridor intersections.

*3. Two-way voice communication shall be provided with the nurse/control station. **Exception:** Skilled nursing facilities.*

4. One device shall be permitted to accommodate both emergency staff assistance and code call station functionality.

5. A patient station shall not be required in the NICU.

Add subsection *1224.4.8:*

1224.4.7 Corridors.

...

1224.4.7.5 Connections. *Corridor systems shall connect all patient rooms and basic services.*

Exception: *Covered pedestrian walkways connecting separate buildings are permitted for ambulatory, psychiatric or chemical dependency patients.*

1224.4.7.6 Departmental boundaries. *Department/service space areas shall be contiguous and include internal circulation to access each of the rooms/spaces associated with it, as identified under the specific Service Space requirements.*

Amend *Section 1224.4.9.1:*

1224.4.9 Windows and screens.

1224.4.9.1 Windows. *Rooms approved for the housing of patients shall be provided with natural light by means of exterior glazed openings excluding clerestory windows, obscure glass and skylights, with an area not less than one tenth of the total floor area.*

~~Exception:~~ *Newborn intensive care units shall also comply with Section 1224.29.2.13.~~12~~ Daylight.*

Relocate *Section 1224.5 "Noise Control"* as new *Section 1224.4.19:*

1224.5 Reserved ~~NOISE CONTROL.~~ ...

1224.4.19 Noise Control.

1224.4.19.1 ~~1224.5.1~~ Impact noises. *Recreation rooms, exercise rooms, equipment rooms and similar spaces where impact noises may be generated, shall not be located directly over patient bed areas or delivery and operating suites, unless special provisions are made to minimize such noise.*

1224.4.19.2 ~~1224.5.2~~ Noise reduction. *The noise reduction criteria shown in Table ~~1224.5~~ 1224.4.19 shall apply to partitions, floors, and ceiling construction in patient areas.*

Relocate "*Table 1224.4 SOUND TRANSIMISSION LIMITATION IN ACUTE CARE GENERAL HOSPITALS*" to new *Section 1224.4.19:*

TABLE ~~1224.5~~ 1224.4.19
SOUND TRANSMISSION LIMITATIONS
IN ~~ACUTE CARE GENERAL~~ HOSPITALS

...

1224.14 NURSING SERVICE SPACE.

...

1224.14.1.6 Handwashing stations ~~fixtures~~. *A handwashing station ~~fixture~~ shall be provided in the patient room. This handwashing station shall be located at or adjacent to the entrance to the patient room with unobstructed access for use by health care personnel and others entering and leaving the room. Water spouts used shall have clearances adequate to avoid contaminating utensils and the contents of carafes, etc. In multiple-bed rooms the handwashing station ~~fixture~~ shall be located outside of the patient's cubicle curtain so that it is immediately accessible to staff. Where renovation of patient rooms is undertaken a handwashing station ~~fixture~~ shall be located in the patient toilet room or patient room.*

...

1224.14.2 Service areas. *Unless otherwise indicated, provision for the services listed below shall be in or immediately ~~readily~~ accessible to each nursing unit. ...*

1224.14.2.1 Administrative center(s) or nurse station(s). *~~This area shall have space for counters ... charting and communication.~~ Administrative center(s) or nurse station shall be provided in accordance with Section 1224.4.4.2.*

1224.14.2.2 Nurse or supervisor office(s).

...

1224.14.2.4 Multipurpose room(s). *Multipurpose rooms shall be provided for staff, patients, patients' families for conferences, reports, education, training sessions, and consultation. These rooms must be readily accessible to each nursing unit. ~~They may be on other floors if convenient for regular use.~~ One such room may serve several nursing units and/or departments.*

...

1224.14.2.6 Clean utility/workroom. *~~If the room is used for preparing patient care items...shall be separated and have no direct connection.~~ Clean utility/workroom shall be provided in accordance with to Section 1224.4.4.6.*

1224.14.2.7 Soiled workroom or soiled holding room. *~~This room shall be separate from the clean utility room... facilities for cleaning bedpans shall be provided elsewhere.~~ Soiled workroom or soiled holding room shall be provided in accordance with Section 1224.4.4.7.*

1224.14.2.8 Medication station. *~~Provision shall be made for distribution of medications... self-contained medicine dispensing unit.~~ Medication station shall be provided in accordance with Section 1224.4.4.4.*

~~1224.14.2.8.1 Medicine preparation room....~~

~~1224.14.2.8.2 Self-contained medicine dispensing unit....~~

...

1224.14.2.10 Nourishment area. *~~There shall be a nourishment area with sink... in or adjacent to the nourishment area.~~ A nourishment area or room shall be provided in accordance with Section 1224.4.4.5.*

...

1224.14.2.14 Showers and bathtubs. *When individual bathing facilities are not provided in patient rooms, there shall be at least one shower and/or bathtub for each 12 beds without such facilities. Each bathtub or shower shall be in an individual room or enclosure that provides privacy for bathing, drying, and dressing.*

1224.14.2.14.1 Special bathing facilities. *Special bathing facilities, including space for attendant, shall be provided for patients on gurneys, carts, and wheelchairs at the ratio of one per 100 beds or a fraction thereof. ~~This~~ The special bathing facility may be located in a nursing unit on a separate floor ~~if convenient for use~~.*

1224.14.2.15 Patient toilet room(s)~~.~~. *Common patient toilet room(s), in addition to those serving bed areas, shall be ~~conveniently~~ located adjacent to multipurpose room(s)~~s~~ and within, or directly accessible to, each central bathing facility.*

1224.14.3.6 Adjoining toilet room. *Each isolation room shall have its own directly accessible ~~adjoining~~ toilet room with an emergency nurse call system, a lavatory, a shower providing a seat or a space for a shower chair and a toilet equipped with a bedpan flushing attachment with a vacuum breaker.*

Amend *Section 1224.15*:

1224.15 ~~Surgical service space~~. SURGICAL SERVICE SPACE. ...

1224.15.1 General. *A minimum of one operating room ~~and one recovery bed~~ is required. The surgical service space shall be divided into two designated areas: 1) semi-restricted areas (e.g. storage areas for clean and sterile supplies, sterile processing rooms, scrub stations, and corridors leading to restricted areas of the surgical suite, etc.); and 2) restricted areas (e.g. operating rooms, hybrid operating rooms, sterile procedure rooms, cardiac catheterization labs, etc.) that can be reached only through a semi-restricted area. The surgical service space shall be located and arranged to provide direct support from the anesthesia/recovery service space with a common door to and to prevent nonrelated traffic through the surgical service space.*

An operating room suite design with a sterile core shall provide for no cross traffic of staff and supplies from decontaminated/soiled areas to the sterile/clean areas. The use of facilities outside the operating room for soiled/decontaminated processing and clean assembly and sterile processing shall be designed to move the flow of goods and personnel from dirty to clean/sterile without compromising universal precautions or aseptic techniques in ~~both~~ either departments.

Exception: *Surgical service space is not required in a rural general acute care hospital ... approved by the Department of Public Health, Licensing and Certification.*

~~1224.15.1~~ 1224.15.2 Surgery.

~~1224.15.1.1~~ **1224.15.2.1 General operating room(s).** ~~In new construction, e~~Each room shall have a minimum clear floor area of 400 square feet (37.16 m^2) with a minimum of 20 feet (6096 mm) clear dimension between fixed cabinets and built-in shelves; and a system for emergency communication. X-ray or imaging viewing capabilities shall be provided.

Exception:

~~1.~~ Where renovation of existing operating rooms is undertaken in facilities built under the 2001 or prior California Building Code, each operating room shall have a minimum clear floor area of 324 square feet (30.10 m^2) with a minimum of 18 feet (5486 mm) clear dimension between fixed cabinets and built-in shelves.

~~2. For shelled floor spaces built under the 2001 or prior California Building Code, each existing operating room shall have a minimum clear floor area of 324 square feet (30.10 m^2) with a minimum of 18 feet (5486 mm) clear dimension between fixed cabinets and built-in shelves.~~

~~1224.15.1.2~~ **1224.15.2.2 Surgical cystoscopic and other endo-urologic procedures.** ~~In new construction e~~Each room shall have a minimum clear floor area of 250 square feet (23.23 m^2) with a minimum of 15 feet (4572 mm) clear dimension between fixed cabinets and built-in shelves. X-ray viewing and/or other imaging modality ~~capability~~ capabilities shall be provided.

Exception:

~~1.~~ Where renovation of existing operating rooms is undertaken in facilities built under the 2001 or prior California Building Code, rooms for surgical cystoscopy shall have a minimum clear floor area of 180 square feet (16.72 m^2). Cast rooms for open reductions, if provided, shall have a minimum clear floor area of 180 square feet (16.72 m^2), no dimension of which shall be less than 11 feet (3353 mm).

~~2. For shelled spaces built under the 2001 or prior California Building Code, each surgical cystoscopy shall have a minimum clear floor area of 180 square feet (16.72 m^2). Cast rooms for open reductions, if provided, shall have a minimum floor area of 180 square feet (16.72 m^2), no dimension of which shall be less than 11 feet (5486 mm).~~

~~**1224.15.2 Preoperative patient holding area(s).** In facilities with two or more operating rooms…Provisions for patient privacy such as cubicle curtains shall be provided.~~

…

1224.15.3.3 Sub-sterile areas. If provided within the surgery suite, a sub-sterile area(s) shall be equipped with a flash sterilizer, warming cabinet, countertop, and handwashing station ~~fixture~~. If a sterilizing facility(ies) with high-speed sterilizer(s) or other sterilizing equipment for immediate or emergency use are provided, they shall be directly accessible from the operating room(s) it serves or shall be located inside the clean core if the clean core is directly accessible from the operating room(s). This room shall be accessible without traveling through any operating room. ~~grouped to service several operating rooms for convenient, efficient use; and a work space and handwashing fixture shall be included~~. Other facilities for processing and sterilizing reusable instruments, etc., may be located in another hospital department such as central sterile supply ~~services~~.

1224.15.3.4 Medication station. A medication station ~~S~~shall be provided in accordance with Section ~~1224.14.2.8~~ 1224.4.4.4.

Amend Section 1224.16.1:

1224.16 ANESTHESIA / RECOVERY SERVICE SPACE

1224.16.1 General ~~Post-anesthetic care units (PACUs).~~ *~~Each PACU shall contain a medication station in accordance with Section 1224.14.2.8; handwashing fixtures; nurse control with charting facilities; clinical sink, refrigerator, provisions for bedpan cleaning; and storage space for gurneys, supplies, and equipment. Additionally, the design shall provide a minimum of 80 square feet (7.43 m^2) for each patient position with a clearance of at least 5 feet (1524 mm) between patient gurneys and a minimum of 4 feet (1218 mm) between the sides and the foot of patient gurneys and adjacent walls or any other fixed obstructions. Provisions for patient privacy such as cubical curtains shall be made. In new construction, at least one door to the recovery room shall access directly from the surgical service space without crossing public corridors. Handwashing fixtures shall be provided with at least one for every four gurneys uniformly distributed to provide equal access from each patient gurney.~~* *The anesthesia/recovery service space shall provide perioperative support services to the surgical service space as required under this section. Perioperative services shall include preoperative patient care and post-operative recovery with a Post-Anesthesia Care Unit (PACU). The anesthesia/recovery service space shall be located adjacent to the surgical service space with direct access to the surgical suite's semi-restricted corridor.*

> ***Exception:*** *In a rural general acute care hospital, when the surgical service space is not required, the anesthesia/recovery service space is not required. The hospital must maintain written transfer agreements with one or more general acute care hospitals that provide surgical and anesthesia services. Written transfer agreements shall be approved by the Department of Public Health, Licensing and Certification.*

Relocate *Section 1224.15.2* as new *Section 1224.16.2*:

1224.16.2 Preoperative patient care area. *In facilities with two or more operating rooms, area(s) with patient care stations shall be provided to accommodate gurney patients or sitting space for ambulatory patients not requiring gurneys. The preoperative area is an unrestricted area and ~~These area(s)~~ shall be under direct visual control of the nursing staff and may be part of the recovery ~~service~~ space. If the preoperative patient care area will serve other purposes, such as overflow PACU or holding area, applicable requirements in Section 1224.16.3 PACU shall be met.*

> ***1224.16.2.1 Space requirements.*** *~~E~~each ~~gurney~~ station shall ~~be~~ have a minimum clear floor area of 80 square feet (7.43 m^2); and ~~shall have~~ a minimum clearance of 3 feet (9133 mm) ~~on~~ shall be provided between the sides and foot of patient lounge chairs/gurneys and ~~foot of the gurney~~ adjacent walls, partitions or fixed elements.*
>
> ***1224.16.2.2 Patient privacy.*** *Provisions for patient privacy such as cubicle curtains shall be made.*
>
> ***1224.16.2.3 Handwashing stations.*** *Handwashing station(s) shall be provided in the preoperative service area at a ratio of one for each 4 stations in open bay areas. A handwashing station shall be provided in each single care station room.*

1224.16.3 Recovery and Post-Anesthetia Care Unit (PACUs~~-~~). *The recovery area and Post-Anesthesia Care Unit is an unrestricted area and located such that at least one door to the recovery room shall provide access directly from the surgical service space without crossing unrestricted corridors. A minimum of 1.5, or major fraction thereof, post-anesthesia care stations per operating room shall be provided. If pediatric surgery is provided, pediatric recovery stations shall be provided. They shall be separate from adult stations, and shall include space for family or visitors and be visible from the nurse station.*

> ***1224.16.3.1 Space requirements.*** *A minimum of 4 feet (1218 mm) clearance shall be provided between the sides and the foot of patient gurneys, or beds, and adjacent walls or other fixed elements. A minimum clear floor area of 80 square feet (7.43 m^2) shall be provided for each station in an open-bay plan. A minimum clearance of 5 feet (1524 mm) shall be provided between*

patient gurneys or beds, and a minimum of 3 feet (914 mm) clearance shall be provided between the foot of the gurney or bed, to a closed cubicle curtain.

1224.16.3.2 Patient privacy. *Provisions for patient privacy such as cubicle curtains shall be made.*

1224.16.3.3 Handwashing stations. *Handwashing stations shall be provided in the post-anesthesia care unit with at least one for every four patient positions uniformly distributed to provide equal access from each patient station. A handwashing station shall be provided in each single care station room.*

1224.16.4 Reserved.

1224.16.5 Support areas for patient care

1224.16.5.1 Administrative area / nurse station. *A nurse station shall be provided in postoperative patient care areas, and shall allow direct observation of the patients and charting facilities. The nurse station shall comply with the requirements of Section 1224.4.4.2.*

1224.16.5.2 Clinical sink. *A clinical sink shall be provided in postoperative patient care areas with provisions for bedpan cleaning.*

1224.16.5.3 Medication station. *Each Post-Anesthesia Care Unit shall contain a medication station. The medication station shall comply with the requirements of Section 1224.4.4.4.*

1224.16.5.4 Ice-making. *Ice-making equipment shall be provided in the perioperative service space. Ice-making equipment is permitted to be located in preoperative or postoperative patient care areas, however, it shall not be located in semi-restricted areas.*

1224.16.5.5 Storage. *Storage shall be provided for gurneys, supplies and equipment.*

1224.16.6 Support areas for staff. *Staff toilet rooms shall be immediately accessible to the postoperative patient care area(s) to maintain staff availability to patients.*

1224.16.7 Support areas for patients, families, and visitors.

1224.16.7.1 Waiting area *A waiting area, in compliance with Section 1224.4.5, shall be provided.*

1224.16.7.2 Patient change area. *A changing area shall be provided for outpatient use in perioperative areas in support of surgical suites that provide outpatient procedures. The changing area shall include space for changing or gowning, provisions for storing patients' belongings during the procedure, and access to patient toilet(s).*

...

1224.18 RADIOLOGICAL/DIAGNOSTIC IMAGING SERVICE SPACE. *Space and equipment shall be provided to accommodate all required elements, and any additional imaging modalities included in the service space, as required in this section. If interventional or image-guided procedures are performed in the imaging services area, additional provisions shall be as described in Section 1224.28 Supplemental Surgery and other Special Procedure Services. If nuclear medicine is provided in the imaging services area, spaces shall also comply with the requirements described in Section 1224.34 Nuclear Medicine.*

1224.18.1 Minimum requirements. *Hospital shall provide a minimum of:*

...

3. *A toilet room shall adjoin~~ing~~ and be directly accessible to each fluoroscopy room~~,~~. ~~I~~In addition to the fluoroscopy toilet rooms, ~~other~~ common patient toilet room facilities shall be located ~~adjacent to or~~ in the radiological/diagnostic imaging service space ~~immediate vicinity~~.*

...

6. Handwashing stations ~~fixtures~~ located within the unit.

1224.18.2 Angiography. ...

1224.18.2.1 Interventional angiography procedures. If interventional angiography procedures are to be performed in the angiography room, the suite ~~must~~ shall comply with ~~general operating room~~ interventional imaging requirements in Section ~~1224.15.1.1~~ 1224.28.4 ~~and have the support of the service areas in Section 1224.15.3~~. If cardiac catheterization procedures are performed refer to Section 1224.28.2.

1224.18.3 Computerized tomography (CT) scanning. ...

1224.18.3.1 Spaces required. ...

1224.18.3.2 Intraoperative computerized tomography. If provided, intraoperative CT scanning spaces shall comply with Section 1224.28.5.

...

1224.18.4 Magnetic resonance imaging (MRI). ...

1224.18.4.1 Handwashing ~~Hand-washing~~ station. Handwashing ~~Hand-washing~~ station(s) shall be ~~provided convenient~~ immediately accessible to the MRI scanner room~~, but need not be within the room~~.

...

1224.18.4.6 Intraoperative magnetic resonance imaging. If provided, the intraoperative magnetic resonance imaging (iMRI) suite shall comply with Section 1224.28.5.

...

1224.18.7.2 Patient dressing ~~rooms~~ areas. Dressing ~~rooms~~ areas shall be provided ~~convenient~~ adjacent to the imaging rooms.

...

1224.19 PHARMACEUTICAL SERVICE SPACE

1224.19.1.2 Location. Provide for ~~convenient~~ immediate accessibility to staff toilet rooms and lockers.

1224.20 DIETETIC SERVICE SPACE

1224.20.2.3 Storage.

1. Food storage spaces shall be ~~convenient~~ readily accessible to the receiving area and shall be located to exclude traffic through the food preparation area to reach them. Storage spaces for bulk, refrigerated, and frozen foods shall be provided. At least one week's (7 days) supply of staple foods and at least two (2) days' supply of frozen, and two (2) days' supply of perishable foods shall be maintained on the premises. Food storage components shall be grouped for convenient access from receiving and to the food preparation areas. All food shall be stored clear of the floor. Lowest shelf shall be not less than 12 inches (305 mm) above the floor or shall be closed in and sealed tight for ease of cleaning.

...

4. Waste storage and recycling facilities (per local requirements) shall be located in a separate room ~~easily~~ immediately accessible to the outside for direct pickup or disposal.

1224.20.2.5 Food preparation workspaces. *Provide workspaces for food preparation, cooking, and baking. These areas shall be as close as possible to the user (i.e. tray assembly and dining). Provide additional spaces for thawing and portioning.*

1224.20.2.6 Assembly and distribution. *~~Provide a~~ The patient tray assembly area ~~and locate within close proximity~~ shall be immediately accessible to the food preparation and distribution areas.*

1224.20.2.10 Ware-washing facilities. *...*

3. ~~Convenient h~~Handwashing stations shall be provided in the ware-washing space.

1224.20.2.12 Waste storage room. *A food waste storage room shall be ~~conveniently located~~ readily accessible to the food preparation and ware washing areas but not within the food preparation area. It shall have direct access to the hospital's waste collection and disposal facilities.*

1224.20.2.15 Toilet rooms and locker spaces. *Toilet rooms shall be provided for the exclusive use of the dietary staff. They shall not open directly into the food preparation areas, but shall be ~~in close proximity~~ readily accessible to them. An enclosed, separate locker area shall be provided for dietetic service employee's clothing and personal belongings.*

...

1224.23 STORAGE.

1224.23.1 General storage. *Hospitals shall provide general storage space of at least 20 square feet (1.86 m^2) per bed in addition to specialized storage spaces. All storage spaces shall be located within the hospital building and readily accessible to the connecting corridor required under Section 1224.4.7.5 ~~on the site of the facility~~.*

...

1224.28 SUPPLEMENTAL SURGERY AND SPECIAL PROCEDURE SERVICES. *When provided, the following supplemental surgery and special procedure services shall meet the requirements below:*

1224.28.1 Cardiovascular and other special procedures. *When provided, the cardiovascular room shall have a minimum clear floor area of 650 square feet (60.39 m^2), with a minimum of 20 feet (6090 mm) clear dimension. Orthopedic surgical and other special procedure rooms shall have a minimum clear floor area of 600 square feet (55.74 m^2), with a minimum of 20 feet (6090 mm) clear dimension. When open-heart surgery is performed, an additional room in the restricted area of the surgical service space ~~preferably adjoining~~ that is directly accessible to this operating room, shall be designated as a pump room where extra corporeal pump(s), supplies and accessories are stored and serviced. Appropriate plumbing and electrical connections shall be provided in the cardiovascular, pump, and storage rooms.*

1224.28.2 Cardiac catheterization.

1224.28.2.1 Procedure room. *A procedure room with a minimum clear floor area of 400 square feet (37.16 m2) for the procedure room in addition to spaces for control, monitoring and recording equipment, and x-ray power and controls, and a minimum of one scrub sink for each catheterization laboratory. This space does not include the control room.*

1224.28.2.1.1 Emergency response space. *Where electrophysiology studies are performed, dedicated space and equipment for emergency resuscitation and stabilization shall be immediately accessible to the procedure room.*

1224.28.3 Freestanding cardiac catheterization laboratory service space. *...*

1224.28.4 Interventional imaging. *Image-guided interventional procedures shall be performed in procedure rooms in compliance with this section. Cardiac catheterization operating rooms shall be in compliance with Section 1224.28.2, and hybrid operating rooms shall be in compliance with Section 1224.28.5.*

1224.28.4.1 Space requirements. *The procedure room shall meet the space, clearance, and storage requirements for the imaging equipment contained in the room and the following:*

1. *A minimum clear dimension of 18 feet (5486 mm).*
2. *The procedure room shall also be sized to allow a minimum clearance of 4 feet (1219 mm) on all sides of the procedure table.*

1224.28.4.2 Pre-procedure and recovery. *Pre-procedure and recovery areas shall be immediately accessible to procedure rooms and separate from corridors. The pre-procedure and recovery areas shall comply with the requirements of Section 1224.16 Anesthesia/recovery Service Space.*

1224.28.4.3 Interventional MRI facilities. *Interventional and intraoperative magnetic resonance imaging (I-MRI) procedure rooms shall comply with Section 1224.28.5 Hybrid Operating Rooms.*

1224.28.4.4 Control room or area. *A control room or area shall be provided.*

1. *The control room or area shall be sized to accommodate the image-recording and viewing equipment.*
2. *A shielded view window permitting direct observation of the patient from the control console shall be provided.*
3. *The shielded control room shall be configured to prevent radiation exposure into occupied areas of the control room when ionizing radiation modalities are used.*
4. *Where the procedure room requires positive (or negative) pressure, a door shall be provided between the control room and the procedure room or between the combined control room/procedure room and other adjacent space.*
5. *Where control functions for ionizing radiation exposures take place in the procedure room, storage for personal radiation protection devices shall be provided.*

1224.28.4.5 Scrub facilities. *Scrub sinks shall be located outside of sterile areas. A minimum of one scrub sink station shall be provided for each interventional imaging procedure room. Scrub sinks shall have water supply controls not requiring direct contact of the hands for operation.*

1224.28.4.6 Medication station. *A medication station shall be provided in compliance with the requirements in Section 1224.4.4.4.*

1224.28.4.7 Reading room. *A reading room for reviewing images shall be available for use by the interventional imaging suite.*

1224.28.4.8 Electrical equipment room. *Electronic equipment or enclosures large enough to contain x-ray transformers, power modules, and associated electronics and electrical gear shall be provided. Sharing of electronics equipment rooms by multiple procedure rooms is permitted.*

1224.28.4.9 Clean utility room. *A clean utility room shall be provided in accordance with the requirements in Section 1224.4.4.6.*

1224.28.4.10 Soiled workroom. *A soiled workroom shall be provided in accordance with Section 1224.4.4.7.*

1224.28.4.11 Housekeeping room. *A housekeeping room shall be provided in accordance with the requirements of Section 1224.4.15.*

1224.28.4.12 Staff changing areas. *Staff changing areas shall be provided and arranged to ensure a traffic pattern so that personnel can enter from outside the suite, change their clothing, and move directly into the semi-restricted corridor within the interventional imaging suite.*

1224.28.5 Hybrid operating room(s). *Hybrid operating rooms shall comply with the requirements of Section 1224.15 and comply with the requirements in this section.*

1224.28.5.1 Space requirements. *Each hybrid operating room shall meet the space, clearance, and storage requirements for the imaging equipment contained in the room and the following:*

1. *A minimum clear floor area of 650 square feet (60.39 m^2) is required for a hybrid operating room unless the imaging equipment requires a larger area.*
2. *The minimum clear dimension shall be 24 feet (7315 mm) unless the requirements for the specific imaging equipment require a greater distance.*
3. *If mobile storage units are used in lieu of fixed cabinets, the minimum clear dimension shall be available between such units when they are parked against a permanent partition.*

1224.28.5.2 Control room. *If required, a control room shall be provided that accommodates the imaging system control equipment and the following requirements:*

1. *The control room shall have a minimum clear floor area of 120 square feet (11.15 m^2), which may include fixed work surfaces.*
2. *The room shall be physically separated from the hybrid operating rooms with walls and a door.*
3. *The room shall have viewing windows that provide for a full view of the patient and the surgical team.*
4. *If the control room is adjacent to a restricted area, it must be physically separated from the restricted area with walls and a door.*

1224.28.5.3 Imaging equipment room. *An imaging equipment room shall be provided for each hybrid operating room.*

1224.28.5.4 Radiation protection. *If the imaging equipment emits ionizing radiation, protection shall be provided in accordance with Section 1224.18.1.1.*

1224.28.5.5 Requirements for specific types of hybrid operating rooms.

1224.28.5.5.1 CT. *Hybrid operating rooms with intraoperative computerized tomography (CT) systems shall have control rooms that comply with Section 1224.18.3.1.*

1224.28.5.5.2 iMRI. *Hybrid operating rooms with intraoperative magnetic resonance imaging (iMRI) systems shall comply with the following:*

1. *Space and configuration requirements in Section 1224.18.4, except the clearances shall meet the requirements of 1224.28.5.1.*
2. *The control room shall comply with Section 1224.18.4, Item 1.*
3. *The anteroom shall comply with Section 1224.18.4.2.*
4. *Entry doors to iMRI hybrid rooms shall swing outward from inside the room.*

1224.28.5.5.3 Vascular imaging. *Hybrid operating rooms with vascular imaging systems shall comply with Section 1224.28.4.4.*

1224.28.5.6 Pre-procedure and recovery. *Pre-procedure and recovery areas shall be immediately accessible to procedure rooms and separate from corridors. The pre-procedure and recovery areas shall comply with the requirements of Section 1224.16 (Anesthesia/recovery Service Space).*

...

1224.28.6 Electroconvulsive Therapy. *If electroconvulsive therapy (ECT) is provided, the requirements of this section shall be met. Where a psychiatric unit is part of a general acute care hospital (Section 1224.31 Psychiatric Nursing Unit), all the requirements in this section shall be permitted to be accommodated in a procedure suite that complies with the requirements in this section or in an operating room in a surgical suite that meets the requirements in Section 1224.15.*

1224.28.6.1 General. *The ECT procedure area may be a single procedure room or a suite of procedure rooms.*

1224.28.6.2 ECT procedure room.

1. *Space requirements. Each ECT procedure room shall have a minimum clear floor area of 200 square feet (18.6 m^2) with a minimum clear dimension of 14 feet (4267 mm)*
2. *Handwashing station. A handwashing station shall be provided.*
3. *Documentation area. Accommodation for written or electronic documentation shall be provided.*

1224.28.6.3 Pre-procedure and recovery area. *When ECT services have a low-volume of procedures, the ECT procedure room may be used for pre-procedure patient care and recovery. If a pre-procedure and recovery areas are provided they shall comply with the requirements of Section 1224.16.*

1224.28.6.4 Emergency equipment storage. *Space shall be provided in the procedure room(s) for storage of emergency equipment such as a CPR cart. A separate emergency equipment storage is permitted to serve more than one ECT procedure room.*

1224.28.6.5 Patient support areas. *A waiting area and changing area shall be provided for outpatient use in perioperative areas in support ECT suites that provide outpatient procedures. The waiting room shall comply with Section 1224.4.5. The changing area shall include space for changing or gowning, provisions for storing patients' belongings during the procedure, and access to patient toilet(s).*

...

1224.29 INTENSIVE CARE UNITS

1224.29.1.7 Handwashing stations ~~fixtures.~~ *Handwashing stations ~~fixtures~~ shall be directly accessible ~~convenient~~ to nurse stations and patient bed areas. There shall be at least one handwashing station ~~fixture~~ for every three beds in open plan areas, and one in each patient room. The handwashing station ~~fixture~~ shall be located near the entrance to the patient cubicle or room.*

1224.29.1.12 Medication station. *A medication station ~~S~~shall be provided in accordance with Section 1224.4.4.4 ~~1224.14.2.8~~.*

1224.29.1.14 Additional service spaces. *The following additional service spaces shall be immediately accessible ~~available~~ within each intensive service space. These may be shared by more than one intensive care unit provided that direct access is available from each.*

...

1224.29.1.14.5 Ice machine. *Each unit ~~There~~ shall ~~be available~~ have equipment to provide ice for treatments and nourishment. Ice-making equipment may be in the clean utility room or at the nourishment station. Ice intended for human consumption shall be from self-dispensing icemakers.*

1224.29.1.15 Support. *The following shall be provided and shall be located immediately ~~adjacent~~ accessible to the unit:*

...

1224.29.2.5 Control station. *A central area shall serve as a control station, and shall have space for counters and storage, and ~~shall have convenient~~ direct access to a handwashing station ~~fixture~~. It may be combined with or include centers for reception, ~~and~~ communication and patient monitoring.*

1224.29.2.10.4 Commercial infant formula. *Where a commercial infant formula is used, omission of the separate cleanup and preparation rooms shall be permitted, and storage and handling in the NICU workroom or another appropriate room that is ~~conveniently~~ readily accessible at all hours shall be permitted. The preparation area shall have the following:*

...

1224.30 PEDIATRIC AND ADOLESCENT UNIT. *...*

1224.30.3.2 Infant formula. *Space for preparation and storage of infant formula shall be provided ~~within~~ immediately accessible to the unit ~~or other convenient location~~.*

1224.30.3.3 Toilet rooms. *Patient toilet room(s) with a lavatory in each room, in addition to those serving bed areas, shall be ~~conveniently~~ located adjacent to play area(s) and in or directly accessible to each central bathing facility.*

1224.32 OBSTETRICAL FACILITIES (PERINATAL UNIT SPACE)

1224.32.3.7 Recovery room(s) (LDR or LDRP rooms may be substituted). *Each recovery room shall contain at least two beds and have a nurse ~~control~~ station, with charting facilities, located to permit visual ~~control~~ observation of all beds. Each room shall include a handwashing station ~~fixture~~ and a medication station. A clinical sink with bedpan flushing device shall be directly accessible ~~available~~, as shall storage for supplies and equipment. Provide visual privacy of the new family.*

...

1224.32.3.8.1 Services. *...*

...

2. Soiled workroom or soiled holding room. See Section 1224.4.4.7 ~~1224.14.2.7~~.

...

1224.32.3.8.2 Shared services. *...*

...

1224.32.3.8.2.2 Waiting room. *This room shall have toilet room~~(s)~~(s), telephone(s) and drinking fountain~~(s)~~(s) that are immediately accessible ~~conveniently located~~. The toilet room~~(s)~~(s) shall contain a lavatory.*

1224.32.3.8.2.5 Clean utility room. *A clean utility room shall be provided if clean materials are assembled within the obstetrical service space prior to use. If a clean utility room is provided see Section 1224.4.4.6 ~~1224.14.2.6~~.*

1224.32.3.8.2.6 Storage

1. *Clean sterile storage area readily accessible ~~available~~ to the delivery room.*

1224.32.3.8.2.9 Staff lounge. *Lounge and toilet room facilities for obstetrical staff ~~convenient~~ shall be readily accessible to cesarean operating room(s), delivery room(s), labor room(s) and recovery room(s). Each toilet room shall contain a handwashing station ~~fixtures~~.*

1224.32.5.1 General. *Infants shall be housed in nurseries that comply with the standards below. All nurseries shall be ~~adjacent~~ immediately accessible to the postpartum unit and obstetrical facilities. The nurseries shall be located and arranged to preclude the need for unrelated traffic. No nursery shall open directly onto another nursery. Each nursery shall contain the following:*

...

1224.32.5.1.3 Lactation. *A consultation/demonstration/breast feeding or pump room shall be provided ~~convenient~~ in a location that is readily accessible to the nursery. Provisions shall be made, either within the room or ~~conveniently located nearby~~ immediately accessible to the room, for a sink, counter, refrigeration and freezing, storage for pump and attachments, and educational materials. ~~The~~ This area ~~provided for the unit for these purposes, when conveniently located,~~ may be shared between units.*

1224.33 EMERGENCY SERVICE.

1224.33.1 Definition. *Levels of emergency care range from initial emergency management as Standby Emergency Medical Service, with a Physician on call; to definitive emergency care as Basic Emergency Medical Service, with a Physician on duty; to a Comprehensive Emergency Medical Service as an Emergency Department.*

1224.33.2 Standby ~~e~~Emergency ~~m~~Medical ~~s~~Service. *If provided, initial emergency management shall be provided in a specifically designated area of the hospital which shall include the following elements:*

1224.33.2.1 Exterior entrance. *A well-marked, illuminated and covered entrance at grade level. The emergency vehicle cover shall provide shelter for both the patient and the emergency medical crew during transfer from an emergency vehicle into the building. This exterior entrance shall not be substituted for the required accessible entrance to the hospital, protected from the weather by canopy or roof overhang assigned for passengers loading zone. Ambulance entrances shall provide a minimum of 6 feet (183 mm) in clear width to accommodate bariatric stretchers, mobile patient lift devices, and accompanying attendants. Reception~~, triage and control station~~ shall be located to permit staff observation and control of access to treatment area, pedestrian and ambulance entrances, and public waiting area.*

1224.33.2.2 Treatment room. *Standby emergency service shall include at least one treatment room with the following elements:*

1. *The area shall not be less than 120 square feet (11.15 m^2) of clear floor area, exclusive of toilet room(s), waiting area and storage.*
2. *Each treatment room shall contain an examination light, work counter, and handwashing ~~fixtures~~ station.*
3. *~~m~~Medical equipment, cabinets, medication storage and counter space for writing.*
4. *The dimensions and arrangement of treatment rooms shall be such that there is a minimum of 3 feet (914 mm) between the sides and foot of the bed/gurney and any wall or any other fixed obstruction. The treatment room may have additional space and provisions for several patients with cubicle curtains for privacy.*
5. *Multiple ~~bed~~station treatment rooms shall provide a minimum of 80 square feet (7.43 m^2) per patient gurney, with a minimum 8 foot width (2,438 mm) and 3 feet (914 mm) at the foot of the bed/gurney, with a minimum of 5 feet (1524 mm) between patient gurneys. Patient gurneys shall be separated from adjoining cubicles by curtains. Handwashing fixtures shall be provided for each four treatment stations or major fraction thereof in multiple-station areas.*

Exceptions:

1. *Where renovation of existing treatment rooms is undertaken in facilities approved under the 2001 or prior California Building Code, existing treatment rooms may be renovated, or replaced in kind one for one in the renovated space. Such treatment rooms shall have no less than 80 square feet (7.43 m^2) of clear floor area, the least dimension of which shall be 8 feet (2438 mm).*
2. *For shelled spaces approved under the 2001 or prior California Building Code as future emergency service space, treatment rooms, shall have no less than 80 square feet (7.43 m^2) of clear floor area per bed, with a minimum dimension of 8 feet (2438 mm).*

1224.33.2.3 Storage. *Equipment and supply storage shall be provided and shall be sized for general medical/surgical emergency supplies, medications and equipment such as ventilator, defibrillator, splints, etc. This storage shall be located in an alcove or room, out of corridor or hallway traffic, and under staff control.*

1224.33.2.4 Lobby. *Provisions for reception, control, and public waiting, including a public toilet room(s) with handwashing fixture(s), and public telephone.*

1224.33.2.5 Toilet room(s). *Patient toilet room(s) with handwashing fixture(s) convenient to shall be immediately accessible to the treatment room(s).*

1224.33.2.6 Communication. *A cCommunication hookup connections to the Poison Control Center and local EMS system shall be provided.*

1224.33.2.7 Observation area. *A patient cubicle with a minimum clear floor area of 100 square feet (9.29 m^2) shall be provided under the visual control of an emergency service staff work area. The patient station shall have space at bedside for visitors and shall have provision for visual privacy from casual observation by other patients and visitors. A handwashing station shall be located in each room, and at least one handwashing station shall be provided for every four patient stations, or major fraction thereof, in open-bay areas.*

> ***Exception:*** *For small and rural hospitals, the observation area need not be dedicated solely for that purpose.*

1224.33.2.78 Airborne infection isolation exam/treatment room. *If provided, the airborne infection isolation exam/treatment room S shall comply with the requirements of Section 1224.29.1.13 1224.4.4.1.3 except for separate toilet room, bathtubs, or shower.*

1224.33.3 Basic eEmergency mMedical sService. *When 24-hour basic emergency service is to be provided, at a minimum, all the provisions of Standby Emergency Service under Section 1224.33.2 and the following shall be provided:*

1224.33.3.1 Exterior entrance. *In addition to the requirements of Section 1224.33.2.1, Grade-level well marked, illuminated, and covered entrance with the emergency entrance shall have direct access from public roads for ambulance and vehicle traffic conforming with the requirements of the local authorities having jurisdiction. Entrance and driveway shall be clearly marked. If a raised platform is used for ambulance discharge, provide a ramp for pedestrian and wheelchair access.*

1224.33.3.2 Patient access. *Paved emergency access shall be provided to permit discharge of patients from automobiles and ambulances, and temporary parking convenient to the entrance.*

1224.33.3.3 Reception, triage, and control station(s). *This area shall be located to permit staff observation and control of access to treatment areas, pedestrian and ambulance entrances, and public waiting area.*

1224.33.3.4 Wheelchair and gurney storage. *Storage for wheelchairs and gurneys for arriving patients ~~S~~shall be located out of circulation paths with ~~convenient~~ access ~~from~~ to emergency entrances.*

1224.33.3.5 Public waiting area. ~~with toilet room facilities, drinking fountains, and telephone.~~ *A public waiting area shall be provided in compliance with Section 1224.4.5 and include provision of public toilet room(s), drinking fountains, and telephone adjacent to the waiting area, dedicated to, and within, the Emergency Service Space.*

1224.33.3.6 Examination and ~~or~~ treatment room(s). *Examination and treatment rooms shall meet the requirements under Section 1224.33.2.2. ~~Shall have a minimum clear floor area of 120 square feet (11.15.m^2). The room shall contain work counter(s); cabinets; handwashing fixtures; and a vision panel adjacent to and/or in the door. The dimensions and arrangement of examination and treatment rooms shall be such that there is a minimum of 3 feet (914 mm) between the sides and foot of the bed/gurney and any wall or any other fixed obstruction. When treatment cubicles are in open multi-bed areas, each cubicle shall have a minimum of 80 square feet (7.43 m^2) of clear space with a minimum 8 foot (2438 mm) width and 3 feet (914 mm) at the foot of the bed, with a minimum of 5 feet (1524 mm) between patient gurneys, and shall be separated from adjoining cubicles by curtains. Handwashing fixtures shall be provided for each four treatment cubicles or major fraction thereof in multiple bed areas.~~*

~~***Exceptions:***~~

~~1. Where renovation of existing examination or treatment room(s) is undertaken in facilities approved under the 2001 or prior California Building Code, existing examination or treatment rooms may be renovated, or replaced, in kind one for one in the renovated space. Such examination or treatment rooms shall have no less than 80 square feet (7.43 m^2) of clear floor area, the least dimension of which shall be 8 feet (2438 mm).~~

~~2. For shelled spaces approved under the 2001 or prior California Building Code as future Emergency Service space, examination or treatment room(s) shall have no less than 80 square feet (7.43 m^2) of clear area, the least dimension of which shall be 8 feet (2438 mm).~~

1224.33.3.7 Trauma/cardiac rooms. *These rooms are for emergency procedures, including emergency surgery, and shall have at least 250 square feet (23.23 m^2) of clear floor space. A minimum clearance of 5 feet (152 mm) shall be provided around all sides of the procedure table or gurney. Each room shall have cabinets and emergency supply shelves, image viewing capability, examination lights, and counter space for writing. Additional space with cubicle curtains for privacy may be provided to accommodate more than one patient at a time in the trauma room with a minimum clear floor area of 200 square feet (18.58 m^2) for each patient bay defined by the privacy curtains. There shall be storage provided for immediate access to attire used for universal precautions. Doors leading from the ambulance entrance to the cardiac trauma room shall have an opening with a minimum width of 5 feet (1524 mm). At least one scrub sink shall be located outside the entrance to each trauma room. One scrub station consisting of two scrub positions is permitted to serve two trauma rooms if located adjacent to the entrance of each procedure room. The placement of scrub sinks shall not restrict the minimum required corridor width.*

1224.33.3.8 Orthopedic and cast work. *~~Provisions may be made in separate room(s) or in the trauma room.~~ At least one orthopedic or cast room shall be provided within the emergency service space. ~~They~~ Provisions shall include storage for splints and other orthopedic supplies, traction hooks, image viewing capability, and examination lights. If a sink is used for the disposal of plaster of paris, a plaster trap shall be provided. The clear floor space for this area shall be a minimum of 180 square feet (16.7 m^2).*

1224.33.3.9 Poison Control and EMS communications center. *Communication connections shall be provided as required under Section 1224.33.2.6. The communications center ~~M~~may be a*

part of the staff work and charting area.

1224.33.3.10 Emergency equipment storage space. *Equipment and supply storage shall be provided as required under Section 1224.33.2.3.*

1224.33.3.11 Patients~~'~~ toilet room~~s~~. *A patient toilet room with a lavatory shall be immediately accessible to the treatment room(s). Where there are more than eight treatment stations ~~areas~~, a minimum of two toilet rooms, with a lavatory in each toilet room, shall be required.*

1224.33.3.12 Storage. *Provide rooms for clean, soiled or used supplies.*

1224.33.3.12.1 Soiled workroom or soiled holding. *See Section 1224.4.4.7~~14.2.7~~. This room is for the exclusive use of the emergency service space.*

1224.33.3.12.2 Clean utility room. *See Section 1224.4.4.6~~14.2.6.~~*

1224.33.3.13 Administrative center or nurses' station for staff work and charting. *These areas shall have space for counters, cabinets, and medication storage, and shall ~~have convenient access to~~ be provided with handwashing ~~fixtures~~ stations. They may be combined with or include centers for reception and communication.*

1224.33.3.14 Staff lounge. *A staff lounge shall be located within the Emergency Department and include staff clothing change areas with lockers, showers, toilets and handwashing stations for male and female staff.*

1224.33.3.15 Housekeeping room. *A housekeeping room, compliant with Section 1224.4.15, shall be located within the unit and dedicated to the emergency service space ~~directly accessible from the unit~~.*

1224.33.3.16 Airborne infection isolation exam/treatment room. *If provided shall comply with the requirements of Section ~~1224.29.1.13~~ 1224.4.4.1.3 ~~except for separate toilet room, bathtubs or shower.~~*

1224.33.3.17 Secured holding room. *~~If provided, shall have at least one holding/seclusion room of 120 square feet (11.15 m^2). This room shall allow for security, patient and staff safety, patient observation and sound proofing.~~ When a secure holding room is provided, it shall meet the following requirements. The location of the secure holding room(s) shall facilitate staff observation and monitoring of patients in these areas. The secure holding room shall have a minimum clear floor area of 60 square feet (5.57 square meters) with a minimum wall length of 7 feet (2.13 meters) and a maximum wall length of 11 feet (3.35 meters). This room shall be designed to prevent injury to patients:*

1. *All finishes, light fixtures, vents, diffusers, and fire protection/alarm components shall be tamper resistant and ligature resistant.*
2. *There shall not be any electrical outlets, medical gas outlets, or similar devices.*
3. *There shall be no sharp corners, edges, or protrusions, and the walls shall be free of objects or accessories of any kind.*
4. *Patient room doors shall swing out and shall have hardware on the exterior side of the door only. The minimum width shall be 44 inches (1120 mm).*
5. *A small impact-resistant view panel or window shall be provided in the door for discreet staff observation of the patient.*

1224.33.4 Comprehensive Emergency Medical Service. *When 24-hour comprehensive emergency service is to be provided, an Emergency Department shall be provided. At a minimum, all the provisions of Stand-by Emergency Service under Section 1224.33.2, the provisions of Basic Emergency Service under Section 1224.33.3, and all of the following shall be provided:*

1224.33.4.1 Triage stations. *In addition to the requirements of Section 1224.33.3.3, the triage area shall include triage station(s) with the following minimum requirements:*

1. *100 square feet (9.29 m^2) minimum clear floor area for each private triage room and 80 square feet (7.4 m^2) minimum clear floor area for each station in open-bay triage areas.*
2. *Provisions for patient privacy.*
3. *Handwashing station in each triage room. In open-bay triage areas, one handwashing station shall be provided for every four triage stations.*
4. *Immediate access to emergency call and code call stations.*
5. *Medical gas outlets for triage areas in compliance with Table 1224.4.6.1.*

1224.33.4.2 Fast-track area. *A fast-track area may be used for treating patients presenting simple and less serious conditions. If a fast-track area is provided, it shall meet the following requirements:*

1. *Space requirements – each fast-track station shall have a minimum 100 square feet (9.29 m^2) of clear floor area.*
2. *Each station shall include a handwashing station, work/documentation counter, examination table light.*
3. *Storage areas for supplies and medication.*
4. *A separate procedure room may be provided. It shall have a minimum clear floor area of 120 square feet (11.15 m^2).*

1224.33.4.3 Pre-screening stations. *A pre-screening area may be used prior to admission to the Emergency Department. If pre-screening is provided, each station must have a minimum of 80 square feet (7.4 m^2) of clear floor area, a handwashing station, documentation counter, and a storage cabinet. Pre-screening stations, whether private rooms or open bays, are considered a part of the waiting area and must meet the same ventilation requirements.*

1224.33.4.4 Diagnostic service areas. *Radiological/Imaging services shall be readily accessible. The Emergency Department shall be supported by Clinical Laboratory services. A STAT lab may be provided within the emergency medical service space in addition to more comprehensive support provided by the Clinical Lab.*

1224.33.4.5 On-call room(s). *Provisions shall be made to accommodate on-call sleeping room(s) for physicians and/or medical staff within the Emergency Department.*

1224.33.4.6 Police and press room. *Provisions shall be made to accommodate police briefing/debriefing and press releases. This may be located outside the Emergency Department.*

1224.33.5 ~~1224.33.4~~ Other space considerations.

1224.33.4~~.~~5.1 Observation units. *Observation rooms for the monitoring of patients up to 24 hours may be provided as a distinct unit within, the emergency department. If provided the unit shall have the following:*

1. *Handwashing ~~fixtures~~ stations shall be provided in each patient room or for each four treatment ~~cubicles~~ stations, or major fraction thereof. Handwashing ~~fixtures~~ stations shall be ~~convenient~~ directly accessible to nurse stations and patient ~~bed~~ care areas.*
2. *Each patient ~~bed area~~ station shall have a minimum of 120 square feet (11.15 m^2) of clear floor area including space at each bedside for visitors and provision for visual privacy from casual observation by other patients and visitors.*
3. *One toilet room shall be provided for each ~~eight~~ six treatment ~~cubicles~~ stations, or major fraction thereof.*
4. *An administrative center/nurse station, in compliance with Section 1224.4.4.2, positioned to allow staff to observe each patient care station or room.*

5. A nourishment area in compliance with Section 1224.4.4.5. ~~sink, work counter, refrigerator, storage cabinets.~~

1224.34 NUCLEAR MEDICINE

1224.34.1 General. If nuclear medicine is provided, the following shall be provided:

1224.34.1.1 Radiation Protection. ...

1224.34.1.2 Nuclear medicine room. Shall be s~~S~~ized to accommodate the equipment and a gurney. ~~Provide a handwashing fixture.~~

When provided, the following facilities shall meet the requirements below:

1224.34.1.2.1 Scintigraphy (Gamma Camera) Facilities. Shall include the following:

1. Scanner room. The scanner room shall provide a minimum clearance of 4 feet (1218 mm).at each side and the foot of the table.
2. Handwashing stations shall be provided throughout the gamma camera suite at locations of patient contact and at locations where radiopharmaceutical materials are handled, prepared, or disposed of.

1224.34.1.2.2 Positron Emission Tomography (PET). Shall include the following:

1. Scanner room shall provide a minimum clearance of 4 feet (1218 mm) at each side and the foot of the table. Additional space shall be provided when PET is combined with CT, and include compliance with Section 1224.18.3 and shielding requirements in Section 1224.34.1.1.
2. Cyclotron room. Where radiopharmaceuticals are prepared on-site, a cyclotron shall be provided. Cyclotron facilities shall be located in access-restricted areas. Shielding requirements for cyclotron facilities shall comply with Section 1224.34.1.1.
3. Control room. A control room shall be provided with a full direct view of the patient in the PET scanner.
4. Patient uptake/cool-down room. A shielded room with access to a dedicated patient toilet, to accommodate radioactive waste, and lavatory shall be provided.
5. Handwashing stations shall be provided throughout the PET suite at locations of patient contact and at locations where radiopharmaceutical materials are handled, prepared, or disposed of.
6. Pre-procedure patient care and recovery area shall be provided to accommodate at least two stretchers. This area shall comply with Section 1224.34.2.6.
7. Computer equipment room shall be provided in support of the equipment provided.
8. Contaminated (hot) soiled holding shall be provided and operationally integrated to minimize incidental exposure to ionizing radiation.

1224.34.1.2.3 Single-Photon Emission Computed Tomography (SPECT) Facilities. When provided shall include the following:

1. Scanner room. Scanner room shall provide a minimum clearance of 4 feet (1218 mm) at each side and the foot of the table.
2. Control room. A control room shall be provided with a full direct view of the patient in the SPECT scanner.
3. Computer equipment room shall be provided in support of the equipment provided.
4. Handwashing stations shall be provided throughout the SPECT suite at locations of patient contact and at locations where radiopharmaceutical materials are handled, prepared, or disposed.

...

1224.34.2 Support areas for nuclear medicine services. *...*

1224.34.2.2 Cleanup. *Provisions for cleanup shall be located within the service space and be readily accessible ~~for convenient access and use~~. ~~It~~ They shall include a service sink or floor receptacle as well as storage space for equipment and supplies.*

...

1224.34.2.5 Dose administration area. *Provide ~~and locate near~~ a dose administration area that is immediately accessible to the preparation area. Since as much as several hours may elapse for the dose to take effect, the area shall provide visual privacy from other areas.*

1224.34.2.6 Pre-procedure/Holding area. *A pre-procedure/holding area for patients on gurneys or beds shall be provided out of traffic and under control of staff and may be combined with the dose administration area with visual privacy between the areas.*

1224.34.2.7 Patient dressing rooms. *~~Located convenient~~ Patient dressing rooms shall be immediately accessible to the waiting area and procedure rooms. Each dressing room shall include a seat or bench, a mirror, and provisions for hanging patients' clothing and for securing valuables.*

1224.34.2.8 Patient toilet room(s). *Patient toilet rooms shall be ~~R~~reserved for nuclear medicine patients and shall be ~~located convenient~~ directly accessible to the nuclear medicine laboratory.*

1224.34.2.9 Staff toilet room~~s(s)~~. *Staff toilet rooms ~~S~~shall be ~~located convenient~~ readily accessible to the nuclear medicine laboratory.*

...

1224.34.2.14 Hot lab for scintigraphy (gamma camera), PET, and SPECT facilities. *A securable area or room shall be provided in which radiopharmaceuticals can be safely stored and doses can be calculated and prepared.*

1. *A single hot lab shall be permitted to serve multiple scanners and nuclear medicine modalities.*
2. *The hot lab shall be shielded in compliance with Section 1224.34.1.1.*
3. *A source storage area, a dose area, and a storage area for syringe shields shall be provided.*

1224.34.3 Radiotherapy service space.

1224.34.3.1 Radiation therapy space. *If radiation therapy is provided, the following shall be accommodated:*

...

5. *Direct access to ~~or~~ space provided for radiation measurement and calibration equipment, including a calibration constancy instrument and access to a secondary standard dose meter.*

   ...

   5.3 Direct access to ~~or~~ space provided for brachytherapy equipment which shall meet the requirements of Chapter 31C and the California Radiation Control Regulations, California Code of Regulations, Title 17, Division 1, Chapter 5, Subchapter 4.

...

1224.34.3.3 Room sizes. *Rooms shall be sized as follows:*

1. *Cobalt rooms and linear accelerators shall be sized in accordance with equipment requirements and shall accommodate a gurney for litter borne patients. Layout shall provide for preventing the escape of radioactive particles. Openings into the room, including doors, ductwork, vents and electrical raceways and conduits, shall be baffled to prevent direct exposure to other areas of the facility.*
2. *Simulator, accelerator and cobalt rooms shall be sized to accommodate the equipment*

with patient access on a gurney, medical staff access to the equipment and patient, and service access.

3. *Where a table is used, the room shall be sized to provide a minimum clearance of 4 feet (1218 mm) on three sides of the table to facilitate bed transfer and provide access to the patient. The door swing shall not encroach on the equipment space, patient circulation space, or transfer space.*
4. *Minimum room size shall be 260 square feet (24.15 m^2) for the simulator room; 680 square feet (63.17 m^2), including the maze, for accelerator rooms; 200 square feet (18.58 m^2) for brachytherapy rooms; and 450 square feet (41.81 m^2) for cobalt rooms.*

1224.34.3.4 General support area. *...*

1. *A gurney hold area ...*
2. *Exam or treatment room ...*

   Exceptions:

   1. ...

   2. ...
3. *Darkroom is optional. If provided, shall be ~~convenient~~ readily accessible to the treatment room(s).*
4. *Patient gowning ...*
5. *Film files area ...*

...

1224.34.5 Additional support areas for cobalt room.

...

1224.34.5.1 *~~Hot lab.~~* ***Hot lab.*** *A hot lab shall be provided in accordance with Section1224.34.2.14.*

1224.34.6 *~~High dose rate brachytherapy room.~~* ***Radiosurgery suite.*** *If radiosurgery (gamma knife/cyber knife) is provided, the following shall be provided:*

1224.34.6.1 General. *The radiosurgery suite shall be located near the imaging services suite to facilitate image acquisition prior to radiosurgery treatment. Location of gamma knife or cyber knife treatment rooms in a radiation therapy suite shall be permitted.*

1224.34.6.2 Radiosurgery treatment rooms. *Radiosurgery (gamma knife/cyber knife) treatment rooms shall provide a minimum clearance of 4 feet (1218 mm) shall be provided on all sides of the treatment table/chair. The door shall not encroach on the equipment or on patient circulation or transfer space. A handwashing station shall be provided in each radiosurgery treatment room.*

1224.34.6.3 Pre-procedure/recovery accommodations. *If provided, pre-procedure/recovery patient care stations shall meet the following requirements:*

1. *Pre-procedure and recovery area(s) shall be immediately accessible to procedure rooms and separate from corridors. The pre-procedure and recovery patient area or room shall be arranged to permit visual observation of the patient by staff before and after the procedure. Bays, cubicles, or single-bed rooms shall be permitted to serve as patient care stations.*
2. *Area. Where open bays are used, each patient care station shall have a minimum clear floor area of 80 square feet (7.43 m^2).*
3. *Clearances. Each bay or cubicle shall have a minimum clearance of 3 feet (914 mm) between walls or partitions and the sides and foot of gurneys or patient beds. Each bay shall have a minimum clearance of 4 feet (1218 mm) between sides of gurneys or patient beds.*
4. *Patient privacy. Provisions such as cubicle curtains shall be provided for patient privacy.*

5. Handwashing station. A handwashing station shall be provided within the pre-procedure/recovery area.

1224.34.6.4 Support areas for radiosurgery treatment rooms. The following shall be provided:

1. Space for sterilization of head-frames.
2. Area for target planning.
3. Medication station.
4. Nourishment area.
5. Head-frame storage.
6. Toilet room(s) for patients, staff and the public.
7. Area for sedation of pediatric patients.

...

1224.36 RENAL DIALYSIS SERVICE SPACE (ACUTE AND CHRONIC)

1224.36.2.4 Handwashing stations ~~fixtures~~. Handwashing stations ~~S~~shall be ~~located convenient~~ directly accessible to the nurses' station and to patient treatment areas. ~~There shall be at least one h~~Handwashing stations ~~fixture~~ shall serve~~ing~~ no more than four patient stations. These shall be uniformly distributed to provide equal access from each patient station.

1224.36.2.14 Housekeeping room. Provide ~~adjacent~~ a housekeeping room that is immediately accessible to, and for the exclusive use of, the unit.

...

1224.39 OUTPATIENT SERVICE SPACE.

...

1224.39.2 Outpatient surgery. ...

...

2. Preoperative patient holding shall be provided in accordance with Section 1224.16.2 ~~1224.15.2~~.

1224.39.3 Gastrointestinal endoscopy. ...

...

1224.39.3.1.2 Handwashing station ~~fixture~~. A separate dedicated handwashing station with hands-free controls shall be ~~available~~ provided in the procedure room.

1224.39.3.3 Pre-operative patient holding. A pre-operative patient holding area shall be provided in accordance with Section 1224.16.2 ~~1224.15.2~~.

1224.39.3.4 Post-anesthesia recovery area. A post-anesthesia recovery area shall meet the requirements of Section 1224.16.3.

1224.39.4 CANCER TREATMENT/INFUSION THERAPY SERVICE SPACE.

...

1224.39.4.2.4 Handwashing stations ~~fixtures~~. Handwashing stations ~~S~~shall be ~~located convenient~~ directly accessible to the nurses' station and patient treatment areas. There shall be at least one handwashing station ~~fixture~~ to serve~~ing~~ no more than four patient stations. These shall be uniformly distributed to provide equal access from each patient station.

1224.39.4.2.11 Housekeeping room. Provide a housekeeping room that is immediately accessible ~~Adjacent~~ to and for the exclusive use of the unit.

1224.39.4.3.1 Staff lounge, lockers and toilet~~s(s)~~. Space shall be available for male and female personnel for staff clothing change area and lounge. The areas shall contain lockers, toilet~~s(s)~~, and handwashing stations ~~fixtures~~.

...

1224.39.5 HYPERBARIC THERAPY SERVICE SPACE.

1224.39.5.1 General. *If provided, clinical hyperbaric oxygen therapy service space shall meet the requirements of the "Hyperbaric Facilities" chapter in NFPA 99: Health Care Facilities Code and shall comply with the following:*

1244.39.5.2 Hyperbaric chambers.

1224.39.5.2.1 Class A chamber (multi-place facilities).

1. ***Clearances.*** *There shall be a minimum clearance of 3 feet (914 mm) around the chamber. The area in front of the chamber entry designed for gurney or bed access shall have a minimum clearance of 8 feet (2438 mm) for gurney or bed approach The area in front of the chamber entry designed for ambulatory or wheelchair access only shall have a minimum clearance of 5 feet (1524 mm) for wheelchair approach.*
2. ***Entries.*** *Chamber entries shall be provided with access ramps that are flush with the chamber entry doorway. Chamber entries not designed for gurney/bed access shall be a minimum of 3 feet (914 mm).*

1224.39.5.2.2 Class B chamber. *(mono-place facilities)*

1. ***Clearances.*** *There shall be a minimum clearance of 3 feet (914 mm) around the chamber. A minimum clearance of 44 inches (1118 mm) shall be provided between the control sides of two chambers. The area in front of the chamber entry shall be designed for gurney or bed access with a minimum clearance of 8 feet (2438 mm) for gurney or bed approach.*
2. ***Oxygen.*** *An oxygen service valve shall be provided for each chamber.*

1224.39.5.3 Pre-procedure patient holding area(s). *In facilities with a Class A hyperbaric chamber or with three or more Class B chambers, a pre-procedure/patient holding area shall be provided to accommodate patients on gurneys or beds and sitting space for ambulatory patients. The area shall permit visual observation of the patient by nursing staff and be located out of traffic flow. Each gurney station shall be a minimum clear floor area of 80 square feet (7.43 m^2) and shall have a minimum clearance of 3 feet (914 mm) on the sides of the gurneys and the foot of the gurney. There shall be provisions for privacy such as cubicle curtains.*

1224.39.5.4 Medical gas station outlets. *Refer to Table 1224.4.6.1 Station Outlets for Oxygen, Vacuum (Suction) and Medical Air.*

1224.39.5.5 Support areas for the hyperbaric suite.

1224.39.5.5.1 Reception/control desk. *An administrative center/nurse station shall be provided within the hyperbaric suite.*

1224.39.5.5.2 Examination/treatment room(s). *Room(s) for individual consultation and treatment shall be provided and meet the requirements of Section 1224.4.4.1.*

1224.39.5.5.3 Clean linen storage. *A clean linen storage area shall be provided This may be within the clean utility room, a separate closet or an approved distribution system. If a closed cart system is used, storage may be in an alcove. It must be out of the path of normal traffic and under staff control.*

1224.39.5.5.4 Clean supply room. *A clean supply room shall be provided and meet the requirements of Section 1224.4.4.6.1. This room may be omitted if the suite is served by a cart system.*

1224.39.5.5.5 Gas cylinder room. *The gas cylinder room shall provide space to house eight (H) cylinders and two gas manifolds, consisting of at least two (H) cylinders on each manifold.*

1224.39.5.5.6 Gurney and wheelchair storage. *Space for gurney and wheelchair storage shall be provided.*

1224.39.5.5.7 Housekeeping room. *A housekeeping room shall be provided and shall be immediately accessible to the hyperbaric suite.*

1224.39.5.5.8 Compressor room. *A compressor room shall be provided to house the chamber compressors, accumulator tanks and fire suppression system.*

1224.39.5.6 Support areas for staff. *Toilet rooms with a handwashing stations shall be immediately accessible to the hyperbaric suite for staff use.*

1224.39.5.7 Support areas for patients.

1224.39.5.7.1 Patient waiting area. *The patient waiting area shall be provided and meet the requirements of Section 1224.39.1.*

1224.39.5.7.2 Patient changing areas. *Changing area(s) for outpatients shall be provided for patient clothing and for securing valuables.*

1224.39.5.7.3 Patient toilet room. *A patient toilet room with a handwashing station shall be directly accessible to the hyperbaric suite.*

NOTATION:

SECTION 1225 [OSHPD 2]
SKILLED NURSING AND INTERMEDIATE-CARE FACILITIES

Relocate and amend *Section 3424* to *Section 1225.2.1.*

1225.2. Application. *New buildings and additions ...*

~~3424.1~~ 1225.2.1. Services/systems and utilities. *Services/systems and utilities that are necessary to the operation of a skilled nursing facility or intermediate care facility shall meet the requirements of this section. Examples of services/systems and utilities include but are not limited to normal power; emergency power; nurse call; fire alarm; communication and data systems; space-heating systems; process load systems; cooling systems; domestic hot and cold water systems; means of egress systems; fire-suppression systems; building drain and sewer systems; and medical gas systems that support licensed services.*

~~Exception: Remodel projects that use available existing services/systems and utilities are exempted from the requirements of this section. The enforcing agency may exempt minor addition, minor alteration, and minor remodel projects and projects to upgrade existing services/systems and utilities from the requirements of this section.~~

~~3424.1.1 Services/systems and utilities for skilled nursing facilities and intermediate care facilities.~~

~~3424.1.1.1~~ 1225.2.1.1. New buildings, ~~and~~ additions, alterations and remodels. *Services/systems and utilities for new buildings, ~~and~~ additions, alterations and remodels shall ~~not~~ only originate in, ~~or~~ pass through or under ~~nonconforming~~ structures. ~~The structures must be~~ which are under the jurisdiction of the Office of Statewide Health Planning and Development (OSHPD).*

~~**Exception:** As an alternate to this section, skilled nursing and intermediate care facilities may meet the requirements in Section 3416A.1.1.1 for hospital buildings.~~

~~**3424.1.1.2 Alterations and remodels.** Services/systems and utilities for alterations or remodels of existing buildings may pass through nonconforming structures provided that the structure is under the jurisdiction of OSHPD, and the new services/systems and utilities passing through the buildings are anchored and braced for seismic forces in accordance with these regulations for new buildings and are free of adverse seismic interactions caused by potential failure of overhead or adjacent components.~~

~~**3424.2**~~ **1225.2.2 Means of egress for single-story wood frame or light-steel frame skilled nursing facilities and intermediate care facilities.** Means of egress for single-story wood frame or light-steel frame skilled nursing facilities and intermediate care facilities ~~shall comply with the requirements of Sections 3424.2.1 and 3424.2.2 .~~ ~~**3424.2.2 Jurisdiction.** Means of egress for skilled nursing facilities and intermediate care facilities~~ shall only pass through buildings that are under the jurisdiction of the Office of Statewide Health Planning and Development (OSHPD).

~~**3424.2.1 New facilities or additions to existing facilities.** Means of egress for new skilled nursing facilities or intermediate care facilities, or additions to existing skilled nursing facilities or intermediate care facilities shall only pass through conforming buildings.~~

~~**Exception:** As an alternate, the nursing facilities and intermediate care facilities may meet the egress requirements in Sections 3417A.1.1.1.1 through 3417A.1.1.1.5 for hospital buildings.~~

...

1225.4 COMMON ELEMENTS.

...

1225.4.2.2.5 Ice-making facilities. Ice-making facilities may be located in the food preparation area or in a separate room. They shall be easily cleanable and ~~convenient~~ immediately accessible to the dietary function.

1225.4.2.2.6 Assembly and distribution. A patient tray assembly area shall be provided and shall be ~~located within close proximity~~ immediately accessible to the food preparation and distribution areas.

1225.4.2.2.7 Ware-washing facilities. ...

3. ~~Convenient h~~Handwashing stations shall be provided in the ware-washing space.

1225.4.2.2.11 Toilet rooms. Toilet rooms shall be provided for the exclusive use of the dietary staff. They shall not open directly into the food preparation areas, but shall be readily accessible ~~in close proximity~~.

1225.4.5.2.5 Location. All storage spaces shall be ~~directly~~ readily accessible ~~on the site of~~ in the licensed facility.

1225.5 SKILLED NURSING UNIT MODELS. ...

1225.5.1 MEDICAL MODEL.

1225.5.1.1 General construction. ...

1225.5.1.2 NURSING SERVICE SPACE.

1225.5.1.2.1 Patient bedrooms. ...

1225.5.1.2.2 Bed clearance. The dimensions and arrangement shall be such that there is ~~A~~a minimum distance of 3 feet (914 mm) ~~shall be provided~~ between

the sides and foot of the beds and any wall or any other fixed obstruction. In multiple-bed rooms, in addition to the above, a minimum clearance of 3 feet (914 mm) shall be provided between beds and a clearance of 4 feet (1219 mm) shall be available at ~~between~~ the foot of each beds ~~and walls or fixed objects~~ to permit the passage of equipment and beds., ~~in multi-patient rooms, and 3 feet (914 mm) in single-patient rooms.~~

1225.5.2 HOUSEHOLD MODEL

1225.5.2.6.3 Staff toilet rooms. *Staff toilet rooms shall be ~~provided conveniently located~~ readily accessible to each resident unit.*

NOTATION:
Authority: Health and Safety Code Sections 1275, 18928, 18949.3and 129850; Government 11152.5
Reference: Health and Safety Code Section 129850

SECTION 1226 [OSHPD 3] CLINICS

1226.4 General construction. *...*

1226.4.9.3 Waste holding room. *...*

The waste holding room shall comply with the following:

1. *The waste holding room shall be a minimum of ...*
2. *The waste holding room shall have 100 percent ...*
3. *All finishes in the waste holding room ...*
4. *The waste holding room shall ~~have convenient~~ be immediately accessible to an exterior door.*

1226.4.13.1 Administrative center(s) or nurse stations(s). *This area shall have space for counters and storage and shall have ~~convenient~~ direct access to a handwashing station ~~fixtures~~ (refer to Section 1224.3 for definition of handwashing station ~~fixture~~). It may be combined with or include centers for reception, charting and communication.*

1226.4.13.2.1 Medicine preparation room or area. *...*

...

4. ~~Convenient~~ Immediate access to handwashing station ~~fixture~~.

1226.4.13.2.2 Self-contained medicine-dispensing unit. *When provided, the location of a self-contained medicine-dispensing unit shall be permitted in the clean workroom or at the administrative center or nurses' station, provided there is adequate security for medications and adequate lighting to easily identify drugs. ~~Convenient~~ Immediate access to a handwashing station ~~fixture~~ shall be provided.*

1226.4.17.2 Storage for employees. *Provide storage for staff personal effects with locking drawers or cabinets (may be individual desks or cabinets). Such storage shall be ~~convenient~~ readily accessible to individual workstations and shall be staff controlled.*

1226.5 OUTPATIENT CLINICAL SERVICES OF A HOSPITAL.

...

1226.5.5.1.2 Outpatient change area. *A separate space shall be provided where outpatients change from street clothing. This shall include provisions for clothing storage, space for clothing change and gowning area. Dressing rooms shall be ~~provided convenient~~ readily accessible to the imaging rooms.*

1226.5.6 X-ray examination services. *...*

...

3. Fluoroscopy room, when provided, shall have a toilet room ~~adjoining~~ directly accessible to the ~~each~~ fluoroscopy room~~.~~. This toilet room is in addition to ~~other~~ common patient toilet room facilities located ~~adjacent to or in the immediate vicinity~~ in the radiological/imaging service space.

...

HYPERBARIC THERAPY

1226.5.14 Hyperbaric therapy service space. *When provided, hyperbaric therapy service space shall comply with Section 1224.39.5 and the provisions of this section:*

1226.5.14.1 General. *Refer to Section 1224.39.5.1.*

1226.5.14.2 Hyperbaric chambers. *Refer to Section 1224.39.5.2.*

1226.5.14.3 Pre-procedure patient holding area(s). *Refer to Section 1224.39.5.3.*

1226.5.14.4 Medical gas station outlets. *Refer to Section 1224.39.5.4.*

1226.5.14.5 Support areas for the hyperbaric suite.

1226.5.14.5.1 Reception/control desk. *Refer to Section 1224.39.5.5.1.*

1226.5.14.5.2 Examination/treatment room(s). *Refer to Section 1224.39.5.5.2.*

1226.5.14.5.3 Clean linen storage. *Refer to Section 1224.39.5.5.3.*

1226.5.14.5.4 Clean supply room. *Refer to Section 1224.39.5.5.4.*

1226.5.14.5.5 Gas cylinder room. *Refer to Section 1224.39.5.5.5*

1226.5.14.5.6 Gurney and wheelchair storage. *Refer to Section 1224.39.5.5.6.*

1226.5.14.5.7 Housekeeping room. *Refer to Section 1224.39.5.5.7.*

1226.5.14.5.8 Compressor room. *Refer to Section 1224.39.5.5.8.*

1226.5.14.6 Support areas for staff. *Refer to Section 1224.39.5.6.*

1226.5.14.7 Support areas for patients.

1226.5.14.7.1 Patient waiting area. *Refer to Section 1224.39.5.7.1.*

12265.14.7.2 Patient changing area. *Refer to Section 1224.39.5.7.2.*

1226.5.14.7.3 Patient toilet room. *Refer to Section 1224.39.5.7.3.*

...

PRIMARY CARE CLINICS

1226.6 PRIMARY CARE CLINICS. *Primary care clinics and outpatient clinical services of a hospital providing services equivalent to a primary care clinic shall comply with Sections 1226.4.3 through 1226.4.8 and the provisions of this section.*

1226.6.1 Examination and treatment areas.

1226.6.1.1 Examination room(s). *Refer to Section 1224.4.4.1.*

1226.6.1.2 Treatment room(s). *Treatment room(s) for minor procedures (e.g. surgical procedures, casting), if provided, shall have a minimum area of 120 square feet (11.15 m^2), the*

least dimension of which shall be a minimum of 10 feet (3048 mm), excluding such spaces such as vestibules and work counters, and shall meet the requirements in Section 1224.4.4.1.

1226.6.1.3 Dental examination and treatment areas. *When provided, the examination and treatment space shall be permitted to be a room or a patient care station in an open treatment area.*

1226.6.1.3.1 Area. *The treatment space shall have a minimum clear floor area of 80 square feet (7.4 m^2). This space is required for each station in an open operatory or treatment area. A minimum of 3 feet (915 mm) clearance shall be provided along the full length of one side of the chair, the head of the chair, and between the cuspidor and the head of the chair on the other side for assisting dental staff.*

1226.6.1.3.2 Pediatric patients. *At least one private consultation/treatment room shall be provided when pediatric patients are treated in a facility.*

1226.6.1.3.3 Handwashing. *Each treatment room shall include a handwashing station. If treatment is provided at stations in an open operatory, a handwashing station may be permitted to serve two treatment stations.*

1226.6.1.3.4 Imaging. *If provided, space for a dental panographic x-ray system and printer shall also comply with shielding requirements in Section 1226.5.5.2 and alcove requirements in Section 1224.18.1.1.*

1226.6.1.4 Oral surgery. *When provided, treatment areas for procedures for which general anesthesia is used, shall comply with the requirements in Section 1226.8.*

1226.6.2 Support areas for examination rooms.

1226.6.2.1 Administrative center or nurse station. *Refer to Section 1226.4.13.1.*

1226.6.2.2 Medication station. *Refer to Section 1226.4.13.2.*

1226.6.2.3 Clean utility room. *Refer to Section 1226.4.13.3.*

1226.6.2.4 Soiled workroom or soiled linen holding. *Refer to Section 1226.4.13.4.*

1226.6.2.5 Consultation room. *Dental facilities must provide a consultation room for private conferences with patients.*

1226.6.2.6 Sterilization facilities. *If sterile processing and/or high level disinfection is provided, the sterile processing room shall consist of a decontamination area and a clean work area. The sterile processing/high level disinfection room shall be designed to provide one-way flow of contaminated materials/instruments to the sterilizer/high level disinfection equipment. Sterile/high level disinfected instruments should be distributed from the area in such a manner that processed items do not pass through the decontamination area.*

1226.6.2.6.1 Decontamination area. *The decontamination area shall be equipped with the following:*

1. *Countertop, separated from clean countertop by 4 feet minimum distance.*
2. *Handwashing station separate from the instrument washing sink.*
3. *Sink for washing instruments. To avoid splash, the decontamination sink shall be separated from the clean work area by either a 4-foot distance from the edge of the sink or a separating wall or screen. If a screen is used, it shall extend a minimum of 4 feet (1220 mm) above the sink rim.*
4. *Storage for supplies.*

1226.6.2.6.2 Clean work area. *The clean work area shall be equipped with the following:*

1. *Countertop, separated from decontamination countertop by 4 feet minimum distance.*

2. Sterilizer/high level disinfection equipment, as required for the services provided.
3. Handwashing station; may share with decontamination area handwashing station.
4. Built-in storage for supplies.

1226.6.2.7 Laboratory. Facilities for laboratory services shall be provided in dental facilities or through a contract arrangement with a laboratory service.

1226.6.3 Support areas for patients.

...

SURGICAL CLINICS

1226.8 SURGICAL CLINICS. ...

1226.8.1 Outpatient surgical service space.

1226.8.1.1 Operating room(s). Refer to Section 1224.39.2, Item 1.

1226.8.1.2 ~~Preoperative patient holding~~ Perioperative services. Provide preoperative patient holding and post-anesthesia recovery area. Refer to Section ~~1224.15.2~~1224.16.

~~**1226.8.1.3 Post-anesthesia recovery area.** Refer to Section 1224.16.~~

1226.9 CHRONIC DIALYSIS CLINICS. ...

1226.9.2.1.1 Handwashing stations ~~fixtures~~. Handwashing stations ~~fixture(s)~~ shall be ~~located convenient~~ directly accessible to the administrative center or nurses' station and to patient treatment areas. ~~There shall be at least one~~ hHandwashing ~~fixture~~ stations may serve~~ing~~ no more than four patient stations. These shall be uniformly distributed to provide equal access from each patient station. Refer to Section 1224.3 for the definition of a handwashing station ~~fixture~~.

1226.9.2.5 Housekeeping room. Provide a housekeeping room that is immediately accessible ~~adjacent~~ to, and for the exclusive use of, the unit. ~~In addition, In addition,~~ tThis room shall ~~be~~ have a minimum floor area of 15 square feet (1.4 m^2) and shall include the following: ...

1226.10 REHABILITATION CLINICS. ...

1666.10.3 Public and administrative.

...

1226.10.3.1.3 Toilets~~(s)~~. Refer to Section 1224.4.5 ~~1224.4.4.5~~.

1226.10.3.1.4 Drinking fountain. Refer to Section 1224.4.5 ~~1224.4.4.5~~.

1226.10.3.1.5 Telephone. Refer to Section 1224.4.5 ~~1224.4.4.5.~~

1226.11 ALTERNATIVE BIRTHING CLINICS. ...

1226.11.2.6 Clean-up room. Each birthing room shall have immediate access to a clean-up room with a handwashing station ~~fixture~~ and work space which is separate from any sterilizing facilities. The clean-up room shall provide 24 square feet (2.23 m^2) per birthing room, up to eight rooms, with no dimension less than 6 feet (1829 mm).

THE CALIFORNIA BUILDING CODE
CALIFORNIA CODE OF REGULATIONS, TITLE 24, PART 2, VOLUMES 1 & 2

The Office of Statewide Health Planning and Development (OSHPD) proposes to adopt the 2015 edition of the International Building Code (IBC 2015) of International Code Council for codification and effectiveness in the 2016 edition of the California Building Code as presented on the following pages, including any necessary amendments. OSHPD further proposes to:

- Adopt new building standards that are not addressed by the 2015 model code proposed for adoption.
- Adopt new necessary amendments to the 2015 model code proposed for adoption.
- Relocate existing adopted and necessary amendments of the current model code into the format of the 2015 model code proposed for adoption. These amendments with editorial changes only are outside the rulemaking and are not subject to public comments. All amendments shown highlighted are existing and are not part of the rulemaking.

LEGEND FOR EXPRESS TERMS

1. Model code text: All International Building Code (IBC) text is shown in regular/*italics* type face.
2. Existing California amendments: All such language appears in *italics*.
3. Code language being modified: All such language appears in *italics and underlined*.
4. Repealed text: Repeal of 2015 IBC language appears in ~~strikeout~~.
5. Existing deletion: IBC model code language that was deleted in the previous Code Adoption Cycles is shown for clarity only. This language appears in ~~strikeout and highlight~~.
6. Existing amendments in 2013 CBC, Chapter 19A: Existing amendments in Sections 1903A through 1905A of the 2013 CBC which are *underlined and italicized* appear in *underline, italics and highlight*. Deletion of existing amendments in Sections 1903A through 1905A appears in ~~*italics, strikeout, and underline.*~~
7. Instructions: Texts which are instructions only that are not amendments and will not be printed appears in blue highlight.

Note:
Following each chapter of the proposed regulations is a notation that cites specific statute(s) that authorizes the adoption of these regulations and statute that allows for regulations to clarify the subject matter being implemented, interpreted or made specific by the authority statute(s).

2016 CALIFORNIA BUILDING CODE

CHAPTER 1
SCOPE AND ADMINISTRATION
DIVISION I
CALIFORNIA ADMINISTRATION

SECTION 1.1
GENERAL

I.I.I Title. *These regulations shall be known as the California Building Code, may be cited as such and will be referred to herein as "this code." The California Building Code is Part 2 of twelve parts of the official compilation and publication of the adoption, amendment and repeal of building regulations to the California Code of Regulations, Title 24, also referred to as the California Building Standards Code. This part incorporates by adoption the ~~2012~~ 2015 International Building Code of the International Code Council with necessary California amendments.*

...

SECTION 1.10
OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT

1.10.1 OSHPD 1. *Specific scope of application of the agency responsible for enforcement, enforcement agency and the specific authority to adopt and enforce such provisions of this code, unless otherwise stated.*

...

1.10.1.2 Applicable building standards. *California Building Standards Code, Title 24, Parts 2, 3, 4, 5, 6, 9 and 11.*
The provisions of Title 24, Part 2, as adopted and amended by OSHPD, shall apply to the applications listed in Section 1.10.1.
OSHPD 1 adopts the following building standards in Title 24, Part 2:
Chapters 2 through 10, 12, 14, 15, 16A, 17A, 18A, 19A, 20, 21A, 22A, 23, 24, 25, 26, 30, 31, 32, 33, 34A, 35~~, Appendix J~~ and Appendix L.

...

1.10.2 OSHPD 2. *Specific scope of application of the agency responsible for enforcement, enforcement agency and the specific authority to adopt and enforce such provisions of this code, unless otherwise stated.*

...

1.10.2.2 Applicable building standards. *California Building Standards Code, Title 24, Parts 2, 3, 4, 5, 6, 9, 10 and 11.*
The provisions of Title 24, Part 2, as adopted and amended by OSHPD, shall apply to the applications listed in Section 1.10.2.
OSHPD 2 adopts the following building standards in Title 24, Part 2:
Chapters 2 through 10, 12, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 30, 31, 32, 33~~, 34,~~ and 35. ~~, Appendices J and L.~~

...

1.10.3 OSHPD 3. *Specific scope of application of the agency responsible for enforcement, enforcement agency and the specific authority to adopt and enforce such provisions of this code, unless otherwise stated.*

...

1.10.3.2 Applicable building standards. *California Building Standards Code, Title 24, Parts 2, 3, 4, 5, 6, 9, 10 and 11.*

The provisions of Title 24, Part 2, as adopted and amended by OSHPD, shall apply to the applications listed in Section 1.10.3.
OSHPD 3 adopts the following building standards in Title 24, Part 2:
Chapter 12.
...

1.10.4 OSHPD 4. *Specific scope of application of the agency responsible for enforcement, enforcement agency and the specific authority to adopt and enforce such provisions of this code, unless otherwise stated.*
...

1.10.4.2 Applicable building standards. *California Building Standards Code, Title 24, Parts 2, 3, 4, 5, 6, 9, 10 and 11.*
The provisions of Title 24, Part 2, as adopted and amended by OSHPD, shall apply to the applications listed in Section 1.10.4.
OSHPD 4 adopts the following building standards in Title 24, Part 2:
Chapters 2 through 10, 12, 14, 15, 16A, 17A, 18A, 19A, 20, 21A, 22A, 23, 24, 25, 26, 30, 31, 32, 33, ~~34A,~~ 35 ~~and Appendices J~~ and Appendix L.
...

DIVISION II
SECTION 101
GENERAL

[A] 101.1 Title. These regulations shall be known as the *California Building Code* of *the State of California*, hereinafter referred to as "this code."
...

[A] 101.4.7 Existing buildings. The provisions of the ~~*International*~~ *California Existing Building Code* shall apply to all matters governing the repairs, alterations, change of occupancy, additions and relocation of existing buildings.

[OSHPD 1] The provisions of the Chapter 34A of this code shall apply to all matters governing the repairs, alterations, change of occupancy, additions, and relocation of existing structures and portions thereof under OSHPD jurisdiction. All references to the International/California Existing Building Code shall be replaced by equivalent provisions in Chapter 34A.

[OSHPD 2 & 4] The provisions of the California Existing Building Code, Chapter 4 the "Prescriptive Compliance Method" shall apply to all matters governing the repairs, alterations, change of occupancy, additions, and relocation of existing structures and portions thereof under OSHPD jurisdiction.

> ***Exception:*** *Performance objectives for incidental and minor additions and alterations of nonconforming buildings shall be permitted to be in accordance with the California Existing Building Code Table 301.1.4.2.*

SECTION 102
APPLICABILITY

[A] 102.1 General. Where there is a conflict between a general requirement and a specific requirement, the specific requirement shall be applicable. Where, in any specific case, different sections of this code specify different materials, methods of construction or other requirements, the most restrictive shall govern.
...

[A] 102.4 Referenced codes and standards. The codes and standards referenced in this code shall be considered part of the requirements of this code to the prescribed extent of each such reference and as further regulated in Sections 102.4.1 ~~and 102.4.2~~ *through 102.4.4.*

...

102.4.3 Code References. [OSHPD 1, 2, 3 & 4] *All reference to International Codes or other similar codes in referenced standards shall be replaced by equivalent provisions in the California Building Standard Codes.*

102.4.4 Reference in Standards. [OSHPD 1, 2, 3 & 4] *All references listed in reference standards shall be replaced by referenced standards listed in Chapter 35 of this code, where applicable, and shall include all amendments to the reference standards in this code.*

...

SECTION 104
DUTIES AND POWERS OF BUILDING OFFICIAL

[A] 104.1 General. The *building official* is hereby authorized and directed to enforce the provisions of this code. The *building official* shall have the authority to render interpretations of this code and to adopt policies and procedures in order to clarify the application of its provisions. Such interpretations, policies and procedures shall be in compliance with the intent and purpose of this code. Such policies and procedures shall not have the effect of waiving requirements specifically provided for in this code.

...

[A] 104.11 Alternative materials, design and methods of construction and equipment. The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code, provided that any such alternative has been *approved*. An alternative material, design or method of construction shall be *approved* where the *building official* finds that the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, not less than the equivalent of that prescribed in this code in quality, strength, effectiveness, fire resistance, durability and safety. Where the alternative materials, design or methods of construction is not *approved*, the *building official* shall provide in writing, stating the reasons why the alternative was not *approved*. *[OSHPD 1, 2 & 4] Alternative system shall satisfy ASCE 7 Section 1.3, unless more restrictive requirements are established by this code for an equivalent system. [OSHPD 1, 2 & 4] Alternative systems shall also satisfy the California Administrative Code, Section 7-104.*

...

104.11.3 Peer review. [OSHPD 1 & 4] *When peer review is required, it shall be performed pursuant to Section 3414A.*

104.11.4 Earthquake monitoring instruments. [OSHPD 1 & 4] *The enforcement agency may require earthquake monitoring instruments for any building that receives approval of an alternative system for the Lateral Force Resisting System (LFRS). There shall be a sufficient number of instruments to characterize the response of the building during an earthquake and shall include at least one tri-axial free field instrument or equivalent. A proposal for instrumentation and equipment specifications shall be forwarded to the enforcement agency for review and approval.*

The instruments shall be interconnected for common start and common timing. Each instrument shall be located so that access is maintained at all times and is unobstructed by room contents. A sign stating "MAINTAIN CLEAR ACCESS TO THIS INSTRUMENT" shall be posted in a conspicuous location.

The Owner of the building shall be responsible for the implementation of the instrumentation program. Maintenance of the instrumentation and removal/processing of the records shall be the responsibility of the enforcement agency or its designated agent.

SECTION 105
PERMITS

[A] 105.1 Required. Any owner or owner's authorized agent who intends to construct, enlarge, alter, repair, move, demolish or change the occupancy of a building or structure, or to erect, install, enlarge, alter, repair, remove, convert or replace any electrical, gas, mechanical or plumbing system, the installation of which is regulated by this code, or to cause any such work to be performed, shall first make application to the *building official* and obtain the required *permit*.

...

[A] 105.3.2 Time limitation of application. An application for a permit for any proposed work shall be deemed to have been abandoned 180 days after the date of filing, unless such application has been pursued in good faith or a permit has been issued; except that the building official is authorized to grant one or more extensions of time for additional periods not exceeding 90 days each. The extension shall be requested in writing and justifiable cause demonstrated. *[OSHPD 1, 2, & 4] Time limitation shall be in accordance with the California Administrative Code, Chapter 7, Section 7-129.*

...

SECTION 106
FLOOR AND ROOF DESIGN LOADS

[A] 106.1 Live loads posted. In commercial, *institutional* or industrial buildings, for each floor or portion thereof designed for live loads exceeding 50 psf (2.40 kN/m^2), such design live loads shall be conspicuously posted by the owner or owner's authorized agent in that part of each *story* in which they apply, using durable signs. It shall be unlawful to remove or deface such notices.

106.1.1 Snow Load Posting. [OSHPD 1, 2, & 4] *Snow loads used in design shall be posted as for live loads.*

~~***106.1.2 Load Posting Responsibility. [OSHPD 1, 2, & 4]*** *The owner or governing board shall be responsible for keeping the actual load below the allowable limits.*~~

[A] 106.2 Issuance of certificate of occupancy. A certificate of occupancy required by Section 111 shall not be issued until the floor load signs, required by Section 106.1, have been installed.

[A] 106.3 Restrictions on loading. It shall be unlawful to place, or cause or *permit* to be placed, on any floor or roof of a building, structure or portion thereof, a load greater than is permitted by this code.

SECTION 107
SUBMITTAL DOCUMENTS

[A] 107.1 General. Submittal documents consisting of *construction documents*, statement of *special inspections*, geotechnical report and other data shall be submitted in two or more sets with each *permit* application. The *construction documents* shall be prepared by a *registered design professional* where required by the statutes of the jurisdiction in which the project is to be constructed. Where special conditions exist, the *building official* is authorized to require additional *construction documents* to be prepared by a *registered design professional.*

Exception: The *building official* is authorized to waive the submission of *construction documents* and other data not required to be prepared by a *registered design professional* if it is found that the nature of the work applied for is such that review of *construction documents* is not necessary to obtain compliance with this code.

[A] 107.2 Construction documents. *Construction documents* shall be in accordance with Sections 107.2.1 through 107.2.6.

...

[A] 107.3.4.2 Deferred submittals.

Deferral of any submittal items shall have the prior approval of the *building official*. The *registered design professional in responsible charge* shall list the deferred submittals on the *construction documents* for review by the *building official*.

Documents for deferred submittal items shall be submitted to the *registered design professional in responsible charge* who shall review them and forward them to the *building official* with a notation indicating that the deferred submittal documents have been reviewed and been found to be in general conformance to the design of the building. The deferred submittal items shall not be installed until the deferred submittal documents have been *approved* by the *building official. [OSHPD 1, 2, & 4] Deferred submittals shall be in accordance with the California Administrative Code, Chapter 7, Section 7-126.*

...

(All existing amendments that are not revised above shall continue without any change)

NOTATION:
Authority: Health and Safety Code Section 129850
Reference: Health and Safety Code Sections 1275, 129850 and 129790

CHAPTER 2
DEFINITIONS

...

SECTION 201
GENERAL

201.1 Scope. Unless otherwise expressly stated, the following words and terms shall, for the purposes of this code, have the meanings shown in this chapter.

...

SECTION 202
DEFINITIONS

...

ACTIVE EQUIPMENT/COMPONENT. [OSHPD 1, 2, 3 & 4] *Equipment/Component containing moving or rotating parts, electrical parts such as switches or relays, or other internal components that are sensitive to earthquake forces and critical to the function of the equipment.*

ALTERNATIVE SYSTEM. [OSHPD 1 & 4] *Alternative materials, design and methods of construction in accordance with Section 104.11, Section 11.1.4 of ASCE 7 or structural design criteria as approved by the enforcement agency.*

...

DIAPHRAGM. ...

...

~~**Diaphragm, rigid.** [OSHPD 1 & 4] A diaphragm is rigid for the purpose of distribution of story shear and torsional moment *where so indicated in Section 12.3.1 of ASCE 7.*~~

...

ENFORCEMENT AGENT. [OSHPD 1, 2, 3 & 4] *That individual within the agency or organization charged with responsibility for agency or organization compliance with the requirements of this Code. Used interchangeably with Building Official and Code Official.*

...

Freestanding Acute Psychiatric Building (APB). [OSHPD 1] *A freestanding building, as defined in the California Administrative Code Section 7-111, that provides 24-hour inpatient Acute Psychiatric Services as defined in the Health and Safety Code (H&SC) Section 1250(b) or as special services in accordance with H&SC Section 1255(a)(5) of a general acute care hospital defined in H&SC Section 1250(a) and all structures required for their continuous operation or access/egress.*

Freestanding Skilled Nursing Building (SNB). [OSHPD 1] *A freestanding building, as defined in the California Administrative Code Section 7-111, that provides skilled nursing and/or intermediate care as defined in the Health and Safety Code Section 1250(c) or (d), and all structures required for their continuous operation or access/egress.*

...

General Acute Care Building (GAC Building). [OSHPD 1] *Hospital buildings as defined in the California Administrative Code Section 7-111 and all structures required for their continuous operation or access/egress, except Freestanding Skilled Nursing Building (SNB) and Acute Psychiatric Building (APB).*

...

INCIDENTAL STRUCTURAL ALTERATIONS, ADDITIONS, OR REPAIRS. [OSHPD 1, 2 & 4] *Alterations, additions or repairs which would not reduce the story lateral shear force-resisting capacity by more than 5 percent or increase the story shear by more than 5 percent in any existing story or a combination thereof with equivalent effect (not exceeding 5 percent total). The calculation of lateral shear force-resisting capacity and story shear shall account for the cumulative effects of additions and alterations since original construction.*

...

MAJOR STRUCTURAL ALTERATIONS, ADDITIONS, OR REPAIRS. [OSHPD 1, 2 & 4] *Alterations, additions, or repairs of greater extent than minor structural alterations, additions or repairs.*

...

MINOR STRUCTURAL ALTERATIONS, ADDITIONS, OR REPAIRS. [OSHPD 1, 2 & 4] *Alterations, additions or repairs of greater extent than incidental structural additions or alterations which would not reduce the story shear lateral-force-resisting capacity by more than 10 percent or increase the story shear by more than 10 percent in any existing story or a combination thereof with equivalent effect (not exceeding 10 percent total). ~~base shear by more than 10 percent.~~ The calculation of lateral shear force-resisting capacity and story shear shall account for the cumulative effects of additions and alterations since original construction.*

NEXT GENERATION ATTENUATION (NGA). [OSHPD 1, 2 & 4] *Attenuation relations used for the 2008 United States Geological Survey (USGS) seismic hazards maps (for the Western United States) or their equivalent as determined by the enforcement agency.*

...

NON-GENERAL ACUTE CARE BUILDING (NON-GAC BUILDING). [OSHPD 1] *A non-freestanding SPC building, which is removed from general acute care services in accordance with the Section 3418A that remains under OSHPD jurisdiction as part of an OSHPD 1 Hospital building.*

...

NPC 1, NPC 2, NPC 3/NPC 3R, NPC 4, and NPC 5. [OSHPD 1] ~~*are the b*~~ *Building nonstructural performance categories for Hospital Buildings defined in Table 11.1 of California Administrative Code (Part 1, Title 24 CCR), Chapter 6.*

...

RETROFIT. [OSHPD 1, 2 & 4] *The construction of any new element or system, or the alteration of any existing element or system required to bring an existing building, or portion thereof, conforming to*

earlier code requirements, into conformance with standards of the currently effective California Building Standards Code.

...

RUGGED EQUIPMENT. [OSHPD 1, 2, 3 & 4] *Rugged equipment refers to an ampleness of construction that gives such equipment the ability to survive earthquake strong motions without significant loss of function.*

...

SIGNIFICANT LOSS OF FUNCTION. [OSHPD 1, 2 & 4] *Significant loss of function for equipment or components means the equipment or component cannot be restored to its original function by competent technicians after a design earthquake because the equipment or component require parts that are not normally stocked by the Owner or not readily available.*

...

SPC BUILDING. [OSHPD 1] *Means a structure with an independent vertical and lateral force resisting system (LFRS) and a distinct building structural performance category assigned by OSHPD.*

...

SPC 1, SPC 2, SPC 3, SPC 4, SPC 4D and SPC 5. [OSHPD 1] ~~*are the b*~~ *Building structural performance categories for Hospital Buildings defined in Table 2.5.3 of California Administrative Code (Part 1, Title 24 CCR), Chapter 6.*

...

SUBSTANTIAL STRUCTURAL DAMAGE. ***[OSHPD 1, 2, & 4]*** A condition where one or both of the following apply:

1. The vertical elements of the lateral force-resisting system have suffered damage such that the lateral load-carrying capacity of any story in any horizontal direction has been reduced by more than ~~33~~ *10* percent from its pre-damage condition; or
2. The capacity of any vertical component carrying gravity load, or any group of such components, ~~that supports more than 30 percent of the total area of the structure's floor(s) and roof(s)~~ has been reduced more than ~~20~~ *10* percent from its pre-damage condition and the remaining capacity of such affected elements, with respect to all dead and *live loads*, is less than 75 percent of that required by this code for new buildings of similar structure, purpose and location.

...

SURFACE MOUNTED COMPONENT. [OSHPD 1, 2 & 4] *Means component directly attached to only one continuous flat surface of wall, floor or roof, without supports. Surface mounted components are directly attached to a surface by attachments (without any supports) and are not rigidly connected to anything else (e. g. distribution system, other components, etc.).*

...

TORQUE-CONTROLLED POST-INSTALLED ANCHOR. [OSHPD 1, 2 & 4] *A post-installed anchor that is set by the expansion of one or more sleeves or other elements against the sides of the drilled hole through the application of torque, which pulls the cone(s) into the expansion sleeve(s); after setting, tensile loading can cause additional expansion (follow-up expansion).*

...

[All existing amendments that are not revised above shall continue without any change]

NOTATION:
Authority: Health and Safety Code Section 129850
Reference: Health and Safety Code Sections 1275, 129850 and 129790

CHAPTER 14
EXTERIOR WALLS

SECTION 1401
GENERAL

1401.1 Scope. The provisions of this chapter shall establish the minimum requirements for exterior walls; *exterior wall* coverings; *exterior wall* openings; exterior windows and doors; architectural *trim*; balconies and similar projections; and bay and oriel windows.

...

SECTION 1405
INSTALLATION OF WALL COVERINGS

1405.1 General. *Exterior wall coverings* shall be designed and constructed in accordance with the applicable provisions of this section.

1405.1.1 Additional requirements. [OSHPD 1, ~~2,~~ and 4] *In addition to the requirements of Sections 1405.6, 1405.7, 1405.8, 1405.9, and 1405.10, the installation of anchored or adhered veneer shall comply with applicable provisions of Section ~~1410~~ 1411.*

...

SECTION ~~1410~~ 1411 [OSHPD 1, ~~2,~~ AND 4]
ADDITIONAL REQUIREMENTS FOR ANCHORED AND ADHERED VENEER.

1411.1 ~~1410.1~~ General. *In no case shall veneer be considered as part of the backing in computing strength or deflection nor shall it be considered a part of the required thickness of the backing. Veneer shall be anchored in a manner which will not allow relative movement between the veneer and the wall.*

Anchored or adhered veneer shall not be used on overhead horizontal surfaces.

1411.2 ~~1410.2~~ Adhered Veneer. *Units of tile, masonry, stone or terra cotta which exceed 5/8 inch (16 mm) in thickness shall be applied as for anchored veneer where used over exit ways or more than 20 feet (6096 mm) in height above adjacent ground elevation.*

1411.2.1 ~~1410.2.1~~ Bond Strength and Tests. *Veneer shall develop a bond to the backing in accordance with TMS 402, Section ~~6.3.2.4~~ 12.3.2.4.*
Not less than two shear tests shall be performed for the adhered veneer between the units and the supporting element. At least one shear test shall be performed at each building for each 5,000 square feet (465 m^2) of floor area or fraction thereof.

All existing amendments that are not revised above shall continue without any change.

Notation:
Authority: Health and Safety Code Section 129850
Reference: Health and Safety Code Sections 1275, 129850 and 129790

CHAPTER 15
ROOF ASSEMBLIES AND ROOFTOP STRUCTURES

SECTION 1501
GENERAL

1501.1 Scope. The provisions of this chapter shall govern the design, materials, construction and quality of roof assemblies, and rooftop structures.

...

SECTION 1507
REQUIREMENTS FOR ROOF COVERINGS

1507.1 Scope. Roof coverings shall be applied in accordance with the applicable provisions of this section and the manufacturer's installation instructions.

...

1507.3.10 Additional requirements. [OSHPD 1, ~~2,~~ and 4] *In addition to the requirements of 1507.3.6 and 1507.3.7, the installation of clay and concrete tile roof coverings shall comply with seismic anchorage provisions of Section 1513. ~~1512.~~*

...

1507.7 Slate shingles. The installation of slate shingles shall comply with the provisions of this section.

...

1507.7.8 Additional requirements. [OSHPD 1, ~~2,~~ and 4] *In addition to the requirements of Section 1507.7.5, the installation of slate shingle roof coverings shall comply with the requirements of Sections 1507.3.6 and 1507.3.7, the installation of slate shingle roof coverings shall comply with seismic anchorage provisions of Section 1513. ~~1512.~~*

...

SECTION 1513 ~~1512~~ [OSHPD 1, ~~2,~~ AND 4]
SEISMIC ANCHORAGE OF SLATE SHINGLE, CLAY AND CONCRETE TILE ROOF COVERINGS

1513.1 ~~1512.1~~ Fasteners. *Nails shall be long enough to penetrate into the sheathing 3/4 inch (19 mm). Where sheathing is less than 3/4 inch (19 mm) in thickness, nails shall be driven into supports, unless nails with ring shanks are used.*
All fasteners shall be corrosion resistant and fabricated of copper, stainless steel, or brass, or shall have a hot dipped galvanized coating not less than 1.0 ounce of zinc per square foot (305 gm/m^2). Nails for slate shingles and clay or concrete tile shall be copper, brass or stainless steel with gage and length per common ferrous nails.

1513.2 ~~1512.2~~ Wire. *Wire for attaching slate shingles and clay or concrete tile shall be copper, brass or stainless steel capable of supporting four times the weight of tile.*
Wire supporting a single tile or shingle shall not be smaller than 1/16 inch (1.6 mm) in diameter. Continuous wire ties supporting more than one tile shall not be smaller than 0.084 inch (2 mm) in diameter.

1513.3 ~~1512.3~~ Metal strips. *Metal strips for attaching slate shingles and clay or concrete tile shall be copper, brass or stainless steel capable of supporting four times the weight of tile.*

1513.4 ~~1512.4~~ Clay or Concrete Tiles. *Clay or concrete tile shall be installed in accordance with Table 1507.3.7 and as described herein.*

1. *On wood roofs or roofs of other material to which wood strips are secured, every cover or top tile when fastened with nails shall be nailed directly into 1-1/4 inches (32 mm) sound grain soft wood strips of sufficient height to support the tile.*
   Pan or bottom tiles shall be nailed directly to the roof sheathing or to wood strips. Wood strips shall be secured to the roof by nails spaced not over 12 inches (305 mm) apart.

2. *On concrete roofs, wires shall be secured in place by wire loops embedded into the concrete not less than 2 inches (51 mm). The wire loops shall be spaced not more than 36 inches (914*

mm) on center parallel to the eaves, and spaced vertically to allow for the minimum 3 inches (76 mm) lapping of the tile.

3. *Where continuous ties of twisted wire, interlocking wires or metal strips extending from the ridge to eave are used to attach tile, the ties shall be attached to the roof construction at the ridge, eave, and at intervals not exceeding 10 feet 0 inch (3048 mm) on center. The ties within 2 feet 0 inch (610 mm) of the rake shall be attached at intervals of 5 feet 0 inch (1524 mm). Attachment for continuous ties shall be nails, screws, staples or approved clips of the same material as the ties and shall not be subjected to withdrawal forces. Attachments for continuous ties shall have an allowable working stress shear resistance of not less than twice the dead weight of the tile tributary to the attachment, but not less than 300 pounds (136 kg).*

4. *Tile with projecting anchor lugs at the bottom of the tiles shall be held in position by means of 1-inch by 2-inch (25mm by 51mm) wood stripping nailed to the roof sheathing over the underlay.*

5. *Clay or concrete tile on roofs with slopes exceeding 24 units vertical in 12 units horizontal (200 percent slope) shall be attached as required for veneer in Chapter 14. The nose of all tiles shall be securely fastened.*

6. *Clay or concrete tile shall have a minimum of two fasteners per tile. Tiles that are 8 inches (203 mm) in width or less are permitted to be fastened at the center of the head with one fastener per tile.*

7. *Interlocking clay or concrete tile shall have a minimum of one nail near center of head or two wire ties per tile.*

1513.5 ~~***1512.5***~~ ***Slate Shingles.*** *Slate shingles on roofs with slopes exceeding 24 units vertical in 12 units horizontal (200 percent slope) shall be attached as required for veneer in accordance with Chapter 14.*

(All existing amendments that are not revised above shall continue without any change)

NOTATION:
Authority: Health and Safety Code Section 129850
Reference: Health and Safety Code Sections 1275, 129850 and 129790

CHAPTER 16
STRUCTURAL DESIGN

SECTION 1601
GENERAL

1601.1 Scope. The provisions of this chapter shall govern the structural design of buildings, structures and portions thereof regulated by this code.

1601.2 Enforcement Agency Approval. [OSHPD 2] *In addition to requirements of the California Administrative Code and the California Building Code, any aspect of project design, construction, quality assurance, or quality control programs for which this code requires approval by the design professional, are also subject to approval by the enforcement agency.*

...

SECTION 1603
CONSTRUCTION DOCUMENTS

1603.1 General. Construction documents shall show the size, section and relative locations of

structural members with floor levels, column centers and offsets dimensioned. The design loads and other information pertinent to the structural design required by Sections 1603.1.1 through 1603.1.8 shall be indicated on the construction documents.

[OSHPD 2] *Additional requirements are included in Section 7-115 and 7-125 of the California Administration Code (Part 1, Title 24, C.C.R).*

...

SECTION 1607
LIVE LOADS

1607.1 General. Live loads are those loads defined in Chapter 2 of this code.

TABLE 1607.1 MINIMUM UNIFORMLY DISTRIBUTED LIVE LOADS, L_o, AND MINIMUM CONCENTRATED LIVE LOADS[g]

OCCUPANCY OR USE	UNIFORM (psf)	CONCENTRATED (lbs.)
...	...	...
36. [OSHPD 2] Storage racks and wall-hung cabinets.	*Total Loads[n]*	

...

n. [OSHPD 2] The minimum vertical design live load shall be as follows:

Paper media:
12-inch-deep (305 mm) shelf 33 pounds per lineal foot (482 N/m)
15-inch-deep (381 mm) shelf 41 pounds per lineal foot (598 N/m), or
33 pounds per cubic foot (5183 N/m^3) per total volume of the rack or cabinet, whichever is less.
Film media:
18-inch-deep (457 mm) shelf 100 pounds per lineal foot (1459 N/m), or
50 pounds per cubic foot (7853 N/m^3) per total volume of the rack or cabinet, whichever is less.
Other media:
20 pounds per cubic foot (311 N/m3) or 20 pounds per square foot (958 Pa), whichever is less, but not less than actual loads.

...

SECTION 1612
FLOOD LOADS

1612.3 Establishment of flood hazard areas. To establish flood hazard areas, the governing body shall adopt a flood hazard map and supporting data. The flood hazard map shall include, at a minimum, areas of special flood hazard as identified by the Federal Emergency Management Agency in an engineering report entitled "The Flood Insurance Study for [INSERT NAME OF JURISDICTION]," dated [INSERT DATE OF ISSUANCE], as amended or revised with the accompanying Flood Insurance Rate Map (FIRM) and Flood Boundary and Floodway Map (FBFM) and related supporting data along with any revisions thereto. The adopted flood hazard map and supporting data are hereby adopted by reference and declared to be part of this section.

Exception: [OSHPD 2] *The flood hazard map shall include, at a minimum, areas of special flood hazard as identified by the Federal Emergency Management Agency's Flood Insurance Study (FIS) adopted by the local authority having jurisdiction where the project is located.*

...

SECTION 1613
EARTHQUAKE LOADS

1613.1 Scope. Every structure, and portion thereof, including nonstructural components that are permanently attached to structures and their supports and attachments, shall be designed and constructed to resist the effects of earthquake motions in accordance with ASCE 7, excluding Chapter 14 and Appendix 11A. The seismic design category for a structure is permitted to be determined in accordance with Section 1613 or ASCE 7.

Exceptions:

1. Detached one- and two-family dwellings, assigned to Seismic Design Category A, B or C, or located where the mapped short-period spectral response acceleration, S_S, is less than 0.4 g.
2. The seismic-force-resisting system of wood-frame buildings that conform to the provisions of Section 2308 are not required to be analyzed as specified in this section. *[OSHPD 2] Not permitted by OSHPD, see Section 2308.*
3. Agricultural storage structures intended only for incidental human occupancy.
4. Structures that require special consideration of their response characteristics and environment that are not addressed by this code or ASCE 7 and for which other regulations provide seismic criteria, such as vehicular bridges, electrical transmission towers, hydraulic structures, buried utility lines and their appurtenances and nuclear reactors.
5. *[OSHPD 2] Seismic Design Category shall be in accordance with exception to Section 1613.3.5.*

...

1613.3.1 Mapped acceleration parameters. The parameters S_s and S_1 shall be determined from the 0.2 and 1-second spectral response accelerations shown on Figures 1613.3.1(1) through 1613.3.1(8). Where S_1 is less than or equal to 0.04 and S_s is less than or equal to 0.15, the structure is permitted to be assigned to *Seismic Design Category* A.

***Exception:** [OSHPD 2] Seismic Design Category shall be in accordance with exception to Section 1613.3.5.*

...

1613.3.5 Determination of seismic design category. Structures classified as *Risk Category* I, II or III that are located where the mapped spectral response acceleration parameter at 1-second period, S_1, is greater than or equal to 0.75 shall be assigned to *Seismic Design Category* E. Structures classified as *Risk Category* IV that are located where the mapped spectral response acceleration parameter at 1-second period, S_1, is greater than or equal to 0.75 shall be assigned to *Seismic Design Category* F. All other structures shall be assigned to a *seismic design category* based on their *risk category* and the design spectral response acceleration parameters, S_{DS} and S_{D1}, determined in accordance with Section 1613.3.4 or the site-specific procedures of ASCE 7. Each building and structure shall be assigned to the more severe *seismic design category* in accordance with Table 1613.3.5(1) or 1613.5.5(2), irrespective of the fundamental period of vibration of the structure, T.

***Exception: [OSHPD 2]** Structures not assigned to seismic design category E or F above shall be assigned to seismic design category D.*

1613.3.5.1 Alternative seismic design category determination.

...

***Exception: [OSHPD 2]** Seismic design category shall be determined in accordance with exception to Section 1613.3.5.*

1613.3.5.2 Simplified design procedure. Where the alternate simplified design procedure of ASCE 7 is used, the seismic design category shall be determined in accordance with ASCE 7.

Exception: [OSHPD 2] *Seismic design category shall be determined in accordance with exception to Section 1613.3.5.*

...

(All existing amendments that are not revised above shall continue without any change)

NOTATION:
Authority: Health and Safety Code Section 129850
Reference: Health and Safety Code Sections 1275 and 129850

CHAPTER 16*A*
STRUCTURAL DESIGN

SECTION 1601*A*
GENERAL

1601*A*.1 Scope. The provisions of this chapter shall govern the structural design of buildings, structures and portions thereof regulated by this code.

1601A.1.1 Application. *The scope of application of Chapter 16A is as follows:*

1. *(Reserved for DSA)*
2. *Applications listed in Section 1.10.1, and 1.10.4, regulated by the Office of Statewide Health Planning and Development (OSHPD). These applications include hospitals, skilled nursing facilities, intermediate care facilities, and correctional treatment centers.*

   Exception: [OSHPD 2] *Single-story Type V skilled nursing or intermediate care facilities utilizing wood-frame or light-steel-frame construction as defined in Health and Safety Code Section 129725, which shall comply with Chapter 16 and any applicable amendments therein.*

1601A.1.2 Amendments in this chapter. *OSHPD adopt this chapter and all amendments.*

Exception: *Amendments adopted by only one agency appear in this chapter preceded with the appropriate acronym of the adopting agency, as follows:*

1. *(Reserved for DSA)*
2. *Office of Statewide Health Planning and Development:*
   [OSHPD 1] *- For applications listed in Section 1.10.1.*
   [OSHPD 4] *- For applications listed in Section 1.10.4.*

1601A.2 Enforcement Agency Approval. *In addition to requirements of the California Administrative Code and the California Building Code, any aspect of project design, construction, quality assurance, or quality control programs for which this code requires approval by the Registered ~~d~~ Design ~~p~~ Professional (RDP), are also subject to approval by the enforcement agency.*

SECTION 1602A
DEFINITIONS AND NOTATIONS

1602*A*.1 Definitions. The following terms are defined in Chapter 2 *except those defined below which shall, for the purposes of this section, have the meanings shown herein.*

...

~~***HOSPITAL BUILDING.*** *Any building defined in Section 129725, Health and Safety Code.*~~

SECTION 1603*A*
CONSTRUCTION DOCUMENTS

1603*A*.1 General. Construction documents shall show the size, section and relative locations of structural members with floor levels, column centers and offsets dimensioned. The design loads and other information pertinent to the structural design required by Sections 1603A.1.1 through ~~1603.1.8~~ *1603A.1.9* shall be indicated on the *construction documents*.

...

[OSHPD 1] *Additional requirements are included in Section 7-115 and 7-125 of the California Administrative Code.* ~~*(Part 1, Title 24, C.C.R).*~~

...

1603*A*.1.5 Earthquake design data. The following information related to seismic loads shall be shown, regardless of whether seismic loads govern the design of the lateral-force-resisting system of the building:

1. Risk Category
2. Seismic importance factor, I_e.
3. Mapped spectral response accelerations, S_S and S_1.
4. Site class.
5. Design spectral response acceleration parameters, S_{DS} and S_{D1}.
6. Seismic design category.
7. Basic seismic-force-resisting system(s).
8. Design base shear.
9. Seismic response coefficient(s), C_S.
10. Response modification factor(s), R.
11. Analysis procedure used.
12. *Applicable horizontal structural irregularities.*
13. *Applicable vertical structural irregularities.*
14. *Location of base as defined in Section 1613A.2.*

1603A.1.5.1 Connections. *Connections that resist design seismic forces shall be designed and detailed on the design drawings.*

...

1603A.1.9 ~~***1603A.1.10***~~ **Construction Procedures.** *Where unusual erection or construction procedures are considered essential by the Registered Design Professional (RDP) in order to accomplish the intent of the design or influence the construction* ~~*design*~~*, such procedure shall be indicated on the construction documents.*

1603A.2 Site Data Reports. *Geotechnical and Geohazard reports for review by the enforcement agency shall be accompanied by a description of the project prepared by the Registered Design Professional (RDP) in responsible charge, which shall include the following:*

1. *Type of service such as General Acute Care Facility, Skilled Nursing Facility, Intermediate Care Facility, Acute Psychiatric Facility, Central Utility Plants, etc.*
2. *Construction materials used for the project such as Steel, Concrete. Masonry, Wood, etc.*
3. *Type of construction project such as new, addition, alteration, repair, etc.*
4. *For existing buildings, extent of construction such as incidental, minor, major, and/or voluntary seismic improvements as defined in Sections 202 and 3402A.*~~*.2*~~ ***[OSHPD 1 & 4]****.*
5. *Seismic Force Resisting System used for each structure in the project.*
6. *Foundation system that will be used for each structure in the project such as spread footing, drilled piers, etc.*
7. *Analysis procedure used and basis of design such as ASCE 7 Equivalent Lateral Force Procedure, ASCE 41 Nonlinear Dynamic Procedure, etc.*

8. *Building characteristics such as number of stories above and below grade, foot print area at grade, grade slope on site, etc.*
9. *Special features such as requirement for shoring, underpinning, retaining walls, etc.*

1603A.3 Structural Design Basis and Calculations. *The application for the approval of construction documents that involves structural elements or components shall be accompanied by complete and accurate structural design computations, which shall comply with requirements prescribed by the enforcement agency:*

1. *The computations shall be preceded by a detailed index.*
2. *The computations including each major subsection shall be prefaced by a statement clearly and concisely outlining the basis for the structural design and indicating the manner in which the structure will resist the vertical loads and lateral forces.*
3. *The computations shall be sufficiently complete to the extent that calculations for the individual structural members and connections can be readily interpreted.*

SECTION 1604*A*
GENERAL DESIGN REQUIREMENTS

1604*A*.3 Serviceability. Structural systems and members thereof shall be designed to have adequate stiffness to limit deflections and lateral drift. See Section 12.12.1 of ASCE 7 for drift limits applicable to earthquake loading.

1604*A*.3.1 Deflections. The deflections of structural members shall not exceed the more restrictive of the limitations of Sections 1604*A*.3.2 through *1604A.3.6* or that permitted by Table 1604*A*.3.

TABLE 1604*A*.3 - DEFLECTION LIMITS[a, b, c, h, i]

CONSTRUCTION	*L or L_r*	*S or W*[f]	*D + (L or Lr)* [d,g]
...	...	...	...
... *Veneered walls, anchored veneers and adhered veneers over 1 inch (25 mm) thick, including the mortar backing*	... —	... *l/600*	... –
Farm buildings	—	—	*l*/180
Greenhouses	—	—	*l*/120

...

1604A.3.7 Horizontal diaphragms. *The maximum span-~~width~~ depth ratio for any roof or floor diaphragm consisting of steel and composite steel slab decking shall not exceed those given in ~~Table 4.2.4 of AF & PA SDPWS for wood or maximum span-depth ratio given in~~ Table 1604A.4 ~~for steel and composite steel slab decking~~, unless test data and design calculations acceptable to the enforcement agency are submitted and approved for the use of other ~~span-width or~~ span-depth ratios. Concrete diaphragms shall not exceed the span- depth ratios for the equivalent composite steel-slab diaphragm in Table 1604A.4.*

TABLE 1604A.4 – MAXIMUM HORIZONTAL DIAPHRAGM SPAN AND SPAN-DEPTH RATIOS[1,3,4]

FLEXIBILITY FACTOR(F)[2]	MAXIMUM DIAPHRAGM SPAN FOR MASONRY OR CONCRETE WALLS (feet)	DIAPHRAGM SPAN-DEPTH LIMITATION			
		Rotation (torsion) Not Considered in Diaphragm		Rotation (torsion) Considered in Diaphragm	
		Masonry or Concrete Walls	Flexible Walls	Masonry or Concrete Walls	Flexible Walls
More than 150	Not to be used	Not to be used	2:1	Not to be used	1-1/2:1
70-150	200	2:1 or as required for deflection	3:1	Not to be used	2:1
10-70	400	2-1/2:1 or as required for deflection	4:1	As required for deflection	2-1/2:1
1-10	No limitation	3:1 or as required for deflection	5:1	As required for deflection	3:1
Less than 1	No limitation	As required for deflection	No limitation	As required for deflection	3-1/2:1

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 plf = 14.6 N/m, 1 psi = 6894 Pa

[1] Diaphragms shall satisfy span-depth limitations based on flexibility.
[2] Flexibility Factor (F) is the average deflection in micro inches (10^{-6}) or μm of the diaphragm web per foot (m) of span stressed with a shear of 1 pound per foot (N/m).
[3] The total deflection Δ of the diaphragm may be computed from the equation: $\Delta = \Delta_f + \Delta_w$.

Where:

Δ_f = Flexural deflection of the diaphragm determined in the same manner as the deflection of beams. The flexural stiffness of the web of diaphragms consisting of bare steel decking shall be neglected.
Δ_w = Web deflection of the diaphragm may be determined solving the following equation:

$$F = \frac{\Delta_w x 10^6}{q_{ave} L}$$

Where:

L = Distance in feet (m) between the vertical resisting element (such as a shear wall) and the point to which the deflection is to be determined.
q_{ave} = Average shear in the diaphragm in pounds per foot (N/m) over length L.

[4] When applying these limitations to cantilevered diaphragms, the allowable span-depth ratio will be half of that shown.

1604A.3.8 Deflections. *Deflection criteria for materials not specified shall be developed by the project architect or structural engineer in a manner consistent with the provisions of this section and approved by the enforcement agency.*

...

1604A.4 Analysis. Load effects on structural members and their connections shall be determined by methods of structural analysis that take into account equilibrium, general stability, geometric compatibility and both short- and long-term material properties.

Members that tend to accumulate residual deformations under repeated service loads shall have included in their analysis the added eccentricities expected to occur during their service life.

Any system or method of construction to be used shall be based on a rational analysis in accordance with well-established principles of mechanics. Such analysis shall result in a system that provides a complete load path capable of transferring loads from their point of origin to the load-resisting elements.

The total lateral force shall be distributed to the various vertical elements of the lateral force-resisting system in proportion to their rigidities, considering the rigidity of the horizontal bracing system or diaphragm. Rigid elements assumed not to be a part of the lateral force-resisting system are permitted to be incorporated into buildings provided their effect on the action of the system is considered and provided for in the design. *Structural analysis shall explicitly include consideration of stiffness of diaphragms in accordance with ASCE 7 Section 12.3.1.* ~~A diaphragm is rigid for the purpose of distribution of story shear and torsional moment when the lateral deformation of the diaphragm is less than or equal to two times the average story drift.~~ Where required by ASCE 7, provisions shall be made for the increased forces induced on resisting elements of the structural system resulting from torsion due to eccentricity between the center of application of the lateral forces and the center of rigidity of the lateral force resisting system.

Every structure shall be designed to resist the overturning effects caused by the lateral forces specified in this chapter. See Section 1609*A* for wind loads, Section 1610*A* for lateral soil loads and Section 1613*A* for earthquake loads.

...

1604A.5 Risk category. Each building and structure shall be assigned a *risk category* in accordance with Table 1604A.5. Where a referenced standard specifies an occupancy category, the risk category shall not be taken as lower than the occupancy category specified therein. Where a referenced standard specifies that the assignment of a risk category be in accordance with ASCE 7, Table 1.5-1, Table 1604.5 shall be used in lieu of ASCE 7, Table 1.5-1.

...

TABLE 1604*A*.5 - RISK CATEGORY OF BUILDINGS AND OTHER STRUCTURES

RISK CATEGORY	NATURE OF OCCUPANCY
...	...
III	Buildings and other structures that represent a substantial hazard to human life in the event of failure, including but not limited to: ... • ~~Group I-2 occupancies with an occupant load of 50 or more resident care recipients, but not having surgery or emergency treatment facilities.~~ ...
IV	Buildings and other structures designated as essential facilities, including but not limited to: • ~~Group I-2 occupancies having surgery or emergency treatment facilities.~~ • ***[OSHPD 1 & 4]*** *Hospital Buildings as defined in the California Administrative Code, Section 7-111 and all structures required for their continuous operation or access/egress.* ...

...

1604A.8.2 Structural walls. Walls that provide vertical load-bearing resistance or lateral shear resistance for a portion of the structure shall be anchored to the roof and to all floors and members that provide lateral support for the wall or that are supported by the wall. The connections shall be capable of resisting the horizontal forces specified in Section 1.4.4 of ASCE 7 for walls of structures assigned to Seismic Design Category A and to Section 12.11 of ASCE 7 for walls of structures assigned to all other seismic design categories. *For anchorage of concrete or masonry walls to roof and floor diaphragms, the out-of-plane strength design force shall not be less than 280 lb/linear ft (4.09 kN/m) of wall.* Required anchors in masonry walls of hollow units or cavity walls shall be embedded in a reinforced grouted structural element of the wall. See Sections 1609*A* for wind design requirements and 1613*A* for earthquake design requirements.

...

SECTION 1605*A*
LOAD COMBINATIONS

1605*A*.1 General. Buildings and other structures and portions thereof shall be designed to resist:

...

1605*A*.1.1 Stability. Regardless of which load combinations are used to design for strength, where overall structure stability (such as stability against overturning, sliding, or buoyancy) is being verified, use of the load combinations specified in Section 1605*A*.2 or 1605*A*.3 shall be permitted. Where the load combinations specified in Section 1605*A*.2 are used, strength reduction factors applicable to soil resistance shall be provided by a *registered design professional.* The stability of retaining walls shall be verified in accordance with Section 1807*A*.2.3. *When using allowable stress design, factor of safety for soil bearing values shall not be less than the overstrength factor of the structures supported.*

...

SECTION 1606*A*
DEAD LOADS

...

1606A.3 Roof Dead Loads. *The design dead load shall provide for the weight of at least one additional roof covering in addition to other applicable loadings if the new roof covering is permitted to be applied over the original roofing without its removal, in accordance with Section* *1511.* ~~*1510.*~~

...

SECTION 1607*A*
LIVE LOADS

...

1607*A*.1 General. Live *loads* are those loads defined in Chapter 2 of this code.

1607*A*.2 Loads not specified. For occupancies or uses not designated in Table 1607*A*.1, the live load shall be determined in accordance with a method approved by the building official.

1607*A*.3 Uniform live loads. The live loads used in the design of buildings and other structures shall be the maximum loads expected by the intended use or occupancy but shall in no case be less than the minimum uniformly distributed unit loads required by Table 1607*A*.1.

...

TABLE 1607A.1 - MINIMUM UNIFORMLY DISTRIBUTED LIVE LOADS AND MINIMUM CONCENTRATED LIVE LOADS[g]

OCCUPANCY OR USE	UNIFORM (psf)	CONCENTRATED (lbs.)
...	...	...
17. Hospitals *[OSHPD 1 & 4]*		
Corridors above first floor	80~~100~~	1,000
Operating rooms, laboratories	60	1,000
		1,000
Patient rooms	40	—
Mechanical and electrical equipment areas including open areas around equipment	*50*	—
		—
Storage:		
Light	*125*	
Heavy	*250*	*1000*

Kitchen and serving areas	*50*	
...	...	...
36. Storage racks and wall-hung cabinets.	*Total Loads[n]*	

...

n. The minimum vertical design live load shall be as follows:

Paper media:

12-inch-deep (305 mm) shelf 33 pounds per lineal foot (482 N/m)
15-inch-deep (381 mm) shelf 41 pounds per lineal foot (598 N/m), or

33 pounds per cubic foot (5183 N/m^3) per total volume of the rack or cabinet, whichever is less.

Film media:

18-inch-deep (457 mm) shelf 100 pounds per lineal foot (1459 N/m), or

50 pounds per cubic foot (7853 N/m^3) per total volume of the rack or cabinet, whichever is less.

Other media:

20 pounds per cubic foot (311 N/m^3) or 20 pounds per square foot (958 Pa), whichever is less, but not less than actual loads.

...

1607A.12.6 ~~***1607A.12.5***~~ ***Uncovered open-frame roof structures.*** *Uncovered open-frame roof structures shall be designed for a vertical live load of not less than 10 pounds per square foot (0.48 kN/m^2) of the total area encompassed by the framework.*

...

1607*A*.14 Interior walls and partitions. Interior walls and partitions that exceed 6 feet (1829 mm) in height, including their finish materials, shall have adequate strength and stiffness to resist the loads to which they are subjected but not less than a horizontal load of 5 psf (0.240 kN/m^2). *The 5 psf (0.24 kN/m^2) service* ~~*working*~~ *load need not be applied simultaneously with wind or seismic loads. The deflection of such walls under a load of 5 psf (0.24 kN/m^2) shall not exceed the limits in Table 1604A.3.*

...

SECTION 1608*A*
SNOW LOADS

1608*A*.2 Ground snow loads. The ground snow loads to be used in determining the design snow loads for roofs shall be determined in accordance with ASCE 7 or Figure 1608*A*.2 for the contiguous United States ~~and Table 1608.2 for Alaska~~. Site-specific case studies shall be made in areas designated "CS" in Figure 1608*A*.2. Ground snow loads for sites at elevations above the limits indicated in Figure 1608*A*.2 and for all sites within the CS areas shall be approved. Ground snow load determination for such sites shall be based on an extreme value statistical analysis of data available in the vicinity of the site using a value with a 2-percent annual probability of being exceeded (50-year mean recurrence interval). ~~Snow loads are zero for Hawaii, except in mountainous regions as approved by the building official.~~

SECTION 1609A
WIND LOADS

...

1609A.1.3 Story Drift for Wind Loads. *The calculated story drift due to wind pressures with ultimate design wind speed, V_{ult}, shall not exceed 0.008 times the story height for buildings less than 65 feet (19,812 mm) in height or 0.007 times the story height for buildings 65 feet (19,812 mm) or greater in height.*

Exception: ***[OSHPD 1 & 4]*** *This story drift limit need not be applied for single-story open structures.*

...

SECTION 1612*A*
FLOOD LOADS

...

1612*A*.3 Establishment of flood hazard areas. To establish *flood hazard areas*, the applicable governing authority shall adopt a flood hazard map and supporting data. The flood hazard map shall include, at a minimum, areas of special flood hazard as identified by the Federal Emergency Management ~~Agency in an engineering report entitled "The Flood Insurance Study for [INSERT NAME OF JURISDICTION]," dated [INSERT DATE OF ISSUANCE],~~ *Agency's Flood Insurance Study (FIS) adopted by the local authority having jurisdiction where the project is located*, as amended or revised with the accompanying Flood Insurance Rate Map (FIRM) and Flood Boundary and Floodway Map (FBFM) and related supporting data along with any revisions thereto. The adopted flood hazard map and supporting data are hereby adopted by reference and declared to be part of this section.

...

SECTION 1613*A*
EARTHQUAKE LOADS

1613*A*.1 Scope. Every structure, and portion thereof, including nonstructural components that are permanently attached to structures and their supports and attachments, shall be designed and constructed to resist the effects of earthquake motions in accordance with ASCE 7 *with all the modifications incorporated herein*, excluding Chapter 14 and Appendix 11A. The seismic design category for a structure ~~is permitted to~~ *shall* be determined in accordance with Section 1613*A* ~~or ASCE 7~~.

Exceptions:

~~1. Detached one- and two-family dwellings, assigned to Seismic Design Category A, B or C, or located where the mapped short-period spectral response acceleration, SS, is less than 0.4 g.~~

~~2. The seismic force-resisting system of wood-frame buildings that conform to the provisions of Section 2308 are not required to be analyzed as specified in this section.~~

~~3. Agricultural storage structures intended only for incidental human occupancy.~~

Structures that require special consideration of their response characteristics and environment that are not addressed by this code or ASCE 7 and for which other regulations provide seismic criteria, such as vehicular bridges, electrical transmission towers, hydraulic structures, buried utility lines and their appurtenances and nuclear reactors.

1613*A*.2 Definitions. The following terms are defined in Chapter 2 *except those defined below which shall, for the purposes of this section, have the meanings shown herein. Definition provided in ASCE 7 Section 11.2 and* ***[OSHPD 1 & 4]*** *Section 3402A.1 ~~and ASCE 7 Section 11.2~~ shall apply when appropriate in addition to terms defined in this section.*

ACTIVE EARTHQUAKE FAULT. *A fault that has been the source of earthquakes or is recognized as a potential source of earthquakes, including those that have exhibited surface displacement within Holocene time (about 11,000 years) as determined by California Geological Survey (CGS) under the Alquist-Priolo Earthquake Fault Zoning Act, those included as type A or type B faults for the U.S. Geological Survey (USGS) National Seismic Hazard Maps, and faults considered to have been active in Holocene time by any authoritative source, Federal, State or Local Governmental Agency.*

BASE. ~~*The level at which the horizontal seismic ground motions are considered to be imparted to the structure or the level at which the structure as a dynamic vibrator is supported. This level does not necessarily coincide with the ground level.*~~ *See ASCE 7.*

...

DISTANCE FROM AN ACTIVE EARTHQUAKE FAULT. *Distance measured from the nearest point of the building to the closest edge of an Alquist-Priolo Earthquake fault zone for an active fault, if such a map exists, or to the closest mapped splay of the fault.*

~~***HOSPITAL BUILDINGS.*** *Hospital buildings and all other medical facilities as defined in Section 1250, Health and Safety Code.*~~

GENERAL ACUTE CARE HOSPITAL. *See Section 1224.3.*

IRREGULAR STRUCTURE. *A structure designed as having one or more plan or vertical irregularities per ASCE 7 Section 12.3.*

...

~~***STRUCTURAL ELEMENTS.*** *Floor or roof diaphragms, decking, joists, slabs, beams, or girders, columns, bearing walls, retaining walls, masonry or concrete nonbearing walls exceeding one story in height, foundations, shear walls or other lateral-force-resisting members, and any other elements necessary to the vertical and lateral strength or stability of either the building as a whole or any of its parts, including connection between such elements.*~~

...

1613*A*.3 Seismic ground motion values. Seismic ground motion values shall be determined in accordance with this section.

1613A.3.1 Mapped acceleration parameters. The parameters S_s and S_1 shall be determined from the 0.2 and 1-second spectral response accelerations shown on Figures 1613.3.1(1) through 1613.3.1(8). ~~Where S_1 is less than or equal to 0.04 and S_s is less than or equal to 0.15, the structure is permitted to be assigned to Seismic Design Category A.~~

~~*Figures 1613.3.1(1) through 1613.3.1(8) were stricken in the CBC 2013 and will not be shown in Chapter 16A. These figures are shown in Chapter 16.*~~

...

1613*A*.3.5 Determination of seismic design category. Structures classified as Risk Category I, II or III that are located where the mapped spectral response acceleration parameter at 1-second period, S_1, is greater than or equal to 0.75 shall be assigned to Seismic Design Category E. Structures classified as Risk Category IV that are located where the mapped spectral response acceleration parameter at 1-second period, S_1, is greater than or equal to 0.75 shall be assigned to Seismic Design Category F. All other structures shall be assigned to *Seismic Design Category D.* ~~a seismic design category based on their occupancy category and the design spectral response acceleration coefficients, S_{DS} and S_{D1}, determined in accordance with Section 1613.5.4 or the site-specific procedures of ASCE 7. Each building and structure shall be assigned to the more severe seismic design category in accordance with Table 1613.5.6(1) or 1613.5.6(2), irrespective of the fundamental period of vibration of the structure, T.~~

~~TABLE 1613.3.5(1) - SEISMIC DESIGN CATEGORY BASED ON SHORT-PERIOD (0.2 second) RESPONSE ACCELERATIONS~~

~~VALUE OF S_{DS}~~	~~RISK CATEGORY~~		
	~~I or II~~	~~III~~	~~IV~~
~~$S_{DS} < 0.167g$~~	~~A~~	~~A~~	~~A~~
~~$0.167g \le S_{DS} < 0.33g$~~	~~B~~	~~B~~	~~C~~
~~$0.33g \le S_{DS} < 0.50g$~~	~~C~~	~~C~~	~~D~~
~~$0.50g \le S_{DS}$~~	~~D~~	~~D~~	~~D~~

~~TABLE 1613.3.5(2) - SEISMIC DESIGN CATEGORY BASED ON 1-SECOND PERIOD RESPONSE ACCELERATION~~

~~VALUE OF S_{D1}~~	~~RISK CATEGORY~~		
	~~I or II~~	~~III~~	~~IV~~
~~$S_{D1} < 0.067g$~~	~~A~~	~~A~~	~~A~~
~~$0.067g \le S_{D1} < 0.133g$~~	~~B~~	~~B~~	~~C~~
~~$0.133g \le S_{D1} < 0.20g$~~	~~C~~	~~C~~	~~D~~
~~$0.20g \le S_{D1}$~~	~~D~~	~~D~~	~~D~~

1613*A*.3.5.1 Alternative seismic design category determination. *Not permitted by OSHPD.* ~~Where S_1 is less than 0.75, the seismic design category is permitted to be determined from Table 1613.3.5(1) alone when all of the following apply:~~

~~1. In each of the two orthogonal directions, the approximate fundamental period of the structure, T_a, in each of the two orthogonal directions determined in accordance with Section 12.8.2.1 of ASCE 7, is less than 0.8 T_s determined in accordance with Section 11.4.5 of ASCE 7.~~

~~2. In each of the two orthogonal directions, the fundamental period of the structure used to calculate the story drift is less than T_s.~~

~~3. Equation 12.8-2 of ASCE 7 is used to determine the seismic response coefficient, C_s.~~

~~4. The diaphragms are rigid or are permitted to be idealized as rigid in accordance with Section 12.3.1 in ASCE 7 or for diaphragms permitted to be idealized as flexible in accordance with Section 12.3.1 of ASCE 7, the distance between vertical elements of the seismic force-resisting system does not exceed 40 feet (12 192 mm).~~

1613*A*.3.5.2 Simplified design procedure. *Not permitted by OSHPD.* ~~Where the alternate simplified design procedure of ASCE 7 is used, the seismic design category shall be determined in accordance with ASCE 7.~~

* * *

1613*A*.4.1 Additional seismic-force-resisting systems for seismically isolated structures. Add the following exception to the end of Section 17.5.4.2 of ASCE 7:

Exception: For isolated structures designed in accordance with this standard, the structural system limitations including the structural height limitations in Table 12.2-1 for ordinary steel concentrically braced frames (OCBFs) as defined in Chapter 11 and ~~ordinary~~ *intermediate* moment frames ~~(OMFs)~~ *(IMFs)* as defined in Chapter 11 are permitted to be taken as 160 feet (48 768 mm) for structures assigned to Seismic Design Category D, E or F, provided that the following conditions are satisfied:

1. The value of R_I as defined in Chapter 17 is taken as 1.

2. For ~~OMFs and~~ OCBFs, design is in accordance with AISC 341.

3. For IMFs, design is in accordance with AISC 341. In addition, requirements of Section E3.6e of AISC 341 shall be satisfied.

...

1613A.6 Ballasted photovoltaic panel systems. Ballasted, roof-mounted photovoltaic panel systems need not be rigidly attached to the roof or supporting structure. Ballasted non-penetrating systems shall be designed and installed only on roofs with slopes not more than one unit vertical in 12 units horizontal. Ballasted nonpenetrating systems shall be design to resist sliding and uplift resulting from lateral and vertical forces as required by Section 1605A, using a coefficient of friction determined by acceptable engineering principles. In structures assigned to Seismic Design Category ~~C,~~ D, E or F, ballasted nonpenetrating systems shall be designed to accommodate seismic displacement determined by nonlinear response history analysis or shake-table testing, using input motions consistent with ASCE 7 lateral and vertical seismic forces for nonstructural components on roofs.

[OSHPD 1 & 4] Ballasted photovoltaic panel systems shall be considered as an alternative system.

...

SECTION 1615A
STRUCTURAL INTEGRITY

1615A.1 General. High-rise buildings that are assigned to Risk Category III or IV shall comply with the requirements of this section. Frame structures shall comply with the requirements of Section 1615A.3. Bearing wall structures shall comply with the requirements of Section 1615A.4.

1615A.2 Definitions. The following words and terms are defined in Chapter 2 *except those defined below shall, for the purposes of this section, have the meanings shown herein.*

...

HIGH-RISE BUILDING. *A building with an occupied floor located more than 75 feet (22 860 mm) above the base.*

...

SECTION 1616A
MODIFICATIONS TO ASCE 7

1616A.1 General. *The text of ASCE 7 shall be modified as indicated in Sections 1616A.1.1 through 1616A.1.40 ~~1616A.1.42~~.*

1616A.1.1 ASCE 7, Section 1.3. *Modify ASCE 7 Section 1.3 by adding Section 1.3.6 as follows:*

1.3.6 Structural Design Criteria. *Where design is based on ASCE 7 Chapters 16, 17, or 18~~, and 31,~~ the ground motion, ~~wind tunnel design recommendations,~~ analysis and design methods, material assumptions, testing requirements, and acceptance criteria proposed by the engineer shall be submitted to the enforcement agency in the form of structural design criteria for approval.*

[OSHPD 1 & 4] *Peer review requirements in Section 3414A of this code shall apply to design reviews required by ASCE 7 Chapters 17 and 18.*

1616A.1.2 ASCE 7, Section 11.1.3. *Replace last paragraph of ASCE 7 Section 11.1.3 by the following:*

Buildings shall be designed and detailed in accordance with Chapter 12.

1616A.1.3 ASCE 7, Section 11.4.7. *Modify ASCE 7 Section 11.4.7 by adding the following:*

For buildings assigned to Seismic Design Category E or F, or when required by the building

official, a ground motion hazard analysis shall be performed in accordance with ASCE 7 Chapter 21 as modified by Section 1803A.6 of this code.

1616A.1.4 ASCE 7, Table 12.2 -1. *Modify ASCE 7 Table 12.2-1 as follows:*

A. BEARING WALL SYSTEMS

5. Intermediate Precast Shear Walls – Not permitted by OSHPD.

17. Light-framed walls with shear panels of all other materials – Not permitted by OSHPD.

B. BUILDING FRAME SYSTEMS

3. Steel ordinary concentrically braced frames – Not permitted by OSHPD.

8. Intermediate Precast Shear Walls – Not permitted by OSHPD.

24. Light-framed walls with shear panels of all other materials – Not permitted by OSHPD.

26. Special steel plate shear wall – Not permitted by OSHPD.

C. MOMENT RESISTING FRAME SYSTEMS

2. Steel special truss moment frames – Not permitted by OSHPD.

3. Steel intermediate moment frames – Not permitted by OSHPD.

4. Steel ordinary moment frames – Not permitted by OSHPD.

12. Cold-formed steel –special bolted moment frame - Not permitted by OSHPD.

Exception:

1) Systems listed in this section can be used as an alternative system when pre-approved by the enforcement agency.

2) Rooftop or other supported structures not exceeding two stories in height and 10 percent of the total structure weight can use the systems in this section when designed as components per ASCE 7 Chapter 13.

3) Systems listed in this section can be used for seismically isolated buildings, when permitted by Section 1613A.4.1.

1616A.1.5 ASCE 7, Section 12.2.3.1. *Replace ASCE 7 Section 12.2.3.1 Items # 1 and # 2 by the following:*

The value of the response modification coefficient, R, used for design at any story shall not exceed the lowest value of R that is used in the same direction at any story above that story. Likewise, the deflection amplification factor, C_d, and the system over strength factor, Ω_0, used for the design at any story shall not be less than the largest values of these factors that are used in the same direction at any story above that story.

1616A.1.6 ASCE 7, Section 12.2.3.2. *Modify ASCE 7 Section 12.2.3.2 by adding the following additional requirement:*

f. Where design of elements of the upper portion is governed by special seismic load combinations, the special loads shall be considered in the design of the lower portion.

1616A.1.7 [Reserved for DSA-SS]

1616A.1.8 [Reserved for DSA-SS]

1616A.1.9 [Reserved for DSA-SS]

1616A.1.10 ASCE 7, Section 12.3.3. *Modify first sentence of ASCE 7 Section 12.3.3.1 as follows:*

12.3.3.1 Prohibited Horizontal and Vertical Irregularities for Seismic Design Categories D through F. *Structures assigned to Seismic Design Category D, E, or F having horizontal structural irregularity Type 1b of Table 12.3-1 or vertical structural irregularities Type 1b, 5a or 5b of Table 12.3-2 shall not be permitted.*

1616A.1.11 ASCE 7, Section 12.7.2. *Modify ASCE 7 Section 12.7.2 by adding item 6 to read as follows:*

6. Where buildings provide lateral support for walls retaining earth, and the exterior grades on opposite sides of the building differ by more than 6 feet (1829 mm), the load combination of the seismic increment of earth pressure due to earthquake acting on the higher side, as determined by a Geotechnical engineer qualified in soils engineering plus the difference in earth pressures shall be added to the lateral forces provided in this section.

1616A.1.12 ASCE 7, Section 12.8.1.3. *Replace ASCE 7 Section 12.8.1.3 by the following:*

~~***12.8.1.3 Maximum S_s Value in Determination of C_s.*** *For regular structures five stories or less above the base as defined in Section 11.2 and with a period, T, of 0.5 s or less, C_s is permitted to be calculated using the larger of either S_s =1.5 or 80% of the value of S_s determined per Sections 11.4.1 or 11.4.7.*~~

12.8.1.3 Maximum S_{DS} Value in Determination of C_s and E_v
The value of C_s and E_v are permitted to be calculated using a value of S_{DS} equal to 1.0, but not less than 70% of S_{DS} as defined in Section 11.4.4, provided that all of the following criteria are met:

1. *The structure does not have irregularities, as defined in Section 12.3.2;*
2. *The structure does not exceed five stories above the base as defined in Section 11.2;*
3. *The structure has a fundamental period, T, that does not exceed 0.5 seconds, as determined using Section 12.8.2;*
4. *The structure meets the requirements necessary for the redundancy factor, ρ, to be permitted to be taken as 1.0, in accordance with Section 12.3.4.2;*
5. *The site soil properties are not classified as Site Class E or F, as defined in Section 11.4.2; and*
6. [Reserved for DSA-SS]
7. ***[OSHPD 1 & 4]*** *The structure is a nonconforming building not supporting SPC-3 or higher buildings.*

1616A.1.13 ASCE 7, Section 12.9.4. *Replace ASCE 7 Section 12.9.4 as follows:*

12.9.4 Scaling Design Values of Combined Response. *Modal base shears used to determine forces and drifts shall not be less than the base shears calculated using the equivalent lateral force procedure of section 12.8.*

1616A.1.14 ASCE 7, Section 12.10.2.1. *Replace ASCE 7 Exception 1. of Section 12.10.2.1 by the following:*

EXCEPTIONS:

1. The forces calculated above need not exceed those calculated using the load combinations with overstrength factor of Section 12.4.3.2 with seismic forces determined by Equation 12.10- 3 and transfer forces, where applicable.

1616A.1.15 ASCE 7, Section 12.12.3. [OSHPD 1 & 4] *Replace ASCE 7 Equation 12.12-1 by the following:*

$$\delta_M = C_d\delta_{max} \qquad \text{(Equation 12.12-1)}$$

1616A.1.16 ASCE 7, Section 12.13.1. *Modify ASCE 7 section 12.13.1 by adding Section 12.13.1.1 as follows:*

12.13.1.1 Foundations and superstructure-to-foundation connections. *The foundation shall be capable of transmitting the design base shear and the overturning forces from the structure into the supporting soil. Stability against overturning and sliding shall be in accordance with Section 1605A.1.1.*

In addition, the foundation and the connection of the superstructure elements to the foundation shall have the strength to resist, in addition to gravity loads, the lesser of the following seismic loads:

1. The strength of the superstructure elements.

2. The maximum forces that ~~would occur~~ can be delivered to the foundation in ~~the~~ a fully yielded structural system.

3. Forces from the Load Combinations with overstrength factor in accordance with ASCE 7 Section 12.4.3.2.

Exceptions:

1. Where reference standards specify the use of higher design loads.

2. When it can be demonstrated that inelastic deformation of the foundation and superstructure-to-foundation connection will not result in a weak story or cause collapse of the structure.

3. Where ~~basic structural system~~ seismic force-resisting system consists of light framed walls with shear panels, unless the reference standard specifies the use of higher design loads.

Where the computation of the seismic overturning moment is by the equivalent lateral-force method or the modal analysis method, reduction in overturning moment permitted by section 12.13.4 of ASCE 7 may be used.

Where moment resistance is assumed at the base of the superstructure elements, the rotation and flexural deformation of the foundation as well as deformation of the superstructure-to-foundation connection shall be considered in the drift and deformation compatibility analyses.

1616A.1.17 ASCE 7, Section 13.1.3. [OSHPD 1 & 4] *Modify ASCE 7 Section 13.1.3 by the following:*

The design of supports and attachments for all nonstructural components shall have a component importance factor, I_p, equal to 1.5.

Exception: *Freestanding skilled nursing or acute psychiatric buildings, not providing services/systems, utilities, or access/egress to general acute care buildings designated as SPC 3 or higher in accordance with Chapter 6 of the California Administrative Code, shall be permitted to use component importance factor, I_p, as shown in Table 1616A.1.17.*

TABLE 1616A.1.17
COMPONENT IMPORTANCE FACTOR (I_P)[1] FOR
FREESTANDING SKILLED NURSING AND ACUTE PSYCHIATRIC BUILDINGS

Description	Importance Factor (I_p)[1]
Architectural components	1.0
Mechanical and electrical components	1.5
Medical devices	1.5
Piping, including in-line components	1.5
HVAC ducts, including in-line components	1.0
Electrical raceways	1.0

[1]Components required for life-safety purposes after an earthquake, including emergency and standby power systems, mechanical smoke removal systems, fire protection sprinkler systems, fire alarm control panels, and egress stairways shall have a component importance factor (I_p) of 1.5.

...

1616A.1.18 ASCE 7, Section 13.1.4. *Replace ASCE 7 Section 13.1.4 with the following:*

13.1.4 Exemptions. *The following nonstructural components are exempt from the requirements of this section:*

1. Furniture (except storage cabinets as noted in Table 13.5-1).
2. Temporary or moveable (mobile) equipment.

Exceptions:

a) Equipment shall be anchored if it is permanently attached to the building utility services such as electricity, gas, or water. For the purposes of this requirement, "permanently attached" shall include all electrical connections except plugs for duplex receptacles.

b) The enforcement agency shall be permitted to require temporary attachments for movable equipment which is usually stationed in one place and heavier than 400 pounds or has a center of mass located 4 feet (1.22 m) or more above the adjacent floor or roof level that directly support the component, when they are not in use for a period longer than 8 hours at a time.

3. Architectural, mechanical and electrical components in Seismic Design Categories D, E, or F where all of the following apply:

a. The component is positively attached to the structure;
b. Flexible connections are provided at seismic separation joints and between the component and associated ductwork, piping, and conduit; and either:

i. The component weighs 400 pounds (1780 N) or less and has a center of mass located 4 feet (1.22 m) or less above the adjacent floor or roof level that directly support the component;

Exception: *Special Seismic Certification requirements of this code in accordance with Section 1705A.13.3 ~~1705A.12.4~~ shall be applicable.*

or

ii. The component weighs 20 pounds (89 N) or less or, in the case of a distributed system, 5 lb/ft (73 N/m) or less.

Exception: *The enforcement agency shall be permitted to require attachments for equipment with hazardous contents to be shown on construction documents irrespective of weight.*

1616A.1.19 ASCE 7, Section 13.4. *Replace ASCE 7 Section 13.4.2.3 with the following:*

13.4.2.3 Prequalified ~~P~~ post-installed anchors and specialty inserts in Concrete and Masonry.

Post-installed anchors and specialty inserts in concrete that are ~~used for component anchorage shall be~~ pre-qualified for seismic applications in accordance with ACI 355.2, ACI 355.4, ICC-ES AC193, ICC-ES AC232, ~~or~~ ICC-ES AC308 or ICC-ES AC446 shall be permitted. Post-installed anchors in masonry ~~used for component anchorage~~ shall be pre-qualified for seismic applications in accordance with ICC-ES AC01, AC58, or AC106.

Use of screw anchors shall be limited to dry interior conditions and shall not be used in building enclosures. Re-use of screw anchors or screw anchor holes shall not be permitted.

1616A.1.20 ASCE 7, Section 13.4.5 *Modify ASCE 7 Section 13.4.5 by adding Section 13.4.5.1 as follows:*

(Relocated from Section 1908A.1.1) ***13.4.5.1 ~~1908A.1.1~~ Power Actuated Fasteners:*** *Power actuated fasteners qualified in accordance with ICC-ES AC 70 shall be deemed to satisfy the requirements of Section 13.4.5. ~~this section.~~*

Power actuated fasteners shall be permitted in seismic shear for components exempt from permit requirements by Section 1616A.1.18 of this code and for interior non-bearing non-shear wall partitions only. Power actuated fastener shall not be used to anchor seismic bracing, exterior cladding or curtain wall systems.

Exception: *Power actuated fasteners in steel to steel connections prequalified for seismic application by cyclic tests in accordance with ICC-ES AC 70 shall be permitted for seismic design.*

1616A.1.21 ~~1616A.1.20~~ ASCE 7, Section 13.5.6. *Replace ASCE 7, Section 13.5.6 with the following:*

13.5.6 Suspended Ceilings. *Suspended ceilings shall be in accordance with this section.*

13.5.6.1 Seismic Forces. *The weight of the ceiling, W_p, shall include the ceiling grid; ceiling tiles or panels; light fixtures if attached to, clipped to, or laterally supported by the ceiling grid; and other components that are laterally supported by the ceiling. W_p shall be taken as not less than 4 psf (19 N/m^2).*

The seismic force, F_p, shall be transmitted through the ceiling attachments to the building structural elements or the ceiling-structure boundary.

13.5.6.2 Seismic Design Requirements. *Suspended acoustical tile or lay-in panel ceilings shall be designed in accordance with ASTM E 580 Section 5.2.8 and the requirements of*

Sections 13.5.6.2.1 and 13.5.6.2.2, or be designed in accordance with Section 13.2.1.1, or be seismically qualified in accordance with Sections 13.2.5 or 13.2.6.

13.5.6.2.1. Industry Standard Construction for Acoustical Tile or Lay-In Panel Ceilings. *Acoustical tile or lay-in panel ceilings in Seismic Design Categories D, E, and F shall be designed and installed in accordance with ASTM C635, ASTM C636, and ASTM E 580, Section 5 - Seismic Design Categories D, E, and F as modified by Section 13.5.6.2.2.*

Exception to Section 13.5.8.1 shall not be used in accordance with ASTM E 580 Section 5.5.

13.5.6.2.2 Modification to ASTM E 580. *Modify ASTM E 580 by the following:*

1. ***Exitways.*** *Lay-in ceiling assemblies in exitways of hospitals shall be installed with a main runner or cross runner surrounding all sides of each piece of tile, board or panel and each light fixture or grille. A cross runner that supports another cross runner shall be considered as a main runner for the purpose of structural classification. Splices or intersections of such runners shall be attached with through connectors such as pop rivets, screws, pins, plates with end tabs or other approved connectors. Lateral force diagonal bracing may be omitted in the short or transverse direction of exitways, not exceeding 8 feet wide, when perimeter support in accordance with ASTM E 580 Sections 5.2.2 and 5.2.3 is provided and the perimeter wall laterally supporting the ceiling in the short or transverse direction is designed to carry the ceiling lateral forces. The connections between the ceiling grid, wall angle and the wall shall be designed to resist the ceiling lateral forces.*

2. ***Corridors and Lobbies.*** *Expansion joints shall be provided in the ceiling at intersections of corridors and at junctions of corridors and lobbies or other similar areas.*

3. ***Lay-in panels.*** *Metal panels and panels weighing more than 1/2 pounds per square foot (24 N/m^2) other than acoustical tiles shall be positively attached to the ceiling suspension runners.*
4. ***Lateral force bracing.*** *Lateral force bracing is required for all ceiling areas except that they shall be permitted to be omitted in rooms with floor areas up to 144 square feet when perimeter support in accordance with ASTM E 580 Sections 5.2.2 and 5.2.3 are provided and perimeter walls are designed to carry the ceiling lateral forces. The connections between the ceiling grid, wall angle and the wall shall be designed to resist the ceiling lateral forces. Horizontal restraint point spacing shall be justified by analysis or test and shall not exceed a spacing of 12 feet by 12 feet. ~~Restraint~~ Bracing wires shall be secured with four tight twists in 1 1/2 inches, or an approved alternate connection.*
5. *Ceiling support and bracing wires shall be spaced a minimum of 6" from all pipes, ducts, conduits and equipment that are not braced for horizontal forces, unless approved otherwise by the building official.*
5. ~~***Ceiling fixtures.*** *Fixtures installed in acoustical tile or lay-in panel ceilings shall be mounted in a manner that will not compromise ceiling performance. All recessed or drop-in light fixtures and grilles shall be supported directly from the fixture housing to the structure above with a minimum of two 12 gage wires located at diagonally opposite corners. Leveling and positioning of fixtures may be provided by the ceiling grid. Fixture support wires may be slightly loose to allow the fixture to seat in the grid system. Fixtures shall not be supported from main runners or cross runners if the weight of the fixtures causes the total dead load to exceed the deflection capability of the ceiling suspension system.~~

~~*Fixtures shall not be installed so that the main runners or cross runners will be eccentrically loaded.*~~

~~*Surface-mounted fixtures shall be attached to the main runner with at least two positive clamping devices made of material with a minimum of 14 gage. Rotational spring catches do not comply. A 12 gage suspension wire shall be attached to each clamping device and to the structure above.*~~

~~*6. **Partitions.** Where the suspended ceiling system is required to provide lateral support for the permanent or relocatable partitions, the connection of the partition to the ceiling system, the ceiling system members and their connections, and the lateral force bracing shall be designed to support the reaction force of the partition from prescribed loads applied perpendicular to the face of the partition. Partition connectors, the suspended ceiling system and the lateral force bracing shall all be engineered to suit the individual partition application and shall be shown or defined in the drawings or specifications.*~~

1616A.1.22 ~~***1616A.1.21***~~ ***ASCE 7, Section 13.5.7. [OSHPD 1 & 4]*** *Modify ASCE 7 Section 13.5.7 by the following:*

All access floors shall be special access floors in accordance with Section 13.5.7.2.

1616A.1.23 ~~***1616A.1.22***~~ ***ASCE 7 Tables 13.5-1 and 13.6-1.*** *Modify ASCE 7, Tables 13.5-1 & 13.6-1 by the following:*

1. *For components with R_p greater than 1.5, overstrength factor (Ω_0) for design of anchorage to concrete and vibration isolators along with associated snubbers/connections shall be 2.0.*
2. *For Exterior Nonstructural Wall Elements and Connections, overstrength factor (Ω_0) shall be 1.0.*

1616A.1.24 ~~***1616A.1.23***~~ ***ASCE 7, Section 13.6.5.*** *Modify ASCE 7, Section 13.6.5.6 Exceptions 1 and 2 as follows:*

Exceptions:

1. *Design for the seismic forces of Section 13.3 shall not be required for raceways where either:*

   a. *Trapeze assemblies are used to support raceways and the total weight of the raceway supported by trapeze assemblies is less than 10 lb/ft (146 N/m), or*
   b. *The raceway is supported by hangers and each hanger in the raceway run is 12 in. (305 mm) or less in length from the raceway support point to the supporting structure. Where rod hangers are used with a diameter greater than 3/8 inch, they shall be equipped with swivels to prevent inelastic bending in the rod.*

2. *Design for the seismic forces of Section 13.3 shall not be required for conduit, regardless of the value of I_p, where the conduit is less than 2.5 in. (64 mm) trade size.*

1616A.1.25 ~~***1616A.1.24***~~ ***ASCE 7, Section 13.6.7.*** *Replace ASCE 7, Section 13.6.7 Exceptions 1 and 2 with the following:*

Exceptions:

The following exceptions pertain to ductwork not designed to carry toxic, highly toxic, or flammable gases or used for smoke control:

1. Design for the seismic forces of Section 13.3 shall not be required for ductwork where either:

a. *Trapeze assemblies are used to support ductwork and the total weight of the ductwork supported by trapeze assemblies is less than 10 lb/ft (146 N/m); or*
b. *The ductwork is supported by hangers and each hanger in the duct run is 12 in. (305 mm) or less in length from the duct support point to the supporting structure. Where rod hangers are used with a diameter greater than 3/8 inch, they shall be equipped with swivels to prevent inelastic bending in the rod.*

2. Design for the seismic forces of Section 13.3 shall not be required where provisions are made to avoid impact with larger ducts or mechanical components or to protect the ducts in the event of such impact; and HVAC ducts have a cross-sectional area of 6 ft^2 (0.557 m^2) or less, or weigh 10 lb/ft (146 N/m) or less.

~~***1616A.1.25 ASCE 7, Section 13.6.8.2.*** *Modify ASCE 7, Section 13.6.8.2 by adding Exception as follows:~~

~~*Anchor capacities shall be determined in accordance with material chapters of this code in lieu of using those in NFPA 13 and demand shall be based on ASCE 7.*~~

1616A.1.26 ASCE 7, Section 13.6.8.3. *Replace ASCE 7, Section 13.6.8.3 with the following:*

13.6.8.3 Exceptions. *Design of piping systems and attachments for the seismic forces of Section 13.3 shall not be required where one of the following conditions apply:*

1. *Trapeze assemblies are used to support piping whereby no single pipe exceeds the limits set forth in 3a. or b. below and the total weight of the piping supported by the trapeze assemblies is less than 10 lb/ft (146 N/m).*

2. *The piping is supported by hangers and each hanger in the piping run is 12 in. (305 mm) or less in length from the top of the pipe to the supporting structure. Where pipes are supported on a trapeze, the trapeze shall be supported by hangers having a length of 12 in. (305 mm) or less. Where rod hangers are used with a diameter greater than 3/8 inch, they shall be equipped with swivels to prevent inelastic bending in the rod.*

3. *Piping having an R_p in Table 13.6-1 of 4.5 or greater is used and provisions are made to avoid impact with other structural or nonstructural components or to protect the piping in the event of such impact and where the following size requirements are satisfied:*

    a. For Seismic Design Categories D, E, or F and values of I_p greater than one, the nominal pipe size shall be 1 inch (25 mm) or less.
    b. For Seismic Design Categories D, E, or F, where I_p = 1.0 the nominal pipe size shall be 3 inches (80 mm) or less.

The exceptions above shall not apply to elevator piping.

1616A.1.27 ASCE 7, Section 13.6.10.1. *Modify ASCE 7 Section 13.6.10.1 by adding Section 13.6.10.1.1 as follows:*

13.6.10.1.1 Elevators guide rail support. *The design of guide rail support-bracket fastenings and the supporting structural framing shall use the weight of the counterweight or maximum weight of the car plus not less than 40 percent of its rated load. The seismic forces shall be assumed to be distributed one third to the top guiding members and two thirds to the bottom guiding members of cars and counterweights, unless other substantiating data are provided. In addition to the requirements of ASCE 7 Section 13.6.10.1, the minimum seismic forces shall be 0.5g acting in any horizontal direction.*

1616A.1.28 ASCE 7, Section 13.6.10.4. *Replace ASCE 7, Section 13.6.10.4 as follows:*

13.6.10.4 Retainer plates. *Retainer plates are required at the top and bottom of the car and counterweight, except where safety devices acceptable to the enforcement agency are provided which meet all requirements of the retainer plates, including full engagement of the machined portion of the rail. The design of the car, cab stabilizers, counterweight guide rails and counterweight frames for seismic forces shall be based on the following requirements:*

1. *The seismic force shall be computed per the requirements of ASCE 7 13.6.10.1. The minimum horizontal acceleration shall be 0.5g for all buildings.*

2. *W_p shall equal the weight of the counterweight or the maximum weight of the car plus not less than 40 percent of its rated load.*

3. *With the car or counterweight located in the most adverse position, the stress in the rail shall not exceed the limitations specified in these regulations, nor shall the deflection of the rail relative to its supports exceed the deflection listed below:*

RAIL SIZE (weight per foot of length, pounds)	*WIDTH OF MACHINED SURFACE (inches)*	*ALLOWABLE RAIL DEFLECTION (inches)*
8	*1 ¼*	*0.20*
11	*1 ½*	*0.30*
12	*1 ¾*	*0.40*
15	*1 31/32*	*0.50*
18 ½	*1 31/32*	*0.50*
22 ½	*2*	*0.50*
30	*2 ¼*	*0.50*

For SI: 1 inch = 25 mm, 1 foot = 305 mm.

NOTE: Deflection limitations are given to maintain a consistent factor of safety against disengagement of retainer plates from the guide rails during an earthquake.

4. *Where guide rails are continuous over supports and rail joints are within 2 feet (610 mm) of their supporting brackets, a simple span may be assumed.*

5. *The use of spreader brackets is allowed.*

6. *Cab stabilizers and counterweight frames shall be designed to withstand computed lateral load with a minimum horizontal acceleration of 0.5g.*

1616A.1.29 ASCE 7, Section 16.1.4. *Remove ASCE 7 Sections 16.1.4.1 and 16.1.4.2 and modify Section 16.1.4 by the following:*

Maximum scaled base shears used to determine forces and drifts shall not be less than the base shears calculated using the equivalent lateral force procedure of Section 12.8.

1616A.1.30 ASCE 7, Section 16.2.2. *Modify ASCE 7 Section 16.2.2 by adding the following:*

Requirements of this section shall be deemed to be satisfied for new buildings, using acceptance criteria in Section 16.2.4.2, by the nonlinear modeling parameters in ASCE 41.

1616A.1.31 ASCE 7, Section 16.2.3. *Modify ASCE 7 Section 16.2.3 by adding the following:*

Requirements of this section shall be deemed to be satisfied by using load combinations in Sections 12.4.2.3 and 12.4.3.2 with 25% of the required live loads.

1616A.1.32 ASCE 7, Section 16.2.4. *Modify ASCE 7 Section 16.2.4 by the following:*

a) *Where site is located within 3.1 miles (5 km) of an active fault at least seven ground motions shall be analyzed and response parameters shall be based on larger of the average of the maximum response with ground motions applied as follows:*
   1. *Each of the ground motions shall have their maximum component at the fundamental period aligned in one direction.*
   2. *Each of the ground motion's maximum component shall be rotated orthogonal to the previous analysis direction.*

b) *Where site is located more than 5 km from an active fault at least 10 ground motions shall be analyzed. The ground motions shall be applied such that one-half shall have their maximum component aligned in one direction and the other half aligned in the orthogonal direction. The average of the maximum response of all the analyses shall be used for design.*

1616A.1.33 ASCE 7, Section 16.2.4.1. [OSHPD 1 & 4] *Replace ASCE 7 exception to Section 16.2.3 by the following:*

Where this standard requires the consideration of the load combinations with overstrength factor of Section 12.4.3.2, average demand from MCE_R analysis obtained from suite of analysis in accordance with Section 16.2.4 shall be used with Immediate Occupancy (IO) acceptance criteria in Section 16.2.4.2.

1616A.1.34 ASCE 7, Section 16.2.4.2. [OSHPD 1 & 4] *Modify ASCE 7 Section 16.2.4.2 by the following:*

Acceptance criteria for elements subjected to deformation beyond their linear range of response shall be based on ASCE 41 for Immediate Occupancy (IO) at Design Earthquake (DE) and Life Safety (LS) at Risk-Targeted Maximum Considered Earthquake (MCE_R). ~~For LS acceptance criteria at MCE_R, primary components shall be within the acceptance criteria for primary components and secondary components shall be within the acceptance criteria for secondary components.~~

~~***1616A.1.35 ASCE 7, Section 17.2.1.*** *Modify ASCE 7, Section 17.2.1 by adding the following:~~

~~*The importance factor, I_p, for parts and portions of a seismic-isolated building shall be the same as that required for a fixed-base building of the same risk category.*~~

1616A.1.35 ~~***1616A.1.36***~~ ***ASCE 7 Section 17.2.4.7.*** *Modify ASCE 7, Section 17.2.4.7 by adding the following:*

The effects of uplift ~~and/or rocking~~ shall be explicitly accounted for ~~in the analysis and~~ in the testing of the isolator units.

~~***1616A.1.37 ASCE 7, Section 17.2.5.2.*** *Modify ASCE 7, Section 17.2.5.2 by adding the following:~~

~~*The separation requirements for the building above the isolation system and adjacent buildings shall be the sum of the factored displacements for each building. The factors to be used in determining separations shall be:*~~

~~1. *For seismically isolated buildings, the deformation resulting from the analyses using the Risk-Targeted Maximum Considered Earthquake unmodified by R_I.~~
~~2. *For fixed based buildings, C_d times the elastic deformations resulting from an equivalent static analysis using the seismic base shear computed via ASCE 7, Section 12.8.*~~

1616A.1.36 ~~***1616A.1.38***~~ ***ASCE 7, Section 17.4.*** *Modify ASCE 7, Section 17.4.2 by adding the following:*

17.4.2.3 Linear Procedure. *Linear procedures shall not be used in Seismic Design Category E and F structures. ~~be limited to structures located at sites where mapped value of S_1 is less than 0.6g.~~*

1616A.1.37 ~~1616A.1.39~~ ASCE 7, Section *17.6 Modify ASCE 7, Section 17.6 by adding the following:*

17.6.1.1 Minimum Seismic Force. *For the response spectrum and linear response history procedures, V_b and V_s, shall not be taken less than those calculated in accordance with Equations 17.5-7 and 17.5-8.*

1616A.1.38 ~~1616A.1.40~~ ASCE 7, Section 18.3.1. *Modify ASCE 7, Section 18.3.1 by replacing the third paragraph with the following:*

If the calculated force in an element of the seismic force resisting system does not exceed 1.5 times its nominal strength for the Risk-Targeted Maximum Considered Earthquake (MCE_R) nor its nominal strength for the Design Earthquake (DE), the element is permitted to be modeled as linear. For this section, the MCE_R and DE response shall be based on largest response due to a single ground motion and not the average response of suite of ground motions.

1616A.1.39 ~~1616A.1.41 Earthquake Motion Measuring Instrumentation and Monitoring.~~ Post-Earthquake Structural Verification. [OSHPD 1 & 4] *Modify ASCE 7 by the following:*

Scope: *For buildings with ~~a Seismic Isolation System, a Damping System or a Lateral Force Resisting System (LFRS) not listed in ASCE 7 Table 12.2-1, earthquake motion measuring instrumentation and installed by the owner and monitoring shall be required. Monitoring requirements shall also apply to~~ welded steel moment frames ~~buildings~~ constructed under a permit issued prior to October 25, 1994 post earthquake verification shall be in accordance with this section.*

~~Instrumentation:~~ *~~There shall be a sufficient number of instruments to characterize the response of the building during an earthquake and shall include at least one tri-axial free field instrument or equivalent. A proposal for instrumentation and equipment specifications shall be forwarded to the enforcement agency for review and approval.~~*

~~The instruments shall be interconnected for common start and common timing. Each instrument shall be located so that access is maintained at all times and is unobstructed by room contents. A sign stating "MAINTAIN CLEAR ACCESS TO THIS INSTRUMENT" shall be posted in a conspicuous location.~~

~~The owner of the building shall be responsible for the implementation of the instrumentation program. Maintenance of the instrumentation and removal /processing of the records shall be the responsibility of the enforcement agency.~~

~~Monitoring:~~ *~~After every significant seismic event, where the ground shaking acceleration at the site exceeds 0.3g, or the acceleration at any monitored building level exceeds 0.8g, as measured by the seismic monitoring system in the building, the owner shall retain a structural engineer to make an inspection of the structural system. The inspection shall include viewing the performance of the building, reviewing the strong motion records, and a visual examination of the isolators, dampers, and their connections for deterioration, offset or physical damage. A report for each inspection, including conclusions on the continuing adequacy of the structural system, shall be submitted to the enforcement agency.~~*

Verification: *After every seismic event that generates ground motions specified in the California Administrative Code, Chapter 6, Section 4.2.0.1 or the damage indicators specified in the California Administrative Code, Chapter 6, Section 4.2.0.2 at a welded steel moment frame building constructed under a permit issued prior to October 25, 1994, the owner shall retain a*

structural engineer to perform detailed joint evaluations required to meet the following requirements:

1. A detailed joint evaluation program shall be submitted to the enforcement agency for approval prepared in accordance with the requirements of the California Administrative Code, Chapter 6, Section 4.2.0.3.

2. Upon approval of the joint evaluation program required by Item 1 above for the joint inspections, a project to perform the joint inspections, detailed in the program, shall be submitted and a building permit shall be obtained by the owner no later than 6 months from the date of occurrence of the seismic event.

***Exception:** Where the ground motions at the building site are less than 0.4g, the permit shall be obtained no later than 12 months from the date of occurrence of the seismic event.*

3. A detailed joint evaluation report shall be submitted to the enforcement agency no later than 6 months of obtaining the building permit. The report shall document the findings from the inspections of the joints and include conclusions on the adequacy of the structural system. Where unsafe conditions are discovered, the provisions of Section 116 shall apply.

Where the detailed joint evaluation report is not submitted within the timeframes specified above, the building shall not be issued a building permit for any projects except for those for seismic compliance, maintenance and repair until the detailed joint evaluation work is complete.

***1616A.1.40 ~~1616A.1.42~~ Operational Nonstructural Performance Level Requirements.** **[OSHPD 1 & 4]** New general acute care hospitals and new building(s) required for general acute care services shall satisfy Operational Nonstructural Performance Level (NPC-5) requirements.*

***Exception:** A new building which is required for general acute care services that is added to an existing general acute care hospital and which has a building area of 4,000 square feet (371 m^2) or less, need not satisfy the NPC-5 requirements until the deadline specified in California Administrative Code (Part 1, Title 24 CCR), Chapter 6.*

Hospitals and buildings designed and constructed to the provisions of this code for new construction shall be deemed to satisfy Operational Nonstructural Performance Level (NPC-5) requirements when:

1. *The facility has on-site supplies of water and holding tanks for sewage and liquid waste, sufficient to support 72 hours of emergency operations for the hospital or building, which are integrated into the building plumbing systems in accordance with the California Plumbing Code.*

2. *An on-site emergency system as defined in the California Electrical Code is incorporated into the building electrical system for critical care areas. Additionally, the system shall provide for radiological service and an onsite fuel supply for 72 hours of acute care operation.*

   Emergency and standby generators shall not be located below the higher of the Design Flood Elevation (DFE) or Base Flood Elevation (BFE) plus two feet (BFE + 2 ft.) or 500 year flood elevation, whichever is higher, and shall be located at an elevation close to grade for easy accessibility from outside for maintenance.

All existing amendments that are not revised above shall continue without any change.

CHAPTER 17
SPECIAL INSPECTIONS AND TESTS

SECTION 1701
GENERAL

1701.1 Scope. The provisions of this chapter shall govern the quality, workmanship and requirements for materials covered. Materials of construction and tests shall conform to the applicable standards listed in this code.

...

SECTION 1703
APPROVALS

...

1703.4 Performance. Specific information consisting of test reports conducted by an approved agency in accordance with the appropriate referenced standards, or other such information as necessary, shall be provided for the building official to determine that the product, material or assembly meets the applicable code requirements.

[OSHPD 2] Tests performed by an independent approved testing agency/laboratory having accreditation to the International Standards Organization (ISO) accreditation Standard 17025 or under the responsible charge of a competent approved independent Registered Design Professional shall be deemed to comply with requirements of this section. Test reports for structural tests shall be reviewed and accepted by an independent California licensed structural engineer.

...

SECTION 1704
SPECIAL INSPECTIONS AND TESTS, CONTRACTOR RESPONSIBILITY AND STRUCTURAL OBSERVATION

...

1704.2 Special inspections and tests. Where application is made to the building official for construction as specified in section 105, the owner or the owners authorized agent, other than the contractor, shall employ one or more *approved agencies* to provide special inspections and tests during construction on the types of work specified in Section 1705 and identify the approved agencies to the building official. These special inspections and tests are in addition to the inspections by the building official that are identified in Section 110.

[OSHPD 2] An inspection agency having accreditation to the International Standards Organization (ISO) accreditation Standard 17020 shall be deemed to comply with the requirements for an approved inspection agency.

...

Exceptions:

...

3. Special inspections and tests are not required for portions of structures designed and constructed in accordance with the cold-formed steel light-frame construction provisions of Section 2211.7 or the conventional light-frame construction provisions of Section 2308. *[OSHPD 2] Not permitted by OSHPD.*

...

SECTION 1705
REQUIRED SPECIAL INSPECTIONS AND TESTS

...

1705.5.3 [OSHPD 2] Manufactured Trusses and Assemblies. *The fabrication of trusses and other assemblages constructed using wood and metal members, or using light metal plate connectors, shall be continuously inspected by an approved agency. ~~a qualified inspector approved by the enforcement agency.~~ The ~~inspector~~ approved agency shall furnish the architect, structural engineer and the enforcement agency with a report that the lumber species, grades and moisture content; type of glue, temperature and gluing procedure; type of metal members and metal plate connectors; and the workmanship conform in every material respect with the duly approved construction documents. ~~plans and specifications.~~ Each inspected truss shall be stamped by the approved agency ~~inspector~~ with an identifying mark.*

...

1705.13.3 Designated Seismic System. For structures assigned to *Seismic design* Category C, D, E or F and with *designated seismic systems* that are subject to the requirements of Section 13.2.2 of ASCE 7 for certification, the *registered design professional* shall specify on the *approved construction documents* the requirements to be met by analysis, testing or experience data as specified therein. *Certificate of compliance* documenting that the requirements are met shall be submitted to the building official as specified in Section 1704A.5.

1705.13.3.1 Special Seismic Certification. *[OSHPD 2]*

1. *Special seismic certification shall be required for life-safety components, such as emergency and standby power systems, mechanical smoke removal systems, and fire sprinkler/fire protection systems.*
2. *Equipment and components supporting sub-acute bed(s) shall have special seismic certification in accordance with Section 1705A.*

Construction documents for OSHPD 2 buildings without sub-acute beds shall explicitly state that skilled nursing facility or intermediate care facility does not admit patients needing sustained electrical life-support equipment.

...

[All existing amendments that are not revised above shall continue without any change.]

CHAPTER 17*A*
SPECIAL INSPECTIONS AND TESTS

SECTION 1701*A*
GENERAL

1701*A*.1 Scope. The provisions of this chapter shall govern the quality, workmanship and requirements for materials covered. Materials of construction and tests shall conform to the applicable standards listed in this code.

1701A.1.1 Application. *The scope of application of Chapter 17A is as follows:*

1. *[Reserved for CSA]*

2. *Structures regulated by the Office of Statewide Health Planning and Development (OSHPD), which include those applications listed in Section 1.10.1, and 1.10.4. These applications include hospitals, skilled nursing facilities, intermediate care facilities and correctional treatment centers.*

Exception: [OSHPD 2] *Single-story Type V skilled nursing or intermediate care facilities utilizing wood-frame or light-steel-frame construction as defined in Health and Safety Code Section 129725, which shall comply with Chapter 17 and any applicable amendments therein.*

1701A.1.2 Amendments in this chapter. *OSHPD adopt this chapter and all amendments.*

Exception: *Amendments adopted by only one agency appear in this chapter preceded with the appropriate acronym of the adopting agency, as follows:*

1. *[Reserved for DSA]*

2. *Office of Statewide Health Planning and Development:*
   [OSHPD 1] *- For applications listed in Section 1.10.1.*
   [OSHPD 4] *- For applications listed in Section 1.10.4.*

...

1701A.3 ~~***1701A.4***~~ ***Special*** ~~***inspectors***~~ ***inspections and tests. [OSHPD 1 and 4]*** *In addition to the inspector(s) of record required by the California Administrative Code, Section 7-144, the owner shall employ one or more approved agencies to provide special inspections and tests* ~~*special inspectors who shall provide inspections*~~ *during construction on the types of work listed under Chapters 17A, 18A, 19A, 20, 21A, 22A, 23, 24, 25, 34A, and noted in the Test, Inspection, and Observation (TIO) program required by Sections 7-141, 7-145 and 7-149 of the California Administrative Code. Test, Inspection, and Observation (TIO) program shall satisfy requirements of Section s 1704A.* ~~*2.3 and 1704A.5.*~~

...

SECTION 1702A
DEFINITIONS

1702A.1 Definitions. The following terms are defined in Chapter 2 *except those defined below which shall, for the purposes of this* ~~*section*~~ *chapter, have the meanings shown herein.*

...

Quality Assurance *(QA). Special inspections and testing provided by an approved agency employed by the Owner. Project specific testing required by approved construction documents shall be performed by the approved agency responsible for Quality Assurance (QA), unless approved otherwise by the building official.*

Quality Control (QC). *Inspections and materials/functionality testing provided by the fabricator, erector, manufacturer or other responsible contractor as applicable.*

...

SPECIAL INSPECTION.

Continuous special inspection. *The full-time observation of work requiring special inspection by a special inspector who is present in the area where the work is being performed.*

Periodic special inspection. *The part-time or intermittent observation of work requiring special inspection by a special inspector who is present in the area where the work has been or is being performed and at the completion of the work.*

...

SECTION 1703A
APPROVALS

...

1703A.4 Performance. Specific information consisting of test reports conducted by an approved agency in accordance with the appropriate referenced standards, or other such information as necessary, shall be provided for the building official to determine that the product, material or assembly meets the applicable code requirements.

~~Relocated from Section 1705A.12.1~~ ***[OSHPD 1 & 4]*** *~~All~~ Tests ~~shall be~~ performed by an independent approved testing agency/laboratory having accreditation to the International Standards Organization (ISO) accreditation Standard 17025 or ~~shall be~~ under the responsible charge of a ~~an~~ competent approved independent Registered Design Professional ~~California licensed engineer~~ shall be deemed to comply with requirements of this section. Test reports for structural tests shall be reviewed and accepted by an independent California licensed structural engineer.*

...

SECTION 1704A
SPECIAL INSPECTIONS AND TESTS, CONTRACTOR RESPONSIBILITY AND STRUCTURAL OBSERVATION

1704A.1 General. Special inspections and tests, statements of special inspections, responsibilities of contractors, submittal to the building official and structural observation shall meet applicable requirements of this section.

1704A.2 Special inspections and tests. Where application is made to the building official for construction as specified in section 105, the owner ~~or the owners authorized agent, other than contractor,~~ shall employ one or more *approved agencies* to provide special inspections and tests during construction on the types of work specified in Section 1705A and identify the approved agencies to the building official. These special inspections and tests are in addition to the inspections by the building official that are identified in Section 110.

[OSHPD 1 & 4] An inspection agency having accreditation to the International Standards Organization (ISO) accreditation Standard 17020 shall be deemed to comply with the requirements for an approved inspection agency.

The inspectors shall act under the direction of the architect or structural engineer or both, and be responsible to the Owner. Where the California Administrative Code (CAC) Section 7-115 (a) 2 permits construction documents to be prepared under the responsible charge of a mechanical, electrical or civil engineer, inspectors shall be permitted to work under the direction of engineer in appropriate branch as permitted therein.

Exceptions:

1. *Special inspections* and tests are not required for construction of a minor nature or as warranted by conditions in the jurisdiction as *approved* by the *building official.*
2. ~~Unless otherwise required by the building official, special inspections are not required for Group U occupancies that are accessory to a residential occupancy including, but not limited to, those listed in Section 312.1.~~
3. ~~Special inspections are not required for portions of structures designed and constructed in accordance with the cold-formed steel light-frame construction provisions of Section 2211.7 or the conventional light-frame construction provisions of Section 2308.~~

~~4. The contractor is permitted to employ the approved agencies where the contractor is also the owner.~~

...

1704A.2.3 Statement of special inspections. The applicant shall submit a statement of *special inspections prepared by the registered design professional in responsible charge* in accordance with Section 107.1 as a condition for ~~permit issuance~~ *construction documents review*. This statement shall be in accordance with Section 1704A.3.

~~**Exception:** A statement of *special inspections* is not required for portions of structures designed and constructed in accordance with the cold-formed steel light-frame construction provisions of Section 2211.7 or the conventional light-frame construction provisions of Section 2308.~~

...

1704A.2.4 Report requirement. The *inspector(s) of record and* ~~A~~ approved agencies shall keep records of special inspections and tests. The *inspector of record and* approved agency shall submit reports of special inspections and tests to the building official, and to the registered design professional in responsible charge *as required by the California Administrative Code.* Reports shall indicate that work inspected or tested was or was not completed in conformance to approved construction documents *as required by the California Administrative Code and this code.* ~~*Title 24 Parts 1 and 2.*~~ Discrepancies shall be brought to the immediate attention of the contractor for correction. If they are not corrected, the discrepancies shall be brought to the attention of the building official and to the registered design professional in responsible charge prior to the completion of that phase of the work. A final report documenting required special inspections and tests, and correction of any discrepancies noted in the inspections or tests, shall be submitted at a point in time agreed upon prior to the start of work by the owner or owner's authorized agent to the building official.

1704A.2.5 Special inspection of fabricated items. Where fabrication of structural, load-bearing or lateral load resisting members or assemblies is being conducted on the premises of a fabricator's shop, *special inspection* of the fabricated items shall be performed during fabrication.

Exceptions: ***[OSHPD 1 & 4]***

~~1)~~ Special inspections during fabrication are not required where the fabricator maintains approved detailed fabrication and quality control procedures that provide a basis for control of the workmanship and the fabricator's ability to conform to *approved construction documents* and this code. Approval shall be based upon review of fabrication and quality control procedures and periodic inspection of fabrication practices by the *special inspector and/or* building official*, as determined by the building official.*

~~2) *Special inspections* are not required where fabricator is registered and approved in accordance with Section 1704.2.5.1.~~

~~**1704.2.5.1 Fabricator approval.** *Special inspections* during fabrication are not required where the work is done on the premises of a fabricator registered and *approved* to perform such work without *special inspection*. Approval shall be based upon review of the fabricator's written procedural and quality control manuals and periodic auditing of fabrication practices by an *approved* agency. At completion of fabrication, the *approved* fabricator shall submit a *certificate of compliance* to the owner or owner's authorized agent for submittal to the *building official as specified in Section 1704.5* stating that the work was performed in accordance with the *approved construction documents.*~~

...

1704A.3.2 Seismic requirements in the statement of special inspections. Where Section 1705A.12 or 1705A.13 specifies *special inspections* or tests for seismic resistance, the statement of special inspections shall identify the *equipment/components that require special seismic certification* ~~designated seismic systems~~ and seismic force resisting systems that are subject to *special inspections* or tests.

...

1704A.4 Contractor responsibility. Each contractor responsible for the construction of a main wind- or seismic force resisting system, *installation of equipment/components requiring special seismic certification* ~~designated seismic system~~ or a wind- or seismic-resisting component listed in the statement of special inspections shall submit a written statement of responsibility to the *building official* and the owner or the Owner's authorized agent prior to the commencement of work on the system or component. The contractor's statement of responsibility shall contain acknowledgement of awareness of the special requirements contained in the statement of *special inspections*.

1704A.5 Submittal to the Building official. In addition to the submittal of reports of *special inspections* and tests in accordance with Section 1704A.2.4, reports and certificates shall be submitted by the owner or owner's authorized agent to the building official for each of the following:

1. ***[OSHPD 1 & 4]*** *Certificate of Compliance* for the fabrication of structural, load-bearing or lateral load-resisting members or assemblies on the premises of a*n* ~~registered and~~ *approved fabricator* in accordance with Section *1704A.2.5.* ~~1704.2.5.1.~~
2. *Certificate of compliance* for the ~~seismic qualification~~ *manufacturer's certification* of non-structural components, supports and attachments in Section 1705A.13.2.
3. *Certificate of compliance* for the ~~designated seismic system~~ *equipment/components requiring special seismic certification* in accordance with Section 1705A.13.3.

...

1704A.6 Structural observations. ~~Where required by the provisions of Section 1704.6.1 or 1704.6.2, t~~ The owner ~~or the owner's authorized agent~~ shall employ a *registered design professional* to perform structural observations. Structural observation does not include or waive the responsibility for inspection in Section 110 or the special inspections in Section 1705A or other sections of this code.

Prior to the commencement of observations, the structural observer shall submit to the *building official* a written statement identifying the frequency and extent of structural observations.

At the conclusion of the work included in the permit, the structural observer shall submit to the *building official* a written statement that the site visits have been made and identify any reported deficiencies that, to the best of the structural observer's knowledge, have not been resolved.

~~**1704.6.1 Structural observations for seismic resistance.** Structural observations shall be provided for those structures assigned to *Seismic Design Category* D, E or F where one or more of the following conditions exist:~~

~~1. The structure is classified as *Risk Category* III or IV.~~
~~2. The height of the structure is greater than 75 feet (22 860 mm) above the base as defined in ASCE 7.~~
~~3. The structure is assigned to *Seismic Design Category* E, is classified as *Risk Category* I or II, and is greater than two *stories above grade plane.*~~
~~4. When so designated by the *registered design professional* responsible for the structural design.~~
~~5. When such observation is specifically required by the *building official.*~~

~~**1704.6.2 Structural observations for wind requirements.** Structural observations shall be provided for those structures sited where *Vasd* as determined in accordance with Section 1609.3.1 exceeds 110 mph (49 m/sec), where one or more of the following conditions exist:~~

~~1. The structure is classified as *Risk Category* III or IV.~~
~~2. The *building height* is greater than 75 feet (22 860 mm).~~
~~3. When so designated by the *registered design professional* responsible for the structural design.~~
~~4. When such observation is specifically required by the *building official.*~~

SECTION 1705A
REQUIRED SPECIAL INSPECTIONS AND TESTS

1705A.1 General. Special inspections and tests of elements and nonstructural components of buildings and structures shall meet the applicable requirements of this section.

...

1705A.2.1 Structural steel. Special inspections and nondestructive testing of structural steel elements in buildings, structures and portions thereof shall be in accordance with the quality assurance ~~inspection~~ requirements ~~of AISC 360~~ *of this section, ~~and~~ Chapter 22A and quality control requirements of AISC 360, AISC 341 and AISC 358.*

Exception: *Special inspection* of railing systems composed of structural steel elements shall be limited to welding inspection of welds at the base of cantilevered rail post.

AISC 360, Chapter N and AISC 341, Chapter J are adopted, except as noted below:
The following provisions of AISC 360, Chapter N are not adopted:

1. *N4., Item 2. (Quality Assurance Inspector Qualifications)*
2. *N5., Item 2. (Quality Assurance)*

~~N5., Item 3. (Coordinated Inspection)~~
~~N5., Item 4. (Inspection of Welding)~~
~~N7 (Approved Fabricators and Erectors)~~
~~N8 (Nonconforming Material and Workmanship)~~

In addition to the quality assurance inspection requirements contained in AISC 360, Section N5 ~~Item 6 (Inspection of High Strength Bolting)~~ (Minimum Requirements for Inspection of Structural Steel Buildings), the requirements of Table 1705A.2.1 of the California Building Code shall apply.

In addition to the quality assurance requirements contained in AISC 360, Section N6 (Minimum Requirements for Inspection of Composite Construction), the requirements of Table 1705A.2.1 of the California Building Code shall apply.

In addition to the quality assurance requirements contained in AISC 341, Chapter J, Section J5 (Inspection Tasks), the requirements of Section 1704A.3 and Table 1705A.2.1 of the California Building Code shall apply.

TABLE 1705A.2.1 - REQUIRED VERIFICATION AND INSPECTION OF STEEL CONSTRUCTION

VERIFICATION AND INSPECTION	CONTINUOUS	PERIODIC	REFERENCED STANDARD[a]	CBC REFERENCE
1. Material verification of high-strength bolts, nuts and washers:				
a. Identification markings to conform to ASTM standards specified in the approved construction documents.	-	X	*AISC 360, Section A3.3 and applicable ASTM material standards*	-
b. Manufacturer's certificate of compliance required.	-	X	-	-

2. Inspection of high-strength bolting:				
a. Snug-tight joints.	-	X	*AISC 360, Section M2.5*	-
b. Pretensioned and slip-critical joints using turn-of-nut with matchmarking, twist-off bolt or direct tension indicator methods of installation.	-	X		
c. Pretensioned and slip-critical joints using turn-of-nut without matchmarking or calibrated wrench methods of installation.	X	-		
3. Material verification of structural steel and cold-formed steel deck:				
a. For structural steel, identification markings to conform to AISC 360.	-	X	*AISC 360, Section A3.1*	*2203A.1*
b. For other steel, identification markings to conform to ASTM standards specified in the approved construction documents.	-	X	*Applicable ASTM material standards*	
c. Manufacturer's certified test reports.	-	X		
4. Material verification of weld filler materials:				
a. Identification markings to conform to AWS specification in the approved construction documents.	-	X	*AISC 360, Section A3.5 and applicable AWS A5 documents*	-
b. Manufacturer's certificate of compliance required.	-	X	-	-
5. Inspection of welding:				
a. Structural steel and cold-formed steel deck:				
1) Complete and partial joint penetration groove welds.	X	-	*AWS D1.1, AWS D1.8*	*1705A.2.1*
2) Multipass fillet welds.	X	-		
3) Single-pass fillet welds > $^5/_{16}$"	X	-		
4) Plug and slot welds.	X	-		
5) Single-pass fillet welds ≤ $^5/_{16}$"	-	X		
6) Floor and roof deck welds.	-	X	*AWS D1.3*	

TABLE 1705A.2.1- continued
REQUIRED VERIFICATION AND INSPECTION OF STEEL CONSTRUCTION

VERIFICATION AND INSPECTION	CONTINUOUS	PERIODIC	REFERENCED STANDARD[a]	CBC REFERENCE
b. Reinforcing steel:				
1) Verification of weldability of reinforcing steel other than ASTM A 706.	-	X	AWS D1.4, ACI 318: Sections 26.6.4.1, 18.2.8, 25.5.7.4 ~~3.5.2~~	-
2) Reinforcing steel resisting flexural and axial forces in intermediate and special moment frames, and boundary elements of special structural walls of concrete and shear reinforcement.	X	-		
3) Shear reinforcement.	X	-		
4) Other reinforcing steel.	-	X		
6. Inspection of steel frame joint details for compliance:				
a. Details such as bracing and stiffening.	-	X	-	1705A.2.1 ~~1705A.2.2~~
b. Member locations.	-	X		
c. Application of joint details at each connection.	-	X		

For SI: 1 inch = 25.4 mm.
a. Where applicable, see also Section ~~1705A.11~~ 1705A.12, Special inspection for seismic resistance

...

1705A.2.2 Cold-formed steel deck. Special inspections ~~and qualification of welding special inspectors~~ for cold formed steel floor and roof deck shall be in accordance with the quality assurance inspection requirements of SDI QA/QC.

Deck weld special inspection shall also satisfy requirements in Table 1705A.2.1 and Section 1705A.2.5.

...

1705A.2.3.1 ~~1705A.2.2.3~~ Steel joist and joist girder inspection. *Special inspection is required during the manufacture and welding of steel joists or joist girders. The approved agency ~~special inspector~~ shall verify that proper quality control procedures and tests have been employed for all materials and the manufacturing process, and shall perform visual inspection of the finished product. The approved agency ~~special inspector~~ shall place a distinguishing mark, and/or tag with this distinguishing mark, on each inspected joist or joist girder. This mark or tag shall remain on the joist or joist girder throughout the job site receiving and erection process.*

...

1705A.2.4.1 ~~1705A.2.2.4~~ Light-framed steel truss inspection. *The manufacture of cold-formed light framed steel trusses shall be continuously inspected by an approved agency ~~a qualified special inspector approved by the enforcement agency~~. The approved agency ~~special inspector~~ shall verify conformance of materials and manufacture with approved plans and specifications. The approved agency ~~special inspector~~ shall place a distinguishing mark, and/or tag with this distinguishing mark, on each inspected truss. This mark or tag shall remain on the truss throughout the job site receiving and erection process.*

1705A.2.5 ~~1705A.2.2.5~~ Inspection of structural welding. *Inspection of all shop and field welding operations shall be made by a qualified welding inspector approved by the enforcement agency.*

The minimum requirements for a qualified welding inspector shall be as those for an AWS Certified Welding Inspector (CWI), as defined in the provisions of the AWS QC1. ~~All welding inspectors shall be as approved by the enforcement agency.~~

Exception: [OSHPD 1 & 4] *Inspection and nondestructive testing personnel meeting the requirements of AISC 341 Section J4 (in addition to AISC 360 Section N4) shall be permitted to perform quality control and quality assurance inspections at the premises of an approved fabricator's shop.*

The welding inspector shall make a systematic daily record of all welds. In addition to other records, this record shall include:

1. *Identification marks of welders.*
2. *List of defective welds.*
3. *Manner of correction of defects.*

The welding inspector shall check the material, details of construction and procedure, as well as workmanship of the welds. The inspector shall verify that the installation of end-welded stud shear connectors is in accordance with the requirements of AWS D1.1 and the approved plans and specifications. The ~~inspector~~ approved agency shall furnish the architect, structural engineer, and the enforcement agency with a verified report that the welding ~~is proper and~~ has been done in ~~conformity~~ conformance with AWS D1.1, D1.3, D1.8, and the approved construction documents.

1705A.3 Concrete construction. *Special inspections* and tests of concrete construction shall be performed in accordance with this section and Table 1705A.3.

Exception: *Special inspections and tests* shall not be required for:

~~1. Isolated spread concrete footings of buildings three stories or less above *grade plane* that are fully supported on earth or rock.~~
~~2. Continuous concrete footings supporting walls of buildings three stories or less above *grade plane* that are fully supported on earth or rock where:~~
~~2.1. The footings support walls of light-frame construction;~~
~~2.2. The footings are designed in accordance with Table 1809.7; or~~
~~2.3. The structural design of the footing is based on a specified compressive strength, f'_c, no greater than 2,500 pounds per square inch (psi) (17.2 MPa), regardless of the compressive strength specified in the approved *construction documents* or used in the footing construction.~~
~~3. Nonstructural concrete slabs supported directly on the ground, including prestressed slabs on grade, where the effective prestress in the concrete is less than 150 psi (1.03 MPa).~~
~~4. Concrete foundation walls constructed in accordance with Table 1807.1.6.2.~~
~~5. C~~ concrete patios, driveways and sidewalks, on grade.

...

1705A.3.3 ~~1705A.3.2~~ Batch plant inspection. *Except as provided under this ~~S~~ section ~~1705A.3.3~~, the quality and quantity of materials used in transit-mixed concrete and in batched aggregates shall be continuously inspected by an approved agency ~~special inspector~~ at the location where materials are measured.*

1705A.3.3.1 ~~1705A.3.3~~ Waiver of continuous batch plant inspection. *Continuous batch plant inspection may be waived by the registered design professional, subject to approval by the enforcement agency under either of the following conditions:*

1. *The concrete plant complies fully with the requirements of ASTM C 94, Sections 9 ~~8~~ and 10 ~~9~~, and has a current certificate from the National Ready Mixed Concrete Association or another agency acceptable to the enforcement agency. The certification shall indicate that the plant has automatic batching and recording capabilities.*

2. For single -story light-framed construction (without basement or retaining wall higher than 6' in height measured from bottom of footing to top of wall) ~~-buildings~~ and isolated foundations supporting equipment only, where deep foundation elements are not used. ~~, where the specified compressive strength fc of the concrete delivered to the jobsite is 3,500 psi (24.13 MPa) and where the f'_c used in design is not greater than 3,000 psi (20.68 MPa).~~

When continuous batch plant inspection is waived, the following ~~periodic inspection~~ requirements shall apply and shall be described in the construction documents:

1. ~~Qualified technician of the~~ An approved agency ~~testing laboratory~~ shall check the first batch at the start of the day to verify materials and proportions conform to the approved mix design.

2. A ~~L~~ licensed weighmaster shall ~~to~~ positively identify quantity of materials ~~as to quantity~~ and certify ~~to~~ each load by a batch ticket.

3. Batch tickets, including material quantities and weights shall accompany the load, shall be transmitted to the inspector of record by ~~a the~~ truck driver with load identified thereon. The load shall not be placed without a batch ticket identifying the mix. The inspector of record shall ~~will~~ keep a daily record of placements, identifying each truck, its load, and time of receipt at the job site, and approximate location of deposit in the structure and shall maintain ~~will transmit~~ a copy of the daily record as required by ~~to~~ the enforcement agency.

1705A.3.4 Inspection of prestressed concrete.

1. In addition to the general inspection required for concrete work, all plant fabrication of prestressed concrete members or tensioning of posttensioned members constructed at the site shall be continuously inspected by an inspector specially approved for this purpose by the enforcement agency.

2. The prestressed concrete plant fabrication inspector shall check the materials, equipment, tensioning procedure and construction of the prestressed members and prepare daily written reports. The ~~inspector~~ approved agency shall make a verified report identifying the members by mark and shall include such pertinent data as lot numbers of tendons used, tendon jacking forces, age and strength of concrete at time of tendon release and such other information that may be required.

3. The inspector of prestressed members posttensioned at the site shall check the condition of the prestressing tendons, anchorage assemblies and concrete in the area of the anchorage, the tensioning equipment and the tensioning procedure and prepare daily written reports. The ~~inspector~~ approved agency shall make a verified report of the prestressing operation identifying the members or tendons by mark and including such pertinent data as the initial cable slack, net elongation of tendons, jacking force developed, and such other information as may be required.

4. The verified reports of construction shall show that of the inspector's own personal knowledge, the work covered by the report has been performed and materials used and installed in every material respect in compliance with the duly approved plans and specifications for plant fabrication inspection. The verified report shall be accompanied by test reports required for materials used. For site posttensioning inspections the verified report shall be accompanied by copies of calibration charts, certified by an approved testing laboratory, showing the relationship between gage readings and force applied by the jacks used in the prestressing procedure

1705A.3.5 Concrete pre-placement inspection. Concrete shall not be placed until the forms and reinforcement have been inspected, all preparations for the placement have been completed, and the preparations have been checked by the inspector of Record.

1705A.3.6 Placing record. *A record shall be kept on the site of the time and date of placing the concrete in each portion of the structure. Such record shall be kept until the completion of the structure and shall be open to the inspection of the enforcement agency.*

...

TABLE 1705A.3 - REQUIRED SPECIAL INSPECTION AND TESTS OF CONCRETE CONSTRUCTION

TYPE	CONTINUOUS SPECIAL INSPECTION	PERIODIC SPECIAL INSPECTION	REFERENCE STANDARDS	CBC REFERENCE
...		...	...	...
4. Inspect anchors post installed in hardened concrete members. [b,c] a. Adhesive anchors installed in horizontally or upwardly inclined orientations to resist sustained tension loads. ...	X		**ACI318: 17.8.2.4**	—
~~*13. Inspection of adhesive anchors in horizontal and upwardly inclined positions.*~~ [c]		~~X~~	~~**ACI318: D.9.2.2**~~	=

...

c. Installation of all adhesive anchors in horizontal and upwardly inclined positions shall be performed by an ACI/CRSI Certified Adhesive Anchor Installer, except where the factored design tension on the anchors is less than 100 lbs. and those anchors are clearly noted on the approved construction documents or where the anchors are shear dowels across cold joints in slabs on grade where the slab is not part of the lateral force resisting system.

...

1705A.4 Masonry construction. Special inspections and tests of masonry construction shall be performed in accordance with the quality assurance program requirements of TMS 402/ACI 530/ASCE 5, *as set forth in Table 3.1.3 Level C requirements,* and TMS 602/ACI 530.1/ASCE 6. ~~*, as set forth in Table 1.19.3 Level C*~~ requirements. *Special inspection and testing of post-installed anchors in masonry shall be required in accordance with requirements for concrete in Chapters 17A and 19A.*

~~**Exception:** *Special inspections and tests* shall not be required for:~~

~~1. Empirically designed masonry, glass unit masonry or masonry veneer in accordance with Section 2109, 2110 or Chapter 14, respectively, where they are part of structures classified as *Risk Category* I, II or III.~~

~~2. Masonry foundation walls constructed in accordance with Table 1807.1.6.3(1), 1807.1.6.3(2), 1807.1.6.3(3) or 1807.1.6.3(4).~~

~~3. Masonry fireplaces, masonry heaters or masonry chimneys installed or constructed in accordance with Section 2111, 2112 or 2113, respectively.~~

1705*A*.4.1 ~~Empirically designed masonry, g~~ *G*lass unit masonry and masonry veneer in Risk ~~Category~~ *Categories II, III or* IV. *Special inspections and tests* for ~~empirically designed masonry,~~ glass unit masonry or masonry veneer designed by Section ~~2109,~~ 2110*A* or Chapter 14, respectively, in structures classified as *Risk ~~Category~~ Categories II, III or* IV, shall be performed in accordance with TMS 402/ACI 530/ASCE 5 Level B Quality Assurance.

...

1705*A*.5 Wood construction. *Special inspections* of prefabricated wood structural elements and assemblies shall be in accordance with Section 1704*A*.2.5 *except as modified in this section. Special inspections* of site-built assemblies shall be in accordance with this section.

...

1705A.5.3 Wood structural elements and assemblies. *Special inspection of wood structural elements and assemblies is required, as specified in this section, to ensure conformance with approved ~~drawings and specifications~~ construction documents, and applicable standards. The approved agency ~~special inspector~~ shall furnish a verified report to the design professional in general responsible charge of construction observation, the structural engineer, and the enforcement agency, in accordance with the California Administrative code and this chapter. The verified report shall list all inspected members or trusses, and shall indicate whether or not the inspected members or trusses conform with applicable standards and the approved drawings and specifications. Any non-conforming items shall be indicated on the verified report.*

1705A.5.4 Structural glued laminated timber. *Manufacture of all structural glued laminated timber shall be continuously inspected by an approved agency ~~a qualified special inspector approved by the enforcement agency~~.*

The approved agency ~~special inspector~~ shall verify that proper quality control procedures and tests have been employed for all materials and the manufacturing process, and shall perform visual inspection of the finished product. Each inspected member shall be stamped by the approved agency ~~special inspector~~ with an identification mark.

> ***Exception:*** *Special Inspection is not required for non-custom members of 5-1/8 inch maximum width and 18 inch maximum depth, and with a maximum clear span of 32 feet, manufactured and marked in accordance with ANSI/APA A190.1 Section 6.1.1 for non-custom members.*

1705A.5.5 Manufactured open web trusses. *The manufacture of open web trusses shall be continuously inspected by an approved agency ~~a qualified special inspector approved by the enforcement agency~~.*

The approved agency ~~special inspector~~ shall verify that proper quality control procedures and tests have been employed for all materials and the manufacturing process, and shall perform visual inspection of the finished product. Each inspected truss shall be stamped with an identification mark by the ~~special inspector~~ approved agency.

1705A.5.6 Timber connectors. *The installation of all split ring and shear plate timber connectors, and timber rivets shall be continuously inspected by an approved agency ~~a qualified inspector approved by the enforcement agency~~. The approved agency ~~inspector~~ shall furnish the architect, structural engineer and the enforcement agency with a report verifying ~~duly verified by him~~ that the*

materials, timber connectors and workmanship conform to the approved ~~plans and specifications~~ construction documents.

...

1705A.6.1 Soil fill. *All fills used to support the foundations of any building or structure shall be continuously inspected by the geotechnical engineer or his or her qualified representative. It shall be the responsibility of the geotechnical engineer to verify that fills meet the requirements of the approved construction documents and to coordinate all fill inspection and testing during the construction involving such fills.*

The duties of the geotechnical engineer or his or her qualified representative shall include, but need not be limited to, the inspection of cleared areas and benches prepared to receive fill; inspection of the removal of all unsuitable soils and other materials; the approval of soils to be used as fill material; the inspection of placement and compaction of fill materials; the testing of the completed fills; the inspection or review of geotechnical drainage devices, buttress fills or other similar protective measures in accordance with the approved construction documents.

A verified report shall be submitted by the geotechnical engineer as required by the California Administrative Code. The report shall indicate that all tests and inspection required by the approved construction documents were completed and that the tested materials and/or inspected work meet the requirements of the approved construction documents.

...

1705A.7.1 ***Driven deep foundations observation.*** *The installation of driven deep foundations shall be continuously inspected by a qualified representative of the geotechnical engineer responsible for that portion of the project.*

The representative of the geotechnical engineer shall make a report of the deep foundation pile-driving operation giving such pertinent data as the physical characteristics of the deep foundation pile-driving equipment, identifying marks for each deep foundation pile, the total depth of embedment for each deep foundation; and when the allowable deep foundation pile loads are determined by a dynamic load formula, the design formula used, and the permanent penetration under the last 10 blows. One copy of the report shall be sent to the enforcement agency.

...

1705A.11.1 Structural wood. Continuous special inspection is required during field gluing operations of elements of the main windforce-resisting system. Periodic special inspection is required for nailing, bolting, anchoring and other fastening of elements of the main windforce resisting system, including wood shear walls, wood diaphragms, drag struts, braces and hold-downs.

~~**Exception:** *Special inspections are* not required for wood shear walls, shear panels and diaphragms, including nailing, bolting, anchoring and other fastening to other components of the main windforce-resisting system, where the fastener spacing of the sheathing is more than 4 inches (102 mm) on center.~~

1705A.11.2 Cold-formed steel light-frame construction. Periodic special inspection is required for welding operations of elements of the main windforce-resisting system. Periodic special inspection is required for screw attachment, bolting, anchoring and other fastening of elements of the main windforce-resisting system, including shear walls, braces, diaphragms, collectors (drag struts) and hold-downs.

~~**Exception:** *Special inspections are* not required for cold-formed steel light-frame shear walls and diaphragms, including screwing, bolting, anchoring and other fastening to components of the windforce-resisting system, where either of the following apply:~~

~~1. The sheathing is gypsum board or fiberboard.~~

~~2. The sheathing is wood structural panel or steel sheets on only one side of the shear wall, shear panel or diaphragm assembly and the fastener spacing of the sheathing is more than 4 inches (102 mm) on center (o.c.).~~

...

1705*A*.12 Special inspections for seismic resistance. *Special inspections* for seismic resistance shall be required as specified in Sections 1705*A*.12.1 through 1705*A*.12.9, unless exempted by the exceptions of Section 1704*A*.2.

~~**Exception:** The special inspections specified in Sections 1705.12.1 through 1705.12.9 are not required for structures designed and constructed in accordance with one of the following:~~

~~1. The structure consists of light-frame construction; the design spectral response acceleration at short periods, S_{DS}, as determined in Section 1613.3.4, does not exceed 0.5; and the building height of the structure does not exceed 35 feet (10 668 mm).~~
~~2. The seismic force-resisting system of the structure consists of reinforced masonry or reinforced concrete; the design spectral response acceleration at short periods, S_{DS}, as determined in Section 1613.3.4, does not exceed 0.5; and the building height of the structure does not exceed 25 feet (7620 mm).~~
~~3. The structure is a detached one- or two-family dwelling not exceeding two *stories above grade plane* and does not have any of the following horizontal or vertical irregularities in accordance with Section 12.3 of ASCE 7:~~
~~3.1. Torsional or extreme torsional irregularity.~~
~~3.2. Nonparallel systems irregularity.~~
~~3.3. Stiffness-soft story or stiffness-extreme soft story irregularity.~~
~~3.4. Discontinuity in lateral strength-weak story irregularity.~~

1705A.12.1 Structural steel. *Special inspections* for structural steel shall be in accordance with Section 1705A.12.1.1 or 1705A.12.1.2, as applicable.

1705A.12.1.1 Seismic Force-Resisting Systems. *Special inspections* of structural steel in the seismic force resisting systems of buildings and structures assigned to *Seismic Design Category* ~~B, C,~~ D, E or F shall be performed in accordance with quality assurance requirements of AISC 341 *as modified by Section 1705A.2.1 of this code.*

~~**Exception:** *Special inspections* the seismic force-resisting systems of buildings and structures assigned to *Seismic Design Category* B or C that are not specifically detailed for seismic resistance, with a response modification coefficient, *R*, of 3 or less, excluding cantilever column systems.~~

1705A.12.1.2 Structural Steel Elements. *Special inspections* of *structural steel elements* in the seismic force resisting systems of buildings and structures assigned to *Seismic Design Category* ~~B, C,~~ D, E or F, other than those covered in Section 1705*A*.12.1.1, including struts, collectors, chords, and foundation elements, shall be performed in accordance with quality assurance requirements of AISC 341 *as modified by Section 1705A.2.1 of this code.*

~~**Exception:** *Special inspections* of *structural steel element* are not required in the seismic force-resisting systems of buildings and structures assigned to *Seismic Design Category* B or C with a response modification coefficient, *R*, of 3 or less.~~

1705*A*.12.2 Structural wood. For the seismic force-resisting system of structures assigned to *Seismic Design Category* ~~C,~~ D, E or F:

...

~~**Exception:** *Special inspections* are not required for wood shear walls, shear panels and diaphragms, including nailing, bolting, anchoring and other fastening to other elements of the~~

~~seismic force-resisting system, where the fastener spacing of the sheathing is more than 4 inches (102 mm) on center.~~

1705A.12.3 Cold-formed steel light-frame construction. For the seismic force-resisting system of structures assigned to *Seismic Design Category* ~~C,~~ D, E or F, periodic special inspection shall be required:

...

~~**Exception:** *Special inspections* are not required for cold-formed steel light-frame shear walls and diaphragms, including screw installation, bolting, anchoring and other fastening to components of the seismic force-resisting system, where either of the following applies:~~

~~1. The sheathing is gypsum board or fiberboard.~~
~~2. The sheathing is wood structural panel or steel sheets on only one side of the shear wall, shear panel or diaphragm assembly and the fastener spacing of the sheathing is more than 4 inches (102 mm) on center.~~

...

1705A.12.4 *Special Inspection for Special Seismic Certification.* ~~**Designated seismic systems.**~~ For structures assigned to *Seismic Design Category* ~~C,~~ D, E or F, the special inspector shall examine *equipment and components* ~~designated seismic systems~~ requiring *special* seismic *certification* ~~qualification~~ in accordance with *Section* 1705A.13.3 or ASCE 7 Section 13.2.2 and verify that the *label*, anchorage and mounting conforms to the *certificate of compliance*.

1705A.12.5 Architectural components. *Periodic special inspection* is required for the erection and fastening of exterior cladding, interior and exterior nonbearing walls, *ceilings*, and interior and exterior veneer in structures assigned to *Seismic Design Category* D, E or F.

~~**Exceptions:** *Periodic special inspection* is not required for the following:~~
~~1. Exterior cladding, interior and exterior nonbearing walls and interior and exterior veneer 30 feet (9144 mm) or less in height above grade or walking surface.~~
~~2. Exterior cladding and interior and exterior veneer weighing 5 psf (24.5 N/m^2) or less.~~
~~3. Interior nonbearing walls weighing 15 psf (73.5 N/m^2) or less.~~

...

1705A.12.6 Plumbing, mechanical and electrical components. *Periodic special inspection* of plumbing, mechanical and electrical components shall be required for the following:

1. Anchorage of electrical equipment for emergency or standby power systems in structures assigned to *Seismic Design Category* ~~C,~~ D, E or F.
2. Anchorage of other electrical equipment in structures assigned to *Seismic Design Category D,* E or F.
3. Installation and anchorage of piping systems designed to carry hazardous materials and their associated mechanical units in structures assigned to *Seismic Design Category* ~~C,~~ D, E or F.
4. Installation and anchorage of ductwork designed to carry hazardous materials in structures assigned to *Seismic Design Category* ~~C,~~ D, E or F.
5. Installation and anchorage of vibration isolation systems in structures assigned to *Seismic Design Category* ~~C,~~ D, E or F where the approved *construction documents* require a nominal clearance of 1/4 inch (6.4 mm) or less between the equipment support frame and restraint.

...

1705A.12.8 Seismic isolation *and damping* systems. Periodic special inspection shall be provided for seismic isolation *and damping* systems in ~~seismically isolated~~ structures assigned to Seismic Design Category ~~B, C~~, D, E or F during the fabrication and installation of isolator units and energy dissipation devices. *Continuous special inspection is required for prototype and production testing of isolator units and damping devices.*

~~**1705A.12.9 Cold-formed steel special bolted moment frames.** Periodic special inspection shall be provided for the installation of cold-formed steel special bolted moment frames in the seismic force-resisting systems of structures assigned to Seismic Design Category D, E or F.~~

1705*A*.13 Testing for seismic resistance. Testing for seismic resistance shall be required as specified in Sections 1705*A*.13.1.1 through 1705*A*.13.4, unless exempted from special inspections by exceptions of Section 1704*A*.2.

1705A.13.1 Structural Steel. Nondestructive testing for seismic resistance shall be in accordance with Section 1705*A*.13.1.1 or 1705*A*.13.1.2, as applicable.

1705A.13.1.1 Seismic Force-Resisting Systems. Nondestructive testing of structural steel in the seismic force resisting systems of buildings and structures assigned to Seismic Design Category ~~B, C,~~ D, E or F shall be performed in accordance with the quality assurance requirements of AISC 341.

~~**Exception:** Nondestructive testing is not required in the seismic force-resisting systems of buildings and structures assigned to *Seismic Design Category* B or C that are not specifically detailed for seismic resistance, with a response modification coefficient, *R*, of 3 or less, excluding cantilever column systems.~~

1705*A*.13.1.2 Structural Steel Elements. Nondestructive testing of *structural steel elements* in the seismic force resisting systems of buildings and structures assigned to *Seismic design Category* ~~B, C,~~ D, E or F, other than those covered in Section 1705*A*.13.1.1, including struts, collectors, chords, and foundation elements, shall be performed in accordance with quality assurance requirements of AISC 341.

~~**Exception:** Nondestructive testing of *structural steel element* is not required in the seismic force-resisting systems of buildings and structures assigned to *Seismic Design Category* B or C with a response modification coefficient, *R*, of 3 or less.~~

1705A.13.2 Nonstructural Components. For structures assigned to *Seismic design Category* ~~B, C,~~ D, E or F, where requirements of Section 13.2.1 of ASCE 7 for non-structural components, supports, or attachments are met by *manufacturer's certification* ~~seismic qualification~~ as specified in Item 2 therein, the *registered design professional* shall specify on the *approved construction documents* the requirements for seismic *certification* ~~qualification~~ by analysis~~,~~ *or* testing. ~~or experience data.~~ *Certificates of compliance* for the ~~seismic qualification~~ *manufacturer's certification* shall be submitted to the building official as specified in Section 1704*A*.5.

Seismic sway braces satisfying requirements of FM 1950 shall be deemed to satisfy the requirements of this Section. Component tests shall be supplemented by assembly tests, when required by the building official.

1705*A*.13.3 *Special Seismic Certification. [OSHPD 1 & 4]* ~~Designated Seismic System.~~ For structures assigned to *Seismic design Category* ~~C,~~ D, E or F~~,~~ ~~and with *designated seismic systems equipment and components*~~ that are subject to the requirements of Section 13.2.2 of ASCE 7 for *special seismic* certification, the *registered design professional* shall specify on the *approved construction documents* the requirements to be met by analysis~~,~~ *or* testing ~~or experience data~~ as specified therein. *Certificates of compliance* documenting that the requirements are met shall be submitted to the building official as specified in Section 1704*A*.5.

Active or energized equipment and components shall be certified exclusively on the basis of approved shake table testing in accordance with ICC-ES AC 156. Minimum of two equipment/components shall be tested for a product line with similar structural configuration. Where a range of products are tested, the two equipment/components shall be either the largest and a small unit ~~smallest~~, or approved alternative representative equipment/components.

Exception: *When a single product (and not a product line with more than one product with variations) is certified and manufacturing process is ISO 9001 certified, one test shall be permitted.*

~~Relocated to Section 1705A.4~~ ~~*All tests shall be performed by an independent laboratory having accreditation to the International Standards Organization (ISO) accreditation standard 17025 or shall be under the responsible charge of an independent California licensed engineer. Test reports shall be reviewed and accepted by an independent California licensed structural engineer.*~~

For a multi-component system, where active or energized components are certified by tests, connecting elements, attachments, and supports can be justified by supporting analysis.

1705A.13.3.1 [OSHPD 1 & 4] ~~***1705A.12.4.1***~~ *Special seismic certification shall be required for the following systems, equipment, and components:*

1. *Emergency and standby power systems.*
2. *Elevator equipment (excluding elevator cabs).*
3. *Components with hazardous contents.*
4. *Exhaust and Smoke control fans.*
5. *Switchgear and Switchboards.*
6. *Motor control centers.*
7. ~~*Radiography and fluoroscopy systems in fluoroscopy rooms.*~~ *Fluoroscopy and x-ray equipment required for radiological/diagnostic imaging service (for service requirements see CBC Section 1224.18.1) and any fluoroscopy and/or radiographic system provided in support of diagnostic assessment of trauma injuries.*
8. *CT (Computerized Tomography) systems used for diagnostic assessment of trauma injuries.*

   Exception: *CT equipment used for treatment or in hybrid operating rooms, including those used for interventional CT, unless used for diagnostic assessment of trauma injuries.*
9. *Air conditioning units excluding Variable/Constant Air Volume (VAV/CAV) boxes up to 75 lbs.*
10. *Air handling units.*
11. *Chillers, including associated evaporators, and condensers.*
12. *Cooling Towers.*
13. *Transformers.*
14. *Electrical substations.*
15. *UPS and batteries.*
16. ~~*Distribution panels*~~ *Panelboards as defined in the California Electrical Code (CEC) Article 100.*
17. *Industrial Control panels as defined in the California Electrical Code (CEC) Article 100.*
18. *Power isolation and correction systems.*
19. *Motorized surgical lighting systems.*
20. *Motorized operating table systems*
21. *Internal communication servers and routers.*
22. *Medical gas and vacuum systems.*
23. *Electrical busways as defined in UL 857.*
24. *Electrical control panels powered by the life safety branch in accordance with the California Electrical Code (CEC) Article 517.32 or the critical branch in accordance with the California Electrical Code (CEC) Article 517.33.*

Exceptions:

1. *Equipment and components weighing not more than* ~~*20*~~ *50 lbs. supported directly on structures* ~~*(and not*~~ *or surface mounted on* ~~*other*~~ *equipment or components)* *that are not required to have special seismic certification by this section.* ~~*with supports and attachments in accordance with this code.*~~

2. *Movable (mobile) and temporary equipment/components, which are not anchored to structure or permanently attached to the building utility services such as electricity, gas, or water. For the purposes of this requirement, "permanently attached" shall include all electrical connections except plugs for duplex receptacles.*
3. *Pipes, ducts, conduits, and cable trays, excluding in-line equipment and components.*
4. *Underground tanks.*
5. *Electric motors, ~~and~~ pumps, and compressors up to 20 hp. ~~not more than 10 hp. rigidly supported directly on structures (and not mounted on other equipment or components) with supports and attachments in accordance with this code~~.*
6. *Electrical Controllers, Switches, Transformers, Circuit Breakers, and fuses up to 10 lbs. or 10 amperes.*
7. *Components where importance factor, I_p, is permitted to be 1.0 by this code.*
8. *Emergency generators up to 25 kilowatts.*
9. *Equipment and Components used for clinical trials only.*

1705A.13.4 Seismic isolation *and damping* systems. Seismic isolation *and damping* systems in ~~seismically isolated~~ structures assigned to Seismic Design Category ~~B, C,~~ D, E or F shall be tested in accordance with Section 17.8 *and 18.9* of ASCE 7.

Prototype and production testing and associated acceptance criteria for isolator units and damping devices shall be subject to preapproval by the building official. Testing exemption for similar units shall require approval by the building official.

...

1705A.19 ~~1705A.18~~ Shotcrete. *All shotcrete work shall be continuously inspected during placing by an approved agency ~~inspector specially approved for that purpose by the enforcement agency~~. The special shotcrete inspector shall check the materials, placing equipment, details of construction and construction procedure. The ~~inspector~~ an approved agency shall furnish a verified report that of his or her own personal knowledge the work covered by the report has been performed and materials used and installed in every material respect in compliance with the duly approved plans and specifications.*

1705A.19.1 ~~1705A.18.1~~ Visual examination for structural soundness of in-place shotcrete. *Completed shotcrete work shall be checked visually for reinforcing bar embedment, voids, rock pockets, sand streaks and similar deficiencies by examining a minimum of three 3-inch (76 mm) cores taken from three areas chosen by the design engineer which represent the worst congestion of reinforcing bars occurring in the project. Extra reinforcing bars may be added to noncongested areas and cores may be taken from these areas. The cores shall be examined by the special inspector and a report submitted to the enforcement agency prior to final approval of the shotcrete.*

Exception: *Shotcrete work fully supported on earth, minor repairs, and when, in the opinion of the enforcement agency, no special hazard exists.*

...

~~All existing amendments that are not revised above shall continue without any change.~~

CHAPTER 18
SOILS AND FOUNDATIONS

SECTION 1801
GENERAL

1801.1 Scope. The provisions of this chapter shall apply to building and foundation systems.

...

SECTION 1803
GEOTECHNICAL INVESTIGATIONS

1803.1 General. Geotechnical investigations shall be conducted in accordance with Section 1803.2 and reported in accordance with Section 1803.6. Where required by the *building official* or where geotechnical investigations involve in-situ testing, laboratory testing or engineering calculations, such investigations shall be conducted by a *registered design professional.*

1803.2 Investigations required. Geotechnical investigations shall be conducted in accordance with Sections 1803.3 through 1803.5.

Exception: The *building official* shall be permitted to waive the requirement for a geotechnical investigation where satisfactory data from adjacent areas is available that demonstrates an investigation is not necessary for any of the conditions in Sections 1803.5.1 through 1803.5.6 and Sections 1803.5.10 and 1803.5.11.

[OSHPD 2] *Geotechnical reports are not required for one-story, wood-frame and light-steel-frame buildings of Type V construction and 4,000 square feet (371 m^2) or less in floor area, not located within Earthquake Fault Zones or Seismic Hazard Zones as shown in the most recently published maps from the California Geological Survey (CGS). Allowable foundation and lateral soil pressure values may be determined from Table 1806.2.*

...

1803.6 Reporting.

...

11. [OSHPD 2] The report shall consider the effects of seismic hazard in accordance with Section 1803.7.

...

1803.7 Geohazard reports. [OSHPD 2]

Geohazard reports shall be required for all proposed construction.

Exceptions:

1. Reports are not required for one-story, wood-frame and light-steel-frame buildings of Type V construction and 4,000 square feet (371m^2) or less in floor area, not located within Earthquake Fault Zones or Seismic Hazard Zones as shown in the most recently published maps from the California Geological Survey (CGS); nonstructural, associated structural or voluntary structural alterations and incidental structural additions or alterations, and structural repairs for other than earthquake damage.

2. A previous report for a specific site may be resubmitted, provided that a reevaluation is made and the report is found to be currently appropriate.

The purpose of the geohazard report shall be to identify geologic and seismic conditions that may require project mitigations. The reports shall contain data which provide an assessment of the nature of the site and potential for earthquake damage based on appropriate investigations of the regional and site geology, project foundation conditions and the potential seismic shaking at the site. The report shall be prepared by a California-certified engineering geologist in consultation with a California-registered geotechnical engineer.

The preparation of the geohazard report shall consider the most recent CGS Note 48; Checklist for the Review of Engineering Geology and Seismology Reports for California Public School, Hospitals, and Essential Services Buildings. In addition, the most recent version of CGS Special Publication 42, Fault Rupture Hazard Zones in California, shall be considered for project sites proposed within an Alquist-Priolo Earthquake Fault Zone. The most recent version of CGS Special Publication 117, Guidelines for Evaluating and Mitigating Seismic Hazards in California, shall be considered for project sites proposed within a Seismic Hazard Zone. All conclusions shall be fully supported by satisfactory data and analysis.

In addition to requirements in Sections 1803.5.11 and 1803.5.12, the report shall include, but shall not be limited to, the following:

1. Site Geology.

2. Evaluation of the known active and potentially active faults, both regional and local.

3. Ground-motion parameters, as required by Section 1613 and ASCE 7.

***

1810.3.1.5 Helical piles. Helical piles shall be designed and manufactured in accordance with accepted engineering practice to resist all stresses induced by installation into the ground and service loads.

1810.3.1.5.1 Helical piles seismic requirements. [OSHPD 2] *For structures assigned to Seismic Design Category D, E or F, capacities of helical piles shall be determined in accordance with Section 1810.3.3 by at least two project specific pre-production tests for each soil profile, size and depth of helical pile. At least two percent of all production piles shall be proof tested to design ultimate strength determined by using load combinations in Section 1605.2.1.*

Helical piles shall satisfy corrosion resistance requirements of ICC-ES AC 358. In addition, all helical pile materials that are subject to corrosion shall include at least 1/16" corrosion allowance.

Helical piles shall not be considered as carrying any horizontal loads.

***

1810.3.10.4 Seismic reinforcement. For structures assigned to *Seismic Design Category* C, a permanent steel casing shall be provided from the top of the micropile down to the point of zero curvature. For structures assigned to *Seismic Design Category* D, E or F, the micropile shall be considered as an alternative system in accordance with Section 104.11. The alternative system design, supporting documentation and test data shall be submitted to the *building official* for review and approval.

1810.3.10.4.1 ***Seismic requirements. [OSHPD 2]*** *For structures assigned to Seismic Design Category D, E or F, a permanent steel casing having a minimum thickness of 3/8" shall be provided from the top of the micropile down to a minimum of 120 percent of the point of zero curvature. Capacity of micropiles shall be determined in accordance with Section 1810.3.3 by at least two project specific pre-production tests for each soil profile, size and depth of micropile. At least two percent of all production piles shall be proof tested to design ultimate strength determined by using load combinations in Section 1605.2.1.*

Steel casing length in soil shall be considered as unbonded and shall not be considered as contributing to friction. Casing shall provide confinement at least equivalent to hoop reinforcing required by ACI 318 Section 18.13.4. ~~21.12.4.~~

Reinforcement shall have Class 1 corrosion protection in accordance with PTI Recommendations for Prestressed Rock and Soil Anchors. Steel casing design shall include at least 1/16" corrosion allowance.

Micropiles shall not be considered as carrying any horizontal loads.

...

~~(All existing amendments that are not revised above shall continue without any change)~~

CHAPTER 18A
SOILS AND FOUNDATIONS

SECTION 1801A
GENERAL

1801A.1 Scope. The provisions of this chapter shall apply to building and foundation systems. ~~*Refer to Appendix J: Grading, for requirements governing grading, excavation and earthwork construction, including fills and embankments.*~~

1801A.1.1 Application. *The scope of application of Chapter 18A is as follows:*

1. ~~(Reserved for DSA)~~
2. *Applications listed in Section 1.10.1, and 1.10.4 regulated by the Office of Statewide Health Planning and Development (OSHPD). These applications include hospitals, skilled nursing facilities, intermediate care facilities, and correctional treatment centers.*

Exception: [OSHPD 2] *Single-story Type V skilled nursing or intermediate care facilities utilizing wood-frame or light-steel-frame construction as defined in Health and Safety Code Section 129725, which shall comply with Chapter 18 and any applicable amendments therein.*

1801A.1.2 Amendments in this chapter. *OSHPD adopt this chapter and all amendments.*

Exception: *Amendments adopted by only one agency appear in this chapter preceded with the appropriate acronym of the adopting agency, as follows:*

1. ~~(Reserved for DSA)~~
2. *Office of Statewide Health Planning and Development:*

[OSHPD 1] *- For applications listed in Section 1.10.1.*
[OSHPD 4] *- For applications listed in Section 1.10.4.*

...

SECTION 1803A
GEOTECHNICAL INVESTIGATIONS

1803A.1 General. Geotechnical investigations shall be conducted in accordance with Section 1803A.2 and reported in accordance with Section ~~1803.6~~ *1803A.7.* ~~Where required by the *building official* or where geotechnical investigations involve in-situ testing, laboratory testing or engineering calculations, such investigations shall be conducted by a *registered design professional*.~~ *The classification and investigation of the soil shall be made under the responsible charge of a California registered geotechnical engineer. All recommendations contained in geotechnical and geohazard reports shall be subject to the approval of the enforcement agency. All reports shall be prepared and signed by a*

registered geotechnical engineer, certified engineering geologist, and a registered geophysicist, where applicable.

1803*A*.2 Investigations required. Geotechnical investigations shall be conducted in accordance with Sections 1803*A*.3 through ~~1803*A*.5~~ *1803A.6*.

Exceptions: ~~The *building official* shall be permitted to waive the requirement for a geotechnical investigation where satisfactory data from adjacent areas is available that demonstrates an investigation is not necessary for any of the conditions in Sections 1803.5.1 through 1803.5.6 and Sections 1803.5.10 and 1803.5.11.~~

1. *Geotechnical reports are not required for one-story, wood-frame and light-steel-frame buildings of Type II or Type V construction and 4,000 square feet (371 m^2) or less in floor area, not located within Earthquake Fault Zones or Seismic Hazard Zones as shown in the most recently published maps from the California Geological Survey (CGS) or in seismic hazard zones as defined in the Safety Element of the local General Plan. Allowable foundation and lateral soil pressure values may be determined from Table 1806A.2.*

2. *A previous report for a specific site may be resubmitted, provided that a reevaluation is made and the report is found to be currently appropriate.*

...

1803*A*.3 Basis of investigation. Soil classification shall be based on observation and any necessary tests of the materials disclosed by borings, test pits or other subsurface exploration made in appropriate locations. Additional studies shall be made as necessary to evaluate slope stability, soil strength, position and adequacy of load-bearing soils, the effect of moisture variation on soil-bearing capacity, compressibility, liquefaction and expansiveness.

1803*A*.3.1 Scope of investigation. The scope of the geotechnical investigation including the number and types of borings or soundings, the equipment used to drill or sample, the in-situ testing equipment and the laboratory testing program shall be determined by a *registered design professional.*

There shall not be less than one boring or exploration shaft for each 5,000 square feet (465 m^2) of building area at the foundation level with a minimum of two provided for any one building. A boring may be considered to reflect subsurface conditions relevant to more than one building, subject to the approval of the enforcement agency.

Borings shall be of sufficient size to permit visual examination of the soil in place or, in lieu thereof, cores shall be taken.

Borings shall be of sufficient depth and size to adequately characterize sub-surface conditions.

...

1803*A*.5.4 Ground-water table. A subsurface soil investigation shall be performed to determine whether the existing ground-water table is above or within 5 feet (1524 mm) below the elevation of the lowest floor level where such floor is located below the finished ground level adjacent to the foundation.

~~**Exception:** A subsurface soil investigation to determine the location of the ground-water table shall not be required where waterproofing is provided in accordance with Section 1805.~~

...

1803A.6. Geohazard Reports. *Geohazard reports shall be required for all proposed construction.*

Exceptions:

1. *Reports are not required for one-story, wood-frame and light-steel-frame buildings of Type II or Type V construction and 4,000 square feet (371m^2) or less in floor area, not located within Earthquake Fault Zones or Seismic Hazard Zones as shown in the most recently published maps from the California Geological Survey (CGS) or in seismic hazard zones as defined in the Safety Element of the local General Plan; nonstructural, associated structural or voluntary structural alterations, and incidental structural additions or alterations, and structural repairs for other than earthquake damage.*

2. *A previous report for a specific site may be resubmitted, provided that a reevaluation is made and the report is found to be currently appropriate.*

The purpose of the geohazard report shall be to identify geologic and seismic conditions that may require project mitigations. The reports shall contain data which provide an assessment of the nature of the site and potential for earthquake damage based on appropriate investigations of the regional and site geology, project foundation conditions and the potential seismic shaking at the site. The report shall be prepared by a California-certified engineering geologist in consultation with a California-registered geotechnical engineer.

The preparation of the geohazard report shall consider the most recent CGS Note 48: Checklist for the Review of Engineering Geology and Seismology Reports for California Public School, Hospitals, and Essential Services Buildings. In addition, the most recent version of CGS Special Publication 42, Fault Rupture Hazard Zones in California, shall be considered for project sites proposed within an Alquist-Priolo Earthquake Fault Zone. The most recent version of CGS Special Publication 117, Guidelines for Evaluating and Mitigating Seismic Hazards in California, shall be considered for project sites proposed within a Seismic Hazard Zone. All conclusions shall be supported by satisfactory data and analysis.

In addition to requirements in Sections 1803A.5.11 and 1803A.5.12, the report shall include, but shall not be limited to, the following:

1. *Site Geology.*
2. *Evaluation of the known active and potentially active faults, both regional and local.*
3. *Ground-motion parameters, as required by Sections 1613A, 1616A & ASCE*

The three Next Generation Attenuation (NGA) relations used for the 2008 USGS seismic hazards maps for Western United States (WUS) shall be utilized to determine the site-specific ground motion. When supported by data and analysis, other NGA (NGA West 1) relations, that were not used for the 2008 USGS maps, shall be permitted as additions or substitutions. No fewer than three NGA relations shall be utilized.

***1803A.7 Geotechnical* Reporting.** Where geotechnical investigations are required, a written report of the investigations shall be submitted to the *building official* by the permit applicant at the time of *permit* application. *The geotechnical report shall provide completed evaluations of the foundation conditions of the site and the potential geologic/seismic hazards affecting the site. The geotechnical report shall include, but shall not be limited to, site-specific evaluations of design criteria related to the nature and extent of foundation materials, groundwater conditions, liquefaction potential, settlement potential and slope stability. The report shall contain the results of the analyses of problem areas identified in the geohazard report. The geotechnical report shall incorporate estimates of the characteristics of site ground motion provided in the geohazard report.* This geotechnical report shall include, but need not be limited to, the following information:

1. A plot showing the location of the soil investigations.
2. A complete record of the soil boring and penetration test logs and soil samples.
3. A record of the soil profile.

4. Elevation of the water table, if encountered. *Historic high ground water elevations shall be addressed in the report to adequately evaluate liquefaction and settlement potential.*
5. Recommendations for foundation type and design criteria, including but not limited to: bearing capacity of natural or compacted soil; provisions to mitigate the effects of expansive soils; mitigation of the effects of liquefaction, differential settlement and varying soil strength; and the effects of adjacent loads.
6. Expected total and differential settlement.
7. Deep foundation information in accordance with Section 1803*A*.5.5.
8. Special design and construction provisions for foundations of structures founded on expansive soils, as necessary.
9. Compacted fill material properties and testing in accordance with Section 1803*A*.5.8.
10. Controlled low-strength material properties and testing in accordance with Section 1803*A*.5.9.
11. *The report shall consider the effects of stepped footings addressed in Section 1809A.3.*
12. *The report shall consider the effects of seismic hazards in accordance with Section 1803A.6 and shall incorporate the findings of the associated geohazard report.*

...

SECTION 1805*A*
DAMPPROOFING AND WATERPROOFING

1805*A*.1 General. Walls or portions thereof that retain earth and enclose interior spaces and floors below grade shall be waterproofed and damp proofed in accordance with this section, with the exception of those spaces containing groups other than residential and institutional where such omission is not detrimental to the building or occupancy.

Ventilation for crawl spaces shall comply with Section 1203.4.

...

1805A.2 Dampproofing. Where hydrostatic pressure will not occur as determined by Section 1803*A*.5.4, floors and walls ~~for other than wood foundation systems~~ shall be dampproofed in accordance with this section. ~~Wood foundation systems shall be constructed in accordance with AWC PWF.~~

...

SECTION 1807*A*
FOUNDATION WALLS, RETAINING WALLS AND EMBEDDED POSTS AND POLES

1807A.1 Foundation walls. Foundation walls shall be designed and constructed in accordance with Sections 1807*A*.1.1 through 1807*A*.1.6. Foundation walls shall be supported by foundations designed in accordance with Section 1808*A*.

1807*A*.1.1 Design lateral soil loads. Foundation walls shall be designed for the lateral soil loads ~~set forth in Section 1610*A*.~~ *determined by a geotechnical investigation in accordance with Section 1803A.*

1807*A*.1.2 Unbalanced backfill height. Unbalanced backfill height is the difference in height between the exterior finish ground level and the lower of the top of the concrete footing that supports the foundation wall or the interior finish ground level. Where an interior concrete slab on grade is provided and is in contact with the interior surface of the foundation wall, the unbalanced backfill height shall be permitted to be measured from the exterior finish ground level to the top of the interior concrete slab.

1807*A*.1.3 Rubble stone foundation walls. *Not permitted by OSHPD.* ~~Foundation walls of rough or random rubble stone shall not be less than 16 inches (406 mm) thick. Rubble stone shall not be used for foundation walls of structures assigned to *Seismic Design Category* C, D, E or F.~~

1807*A*.1.4 Permanent wood foundation systems. *Not permitted by OSHPD.* ~~Permanent wood foundation systems shall be designed and installed in accordance with AWC PWF. Lumber and plywood shall be treated in accordance with AWPA U1 (Commodity Specification A, Use Category 4B and Section 5.2) and shall be identified in accordance with Section 2303*A*.1.9.1.~~

1807*A*.1.5 Concrete and masonry foundation walls. Concrete and masonry foundation walls shall be designed in accordance with Chapter 19*A* or 21*A*, as applicable.

~~**Exception:** Concrete and masonry foundation walls shall be permitted to be designed and constructed in accordance with Section 1807.1.6.~~

~~**1807.1.6 Prescriptive design of concrete and masonry foundation walls.** Concrete and masonry foundation walls that are laterally supported at the top and bottom shall be permitted to be designed and constructed in accordance with this section.~~

~~**1807.1.6.1 Foundation wall thickness.** The thickness of prescriptively designed foundation walls shall not be less than the thickness of the wall supported, except that foundation walls of at least 8-inch (203 mm) nominal width shall be permitted to support brick veneered frame walls and 10-inch-wide (254 mm) cavity walls provided the requirements of Section 1807.1.6.2 or 1807.1.6.3 are met.~~

~~**1807.1.6.2 Concrete foundation walls.** Concrete foundation walls shall comply with the following:~~

~~1. The thickness shall comply with the requirements of Table 1807.1.6.2.~~
~~2. The size and spacing of vertical reinforcement shown in Table 1807.1.6.2 are based on the use of reinforcement with a minimum yield strength of 60,000 psi (414 Mpa). Vertical reinforcement with a minimum yield strength of 40,000 psi (276 Mpa) or 50,000 psi (345 Mpa) shall be permitted, provided the same size bar is used and the spacing shown in the table is reduced by multiplying the spacing by 0.67 or 0.83, respectively.~~

~~**TABLE 1807.1.6.2**~~
~~**CONCRETE FOUNDATION WALLS**[b,c]~~

~~(Deleted Table not shown for clarity)~~

~~3. Vertical reinforcement, when required, shall be placed nearest the inside face of the wall a distance, *d*, from the outside face (soil face) of the wall. The distance, *d*, is equal to the wall thickness, *t*, minus 1.25 inches (32 mm) plus one-half the bar diameter, *db*, [$d = t - (1.25 + db / 2)$]. The reinforcement shall be placed within a tolerance of ± 3/8 inch (9.5 mm) where *d* is less than or equal to 8 inches (203 mm) or ± 1/2 inch (12.7 mm) where *d* is greater than 8 inches (203 mm).~~
~~4. In lieu of the reinforcement shown in Table 1807.1.6.2, smaller reinforcing bar sizes with closer spacings that provide an equivalent cross-sectional area of reinforcement per unit length shall be permitted.~~
~~5. Concrete cover for reinforcement measured from the inside face of the wall shall not be less than ¾ inch (19.1 mm). Concrete cover for reinforcement measured from the outside face of the wall shall not be less than 11/2 inches (38 mm) for No. 5 bars and smaller, and not less than 2 inches (51 mm) for larger bars.~~
~~6. Concrete shall have a specified compressive strength, *fc'*, of not less than 2,500 psi (17.2 MPa).~~
~~7. The unfactored axial load per linear foot of wall shall not exceed $1.2\ t\ fc'$ where *t* is the specified wall thickness in inches.~~

1807.1.6.2.1 Seismic requirements. Based on the *seismic design category* assigned to the structure in accordance with Section 1613, concrete foundation walls designed using Table 1905.1.7 shall be subject to the following limitations:

1. *Seismic Design Categories* A and B. No additional seismic requirements, except provide reinforcement around openings in accordance with Section 1909.6.3.
2. *Seismic Design Categories* C, D, E and F. Tables shall not be used except as allowed for plain concrete members in Section 1908.1.8.

1807.1.6.3 Masonry foundation walls. Masonry foundation walls shall comply with the following:

1. The thickness shall comply with the requirements of Table 1807.1.6.3(1) for plain masonry walls or Table 1807.1.6.3(2), 1807.1.6.3(3) or 1807.1.6.3(4) for masonry walls with reinforcement.
2. Vertical reinforcement shall have a minimum yield strength of 60,000 psi (414 Mpa).
3. The specified location of the reinforcement shall equal or exceed the effective depth distance, *d*, noted in Tables 1807.1.6.3(2), 1807.1.6.3(3) and 1807.1.6.3(4) and shall be measured from the face of the exterior (soil) side of the wall to the center of the vertical reinforcement. The reinforcement shall be placed within the tolerances specified in TMS 602/ACI 530.1/ASCE 6, Article 3.3.B.11 of the specified location.

TABLE 1807.1.6.3(1)
PLAIN MASONRY FOUNDATION WALLS[a,b,c]

(Deleted Table not shown for clarity)

4. Grout shall comply with Section 2103.12.
5. Concrete masonry units shall comply with ASTM C 90.
6. Clay masonry units shall comply with ASTM C 652 for hollow brick, except compliance with ASTM C 62 or ASTM C 216 shall be permitted where solid masonry units are installed in accordance with Table 1807.1.6.3(1) for plain masonry.
7. Masonry units shall be laid in running bond and installed with Type M or S mortar in accordance with Section 2103.2.1.
8. The unfactored axial load per linear foot of wall shall not exceed $1.2\,t\,f'_m$ where t is the specified wall thickness in inches and f'_m is the specified compressive strength of masonry in pounds per square inch.
9. At least 4 inches (102 mm) of solid masonry shall be provided at girder supports at the top of hollow masonry unit foundation walls.
10. Corbeling of masonry shall be in accordance with Section 2104.2. Where an 8-inch (203 mm) wall is corbeled, the top corbel shall not extend

TABLE 1807.1.6.3(2)
8-INCH MASONRY FOUNDATION WALLS WITH REINFORCEMENT WHERE d _ 5 INCHES[a,b,c]

(Deleted Table not shown for clarity)

higher than the bottom of the floor framing and shall be a full course of headers at least 6 inches (152 mm) in length or the top course bed joint shall be tied to the vertical wall projection. The tie shall be W2.8 (4.8 mm) and spaced at a maximum horizontal distance of 36 inches (914 mm). The hollow space behind the corbelled masonry shall be filled with mortar or grout.

1807.1.6.3.1 Alternative foundation wall reinforcement. In lieu of the reinforcement provisions for masonry foundation walls in Table 1807.1.6.3(2), 1807.1.6.3(3) or 1807.1.6.3(4), alternative reinforcing bar sizes and spacings having an equivalent cross-sectional area of reinforcement per linear foot (mm) of wall shall be permitted to be used,

~~provided the spacing of reinforcement does not exceed 72 inches (1829 mm) and reinforcing bar sizes do not exceed No. 11.~~

~~**1807.1.6.3.2 Seismic requirements.** Based on the *seismic design category* assigned to the structure in accordance with Section 1613, masonry foundation walls designed using Tables 1807.1.6.3(1) through 1807.1.6.3(4) shall be subject to the following limitations:~~

~~1. *Seismic Design Categories* A and B. No additional seismic requirements.~~
~~2. *Seismic Design Category* C. A design using Tables 1807.1.6.3(1) through 1807.1.6.3(4) is~~

~~**TABLE 1807.1.6.3(3)**~~
~~**10-INCH MASONRY FOUNDATION WALLS WITH REINFORCEMENT WHERE d = 6.75 INCHES**[a, b, c]~~

~~(Deleted Table not shown for clarity)~~

~~subject to the seismic requirements of Section 7.4.3 of TMS 402/ACI 530/ASCE 5.~~
~~3. *Seismic Design Category* D. A design using Tables 1807.1.6.3(2) through 1807.1.6.3(4) is subject to the seismic requirements of Section 7.4.4 of TMS 402/ACI 530/ASCE 5.~~
~~4. *Seismic Design Categories* E and F. A design using Tables 1807.1.6.3(2) through 1807.1.6.3(4) is subject to the seismic requirements of Section 7.4.5 of TMS 402/ACI 530/ASCE 5.~~

~~**TABLE 1807.1.6.3(4)**~~
~~**12-INCH MASONRY FOUNDATION WALLS WITH REINFORCEMENT WHERE d = 8.75 INCHES**[a,b,c]~~
~~(Deleted Table not shown for clarity)~~

1807*A*.2 Retaining walls. Retaining walls shall be designed in accordance with Sections 1807*A*.2.1 through 1807*A*.2.3. *Freestanding cantilever walls shall be design in accordance with Section 1807A.2.4.*

1807*A*.2.1 General. Retaining walls shall be designed to ensure stability against overturning, sliding, excessive foundation pressure and water uplift. Where a keyway is extended below the wall base with the intent to engage passive pressure and enhance sliding stability, lateral soil pressures on both sides of the keyway shall be considered in the sliding analysis.

1807*A*.2.2 Design lateral soil loads. Retaining walls shall be designed for the lateral soil loads ~~set forth in Section 1610.~~ *determined by a geotechnical investigation in accordance with Section 1803A and shall not be less than eighty percent of the lateral soil loads determined in accordance with Section 1610A. For use with the load combinations, lateral soil loads due to gravity loads surcharge shall be considered gravity loads and seismic earth pressure increases due to earthquake shall be considered as seismic loads.*

...

1807A.2.4 Freestanding Cantilever Walls. *A stability check against the possibility of overturning shall be performed for isolated spread footings which support freestanding cantilever walls. The stability check shall be made by dividing R_p used for the wall by 2.0. The allowable soil pressure may be doubled for this evaluation.*

Exception: *For overturning about the principal axis of rectangular footings with symmetrical vertical loading and the design lateral force applied, a triangular or trapezoidal soil pressure distribution which covers the full width of the footing will meet the stability requirement.*

...

SECTION 1808*A*
FOUNDATIONS

1808*A*.1 General. Foundations shall be designed and constructed in accordance with Sections 1808*A*.2 through 1808*A*.9. Shallow foundations shall also satisfy the requirements of Section 1809*A*. Deep foundations shall also satisfy the requirements of Section 1810*A*.

1808*A*.2 Design for capacity and settlement. Foundations shall be so designed that the allowable bearing capacity of the soil is not exceeded, and that differential settlement is minimized. Foundations in areas with expansive soils shall be designed in accordance with the provisions of Section 1808*A*.6.

The enforcing agency may require an analysis of foundation elements to determine subgrade deformations in order to evaluate their effect on the superstructure, including story drift.

...

1808*A*.8 Concrete foundations. The design, materials and construction of concrete foundations shall comply with Sections1808*A*.8.1 through 1808*A*.8.6 and the provisions of Chapter 19*A*.

~~Exception: Where concrete footings supporting walls of light-frame construction are designed in accordance with Table 1809.7, a specific design in accordance with Chapter 19 is not required.~~

...

TABLE 1808*A*.8.1
MINIMUM SPECIFIED COMPRESSIVE STRENGTH f'_c OF CONCRETE OR GROUT

FOUNDATION ELEMENT OR CONDITION	SPECIFIED COMPRESSIVE STRENGTH, f'_c
~~1. Foundations for structures assigned to Seismic Design Category A, B or C~~	~~2,500 psi~~
~~2a. Foundations for Group R or U occupancies of light-frame construction, two stories or less in height, assigned to Seismic Design Category D, E or F~~	~~2,500 psi~~
~~2b~~ *1.* Foundations for other structures assigned to Seismic Design Category D, E or F	3,000 psi
~~3~~ *2.* Precast nonprestressed driven piles	4,000 psi
~~4~~ *3.* Socketed drilled shafts	4,000 psi
~~5~~ *4.* Micropiles	4,000 psi
~~6~~ *5.* Precast prestressed driven piles	5,000 psi

For SI: 1 pound per square inch = 0.00689MPa.

...

1808*A*.8.6 Seismic requirements. See Section 1905*A* for additional requirements for foundations of structures assigned to *Seismic Design Category* ~~C,~~ D, E or F.

For structures assigned to *Seismic Design Category* D, E or F, provisions of Sections 18.13 of ACI 318 shall apply where not in conflict with the provisions of Sections 1808*A* through 1810*A*.

~~**Exceptions:**~~

~~1. Detached one- and two-family dwellings of light-frame construction and two stories or less above *grade plane* are not required to comply with the provisions of Section 18.13 of ACI 318.~~

~~2. Section 18.13.4.3(a) of ACI 318 shall not apply.~~

...

SECTION 1809*A*
SHALLOW FOUNDATIONS

1809*A*.1 General. Shallow foundations shall be designed and constructed in accordance with Sections 1809*A*.2 through 1809*A*.13.

1809*A*.2 Supporting soils. Shallow foundations shall be built on undisturbed soil, compacted fill material or controlled low-strength material (CLSM). Compacted fill material shall be placed in accordance with Section 1804*A*.5. CLSM shall be placed in accordance with Section 1804*A*.6.

1809*A*.3 Stepped footings. The top surface of footings shall be level. The bottom surface of footings shall be permitted to have a slope not exceeding one unit vertical in 10 units horizontal (10-percent slope). Footings shall be stepped where it is necessary to change the elevation of the top surface of the footing or where the surface of the ground slopes more than one unit vertical in 10 units horizontal (10-percent slope).

Individual steps in continuous footings shall not exceed 18 inches (457 mm) in height and the slope of a series of such steps shall not exceed 1 unit vertical to 2 units horizontal (50% slope) unless otherwise recommended by a geotechnical report. The steps shall be detailed on the drawings. The local effects due to the discontinuity of the steps shall be considered in the design of the foundation.

...

1809*A*.7 Prescriptive footings for light-frame construction. *Not permitted by OSHPD .* ~~Where a specific design is not provided, concrete or masonry-unit footings supporting walls of light-frame construction shall be permitted to be designed in accordance with Table 1809.7.~~

~~**TABLE 1809.7**~~
~~**PRESCRIPTIVE FOOTINGS SUPPORTING WALLS OF LIGHT-FRAME CONSTRUCTION**~~[a,b,c,d,e]

~~(Table not shown for clarity)~~

1809*A*.8 Plain concrete footings. *Not permitted by OSHPD.* ~~The edge thickness of plain concrete footings supporting walls of other than light-frame construction shall not be less than 8 inches (203 mm) where placed on soil or rock.~~

~~**Exception:** For plain concrete footings supporting Group R-3 occupancies, the edge thickness is permitted to be 6 inches (152 mm), provided that the footing does not extend beyond a distance greater than the thickness of the footing on either side of the supported wall.~~

1809*A*.9 Masonry-unit footings. *Not permitted by OSHPD.* ~~The design, materials and construction of masonry-unit footings shall comply with Sections 1809.9.1 and 1809.9.2, and the provisions of Chapter 21.~~

~~**Exception:** Where a specific design is not provided, masonry-unit footings supporting walls of light-frame construction shall be permitted to be designed in accordance with Table 1809.7.~~

~~**1809.9.1 Dimensions.** Mansonry-unit footings shall be laid in Type M or S mortar complying with Section 2103.8 and the depth shall not be less than twice the projection beyond the wall, pier or~~

~~column. The width shall not be less than 8 inches (203 mm) wider than the wall supported thereon.~~

~~**1809.9.2 Offsets.** The maximum offset of each course in brick foundation walls stepped up from the footings shall be 11/2 inches (38 mm) where laid in single courses, and 3 inches (76 mm) where laid in double courses.~~

1809A.10 *Reserved.* ~~**Pier and curtain wall foundations.** Except in *Seismic Design Categories* D, E and F, pier and curtain wall foundations shall be permitted to be used to support light-frame construction not more than two *stories above grade plane*, provided the following requirements are met:~~

~~1. All load-bearing walls shall be placed on continuous concrete footings bonded integrally with the *exterior wall* footings.~~
~~2. The minimum actual thickness of a load-bearing masonry wall shall not be less than 4 inches (102 mm) nominal or 35/8 inches (92 mm) actual thickness, and shall be bonded integrally with piers spaced 6 feet (1829 mm) on center (o.c.).~~
~~3. Piers shall be constructed in accordance with Chapter 21 and the following:~~
~~3.1. The unsupported height of the masonry piers shall not exceed 10 times their least dimension.~~
~~3.2. Where structural clay tile or hollow concrete masonry units are used for piers supporting beams and girders, the cellular spaces shall be filled solidly with concrete or Type M or S mortar.~~

~~**Exception:** Unfilled hollow piers shall be permitted where the unsupported height of the pier is not more than four times its least dimension.~~

~~3.3. Hollow piers shall be capped with 4 inches (102 mm) of solid masonry or concrete or the cavities of the top course shall be filled with concrete or grout.~~
~~4. The maximum height of a 4-inch (102 mm) load-bearing masonry foundation wall supporting wood-frame walls and floors shall not be more than 4 feet (1219 mm) in height.~~
~~5. The unbalanced fill for 4-inch (102 mm) foundation walls shall not exceed 24 inches (610 mm) for solid masonry, nor 12 inches (305 mm) for hollow masonry.~~

...

1809A.12 Timber footings. *Not permitted by OSHPD.* ~~Timber footings shall be permitted for buildings of Type V construction and as otherwise *approved* by the *building official*. Such footings shall be treated in accordance with AWPA U1 (Commodity Specification A, Use Category 4B). Treated timbers are not required where placed entirely below permanent water level, or where used as capping for wood piles that project above the water level over submerged or marsh lands. The compressive stresses perpendicular to grain in untreated timber footings supported upon treated piles shall not exceed 70 percent of the allowable stresses for the species and grade of timber as specified in the AF&PA NDS.~~

...

1809A.14 Pipes and Trenches. *Unless otherwise recommended by the soils report, open or backfilled trenches parallel with a footing shall not be below a plane having a downward slope of 1 unit vertical to 2 units horizontal (50% slope) from a line 9 inches (229 mm) above the bottom edge of the footing, and not closer than 18 inches (457 mm) from the face of such footing.*

Where pipes cross under footings, the footings shall be specially designed. Pipe sleeves shall be provided where pipes cross through footings or footing walls and sleeve clearances shall provide for possible footing settlement, but not less than 1 inch (25 mm) all around pipe.

Exception: *Alternate trench locations and pipe clearances shall be permitted when approved by registered design professional in responsible charge and the enforcement agent.*

...

SECTION 1810*A*
DEEP FOUNDATIONS

1810*A*.1 General. Deep foundations shall be analyzed, designed, detailed and installed in accordance with Sections 1810*A*.1 through 1810*A*.4.

...

1810*A*.3.1.5 Helical piles. Helical piles shall be designed and manufactured in accordance with accepted engineering practice to resist all stresses induced by installation into the ground and service loads.

1810A.3.1.5.1 Helical Piles Seismic Requirements. *For structures assigned to Seismic Design Category D, E or F, capacities of helical piles shall be determined in accordance with Section 1810A.3.3 by at least two project specific pre-production tests for each soil profile, size and depth of helical pile. At least two percent of all production piles shall be proof tested to the load determined in accordance with Section 1616A.1.16.*

Helical piles shall satisfy corrosion resistance requirements of ICC-ES AC 358. In addition, all helical pile materials that are subject to corrosion shall include at least 1/16" corrosion allowance.

Helical piles shall not be considered as carrying any horizontal loads.

...

1810*A*.3.2 Materials. The materials used in deep foundation elements shall satisfy the requirements of Sections 1810*A*.3.2.1 through 1810*A*.3.2.8, as applicable.

...

~~**1810.3.2.1.2 ACI 318 Equation (25.7.3.3).** Where this chapter requires detailing of concrete deep foundation elements in accordance with Section 18.7.5.4 of ACI 318, compliance with Equation (25.7.3.3) of ACI 318 shall not be required.~~

...

1810*A*.3.2.4 Timber. *Not permitted by OSHPD.* ~~Timber deep foundation elements shall be designed as piles or poles in accordance with AF&PA NDS. Round timber elements shall conform to ASTM D 25. Sawn timber elements shall conform to DOC PS 20.~~

~~**1810.3.2.4.1 Preservative treatment.** Timber deep foundation elements used to support permanent structures shall be treated in accordance with this section unless it is established that the tops of the untreated timber elements will be below the lowest ground water level assumed to exist during the life of the structure. Preservative and minimum final retention shall be in accordance with AWPA U1 (Commodity Specification E, Use Category 4C) for round timber elements and AWPA U1 (Commodity Specification A, Use Category 4B) for sawn timber elements. Preservative treated timber elements shall be subject to a quality control program administered by an *approved agency*. Element cutoffs shall be treated in accordance with AWPA M4.~~

...

1810A.3.3.1.2 Load tests. Where design compressive loads are greater than those determined using the allowable stresses specified in Section 1810A.3.2.6, where the design load for any deep foundation element is in doubt, *where driven deep foundation elements are installed by means other than a pile hammer,* or where cast-in-place deep foundation elements have an enlarged base formed either by compacting concrete or by driving a precast base, control test elements shall be tested in accordance with ASTM D 1143 *including Procedure G: Cyclic Loading Test* or ASTM D 4945. At least one element shall be load tested in each area of uniform subsoil conditions. Where required by the building official, additional elements shall be load tested where necessary to establish the

safe design capacity. The resulting allowable loads shall not be more than one-half of the ultimate axial load capacity of the test element as assessed by one of the published methods listed in Section 1810A.3.3.1.3 with consideration for the test type, duration and subsoil. The ultimate axial load capacity shall be determined by a registered design professional with consideration given to tolerable total and differential settlements at design load in accordance with Section 1810A.2.3. In subsequent installation of the balance of deep foundation elements, all elements shall be deemed to have a supporting capacity equal to that of the control element where such elements are of the same type, size and relative length as the test element; are installed using the same or comparable methods and equipment as the test element; are installed in similar subsoil conditions as the test element; and, for driven elements, where the rate of penetration (e.g., net displacement per blow) of such elements is equal to or less than that of the test element driven with the same hammer through a comparable driving distance, *or where the downward pressure and torque on such elements is greater than or equal to that applied to the test element that determined the ultimate axial load capacity at a comparable driving distance*.

...

1810A.3.3.1.5 Uplift capacity of a single deep foundation element. Where required by the design, the uplift capacity of a single deep foundation element shall be determined by an approved method of analysis based on a minimum factor of safety of three or by load tests conducted in accordance with ASTM D 3689. The maximum allowable uplift load shall not exceed the ultimate load capacity as determined in Section 1810A.3.3.1.2, using the results of load tests conducted in accordance with ASTM D3689 *including the Cyclic Loading Procedure*, divided by a factor of safety of two.

Exception: Where uplift is due to wind or seismic loading, the minimum factor of safety shall be two where capacity is determined by an analysis and one and a half where capacity is determined by load tests.

...

1810A.3.3.2 Allowable lateral load. Where required by the design, the lateral load capacity of a single deep foundation element or a group thereof shall be determined by an *approved* method of analysis or by lateral load tests *in accordance with ASTM D3966, including the Cyclic Loading Procedure,* to at least twice the proposed design working load. The resulting allowable load shall not be more than one-half of the load that produces a gross lateral movement of 1 inch (25 mm) at the lower of the top of foundation element and the ground surface, unless it can be shown that the predicted lateral movement shall cause neither harmful distortion of, nor instability in, the structure, nor cause any element to be loaded beyond its capacity.

...

1810*A*.3.5.3.3 Structural Steel Sheet Piling. Individual sections of structural steel sheet piling shall conform to the profile indicated by the manufacturer, and shall conform to general requirements specified by ASTM A6.

Installation of sheet piling shall satisfy inspection, monitoring, and observation requirements in Sections 1812A.6 and 1812A.7.

...

1810*A*.3.8.3 Precast prestressed piles. Precast prestressed concrete piles shall comply with the requirements of Sections 1810*A*.3.8.3.1 through 1810*A*.3.8.3.3.

...

1810*A*.3.8.3.2 Seismic reinforcement in Seismic Design Category C. *Not permitted by OSHPD.* ~~For structures assigned to *Seismic Design Category* C in accordance with Section 1613, precast prestressed piles shall have transverse reinforcement in~~

~~accordance with this section. The volumetric ratio of spiral reinforcement shall not be less than the amount required by the following formula for the upper 20 feet (6096 mm) of the pile.~~

~~$\rho_s = 0.12 f'_c / f_{yh}$ (Equation 18-5)~~

~~where:~~
~~f'_c = Specified compressive strength of concrete, psi (MPa).~~
~~f_{yh} = Yield strength of spiral reinforcement ≤ 85,000 psi (586 MPa).~~
~~ρ_s = Spiral reinforcement index (vol. spiral/vol. core).~~

~~At least one-half the volumetric ratio required by Equation 18-5 shall be provided below the upper 20 feet (6096 mm) of the pile.~~

1810*A*.3.8.3.3 Seismic reinforcement in Seismic Design Categories D through F. For structures assigned to *Seismic Design Category* D, E or F, ~~*in accordance with Section 1613A,*~~ precast prestressed piles shall have transverse reinforcement in accordance with the following:

...

~~This required amount of spiral reinforcement is permitted to be obtained by providing an inner and outer spiral.~~

...

1810*A*.3.9.4.2.1 Site Classes A through D. For Site Class A, B, C or D sites, transverse confinement reinforcement shall be provided in the element in accordance with Sections 18.7.5.2, 18.7.5.3 and 18.7.5.4 of ACI 318 within three times the least element dimension *at* ~~of~~ the bottom of the pile cap. A transverse spiral reinforcement ratio of not less than one-half of that required in Section 18.7.5.4 ~~(a)~~ of ACI 318 shall be permitted *for concrete deep foundation elements.*

1810*A*.3.9.4.2.2 Site Classes E and F. For Site Class E or F sites, transverse confinement reinforcement shall be provided in the element in accordance with Sections 18.7.5.2, 18.7.5.3 and 18.7.5.4 of ACI 318 within seven times the least element dimension *at* ~~of~~ the *bottom of the* pile cap and within seven times the least element dimension *at* ~~of~~ the interfaces of strata that are hard or stiff and strata that are liquefiable or are composed of soft- to medium-stiff clay.

...

1810*A*.3.10 Micropiles. Micropiles shall be designed and detailed in accordance with Sections 1810*A*.3.10.1 through 1810*A*.3.10.4.

...

~~**1810A.3.10.4 Seismic reinforcement.** For structures assigned to *Seismic Design Category* C, a permanent steel casing shall be provided from the top of the micropile down to the point of zero curvature. For structures assigned to *Seismic Design Category* D, E or F, the micropile shall be considered as an alternative system in accordance with Section 104.11. The alternative system design, supporting documentation and test data shall be submitted to the *building official* for review and approval.~~

1810A.3.10.4 Seismic requirements. *For structures assigned to Seismic Design Category D, E, or F, a permanent steel casing having a minimum thickness of 3/8" shall be provided from the top of the micropile down to a minimum of 120 percent of the point of zero curvature. Capacity of micropiles shall be determined in accordance with Section 1810A.3.3 by at least two project specific pre-production tests for each soil profile, size and depth of micropile. At least two percent of all production piles shall be proof tested to the load determined in accordance with Section* <u>*1616A.1.16*</u> ~~*1615A.1.10.*~~

Steel casing length in soil shall be considered as unbonded and shall not be considered as contributing to friction. Casing shall provide confinement at least equivalent to hoop reinforcing required by ACI 318 Section 18.13.4. ~~21.12.4~~
Reinforcement shall have Class 1 corrosion protection in accordance with PTI Recommendations for Prestressed Rock and Soil Anchors. Steel casing design shall include at least 1/16" corrosion allowance.

Micropiles shall not be considered as carrying any horizontal loads.

...

1810A.4 Installation. Deep foundations shall be installed in accordance with Section 1810A.4. Where a single deep foundation element comprises two or more sections of different materials or different types spliced together, each section shall satisfy the applicable conditions of installation.

1810A.4.1 Structural integrity. Deep foundation elements shall be installed in such a manner and sequence as to prevent distortion or damage that may adversely affect the structural integrity of adjacent structures or of foundation elements being installed or already in place and as to avoid compacting the surrounding soil to the extent that other foundation elements cannot be installed properly.

...

1810A.4.1.5 Defective timber piles. *Not permitted by OSHPD.* ~~Any substantial sudden increase in rate of penetration of a timber pile shall be investigated for possible damage. If the sudden increase in rate of penetration cannot be correlated to soil strata, the pile shall be removed for inspection or rejected.~~

...

SECTION 1811A
PRESTRESSED ROCK AND SOIL FOUNDATION ANCHORS

1811A.1 General. *The requirements of this section address the use of vertical rock and soil anchors in resisting seismic or wind overturning forces resulting in tension on shallow foundations.*

1811A.2 Adoption. *Except for the modifications as set forth in Sections 1811A.3 and 1811A.4, all Prestressed Rock and Soil Foundation Anchors shall comply with ~~be designed in accordance with~~ PTI Recommendations for Prestressed Rock and Soil Anchors.*

1811A.3 Geotechnical Requirements. *Geotechnical report for the Prestressed Rock & Soil Foundation Anchors shall address the following:*

1. *Minimum diameter and minimum spacing for the anchors including consideration of group effects.*
2. *Maximum unbonded length and minimum bonded length of the tendon.*
3. *Maximum recommended anchor tension capacity based upon the soil or rock strength / grout bond and anchor depth / spacing.*
4. *Allowable bond stress at the ground / grout interface and applicable factor of safety for ultimate bond stress.*
5. *Anchor axial tension stiffness recommendations at the anticipated anchor axial tension displacements, when required for structural analysis.*
6. *Minimum grout pressure for installation and post-grout pressure.*
7. *Class I Corrosion Protection is required for all permanent anchors. Geotechnical report shall specify the corrosion protection recommendations for temporary anchors.*
8. *Performance test shall be at a minimum of 1.6 times the design loads. There shall be a minimum of two preproduction test anchors. Preproduction test anchors shall be tested to ultimate load or 0.80 times the specified minimum tensile strength of*

the tendon. A Creep test is required for all prestressed anchors with greater than 10 kips of lock-off prestressing load.

9. *Lock-off prestressing load requirements.*
10. *Acceptable Drilling methods.*
11. *Geotechnical observation and monitoring requirements.*

1811A.4 Structural Requirements.

1. *Tendons shall be thread-bar anchors conforming to ASTM A722.*
2. *The anchors shall be placed vertical.*
3. *Design Loads shall be based upon the load combinations in Section 1605A.3.1 and shall not exceed 60 percent of the specified minimum tensile strength of the tendons.*
4. *Ultimate Load shall be based upon Section 1616A.1.16 ~~1615A.1.10~~ and shall not exceed 80 percent of the specified minimum tensile strength of the tendons.*
5. *The anchor shall be designed to fail in grout bond to the soil or rock before pullout of the soil wedge by group effect.*
6. *Foundation design shall incorporate the effect of lock-off loads.*
7. *Design shall account for as-built locations of soil anchors considering all the acceptable construction tolerances.*
8. *Design shall account for both short and long term deformation.*
9. *Enforcement agency may require consideration of anchor deformation in evaluating deformation compatibility or building drift where it may be significant.*

SECTION 1812A
EARTH RETAINING SHORING

(Relocated from Section J106.2) ***~~J106.2 Earth retaining shoring. [OSHPD 1 & 4]~~***

1812A.1 ~~J106.2.1~~ General. *The requirements of this section shall apply to temporary and permanent earth retaining shoring using soldier piles and lagging with or without tie-back anchors in soil or rock, only when existing or new ~~OSHPD 1 or 4~~ facilities are affected. Shoring used as construction means and methods only, which does not affect existing or new ~~OSHPD 1 or 4~~ facilities, are not regulated by this section ~~OSHPD~~ and shall satisfy the requirements of the authorities having jurisdiction.*

Design, construction, testing, and inspection shall satisfy the requirements of this code except as modified in Sections 1812A.2 ~~J106.2.2~~ through ~~J106.2.8~~ 1812A.8.

1812A.2 ~~J106.2.2~~ Duration. *Shoring shall be considered temporary when elements of the shoring will be exposed to site conditions for a period of less than one (1) year, and shall be considered permanent otherwise. Permanent shoring shall account for the increase in lateral soil pressure due to earthquake. At the end of the construction period, the existing and new structures shall not rely on the temporary shoring for support in anyway. Wood components shall not be used for permanent shoring lasting more than two (2) years. Wood components of the temporary shoring that may affect the performance of permanent structure shall be removed after the shoring is no longer required.*

All components of the shoring shall have corrosion protection or preservative treatment for their expected duration. Wood components of the temporary shoring that will not be removed shall be treated in accordance with AWPA U1 (Commodity Specification A, Use Category 4B and Section 5.2), and shall be identified in accordance with Section 2303.1.9.1 ~~2303.1.8.1~~.

1812A.3 ~~J106.2.3~~ Surcharge. *Surcharge pressure due to footings, traffic, or other sources shall be considered in design. If the footing surcharge is located within the semi-circular distribution or bulb of earth pressure (when shoring is located close to a footings), lagging shall be designed for lateral earth pressure due to footing surcharge. Soil arching effects may be considered in the design of lagging. Underpinning of the footing may be used in lieu of designing the shoring and lagging for surcharge pressure. Alternatively, continuously contacting drilled pier shafts near the*

footings shall be permitted. The lateral surcharge design pressure shall be derived using Boussinesq equations modified for the distribution of stresses in an elastic medium due to a uniform, concentrated or line surface load as appropriate and soil arching effects.

1812A.4 ~~J106.2.4~~ Design and testing. *Except for the modifications as set forth in Sections 1812A.4.1 ~~J106.2.4.1 and J106.2.4.2~~ through 1812A.4.3 below, all Prestressed Rock and Soil Tie-back Anchors shall ~~be designed and tested in accordance~~ comply with PTI Recommendations for Prestressed Rock and Soil Anchors (PTI-2004).*

1812A.4.1 ~~J106.2.4.1~~ Geotechnical requirements. *The geotechnical report for the earth retaining shoring shall address the following:*

1. *Minimum diameter and minimum spacing for the anchors including consideration of group effects.*
2. *Maximum unbonded length and minimum bonded length of the tie-back anchors.*
3. *Maximum recommended anchor tension capacity based upon the soil or rock strength / grout bond and anchor depth / spacing.*
4. *Allowable bond stress at the ground / grout interface and applicable factor of safety for ultimate bond stress for the anchor. For permanent anchors, a minimum factor of safety of 2.0 shall be applied to ground soil interface as required by PTI-2004 Section 6.6.*
5. *Minimum grout pressure for installation and post-grout pressure for the anchor. The presumptive post grout pressure of 300 psi may be used for all soil type.*
6. *Class I Corrosion Protection is required for all permanent anchors. The geotechnical report shall specify the corrosion protection recommendations for temporary anchors.*
7. *Performance test for the anchors shall be at a minimum of two (2) times the design loads and shall not exceed 80% of the specified minimum tensile strength of the anchor rod. A creep test is required for all prestressed anchors that are performance tested. All production anchors shall be tested at 150% of design loads and shall not be greater than 70% of the specified minimum tensile strength of the anchor rod.*
8. *Earth pressure, surcharge pressure, and the seismic increment of earth pressure loading, when applicable.*
9. *Maximum recommended lateral deformation at the top of the soldier pile, at the tie-back anchor locations, and the drilled pier concrete shafts at the lowest grade level.*
10. *Allowable vertical soil bearing pressure, friction resistance, and lateral passive soil resistance for the drilled pier concrete shafts and associated factors of safety for these allowable capacities.*
11. *Soil-pier shaft / pile interaction assumptions and lateral soil stiffness to be used in design for drilled pier concrete shaft or pile lateral loads.*
12. *Acceptable drilling methods.*
13. *Geotechnical observation and monitoring recommendations.*

1812A.4.2 ~~J106.2.4.2~~ Structural requirements:

1. *Tendons shall be thread-bar anchors conforming to ASTM A 722.*
2. *Anchor design loads shall be based upon the load combinations in Section 1605A.3.1 and shall not exceed 60 percent of the specified minimum tensile strength of the tendons.*
3. *The anchor shall be designed to fail in grout bond to the soil or rock before pullout of the soil wedge.*
4. *Design of shoring system shall account for as-built locations of soil anchors considering all specified construction tolerances in Section 1812A.8 ~~J106.2.8~~.*
5. *Design of shoring system shall account for both short and long term deformation.*

1812A.4.3 ~~J106.2.4.3~~ Testing of tie-back anchors:

1. *The geotechnical engineer shall keep a record at job site of all test loads, total anchor movement, and report their accuracy.*
2. *If a tie-back anchor initially fails the testing requirements, the anchor shall be permitted to be re-grouted and retested. If anchor continues to fail, the followings steps shall be taken:*
   a. *The contractor shall determine the cause of failure – variations of the soil conditions, installation methods, materials, etc.*
   b. *Contractor shall propose a solution to remedy the problem. The proposed solution will need to be reviewed and approved by geotechnical engineer, shoring design engineer, and the building official.*
3. *After a satisfactory test, each anchor shall be locked-off in accordance with Section 8.4 of PTI 2004.*
4. *The shoring design engineer shall specify design loads for each anchor.*

1812A.5 ~~J106.2.5~~ Construction: *The construction procedure shall address the following:*

1. *Holes drilled for piles / tie-back anchors shall be done without detrimental loss of ground, sloughing or caving of materials and without endangering previously installed shoring members or existing foundations.*
2. *Drilling of earth anchor shafts for tie-backs shall occur when the drill bench reaches two to three feet below the level of the tie-back pockets.*
3. *Casing or other methods shall be used where necessary to prevent loss of ground and collapse of the hole.*
4. *The drill cuttings from earth anchor shaft shall be removed prior to anchor installation.*
5. *Unless tremie methods are used, all water and loose materials shall be removed from the holes prior to installing piles / tie-backs.*
6. *Tie-back anchor rods with attached centralizing devices shall be installed into the shaft or through the drill casing. Centralizing device shall not restrict movement of the grout.*
7. *After lagging installation, voids between lagging and soil shall be backfilled immediately to the full height of lagging.*
8. *The soldier piles shall be placed within specified tolerances in the drilled hole and braced against displacement during grouting. Fill shafts with concrete up to top of footing elevation, rest of the shaft can generally be filled with lean concrete. Excavation for lagging shall not be started until concrete has achieved sufficient strength for all anticipated loads as determined by the shoring design engineer.*
9. *Where boulders and / or cobbles have been identified in the geotechnical reports, contractor shall be prepared to address boulders and / or cobbles that may be encountered during the drilling of soldier piles and Tie-back anchors.*
10. *The grouting equipment shall produce grout free of lumps and indispensed cement. The grouting equipment shall be sized to enable the grout to be pumped in continuous operation. The mixer shall be capable of continuously agitating the grout.*
11. *The quantity of grout and grout pressure shall be recorded. The grout pressure shall be controlled to prevent excessive heave in soils or fracturing rock formations.*
12. *If post-grouting is required, post grouting operation shall be performed after initial grout has set for 24-hours in the bond length only. Tie-backs shall be grouted over a sufficient length (anchor bond length) to transfer the maximum anchor force to the anchor grout.*
13. *Testing of anchors may be performed after post-grouting operations provided grout has reached strength of 3,000 psi as required by PTI-2004 Section 6.11.*
14. *Anchor rods shall be tensioned straight and true. Excavation directly below the anchors shall not continue before those anchors are tested.*

1812A.6 ~~J106.2.6~~ Inspection, survey monitoring, and observation

1. *The shoring design engineer or his designee shall make periodic inspections of the job site for the purpose of observing the installation of shoring system, testing of tie-back anchors, and*

monitoring of survey.

2. *Testing, inspection, and observation shall be in accordance with testing, inspection and observation requirements approved by the building official. The following activities and materials shall be tested, inspected, or observed by the special inspector and geotechnical engineer:*
   a. *Sampling and testing of concrete in soldier pile and tie-back anchor shafts.*
   b. *Fabrication of tie-back anchor pockets on soldier beams*
   c. *Installation and testing of tie-back anchors.*
   d. *Survey monitoring of soldier pile and tie-back load cells.*
   e. *Survey Monitoring of existing buildings.*
3. *A complete and accurate record of all soldier pile locations, depths, concrete strengths, tie-back locations and lengths, tie-back grout strength, quantity of concrete per pile, quantity of grout per tie-back and applied tie-back loads shall be maintained by the special inspector and geotechnical engineer. The shoring design engineer shall be notified of any unusual conditions encountered during installation.*
4. *Calibration data for each test jack, pressure gauge, and master pressure gauge shall be verified by the special inspector and geotechnical engineer. The calibration tests shall be performed by an independent testing laboratory and within 120 calender days of the data submitted.*
5. *Monitoring points shall be established at the top and at the anchor heads of selected soldier piles and at intermediate intervals as considered appropriate by the geotechnical engineer.*
6. *Control points shall be established outside the area of influence of the shoring system to ensure the accuracy of the monitoring readings.*

7. *The periodic basis of shoring monitoring, as a minumum, shall be as follows:*
   a. *Intitial monitoring shall be performed prior to any excavation.*
   b. *Once excavation has begun, the periodic readings shall be taken weekly until excavation reaches the estimated subgrade elevation and the permanent foundation is complete.*
   c. *If performance of the shoring is within established guidelines, shoring design engineer may permit the periodic readings to be bi-weekly. Once initiated, bi-weekly readings shall continue until the building slab at ground floor level is completed and capable of transmitting lateral loads to the permanent structure. Thereafter, readings can be monthly.*
   d. *Where the building has been designed to resist lateral earth pressures, the periodic monitoring of the soldier piles and adjacent structure can be discontinued once the ground floor diaphragm and subterranean portion of the structure is capable of resisting lateral soil loads and approved by the shoring design engineer, geotechnical engineer, and the building official.*
   e. *Additional readings shall be taken when requested by special inspector, shoring design engineer, geotechnical engineer, or the building official.*

8. *Monitoring reading shall be submitted to shoring design engineer, engineer in responsible charge, and the building official within 3 working days after they are conducted. Monitoring readings shall be accurate to within 0.01 feet. Results are to be submitted in tabular form showing at least the intial date of monitoring and reading, current monitoring date and reading and difference between the two readings.*
9. *If the total cummulative horizontal or vertical movement (from start of construction) of the existing buildings reaches ½" or soldier piles reaches 1" all excavation activities shall be suspended. The geotechnical and shoring design engineer shall determine the cause of movement, if any, and recommend corrective measures, if necessary, before excavation continues.*
10. *If the total cummulative horizontal or vertical movement (from start of construction) of the existing buildings reaches 3/4" or soldier piles reaches 1 ½" all excavation activities shall be suspended until the causes, if any, can be determined. Supplemental shoring shall be devised to eliminate further movement and the building official shall review and approve the supplemental shoring before excavation continues.*
11. *Monitoring of Tie-back Anchor Loads:*

a. *Load cells shall be installed at the tie-back heads adjacent to buildings at maximum interval of 50', with a minimum of one load cells per wall.*
b. *Load cell readings shall be taken once a day during excavation and once a week during the remainder of construction.*
c. *Load cell readings shall be submitted to the geotechnical engineer, shoring design engineer, engineer in responsible charge, and the building official.*
d. *Load cell readings can be terminated once the temporary shoring no longer provides support for the buildings.*

1812A.7 ~~J106.2.7~~ Monitoring of existing OSHPD 1 and 4 structures

1. *The contractor shall complete a written and photographic log of all existing OSHPD 1 & 4 structures within 100 ft or three times depth of shoring, prior to construction. A licensed surveyor shall document all existing substantial cracks in adjacent existing structures.*
2. *Contractor shall document existing condition of wall cracks adjacent to shoring walls prior to start of construction.*
3. *Contractor shall monitor existing walls for movement or cracking that may result from adjacent shoring.*
4. *If excessive movement or visible cracking occurs, contractor shall stop work and shore / reinforce excavation and contact shoring design engineer and the building official.*
5. *Monitoring of the existing structure shall be at reasonable intervals as required by the registered design professional subject to approval of the building official. Monitoring shall be performed by a licensed surveyor and shall consist of vertical and lateral movement of the existing structures. Prior to starting shoring installation a pre-construction meeting shall take place between the contractor, shoring design engineer, surveyor, geotechnical engineer, and the building official to identify monitoring locations on existing buildings.*
6. *If in the opinion of the building official or shoring design engineer, monitoring data indicate excessive movement or other distress, all excavation shall cease until the geotechnical engineer and shoring design engineer investigates the situation and makes recommendations for remediation or continuing.*
7. *All reading and measurements shall be submitted to the building official and shoring design engineer.*

1812A.8 ~~J106.2.8~~ Tolerances. *Following tolerances shall be specified on the construction documents.*

1. *Soldier Piles:*
   i. *Horizontal and vertical construction tolerances for the soldier pile locations.*
   ii. *Soldier pile plumbness requirements (angle with vertical line).*

2. *Tie-back Anchors:*
   i. *Allowable deviation of anchor projected angle from specified vertical and horizontal design projected angle.*
   ii. *Anchor clearance to the existing/new utilities and structures.*

~~Relocated from Section J112~~

Section 1813A ~~J112~~

Vibro Stone Columns for Ground Improvement

1813A.1 ~~J112.1~~ General. ~~[OSHPD 1, 2, & 4] *This section shall apply to Vibro Stone Columns (VSCs) for ground improvement using unbounded aggregate materials. Vibro stone column provisions in this section are intended to increase bearing capacity, reduce settlements, and mitigate liquefaction for shallow foundations. These requirements shall not be used for grouted or bonded stone columns, ground improvement for deep foundation elements, or changing site class. VSCs shall not be considered as a deep foundation element.*
