To: Clerk of the San Francisco Board of Supervisors
San Francisco Board of Supervisors
Lisa Gibson, Planning Department, Environmental Review Officer

From: Dee Seligman, Interim President, San Francisco Forest Alliance
Rupa Bose, Vice President, San Francisco Forest Alliance
Tom Borden, Director, San Francisco Forest Alliance

Date: January 5, 2017

Subject: Appeal to Board of Supervisors of EIR certification Planning Department Case 2005.091.2E

In accordance with Administrative Code Section 31.16, the SF Forest Alliance does hereby appeal the Planning Commission's Certification of the SNRAMP (Significant Natural Resource Areas Management Plan) EIR on December 15, 2016. A copy of the certification motion is attached. Per Section 31.16 (b) (6), we ask that, "The Board shall conduct its own independent review of whether the CEQA decision adequately complies with the requirements of CEQA. The Board shall consider anew all facts, evidence and issues related to the adequacy, accuracy and objectiveness of the CEQA decision including, but not limited to, the sufficiency of the CEQA decision and the correctness of its conclusions."

Based on the evidence accompanying this letter and additional materials to follow, we believe the Board will find the EIR does not comply with CEQA, including that it is not adequate, accurate and objective; that it is not sufficient as an informational document; that its conclusions are incorrect, and it does not reflect the independent judgment and analysis of the City.

This appeal is not about whether you prefer trees or grass, whether you want to preserve and expand our historic native habitat or accept the changes caused by man and nature. This appeal is about accountability and transparency. Does the EIR correctly identify the significant environmental impacts of the SNRAMP and have mitigation measures been identified to minimize or eliminate those impacts?

This appeal is before you because the EIR fails to identify significant impacts of the Plan's implementation, and, therefore, fails to define mitigation measures to address them. These unidentified impacts include significant greenhouse gas emissions and the closure of 23% of our total parkland to public access. Further, the EIR contains what we will politely call inaccuracies. They have no place in what should be an impartial evaluation of the Plan. Finally, the current EIR relies heavily on an unsupported premise: namely that removed trees will be replaced on a one-to-one basis within the project area.

What needs to be done? Send the EIR back to Planning so they can:

- properly identify the Plan's significant impacts;
- require mitigation/accountability measures for the added significant impacts;
- remove the incorrect statements;
- add a mitigation measure that introduces accountability for tree removal and replacement.

While this is happening, the Recreation and Parks Department should be restrained from continuing their implementation of the SNRAMP. The language of this restraint should be essentially the same as the language issued by the Board of Supervisors in 2002 in BOS Resolution 653-02. That is:

FURTHER RESOLVED, That until the Natural Areas Management Plan is completed and approved by the Board of Supervisors, the Natural Areas Program may continue to preserve and maintain genuine remnants of San Francisco's native flora and fauna so long as those activities do not include:

Removal of healthy trees that pose no safety hazards

Trail closures, or restrictions on access and recreation

Expansion of activities into areas that no longer support predominantly native flora and fauna

And yes, Rec and Park has been implementing the SNRAMP even as we waited for its EIR. They ignored your resolution and they violated CEQA.

Below are summarized failings of the EIR that demonstrate how the EIR is not adequate, nor accurate nor objective, the three criteria of CEQA. We will follow up with supporting documents that provide the facts and information sources that back up these assertions.

The EIR for the SNRAMP is neither adequate nor accurate. It presents false information; refuses to acknowledge significant negative impacts; fails to assess the actual intent of the SNRAMP; and makes unwarranted assumptions. An important mitigation measure is missing. See the link below for the full critique:

<https://sfforest.files.wordpress.com/2016/12/arguments-against-certification-of-snramp-eir.pdf>

1 . Greenhouse Gases

The EIR claims implementing the SNRAMP will result in an increase in stored carbon to reduce global warming. You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The result will be a huge release of stored carbon and a loss of future carbon sequestration. The emissions from the trucks and logging equipment needed for the Plan's implementation and maintenance are not accounted for. The greenhouse gas figures presented in the EIR are intentionally miscalculated. The greenhouse gas emissions run counter to San Francisco's 2008 Greenhouse Gas Ordinance and AB 32, California Global Warming Solutions Act of 2006. Therefore, the impact must automatically be deemed Significant since it, "Conflicts with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases."

(2016 CEQA Statute and Guidelines Page 285)

2. Tree Replacement

The EIR states the SNRAMP includes a 1:1 tree replacement policy, that every tree removed in the project area would be replaced with a new tree somewhere in the project area. This is a false premise. No such commitment appears in the SNRAMP or in any City code governing the Plan. The EIR cites no documented policy to support this assertion, yet it makes the claim over and over again to support analyses of various Impacts. The only "documentation" presented is a Feb. 2012 memo from Rec and Park to Planning that makes a loosely stated claim that trees will be replaced. Note that this memo was sent 15 months after the DEIR was published.

The EIR claims trees planted as replacements would be trees. Where the SNRAMP does mention replacing trees, it says, "Although the removal of invasive trees would be noticeable, the trees in the San Francisco Natural Areas would be replaced with either native trees or other native vegetation, such as native scrub or grassland species.... in some locations, trees would be replaced by native scrub or grassland species...". There is no definition of what might qualify as a replacement "tree". Does a shrub qualify? Would the species planted ever grow large enough to be considered a tree?

In discussing tree replacement, the EIR states, "the proposed project would replace primarily dead, dying, and diseased trees". This is not true. Trees to be removed under the SNRAMP are not selected based on poor health, but rather to remove trees in specific areas to open up those areas to promote grasslands. This is one of the most fundamental intents of the SNRAMP.

Missing Mitigation Measure

A requirement to plant replacement trees in the Natural Areas must be added as a mitigation measure in the EIR. The measure needs to include a recording system to track the size, type, location, reason for removal and date of trees removed. At the same time it should track the size, type, location and date of trees planted. Planted trees should be monitored annually to assess survival rates. Failed trees must be replaced. This mitigation measure is critical to control negative impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology.

3. Loss of Public Access

The EIR fails to address the fact the Plan would close 95% of our wild parkland to public access. The SNRAMP discloses that the public would be restricted to on-trail use in MA-1 and MA-2 areas. The signs that the Natural Areas Program (NAP) installed in January 2015 make it illegal to go off-trail in any Natural Area, including those classified MA-3. The surface area of trails in the Natural Areas amounts to less than 5% the total acreage. Many of us commented on the draft EIR that limiting public use to on-trail only was a huge impact. Today we can roam our parks freely. Kids can explore nature, climb on rocks, see what's "over there". With SNRAMP implementation, our park use will be limited to walking on the NAP's "designated" trails. The EIR sweeps this issue under the carpet.

4. Trail Closures

The actual extent of intended trail closures is not disclosed in the SNRAMP and not evaluated in the EIR. In most of the parks where the NAP has violated CEQA and moved forward with implementation of the SNRAMP, trail closures have been much more extensive than disclosed in the SNRAMP. Consider parks where "improvement" projects have been completed by the NAP and "designated" trails have been specified. The SNRAMP indicates 22% of trails in those Natural Areas would be closed. In fact, the NAP has closed 53% of them. This is a significant environmental effect on recreation the EIR fails to recognize.

5. CEQA Violations

The EIR claims the SNRAMP is not being implemented ahead of the EIR certification, which would be a violation of CEQA. However, the NAP has been closing trails and erecting access control fences in parks all over town. They have installed signs in virtually every natural area restricting us to their designated trails. These are all CEQA violations, which the writers of the EIR deny.

Implementation of the SNRAMP must be halted while this appeal is pending, the EIR is corrected, and finally re-certified by the Planning Commission.

6. Herbicides

The EIR claims there will be no increase in herbicide use when the plan is implemented. Why would the EIR say something that cannot be true? The Plan calls for cutting down 18,448 trees and treating the stumps with Tier 1 herbicides. This will require additional herbicide. The Plan calls for more native plantings and conversion of forest to open grassland. Obviously, if there are more plants and new open area to defend against "weeds" more herbicide will be required.

7. Bicycle Prohibition

The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." And yet, the NAP has already installed signs in our Natural Areas prohibiting bike riding, or even bringing bicycles into the park areas managed under the program. People will not ride their bicycles to a park if they have to leave them at the park boundary. Why can't our children ride bikes on trails away from cars? This action flies in the face of Transit First, Green Connections and our Children's Outdoor Bill of Rights.

8. Fences Blight Landscapes

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP. The SNRAMP says, "If off-trail use continues in a particularly sensitive habitat (e.g., wetlands), permanent fencing shall be considered as a last resort once all other options, including enforcement, have failed." In fact, the NAP has already installed vast quantities of fencing for public access control that have a significant environmental effect on Aesthetics. Parks particularly hard hit with fences are Corona Heights, Grandview and Glen Canyon where fences are now dominant features of the landscapes.

9. Incorrect "Facts"

Commenters on the DEIR complained about the removal of public amenities by the NAP. A bench on Mt Davidson was cited as an example. The EIR claims the bench was removed, "because it was rotting and unsafe for sitting." In fact the bench was removed, not because it was rotting and unsafe, but because it was popular with park users who were attracted to an area where the NAP wanted to restrict usage. Proof of this is contained in an email from Chris Campbell of the NAP.

<http://sfforest.org/2016/12/10/disturbing-story-of-mt-davidson-bench/>

A commenter on the DEIR noted that the Program was cutting off neighborhoods from their parks. The trail closed by the NAP in Glen Canyon between Silver Tree Camp and O'Shaughnessy Blvd. was cited. In an effort to hide the CEQA violation, the EIR claims the trail, "was closed prior to the commencement of the environmental review for the SNRAMP." The trail in question appears in the 2006 SNRAMP as a trail to be closed under the Plan. However, in fact, the EIR process was initiated in 2005 because the Planning case number is 2005.091.2E. Further, the trail continues to appear as a trail to be closed on the map for the Glen Canyon Trails Improvement Project published in 2011. A fence was constructed at the bottom of the trail in the course of that project.

Why are these misstatements incorporated into the EIR? Their inclusion shows the authors of the EIR had a strong bias in favor of the SNRAMP. These last couple of examples amount to nothing but a silly whitewash of the Plan's impacts. However, the miscalculations of greenhouse gas sequestration and the spurious "facts" created to support them take this misstatement to a higher level.

We respectfully request that our Supervisors, representing all San Francisco neighborhoods, will carefully review this Appeal letter and send this EIR back to Planning for further mitigations; accountability measures; removal of incorrect statements; and proper identification of the significant impacts.

Sincerely,

Dee Seligman, Interim President, San Francisco Forest Alliance

Rupa Bose, Vice President, San Francisco Forest Alliance

Tom Borden, Director, San Francisco Forest Alliance

**ADOPTING FINDINGS RELATED TO THE CERTIFICATION OF A FINAL ENVIRONMENTAL IMPACT REPORT
FOR THE PROPOSED SIGNIFICANT NATURAL RESOURCE AREAS MANAGEMENT PLAN.**

MOVED, that the San Francisco Planning Commission (hereinafter "Commission") hereby CERTIFIES the final Environmental Impact Report identified as Case No. 2005.0912E, the "Significant Natural Resource Areas Management Plan" (hereinafter "Project"), based upon the following findings:

1. The City and County of San Francisco, acting through the Planning Department (hereinafter "Department") fulfilled all procedural requirements of the California Environmental Quality Act (Cal. Pub. Res. Code Section 21000 *et seq.*, hereinafter "CEQA"), the State CEQA Guidelines (Cal. Admin. Code Title 14, Section 15000 *et seq.*, hereinafter "CEQA Guidelines") and Chapter 31 of the San Francisco Administrative Code (hereinafter "Chapter 31").
 - A. The Department determined that an Environmental Impact Report (hereinafter "EIR") was required and provided public notice of that determination by publication in a newspaper of general circulation on April 22, 2009.
 - B. The Department held a public scoping meeting on May 12, 2009 and May 14, 2009 in order to solicit public comment on the scope of the Project's environmental review.
 - C. On August 31, 2011, the Department published the Draft Environmental Impact Report (hereinafter "DEIR") and provided public notice in a newspaper of general circulation of the availability of the DEIR for public review and comment and of the date and time of the Planning

¹ The Significant Natural Resource Areas Management Plan, or SNRAMP, is now referred to as the Natural Resources Management Plan; however, to maintain consistency between the Draft EIR and the RTC document, the term SNRAMP will continue to be used.

Commission public hearing on the DEIR; this notice was mailed to the Department's list of persons requesting such notice.

- D. On August 31, 2011, copies of the DEIR were mailed or otherwise delivered to a list of persons requesting it, to those noted on the distribution list in the DEIR, and to government agencies, the latter both directly and through the State Clearinghouse.
 - E. Notice of Completion was filed with the State Secretary of Resources via the State Clearinghouse on August 31, 2011.
2. The Commission held a duly advertised public hearing on said DEIR on October 6, 2011 at which opportunity for public comment was given, and public comment was received on the DEIR. The period for acceptance of written comments ended on October 31, 2011.
 3. On April 27, 2012, the Department opened a second public review and comment period for the DEIR, and provided public notice in a newspaper of general circulation of the availability of the second public review and comment period; this notice was mailed to the Department's list of persons requesting such notice and to neighborhood groups registered with the Department at that time. The period for acceptance of written comments ended on June 11, 2012.
 4. The Department prepared responses to comments on environmental issues received at the public hearing and in writing during the first 61-day public review period and the second 45-day public review period for the DEIR, prepared revisions to the text of the DEIR in response to comments received or based on additional information that became available during the public review period, and corrected errors in the DEIR. This material was presented in a Comments and Responses document, published on November 16, 2016, distributed to the Commission and all parties who commented on the DEIR, and made available to others upon request at the Department.
 5. A Final Environmental Impact Report (hereinafter "FEIR") has been prepared by the Department, consisting of the DEIR, any consultations and comments received during the review process, any additional information that became available, and the Comments and Responses document all as required by law.
 6. Project EIR files have been made available for review by the Commission and the public. These files are available for public review at the Department at 1650 Mission Street, Suite 400, and are part of the record before the Commission.
 7. On December 15, 2016, the Commission reviewed and considered the information contained in the FEIR and hereby does find that the contents of said report and the procedures through which the FEIR was prepared, publicized, and reviewed comply with the provisions of CEQA, the CEQA Guidelines, and Chapter 31 of the San Francisco Administrative Code.
 8. The project sponsor has indicated that the presently preferred alternative is the Significant Natural Resources Area Management Plan.

9. The Planning Commission hereby does find that the FEIR concerning File No. 2005.0912E: Significant Natural Resources Area Management Plan reflects the independent judgement and analysis of the City and County of San Francisco, is adequate, accurate and objective, and that the Comments and Responses document contains no significant revisions to the DEIR that would require recirculation of the document pursuant to CEQA Guideline Section 15088.5, and hereby does CERTIFY THE COMPLETION of said FEIR in compliance with CEQA, the CEQA Guidelines and Chapter 31 of the San Francisco Administrative Code.
10. The Commission, in certifying the completion of said FEIR, hereby does find that the project described in the Environmental Impact Report and the project preferred by the project sponsor, described as the Significant Natural Resources Area Management Plan in FEIR would have the following significant unavoidable environmental impacts, which cannot be mitigated to a level of insignificance:
 - A. A significant project specific and cumulative impact on Sharp Park Golf Course, a historic resource under CEQA, due to modification of golf holes for restoration activities;
 - B. A significant cumulative impact on recreation in dog play areas (DPAs) within Natural Areas due to increased use resulting from the reduction of dog play areas by the project and potentially by the National Park Service's (NPS) Dog Management Plan within the Golden Gate National Recreation Area (GGNRA);
 - C. A significant cumulative impact on biological resources within Natural Areas DPAs due to increased use resulting from the reduction of dog play areas by the project and potentially by the NPS Dog Management Plan within the GGNRA; and
 - D. A significant project-specific and cumulative impact on air quality from activities such as trail construction, hillside stabilization, erosion control, and tree removal.
11. The Planning Commission reviewed and considered the information contained in the FEIR prior to approving the Project.

I hereby certify that the foregoing Motion was ADOPTED by the Planning Commission at its regular meeting of December 15, 2016.

Jonas P. Ionin

Board of Supervisors Appeal Fee Waiver

Application to Request a
Board of Supervisors Appeal Fee Waiver

CASE NUMBER:
For Staff Use only

1. Applicant and Project Information

APPLICANT NAME: Dee Seligman		
APPLICANT ADDRESS: 2094 Fell St. San Francisco, CA 94117		TELEPHONE: (415) 668-6308
		EMAIL: deesel91@gmail.com
NEIGHBORHOOD ORGANIZATION NAME: San Francisco Forest Alliance		
NEIGHBORHOOD ORGANIZATION ADDRESS: P.O. Box 460668 San Francisco, CA 94146		TELEPHONE: (415) 297-6084
		EMAIL: Sfforestnews@gmail.com
PROJECT ADDRESS: Natural Areas within San Francisco Recreation and Parks		
PLANNING CASE NO.: 2005.091.2E	BUILDING PERMIT APPLICATION NO.:	DATE OF DECISION (IF ANY): 12/15/2016

2. Required Criteria for Granting Waiver

(All must be satisfied; please attach supporting materials)

- ☒ The appellant is a member of the stated neighborhood organization and is authorized to file the appeal on behalf of the organization. Authorization may take the form of a letter signed by the President or other officer of the organization.
- ☐ The appellant is appealing on behalf of an organization that is registered with the Planning Department and that appears on the Department's current list of neighborhood organizations.
- ☒ The appellant is appealing on behalf of an organization that has been in existence at least 24 months prior to the submittal of the fee waiver request. Existence may be established by evidence including that relating to the organization's activities at that time such as meeting minutes, resolutions, publications and rosters.
- ☒ The appellant is appealing on behalf of a neighborhood organization that is affected by the project and that is the subject of the appeal.

For Department Use Only

Angela Calvillo
Clerk of the Board
1 Dr. Carlton B. Goodlett Place
City Hall, Room 244
San Francisco, CA 94102-4689

**RE: APPEAL OF THE FINAL ENVIRONMENTAL IMPACT REPORT AND PROJECT
APPROVAL FOR THE FOR THE SIGNIFICANT NATURAL RESOURCES AREA
MANAGEMENT PLAN" (Case No. 2005.0912E)**

Dear Ms. Calvillo:

The Wild Equity Institute and the Sierra Club's San Francisco Bay Chapter, the National Parks Conservation Association, Save the Frogs!, Golden Gate Audubon Society, Sequoia Audubon Society, and other interested individuals and organizations submit this appeal of the Final Environmental Impact Report ("FEIR") certified by the Planning Commission and approved by the Recreation and Parks Commission and for the Sharp Park Golf Course redevelopment project in the Significant Natural Resources Area Management Plan ("SNRAMP"), Case No. 2005.0912E.

San Francisco's Significant Natural Resource Areas Program was to be one of the great urban conservation programs in America. But in 2016, San Francisco released a Final Environmental Impact Report ("FEIR") for the Significant Natural Resource Area Management Plan ("SNRAMP") that will, if adopted, turn the program on its head.

The FEIR removes SNRAMP's original plan for Sharp Park's natural areas and replaces it with a project to redevelop Sharp Park Golf Course within the "recovery" area for two imperiled species, the San Francisco Garter Snake and the California Red-Legged Frog.

North America's Most Beautiful Serpent: the San Francisco Garter Snake

Twain's Frog: the California Red-legged Frog

Page 1 of 8

Sharp Park Golf Course is arguably San Francisco's greatest economic and ecological mistake. It loses hundreds of thousands of dollars every year, taking money away from San Francisco's neighborhood parks and community centers. It kills two endangered species as it operates, and its location along California's coast means that before long it will be flooded by sea level rise: already several links have been washed out to sea.

In February 2006 the Recreation and Parks Department and the Planning Department began a California Environmental Quality Act ("CEQA") process for the Significant Natural Resource Areas Management Plan ("SNRAMP"). The SNRAMP proposed projects in the City's Natural Areas, including Sharp Park's Natural Areas, but did not propose any changes to Sharp Park Golf Course.

The original plan's management boundary (depicted by areas shaded in brown) was limited to the natural lagoon at Sharp Park. No modifications to the golf course were proposed. Environmental groups unanimously supported this plan.

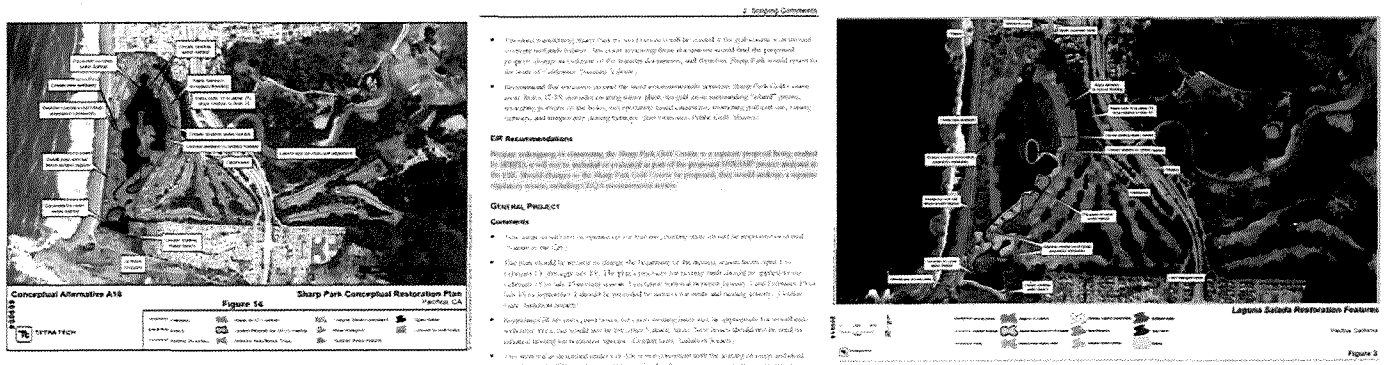

Separately in 2009 the Recreation and Parks Department conceded to the demands of golf purists by releasing a controversial proposal to redevelop Sharp Park Golf Course. Known as "A18," the

proposal was heavily criticized by environmentalists, budget hawks, and Bay Area scientists, who stated:

“It is our conclusion that the minimal habitat enhancement proposed by the Park Department in their preferred 18-hole alternative is inadequate to allow the recovery of the San Francisco garter snake and red-legged frog at the site, and is set up to fail with climate change and sea-level rise.”

When this criticism became public A18 appeared dead on arrival at City Hall. Indeed, shortly after A18 was criticized, the Recreation and Parks Department publicly stated:

“Because redesigning or eliminating the Sharp Park Golf Course is a separate proposal being studied by SFRPD, it will not be included or evaluated as part of the proposed [Significant Natural Areas Management Plan] project analyzed in the EIR. Should changes to the Sharp Park Golf Course be proposed, they would undergo a separate regulatory review, including CEQA environmental review.”

Despite assurances that A18 (L) would never be inserted into the SNRAMP environmental review, the final EIR plan for Sharp Park (R) is indistinguishable from it.

Yet in November 2016 the Department released a SNRAMP FEIR that removed the original plan for Sharp Park and replaced it with A18, the Golf Course redevelopment project. Moreover, the FEIR declares the Golf Course an Historic Resource that CEQA must protect—even though the original design was washed away by ocean storms decades ago—and therefore refused to consider alternatives that would protect Sharp Park’s environment from this controversial project.

Sharp Park, arguably San Francisco’s most ecologically and biologically important natural area, would be devastated by implementation of A18, and in the seven years since A18 was first announced, many of the SNRAMP proposals for San Francisco’s 31 other natural areas have moved forward or implemented, because they either didn’t require environmental review or because they were incorporated into other park projects.

Nonetheless, to ensure that SNRAMP’s good proposals for the City’s other natural areas wouldn’t be affected by the disastrous proposal for Sharp Park, Wild Equity and an array of environmental and community supporters demanded that the Sharp Park Golf Course redevelopment plan be segregated out of SNRAMP and its environmental review process, so the golf course project could stand or more likely, fall on its own merits.

But these reasonable proposals have fallen on deaf ears. The Recreation and Parks Department has informed San Francisco's environmental community that we must sacrifice our most precious biological resource if we desire modest conservation gains in San Francisco's other natural landscapes.

Now Wild Equity, the Sierra Club, Surfrider Foundation, S.F. League of Conservation Voters, National Parks Conservation Association, Sequoia Audubon and others all agree: the environmental benefits proposed by SNRAMP in other areas are far outweighed by the environmental destruction the golf course bailout would cause at Sharp Park.

In 2009, the San Francisco Board of Supervisors unanimously passed an ordinance ordering RPD to study restoration alternatives at Sharp Park. The report RPD ultimately released contained a radical new golf course redevelopment plan for Sharp Park guised as a "recovery" effort for listed species (TetraTech 2009).

After scientists criticized the plan's several significant flaws (Davidson et al. 2011, pp. 1-2), the City convened the fact-finding Sharp Park Working Group (Holland 2011, p. 4-5). When the Working Group released findings that adopted many of (ESA-PWA 2011) recommendations,¹ RPD announced it would abandon a core element of its golf course redevelopment plan—armoring Sharp Park's seawall—but continued to insist that Sharp Park's 18-hole golf course would remain in its historic footprint, even as it acknowledged that sea level rise will erode the seawall and force it inland, squeezing endangered species habitats in a narrow area between the golf areas and the advancing ocean (Holland 2011, pp. 4-5).

Contemporaneously the City was preparing a Draft Environmental Impact Report ("DEIR") for the City's Significant Natural Resource Areas Management Plan ("SNRAMP").

However, when the DEIR was released in 2011 the PWA-based Laguna Salada plan had been replaced with the TetraTech golf course redevelopment plan.² This plan is now adopted in the FEIR. Under this plan, 60,000 cubic yards of material would be dredged from the Laguna Salada's wetland complex, creating 12,100,000 gallons of water storage capacity (RPD 2011, p. 99). Four golf links surrounding Laguna Salada would be raised by up to 3.5 feet, creating additional (although unquantified) water storage capacity in the lagoon system (TetraTech 2009, p. 43). Another link would be narrowed, and another removed³ (RPD 2011, Figure 3). It also calls for

¹ The penultimate draft of the Sharp Park Working Group's findings did not make any conclusion about Sharp Park Golf Course's integrity or compatibility with the site. However, shortly before its scheduled release, Dave Holland, then director of San Mateo County Parks, leaked a copy of the document to golf advocacy groups (Holland 2011, p. 1-3). These advocates demanded that Mr. Holland "insert something along the following line: 'None of the foregoing is incompatible with preservation of the historic 18 hole golf course that exists on the property.'" *Id.* Mr. Holland agreed to do so, and was able to insert a single line

² The plan was attached to the DEIR as Appendix I, and will be referred to throughout this document as (TetraTech 2009) or (RPD 2011) interchangeably.

³ Although Hole 12 will be removed at Sharp Park, the EIR requires the City to rebuild the link in another location at Sharp Park (RPD 2011, p. 28). The EIR proposes two locations for this link: west of Laguna

filling ½ acre of Sharp Park’s wetlands to create an island in Laguna Salada (RPD 2011, p. 99) and landfilling areas where California red-legged frogs breed to “prevent localized ponding” and “to allow more complete drainage to Laguna Salada” (RPD 2011, p. 377).

The FEIR’s golf course redevelopment project is interrelated with ongoing wetland drainage at Sharp Park. Both are designed to reduce golf course flooding, and depend upon each other to implement this larger action. The City’s larger plan to reduce golf course flooding is composed of (1) ensuring maximum pump rates are reliably achieved, (2) increasing water flow rates towards the pumps, (3) increasing water storage capacity by deepening lagoons and (4) increasing storage capacity by elevating the rim of the lagoon. If any one of these components fails or is not achieved, pumping rates will decrease and golf course areas will flood.

While there is some overlap, this project is primarily designed to accomplish the first and second elements of this plan, *see* (RPD, 2012, p. 6), while the EIR is primarily designed to implement the third and fourth elements of the plan. RPD 2011, p. 99. But the elements are expressly interlinked: the FEIR repeatedly states that the golf course redevelopment project is dependent on efficient pump operations (RPD 2011, pp. 146, 361, 374, 377), and further explains that the golf course redevelopment plan is designed to meet flood control objectives while reducing wear-and-tear on the pumps (TetraTech 2009, p. 43).

The City’s statement that the golf course redevelopment plan is wholly separate from pumping operations (Wayne 2011b, p. 2) is belied by its recent permitting strategy discussion with other agencies (Anonymous 2012, p. 1). The agenda from this discussion indicates the pumping and the golf redevelopment project are two temporal phases of a single management strategy. Effects from the later phases are classic indirect effects, because they are caused by the proposed action and are later in time, but still reasonably certain to occur. They also derive, either directly or indirectly from an interrelated element of the City’s larger flood management strategy. In either case, by law the City must review these effects during this CEQA process, regardless of the City’s colloquial assertion that the projects are separate.

The City’s proposal has already been approved by several oversight bodies, and in each case the City made clear that it would not review or consider restoration alternatives at Sharp Park. The City’s single-minded approach to Sharp Park and its completion of many steps in its approval process show that the golf course redevelopment project is reasonably certain to occur.

The City’s proposal to rebuild Sharp Park Golf Course’s original layout was endorsed by San Francisco’s Recreation and Parks Commission in December of 2009, to the exclusion of all other options for Sharp Park’s future (RPD 2011, p. 2). In the SNRAMP EIR, the City concluded that only an 18-hole Golf Course at Sharp Park was a feasible alternative for the property, and refused to consider other restoration options that would provide additional benefits to listed species (RPD 2011, p. 3). Moreover, the EIR contains a mitigation requirement that will force the City to rebuild

Salada, between the seawall and frog breeding areas, or east of Highway 1. The EIR suggests that surrounding Laguna Salada with golf links would have fewer significant impacts because it would retain historic integrity of the golf course, even though it would negatively affect wildlife and intrude on protected natural areas. However, the EIR defers the ultimate decision to subsequent environmental review.

a golf link in one of two places in subsequent environmental review (RPD 2011, p. 28). Thus, the City's existing approvals and contemporaneous permitting procedures create a binding requirement to implement the golf course redevelopment plan.

Furthermore, when the San Francisco Board of Supervisors passed an ordinance requiring the City to negotiate with the National Park Service to implement a restoration plan for the property, the Mayor vetoed the ordinance, (Lee 2011, p. 1), again indicating the City's intent to ensure the golf course redevelopment project occurs. And with the City's encouragement, San Mateo County passed a resolution calling for San Francisco to "maximize recreation opportunities" at Sharp Park by implementing the golf course redevelopment plan (San Mateo Co. 2011, p. 2).

These actions by the City are all that is necessary to show that the golf course redevelopment plan is reasonably certain to occur. While there may be some ambiguity about how the ultimate Golf Course design will turn out, the City's CEQA documents must give consideration of the effects of interrelated and interdependent activities whether or not all of the activities' impact is known.

Now the plan has added mitigation measures dealing with acidic soils that were not present in the 2011 DEIR released for public review. For example, M-BI-6a has been modified extensively to add several pages of mitigation related to acid sulfate and anoxic conditions during dredging. None of this has been available for public review during the public comment process for this CEQA process. When such large changes are made, recirculation is required. *See Friends of the College of San Mateo Gardens v. San Mateo County Community College District*, (2016) 1 Cal. 5th 937.

In addition, the FEIR fails to adequately analyze how mitigation measures at Sharp Park will impact the San Francisco garter snake as a fully protected species pursuant to Fish & G. Code § 5050, subd. (b)(1) in light of the holding in *Center for Biological Diversity v. California Department of Fish and Wildlife* (2015) 62 Cal.4th 204. Here, the Court recognized that fully protected species are subject to stricter prohibitions than provided under the Endangered Species Act, including an express prohibition on taking or possessing a fully protected species as mitigation for a project under CEQA. The FEIR is in violation of this holding, because it's proposal to redevelop Sharp Park Golf Course is mitigated with several provisions that expressly demonstrate "take" of the San Francisco garter snake. For example, the project explains that "Impacts to San Francisco garter snakes could occur from construction activities involving vehicle traffic and the use of heavy equipment which could result in direct mortality of individuals," DEIR p. 322, and then explains that mitigation measure M-BI-6a specifically requires "an on-call specialty environmental monitor with a valid 10(a)(1)(A) permit to handle San Francisco garter snakes and relocate them." DEIR p. 323. This is simply not permissible under CEQA after *Center for Biological Diversity v. California Department of Fish and Wildlife*.

The FEIR does not comply with San Francisco's Sea Level Rise Action Plan, released in March of 2016. The Action Plan requires San Francisco to consider adaptation and retreat alternatives where lands are at risk from expected sea level rise impacts. While the FEIR recognizes that Sharp Park is one of two natural areas at risk from expected sea level rise impacts, it fails to consider any alternative that would protect Sharp Park's natural ecology from salinity intrusion or other impacts from sea level rise. This violates CEQA and San Francisco's own plans for sea level rise adaptation.

The FEIR selectively excludes alternatives without substantial evidence or sound logic. In a case like this where public concern and controversy is high, evidence of alternatives is widespread, and when massive take has occurred under existing protocols, the City cannot ensure that there will be no significant adverse environmental impacts without at least considering alternatives to the golf course redevelopment project.

In particular, (ESA-PWA 2011) contributed a restoration model for Sharp Park that is based on the best scientific data available at Sharp Park and addresses all of the above deficiencies in the project. For example, where the project suggests that both species are “conservation reliant” due to their isolation, the ESA-PWA proposal emphasizes connective habitat corridors across Sharp Park.

Where the project suggests it will continue to drain and fertilize Sharp Park’s wetlands on the one hand, and then dredge excessive tule and cattail growth on the other, PWA-ESA’s mitigation model constrains pumping so that water levels will rise high enough to drown excessive vegetation growth, and ensures that water levels rise and fall slowly so that Sharp Park’s entire wetland feature remains hydrologically connected and contains sufficient water for egg masses to develop into adult frogs.

Where the project ignores the fundamental changes climate change will bring to this landscape, ESA-PWA’s plan provides mitigation and recovery areas upland and inland from areas that will be immediately impacted by catastrophic flooding events, and then creates natural defenses around these areas by restoring wetlands and vegetative features between the rising sea and the restored habitats. These features will absorb and slow the rate of water if intrusion ever does occur.

Where the project blames the frog for an apparently indiscriminant breeding behavior and for laying eggs in ‘unsustainable’ habitats, ESA-PWA’s mitigation and restoration plan recognizes that the California red-legged frog can successfully breed under natural conditions at Sharp Park, so long as the velocity, rapidity, and scope of the wetland draining project implemented by San Francisco is curtailed.

All of these outcomes would provide greater conservation and public benefits than the project disclosed in the notification, yet the City does not seem prepared to consider alternatives to the project proposal. Such reluctance is inconsistent with sound environmental review and the strictures of CEQA.

The City’s rationale for rejecting the full restoration alternative based on possible impacts to historic resources associated with the golf course is not supported by substantial evidence or law. This is particularly true because RPD’s internal communications demonstrate that under its golf course redevelopment project:

- “Sea level rise will reduce the capacity of sharp park to function as a freshwater wetland that will support frogs and snakes”
- “Based on most conservative predictions of sea level rise, the majority of sharp park west of highway 1 will not support freshwater wetlands in the long term”
- “The wetland complex at sharp park is not expected to provide habitat in perpetuity.”

(Wayne, 2009). Yet the impacts caused by the redevelopment project are deemed of less import in the FEIR compared to maintaining a golf course on the property.

This conclusion is internally inconsistent with the FEIR. The FEIR makes clear that the only mitigation measure necessary for changes to the golf course are to document the golf course's landscape before changes—including the elimination of holes or links—are made. M-CP-7. Thus there is no limitation within the FEIR's own logic to exclude these other alternatives, and they must be considered by the City.

This letter and its references, along with all other documents submitted into the record for this project or related Sharp Park projects are incorporated herein by reference.

Sincerely,

Brent Plater

WILD Equity

INSTITUTE

*Building a healthy and sustainable global community for people
and the plants and animals that accompany us on Earth*

Dear San Francisco Board of Supervisors,

Wild Equity is now, and has always been, a strong supporter of the City's Natural Areas and its Natural Areas Program. We believe that the preservation of San Francisco's Natural Areas is among the most pressing conservation issues of our time.

However, we have grave concerns about the California Environmental Quality Act ("CEQA") review process for the Significant Natural Resource Areas Management Plan ("SNRAMP"). Indeed, we have consistently and repeatedly objected to the City's decision to insert a project known as "A18," the Sharp Park Golf Course redevelopment project, into the SNRAMP EIR process.

To date you have not taken any action to address this concern. This is perplexing, as our request is entirely consistent with the City's November 2009 Scoping Report for the SNRAMP CEQA process, which stated:

[b]ecause redesigning or eliminating the Sharp Park Golf Course is a separate proposal being studied by SFRPD, it will not be included or evaluated as part of the proposed SNRAMP project analyzed in the EIR. Should changes to the Sharp Park Golf Course be proposed, they would undergo a separate regulatory review, including CEQA environmental review.

We write today to reiterate that unless all Sharp Park Golf Course redevelopment projects and management proposals derived from A18 are removed from the SNRAMP CEQA process, Wild Equity will oppose SNRAMP's approval. In contrast, if the City were to revert to the original SNRAMP project for Sharp Park—i.e., the project proposed in the 2006 Final Draft SNRAMP—Wild Equity will strongly support SNRAMP's adoption.

We have reached this conclusion after carefully weighing the SNRAMP's conservation benefits against the environmental harm that will be wrought by A18. It is clear that the proposed conservation benefits SNRAMP may bring to the City's other natural areas are greatly outweighed by the concrete harms that A18 will impose on Sharp Park.

A18 has been heavily criticized by scientists, conservation groups, and community park advocates in both 2009 and 2011 because of its harmful impacts on imperiled wildlife and the economic sustainability of the Recreation and Park Department. Wild Equity is not willing to sacrifice Sharp Park, unquestionably the Recreation and Park Department's most ecologically and biologically important natural area, to this ill-conceived project for a vague promise of conservation benefits in other areas. Yet this is what SNRAMP DEIR's preferred alternative

currently offers.

We therefore reiterate that we will oppose adoption of the SNRAMP DEIR unless all Sharp Park Golf Course redevelopment projects and management proposals derived from A18 are removed from the SNRAMP CEQA process.

Sincerely,

Brent Plater

Surfrider Foundation, San Francisco Chapter
3830 Noriega St. San Francisco, Ca 94122

11/20/14

Dear San Francisco Board of Supervisors,

The mission of the San Francisco Chapter of Surfrider Foundation includes the preservation and enhancement of San Francisco's natural coastline.

We are writing to the Board to relay our grave concerns about the California Environmental Quality Act ("CEQA") review process for the City's Significant Natural Resource Areas Management Plan ("SNRMAMP"). Specifically, we take issue with project known as "A18," the Sharp Park Golf Course redevelopment project, which is presently included into the SNRMAMP EIR process.

Sharp Park golf course, while being an affordable recreational amenity to the public, also happens to be located on a coastal wetland. The preservation of the course layout relies upon the maintenance of a sea wall on the beach. The seawall prevents waves from filling the lagoon and thereby flooding the links. The problem is Pacifica has already lost most of its beach area to seawalls and rock revetments. In our view, to promote further beach loss in Pacifica (by continuing to invest in the operation of the golf course) is bad environmental policy. Coastal wetlands and lagoons such as the one at Sharp Park help purify water, and bring sand to our eroding beaches. Furthermore, our allies in the environmental community are correct in claiming that the golf course negatively impacts endangered species (San Francisco Garter snake and Ca red legged-frogs).

We write today to ask for the removal of the Sharp Park Golf Course redevelopment projects and management proposals (derived from A18) from the SNRMAMP CEQA process. Coastal wetlands and beaches are significant natural areas. Wherever we have a chance to restore or protect them, we should embrace the opportunity. Thank you.

Sincerely,

A handwritten signature in black ink, appearing to read "Bill McLaughlin".

John Rahaim, Director and Planning Commissioners
San Francisco Planning Department
1650 Mission St #400
San Francisco, CA 94103

Re: Sharp Park and the Significant Natural Resource Areas Management Plan (SNRAMP) EIR

Dear Director Rahaim and Planning Commissioners:

The Sierra Club again urges you to remove from the SNRAMP CEQA process all Sharp Park Golf Course redevelopment projects and management proposals that are a part of project A18, the Sharp Park Golf Course redevelopment project. If the SNRAMP EIR is adopted with these elements the Sierra Club will have no choice but to oppose this EIR since it will violate CEQA and put endangered species (the San Francisco garter snake and the California red-legged frog) at risk.

We would do this with great reluctance since we are strong supporters of the San Francisco Natural Areas Program and wish to see it implemented as fully as possible. Unfortunately, project A18 would undermine the goals of the Natural Areas Program at Sharp Park since, as said above, it would impact endangered species and addresses a golf redevelopment project, not a natural areas project.

It is obvious to us that project A18 requires a distinct and separate CEQA process, not as a part of the SNRAMP EIR. We have made our concerns well known to you, as we have previously objected to inserting A18, into the California Environmental Quality Act ("CEQA") review process for the Significant Natural Resource Areas Management Plan ("SNRMAMP").

Your own analysis supports our position. The City's November 2009 Scoping Report for the SNRAMP CEQA process stated:

[b]ecause redesigning or eliminating the Sharp Park Golf Course is a separate proposal being studied by SFRPD, it will not be included or evaluated as part of the proposed SNRAMP project analyzed in the EIR. Should changes to the Sharp Park Golf Course be proposed, they would undergo a separate regulatory review, including CEQA environmental review.

Furthermore, the Sharp Park Golf Course redevelopment project, in contrast to the "program" level analysis of SNRAMP part of the DEIR, is analyzed at the "project" level and would therefore not require additional CEQA review before it is implemented even though it was not subject to all of CEQA's required review procedures and not a single alternative to A18 was considered in the DEIR.

A18 has been heavily criticized by scientists, conservation groups, and community park advocates in both 2009 and 2011 because of its harmful impacts on imperiled wildlife and the economic sustainability of the Recreation and Park Department.

While we strongly believe that the Natural Areas Program is critical to the future of San Francisco and its natural ecology, we do not believe it is appropriate or ethical for the City to attempt to seek acceptance of an environmentally disastrous project by inappropriately injecting it into the CEQA process of an otherwise strongly supported program.

We therefore reiterate that we will oppose adoption of the SNRAMP DEIR unless all Sharp Park Golf Course redevelopment projects and management proposals derived from A18 are removed from the SNRAMP CEQA process.

Sincerely,

Arthur Feinstein
Conservation Chair

John Rahaim, Director and Planning Commissioners
San Francisco Planning Department
1650 Mission St #400
San Francisco, CA 94103

Re: Sharp Park and the Significant Natural Resource Areas Management Plan (SNRAMP) EIR

Dear Director Rahaim and Planning Commissioners:

San Francisco Tomorrow's goal of having a livable, sustainable and environmentally healthy city depends in great part upon the City employing a transparent and lawful planning process. Sadly, the present SNRAMP DEIR fails both tests.

The unjustified inclusion of project A18, the Sharp Park Golf Course redevelopment project, in the SNRAMP EIR clearly violates CEQA. We believe it obvious that project A18 requires a distinct and separate CEQA process since project A18 does not address a Natural Area project and, in fact, addresses a golf course project.

Your own analysis supports our position. The City's November 2009 Scoping Report for the SNRAMP CEQA process stated:

[b]ecause redesigning or eliminating the Sharp Park Golf Course is a separate proposal being studied by SFRPD, it will not be included or evaluated as part of the proposed SNRAMP project analyzed in the EIR. Should changes to the Sharp Park Golf Course be proposed, they would undergo a separate regulatory review, including CEQA environmental review.

SFT urges you to comply with the law and your department's own position and remove from the SNRAMP EIR process all Sharp Park Golf Course redevelopment projects and management proposals. Otherwise, SFT will have no choice but to oppose this EIR since it will violate CEQA and put endangered species (the San Francisco garter snake and the California red-legged frog) at risk.

We want to emphasize that SFT strongly supports the City's Natural Areas Program and considers it a landmark and essential component of the City's General Plan. All the more reason to not jeopardize the integrity of the Natural Areas Program, and the City's planning process itself, which would be the

**RE: TENTATIVE OPPOSITION TO THE SIGNIFICANT NATURAL
RESOURCE AREAS MANAGEMENT PLAN**

Dear Clerk of the Board:

The San Francisco League of Conservation Voters (SFLCV) is now, and has always been, a strong supporter of the City's Natural Areas and its Natural Areas Program. We believe that the preservation of San Francisco's Natural Areas is among the most pressing conservation issues of our time.

However, we have grave concerns about the California Environmental Quality Act (CEQA) review process for the Significant Natural Resource Areas Management Plan (SNRMAMP). Indeed, we have consistently and repeatedly objected to the City's decision to insert a project known as "A18," the Sharp Park Golf Course redevelopment project, into the SNRAMPEIR process.

To date you have not taken any action to address this concern. This is perplexing, as our request is entirely consistent with the City's November 2009 Scoping Report for the SNRAMPECEQA process, which stated:

[b]ecause redesigning or eliminating the Sharp Park Golf Course is a separate proposal being studied by SFRPD, it will not be included or evaluated as part of the proposed SNRAMPE project analyzed in the EIR. Should changes to the Sharp Park Golf Course be proposed, they would undergo a separate regulatory review, including CEQA environmental review.

We write today to reiterate that unless all Sharp Park Golf Course redevelopment projects and management proposals derived from A18 are removed from the SNRAMPECEQA process, SFLCV will oppose SNRAMPE's approval. In contrast, if the City were to revert to the original SNRAMPE project for Sharp Park—i.e., the project proposed in the 2006 Final Draft SNRAMPE—the SFLCV will strongly support SNRAMPE's adoption.

We have reached this conclusion after carefully weighing the SNRAMPE's conservation benefits against the environmental harm that will be wrought by A18. It is clear that the

proposed conservation benefits SRNAMP may bring to the City's other natural areas are greatly outweighed by the concrete harms that A18 will impose on Sharp Park.

A18 has been heavily criticized by scientists, conservation groups, and community park advocates in both 2009 and 2011 because of its harmful impacts on imperiled wildlife and the economic sustainability of the Recreation and Park Department. The SFLCV is not willing to sacrifice Sharp Park, unquestionably the Recreation and Park Department's most ecologically and biologically important natural area, to this ill-conceived project for a vague promise of conservation benefits in other areas. Yet this is what SNRAMP DEIR's preferred alternative currently offers.

We therefore reiterate that we will oppose adoption of the SNRAMP DEIR unless all Sharp Park Golf Course redevelopment projects and management proposals derived from A18 are removed from the SNRAMP CEQA process.

SEQUOIA
AUDUBON SOCIETY

P.O. Box 620292
Woodside, CA 94062

July 29, 2014

To Whom It May Concern:

Resolution to remove the Sharp Park Golf Course Design Project (Alternative A18) from the Environmental Impact Report for the San Francisco Recreation and Park Department's Significant Natural Resource Areas Management Plan, and to oppose any final SNRAMP EIR that contains such proposals.

WHEREAS, the two-fold mission of the Recreation and Park Department's Natural Areas Program (NAP) is to "preserve, restore, and enhance remnant Natural Areas, and to develop and support community-based site stewardship of these areas"; and

WHEREAS, the Significant Natural Resource Areas Management Plan (SNRAMP) is intended to guide management activities and site improvements in Natural Areas by the Recreation and Park Department for the next 20 years; and

WHEREAS, one of these natural areas, Sharp Park, has significantly different ecological and administrative issues because it is the only Natural Area that contains the endangered San Francisco garter snake and the threatened California red-legged frog, and is the only Natural Area located outside of San Francisco county; and

WHEREAS, the planning process for the SNRAMP began in 1995 and has included the input of multiple stakeholders including a Citizen Task Force and Green Ribbon Panel in 2002, a Citizens Advisory Committee in 2003, an ad hoc working group in 2004, and three independent scientific peer reviews and a public comment period on the 2005 public draft; and

WHEREAS, the SNRAMP Final Draft Plan was approved for environmental review in 2006 and has completed several steps in the California Environmental Quality Act (CEQA) review process, including the publication of a Notice of Preparation, distribution of an Initial Study, the conclusion of public scoping and comment periods, and the publication of a final Scoping Report by November of 2009; and
WHEREAS, Alternative A18, a conceptual alternative to redesign Sharp Park Golf Course, was separately proposed by the Recreation and Park Department in November 2009; and

WHEREAS, Alternative A18 did not complete several CEQA procedural requirements, including a discussion of Alternative A18 in a Notice of Preparation and Initial Study; review by or consultation with Responsible Agencies; or formal public comment and review of draft golf course designs; and

WHEREAS, Alternative A18 was heavily criticized by scientists, conservation groups, and community park advocates because of its harmful impacts on imperiled wildlife and the economic sustainability of the Recreation and Park Department;

WHEREAS, in the November 2009 Scoping Report for the SNRAMP CEQA process, the Recreation and Park Department and the Planning Department jointly stated that "because redesigning or eliminating the Sharp Park Golf Course is a separate proposal being studied by SFRPD, it will not be included or evaluated as part of the proposed SNRAMP project analyzed in the EIR. Should changes to the Sharp Park Golf Course be proposed, they would undergo a separate regulatory review, including CEQA environmental review;" and

WHEREAS, Alternative A18 was nonetheless inserted into the long-standing SNRAMP CEQA review process as a new, additional SNRAMP project when the SNRAMP DEIR was released in August 2011; and

WHEREAS, Sharp Park is the only Natural Area that the DEIR studies at the project-level, which means Alternative A18 will have completed its entire CEQA requirements if the SNRAMP DEIR is adopted as final, while the City's 31 other Natural Areas will require subsequent, project-specific environmental review before their proposed projects are implemented;

WHEREAS, with the exception of Alternative A18, all feasible alternative management regimes for Sharp Park were excluded from consideration in the DEIR because it characterizes the golf course as an historic resource for purposes of CEQA, despite the San Francisco Historic Preservation Commission's contrary determination; and

WHEREAS, Alternative A18 should be subject to a separate and complete environmental evaluation;

NOW, THEREFORE BE IT RESOLVED that the Board of Directors of Sequoia Audubon supports removing all Sharp Park Golf Course projects and management proposals derived from Alternative A18 from the SNRAMP EIR process, and if they are not so removed, Sequoia Audubon will oppose passage of the SNRAMP EIR.

Sincerely,

Sue Cossins
Administrative Assistant
For the Sequoia Audubon Society Board of Directors

San Francisco Board of Supervisors
1 Dr. Carlton B. Goodlett Place, City Hall, Room 244
San Francisco, CA 94102-4689

Dear Board of Supervisors,

I am writing to inform you that unless all Sharp Park Golf Course redevelopment projects and management proposals derived from A18 are removed from the SNRAMP CEQA process, SAVE THE FROGS! will oppose SNRAMP's approval. We have reached this conclusion after carefully weighing the SNRAMP's conservation benefits against the environmental harm that will be wrought by A18. It is clear that the proposed conservation benefits SNRAMP may bring to the City's other natural areas are greatly outweighed by the concrete harms that A18 will impose on Sharp Park's amphibians.

This conclusion is based on, among other considerations, (a) the fact that the natural areas program, which we support in principle, already has authority to implement the DEIR's proposed conservation projects in most of the City's natural areas, and therefore adopting the SNRAMP DEIR as currently proposed will provide no additional conservation benefit to these areas; (b) the few areas where additional conservation gains would be authorized are analyzed only at the "program" level, which means some subsequent, significant environmental review document will be required before those projects move forward, making those projects subject to further delay, expense, and uncertainty; and (c) the Sharp Park Golf Course redevelopment project, in contrast, is analyzed at the "project" level and would therefore not require additional CEQA review before it is implemented: and yet A18 was not subject to all of CEQA's required review procedures and not a single alternative to A18 was considered in the DEIR.

A18 has been heavily criticized by scientists, conservation groups, and community park advocates in both 2009 and 2011 because of its harmful impacts on imperiled wildlife and the economic sustainability of the Recreation and Park Department. SAVE THE FROGS! is not willing to sacrifice Sharp Park, unquestionably the Recreation and Park Department's most ecologically and biologically important natural area, to this ill-conceived project for a vague promise of conservation benefits in other areas. Yet this is what SNRAMP DEIR's preferred alternative currently offers. The vast majority of California's wetlands have been destroyed; Sharp Park is home to federally protected, endangered California Red-Legged Frogs (*Rana draytonii*), an iconic amphibian that the Board of Supervisors should work to protect, rather than to kill, harm and harass, which is what happens when the City pumps the Sharp Park Wetlands out to sea and their egg masses get stranded on dry land.

I therefore reiterate that SAVE THE FROGS! will oppose adoption of the SNRAMP DEIR unless all Sharp Park Golf Course redevelopment projects and management proposals derived from A18 are removed from the SNRAMP CEQA process.

Sincerely,

Kerry Kriger

Phil Ginsburg
General Manager
San Francisco Recreation and Park Department
McLaren Lodge-Golden Gate Park
501 Stanyan St.
San Francisco, CA 94117

Re: Significant Natural Resource Areas Management Plan

Dear General Manager Ginsburg,

The National Parks Conservation Association (NPCA) has been and continues to be a supporter of the City's Natural Areas and its Natural Areas Program, which is one component of a larger conservation strategy in the Bay Area that includes city, state and federal parks.

However, we have grave concerns about the California Environmental Quality Act ("CEQA") review process for the Significant Natural Resource Areas Management Plan ("SNRAMP"). Indeed, we have consistently and repeatedly objected to the City's decision to insert a project known as "A18," the Sharp Park Golf Course redevelopment project, into the SNRAMP EIR process.

To date, the City has not taken any action to address this concern. This is perplexing, as our request is entirely consistent with the City's November 2009 Scoping Report for the SNRAMP CEQA process, which stated:

[b]ecause redesigning or eliminating the Sharp Park Golf Course is a separate proposal being studied by SFRPD, it will not be included or evaluated as part of the proposed SNRAMP project analyzed in the EIR. Should changes to the Sharp Park Golf Course be proposed, they would undergo a separate regulatory review, including CEQA environmental review.

We write today to reiterate that unless all Sharp Park Golf Course redevelopment projects and management proposals derived from A18 are removed from the SNRAMP CEQA process the NPCA will oppose SNRAMP's approval. In contrast, if the City were to revert to the original SNRAMP project for Sharp

Park—i.e., the project proposed in the 2006 Final Draft SNRAMP—the NPCA will strongly support SNRAMP’s adoption.

We have reached this conclusion after carefully weighing the SNRAMP’s conservation benefits against the environmental harm that will be wrought by A18. It is clear that the proposed conservation benefits SNRAMP may bring to the City’s other natural areas are greatly outweighed by the concrete harms that A18 will impose on Sharp Park.

This conclusion is based on, among other considerations, (a) the fact that the natural areas program, already has authority to implement the DEIR’s proposed conservation projects in most of the City’s natural areas, and therefore adopting the SNRAMP DEIR as currently proposed will provide no additional conservation benefit to these areas; (b) the few areas where additional conservation gains would be authorized are analyzed only at the “program” level, which means some subsequent, significant environmental review document will be required before those projects move forward, making those projects subject to further delay, expense, and uncertainty; and (c) the Sharp Park Golf Course redevelopment project, in contrast, is analyzed at the “project” level and would therefore not require additional CEQA review before it is implemented: and yet A18 was not subject to all of CEQA’s required review procedures and not a single alternative to A18 was considered in the DEIR.

A18 has been heavily criticized by scientists, conservation groups, and community park advocates in both 2009 and 2011 because of its harmful impacts on imperiled wildlife and the economic sustainability of the Recreation and Park Department. NPCA is not willing to sacrifice Sharp Park, unquestionably the Recreation and Park Department’s most ecologically and biologically important natural area, to this ill-conceived project for a vague promise of conservation benefits in other areas. Yet this is what SNRAMP DEIR’s preferred alternative currently offers.

We therefore reiterate that we will oppose adoption of the SNRAMP DEIR unless all Sharp Park Golf Course redevelopment projects and management proposals derived from A18 are removed from the SNRAMP CEQA process.

Sincerely,

A handwritten signature in cursive script that reads "Neal Desai".

April 10, 2015

Phil Ginsburg, General Manager
San Francisco Park & Recreation Department
501 Stanyan Street
San Francisco, CA 94117

Dear Mr. Ginsburg:

Golden Gate Audubon would like to reiterate its opposition to elements of Sharp Park development and management which have been included in the Significant Natural Resources Areas Management Plan (SNRAMP) and the associated SNRAMP Environmental Impact Review (EIR). We urge you to move forward with the excellent protection and programs under the SNRAMP for the originally indicated natural areas in the city, but urge you to remove the Sharp Park elements (Alternative A18) which merit further intensive review and vetting, as outlined below.

The SNRAMP is designed to guide management activities and improvement of dozens of important city-owned properties in San Francisco that include critical habitat fragments and special species. For decades, SNRAMP has been envisioned and developed with thoughtful guidance from many stakeholders, including SF RPD and the conservation community. However, the rather late inclusion of Alternative A18 (Sharp Park) has severely compromised what would otherwise be unambiguously strong support of the environmental community for SNRAMP.

Why Sharp Park is different and does not belong in SRNAMP:

- Sharp Park is not within the City and County limits of San Francisco and this area's management has repercussions for contiguous habitat parcels of other jurisdictions, who have not participated in review processes to date.
- Alternative A18 is primarily concerned with sustaining an artificial amenity: a golf course, rather than effectively managing for a coastal wetland ecosystem. As the operation the golf course is not consistent with the purpose of SNRAMP, including Sharp Park undermines SNRAMP's integrity.
- Sharp Park is the only parcel in SNRAMP EIR known to host native *vertebrate* species which are federally-listed under the Endangered Species Act. Two resident native vertebrate species: the threatened California Red-legged Frog and the endangered San Francisco Garter Snake are well known to be

GOLDEN GATE AUDUBON SOCIETY

2530 San Pablo Avenue, Suite G, Berkeley, CA 94702

phone 510.843.2222 web www.goldengateaudubon.org email ggas@goldengateaudubon.org

experiencing perilous rates of decline throughout their ranges. The San Francisco Garter Snake has a quite limited and fragmented range due, in part, to the unfortunate history of draining coastal wetlands. Sharp Park is one of very few places where the San Francisco Garter Snake's survival as a species could be achieved with substantive focus on coastal wetland ecology. Sharp Park merits its own independent CEQA review for its unique conservation importance but also for the opportunity this San Mateo County property offers as a unique venue for the public to discover coastal wetland ecology and see rare animals. It would be shameful, and ironic, to say the least, if it were the City of San Francisco that effectively signed the death warrant for the beautiful snake sharing its namesake - by inadequately preserving habitat which serves as this particular endangered species last stronghold on Earth -- under the umbrella of a Significant Natural Resource Areas Management Plan EIR.

- Although SNRAMP planning has taken place since 1995, the Sharp Park Alternative A18 was not formally included until after 2009. As such, it has not received anything like equal or adequate environmental and public review.
- Because the project elements at Sharp Park have not been properly studied nor sufficiently vetted by all relevant stakeholders, it should not be approved without separate review and public input. Yet, adoption of the final DEIR could effectively fast track the implementation of irreversible destructive management practices at Sharp Park simply because A18 is considered at the Project Level. While the 31 other projects are only approved at the program level, each of those 31 other projects have received more careful review than A18. It suggests that the City's late inclusion of Alternative A18 effectively circumvented a truly comprehensive review process under CEQA for Sharp Park projects. This rightly raises suspicion among the environmental community and has invoked opposition to SNRAMP that would not exist if Option A18 were simply removed from the SNRAMP EIR.
- Because Sharp Park is managed primarily as a golf course, it is not in fact being managed as a natural resource area. Therefore, it does not, by definition, belong to the collection of properties contemplated by the SNRAMP EIR. Furthermore, the water buttressing impacts, severe draining regimens, and vegetation removal required for artificially sustaining the golf course are deeply disruptive for a coastal wetland ecosystem – and compromise crucial habitat for the San Francisco Garter Snake and the Red-Legged Frog.

Given the many concerns (presence of federally listed species, insufficiency in time, and substance and scope of review, mismatched management objectives for that property, and a divided conservation community, we urge you to REMOVE Sharp Park Alternative A18 from the SNRAMP-EIR. Doing so, will enable the City to earn back strong support from the conservation community for the rest of the projects contemplated under SNRAMP.

Our concerns about the A18 project element had been lodged separately, earlier, during the appropriate comment period. However, by insisting on the inappropriate inclusion of A18, the City has unwittingly broadened and strengthened opposition to SNRAMP and the entire Natural Areas Program. Without Alternative A18, SNRAMP may be deemed the most thoughtful and powerful urban conservation initiative anywhere in the world. Yet, the misguided inclusion of A18 undermines the integrity of SNRAMP and alienates support from environmental organizations that would otherwise be its champions. We urge you to remove A18.

Sincerely Yours,

RE: Natural Areas Program EIR

Dear Commissioners:

Our thousands of Audubon members enjoy birdwatching, wildlife viewing, nature study, ecology, citizen science, volunteering, habitat restoration, stewardship, etc. — all opportunities that the Natural Areas Program offers. For 15 years, SNRAMP has been envisioned and developed to protect natural areas within the city and make them accessible to people. SNRAMP is meant to **guide management activities that will improve dozens of important San Francisco properties that include critical habitat fragments, special native species, and even critically endangered species.**

While most of the city landscape is concrete, buildings, roads, and other urban development, the Recreation and Park Department manages approximately 230 parks of various sizes, totaling about 3,500 acres. Only 1,100 acres confined to 31 of these parks are deemed to contain *significant natural areas*, which are the unique natural heritage of San Francisco. This is **less than 3.6% of the total city area that must do the job of preserving the many species of plants and animals that struggle to persist in our city.**

San Francisco has a stunningly beautiful and unique biological history and heritage. City-managed lands host differing weather regimes and soils, and we have diverse communities of plants and animals ranging from SF Bay coastline to live oak woodland, mature forest, vernal pool and prairie, to coast chaparral. Our native plants and animals have evolved over millions of years to thrive under distinct sets of conditions. To survive, they need us to notice them, learn about them, appreciate them, and ultimately commit to preserving them. Having this beauty and biological diversity within a 48-square-mile city is truly a very rare treasure! This amount of diversity is a public value that deserves diligent and dutiful stewardship. Future generations will grow up exploring and loving these natural areas, and this will create our future stewards for the unique natural heritage of San Francisco.

While we support the intention of the SNRAMP plan and its relevant projects for numerous city parks, we are profoundly troubled by the inclusion of the Sharp Park Golf Course, which conspicuously fails to cohere to the fundamental objectives of the overall SNRAMP plan. Alternative A18 (Sharp Park), which was added very late in the long-standing effort to draft SNRAMP and was added in direct contradiction of the promises of the City to consider that project separately, is principally just a very costly Golf Course

GOLDEN GATE AUDUBON SOCIETY

2530 San Pablo Avenue, Suite G Berkeley, California 94702

phone 510.843.2222 fax 510.843.5351 web www.goldengateaudubon.org

redevelopment plan. There are many reasons why this does not belong in the SNRAMP EIR – not the least of all that it is to be re-developed and managed *primarily* as a golf course (not as a natural area)! The Golf Course is **not free to the public** to be widely enjoyed (it'll only be open to paying golfers). Redeveloping and maintaining this particular golf course requires management practices, including **draining the natural wetland and constant mowing which severely negatively impact two critically endangered vertebrate species** on this property located in San Mateo County: the SF Garter Snake and California Red-legged Frog. This Golf Course will continue to use pesticides at levels not appropriate in other Natural Areas. **Pretending that environmentally responsible redevelopment of this particular Golf Course would be possible -- in this era of increasing knowledge of sea-level rise and rates of coastal erosion -- is folly.** Surely, San Francisco officials are smart enough to recognize that expensive efforts to keep this Golf Course are woefully short-sighted and may have permanently damaging consequences for these endangered species' survival. The City should remove the Golf Course elements to ensure this EIR is true to its stated purpose: **preserving this city's natural areas.**

Including the area to be redeveloped as the Sharp Park Golf Course contradicts the conservation objectives of the Natural Areas plan and compromised what would otherwise be unambiguously strong support from the environmental community. Furthermore, in the near future it will be critical to raise money for numerous SNRAMP projects, which are not yet funded. We believe that fundraising for authentic conservation cannot be achieved if the city intends to use those very same funds to support an expensive-to-renovate and increasingly expensive-to-operate golf-course which poses a persistent threat to two endangered species.

Golden Gate Audubon is committed to advocating for the SNRAMP plan in SF's city parks, which we view as a significant commitment to maintaining native biodiversity in this city. But we strenuously object to the inclusion of Sharp Park Golf Course elements, which really are not "natural area conservation" and are not even located within the City of San Francisco. **We hope that you will certify the SNRAMP EIR *excluding* the functional Golf Course areas at Sharp Park and, instead, adopt the SNRAMP plan for the protection of the genuine natural areas of San Francisco.**

Sincerely,

Cindy Margulis
Executive Director

San Francisco Planning Department
1650 Mission St #400
San Francisco, CA 94103

Re: Sharp Park and the Significant Natural Resource Areas Management Plan
(SNRAMP) EIR

Dear Director Rahaim and Planning Commissioners:

Audubon California¹ writes to strongly urge the San Francisco Planning Department to remove the Sharp Park Golf course redevelopment and management project from the San Francisco Significant Natural Areas Management Program (SNRAMP) Environmental Impact Report (EIR). The golf course project is directly at odds with the purpose and goals of the SNRAMP, creates greater threats to the San Francisco garter snake and the California red-legged frog populations, and its inclusion threatens the entire program.

San Francisco considers itself one of the greenest cities in the United States. The SNRAMP program is, on the whole, worthy of support and recognition. However, despite broad and persistent opposition from the conservation community, San Francisco continues to include a redevelopment project for a golf course that threatens two endangered species in a program specifically dedicated to protecting and enhancing local biodiversity.

We remind you that in the November 2009 Scoping Report for the SNRAMP process stated:

Because redesigning or eliminating the Sharp Park Golf Course is a separate proposal being studied by SFRPD, it will not be included or evaluated as part of the proposed SNRAMP project analyzed in the EIR. Should changes to the Sharp Park Golf Course be proposed, **they would undergo a separate regulatory review**, including CEQA environmental review. (emphasis added)

The decision to depart from the 2009 Scoping Report appears to be a tacit acknowledgement by the Recreation and Parks Department that the controversial golf course redevelopment program would not pass muster under the California Environmental Quality Act (CEQA) if

¹ These comments are submitted on behalf of Audubon California, the state office of the National Audubon Society. Separate comments have already been submitted and/or will be submitted by Sequoia Audubon Society and Golden Gate Audubon Society, which are independent chapters of National Audubon, each with their own policies and positions related to Sharp Park. The National Audubon Society and its chapters should not be confused with "Audubon International", which is a separate entity funded in part by the U.S. Golf Association and that collects fees to "certify" developments such as golf courses and resorts as "bird-friendly" despite frequent opposition from conservation organizations.

analyzed on its own. Therefore, Sharp Park was included as part of the SNRAMP to push it through as part of a broader package that would reduce opposition to the project.

Now more than ever, San Francisco should lead by example in developing environmental policy and protecting local biodiversity. The Natural Areas Program is an excellent example of that leadership. It should not be diminished and potentially derailed by a cynical attempt to ram an expensive and environmentally-harmful golf course project through the CEQA process.

Therefore, Audubon California opposes certification of the SNRAMP Draft EIR unless the Sharp Park Golf Course redevelopment and management projects are removed. Please help the SNRAMP process continue unhindered and let the Sharp Park proposals be evaluated on their own merits in a separate CEQA process.

Thank you for consideration of our comments. If you have any questions, please do not hesitate to contact me at mlynes@audubon.org.

Respectfully submitted,

SUBJECT: Observations of apparent major long-term patterns of salinity intrusion indicators, north-western Sharp Park; relationship to modification of authorized drainage of Laguna Salada, Pacifica, San Mateo Co. (CDP 2-012-014)

Dear Ms. Rexing:

I would like to provide you with some observations of large-scale, conspicuous, and ecologically significant salinity intrusion indicators in vegetation and soil at Sharp Park. I am submitting these for your consideration in ongoing regulatory management of Sharp Park. Salinity intrusion patterns evident at the surface soil and vegetation are relevant to pumping and drainage of Laguna Salada that lowers Sharp Park groundwater elevations relative to the saline beach groundwater lens that is "pumped" by wave runup on the beachface.

Attached are annotated photos of greatly expanded dieback zones (apparently more than 2 acres) of irrigated turfgrass, and patches of salt-tolerant weeds (halophytes) in November 2015, and previous direct evidence of capillary efflorescence of salts in turfgrass depressions and flats dating from 2010 (soon after they became conspicuous). Most of the turfgrass landward of the barrier beach at the northwest end of Sharp Park exhibited mass dieback this year. This acute dieback contrasted sharply with adjacent turfgrass at slightly higher elevation, or slightly or landward of zone of apparent shallow brackish groundwater influence.

The 2010 observations of incipient salinity intrusion provide direct evidence of salt efflorescence at the soil surface in depressions where the dieback zones initiated, as well as rapid colonization by non-native halophytes (salt-tolerant weeds) that replaced barrens left by dead turfgrass. As you know, turfgrass is physiologically unable to cope with soil salt levels so high that they visibly accumulate as crystalline salt crusts at the soil surface between rains or irrigation episodes. These patterns are not consistent with any other mechanism of salt transport, such as salt spray deposition (minimized in lee of a barrier, and at the ground surface).

As sea level rises, wave runup and beach elevations rise relative to the water surface elevation of Laguna Salada. Thus, groundwater gradients between the sandy barrier beach (underlying the artificial earthen berm) should be expected to steepen towards Laguna Salada as long as it is

Peter R. Baye
Coastal Ecologist
baye@earthlink.net

pumped to elevations lower than beach groundwater. The lower the lagoon is pumped relative to beach groundwater levels, the steeper the saline groundwater gradient is likely to become – along with the magnitude of salinity intrusion impacts. The dramatic localized expansion of the turfgrass dieback from local depressions in 2010, to mass dieback of the entire western turfgrass zone in 2015, is consistent with a significant long-term adverse increase in salinity intrusion from shallow brackish groundwater flow from the beach toward the drained low lagoon. The details of the patterns of dieback gradient and salt efflorescence along the historical footprint of the sand barrier beach are also consistent with a pattern of shallow brackish groundwater intrusion from the beach, expressed as a zone of capillary rise of soil salts in low elevation areas. This pattern is probably magnified and revealed by the drought, which has reduced dilution of beach groundwater salts.

The fringing marsh (wetlands) at some western the Laguna Salada shoreline segments is also apparently exhibiting localized patterns of dieback consistent with increased salinity intrusion. The eastern shore marsh of Laguna Salada exhibits no salt dieback patterns (just low water level vegetation indicators), but there is unprecedented dieback of bulrush, rush, and stunting of tules, along with expansion of saltgrass, on the south lobe of the relict washover fan. This is consistent with increased salt stress in wetland vegetation, which I have not observed in past droughts. These are obviously not simply drought patterns of physiological wetland vegetation stress, because they are highly asymmetric across the lagoon.

Salinity intrusion at Sharp Park is a long-term management problem for wetland management, water quality, and turfgrass maintenance feasibility. Prof. Rosemary Knight (Stanford University, GEM – Center for Groundwater Evaluation and Management <https://gemcenter.stanford.edu/>) has developed efficient and definitive imaging methods (Electrical Resistivity Tomography) for measuring salinity intrusion in shallow coastal groundwater in Central California and elsewhere. I recommend that the Commission fully consider requiring monitoring of groundwater and salinity intrusion with such methods in order to constrain impacts of lagoon drainage (pumping) as sea level rises. In addition, as the Commission modifies the Coastal Development Permit conditions for Sharp Park related to pumping, I would recommend requiring well-distributed year-round sampling (multiple transects) of soil salinity and vegetation, from the soil surface to groundwater capillary fringe, across the backbarrier zones exhibiting long-term patterns of turfgrass dieback.

Thank you for your consideration and efforts to balance public interest in wetland conservation, water quality, and coastal recreation in your administration of the Sharp Park CDP.

Respectfully submitted,

Peter R. Baye, Ph.D.

Observations of salinity intrusion patterns evident in turfgrass dieback, halophyte (salt-tolerant plant) colonization, and salt efflorescence at Northwestern Sharp Park, 2010-2015.

1. Sharp Park northwestern turfgrass dieback patterns: 2015

Northwestern Sharp Park turfgrass exhibiting almost complete dieback in topographic lows (flats and swales close to groundwater level indicated by lagoon water surface; C) behind barrier beach. Note contrasting green turfgrass on landward mounds in background (A) and seaward depressions colonized by salt-tolerant weeds (B). Iceplant (*Carpobrotus edulis x chilensis*) in foreground. November 25, 2015.

Nearly complete dieback of turfgrass landward of Salada barrier beach and dike (C). Green vegetation in lowest depressions (B) is composed of salt tolerant weeds identified in 2010, including spurrey (*Spergularia* spp.) and staghorn plantain (*Plantago coronopus*) rather than turfgrass species. November 25, 2015.

Nearly complete dieback of turfgrass landward of Salada barrier beach and dike (C). Green vegetation in lowest depressions (B) is composed of salt tolerant weeds identified in 2010, including spurrey (*Spergularia* spp.) and staghorn plantain (*Plantago coronopus*) rather than turfgrass species. November 25, 2015.

Contrast: green turfgrass flats at similar elevation range, north and northeast of Laguna Salada, landward of salinity intrusion zone. November 25, 2015.

Green turfgrass landward and above salinity intrusion zone (A - sand trap topographic highs, background) and yellow-green salt-tolerant weeds in lowest, most saline depressions (A – foreground). Matrix: (C) salt-killed brown-gray turfgrass litter. November 25, 2015.

Green turfgrass landward and above salinity intrusion zone (A - sand trap topographic highs, background) and yellow-green salt-tolerant weeds in lowest, most saline depressions (A – foreground). Matrix: (C) salt-killed brown-gray turfgrass litter. November 25, 2015.

Peter R. Baye
Coastal Ecologist
baye@earthlink.net

Conspicuous narrow transition zone between salinity intrusion (turfgrass dieback, capillary transport of salt from shallow brackish groundwater, C) and drained, non-saline turfgrass on rolling topography (higher elevation) landward of salinity intrusion zone (A). November 25, 2015.

Corresponding wetland vegetation impacts of salinity intrusion, western central shore of Laguna Salada: dieback of rushes and bulrushes (*Juncus lescurii*, *Schoenoplectus pungens*) and stunted tules (*S. californicus*) on seaward fringing marsh. Green low vegetation at emergent bed of low lagoon includes rapidly growing salt-tolerant saltgrass (*Distichlis spicata*). November 25, 2015.

2. Incipient salinity intrusion patterns at NW Sharp Park prior to drought: 2010

Depressions in turfgrass flats landward of the barrier beach are the first areas to exhibit acute salinity symptoms in 2010: acute recent dieback of turfgrass with sharp boundaries related to topography and drainage, salt efflorescence at surface of soil and leaf litter, and initial colonization of barrens by salt-tolerant weeds. Surrounding matrix of turfgrass remains green above depressions; no contrast between landward and seaward turfgrass dieback outside depressions. Incipient dieback (browning) of turfgrass is evident in shallower depressions. March 27, 2010.

Sharp boundaries and surface expression of capillary rise and efflorescence of salt from shallow groundwater in depressional topography of northwest golf course. White surface is salt efflorescence on dead grass litter and soil. Light brown is dead turfgrass litter; darker brown is prostrate broadleaf weedy

Peter R. Baye
Coastal Ecologist
baye@earthlink.net

vegetation intolerant of salt, accumulated prior to expansion of populations of salt-tolerant weed species. March 27, 2010.

Sharp boundaries and surface expression of capillary rise and efflorescence of salt from shallow groundwater in depressional topography of northwest golf course. White surface in foreground is salt efflorescence on dead grass litter and soil. Light brown is dead turfgrass litter; darker brown is prostrate broadleaf weedy vegetation intolerant of salt, accumulated prior to expansion of populations of salt-tolerant weed species. March 27, 2010.

Surface expression of capillary rise and efflorescence of salt from shallow groundwater in depression at northwest golf course. White surface in foreground is salt efflorescence on dead grass litter and soil. Light brown at edge of dieback zone is dead turfgrass litter; darker brown in center is prostrate broadleaf weedy vegetation intolerant of salt, accumulated prior to expansion of populations of salt-tolerant weed species. March 27, 2010

Detail of salt efflorescence (fine crystalline crust) on soil surface and leaf litter of barren area in depressional turfgrass dieback zone. March 27, 2010

Establishment of salt-tolerant weeds in salt efflorescence patches within turfgrass dieback zone – seedlings and mature rosettes of staghorn plantain (*Plantago coronopus*), only patchy in turfgrass dieback barrens in 2010. March 27, 2010. Later expansion of this and other salt-tolerant weed populations in depressions reversed the green/dieback pattern in 2015, apparently restricting green to the salt-tolerant weeds of the depressions where salt and moisture concentrate, and leaving dead turfgrass in new areas reaching lethal soil salt levels.

Establishment of salt-tolerant weeds in salt efflorescence patches within turfgrass dieback zone: spurrey (*Spergularia* sp., likely *S. bocconii*), in early stages of colonization in barrens in 2010. March 27, 2010.

Persistence of localized depressional turfgrass dieback areas in 2010, within matrix of irrigated turfgrass.
June 10 2010.

To: Stephanie Rexing, California Coastal Commission – North Central Coast

Date: April 16, 2015

SUBJECT: Sharp Park Project Project, 2-12-014, California Coastal Commission staff report and addendum: formulation and assessment of feasible alternatives to wetland dredging; technical clarifications.

Dear Ms. Rexing:

After reviewing the Staff Report (April 3, 2015) and Addendum (April 15, 2015) for the Sharp Park Infrastructure project, I would like to provide some clarifications regarding some major and minor technical issues regarding wetland ecology and management. I hope this will help correct some apparent confusion regarding formulation and assessment of feasible alternatives to dredging marsh as a means of increasing open water/marsh edge habitat, and reversing progressive spread of tules and cattail marsh into shallow open water habitats at Laguna Salada.

I am submitting the comments below not as an opponent or proponent of the project, nor on behalf of other project opponents or proponents. My main aim is to help clarify what a potentially feasible alternative to wetland dredging actually would be and how it would work, so that it can be meaningfully assessed for Coastal Act policy compliance (including conflict resolution procedures). I think I can outline a very simple, scientifically sound and feasible alternative to dredging based on modest seasonally timed (winter-spring-early summer) increases in mean lagoon water levels on the order of only 1 to 2 feet above current target levels, which are *feasible* (water levels not associated with golf course closure in recent years), even though they may not be the applicant's *preferred* alternative.

1. Alternatives to dredging marsh to maintain open water/marsh edge

The version of the water level management alternative assessed in the staff report has become distorted as a “straw-man” alternative, needlessly burdened with an infeasible premise of excessively high water levels (near 12 ft NAVD) that have not actually been proposed, even in a wetland restoration context.

Peter R. Baye Ph.D.
 Coastal Ecologist, Botanist,
baye@earthlink.net
 (415) 310-5109

...water levels required for such a process would be up to three to four feet **higher than the very highest winter/spring flooding ever recorded** to have occurred at the Golf Course (see above, 12 feet NAVD88 inundation line on Figure 1), effectually closing down the entire Golf Course for a longer duration of time. Staff Report p. 24; bold added for emphasis)

Please note that this description of the water management alternative, which raises water levels 3-4 ft above the *highest* flood levels above the *upper lagoon wetland edge*, is inconsistent with the Staff Report's account of the water management alternative on page 34, which raises water levels *above the submerged lagoon bed* at the *lower edge of marsh vegetation* to reach a minimum submergence depth of 4 feet. This confusion about the upper and lower reference positions for water level changes completely distorts the alternative.

2) Flooding of the Vegetation

Project opponents suggest "conventional" water depth management of the marsh and ponds. This entails raising the amount of water **around the lower edges of tules and cattails** from 2 to 4 feet deep **to a minimum of 4 feet deep**. The alternative also calls for amphibious equipment to mow tules and cattails to stumps before the winter flooding and frog breeding season begins. Opponents assert the submerged tule and cattail stumps will die off due to the lack of oxygen, solving the problem of emergent vegetation. (Staff Report p. 34)

I know of no scientific justification for assuming a 4-5 ft increase in lagoon water levels to 12 ft NAVD to achieve reduction of tule and cattail spread. Raising lagoon water levels to 12 ft NAVD would not only be physically infeasible over the summer, it would submerge even the uppermost marsh in about 3 feet of water, which is near the limit of tule and cattail flooding tolerance. That would constitute an absurd "overkill" straw-man alternative that would drown most of the existing Laguna Salada marsh into open water – an alternative designed to fail and cause unjustifiable impacts while overshooting the aim of increasing open water area commensurate with the proposed marsh dredging.

Instead, to achieve a modest increase of open water habitat and retreat of lower marsh edges commensurate with (or moderately greater than) proposed marsh dredging, a 1 to 2 ft rise in target winter-early summer water levels by reducing pumping, with inevitable gradual summer drawdown (due to natural seepage outflow and evapotranspiration, not pumping), should be considered. This would mean target water levels triggering pumping to rise to only about 8-9 ft NAVD, not 12 ft, during winter, spring, and early summer.

To drown out the edge of tules and cattails along the lower (deepest) end of the depth gradient they can tolerate near the open water edge under existing conditions, there is simply no need to maintain a super-elevated 12 ft NAVD constant lagoon water level all year or even part of the year. Tule and cattail "drowning" in the wetland zone now near their limit of tolerance – 3-4 ft deep water zones during the wet winter season and much of the

growing season -- could occur by raising water levels only 1-2 ft deep, making the same zone 4-5 ft deep over winter and spring. This would exceed their limits of tolerance for high survivorship (regrowth), even if drawdown of water levels below limits of submergence tolerance later occur by mid-summer.

This drowning-dieback management method – flooding out cattails and tules by controlled episodes of excessive water levels for part of the year – is a conventional marsh habitat management method that predates wetland ecology as a science. It also emulates natural processes of among-year and between-season fluctuations in non-tidal lagoon water levels, which naturally keep dominant low marsh species like tules and cattails in check. Thus, it does not matter if shallow water conditions occasionally occur in drought years or multi-year droughts, as long as occasional wet years with prolonged high water stands around 8-9 ft during the winter and growing season occur.

The longer periods of deeper submergence along the lagoon depth gradient is what holds tules and cattails in check. All coastal lagoons usually draw usually down gradually during the summer evaporation period. They tend to equilibrate or “bottom out” as they approach the elevation of beach groundwater as freshwater inflows from groundwater and streams decline. But *starting* the marsh growing season at the bottom (shallow lagoon low stand, late summer-like low water) even at the start of growth in earliest spring – unleashes the progressive tule spread that the applicant is trying to address with dredging instead of managing them with naturalistic seasonally higher fluctuating water levels

As for aquatic mowing of low marsh near the open water edge (cutting tule and cattail shoots at their bases in fall, prior to rains and frog breeding), this technique is only a potential supplemental action to maximize physiological stress on cattail and tule roots and rhizomes during periods of deep submergence. In contrast with dredging to maintain open water in shallows that would otherwise support marsh, it would be a one-time event coordinated with initial raising of winter-spring lagoon water levels.

The functional basis for aquatic mowing to control tules and cattails at depth near their limits of tolerance (3-4 ft) is as follows. Submerged cattail and tule roots and below-mudline buds “breathe” through air passages in both live and dead standing shoots above the water surface. When these above-waterline shoots are cut or submerged, roots and rhizomes deplete limited reserves of oxygen, and are exposed to natural sediment toxins like sulfides, which are otherwise neutralized by low levels of oxygen diffusing from roots. The only way the mown plants can reconnect roots to oxygen pathways to roots is by elongating new shoots above the waterline. Submergence by 3-4 feet of water or more severely limits the ability of roots to resume normal metabolism, compared with intact plants with standing shoots above the waterline. Aquatic mowing of marsh arguably has significantly less wetland impact (equipment mobilization, sediment disturbance, biogeochemical and water quality effects) than dredging marsh sediment.

There is another major difference between the water level management alternative and proposed dredging with regard to the spatial pattern of open water and marsh, and marsh drainage and pumping, and it relates to the contrasting basic purposes of flood control versus habitat enhancement. Moderately raised lagoon water levels (1-2 ft above existing baseline near 7 ft NAVD) would not produce a large, deep linear ditch aimed at the pump intake forebay, with maximum efficiency for drainage and pumping (*i.e.*, floodwater conveyance), as dredging a canal would. The remnants of the old ditch are apparently infilled with vegetation and the young peat (organic substrate) it produced, so it is uncertain whether raising water levels would re-open shallow water over the old ditch alignment significantly, if at all.

In contrast, raising lagoon water levels by 1-2 ft would very likely open more water habitat next to the lowest elevation marsh at the existing open water/marsh edge, along a depth gradient controlled by bathymetry of the lagoon. This difference discriminates between the basic project purpose as flood control for recreation land use, and the (incidental or fictitious) purpose of increasing open water/marsh habitat edge. But if the basic purpose is really to increase open water/marsh habitat and reverse progressive spread of marsh into open water (caused by long-term marsh pumping and drainage to stable shallow summer-like water levels most of the year), then a properly designed water management alternative would be more effective and environmentally superior (higher short-term and long-term benefit/lower impact).

I agree with the Staff Report conclusion that dredging is at most a very short-term, *temporary* solution to the problem of progressive marsh spread into open water:

By analogy, clearing of the vegetation and sediment is a *temporary* action to maintain the existing capacity of the pumps.” [Staff Report p. 23].

...shallow water, which in one sense, benefits egg laying by the CRLF because the frogs prefer warmer waters, also promotes the growth of cattails and tules, causing the encroachment of emergent vegetation within LS and HSP. This spread of emergent vegetation not only compromises the pumping operations, but also leads to loss of open water habitat needed by CRLF.13 SFRPD has explained that the *current project activities proposed in this CDP application consist of a short-term solution to an ongoing problem*. SFRPD is currently considering long-term solutions... Staff report p. 22

In addition, the project represents a *temporary solution to an existing problem* that may be already aggravated by the ongoing maintenance activities at the Golf Course. Specifically, ongoing pumping activities at the Golf Course, which will continue as a result of the infrastructure improvements and replacement pumps, may continue to maintain low water levels that all parties agree aggravate the spread of emergent vegetation which compromises open water breeding habitat for CRLF. So, while this

project proposes a temporary feasible management *solution, the ongoing pumping may continue to exacerbate the problem in the long-term.* Staff report p. 25:

These statements appear to be inconsistent with Staff Report findings on page 2, which appear to be unexplained and without citation:

Additionally, clearing sediments and vegetation from Horse Stable Pond *will maintain the long-term functional capacity* of the wetland complex and *may eventually increase such capacity* consistent with Coastal Act Section 30233(c).

As long as the lagoon is maintained artificially shallow most of the year, the marsh will re-occupy all shallow water within its limits of submergence tolerance. Maintenance of perpetually low summer-like water levels most of the year also implies *permanent, perpetual dredging cycles*, probably on the order of 5 years, to maintain open ditches. It also inevitably implies *permanent* (cyclic) *impacts* of marsh maintenance dredging. Is this foreseeable ongoing, cumulative dredging impact to wetlands assessed in the staff report? Or is the project treated as a one-time event? I know of only one other coastal wetland in California occupied by federally listed endangered species where regulatory agencies approve of routine dredging of marsh as maintenance activity: “grandfathered” (century-old) vast areas of managed waterfowl marshes of Suisun Marsh, where routine non-tidal ditch maintenance has relatively low-level impacts to one widespread listed wildlife species, for which applicants have substantial compensatory mitigation obligations.

The Staff Report also infers that raising water levels would increase water level fluctuations that adversely impact breeding of California red-legged frogs. This matter requires careful analysis, and I believe it is basically incorrect. The water level fluctuations actually should decrease, not increase, as the target water level is raised, because with less deviation between target threshold levels triggering pumping and flood levels, pumps (should activate less often during flood periods. Thus, rapid, abrupt drawdown of lagoon levels during the frog breeding season should decrease in both frequency and magnitude.

I can find no documented evidence that Sharp Park golf recreation is now significantly impaired by shallow flooding of wetland and golf turf margins around elevation 9 ft NAVD in 2015. I observed shallow flooding of mown turf areas around holes 14-15 (approximately 9 ft elevation, dead reckoning by topographic maps; I did not conduct elevation surveys of water levels). Even in this drought year, on April 2 and March 7, Sharp Park golf course was open and busy (many players even near sunset). See photos below, taken from Sharp Park Boulevard. Both golf players and ducks were present side-by-side along the flooded edges of the northeast corner of the golf course. Is it the applicant’s burden to demonstrate that golf is actually “infeasible” at approximately 9 ft water levels, rather than merely not the applicant’s preferred alternative?

2. Historical Ecology of Sharp Park

The Staff Report Addendum on page 5 states, "...in regards to the historic ecology of Sharp Park staff does not see a significant area of disagreement between what has been presented in the staff report and what was presented by the project opponents". The Staff Report is inconsistent in its statements regarding historical ecology of Laguna Salada, possibly due to citation of different sources and inadvertent misinterpretation. The problematic statement of historical ecology occurs on page 34 of the Staff Report, where it reiterates local lore:

Peter R. Baye Ph.D.
Coastal Ecologist, Botanist,
baye@earthlink.net
(415) 310-5109

Sharp Park is unusual in that natural conditions are not necessarily the best conditions for the sensitive species in question here. Under completely natural conditions, without the berm and with no pumping, CRLF would probably not exist at the site as the water would be too brackish. The CRLF began surviving at the site after the water became less salty....[Staff Report p. 34]

This statement above is not consistent with Staff Report statements citing Dr. John Dixon's memo (Exhibit 7), which is substantially correct and agrees with statement of "opponents" that the lagoon was normally non-tidal, and only intermittently tidally influenced through an unstable and ephemeral tidal inlet:

The watershed is too small for runoff to maintain on open inlet or regularly breach the barrier beach, but the lagoon was probably **intermittently and briefly connected to the ocean through an outlet channel** and it periodically received sea water that overtopped the sand berm adjacent to the beach. **These hydrological characteristics probably resulted in a salinity gradient from brackish near the beach to fresh at the landward edge.** (Staff Report Exhibit 7, April 2 Dixon memo; bold added for emphasis)

In their letter of April 13, 2015 the project opponents claim that contrary to the staff report findings, "Sharp Park was historically a backbarrier lagoon/beach ecosystem, and was not influenced by *daily* tides."

To clarify, there is a huge ecological difference between "influenced by daily tides" and "intermittently and briefly connected to the ocean through an outlet channel". Daily tides occur through permanently open tidal inlets, like those of swell-sheltered south-facing tidal lagoons such as Bolinas Lagoon, Drakes Estero, or Bodega Harbor, or jetty-maintained inlets like Moss Landing. The relevant significant point here is that overwhelming physical process and historical ecological evidence supports the hypothesis that Laguna Salada supported fresh-brackish wetland gradient with tule, cattail, and bulrush marsh, long before the berm or golf course. This is not consistent with the Staff Report's causal attribution of fresh-brackish wetlands to the berm on page 7: "*As a result of the berm*, the wetlands found within the Golf Course transitioned from historically tidally influenced saltwater wetlands that were brackish near the beach, to modernly freshwater wetlands (see Dr. John Dixon's Memo)."

Natural fresh-brackish lagoon wetland gradients are typical of coarse-grained, west-facing barrier beaches and the lagoons they enclose in the North Central Coast region. These fresh-brackish natural lagoon wetland ecosystems support California red-legged frogs, western pond turtles, and garter snake subspecies in the absence of artificial dikes, berms, or golf courses. Many examples with supporting analysis are provided in the appendices of the peer-reviewed ESA-PWA (2011) report on Laguna Salada, which is substantially consistent with Dr. Dixon's memo. <https://www.savethefrogs.com/actions/sharp-park/images/Sharp-Park-Report.pdf>

Peter R. Baye Ph.D.
Coastal Ecologist, Botanist,
baye@earthlink.net
(415) 310-5109

The historical Laguna Salada, prior to Sharp Park construction, supported fringing marshes with cattails and bulrushes that were intolerant of high salinity. Laguna Salada was ...a brackish to fresh-brackish wetland like other seasonal or nontidal coastal lagoons in the region.”... We conclude that Laguna Salada in its pre-disturbance state was a backbeach lagoon that was predominantly non-tidal and primarily formed by rainfall runoff pooling behind the beach ridge. The coarse-grained beach was built and maintained by strong wave action and adequate sediment supply. Our analysis indicates that the lagoon was not big enough to maintain a tidal opening against the large waves that would close it off. However, waves were (and are) large enough to overwash the beach and bring in salt water. Therefore, we conclude that salinity was controlled by fresh runoff but was variable fresh-brackish (low salinity) due to wave overwash and brief tidal incursions following breaching

We conclude that fresh-brackish CRLF and SFGS wetland habitat existed at Laguna Salada before the golf course was constructed, when the site was modified for agriculture. We also conclude that pre-agricultural conditions could have, and likely did, include CRLF and SFGS habitat. (ESA-PWA 2011).

Again, the importance of this point is that the origin and maintenance of fresh-brackish wetland gradients and listed species did not depend on golf or artificial berms. Fresh-brackish lagoon wetlands naturally occur throughout the region, and there is unambiguous evidence of cattail-tule fresh-brackish marsh at the landward end of Laguna Salada prior to the golf course.

3. Scenic coastal views. (Staff Report p. 2, 3, 18)

The analysis of scenic views at Sharp Park is related to topography and vegetation of the beach, berm (“seawall”), and golf course, as well as public access constraints like the new fence along the berm. I do not claim expertise on scenic views, but I would like to clarify some basic confusion in the Staff Report related to views on p. 18:

Sharp Park is a public park that provides recreational opportunities for all people. In addition to the golf course, it offers breathtaking views to hikers, runners, cyclists, and due to the easy access by car and on foot, to visitors who may only have a short time available to see the ocean. Sharp Park qualifies as a sensitive coastal resource area due to its significant recreational value and because it is a highly scenic area.

The scenic coastal views of the ocean, beach, and lower Mori Point cliffs from the golf course itself are obscured by the berm/seawall, which has a crest elevation about 6 ft or more above the beach crest, which ranges around 17-18 ft elevation or higher. Most of the golf course lies in the depression of partly filled Laguna Salada at elevations well below the berm crest. Even from Sharp Park Boulevard, above the golf course, the beach is not visible

Peter R. Baye Ph.D.
Coastal Ecologist, Botanist,
baye@earthlink.net
(415) 310-5109

across the berm. The spectacular views described are possible only from the berm/seawall and beach, which is separated from the golf course by a new/recent fence. In addition, relict Monterey cypress groves (dead standing snags and live trees) further obscure coastal vistas from the golf course itself. Therefore, the scenic view qualities described and extolled in the Staff Report are features of the berm, not the golf course in its current form. The original Alister MacKenzie golf course design apparently allow for open coastal views, but that came at the cost of excessive vulnerability to coastal storms which eventually destroyed the western part of the golf course, in an obvious storm overwash hazard zone.

4. Monitoring methodology and sampling strategy. In order to generate interpretable, analyzable data, conditions for monitoring must include requirements for the spatial sampling plan (distribution of sampling locations on landward and seaward portions of the lagoon, and in transects spanning the lagoon/marsh gradients). In addition, vegetation data must include position data (GIS or ground survey) data on the lower edge of marsh/water edge vegetation, in order to interpret horizontal marsh retreat/advance responses to water level changes over time. Aggregate “cover” area estimates will not be sufficient for this purpose. In addition, disturbance-free (exclosure) transects including the upland/marsh edge will be necessary to determine the accurate position of the wetland boundary and buffer zones. This will also necessitate accurate identification of grasses, including *Agrostis stolonifera* (creeping bentgrass, a widespread wetland grass also occurring in some golf turf; distinct from *Poa* (bluegrass) species).

5. Chronology of earthen berm incremental construction. The Staff Report (p. 12) states that the golf course was “separated from the beach by a berm built in 1941 to keep the ocean from flooding the course”, and then jumps to the description of the recent armored condition: “This earthen berm, with a rock revetment on its western side..”. This chronology is inconsistent with historical aerial and ground photography of Salada Beach and Laguna Salada. I would recommend that staff rigorously examine the available historical aerial and ground photography available to develop an accurate chronology of the berm. Robert Battalio (ESA) did this for the ESA-PWA report on Laguna Salada (2011), and concluded that:

While dune building and stabilization in the 1920s to 1940s altered the natural beach berm morphology, a significant coastal structure did not exist until decades later. A review of historical photographs and documents indicates that the existing levee was not constructed until the 1980s. The majority of the coastal levee/seawall was constructed in 1989-1990. A review of available photos prior to 1983 shows an earth embankment at the north and south ends of the shore, with no embankment in the middle third. The embankments are not as large as the existing levee and proposed seawall structures, and do not extend the full length of the shore. (ESA-PWA 2011 p. 15; and Appendices)

6. Conclusions. Without prejudice to permit issuance or denial, I recommend that staff rigorously re-examine the premises and conclusions of the alternatives analysis, particularly

Peter R. Baye Ph.D.
Coastal Ecologist, Botanist,
baye@earthlink.net
(415) 310-5109

with regard to accurate, objective feasibility thresholds and hydrologic-ecological thresholds. Scientifically sound analysis of wetland management alternatives is critically important in context of wetland dredging policies and conflict resolution procedures, and evaluation of reasonable public interest trade-offs between recreation policy priorities and coastal wetland or ESHA resource conservation priorities.

7. Summary statement of qualifications (coastal wetland ecology expertise).

I have over 35 years' experience as a professional coastal ecologist, including senior wetland regulatory analysis for the U.S. Army Corps of Engineers San Francisco District, and endangered species recovery planning focused on coastal wetland ecosystems of California, with specialization in ecology of coastal lagoons, tidal marshes, beaches, and dunes. I have closely observed coastal lagoons from Marin to Santa Cruz for over two decades, and my professional wetland consulting work includes restoration, enhancement guidance for multiple coastal lagoons managed and owned by California State Parks and National Park Service. I co-authored a detailed and comprehensive assessment of modern and historical ecology of Laguna Salada with ESA-PWA (now ESA) in 2010.

WILD Equity

INSTITUTE

*Building a healthy and sustainable global community for people
and the plants and animals that accompany us on Earth*

The Wild Equity Institute is working to build a new public park at Sharp Park in Pacifica, CA. With our partners at the NPCA, the Neighborhood Parks Council, the National Japanese American Historical Society, and many other organizations, we have proposed to close the course and partner with the National Park Service to restore the land and interpret its hidden history, including the former WWII internment camp and prehistoric artifacts that have been found on the site.

Perhaps in response to this idea and litigation, **for the first time San Francisco is proposing to landmark Sharp Park Golf Course. This proposal is not well informed.** Below you will find background information about this proposal.

Although Alister MacKenzie, the original architect of Sharp Park Golf Course, has made some important golf courses, there is significant disagreement about (a) the quality of the original architectural design at Sharp Park and whether it is a reflection of Mackenzie's signature design, and (b) its current integrity. **Every history written about this course before the restoration proposal we are advancing was announced concluded that the original MacKenzie design no longer exists at Sharp Park today.**

Some contemporary golf advocates have suggested that these previous assessments were based on misinformation or bad data. They have gone as far as suggesting that several of the links at Sharp Park remain consistent with Sharp Park's original design. As a preliminary matter, **golf courses are not simply a collection of links: they are a course, and to suggest that because a few golf links remain in the places Alister MacKenzie placed them does not answer the question about the historic integrity of the course as a whole.**

But more importantly, these assessments are directly contradicted by assessments made away from the heat of this dispute, and not conducted by individuals with a stake in the outcome. **Indeed, the only individuals who have asserted that Sharp Park is historic are associated with the San Francisco Public Golf Alliance—a golf activist organization that is not qualified to provide these assessments, and has an inherent conflict in doing so regardless.**

Therefore, the previous assessments are more likely to be unbiased and accurate: even if the historians who wrote them would prefer the original course be restored, instead of than the natural areas upon which the course was built.

Some of MacKenzie's courses should be considered for recognition. But Sharp Park is simply not the place to start. There is not a single Alister MacKenzie golf course presently listed on the California or federal registers of historic places, and most everyone would agree that Sharp Park is not one of the greatest examples of his work. Indeed, **the litany of problems the golf course faces—from chronic annual flooding, to the killing of endangered species, to the low grades given the course by its own golfers, to the chronic financial instability of the course, to the inevitable loss of the site to sea level rise as our climate changes—all indicate that this particular course does not exemplify the work of a master implementing his art.**

Moreover, the San Francisco Public Golf Alliance has distributed false information to the Planning Department and to the Historic Preservation Commission arguing that Sharp Park Golf Course itself has been designated an historic landmark by the City of Pacifica. **This is not true: indeed, to the extent any historic preservation has been provided to Sharp Park, it has been equally provided to the trees, lagoon, and marsh on the property,** as will be shown below. Indeed, a proposal to try and landmark the golf course was tabled indefinitely by Pacifica's Planning Commission in 2009.

The Pacifica General Plan (as updated August 2005) Historic Preservation Element. This section includes a "list and map of all of the sites and structures felt to be of historic significance in Pacifica."

With regards to Sharp Park, the Pacifica Historic Sites list includes:

Number 18. Laguna Salada & Marsh

Number 19. Sharp Park Golf Course & Clubhouse

Number 20. Trees in Sharp Park

However, this section also states that "the element would be implemented by an Historic Ordinance which would establish a Pacifica Historic Sites Advisory Committee to review proposed changes to sites and structures designated on the Historic Sites Map and advise the Planning Commission and City Council of the appropriateness of the proposal." **No such Historic Ordinance or Advisory Committee was ever created: instead Pacifica implemented this through its zoning code.**

Title 9 of Pacifica's Zoning Code, Chapter 7 covers Historic Preservation. Section 9-7.208 of the Code lists Pacifica's designated Historic Sites:

Sec. 9-7.208. - Final designations.

The following structures, having been approved by the Planning Commission and Council for designation as historic landmarks pursuant to the procedures of this article, are hereby given final landmark designation:

- (a) Sanchez Adobe;
- (b) Sharp Park Golf Course Clubhouse;**
- (c) Little Brown Church;
- (d) San Pedro Schoolhouse;
- (e) 185 Carmel Avenue;
- (f) Vallemar Station, 2125 Cabrillo Highway;
- (g) Anderson's Store, 220 Paloma Avenue;
- (h) 165 Winona Avenue; and
- (i) Dollaradio Station.

(§ 1, Ord. 482-C.S., eff. May 27, 1987, as amended by § 1, Ord. 533-C.S., eff. September 27, 1989, § 1, Ord. 534-C.S., eff. September 27, 1989, and § 2, Ord. 569-C.S., eff. July 10, 1991, § II, Ord. No. 770-C.S., eff. May 26, 2010)

As you can see, only the golf course clubhouse has been designated historic by Pacifica. **Laguna Salada itself, along with the golf course, are 'potential' historic resources according to the general plan, but because these potential resources were never finalized into actual landmarks, they are not so protected.**

Only Sharp Park Golf Course's clubhouse is listed as an historic landmark in Pacifica, an uncontroversial finding that is not impacted in any way by the restoration proposals we have all pursued. However, **to rely on Pacifica's general plan as reason to landmark the golf course takes one only so far, because the marsh, lagoon and trees—all directly threatened by the course, are provided the same level of so-called protection as the course itself.**

San Francisco's own Historic Preservation Commission, the City's agency responsible for identifying and designating landmarks, disagreed with this assessment. **On September 21, 2011, the Commission ordered staff to prepare comments stating that they do not concur in the Recreation and Parks Department's position that Sharp Park retains historic integrity.**

There is good reason for this determination:

- The Recreation and Parks Department's Historic Resources Evaluation provides **insufficient information and evidence to support its conclusion that Sharp Park retains historic integrity.**
- The evaluation also **lacks a proper analysis of the historic landscape**, and thus there isn't an appropriate baseline to judge integrity.
- The Evaluation also **fails to consider a range of mitigation measures**, and thus precludes restoration of endangered species habitat. Historic preservation and natural resources protection are not exclusive – Crissy Field and Muir Woods restoration are examples of natural resource restoration projects where historic resources existed.
- The National Park Service has asked to play a role in any historic resource evaluation of the golf course – per their 2009 statement – because the course is within their historic boundary and they are undertaking a multi-million dollar wildlife habitat restoration project adjacent to Sharp Park, yet the City has not engaged the Park Service. **The Park Service is considered the most respected expert in historic resource preservation.**

Attached to this memo are previous statements by the National Park Service and the City of San Francisco opposing landmarking the golf course in Pacifica; written histories about how the course no longer retains integrity; and a link-by-link assessment of what has been lost at the golf course.

WILD Equity

INSTITUTE

*Building a healthy and sustainable global community for people
and the plants and animals that accompany us on Earth*

Sharp Park today bears no resemblance to Alister MacKenzie's original design. **Every link has been changed at Sharp Park—in many cases radically, and many holes have been lost completely.** It is misleading to claim that any historical integrity exists at the course.

- The water features on five MacKenzie holes east of Laguna Salada, original holes 1, 9, 15, 16, & 17, have been culverted, eliminating crucial water hazards essential to his design.
- Five holes west of Laguna Salada, including original holes 3, 4, 6, 7, & 8 were destroyed completely by massive coastal storm surges and the subsequent construction of the berm.
- Two others, original holes 2 & 5, were severely damaged and modified to eliminate additional water features and other elements of their design. Now the site of hole 12, the original hole 2 was shortened by 60 yards and a stroke while the strategic features—including its proximity to a much larger Horse Stable Pond than exists currently—are almost completely irrelevant to the hole's play today. Hole number 5, which was considered by Jack Fleming to be "one of the most interesting holes on the course, similar to Dr. MacKenzie's 'ideal golf hole,'" is now the current site of hole 17, but other than occupying the same space the hole bears absolutely no resemblance to the original hole 5: a tee shot over Laguna Salada has been removed, and dual fairways have been combined into one, eliminating strategy alternatives integral to MacKenzie's design.
- Original holes 10 and 11, now the location of holes 14 and 15, have likewise been modified with changed greens and fairways that bear no resemblance to MacKenzie's layout. Indeed, Daniel Wexler argued that the original hole 10 was perhaps the course's best link, but its essential feature—a double fairway—no longer exists.
- Original hole 12, now the location of hole 18, has had sand traps removed from the design. In addition, original hole 13 (now 3), and original holes 14 and 15 (now the location of holes 8 and 2) described by Wexler as "not among the layout's finest" to begin with, have likewise had hazards reconfigured, as has the final original hole, 18 (now the location of hole 10).
- In addition, the theory of the course—the creation of a links-type, seaside course—was entirely upended when the berm was built separating the course from the ocean.

SHARP PARK GOLF COURSE

PACIFICA, CA

Opened in 1931 / 6,154 yards Par-71

As today, some 65 years after his death, Dr. Alister MacKenzie remains perhaps the most celebrated golf architect in history, it is truly remarkable that two public courses he laid out in major American metropolises could have been so short-lived and poorly documented. Yet Bayside, as we have seen, labored in (and vanished into) almost complete obscurity—and it cannot even begin to compare with the briefly-lived legacy of San Francisco's Sharp Park.

MacKenzie's Sharp Park layout is surely one of golf architecture's most enduring mysteries. Owing to the fact that it was built in 1931, then washed into oblivion by a coastal storm shortly thereafter, its original design was seen firsthand by very few. Nor was this initial version in any way adequately recorded, with few photographs of any kind known to remain in existence. Further, a visit to today's 6,299-yard facility offers little; this vastly-altered layout serving mostly to make one wonder if a vintage MacKenzie design ever *could* have existed upon this site.

But the Doctor's original, located very much upon this same land, was all that its tantalizing prospects have suggested, a marvelous golf course featuring seaside holes, two double fairways, a large lake, and a cypress-dotted setting fairly reminiscent of Monterey. It was, in short, a municipal masterpiece.

Located just 10 miles south of downtown San Francisco, the site given to MacKenzie was uncommonly fine for a public facility, including a nearly 1,000-yard oceanfront stretch along Salada Beach. For a county whose public course facilities at Harding and Lincoln Parks were among the busiest in the nation, the development of Sharp Park was a godsend, but this wonderful property was not without its drawbacks.

For one thing, a fair amount of the land required shoring up with massive quantities of dredged sand in an expensive, Lido-like operation. Second, the site was partially divided by a small county road, a circumstance dictating that three of MacKenzie's back-nine holes be separated from their 15 brethren. Years later this road would be rerouted, though by that time the storm-driven reconfiguration of the golf course would still leave four newer holes separated, about the only commonality between MacKenzie's work and the course in play today.

The 1931 layout began with a dogleg-right par-4 of 400 yards, a strong but not especially memorable opener. But things changed quickly at the second, a 274-yard par-4 with alternate tees situated on either side of the first green. In what today might be referred to as "risk/reward" style, this nearly-driveable hole featured a large bunker front-right of the putting surface and a lake to the left of the fairway, creating the wonderful question of just how near the water one dared to venture in pursuit of an easier angle for his second.

The third was a long two-shotter of 423 yards, playing directly north along the beachfront. Again the risk/reward question was laid before us: play safely down the middle and deal with a front-right greenside bunker or aggressively skirt the beach in pursuit of an open second? Seaside winds generally affected play at Sharp Park greatly, bringing those most unlikish of obstacles—trees—into play along the right side as well.

Following the short fourth, a precise pitch played along the lake's westward shoreline, one reached the first of the dual-fairway holes, the 338-yard fifth. Here the player's options were numerous with a "safe" left-side route leaving the most difficult second-shot, a dangerous lakefront fairway opening up a more direct line, or the all-out blast over everything leaving a mere pitch from a wide-open angle. As at the second hole, a second tee positioned left of the previous green served to create additional angles and variety.

The 385-yard seventh was the course's second and last seaside hole, playing directly south to a long, narrow green flanked on either side by sand. The slight angling of the putting surface again tempted one to drive close to the beach (particularly if the pin was cut back-left), but the lesser presence of trees at least made this tee shot a bit more forgiving.

The 398-yard eighth, though built with only one fairway, offered two very distinct lines of play. A drive aimed safely left was simple enough but set up a nearly all-carry approach across two front-left greenside bunkers. For the man capable of controlling a long fade, however, there was the option of skirting the treeline, a shot which, if brought off successfully, again yielded a more favorable approach.

Though one hesitates to name a best hole among so many good ones, the 392-yard 10th did

a fine job of nominating itself. Here was the double fairway concept played out to the fullest, the right side providing ample safety but a bunker-obscured second, the left requiring a gutsy tee shot to a water-guarded fairway but yielding a straight-on approach. Yet again, dual tee boxes varied the challenge from day to day, making the 10th a truly great hole—but an intimidating prospect for anyone hoping to slip past the starter and begin play on the back nine.

Following the 142-yard 11th came the long 12th, a 493-yarder distinctly reachable in two, provided one avoided several prominent trees and the out-of-bounds which ran down the entire left side.

Perhaps not surprisingly, the three holes exiled across the county road were not among the layout's finest, the 345-yard 13th being the best of the bunch with out-of-bounds also threatening its more-favored left side.

With the routing having returned to the clubhouse for a third time, one set out again at the 363-yard 16th, a par-4 following much the same path as today's first hole. Here a large mound punctuated the fairway some 175 yards off the tee, offering several different angles of play. The more difficult drive was the one aimed down the right side, close to a clump of trees. Naturally this choice also provided the better approach angle to a deep, narrow putting surface.

MacKenzie closed out Sharp Park with a pair of long finishers beginning with the 471-yard 17th. Though not a particularly difficult hole, this short par-5 often faced a strong sea breeze and featured out-of-bounds left, two bunkers, a meandering brook and a green laid precariously close to a rough, marshy depression. The 18th, by contrast, was a bit of a monster, its 443 yards requiring more brute strength than finesse, though the ability to draw one's tee shot would obviously have come in handy.

It was indeed unfortunate for Sharp Park that so many of its best holes fell along the property's ocean side, for it was this flank which took the brunt of any incoming storms. Following the early 1930s deluge that washed several of these gems out to sea, a massive berm was constructed (largely upon land once occupied by holes three and seven) to prevent history from repeating itself. The subsequent rerouting of the county road and reconfiguring of the lakeside holes has further muddled things so that today only a handful of holes run consistent with MacKenzie's originals, and no appreciable trace of his strategy remains in play.

How Sharp Park Would Measure Up Today

Oceanfront holes, double fairways, MacKenzie bunkering, marvelous scenery...

Any way you look at it, even at only 6,154 yards, Sharp Park would have to stand well out in front as America's finest municipal golf course.

Restoration anyone?

SHARP PARK

Being that the City had come by the lots at Sharp Park so cheaply (free in fact) they decided to bring in one of the world's foremost golf architects, Dr. Alister Mackenzie. The fact that Mackenzie and his assistant at that time, Jack Fleming, were able to design a golf course along the San Mateo County coast line was quite an accomplishment in itself. They managed to accomplish this difficult feat by dredging for fourteen months in order to build up the fairways.

On May 15, 1930 Robert Hunter, Jr. was appointed the superintendent of construction for Sharp Golf Course at a fee of \$750 for ten month's work. Four and a half months later on October 2, 1930 Willis Polk and Company was authorized to prepare plans and specifications for the starter's house at the golf course. The original cost of playing golf was \$2.00 per month and a card good for all three courses became available in May 1932 for \$5.00.

The courses's opening in 1932 was twice delayed due to wet conditions. The golf course officially opened April 1, 1932. Perhaps the fact that even the opening of the course had to be delayed twice due to winter rains should have warned of the drainage problems this site would always face. Normally a golf course will welcome the rest and revitalization the winter rains bring. In Sharp Park's case the winter rains brought about the annual flooding of Laguna Salada out on to playable portions of the golf course.

This problem still persists 47 years later even though a 4,000 gallon water pump has been installed. Two factors contribute to the poor drainage problem at the Sharp Park site. First and foremost

is the fact that the course is built at sea level and thus was susceptible to changing tides. The second factor was the annual flooding of Laguna Salada itself.

The golf course that opened on April 1, 1932 was becoming increasingly popular until it was severely damaged by high tides in a storm during the winter of 1938. The holes constructed on or near the beach were undated by the unchecked tides of the storm. This resulted in severe damage to the beach holes - Numbers 2 through 8. The course, generally considered one of the best tests of golf in Northern California would never be the same. The beach holes had to be abandoned and reconstruction was forced across the Coast Highway up into what is now referred to as "The Canyon Holes". The effect was much the same as taking a house with a beach view and turning it 180 degrees to face a mountain slope. This was the most drastic architectural change the Sharp Park layout would ever face. Even the State Highway construction in the early 1960's that wiped out one par three hole would not have as damaging effect as nature.

Sharp Park remains very busy to this day drawing players both from the City and from down the peninsula. During the winter, however, as the water table rises, the course becomes less playable and suffers a significant drop in play - more so than other municipal courses during the winter. One winter in the early 1970's flooding was so thorough that the unchecked water nearly reached the clubhouse.

September 1, 2009

Honorable Julie Lancelle
Mayor, City of Pacifica
City of Pacifica City Hall
170 Santa Maria Avenue
Pacifica, CA 94044

Michael Crabtree, Planning Director
City of Pacifica
Planning Department
1800 Francisco Blvd.
Pacifica, CA 94044

Re: Proposed Designation of Sharp Park Golf Course as a Pacifica City Landmark

Dear Mayor Lancelle and Director Crabtree,

I am writing in regard to the City of Pacifica's application to designate the Sharp Park Golf Course a Historic Landmark under Pacifica Municipal Code, Chapter 7. We think this action is both inappropriate and unnecessary. Under California law, the City of Pacifica cannot regulate land use at Sharp Park which is owned by the City and County of San Francisco. (See, Cal. Govt. Code §§ 53090, et seq., *Akins v. County of Sonoma*, 67 Cal. 2d 185 (1967).) Therefore, any designation of the Sharp Park Golf Course as a historic landmark by the City of Pacifica will have no legal effect and, frankly is not helpful in furthering a legitimate public policy debate here in San Francisco.

We certainly recognize that Sharp Park Golf Course is used and enjoyed not just by many San Franciscans, but also by the residents of Pacifica, and that your City is concerned about any potential changes to it, and particularly to the golf course. As you may know Sharp Park is approximately 400 acres -- 237 of those acres are included in the San Francisco Recreation and Park Department's Significant Natural Resource Areas Management Plan (SNRAMP). This Plan is currently undergoing environmental review under the California Environmental Quality Act. We appreciate the historic and cultural value of the golf course, and an evaluation of the effects of the SNRAMP on the golf course as a potential historical resource will be included in the SNRAMP EIR.

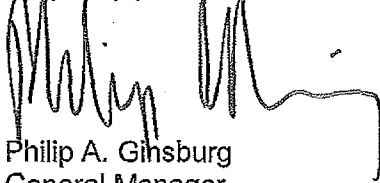

As you also likely know, the area around the Sharp Park Golf Course contains habitat that support two special status species: San Francisco garter snake (*Thamnophis sirtalis tetrataenia*), listed as endangered under the federal Endangered Species Act, and classified as a fully protected species under California Fish and Game Code § 5050; and the California red-legged frog (*Rana draytonii*), listed as threatened under the federal Endangered Species Act and a state species of special concern. Under federal and state law, the City and County of San Francisco must ensure that the golf course operation does not endanger or harm either of these species. Recently, the San Francisco Board of Supervisors enacted legislation directing the Recreation and Park Department to develop a plan for

restoring the habitat for the garter snake and red-legged frog in conformance with federal and state law. Currently, we are preparing option plans, including schedules and costs for presentation to the public and to the Board which we hope to have preliminarily completed in October 2009.

We take our stewardship responsibilities at Sharp Park very seriously. In a very difficult financial climate, we must manage the recreational, cultural and biological uses of the park in a manner that best balances legitimate recreational needs with our fiduciary and legal responsibility to protect the habitat. We will continue to include the City of Pacifica in our discussions as we evaluate plans Sharp Park's future.

Very truly yours,

A handwritten signature in black ink, appearing to read 'Philip A. Ginsburg', with a long horizontal flourish extending to the right.

Philip A. Ginsburg

IN REPLY REFER TO:

NPS Statement on Pacifica Landmark Designation for Sharp Park

July 20, 2009

We learned of the City of Pacifica's proposal to designate Sharp Park Golf Course as a Pacifica Historic Landmark when we received the public hearing notice. We were not notified of this proposal through the Pacifica GGNRA Advisory Committee, which was set up by the Pacifica City Council to discuss items pertinent to both bodies.

As you know, Sharp Park is within the boundary of the Golden Gate National Recreation Area and adjacent to lands that we manage at Sweeney Ridge and Mori Point. We are currently completing a multi-year restoration project at Mori Point, to protect the Endangered San Francisco Garter snake and the threatened Red-legged frog and provide for compatible recreation and community stewardship and educational activities. Therefore, we have an interest in the future of Sharp Park.

Although we concur that the golf course and club house, as well as the remains of the WWII internment camp, should be evaluated, we request that you not make a landmark designation without a professional assessment of the significance and integrity of the property. We can assist with such an evaluation and would like to work with City of Pacifica and the City of San Francisco to define an appropriate process that includes all stakeholders.

October 27, 2011

Bill Wycko
Environmental Review Officer
Planning Department
City of San Francisco
1650 Mission Street, Ste 400
San Francisco, CA 94103-2479

RE: Sharp Park Golf Course – Historic Resource Evaluation

Dear Mr. Wycko,

I have reviewed Appendix C of the DEIR for the *Significant Natural Resource Areas Management Plan: Sharp Park Golf Course* and question the determination of eligibility for listing on the National Register of Historic Properties (NRHP). On page 5-4 the author suggests that Sharp Park Golf Course has historic significance under Criterion A and C under the NRHP and Criterion 1 and 3 for the California Register of Historic Resources (CRHR). Criterion C/3 requires that "a property embody the distinctive characteristics of a type, period, or method of construction that represents the work of a master, or that possesses high artistic values". Based on the number and extent of alternations that have taken place since the period of significance (1929 – 1932) I question the validity of finding Sharp Park eligible as a historic resource.

*Bulletin 18 "How to Evaluate and Nominate Designed Historic Landscapes,"*¹ states "As defined by the National Historic Preservation Act of 1966 and the National Register criteria, to be eligible for the National Register a designed historic landscape must possess significance and integrity of location, design, setting, materials, workmanship feeling and association." Sharp Park Golf Course lacks integrity.

The *Historical Resources Evaluation Report* (HRER) prepared by Tetra Tech, Inc. describes many alterations made to the course since 1932. Comparing the course layouts depicted in the two exhibits included in the Evaluation Report² one finds very few similarities between how the course was designed and how it exists today.

¹ National Park Service, "How to Evaluate and Nominate Designed Historic Landscapes," *National Register Bulletin No. 18*, p. 6.

² The original Sharp Park Golf Links plan prepared by Mackenzie, Hunter & Egen (Figure 3) and the aerial of the Existing Golf Course (Figure 2).

Chris Cathy Christopher
Pattillo Garrett Kent

444 - 17th Street Oakland CA 94612
Tel 510.465.1284 Fax 510.465.1256

1. The original hole 1 (now hole 11) was a long, straight shot. The reconfigured hole doglegs to the right.
2. The original hole 2 (now hole 12) was a dogleg that wrapped around the south end of the course. Hole 12 is now a lot shorter with no dogleg.
3. The original holes 3, 4, and 8 were destroyed in a big storm and not replaced.
4. The original hole 5 offered multiple fairway options – a unique design feature of Mackenzie. Hole 17 which replaced 5 is a single straight shot.
5. The original hole 6 that ran east-west at the north boundary no longer exists.
6. The original hole 7 appears to be similar to current hole 16 identified on Figure 2 as having been built after 1941, after the period of significance.
7. The original holes 9 and 10 each offered double fairways. The replacement holes 13 and 14 eliminated these special features.
8. The original hole 11 – a short run - appears to be similar to current hole 15.
9. The original hole 12 was a long straight shot. It has been replaced by hole 18 that is longer with a dogleg.
10. The original holes 13, 14 and 15 were on the east side of the county road and generally paralleled the road running north-south. Today this area has four holes that all run east-west.
11. The original hole 16 was a dogleg left replaced by hole 3 a straight shot.
12. The original hole 17 ran east-west and was a long shot with a dogleg. Hole 8, a short, straight fairway replaced it.
13. The original hole 18 was a dogleg. This hole has been replaced by hole 2, a straight shot.

In summary only hole 11 (now hole 15) is similar to the original design. The layout of the remainder of the course has been substantially altered. The change to the order of how the holes are played is significant as it materially alters the sequence and nature of views the player experiences making it unlike what was intended by the designer. Other major changes implemented since the period of significance include:

- A. Elimination or reconfiguration of several sand traps.
- B. Construction of a seawall in 1941 to prevent flooding of the golf course. This eliminated views to the beach and Pacific Ocean and the essence of the links design concept.
- C. Filling a portion of the lagoon as part of the reconfiguration of hole 10.
- D. Installation of concrete golf cart paths along the back nine holes in 1996 where none existed previously.
- E. Culverting of water features on five holes and the elimination of water hazards – an important component of the original design.
- F. Installation of a 4000-gallon pump to help with annual flooding of Laguna Salada.
- G. Alternations made between 1985 and 1994 to accommodate female players such as shortening of the fairways.

Adding together all of these alterations it is apparent that Sharp Park Golf Course lacks sufficient integrity to qualify as a historic resource under criterion C/3. The course no longer reflects the work of Alister Mackenzie. The land use remains a golf course but otherwise there are few similarities between the course that existed during the period of significance and what remains today.

The Evaluation Report notes that Alister Mackenzie attained status as a master golf course architect. Appendix C on page 4-7 notes, "George Shackelford, in his book *Grounds for Golf*, describes Mackenzie as a master designer and offers that Mackenzie's secret to creating unique courses was his talent for routing." Regrettably, today nothing remains of Mackenzie's unique routing. He continues to explain that his work "was known for its original and distinctive bunkers, with irregular shapes and each with its own design." And "Distinctive bunkering, the use of small hillocks around greens, and exciting hole locations were Mackenzie's trademark".

Another of Mackenzie's trademarks was his talent for working with natural landform and subtly integrating his courses with a site's topography to take full advantage of the unique qualities of each site. Quoting from the HRER, "Mackenzie felt that the success of golf course construction depended entirely on making the best use of natural features and devising artificial ones indistinguishable from nature." The HRER continues with, "..... while many architects try to create a special course, Mackenzie could figure out how best to fit holes into a property and situate a golf course to evoke a comfortable, settled, connection to the ground. His course routings are always functional and original but rarely do they fight the contours of the property."

In summary, defining characteristics of Mackenzie's design style included unique course routing, a talent for adapting a course to fit the land, an ability to offer challenge to players of varying skill levels, distinctively designed bunkers, and inclusion of multiple fairway options – offering advantage to those to took greater risks in their play. The vast majority of these features have been eliminated from the course. According to Wexler, in a recently published article "no appreciable trace of his strategy remains in play."³

Unfortunately, Sharp Park Golf Course began to fail even before the course opened in 1932 because Mackenzie failed to fully understand the forces of nature at this site. Page 4-3 of the Evaluation Report notes that the opening was delayed twice due to "drainage problems on the course due to winter rains." Shortly after the course opened a major storm washed out a large portion of the course and necessitated construction of the seawall in 1938 intended to prevent similar damage in the future. This type of damage has continued – as recently as 1982 a major storm wiped out several holes. In 1990 another breach killed many of the cypress trees on the course. Few of the golf courses designed by Alister Mackenzie remain intact today. It would be ironic and misplaced if this course – one that represents a failure in design – became a lasting representative of his life's work by being officially designated as a historic property.

³ Dr. Alister Mackenzie, "Sharp Park Golf Course", Pacifica, CA page 113

The determination of historic significance is tied to a site's level of integrity. According to *A Guide to Cultural Landscape Reports: Contents, Process, and Techniques*⁴ "The historic integrity of a cultural landscape relates to the ability of the landscape to convey its significance." And "Historic integrity is assessed to determine if the landscape characteristics and associated features, and the spatial qualities that shaped the landscape during the historic period of significance, are present in much the same way as they were historically." Emphasis added.

The guide continues, "Historic integrity is determined by the extent to which the general character of the historic period is evident, and the degree to which incompatible elements obscuring the character can be reversed". In the case of Sharp Park Golf Course the changes to the course were not the result of the normal evolution of a living landscape – maturing trees and other plantings, but rather major changes that were forced to solve functional problems that resulted from flaws in the original design – a failure to fully understand the power of nature and it's ability to wreak havoc. The changes made to Sharp Park Golf Course cannot be reversed because doing so would recreate the conditions that necessitated that the alterations be made in the first place.

Page 5-2 of the HRER notes, "Because landscape features change over time, a landscape need not retain all of the original features it had during its period of significance, but it must retain the essential features and characteristics that make its historic character clearly recognizable."

In essence for a site to meet the criteria of historic significance most of the designed features must look as they did during the period of significance. This may be true for the Clubhouse and maintenance building which are not addressed here, but it is not the case at Sharp Park Golf Course and no doubt explains why "None of the state or national registers identified Sharp Park Golf Course as a historical resource" as noted on page 4-1 of the HRER.

By making the finding that the existing golf course represents a historic resource under criterion C/3 it seems that Tetra Tech failed to appreciate not only the subtleties of golf course architecture but its essential features. Just because there was a golf course present in 1932 the fact that there is still a golf course present today, does not qualify the current course as a historic resource.

⁴ A Guide To Cultural Landscape Reports: Contents, Process and Techniques by Robert R. Page, Cathy A. Gilbert, and Susan A. Dolan, US Department of the Interior, National Park Service, Cultural Resource Stewardship and Partnerships, 1998.

Sharp Park Golf Course lacks integrity. While a golf course at this site is consistent with the historic land use, that fact is insufficient evidence for a finding of historic significance. Failure to demonstrate significance voids eligibility for historic resource status. I urge you to consider this as you plan for the future use of Sharp Park.

SF Historic Preservation Commission: Sharp Park Golf Course Lacks Historic Integrity

06 October 2011 - 22:38

[Permalink](#) |  [Share Item on Facebook](#)

See also:

- [Restore Sharp Park](#) — [Latest News](#)

In a stunning rebuke to golfers grasping to keep San Francisco subsidizing suburban golf in San Mateo County, on September 21, 2011 San Francisco's Historic Preservation Commission stated that it does not concur that Sharp Park Golf Course is an historic resource.

Watch this annotated audio excerpt of the Historic Preservation Commission hearing.

Sharp Park Golf Course has been losing money and killing endangered species for many years. In September Supervisor John Avalos introduced legislation to transform Sharp Park into a new national park, while providing Sharp Park's current golfers with additional access to affordable golf courses in San Francisco.

But golf privatization groups who oppose national parks convinced San Francisco's Recreation and Parks Department to make-up a case that Sharp Park Golf Course should be protected as an historic resource under the California Environmental Quality Act. As part of this process, the Department asked the Historic Preservation Commission to rubber-stamp its proposal.

However, the Commissioners reviewed the proposal and raised several objections to the Recreation and Parks Department proposal. Led by Commissioner Alan Martinez—who explained that the existing golf course is “a fragment of what it once was”—the Commission could not reach consensus on the golf course's integrity, and unanimously voted that “the commission did not concur on the integrity of the golf course.”

The Wild Equity Institute is working with dozens of community, environmental, and history organizations to ensure that the California Environmental Quality Act and San Francisco's historic preservation laws aren't abused by golf privatization groups. The next step in this process is to ensure that the Planning Commission evaluates Sharp Park separately from other natural areas in San Francisco that are undergoing environmental review. Keep your eyes and ears peeled for more updates in the coming weeks.

Historic Photos, Field Notes Show Sharp Park Has Always Been Habitat for Herps--and the Golf Course is Harming Them

19 July 2010 - 18:58

See also:

- [Restore Sharp Park — Latest News](#)

Rediscovered [historic photos](#) of Sharp Park, along with [field notes](#) stored at [UC Berkeley's Museum of Vertebrate Zoology](#), indicate that Sharp Park was once excellent habitat for the [San Francisco garter snake](#) and the [California red-legged frog](#): and that Sharp Park Golf Course is the primary threat to both species at the site.

This undated photo of Sharp Park shows Laguna Salada before the golf course was built, with Mori Point Ridge in the background.

In this photo, the lagoon is clearly fringed with cattails, vegetation that can't grow in saline environments. This indicates that Laguna Salada was not a "salt lake" as golf privatization advocates have argued, but a fresh lagoon where the [San Francisco garter snake](#) and the [California red-legged frog](#) could thrive.

At least until Sharp Park Golf Course was built. The earliest systematic biological surveys of San Mateo County were conducted by Dr. Wade Fox—the man who would eventually scientifically describe the San Francisco garter snake—when he was a graduate student at UC Berkeley. Although he died in his prime, Dr. Fox's field notes have been preserved at the UC Berkeley Museum of Vertebrate Zoology. These notes have finally been digitized, and they show that in 1946 Dr. Fox found a dead San Francisco garter snake at Sharp Park, which he concluded was "probably killed by golfers—they probably die frequently in this manner." Presaging the species precipitous decline, Dr. Fox also noted that the only secure area remaining for the species at Sharp Park was in the wet grasses near the lagoon: the surrounding golf links were deadly to the species.

5

Thamnophis elegans

April 6 Sharp Park, San Mateo Co., Calif
 The narrow bands of grass and sedge plants along the edge of the lake is the only really weedy place on the 3.70 ha. - we found some dead ones, probably killed by gaspers. They probably die frequently in this manner.

April 13 Miller Beach, Marin Co., Calif
 Today I found two entellus around the small pool in the pasture. The strong, cold wind coming in from the ocean was probably too cold for them. None were in sight, nor were any found under surface objects around the pool even though there was several sediments to be found there. Up the stream from this pool I found a very small entellus & several sediments which were not. But this was protected from the wind and occurred in the stream. Up on the hill I saw a large sediment swim out on the water - while moving it swam sediment beneath the surface. Then it immediately swim into the head end of the water. On the sandy bank south of the cottage at the beach sediments were active. Once again they were sheltered from the wind, and were facing the sun so that they could receive at least some of the radiation from the sun.

The San Francisco garter snake is now on the brink of extinction, and is probably the most imperiled vertebrate species on the San Francisco Peninsula. Yet since the 1940s Sharp Park Golf Course has been killing this species, and more recently the Golf Course has been found killing both the San Francisco garter snake and the California red-legged frog. We can do better: let's restore Sharp Park and build a better public park on the property. Find out how you can help restore Sharp Park [here](#).

> Therefore must think and work regionally (not just sharp) about opportunities to create secure freshwater wetlands on the 30+ year time scale. For exmaple GGNRA land and Calera Creek.

>

> 30 years = approxiamte life of capital improvements including golf course and sea wall. Also the planning horizon for the Alternatives Report. The alternatives report was not intended to assess the integrity of the sea wall. This study is being done under separate contract. For the purposes of the recovery action, it had to be assumed that the sea wall was either in good enough shape to hold for the planning horizon, or it would be modified as needed to last for the planning horizon.

>

> Now

>

> Species are at risk of local extinction now. Planning for creating wetlands eastward of the current location would likely be a long process and very difficult from a permitting standpoint and would not meet the goals of connecting habitat to Mori Point. There might also be legal challenges associated with moving the sea wall. Meanwhile, the population of the SFGS would continue to decline.

Financial Appraisal of Sharp Park Golf Course 2005 - 2015

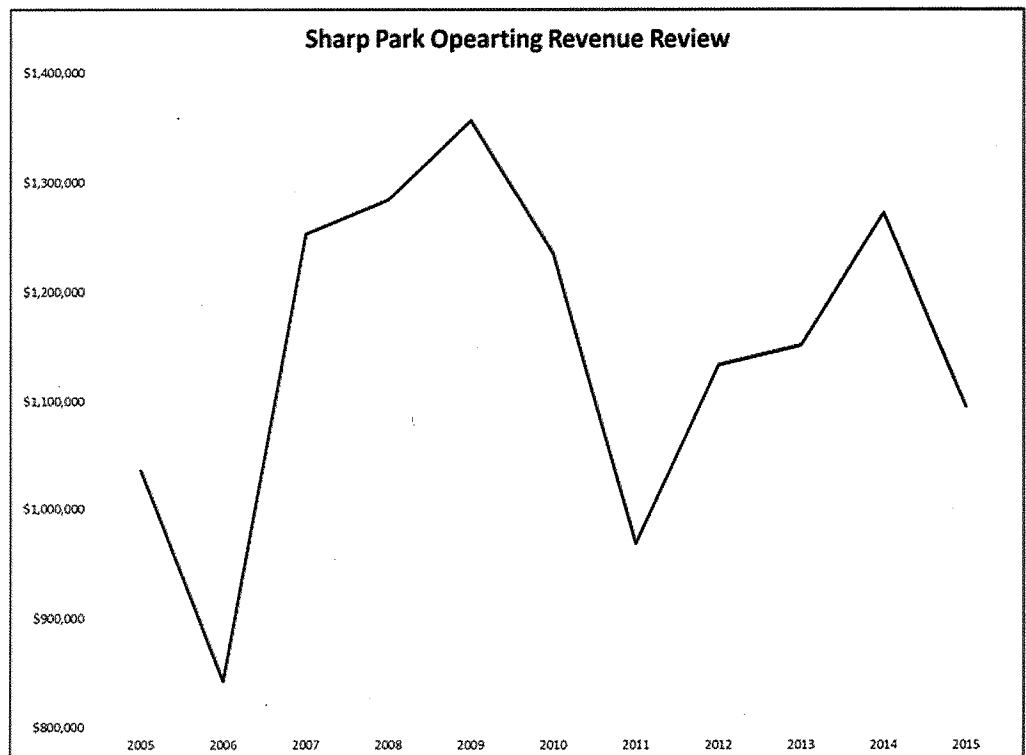

Executive Summary

- Revenue levels over the last ten years have been volatile and it is questionable whether even significant investment in Sharp Park Golf Course would result in revenue growth.
- Sharp Park Golf Course has been loss making for nine out of the last ten years. This has resulted in over \$1.1 million of loss for the City of San Francisco.
- Documentation provided in support of expenses for Sharp Park, indicate that there could be significant inaccuracies in the financial reporting of operating expenses on the Revenue and Expenditure Reports.
- Since 2005 \$7.9 million has been spent on water and irrigation projects for Sharp Park Gold Course. It does not appear that the depreciation for these expenditures has been included in the Revenue and Expenditure Reports. On this basis, it would appear that a major expense may have been omitted in the Revenue and Expenditure Reports.

Operating Revenue Review

- As illustrated in the graph and table below, operating revenues over the last ten years have highly been volatile.
- The volatility of the revenue makes it challenging to predict whether any investment in the Sharp Park would result in a significant increase in revenue.
- For the purposes of this analysis, revenue from golf green fees, concessions and golf resident cards was included. Interest income and income from the General Fund was excluded as these were not considered to be operating revenue streams.

Financial Year Ending	Sharp Park Operating Revenue
2005	\$ 1,035,919
2006	842,895
2007	1,253,087
2008	1,284,381
2009	1,356,712
2010	1,234,844
2011	968,735
2012	1,133,396
2013	1,151,451
2014	1,271,908
2015	\$ 1,094,569

Profitability Review

- The Sharp Park Golf Course is not profitable. As shown in the table below, Sharp Park has been loss making for nine out of the last ten years and has resulted in \$1,147,064 of loss for the City of San Francisco.
- As discussed above, it is unclear whether any additional investment would increase revenue and return the park to profitability.
- We note that expenses such as 'Equipment' appear to be very low and may be understated in the reports provided by Recreation and Park Department.
- For the purposes of this analysis, we utilized data from the Revenue and Expenditure Reports provided by the Recreation and Park Department.

Notes:												
1. Golf Resident Card revenue and expenses were apportioned to each course according to that course's % contribution to golf fund allocated revenues and allocated operating expenditures, respectively.												
2. General Fund Support was removed from revenue.												
3. Interest earned was removed from revenues as it does not represent an operating revenue.												
4. Repayment to Open Space Fund was eliminated.												
Source: San Francisco Recreation & Park Dept. Golf Revenue & Expenditure Reports												

Accuracy of Expenses

- We requested documentation from the Recreation and Park Department to verify operating expenses included in the Revenue and Expenditure Reports. We were provided with payroll documentation for 2014 and 2015 in support of Sharp Park payroll costs. We were not provided with adequate documentation to review the reliability of other expenses.
- The supporting payroll documentation provided indicated that payroll expenses may have been significantly understated in the financial year 2014/2015. As shown in the table below, annual salary costs were listed as \$583,187, however, the payroll data indicates that actual costs were \$982,495.
- As inaccuracies have been observed in the presentation of payroll expenses, it is possible that other operating expenses included in the Revenue and Expenditure Reports have also been understated.

- On this basis, it is possible that the losses generated by Sharp Park may have been significantly understated and the cost to the City of San Francisco of operating Sharp Park may be higher than stated on the Revenue and Expenditure Reports.

Month	Salary	Fringe
Jul-14	\$ 45,867	\$ 21,100
Aug-14	384,816	157,758
Sep-14	48,393	20,904
Oct-14	50,669	21,661

Jun-15	82,279	36,588
Total	\$ 982,495	\$ 417,971
Per 2014/2015 Budget Reports	\$ 583,187	\$ 254,736
Source: Payroll report provided by San Francisco Recreation and Park Department		

Accounting for Capital Expenditure

- Data extracted from the Monthly Capital Reports generated by the Recreation and Park department, show that since 2005, \$7.9 million has been spent on capital water and irrigation projects for Sharp Park Gold Course (see the table below).
- Per GASB Statement No. 34, capital assets should be depreciated over their 'useful life'. As a result, we would expect to see an amount for depreciation included in the Revenue and Expenditure Reports to account for the capital expenditures on water and irrigation systems.
- As depreciation for these expenditures does not appear to have been included in the Revenue and Expenditure Reports, it is possible that a major expense may have been omitted in the Revenue and Expenditure Reports.

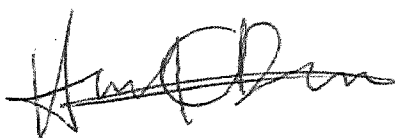

Fiscal Year	Capital Plan Project Name	Budget	Expended
2005-2006	Lincoln and Sharp Irrigation	\$ 620,977	\$ 620,977

ADOPTING FINDINGS RELATED TO THE CERTIFICATION OF A FINAL ENVIRONMENTAL IMPACT REPORT FOR THE PROPOSED SIGNIFICANT NATURAL RESOURCE AREAS MANAGEMENT PLAN.

MOVED, that the San Francisco Planning Commission (hereinafter "Commission") hereby CERTIFIES the final Environmental Impact Report identified as Case No. 2005.0912E, the "Significant Natural Resource Areas Management Plan" (hereinafter "Project"), based upon the following findings:

1. The City and County of San Francisco, acting through the Planning Department (hereinafter "Department") fulfilled all procedural requirements of the California Environmental Quality Act (Cal. Pub. Res. Code Section 21000 *et seq.*, hereinafter "CEQA"), the State CEQA Guidelines (Cal. Admin. Code Title 14, Section 15000 *et seq.*, hereinafter "CEQA Guidelines") and Chapter 31 of the San Francisco Administrative Code (hereinafter "Chapter 31").
 - A. The Department determined that an Environmental Impact Report (hereinafter "EIR") was required and provided public notice of that determination by publication in a newspaper of general circulation on April 22, 2009.
 - B. The Department held a public scoping meeting on May 12, 2009 and May 14, 2009 in order to solicit public comment on the scope of the Project's environmental review.
 - C. On August 31, 2011, the Department published the Draft Environmental Impact Report (hereinafter "DEIR") and provided public notice in a newspaper of general circulation of the availability of the DEIR for public review and comment and of the date and time of the Planning

¹ The Significant Natural Resource Areas Management Plan, or SNRAMP, is now referred to as the Natural Resources Management Plan; however, to maintain consistency between the Draft EIR and the RTC document, the term SNRAMP will continue to be used.

Commission public hearing on the DEIR; this notice was mailed to the Department's list of persons requesting such notice.

- D. On August 31, 2011, copies of the DEIR were mailed or otherwise delivered to a list of persons requesting it, to those noted on the distribution list in the DEIR, and to government agencies, the latter both directly and through the State Clearinghouse.
 - E. Notice of Completion was filed with the State Secretary of Resources via the State Clearinghouse on August 31, 2011.
2. The Commission held a duly advertised public hearing on said DEIR on October 6, 2011 at which opportunity for public comment was given, and public comment was received on the DEIR. The period for acceptance of written comments ended on October 31, 2011.
 3. On April 27, 2012, the Department opened a second public review and comment period for the DEIR, and provided public notice in a newspaper of general circulation of the availability of the second public review and comment period; this notice was mailed to the Department's list of persons requesting such notice and to neighborhood groups registered with the Department at that time. The period for acceptance of written comments ended on June 11, 2012.
 4. The Department prepared responses to comments on environmental issues received at the public hearing and in writing during the first 61-day public review period and the second 45-day public review period for the DEIR, prepared revisions to the text of the DEIR in response to comments received or based on additional information that became available during the public review period, and corrected errors in the DEIR. This material was presented in a Comments and Responses document, published on November 16, 2016, distributed to the Commission and all parties who commented on the DEIR, and made available to others upon request at the Department.
 5. A Final Environmental Impact Report (hereinafter "FEIR") has been prepared by the Department, consisting of the DEIR, any consultations and comments received during the review process, any additional information that became available, and the Comments and Responses document all as required by law.
 6. Project EIR files have been made available for review by the Commission and the public. These files are available for public review at the Department at 1650 Mission Street, Suite 400, and are part of the record before the Commission.
 7. On December 15, 2016, the Commission reviewed and considered the information contained in the FEIR and hereby does find that the contents of said report and the procedures through which the FEIR was prepared, publicized, and reviewed comply with the provisions of CEQA, the CEQA Guidelines, and Chapter 31 of the San Francisco Administrative Code.
 8. The project sponsor has indicated that the presently preferred alternative is the Significant Natural Resources Area Management Plan.

9. The Planning Commission hereby does find that the FEIR concerning File No. 2005.0912E: Significant Natural Resources Area Management Plan reflects the independent judgement and analysis of the City and County of San Francisco, is adequate, accurate and objective, and that the Comments and Responses document contains no significant revisions to the DEIR that would require recirculation of the document pursuant to CEQA Guideline Section 15088.5, and hereby does CERTIFY THE COMPLETION of said FEIR in compliance with CEQA, the CEQA Guidelines and Chapter 31 of the San Francisco Administrative Code.
10. The Commission, in certifying the completion of said FEIR, hereby does find that the project described in the Environmental Impact Report and the project preferred by the project sponsor, described as the Significant Natural Resources Area Management Plan in FEIR would have the following significant unavoidable environmental impacts, which cannot be mitigated to a level of insignificance:
 - A. A significant project specific and cumulative impact on Sharp Park Golf Course, a historic resource under CEQA, due to modification of golf holes for restoration activities;
 - B. A significant cumulative impact on recreation in dog play areas (DPAs) within Natural Areas due to increased use resulting from the reduction of dog play areas by the project and potentially by the National Park Service's (NPS) Dog Management Plan within the Golden Gate National Recreation Area (GGNRA);
 - C. A significant cumulative impact on biological resources within Natural Areas DPAs due to increased use resulting from the reduction of dog play areas by the project and potentially by the NPS Dog Management Plan within the GGNRA; and
 - D. A significant project-specific and cumulative impact on air quality from activities such as trail construction, hillside stabilization, erosion control, and tree removal.
11. The Planning Commission reviewed and considered the information contained in the FEIR prior to approving the Project.

I hereby certify that the foregoing Motion was ADOPTED by the Planning Commission at its regular meeting of December 15, 2016.

CALIFORNIA ENVIRONMENTAL QUALITY ACT FINDINGS: FINDINGS OF FACT, EVALUATION OF MITIGATION MEASURES AND ALTERNATIVES, AND STATEMENT OF OVERRIDING CONSIDERATIONS

SAN FRANCISCO RECREATION AND PARK COMMISSION

December 15, 2016

I. PREAMBLE

In determining to approve the Natural Resources Management Plan ("Project" and "Management Plan") as described in Section II.A, Project Description, below, the San Francisco Recreation and Park Commission ("Commission") makes and adopts the following findings of fact and decisions regarding the Project, and mitigation measures, and alternatives based on substantial evidence in the whole record of this proceeding and under the California Environmental Quality Act, California Public Resources Code Sections 21000 et seq. ("CEQA"), the Guidelines for Implementation of CEQA, 14 California Code of Regulations Sections 15000 et seq. ("CEQA Guidelines"), and Chapter 31 of the San Francisco Administrative Code ("Chapter 31").

This document is organized as follows:

Section II provides a description of the proposed Project, Project objectives, the environmental review process for the Project, the approval actions to be taken, and the location of records;

Section III identifies impacts of the Project found not to be significant as well as the Project's potentially significant impacts that can be avoided or reduced to less-than-significant levels through mitigation and describes the disposition of the mitigation measures;

Section IV identifies significant project-specific and cumulative impacts that cannot not be eliminated or reduced to a less-than-significant level and describes any applicable mitigation measures as well as the disposition of the mitigation measures;

Section V identifies the Project alternatives that were analyzed in the EIR and the economic, legal, social, technological, and other considerations that support approval of the project and the rejection as infeasible of alternatives, or elements thereof, analyzed;

Section VI sets forth the Commission's Statement of Overriding Considerations pursuant to CEQA Guidelines Section 15093.

The Mitigation Monitoring and Reporting Program ("MMRP") for the mitigation measures that have been proposed for adoption is attached with these findings as Attachment 2 to Motion No. _____. The MMRP is required by CEQA Section 21081.6 and CEQA Guidelines Section 15091. The MMRP provides a table setting forth each mitigation measure listed in the Final Environmental Impact Report for the Project ("Final EIR") that is required to reduce or avoid a significant adverse impact. The MMRP also specifies the agency responsible for implementation of each measure and establishes monitoring actions and a monitoring schedule. The full text of the mitigation measures is set forth in the MMRP.

These findings are based upon substantial evidence in the entire record before the Commission. The references set forth in these findings to certain pages or sections of the Draft Environmental Impact

Report (“Draft EIR” or “DEIR”) or the Responses to Comments document (“RTC”), which together constitute the Final Environmental Impact Report (“Final EIR” or “FEIR”) are for ease of reference and are not intended to provide an exhaustive list of the evidence relied upon for these findings.

II. PROJECT DESCRIPTION AND PROCEDURAL BACKGROUND

a. Project Description

The project sponsor, San Francisco Recreation and Park Department (“SFRPD”) proposes to adopt the Natural Resources Management Plan (“NRMP”). The Project area encompasses 32 Natural Areas that are scattered mostly throughout the central and southern portions of San Francisco and constitute approximately four percent of the total city area; one natural area is in Pacifica. The areas range in size from less than one acre to almost 400 acres and include such popular locations as Twin Peaks and portions of Glen Canyon Park. The Management Plan will guide activities on properties owned or maintained by the SFRPD through its Natural Resources Program.

The Natural Areas include the following areas in San Francisco: Balboa; Bayview Park; Bernal Hill; Billy Goat Hill; Brooks Park; Buena Vista Park; Corona Heights; Dorothy Erskine Park; Duncan-Castro; Edgehill Mountain; Everson/Digby; Fairmount Park; Glen Canyon and O’Shaughnessy Hollow; Golden Gate Heights; Golden Gate Park Oak Woodlands; Grandview Park; Hawk Hill; India Basin Shoreline Park; Interior Greenbelt; Kite Hill; Lake Merced; Lakeview/Ashton Mini Park; McLaren Park; Mount Davidson; Palou-Phelps; Pine Lake; Rock Outcrop; Tank Hill; Twin Peaks; and 15th Avenue Steps. Sharp Park in Pacifica is also a Natural Area.

Fragments of unique plant and animal habitats within San Francisco and Pacifica, known as Natural Resource Areas (Natural Areas), have been preserved within the parks that are managed by the San Francisco Recreation and Park Department (SFRPD). In the late 1990s, the SFRPD initiated a Natural Areas Program to protect and manage these Natural Areas. Over the course of several years, the SFRPD developed the Natural Resources Management Plan, with the final draft plan published in February 2006. The NRMP contains detailed information on the biology, geology, and trails within 32 Natural Areas, 31 in San Francisco and one (Sharp Park) in Pacifica. The NRMP is intended to guide natural resource protection, habitat restoration, trail and access improvements, other capital projects, and maintenance activities over the next 20 years.

The Management Plan delineates the acreage within each Natural Area into management area categories based on the management priority. The NRMP prescribes both general management activities that apply to all Natural Areas and management activities specific to each Natural Area. The NRMP identifies a number of goals with respect to conservation and restoration, education, research, stewardship, recreation, and monitoring goals. Recommended actions identified for each Natural Area are intended to meet the overall goals of the NRMP and may include, but are not limited to, habitat restoration, removal of invasive species, tree removal, erosion control, trail closure, relocation or creation, and closure or reduction of dog play areas. Individual Natural Areas may be identified as an entire park or only a portion of the park. Unless otherwise specified in the NRMP or the Draft EIR, management actions apply only to the geographic boundary of the Natural Area.

The Management Plan identifies a number of objectives and goals of the Natural Areas Program. For the purposes of CEQA, the project objectives are as follows:

- To identify issues and impacts adversely affecting ecosystem functions and biological diversity;
- To identify, prioritize, and implement restoration and management actions designed to promote the functioning of San Francisco's native ecosystem, including the maintenance and enhancement of native biodiversity;
- To identify and prioritize monitoring of natural resources to support an adaptive management approach;
- To provide guidelines for passive recreation compatible with San Francisco's natural resources;
- To provide guidelines for education, research, and stewardship programs; and
- To restore the Laguna Salada wetland complex for the benefit of special status species.

b. Environmental Review

On April 22, 2009, the Planning Department determined that an Environmental Impact Report ("EIR") was required and provided public notice of that determination by publication in a newspaper of general circulation.

The Planning Department held a public scoping meeting on May 12, 2009 and May 14, 2009 in order to solicit public comment on the scope of the Project's environmental review.

On August 31, 2011, the Planning Department published the Draft Environmental Impact Report ("DEIR") and provided public notice in a newspaper of general circulation of the availability of the DEIR for public review and comment and of the date and time of the Planning Commission public hearing on the DEIR; this notice was mailed to the Planning Department's list of persons requesting such notice.

On August 31, 2011, copies of the DEIR were mailed or otherwise delivered to a list of persons requesting it, to those noted on the distribution list in the DEIR, to adjacent property owners, and to government agencies, the latter both directly and through the State Clearinghouse.

Notice of Completion was filed with the State Secretary of Resources via the State Clearinghouse on August 31, 2011.

The Planning Commission held a duly advertised public hearing on said DEIR on October 6, 2011 at which opportunity for public comment was given, and public comment was received on the DEIR. The period for acceptance of written comments ended on October 31, 2011.

On April 27, 2012, the Planning Department opened a second public review and comment period for the DEIR, and provided public notice in a newspaper of general circulation of the availability of the second public review and comment period; this notice was mailed to the Planning Department's list of persons requesting such notice. The period for acceptance of written comments ended on June 11, 2012.

The Planning Department prepared responses to comments on environmental issues received at the public hearing and in writing during the first 61-day public review period and the second 45-day public review period for the DEIR, prepared revisions to the text of the DEIR in response to comments received or based on additional information that became available during the public review period, and corrected errors in the DEIR. This material was presented in a Comments and Responses document, published on

November 16, 2016, distributed to the Planning Commission and all parties who commented on the DEIR, and made available to others upon request at the Planning Department.

The FEIR was prepared by the Planning Department, consisting of the DEIR, any consultations and comments received during the review process, any additional information that became available, and the Comments and Responses document all as required by law.

The FEIR is both a project-level and a programmatic EIR. A project-level EIR is generally the most common type of EIR, and it examines the environmental impacts of a specific project. This level of CEQA review focuses primarily on the changes in the environment that would result from a project and examines all phases of the project, including planning, construction, and operation (CEQA Guidelines Section 15168). Project-level review has been selected as the appropriate level of CEQA review for the NRMP's routine maintenance activities and the Sharp Park restoration activities. These components of the NRMP have been developed to a sufficient level of detail to allow project-level environmental review.

Program-level CEQA review is used in environmental analyses for a series of actions that can be characterized as one large project because they are logically related. The series of actions can be related geographically, or be logical parts in the chain of contemplated actions. Program-level review is used in connection with the issuance of rules, plans, or other general criteria to govern the conduct of a continuing program. Programmatic review is also appropriate for individual activities carried out under the same authorizing statutory or regulator authority, that have generally similar environmental effects which can be mitigated in similar ways (CEQA Guidelines Section 15168). Program-level review has been selected as the appropriate level of CEQA review for the NRMP's large-scale projects because these projects are long-term projects that have not been fully developed to enable project-level environmental review. Once funding is available for long-term projects, additional design and development of the project would commence, allowing for a greater understanding of project-level environmental impacts.

Project EIR files have been made available for review by the Planning Commission, the Commission, and the public. These files are available for public review at the Department at 1650 Mission Street, Suite 400, and are part of the record before the Commission.

On December 15, 2016, the Planning Commission reviewed and considered the information contained in the FEIR and found that the contents of said report and the procedures through which the FEIR was prepared, publicized, and reviewed comply with the provisions of CEQA, the CEQA Guidelines, and Chapter 31 of the San Francisco Administrative Code. The Planning Commission certified the FEIR as adequate, accurate, and complete.

c. Commission Actions

The Commission is currently considering various actions ("Actions") in furtherance of the Project, which include, but are not limited to the following:

- Approval of the Natural Resources Management Plan.

d. Location of Records

The record upon which all findings and determinations related to the adoption of the Project are based include the following:

- The FEIR, and all documents referenced in or relied upon by the EIR;
- All information (including written evidence and testimony) provided by City staff to the Planning Commission relating to the FEIR, the proposed approvals and entitlements, the Project, and the alternatives set forth in the FEIR;
- All information (including written evidence and testimony) presented to the Planning Commission by the environmental consultant and subconsultants who prepared the FEIR, or incorporated into reports presented to the Planning Commission;
- All information (including written evidence and testimony) presented to the City from other public agencies relating to the Project or the FEIR;
- All applications, letters, testimony, and presentations presented to the City by the Project sponsor and its consultants in connection with the Project;
- All information (including written evidence and testimony) presented at any public hearing or workshop related to the Project and the FEIR;
- The Mitigation Monitoring and Reporting Program (MMRP); and
- All other documents comprising the record pursuant to Public Resources Code Section 21167.6(e).

The public hearing transcript, a copy of all letters regarding the Final EIR received during the public review period, the administrative record, and background documentation for the Final EIR are located at the Planning Department, 1650 Mission Street, 4th Floor, San Francisco. The Planning Commission Secretary is the custodian of these documents and materials. The Library Commission Secretary is the custodian of Project documents and materials on file at the SFPL Main Library. The Recreation and Park Commission Secretary is the custodian of Project documents and materials on file at the Recreation and Park Department Headquarters in Golden Gate Park.

These findings are based upon substantial evidence in the entire record before the Commission. The references set forth in these findings to certain pages or sections of the DEIR, the RTC or the Final EIR are for ease of reference and are not intended to provide an exhaustive list of the evidence relied upon for these findings.

In making these findings, the opinions of the Planning Department and other City staff and experts, other agencies and members of the public have been considered. These findings recognize that the determination of significance thresholds is a judgment within the discretion of the City and County of San Francisco; the significance thresholds used in the Final EIR are supported by substantial evidence in the record, including the expert opinion of the Final EIR preparers and City staff; and the significance thresholds used in the Final EIR provide reasonable and appropriate means of assessing the significance of the adverse environmental effects of the Project.

These findings do not attempt to describe the full analysis of each environmental impact contained in the Final EIR. Instead, a full explanation of these environmental findings and conclusions can be found in the Final EIR and these findings hereby incorporate by reference the discussion and analysis in the Final EIR supporting the determination regarding the Project impacts and mitigation measures designed to address those impacts. In making these findings, the determinations and conclusions of the Final EIR relating to environmental impacts and mitigation measures, are hereby ratified, adopted and incorporated in these

findings, except to the extent any such determinations and conclusions are specifically and expressly modified by these findings.

III. LESS-THAN-SIGNIFICANT IMPACTS AND FINDINGS REGARDING MITIGATION MEASURES

Under CEQA, no mitigation measures are required for impacts that are less than significant (Pub. Res. Code § 21002; CEQA Guidelines §§ 15126.4, subd. (a)(3), 15091). As more fully described in the Final EIR and based on the evidence in the whole record of this proceeding, it is hereby found that implementation of the Project would not result in any significant impacts in the following areas and that these impact areas therefore do not require mitigation: Land Use and Land Use Planning, Aesthetics, Wind and Shadow, and Agriculture and Forest Resources.

CEQA requires agencies to adopt mitigation measures that would avoid or substantially lessen a project's identified significant impacts or potential significant impacts if such measures are feasible. As more fully described in the Final EIR and based on the evidence in the whole record of this proceeding, it is hereby found that implementation of the Project would result in certain identified significant impacts, but that adoption of mitigation measures would avoid or substantially lessen these impacts with regard to: Cultural & Paleontological Resources, Recreation, Biological Resources, Hydrology and Water Quality, Hazards and Hazardous Materials, and Air Quality.

The findings in this section concern mitigation measures discussed in the Final EIR, presented in a Mitigation Monitoring and Reporting Program ("MMRP"), and attached as Attachment 2 to these Findings, which are hereby adopted and incorporated as conditions of Project approval. The Final EIR includes a series of mitigation measures that have been identified that would eliminate or reduce to a less-than-significant level the NRMP's potential environmental impacts of the Project listed in this section. All of the mitigation measures set forth in the Final EIR that are needed to reduce or avoid these significant adverse environmental impacts are contained in Attachment 2. Accordingly, in the event a mitigation measure recommended in the Final EIR has inadvertently been omitted in these findings or the MMRP, such mitigation measure is nevertheless hereby adopted and incorporated in the findings below by reference. In addition, in the event the language describing a mitigation measure set forth in these findings or the MMRP fails to accurately reflect the mitigation measure in the Final EIR due to a clerical error, the language of the mitigation measure as set forth in the Final EIR shall control. The impact numbers and mitigation measure numbers used in these findings reflect the numbers contained in the Final EIR.

The Commission finds that the mitigation measures, as set forth in the Attached Exhibit 1 to this Resolution, are feasible and adopts these measures as conditions of Project approval. In no instance are the conclusions of the Final EIR, or the mitigation measures recommended in the Final EIR for the Project, being rejected.

a. Cultural and Paleontological Resources

Architectural Resources

Impact CP-1: Implementation of programmatic projects under the NRMP would result in a substantial adverse change in the significance of historical architectural resources, including historic landscapes.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-CP-1: Consultation with the San Francisco Planning Department

The Commission finds that the foregoing mitigation measure is feasible and will mitigate the potential impacts of project construction on architectural resources and landscapes to a less-than-significant level because the measures, which are adopted as conditions of project approval, provide adequate protection against significant impacts to potential architectural resources and landscapes that may exist on the project site(s).

Archaeological Resources

Impact CP-10: Implementation of programmatic projects under the NRMP would result in a substantial adverse change in the significance of archaeological resources in Natural Areas of high archaeological sensitivity.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-CP-10: Archaeological Monitoring Program for Programmatic Projects in Natural Areas with High Archaeological Sensitivity, Routine Maintenance Activities at Tank Hill and Lake Merced, and the Sharp Park Restoration Project

Impact CP-11: Implementation of programmatic projects under the NRMP would result in a substantial adverse change in the significance of archaeological resources in Natural Areas of moderate and low archaeological sensitivity.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-CP-11: Accidental Discovery

Impact CP-12: Implementation of routine maintenance under the NRMP would result in a substantial adverse change in the significance of archaeological resources in any of the Natural Areas, with the exception of Lake Merced and Tank Hill Natural Areas.

The following mitigation measures, as more fully described in the Final EIR, are hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-CP-11: Accidental Discovery

M-CP-12: Annual Archaeological Sensitivity Training for Natural Areas Program Staff Involved with Routine Maintenance Activities in all Natural Areas

Impact CP-13: Implementation of routine maintenance under the NRMP would result in a substantial adverse change in the significance of archaeological resources in the Lake Merced and Tank Hill Natural Areas.

The following mitigation measures, as more fully described in the Final EIR, are hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-CP-10: Archaeological Monitoring Program for Programmatic Projects in Natural Areas with High Archaeological Sensitivity, Routine Maintenance Activities at Tank Hill and Lake Merced, and the Sharp Park Restoration Project

M-CP-12: Annual Archaeological Sensitivity Training for Natural Areas Program Staff Involved with Routine Maintenance Activities in all Natural Areas

Impact CP-14: Implementation of the Sharp Park restoration efforts under the NRMP would result in a substantial adverse change in the significance of archaeological resources.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-CP-10: Archaeological Monitoring Program for Programmatic Projects in Natural Areas with High Archaeological Sensitivity, Routine Maintenance Activities at Tank Hill and Lake Merced, and the Sharp Park Restoration Project

The Commission finds that the foregoing mitigation measures are feasible and will mitigate the potential impacts of project construction on archaeological resources and landscapes to a less-than-significant level because the measures, which are adopted as conditions of project approval, provide adequate protection against material damage to potential underground cultural resources that may exist on the project site(s).

Paleontological Resources

Impact CP-15: Implementation of programmatic projects under the NRMP would directly or indirectly destroy paleontological resources or unique geological formations.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-CP-15: Coordination with EP Regarding Paleontological Resources Prior to Implementation of Programmatic Projects

Impact CP-16: Implementation of routine maintenance under the NRMP would directly or indirectly destroy paleontological resources or unique geological formations.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-CP-16: Avoidance of Surface Bedrock in Routine Maintenance Activities

Impact CP-17: Implementation of Sharp Park restoration activities under the NRMP would directly or indirectly destroy paleontological resources or unique geological formations.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-CP-17: Paleontological Training Program and Alert Sheet for the Sharp Park Restoration Project

The Commission finds that the foregoing mitigation measures are feasible and will mitigate the potential impacts of project construction on paleontological resources to a less-than-significant level because the measures, which are adopted as conditions of project approval, provide adequate protection against material damage to potential paleontological resources that may exist on the project site(s).

Human Remains

Impact CP-18: Implementation of programmatic projects under the NRMP would disturb human remains.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-CP-18: Human Remains, Associated or Unassociated Funerary Objects.

Impact CP-19: Implementation of routine maintenance under the NRMP would disturb human remains.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-CP-18: Human Remains, Associated or Unassociated Funerary Objects.

Impact CP-20: Implementation of Sharp Park restoration activities under the NRMP would disturb human remains.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-CP-18: Human Remains, Associated or Unassociated Funerary Objects.

The Commission finds that the foregoing mitigation measure is feasible and will mitigate the potential impacts of project construction related to human remains to a less-than-significant level because the measure, which is adopted as a condition of project approval, provides adequate protection against material damage to potential human remains that may exist on the project site(s).

b. Recreation

Impact RE-6: Implementation of the Sharp Park restoration activities under the NRMP would have a substantial adverse effect on the physical characteristics of existing recreation facilities.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-RE-6: Restoration of the Sharp Park Golf Course to 18 Playable Holes

- c. The Commission finds that the foregoing mitigation measure is feasible and will mitigate the potential impacts of project construction related to recreation to a less-than-significant level through the restoration of Sharp Park Golf Course to 18 Playable Holes. This measure is adopted as a condition of project approval.

Biological Resources

Special Status Species

Impact BI-1: The NRMP and implementation of programmatic projects proposed under the NRMP would have a substantial adverse effect on special status plant species.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-BI-1a: Protection of Protected Species and Riparian and Wetland Habitat

M-BI-1b: Protection of Locally Significant Plant Species during Implementation of Programmatic Projects

Impact BI-2: The NRMP and implementation of programmatic projects under the NRMP would have a substantial adverse effect on special status bird species.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-BI-1a: Protection of Protected Species and Riparian and Wetland Habitat

Impact BI-3: The NRMP and implementation of programmatic projects under the NRMP would have a substantial adverse effect on other protected terrestrial wildlife species (other than bird species).

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-BI-1a: Protection of Protected Species and Riparian and Wetland Habitat

Impact BI-4: The NRMP and implementation of programmatic projects under the NRMP would have a substantial adverse effect on protected aquatic species.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-BI-1a: Protection of Protected Species and Riparian and Wetland Habitat

Impact BI-5: Implementation of routine maintenance activities under the NRMP would result in a substantial adverse effect on special status species.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-BI-5: Protection of Special Status Species during Routine Maintenance

Impact BI-6: Implementation of the Sharp Park restoration activities under the NRMP would have a substantial adverse effect on special status species.

The following mitigation measures, as more fully described in the Final EIR, are hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-BI-6a: Protection of Protected Species during Implementation of the Sharp Park Restoration Project

M-BI-6b: Protection of Protected Species during Maintenance of the Sharp Park Restoration Project

M-HY-1: Implementation of Stormwater Pollution Prevention Measures

The Commission finds that the foregoing mitigation measures are feasible and will mitigate the potential impacts of project construction on special status species to a less-than-significant level because the measures, which are adopted as conditions of project approval, provide adequate protection against any significant impact to special status species.

Sensitive Natural Communities

Impact BI-7: The NRMP and implementation of programmatic projects under the NRMP would have a substantial adverse effect on sensitive natural communities.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-BI-1a: Protection of Protected Species and Riparian and Wetland Habitat.

The Commission finds that the foregoing mitigation measure is feasible and will mitigate the potential impacts of project construction on sensitive natural communities to a less-than-significant level because the measure, which is adopted as a condition of project approval, provides adequate protection against any significant impact to sensitive natural communities.

Wetlands

Impact BI-10: The NRMP and implementation of programmatic projects under the NRMP would have a substantial adverse effect on wetlands.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-BI-1a: Protection of Protected Species and Riparian and Wetland Habitat

Impact BI-12: Implementation of the Sharp Park restoration activities under the NRMP would have a substantial adverse effect on wetlands.

The following mitigation measures, as more fully described in the Final EIR, are hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-BI-12a: Protection of Wetlands during the Sharp Park Restoration Project

M-BI-12b: Laguna Salada Restoration Project Wetland Mitigation Plan

The Commission finds that the foregoing mitigation measures are feasible and will mitigate the potential impacts of project construction on wetlands to a less-than-significant level because the measures, which are adopted as conditions of project approval, provide adequate protection against any significant impact to wetlands.

Fish and Wildlife Movement, Migratory Corridors, and Nursery Sites

Impact BI-15: Implementation of Sharp Park restoration activities under the NRMP would have a substantial adverse effect on fish and wildlife movement, migratory corridors and nursery sites.

The following mitigation measures, as more fully described in the Final EIR, are hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-BI-6a: Protection of Protected Species during Implementation of the Sharp Park Restoration Project

M-BI-6b: Protection of Protected Species during Maintenance of the Sharp Park Restoration Project

M-BI-12a: Protection of Wetlands during the Sharp Park Restoration Project

M-BI-12b: Laguna Salada Restoration Project Wetland Mitigation Plan

The Commission finds that the foregoing mitigation measures are feasible and will mitigate the potential impacts of project construction on fish and wildlife movement, migratory corridors, and nursery sites to a less-than-significant level because the measure, which is adopted as a condition of project approval, provides adequate protection against any significant impact to fish and wildlife.

d. Hydrology and Water Quality

Water Quality

Impact HY-1: Implementation of programmatic projects under the NRMP would violate water quality standards or otherwise degrade water quality.

The following mitigation measures, as more fully described in the Final EIR, are hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-HY-1: Implementation of Stormwater Pollution Prevention Measures

M-HZ-13: Emergency Response Plan for Accidental Releases of Hazardous Materials

Impact HY-2: Implementation of routine maintenance activities under the NRMP would violate water quality standards or otherwise degrade water quality.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-HZ-14: General Emergency Response Plan for Routine Management Activities Using Gasoline- or Diesel-Powered Equipment

Impact HY-3: Implementation of the Sharp Park restoration under the NRMP would violate water quality standards or otherwise degrade water quality.

The following mitigation measures, as more fully described in the Final EIR, are hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-BI-6a: Protection of Protected Species during Implementation of the Sharp Park Restoration Project

M-BI-12b: Laguna Salada Restoration Project Wetland Mitigation Plan

M-HY-1: Implementation of Stormwater Pollution Prevention Measures

M-HZ-13: Emergency Response Plan for Accidental Releases of Hazardous Materials

The Commission finds that the foregoing mitigation measures are feasible and will mitigate the potential impacts of project construction on water quality to a less-than-significant level because the measures, which are adopted as condition of project approval, provide adequate protection against any significant impact to water quality.

Erosion and Siltation

Impact HY-7: Implementation of the programmatic projects under the NRMP would result in substantial erosion or siltation.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-HY-1: Implementation of Stormwater Pollution Prevention Measures

Impact HY-9: Implementation of the Sharp Park restoration under the NRMP would not result in substantial erosion or siltation.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-HY-1: Implementation of Stormwater Pollution Prevention Measures

The Commission finds that the foregoing mitigation measure is feasible and will mitigate the potential impacts of project construction on erosion and siltation to a less-than-significant level because the measure, which is adopted as a condition of project approval, provides adequate protection from significant impacts related to erosion and siltation.

Stormwater Runoff

Impact HY-13: Implementation of the programmatic projects under the NRMP would affect stormwater runoff quantity or quality.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-HY-1: Implementation of Stormwater Pollution Prevention Measures

Impact HY-15: Implementation of the Sharp Park restoration under the NRMP would affect stormwater runoff quantity or quality.

The following mitigation measures, as more fully described in the Final EIR, are hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-HY-1: Implementation of Stormwater Pollution Prevention Measures

M-HZ-13: Emergency Response Plan for Accidental Releases of Hazardous Materials

M-BI-12a: Protection of Wetlands during the Sharp Park Restoration Project

M-BI-12b: Laguna Salada Restoration Project Wetland Mitigation Plan

The Commission finds that the foregoing mitigation measures are feasible and will mitigate the potential impacts of project construction on erosion and siltation to a less-than-significant level because the measures, which are adopted as conditions of project approval, provide adequate protection from significant impacts related to stormwater runoff.

e. Hazards and Hazardous Materials

Hazardous Material Accidents

Impact HZ-13: Implementation of the programmatic projects under the NRMP would not create significant hazard to the public or the environment through accident conditions involving the release of hazardous materials into the environment.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-HZ-13: Emergency Response Plan for Accidental Releases of Hazardous Materials

Impact HZ-14: Implementation of the routine maintenance activities under the NRMP would not create significant hazard to the public or the environment through accident conditions involving the release of hazardous materials into the environment.

M-HZ-14: General Emergency Response Plan for Routine Management Activities Using Gasoline- or Diesel-Powered Equipment

Impact HZ-15: Implementation of the Sharp Park restoration under the NRMP would not create significant hazard to the public or the environment through accident conditions involving the release of hazardous materials into the environment.

The Commission finds that the foregoing mitigation measures are feasible and will mitigate the potential hazardous material accidents to a less-than-significant level because the measures, which are adopted as conditions of project approval, provide adequate protection from significant impacts due to hazardous material accidents.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-HZ-13: Emergency Response Plan for Accidental Releases of Hazardous Materials

f. Air Quality

Fugitive Dust

Impact AQ-1: Programmatic projects under the NRMP would result in substantial fugitive dust emissions.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-AQ-1: Fugitive Dust Reduction

Impact AQ-3: The Sharp Park restoration under the NRMP would result in substantial fugitive dust emissions.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR and the attached MMRP and will be implemented as provided therein.

M-AQ-1: Fugitive Dust Reduction

The Commission finds that the foregoing mitigation measures are feasible and will mitigate the potential impacts of project construction on water quality to a less-than-significant level because the measures, which are adopted as conditions of project approval, provide adequate protection against any significant impacts to water quality.

IV. SIGNIFICANT IMPACTS THAT CANNOT BE AVOIDED OR REDUCED TO A LESS-THAN-SIGNIFICANT LEVEL

Based on substantial evidence in the whole record of these proceedings, the Commission finds that, where feasible, changes or alterations have been required, or incorporated into, the Project to reduce the significant environmental impacts as identified in the Final EIR. It is further found, however, that certain mitigation measures in the Final EIR, as described in this Section IV, or changes, have been required in, or incorporated into, the Project, pursuant to Public Resources Code Section 21002 and CEQA Guidelines Section 15091, which may lessen, but do not avoid (i.e., reduce to less-than-significant levels), the potentially significant environmental effects associated with implementation of the Project that are described below. Although all of the mitigation measures set forth in the Mitigation Monitoring and Reporting Plan (MMRP), attached as Exhibit 1, are adopted, for some of the impacts listed below, despite the implementation of feasible mitigation measures, the effects remain significant and unavoidable.

It is further found, as described in this Section IV below, based on the analysis contained within the Final EIR, other considerations in the record, and the significance criteria identified in the Final EIR, that because some aspects of the Project could cause potentially significant impacts for which feasible mitigation measures are not available to reduce the impact to a less-than-significant level, those impacts remain significant and unavoidable. It is also recognized that although mitigation measures are identified in the Final EIR that would reduce some significant impacts, certain measures, as described in this Section IV below, are uncertain or infeasible for reasons set forth below, and therefore those impacts remain significant and unavoidable or potentially significant and unavoidable.

Thus, the following significant impacts on the environment, as reflected in the Final EIR, are unavoidable. As more fully explained in Section VIII, below, under Public Resources Code Section 21081(a)(3) and (b), and CEQA Guidelines 15091(a)(3), 15092(b)(2)(B), and 15093, it is found and determined that legal, environmental, economic, social, technological and other benefits of the Project override any remaining significant adverse impacts of the Project for each of the significant and unavoidable impacts described below. This finding is supported by substantial evidence in the record of this proceeding.

a. Cultural and Paleontological Resources

Project-Level Impact (Sharp Park Restoration) - Architectural Resources

Impact CP-7: Implementing restoration activities to close Hole 12 of the Sharp Park Golf Course would result in a substantial adverse change in the significance of the golf course, a historic resource under CEQA.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR, and the attached MMRP, and will be implemented as provided therein.

M-CP-7: Documentation of the Sharp Park Golf Course

Implementation of Mitigation Measure M-CP-7 would reduce the magnitude of this impact, but documentation alone would not reduce this impact to a less-than-significant level. No other feasible mitigation measures have been identified. Therefore, this impact remains significant and unavoidable with mitigation.

Impact CP-9: Implementation of the Sharp Park restoration activity that requires modification of the Sharp Park Golf Course to create upland habitat on the east side of the lagoon and shorten or narrow Holes 10 and 13 would be a substantial adverse change in the significance of the golf course, a historic resource under CEQA.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR, and the attached MMRP, and will be implemented as provided therein.

M-CP-7: Documentation of the Sharp Park Golf Course

Implementation of Mitigation Measure M-CP-7 would reduce the magnitude of this impact, but documentation alone would not reduce this impact to a less-than-significant level. No other feasible mitigation measures have been identified. Therefore, this impact remains significant and unavoidable with mitigation.

Cumulative Impact

Impact CP-21: The proposed project, in combination with other planned and foreseeable future projects, would have a cumulatively considerable significant impact related to cultural and paleontological resources due to the identified significant on Sharp Park Golf Course, a historic resource under CEQA, due to modification of golf holes for restoration activities.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR, and the attached MMRP, and will be implemented as provided therein.

M-RE-6: Restoration of the Sharp Park Golf Course to 18 Playable Holes

Although Mitigation Measure M-RE-6 would require the SFRPD to coordinate with a golf course consultant with expertise in historic golf course renovation to restore the playability of the Sharp Park Golf Course, while documenting and preserving the historic character-defining features of the course, the project's contribution to a cumulatively considerable impact to cultural resources due to the modification of golf holes would remain significant and unavoidable and no other feasible mitigation measures are available.

b. Recreation

Cumulative Impact

Impact RE-7: The proposed project, in combination with other planned and foreseeable future projects, would result in a cumulatively considerable significant impact related to recreation, due to a significant cumulative impact on recreation in dog play areas within Natural Areas due to increased use resulting from the reduction of dog play areas by the project and potentially by the National Park Service's (NPS) Dog Management Plan within the Golden Gate National Recreation Area (GGNRA). As set forth in the Final EIR, no feasible mitigation measures are available at this time to reduce this impact to less-than-significant. Therefore, this impact remains significant and unavoidable.

c. Biological Resources

Cumulative Impact

Impact BI-19: The proposed project, in combination with other planned and foreseeable future projects, would result in a cumulatively considerable significant impact related to biological resources within Natural Areas dog play areas due to increased use resulting from the reduction of dog play areas by the project and potentially by the NPS Dog Management Plan within the GGNRA. As set forth in the Final EIR, no feasible mitigation measures are available at this time to reduce this impact to less-than-significant. Therefore, this impact remains significant and unavoidable.

d. Air Quality

Criteria Air Pollutants - Programmatic Impact

Impact AQ-4: Programmatic projects under the NRMP such as trail construction, hillside stabilization, erosion control, and tree removal would contribute substantially to an existing or projected air quality violation and would result in a net increase of criteria pollutants for which the project region is in nonattainment under an applicable federal, state, or regional ambient air quality standard.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR, and the attached MMRP, and will be implemented as provided therein.

M-AQ-4: Construction Contract Specification to Reduce Construction Vehicle Emissions

Mitigation Measure M-AQ-4 would reduce NO_x emissions, but may not reduce emissions to below the Bay Area Air Quality Management District significance threshold due to uncertainty regarding the level of construction required for programmatic projects and the effectiveness of the mitigation measure to reduce criteria air pollutants. No other feasible mitigation measures are available, and therefore this impact remains significant and unavoidable.

Criteria Air Pollutants - Project-Level Impact (Sharp Park Restoration)

Impact AQ-6: The Sharp Park restoration under the NRMP would contribute substantially to an existing or projected air quality violation and would result in a net increase of criteria pollutants for which the project region is in nonattainment under an applicable federal, state, or regional ambient air quality standard.

The following mitigation measure, as more fully described in the Final EIR, is hereby adopted in the form set forth in the Final EIR, and the attached MMRP, and will be implemented as provided therein.

M-AQ-4: Construction Contract Specification to Reduce Construction Vehicle Emissions

Mitigation Measure M-AQ-4 would reduce NOx emissions, but such emissions would remain above the Bay Area Air Quality Management District daily significance threshold. No other feasible mitigation measures are available, and therefore this impact remains significant and unavoidable.

Impact AQ-10: Implementation of the proposed project in combination with past, present, and reasonably foreseeable projects in the vicinity would result in cumulatively considerable significant air quality impacts.

The following mitigation measures, as more fully described in the Final EIR, are hereby adopted in the form set forth in the Final EIR, and the attached MMRP, and will be implemented as provided therein.

M-AQ-4: Construction Contract Specification to Reduce Construction Vehicle Emissions

M-AQ-10: Cumulative Health Risk Analysis for Programmatic Projects

Mitigation Measure M-AQ-4 would reduce NOx emissions, but may not reduce emissions to below the Bay Area Air Quality Management District significance threshold. Additionally, due to uncertainty regarding the boundaries of individual construction projects for programmatic activities and the concomitant uncertainty that Mitigation Measure M-AQ-10 would be effective in reducing cumulative health risk impacts, this impact remains significant and unavoidable. No other feasible mitigation measures are available.

V. EVALUATION OF PROJECT ALTERNATIVES

This Section describes the reasons for approving the Project and the reasons for rejecting the alternatives as infeasible. CEQA requires that an EIR evaluate a reasonable range of alternatives to the proposed project or the project location that substantially reduce or avoid significant impacts of the proposed project. CEQA requires that every EIR also evaluate a “No Project” alternative. Alternatives provide the decision maker with a basis of comparison to the proposed Project in terms of their significant impacts and their ability to meet project objectives. This comparative analysis is used to consider reasonable, potentially feasible options for minimizing environmental consequences of the proposed Project.

The Commission rejects the Alternatives set forth in the Final EIR and listed below based upon substantial evidence in the record, including evidence of economic, legal, social, technological, and other considerations described in this Section, in addition to those described in Section VI below, which are hereby incorporated by reference, that make these alternatives infeasible. In making these determinations, the Commission is aware that CEQA defines “feasibility” to mean “capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors.” (CEQA Guidelines § 15364.) Under CEQA case law, the concept of “feasibility” encompasses (i) the question of whether a particular alternative promotes the underlying goals and objectives of a project; and (ii) the question of whether an alternative is “desirable” from a policy standpoint to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, legal, and technological factors.

Alternatives Analyzed in the FEIR

No Project Alternative

Under the No Project Alternative, the project sites would remain in their existing conditions. The SFRPD would continue with management activities authorized under the 1995 management plan, which includes activities similar to those outlined for the proposed project. However, the No Project Alternative differs from the proposed project in that programmatic projects would not occur. Habitat restoration and invasive tree and vegetation removal would likely be smaller in scale. Fewer trails would be closed and no new trails created. The No Project Alternative would not close or reduce the size of dog play areas. Over time, this alternative likely would result in Natural Areas with characteristics largely similar to those under the proposed project; however, restoration and enhancement actions would be smaller in scale under the No Project Alternative. Activities at Laguna Salada in the Sharp Park Natural Area would be limited to removing accumulated sediment and tules by hand or other low-impact means. Laguna Salada would not be dredged.

The Commission rejects the No Project Alternative because it would not meet the project objectives because it would not implement a comprehensive program for managing the Natural Areas to maintain and enhance biodiversity and provide appropriate recreation opportunities. Moreover, the No Project Alternative would not restore Laguna Salada, as stated in the project objectives. Compared to the proposed project, the No Project Alternative would involve moderately less invasive tree and vegetation removal and closure of fewer trails. The No Project Alternative would not result in new trails because routine maintenance would be limited.

Maximum Restoration Alternative

The Maximum Restoration Alternative seeks to restore native habitat and convert nonnative habitat to native habitat wherever possible throughout the Natural Areas, including all management areas. The SFRPD would restore native habitat and convert nonnative habitat to native habitat wherever possible throughout the Natural Areas, including all management areas. The Maximum Restoration Alternative prioritizes activities related to endangered species protection and recovery and maximum enhancement of biodiversity. Compared to the proposed project, this alternative emphasizes the restoration of native habitat over recreational uses and nonnative habitat. As this alternative would prioritize habitat restoration over recreation, this alternative would close additional trails, and no new trails would be created. The Maximum Restoration Alternative would further reduce the amount of dog play area acreage, as compared to the proposed project; this alternative would not add any new dog play areas to the Natural Areas.

The Maximum Restoration Alternative includes more extensive habitat restoration at the Laguna Salada wetland complex than the proposed project. Similar to the proposed project, this alternative would extend restoration outside the Natural Area boundary but also would restore up to an additional five acres of habitat for the California red-legged frog and San Francisco garter snake.

The Commission rejects the Maximum Restoration Alternative because it would result in additional restrictions on public use and access of the Natural Areas; therefore, the Maximum Restoration Alternative does not meet the objective related to recreation, as the Maximum Restoration Alternative would provide additional restrictions on public use and access of the Natural Areas.

Maximum Recreation Alternative

The Maximum Recreation Alternative seeks to restore and improve recreational access to the Natural Areas wherever it does not interfere with the continued existence of native species and federally or state-listed sensitive species. Over time, less habitat identified by the NRMP would be restored, while all or most of the recreation-related projects, such as trail network improvement, would be implemented. As such, the Maximum Recreation Alternative includes substantially less invasive tree and vegetation removal, thereby resulting in a long-term increase in the presence of nonnative species and a reduction in native habitat. Tree and vegetation removal would be limited to that necessary to meet the Natural Areas Program tree maintenance health and safety goals and those trees required to be removed for trail creation or other projects providing additional recreation facilities (picnic areas and playgrounds).

The Maximum Recreation Alternative would close fewer informal and social trails and includes moderately more trail creation in MA-2 and MA-3 areas than the proposed Project and would also allow mountain biking and horseback riding where those uses would not conflict with special status species and their habitats. The Maximum Recreation Alternative would not close or reduce dog play areas, but no new dog play areas would be created in the Natural Areas.

The Maximum Recreation Alternative includes restoration of the wetland complex at Laguna Salada. However, restoration would differ from the proposed project in that it would be limited to the geographic limits of the Natural Area; restoration would not encroach on the golf course operations, except as required for temporary construction. Compared to the proposed project, this alternative would result in less edge and upland habitat for the San Francisco garter snake.

The Commission rejects the Maximum Recreation Alternative because it would result in an overall decrease in habitat restoration and management of the Natural Area's resources as compared to the proposed Project. The Maximum Recreation Alternative would only include restoration/enhancement of Laguna Salada within the geographic limits of that Natural Area, rather than both restoring the Laguna Salada and increasing habitat access by adding habitat corridors, as with the proposed Project. This would provide more limited benefits to special status species, as compared to the proposed Project.

Maintenance Alternative

The Maintenance Alternative seeks to maintain the current distribution of native and nonnative habitat and species throughout the Natural Areas. Under this alternative, there would be no conversion of nonnative habitat to native habitat; other features of the Natural Areas also would be retained.

Under the Maintenance Alternative the general components of the SNRAMP, the SFRPD would implement best management practices (BMPs), adaptive management, integrated pest management (IPM), and the monitoring plan, which are detailed in Chapter III of the DEIR. Under this alternative, the SFRPD would maintain the current distribution of native and nonnative habitat and species throughout the Natural Areas. There would be no conversion of nonnative habitat to native habitat, and other features of the Natural Areas also would be retained. There would be less habitat restoration and less invasive tree and vegetation removal compared to the proposed project. Over time, this alternative likely would result in Natural Areas with habitat and recreation characteristics similar to those currently present.

The Maintenance Alternative would preserve the current trail system; it would not close trails or

create new trails. The Maintenance Alternative would not close or reduce dog play areas; however, no new dog play areas would be created in the Natural Areas.

Activities at Laguna Salada in the Sharp Park Natural Area would be limited to removing accumulated sediment and tules by hand or other low-impact means during the dry season. Laguna Salada would not be dredged, and during the rainy season Natural Areas Program staff would continue monitoring for the California red-legged frog, in compliance with the state and federal Endangered Species Acts. The Maintenance Alternative was identified as the environmentally superior alternative in the FEIR.

The Commission rejects the Maintenance Alternative because it would not result in restoration projects that address the issues that may adversely affect the ecosystem functions and biological diversity in the Natural Areas. The Maintenance Alternative meets some, but not all of the project objectives. Specifically, the Maintenance Alternative does not meet the objectives related to enhancement of the native ecosystem and biodiversity and restoration of the Laguna Salada wetland complex. The Maintenance Alternative would not result in restoration projects that address the issues that may adversely affect the ecosystem functions and biological diversity in the Natural Areas. Furthermore, the Maintenance Alternative would not provide additional recreation opportunities compatible with San Francisco's natural resources.

Alternatives Considered, Rejected, and the Reasons for Rejection

During the scoping process, public comment was received proposing a Sharp Park restoration alternative that included a model of natural flood control, outdoor recreation, environmental education, and endangered species recovery. This alternative would involve full restoration of the entire Sharp Park property, including the elimination of the golf course. This proposal was rejected as an individual alternative because it is not compatible with the 18-hole layout of the historic golf course. This alternative would, through the elimination of the Sharp Park Golf Course, result in greater significant and unavoidable impacts to cultural and recreational resources and therefore is not required to be analyzed under CEQA.

In addition, as part of the Sharp Park Conceptual Restoration Alternatives Report, the SFRPD proposed restoration alternatives that would be compatible with either a nine-hole layout at the Sharp Park Golf Course or with removal of the golf course entirely. These alternatives have been rejected because they are not compatible with the existing 18-hole layout of the historic golf course.

VI. STATEMENT OF OVERRIDING CONSIDERATIONS

Pursuant to Public Resources Section 21081 and CEQA Guidelines Section 15093, is the Commission hereby finds, after consideration of the Final EIR and the evidence in the record, that each of the specific overriding economic, legal, social, technological and other benefits of the NRMP as set forth below independently and collectively outweighs the significant and unavoidable impacts and is an overriding consideration warranting approval of the NRMP. Any one of the reasons for approval cited below is sufficient to justify approval of the NRMP. Thus, even if a court were to conclude that not every reason is supported by substantial evidence, this determination is that each individual reason is sufficient. The substantial evidence supporting the various benefits can be found in the Final EIR and the preceding findings, which are incorporated by reference into this Section, and in the documents found in the administrative record, as described in Section I.

The Commission finds that, notwithstanding the imposition of all feasible mitigation measures, significant impacts related to Cultural and Paleontological Resources, Biological Resources, Air Quality, and Recreation will remain significant and unavoidable and in accordance with CEQA Guidelines Section 15092(b)(2)(B), such remaining impacts are acceptable due to the overriding considerations described below. In accordance with CEQA guidelines Section 15093, CEQA Section 21081(b), and Chapter 31 of the San Francisco Administrative Code, the Commission hereby finds that each of the specific economic, legal, social, technological, and other considerations, and the benefits of the Project separately and independently outweigh these significant, adverse impacts. The remaining significant adverse impacts identified are acceptable in light of each of these overriding considerations.

The Management Plan would:

- enhance over 1,000 acres of natural open spaces under the jurisdiction of San Francisco Recreation and Park Department through recommended management actions specific to each of the 32 Natural Areas;
- identify and prioritize monitoring of natural resources to support an adaptive management approach to appropriately prepare and react to any foreseeable hazards to public safety;
- provide guidelines for education, research, and stewardship programs to promote city residents of all ages to connect to the natural world despite living in an urbanized city;
- promote the functioning of San Francisco's native ecosystem through maintenance and enhancement of native biodiversity to ensure San Francisco is resilient and adaptable towards climate change;
- improve trail infrastructure and access to Natural Areas to encourage City residents to utilize their parks system for physical exercise and relaxation;
- ensure the sustained and increased populations of the endangered San Francisco garter snake and the threatened California red-legged frog, both protected under the Endangered Species Act, through the Laguna Salada restoration at Sharp Park;
- protect and enhance beautiful natural and sustainable landscapes of San Francisco for future generations to enjoy.

Having considered the information included above as well as information in these Findings and elsewhere in the administrative record, the Commission finds, determines, and concludes that the project benefits of the Management Plan Project outweigh the unavoidable adverse environmental effects, and that the adverse environmental effects are therefore acceptable.

Attachment 2: Mitigation Monitoring and Reporting Program

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
Cultural and Paleontological Resources				
Mitigation Measure M-CP-1: Consultation with the San Francisco Planning Department: SFRPD would coordinate with the San Francisco Planning Department's Historic Preservation Planners and would submit plans before constructing stabilizing and erosion control measures that require installation of structures, such as gabions, near potentially eligible resource. Should it be determined that a Historic Resource Evaluation is required, that evaluation shall be completed by a qualified professional landscape architectural historian. The Planning Department would assist in determining if any proposed construction or other activities would impact identified historic resources under CEQA on a site-by-site basis; if such impacts may occur, the project would be required to be redesigned to avoid significant impacts to historic architectural resources. The Planning Department would also assess potential impacts on any historic landscapes that are present.	San Francisco Recreation and Parks Department (SFRPD)	Before any construction of structures near potentially eligible resource— <ul style="list-style-type: none"> • Coordination with SF Planning Department • Submission of plans • Possible redesign of project if necessary 	San Francisco Recreation and Parks Department (SFRPD)	Ongoing
Mitigation Measure M-CP-7: Documentation of the Sharp Park Golf Course The SFRPD would retain a consultant with expertise in historic golf course renovation and with specific expertise, if possible, in golf courses designed by Alistair McKenzie to document and preserve the historic character-defining features of the Sharp Park Golf Course before wetland restoration activities take place. The National Park Service has published guidance for preserving cultural landscapes in Preservation Brief 36: Protecting Cultural Landscapes, Planning, Treatment, and Management of Historic Landscapes and in the more complete Secretary of the Interior's Standards for the Treatment of Historic Properties Guidelines for the Treatment of Cultural Landscapes. The appropriate level of documentation would be selected by a qualified professional landscape architectural historian who meets the standards for history, architectural history, or architecture (as appropriate) set forth by the Secretary of the Interior's Professional Qualification Standards, (36 CFR, Part 61).	SFRPD	Pre-activity— <ul style="list-style-type: none"> • Retain a consultant with appropriate expertise 	SFRPD	Considered complete when qualified consultant has been retained / Pre-activity

MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<ul style="list-style-type: none"> Cataloguing and Laboratory Analysis. Description of selected cataloguing system and artifact analysis procedures; Discard and Deaccession Policy. Description of and rationale for field and post-field discard and deaccession policies; Interpretive Program. Consideration of an on-site/off-site public interpretive program during the course of the archaeological data recovery program. Security Measures. Recommended security measures to protect the archaeological resource from vandalism, looting, and unintentional damage; Final Report. Description of proposed report format and distribution of results; and Curation. Description of the procedures and recommendations for curating any recovered data having potential research value, identifying appropriate curation facilities, and summarizing the accession policies of the curation facilities. 				
<p>M-CP-10: Final Archaeological Resources Report. The archaeological consultant shall submit a Draft Final Archaeological Resources Report (FARR) to the ERO that evaluates the historical significance of any discovered archaeological resource and describes the archaeological and historical research methods used in the archaeological monitoring or data recovery program. Information that may put at risk any archaeological resource shall be provided in a separate removable insert within the draft final report.</p> <p>Copies of the Draft FARR shall be sent to the ERO for review and approval. Once the FARR is approved, copies shall be distributed as follows:</p> <ul style="list-style-type: none"> One copy to the NWIC with a copy of the transmittal sent to the ERO; and Three copies to the EP division of the San Francisco Planning Department; EP shall also receive one unlocked, searchable PDF copy of the FARR on a CD or DVD, along with copies of any formal site recordation forms (CA DPR 523 series) and documentation for nomination to the National Register of Historic Places/California Register of Historical Resources. In instances of high public interest or interpretive value, the ERO may require a different final report content, format, and distribution than that presented above. 	SFRPD, Archaeological consultant, ERO	If ERO requires an archaeological data recovery program to mitigate for adverse effects on the significant archaeological resource	SFRPD, Archaeological consultant	Considered complete after draft FARR is reviewed and approved by ERO / Ongoing, as-needed basis

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
Mitigation Measure M-CP-11: Accidental Discovery Prior to any ground disturbing activity resulting from implementation of the NRMP, including Natural Areas of moderate and low archaeological sensitivity, a copy of EP's standard archaeological alert sheet will be issued to project staff. The project sponsor shall distribute the Planning Department archaeological resource "ALERT" sheet to the involved Natural Areas Program staff and volunteers, project prime contractor, any project subcontractors (including, but not limited to, demolition, excavation, grading, etc. firms), and any utilities firm involved in ground-disturbing activities. Prior to any ground-disturbing activities being undertaken, each contractor (or Natural Areas Program staff for projects without contractors) is responsible for ensuring that the "ALERT" sheet is circulated to all field personnel, including machine operators, field crew, supervisory personnel, etc. The project sponsor shall provide the ERO with a signed affidavit from the responsible parties (prime contractor, subcontractor(s), and utilities firm) confirming that all field personnel have received copies of the "ALERT" sheet.	SFRPD	Prior to any ground disturbing activity from implementation of NRMP	SFRPD	Complete when "ALERT" sheet is circulated and SFRPD provides the ERO with a signed affidavit from responsible parties / Ongoing
M-CP-11: Should any indication of an archaeological resource be encountered during any soils disturbing activity of the project, the project Head Foreman and/or SFRPD shall immediately notify the ERO and immediately suspend any soils disturbing activities in the vicinity of the discovery until the ERO has determined what additional measures should be undertaken.	SFRPD, ERO	If any indication of any archaeological resource is encountered	SFRPD	Considered complete when SFRPD notifies ERO and suspends any soils disturbing activities / Ongoing, as-needed basis
M-CP-11: If the ERO determines that an archaeological resource may be present within the project site, SFRPD shall retain the services of an archaeological consultant from the pool of qualified archaeological consultants maintained by the Planning Department archaeologist. The archaeological consultant shall advise the ERO as to whether the discovery is an archaeological resource, retains sufficient integrity, and is of potential scientific, historical, or cultural significance. If an archaeological resource is present, the archaeological consultant shall identify and evaluate the archaeological resource. The archaeological consultant shall make a recommendation as to what action, if any, is warranted. Based on this information, the ERO may require, if warranted, specific additional measures to be implemented by SFRPD. Measures might include: <ul style="list-style-type: none"> • Preservation in situ of the archaeological resource; • An AMP; or • An archaeological testing program. 	SFRPD, ERO	If ERO determines that an archaeological resource may be present within project site— <ul style="list-style-type: none"> • Retain services of archaeological consultant • Consultant to advise ERO of significance of archaeological resource 	SFRPD, Archaeological consultant	Considered complete when archaeological consultant recommends an action, if any. If so, SFRPD to implement specific additional measures required by ERO / Ongoing, as-needed basis

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
M-CP-11: If an AMP or archaeological testing program is required, it shall be consistent with the EP division guidelines for such programs and as described above under M-CP-10. The ERO may also require that SFRPD immediately implement a site security program if the archaeological resource is at risk from vandalism, looting, or other damaging actions.	SFRPD, Archaeological consultant, ERO	If an AMP or archaeological testing program is required	SFRPD	Considered complete when AMP or archaeological testing program is consistent with EP division guidelines (M-CP-10), and if required, when SFRPD implements a site security program / Ongoing, as-needed basis
M-CP-11: The project archaeological consultant shall submit a FARR to the ERO that evaluates the historical significance of any discovered archaeological resource and describes the archaeological and historical research methods employed in the AMP and/or ADRP. Information that may put at risk any archaeological resource shall be provided in a separate removable insert within the final report. Copies of the Draft FARR shall be sent to the ERO for review and approval. Once approved by the ERO, copies of the FARR and associated items (i.e. site record forms) shall be distributed in the same numbers and to the same recipients outlined in M-CP-10.	Archaeological consultant, ERO	If an AMP or archaeological testing program is required	SFRPD	Considered complete when FARR is review and approved by ERO / Ongoing, as-needed basis.
Mitigation Measure M-CP-12: Annual Archaeological Sensitivity Training for Natural Areas Program Staff Involved with Routine Maintenance Activities in all Natural Areas SFRPD staff working within the Natural Areas will be trained by a qualified archaeologist regarding the potential for archaeological resources within the Natural Areas and how to identify such resources. The training will also include a review of penalties for looting and disturbance of these resources. At a minimum, the training will include the following: • Assigned archaeological sensitivity level of each Natural Area; • A discussion of the potential to encounter archaeological resources; • Instructions for how to identify archaeological resources; • Instructions for reporting observed looting, disturbances of known archaeological resources, or the presence of a previously unidentified archaeological site; • An overview of the AMP for routine maintenance activities and accidental discovery procedures in the Natural Areas (see M-CP-10 and M-CP-11, respectively); and • An overview of M-CP-18, Treatment of Human Remains and Associated or Unassociated Funerary Objects.	SFRPD, Archaeological consultant	Annual training for Natural Areas Program staff	SFRPD, Archaeological consultant	Considered compliant after every annual training of Natural Areas staff / Ongoing on an annual basis

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
M-CP-12: It shall be the responsibility of SFRPD Natural Areas Program staff, at the beginning of any management activities involving persons outside of the Natural Areas Program, to educate volunteers or other personnel on the potential to encounter archeological resources and instructions for reporting the presence of potential resources to SFRPD Natural Areas Program staff.	SFRPD	At the beginning of any management activities involving persons outside of the Natural Areas Program— Ongoing education of volunteers/other personnel regarding archaeological resources in Natural Areas	SFRPD	Considered compliant after any archaeological resources volunteer/other personnel training by Natural Areas staff / Ongoing, as-needed basis
Mitigation Measure M-CP-15: Coordination with EP Regarding Paleontological Resources Prior to Implementation of Programmatic Projects To mitigate the potential for the NRMP to affect paleontological resources, this mitigation measure will apply to programmatic projects. The SFRPD shall coordinate with EP prior to conducting any programmatic projects that would result in ground disturbance. In such instances, EP shall review the proposed activities to determine if ground-disturbing activities could occur at or near bedrock or other geologic features of CEQA significance. If such features exist and could be affected by project activities, a training program will be conducted and an alert sheet will be disseminated to all field personnel.	SFRPD, EP	Prior to conducting any programmatic projects that would result in ground disturbance.	SFRPD	Considered complete when EP reviews proposed activities; if significant features exist or could be affected, SFRPD to conduct training program and to disseminate alert sheet to field personnel / Ongoing, as-needed basis
M-CP-15: Any paleontological training will be conducted by a qualified paleontologist and will discuss the potential for such resources to exist in the Natural Area(s) and how to identify such resources. The training will also include a review of penalties for looting and disturbance of these resources. Alert sheets will be issued for all such projects and will include the following: <ul style="list-style-type: none"> • A discussion of the potential to encounter paleontological resources; • Instructions for reporting observed looting of a paleontological resource; and • Instructions that if a paleontological deposit were encountered within a project area, all ground-disturbing activities in the vicinity of the deposit shall cease and the ERO shall be notified immediately. 	SFRPD, Paleontologist consultant	If significant paleontological resources may be affected by proposed activities— <ul style="list-style-type: none"> • Retain a qualified paleontologist consultant • Consultant to conduct training • Alert sheets will be issued. • Alert ERO if paleontological deposit is encountered. 	SFRPD, Paleontologist consultant	Considered complete when training is conducted and if any identified resources are reported to ERO / Ongoing, as-needed basis

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
M-CP-15: When unanticipated paleontological resources are encountered during programmatic project activities, all project activities shall stop, and a professional paleontologist shall be hired to assess the find and its significance. The findings shall be presented to the ERO who would decide the additional steps to be taken before work in the vicinity of the deposit is authorized to continue.	SFRPD, Paleontologist consultant	When unanticipated paleontological resources are encountered during programmatic project activities— <ul style="list-style-type: none"> Retain professional paleontologist to assess the find and its significance Present findings to ERO and follow additional steps. 	SFRPD, Paleontologist consultant	Considered complete when findings are presented to ERO and if necessary and required by ERO, when any additional steps are taken / Ongoing, as-needed basis.
Mitigation Measure M-CP-16: Avoidance of Surface Bedrock in Routine Maintenance Activities To mitigate the potential for the NRMP to affect paleontological resources the following mitigation measure will apply to routine maintenance activities. Natural Areas Program staff and volunteers will avoid ground-disturbing activities in areas where surface bedrock exists. If routine maintenance activities cannot avoid bedrock, SFRPD will implement M-CP-15, discussed above	SFRPD	When working near potentially affected paleontological resources— Avoid ground-disturbing activities where surface bedrock exists.	SFRPD	Considered compliant when SFRPD staff/volunteers avoid ground-disturbing activities where surface bedrock exists; Also considered compliant if SFRPD implements M-CP-15 if bedrock cannot be avoided / Ongoing basis

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>Mitigation Measure M-CP-17: Paleontological Training Program and Alert Sheet for the Sharp Park Restoration Project</p> <p>To mitigate the potential for the Sharp Park restoration project to affect paleontological resources, the SFRPD shall arrange for a paleontological training by a qualified paleontologist regarding the potential for such resources to exist in the restoration area and how to identify such resources. The training shall also include a review of penalties for looting and disturbance of these resources. An alert sheet shall be issued and will include the following:</p> <ul style="list-style-type: none"> • A discussion of the potential to encounter paleontological resources; • Instructions for reporting observed looting of a paleontological resource; and • Instruct that if a paleontological deposit were encountered within a project area, all soil-disturbing activities in the vicinity of the deposit shall cease and the ERO would be notified immediately. <p>If an unanticipated paleontological resource is encountered during project activities, all project activities shall stop, and a professional paleontologist shall be hired to assess the find and its significance. The findings shall be presented to the ERO who would decide the additional steps to be taken before work in the vicinity of the deposit was authorized to continue.</p>	SFRPD, Paleontologist consultant, ERO	<p>If Sharp Park restoration project has potential to affect paleontological resources—</p> <ul style="list-style-type: none"> • Retain a qualified paleontologist • Arrange a paleontological training • If unanticipated paleontological resource is found, paleontologist consultant to present findings to ERO • Follow additional steps required by ERO as needed. 	SFRPD, Paleontologist consultant	Considered complete if paleontologist is retained, trains staff, and reports any found resources to ERO, and any required additional steps are executed. / Ongoing, as-needed basis
<p>Mitigation Measure M-CP-18: Human Remains, Associated or Unassociated Funerary Objects.</p> <p>The treatment of human remains and of associated or unassociated funerary objects discovered during any ground-disturbing activity shall comply with applicable State and Federal Laws, including immediate notification of the Coroner of the City and County of San Francisco (or San Mateo County Coroner if found at Sharp Park) and in the event of the Coroner's determination that the human remains are Native American remains, notification of the NAHC who shall appoint a Most Likely Descendant (Pub. Res. Code Sec. 5097.98). The archaeological consultant, SFRPD, and Most Likely Descendant shall make all reasonable efforts to develop an agreement for the treatment of, with appropriate dignity, human remains and associated or unassociated funerary objects (CEQA Guidelines, Sec. 15064.5(d)). The agreement should take into consideration the appropriate excavation, removal, recordation, analysis, curation, possession, and final disposition of the human remains and associated or unassociated funerary objects.</p>	SFRPD, Archaeological consultant	<p>If any human remains or funerary objects are discovered during any ground-breaking activity—</p> <ul style="list-style-type: none"> • Comply with applicable State and Federal Laws 	SFRPD, Archaeological consultant	Ongoing, as-needed basis

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
Recreation				
Mitigation Measure M-RE-6: Restoration of the Sharp Park Golf Course to 18 Playable Holes The SFRPD would coordinate with a golf course consultant and would restore the playability of the Sharp Park Golf Course, which would involve replacing Hole 12 either on the west (Option 1) or east (Option 2) side of Highway 1. Replacing the hole on the west side of Highway 1 may also require moving an additional hole west of the highway to retain playability and flow of the course, thereby increasing the number of holes west of the highway to 15 and decreasing to three the number of holes to the east. Creating a new hole east of Highway 1 would decrease the number of holes west of the highway to 13 and increase to five the number of holes to the east. The determination of where the replacement hole is constructed and whether additional holes need to be moved would require additional environmental review.	SFRPD	During implementation of Sharp Park restoration project— <ul style="list-style-type: none"> • Consultation with golf course consultant; • Replacement of Hole 12 • Additional environmental review. 	SFRPD	Considered complete when agreed upon design of golf course consultant is constructed
Biological Resources				
Mitigation Measure M-BI-1a: Protection of Protected Species and Riparian and Wetland Habitat Where there is potential for protected species or their habitats (plants, birds, terrestrial, and aquatic species) or other protected habitats, namely riparian and wetland habitat (as protected by California Department of Fish and Game, California Coastal Commission, San Francisco Bay Regional Water Quality Control Board and/or US Army Corps of Engineers) to be affected directly or indirectly by a programmatic project, the SFRPD will prepare and provide for ERO review a compliance plan that details the proposed project, whether any protected species, protected species habitat, riparian habitat, or wetland habitat exists, the appropriate life histories of such resources (as applicable to special status species), and how the project will achieve compliance with this mitigation measure, including details as to how the SFRPD will first avoid, then minimize and if necessary restore, and/or compensate for any impacts to protected species and/or their habitats or other regulated habitats. Where there is potential for impacts to protected species and/or riparian and wetland habitats that are regulated by state, federal and/or local agencies, the compliance plan shall identify those agencies, and the SFRPD shall coordinate with all applicable resource agencies to obtain the appropriate permits and/or consultation as required by state or federal law. This mitigation measure requires SFRPD to implement the following, subject to modification through the regulatory approval processes required for an individual project.	SFRPD	Where there is potential for protected species or their habitats may be affected by programmatic project— <ul style="list-style-type: none"> • Preparation of a compliance plan • Implementation of plan • Ongoing review • Application for necessary permits. 	SFRPD	Ongoing

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>M-BI-1a: To avoid disturbance to protected species, their habitats, and riparian or wetland habitat, the following measures will be implemented by the SFRPD:</p> <p>For protected species, a qualified SFRPD biologist shall survey for suitable habitat within the project area before the project begins, according to US Fish and Wildlife Service and California Department of Fish and Game protocol for the protected species having the potential to occur. If no protocol exists, surveys shall be conducted according to generally accepted survey methods. If individuals were found or if it is determined that the potential exists for protected species to be present, the SFRPD shall redesign the proposed project to avoid impacts on protected species. Avoidance/minimization measures shall include conducting project activities during periods of the species lifecycle when the species would not be affected or may be minimally affected by project activities. If it is infeasible to avoid disturbance of protected species, the SFRPD will contact the US Fish and Wildlife Service or California Department of Fish and Game and undertake appropriate consultation according to the California Endangered Species Act or Endangered Species Act (unless an existing Biological Opinion is already in place and the proposed activities fall under the actions of that Biological Opinion, as may be the case for impacts to the mission blue butterfly at Twin Peaks). Any additional requirements agreed to during consultation with the US Fish and Wildlife Service and California Department of Fish and Game, or other regulatory agencies, to protect the species would be implemented, including restoration and compensation, where required.</p> <p>Where there is potential for wetland or riparian areas to be affected by programmatic activities, the SFRPD shall coordinate with California Department of Fish and Game, California Coastal Commission, San Francisco Bay Regional Water Quality Control Board, US Army Corps of Engineers and/or other applicable agencies to determine the jurisdictional boundaries of protected riparian and wetland habitat. SFRPD shall apply for all appropriate permits for effects to riparian areas and wetlands (including, but not limited to, US Army Corps of Engineers 404 permits, California Department of Fish and Game Section 1602 permits, San Francisco Bay Regional Water Quality Control Board 401 Water Quality Certifications, and coastal development permits). Any additional requirements to protect riparian and wetland habitat resulting from the regulatory approval processes would be implemented, including restoration and compensation, where required.</p> <p>As discussed in Section III.E.5, new trails would be designed to avoid sensitive species habitat and riparian and wetland habitat. Where habitat for protected species or riparian and wetland habitat cannot be avoided, the programmatic project would be required to restore and/or compensate for habitat losses in accordance with measures 4 and 5 of this mitigation measure. Restoration and/or compensation shall be required at a minimum of a 1:1 ratio of habitat affected to habitat restored and/or compensated.</p>	SFRPD	<p>Where there is potential for protected species or their habitats may be affected by programmatic project—</p> <ul style="list-style-type: none"> • Preparation of compliance plan • Implementation of Plan • Ongoing review • Application for any necessary permits 	SFRPD	Ongoing and as-needed

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>M-BI-1a: To minimize disturbance to protected species, their habitat, and wetland and riparian habitat, as a result of programmatic projects, the following minimization measures will be implemented by SFRPD, as applicable.</p> <p>Post signs or install flagging and temporary fencing around protected species habitats and riparian and/or wetland habitats that are not being directly restored. No activities shall be allowed within fenced areas, including moving equipment, storing materials, or temporarily stockpiling soils. All exclusion fencing will be removed when work in the project area is completed.</p> <p>Where stream crossings are necessary, temporary stream crossings will be located in previously disturbed areas lacking riparian vegetation, pools, side ponds or other sensitive habitats unless otherwise permitted by natural resource agencies for habitat improvement activities or hazard abatement. At a minimum, all temporarily impacted areas shall be restored to their previous condition.</p> <p>In or near riparian or wetland habitat, programmatic project activities shall be limited to the dry season (generally April 15 to October 15) and include protective practices such as the use of geotextile cushions and other materials if heavy equipment will result in rutting or soil displacement (i.e. timber pads, prefabricated equipment pads, thick vegetative slash, geotextile fabric) and/or vehicles with balloon tires shall be employed.</p> <p>Where protected species are potentially present, a biological monitor shall be required (as determined after appropriate consultation with US Fish and Wildlife Service and California Department of Fish and Game) during implementation of the proposed project. The biological monitor shall survey for protected species to ensure avoidance of those species, wherever feasible; where avoidance is not feasible, the monitor would relocate any species throughout implementation of the programmatic project, as permitted by natural resource agencies. The exact relocation sites and requirements for relocation shall be determined through consultation/coordination with US Fish and Wildlife Service and/or California Department of Fish and Game.</p>	SFRPD	<p>Where there is potential for protected species or their habitats may be affected by programmatic project—</p> <ul style="list-style-type: none"> • Posting of signs and installation of flagging and temporary fencing as necessary • Limiting of construction and maintenance to the dry season. Employment of protective practices as necessary 	SFRPD	Ongoing and as-needed

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>M-BI-1a: Where disturbance of protected species, their habitat, or riparian or wetland habitat cannot be avoided or sufficiently minimized, the SFRPD shall restore the habitat functions and services of areas that are subject to disturbance during programmatic project activities at a minimum of a 1:1 ratio, in accordance with a detailed restoration plan or plans prepared by a qualified restoration ecologist and would be consistent with all required permits. Final restoration plans would include the following:</p> <p>Detailed work descriptions for the restoration actions; and b. Ecologically based criteria that shall be used to determine whether the restoration project(s) were achieving identified performance objectives. A schedule for monitoring and reporting on monitoring results shall be included, as agreed upon in coordination with applicable permitting agencies, and as needed to verify whether the vegetation is fully established. The final restoration plan may include the following:</p> <ul style="list-style-type: none"> • Detailed description of restoration activities; • Restoration goals; • Restoration work plan; • Management and maintenance plan; • Success criteria and performance indicators; • Monitoring plan; and • Site protection measures. 	SFRPD	<p>Where disturbance of protected species, their habitat, or riparian or wetland habitat cannot be avoided—</p> <ul style="list-style-type: none"> • Possible implementation of monitoring plan • Ongoing restoration activity 	SFRPD	Ongoing and as-needed
<p>M-BI-1a: Where avoidance and minimization measures are not sufficient to prevent a programmatic project from permanently removing protected species habitat, riparian, and/or wetland habitat and on- or off-site restoration or enhancement is not practicable, SFRPD shall provide compensatory mitigation for the impacts created at a minimum of a 1:1 ratio, unless otherwise determined by natural resources agencies. Examples include mitigation banking, in-lieu funds to parks for their restoration, or off-site preservation. Such activities would be evaluated in subsequent environmental reviews.</p>	SFRPD	Compensatory mitigation for impacts as needed.	SFRPD	Ongoing and as-needed

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>M-BI-1b: Protection of Locally Significant Plant Species during Implementation of Programmatic Projects</p> <p>Where there is potential to impact locally significant plant species and SFRPD has not substantially enhanced the habitat for that species through restoration activities implemented by the NRMP already, SFRPD shall undertake the following measures to avoid and minimize impacts to locally significant plant species:</p> <ul style="list-style-type: none"> A qualified SFRPD biologist shall survey suitable habitat within the project area before the project begins. If locally significant plant species are found, the SFRPD shall redesign the proposed project to avoid or minimize impacts on locally significant plant species. Where impacts to locally significant plant species cannot be avoided, SFRPD shall harvest the seeds of, or salvage, the affected species and use collected plants or seeds to enhance and/or restore similar habitat within the Natural Areas or outside of the Natural Areas, if necessary. To the extent feasible, habitat enhancement or restoration shall take place at sites already planned for other mitigation for the project or as part of other restoration activities carried out by SFRPD; if habitat is not suitable at those sites, habitat enhancement or restoration shall be carried out at appropriate nearby sites through strategies such as transplantation, relocation or seed harvest. Enhancement and/or restoration of locally significant plant species habitat shall be designed to meet a minimum of a 1:1 ratio of affected plants/habitat to enhanced and/or restored habitat. 	SFRPD	If necessary, SFRPD shall harvest the seeds of, or salvage, the affected species and use collected plants or seeds to enhance and/or restore similar habitat within the Natural Areas or outside of the Natural Areas.	SFRPD	Ongoing and as-needed

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>Mitigation Measure M-BI-5: Protection of Special Status Species during Routine Maintenance</p> <p>The SFRPD shall avoid disturbance to biological resources by undertaking the following measures during routine maintenance activities:</p> <ul style="list-style-type: none"> Natural Areas Program staff and/or SFRPD staff engaged in routine maintenance activities as part of the NRMP shall receive annual training on the special status species that occur within the Natural Areas. The training shall identify the special status species that occur within the Natural Areas, their life history, measures to be implemented to avoid impacts to those species, and the proper protocol for encountering special status species. The SFRPD shall confirm that all SFRPD staff engaged in routine maintenance activities as part of the NRMP has been trained appropriately. An education program for other field personnel (e.g. volunteers) shall be conducted by the SFRPD staff before field activities begin at a new site that has the potential to contain special status species. The field education program will consist of a brief presentation by persons knowledgeable in the applicable special status species and will include identifying the locations of protected species and locally significant plant species and an explanation of the measures being taken to avoid these species. The SFRPD shall confirm that all workers and volunteers have been trained appropriately. <p>Disturbance of special status plant species shall be avoided. SFRPD staff shall conduct a reconnaissance survey of maintenance areas prior to undertaking routine maintenance activities to ensure that no special status plant species are present. If such species are found to be present, activities in those areas would be relocated or modified so as to avoid potentially affecting those species. SFRPD staff shall ensure that all volunteers and others involved in maintenance or restoration activities follow protection protocols. Vehicle operators shall use existing access roads and would remain outside of habitat supporting protected species to the extent feasible. All vehicles shall be brought in clean and free of weeds to prevent the spread or introduction of invasive plant species.</p>	SFRPD	<p>To prevent disturbance to any biological resources—</p> <ul style="list-style-type: none"> Natural Areas staff to receive annual training SFRPD staff to conduct education program for other field personnel SFRPD staff to conduct a reconnaissance survey of special status plant species in maintenance areas. 	SFRPD	Ongoing

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>M-BI-5: California Red-Legged Frog and San Francisco Garter Snake: These species both potentially occur at the Sharp Park upper canyon. The following measures shall apply to this Natural Area:</p> <ul style="list-style-type: none"> To avoid disturbance of these species, maintenance work shall not occur in the vicinity of ponds and wetlands between November 15 and April 15, the breeding season for California red-legged frog and the season when San Francisco garter snakes are inactive in their winter burrows. If maintenance cannot be avoided during the abovementioned time period, the SFRPD staff will conduct reconnaissance surveys of maintenance areas prior to undertaking maintenance work to ensure that no California red-legged frogs or San Francisco garter snakes are present. Vegetation in all maintenance areas will be progressively cleared by hand equipment to a height of 4 inches and checked for the presence of snakes prior to disturbance and prior to equipment or vehicles entering the sites. Once vegetation is cleared, an additional pre-activity survey for the San Francisco garter snake and California red-legged frog shall be conducted in the maintenance area. In the event that a California red-legged frog or San Francisco garter snake is encountered, all field work shall immediately stop. Field personnel shall notify the onsite SFRPD staff member who will confirm the species has moved outside of the work zone, or the work zone shall be adjusted to avoid the species. SFRPD staff shall provide verbal notification to the US Fish and Wildlife Service and/or to the local California Department of Fish and Game warden or biologist (as applicable) within one working day of the encounter. The SFRPD shall follow up with written notification to the US Fish and Wildlife Service and/or California Department of Fish and Game (as applicable) within five working days. Maintenance activities in the location of the encounter would be prohibited until SFRPD has contacted and properly consulted with US Fish and Wildlife Service and/or California Department of Fish and Game. Field personnel shall submit all observations of protected species to the California Natural Diversity Database. 	SFRPD	<p>When working at Sharp Park— CRLF:</p> <ul style="list-style-type: none"> Avoid construction during breeding season Install flagging and temporary fencing around frog habitat Restore habitat when necessary On-site biological monitor during project activities to advise and to relocate species as necessary <p>SFGS:</p> <ul style="list-style-type: none"> Implement best management practices Schedule activities outside of hibernation season Install temporary fencing and flagging as needed. MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>M-BI-5: Western Pond Turtle: This species occurs at Lake Merced and Sharp Park and may occur at Pine Lake. The following measures shall apply to these Natural Areas:</p> <ul style="list-style-type: none"> To avoid disturbance of this species, routine maintenance work shall be avoided within wetlands, ponds and adjacent uplands, between May 15 and July 15, the nesting season for western pond turtles. If maintenance work cannot be avoided during the abovementioned time period, the SFRPD staff shall conduct reconnaissance surveys of maintenance areas prior to undertaking maintenance work to ensure that no western pond turtles or their nests are present. In the event that a western pond turtle is encountered, all field work shall immediately stop. Field personnel shall notify the onsite SFRPD staff member who will confirm the species has moved outside of the work zone, or the work zone shall be adjusted to avoid the species. SFRPD staff shall provide verbal notification to the local California Department of Fish and Game warden or biologist (as applicable) within one working day of the encounter. The SFRPD shall follow up with written notification to California Department of Fish and Game within five working days. Maintenance activities in the location of the encounter would be prohibited until SFRPD has contacted and properly consulted with California Department of Fish and Game. Field personnel shall submit all observations of protected species to the California Natural Diversity Database. 	SFRPD	<p>When working at Sharp Park, Lake Merced, or Pine Lake—</p> <ul style="list-style-type: none"> Relocate species from Pine Lake to Lake Merced on an as-needed basis. 	SFRPD	Ongoing
<p>M-BI-5: San Francisco Dusky-Footed Woodrat: This species occurs in the Sharp Park upper canyon. The following measure shall apply to this Natural Area:</p> <ul style="list-style-type: none"> SFRPD staff will conduct reconnaissance surveys of maintenance areas prior to undertaking maintenance work to identify locations of woodrat middens. To avoid disturbance of the San Francisco dusky-footed woodrat, no vegetation shall be cleared within a 10-foot buffer of an active or potentially active woodrat middens. 	SFRPD	<p>When working at Sharp Park—</p> <ul style="list-style-type: none"> Conduct reconnaissance surveys Avoid disturbance 	SFRPD	Ongoing

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>M-BI-5: Western Red Bat: If an occupied or active roost is identified during maintenance activities, the roost shall not be disturbed. No maintenance work within 150 feet of the potentially occupied roost shall occur until it has been determined that bats are no longer using the site.</p> <ul style="list-style-type: none"> In the event that a western red bat is encountered, all field work shall immediately stop. Field personnel shall notify the onsite SFRPD staff member who shall confirm that the species has moved outside of the work zone, or the work zone shall be adjusted to avoid the species. SFRPD staff shall provide verbal notification to the local California Department of Fish and Game warden or biologist (as applicable) within one working day of the encounter. The SFRPD shall follow up with written notification to California Department of Fish and Game within five working days. Maintenance activities in the location of the encounter would be prohibited until SFRPD has contacted and properly consulted with California Department of Fish and Game. Field personnel shall submit all observations of protected species to the California Natural Diversity Database. 	SFRPD	<p>If a Western Red Bat is identified—</p> <ul style="list-style-type: none"> Roost shall not be disturbed. All field work to stop immediately. Notify CDFG. 	SFRPD	Ongoing
<p>M-BI-5: Mission Blue Butterfly: This species occurs at Twin Peaks and Sharp Park. The following measures shall apply to these Natural Areas: To avoid impacts to this species, SFRPD shall adhere to the long-term management and monitoring guidelines as described in the Recovery Action Plan for the Mission Blue Butterfly at Twin Peaks Natural Area and the corresponding Biological Opinion and as agreed to with the US Fish and Wildlife Service. These guidelines include conducting vegetation removal by manual, mechanical and chemical treatments that would be applied consistent with the SFRPD Integrated Pest Management program, such as hand pulling, cutting and grubbing. To avoid impacts from trampling of host plants by recreational users, the SFRPD shall continue to conduct regular maintenance on the existing trail network including trimming trailside vegetation and replacing trail base materials.</p>	SFRPD	<p>To avoid impacts to Mission Blue Butterfly at Twin Peaks and Sharp Park—</p> <ul style="list-style-type: none"> Adhere to long-term management and monitoring guidelines as described in Recovery Action Plan for Mission Blue Butterfly at Twin Peaks Natural Area and corresponding Biological Opinion (USFW) 	SFRPD	Ongoing

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>Mitigation Measure M-BI-6a: Protection of Protected Species during Implementation of the Sharp Park Restoration Project</p> <p>The SFRPD shall implement the following, subject to modification during the required regulatory approval processes:</p> <p><u>Avoidance Measures:</u></p> <ul style="list-style-type: none"> The number of access routes, the size of staging areas, and the total area of activity would be the minimum necessary to achieve the project goals and to the extent feasible access routes shall be located in upland areas; Vehicle and equipment operators would use existing access roads and would remain outside of wetlands and riparian areas that are not integral to the restoration project; The construction documents for the Sharp Park restoration project would identify construction staging areas, access corridors, and work zones that are least impactful to biological resources, as well as golf play and operations. Avoidance of wetlands and other biological resource areas, however, would take precedence over avoidance of golf play areas, such that golf play and operations would be impacted rather than biological resources; After surveying the construction site for special -status species in accordance with this mitigation measure, silt fencing or exclusion fencing would be placed around the project and staging areas to reduce the potential for animals to enter the construction site. Fencing will be monitored throughout construction to ensure no San Francisco garter snakes, California red-legged frogs, or western pond turtles enter the area; fencing will meet CDFG specifications so as to avoid impacts to species potentially getting trapped in the fence. No restoration and construction shall occur between November 15 and April 15, the breeding season for California red-legged frog and the season when San Francisco garter snakes are inactive in their winter burrows, although shrubs and willow posts may be planted by hand after the first rains, and weeds may be removed within 15 feet of aquatic areas during these times; Before moving any vehicles that remain stationary for longer than 30 minutes, the biological monitor would inspect those vehicles to ensure that no animals had crawled beneath them for cover; During project activities, all trash that could attract nonnative predators would be properly contained, removed from the work site, and disposed of regularly. Following project completion, all trash and construction debris would be removed from work areas. 	SFRPD	<p>During implementation of Sharp Park restoration project—</p> <ul style="list-style-type: none"> Follow avoidance measures 	SFRPD	Pre-activity and ongoing

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>M-BI-6a: Pre-Construction and Construction Activities</p> <p>Prior to commencement of any on-site work related to the proposed removal of sediment and emergent vegetation in the Laguna Salada wetland complex, which includes the Horse Stable Pond and the connecting channel and culverts that link Horse Stable Pond and Laguna Salada, additional sediment core sampling tests shall be conducted, as necessary, in the manner specified in this mitigation measure to determine whether there are elevated concentrations of sulfides or other soil characteristics that would render the soils unsuitable for supporting the desired vegetation.</p> <p>The results of the sediment core sampling tests shall be submitted to the USFWS and CDFW for review prior to commencement of any on-site remediation work or sediment/vegetation removal work at Horse Stable Pond or the connecting channel and culverts.</p> <p>If remediation measures are required based on the results of the sediment core sampling tests, the SFRPD shall submit a remediation and monitoring plan (prepared by a qualified biological/hydrological consultant) to all applicable resource agencies for review prior to implementation of the remediation measures. Alternatively, the soils could be placed in a nonsensitive location. Copies of all correspondence with the resource agencies shall be submitted to the ERO. The sediment core sampling tests shall include the following elements: Work Plan, Sampling of Sediment Cores, Analysis of Sediment Cores and Estimation of the Potential for Formation of Acid Sulfate Soils, Toxics Pathway Analysis, Remediation.</p>	SFRPD	<p>Prior to commencement of any on-site work—</p> <ul style="list-style-type: none"> Conduct sediment core sampling tests Submit sampling tests results to USFWS and CDFW prior to any on-site remediation work or sediment/vegetation removal work at Horse Stable Pond. Submit a remediation and monitoring plan to all applicable resource agencies prior to implementation of remediation measures. 	SFRPD	Pre-activity
<p>M-BI-6a: Work Plan</p> <p>A Work Plan for sediment core sampling tests shall be prepared by a qualified SFRPD biological/hydrological consultant and submitted to the USFWS and CDFW for review. The Work Plan shall describe, at a minimum, compliance with Tasks 2 through 5 of this part of the mitigation measure, as well as the "During and Post-Construction pH Monitoring" requirement (see following section). Copies of all correspondence with the responsible agencies shall be submitted to the ERO.</p>	SFRPD	Prior to commencement of any on-site work—	SFRPD	Pre-activity

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>M-BI-6a: Sampling of Sediment Cores</p> <p>The locations of any additional sampling shall be determined pursuant to the work plan developed in accordance with Task 1, above. Sample sediment cores shall include the soils between the current surface sediment level and approximately two to three feet below the current surface. This depth shall be at least one foot below the proposed depth of the future sediment-water interface.</p>	SFRPD	Prior to commencement of any on-site work—	SFRPD	Pre-activity
<p>M-BI-6a: Analysis of Sediment Cores and Estimation of the Potential for Formation of Acid Sulfate Soils</p> <p>The sediment cores shall be analyzed every five centimeters over the first 20 centimeters of core depth and then every 10 centimeters, or as appropriate based on field conditions, for the remainder of the core length for the following components: Total Organic Carbon (TOC), carbonate/bicarbonate, sulfate, sulfide, sulfites, pH, calcium, sodium, iron, aluminum, chloride, conductivity, redox potential, refractory organics, organic nitrogen, total phosphorus, ammonia, nitrate+nitrite nitrogen, soluble reactive phosphorus, organic phosphorus, loosely-sorbed phosphorus, iron-phosphorus, iron-phosphorus, aluminum-phosphorus, and calcium-phosphorus. Sediment core chemistry shall be analyzed to assess the potential reduction of sulfate to form hydrogen sulfate, iron sulfides, and reduction buffering capacity relative to acid-neutralizing capacity.</p> <p>In addition, sediment oxygen demand (SOD) in the sediment cores shall be measured. Results shall be compared to the total oxidizable organic material, which would be estimated from the difference of TOC and refractory organic carbon (labile carbon). These results shall be used in the analysis of potential for formation of anoxic conditions within the Laguna Salada Wetlands Complex.</p> <p>Sediment cores shall be analyzed based on Toxicity Reference Values (TRVs) from the USEPA and Screening Quick Reference Tables (SQuiRT) from the National Oceanic Atmospheric Administration. A draft summary of potential toxics shall be provided to the USFW, CDFW, and ERO for review and, if needed, revision will be made to the toxicity ranges appropriate for use in analyzing the sediment cores.</p> <p>The potential for formation of acid sulfate soils and anoxic conditions in the water column shall be estimated based on this analysis and in coordination with the USFWS and CDFW. If this analysis determines that acid sulfate soils could be present in this location, the SFRPD shall perform a toxic pathway analysis to determine the appropriate remediation measures. The analysis results and determination shall be submitted to the USFWS, CDFW, and ERO.</p>	SFRPD	Prior to commencement of any on-site work—	SFRPD	Pre-activity

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>M-BI-6a: Toxics Pathway Analysis</p> <p>Should the potential for acid sulfate soils and anoxic conditions be present, a toxics pathway analysis shall be conducted for potential risks and toxicities to species that may be affected by localized increases in acidity, hypoxia, or dissolved metals concentration. During this Task, toxicity standards shall be established in coordination with the USFWS, CDFW, and ERO based on the results of Tasks 2 and 3 above, site-specific hydrologic conditions including water exchange and dissolved oxygen levels, the species that are known to be present, and literature review. The results of this task shall be submitted to the USFWS and CDFW and any applicable responsible agencies for review and comment. Copies of all correspondence with the responsible agencies shall be submitted to the ERO.</p> <p>Should the results of the sediment core tests reveal that there has been an appreciable increase in the amount of nitrogen and related compounds in the sediment cores, any necessary measures to remediate such compounds shall be undertaken in accordance with Task 5, below. The SFRPD shall hire a qualified biological/hydrological consultant to prepare a remediation and monitoring plan which shall be submitted to the USFWS and CDFW for review and approval. Copies of all correspondence with the resource agencies shall be submitted to the ERO for review.</p>	SFRPD	Prior to commencement of any on-site work	SFRPD	Pre-activity

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>M-BI-6a: Remediation</p> <p>If results of the sediment core chemistry analysis reveal the potential for reduction of sulfate to form hydrogen sulfate, iron sulfides, and its reduction in buffering capacity relative to acid-neutralizing capacity, or if the toxics pathway analysis indicates that their presence could potentially result in substantial stress to special-status species, the SFRPD shall implement remediation measures.</p> <p>Remediation measures could include, but are not limited to:</p> <ul style="list-style-type: none"> • Addition of lime to neutralize any acid that exists or which may form during the sediment removal process; • Injection of sodium nitrate to oxidize the sediments, thereby satisfying the sediment oxygen demand; or • Use of suction hydraulic sediment removal that reduces re-suspension of any form of sediments. <p>Depending on the severity of the condition (e.g., hypoxia), the remediation measure selected for implementation would be the least intensive beginning with Item a, when signs of hypoxia are present, to the most intensive with Item c, when hypoxia is persistent and/or widespread. The SFRPD shall select the remediation measure in consultation with the USFWS and CDFW. The remediation measure shall be selected based on immediate threats to species and sensitive life stages present during occurrence of the hypoxic condition.</p>	SFRPD	Prior to commencement of any on-site work	SFRPD	Pre-activity
<p>M-BI-6a: A worker education program shall be implemented to familiarize workers, including all vehicle operators, of the importance of avoidance of harm to special-status species and the proper protocol should a protected species be encountered. The training shall include a discussion of the importance of maintaining speed limits and respecting exclusion zones. The SFRPD and its construction contractor shall confirm that all workers have been trained appropriately.</p>	SFRPD	Prior to commencement of any on-site work	SFRPD	Pre-activity and ongoing

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>M-BI-6a: Two weeks prior to the commencement of work activities and immediately prior to commencement of work, a qualified biologist will survey aquatic habitat that is suitable for the California red-legged frog, San Francisco garter snake, and western pond turtle that would be affected by the project. If individuals in any life stages of these species are found, the biologist will contact the USFWS and/or CDFG to determine whether relocating any life stages is appropriate. Collection of California red-legged frogs, San Francisco garter snakes, and western pond turtles would be done with hand nets, and shall be relocated to areas of appropriate habitat;</p> <p>Upland vegetation in all construction areas will be progressively cleared by hand equipment to a height of 4 inches and checked for the presence of protected species prior to disturbance and prior to construction equipment or vehicles entering the sites. Once vegetation is cleared, an additional pre-activity survey for the San Francisco garter snake, western pond turtles, and California red-legged frogs will be conducted in the impact area.</p>	SFRPD	<p>Two weeks prior to commencement of any on-site work—</p> <ul style="list-style-type: none"> • Biologist to survey aquatic habitat • Contact USFWS and/or CDFG 	SFRPD	Pre-activity
<p>M-BI-6a: Prior to construction near wetlands or ponds, all rodent burrows in the construction area will be hand excavated until the burrows terminate or to a maximum depth of 30 centimeters in areas where soil or fill will be removed or placed.</p>	SFRPD	<p>Prior to construction near wetlands or ponds—</p> <ul style="list-style-type: none"> • Hand excavate all rodent burrows in construction area. MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
M-BI-6a: Biological Monitor: <ul style="list-style-type: none"> A biological monitor familiar with the identification and life history of California red-legged frog, San Francisco garter snake, western pond turtle, and other potentially present protected species, and with the appropriate agency authorization, shall be designated to periodically inspect onsite compliance with all mitigation measures. The biological monitor shall perform a daily survey of the entire project area during construction activities. During these surveys, the monitor shall inspect the exclusion fencing for individuals trapped within the fence and determine the need for fence repair. Throughout the duration of the project, the monitor shall continue to perform daily fence surveys and compliance reviews at the project site. The monitor shall be designated prior to project implementation and shall have at least one specialty environmental monitor on call, with a valid 10(a)(1)(A) permit to handle listed species. The specialty monitor shall direct all personnel in regards to interactions with protected species, perform authorized species relocations, and supervise all reporting on such species. Bullfrog monitoring will occur and egg masses detected shall be removed. 	SFRPD	Prior to commencement of any on-site work and during construction activities	SFRPD	Pre-activity and ongoing
M-BI-6a: During and Post Construction pH Monitoring: During sediment and vegetation removal in the Laguna Salada Wetland Complex, pH levels immediately above the sediment shall be monitored by the SFRPD to ensure that implementation of the proposed project would not adversely affect special-status species. To ensure that residual acid sulfates in the water column would not adversely impact special-status species, pH levels in Horse Stable Pond and the connecting channel shall be monitored by the SFRPD for a period of six weeks after the proposed sediment and vegetation removal is completed. A remediation measure, such as addition of lime or injection of sodium nitrate, shall be implemented if the monitoring warrants such a remediation measure to protect special-status species based on the toxicity standards that are established in accordance with Task 4 above.	SFRPD	During construction activities and post construction— <ul style="list-style-type: none"> Monitor pH levels immediately above the sediment Monitor pH levels in Horse Stable Pond and connecting channel for a period of six weeks after proposed sediment and vegetation removal is completed. ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>Mitigation Measure M-BI-6b: Protection of Protected Species during Maintenance of the Sharp Park Restoration Project</p> <p>The SFRPD shall implement the following, subject to modification during the required regulatory approval processes:</p> <ul style="list-style-type: none"> To avoid disturbance of the San Francisco garter snake, California redlegged frog and western pond turtle, maintenance work shall not occur in the vicinity of ponds and wetlands between November 15 and April 15, the breeding/nesting season for California red-legged frog and the season when San Francisco garter snakes are inactive in their winter burrows. If maintenance cannot be avoided during the abovementioned time period, the Natural Areas Program will conduct reconnaissance surveys of maintenance areas prior to undertaking maintenance work to ensure that no California red-legged frogs, western pond turtles or San Francisco garter snakes are present. Heavy equipment would remain outside of wetlands to the extent feasible. If it is infeasible to avoid wetlands, no heavy equipment shall be used within wetlands between October 15 and April 15. In the event that a California red-legged frog, western pond turtle or San Francisco garter snake is encountered, all work shall immediately stop. Field personnel shall notify the onsite SFRPD staff member who will confirm that the species has moved outside of the work zone, or the work zone shall be adjusted to avoid the species. SFRPD staff shall provide verbal notification to the US Fish and Wildlife Service and/or to the local California Department of Fish and Game warden or biologist (as applicable) within one working day of the encounter. The SFRPD shall follow up with written notification to the US Fish and Wildlife Service and/or California Department of Fish and Game (as applicable) within five working days. Maintenance activities in the location of the encounter would be prohibited until SFRPD has contacted and properly consulted with US Fish and Wildlife Service and/or California Department of Fish and Game. Field personnel shall submit all observations of protected species to the California Natural Diversity Database. 	SFRPD	<p>During maintenance of Sharp Park Restoration Project—</p> <ul style="list-style-type: none"> No maintenance work to occur between November 15 and April 15 No heavy equipment shall be used within wetlands between October 15 and April 15. 	SFRPD	Ongoing

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>Mitigation Measure M-BI-12a: Protection of Wetlands during the Sharp Park Restoration Project</p> <p>The SFRPD shall obtain all applicable permits from San Francisco Bay Regional Water Quality Control Board, California Coastal Commission, US Army Corps of Engineers, and California Department of Fish and Game for impacts to wetland habitat. Measures identified in these permits shall be applied, in addition to the following measures, unless otherwise specified by resource agencies:</p> <ul style="list-style-type: none"> • Except for those areas directly being restored, a minimum 100-foot buffer surrounding all wetlands, ponds, streams, drainages, and other aquatic habitats located on or within 100 feet of the project site shall be clearly designated on the final project construction plans and marked on the site with orange construction fencing or silt fencing. If the area is on a slope, silt fencing or other comparable management measures will be installed to prevent polluted runoff, as well as equipment, from entering the buffer area. Signs shall be installed every 100 feet on or adjacent to the buffer fence that read, "Environmentally Sensitive Area – Keep Out." Fencing and management measures shall be installed and inspected prior to project implementation and maintained throughout the restoration period. No equipment mobilization, grading, clearing, storage of equipment or machinery, vehicle or equipment washing, or similar activity, may occur until a representative of the SFRPD has inspected and approved the fencing and/or management measures installed around these features; • Vehicle and equipment operators would use existing access roads and would remain outside of wetlands and riparian areas that are not directly associated with habitat restoration. Project construction and staging areas would be delineated with construction fencing and shall avoid wetland habitat to the maximum extent feasible; • All vehicles would be brought in clean and free of weeds to prevent the spread or introduction of invasive plant species. Vehicles and equipment would be fueled, maintained, and parked at least 100 feet from wetlands. Each morning, operators would inspect all equipment that requires the use of fuel or fluids for leaks; • Silt barriers, such as sand bags, silt fences/curtains, or basins, would be installed before the project begins; 	SFRPD	<p>Prior to and during implementation of Sharp Park Restoration Project—</p> <ul style="list-style-type: none"> • Pre-activity establishment of success criteria and monitoring program • Ongoing establishment of 100-foot riparian habitat buffer using silt fencing and construction fencing 	SFRPD	Pre-activity

Air Quality				
<p>Mitigation Measure M-AQ-1: Fugitive Dust Reduction</p> <p>The SFRPD would implement the requirements of the Dust Control Ordinance for all programmatic projects that are outside of San Francisco to reduce fugitive dust emissions.</p> <p>For projects less than half an acre, the SFRPD would comply with the general dust control requirements listed in Section 106.3.2.6.3(c) of the San Francisco Building Code, which are:</p> <ul style="list-style-type: none"> • Water all active construction areas sufficiently to prevent dust from becoming airborne. Increased watering frequency may be necessary whenever wind speeds exceed 15 miles per hour. Reclaimed water must be used if required by Article 21, Section 1100 et seq. of the San Francisco Public Works Code. If not required, reclaimed water should be used whenever possible. • Provide as much water as necessary to control dust (without creating runoff) in any area of land clearing, earth movement, excavation, drillings, and other dust-generating activity. • During excavation and dirt-moving activities, wet sweep or vacuum the streets, sidewalks, paths, and intersections where work is in progress at the end of the workday. • Cover any inactive (no disturbance for more than seven days) stockpiles greater than ten cubic yards or 500 square feet of excavated materials, backfill material, import material, gravel, sand, road base, and soil with a 10 mil (0.01 inch) polyethylene plastic or equivalent tarp and brace it down or use other equivalent soil stabilization techniques. • Use dust enclosures, curtains, and dust collectors as necessary to control dust in the excavation area. 	SFRPD	Compliance with Dust Control Ordinance for projects less than half an acre	SFRPD	Ongoing

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>M-AQ-1: For projects greater than half an acre, in addition to the general dust control requirements above, the SFRPD would prepare a site-specific dust control plan that requires the project sponsor to:</p> <ul style="list-style-type: none"> • Submit a map to the director of the San Francisco Department of Public Health, showing all sensitive receptors within 1,000 feet of the site; • Wet down areas of soil at least three times per day; • Provide an analysis of wind direction, and install upwind and downwind particulate dust monitors; • Record particulate monitoring results; • Hire an independent third party to conduct inspections and keep a record of those inspections; • Establish shutdown conditions based on wind, soil migration, and other factors; • Establish a hotline for surrounding community members who may be affected by project-related dust; • Limit the area subject to construction activities at any one time; • Install dust curtains and windbreaks on the property lines, as necessary; • Limit the amount of soil in hauling trucks to the size of the truck bed, and secure the load with a tarpaulin; • Enforce a 15-mile per hour speed limit for vehicles entering and exiting construction areas; • Sweep affected streets with water sweepers at the end of the day; • Install and use wheel washers to clean truck tires; • Stop construction activities when winds exceed 25 miles per hour; • Apply soil stabilizers to inactive areas; and • Sweep off adjacent streets to reduce particulate emissions. 	SFRPD	Compliance with Dust Control Ordinance for projects greater than half an acre	SFRPD	Ongoing

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
<p>Mitigation Measure M-AQ-4: Construction Contract Specification to Reduce Construction Vehicle Emissions</p> <p>The SFRPD will consult with EP before implementing each programmatic project. Under EP's direction, the SFRPD will either conduct a refined air quality analysis prior to project implementation, or EP will provide a list of all feasible mitigation measures to incorporate into the construction specifications to reduce construction vehicle emissions. If SFRPD were to conduct a refined air quality analysis and find that construction-related criteria air pollutant emissions would be below the Bay Area Air Quality Management District thresholds, SFRPD would not be required to incorporate mitigation measures into the project's construction specifications. The following mitigation measures are examples of mitigation measures that EP might direct the SFRPD to incorporate into construction specifications for the Sharp Park restoration project or the programmatic projects.</p> <ul style="list-style-type: none"> • For programmatic projects between 2011 and 2015, use Tier 3 equipment with best available control technology where feasible. For programmatic projects conducted after 2015, use Tier 4 equipment or interim Tier 4 equipment equipped with best available control technology where such equipment exists. • Use temporary power provided by the Pacific Gas & Electric Company instead of diesel generators; where it is not possible to plug into the electric grid, use Tier 3 diesel generators and air compressors. • Use concrete batched from local plants to limit concrete trucks' travel time and the amount of diesel exhaust emitted. • Minimize idling times by either shutting equipment and vehicles off when not in use or limiting the maximum idling time to five minutes or less (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Provide clear signage of idling rules for construction workers at all access points. • Use on-road haul trucks model year 2007 or later. • Maintain and properly tune construction equipment in accordance with manufacturer's specifications. Have all equipment checked by a certified mechanic to determine that equipment is running in proper condition prior to operation. 	SFRPD	During any construction— Reduce construction vehicle emissions per agreement with EP	SFRPD	Ongoing

ATTACHMENT 2: MITIGATION MONITORING AND REPORTING PROGRAM (Includes Text for Adopted Mitigation and Improvement Measures)				
MEASURES ADOPTED AS CONDITIONS OF APPROVAL	Responsibility for Implementation	Schedule	Monitoring/Report Responsibility	Status/Date Completed
M-AQ-10: Cumulative Health Risk Analysis for Programmatic Projects As part of the environmental review for all programmatic projects, the SFRPD will conduct a cumulative site-specific health risk analysis to determine if nearby sensitive receptors would be affected by those projects in combination with other known sources (e.g., roadway sources and permitted stationary sources) and existing construction projects within 1,000 feet. Based on the results of those analyses, EP would determine the need for and the scope of additional measures to reduce health risk impacts from construction activities. Mitigation measures to reduce construction-related health risks could include those listed under M-AQ-4.	SFRPD	Ongoing, environmental review for all programmatic projects— Site-specific health risk analysis to be conducted by SFRPD	SFRPD	Ongoing
Improvement Measure from the Initial Study				
Mitigation Measure I-ME-1 Consistent with the 2005 California Energy Action Plan II priorities for reducing energy use, the SFRPD would ensure that energy-efficient equipment is used to the extent practicable during project implementation.	SFRPD	Adherence to 2005 California Energy Action Plan 2 Guidelines	SFRPD	Ongoing

SAN FRANCISCO RECREATION AND PARK COMMISSION

RESOLUTION NO. XXXXXX

RESOLUTION ADOPTING FINDINGS UNDER THE CALIFORNIA ENVIRONMENTAL QUALITY ACT AND APPROVING THE NATURAL RESOURCES MANAGEMENT PLAN.

WHEREAS, The San Francisco Recreation and Park Department manages 32 Natural Areas that are scattered mostly throughout the central and southern portions of San Francisco and constitute approximately four percent of the total city area; one natural area is in Pacifica; and

WHEREAS, The Natural Areas managed by San Francisco Recreation and Park Department ("SFRPD") range in size from less than one acre to almost 400 acres and include such popular locations as Twin Peaks and portions of Glen Canyon Park; and

WHEREAS, In the late 1990s, the SFRPD initiated a Natural Areas Program to protect and manage these Natural Areas; and

WHEREAS, The SFRPD recognizes the need for a Management Plan to guide activities on properties owned or maintained by the SFRPD through its Natural Resources Program; and

WHEREAS, Over the course of several years, the SFRPD developed the Natural Resource Management Plan ("NRMP" or "Project"), with the final draft plan published in February 2006; and

WHEREAS, The NRMP contains detailed information on the biology, geology, and trails within 32 Natural Areas, 31 in San Francisco and one (Sharp Park) in Pacifica; and

WHEREAS, The NRMP is intended to guide natural resource protection, habitat restoration, trail and access improvements, other capital projects, and maintenance activities over the next 20 years; and

WHEREAS, The NRMP delineates the acreage within each Natural Area into management area categories based on the management priority; and

WHEREAS, The NRMP prescribes both general management activities that apply to all Natural Areas and management activities specific to each Natural Area; and

WHEREAS, The NRMP identifies a number of goals with respect to conservation and restoration, education, research, stewardship, recreation, and monitoring goals; and

WHEREAS, Recommended actions identified for each Natural Area are intended to meet the overall goals of the NRMP and may include, but are not limited to, habitat restoration, removal of invasive species, tree removal, erosion control, trail closure, relocation or creation, and closure or reduction of dog play areas; and

WHEREAS, On April 22, 2009, the Planning Department determined that an Environmental Impact Report ("EIR") was required under the California Environmental Quality Act, Public Resources Code Section 21000 *et seq.*, to analyze the environmental impacts of the proposed NRMP and provided public notice of that determination by publication in a newspaper of general circulation; and

WHEREAS, The Planning Department held a public scoping meeting on May 12, 2009 and May 14, 2009 in order to solicit public comment on the scope of the proposed Project's environmental review; and

WHEREAS, On August 31, 2011, the Planning Department published the Draft Environmental Impact Report ("DEIR") and provided public notice in a newspaper of general circulation of the availability of the DEIR for public review and comment and of the date and time of the Planning Commission public hearing on the DEIR; this notice was mailed to the Planning Department's list of persons requesting such notice; and

WHEREAS, On August 31, 2011, copies of the DEIR were mailed or otherwise delivered to a list of persons requesting it, to those noted on the distribution list in the DEIR, to adjacent property owners, and to government agencies, the latter both directly and through the State Clearinghouse; and

WHEREAS, Notice of Completion was filed with the State Secretary of Resources via the State Clearinghouse on August 31, 2011; and

WHEREAS, The Planning Commission held a duly advertised public hearing on said DEIR on October 6, 2011 at which opportunity for public comment was given, and public comment was received on the DEIR; the period for acceptance of written comments ended on October 31, 2011; and

WHEREAS, On April 27, 2012, the Planning Department opened a second public review and comment period for the DEIR, and provided public notice in a newspaper of general circulation of the availability of the second public review and comment period; this notice was mailed to the Planning Department's list of persons requesting such notice. The period for acceptance of written comments ended on June 11, 2012; and

WHEREAS, The Planning Department prepared responses to comments on environmental issues received at the public hearing and in writing during the first 61-day public review period and the second 45-day public review period for the DEIR, prepared revisions to the text of the DEIR in response to comments received or based on additional information that became available during the public review period, and corrected errors in the DEIR; and

WHEREAS, This material was presented in a Comments and Responses document, published on November 16, 2016, distributed to the Planning Commission and all parties who commented on the DEIR, and made available to others upon request at the Planning Department; and

WHEREAS, A Final Environmental Impact Report (hereinafter "FEIR") has been prepared by the Planning Department, consisting of the DEIR, any consultations and comments received during the review process, any additional information that became available, and the Comments and Responses document all as required by law; and

WHEREAS, Project EIR files have been made available for review by the Planning and Recreation and Park Commissions and the public, and these files are available for public review at the Planning Department at 1650 Mission Street, Suite 400, and are part of the record before the Commission; and

WHEREAS, On December 15, 2016, the Planning Commission reviewed and considered the information contained in the FEIR and found that the contents of said report and the procedures through which the FEIR was prepared, publicized, and reviewed comply with the provisions of CEQA, the CEQA Guidelines, and Chapter 31 of the San Francisco Administrative Code and certified the FEIR as adequate, accurate, and complete; and

WHEREAS, The Recreation and Park Commission has reviewed and consider the FEIR and the Mitigation Monitoring and Reporting Program (MMRP), (attached hereto as Attachment 2); now therefore be it

RESOLVED, That the Recreation and Park Commission adopts the CEQA findings, including a statement of overriding considerations, (attached hereto as Attachment 1) as though fully set forth herein; and be it

FURTHER RESOLVED, That the Recreation and Park Commission adopts the MMRP and imposes all mitigation measures contained therein as conditions of Project approval; and be it

FURTHER RESOLVED, That the Recreation and Park Commission approves the NRMP, which prescribes both general management activities that apply to all Natural Areas and management activities specific to each Natural Area, including, but not limited to habitat restoration, removal of invasive species, tree removal, erosion control, trail closure, relocation or creation, and closure or reduction of dog play areas.

APPLICATION FOR Board of Supervisors Appeal Fee Waiver

1. Applicant and Project Information

APPLICANT NAME: Brent Plater		
APPLICANT ADDRESS: 474 Valencia St., Suite 295, San Francisco, CA 94103	TELEPHONE: (415) 349-5787	EMAIL: bplater@wildequity.org
NEIGHBORHOOD ORGANIZATION NAME: Wild Equity Institute		
NEIGHBORHOOD ORGANIZATION ADDRESS: 474 Valencia St., Suite 295, San Francisco, CA 94103	TELEPHONE: (415) 349-5787	EMAIL: info@wildequity.org
PROJECT ADDRESS: Significant Natural Resource Areas Management Plan		
PLANNING CASE NO.: 2005.0912E	BUILDING PERMIT APPLICATION NO.:	DATE OF DECISION (IF ANY): 12/15/16

2. Required Criteria for Granting Waiver

(All must be satisfied; please attach supporting materials)

- ☒ The appellant is a member of the stated neighborhood organization and is authorized to file the appeal on behalf of the organization. Authorization may take the form of a letter signed by the President or other officer of the organization.
- ☒ The appellant is appealing on behalf of an organization that is registered with the Planning Department and that appears on the Department's current list of neighborhood organizations.
- ☒ The appellant is appealing on behalf of an organization that has been in existence at least 24 months prior to the submittal of the fee waiver request. Existence may be established by evidence including that relating to the organization's activities at that time such as meeting minutes, resolutions, publications and rosters.
- ☒ The appellant is appealing on behalf of a neighborhood organization that is affected by the project and that is the subject of the appeal.

APPELLANT: Brent Planter, Wild Equity Institute
Dee Seligman, Rupa Bose, and Tom Borden, San Francisco Forest Alliance

INTRODUCTION

This memorandum and the attached documents are a response to two letters of appeal submitted to the Board of Supervisors (the “Board”) regarding the Planning Department’s (the “Department”) issuance of a Final Environmental Impact Report (“Final EIR”) under the California Environmental Quality Act (“CEQA Determination”) for the Natural Resources Management Plan (the “Project”).¹ The Final EIR (provided on a CD) was certified by the Planning Commission (the “Commission”) on December 15, 2016. The Recreation and Parks Commission approved the project on December 15, 2016. Two appeals of the Final EIR to the Board were filed.

The first appeal to the Board was filed by Dee Seligman, Rupa Bose, and Tom Borden of the San Francisco Forest Alliance (the “SF Forest Alliance Appellant”) on January 5, 2017. The SF Forest Alliance Appeal

¹ The Significant Natural Resource Areas Management Plan (or SNRAMP) is now referred to as the Natural Resources Management Plan (or NRMP) as the San Francisco Recreation and Parks Department has updated the name of the Plan.

Letter is part of Board of Supervisors File No. 170044 and can be accessed here: <https://sfgov.legistar.com/View.ashx?M=F&ID=4924313&GUID=0421B939-FD4D-4137-999D-045B5FD7BB42>.

The second appeal was filed by Brent Plater of the Wild Equity Institute on behalf of the Sierra Club's San Francisco Bay Chapter, the National Parks Conservation Association, Golden Gate Audubon Society, and the Sequoia Audubon Society (the "Wild Equity Appellant") on January 17, 2017.² The Wild Equity Appeal Letter is part of Board of Supervisors File No. 170044 and can be accessed here: <https://sfgov.legistar.com/View.ashx?M=F&ID=4924316&GUID=6CA60239-9847-404D-A193-B3CBC9D82A65>.

The decision before the Board is whether to uphold the Planning Commission's decision to certify the Final EIR and deny the appeal, or to overturn the Planning Commission's decision to certify the Final EIR and return the proposed project to the Planning Department for staff to conduct additional environmental review.

PROJECT DESCRIPTION

The San Francisco Recreation and Parks Department (the "SFRPD") developed the Natural Resources Management Plan (NRMP) to identify management actions that would preserve, restore, and enhance 32 Natural Areas, 31 in San Francisco and one (Sharp Park) in Pacifica. The 31 Natural Areas in San Francisco are scattered mostly throughout the central and southern portions of San Francisco and constitute approximately four percent of the total city area; the Sharp Park Natural Area is located on the western side of Pacifica. Natural Areas range in size from less than one acre to almost 400 acres and include such locations as Twin Peaks and portions of Glen Canyon Park. Many of these areas support sensitive plant and animal species and their habitats and most are used as recreational open spaces by residents and visitors.

As envisioned by the SFRPD, the NRMP would provide the framework for long-term management of the Natural Areas. The NRMP is intended to guide natural resource protection, habitat restoration, trail and access improvements, other capital projects, and maintenance activities over the next 20 years. The NRMP delineates Natural Areas into management area categories, depending on the level of resources and habitat present, and prescribes both general management activities that apply to all Natural Areas and activities specific to each Natural Area. Restoration actions would be undertaken based on adaptive management, which is a flexible learning-based approach to managing complex ecosystems, and monitoring would determine the success of those actions and influence future actions.

The activities planned for the Natural Areas can generally be divided between routine maintenance and programmatic projects. In the EIR, routine maintenance is addressed at a project level because sufficient detail is known about these activities and their potential impacts to conduct meaningful project-level environmental review. In contrast, the programmatic projects, which have not yet been designed and planned at a level that would support more detailed, project-level review, are addressed

² Save the Frogs! did not submit comments on the Draft Environmental Impact Report or submit comments at a public hearing on the EIR. For this reason, Save the Frogs! did not meet the requirements of Chapter 31 of the San Francisco Administrative Code to appeal the certification of the Final EIR to the Board of Supervisors.

“programmatically.” Generally, programmatic environmental review is used when a series of actions are related geographically, as logical parts in a chain of contemplated actions, in connection with rules, regulations, plans, or other general criteria to govern the conduct of a continuing program, or when individual activities are carried out under the same authorizing statutory or regulatory authority and have generally similar environmental effects that can be mitigated in similar ways. (CEQA Guidelines Section 15168(a).) CEQA contemplates that such programmatic projects may undergo additional environmental review, as appropriate and as required by CEQA, at the time they are proposed. (CEQA Guidelines Section 15168(c).) The EIR also analyzed the Laguna Salada Restoration Project at Sharp Park, as described below, at the project-level because sufficient detail regarding the proposed actions at Sharp Park was known during preparation of the Draft Environmental Impact Report (the “Draft EIR”).

Program-Level Activities

Programmatic projects would include the following:

- Rerouting or constructing trails, using heavy equipment (such as bobcats, backhoes, and excavators) at a typical grading depth of two feet. This activity is typically conducted by contractors.
- Stabilizing hillsides, using erosion control measures that require heavy equipment and grading and possible installation of structures, such as gabions. This activity is typically conducted by contractors.
- Undertaking initial invasive weed or tree removal projects that typically exceed half an acre (or on average 20 trees) at any one time. Trees would be removed manually and limb-by-limb, as described more fully in the Draft EIR Project Description on pp. 92-93. This activity can be conducted by contractors or SFRPD staff.

While the NRMP may identify additional types of programmatic projects, the environmental effects of those projects are anticipated to be similar to or less than the above categories of program-level projects.

Project Level Activities

Routine Maintenance

Routine maintenance would include the following:

- Removing invasive weeds by hand, either as follow-up on a previously treated site or as initial treatment in small areas (less than half an acre). This activity mostly involves the use of hand tools and volunteers, with some use of power equipment by SFRPD staff, such as brush blades or chainsaws. Ground disturbance from this activity is typically within the top inch or so of ground around the root zone.
- Installing plants using hand tools and plants in one-gallon containers or smaller. In addition to planting, volunteers also may assist Natural Resources Division staff with installation of erosion control materials, including coir rolls, straw bales, wattles, jute netting, and straw matting. These materials are installed with pins or two- to three-foot-long wooden stakes. This activity typically disturbs up to 12 inches of surface soil.

- Removing invasive trees (mostly eucalyptus), as well as overhanging tree limbs. This activity typically occurs in places where trees are expanding into or threatening a native habitat or presenting a safety concern. Following removal, stumps are left in place, resulting in little, if any, ground disturbance. Typically, no more than 20 trees (or half an acre) are treated at one time. This removal covers saplings and any tree over 15 feet high. Trees over six inches at diameter-at-breast-height (dbh) are typically removed by tree crews at a rate of one to a few trees at a time. Trees would be removed manually and limb-by-limb, as described more fully in the Draft EIR Project Description on pp. 92-93.
- Maintaining trails, which include clearing deposited soil from steps, replacing or installing steps or trail edging, and rerouting and benching trails. Ground disturbance for this activity is usually six inches or less.
- Maintaining catchment basins and sediment dams through hand removal of accumulated materials.

Laguna Salada Restoration Project at Sharp Park

As stated in the Draft EIR project description on p. 97, as part of the Sharp Park restoration activities, the following project-level activities from the NRMP would be implemented. The full set of Sharp Park NRMP measures are presented in the Draft EIR project description on p. 144 and include additional measures that may fall under either programmatic projects or routine maintenance.

- SP-4a—Implement improvements to protect and enhance the habitat for the California red-legged frog and San Francisco garter snake at Laguna Salada, including the following:
 - Create upland mounds for foraging, resting, and escape cover for the California red-legged frog and the San Francisco garter snake;
 - Dredge excess sediments and accumulated organic matter, including stands of encroaching tules, to maintain open water and fringe habitat in the wetlands complex and use appropriate dredged material on site to create or enhance upland habitat or to increase the elevation of certain golf course fairways;
 - Continue monitoring for California red-legged frogs and San Francisco garter snakes; and
 - Install and maintain signs and barriers to prevent disturbance of sensitive habitat in Horse Stable Pond and Laguna Salada by dogs or other possible nuisances.
- SP-4b—Construct upland mounds in the area directly south and southeast of Laguna Salada and plant with native grasses and herbs to provide snake and frog basking sites, and to provide nesting habitat for riparian birds; and
- SP-9b—Establish a vegetation management plan for the canal connecting Laguna Salada and Horse Stable Pond that would allow channel maintenance without affecting the forktail damselfly, California red-legged frog, or San Francisco garter snake

The improvements to protect and enhance the California red-legged frog and San Francisco garter snake at Laguna Salada under measure SP-4a are focused on restoring the marsh complex and associated

uplands to establish conditions that more closely resemble previous conditions, which will contribute to the recovery of these species, and to reduce the potential recurrence of the conditions that negatively affect the wetland complex and habitat for these species.

Draft EIR Figure 3 (as updated per the December 15, 2016 EIR Errata, Attachment A to this Appeal Response) shows the conceptual plan for restoring these areas. Although the primary restoration features discussed in the Final EIR are not likely to change, some modification may occur during consultation with the U.S Fish and Wildlife Service (USFWS) and/or California Department of Fish and Wildlife (CDFW) pursuant to the state and federal Endangered Species Acts and during other regulatory approval processes, such as with the California Coastal Commission.

The restoration is designed to achieve recovery of the California red-legged frog and San Francisco garter snake populations and the main components are as follows:

- Dredging up to 60,000 cubic yards of material to remove sediment, encroaching plant species, and decaying vegetation in Laguna Salada, Horse Stable Pond, and the channel that connects the two water bodies, resulting in the conversion of freshwater marsh, willow scrub, and wet meadow wetland habitat to open water habitat;
- Recontouring freshwater marsh wetland and ruderal (disturbed) habitat along the Laguna Salada, Horse Stable Pond, and channel shorelines to create shallow water wetland habitat;
- Creating an upland and wetland habitat corridor between Horse Stable Pond and Laguna Salada;
- Converting about half an acre of wet meadow/freshwater marsh wetland to upland habitat, creating an upland refuge in the middle of Laguna Salada to provide snakes and frogs with refugia from feral cats and other terrestrial predators, and creating about an acre of replacement wetland along the northern and western edges of the lagoon in place of coastal scrub habitat; and
- Constructing up to four acres of upland mounds on landscaped grass on the east side of the lagoon and between Laguna Salada and Horse Stable Pond. These mounds would be placed in the area currently occupied by part of the Hole 13 fairway, which would be narrowed and reconfigured.

SFRPD developed 30 percent design plans for the Laguna Salada Restoration Project, enabling project-level CEQA review.

PROJECT BACKGROUND

1995 Natural Resources Management Plan

In the late 1990s, the SFRPD developed a Natural Areas Program to protect and manage Natural Areas for the natural and human values they provide. The Natural Areas Program mission is to preserve, restore, and enhance the Natural Areas and to promote environmental stewardship of these areas. On January 19, 1995, the San Francisco Recreation and Park Commission approved the first Significant Natural Resource Areas Management Plan (the “1995 Management Plan”). See Appendix E of the Draft EIR for a copy of the 1995 Management Plan.

Natural Resources Management Plan Update

Over the course of several years, the SFRPD embarked on a Plan update process that involved meetings with over 3,000 members of the public, task forces, advisory groups, independent technical advisers, consultants, and decision-making bodies to study, consider, and propose updates to the 1995 Management Plan, followed by independent scientific review. Ultimately, the SFRPD updated and expanded the level of detail in the 1995 Management Plan, as well as incorporated the comments from scientific reviews, resulting in a new NRMP. The San Francisco Recreation and Park Commission approved the Final Draft Plan for CEQA evaluation in August 2006 (the “2006 NRMP”).

Development of the Laguna Salada Restoration Project at Sharp Park

In 2009, the Board of Supervisors approved Ordinance No. 85-09 which required the SFRPD to develop a plan for restoring Sharp Park for the California red-legged frog and the San Francisco garter snake; in response to this, the SFRPD began to refine the activities proposed for Sharp Park in the 2006 NRMP. As part of the refinement, the SFRPD initiated the preparation of the Sharp Park Conceptual Restoration Alternatives Report (the “Restoration Report”) which was completed in September 2009. (See Draft EIR Appendix I.)

The Restoration Report provided decision makers with information on how to further define the restoration activities for Laguna Salada at Sharp Park. The report developed and analyzed three project proposals for the Laguna Salada restoration that would affect existing golf course operations: 1) restoration while continuing the operation of an 18-hole golf course (A18), 2) restoration while continuing golf course operations, albeit with a 9-hole golf course (A9), and 3) restoration while ceasing existing golf course operations. The project proposals in the Restoration Report were not CEQA Alternatives developed pursuant to CEQA Guidelines Section 15126.6, but rather initial project proposals for restoration that could be undertaken by the SFRPD.

These project proposals were derived from programmatic elements identified in the 2006 Natural Resources Management Plan. The Restoration Report on p. 4 concluded that “All three [proposals] will achieve the habitat goals.... [F]rom a wetland habitat restoration standpoint, converting uplands immediately adjacent to the wetland areas would result in greatest net benefit to the [San Francisco Garter Snake] per acre of enhanced habitat.”

In 2009, the Recreation and Park Commission endorsed the recommendation of the General Manager to proceed with developing a proposal that would expand the footprint of the habitat area into what is currently part of the landscaped golf course, restoring 19 acres of the golf course to upland habitat around wetland areas and providing a habitat corridor between Laguna Salada and Horse Stable Pond (the “Laguna Salada Restoration Project”). This proposal would act as recovery plan for the San Francisco garter snake and California red-legged frog and preserve an 18-hole golf course at Sharp Park.

The SFRPD submitted the proposed Laguna Salada Restoration Project to the Planning Department for analysis of environmental effects in the Draft EIR. This change to the 2006 NRMP, and update to the project description, was documented by the SFRPD in an August 21, 2011 memorandum to the Planning Department and is included in Draft EIR Appendix J. SFRPD continued to refine the details of the Laguna

Salada Restoration Project through consultation with the appropriate resource agencies, including the CDFW and USFWS.³

PROCEDURAL BACKGROUND

Notice of Preparation and Initial Study

In compliance with Section 15082 of the CEQA Guidelines, the San Francisco Planning Department prepared a Notice of Preparation (NOP) and Initial Study,⁴ which was sent to more than 2,400 interested parties on April 22, 2009, including the California Office of Planning and Research (OPR, or State Clearinghouse), other governmental agencies, organizations and persons interested in the proposed project. On that date, an environmental review notice associated with the NOP was published in the San Francisco Examiner and Pacifica Tribune. During a 30-day public scoping period that ended on May 26, 2009, the Planning Department accepted comments from agencies and interested parties identifying environmental issues that should be addressed in the EIR. In addition, two public scoping meetings were held (May 12, 2009, in the County Fair Building Auditorium in Golden Gate Park, and on May 14, 2009, at the Pedro Point Firehouse in Pacifica) to receive oral comments on the scope of the EIR. The Planning Department considered the comments made by the public and agencies in response to the NOP in preparing the Draft EIR for the proposed project. The NOP and Initial Study, with a summary of comment letters received in response to the NOP is included in Draft EIR Appendix A.

Draft EIR

The Draft EIR⁵ was published on August 31, 2011, and circulated to local, state, and federal agencies and to interested organizations and individuals for a 45-day public review period that was later extended for two weeks by the San Francisco Planning Commission, resulting in a 61-day public review period that began August 31, 2011, and continued through October 31, 2011. In addition, the Planning Commission held a public hearing on the Draft EIR on October 6, 2011, and Commissioners, organizations, and individuals made oral comments at that hearing. A second public review comment period, during which written comments were once again invited, was provided from April 27, 2012, to June 11, 2012, for a total of an additional 46 days. A Public Notice of the additional comment period was sent to over 300 neighborhood organizations and individuals through direct mailing and was also posted in the following locations: SFRPD's McLaren Lodge, the Planning Department, and the San Francisco County Clerk's office. Between the two public review periods, a total of 107 days were available to provide written public comment on the Draft EIR.

3 In 2012, the USFWS issued a Biological Opinion and Incidental Take Statement for the Sharp Park Safety, Infrastructure Improvement, and Habitat Enhancement Project (the "Pumphouse Project"), golf course operations, and pumping, with the understanding that the SFRPD is committed to moving forward with the proposed Laguna Salada Restoration Project.

4 A copy of the NOP and Initial Study may be accessed here: <http://sf-planning.org/environmental-planning>.

Responses to Comments

The Planning Department prepared a Responses to Comments (RTC)⁶ document that includes responses to comments on environmental issues received at the Draft EIR public hearing that was held on October 6, 2011, and in writing during the combined 107-day public review period for the Draft EIR. In addition, the Responses to Comments document included text changes (or text revisions) that were proposed in response to comments received or based on additional information that became available during the public review period and that represent a refinement or clarification to the text of the EIR. The Responses to Comments document did not identify any new significant environmental impacts; a substantial increase in the severity of a significant impact identified in the Draft EIR; or any new mitigation measures. None of the conclusions in the Draft EIR changed, and no new significant new information that would require recirculation of the Draft EIR under CEQA (California Public Resources Code Section 21092.1) and the CEQA Guidelines (14 California Code of Regulations Section 15088.5) was identified.

The RTC document was published on November 16, 2016, distributed to the Planning Commission and all parties who commented on the Draft EIR, and made available to others upon request at Department offices. While CEQA requires the Responses to Comments to be released a minimum of 10 days prior to certification of the EIR, the Planning Department released the document 30 days prior to the EIR Certification hearing on December 15, 2016, due to the length of the RTC document and the number of comments received.

Errata

Following publication of the RTC document, the SFRPD proposed modifications to the Project Description with respect to proposed actions at the Sharp Park Natural Area with the intent of emphasizing the preferred use of soil spoils for habitat restoration purposes and identifying the other disposal sites required for excess spoils as equal disposal options. The revisions to the Project Description removed specific reference to use of the spoils to raise the elevation of certain golf course holes and to clarify potential re-use locations. The Environmental Planning Division of the Planning Department issued the December 15, 2016, Errata to the Environmental Impact Report (Attachment A to this Appeal Response) that analyzed the proposed revisions to the Project Description and determined that the proposed modifications would not result in new significant environmental impacts or substantially increase the severity of a significant impact identified in the Draft EIR, and no new mitigation measures would be necessary. Further, these modifications to the project description and additional revisions to the EIR do not change any of the conclusions in the Draft EIR and do not constitute significant new information that requires recirculation of the Draft EIR under CEQA (California Public Resources Code Section 21092.1) and the CEQA Guidelines (14 California Code of Regulations Section 15088.5).

Project Impacts

The EIR concludes that the NRMP would result in the following significant and unavoidable environmental impacts even where feasible mitigation measures were identified:

⁶ Ibid.

- Significant unavoidable impacts to the historic integrity of with Sharp Park Golf Course from closing Hole 12 and modifying Holes 10 and 13;
- Significant unavoidable project-level and cumulative impacts from nitrogen oxide (NOx) criteria pollutant emissions, which could exceed the Bay Area Air Quality Management District (BAAQMD) daily threshold;
- Significant unavoidable cumulative impacts related to the physical deterioration of recreational facilities resulting from increased dog use due to the implementation of the NRMP and the Golden Gate National Recreation Area (GGNRA) Dog Management Plan; and
- Significant unavoidable cumulative impacts related to special status plant and wildlife species from increased dog use due to the implementation of the NRMP and the GGNRA Dog Management Plan.

All other impacts are either less than significant or can be reduced to a less-than-significant level with the implementation of the mitigation measures identified in the EIR.

EIR Certification

On December 15, 2016, the Planning Commission held a hearing to consider certification of the Final EIR, which consists of the Draft EIR and appendices, RTC and appendices, and Errata. The Planning Commission reviewed and considered the information contained in the Final EIR and found that the Final EIR reflected the independent judgment and analysis of the City and County of San Francisco. The Planning Commission found that the Final EIR was adequate, accurate and objective, and that the RTC document contained no significant revisions to the Draft EIR. The Planning Commission certified the Final EIR in compliance with the requirements of CEQA, the CEQA Guidelines, and Chapter 31 of the San Francisco Administrative Code.

The EIR is an “informational document” intended to inform public agency decisionmakers and the public of the significant environmental effects of a project proposal, identify possible ways to minimize the significant effects, and describe feasible alternatives to the project to reduce or eliminate those significant effects. Certification of an environmental document does not, in this case, constitute a project approval of any kind.

CEQA Findings and Statement of Overriding Considerations

As described in CEQA Guidelines Section 15093, if the Final EIR identifies significant effects for a proposed project, but the effects are not avoided or reduced to a less-than-significant level (i.e., significant and unavoidable impacts), whichever decisionmaker approves the project must find that any such unavoidable significant effects are acceptable due to overriding financial, technological, social, or other policy considerations. This is known as a Statement of Overriding Considerations. In making these findings, the decisionmaker must balance the prescribed types of benefits of the proposed project against its unavoidable environmental risks. If the benefits of a project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered acceptable (CEQA Guidelines Section 15093).

Because the Recreation and Park Commission has sole authority to approve the NRMP, it was the decisionmaker, under CEQA, that was required to adopt CEQA findings, including a Statement of Overriding Consideration when it approved the project. Thus, following Planning Commission certification of the EIR on December 15, 2016, the Recreation and Park Commission approved the project and adopted findings as part of its approval action, in Recreation and Park Commission Resolution No. 1612-012 (see Attachment B of this Appeal Response).

CEQA GUIDELINES

The Final EIR has been prepared in accordance with CEQA, as established under the Public Resources Code 21000 et seq., the CEQA Guidelines (a part of the California Code of Regulations), and local CEQA procedures under Chapter 31 of the San Francisco Administrative Code. The purpose of the Final EIR is to disclose any potential impacts on the physical environment resulting from implementation of the proposed project and time for public review and comment before decisionmakers decide to approve or deny the project.

STANDARDS OF ADEQUACY FOR CERTIFICATION OF AN EIR

On December 15, 2016, the Planning Commission reviewed and considered the Final EIR at a duly noticed public hearing and certified the Final EIR for the proposed project in compliance with CEQA, the CEQA Guidelines, and Chapter 31. (See Attachment C of this Appeal Response.)

Under San Francisco Administrative Code Section 31.16(c)(3), the grounds for appeal of an EIR shall be limited to whether the EIR complies with CEQA, including whether:

“it is adequate, accurate and objective, sufficient as an informational document, correct in its conclusions, and reflects the independent judgment and analysis of the City and whether the Planning Commission certification findings are correct.”

The standards for adequacy of an EIR are set forth in CEQA Guidelines Section 15151, which provides:

“An EIR should be prepared with a sufficient degree of analysis to provide decisionmakers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection, but for adequacy, completeness, and a good faith effort at full disclosure.”

San Francisco Administrative Code Section 31.16(b)(6) provides that in reviewing a CEQA decision on appeal, the Board of Supervisors “shall conduct its own independent review of whether the CEQA decision adequately complies with the requirements of CEQA. The Board shall consider anew all facts, evidence and issues related to the adequacy, accuracy and objectiveness of the CEQA decision, including, but not limited to, the sufficiency of the CEQA decision and the correctness of its conclusions.”

APPELLANT ISSUES AND PLANNING DEPARTMENT RESPONSES

The concerns raised in the January 5, 2017 SF Forest Alliance Appeal Letter and the January 17, 2017 Wild Equity Appeal Letter, are summarized below and are followed by the Department's responses.

The SF Forest Alliance Appeal Letter included comments that the EIR presents an inaccurate project description, specifically regarding the proposed one-to-one tree replacement, the number of trees proposed for removal, and the forest management objectives; the EIR did not consider environmental justice impacts from NRMP activities at McLaren Park and Bayview Hill; and the EIR did not adequately disclose trail closure and trail use limitations, the amount of herbicide/pesticide use resulting from NRMP activities, and aesthetic impacts of fences. The SF Forest Alliance Appeal Letter also included comments about the actions of the SFRPD in light of Board of Supervisor Resolution 653-02 and alleged CEQA violations by the SFRPD.

The Wild Equity Appeal Letter included comments on the merits of the project; preference for full restoration of Sharp Park and removing the Sharp Park Golf Course; failure of the EIR to evaluate a full restoration alternative; failure of the EIR to evaluate the "golf course redevelopment project;" disagreement that Sharp Park golf course is a historic resource; failure of the EIR to evaluate the impacts of sea level rise on the project; failure of the EIR to evaluate the existing operations of Sharp Park; failure of the EIR to analyze the impacts of Mitigation Measure M-BI-6a, Protection of Protected Species during Implementation of the Sharp Park Restoration Project; and an assertion that the Draft EIR should have been recirculated as a result of amendments made to M-BI-6a.

Neither of the appeal letters or their attachments contain any new information that was not already addressed in the RTC document or that would change any of the conclusions reached in the EIR. The Planning Department finds the Appellants' arguments to be without merit.

Issue 1: The SF Forest Alliance Appellant asserts that the Final EIR misstates the NRMP's one-to-one tree replacement policy and requests a mitigation measure to require such replacement. Additionally the SF Forest Alliance Letter includes an attachment that asserts that the Final EIR erroneously reports the projected number of trees to be removed because it does not consider saplings and misstates the Forest Management Objectives in the NRMP by stating that the NRMP would focus on dead, dying or diseased trees.

Response 1: The Final EIR correctly cites the NRMP's one-to-one tree replacement, which is part of the NRMP project description and, therefore, does not necessitate a mitigation measure. The Final EIR also correctly estimates the projected number of trees to be removed, assesses the impacts of sapling removal, and correctly summarizes the Forest Management Objectives in the NRMP.

One-to-one Tree Replacement

As stated in Draft EIR Chapter III, Project Description, p. 92, invasive trees that are removed in San Francisco would be replaced with native tree species at a ratio of roughly one-to-one, although not necessarily at the same location or within the same Natural Area. The provision of replacement trees is a component of the NRMP project, rather than a mitigation measure. This tree replacement information

was documented in an August 24, 2011 Memorandum⁷ provided by the SFRPD to the Planning Department that clarified changes to the NRMP project description, and is included Draft EIR Appendix J.

Page 3 of the August 24, 2011 Memorandum states:

Tree Removal and Replacement. Invasive trees removed in San Francisco would be replaced with native tree species at a ratio of roughly one-to-one, although not necessarily at the same location or within the same Natural Area.

Additionally, a memorandum provided by Lisa Wayne, Open Space Manager, SFRPD, to Jessica Range, Environmental Planner, San Francisco Planning Department,⁸ provides additional detail on tree removal and replacement practices pursuant to the NRMP and SFRPD Natural Resources Division's current practices. In this memorandum, the SFRPD indicated that each year, the Natural Resources Division propagates and plants over 10,000 plants in restoration sites throughout the city, with at least 200 of those plants being trees. Therefore, planting replacement trees in Natural Areas at a one-to-one ratio, as proposed, is both feasible and has been demonstrated.

Tree Removal

General Recommendation GR-15c indicates that tree removal would focus on dead or dying trees, trees with disease or insect infestations, storm-damaged or hazardous trees, and trees that are suppressed because of overcrowding (see Draft EIR p. 112, Project Description). However, as discussed on RTC p. 4-459, there may be instances where other trees are removed in order to achieve broader restoration goals. In terms of the size of trees, diameter-at-breast-height (dbh), a common metric for assessing trees, is measured as the diameter of a tree at 4.5 feet above ground level on the uphill side of a tree. While a larger dbh is generally associated with taller trees, there is no specific, mathematical correlation between dbh and the height of a tree in general. For documentation purposes, the NRMP defines a tree as any plant having a dominant vertical trunk that is over 15 feet tall,⁹ while the NRMP EIR considers trees less than 15 feet tall seedlings or saplings. Seedlings and saplings are not included in the calculation of the number of trees to be removed within the Natural Areas, because they are not considered trees. SFRPD staff could remove seedlings and saplings that have a dbh of six inches or less (or a height of 15 feet or less), but the SFRPD arborist would be consulted in the evaluation of the removal of trees. The removal of saplings is addressed throughout the EIR as invasive vegetation removal or vegetation removal, which includes shrubs, saplings, and other species of less than 15 feet in height.

⁷ Dawn Kamalanathan, Director of Capital and Planning Division, San Francisco Recreation and Parks Department, "Clarification of Changes to the SNRAMP Project Description" memorandum to Bill Wycko, Environmental Review Officer, San Francisco Planning Department, August 24, 2011.

⁸ Lisa Wayne, Open Space Manager, San Francisco Recreation and Parks Department, "Tree Removal and Replacement," memorandum to Jessica Range, Environmental Planner, San Francisco Planning Department, November 27, 2012.

⁹ This standard consistent with those in the Forest Inventory and Analysis Glossary maintained by the United States Department of Agriculture Forest Service. Accessed: <https://www.nrs.fs.fed.us/fia/data-tools/state-reports/glossary/default.asp> on February 14, 2017.

Forest Management Objectives

Draft EIR p. 112 shows that General Recommendation GR-15c indicates that tree removal would focus on dead or dying trees, trees with disease or insect infestations, storm-damaged or hazardous trees, and trees that are suppressed because of overcrowding. This recommendation can be found on page 5-19 of the NRMP.

“Recommendation GR-15c: To promote forest health, removal of trees shall focus on the removal of dead or dying trees, trees with disease or insect infestations, storm-damaged or hazardous trees, and trees that are suppressed because of overcrowding.”

While it is acknowledged that in some locations trees may be removed that are not dead, dying, or infested, the NRMP and the EIR project description is clear that those that are dead, dying, or infested would be the focus of tree removal activities. In conclusion, the one-to-one tree replacement is part of the NRMP project analyzed in the EIR and is clearly stated on Draft EIR p. 92. Furthermore, the EIR project description consistently indicates and accurately states that trees in San Francisco would be replaced at a one-to-one ratio, although not necessarily in the same location or same natural area. The EIR accurately presents NRMP objective GR-15c, which states that the NRMP would focus tree removal on replace dead, dying and diseased trees. Therefore, the items that the SF Forest Alliance claims are errors in the EIR are very much part of the project description and are accurately presented in the EIR.

Issue 2: The SF Forest Alliance Appellant asserts that the Final EIR did not consider environmental justice impacts resulting from the removal of trees and decrease in public access in McLaren Park and Bayview Hill.

Response 2: The remaining trees and trails at Bayview Park and McLaren Park following implementation of the NRMP over the 20-year period would not be disproportionately low compared to other Natural Areas and the Appellant has not provided evidence that the NRMP would result in an economic or social effect that would in turn cause a significant impact on the environment.

The goals of the NRMP, as articulated on NRMP p. 2-2, are to provide opportunities for passive recreational uses compatible with conservation and restoration goals and to improve and develop a recreational trail system that provides the greatest amount of accessibility while still protecting natural resources. At Bayview Park, the NRMP would result in the removal of 511 of the 6,000 invasive trees, the closure/relocation of 1,439 feet of social trails, and the creation of 1,020 feet of trails, all over a 20-year period. At Bayview Park, 8,077 feet of trails would remain. At McLaren Park, the NRMP would result in the removal of approximately 809 of the 19,500 invasive trees and the closure/relocation of 15,681 feet of social trails, all over a 20-year period. At McLaren Park, 43,504 feet of trails would remain. The remaining trees and trails at Bayview Park and McLaren Park would not be disproportionately low compared to other Natural Areas.

CEQA does not does not require the analysis of environmental justice impacts (although it is required under the National Environmental Policy Act [NEPA]). Consistent with CEQA Guidelines Section 15064(e), economic and social changes caused by a proposed project are not themselves treated as significant effects on the environment. However where a physical change in the environment is caused by an economic or social impact of a project, that physical change may be regarded as a significant impact on the environment in the same manner as any other physical change caused by the project. Alternatively,

economic and social effects of a physical change may be used to determine that the physical change is a significant effect on the environment. If the physical change causes adverse economic or social effects on people, those adverse effects may be used as a factor in determining whether the physical change is significant. The SF Forest Alliance Appellant does not provide any evidence that the NRMP at Bayview Park and McLaren Park would result in economic or social impact that would in turn cause a significant effect on the environment. The environmental effects related to trail modifications, access and tree removal are addressed throughout the EIR.

Issue 3: The SF Forest Alliance Appellant asserts that the Final EIR did not adequately disclose the extent of trail closures resulting from the proposed project and these closures would result in significant recreation impacts.

Response 3: The Final EIR adequately analyzes the impacts of trail closures and appropriately concludes that such closures would result in less-than-significant recreation impacts.

The SF Forest Alliance Appeal Letter claims that the extent of intended trail closures is not disclosed in the NRMP and not evaluated in the EIR, and that the trail closures would result in a significant environmental effect on recreation. The SF Forest Alliance Appeal Letter includes a table that provides alternative data and includes maps indicating additional trails that have been closed per NRMP.

As discussed on RTC p. 4-152, the trail lengths presented in Table 5 of the Draft EIR refer only to designated primary, secondary, and social trails; it does not include streets or sidewalks. Further, the data contained in Table 5, including the length of the trails, was generated using a Geographic Information System (GIS), which also produced the Soils, Land Features, and Trails maps contained in the NRMP. GIS is a computer system used for capturing, storing, checking, and displaying data related to positions on the Earth's surface. Each of the individual Natural Areas maps provided in the NRMP indicates the source data used in the GIS map and who created and revised the GIS map and on what date. The information provided in Table 5, and on the maps provided in the NRMP, represents the existing conditions at the time work on the EIR commenced.

In regards to the assertion that the NRMP illustrates fewer trails to be decommissioned than have been proposed or undertaken, social trails are not developed by SFRPD; instead, they result from unauthorized travel by park users and change over time as unauthorized use changes over time. Social trails are defined as undesigned and redundant pathways that have developed through use of a Natural Area, and they are not maintained by the SFRPD. As such, it is impossible for the SFRPD to maintain an inventory of all social trails. The NRMP identified anticipated social trails to be decommissioned, as well as improvements to authorized trails. At the time the SFRPD develops trail restoration plans for specific projects, the SFRPD conducts a survey to develop the trail restoration plan using the most up-to-date information about social trails and the preferred alignment for authorized trails. For this reason, the Primary, Secondary, and Closed trails illustrated in the NRMP are similar to, but not necessarily identical to, the illustrations provided by the Appellant.

As discussed on Draft EIR pp. 259 to 260, one of the objectives of the NRMP is to provide guidelines for recreational uses compatible with San Francisco's natural resources. These guidelines are intended to promote passive recreation, including improving and developing a recreational trail system within the

Natural Areas. As such, the NRMP calls for the creation of 5,897 feet (1.1 miles) of new trails and the closure or rerouting of 54,411 feet (10.31 miles) of trails. However, trail access would be maintained in all Natural Areas. Creating new trails and closing some existing social trails could enhance the recreation experience offered by the Natural Areas by upgrading trails to be more user friendly through increased accessibility and improved trail conditions. As a result, the proposed project would not limit access to, or result in the physical deterioration of the Natural Areas or any other recreation facilities. Therefore the Draft EIR concluded that this impact of the NRMP on recreational resources would be considered less than significant. The Appellant has not submitted any evidence that a significant recreation impact would occur from the proposed trail closures.

Please see Response 7 regarding alleged CEQA violations.

Issue 4: The SF Forest Alliance Appellant asserts that the Final EIR did not adequately disclose that herbicide use would increase with the NRMP given the number of trees proposed for removal.

Response 4: Herbicide use under the NRMP is expected to be similar to current levels of use because existing routine maintenance activities would continue and tree removal would occur gradually over a 20-year period.

The SF Forest Alliance Appeal Letter asserts that the EIR's conclusion that herbicide use following the implementation of the NRMP would not substantially increase is false and that the removal of the number of trees proposed by the NRMP would necessitate an increase in the use of herbicides.

As discussed on RTC p. 4-536, the CEQA analysis provided in the Draft EIR compares the baseline (or existing conditions) at the project site, with the potential environmental impacts that would result from the proposed project; it does not analyze the impacts of current practices, except where they may appropriately be considered in a cumulative impact analysis. Pesticide use under the NRMP is expected to be substantially similar to the current use of pesticides in Natural Areas because the NRMP would apply herbicides in accordance with the City's Integrated Pest Management (IPM) Program and tree removal would occur gradually over the course of 20 years.

Herbicides are applied in accordance with the City's IPM Program, which is discussed in detail on Draft EIR pp. 90 to 91. The City's IPM program, codified as an Ordinance, provides the optimal integration of management methods to control pests with the least possible hazard to people, property, and the environment. As stated on Draft EIR p. 296, to minimize the potential impacts of herbicide application, the SFRPD would adhere to the City's IPM Program, in which pesticide use in the Natural Areas would be as little as possible to achieve the desired results and carefully monitored. Also, as discussed on RTC p. 4-537, the use of herbicides has substantially declined since 2003, where all four types of herbicides being used by the SFRPD are at levels of less than 4 pounds per year each (with two types of these herbicides are being used at levels of less than 1 pound per year each).

The EIR evaluated the environmental effect of pesticide use. While the Appellant expressed general concern about the proposed use of herbicides, they do not present any evidence that the proposed project would result in significant impacts with respect to the use of pesticides and herbicides.

Issue 5: The SF Forest Alliance Appellant asserts that the Final EIR did not adequately analyze the aesthetic impacts of fences in the natural areas.

Response 5: As detailed in the EIR, the NRMP proposes fencing to restrict access to sensitive habitat areas only under certain circumstances and the installation of fencing would not result in a substantial demonstrable change to aesthetic conditions.

The SF Forest Alliance Appeal Letter asserts that the installation of fences as part of the NRMP would have a significant environmental effect in regards to aesthetics. The Appeal Letter included an attachment that had a list of fencing that have been installed at Bayview Hill, Corona Heights, Glen Canyon, and Grandview and photos of split rail fencing in these locations to support their claim. The SF Forest Alliance Appeal Letter also asserts that installation of this fencing was a CEQA violation as they were installed before CEQA review of the NRMP was completed.

As discussed on RTC p. 4-339, the NRMP does not propose restricting access to trails with fencing as the primary means. Rather, fencing would only be required to protect visitor safety and sensitive habitat. The type of permanent fencing that typically would be used is a three-foot high rustic split-rail fence, similar to those depicted in the SF Forest Alliance attachment. While aesthetic effects are somewhat subjective, the photographs provided by the SF Forest Alliance further demonstrate that any such split-rail fencing would not result in a substantial, demonstrable negative change in aesthetic conditions. Therefore, the Draft EIR appropriately concludes on pp. 191 to 195 that the installation of fencing would result in less-than-significant aesthetic impacts.

Please see Response 7 for discussion regarding alleged CEQA violations.

Issue 6: The SF Forest Alliance Appellant states that Board of Supervisors Resolution 653-02 restricts the SFRPD from implementing the NRMP.

Response 6: Board of Supervisors Resolution 653-02 established a Board of Supervisors Citizens Advisory Committee for the development of NRMP which sunseted on December 1, 2003 and did not restrict the SFRPD from approving and implementing the NRMP.

The SF Forest Alliance Appeal Letter asserts that the SFRPD is prohibited from implementing the NRMP by Board of Supervisors Resolution 653-02.

Consistent with Board of Supervisors Resolution 653-02, the SFRPD established a Natural Areas Program Citizen Advisory Committee to guide the development of the NRMP, which, pursuant to the requirements of the Resolution, sunseted in 2003. The Appellant's concerns regarding SFRPD's compliance with Resolution 653-02 do not raise any issues regarding the adequacy or accuracy of the Final EIR, and as such are not ground for finding it inadequate under CEQA.

Resolution 653-02 did not purport to restrict the Recreation and Park Commission's ability to approve the NRMP. Rather, it anticipated that the Recreation and Park Commission would do exactly that. The Recreation and Park Commission's approval of the NRMP is not before the Board, and this comment does not raise any issues regarding the adequacy or accuracy of the Final EIR.

Issue 7: The SF Forest Alliance Appellant alleges multiple CEQA violations by the SFRPD, claiming that NRMP activities were being implemented before CEQA review of the NRMP was completed. Additionally, the Appellant alleges that one such violation, the installation of signs requesting the public to stay on designated trails and restricting and/or prohibiting bicycle use, would result in significant recreation impacts not disclosed in the NRMP EIR.

Response 7: Management of the Natural Areas is currently operating under the 1995 Management Plan and any actions taken are either authorized by the 1995 Management Plan or considered a separate project from the NRMP. The management of trail use is an existing SFRPD practice that would not change substantially with the NRMP.

The SF Forest Alliance Appeal Letter asserts that the SFRPD has acted in violation of CEQA by performing many of the actions proposed in the NRMP prior to certification of the EIR and approval of the project. The SF Forest Alliance Appeal Letter included an attachment that presented examples of such actions, which can be grouped into three categories: trail closure; the installation of fences; and installation of signs at some locations requesting users stay on designated trails and prohibiting or restricting the use bicycles.

The SF Forest Alliance Appeal Letter also claims that the installation of signs that request that the public stay on designated trails and restricts or prohibits bicycle use in some Natural Areas was not evaluated in the EIR and that this restriction would result in a significant environmental effect on recreation. To support the claim regarding restrictions to on-trail use and prohibition of bicycles in Natural Areas, the SF Forest Alliance Appeal Letter includes a photo of a sign at a Natural Area that directs users to "Stay on Designated Trails. No Bicycles."

Most of these concerns, some of which were raised during the public review period of the Draft EIR, relate to previous actions of the Natural Resources Division, which are separate and independent from the NRMP. These concerns do not do not relate to the adequacy or accuracy of the information contained in the EIR. Nonetheless, the RTC provided a response to some of these concerns for informational purposes. Further, as with all of the comments provided on this Draft EIR, they were forwarded to the SFRPD staff and Commission for review and consideration.

As discussed on RTC p. 4-20, the Natural Resources Division is currently operating under the 1995 Management Plan. Any action the Natural Resources Division is currently undertaking is either under the authorization of the 1995 Management Plan or a separate project from the NRMP. The alleged violations cited in the Appellant's Letter, while independent of the NRMP, may include projects funded by the 2008 and 2012 San Francisco Clean and Safe Neighborhoods Bond.

The 2008 Clean and Safe Neighborhood Parks Bond was a general obligation bond for improvements to parks owned and/or operated by the SFRPD and the Port of San Francisco. The 2012 San Francisco Clean and Safe Neighborhood Parks Bond, which is also a general obligation bond, builds on that precedent by delivering voter-approved parks and open-space recreation projects owned and/or operated by SFRPD or the Port of San Francisco. The projects identified in the 2008 and 2012 Clean and Safe Neighborhood

Parks Bond are separate and independent from the NRMP.¹⁰ The 2008 General Obligation Bond (2008 Clean and Safe Neighborhoods Parks Bond) underwent CEQA review as part of Planning Department Case File No. 2007.1013E. The 2012 General Obligation Bond (2012 Clean and Safe Neighborhoods Parks Bond) underwent CEQA review as part of Case File No. 2011.1359E.

Trail Closures and Installation of Fences

Appellant expressed two concerns in regards to trail closures and installation of fencing. As examples, Appellant cited actions at Glen Canyon. As discussed on RTC p. 4-20, the Glen Canyon Trail Restoration Project, referenced in the Appellant's attachment, was largely funded from the 2008 Clean and Safe Neighborhood Parks Bond, which underwent CEQA review under Planning Department Case File Nos. 2007.1247E and 2010.0870E, and is separate and independent of the NRMP. As discussed on RTC p. 4-21, the Glen Canyon Restoration Project, which is now substantially complete, repaired existing trails and steps, provided fencing for public safety, protected sensitive habitat areas, provided erosion control measures, restored native plants, and provided wayfinding signage.

As discussed on RTC p. 4-214, in regards to the trail closure in Glen Canyon, referenced in the Appellant's attachment, the trail (at the entry to the park from O'Shaughnessy Blvd.) was closed prior to the commencement of the environmental review for the NRMP. This unofficial path was deemed unsafe, due to a significant presence of poison oak. A low post-and-cable fence was installed near Silver Tree camp and day care center to discourage use. This trail closure is not part of the NRMP project.

Installation of Signs Requesting On-Trail Use and the Prohibition/Restriction of Bicycles

As discussed in the Project Background section above, the first Significant Natural Resource Areas Management Plan was approved in 1995. As presented on Draft EIR pp. 78 to 79, the 1995 Management Plan (Attachment E to the Draft EIR) included the following policies and management actions that pertain to trail management:

- Vegetation
 - Maintain and promote indigenous plant species,
 - Protect species listed as rare, threatened, or of special concern,
 - Preserve habitat that supports wildlife;
- Geotechnical/Soils
 - Minimize erosion along roads and trails,
 - Minimize access on unstable slopes,
- Public Use

¹⁰ In the case of the 2012 Clean and Safe Neighborhood Parks Bond, some of the bond money is set aside for Citywide Parks improvements, which includes improvements to Golden Gate Park, McLaren Park, and Lake Merced Park. It is possible that some of these monies could be used for management actions and improvements proposed under the NRMP, but NRMP projects could not be accomplished until after NRMP EIR certification and project approval.

- Develop guidelines for pathways and trails and for interpretive signs
- Control dirt bike and off-road use

The NRMP does not substantially change the SFRPD's approach to trail management. The SFRPD posts signs restricting or prohibiting activities that would either be inappropriate (e.g. the trail is too narrow or not constructed to support biking activity) – or – potentially destructive (e.g. creating land erosion conditions, compaction, endangering sensitive natural habitat). As discussed in Response 3 above, the proposed project would not significantly limit access to, or result in the physical deterioration of the Natural Areas or any other recreation facilities. Therefore the Draft EIR concluded that this impact of the NRMP on recreational resources would be considered less than significant.

As discussed on RTC p. 4-145, in terms of bicycle use, bicycles are currently allowed on paved areas in some of the Natural Areas (if trails are designated accordingly). Further, since the NRMP Draft EIR was written and circulated for public review, the SFRPD has added designated multi-use earthen trails which allow bicycle use in portions of McLaren Park, Oak Woodlands, and Twin Peaks, and the entirety of Interior Greenbelt.

In regards to posting signs managing trail usage, the SFRPD does post signs requesting users stay on designated trails and restricting or prohibiting bicycle riding on trails at specific park sites. The SFRPD's authority for the posting of these signs is Park Code 3.02 which states "No person shall willfully disobey the notices, prohibitions or directions on any sign posted by the Recreation and Park Commission or the Recreation and Park Department." This Park Code section was enacted in 1981 and has been in force since then.

In conclusion, the SF Forest Alliance Appellant's list of alleged CEQA violations relate either to activities allowed under the 1995 Management Plan or separate projects from the NRMP. The alleged CEQA violations related to other projects, even if true, does not pertain to the adequacy of the EIR for the NRMP.

Issue 8: The SF Forest Alliance Appellant asserts that the greenhouse gas (GHG) calculation methodology in the EIR results in miscalculations of GHG sequestration, partially from project description errors regarding tree removal and replacement and types of trees to be removed. The SF Forest Appellant also claims that the quantification of GHGs does not account for emissions from vehicles and equipment that would be used for the NRMP and that the vegetation sequestration analysis does not account for the carbon that would be released from the removal of approximately 12,000 saplings.

Response 8: The EIR accurately presents tree removal and replacement quantities (See Response 1 above). The EIR evaluated the significance of potential GHG emission impacts primarily based on a qualitative assessment of compliance with the City's Greenhouse Gas Reduction Strategy, and disclosed additional quantitative analysis based on accepted methodologies and protocols. The quantification of GHG emissions does account for emissions from vehicles and equipment and removal of saplings.

The SF Forest Alliance Appeal Letter claims:

1. The Final EIR assumes trees will be replaced on a one-to-one basis in the project area, but this one-to-one replacement is not part of the NRMP. (See Response 1 above.)

2. The Final EIR assumes removed trees will be replaced with trees, while the SF Forest Alliance claims they will be replaced with shrubs and grasslands. (See Response 1 above.)
3. The Final EIR misstates the forest management objectives. (See Response 1 above.)
4. The GHG quantification in the Final EIR does not account for removal of approximately 12,000 saplings.
5. The Final EIR fails to account for GHG emissions from vehicles and equipment used for the project.
6. The Final EIR relies on a GHG calculation methodology that results in miscalculations of GHG sequestration.

In response to concerns 1 through 3 the one-to-one tree replacement, types of trees used as replacement, and Forest Management Objectives, Response 1 above explains that the Final EIR correctly cites the NRMP's proposed one-to-one tree replacement and types of trees to be replaced, which is part of the NRMP project description. The Final EIR also correctly estimates the projected number of trees to be removed and correctly summarizes the Forest Management Objectives in the NRMP.

GHG Analysis

SF Forest Alliance Appellant claims that the GHG quantification does not account for emissions from vehicles and equipment used for the project and that the vegetation sequestration analysis does not account for the carbon that would be released from removal of approximately 12,000 saplings. The Appellant also asserts that the EIR uses its own GHG calculation methodology.

Overview of EIR Analysis

As discussed in the Project Description section above, the Final EIR analyses of the NRMP includes the following general actions:

1. Routine Maintenance
2. Programmatic Projects
3. Laguna Salada Restoration Project at Sharp Park

The EIR contains both a programmatic level of analysis and project-level analysis. Routine maintenance activities and the Laguna Salada Restoration Project are addressed at a project-level, while programmatic activities are addressed at a program level of review. Routine maintenance activities and their associated GHG emissions are expected to be very similar to existing activities undertaken by the Natural Resources Division and would not substantively change with approval of the NRMP (see Draft EIR starting on p. 96 for further details and EIR assumptions regarding routine maintenance). The Laguna Salada Restoration Project is fully described on Draft EIR pp. 97 to 104. Program level activities are large scale capital improvements. These projects have not been developed to a point where project-level environmental review can occur. Additional analysis may occur when a specific programmatic project is proposed and information sufficient for project-level analysis becomes available.

As discussed starting on Draft EIR p. 446, the proposed project's GHG impact was analyzed in the Initial Study for the NRMP. In response to scoping comments received on the Initial Study, the Draft EIR contained additional discussion related to greenhouse emissions. The Draft EIR assessed the proposed project's GHG emissions for the NRMP activities in San Francisco (within 31 of the 32 Natural Areas) qualitatively. The qualitative analysis included a determination of whether the NRMP activities in San Francisco comply with San Francisco's qualified GHG Reduction Strategy, titled *Strategies to Address Greenhouse Gas Emissions in San Francisco*. The Draft EIR found the proposed project to be consistent with the GHG Reduction Strategy and the GHG emissions within the 31 Natural Areas in San Francisco were determined to be less than significant. No comments were received in regards to the qualitative assessment of compliance with the City's GHG Reduction Strategy, which is the City's standard approach to evaluating a proposed project's GHG impacts. For the Sharp Park Natural Area, GHG emissions resulting from the Sharp Park restoration activities were modeled quantitatively and were found to be less than significant. In response to public comments received on the Draft EIR, the RTC included further quantitative analysis primarily to address concerns related to how GHG emissions were quantified.

GHGs from Vehicles and Equipment

The EIR included a quantitative analysis of GHGs that would be emitted as a result of the Laguna Salada Restoration Project, concluding that these emissions would total 1,630 MT CO₂E. This analysis evaluated GHG emissions from the entire construction of the Laguna Salada Restoration project, including vehicles and equipment. With regards to GHG emissions from programmatic projects, as stated on Draft EIR p. 455, the Laguna Salada Restoration Project is expected to be representative of the largest programmatic project that RPD would undertake as part of the NRMP and therefore quantification of GHGs from vehicles and equipment associated with the Laguna Salada Restoration Project would represent a conservative (worst-case) assessment of GHG emissions from large-scale programmatic projects. Further, as stated above, the EIR assessed large-scale capital projects, other than the Laguna Salada Restoration Project, at a programmatic level of environmental review and may require additional analysis pursuant to CEQA when a specific project is proposed. As stated on Draft EIR p. 455, routine maintenance activities would be similar to current activities and thus would not result in a net increase in GHG emissions.

Removal of Saplings

With respect to routine maintenance, removal of saplings during routine maintenance is an existing condition and part of the current practices of the Natural Resources Division. Routine maintenance is expected to remain similar to existing conditions and would, therefore, not represent a change from existing, baseline conditions.

With respect to large-scale programmatic projects, the EIR provides a quantitative analysis of carbon sequestration that would be lost from tree removal activities. This analysis was conducted primarily to address concerns raised in the Initial Study and Draft EIR. The Appellant contends this analysis is faulty because it does not account for carbon sequestration that could be lost from removal of saplings. It is possible that large-scale programmatic projects could include removal of saplings; however, at this point, no specific project is proposed and a specific inventory of saplings that could be removed as part of programmatic projects is unknown. Once a specific programmatic project is proposed, that project may

require additional environmental review. However, as discussed above, the significance of the project's impact on GHG emissions was not based solely on a quantitative analysis, and no such analysis is required by CEQA. Instead, consistent with how the Planning Department evaluates a project's impact with respect to GHG emissions, the project was evaluated for consistency with the GHG Reduction Strategy and found to be consistent with this strategy.

GHG Calculation Methodology

The standard metric typically employed in environmental documents with respect to GHG emissions is to report GHGs emitted on an annual basis (in other words, reported as a sequestration or emission rate), not total amount of carbon sequestered. This metric is consistent with how GHG emissions are quantified under CEQA as recommended by the BAAQMD and other Air Districts in California. The SF Forest Alliance Appellant's claim that by assessing changes in carbon sequestration rates, the EIR does not accurately report the total amount of carbon sequestration that would be lost through tree removal activities. While it may be true that the total amount of sequestered carbon in trees at the end of the 20 year project horizon may be lower than existing levels as a result of replacing large trees of greater biomass with smaller trees, it is important to note that carbon sequestered in trees would not instantaneously be released into the atmosphere, but rather the tree would degrade over time, releasing carbon. Depending upon whether trees are removed offsite and chipped or left in place, the rate at which that carbon would be released into the atmosphere would vary substantially. For example, a tree that is left in place may degrade slowly and some of the carbon would be taken up by other animals and organisms and released into the atmosphere upon degradation of those organisms. It is also important to note that tree removal activities would take place gradually, over the 20 year project horizon and would not occur all at once. Furthermore, tree removal activities would focus on trees that are dead, dying or diseased and consequently are no longer actively sequestering meaningful amounts of carbon. Therefore, carbon that is already sequestered in these trees would likely be released into the atmosphere as part of natural processes, irrespective of the NRMP tree removal activities.

The methods used to quantify GHG sequestration rates from vegetation are based on standard methodology and protocols from expert sources including the U.S. Department of Energy, the U.S. Forest Service, the Intergovernmental Panel on Climate Change, and an emissions estimation model, called CalEEMod.

In conclusion, the EIR analyzed the impacts of the NRMP as they relate to GHG emissions based primarily on a qualitative assessment of compliance with the City's Greenhouse Gas Reduction Strategy, and disclosed additional quantitative analysis based on accepted methodologies and protocols. Assuming that the Appellant's contentions are correct, represent that of an expert, and are based on other accepted methodologies and protocols, the differences in how GHGs from the project are reported (sequestration rates versus total amount of carbon sequestered) is a disagreement among experts in regards to the specific quantitative information provided. As stated in CEQA Guidelines Section 15151, assuming that the comments express the view of a qualified expert, "[d]isagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among experts. The courts have looked not for perfection but for adequacy, completeness and a good faith effort at full disclosure."

An EIR is considered adequate if substantial evidence in the record supports the agency's decision that the EIR is adequate, even if there is substantial evidence to the contrary. The Appellants raise no concerns in regards to the qualitative assessment of GHGs in the Final EIR, primarily that the plan is consistent with the Greenhouse Gas Reduction Strategy, which is the threshold for the determination of a less than significant impact from GHG emissions in the Draft EIR.

Issue 9: The Wild Equity Appellant provides comments on the merits of the project, expressing a preference for the full restoration of Sharp Park, in lieu of the proposed Laguna Salada Restoration Project analyzed in the Final EIR and approved by the Recreation and Park Commission. The Wild Equity Appeal Letter also included attachments that request the removal of the Sharp Park Laguna Salada Restoration Project from the EIR.

Response 9: The Wild Equity Appellant's preference for full restoration of Sharp Park is a comment on the merits of the project itself, not on the adequacy of the Final EIR. The question before the Board is whether the Final EIR adequately analyzes the environmental impacts of the project as proposed by the project sponsor, in this case, the SFRPD. Under CEQA, the Final EIR must analyze the project as proposed by the project sponsor – here SFRD. The Final EIR does not dictate what project is brought forth for environmental review by the SFRPD.

The Wild Equity Appellant expresses a preference for the full restoration of Sharp Park. This concern is similar to those received during the public review period for the Draft EIR, and as discussed on RTC p. 4-168, these comments regard the merits of project itself, not on the adequacy of the Final EIR. Certification of the Final EIR by the Planning Commission was not a project approval of any kind and did not preclude the Recreation and Parks Commission from taking another action with respect to Sharp Park or the NRMP. The Recreation and Parks Commission approved the project, including the Laguna Salada Restoration Project on December 15, 2016. Please see Response 10 for a discussion regarding the analysis of a full restoration alternative in the Draft EIR.

While not cited in the Wild Equity Appeal Letter itself, an attachment was included of an April 16, 2015 memorandum to the California Coastal Commission submitted by Peter Baye regarding formulation and assessment of feasible alternatives to wetland dredging. This memorandum pertained to the Pumphouse Project, and is not a comment on the impacts of the proposed project or the adequacy of the EIR. Please see Response 10 for a discussion regarding the analysis of a non-dredging alternative in the Draft EIR.

The Wild Equity Appellant requests to remove Sharp Park from the NRMP Final EIR and included as attachments letters from various organizations supporting such a request. As discussed on RTC page 4-168, the Planning Department is responsible for analyzing the environmental impacts of the project as proposed by the project sponsor, in this case, the SFRPD. Although the lead agency is charged with proposing modifications to a project—in the form of mitigation measures—to reduce or eliminate the project's potential significant impacts, it is not appropriate for a lead agency to propose changes to the project description itself, such as removing the Laguna Salada Restoration Project from the NRMP, and therefore, from the Draft EIR.

As discussed on page 4-168 of the RTC, between the release of the NRMP in 2006 and the development of the EIR, the restoration project at Sharp Park progressed such that it could be reviewed at a project-level rather than a programmatic level. There are policy and operational reasons for including a project-level

analysis of the environmental impacts of the Laguna Salada Restoration Project. As detailed in both the NRMP and the NRMP EIR, habitat improvements at Sharp Park are an integral part of the NRMP itself – they implement all of the general recommendations (GR) that would occur elsewhere within the Natural areas, including, but not limited to, the protection of sensitive species and habitats, typically through the control of invasive plants (GR-1), and also, in the case of Sharp Park, by restricting dogs from habitat for the San Francisco garter snake and California red-legged frog (GR-8c), as well as the management of sensitive species and vegetation series of limited distribution (GR-2). In addition, one of the project objectives, as identified on Draft EIR p 82, is specifically “restore the Laguna Salada wetland complex for the benefit of special status species.” Another project objective, as also identified on Draft EIR p. 82, is to “identify, prioritize, and implement restoration and management actions designed to promote the functioning of San Francisco’s native ecosystem, including the maintenance and enhancement of native biodiversity.” If the Sharp Park component of the NRMP project were to be removed, one of the CEQA project objectives would not be achieved (i.e., restoring the Laguna Salada wetland complex), and the other objective would be achieved to a lesser extent (i.e., implementing restoration activities).

CEQA prohibits piecemealing, or dividing, one project into two or more projects, which can lead to an underestimation of the project’s impacts on the environment. But CEQA contains no prohibition against analyzing two related projects in one EIR. In fact, CEQA provides that “[w]here one project is one of several similar projects of a public agency, but is not deemed a part of a larger undertaking or a larger project, the agency may prepare on EIR for all projects, or one for each project...” (CEQA Guidelines Section 15165.) Thus, it is up to the public agency to determine whether including multiple related, but separate, projects in one EIR is appropriate. The only requirement is that “in either case [the EIR must] comment upon the cumulative effect[s]” of the projects. (*Id.*) Here, combining the analysis of the project-level Laguna Salada Restoration Project with the programmatic analysis of other NRMP activities is consistent with and helps inform the analysis of the NRMP project as a whole.

In conclusion, the Final EIR appropriately analyzed the project proposed by the SFRPD, which included a description of the Laguna Salada Restoration Project. Because the proposed Laguna Salada Restoration Project developed to a level of detail that allowed project-level environmental review, the EIR appropriately analyzed it at a project level. This level of analysis informs public agency decisionmakers and the public of the significant environmental effects of this project, identifies possible ways to minimize the significant effects, and describes feasible alternatives to the project to reduce or eliminate those significant effects. While the Wild Equity Appellant provides reasons why Appellant prefers full restoration to the Laguna Salada Restoration Project, the comments on the merits of the Laguna Salada Restoration Project are not evidence that the Final EIR is inadequate.

Issue 10: The Wild Equity Appellant asserts that the Final EIR failed to evaluate a full restoration alternative.

Response 10: The Final EIR considered a full restoration alternative, and determined that such an alternative is not required to be analyzed.

The Wild Equity Appeal Letter asserts that the Final EIR excludes alternatives, namely a full restoration alternative, and that there is no basis for not including a full restoration alternative. And while not cited in the Wild Equity Appeal Letter itself, an attachment was included of an April 16, 2015 memo to the California Coastal Commission submitted by Peter Baye regarding formulation and assessment of

feasible alternatives to wetland dredging. This memorandum pertained to the Sharp Park Pumphouse Project, and is not a comment on the impacts of the proposed project or the adequacy EIR. A response is provided below for informational purposes.

As described under the Project Background section above, the Recreation and Park Commission endorsed the recommendation of the General Manager to proceed with a project proposal that would expand the footprint of the habitat area into what is currently part of the landscaped golf course, thereby converting 19 acres of the golf course to create restored upland habitat around wetland areas and a habitat corridor between Laguna Salada and Horse Stable Pond. The SFRPD submitted this Laguna Salada Restoration Project to the Planning Department to be analyzed in the Draft EIR, as documented in the August 24, 2011 Memorandum (Draft EIR Appendix J Summary of Changes to the NRMP). As discussed in Response 9 above, the Planning Department, as the lead agency, is responsible for analyzing the environmental impacts of the project as proposed by the project sponsor, in this case, the SFRPD.

Full Restoration Alternative

As discussed on RTC p. 4-565, the Draft EIR considered an alternative to the proposed project that would include restoration of all of Sharp Park (essentially removing the golf course), in Draft EIR Section VII.F, Alternatives Considered but Rejected, pp. 526 to 527. In accordance with CEQA Guidelines Section 15126.6, "... alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the proposed project and could avoid or substantially lessen one or more of the significant effects" and "alternatives shall be limited to ones that would avoid or substantially lessen the significant effects of the project."

Draft EIR p. 526 states that while a public comment on the NOP was received proposing an alternative that would involve full restoration of the entire Sharp Park property, including the elimination of the golf course, it was rejected as a "CEQA alternative" because it is not compatible with the 18-hole layout of the historic golf course. This alternative would, through the elimination of the Sharp Park Golf Course, result in greater significant and unavoidable impacts to cultural and recreational resources and therefore is not required to be analyzed under CEQA.

The Draft EIR did analyze a Maximum Restoration Alternative for Sharp Park that includes more aggressive restoration of the Laguna Salada wetland complex as compared to the proposed project. This alternative would restore an additional five acres of habitat for the California red-legged frog and San Francisco garter snake, for a total of approximately 24 acres of restored habitat. Compared to the proposed project, this alternative would result in additional upland habitat on the northeast edge of Laguna Salada and additional dredging of the Laguna Salada wetland complex water bodies. The Draft EIR (pp. 525-526) determined that the Maximum Recreation and Maintenance Alternatives are the environmentally superior alternatives because they have fewer unmitigated significant impacts than either the proposed project or the Maximum Restoration Alternative.

It should be noted that one of the reasons that both the Maintenance Alternative and Maximum Recreation Alternative would result in less environmental impacts than the proposed project is because these alternatives would not provide a habitat corridor between Laguna Salada and Horse Stable Pond or provide the same degree of upland habitat as the proposed project and Maximum Restoration Alternative. While these features would be beneficial to the San Francisco garter snake and California

red-legged frogs, the construction of the habitat corridor and upland refuge would require augmenting the Sharp Park Golf Course, resulting in further significant and unavoidable impacts to the golf course as a historic resource and a significant impact to the golf course as a recreational resource.

Non-Dredging Alternative

While not cited in the Wild Equity Appeal Letter itself, an attachment was included that suggested a non-dredging project proposal, including water-level management of the lagoon and construction of a low berm or levee bordering the upland side of the lagoon's wetland-upland transition zone, but appears to be a comment on the Pumphouse Project. A similar comment for the Laguna Salada Restoration Project was submitted on the Draft EIR and responded to in the RTC. As stated on RTC page 4-601, the creation of a berm and the maintenance of higher water levels at the lagoon would eliminate more areas of the golf course, which would create additional impacts related to historic resources and recreation. Further, the Maximum Restoration Alternative was designed to maximize restoration activities while allowing the golf course to operate, which would not be achieved with a non-dredging project proposal.

In conclusion, the comments do not raise new issues related to the adequacy of the Final EIR's analysis of CEQA alternatives, and the Final EIR meets the standards for adequacy of an EIR, as set forth in CEQA Guidelines Section 15151.

Issue 11: The Wild Equity Appellant asserts that NRMP activities at Sharp Park constitute a "golf course redevelopment project" and the Final EIR failed to analyze the redevelopment of the golf course.

Response 11: The Final EIR analyzed the impacts of the Laguna Salada Restoration Project on the Sharp Park golf course and determined that the restoration activities would result in a significant impact on the golf course as recreational resource and required a mitigation measure that would relocate one of the affected golf course holes. A specific design of the golf course to accommodate the hole relocation has not been developed and may require additional environmental review. Because design of the golf course is not proposed at this time, analysis of activities would be speculative and is not required under CEQA.

The Wild Equity Appeal Letter asserts that the proposed project is a "golf course redevelopment" project that was identified as A18 in the Restoration Report, and the Final EIR failed to analyze the impacts of this "golf course redevelopment project." The Wild Equity Appeal Letter supports this claim by stating that the Laguna Salada Restoration Project would result in modifications to the golf course, which were not presented in the 2006 NRMP. An attachment to the Wild Equity Appeal Letter expressed concern that the operation of the golf course threatens the endangered San Francisco garter snake.

As described above in the "Development of the Laguna Salada Restoration Project at Sharp Park" section, the SFRPD refined the activities proposed for Sharp Park in the 2006 SNRAMP and developed the Laguna Salada Restoration Project in order to restore habitat for the San Francisco garter snake and California red-legged frog. As stated on p. 260 of the Draft EIR, the Laguna Salada Restoration Project would restore about 19 acres of the Sharp Park Golf Course for habitat. A portion of the golf course is located on the western side of Highway 101, which bisects Sharp Park, and restoration would primarily affect the layout of the golf course holes, including Holes 10, 12, 14, 15, and 18 on the eastern edge of Laguna Salada. The proposed habitat corridor between Horse Stable Pond and Laguna Salada also would be constructed requiring Holes 10 and 13 to be slightly shortened or narrowed and Hole 12 to be closed.

The Draft EIR determined that the closure of Hole 12 as a result of the wetland restoration would result in significant recreation impacts, and Mitigation Measure M-RE-6, to restore the playability of the 18-hole golf course, was identified to reduce recreation impacts to a less-than-significant level (refer to Draft EIR p. 261 and pp. 264 to 269). The Draft EIR also determined that the closure of Hole 12 would result in a substantial adverse change in the significance of the golf course, a historic resource under CEQA. Implementation of Mitigation Measure M-CP-7 which requires documentation of the Sharp Park Golf Course before restoration activities would reduce the magnitude of this impact, but would not sufficiently reduce it to a less than significant level.

The environmental impact of mitigation measure M-RE-6 (restoration of the playability of the 18-hole golf course) was analyzed in the Draft EIR on pp. 264 to 269. It was determined that the significant historic resource impact of Mitigation Measure M-RE-6, regarding the placement of Hole 12, could be reduced to a less-than-significant level if the replacement hole is located west of Highway 1.

Mitigation Measure M-RE-6 requires the SFRPD to coordinate with a golf course consultant with expertise in historic golf course renovation and with specific expertise, if possible, in golf courses designed by Alistair MacKenzie to restore the playability of the Sharp Park Golf Course, which would also help reduce historic impacts.

At this time, the SFRPD has not yet retained a golf course consultant to prepare a golf course design that addresses the relocation of Hole 12, in accordance with Mitigation Measure M-RE-6. When a golf course design pursuant to Mitigation Measure M-RE-6 is developed, it may be subject to further review as required by CEQA. Therefore, Wild Equity's claim that the proposed Laguna Salada Restoration Project is a golf course redesign is factually incorrect. The only golf course modifications proposed are those disclosed in the EIR to accommodate the Laguna Salada Restoration Project and those agreed to by SFRPD in compliance with Mitigation Measure M-RE-6. In accordance with CEQA Guidelines Section 15126.4(a)(1)(D), the environmental impacts of M-RE-6 is disclosed in Draft EIR pp. 264 to 269. Therefore, any such analysis of a golf course redesign would be speculative at this point and is not required per CEQA Guidelines Section 15064.

An attachment to the Wild Equity Appeal Letter expressed concern that the operation of the golf course threatens the endangered San Francisco garter snake. The Final EIR analyzes the environmental impacts of the NRMP by comparing the existing physical environmental conditions against the potential physical effects of the proposed project. The existing baseline conditions at Sharp Park include the existing and currently operational Sharp Park Golf Course, and the Final EIR analyzes the impacts of the Laguna Salada Restoration Project on the existing Sharp Park Golf Course and its surroundings. Continued operation of the golf course is an existing, separate activity and, accordingly, is not evaluated in this EIR.

Issue 12: While not cited in the Wild Equity Appeal Letter itself, attachments were included that express disagreement with the EIR's conclusion that the Sharp Park Golf Course retains adequate integrity to be determined a historic resource.

Response 12: The Sharp Park Golf Course was evaluated and determined eligible for the California Register of Historical Resources (CRHR) (and the National Register of Historic Places (NRHP)) as a designed historic landscape. Disagreement among experts regarding the eligibility of the Sharp Park Golf Course as an historic resource does not make the Final EIR inadequate.

The Wild Equity Appeal Letter included a summary of and attachment of a letter from Chris Pattillo of PGA design, Landscape Architects from October 27, 2011 (Pattillo Attachment). This same letter was submitted to the Planning Department during the public review period for the proposed project and is fully addressed in the RTC document. The Pattillo Attachment expressed disagreement with the EIR's conclusion that the Sharp Park Golf Course retains adequate integrity to be determined a historic resource for purposes of environmental impact evaluation under CEQA. The Pattillo Attachment asserts that the golf course no longer reflects the work of Alister Mackenzie and there are few similarities between the course that existed during the period of significance and what remains today.

The Wild Equity Appellant also included as an attachment a link to the Historic Preservation Commission's meeting for the HPC to discuss whether to comment on the adequacy and accuracy of the Draft EIR, noting that two Historic Preservation Commissioners did not agree with the Department's determination that the Sharp Park Golf Course retains sufficient integrity to qualify as an historic resource under CEQA.

As discussed on RTC p. 246, the Planning Department acknowledges that two of the seven members of the San Francisco HPC disagreed with the historic eligibility determination for the Sharp Park Golf Course. The assessment of potential impacts to historic resources at Sharp Park, as presented in the EIR, are based on the analysis and conclusions of the Historic Resource Evaluation Response (HRER) and the Historical Resources Evaluation (HRE) conducted for the proposed project. HRE Section 5.2 (included in EIR Appendix C) provides a full analysis of the historic nature of the Sharp Park Golf Course, including the integrity of the resource and the impacts of the proposed project on the golf course as a historic resource.

Per CEQA Guidelines Section 15064.5(a), historical resources shall include the following:

- 1) A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (Pub. Res. Code §5024.1, Title 14 CCR, Section 4850 et seq.).
- (2) A resource included in a local register of historical resources, as defined in section 5020.1(k) of the Public Resources Code or identified as significant in an historical resource survey meeting the requirements section 5024.1(g) of the Public Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
- (3) Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (Pub. Res. Code, § 5024.1, Title 14 CCR, Section 4852) including the following:
 - (A) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

- (B) Is associated with the lives of persons important in our past;
- (C) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
- (D) Has yielded, or may be likely to yield, information important in prehistory or history.

(4) The fact that a resource is not listed in, or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to section 5020.1(k) of the Public Resources Code), or identified in an historical resources survey (meeting the criteria in section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code [PRC] sections 5020.1(j) or 5024.1.

The golf course and its associated structures (such as the clubhouse) were evaluated using the criteria for identifying historical resources under CEQA Guidelines Section 15064.5(a)(2)–(3), which provide the criteria from California PRC Section 20524.1. The evaluation was also conducted using the National Park Service (NPS) National Register Bulletin 18, “How to Evaluate and Nominate Designed Historic Landscapes.”

As part of the analysis conducted for the HRE, a records search was conducted of the Northwest Information Center, the National Register of Historic Places, and the California Register of Historical Resources. The HRE states that the Sharp Park Golf Course was not listed on any federal or state registers; this does not indicate that the course is not eligible for listing, rather it indicates that the golf course had not yet been evaluated for historical significance and eligibility for listing on federal or state registers prior to the preparation of the HRE and the EIR.

In conjunction with this EIR, the Sharp Park Golf Course was evaluated and determined eligible for the California Register of Historical Resources (CRHR) (and the National Register of Historic Places (NRHP)) as a designed historic landscape for the reasons detailed in the HRE and described on Draft EIR pp. 207 to 209.

The HRER and EIR acknowledge that alterations to the Sharp Park Golf Course have occurred over time, as is expected with landscape cultural resources. With respect to whether the Sharp Park Golf Course retains historic integrity, the HRE finds: “[a]lthough the course has been modified over time, the golf course is in its historic location and retains much of its historic appearance, except that the ocean is no longer visible from the course. Still present are the lagoon, the east and west locations of the holes, and the fairway, which were all elements of the original design. [Alister] Mackenzie designed the course with interesting challenges for golfers, regardless of their skill level, which is still true of the current course. Man-made features that have been added, such as the seawall, do not diminish the historic integrity of the course because the land and its location were important to Mackenzie’s design; thus, the course is still authentic to Mackenzie’s plan. The course retains its integrity of design, workmanship, and materials, which provide it with a similar sense of feeling and association to its period of significance.”

The HRE, HRER and Draft EIR analysis relative to the Golf Course’s designation as a historic resource provides the required substantiation and documentation, and it was prepared by the City’s Historic Preservation Specialists. It should be noted that the Planning Department received numerous comments both in support of and opposition to the designation of the Sharp Park Golf Course as an historic resource

(see RTC pages 4-232 to 4-249). As stated in CEQA Guidelines Section 15151, assuming that the comments express the view of a qualified expert, “[d]isagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among experts. The courts have looked not for perfection but for adequacy, completeness and a good faith effort at full disclosure.” RTC pages 4-246 through 4-249 provides a full summary of the main points of disagreement in regards to the historic designation of the Sharp Park Golf Course.

Issue 13: The Wild Equity Appellant asserts that the Final EIR does not adequately analyze how the proposed Laguna Salada Restoration Project may be affected by future sea level rise and that the Final EIR does not comply with San Francisco’s Sea Level Rise Action Plan because it fails to consider adaptation and retreat alternatives to the proposed project.

Response 13: The Final EIR adequately analyzes the effects of the project on the environment as required by CEQA. There is no requirement for an EIR to consider policy-based alternatives.

The Appellant states that the Final EIR does not comply with San Francisco’s Sea Level Rise Action Plan because it fails to consider adaptation and retreat alternatives and fails to consider an alternative that would protect Sharp Park’s natural ecology from salinity intrusion or other impacts from sea level rise. Additionally the Appellant asserts that the Final EIR did not adequately analyze the impacts to the project from sea level rise.

As stated on page 4-493 of the RTC, the purpose of an EIR is to provide public agencies and the public with detailed information about the effect that a proposed project is likely to have on the environment (PRC Section 21061). CEQA defines “environment” as the “physical conditions which exist within the area which will be affected by a proposed project, including land, air, water, minerals, flora, fauna, noise, objects of historical or aesthetic significance” (PRC Section 21060.5). Furthermore, “... [an] EIR shall also analyze any significant environmental effects the project might cause by bringing development and people to the area affected. For example, an EIR on a subdivision astride an active fault line should identify as a significant effect the seismic hazard to future occupants of the subdivision. The subdivision would have the effect of attracting people to the location and exposing them to the hazards found there. Similarly, the EIR should evaluate any potentially significant impact of locating development in other areas susceptible to hazardous conditions (e.g., floodplains, coastlines, wildfire risk areas)” (CEQA Guidelines Section 151262). The above CEQA requirements are valid only to the extent that the project exacerbates the hazardous condition (*California Building Industry Association v. BAAQMD*, 62 Cal.4th 369 (2015)). The proposed Laguna Salada Restoration Project is intended to restore the marsh complex and associated uplands to protect and enhance the California red-legged frog and San Francisco garter snake habitat; the project would not result in significant environmental effects that would exacerbate sea level rise. Furthermore, the proposed project would not have the potential of attracting people to any existing or future hazardous conditions related to sea level rise.

Cumulative Sea Level Rise Effects

As stated on RTC p. 4-494, the Draft EIR addresses the potential effects of climate change, including sea level rise, on the proposed project. Because global climate change is a cumulative impact (it is the result of impacts of past, present, and reasonably foreseeable projects on the environment), the secondary impacts

of global climate change, including sea level rise are addressed in the cumulative impact discussion (Impact HY-16, Draft EIR pp. 380 to 382). Figure 7, Potential Sea Level Rise near Sharp Park, Draft EIR p. 359, illustrates the potential effects of sea level rise at Sharp Park. Draft EIR pp. 381 to 382 also analyzes cumulative effects due to sea level rise.

As discussed on Draft EIR p. 382, at Sharp Park, sea level rise would increase the base level elevations of Laguna Salada and Horse Stable Pond. Fresh water must continue to discharge to the ocean underground, and in order for this to happen, the elevation of the water table would rise in proportion to the rise in sea level. The freshwater/saltwater interface, which is a zone of mixing, would move inland somewhat. Salinity in Laguna Salada may increase, especially during dry periods when outflow of fresh groundwater from the watershed above Sharp Park is lowest. The magnitude of sea level rise during the project planning period would probably be too small to result in significant erosion of the sea wall, but the effects are difficult to predict.

Salinity Conditions with Sea Level Rise

The Appellant asserts that the EIR fails to consider an alternative that would protect Sharp Park's natural ecology from salinity intrusion resulting from sea level rise. While not cited in the Wild Equity Appeal Letter itself, an attachment was included of a January 5, 2016 Memorandum to the California Coastal Commission submitted by Peter Baye regarding observations of salinity intrusion at the north-western part of Sharp Park resulting from the modification of authorized drainage of Laguna Salada in light of sea level rise. This memorandum addresses salinity intrusion that may be occurring as a result of ongoing pumping operations at Laguna Salada and it is not a comment on the impacts of the proposed project or on the adequacy of the EIR. However, information regarding salinity conditions at Laguna Salada with respect to sea level rise was provided in the RTC and is summarized below.

As summarized on RTC p. 4-495 to 4-496 and as discussed on Draft EIR p. 382, it is expected that the stable fresh water elevation in Laguna Salada would rise in response to a rising sea level, since this is necessary to maintain a positive flow of groundwater to the ocean. This may lead to a number of changes over time, including increased salinity in Laguna Salada. Impact HY-16 (on Draft EIR pp. 381 and 382) addresses the cumulative impacts on salinity conditions with sea level rise and concludes that the proposed project is not expected to contribute in a cumulatively considerable way to any significant cumulative impacts on water resources and sea level rise. While the specific effects of sea level rise on the Laguna Salada Restoration Project are uncertain, because the effects of sea level rise are expected to occur gradually over time and because the NRMP proposes to employ an adaptive management approach, SFRPD would continue to evaluate the environmental conditions at Sharp Park and make management decisions in the future based on those conditions. Although the Final EIR concludes there could be significant impacts from sea level rise on the project, the proposed project would not itself result in a considerable contribution to the cumulative effects of climate change, and this is the key question under CEQA. The Final EIR concludes that the proposed project would result in a less than cumulatively considerable contribution to sea level rise impacts and this conclusion is supported by substantial evidence in the EIR and supporting documents.

San Francisco Sea Level Rise Action Plan

San Francisco released its Sea Level Rise Action Plan (the “Action Plan”) in March 2016. The San Francisco Sea Level Rise Action Plan is the first step towards the development of the Citywide Sea Level Rise Adaptation Plan. The Action Plan identifies a citywide vulnerability and risk assessment as part of the next steps of developing an Adaptation Plan. Vulnerability and risks assessments of the City’s parks and open space have not yet been conducted.

Per CEQA Guidelines Section 15125(d), an “EIR shall discuss any inconsistencies between the proposed project and applicable general plans and regional plans.” An EIR only needs to discuss inconsistencies with applicable plans; it need not develop project alternatives that avoid such inconsistencies, as suggested by the Appellant. The Action Plan is not an adaptation plan and it is unknown at this point what strategies would be proposed in a future adaptation plan and whether or not they would be applicable to Sharp Park. The strategy for managing Natural Areas is based on adaptive management, which is a flexible learning-based approach to managing complex ecosystems so as the adaptation plan is developed, the SFRPD may incorporate any relevant measures into the NRMP in the future. Certification of the EIR does not preclude decisionmakers from taking other actions in the future with respect to Sharp Park that could include sea level rise adaptation and retreat actions.

As discussed on Draft EIR p. 151, policy conflicts do not, in and of themselves, indicate a significant environmental effect within the meaning of CEQA, in that the intent of CEQA is to determine physical effects associated with a project. To the extent that physical environmental impacts of a proposed project may result from conflicts with one of the policies related to a specific resource topic, such physical impacts are adequately analyzed in the EIR within each topic section as required under CEQA.

Issue 14: The Wild Equity Appellant asserts that the Final EIR does not adequately analyze the ongoing pumping operations of Sharp Park with the “golf course redevelopment” project.

Response 14: The ongoing pumping operations are part of the baseline conditions at the project site and would not change with the Laguna Salada Restoration Project or NRMP. There is no “golf course redevelopment project” (See Response 11).

The Wild Equity Appeal Letter asserts that the “golf course redevelopment plan” is not a separate project from ongoing pumping operations and, therefore, the EIR needs to analyze the ongoing pumping operations as part of the Laguna Salada Restoration Project. The Wild Equity Appeal Letter cites to “Anonymous 2012, p. 1” to support this claim, but this was not included as an attachment to the Appeal Letter.

The CEQA analysis provided in the Draft EIR compares the baseline (or existing conditions) at the project site to the potential environmental impacts that would result from construction and implementation of the proposed project. The existing and ongoing pumphouse operations are part of the baseline conditions at the project site and are not a part of the proposed project. Thus, although the existing pumphouse operations inform the project setting and are part of the baseline conditions against which the proposed project’s impacts are measured, the EIR does not and should not evaluate the existing and ongoing operation of the pumphouse in the project-related impact analysis for the proposed project.

The pumphouse operations received a Biological Opinion from USFWS on October 2, 2012. Currently, under existing conditions, the pumps manage water levels in Horse Stable Pond to maintain California red-legged frog habitat, which is also a goal of the proposed project, and to reduce the frequency of flooding of the golf course. This ongoing pumping is part of the baseline conditions and whether or not the Laguna Salada Restoration Project and NRMP are approved and implemented, the SFRPD would continue to use the pumps to manage water levels in Horse Stable Pond.

See Response 11 regarding the Wild Equity Appellant's characterization of the project as a golf course redevelopment project.

Issue 15: The Wild Equity Appellant asserts that the EIR through Mitigation Measure M-BI-6a, Protection of Protected Species during Implementation of the Sharp Park [Laguna Salada] Restoration Project, improperly relies on "take" of the San Francisco Garter snake to reduce project impacts to a less than significant level. Additionally, the Wild Equity Appellant asserts that the EIR fails to analyze the impacts of M-BI-6a on the San Francisco Garter Snake. The Wild Equity appellant asserts that changes to Mitigation Measure M-BI-6a, addressing acid sulfate soils required recirculation of the Draft EIR.

Response 15: The Laguna Salada Restoration Project is intended as a recovery action for the San Francisco garter snake and while Mitigation Measure M-BI-6a focuses on avoidance measures, "incidental take" may be allowed during the regulatory approval process. Additionally, as stated in the EIR, this mitigation measure may be altered by resource agencies during the permit review process, as they deem necessary to protect the species. Thus, Mitigation Measure M-BI-6a would not result in significant adverse impacts on the San Francisco Garter Snake. Additionally, changes to Mitigation Measure M-BI-6a did not require recirculation of the Draft EIR.

The Wild Equity Appeal Letter asserts, in the citation of a court case, that the EIR could not rely on a mitigation measure that authorized the take of a fully protected species under the California Fish and Game Code. Additionally, the Wild Equity Appeal Letter asserts that the EIR did not analyze the impacts of Mitigation Measure M-BI-6a and changes to this mitigation measure that added language addressing acid sulfate soils following the publication of the Draft EIR required recirculation of the Draft EIR.

The case cited by the Appellant involved a large-scale residential development project in northern Los Angeles County and the Court concluded that for such a project, an agency could not authorize incidental take of a fully protected species as a means of mitigating a project's impacts. It was concluded that Fish and Game Code Section 5515 permits the taking of a fully protected species for "scientific research" and that it allowed for the trapping and transplantation of a fully protected species as part of a species recovery program, but not as a development project mitigation.

As stated on Draft EIR p. 293, the purpose of the Laguna Salada Restoration Project is to enhance the Laguna Salada wetland complex to provide higher quality habitat for the fully protected San Francisco garter snake and one of its primary food sources, the California red-legged frog. As such, the Laguna Salada Restoration Project, consistent with the California Fish and Game Code, is intended as a recovery action for the San Francisco garter snake. Thus, the trapping and transplantation of a fully protected species as part of a species recovery program, such as the Laguna Salada Restoration Project, is allowed, unlike for a private development project.

Mitigation Measure M-BI-6a would ensure that measures are taken to avoid impacts to San Francisco garter snakes during construction by the use of silt fencing or exclusion fencing around the project and staging areas and all onsite restoration activities. This measure would reduce temporary construction impacts by avoiding and minimizing impacts to San Francisco garter snakes to the maximum extent feasible. Mitigation Measure M-BI-6a also includes pre-construction activities such as a pre-activity survey to identify snakes and snake habitat. It also includes a worker education program to train all workers on how to identify and avoid harm to San Francisco garter snakes. Prior to construction equipment or vehicles entering the site, vegetation will be cleared by hand equipment to a height of 4 inches and checked for the presence of snakes. Additionally, prior to construction near wetlands and ponds, rodent burrows in the construction areas will be hand excavated in order to ensure absence of snakes and frogs.

No restoration activities would occur between November 15 and April 15 (the breeding season for California red-legged frog and the season when San Francisco garter snakes are inactive in their winter burrows), and a biological monitor would be present during construction activities, in addition to an on-call specialty environmental monitor with a valid 10(a)(1)(A) permit to handle San Francisco garter snakes and relocate them to an area consisting of suitable habitat if needed and if authorized by USFWS and CDFW. Any relocation efforts would be coordinated with the appropriate agency to minimize any adverse effects. With implementation of M-BI-6a, the short-term impacts of the Laguna Salada Restoration Project on the San Francisco garter snake would be less than significant. This mitigation measure may be altered by resource agencies during the permit review process, as necessary.

Prior to implementing the proposed Laguna Salada Restoration Project, the SFRPD would consult with CDFW and USFWS and prepare a Biological Assessment and would need to obtain a Biological Opinion and incidental take permit from the USFWS and CDFW pursuant to the California and federal Endangered Species Acts. If an incidental take permit is not granted, the project may not be able to move forward as proposed.

The EIR concluded that the proposed project would not result in any significant unavoidable biological resources impacts related to California red-legged frogs or San Francisco garter snakes. The Appellant fails to show that the extent of incidental take anticipated to result from the proposed project would result in any significant biological resources impact related to California red-legged frogs or San Francisco garter snakes that cannot be mitigated by the proposed mitigation measures.

Acid Sulfate Soils

As discussed on RTC p. 4-369, on November 22, 2013, Fugro Consultants (Fugro) collected shallow sediment samples from four locations (one on the west side of Laguna Salada, two at Horse Stable Pond, and one in the connecting channel). The purpose of the sediment sampling and analyses was to evaluate the potential for acid sulfate soil conditions in advance of planned soil and vegetation removal. The sediment samples collected by Fugro were then analyzed by Tetra Tech for the Pumphouse Project. Page 3 of the Tetra Tech memorandum concluded that "There is no indication that acid sulfate soils are found within the upper 3 feet of sediments, which is the depth proposed for sediment and vegetation removal. The sulfate concentrations found near the surface of the sediment cores in all cases reflect sources from the surrounding land use activity." Page 3 further concludes that "Nothing in the sediment analysis showed any naturally-occurring biological reason that excavation of sediments could cause elevated pH

levels, therefore if elevated pH levels do occur they would likely be evidence of an artificial deposit of material that can elevate pH if allowed into the water column.” These reports were provided to the USFWS and CDFW. A representative for USFWS reviewed the information submitted and concurred with the methods and conclusions of the report.

As stated in RTC p. 4-369, in an abundance of caution due to the unlikely event that anoxic conditions materialize, to ensure potential impacts to California red-legged frogs and San Francisco garter snakes are mitigated to a less-than-significant level, pertinent aspects of the Sharp Park Pumphouse Final Mitigated Negative Declaration (FMND) Mitigation Measure M-BIO-2b, Protection of Special-Status Species and Water Quality from Acid Sulfate Soils and Other Components, p. 124, have been incorporated into Draft EIR Mitigation Measure M-BI-6a, Protection of Protected Species during Implementation of the Sharp Park [Laguna Salada] Restoration Project, p. 326. This modification to the mitigation measure was made between the publication of the Draft EIR and the publication of the RTC document, and such modifications and refinements to both project descriptions and mitigation measures are not only common during the environmental review process, but are encouraged to reduce the impacts of a proposed project following public review.

Here, with the revisions to the mitigation measure, Pumphouse FMND Mitigation Measure M-BIO-2b and NRMP EIR Mitigation M-BI-6a are now consistent with one another, which further support a consistent implementation effort. Recirculation of an EIR after the close of a Draft EIR comment period is only required when new information shows that new significant environmental impacts or a substantial increase in the severity of a significant impact identified in the Draft EIR will result, when an EIR is “so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded” or where a “feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, *but the project’s proponents decline to adopt it.*” (CEQA Guidelines Section 15088.5(a) (emphasis added)). Here, the changes to Mitigation Measure M-BI-6a do not change any of the conclusions in the Draft EIR and do not constitute significant new information that requires recirculation of the Draft EIR under CEQA (California PRC Section 21092.1) or the CEQA Guidelines (14 CCR Section 15088.5). — Further, and most importantly, the changes improve the efficacy and consistency of the mitigation measure with the Pumphouse Project, and the Recreation and Park Commission adopted them as a condition of project approval. Thus, recirculation was not required under CEQA Guidelines Section 15088.5.

CONCLUSION:

The Appellants have not raised any new issues relative to the project’s physical environmental impacts that were not previously addressed in the Draft EIR and/or in the Responses to Comments document or at the EIR certification hearing, and as discussed above, the analysis and conclusions of the Final EIR are supported by substantial evidence in the record. Moreover, Appellants have not provided substantial evidence in support of their own arguments regarding the adequacy and accuracy of the Final EIR. Argument and speculation alone are not substantial evidence under CEQA. Even if the Appellants had provided substantial evidence that contradicts the analysis and conclusions of the Final EIR, the agency’s adequacy determination remains valid when the EIR is based on substantial evidence in the record. The Final EIR and supporting documents provide such substantial evidence.

For the reasons stated above, the Planning Commission's certification of the EIR complies with the requirements of CEQA, the CEQA Guidelines, and Chapter 31 of the San Francisco Administrative Code. The Department, therefore, recommends that the Board uphold the Commission's decision to certify the EIR and deny the appeal.

Fax:
415.558.6409

Planning
Information:
415.558.6377

Following publication of the Response to Comments document for the Natural Resources Management Plan, the Recreation and Parks Department proposed modifications to the Project Description with respect to proposed actions at the Sharp Park Natural Area with the intent of emphasizing the preferred use of soil spoils for habitat restoration purposes and identifying the other disposal sites required for excess spoils as equal disposal options. The revisions to the Project Description remove specific reference to use of the spoils to raise the elevation of certain golf course holes and to clarify potential re-use locations. The Environmental Planning Division of the Planning Department has analyzed the proposed revisions to the Project Description and determined that the proposed modifications to the Project Description would not result in new significant environmental impacts or substantially increase the severity of a significant impact identified in the Draft EIR, and no new mitigation measures would be necessary. Further, these modifications to the project description and additional revisions to the EIR as shown below, do not change any of the conclusions in the Draft EIR and do not constitute significant new information that requires recirculation of the Draft EIR under the California Environmental Quality Act (CEQA) (California Public Resources Code Section 21092.1) and the CEQA Guidelines (14 California Code of Regulations Section 15088.5).

The following are additional Staff-initiated text changes that will be added to Chapter 5.B, Staff-Initiated Changes, and incorporated into the Final EIR. Deletions are marked with ~~strikethrough~~ and additions are noted with double underline.

The text on Draft EIR pp.99-102, last paragraph, has been changed as follows:

Some areas that are currently open water within Laguna Salada and Horse Stable Pond would be deepened by one to three feet, and parts of the eastern portions of the lagoon and pond shorelines, as well as the connector channel, would be excavated to restore open water habitat and to ensure that ample edge habitat consisting of open water/emergent vegetation interface would persist for the foreseeable future. Excavation of accumulated sediments and encroaching wetland plants would result in the conversion of vegetated wetlands to open water habitat. This deepening would be conducted using excavating equipment positioned along the shore of the two water bodies. Up to 60,000 cubic yards of

material would be excavated; of this, approximately 40,000 cubic yards would be used on-site and approximately 20,000 cubic yards would be stockpiled or spread at the Sharp Park rifle range site or disposed of at the Sharp Park organic dump. Excavated dredge spoils appropriate for use as golf course substrate materials would be used on-site to raise the elevation of Holes 10, 14, 15, and 18 and to create the upland habitat on the east edge of Laguna Salada. Prior to on-site use of dredged material, the sediments to be removed as part of the wetland restoration project would be tested for elevated concentrations of sulfides and other characteristics to determine whether the sediments would serve as soils suitable for supporting desired vegetation. If the sediment proves unsuitable, it would be placed in a ~~nonsensitive~~ non-sensitive location or treated to render it capable of supporting the desired vegetation. Treatment may include spreading and mixing the dredged material with native soil to avoid concentrating acidic soils or adding lime to neutralize acidic soils. Excavated dredged soils appropriate for on-site re-use would be used to create upland habitat on the east edge of Laguna Salada. Any additional sediment would be re-used at non-sensitive locations, which include the Sharp Park Rifle Range, the Sharp Park green waste facility, and the Sharp Park golf course in locations where the character-defining features of the course would not be adversely impacted. Excavation of the eastern portions of the lagoon, pond and the connector shoreline would convert up to six acres of freshwater marsh, willow scrub, and wet meadow wetland habitat to open water habitat.

Figure 3 of the Draft EIR p. 101 has been modified to emphasize that on-site sediment from Laguna Salada will be used to create upland habitat proposed by the project, remove reference to raising certain golf course fairways, and to include the location of the Green Waste Facility and Rifle Range (both proposed locations for sediment re-use) within the extent of the figure. These modifications are shown in hatched yellow and yellow call-outs on the attached revised Figure 3.

The text on Draft EIR pp. 221-222, last paragraph has been changed as follows:

Impact CP-6. Implementation of the Sharp Park restoration activities that include raising holes 10, 14, 15, and 18 would not result in a substantial adverse change in the significance of the Sharp Park Golf Course, a historic resource under CEQA. (less than significant)

As discussed in Section V.D.2, Sharp Park Golf Course meets the criteria for listing on the NRHP and CRHP for its significance under Criteria A and C for listing on the CRHR under Criteria 1 and 3. At Sharp Park, excavated dredged spoils appropriate for use as golf course substrate materials ~~would~~ may be used on-site to raise Holes 10, 14, 15, and 18 and to create upland habitat on the east edge of Laguna Salada.

The text on Draft EIR p. 453, in Table 19, has been changed as follows:

Table 1
Regulations Applicable to the Proposed Project

Regulation	Project Requirement
Mandatory Recycling and Composting Ordinance (Environment Code, Chapter 19)	Minor quantities of solid waste and recyclable material would be generated during the management of the Natural Areas. Unless it can be used to create wildlife habitat, all large woody debris generated by the Natural Areas Program would be composted in Golden Gate Park; vegetation debris from Sharp Park would be disposed of at the Sharp Park organic dump <u>green waste facility</u> . The wood chips may be used to suppress understory invasive vegetation or could be used as beneficial mulch on other revegetation projects in the Natural Areas. Also, large tree trunks may be left on site if they provide habitat value, or they may be used for recreational or maintenance purposes within the Natural Area.
San Francisco Green Building Requirements for construction and demolition debris recycling (SF Building Code, Chapter 13C)	Minor quantities of solid waste and recyclable material would be generated during the management of the Natural Areas.
San Francisco Clean Contractors Ordinance (Ordinance 70-07)	On public works construction projects that take 20 days or more to complete must reduce vehicle emissions that contribute to GHG accumulation by (1) using a blend of at least 20 percent biodiesel in off-road vehicles and construction equipment and (2) using construction equipment with engines that meet Tier 2 standards or use best available control technology.

Subject: Modification to Natural Areas Management Plan Project Description and Figure 3 in the Draft Environmental Review Document, Planning Department Case No. 2005.0912E

Following publication of the Response to Comments document for the Natural Resources Management Plan, we have proposed modifications to the Project Description with respect to proposed actions at the Sharp Park Natural Area with the intent of emphasizing the preferred use of soil spoils for habitat restoration purposes and identifying the other disposal sites required for excess spoils as equal disposal options. Specifically, the revisions listed below to the Project Description remove specific reference to use of the spoils to raise the elevation of certain golf course holes and clarify potential re-use locations.

The text on Draft EIR pp. 99-102, last paragraph, has been changed as follows:

Some areas that are currently open water within Laguna Salada and Horse Stable Pond would be deepened by one to three feet, and parts of the eastern portions of the lagoon and pond shorelines, as well as the connector channel, would be excavated to restore open water habitat and to ensure that ample edge habitat consisting of open water/emergent vegetation interface would persist for the foreseeable future. Excavation of accumulated sediments and encroaching wetland plants would result in the conversion of vegetated wetlands to open water habitat. This deepening would be conducted using excavating equipment positioned along the shore of the two water bodies. Up to 60,000 cubic yards of material would be excavated; ~~of this, approximately 40,000 cubic yards would be used on-site and approximately 20,000 cubic yards would be stockpiled or spread at the Sharp Park rifle range site or disposed of at the Sharp Park organic dump.~~ Excavated dredge spoils appropriate for use as golf course substrate materials ~~would be used on-site to raise the elevation of Holes 10, 14, 15, and 18 and to create the upland habitat on the east edge of Laguna Salada.~~ Prior to on-site use of dredged material, the sediments to be removed as part of the wetland restoration project would be tested for elevated concentrations of sulfides and other characteristics to determine whether the sediments would serve as soils suitable for supporting desired vegetation. If the sediment proves unsuitable, it would be placed in a ~~non-sensitive~~ non-sensitive location or treated to render it capable of supporting the desired vegetation. Treatment may include spreading and mixing the dredged material with native soil to avoid concentrating acidic soils or adding lime to neutralize acidic soils. Excavated dredged soils appropriate for on-site re-use would be used to create upland habitat on the east edge of Laguna Salada. Any additional sediment would be re-used at non-sensitive locations, which include the Sharp Park Rifle Range, the Sharp Park green

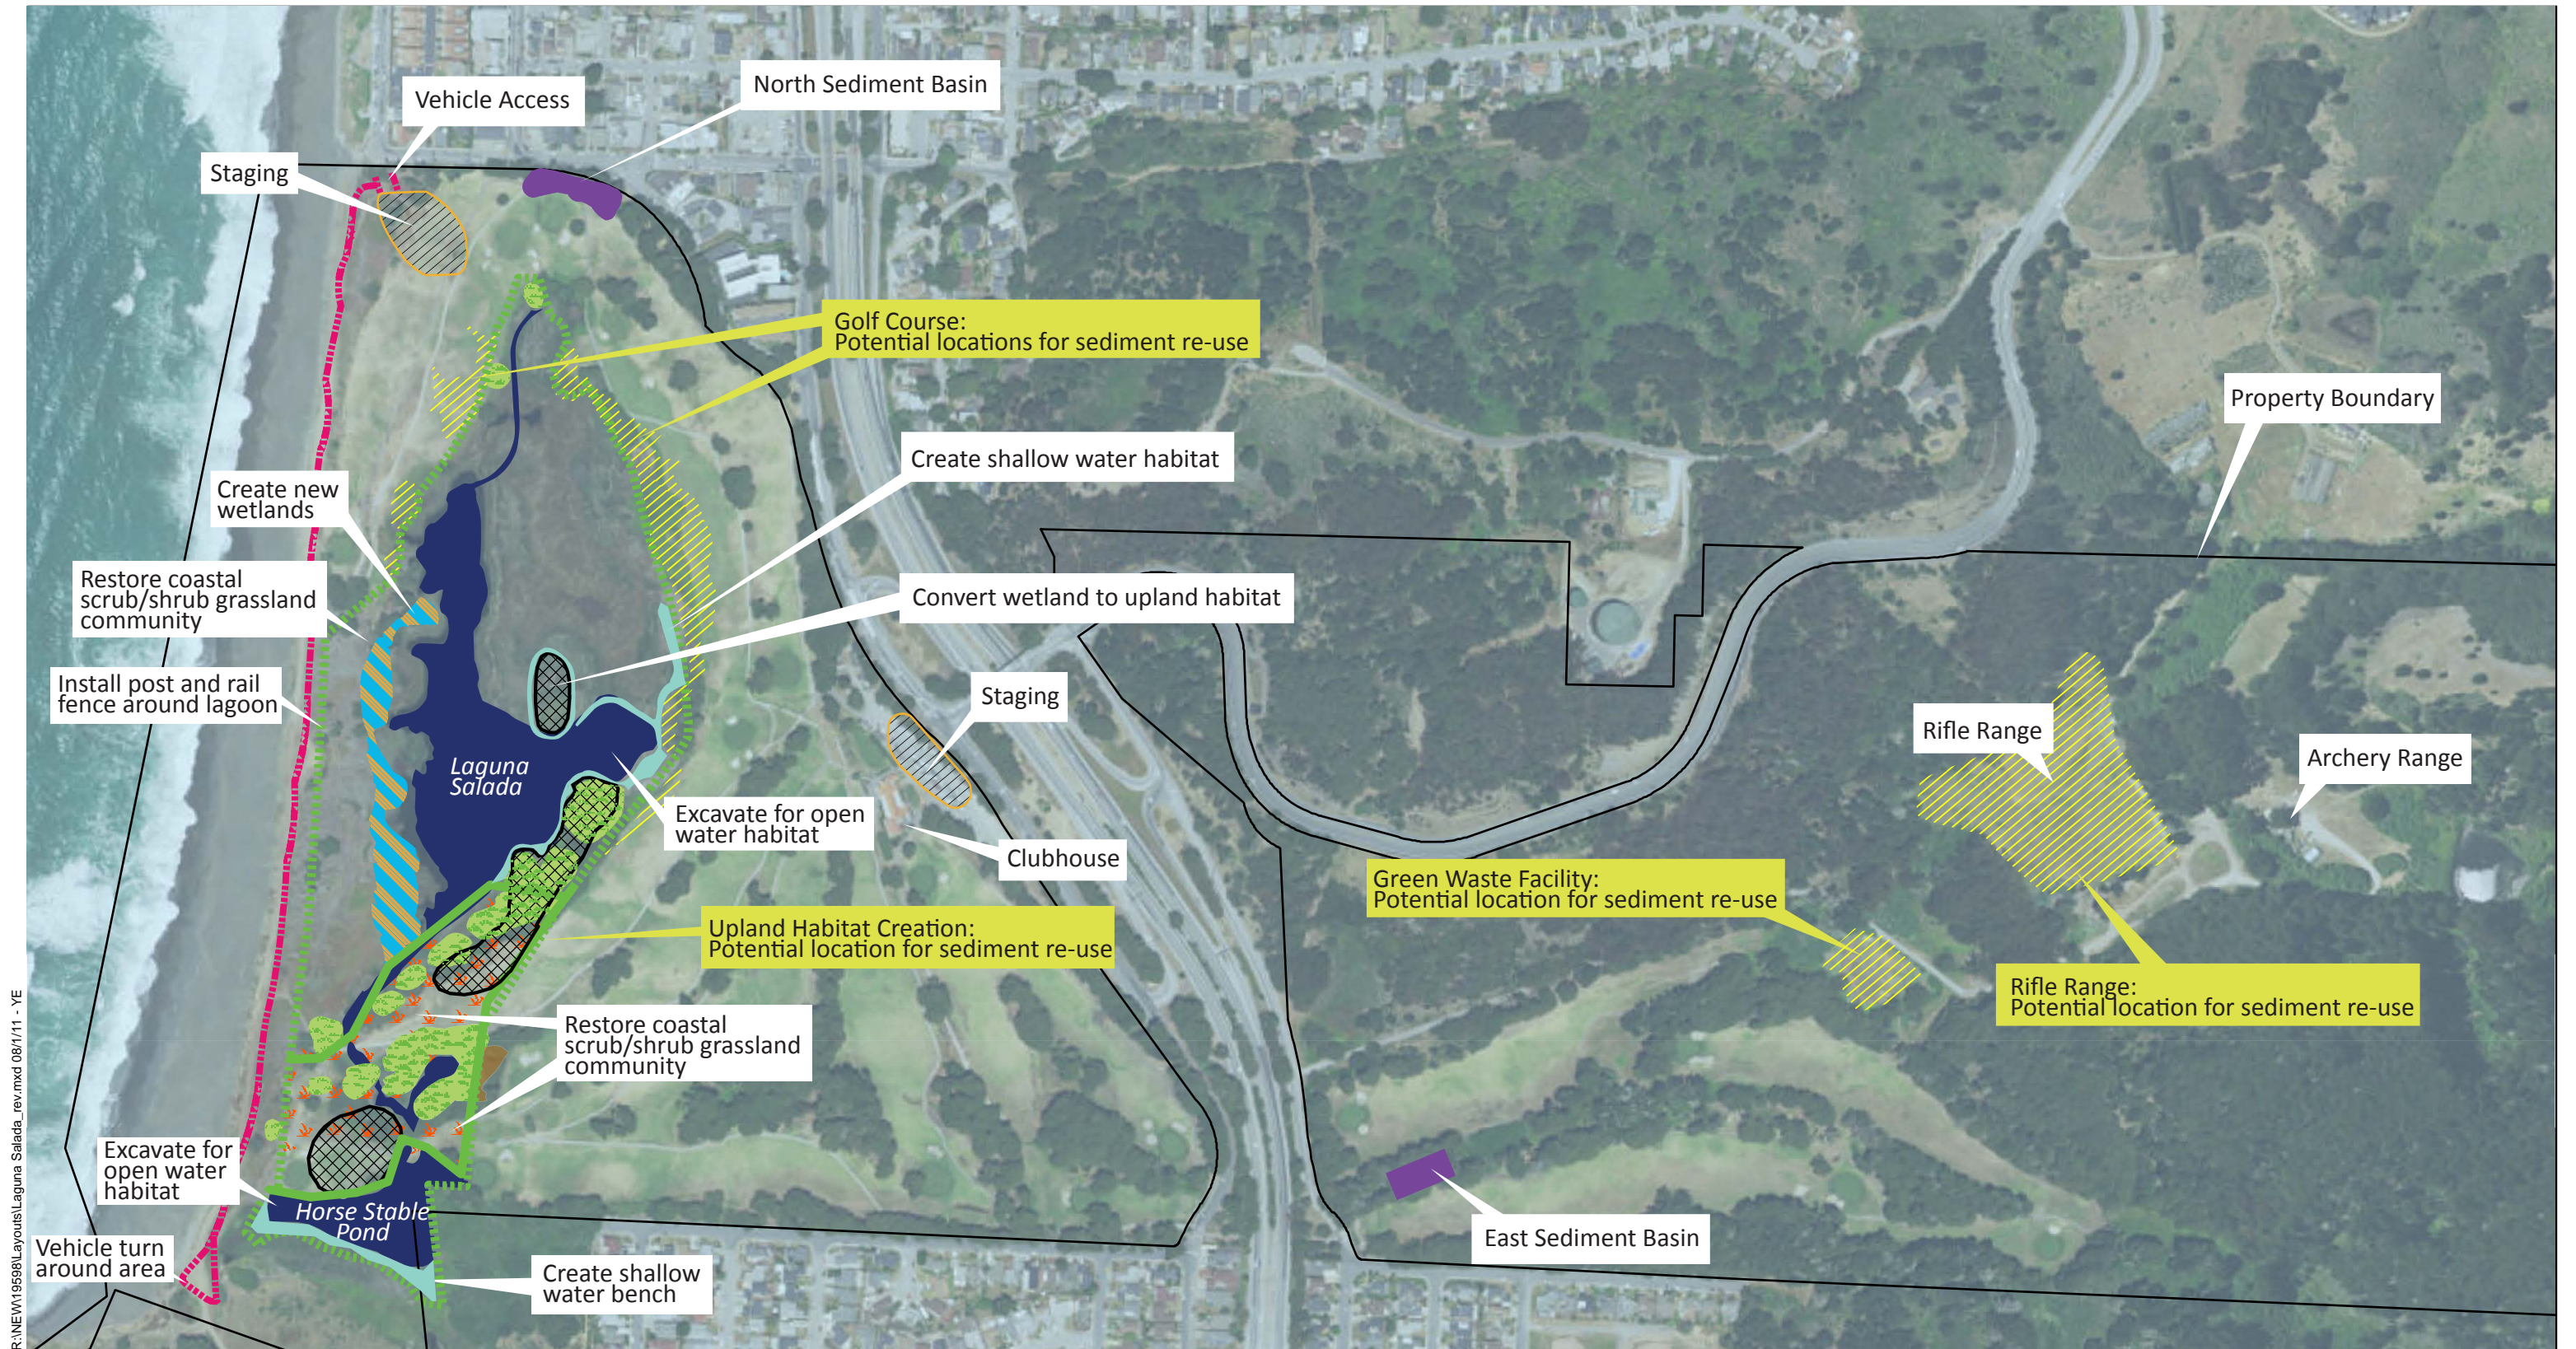

waste facility, and the Sharp Park golf course in locations where the character-defining features of the course would not be adversely impacted. Excavation of the eastern portions of the lagoon, pond and the connector shoreline would convert up to six acres of freshwater marsh, willow scrub, and wet meadow wetland habitat to open water habitat.

We also propose to change Figure 3 of the Draft EIR p. 101 to emphasize that on-site sediment from Laguna Salada will be used to create upland habitat proposed by the project, remove reference to raising certain golf course fairways, and to include the location of the Green Waste Facility and Rifle Range (both proposed locations for sediment re-use) within the extent of the figure. These modifications are shown in hatched yellow and yellow call-outs on the attached revised Figure 3.

Please contact me to let me know if you need future clarification.

Attachment B: Recreation and Park Commission Resolution

No. 1612-012

RECREATION AND PARK COMMISSION
City and County of San Francisco
Resolution No. 1612-012

**RESOLUTION ADOPTING FINDINGS UNDER THE CALIFORNIA
ENVIRONMENTAL QUALITY ACT AND APPROVING THE NATURAL
RESOURCES MANAGEMENT PLAN**

WHEREAS, The San Francisco Recreation and Park Department manages 32 Natural Areas that are scattered mostly throughout the central and southern portions of San Francisco and constitute approximately four percent of the total city area; one natural area is in Pacifica; and

WHEREAS, The Natural Areas managed by San Francisco Recreation and Park Department ("SFRPD") range in size from less than one acre to almost 400 acres and include such popular locations as Twin Peaks and portions of Glen Canyon Park; and

WHEREAS, In the late 1990s, the SFRPD initiated a Natural Areas Program to protect and manage these Natural Areas; and

WHEREAS, The SFRPD recognizes the need for a Management Plan to guide activities on properties owned or maintained by the SFRPD through its Natural Resources Program; and

WHEREAS, Over the course of several years, the SFRPD developed the Natural Resource Management Plan ("NRMP" or "Project"), with the final draft plan published in February 2006; and

WHEREAS, The NRMP contains detailed information on the biology, geology, and trails within 32 Natural Areas, 31 in San Francisco and one (Sharp Park) in Pacifica; and

WHEREAS, The NRMP is intended to guide natural resource protection, habitat restoration, trail and access improvements, other capital projects, and maintenance activities over the next 20 years; and

WHEREAS, The NRMP delineates the acreage within each Natural Area into management area categories based on the management priority; and

WHEREAS, The NRMP prescribes both general management activities that apply to all Natural Areas and management activities specific to each Natural Area; and

WHEREAS, The NRMP identifies a number of goals with respect to conservation and restoration, education, research, stewardship, recreation, and monitoring goals; and

WHEREAS, Recommended actions identified for each Natural Area are intended to meet the overall goals of the NRMP and may include, but are not limited to, habitat restoration, removal of invasive species, tree removal, erosion control, trail closure, relocation or

creation, and closure or reduction of dog play areas; and

WHEREAS, On April 22, 2009, the Planning Department determined that an Environmental Impact Report ("EIR") was required under the California Environmental Quality Act, Public Resources Code Section 21000 *et seq.*, to analyze the environmental impacts of the proposed NRMP and provided public notice of that determination by publication in a newspaper of general circulation; and

WHEREAS, The Planning Department held a public scoping meeting on May 12, 2009 and May 14, 2009 in order to solicit public comment on the scope of the proposed Project's environmental review; and

WHEREAS, On August 31, 2011, the Planning Department published the Draft Environmental Impact Report ("DEIR") and provided public notice in a newspaper of general circulation of the availability of the DEIR for public review and comment and of the date and time of the Planning Commission public hearing on the DEIR; this notice was mailed to the Planning Department's list of persons requesting such notice; and

WHEREAS, On August 31, 2011, copies of the DEIR were mailed or otherwise delivered to a list of persons requesting it, to those noted on the distribution list in the DEIR, to adjacent property owners, and to government agencies, the latter both directly and through the State Clearinghouse; and

WHEREAS, Notice of Completion was filed with the State Secretary of Resources via the State Clearinghouse on August 31, 2011; and

WHEREAS, The Planning Commission held a duly advertised public hearing on said DEIR on October 6, 2011 at which opportunity for public comment was given, and public comment was received on the DEIR; the period for acceptance of written comments ended on October 31, 2011; and

WHEREAS, On April 27, 2012, the Planning Department opened a second public review and comment period for the DEIR, and provided public notice in a newspaper of general circulation of the availability of the second public review and comment period; this notice was mailed to the Planning Department's list of persons requesting such notice. The period for acceptance of written comments ended on June 11, 2012; and

WHEREAS, The Planning Department prepared responses to comments on environmental issues received at the public hearing and in writing during the first 61-day public review period and the second 45-day public review period for the DEIR, prepared revisions to the text of the DEIR in response to comments received or based on additional information that became available during the public review period, and corrected errors in the DEIR; and

WHEREAS, This material was presented in a Comments and Responses document, published on November 16, 2016, distributed to the Planning Commission and all parties who commented on the DEIR, and made available to others upon request at the Planning Department; and

WHEREAS, A Final Environmental Impact Report (hereinafter "FEIR") has been prepared by the Planning Department, consisting of the DEIR, any consultations and comments received

during the review process, any additional information that became available, and the Comments and Responses document all as required by law; and

WHEREAS, Project EIR files have been made available for review by the Planning and Recreation and Park Commissions and the public, and these files are available for public review at the Planning Department at 1650 Mission Street, Suite 400, and are part of the record before the Commission; and

WHEREAS, On December 15, 2016, the Planning Commission reviewed and considered the information contained in the FEIR and found that the contents of said report and the procedures through which the FEIR was prepared, publicized, and reviewed comply with the provisions of CEQA, the CEQA Guidelines, and Chapter 31 of the San Francisco Administrative Code and certified the FEIR as adequate, accurate, and complete; and

WHEREAS, The Recreation and Park Commission has reviewed and consider the FEIR and the Mitigation Monitoring and Reporting Program (MMRP), (attached hereto as Attachment 2); now therefore be it

RESOLVED, That the Recreation and Park Commission adopts the CEQA findings, including a statement of overriding considerations, (attached hereto as Attachment 1) as though fully set forth herein; and be it

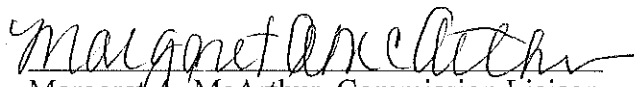

FURTHER RESOLVED, That the Recreation and Park Commission adopts the MMRP and imposes all mitigation measures contained therein as conditions of Project approval; and be it

FURTHER RESOLVED, That the Recreation and Park Commission approves the NRMP, which prescribes both general management activities that apply to all Natural Areas and management activities specific to each Natural Area, including, but not limited to habitat restoration, removal of invasive species, tree removal, erosion control, trail closure, relocation or creation, and closure or reduction of dog play areas.

Adopted by the following vote:

ADOPTING FINDINGS RELATED TO THE CERTIFICATION OF A FINAL ENVIRONMENTAL IMPACT REPORT FOR THE PROPOSED SIGNIFICANT NATURAL RESOURCE AREAS MANAGEMENT PLAN.

MOVED, that the San Francisco Planning Commission (hereinafter "Commission") hereby CERTIFIES the final Environmental Impact Report identified as Case No. 2005.0912E, the "Significant Natural Resource Areas Management Plan" (hereinafter "Project"), based upon the following findings:

1. The City and County of San Francisco, acting through the Planning Department (hereinafter "Department") fulfilled all procedural requirements of the California Environmental Quality Act (Cal. Pub. Res. Code Section 21000 *et seq.*, hereinafter "CEQA"), the State CEQA Guidelines (Cal. Admin. Code Title 14, Section 15000 *et seq.*, (hereinafter "CEQA Guidelines") and Chapter 31 of the San Francisco Administrative Code (hereinafter "Chapter 31").
 - A. The Department determined that an Environmental Impact Report (hereinafter "EIR") was required and provided public notice of that determination by publication in a newspaper of general circulation on April 22, 2009.
 - B. The Department held a public scoping meeting on May 12, 2009 and May 14, 2009 in order to solicit public comment on the scope of the Project's environmental review.
 - C. On August 31, 2011, the Department published the Draft Environmental Impact Report (hereinafter "DEIR") and provided public notice in a newspaper of general circulation of the availability of the DEIR for public review and comment and of the date and time of the Planning

¹ The Significant Natural Resource Areas Management Plan, or SNRAMP, is now referred to as the Natural Resources Management Plan; however, to maintain consistency between the Draft EIR and the RTC document, the term SNRAMP will continue to be used.

Commission public hearing on the DEIR; this notice was mailed to the Department's list of persons requesting such notice.

- D. On August 31, 2011, copies of the DEIR were mailed or otherwise delivered to a list of persons requesting it, to those noted on the distribution list in the DEIR, and to government agencies, the latter both directly and through the State Clearinghouse.
 - E. Notice of Completion was filed with the State Secretary of Resources via the State Clearinghouse on August 31, 2011.
2. The Commission held a duly advertised public hearing on said DEIR on October 6, 2011 at which opportunity for public comment was given, and public comment was received on the DEIR. The period for acceptance of written comments ended on October 31, 2011.
 3. On April 27, 2012, the Department opened a second public review and comment period for the DEIR, and provided public notice in a newspaper of general circulation of the availability of the second public review and comment period; this notice was mailed to the Department's list of persons requesting such notice and to neighborhood groups registered with the Department at that time. The period for acceptance of written comments ended on June 11, 2012.
 4. The Department prepared responses to comments on environmental issues received at the public hearing and in writing during the first 61-day public review period and the second 45-day public review period for the DEIR, prepared revisions to the text of the DEIR in response to comments received or based on additional information that became available during the public review period, and corrected errors in the DEIR. This material was presented in a Comments and Responses document, published on November 16, 2016, distributed to the Commission and all parties who commented on the DEIR, and made available to others upon request at the Department.
 5. A Final Environmental Impact Report (hereinafter "FEIR") has been prepared by the Department, consisting of the DEIR, any consultations and comments received during the review process, any additional information that became available, and the Comments and Responses document all as required by law.
 6. Project EIR files have been made available for review by the Commission and the public. These files are available for public review at the Department at 1650 Mission Street, Suite 400, and are part of the record before the Commission.
 7. On December 15, 2016, the Commission reviewed and considered the information contained in the FEIR and hereby does find that the contents of said report and the procedures through which the FEIR was prepared, publicized, and reviewed comply with the provisions of CEQA, the CEQA Guidelines, and Chapter 31 of the San Francisco Administrative Code.
 8. The project sponsor has indicated that the presently preferred alternative is the Significant Natural Resources Area Management Plan.

9. The Planning Commission hereby does find that the FEIR concerning File No. 2005.0912E: Significant Natural Resources Area Management Plan reflects the independent judgement and analysis of the City and County of San Francisco, is adequate, accurate and objective, and that the Comments and Responses document contains no significant revisions to the DEIR that would require recirculation of the document pursuant to CEQA Guideline Section 15088.5, and hereby does CERTIFY THE COMPLETION of said FEIR in compliance with CEQA, the CEQA Guidelines and Chapter 31 of the San Francisco Administrative Code.
10. The Commission, in certifying the completion of said FEIR, hereby does find that the project described in the Environmental Impact Report and the project preferred by the project sponsor, described as the Significant Natural Resources Area Management Plan in FEIR would have the following significant unavoidable environmental impacts, which cannot be mitigated to a level of insignificance:
 - A. A significant project specific and cumulative impact on Sharp Park Golf Course, a historic resource under CEQA, due to modification of golf holes for restoration activities;
 - B. A significant cumulative impact on recreation in dog play areas (DPAs) within Natural Areas due to increased use resulting from the reduction of dog play areas by the project and potentially by the National Park Service's (NPS) Dog Management Plan within the Golden Gate National Recreation Area (GGNRA);
 - C. A significant cumulative impact on biological resources within Natural Areas DPAs due to increased use resulting from the reduction of dog play areas by the project and potentially by the NPS Dog Management Plan within the GGNRA; and
 - D. A significant project-specific and cumulative impact on air quality from activities such as trail construction, hillside stabilization, erosion control, and tree removal.
11. The Planning Commission reviewed and considered the information contained in the FEIR prior to approving the Project.

I hereby certify that the foregoing Motion was ADOPTED by the Planning Commission at its regular meeting of December 15, 2016.

Jonas P. Ionin
Commission Secretary

Re: Analysis in Support of Wild Equity Institute's Appeal of the Significant Natural Resource Areas Management Plan Environmental Impact Report's Analysis of the Sharp Park Project – File No. 170044.

Dear Ms. Calvillo and Members of the Board of Supervisors,

Pursuant to Administrative Code § 31.16(b)(5), the following information is submitted on behalf of Appellant Wild Equity Institute in support of its appeal of the Environmental Impact Report and accompanying findings and certification prepared for the Significant Natural Resource Areas Management Plan (Planning Department Case No. 2005.1912E; State Clearinghouse No. 2009042102) (hereinafter "SNRAMP EIR" or "EIR").

Wild Equity has no objections to either the programmatic or maintenance activities applicable to all of the significant natural areas addressed in the SNRAMP EIR. Wild Equity's objections are limited to the portions of the SNRAMP EIR and findings addressing the one large-scale site-specific project – the "Sharp Park Restoration Project." A thorough review of the restoration alternatives and a full

scientific debate of the viable options for restoring the Laguna Salada wetlands complex at Sharp Park is critical to the survival of two listed species depending on that habitat – the endangered and fully-protected San Francisco garter snake and the threatened red-legged frog. An adequate review is also critical for the public and policy-makers to consider its options regarding multi-million dollar financial investments in a Pacifica-based golf course.

In response to comments received on the Initial Study prepared for the SNRAMP project, the Planning Department and Recreation and Park Department issued a scoping report that reassured the interested public that the SNRAMP and its EIR would not include any changes to the Sharp Park Golf Course, an area not included within a natural resource area:

Because redesigning or eliminating the Sharp Park Golf Course is a separate proposal being studied by SFRPD, it will not be included or evaluated as part of the proposed SNRAMP project analyzed in the EIR. Should changes to the Sharp Park Golf Course be proposed, they would undergo a separate regulatory review, including CEQA environmental review.

(DEIR, App. A, *Scoping Report For San Francisco Natural Areas Management Plan* (Nov. 2009) (“Scoping Report”), p. 2-5.) Despite this assurance, the DEIR proposed and the Planning Commission went on to certify an FEIR that did just that – proposing changes to the design of the golf course and even mandating through a mitigation measure that a fairway be replaced. (See DEIR, p. 261.)

In addition to the Departments’ assurance, the Sharp Park Restoration Project should be analyzed in a separate project-level EIR in order to cure the Commissions’ CEQA violations. Because the SNRAMP EIR’s analysis of potential significant environmental impacts of the Sharp Park Project is significantly flawed and fails to comply with CEQA, Wild Equity requests that the Board of Supervisors reject those portions of the SNRAMP EIR, instruct the Planning Commission on remand to remove that individual project from the programmatic-level EIR, and prepare a separate project-level EIR remedying each of the flaws identified below.

The Sharp Park Project is readily severable from the programmatic and maintenance level activities addressed by the EIR. The EIR’s significant flaws in addressing that discrete project should not stand as an obstacle to the Planning Commission proceeding expeditiously with a programmatic EIR approving the programmatic and maintenance activities applicable throughout the Significant Natural Resource Areas. The Board’s findings and remand should ensure that any delay to the programmatic review of the entire SNRAMP program be minimal by instructing the Planning Commission to promptly remove the Sharp Park Restoration Project from the EIR and expeditiously proceed to reconsider certification of the SNRAMP programmatic EIR excluding that project.

The Board of Supervisors should reject the EIR and Planning Commission's certification of the Sharp Park Project included in the SNRAMP EIR for the following reasons:

1. The dredging mitigation measures to relocate San Francisco garter snakes, a fully-protected species under Fish & Game Code § 5050, are in violation of that section's strict prohibition on pursuing, catching or capturing fully-protected species and cannot be used as a mitigation measure for any CEQA project. (*See Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal.4th 204.)
2. The EIR fails to consider cumulative water quality and biological impacts of the Sharp Park Project resulting from anticipated sea level rise. Nor does the EIR evaluate the Project's cumulative impacts and the effectiveness of various alternatives in light of anticipated changes to the Sharp Park seawall. The Laguna Salada and the adjacent seawall exist at the battlefront of global warming and sea level rise. For any long-term restoration of the Laguna to make any scientific or even common sense, sea level rise must be taken into account. Relatedly, by not addressing the foreseeable changes to the sea wall as part of the Sharp Park Project's cumulative impact analysis, the EIR's analysis falls short of CEQA's requirements. The Board of Supervisors should not countenance an environmental review that actively seeks to avoid considering restoration alternatives for Sharp Park in light of their ability to withstand sea level rise and necessary changes to the degrading sea wall along its western edge.
3. The EIR fails to address the proposed Sharp Park Project's likely impacts to wetlands as defined by the California Coastal Commission that are located on golf fairways where dredged materials may be disposed by the proposed project. Alternatives left unanalyzed by the EIR would avoid this impact.
4. The EIR fails to address an adequate range of non-dredging alternatives to the Sharp Park Project, including an alternative consistent with the project proposed by the Planning Department and Recreation and Park Department in the Notice of Preparation and Initial Study and a detailed alternative prepared by PWA and wetland restoration expert, Peter Baye, Ph.D. These alternatives would significantly reduce the proposed Sharp Park Project's significant and unavoidable NOx emissions, would avoid any impacts to Coastal Commission wetlands, and would allow for migration of wetlands habitat that evolves with sea level rise.

Wild Equity respectfully requests that, applying its independent authority, the Board of Supervisors make findings that the SNRAMP EIR's analysis of the Sharp Park Project fails to comply with CEQA, reverse the Planning Commission's findings and

certification of the SNRAMP EIR, instruct the Planning Commission to remove the Sharp Park Project from the projects considered in the SNRAMP EIR, promptly complete the SNRAMP EIR for the programmatic and maintenance activities, and prepare a separate EIR for the Sharp Park Restoration Project addressing each of the flaws in the current analysis.¹

- 1. Like every other natural resource area's project level actions and due to the serious flaws in the project-level analysis of the Sharp Park Project, the Board of Supervisors should instruct the Planning Commission to separate the CEQA review of the Sharp Park Project from the programmatic EIR.**

There is no reason for the significant CEQA flaws found in the project-level analysis of the Sharp Park Project to impede the City's adoption of a programmatic level EIR for the SNRAMP. The Sharp Park Project is not necessary to the programmatic-level review of the SNRAMP or the project-level analysis of SNRAMP-wide maintenance activities. The Planning Department and Recreation and Park Department acknowledged as much, assuring the public during the scoping phase that the SNRAMP EIR would not include any changes to the Sharp Park Golf Course. (Scoping Report, p. 2-5.)

The Board of Supervisors is invested with plenary authority to reject the Planning Commission's certification and the EIR and remand the decision back to the Commission with instructions to remove the Sharp Park Project from the projects

¹ Additionally, the Board of Supervisors should reject the Statement of Overriding Considerations adopted by the Recreation and Park Department as it pertains to the Sharp Park Project. The Recreation and Park Commission adopted a statement of overriding considerations finding that the significant and unavoidable impacts of the Sharp Park Project are acceptable because the Sharp Park Project "would ... ensure the sustained and increased populations of the endangered San Francisco garter snake and the threatened California red-legged frog, both protected under the Endangered Species Act, through the Laguna Salada restoration at Sharp Park." (San Francisco Recreation and Park Commission, California Environmental Quality Act Findings: Findings of Fact, Evaluation of Mitigation Measures and Alternatives, and Statement of Overriding Considerations, pp. 22-23 (Dec. 15, 2016).) This finding is not supported by substantial evidence because substantial evidence in the record indicates that sea level rise and the continued degradation of the Sharp Park sea wall will undermine the Project and neither sustain nor increase populations of the garter snake and red-legged frog. In addition, because the Sharp Park Project continues to limit the scope and type of habitat restoration in and adjacent to the Laguna Salada wetlands because of its existing and redevelopment features, including raising of golf holes, large-scale dredging and continued pumping operations, the Sharp Park Project does not ensure sustained and increased populations of San Francisco garter snakes and red-legged frogs. Thus, the Board should resolve to reject the Commission's statement.

considered in SNRAMP EIR, instruct the Commission to promptly recertify the SNRAMP EIR without that project, and prepare a separate EIR for the Sharp Park restoration activities for later tiered consideration.

a. The Sharp Park Project can be readily severed from the program-level and maintenance activity categories addressed in the EIR.

Because of its numerous flaws pursuant to CEQA described below, the City should review the Sharp Park Project and a reasonable range of alternatives in a separate tiered EIR. The EIR is a programmatic EIR for large-scale projects in the other natural resource areas. (See DEIR, p. 72.) The EIR addresses all of the natural resource areas on a programmatic level for “[r]erouting or constructing trails, using heavy equipment (such as bobcats, backhoes, and excavators) at a typical grading depth of two feet[,]... [s]tabilizing hillsides, using erosion control measures that require heavy equipment and grading and possible installation of structures, such as gabions[,] [and] [u]ndertaking initial invasive weed or tree removal projects that typically exceed half an acre (or on average 20 trees) at any one time.” (DEIR, p. 96.) Wild Equity does not contest the EIR’s programmatic review.

The EIR also conducts project-level review of two projects. One project is routine maintenance which includes “[r]emoving invasive weeds by hand, either as follow-up on a previously treated site or as initial treatment in small areas (less than half an acre).... Installing plants using hand tools and plants in one-gallon containers or smaller.... Removing invasive trees (mostly eucalyptus), as well as overhanging tree limbs.... Typically, no more than 20 trees (or half an acre) are treated at one time.... Maintaining trails, which includes clearing deposited soil from steps, replacing or installing steps or trail edging, and rerouting and benching trails... [and] Maintaining catchment basins and sediment dams through hand removal of accumulated materials.” (DEIR, pp. 96-97.) Like the programmatic components, the maintenance activities are SNRMP-wide and not specific to any particular natural area. Wild Equity does not contest this project-level review of maintenance activities throughout the natural resource areas, including where maintenance will be applied in Sharp Park.

The EIR’s second project considered at project-level review is for the proposed “Sharp Park restoration activities.” This project is focused on the Laguna Salada wetlands complex and Sanchez Creek, which flows into the complex. (DEIR, pp. 97-99.) In particular, this project-level component includes:

- Create upland mounds for foraging, resting, and escape cover for the California red-legged frog and the San Francisco garter snake;
- Dredge excess sediments and accumulated organic matter, including stands of encroaching tules, to maintain open water and fringe habitat in the wetlands complex and use appropriate dredged material on site to create or enhance upland habitat or to increase the elevation of certain golf course fairways;
- Continue monitoring for California red-legged frogs

and San Francisco garter snakes; and • Install and maintain signs and barriers to prevent disturbance of sensitive habitat in Horse Stable Pond and Laguna Salada by dogs or other possible nuisances. • SP-4b—Construct upland mounds in the area directly south and southeast of Laguna Salada and plant with native grasses and herbs to provide snake and frog basking sites, and to provide nesting habitat for riparian birds; and • SP-9b—Establish a vegetation management plan for the canal connecting Laguna Salada and Horse Stable Pond that would allow channel maintenance without affecting the forktail damselfly, California red-legged frog, or San Francisco garter snake.

(*Id.*) The main components of the Sharp Park Project include:

- Dredging up to 60,000 cubic yards of material to remove sediment, encroaching plant species, and decaying vegetation in Laguna Salada, Horse Stable Pond, and the channel that connects the two water bodies, resulting in the conversion of freshwater marsh, willow scrub, and wet meadow wetland habitat to open water habitat;
- Recontouring freshwater marsh wetland and ruderal (disturbed) habitat along the Laguna Salada, Horse Stable Pond, and channel shorelines to create shallow water wetland habitat;
- Creating an upland and wetland habitat corridor between Horse Stable Pond and Laguna Salada;
- Converting about half an acre of wet meadow/freshwater marsh wetland to upland habitat, creating an upland refuge in the middle of Laguna Salada to provide snakes and frogs with refugia from feral cats and other terrestrial predators, and creating about an acre of replacement wetland along the northern and western edges of the lagoon in place of coastal scrub habitat; and
- Constructing up to four acres of upland mounds on landscaped grass on the east side of the lagoon and between Laguna Salada and Horse Stable Pond. These mounds would be placed in the area currently occupied by part of the Hole 13 fairway, which would be narrowed and reconfigured.

(*Id.*, pp. 98-99.) As discussed in detail below, the Sharp Park Project is the only project for which the EIR fails to comply with CEQA.

The Sharp Park Project is severable from the programmatic and maintenance activities analyzed in the SNRAMP EIR. The Project does not extend into any other natural resource area. As the Final Draft Significant Natural Resource Areas Management Plan (Feb. 2006) (“2006 SNRAMP”) acknowledged, “Sharp Park occupies a unique position amongst the Natural Areas. Not only is it located outside of the City proper, but it is bordered by designated open spaces (Sweeny and Milagra Ridges).” (2006 SNRAMP, p. 6.4-9). The issues relating to habitat for the San Francisco garter snake and California red-legged frog are specific to the Laguna Salada wetland complex. Although the SNRAMP assigns an objective to all of the natural resources

areas to “identify, prioritize, and implement restoration and management actions designed to promote the functioning of San Francisco’s native ecosystem, including the maintenance and enhancement of native biodiversity[.]” it is only the Sharp Park Project that the EIR reviews at a site-specific project-level. In addition, the Sharp Park Project is the only project that involves activities outside of the SNRMP, including work and dredge disposal sites on portions of the golf course that are not designated natural areas. (See Final Draft Significant Natural Resource Areas Management Plan, p. 6.4-21, Fig. 6.4-1; *Compare* DEIR, p. 100, Fig. 2.)

The City claims that “[i]f the Sharp Park component of the SNRAMP project were to be removed, one of the CEQA project objectives would not be achieved (i.e., restoring the Laguna Salada wetland complex), and the other objective would be achieved to a lesser extent (i.e., implementing restoration activities).” (Responses to Comments, p. 4-169.) This response is illogical and inconsistent with the main programmatic review conducted by the SNRAMP EIR. Separating out project level review of the Sharp Project would not eliminate an objective to restore Sharp Park. It would simply move that objective to the separate Sharp Park EIR that would focus on the unique species and habitat issues associated with that natural area and allow the City to cure the many CEQA problems with the current analysis discussed below and in previous comments. The objective could still remain in the program EIR as well but limited to a program-level review, allowing the details of the specific Sharp Park restoration project to be worked out in a later tiered EIR. This procedure would not implement restoration activities to a lesser extent. Indeed, it would be the same extent as every other natural area, none of which have any large-scale, project-specific restoration activities currently proposed. An EIR focused solely on the Sharp Park Restoration would instead ensure that effective restoration activities are conducted in that critical area.

The City also suggests that removing the Sharp Park project will have an unidentified adverse effect on the City’s review of cumulative impacts in the EIR. (Response to Comments, p. 4-169.) This is not the case. Although the City’s analysis thus far has been deficient, the Sharp Park Project is foreseeable and fully capable of being factored into any relevant cumulative impact analysis. The only conceivable cumulative impact would appear to be NOx emissions. Nothing would preclude the City from acknowledging those potential impacts even if the SNRAMP programmatic EIR does not yet include a project-level review of the Sharp Park Project. Likewise, the cumulative impact analysis relies for the most part on a long list of projects located in and around San Francisco. (DEIR, App. G.) Excluding the project-level CEQA review of the Sharp Park Project would not change that list of projects considered by the Commission in its cumulative impacts analysis.

///

///

b. The Board of Supervisors has ample authority to instruct the Planning Commission to sever the Sharp Park restoration activities project from the program-level and maintenance project CEQA review.

The Board of Supervisors has plenary authority to review the merits of the EIR, the underlying record, and the Planning Commission's findings and certification of the EIR. Under the City's CEQA regulations, the Board of Supervisors, the Planning Commission and the Recreation and Park Department are treated as a single entity, *i.e.* the City and County of San Francisco. (Administrative Code § 31.04(a) ("The City and all its officials, boards, commissions, departments, bureaus and offices shall constitute a single "local agency," "public agency" or "lead agency" as those terms are used in CEQA"). Accordingly, the Code automatically suspends any activity by any other department addressed in an EIR that has been appealed to the Board of Supervisors. (§31.16(b)(3) ("For projects that require multiple City approvals, after the Clerk has scheduled the appeal for hearing and until the CEQA decision is affirmed by the Board, ... (B) other City boards, commissions, departments and officials shall not carry out or consider further the approval of the project that is the subject of the CEQA decision on appeal except activities that are essential to abate hazards to the public health and safety...").)

The Board of Supervisors conducts a plenary review of an EIR and the Planning Commission's findings and certifications. "The Board shall conduct its own independent review of whether the CEQA decision adequately complies with the requirements of CEQA." (§ 31.16(b)(6).) "The Board ***shall consider anew all facts, evidence and issues related to the adequacy, accuracy and objectiveness of the CEQA decision, including, but not limited to, the sufficiency of the CEQA decision and the correctness of its conclusions.***" (*Id.* (emphasis added).) The Board of Supervisors is required to reverse the Planning Commission's certification of an EIR "if the Board finds that the EIR does not comply with CEQA, including that it is not adequate, accurate and objective, is not sufficient as an informational document, that its conclusions are incorrect or it does not reflect the independent judgment and analysis of the City, or that the Planning Commission certification findings are incorrect." (§ 31.16(c)(5).) When the Board of Supervisors' reverses the Planning Commission's decision, that reversal automatically extends to all other actions by any other city department or commission approving the project at issue. (§ 31.16(b)(10) ("If the Board reverses the CEQA decision, the prior CEQA decision and ***any actions approving the project in reliance on the reversed CEQA decision, shall be deemed void***") (emphasis added). However, the Board's reversal is limited to those aspects of the EIR that are deficient. The Administrative Code provides that a remand of an EIR and its certification to the Planning Commission is limited to further action by the Commission "consistent with the Board's findings." (§ 31.16(c)(5) ("If the Board reverses the Planning Commission's certification of the final EIR, it shall remand the final EIR to the Planning Commission ***for further action consistent with the Board's findings***") (emphasis added).) Indeed, the Code ensures that the entire FEIR not have to be reopened and

subjected to future Board review and repetitive appeals by limiting any future appeals only to those portions of an EIR that are subsequently revised. (*Id.* (“Any further appeals of the EIR shall be limited **only to the portions** of the EIR that the Planning Commission has revised.... The Board's subsequent review, if any, also shall be limited to the **portions of the EIR** that the Planning Commission has revised including, without limitation, new issues that have been addressed”) (emphasis added).)

Because the Board of Supervisors has plenary review authority and the Planning Commission is obliged to revise the EIR on remand consistent with the findings of the Board of Supervisors, the Board may, based on its review, find that (1) the SNRAMP EIR is not adequate, not sufficient as an informational document, and its conclusions and accompanying findings are incorrect in considering the Sharp Park Project (as discussed further below); (2) the SNRAMP EIR is adequate regarding the programmatic and maintenance projects included in the EIR; (3) the Planning Commission, on remand, delete the Sharp Park Project from the project's considered in the SNRAMP program EIR, (3) the Planning Commission promptly recertify the Program-level and Maintenance Projects already included in the EIR, and (4) the Planning Commission prepare a separate EIR reviewing any proposal for Sharp Park restoration activities that addresses each of the inadequacies discussed below.

The Board of Supervisor's plenary authority to review the EIR and sever the deficient project level review of the Sharp Park Project is consistent with CEQA's recognition that errors in an EIR be cured with the least disruption to implementation of separate and severable related projects or even portions of projects. The Supervisors' de novo review of the Planning Commission's EIR certification and findings is broader than the review role exercised by the California courts. Nevertheless, CEQA plainly contemplates that the courts, even with their more limited review powers, are authorized to tailor any relief to cure an inadequate EIR or accompanying finding to fit the violation. (See *Kostka & Zischke, Practice Under the Cal. Environmental Quality Act* (Cont.Ed.Bar 2nd Edition, March 2016 Update), § 23.124.) Thus, under PRC § 21168.9(b), any order of a court addressing a violation of CEQA:

shall include only those mandates which are necessary to achieve compliance with this division and only those specific project activities in noncompliance with this division. The order shall be made by the issuance of a peremptory writ of mandate specifying what action by the public agency is necessary to comply with this division. However, the order shall be limited to that portion of a determination, finding, or decision or the specific project activity or activities found to be in noncompliance only if a court finds that (1) the portion or specific project activity or activities are severable, (2) severance will not prejudice complete and full compliance with this division, and (3) the court has not found the remainder of the project to be in noncompliance with this division.

(PRC § 21168.9(b).) The Sharp Park Project is not just a severable activity – it is a separate project. The Board of Supervisors, exercising its de novo review authority, has even more discretion than the courts to remand the EIR back to the Planning Commission with instructions to remove those portions addressing the project level Sharp Park Restoration Project, promptly certify the programmatic-level EIR, and prepare a separate EIR for that project-level proposal consistent with Chapter 31. Because the programmatic and maintenance project components of the EIR are consistent with CEQA, those project components should be allowed to proceed, with instructions to the Planning Commission to promptly excise the Sharp Park Project from the EIR and recertify the programmatic EIR without that objectionable component.

2. The mitigation measures for addressing impacts to the San Francisco garter snake, a fully-protected species under Fish & Game Code § 5050, are not authorized by law and thus fail to mitigate impacts to the snake.

The City proposes to mitigate the Sharp Park Project's impacts to the San Francisco garter snake by having a biologist relocate any snakes found in the way of the proposed dredging. (DEIR, p. 320.) Because this proposed mitigation scheme amounts to a take of the fully-protected San Francisco garter snake, it is precluded by Fish & Game Code § 5050 and is inconsistent with law under CEQA.

The San Francisco garter snake is a fully protected species under Fish & Game Code § 5050(b). (Fish & Game Code § 5050(b)(2) ("The following are fully protected reptiles and amphibians:... (2) San Francisco garter snake (*Thamnophis sirtalis tetrataenia*)"; DEIR, p. 279, Table 9; DEIR, p. 275 ("The San Francisco garter snake, which occurs at the Sharp Park Natural Area, is listed as fully protected under the Fish and Game Code").)

The DEIR identifies the proposal to extensively dredge the Laguna Salada wetlands complex as a potential significant impact on the garter snake absent mitigation. (DEIR, pp. 319-320, 323.) As mitigation, the DEIR calls for relocation the garter snake when they are in the way of the dredging operations. (DEIR, p. 42, 323, 327.)

Any take or possession of a fully protected species is forbidden, in particular when the take or possession is done as part of specified mitigation for a project defined by CEQA:

(1) Except as provided in this section, Section 2081.7, Section 2081.9, or Section 2835,² a fully protected reptile or amphibian may not be taken or

² None of these exceptions apply to the San Francisco garter snake or Sharp Park. Only F&G Code § 2835 could conceivably apply, allowing for the Department of Fish & Wildlife to authorize take of fully-protected species "whose conservation and management is provided for in a natural community conservation plan approved by the

possessed at any time. No provision of this code or any other law shall be construed to authorize the issuance of a permit or license to take a fully protected reptile or amphibian, and no permit or license previously issued shall have any force or effect for that purpose. However, the department may authorize the taking of a fully protected reptile or amphibian for necessary scientific research, including efforts to recover fully protected, threatened, or endangered species. ...

(2) As used in this subdivision, "scientific research" does not include an action taken as part of specified mitigation for a project, as defined in Section 21065 of the Public Resources Code.

(Fish & Game Code § 5050(a)(1)-(2).)³ Fish & Game Code § 86 defines "take" as to "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill."

The California Supreme Court recently interpreted a related provision of the Fish & Game Code applicable to fully-protected bird species, Fish & Game Code § 5515, which contains identical language as in Section 5050 quoted above.⁴ The Supreme Court made clear that the Fish & Game Code provides no authority for any incidental take of fully protected species in the context of mitigation for any CEQA project. As the Court explains:

In light of the definition of "take" in section 86 as including an animal's "pursu[it]," "catch," or "capture," the capture and relocation of [fully protected] stickleback contemplated by mitigation measures BIO-44 and BIO-46 violates Fish and Game Code section 5515. Although trapping and translocation are defined as possible conservation measures for endangered species under Fish and Game Code section 2061, the stickleback, as a fully protected species, is subject to the stricter prohibitions against taking set forth in Fish and Game Code section 5515,

department." (F&G Code § 2835.) However, "[n]o ... Natural Community Conservation Plans overlap with the Natural Areas." (EIR, p. 276.)

³ PRC § 21065 defines "project" as "an activity which may cause either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment, and which is any of the following: (a) An activity directly undertaken by any public agency. (b) An activity undertaken by a person which is supported, in whole or in part, through contracts, grants, subsidies, loans, or other forms of assistance from one or more public agencies. (c) An activity that involves the issuance to a person of a lease, permit, license, certificate, or other entitlement for use by one or more public agencies." PRC § 21065

⁴ The Court of Appeal expressly identified Fish & Game Code § 5050 as a "[p]arallel provision[]" to Fish & Game Code 5515. (*Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal.4th 204, 232.)

including an express prohibition on taking as mitigation for a project under CEQA. (§ 5515, subd. (a)(2).)

Center for Biological Diversity v. Department of Fish & Wildlife (2015) 62 Cal.4th 204, 232-233. The Court continues:

We must reject the claim DFW may authorize, as CEQA mitigation, actions to protect a fully protected species from harm when, as here, those actions are otherwise prohibited as takings. The Legislature has expressly precluded this interpretation of the statutes by providing, in Fish and Game Code section 5515, subdivision (a), that permitted taking of a fully protected species for “scientific research” may include “efforts to recover” the species but that such “scientific research” does not include “any actions taken as part of specified mitigation for a project” as defined in CEQA. We cannot give effect to this provision and at the same time hold that DFW may, as CEQA mitigation, authorize the trapping and transplantation of stickleback—actions that plainly call for the fish's “catch,” or “capture” (Fish & G. Code, § 86). That such catch or capture is intended to protect the stickleback from harm caused by the project's construction is inherent in its adoption as CEQA mitigation and is expressly barred under section 5515.

(*Id.* at 233; *see also id.* (“The Legislature evidently believed the prohibition on taking or possessing fully protected species should be relaxed to permit the use of wildlife management techniques needed for species recovery, but that agencies should not be allowed to rely on the availability of such techniques in approving or carrying out projects that would have significant adverse effects on a fully protected species..... such actions may not be relied on or “specified” as project mitigation measures pursuant to CEQA”).) Rather than restoration, the Sharp Park Project is more accurately described a mitigation project for operating the Sharp park golf course. However, even assuming Sharp Park were to qualify as a “restoration” project, the Supreme Court has made clear that takings to mitigate impacts of such a project are forbidden, (*Id.* at 232 (“DFW may conduct or authorize capture and relocation of the stickleback as a conservation measure to protect the fish and aid in its recovery, but the agency may not rely in a CEQA document on the prospect of capture and relocation as mitigating a project’s adverse impacts”).)

The City cannot distinguish its proposed relocations of the fully-protected San Francisco garter snake from the stickleback relocation mitigations prohibited by the Fish & Game Code and rejected by the Supreme Court in *Center For Biological Diversity*. This error only applies to the proposed Sharp Park project and its reliance on massive dredging of the Laguna Salada. Because the mitigation proposed by the City is illegal, it cannot be relied upon in the project-level CEQA analysis for Sharp Park. As a result, this project level component should be stripped out of the programmatic EIR. Future

review of any Sharp Park wetlands project must consider the feasible alternatives discussed that do not include extensive dredging.

3. The DEIR fails to address the likely cumulative impacts the Sharp Park Project will have on wetlands and aquatic resources when combined with future changes to the sea wall and sea level rise.

By refusing to address impacts beyond 20 years and future changes to the Sharp Park sea wall, the City's EIR fails to address the Sharp Park Project's cumulative impacts on water quality and biological resources. Although a 20 year management period may make sense for the general maintenance activities and programmatic activities, it makes no sense for a project-level analysis of the Sharp Park restoration activities. In particular, by avoiding looking at cumulative impacts of the Sharp Park dredging project beyond 20-years, the DEIR cannot assess those cumulative impacts in light of expected sea level rise. In addition, the City chooses to ignore the cumulative impacts associated with the reasonably foreseeable project that will be necessary to address the Sharp Park sea wall. Alternatively, future sea wall management is so intertwined with any long-term Sharp Park restoration project, omitting future changes to the sea wall improperly piecemeals review of the Sharp Park project.

An EIR must discuss significant cumulative impacts. (CEQA Guidelines § 15130(a).) This requirement flows from PRC § 21083, which requires a finding that a project may have a significant effect on the environment if "the possible effects of a project are individually limited but cumulatively considerable.... 'Cumulatively considerable' means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects." "Cumulative impacts" are defined as "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts." (CEQA Guidelines § 15355(a).) "[I]ndividual effects may be changes resulting from a single project or a number of separate projects." (CEQA Guidelines § 15355(a).)

"The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time." (*Communities for a Better Environment v. Cal. Resources Agency*, (2002) 103 Cal.App.4th 98, 117.) A legally adequate cumulative impacts analysis views a particular project over time and in conjunction with other related past, present, and reasonably foreseeable probable future projects whose impacts might compound or interrelate with those of the project at hand.

Under CEQA, an EIR's cumulative impacts analysis must address all reasonably foreseeable projects. As the EIR acknowledges, "management options for the Sharp Park sea wall, including a naturally managed sea wall and shoreline, have been

considered by the SFRPD....” (DEIR, p. 103.) Despite that foreseeable sea wall project, the DEIR asserts that “those options are not proposed as part of the SNRAMP. Thus, they are not addressed in this EIR.” (*Id.*) Whether or not a future project must be included in an EIR’s cumulative impact analysis does not turn on whether it is part of the proposed management program. (See CEQA Guidelines § 15355(a).) Indeed, the list of projects included in the cumulative impact analysis in the current EIR are not limited to SNRMP projects. (See DEIR, App. G.) Moreover, the future sea wall project has no relevance to cumulative impacts for either the programmatic or maintenance activities that apply to the entire SNRAMP. However, the future management of the sea wall is directly linked to the Sharp Park Project’s impacts.

The City exacerbates this omission by invoking the SNRAMP’s 20 year management term to cut off any serious discussion of the Sharp project’s impacts in light of sea level rise: “During the 20-year project planning period for the project, the sea level is expected to rise less than one foot.” (DEIR, p. 381.) The SNRMP planning period should not act as a barrier to evaluating impacts or considering the long-term viability of Sharp Park restoration proposals. This is another reason why the Sharp Park Project should be evaluated under CEQA separately from the overall SNRMP program.

The City is very aware of inevitable sea level rise. “Recent computer modeling performed for this project indicates the potential for more widespread flooding of the golf course next to Laguna Salada (KHE 2009), including inundation as a result of sea level rise.” (DEIR, p. 358.) “Sea levels have risen over seven inches along the California coast in the past century and are projected to rise another 12 inches by 2040 and as much as 4.6 feet by 2100, in response to global climate change....” (*Id.*)

The City also anticipates that sea level rise will affect the Sharp Park sea wall and affect the performance of the proposed Sharp Park Project:

Sea level rise will put additional stress on the seawall at Sharp Park and could result in more frequent overtopping (SFRPD 2009a). Rising sea levels will also result in higher groundwater levels near the coast, as the water table rises to maintain net groundwater outflow to the ocean. Higher groundwater levels will reduce storage capacity of Laguna Salada somewhat and will require more frequent or increased rates of pumping to maintain the water level in Laguna Salada below the elevation at which flooding impacts could occur.

(DEIR, p. 361.) The City also acknowledges the inevitability of changes to the sea wall:

While portions of the seawall are in fair to good condition, mainly in armored areas, there are other portions of the seawall that are in poor condition. Significant erosion rills, near-vertical slope faces, and beach sand within two feet of the seawall are all issues that negatively affect the condition of the wall. If improvements are not performed to alleviate these

conditions, it is very likely that the seawall would be overtopped and breached during a 100-year storm or as a result of future sea level rise (Arup 2009).

(*Id.*) Both sea level rise and actions to address the sea wall's frailties are plainly foreseeable.

Dr. Baye has explained the direct cumulative link between the proposed Sharp Park Project and management decisions for the sea wall. As Dr. Baye states, "[t]he DEIR 'fails to address significant potential cumulative impacts between dredging, salinity stratification, seawater intrusion, and sea level rise within the 20 year planning period.'" (Responses to Comments, Attachments, p. B-510 (Baye-1).) Dr. Baye's comments point out the EIR's and previous reports' failure "to identify the significant long-term constraints of 'enhancing' non-tidal seepage lagoon wetlands that are artificially pumped to low water levels relative to sea level behind a permeable sand barrier." (*Id.*, p. B-512.) Dr. Baye also notes that "[n]one of the intended 'enhancement' benefits to wildlife species are physically possible if the long-term effects of pumping, sea level rise, and evaporative concentration of lagoon water interact to convert the wetlands from fresh -brackish to brackish-saline or even hypersaline marsh." (*Id.*, p. B-513.)

Dr. Baye further explains:

All coastal lagoons originate and are maintained by landward migration during sea level rise. The Laguna Salada wetland complex's long-term survival depends on planning for gradual landward migration of the barrier beach and its wetlands with rising sea level which requires geomorphic accommodation space. That space is currently displaced by the golf course, built on filled riparian wetlands of the past - the historic freshwater end of the Laguna Salada wetland complex. Rising level and a static golf course together will inevitably squeeze the existing (reduced area of) fresh-brackish wetlands out of existence, regardless of ephemeral "habitat enhancement' plan actions.

It is not feasible to stabilize the lagoon wetlands in the reduced "footprint" of the 20th century lagoon as sea level rises over three to four feet in coming decades of the 21st century. Oceanic overwash processes during extreme storms must drive the beach and its lagoon wetland complex landward as sea level rises. Any long-term wetland management plan for a backbarrier lagoon must presume upward and landward displacement of existing lagoon wetlands over multiple decades. This lagoon accommodation space location of historic freshwater riparian wetlands is occupied by golf links that will be subject to adverse increases in flooding and coastal storm risks.

(*Id.*, p. B-514.) It is up to the EIR for the Sharp Park Project to explore these obvious interactions and any cumulative impacts. Simply ignoring the inevitable future sea wall

project and inevitable sea level rise does not address the full impacts of the Sharp Park Project and is a recipe for failure.

Last year, the City adopted the Sea Level Rise Action Plan, released in March of 2016. This Action Plan requires San Francisco to consider adaptation and retreat alternatives where lands are at risk from expected sea level rise impacts. This was not applied by the Planning and Recreation and Park Commissions to their consideration of the Sharp Park Restoration Project.

Contrary to the DEIR's avoidance of the Sharp Park's cumulative impacts in light of sea level rise, the 2011 PWA Report proposes and analyzes an alternative that does not rely on extensive dredging and which anticipates expected sea level rise, the ineffectiveness of the existing sea wall and the need to allow the freshwater Laguna wetlands habitat to migrate inland. (2011 PWA Report.) The same is true of the original Sharp Park proposal included in the notice of preparation and initial study. (See *infra*, pp. 21-23). If the City's goal is to restore the Laguna Salada habitat for the red-legged frog and San Francisco garter snake in the long term, the project's impacts must be considered in light of the expected sea level rise.

Because the Sharp Park sea wall's management is so intertwined with the form and potential success of any Sharp Park restoration project, the two projects cannot be separated without improperly piecemealing the CEQA analysis. CEQA mandates "that environmental considerations do not become submerged by chopping a large project into many little ones -- each with a minimal potential impact on the environment -- which cumulatively may have disastrous consequences." (*Bozung v. LAFCO* (1975) 13 Cal.3d 263, 283-84; *City of Santee v. County of San Diego* (1989) 214 Cal.App.3d 1438, 1452.) Before undertaking a project, the lead agency must assess the environmental impacts of all reasonably foreseeable phases of a project and a public agency may not segment a large project into two or more smaller projects in order to mask serious environmental consequences. As the Court of Appeal stated:

The CEQA process is intended to be a careful examination, fully open to the public, of the environmental consequences of a given project, **covering the entire project, from start to finish**. . . the purpose of CEQA is not to generate paper, but to compel government at all levels to make decisions with environmental consequences in mind.

(*Natural Resources Defense Council v. City of Los Angeles* (2002) 103 Cal.App.4th 268 (emphasis added)). Although holding off on a decision about the Sharp Park seawall is easily severed from the programmatic and maintenance activities addressed in the DEIR, it cannot legally be severed from the proposed wetlands restoration project at Sharp Park. A separate EIR for the Sharp Park Project will allow the City to conduct a thorough, wholistic analysis of the wetlands complex and how best to restore it in the long-term as well as in compliance with CEQA.

4. The DEIR fails to address the likely impacts to wetlands as defined by the California Coastal Commission located within fairways where dredged materials may be disposed by the proposed project.

The City acknowledges that wetlands within the jurisdiction of the California Coastal Commission may be present on portions of fairways slated to be raised with sediments dredged from the Laguna. (Response to Comments, p. 4-426.) Dr. Baye documented the presence of these wetland areas in his expert comments. (Baye Comment, B-500-501.) Despite those comments six years ago, the City apparently has not yet investigated Dr. Baye's evidence. A simple site visit by a knowledgeable aquatic biologist some time in the last six years would have sufficed to confirm Dr. Baye's observations. Instead, the City claims it does not know where wetlands are being mowed on the fairways and that information would come out during the proceeding before the California Coastal Commission. (See Response to Comments, p. 4-427) As a result, the City makes no effort to identify potential impacts to these wetland areas and evaluate any mitigations or alternatives to avoid such impacts. The City's decision to turn a blind eye to Dr. Baye's expert observations and attempt to sidestep substantial evidence that wetlands within the Coastal Commission's jurisdiction are in harm's way at the project site is an abuse of discretion under CEQA.

Where an EIR fails to address a potential significant impact, that omission is subject to de novo review by court as a matter of law. (*Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1208.) "[U]nder CEQA, the lead agency bears a burden to investigate potential environmental impacts." (*Sundstrom v. County of Mendocino* (1988) 202 Cal. App. 3d 296, 311). "While foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can." (*Berkeley Keep Jets Over the Bay Com. v. Board of Port Cmrs.* (2001) 91 Cal. App. 4th 1344, 1370.)

Relatedly, responses to comments on a draft EIR must state reasons for rejecting suggested mitigation measures and comments on significant environmental issues. "Conclusory statements unsupported by factual information" are not an adequate response. (14 CCR §15088(b, c); *Cleary v. County of Stanislaus* (1981) 118 Cal.App.3rd 348.) The need for substantive, detailed response is particularly appropriate when comments have been raised by experts or other agencies. (*Berkeley Keep Jets*, 91 Cal.App.4th at 1367.) A reasoned analysis of the issue and references to supporting evidence are required for substantive comments raised. (*Calif. Oak Found. v. Santa Clarita* (2005) 133 Cal.App.4th 1219, 1240.)

The agency cannot simply rely on a future regulatory effort by another agency as an excuse not to identify and evaluate a potential impact. (See *Kings Co v. Hanford* (1990) 221 CA3d 692, 712-718 (agency erred by "wrongly assuming that, simply because the smokestack emissions would comply with applicable regulations from other agencies regulating air quality, the overall project would not cause significant effects to air quality."); *Citizens for Non-Toxic Pest Control v. Dept. Food & Agr.* (1986) 187 CA3d

1575, 1587-88 (state agency may not rely on registration status of pesticide to avoid CEQA review). Indeed, the lead agency is required to consult "with all responsible agencies and with any other public agency which has jurisdiction by law over natural resources affected by the project" (§ 21080.3(a); *Berkeley Keep Jets*, 91 Cal.App.4th at 1370.) Where comments identify a possible significant impact to natural resources within the jurisdiction of another agency, the lead agency is supposed to make inquiries of environmental or regulatory agencies having expertise in the matter. (*Id.*)

By failing to address the presence of wetlands within the Coastal Commission's jurisdiction on fairways where dredged materials are proposed to be disposed, the City has run afoul of each of the above CEQA obligations. The City fails to determine the scope of wetlands on the relevant fairways. Although the City did a "CCC wetlands" delineation for the previous smaller pumphouse project, the City did no such evaluation for the current, much larger dredging and fairway supplementing project. (Response to Comments, p. 4-426.) As the City acknowledges, "[t]he wet meadow area is within the SNRAMP area proposed for restoration and management, but the precise area of additional wetlands that may be delineated using the single-parameter approach has not been determined" and "[t]here may be other CCC wetlands that are outside of the Pumphouse project's area of impact, but within the potential SNRAMP area of impact that would classify as CCC wetlands but have not been identified." (Response to Comments, p. 4-426.) The City attempts to downplay this omission, asserting that "[w]hether or not additional areas are subject to CCC wetland delineation, the Draft EIR concluded that raising the fairways and Hole 18 would not cause significant physical environmental impacts, including, but not limited to, impacts to hydrology, biological resources, cultural resources, or aesthetics, as compared to baseline conditions." (*Id.*, pp. 4-426 – 4-427. See *also* Planning Commission Errata, p. 2 (Dec. 15, 2016).) This statement is however unsupported given the City's admission it does not know the extent of CCC wetlands on the adjacent fairways. The statement that the City can evaluate this potential impact without even knowing whether CCC wetlands are present is not an adequate response to Dr. Baye's comments and personal expert observations of the site.

The City also attempts to cover this omission by stating, "[h]owever, to the extent the CCC may determine that these areas qualify as wetlands using the single-parameter approach, SFRPD would seek necessary permits and comply with any conditions required by the CCC." However, the City must evaluate this impact in the EIR and not simply await another agencies' proceeding or assert it will comply with another agencies' standards. (See *Kings Co.*, 221 CA3d at 712-718.)

5. The EIR fails to address an adequate range of alternatives to the Sharp Park Project.

Although the EIR claims to review a total of five alternatives for the Sharp Park Project, only four distinct alternatives are actually identified. (DEIR, p. 463.) The "No

Project” and the “Maintenance Alternative” are the same version. (See DEIR, pp. 463-64; *Compare id.*, p. 465 & p. 512.). Putting aside the “No Project Alternative,” the range of actual alternatives consists of the Proposed Sharp Park Project, a “Maximum Restoration Alternative,” and a “Maximum Recreation Alternative.”

With regard to the Sharp Park Project, the “Maximum Restoration Alternative” purports to restore an additional 5 acres of habitat for the red-legged frog and garter snake, amounting to a total of 24 acres compared with 19 acres under the proposed Project. Essentially, it appears that more dredging would occur in order to generate sediment that would then be used to restore an additional 5 acres of upland habitat. The EIR concludes that this alternative “does not meet the objective related to recreation, as the Maximum Restoration Alternative would provide additional restrictions on public use and access of the Natural Areas,” though there is no indication what restrictions would result. (DEIR, p. 481.) The DEIR also states that any potentially significant impact to recreation at the golf course would be reduced to less than significant “by implementing mitigation measures similar to those developed for the proposed project.” (DEIR, pp. 484-85.) The DEIR does not indicate that this version of an alternative would reduce the proposed Sharp Project’s NOx emissions. Given the additional dredging and habitat work, it would appear likely to make that impact worse. As much or more dredged materials would be deposited on CCC wetlands that currently exist on adjacent fairways. All in all, this Alternative remains a dredging alternative for the Laguna Salada with few differences from the proposed project.

With regard to the Sharp Park Project, the “Maximum Recreation Alternative” maintains the proposed project’s dredging components but would eliminate any habitat alterations that encroach on the adjacent golf course fairways. (DEIR, p. 463.) This alternative, like the proposed project, includes the same amount of dredging activity in the Laguna Salada. (DEIR, p. 494.) This alternative would reduce the amount of edge and upland habitat for the San Francisco garter snake. (*Id.*) The DEIR does not evaluate whether this alternative would reduce NOx emissions from the Sharp Park wetlands project. Given that the same amount of dredging is proposed, it would appear likely that the significant NOx emissions would be the same as the proposed project.

Likewise, no discussion is included in the EIR evaluating this alternative’s impacts on CCC wetlands. Although the DEIR asserts that the Maximum Recreational Alternative “would not encroach on the Sharp Park Golf Course or modify the golf course in any way,” it provides no information on where the 40,000 cubic yards of dredged material slated for adjacent fairways would be dumped. (DEIR, p. 498.)

With regard to the Sharp Park Project, the Maintenance Alternative would not include the proposed dredging of Laguna Salada. (See DEIR, p. 512.) However, this alternative is doomed from the start and adds nothing to the City’s ability to consider alternatives because, in regard to the Sharp Park wetlands, it is indistinguishable from the No Project Alternative. (See *id.*, pp. 512, 518. *Compare* p. 470)

Where a project is found to have significant adverse impacts, CEQA requires the adoption of a feasible alternative that meets most of the project objectives but results in fewer significant impacts. (*Citizens of Goleta Valley v. Bd. of Supervisors* (1988) 197 Cal.App.3d 1167, 1180-81; *see also, Burger v. County of Mendocino* (1975) 45 Cal.App.3d 322) A “feasible” alternative is one that is capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social and technological factors. (Pub. Res. Code § 21061.1; CEQA Guidelines § 15364.)

CEQA requires that an EIR provide a discussion of project alternatives that allows meaningful analysis. (*Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 403.) An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. (CEQA Guidelines § 15125.6.) The purpose of the discussion of alternatives is both to support the decision makers and to inform public participation. Thus, “[a]n EIR’s discussion of alternatives must contain analysis sufficient to allow informed decision making.” (*Laurel Heights*, 47 Cal.3d at 404.) An EIR must also include “detail sufficient to enable those who did not participate in its preparation to understand and to consider meaningfully the issues raised by the proposed project.” (*Id.* at 405.)

The analysis of project alternatives must contain a quantitative assessment of the impacts of the alternatives. In *Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 733-73, the court found the EIR’s discussion of a natural gas alternative to a coal-fired power plant project to be inadequate because it lacked necessary “quantitative, comparative analysis” of air emissions and water use. The court concluded that absent such data, the significance of the elimination of this impact was unknown.

In the end, with the exception of a no project alternative, all three proposed projects for the Sharp Park wetlands complex are large-scale dredging projects. No restoration alternatives are evaluated that do not include dredging 60,000 cubic feet of materials from Laguna Salada. No restoration alternatives address or provide any quantitative comparisons of the unavoidable air quality impacts of the proposed project. No alternative explores how the project could avoid smothering CCC wetlands or provides any quantitative assessment of that impact.

The EIR truncates the alternatives discussion despite at least two Sharp Park alternatives, including one proposed by the City itself at the outset of this process and another provided by an expert wetlands restoration firm, having been provided to the City that would avoid these impacts, would achieve most or all of the project’s objectives, and may not result in any unavoidable environmental impacts. The City’s refusal to evaluate these two alternatives in the EIR violates CEQA.

a. It is an abuse of discretion for the City to fail to evaluate the proposed Sharp Park Project included in the notice of preparation and initial study.

The EIR fails to evaluate the most obvious alternative to the current large-scale dredging project at Sharp Park – the Sharp Park wetlands project initially proposed by the City in the notice of preparation and initial study issued by the City in 2009. The NOP and Initial Study proposed a project that implements the Final Draft Significant Natural Resource Areas Management Plan published by the City in February 2006. (Initial Study, p. 1 (FEIR, App. A) (“The proposed project is the SFRPD’s implementation of the SNRAMP”). See Response to Comments, p. 4-170.) This original proposed project for Sharp Park’s wetlands does not involve the proposed large-scale dredging of 60,000 cubic feet of sensitive habitat. Instead, the proposal is based on the Final Draft Significant Natural Resource Areas Management Plan issued in 2006.

The proposed project at that time included the following recommendations for the Laguna Salada wetlands management areas:

- SP-4a—implement improvements to protect and enhance the California red-legged frog and San Francisco garter snake at Laguna Salada, including the following:
 - Create shallow pools within existing wetlands,
 - Continue monitoring California red-legged frogs and San Francisco garter snakes,
 - Remove tires from Horse Stable Pond,
 - Install signs and barriers to keep dogs out of Horse Stable Pond,
 - Separate the small peninsulas within Laguna Salada from the mainland by small canals, and
 - Restore Sanchez Creek by deepening the channel, expanding the creek corridor upstream, and buffer zones to limit human disturbance....

(Initial Study, p. 43.) This proposed project tracks the recommendations of the Final Draft Significant Natural Resource Areas Management Plan. (2006 SNRAMP, p. 6.4-13.)

The recommendations in the initial study and the 2006 SNRAMP also included various other measures relevant the wetland areas:

- SP-4b—create low mounds, planted with willows, on the western edge of Laguna Salada to serve as a visual barrier, to provide snake and frog basking sites, and to provide nesting habitat for riparian birds;
- SP-4c—reduce draw-down of Horse Stable Pond when California red-legged frog egg masses are present or maintain a stable water level during red-legged frog breeding season;
- SP-4d—remove any bullfrogs that are found in Laguna Salada;

- SP-4e—stop all golf course vehicles from using the service road from Moose Lodge to Horse Stable Pond;
- SP-5a—work with golf course staff to minimize use of chemicals;
- SP-6a—coordinate with the golf course to remove aquatic vegetation within the channel every spring and fall;
- SP-6b—remove and trim vegetation along the edges of the channel between Laguna Salada and Horse Stable Pond to allow forktail damselfly perching within sight of the water;

- SP-8a—make 33.3 acres of Arrowhead Pond, Laguna Salada, and Horse Stable Pond off limits to dogs to prevent access to sensitive habitats; if this is not effective, use fencing to close social trails in these areas;
- SP-9a—educate golf course staff about the importance of identifying California red-legged frogs, San Francisco garter snakes, and forktail damselflies and their habitats;
- SP-9b—establish a vegetation management plan for the canal connecting Laguna Salada and Horse Stable Pond that would allow channel maintenance without affecting the forktail damselfly, California red-legged frog, or San Francisco garter snake;
- SP-9c—create a buffer zone between the Laguna Salada wetlands and the golf course fairways; ...

(Initial Study, pp. 43-44; 2006 SNRAMP, p. 6.4-14 – 6.4-16.) Neither the EIR’s proposed project nor any of the alternatives addressed this original Sharp Park wetlands project.

As acknowledged by its inclusion in the 2006 SNRAMP and 2009 initial study, as well as the 1992 Laguna Salada Enhancement Plan (PWA 1992) on which they rely, this alternative is entirely feasible. Unlike the current proposed wetlands project for Sharp Park, the Initial Study alternative anticipated having no air quality impacts. (Initial Study, p. 79.) The expansion of buffer areas “could be as simple as developing a wider rough, an unmowed strip of native grasses, or installing upper marsh vegetation to narrow the fairways. Any of these options would help protect these sensitive habitats and species from human disturbance and provide greater wildlife value.” (SNRAMP, p. 6.4-16.) By expanding these buffer zones between the lagoon and the fairways, this alternative could be designed to avoid any impacts to CCC wetlands.

Any possible impacts from this reduced scope alternative to recreation or any cultural resource value associated with the adjacent fairways would appear to be capable of mitigation or, in the case of impacts to golfing, not an environmental impact. As for cultural resource impacts, the City’s proposed project will have significant and unavoidable impacts on Fairway 12 of the golf course. Nevertheless, that project alternative was not eliminated, indeed it is the City’s preferred project. Under that alternative, the fairway will be documented consistent with the National Park Service guidelines prior to the project’s implementation. Other alternatives should be treated in a like manner. The Initial Study alternative’s inclusion of expanded buffer zones may

actually have less impact on the fairways than the preferred project. Indeed, the map included in the Initial Study does not indicate any impact on the general layout of the course fairways. (See 2006 SNRAMP, 6.4-25 (Fig. 6.4-5).) As for impacts to recreational golf, as discussed below, that is not an environmental impact, and cannot be used as a proper rationale to eliminate consideration of a feasible alternative. Because the City's Initial Study alternative is feasible, would meet all of the Sharp Park project's objectives, and would have fewer, if any, significant impacts than the City's currently preferred proposed project, the City abused its discretion in failing to address this alternative.

b. The City abuses its discretion by refusing to analyze in the EIR the restoration alternative proposed by ESA/PWA and Peter Baye, Ph.D.

The City has not articulated a legal basis for rejecting consideration of an additional non-dredging alternative prepared in 2011 by ESA/PWA and Dr. Peter Baye and presented in a detailed report entitled, "Conceptual Ecosystem Restoration Plan And Feasibility Assessment: Laguna Salada, Pacifica, California" (hereinafter the "PWA 2011 Report".) We will refer to this alternative as the "PWA Alternative." The first three phases of the PWA 2011 Report outline in extensive detail a feasible restoration alternative for the Laguna Salada and adjacent habitats that does not involve the massive dredging proposed by the current preferred project. (PWA 2011 Report, pp. 26-38.) Dr. Baye also outlined a version of this same alternative in his comments on the DEIR. (Response to Comments, Attachments, p. B-507.) Rather than primarily relying on dredging, the PWA Alternative relies on reducing artificial pumping of the lagoon and allowing higher lagoon levels to achieve increases in open water marsh and other habitat beneficial for the garter snake and red-legged frog. (PWA Report, p. 29.) This proposal would result in a much larger area of habitat for the listed species. The PWA Alternative also includes extensive upland habitat restoration for the garter snake (*Id.*, p. 30.) Although the PWA 2011 Report extends to a long-term proposal to allow the existing seawall between the Laguna Salada and Ocean Beach to erode over time to a natural barrier beach and includes some new berms to protect nearby neighborhoods, the future of the seawall would not need to be part of this alternative, in the same way it is not included in the City's preferred project. Dr. Baye's comments on the DEIR also provide a more modest version of the PWA alternative:

The most obvious environmentally superior feasible alternative that was ignored was modification of water level management of the lagoon, which is controlled by artificial drainage of the lagoon by pumps operated by the City. Increased water surface elevations and seasonal fluctuation of lagoon levels combined with peripheral flood control berms that double as buffers upland refuge and basking habitat is a wetland habitat management/enhancement alternative that would eliminate the need for high-cost, high-impact risk engineered dredging alternatives, and would have superior environmental benefits for salinity intrusion and endangered species habitat enhancement. Artificially managing water level fluctuations

in the lagoon emulating natural lagoon hydrology would maintain a favorable seasonal dynamic balance of shallow open water habitat (submerged aquatic vegetation, principally sago pondweed) and emergent marsh (tule, bulrush, cattail, spikerush) that is evident in the constructed GGNRA ponds at the toe of Mori Point slopes, where California red-legged frogs and tree frogs are now breeding.

(Response to Comments, p. B-507.)

The PWA Alternative would significantly reduce the current proposed Sharp Park project's significant NOx emissions. Although the PWA Alternative may still result in significant NOx emissions itself, by eliminating the substantial dredging component those emissions would be significantly reduced compared to the current proposed Sharp Park project.

Dr. Baye's expert comments also confirm that the PWA Alternative would not adversely affect any wetlands, including CCC wetlands. Instead, it would expand those habitats to the benefit of listed and other species.

The City rejects consideration of Dr. Baye's and the PWA Alternative based on its conclusion that the alternative would have additional impacts on historic resources and recreation:

The creation of a berm and the maintenance of higher water levels at the lagoon would eliminate more areas of the golf course, which would create additional impacts related to historic resources and recreation. Further, the maximum restoration alternative was designed to maximize restoration activities while allowing the golf course to operate, which would not be achieved with the commenters proposed changes to this alternative.

(*Id.*, p. 4-601.) As for historic resources, assuming the City's analysis of the historic significance of the golf course is correct, the PWA Alternative would have additional impacts on the existing fairways. However, that conclusion, by itself, does not mean the City can avoid evaluating this feasible alternative. The historic resource impacts are but one category of impacts related to the Sharp Park project. Two other impacts – CCC wetlands and NOx emissions – would be either eliminated or dramatically reduced by the PWA Alternative. And any historic impacts to the golf course could be mitigated at least in part by their documentation consistent with the National Park Service guidance documents. (See DEIR, p. 13.)

As for impacts to golfing, that impact is not an environmental impact within the purview of CEQA and not an impact justifying a refusal to evaluate a feasible alternative. The Appendix G checklist included in the CEQA Guidelines only identifies two impacts under the heading "Recreation." Neither impact involves an impact to the recreational activity itself. Section XV of Appendix G has a lead agency respond to two questions pertaining to recreation. First, "Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial

physical deterioration of the facility would occur or be accelerated?" (CEQA Guidelines, App. G, § XV(a).) Of course, eliminating golfing from some or even all areas of Sharp Park would do the opposite and would not have any impact based on this question. Fewer fairways would decrease the use and any accompanying physical deterioration. And although golfing recreation would be reduced, other forms of passive recreation, one of the purported objectives of the Natural Areas program, would be enhanced by the PWA Alternative.

The second question posed by Section XV of Appendix G is "Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?" (CEQA Guidelines, App. G, § XV(b).) The City's response would flip this question on its head. An alternative reducing the size of the golf course is the opposite of expanding the course. A reduction would have a positive effect on the environment, certainly in regard to expanded habitat for listed and other species.

In its version of the Initial Study form, the City has taken the liberty of adding an additional question to the checklist. Section E.9 of the Initial Study adds in, "Physically degrade existing recreational resources?" to the Guideline's form. This additional question was added in order "[t]o address degradation of trails" and the expectation that "[i]n the short-term, recreational resources, including trails, DPAs, and scenic viewing areas, could be temporarily closed for restoration efforts if necessary." (Initial Study, p. 93.) This additional checklist question does not transform reduction in golfing or the size of the golfing facilities at Sharp Park into environmental impacts. Just because an activity involves recreation does not mean that degrading that activity is an environmental impact. For example, when the City closed the Sharp Park rifle range, there was no environmental impact from precluding recreational gun enthusiasts from shooting rifles at that location. Less golf in Sharp Park does not amount to an environmental impact of the Sharp Park project. Accordingly, the City's reliance on impact to golfing as a rationale for avoiding consideration of the PWA Alternative is an abuse of discretion.

CONCLUSION

Wild Equity requests that the Board of Supervisors reject the SNRAMP EIR and certification and make findings that ensure that the Planning Commission proceeds with the portions of the EIR addressing the programmatic and maintenance level activities. As the Planning Department and Recreation and Park Department indicated many years ago, a Sharp Park Project addressing changes to the golf course should be conducted in a separate project-level EIR. Separating the Sharp Park Project into a

Page 26 of 26

separate project-level EIR is now an imperative given the many flaws in the current analysis.

Respectfully submitted,

Michael R. Lozeau
Lozeau Drury LLP

SF Forest Alliance's ASKS on SNRAMP's EIR Certification February 16, 2017

Reject the certification of the EIR by the Planning Commission. Instruct the Planning Department to revise the EIR to address the insufficient and incorrect information. Require that Planning add the following mitigation measures to the EIR:

RECEIVED
BOARD OF SUPERVISORS
SAN FRANCISCO
2017 FEB 16 PM 3:49
BY BJ

1. that the location(GPS coordinates), size, species, date and reason for removal be recorded for each tree removed in San Francisco. A public log of this data shall be available to compare tree removals approved under the Plan with actual removals. (According to RPD, there will only be about 14 tree removals per month.)
2. that additional mitigation measures be required to address the Plan's impact on greenhouse gas (GHG) emissions relative to San Francisco's 2008 Greenhouse Gas Ordinance and AB 32, California Global Warming Solutions Act of 2006. Planning will need to sort that out.
3. assuming the GHG mitigation requires replacement tree planting, that the location (GPS coordinates), size, species and date of replacement trees planted be recorded. Further, that the ongoing survival and growth of those trees be tracked. The data should be available to the public.
4. that the impact of parkland closures be studied and mitigation measures added to address these losses. Residents in S.E. San Francisco are particularly dependent on parks that are primarily Natural Areas.
5. that trail additions and trail closures be tracked in relation to the original trail system documented in the SNRAMP and that public maps documenting this be maintained.
6. that metrics for the success of the Project be defined and progress be systematically evaluated. If the Plan results in sustainable improvements to our Natural Areas, capital landscape renovations, maintenance costs and herbicide use will decline. Forest health will improve. Restored areas will survive on their own without substantial human intervention. If not, the program should be scaled back to reduce the environmental damage and shift the spending to programs that benefit the public.
7. that measures be devised to mitigate the reduction in off-leash dog play areas under the SNRAMP. The EIR recognizes the reductions in dog play areas at GGNRA and under the SNRAMP would result in a significant cumulative impact to recreational use. RPD and the drafters of the EIR have failed to define mitigation measures.

Require that the Recreation and Parks Department halt further implementation of the SNRAMP until the EIR is certified and necessary mitigation measures are documented and adopted.

Dee Seligman, Interim President
Rupa Bose, Vice President
Tom Borden, Director

Subject: Appeal of the Certification of the EIR for the Significant Natural
Resource Areas Management Plan
SF Planning Case number 2005.1912E

This document and its 8 appendices (A through H) comprise our full set of arguments and supporting evidence.

This appeal is not about whether you prefer trees or grass, whether you want to preserve and expand our historic native habitat or accept the changes caused by humans and nature. This appeal is about accountability and transparency. Does the EIR correctly identify the significant environmental impacts of the SNRAMP and have mitigation measures been put in place to minimize or eliminate those impacts?

The EIR for the SNRAMP is inaccurate and inadequate and biased. The poor quality information it provides is not sufficient to enable informed decisions about the Plan. The process used to bring the DEIR to certification violated CEQA and local regulations. Here are the issues.

- 1 Public access restrictions: The SNRAMP calls for us to surrender public access to 28% of our parkland. The Project applies to one third of our parkland. Public access will be restricted to on-trail only, or less than 5% of current access. Comments on the DEIR asked that this be addressed. The FEIR fails to respond to this.
- 2 Greenhouse gas release: The FEIR claims implementing the SNRAMP will result in reduced emissions of greenhouse gasses (GHG). Actually, the GHG releases that would result from Plan implementation are a Significant Environmental Effect that is hidden by the EIR. Carbon sequestration is dramatically miscalculated, equipment emissions are not included and methane and carbon dioxide emissions from decay of the destroyed trees are ignored.
- 3 Increase in herbicides: The SNRAMP is dependent on the use of herbicides. However, the FEIR claims there will be no increase in herbicide use with SNRAMP implementation. In other words, the SNRAMP does not require the use of herbicides. It is impossible for this to be correct. The "no increase in herbicide use" is an entirely new conclusion the DEIR did not present.
- 4 CEQA process violations: The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR. External agencies and the public were never allowed to challenge major changes made to the DEIR, such as the nonsensical greenhouse gas analysis; the assertion of no increase in pesticide use; and the mitigation of acidic soils at Laguna Salada.

In addition, the Certification hearing involved multiple violations of the San Francisco Administrative Code.

- 5 Trail closures: The SNRAMP plans closure of 26% of our trails. In parks where the NAP has already implemented its "Trail Improvement Projects" over 50% of the trails have been closed. The EIR does not address this significant impact on public recreation.
- 6 Tree replacement: The EIR analysis of the Project's impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the project area would be replaced with a new tree somewhere in the Project area.
- 7 Implementation before Certification: The EIR claims the SNRAMP has not been implemented ahead of the EIR certification. This is false.
- 8 Cycling prohibition: The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." This is false. The Plan prohibits bicycles in the program areas. This is contrary to our Transit First, Green Connections, ROSE, Children's Outdoor Bill of Rights and other policies.
- 9 Impact of fencing ignored: The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP. The EIR does not address this significant impact on public recreation and aesthetics.
- 10 Bias: Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the Mt Davidson bench removal and the Glen Canyon Miraloma trail closure.

1 Public Access Restrictions, On-Trail Use Only

The intent of the SNRAMP is to restrict public access to designated trails only. Not only does this mean closing social trails and other trails the planners find undesirable, it also means access will be limited to **on-trail use only**. Multiple commenters raised this issue. The Response To Comments (RTC) recognizes the comments, but it fails to address them. The fact that the Plan will deny public access to more than 95% of the Project area must be addressed.

The SNRAMP is a bit vague in expressing its intent. The drafters knew direct statements would draw direct fire from the public. Here is what is in the SNRAMP.

Recommendation GR-11C in the SNRAMP says, "Public use in all Natural Areas, unless otherwise specified, should encourage on-trail use." It goes on to say, "interpretive and park signs should be installed or modified as appropriate to include "Please Stay on Trails" and then, "If off-trail use continues in a particularly sensitive habitat (e.g., wetlands), permanent fencing shall be considered as a last resort once all other options, including enforcement, have failed."

Page 1-6 of the SNRAMP makes it clear that public use of MA-2 areas will be on-trail only.

“Relatively fewer use restrictions will be implemented within the MA-2 areas. In general, all passive recreational uses will be allowed in these areas as long as they include **on-trail use only** and leashed pets”

In the preceding paragraph on the same page it discusses MA-1 areas but does not mention on trail use only. Clearly, if the less sensitive MA-2 areas are on-trail only, the MA-1 areas will be on-trail only as well.

The SNRAMP does not call for on-trail use only in MA-3 areas, but only talks about closing social trails.

Action by the NAP since the SNRAMP was written confirms the actual intent is to restrict the public to on-trail use only in all Natural Areas, including MA-3. In early 2015, the NAP installed signs in virtually all of its Natural Areas requiring that users, “Stay on Designated Trails” threatening \$100 fines via Park Code 3.02.

Please note, the installation of these signs is a clear violation of CEQA. The NAP is instituting new public access restrictions which are part of the SNRAMP in advance of its EIR certification.

The impact on the public is huge. Consider the Plan covers 836 acres of land in San Francisco. (SNRAMP page 43) Prior to the NAP's access restrictions, all of that was freely available to the public. Once the Plan is implemented, the public will be restricted

to 30.6 miles of trails. (SNRAMP page 52) Assuming the average usable width of a trail is 10 feet, the acreage available to the public under the Plan will be just 37 acres, or 4.5 percent of what we had.

Multiple commenters raised this issue and are quoted in Response To Comments (RTC). In one section after another, the RTC ducks this issue.

Response PD-6 "Opposition to the proposed public access restrictions" page 4-145
"The proposed project is a management plan for the current program area and does not create new Natural Areas or restrict access to the existing Natural Areas, but instead focuses on enhancing native communities within existing Natural Areas." This statement is incorrect. Clearly they are restricting access to existing Natural Areas.

Response G-5 "Impacts of Natural Areas access restrictions on social fabric of San Francisco" page 4-31 "These comments express concern that the SNRAMP would prohibit access to the Natural Areas" The response only talks about trails and ignores the fact the SNRAMP would restrict use to on-trail only.

Response RE-8 "Impacts resulting from restrictions on recreational access" page 4-323
This response is supposed to address denial of access. Commenters say that,
"A majority of land under NAP control citywide (57%) will have significant restrictions to access by all people (not just people with dogs); that is the amount of land designated as MA-1 and MA-2."

The response talks about on-leash dog walking and a designated trail system and then suddenly concludes,

"Therefore, the proposed project would not result in large-scale restrictions on recreational access."

Again, the drafters completely refuse to recognize the issue that the Plan will convert our parks from free use to on-trail use only.

RE-10 "Recreational analysis related to trails" page 4-330

This is supposed to address comments that call for the EIR to analyze the impacts of **confining recreation activities to trails**, as well as the closure of trails in Natural Areas. The response proceeds to discuss trails at length but never addresses the issue in bold above. They duck the question again. The response does not acknowledge the vast acreage that would be closed to the public due to on-trail use only.

The NAP controls the entire park in over half of the parks with natural areas (18 of 32 parks). In an additional 10 parks, NAP controls over 50% of the park. Only 4 of 32 parks with natural areas have less than 50% of their land controlled by NAP. So when NAP confines access to trails only, in 18 parks, that closure affects the entire park, not just a small portion of each park. People are losing access to their neighborhood parks.

It is important to note that parks in the underserved neighborhoods of S.E. San Francisco contain large percentages of Natural Areas. This is because we never spent money to develop those parks and just left the land as-is. Now this Plan intends to close those undeveloped parklands to public use. Half of McLaren Park, most of Bayview Hill and most of India Basin are Natural Areas. The residents can ill afford to lose the limited park resources available to them. **Implementing the access restrictions of the plan is a form of environmental racism, forcing already disadvantaged neighborhoods to carry a disproportionate burden of these access closures.**

The Children's Outdoor Bill of Rights adopted by the BOS in October 2013 <http://www.sfbos.org/ftp/uploadedfiles/bdsupvrs/resolutions15/r0081-15.pdf> includes the promise that our children will be able to, "Explore all the wild places in the City". Restricting children to on-trail use only in our natural areas flies in the face of this.

The EIR completely fails to address the issue of on-trail access only. The EIR claims Recreation is an Effect not found to be significant. (DEIR page 442) **This is an incorrect conclusion, reducing public access to only 5% of the Program area is a Significant Environmental Effect.**

2 Greenhouse Gas Release, an inconvenient truth

The EIR grossly miscalculates the greenhouse gas (GHG) releases that would be caused by implementation of the SNRAMP. Implementing the Plan would result in a significant release of GHGs, not a reduction as the EIR claims. In total, the vegetation change contemplated by the Plan would release 44,035 metric tons of CO₂ and prevent the capture of 28,600 metric tons of CO₂ that would otherwise occur. This is a net release of 72,635 metric tons of CO₂. Actually, the situation is much worse since much of the carbon in the felled trees would actually be released as methane, a GHG with 34 times the Global Warming Potential of carbon dioxide.

Therefore the project conflicts with:

San Francisco's 2008 Greenhouse Gas Ordinance, SF Environment Code Chapter 9, sections 900 to 908

and with

California's goal of reducing GHG emissions set forth by the timetable established in AB 32 California Global Warming Solutions Act of 2006

The GHG release is automatically Significant since it conflicts with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

The error in the IER comes from a variety of sources:

- 2.1 The EIR ignores that the Plan allows and does not count the cutting of 11,920 existing "saplings" in San Francisco.
- 2.2 The EIR assumes trees removed will be replaced on a 1 to 1 basis in the project area. This 1 to 1 replacement is not part of the SNRAMP.
- 2.3 The EIR claims to use an accepted calculation methodology, but instead makes up its own to reach a false conclusion.
- 2.4 The EIR misstates the forest management objectives of the SNRAMP.
- 2.5 The EIR assumes any replacement trees planted will be trees. Actually, shrubs and "grassland species" are suggested when replacing trees is discussed in the SNRAMP.
- 2.6 The EIR fails to account for the GHG emissions from vehicles and equipment used for the project.

- 2.7 The EIR does not account for the GHG releases that will result from the 60,000 cubic yards of organic material dredged from Laguna Salada to convert it from marshland to open water.
- 2.8 The EIR does not even mention methane. As the trees cut down under this plan decay, the carbon in them will be released in the form of carbon dioxide and as methane. Methane is much more damaging for our environment than carbon dioxide.

The San Francisco Forest Alliance engaged the services of the Quercus Group to provide expert opinion on the EIR GHG analysis. Please see Appendix A. That testimony validates our analysis and reveals additional shortcomings of the EIR analysis.

The idea that the landscapes envisioned in the SNRAMP will sequester more carbon than today's landscapes defies common sense. Compare early pictures of San Francisco with those of today. Where is all the carbon in those historical landscapes? You can see it in the large trees we have now. The SNRAMP is not taking the landscape back to 1790, but it is moving in that direction. Yet the RTC states, "the proposed project is expected to result in a net increase in carbon sequestration capacity within the Natural Areas in San Francisco." (page 4-285) The land use conversion in Sharp Park, where 15,000 trees are to be cut down and replanted with grasses, is claimed to increase carbon sequestration. (page 4-301) This is crazy talk. Obviously the science cited in the EIR is being used incorrectly.

Mt Davidson today

Mt Davidson tomorrow?.... Which landscape holds more carbon?

2.1 Saplings

The SNRAMP defines a Tree as a tree having a dominant vertical trunk greater than 15 feet tall. Smaller trees are considered “Saplings”. (DEIR page 92) The SNRAMP allows Saplings to be cut without any limitations or accounting. These small trees are what would normally regenerate our forests, replacing trees as they fall to age or disease. There are a lot of these young trees in our natural areas.

Forest in McLaren Park

A US Forest Service survey of San Francisco’s urban forest cited in the EIR reports that 31.4% of trees in the City are 1 to 3 inches in diameter at breast height (DBH) and that

51.4% of trees are less than 6 inches DBH.¹ Monterey Pine and Monterey Cypress trees less than 3" DBH are typically short enough to qualify as saplings. Eucalyptus tend to be taller for the same trunk diameter. Perhaps an average Sapling cutoff would be 2.5" DBH. To get an idea of the scale of this issue, let's make a conservative assumption that half of trees 1" to 3" DBH are Saplings.

This means 15.7% of the trees are Saplings and 84.3% are Trees in terms of the SNRAMP.

Since the San Francisco Natural Areas contain 64000 Trees larger than Saplings, that means there are 75,920 total trees. Of this 15.7%, or 11,920 are saplings and 35.7%, or 27,100 are Trees less than 6" DBH.

The EIR talks of removing 3,448 non-native trees in San Francisco and replacing them with 3448 Coast live Oak or similar plantings. The additional 11,920 saplings they can remove are already established successful trees. These Monterey Pine, Monterey Cypress and Blue Gum Eucalyptus saplings would grow into much larger trees than the oaks.

The EIR is inadequate because it fails to address the allowed destruction of 11,290 young trees. The significance of these Saplings vastly outstrips that of the replacement trees the EIR says would be planted under the Plan.

It must also be pointed out NAP staff is allowed to cut Trees smaller than 6" diameter at breast height without involving the RPD arborist. There is no 30 day preposting requirement for these trees and no record of the cutting is required. This is a major accountability issue that puts 27,100 trees at risk. This must be addressed. **There must be a mitigation measure that requires record keeping of all tree cutting.** This should also include trees killed by girdling or by chemical means such as Drilling, Frilling, & Basal Bark treatments. Given the plan calls for cutting 3,448 trees over a 20 year period in San Francisco, this would not be an onerous task. It is about 14 trees per month.

2.2 Trees 1:1 Replacement

The DEIR states the SNRAMP institutes a 1:1 tree replacement policy, that every tree removed in the project area would be replaced with a new tree somewhere in the project area. This is a false premise. No such commitment appears in the SNRAMP. Nor is there any section of San Francisco Code that would require the RPD Natural Areas Program to plant a new tree for every one they remove. The EIR cites no documented public policy to support this assertion, yet it makes the claim over and over again:

The DEIR (pages 92, 456, 484, 514) states that, "Trees removed in the Natural Areas in San Francisco would be replaced at a one-to-one ratio, although not necessarily in the same location." This commitment does not appear in the SNRAMP.

The DEIR (page 408) says, "The total number of trees would not change within the Natural Areas of San Francisco". This does not appear in the SNRAMP.

¹ Nowak "Assessing urban forest effects and values, San Francisco's urban forest" U.S. Department of Agriculture, Forest Service Northern Research Station 2007

The DEIR (page 92) says, "Invasive trees removed in San Francisco would be replaced with native tree species at a ratio of roughly one-to-one, although not necessarily at the same location or within the same Natural Area." This does not appear in the SNRAMP.

The CEQA process for the Beach Chalet Fields, Planning Case 2010.0016E revealed that SFRPD has no policy or ordinance requiring 1:1 tree replacement. See the RTC Page X.L-41. As a result, a mitigation measure was added to that EIR.

Mitigation Measure M-BI-3

The San Francisco Recreation and Park Department (SFRPD) shall replace the trees removed within SFRPD-managed lands with trees of equivalent ecological value (i.e., similar species providing the same general microhabitat characteristics for wildlife species) to the trees removed. If trees of equivalent ecological value are not feasible or available, removed trees shall be replaced at a ratio of 1 inch for 1 inch of the diameter at breast height of the removed tree. SFRPD shall monitor tree replacement plantings annually for a minimum of three years after completion of construction to ensure establishment of the plantings and, if necessary, shall replant to ensure the success of the replacement plantings.

Why would the SNRAMP EIR, where the scale of tree removal dwarfs that of the Beach Chalet Fields, be considered adequate when it does not include a mitigation measure to insure tree replacements are carried out?

The Plan cannot be properly executed unless an accounting system is put in place to track these things. RPD tree removal and planting records are almost non-existent. Only the Urban Forestry group within RPD operations keeps any records at all. They do not know what they cut or where and they do not know what they planted or where. The NAP keeps no records of tree cutting or tree planting. The following was asked of RPD as a Sunshine request, "RPD must have a record keeping system to track trees that have been removed and trees that have been planted. I would like RPD to provide a copy of tree removal and tree planting records for the past 5 years." The only record provided is shown below.

Tree count July 2015 to Dec 2015				
Pruned	Removed	Planted	Vandalized or Stolen	
27	10	27	1	July 15
12	12	17	6	August 15
45	18	24	0	September 15
22	18	30	0	October 15
27	21	15	0	November 15
49	11	21	0	December 15
Total- 182	Total- 90	Total- 134	Total-7	

RPD has no system to track the survival of trees planted. This is true of the Urban Forestry group and the NAP.

A requirement to plant replacement trees in the Natural Areas must be added as a mitigation measure in the EIR. The measure needs to include a recording system to

track the size, type, location, date and health of trees removed. At the same time it should track the size, type, location and date of trees planted. Planted trees should be monitored annually to assess survival/growth versus species and location. Failed trees must be replaced.

Even if the SNRAMP contained language requiring 1:1 tree replacement within the Project area, the Project area is so large that concentrated tree removal in one area with its trees replaced in another area across town, could produce severe results. The southeast part of the City contains a concentration of disadvantaged neighborhoods. It also contains parks with large Natural Areas like McLaren and Bayview Hill. Removing a large quantity of trees from these parks will reduce air quality. **This is an environmental justice issue which should have been considered under CEQA. It was not.**

2.3 Calculation Methodology

The RTC purports to use the calculation methodology incorporated into the "California Emission Estimator Model" (CalEEMod). However, this is not the case. Instead, the authors have made up their own method based on carbon accumulation rates that fails to account for the carbon released from the trees destroyed. At the December 15 Certification hearing, Planning staff explained this debate over the calculation method as a "disagreement of experts". This is not a scientific debate, this is grade school math. The RTC says $2+2=-1$. The CalEEMod calculation says $2+2=4$. The numbers in the EIR are intentionally miscalculated.

Please note. There is a troubling lack of transparency in the RTC figures. Final numbers are presented, but not the calculations. For this section of the RTC to be credible, the basis for the numbers should have been revealed. A copy of a February 19, 2013 technical memorandum, "Sequestration Study of Greenhouse Gases for SNRAMP" prepared by Chris Sanchez of Environmental Science Associates was obtained from the Planning Department. This document is clearly the source of the misleading calculations but it is not referenced in the RTC. See Appendix B.

The CalEEMod program the EIR refers to was developed to address this situation. Unfortunately, it is an outdated program. The methodology it uses is out of touch with current scientific thought. It assumes all carbon in the removed trees will be released as carbon dioxide. It does not account for the methane release from decomposing trees. Further, it assumes trees stop sequestering carbon at age 20. Actually, trees continue to grow and sequester carbon for 100 years or more. See the Quercus Group document, Appendix A.

CalEEMod grossly underestimates the environmental damage from cutting down trees. However, even using the output for CalEEMod was not enough to produce positive results for the SNRAMP. Let's look more closely for the sleight of hand. A copy of the "CalEEMod User Guide, Calculation Details" is attached as Appendix C. It clearly shows how land use changes, such as those proposed by the SNRAMP, should be evaluated. The EIR refers to the method, but does not follow it.

RTC Response GG-1 "Greenhouse Gas Emissions" page 4-297

The EIR makes the argument that once trees reach the age of 20 years they cease to sequester more net carbon. The EIR stops here and uses this, and a HortScience report that 90% of the trees in our natural areas are over 20 years old, to say that 90% of the

trees can be removed without any effect on GHG calculations. (see Appendix B) Rather than look at the net release of GHG caused by the project (as is the accepted practice used in CalEEMod), they look at carbon sequestration rate, MT/yr, that would occur in year 20 of the plan. On page 4-298, they say, "CalEEMod calculates GHG emissions based solely on sequestration rates and not based on release of stored carbon". This is completely incorrect. CalEEMod, calculates the total change in stored carbon in converting one landscape type to another. The carbon released from destroyed vegetation is a main factor. See the user guide in Appendix C.

The tree age cited by HortScience is far out of step with reality. For instance, in McLaren Park there are many young trees regenerating the forest. This looks more like the distribution of tree sizes described in the Nowak report cited in footnote 1. See additional forest images in D.

As an example, consider Table 19B on RTC page 4-301. This relates to plans to clear cut 56 acres of forest in Sharp Park and replace it with grassland and scrub. For Grassland plantings it presents "annual sequestration gain (year 20) of 241 MT CO₂/yr. Where does that come from? The EIR says, "Replacement vegetation was assigned a grassland sequestration rate as provided by CalEEMod." That CalEEMod "rate" is not a rate as in MT/yr. It is the amount of CO₂ storage in an acre of mature grassland, 4.31 MT CO₂/acre. See page 46 of the CalEEMod user guide in Appendix C. The EIR multiplies this times 56 acres. This should give a value of 241 MT of CO₂ but instead they declare it to be an ongoing capture rate 241 MT of CO₂ per year. This is wrong. They are mixing apples and oranges.

Going back to the accepted methodology contained in CalEEMod. It assumes trees increase in stored carbon for 20 years and then hold a fixed amount of carbon from then on. Fast growing trees have a higher sequestration rate and end up with more carbon at the end of the 20 year growing period. Existing forest land could be 500 years old and still sequester the same amount of carbon per acre because new trees grow to replace the old ones that die. Similarly, grasslands are assumed to reach a static amount of stored carbon per acre. See the explanatory pages from the CalEEMod User Guide, Calculation Details attached as Appendix C.

The CalEEMod calculation is very straightforward. The calculation is simply to compare the carbon stored in the current landscape to how much the new landscape will accumulate in 20 years.

Consider the 56 acres of forest in Sharp Park that is to be converted from forest into grassland. The values used in the CalEEMod calculation are 111 MT CO₂/ acre for forest and 4.31 MT CO₂/ acre for grassland. The net emission of GHG due to this part of the SNRAMP would be:

Forest removed		new grassland	
56 x 111	-	56 x 4.31	
6,216	- 241	=	5,975 metric tons of CO ₂ released

This is a number for an average forest. It is based on trees with a sequestration rate of 0.035 MT CO₂/year and a tree density of about 158 trees /acre. However blue gum eucalyptus is not average. According to the SNRAMP (page 3-11), blue gum eucalyptus "is one of the fastest growing trees in the world". A growth rate for eucalyptus is not published in the CalEEMod. Fortunately, the ESA technical memorandum prepared for the EIR, "Sequestration Study of Greenhouse Gases for SNRAMP" does provide a value, 0.12 MT/year/tree. (see page 5 of the memo) Note this sequestration rate is 3.4 times higher than the average CalEEMod tree species.

We can redo the calculation using the information specific to eucalyptus. 15,000 trees will be removed from the 56 acres in Sharp Park, that essentially all are Eucalyptus and (supposedly) most at least 20 years old.(see page 5 of the memo) So, the stored carbon in the trees that would be removed is:

$$15,000 \times 0.12 \times 20 = 36,000 \text{ MT}$$

This means that the SNRAMP activity in Sharp Park would produce a net release of 36,000 – 241 = 35760 MT of CO₂. This does not even include the emissions from the vehicles and equipment used for the logging and for the replanting. Nor does it include the emissions from the wetlands restoration part of the project.

Consider the 3448 Trees the Plan contemplates removing in San Francisco. (RTC page 5-44) According to the RTC these are predominantly blue gum eucalyptus. Over the standardized 20 year growth period, the trees would have stored

$$3,448 \times 20 \times 0.12 = 8,275 \text{ MT CO}_2$$

All of this would be released under the SNRAMP.

Finally, consider the existing 11,920 saplings the SNRAMP would allow to be removed in San Francisco. Were they allowed to grow, they would sequester:

$$11,920 \times 20 \times 0.12 = 28,600 \text{ MT CO}_2$$

In total, the vegetation change contemplated by the Plan would release 44,035 metric tons of CO₂ and prevent the capture of 28,600 metric tons of CO₂ that would otherwise occur. This is a net loss of 72,635 metric tons of CO₂

sequestration. In reality, the situation is much worse because a large portion of the carbon in the trees will actually be released as methane.

If a mitigation measure is added to require 1:1 tree replacement and the replacement trees are coast live oaks we can calculate the outcome. No growth rate is published in the CalEEMod for these trees either. The EIR chooses to classify them as having a medium growth rate. Using the average accumulation rate from CalEEMod, 0.0354 MT CO₂/yr replacement trees, if actually planted, would hold:

$$3,448 \times 20 \times .0354 = 2,441 \text{ MT CO}_2$$

The net loss of carbon sequestration caused by the plan, even if there were replacement trees, would be 70,195 MT of CO₂. This is a Significant Environmental Effect the EIR fails to reveal. Please keep in mind, this is a very understated analysis. It assumes trees only capture carbon for 20 years and only release carbon dioxide as they decompose.

2.4 Forest Management Objectives

The RTC misstates the forest management objectives of the SNRAMP. Pages 4-284 to 4-285 say,

“because the proposed project would replace primarily dead, dying, and diseased trees that have limited capability to sequester carbon or other pollutants for that matter, with young saplings that have long-term carbon sequestration capabilities, the proposed project is expected to result in a net increase in carbon sequestration capacity within the Natural Areas in San Francisco.”

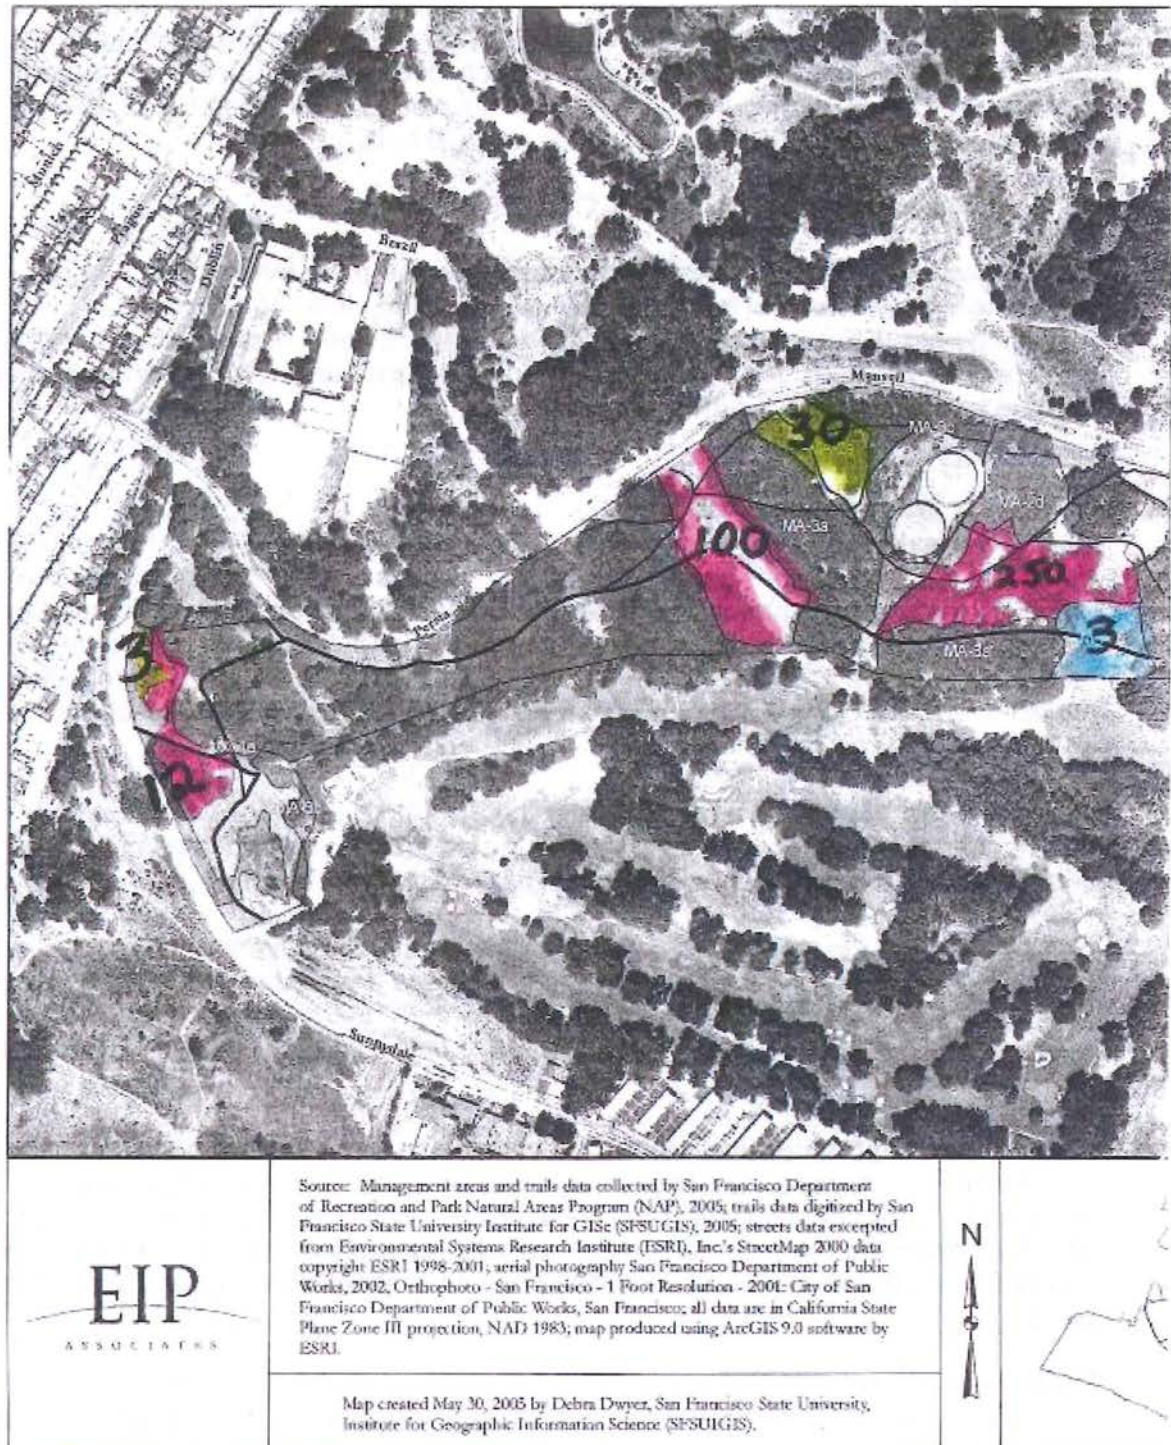

This is not true, trees to be removed under the SNRAMP are not selected based on health, but rather to remove trees in specific areas to open up those areas to promote grasslands. This is a fundamental intent of the SNRAMP. The DEIR page 456 states,

“Further, most of the trees within the Natural Areas are nonnative and most are also invasive. The invasive forests within the Natural Areas are predominantly eucalyptus, although cypress, pine, and acacia also occur (SFRPD 2006). The long term goal in MA1 and MA2 is to slowly convert those areas to native scrub, grassland habitats, or oak woodlands.”

For another example, consider the map of central McLaren Park below. Additional maps are presented in Appendix D. These maps were obtained from the Natural Areas Program by Sunshine requests. They show specific locations for tree removal under the SNRAMP and were the basis for the tree removal numbers presented in the Plan. You can see this is not about culling unhealthy trees. It is about clearing trees from specific areas.

These trees are not selected because they are unhealthy or unsafe. In fact, the Program has a strong incentive to remove the largest healthiest trees to get the most bang for the buck from the allowed number of tree removals. Dead, dying and diseased trees can be removed later on the basis of public safety without being counted under the Program. This public safety excuse has been well used by the NAP to justify tree fellings to date.

The forest management statement in the EIR is not only incorrect, it is a purposeful misstatement of fact.

2.5 Tree Definition for Replacement

For what tree replacement does take place, the SNRAMP makes no commitment what will be planted. The SNRAMP and the EIR suggest the new trees to be planted will be coast live oak, California laurel, California wax myrtle and dwarf California buckeye. (RTC page 4-464) Many of the NAP areas did not historically sustain these trees. Even in favorable locations, only a small percentage may ever grow tall enough to escape Sapling status. If we apply the same definition for tree replacement as for tree removal, they may not even qualify as Trees.

The DEIR page 189-190 shows that any replacement trees contemplated would not necessarily be trees at all:

"Although the removal of invasive trees would be noticeable, the trees in the San Francisco Natural Areas would be replaced with either native trees or other native vegetation, such as native scrub or grassland species....in some locations, trees would be replaced by native scrub or grassland species..."

Will this "tree"

replace this tree killed by NAP supporters?

Again, a mitigation measure similar to the one put in place for the Beach Chalet Fields should be required. Obviously, the intent of the SNRAMP is to remove certain types of trees. Any replacements would be native trees of a different ecological value. However, the latter two requirements should still apply, that the size of the trees be comparable and that the establishment of the plantings be monitored. Unfortunately, given the restriction imposed by the SNRAMP, that new trees be native trees, the new trees will never grow to comparable size. This can be compensated for by planting multiple native trees for each tree removed. A 3:1 ratio should be required. Such requirements are much more critical for this EIR given the vast quantity of trees at stake.

2.6 Equipment Emissions

The EIR fails to account for the GHG emissions from vehicles and equipment used for tree felling, limbing, chipping, hauling, fence installation, watering, grading etc. associated with implementation. Neither does it account for transportation and equipment emissions associated with ongoing maintenance operations such as weeding, pesticide application, sapling cutting and replanting. Given the number of trees to be removed and the 32 far-flung worksites, these emissions would be significant. The only equipment GHG emissions accounted for by the EIR is for the Sharp Park Wetland Restoration Project. The equipment emissions for all of the other program operations would vastly outstrip this and are not accounted for. See page 4-302 of the RTC.

2.7 Wetland Dredging

The SNRAMP calls for dredging 60,000 cubic yards of mixed mineral/organic material from wetlands at Sharp Park. The EIR does not account for the GHG that will be released when this material is brought to the surface and allowed to decompose.

2.8 Methane

The EIR does not even mention methane. As the trees cut down under this plan decay, the carbon in them will be released in the form of carbon dioxide and as methane. Methane is much more damaging to our environment than carbon dioxide. It has 34 times the Global Warming Potential of carbon dioxide. This EIR cannot be considered adequate when methane release is completely unquantified.

3 Herbicide Use

The RTC page 4-538 says,

“The amount and frequency of pesticide applications as a result of implementation of the SNRAMP would be similar to what currently occurs within the NAP areas and what has occurred over the past 10 years.” In other words, implementation of the Plan will not require pesticide use beyond what is already occurring.

Please note, herbicides are considered a type of pesticide.

Supposedly, the Plan has not commenced. The November 2, 2016 report by the Department of Environment Integrated Pest Management Group, “City and County of San Francisco Agency Responses to the 2016 Request for Information on Future Herbicide Reduction” shows the NAP is the largest user of Tier 1, Most Hazardous, herbicides in RPD.

The Plan calls for a large number of Trees to be cut down. The stumps of all of those will be treated with Tier 1 herbicide to prevent resprouting. This is a new activity requiring pesticide use. When the SNRAMP commences, a large number of Saplings are to be removed during forest thinning, forest removal and in less forested MA-1 and MA-2 areas. All of these stumps will be treated with herbicide to prevent resprouting. This is a new activity requiring pesticide use. When the SNRAMP commences, grasslands will be expanded by removing non-native scrub. This is a new activity that will require herbicide use. All of these new activities will clearly increase pesticide use. The statement in the EIR above cannot be correct.

4 CEQA process violations

In addition to failings of the EIR itself, the process for EIR certification was unlawful. The SF Planning Department and Commission violated sections of the California Environmental Quality Act and of the San Francisco Administrative Code. This regards the process used to move the EIR for the RPD Significant Natural Resource Areas Management Plan from its draft form to certification by the Planning Commission. The most egregious violation is the failure of Planning to recirculate the EIR for comments and responses (Consultation) following the addition of significant new information to the EIR after the close of public comment on the DEIR. This is required by CEQA:

CEQA § 21092.1. ADDITION OF NEW INFORMATION; NOTICE AND CONSULTATION

When significant new information is added to an environmental impact report after notice has been given pursuant to Section 21092 and consultation has occurred pursuant to Sections 21104 and 21153, but prior to certification, the public agency shall give notice again pursuant to Section 21092, and consult again pursuant to Sections 21104 and 21153 before certifying the environmental impact report.

The August 2011 DEIR contained no quantitative analysis of greenhouse gas (GHG) emissions that would result from SNRAMP implementation, other than equipment emissions from the Sharp Park wetlands project. Otherwise, it contained nothing but hand waving arguments. (Grasslands reflect more sunlight than forests in regions where there is snow on the ground for many months of the year.) This was roundly criticized during the comment period for the DEIR.

The November 2016 Response to Comments contains entirely new information regarding GHG emissions. (pages 5-41 to 5-45) Most of the old DEIR arguments were removed. Completely new analysis was added based on newly cited practices and newly generated data. The new information purports to demonstrate that Plan implementation will result in a net reduction in GHG emissions. It is important to vet this seemingly impossible outcome since Plan implementation will obviously produce extensive GHG emissions resulting in a Significant Environmental Impact.

After adding this new information to the EIR, Planning did not circulate the EIR for Consultation as required by 21092.1 above. Done correctly, Planning would have made the amended EIR available for public review. They would have accepted public and agency comments and then created a new Response To Comments (RTC). The new RTC would have addressed concerns over the validity of the new information.

Other significant new information was added to the EIR following the close of consultation. One was the new conclusion that Plan implementation will not require an increase in pesticide use over current levels. See RTC page 5-40 A huge new section was added regarding mitigation measures to deal with acidic soils at Laguna Salada in Sharp Park. See RTC pages 5-4 to 5-8.

Other code violations by Planning in the execution of this process include:

San Francisco 67.15 (b) Every agenda for special meetings at which action is proposed to be taken on an item shall provide an opportunity for each member of the public to directly address the body concerning that item prior to action thereupon.

The certification hearing for the RPD SNRAMP EIR was held on December 15, 2016. The agenda for the hearing can also be found at:
<http://sf-planning.org/meeting/planning-commission-december-15-2016-agenda>

The Planning Commission combined its certification hearing of the EIR with the Rec and Park Commission hearing on adoption of the SNRAMP. The hearing contained two agenda items, strangely noted as 1a and 1b. These are two entirely different decisions, made by two different commissions based on two different sets of input information. The Planning Commission action is to assess the technical conformance of the EIR to CEQA regulations and if it is acceptable, to certify it. The Rec and Park Commission is to consider the information contained in the certified EIR and decide whether or not to adopt the Plan in light of its environmental impacts. Despite this, they held the meeting as if only one item was on the agenda. All testimony by Planning and RPD was given, followed by all public testimony on both decisions. When all that was completed, the Planning Commission voted to certify the EIR and the Rec Park Commission voted to adopt the plan. All of the public testimony was mixed together randomly. It lasted for about 5 hours. About 10% of the comments were directed to EIR certification. Members of the public were only allowed to testify once.

There are two 67.15 (b) issues here.

1) This way of conducting the hearing is legalistically in compliance with 67.17 (b). However, it circumvents the intent of the Code. The Planning Commission should have heard testimony on the EIR and made their decision on certification. Then the Rec Park Commission should have heard testimony on the SNRAMP and made their decision on adoption of the SNRAMP. We asked the Planning Commission if they would at least separate the testimonies on the EIR from testimonies on the SNRAMP. They said they chose not to. The effect was to fragment and dilute public testimony on the EIR. The public's ability to convey information to the Planning Commission was stifled as a result.

2) Members of the public were only allowed to speak once. There were two distinct agenda items at the hearing. Numbering them as 1a and 1b does not erase that fact. If you choose to speak on the EIR and then you could not speak on the SNRAMP. They will say people could have split their time in half and spoke a little bit about both. Doing that would have diluted their messages and made them less intelligible.

San Francisco 31.15 (d) When the final EIR has been prepared and in the judgment of the Planning Commission it is adequate, accurate and objective, reflecting the independent judgment and analysis of the Planning Commission, the Planning Commission shall certify its completion in compliance with CEQA. The notice of the Planning Commission hearing on the certification of the final EIR shall inform the public of its appeal rights to the Board of Supervisors with respect to the final EIR within the time frame specified in Section 31.16 of this Chapter. The certification of completion shall contain a finding as to whether the project as proposed will, or will not, have a significant effect on the environment.

The certification of the EIR is supposed to be an unbiased technical decision by the Planning Commission. Is the EIR "adequate, accurate and objective, sufficient as an informational document, correct in its conclusions, and reflects the independent judgment and analysis of the Planning Commission". The Planning Commission chose to structure the hearing to immerse themselves in testimony for and against the SNRAMP before making their certification decision. 90% of the testimony they heard

was of this sort. Why would this be relevant if they are trying to make an unbiased decision on the technical merits of the EIR? Clearly, they see the certification decision as a political one, biased by other factors than those they are supposed to be considering.

San Francisco 31.15 (d) ...The notice of the Planning Commission hearing on the certification of the final EIR shall inform the public of its appeal rights to the Board of Supervisors with respect to the final EIR within the time frame specified in Section 31.16 of this Chapter....

The Administrative Code requires that the hearing notice inform the public of its rights to appeal the certification. The notice did not contain the required information.

San Francisco 67.7 (g) Each policy body shall ensure that notices and agendas for regular and special meetings shall include the following notice: KNOW YOUR RIGHTS UNDER THE SUNSHINE ORDINANCE (Chapter 67 of the San Francisco Administrative Code)

The notice for the hearing did not include this required information.

Based on these procedural issues alone, the certification of the EIR should be rescinded and Planning required to recirculate the EIR for Consultation. Once the new RTC is completed, the Planning Commission must conduct the certification process in compliance with CEQA and our local ordinances.

5 The SNRAMP does not disclose the full extent of planned trail closures and so the EIR is not evaluating the correct Plan.

The SNRAMP does not accurately reflect the extent of trail closures actually planned by the NAP. In most of the parks where the NAP has violated CEQA and moved forward with implementation of the SNRAMP, trail closures have been more extensive than disclosed in the SNRAMP. The table below compares the footage of trails to be closed under the SNRAMP versus what has actually been closed.

	Trails Existing per SNRAMP	Trails to be closed per SNRAMP	Trails additional actually closed	Trails actually remaining	Trails Percent closure per SNRAMP	Trails percent closure actual
Glen Canyon	23251	3173	5515	14563	14%	37%
Bayview	4610	1752	1607	1251	38%	73%
Twin Peaks	9400	2779	3736	2885	30%	69%
Billy Goat Hill	2660	598	1412	650	22%	76%
Hawk Hill	1639	702	937	0	43%	100%
Grandview	1893	239	627	1027	13%	46%
Corona Heights	6230	1589	1896	2745	26%	56%
total	49683	10832	15730	23121	22%	53%

Note, there is a discrepancy in the Bayview Hill numbers. The SNRAMP includes the length of the road. This is not in the Plan area. It has been removed from the numbers above.

So, the Natural Areas Program has been closing about 2.5 times the amount of trails than what is disclosed in the SNRAMP. The EIR cannot be valid because it is not evaluating the actual plan of the Natural Areas Program.

See Appendix F for more detailed information on the trail closures to date.

6 Tree Replacement

We noted in section 2.2 the DEIR and the RTC make the unwarranted assumption that removed trees will be replaced, that the replacement will be on a 1:1 basis, that the replacements will be trees and that the replacement trees will be planted in the project area. These assertions are not supported by any language in the SNRAMP.

This is not just a critical issue for greenhouse gas emissions. A reduction in the number and size of trees in the project area also impacts air quality, aesthetics, wind and hydrology. All of the following sections of the DEIR and RTC hinge on the tree replacement premise.

DEIR

III.E.5	Management Practices
Impact LU-7:	Implementation of programmatic projects under the SNRAMP would not have a substantial impact upon the existing character of the vicinity. (Less than Significant)
Impact AE-1:	Implementation of programmatic projects under the SNRAMP would not have a substantial adverse effect on a scenic vista. (Less than Significant)
Impact WS-1:	Implementation of the programmatic projects under the SNRAMP would not result in significant ground-level wind hazards and windthrow risks. (Less than Significant)
Impact BI-2:	The SNRAMP and implementation of programmatic projects under the SNRAMP would have a substantial adverse effect on special status bird species. (Less than Significant with Mitigation)
Impact AF-4:	Implementation of the programmatic projects under the SNRAMP would not have a substantial adverse effect on the loss or conversion of farmland or forest land. (Less than Significant)
VII.B.2 Impacts	Wind and Shadow
VII.B.2 Impacts	Hydrology and Water Quality
VII.D.2 Impacts	Wind and Shadow

RTC

Response PD-3	General opposition to the project
Response PD-34	Elimination of 18,000 trees
Response LU-4	Applicability of San Francisco Urban Forestry and Landmark Tree Ordinances
Response AE-1	Aesthetics [AE]
Response CP-8	Impacts of tree removal on historic Mount Davidson Area
Response CP-9	Inadequate/Incomplete HRER for Mount Davidson

Response AQ-1	Increased pollution from tree removal activities
Response BI-12	Tree removal at Mount Davidson
Response BI-30	Impacts related to the removal of nonnative trees and invasive vegetation
Response BI-33	SNRAMP proposals for tree replacement
5.A.3 Chapter III:	Project Description
5.A.12 Chapter VI:	Other CEQA Issues
5.B.3 Section V.B:	Project Description

A mitigation measure must be put in place to record data on the trees removed, trees planted and the survival of the planted trees.

7 Implementation before Certification

The NAP has been flagrantly violating CEQA, moving forward with the Program before EIR certification. The EIR denies this, despite the many examples.

RTC Response G-3 page 4-20 With respect to bond monies spent in various parks says,

"It is possible that some of these monies could be used for management actions and improvements proposed under the SNRAMP, but no physical improvements could be accomplished unless and until this EIR is certified by the Planning Commission." It goes on to say the NAP "provided fencing for public safety" as part of the Glen Canyon Restoration Project. In fact, only a small percentage of the fence installed on that project was for public safety. The remainder was for public access control. The EIR does not mention the extensive trail closures implemented under that project.

In 2002 the Board of Supervisors issued resolution 653-02 requiring the RPD halt implementation of the Natural Areas Plan until a final plan was approved. That plan is the subject of the EIR before you. The resolution clearly defines the difference between implementing the plan versus a holding pattern for the Natural Areas Program.

FURTHER RESOLVED, That until the Natural Areas Management Plan is completed and approved by the Board of Supervisors, the Natural Areas Program may continue to preserve and maintain genuine remnants of San Francisco's native flora and fauna so long as those activities do not include:

Removal of healthy trees that pose no safety hazards

Trail closures, or restrictions on access and recreation

Trapping and removal of wild or feral animals currently inhabiting parks and lakes

Expansion of activities into areas that no longer support predominantly native flora and fauna

We have clear information from CEQA and additional guidance from the Board of Supervisors about what amounts to plan implementation prior to EIR certification. **RPD has been violating CEQA and the BOS resolution.** Violations include the following:

- Closure of trails
- Installation of public access control fences
- Installation of signs restricting the public to "designated" trails making it illegal for park goers to use "un-designated" trails and making off-trail use illegal.
- Installation of signs prohibiting people from riding bicycles, or even walking bicycles into Plan management areas.
- Removal of healthy trees.

-Establishing new native plant gardens in areas that no longer supported predominantly native flora.

Below is a detailed listing of these violations:

Citywide

- Signs have been placed in almost all parkland managed by the NAP that say, "Stay on Designated Trails. No Bicycles."

Glen Canyon Park

- The NAP closed 8,688 feet of trails since 2006.
- Extensive fencing intended to discourage public access was erected at many locations in the park. The SNRAMP EIR claims RPD "provided fencing for public safety" when in fact only about 153 feet of fence was installed for public safety. The remaining 680 feet of split rail fence was installed purely for public access control.
- a fenced native plant garden was added in SNRAMP zone MA-3b that did not previously support predominantly native flora. The SNRAMP criteria for MA-3 areas includes the "absence (current or historic) of sensitive plants"

Mt. Davidson

- As part of the Mt. Davidson Seismic Tank upgrade by the SFPUC in 2008, the NAP insisted that the water pipeline from the Stanford Heights Reservoir to the tank on Mt. Davidson be relocated from its existing location among shrubs and grass to the forested area. This required clear cutting a swath of healthy trees up the face of the mountain.
- In about January 2014 the trail below the lower saddle viewing area on the east side of the park was blocked off with felled trees and limbs. More trees and limbs have been added since.
- In October 2015 the trail that runs north from the cross down to the open plateau and rocky knoll was blocked off with felled trees and limbs. This is a historic WPA trail with extensive stone work. One staircase was stuffed full of tree limbs. In the summer of 2016, in the same area, two staircases constructed with wood treads were ripped out. The steel spikes that had held the treads were left protruding from the ground.

McLaren Park

- Multiple trails have been closed in the area south of Mansell and west of Visitacion.
- Fencing was installed at the Visitacion overlook parking area to prevent people from walking out onto the knoll above Visitacion Valley.
- The trail that runs along twin water tanks fence line was closed.
- Native plantings were extended into areas that did not support predominantly native flora and fauna under the McLaren Park Connector Trail Project. Plantings were established at the Persia, Campbell and Visitacion entrances. The Persia and Campbell sites are classed MA-3, "absence (current or historic) of sensitive plants". The project plan for the Persia site indicates a large healthy tree at the south end of the project site is to remain. That tree has disappeared. The fencing for the Campbell site blocked the trail running north from the sidewalk intersection. That was subsequently removed by the public. The Visitacion site is classed MA-2, still not an area that "supports predominantly native flora". The project plan for the Visitacion site indicates 2 healthy trees at the SW corner of the project. One of them went missing.
- Based on numbered stumps, one hundred trees were cut in the summer of 2014 in conjunction with the Visitacion trail restoration project. The 2012 HortScience McLaren Park Tree Risk Assessment report only identified 26 trees in the project area that should have been removed.

Pine Lake

- Fencing has been erected around the lake to limit public access.

Twin Peaks

- The NAP has active plans to close trails on Twin Peaks under the Figure 8 project. These trail closures, in conjunction with the "stay on designated trails" signage, will effectively close the two southern lobes of Twin Peaks to the public.

See: http://sfrecpark.org/wp-content/uploads/TwinPeaksMeeting2_11.02.11.pdf

Trail closures are faintly marked on pages 33 and 34. The trail that runs down the South lobe was closed in August/September 2016.

India Basin Shoreline Park

- The coastline of the SE parcel of the park at the foot of Arelious Walker Street has been made off limits to the public. Permanent fences were erected and signs posted that say "Wildlife Area No Access."

Bayview Hill

- Split rail fencing has been installed under the Bayview Trail Improvement Project that closes off the north-west quadrant of the park. The gate in the steel fence has been locked, closing off the south-west quadrant of the park to the public.

Bernal Hill

- The trail on the NE end of the park just east of Folsom St has been blocked. It is the easiest, most sustainable route up onto the hill along the entire north face. The NAP has active plans to close additional trails under the Bernal Heights Park Trails Improvement Project.

Also see Appendix F. It shows the trail closures planned under the SNRAMP and also shows which trails have been closed by the NAP since work was started on the EIR in 2005. The footage of access control fencing installed in each area is given. These trail closures and fence installations are all CEQA violations.

The Recreation and Parks Department should be admonished for violating CEQA. Where practical, these violations should be cured. No further violations should be allowed until this EIR is corrected, certified and the Plan adopted by the Recreation and Parks Commission.

8 Bicycle Prohibition

The SNRAMP hints that its drafters consider bicyclists to be a problem, but does not state any broad action that would be taken to restrict bicycle use in Natural Areas. However, in early 2015, the NAP erected signs prohibiting the public from bringing bicycles into Natural Areas. (See the sign photo in section 1.) The NAP is only allowing bicycles on a few trails by special exception. Prior to the posting of these signs, RPD regulations permitted bicycles on all trails unless signs were posted forbidding them. There were no such signs in the Natural Areas when the new signs were installed. See the discussion in Appendix G.

This hidden agenda of the NAP was not disclosed in the SNRAMP and the idea that the implementation of the SNRAMP would bar people from walking their bikes or riding them in NAP managed parklands is incorrectly addressed by the RTC.

Not only does the prohibition prevent people from riding their bicycles in our parks, it prevents them from riding their bicycles to our parks. You cannot expect people to lock their bicycles at park borders and leave them while they spend time in the park. Bike theft is just too rampant. **This bicycle prohibition flies in the face of City initiatives including Green Connections, Transit First and the ROSE.**

RTC Response PD-6 "Opposition to the proposed public access restrictions" page 4-146 claims,

"The SNRAMP does not propose changes to bicycle use in the Natural Areas."

This is not true. Prior to the NAP's premature implementation of the SNRAMP, bicycles were allowed anywhere in Natural Areas unless specifically prohibited. In 2015, the NAP blanketed the Natural Areas with signs prohibiting riding or walking bicycles in Natural Areas.

Response RE-10 "Recreational analysis related to trails" page 4-339

"The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use. Off-road bicyclists would be affected by proposed trail closures similarly to other trail users, such as hikers and runners."

That is incorrect. The NAP allows all other users on Designated Trails while people with bicycles are forbidden to enter Program areas at all.

The RTC fails to address this important issue and misstates the facts.

9 Aesthetic Impact of Fences

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that the use of fences will be much more extensive than what is disclosed in the SNRAMP.

Recommendation GR-11C in the SNRAMP says, "If off-trail use continues in a particularly sensitive habitat (e.g., wetlands), permanent fencing shall be considered as a last resort once all other options, including enforcement, have failed." In fact, the NAP has installed vast quantities of fencing that have a Significant Environmental Effect on Aesthetics. The EIR only discusses the aesthetic impact of the seawall fence at Sharp Park. The impact of fences in other areas is not addressed.

Parks particularly hard hit with fences are Corona Heights, Grandview and Glen Canyon where fences are now dominant features of the landscapes. Here is a tabulation for parks that have benefited from "improvement" projects.

Bayview Hill	430 feet 80 feet	Chainlink fence installed some time ago, but gate now locked splitrail fence installed since 2005
Corona Heights	936 feet 500 feet	splitrail fence installed since 2005 low wire fence (not the old chainlink fence for public safety)
Glen Canyon	680 feet	splitrail fence installed since 2005

80 feet plastic on metal posts installed since 2005

Grandview 856 feet splitrail fence installed since 2005

See the fence photos in Appendix H.

The effect of fences on Aesthetics is a Significant Environmental Effect not addressed by the EIR.

10 Bias

The EIR contains a surprising number of statements that are not true. Their inclusion indicates bias by the drafters of the document.

- A Response GG-1 and its supporting technical memorandum, "Sequestration Study of Greenhouse Gases for SNRAMP" discussed in Section 2.3 are wrong. Given the author's "expert" status, one can only assume the faulty GHG accounting method was intentionally presented.
- B HortScience, a frequent beneficiary of NAP contracts, was asked to author a very unscientific paper in January 2013 titled, "Age of blue gum in San Francisco's Natural Area Parks". This report is cited by ESA in their carbon sequestration memo and used to support the false GHG calculations that appear in the EIR.

HortScience cites their assessment of 800 blue gums larger than 6" diameter, with a median size larger than 20" diameter to make the statement that, "Given my observations of blue gum in Glen Canyon, McLaren, Mount Davidson and Pine Lake Park, I estimate that at least 90% are more than 20 years old." Obviously, given the large trees Mr. Clark was examining, they were indeed more than 20 years old. Given the title of the document, you would think these statements were referring broadly to all trees in our Natural Areas, but the writing allows the possibility he was referring to only the large trees he was assessing.

HortScience never actually studied the parks with the intent to determine the mix of tree ages. Their work included no assessment of smaller trees. The only evidence presented about the quantity of young trees is:

-a paper from Dr. Joe McBride from 1994 related to some specific stands in the Presidio and Golden Gate Park.

-an examination of Google Earth historical photos from which he somehow deduces that there are very few young trees in our forests.

-finally the author says young trees observed at the edges of the stands examined were not common. (That is a recollection of something the author was not specifically looking at when he was in the parks.)

HortScience must know there is a high percentage of young trees in our natural areas. The language of this memo is intentionally ambiguous to give the impression the author is saying 90% of the blue gums in our natural areas are more than 20 years old, when the legalistic meaning is that 90% of the trees HortScience specifically assessed were more than 20 years old.

Please see the photos in Appendix E. These were taken in various natural areas that show the mix of trees that actually exist.

- C The HortScience report only dealt with observations of a few parks in San Francisco, yet the EIR specifically cites it to claim that 90% of the trees in Sharp Park are more than 20 years old. There is no connection. RTC Footnote 76, page 4-300
- D Impact of removing benches and recreational amenities

The response to comments about the removal of benches from Natural Areas, RE-11 page 4-340 contains an outright lie,

"In 2011, SFRPD removed a bench on the northern portion of Mt. Davidson because it was rotting and unsafe for sitting. " The truth is revealed in the email below sent by Chris Campbell of the NAP. The bench was not rotting and unsafe. It was removed because people liked it and used it.

Subject: Re: Bench missing on Mt. Davidson
From: Christopher.Campbell@sfgov.org
Date: Thu, 27 May 2010 08:42:45 -0700

Hello Jacquie,

The bench that you're referring to was installed by the Recreation and Park Natural Areas Program. It was installed a number of years ago on this site to take advantage of the views, beauty and serenity of the plateau. We monitored the use of the bench and it unfortunately became an attractive nuisance. The secluded location was a draw for night time drinking and smoking. Bottles were thrown down the hill slope and most often broke, causing a hazard for both animals and people. Secondly the bench became a draw for commercial dog walkers, at times with more than 12 dogs in the area at once. This activity resulted in trampling of this sensitive slope, disturbance of wildlife and the creation of trails around the bench. One of the trails remains in the grassland below the bench location. After consideration we concluded it was best to remove this bench.

Over the coming year we will evaluate the installation of benches city-wide. This will be done in correlation with a natural areas trail project. Due to the activities associated with this bench we unfortunately do not have intentions to re-install one on the lower plateau at Mount Davidson.

Sorry for the disappointment this may bring,
Christopher

Christopher Campbell
Natural Areas Program

- E Closure of the Miraloma trail in Glen Canyon, Comment LU-2 page 4-214
In Glen Canyon the only sustainable trail on the entire west side of the park was closed. This runs from O'Shaughnessy Blvd. down to the Silver Tree Camp.

Response LU-2

"The trail to which the commenter refers (at the entry to the park from O'Shaughnessy Blvd.) was closed prior to the commencement of the environmental review for the SNRAMP. This unofficial path was deemed unsafe, due to a significant presence of poison oak. A low post-and-cable fence was installed near Silver Tree camp and day care center to discourage use. This trail closure is not part of the SNRAMP project and thus was not analyzed in the EIR."

This is a fabrication. The trail closure is part of the SNRAMP. The trail is shown on the SNRAMP Glen Canyon map as an existing trail slated for closure. (SNRAMP page 6.3-24) The bottom of the trail was closed with a split rail fence after 2011. The trail itself is not hazardous. The NAP could easily control the poison oak along the trail if they wanted to. They simply want to exclude the public from the west side of the park.

Not only is this trail closure planned under the SNRAMP and subject to this EIR, it was still indicated as an existing trail under the Glen Canyon Trails Improvement Project published in July 2011. It clearly shows this trail as one they plan to close under that project.

<http://sfrecpark.org/wp-content/uploads/GlenCanyonTrailconceptplan.pdf>

F Forest Management Objectives

As noted in section 2.4 of this document, the EIR willfully misstates the forest management objectives of the SNRAMP. This occurs on pages 4-284 to 4-285 of the RTC. It is amazing the authors would try to pass off such a bald lie involving the fundamental purpose of the SNRAMP tree removals.

San Francisco, Ca. 94102-4689

Re: Planning Case No. 205.1912E SNRAMP

Board Members:

The Quercus Group appreciates the opportunity to submit Significant Natural Resource Areas Management Plan EIR comments on behalf of the San Francisco Forest Alliance. We incorporate by reference the Alliance forest comments of November 27, 2016.

Review of the EIR finds that the project fails to comprehensively analyze or feasibly and proportionally mitigate terrestrial conversion vegetation and soil organic matter direct/indirect¹ greenhouse gas (GHG) emissions pursuant to California Environmental Quality Act (CEQA) requirements. Specifically, the failure to fully account for the foreseeable carbon dioxide (CO₂) and methane (CH₄) emission effects due to biomass disposal decomposition (Exhibit A) and soil disturbance. These EIR omissions represent a failure to proceed in the manner prescribed by CEQA.

Forest Resources Conversion Greenhouse Gas Emissions

The limitations of the Intergovernmental Panel on Climate Change (IPCC) generic vegetation land use change general default standards were clearly demonstrated in the excellent Forest Alliance comments. The California Emissions Estimator Model (CalEEMod) used for the EIR GHG biogenic emissions analysis employs IPCC forest general defaults that are unrelated to actual California forest carbon stocking conditions (CalEEMod, Appendix A, pp. 51, 52). This one size fits all approach does not reflect California's diverse forests resources and fails to account for CEQA site-specific forest conversion requirements or other pertinent California GHG policies/laws (Exhibit B). In fact the only IPCC general default standards relevant to California forest resources are the international GHG global warming potential (GWP) values established by the 2013 IPCC Fifth Assessment Report.

CEQA § 15364.5 states that "Greenhouse gas" or "greenhouse gases" includes but is not limited to: carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons and sulfur hexafluoride. In 2016 Senate Bill 1383 designated methane a short-lived climate "super" pollutant.² Neither the 2009 CEQA GHG amendments nor the enabling legislation Senate Bill 97 mention the term "carbon sequestration." CEQA's focus is "*the mitigation of greenhouse gas emissions or the effects of greenhouse gas emissions.*" Further, the EIR must explain how the terrestrial conversion mitigation proposals result in less than significant GHG emissions consistent with state 2020, 2030 and 2050 GHG reduction targets.

¹ CEQA recognizes these secondary GHG biogenic emissions in the indirect effects language of Guidelines § 15358(2), "... are later in time or farther removed in distance, but are still reasonably foreseeable."

² SB 1383 requires a 40 percent statewide reduction in methane emissions from 2013 levels by 2030.

Upon the disposal of impacted vegetation, the decomposition of biomass does in all cases result in CO₂ and CH₄ biogenic emissions.³ CEQA doesn't differentiate between anthropogenic and biogenic GHG emissions. The following 2009 Natural Resources Agency response to the California Wastewater Climate Change Group proves the point:

Response 95-1: "Regarding the comment that the Guidelines should distinguish between anthropogenic and biogenic carbon dioxide emissions, the Natural Resources Agency notes that SB 97 did not distinguish between the sources of greenhouse gas emissions. Thus, it would not be appropriate for the Natural Resources Agency to treat the different categories of emissions differently absent a legislative intent that the Guidelines do so. Neither AB 32 nor the Air Resources Board's Scoping Plan distinguishes between biogenic and anthropogenic sources of greenhouse gas emissions. On the contrary, the Scoping Plan identifies methane from, among other sources, organic wastes decomposing in landfills as a source of emissions that should be controlled. (Scoping Plan, at pp. 62-63)."

AB 32 defines carbon dioxide equivalent (CO₂e) to mean, "... the amount of carbon dioxide by weight that would produce the same global warming impact as a given weight of another greenhouse gas, based on the best available science, including from the Intergovernmental Panel on Climate Change."

"The IPCC released its Fifth Assessment Report (AR5) in 2013, including scientific research and conclusions regarding current GHG global warming potential (GWP) values for determining CO₂e. The IPCC recommends using the AR5 GWP values, as they reflect the best information on global warming potentials. The Air District is using the GWP values from AR5, which include a GWP for methane (including all feedback effects) of 34. We recommend that ARB also use GWPs from AR5 in the Strategy."⁴ Consistent with the AB 32 carbon dioxide equivalent definition, the Bay Area Air Quality Management District uses the GWP values from AR5.

CalEEMod Model Methodology

The CalEEMod model is used for project forest conversion GHG biogenic emissions analysis. Like all publicly available forest conversion models the CalEEMod measures only the carbon loss (emission) or carbon gain (sequestration). The CalEEMod was not designed to calculate vegetation methane biogenic emissions due to biomass decomposition. The California Air Pollution Control Officers Association have never claimed their model has that capability regarding forest resources conversion GHG biogenic emissions analysis.

Other flawed aspects of the forest resources GHG biogenic emissions analysis include:

- "IPCC Good practice Guidance for Land Use and Forestry (2003) applies a 20 year window for calculating positive sequestration from trees" (Appendix B).

The cited IPCC standard is antiquated, pre-dating California's development of extensive GHG policy and law. Both forest resources and GHG biogenic emissions are analyzed over a standard one-hundred year planning horizon. The assertion that trees are limited to a 20 year positive carbon sequestration window is baseless and the EIR provides no science or fact to support this speculative opinion. In fact planted native oak trees don't attain appreciable carbon sequestration until about 20 years of age.

³ "Anaerobic digestion, chemical process in which organic matter is broken down by microorganisms in the absence of oxygen, which results in the generation of carbon dioxide (CO₂) and methane (CH₄) Sugars, starches, and cellulose produce approximately equal amounts of methane and carbon dioxide." Encyclopædia Britannica (2016). <http://www.britannica.com/EBchecked/topic/22310/anaerobic-digestion>.

⁴ BAAQMD May 26, 2016 letter from Jack P. Broadbent, Executive Officer/APCO to Richard Corey, Executive Officer, California Air Resources Board regarding ARB Short-Lived Climate Pollutants Strategy.

- The CalEEMod uses a IPCC forest general default of 111 metric tonnes (MT) of CO₂e emissions per acre.

Dividing 111 MT CO₂e by 3.67 yields 30 MT biomass/soil carbon sequestration per acre. Based on the age and density of the forest this figure substantially underestimates the carbon sequestration stocking per acre values of the thousands of large trees to be removed. Actual non-plantation eucalyptus aboveground biomass carbon sequestration stocks are ± 60 MT C/acre and 0.4 MT C/acre-year. According to the latest literature eucalyptus soil carbon stocks are as high as 50 MT C/acre.

- “At the end of the 20 year horizon window of the SNRAMP, there would be a calculated net gain of sequestration of approximately 388 MT of CO₂ per year. The primary contributing factor to this sequestration gain would be the removal of an aging eucalyptus tree population which would be replaced with much more efficiently sequestering tree and plant growth” (Appendix B).

The EIR does not stipulate that new planted trees will be a mitigation measure. Nor does it provide data on the species/number of planted trees required to reduce GHG biogenic emission impacts consistent with state 2020, 2030 and 2050 reduction goals. Essentially the EIR is falsely claiming that the existing forest carbon sequestration capacity will be more than replaced by the grassland sequestration. Quercus Group suggests the EIR preparers query the USDA Forest Service or CALFIRE regarding the veracity of this assertion.

- The SNRAMP defines a Tree as a tree having a dominant vertical trunk greater than 15 feet tall. Smaller trees are considered “Saplings” (EIR at 92).

The thousands of EIR uncounted “saplings,” which under the plan may be removed, would replace the “aging eucalyptus tree population” over time and sequester significantly more carbon, much faster than grassland.

To accurately and fully account for forest conversion GHG biogenic emissions the total biomass weight or total biomass carbon weight of the impacted overstory/understory vegetation must be known, the means of vegetation disposal identified and the soil organic matter emissions calculated.

- Please provide the following forest resources information:
 1. What is the estimated total biomass weight or total biomass carbon weight of all the impacted vegetation?
 2. What are the estimated biomass decomposition CO₂ and CH₄ emissions?
 3. What are the estimated soil organic matter CO₂ biogenic emissions associated with ground disturbing activities?⁵

⁵ Soil organic matter (SOM) is the organic matter component of soil, consisting of plant and animal residues at various stages of decomposition, cells and tissues of soil organisms, and substances synthesized by soil organisms. The SOM carbon sequestration zone extends to a depth of 1 meter.

The EIR provides no science or fact to support how its potential mitigation measures are going to actually mitigate the project's dual impacts of lost forest carbon sequestration capacity *and* significant biomass disposal/soil disturbance GHG biogenic emissions.

- Please provide the following forest resources mitigation information:
 1. Demonstrate mathematically how the proposed measures will mitigate the CO₂ and CH₄ biogenic emissions due to the decomposition of the impacted biomass.
 2. Demonstrate mathematically how the proposed measures will mitigate the soil organic matter CO₂ biogenic emissions associated with ground disturbing activities.
 3. Explain how the proposed mitigation is consistent with SB 1383 2030 reduction requirements regarding methane emissions.
 4. Explain how the non-tree planting migration measures are consistent with reducing GHG emissions statewide 80 percent by 2050.

Wetlands are major carbon sinks. Impacted wetlands carbon sequestration rates can take decades or longer to replicate through replacement mitigation. In general, Ambrose et al. (2007) found that the primary state and federal wetland protection programs have been generating more wetlands of lower quality than the wetlands they allowed to be destroyed. The EIR proposes the conversion of freshwater marsh, willow scrub and wet meadow wetland habitat to open water habitat.

- Please provide the following wetlands conversion information:
 1. What are the estimated CO₂ and CH₄ biogenic emissions associated with impacts to all project area wetland classifications, including the dredging of up to 60,000 cubic yards of "material"?
 2. What is the estimated carbon sequestration rate (i.e. metric tonnes carbon per acre per year) for the wetland classifications replacement mitigation?
 3. Explain how the proposed mitigation is consistent with SB 1383 2030 reduction requirements regarding methane emissions.

Summary

The 2008 California Air Resources Board's AB 32 Scoping Plan recognized the significant contribution that terrestrial greenhouse gas storage will make in meeting the state's GHG emissions reduction goals: "This plan also acknowledges the important role of terrestrial sequestration in our forests, rangelands, wetlands, and other land resources." The EIR perpetuates the myth that forest and other terrestrial conversion GHG emissions are simply an issue of carbon transformed to carbon dioxide. This fallacy belies the fact that potentially four other GHGs are involved, including the super pollutant methane. The constant among court decisions regarding GHG analysis is that project emissions must be accurately and fully rendered in a CEQA document. This EIR appears designed to obfuscate and minimize project GHG biogenic emissions, rather than a bona fide attempt to comply with CEQA's focus of ascertaining the mitigation of greenhouse gas emissions or the effects of greenhouse gas emissions.

Substantial evidence has been presented that project GHG biogenic emissions will result in potentially significant environmental effects that have not been sufficiently analyzed or feasibly mitigated. The project has not made "a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate the amount of greenhouse gas emissions resulting from a project" (CEQA Guidelines § 15064.4(a)). Therefore the EIR is deficient as an informational document, in that it fails to apprise decision-makers/public of the full range and intensity of the adverse GHG emission effects on the environment that may reasonably be expected if the project is approved.

Sincerely,

A handwritten signature in black ink, appearing to read "Ron Cowan". The signature is fluid and cursive, with a long horizontal stroke at the end.

Ron Cowan, Principal

Exhibit A

Biomass Disposal Greenhouse Gas Emissions

The following chart illustrates the relative GHG indirect biogenic emission effects from common methods of vegetation (biomass) disposal.¹ The biomass combustion GHG emission values do not include black carbon emissions.

Uncontrolled landfill disposal produces the greatest biomass GHG biogenic emissions followed by composting, open burning, mulching, forest thinning, controlled landfills and biomass power. The chart demonstrates that peak greenhouse gas emissions vary substantially depending on the means of biomass disposal, with the higher peaks reflecting increased amounts of methane and/or nitrous oxide emissions.

Terminology: Net effect of thinning emissions apply to forest thinning emissions and spreading emissions are equivalent to mulching emissions.

¹ One bone dry ton (bdt) is a volume of wood chips (or other bulk material) that would weigh one ton (2000 pounds, or 0.9072 metric tons) if all the moisture content was removed.

Exhibit B

Terrestrial Conversion Greenhouse Gas Emissions

Policy and Regulatory Framework

The following policy and regulatory background information provides context to the importance of reducing and feasibly mitigating terrestrial conversion greenhouse gas (GHG) biogenic emission effects:

Governor Brown

"We must also reduce the relentless release of methane, black carbon and other potent pollutants across industries. And we must manage farm and rangelands, forests and wetlands so they can store carbon." – January 2015 inaugural address regarding the state's greenhouse gas reduction goals for the next 15 years.

California Air Resources Board

"California is committed to reducing emissions of CO₂, which is the most abundant greenhouse gas and drives long-term climate change. However, short-lived climate pollutants [methane, black carbon, etc.] have been shown to account for 30-40 percent of global warming experienced to date. Immediate and significant reduction of both CO₂ and short-lived climate pollutants is needed to stabilize global warming and avoid catastrophic climate change." *Reducing Short-Lived Climate Pollutants in California, 2014.*

Assembly Bill 32

Signed by Governor Schwarzenegger on September 27, 2006. This statute requires a statewide GHG emissions limit equivalent to the statewide greenhouse gas emissions levels in 1990 to be achieved by 2020.

Senate Bill 97

Signed by Governor Schwarzenegger on August 24, 2007. This statute required that the Office of Planning and Research prepare CEQA guidelines for evaluating the effects of GHG emissions and for mitigating such effects. The Natural Resources Agency adopted these guidelines on December 31, 2009.

Senate Bill 32

Signed by Governor Brown on September 8, 2016. This statute requires that statewide GHG emissions be reduced to 40% below the 1990 level by 2030.

Senate Bill 1383

Signed by Governor Brown on September 19, 2016. This statute requires a 50 percent statewide reduction in black carbon emissions and a 40 percent reduction in methane and hydrofluorocarbon emissions from 2013 levels by 2030.

Executive Order S-3-05

Signed by Governor Schwarzenegger on June 1, 2005. Executive Order S-3-05 established a California GHG reduction target of 80 percent below 1990 levels by 2050.

Phoenix Energy

"As wood starts to decompose it releases roughly equal amounts of methane (CH₄) and carbon dioxide (CO₂)."

 2014. <http://www.phoenixenergy.net/powerplan/environment>

Macpherson Energy Corporation

"Rotting produces a mixture of up to 50 percent CH₄, while open burning produces 5 to 10 percent CH₄."

San Francisco Board of Supervisors
1 Dr. Carlton B. Goodlett Place
City Hall, Room 244
San Francisco, CA 94102

Please Support the EIR Appeal Significant Natural Resource Areas Management Plan

Dear Members of the Board of Supervisors,

We ask you to please support the appeal of the Environmental Impact Report (EIR) for the Significant Natural Resource Areas Management Plan.

We are concerned that the EIR violates CEQA law because it contains fundamental math errors, incorrect assumptions, and outdated science related to Greenhouse Gas Emissions.

We are concerned that the Significant Natural Resource Areas Management Plan violates AB 32, the California Global Warming Solutions Act, by generating significant carbon emissions and causing climate change by felling 18,448 large trees and only replanting 3,448 of them (a replacement rate of 0.19).

We are concerned that this Plan threatens public safety by causing climate change, degrading air quality, increasing mudslide risk, and spraying toxins in children's parks.

CEQA: The CEQA Guidelines §15364.5 require the City of San Francisco to determine the significance of impacts from Greenhouse Gas Emissions. Greenhouse gases include but are not limited to carbon dioxide, methane, and nitrous oxide. By law, the lead agency should make a good-faith effort, based on available information, to describe, calculate or estimate the amount of greenhouse gas emissions resulting from a project.

Please send the EIR back to Planning to correct the math errors and incorrect science contained within as follows:

- **Math Errors:** The EIR adds together a rate and a stock and produces a meaningless final number for Greenhouse Gas Emissions.
- **90% of Trees Deleted:** The EIR assumes 90% of the existing trees are absorbing no carbon because they are over 20 years old. According to best available science from 2010 Forest Ecology & Management and the 2014 U.S. Geological Survey, older trees continue to actively sequester more carbon than younger trees. To be good faith, all 18,448 trees must be included in the Greenhouse Gas Emissions.

- **Tree Survival Rates:** The Greenhouse Gas calculations in the EIR presume that 100% of the newly-planted trees will survive. This is overly optimistic. SF Rec and Park's numerical model assumes that all new trees are live oaks. Per the Department of Public Works, oaks are known to be uneven survivors in San Francisco because they prefer heat, wind protection, and good drainage. This is why in the 1800s, oak trees were found in San Francisco only in limited numbers in creek beds. To be good faith, a more realistic tree survival rate needs to be incorporated into the EIR when estimating net Greenhouse Gas Emissions.

CEQA law requires the lead agency, SF Rec and Park, to answer the following questions in good faith. Would the project:

- Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?
- Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?

The EIR Responses to Comments (4-301) concludes, "There would be a calculated total net sequestration gain of 202 MT of CO₂ per year." The Sharp Park portion of this total is shown as 64 MT, but this number is meaningless because it results from combining an annual rate with a stock. This is a fundamental math error that renders the result invalid.

When the math errors and assumptions are corrected using best available science and the same methodology, the new Greenhouse Gas calculations are shown below. Subsequently, a top sustainability and greenhouse gas verification firm was hired to perform the carbon calculations using best practices in accordance with AB 32. Per the attached appendix, they found that felling the 18,448 trees in the Plan would release total carbon emissions of **177,572 MT of CO₂e** and would result in a loss of carbon sequestration over the life of the project of **-44,275 MT of CO₂e**.

Greenhouse Gas Emissions for SNRAMP

	Annual Carbon Sequestration	Carbon Emissions
EIR with Errors:	Gain of +202 MT of CO ₂ per year	Not Presented
Corrected Math:	Loss of -2,401 MT of CO ₂ per year	65,101 MT of CO ₂
Top GHG Firm:	Loss of -44,275 MT of CO ₂ e	177,572 MT of CO ₂ e

Therefore, the Greenhouse Gas Emissions caused by the Natural Resource Areas Management Plan are significant under CEQA, violate the California Global Warming Solutions Act (AB 32), and must be mitigated.

The EIR Responses to Comments (4-301) erroneously concludes, “The proposed project would have a net GHG benefit and would not conflict with California’s goal of reducing GHG emissions set forth by the timetable established in AB 32.”

By presenting Greenhouse Gas calculations in the EIR that contain both fundamental math errors and assumptions that have been disproved by modern science, SF Rec and Park did not make a good-faith effort to estimate the greenhouse gas emissions from this project as required by law. Please refer the EIR back to Planning to remedy this.

Tree Replacement Rate: The tree replacement ratio in the EIR is only **0.19**. SF Rec and Park would replant only 3,448 trees out of 18,448 felled. Per the EIR on page 92, “Trees removed in San Francisco would be replaced with native tree species at a ratio of roughly one-to-one, although not necessarily at the same location or within the same Natural Area. For Sharp Park in Pacifica, many of the trees would be replaced not with trees but with native vegetation, specifically coastal scrub.” The SF Rec and Park Memo “SNRAMP Tree Removal and Replacement” dated November 27, 2012 states, “At Sharp Park, a total of 15,000 trees will be removed and replaced over 20 years with native grassland or coastal scrub.” The numerical model used by SF Rec and Park to calculate Greenhouse Gases replants grassland in place of the 15,000 trees killed in Sharp Park.

This Plan will cause climate change by deforesting 15,000 large carbon-sequestering trees without replacement. We request that the minimum replacement rate be **1:1** or 18,448 trees. Best practice per the U.S. Forest Service 2016 would be **3:1** to account for the loss of carbon sequestration and the inevitable partial mortality of the saplings. If the replacement rate is not raised from 0.19 to a guaranteed 1:1 or higher with trees, then this Plan will cause climate change and threaten public safety.

Air Pollution: We are concerned that cutting down 15,000 trees without adequate replacement per the Significant Natural Resource Areas Management Plan will hurt human and environmental health by worsening air pollution. The EIR states that the deforestation “would result in significant unavoidable air quality impacts as a result of exceeding the BAAQMD thresholds for NOx pollutant emissions.” It concludes that “cumulative impacts associated with criteria air pollutants would be significant and unavoidable.” (EIR pages 438-440) We urge the SF Board of Supervisors to please send the EIR back to Planning for further air quality mitigation measures.

Herbicides: SF Rec and Park’s spraying of herbicides including Roundup required by the Plan is posing a threat to public health and safety. Per SF Rec and Park, “If you don’t treat a felled eucalyptus stump with herbicides, it will come back.” Glyphosate in Roundup was declared a probable carcinogen by the World Health Organization. The four toxic herbicides being used in the Natural Resource Areas are Roundup, Garlon 4 Ultra (triclopyr), Milestone (aminopyralid), and Habitat (imazapyr). San Francisco residents are very concerned that SF Rec and Park is polluting children’s parks with cancer-causing chemicals in order to kill trees that the public wants to stay standing.

In summary, SF Rec and Park's plan to cut down over 18,000 large trees without adequate replacement and spray toxic herbicides would damage public safety, public health, and the environment.

Please refer the EIR back to Planning so that it can provide an accurate picture of Greenhouse Gas Emissions under the California Environmental Quality Act and include further mitigation for the environmental harm to climate and public health. Otherwise, the City will be vulnerable to future risks under CEQA.

Please ensure that the City of San Francisco continues to be a global leader in the fight for climate resilience.

Thank you for your help and consideration.

Sincerely,

Nadine Weil

Tree growth never slows

Idea debunked that young trees have the edge on their older siblings in carbon accumulation.

Jeff Tollefson
January 15, 2014

Trees add an increasing amount of mass every year.

Many foresters have long assumed that trees gradually lose their vigor as they mature, but **a new analysis suggests that the larger a tree gets, the more kilos of carbon it puts on each year.**

“The trees that are adding the most mass are the biggest ones, and that holds pretty much everywhere on Earth that we looked,” says Nathan Stephenson, an ecologist at the US Geological Survey in Three Rivers, California, and the first author of the study, which appears today in *Nature*. “Trees have the equivalent of an adolescent growth spurt, but it just keeps going.”

The scientific literature is chock-full of studies that focus on forests' initial growth and their gradual move towards a plateau in the amount of carbon they store as they reach maturity. Researchers have also documented a reduction in growth at the level of individual leaves in older trees.

In their study, Stephenson and his colleagues analyzed reams of data on 673,046 trees from 403 species in monitored forest plots, in both tropical and temperate areas around the world. They found that the largest trees gained the most mass each year, capitalizing on their additional leaves and adding ever more girth high in the sky.

Although they relied mostly on existing data, the team calculated growth rates at the level of the individual trees, whereas earlier studies had typically looked at the overall carbon stored in a plot.

Estimating absolute growth for any tree remains problematic, in part because researchers typically take measurements at a person's height and have to extrapolate the growth rate higher up. **But the researchers' calculations consistently showed that larger trees added the most mass.** In one old-growth forest plot in the western United States, for instance, trees larger than 100 centimeters in diameter comprised just 6% of trees, but accounted for 33% of the growth.

The findings build on a detailed case study published in **2010**, which showed similar growth trends for two of the world's tallest trees — the coast redwood (*Sequoia sempervirens*) and the **eucalyptus** (*Eucalyptus regnans*), both of which can grow well past 100 meters in height. In that study, researchers climbed, and took detailed measurements of, branches and limbs throughout the canopy to calculate overall tree growth. Stephen Sillett, a botanist at Humboldt State University in Arcata, California, who led the 2010 study, says that the latest analysis confirms that his group's basic findings apply to almost all trees.

The results are consistent with the known reduction in growth at the leaf level as trees age. Although individual leaves may be less efficient, older trees have more of them. And in older forests, fewer large trees dominate growth trends until they are eventually brought down by a combination of fungi, fires, wind and gravity; the rate of carbon accumulation depends on how fast old forests turn over.

“It’s the geometric reality of tree growth: bigger trees have more leaves, and they have more surface across which wood is deposited,” Sillett says.

The findings help to resolve some of these contradictions, says Maurizio Mencuccini, a forest ecologist at the University of Edinburgh, UK. “On an absolute scale, the old trees keep growing far more.”

The study has broad implications for forest management, whether in maximizing the yield of timber harvests or providing old-growth habitat and increasing carbon stocks. More broadly, the research could help scientists to develop better models of how forests function and their role in regulating the climate.

Appendix A-1
Technical Memorandum for Nadine Weil
02/16/17

Background:

This memorandum is intended to provide support to Nadine Weil regarding greenhouse gas (GHG) sequestration and emissions quantification related to implementation of the proposed Significant Natural Resources Area Management Plan (SNRAMP). The proposed activities include removal of non-native trees, predominantly *Eucalyptus globulus* (blue gum eucalyptus), in Pacifica (Sharp Park Natural Area) and in San Francisco (in several parks and natural areas), followed by subsequent replanting of the areas with diverse native vegetation types, as stated in the “Sequestration Study of Greenhouse Gases for SNRAMP” prepared by the firm Environmental Science Associates (ESA 2013).

The main purpose of this analysis is to provide a quantification using best practices of the carbon stored in the 18,448 trees proposed for removal at the Pacifica and San Francisco sites. Below and in the attached worksheet (“Euc_removal_GHG_021417.xls”), we provide detailed description of the quantification (including data and assumptions) used. Please note that much of the analysis uses the methods set forth in the US Forest Projects Protocol for California Air Resources Board’s compliance offset forest protocols for AB32 Cap and Trade. These are the most rigorous methods available. In addition, we calculated the amount of annual mean sequestration that would occur over the 20 year proposed timeline of the study. For the purposes of the study, all trees proposed for removal were assumed to be *Eucalyptus globulus*.

In summary, our results indicate the following:

Carbon Storage and Annual Carbon Sequestration

Parameter Measured	Sharp Park	San Francisco	Total
Loss of stored carbon for all trees	-144,383 MT CO ₂	-33,189 MT CO ₂	-177,572 MT CO₂
Loss of annual sequestration (over 20 years)	-36,000 MT CO ₂	-8,275 MT CO ₂	-44,275 MT CO₂

The numbers reported here (shown in negative to indicate emissions if the trees are harvested) are much larger than those reported in the ESA 2013 study used in the EIR. While limited information is available regarding the calculations employed in the ESA study, a principle reason for the difference may be the key assumption made in the ESA 2013 study that carbon sequestration ceases at 20 years of age. Based on best current scientific information (e.g. Nature 2014 and prior), we do not believe it is appropriate to assume that sequestration ceases at 20 years of age, or at any age for healthy trees, for that matter. More information to this effect is provided on page 3 of this memo.

Methodology:

Greenhouse gas calculations were conducted by converting volume of trees to biomass to carbon content to metric tons of CO₂e as follows.

Volume

Volumetric values were calculated in cubic feet from DBH values using local volume equations as follows:

$$\text{Vol (cf)} = a (\text{DBH})^b$$

Where a and b are known species-specific regression coefficients.

The following local volume equation was derived from Pillsbury and Reimer (1997), from local coastal California eucalyptus globulus stands:

- Blue-gum eucalyptus: $\text{Vol (cf)} = 0.055113 (\text{DBH})^{2.436970}$
- $= 0.055113 (28.0')^{2.436970}$

Note: Vol = volume outside bark

Converting Volume to Biomass:

Once volume was derived, the following steps were taken to determine the amount of carbon stored in the standing live Eucalyptus trees. The methodology used was the Air Resource Board (ARB) Cap and Trade AB32 US Forest Project Protocol for determining the amount of carbon in the live standing trees (ARB 2014; Appendix C, Section C.1):

- Multiply the cubic foot volume by the appropriate wood density factor by species. This results in pounds of biomass with zero moisture content, also referred to as biomass of dry weight.

A wood density factor of 49.92 lbs/ft³ was used, from the United States Forest Service's (USFS) Forest Inventory Analysis's wood density factor for *Eucalyptus globulus*.

- Biomass of dry weight= (volume * wood density)
- Multiply the biomass of dry weight values by 0.5 pounds of carbon/pound of wood to compute the total carbon weight.
- Divide the carbon weight by 2,204.6 pounds/metric ton to convert to metric tons of carbon.

Carbon estimates are presented in CO₂ equivalent rather than carbon (C) alone. Once carbon weight was derived, the total metric tons of CO₂ or CO₂e were calculated by multiplying carbon by 3.67, the molecular weight ratio of CO₂ to C (IPCC, 2007). Because the resulting carbon amounts were for trunks only, the following conservative ratio was used as a root to shoot ratio, added into the carbon total: 0.25.

Harvested Wood

The fate of the harvested wood determines the rate at which carbon is released into the atmosphere through decomposition. For example, if the wood is used in wood products, more carbon is retained than if it is allowed to decompose on the forest floor, or if it is mulched or sent to a landfill. Nowak et al 2002 modeled carbon content of wood over time following harvest, in two common tree disposal/utilization scenarios 1) mulching and 2) taking wood to landfills, two common tree disposal/utilization scenarios. Although no mulch decomposition studies could be found, studies on decomposition reveal that 37–56% of carbon in tree roots and 48–67% of carbon in twigs is released within the first 3 years. The remaining carbon was estimated to be lost within 20 years of mulching. For the purposes of this analysis, it was assumed that carbon in the harvested wood pool will be lost within 20 years; however a greater level of effort would be needed to determine this with greater accuracy.

Replacement with Native Vegetation following Removal of Trees:

The SNRAMP study states that removed trees at Sharp Park would be replaced with native grassland and coastal scrub over a 20 year period. ESA 2013 calculated replacement vegetation as grassland (rather than a scrub type) in the CalEEMod emissions estimator model. This is a conservative assumption given the scrub type would sequester more carbon than the grassland type. Replacement planting with trees in certain areas is also calculated in the ESA 2013 study.

A greater level of effort would be needed to prepare analysis for the replacement plantings. For the purposes of this report, the sequestration values for the replacement types are small compared to the numbers associated with the removal of trees.

False Assumption: Sequestration does not occur in trees 20 years and after

Based on best current scientific information (e.g. Nature 2014 and others), it is not appropriate to assume that sequestration ceases at 20 years of age. The study reported in Nature (2014) presents a global analysis of 403 tropical and temperate tree species, including *Eucalyptus* species, including 673,046 trees, demonstrating that for most species mass growth rate increases continuously with tree size. They found that the largest trees gained the most mass each year, capitalizing on their additional leaves and adding ever more girth high in the sky. The study finds that large, old trees do not act simply as senescent carbon reservoirs but actively fix large amounts of carbon compared to smaller trees. At the extreme, a single big tree can add the same amount of carbon to the forest within a year as is contained in an entire mid-sized tree. The apparent paradoxes of individual tree growth increasing with tree size despite declining leaf-level and stand-level productivity can be explained, respectively, by increases in a tree's total leaf area that outpace declines in productivity per unit of leaf area and, among other factors, age-related reductions in population density. The study's authors assert that their results resolve conflicting assumptions about the nature of tree growth, inform efforts to

understand and model forest carbon dynamics, and have additional implications for theories of resource allocation and plant senescence.

Carbon Emissions

Source: HortScience Memo, January 2013

Age

McBride and Froehlich (1984) noted that almost all of the older blue gum stands in San Francisco were even-aged, established in a brief period in the late 1800s and early 1900s. Therefore, many trees are over 100 years old.

Conclusion:

We used the smaller of the two total MT CO2 #'s to be conservative, but thought it would be interesting to see this as well.

Technical Memorandum

date February 19, 2013

to Nancy Clark; Barbara Sahm; Michael Li
Turnstone Consulting

from Chris Sanchez
Environmental Science Associates

subject Sequestration Study of Greenhouse Gases for SNRAMP

This Technical Memorandum is intended to provide an estimate of the greenhouse gas (GHG) sequestration and release potential related to implementation of the Significant Natural Resources Area Management Plan (SNRAMP). The SNRAMP would result in removal of non-native trees and their replacement with either native tree species or grasslands. These tree removal and replacement activities would occur at various restoration sites throughout the City of San Francisco as well as within the Sharp Park Natural Area (Sharp Park) in Pacifica, under the management of the San Francisco Recreation and Park Department. In addition, the SNRAMP outlines the City's program to propagate trees and plants at restoration sites throughout the City. Tree removal throughout San Francisco and in Sharp Park would result in initial CO₂ sequestration loss, whereas tree planting and planting of scrub, grasslands and herbaceous plants would result in carbon sequestration.

Methodology

The following analysis draws from a number of resources to estimate anticipated CO₂ sequestration gains and losses. These include the Urban Forestry Carbon Sequestration Workbook published by the U.S. Department of Energy,¹ the Center for Urban Forest Research Tree Carbon Calculator published by the U.S. Forest Service², the *Good Practice Guidance for Land Use, Land Use Change and Forestry* published by the International Panel on Climate Change (IPCC)³ and the CalEEMod emissions estimator Model supporting calculations.⁴

Trees have a relatively high rate of CO₂ sequestration potential. However, while the sequestration rate increases over a period of time (assumed to be approximately 20 years, based on professional practice), after that point the accumulation of carbon in biomass slows with age, and eventually is completely offset by losses associated with tree clipping, pruning, and occasional death (IPCC, 2003). Sequestration rates for grasslands and herbaceous plants, which grow quickly, were assumed to be static. This analysis applied tree age for Blue Gum (eucalyptus trees would be the predominant species removed) provided by San Francisco Recreation and Park Department to

⁴ SQAQMD, CalEEMod Appendix A, 2011.

determine increases and losses in CO₂. The Urban Forestry Carbon Sequestration Workbook was used to estimate increasing carbon sequestration of new tree plantings over a 20 year period. The Tree Carbon Calculator from the USFS was used as a source of sequestration rates for specific tree types to be removed as provided by San Francisco Recreation and Park Department.⁵ The CalEEMod model supporting documentation provided the sequestration rates for grasslands.

Sequestration Losses and Gains from Tree Replacement in San Francisco

Data provided indicate that 3,443 trees would be removed in San Francisco over a 20 year period. While six species of tree were identified for removal, species-specific sequestration rates could not be identified for four of these species. However, the remaining two species (eucalyptus and pine) comprise over 96 percent of the trees to be removed. Consequently, sequestration rates for the remaining species were assigned to the known sequestration rates equally. Based on field data estimates provided by Hort Science⁶, approximately 2,942 of these trees to be removed are Blue Gum trees greater than 20 years of age for which sequestration has been slowed and is assumed by IPCC Good Practice⁷ to be offset by maintenance and mortality. Loss of sequestration from trees to be removed in San Francisco is presented in Table 1.

Over the same 20-year period that trees would be removed, new tree plantings would occur. These trees were assumed, based on data provided, to largely consist of California Live Oak. Consequently, these trees were assigned to the “medium hardwood” category in the Urban Forestry Carbon Sequestration Workbook. Carbon sequestration increases over time from replanting 3,448 trees are also presented in Table 1.

Table 1 - CO₂ Sequestration Losses and Gains from Tree Removal and Planting in San Francisco

Tree Removal – San Francisco	Estimated CO₂ Losses (-) and Gains (+)
Annual Sequestration loss (over 20 years)	- 54 MT CO ₂ /year
Tree Plantings – San Francisco	
Annual Sequestration gained (year 20)	+ 192 MT CO ₂ /year
Net sequestration gain at end of 20 year program =	+ 138 MT CO ₂ /year

Sequestration Losses and Gains from Tree Removal and Grassland and Scrub placement in Sharp Park

Data provided indicate that 15,000 trees would be removed in Sharp Park over a 20 year period. These tree species are almost entirely eucalyptus. Based on field data estimates provided by Hort Science⁵, approximately 13,500 of these trees to be removed are Blue Gum trees greater than 20 years of age for which sequestration has been slowed and is assumed by IPCC Good Practice to be offset by maintenance and mortality. Loss of sequestration from trees to be removed at Sharp Park is presented in Table 2.

Over the same 20-year period that trees would be removed from Sharp Park, trees would be replaced with native grassland and coastal scrub. Replacement vegetation was assigned a grassland sequestration rate as provided in the CalEEMod emissions estimator model. A specific sequestration rate for coastal scrub was not available and all

⁵ San Francisco Recreation and Park Department, Memorandum to Jessica Range of San Francisco Environmental Planning, November 27, 2012.

⁶ Hort Science, Memorandum to Jessica Range, January 17, 2013.

⁷ International Panel on Climate Control, National greenhouse Gas Inventories Programme, *Good Practice Guidance for Land Use, Land Use Change and Forestry*, 2003.

56 acres of replaced vegetation was assumed to be grassland for purposes of calculation. Carbon sequestration associated with planting approximately 56 acres of grasslands is also presented in Table 2.

Sequestration Gains from Annual Plantings of propagated plants and trees in San Francisco

Each year the Natural Areas Program propagates and plants over 10,000 plants in restoration sites throughout the City⁵. Each year these plantings mature and their GHG sequestration potential increases. Consequently, the plants, and particularly the trees, continue to increase their sequestration of CO₂ during the 20 year horizon of this analysis. Table 3 provides an estimate of this increase at the end of the 20 year planting window.

Table 2- CO₂ Sequestration Losses and Gains from Tree Removal and Grassland Planting in Sharp Park

Tree Removal – Sharp Park	Estimated CO₂ Losses (-) and Gains (+)
Annual Sequestration loss (over 20 years)	- 177 MT CO ₂ /year
Grassland Plantings – San Francisco	
Annual Sequestration gained (year 20)	+ 241 MT CO ₂ /year
Total Sequestration Gain (after 20 years)	+ 64 MT CO₂/year

Table3- CO₂ Sequestration Gains from Propagated Tree and Herbaceous Plant Planting in San Francisco

Tree Plantings	Estimated CO₂ Losses (-) and Gains (+)
Annual Sequestration gain (after 20 years)	+ 166 MT CO ₂ /year
Herbaceous Plant Plantings –	
Annual Sequestration gained (after 20 years)	+ 20 MT CO ₂ /year
Net sequestration gain at end of 20 year program =	+ 186 MT CO₂/year

Conclusion: Net Sequestration Changes Associated with the Implementation of the SNRAMP

At the end of the 20 year horizon window of the SNRAMP, there would be a calculated net gain of sequestration of approximately 388 MT of CO₂ per year. The primary contributing factor to this sequestration gain would be the removal of an aging eucalyptus tree population which would be replaced with much more efficiently sequestering tree and plant growth.

Tree Replacement in San Francisco Natural Areas

3443 tree would be removed in phases over the next 20 years, replaced with primarily native trees such as coast live oak, red alder, California buckeye, toyon, wax myrtle, and various willow trees.

Table 1 shows the trees proposed for removal by park and species

Table 1: Trees proposed for removal in SF:

	Eucalyptus	Pine	Cypress	Maytens	Tea	Acacia
	3269	50	54	10	4	56
Species specific data only for Eucalyptus & Pine>allot others evenly	3331	112				
# of trees with active sequestration (see below)	388.9	112				

All will be replaced by natives trees.

Coast live oak will be the most commonly planted replacement tree.

IPCC Good practice Guidance for Land Use and Forestry (2003) applies a 20 year window for calculating positive sequestration from trees.

Tree survey Results (Hort Science, 2013) :

Percentage of Blue Gum/Eucalyptus trees > 20 years = 90%

Number of Eucalyptus Trees with active positive sequestration = 326.9

MEMORANDUM

TO: Jessica Range, Environmental Planner, San Francisco Planning Department
FROM: Lisa Wayne, Open Space Manager, San Francisco Recreation and Park Department (SFRPD)
CC: Karen Mauney-Brodek, Deputy Director for Park Planning, SFRPD
DATE: November 27, 2012
RE: SNRAMP Tree Removal and Replacement

This memorandum provides additional detail on tree removal and replacement practices pursuant to the Significant Natural Resource Areas Management Plan (SNRAMP) and SFRPD's Natural Areas Program (NAP) current practices.

1. *Tree Removal:* The number and species of trees proposed for removal are detailed in the specific chapters of the SNRAMP and within SNRAMP Appendix F: Urban Forestry Statements. Appendix F of the SNRAMP explains how the number of trees to be removed from each Natural Area was determined, what defines a tree and other urban forestry practices. The number of trees to be removed from each Natural Area is also shown in Table 5 of the SNRAMP. Table 1 below, provides further detail on the species of tree proposed for removal under the SNRAMP. All tree removal proposed in the SNRAMP would be phased over 20 years.
2. *Tree Replacement in San Francisco Natural Areas:* In San Francisco, all trees that are proposed for removal would be replaced, although not necessarily within the same location or with the same species. A total of 3,448 trees would be removed in phases over 20 years and replaced with primarily native trees such as coast live oak, red alder, California buckeye, toyon, wax myrtle, and various willow trees (e. g., arroyo, shining, or yellow willow). Some non-native trees that provide high value habitat for wildlife may also be planted as replacement trees including Douglas fir, pines and other non-invasive conifers. The species that would be planted at a location would depend upon the particular habitat needs and ecosystem suitability. It is anticipated that coast live oak trees would be the most commonly planted replacement tree.
3. *Vegetation Replacement at Sharp Park Natural Area:* At Sharp Park, a total of 15,000 invasive trees, primarily blue gum eucalyptus, will be removed and replaced over 20 years with native grassland or coastal scrub such that all areas are restored with dense vegetative cover. It is anticipated that most of the 56 acres would be replanted with coastal scrub species.
4. *Planting in San Francisco Natural Areas:* Each year, the NAP propagates and plants over 10,000 plants in restoration sites throughout the City. Typically at least 200 of those plants being trees. Attached are four years of plant inventories from 2009 to 2013 that detail the plants that have been propagated and planted by NAP.

Memorandum

DATE: January 17, 2013

To: Jessica Range, SF Planning Department

FROM: Jim Clark *Me*

SUBJECT: Age of blue gum in San Francisco's Natural Area Parks

As coordinator for the environmental analysis for the Significant Natural Resource Area Management Plan proposed by San Francisco Rec and Park, you asked if I could provide an estimate of the percentage of blue gums (*Eucalyptus globulus*) in these forests that are at least 20 years or older.

Blue gums in Natural Area parks

I have assessed over 800 blue gums in Pine Lake, Glen Canyon, Mount Davidson and McLaren Parks (Table 1). My work focused on trees adjacent to areas of high use such as streets, playgrounds, adjacent properties and parking lots. The assessment was limited to tree 6" or greater in diameter. I examined 675 trees with one stem and 146 with 2 or more stems.

Table 1. Diameter distribution and condition of blue gum. Pine Lake, Glen Canyon, McLaren and Mount Davidson. Recreation & Park Department. San Francisco CA.

Diameter Class (in.)	Condition					Avg. Condition	No. of Trees
	Dead	Poor	Fair	Good	Excel- lent		
<10	--	24	1	--	--	1.8	25
10 to 19	--	151	45	12	--	2.2	208
20 to 29	--	72	76	25	8	2.8	181
30 to 39	--	41	66	30	3	2.9	140
40 to 49	--	11	40	21	2	3.2	74
50 to 59	--	1	13	13	1	3.5	28
60 to 69	--	--	8	7	--	3.5	15
70 to 79	--	1	1	--	--	2.5	2
80 to 89	--	--	--	1	--	4.0	1
90 & >	--	--	1	--	--	3.0	1
Multistem	--	46	84	16	--	2.8	146
Total	--	347	335	125	14	2.7	821

Condition rating: 0 = dead. 1=poor. 5=excellent.
Trees with more than one stem were categorized as multistem.

Among the 675 trees with one stem, approximately 33% were less than 20" in diameter. Almost half of the trees were between 21" and 40" while about 18% were larger than 40". In these four parks, trunk diameters varied from 6" to 90". Tree condition was poorer in small diameter trees.

In general the blue gum stands I examined were a mix of large diameter, tall dominant trees, smaller diameter codominant and intermediate trees and small diameter suppressed individuals. In some cases, small diameter trees were present along the edge of the stand.

All stands had a large variation in trunk diameter. Although I made no measurements, tree height appeared to vary just as widely. I think that all of the trees were planted at the same time. Some grew faster than others, becoming large and dominant. Because blue gum is intolerant of shade, slow growing trees became less vigorous and remained small in size.

Blue gum stands

Stands of blue gums in San Francisco were created by planting. McBride and Froehlich (1984) noted that almost all of the older blue gum stands in San Francisco were even-aged, established in a brief period in the late 1800s and early 1900s. It is likely that some blue gum stands in San Francisco parks including Glen Canyon, McLaren, Mount Davidson and Pine Lake Parks were planted after this time.

I did not observe, however, any recent plantings of this species. All of the stands I observed were mature in development.

Historical photos viewed on Google Earth illustrate overall patterns of vegetation. For the four Natural Area Parks, it is clear that vegetation was well-established by 1993. This would suggest that the large majority of blue gums are over 20 years old.

Blue gum can reproduce by both seed and root sprouts. McBride and Froehlich noted the absence of seedling development and the presence of root sprouts in their assessment of old blue gum stands in Golden Gate Park, Mountain Lake Park and the Presidio. I don't know if the small diameter trees I observed at the edge of some stands were sprouts or seedlings. Whatever their origin, such small trees were not common.

Given my observations of blue gum in Glen Canyon, McLaren, Mount Davidson and Pine Lake Park, I estimate that at least 90% are more than 20 years old.

Please contact me with any questions.

10 Vegetation

The program calculates GHG emissions associated with the vegetation activities of land use change and the planting of new trees.

The program calculates GHG emissions from vegetation activities according to the IPCC protocol for vegetation since it has default values that work well with the information typically available for development projects. This method is similar to the CAR Forest Protocol⁵⁴ and the Center for Urban Forest Research Tree Carbon Calculator⁵⁵, but it has more general default values available that will generally apply to all areas of California without requiring detailed site-specific information⁵⁶.

10.1 Land Use Change

A development which changes land use type results in changes in CO₂ sequestration from the atmosphere which would not have been captured had there been no land-type change.

Overall Change in Sequestered CO₂ [MT CO₂]

$$= \sum_i (SeqCO_2)_i \times (area)_i - \sum_j (SeqCO_2)_j \times (area)_j$$

Where:

SeqCO ₂	=	mass of sequestered CO ₂ per unit area [MT CO ₂ /acre]
area	=	area of land for specific land use type [acre]
i	=	index for final land use type
j	=	index for initial land use type

Overall change in sequestered CO₂ is the summation of sequestered CO₂ from initial land use type multiplied by area of land for initial land use type subtracted by the summation of sequestered CO₂ from final land use type multiplied by area of land for final land use type.

There is no reduction in GHG emissions associated with preservation of a land.

SeqCO₂

The mass of sequestered CO₂ per unit area [MT CO₂/acre] is dependent on the specific land use type. The program uses default CO₂ sequestration values from CCAR for each land use that will be preserved or created:

⁵⁴ CCAR. 2007. Forest Sector Protocol Version 2.1. September. Available at: http://www.climateregistry.org/resources/docs/protocols/industry/forest/forest_sector_protocol_version_2.1_sept2007.pdf

⁵⁵ Available at: <http://www.fs.fed.us/ccrc/topics/urban-forests/ctcc/>

⁵⁶ The CAR Forest Protocol and Urban Forest Research Tree Carbon Calculator are not used since their main focus is annual emissions for carbon offset considerations. As such they are designed to work with very specific details of the vegetation that is not available at a CEQA level of analysis.

this is equivalent CO₂ stored in mature vegetation per acre
this is not a sequestration rate as in MT CO₂/acre/year

Land Use	Sub-Category	Default CO ₂ accumulation per acre (MT CO ₂ /acre)
Forest Land	Scrub	14.3
	Trees	111
Cropland	--	6.20
Grassland	--	4.31
Wetlands	--	0

The EIR uses the 4.31 figure as an annual CO₂ capture rate of CO₂/acre/year.
It is not a rate.

The default annual CO₂ is calculated by multiplying total biomass (MT dry matter/acre) from IPCC data by the carbon fraction in plant material (0.47), then using the ratio of molecular weights (44/12) to convert from MT of carbon (C) to MT of carbon dioxide (CO₂).

Vegetation Type

Vegetation types are defined by IPCC as follows:

(i) Forest Land

This category includes all land with woody vegetation consistent with thresholds used to define Forest Land in the national greenhouse gas inventory. It also includes systems with a vegetation structure that currently fall below, but *in situ* could potentially reach the threshold values used by a country to define the Forest Land category.

(ii) Cropland

This category includes cropped land, including rice fields, and agro-forestry systems where the vegetation structure falls below the thresholds used for the Forest Land category.

(iii) Grassland

This category includes rangelands and pasture land that are not considered Cropland. It also includes systems with woody vegetation and other non-grass vegetation such as herbs and brushes that fall below the threshold values used in the Forest Land category. The category also includes all grassland from wild lands to recreational areas as well as agricultural and silvi-pastoral systems, consistent with national definitions.

(iv) Wetlands

This category includes areas of peat extraction and land that is covered or saturated by water for all or part of the year (e.g., peatlands) and that does not fall into the Forest Land, Cropland, Grassland or Settlements categories. It includes reservoirs as a managed sub-division and natural rivers and lakes as unmanaged sub-divisions.

Area

The user must specify area of land in acres for specific final and initial land use types. These area changes include not only the area of land that will be converted to buildings, but also areas disrupted by the construction of utility corridors, water tank sites, and associated borrow and

grading areas. Areas temporarily disturbed that will eventually recover to become vegetated will not be counted as vegetation removed as there is no net change in vegetation or land use.⁵⁷

10.2 Sequestration

Planting trees will sequester CO₂ and is considered to result in a one-time carbon-stock change. Trees sequester CO₂ while they are actively growing. The amount of CO₂ sequestered depends on the type of tree.

sequestration rate only comes in to calculate carbon storage in a mature landscape

$$\text{Total Sequestered CO}_2 = (\text{Growing Period} \times \sum_{i=1}^n [\text{Sequestration } i \times \text{Trees } i])$$

Where:

Growing Period = Growing period for all trees, expressed in years (20).

n = Number of broad species classes.

Sequestration i = Default annual CO₂ accumulation per tree for broad species class i .

Trees i = Number of net new trees of broad species class i .

Total Sequestered CO₂ is the growing period for all trees multiplied by the summation of annual CO₂ accumulation multiplied by the number of new trees per broad species class.

Growing Period

The program assumes the IPCC active growing period of 20 years. Thereafter, the accumulation of carbon in biomass slows with age, and will be completely offset by losses from clipping, pruning, and occasional death. Actual active growing periods are subject to, among other things, species, climate regime, and planting density. Note that trees may also be replaced at the end of the 20-year cycle, which would result in additional years of carbon sequestration. However, this would be offset by the potential net release of carbon from the removal of the replaced tree.

⁵⁷ This assumption facilitates the calculation as a yearly growth rate and CO₂ removal rate does not have to be calculated. As long as the disturbed land will indeed return to its original state, this assumption is valid for time periods over 20 years.

Sequestration

The program uses default annual CO₂ accumulation per tree for broad species class as follows:

Broad species class	Default annual CO₂ accumulation per tree¹ (MT CO₂/ year)
Aspen	0.0352
Soft maple	0.0433
Mixed hardwood	0.0367
Hardwood maple	0.0521
Juniper	0.0121
Cedar/larch	0.0264
Douglas fir	0.0447
True fir/Hemlock	0.0381
Pine	0.0319
Spruce	0.0337
Miscellaneous ²	0.0354

1. IPCC's carbon (C) values converted to carbon dioxide (CO₂) using ratio of molecular weights (44/12).
2. Average of all other broad species classes. To be assumed if tree type is not known.

where they have not been cut down.

Appendix F Trail Closure Maps

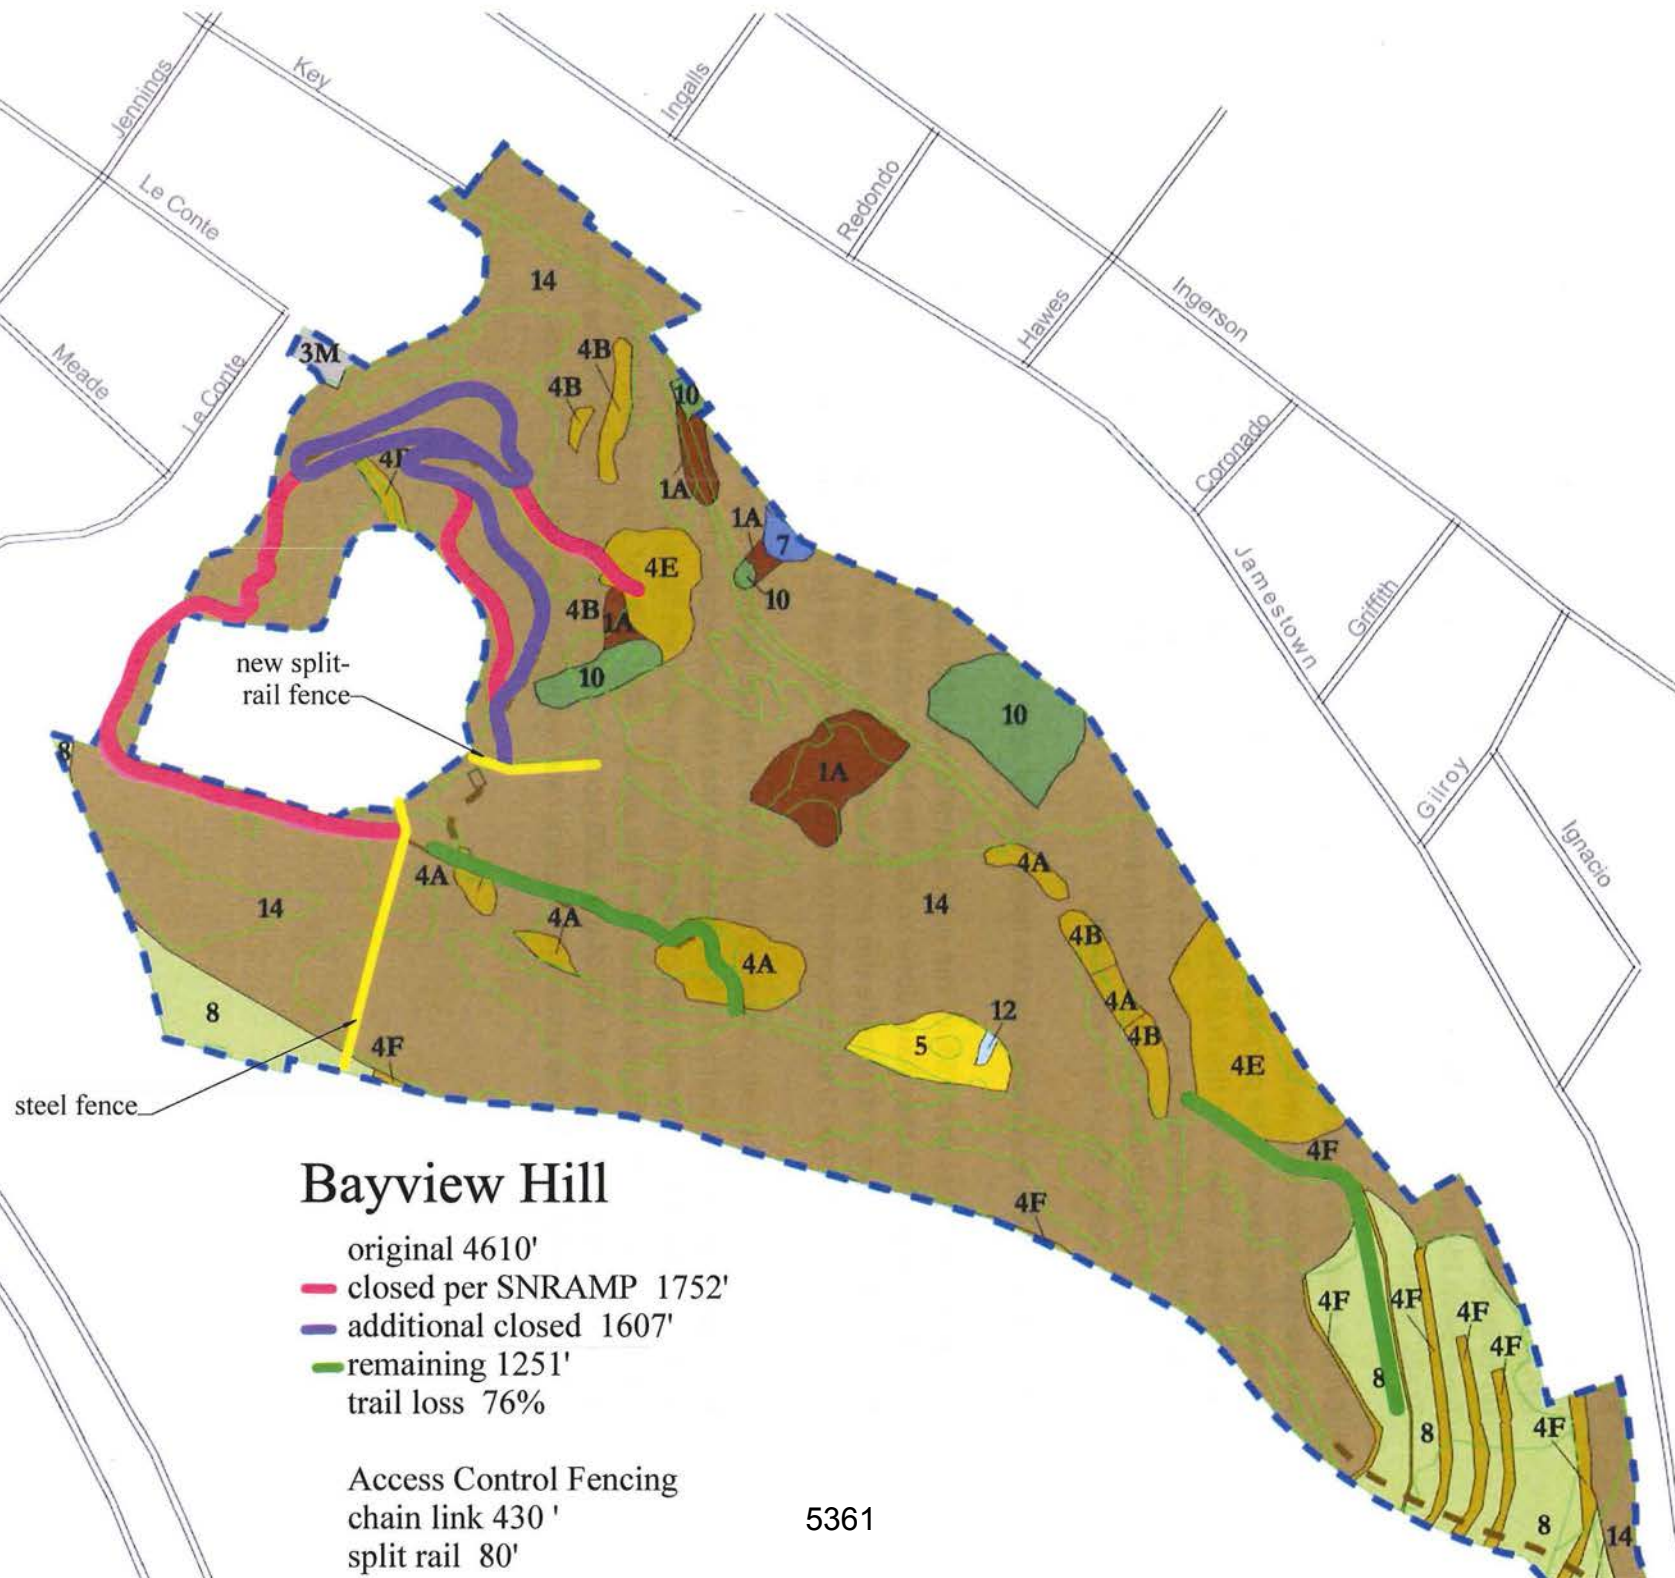

Below are maps of the Natural Areas showing trail closures implemented by the Natural Areas Program since 2006. Some have been physically decommissioned by placing logs, branches and other obstructions in the trails. Many have been fenced off. Others can still be accessed, but to do so is punishable by a fine. The latter applies to Natural Areas where "Designated Trails" have been identified for the public and users would be disobeying the "Stay On Designated Trails" signs.

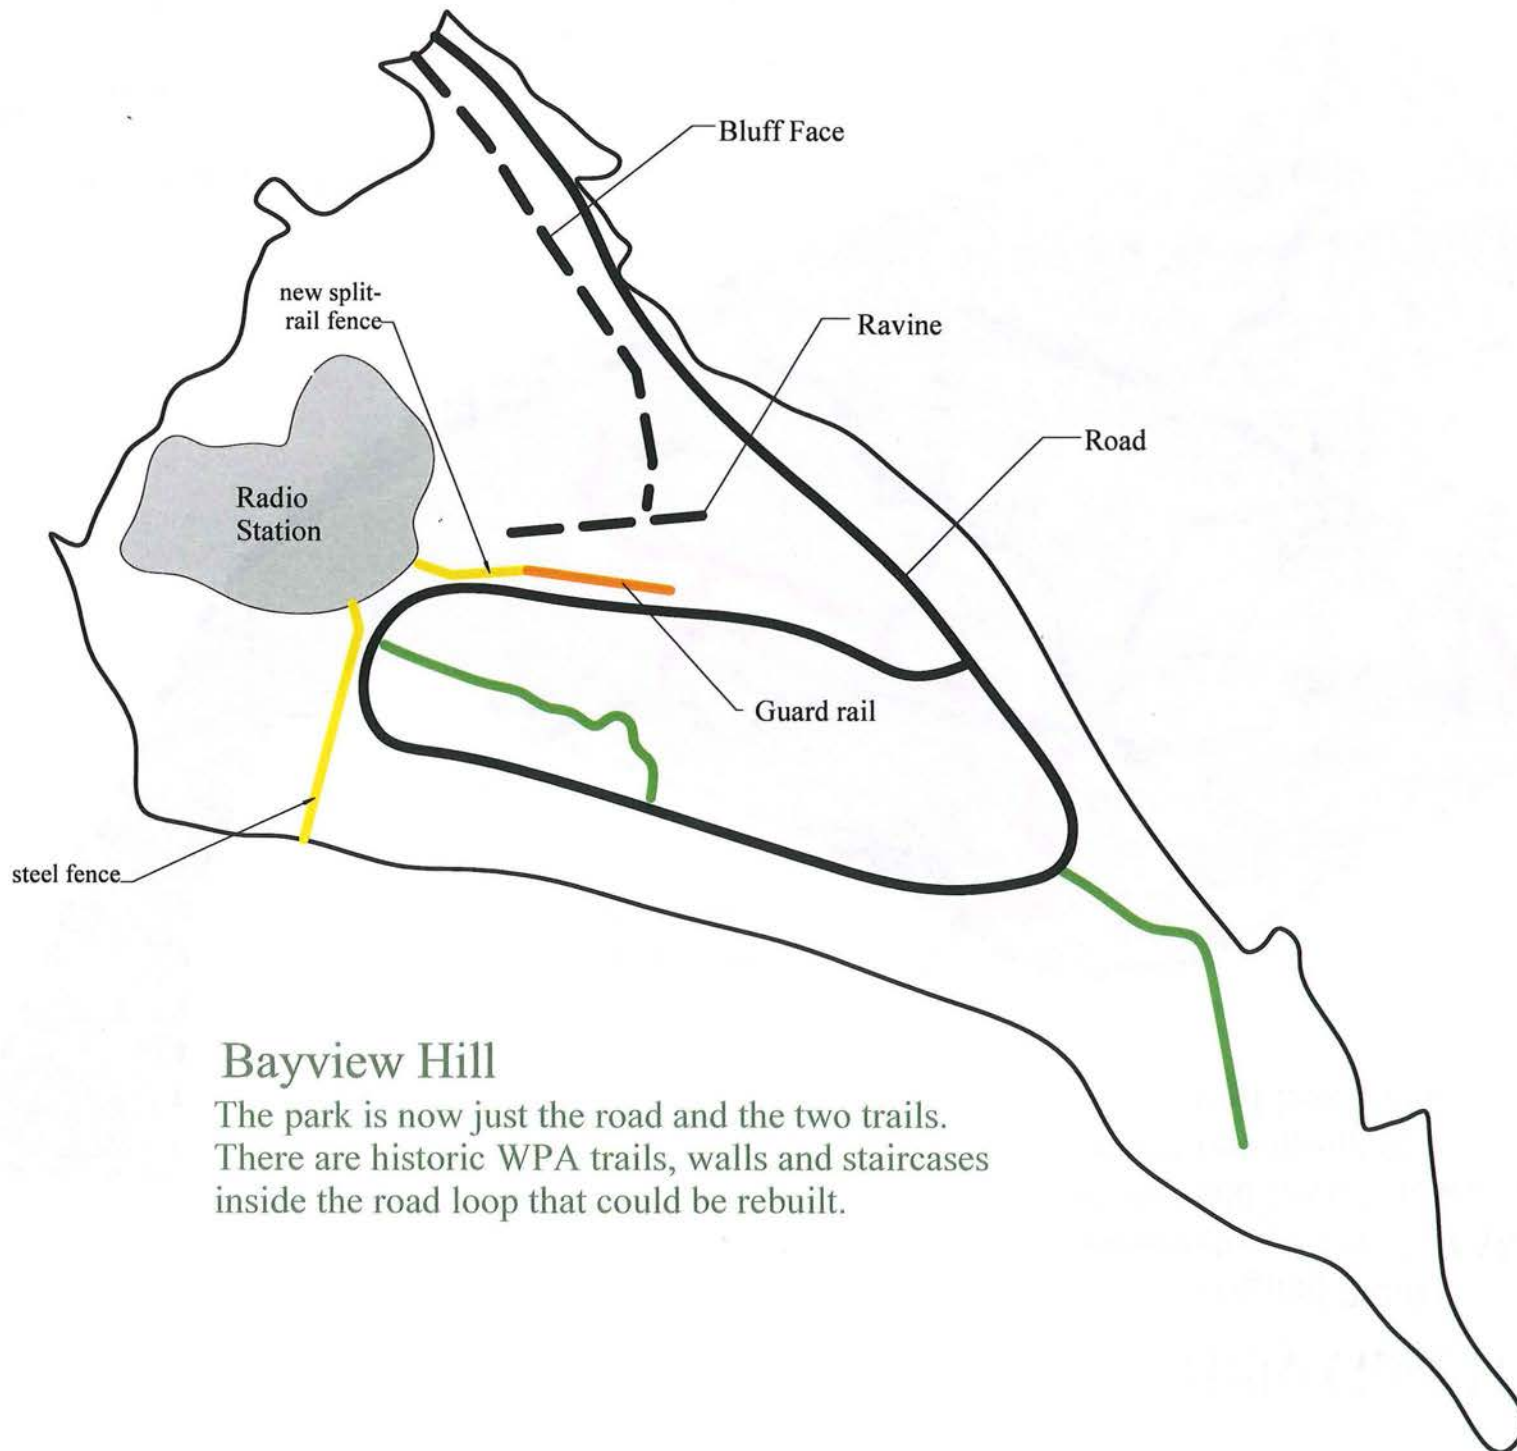

On the maps, trails are marked in three colors. The green trails are the Designated Trails where we are still allowed to walk. The red trails are ones identified in the SNRAMP as unwanted and planned for closure. The purple trails are identified in the SNRAMP as Designated Trails to remain open. However, the NAP has chosen to close those as well. We are now forbidden to walk on the red and purple trails. Each park map is followed by a skeleton map highlighting the tiny amount of parkland now open to the public. The only public use of NAP parkland is along those green lines. The rest is off-limits.

The maps contain text indicating the linear feet of access control fence installed by the NAP.

The SNRAMP states that 26% of the existing trails would be closed, leaving us with 30.8 miles of trail. Based on what they have done so far, the NAP is actually closing 51% of the trails in Natural Areas. If we extrapolate the actual closure rate to all of the Natural Areas, the 41 miles of existing and planned trails documented in the SNRAMP will be reduced to 20.9 miles.

The loss in trails is nothing compared to the loss in actual parkland available to the public. Assuming the average trail is 10 feet wide and the NAP only closes the trails disclosed in the SNRAMP (both very generous assumptions based on what we have seen so far), we can calculate how much parkland remains for the public. 30.8 miles of 10 foot wide trail only amounts to 37 acres. This is 3.4% of the 1100 acres available to the public before the new access restrictions. At the actual trail closure rate we will only be left with 25 acres.

Bayview Hill

The park is now just the road and the two trails. There are historic WPA trails, walls and staircases inside the road loop that could be rebuilt.

Natural Areas Program Cycling Prohibition

February 19, 2016
Tom Borden**The Situation**

In February 2015 RPD installed new signs in our parks. There are two types, one for regular park areas and one for areas managed by the Natural Areas Program. The NAP signs flatly state, "Stay on Designated Trails. No Bicycles." The NAP signs appear on both paved and earthen trails. The signs for regular park areas make no mention of bicycles. Needless to say, San Franciscans who cycle are extremely unhappy about the signs that now prohibit bike riding on large portions of Twin Peaks, Mount Davidson, Bayview Hill, McLaren Park and even the road on the floor of Glen Canyon.

Letters were sent to RPD and to the Recreation and Park Commission noting cyclists objections and asking for an explanation. A formal response was returned by RPD General Manager Phil Ginsberg on March 3, 2015. Critical assertions made in the email are:

- Cycling is not allowed on NAP controlled lands except for two trails
 - In all other parklands, bikes are not allowed on earthen trails.
- "The signs posted in McLaren Park are correct and are consistent with long-standing regulations."

This is a dramatic change in policy. The only existing cycling prohibitions are on certain trails in Golden Gate Park marked by signs at their street entrances. SFRPD currently runs a children's mountain biking program, apparently in violation of their own "longstanding regulations". Over the past 5 years, NAP invited cyclists to volunteer thousands of hours to build trails in Golden

Gate Park Oak Woodlands, Interior Greenbelt and McLaren Park. The NAP staff did not tell the cyclist volunteers it was illegal to ride bicycles on the trails they were building.

The SF Park Code contains no rules forbidding cyclists from riding on dirt trails in any of our parks. SECTION. 3.04. BRIDLE PATHS makes it clear that bicycles are expected to be on these earthen trails.

Sunshine Request 1 Alex Aldrich April 22, 2015 “Bicycle Policy”

An information request submitted to RPD under the SF Sunshine Ordinance and a subsequent hearing at the Sunshine Ordinance Task Force Complaints Committee proved that there are no “long standing regulations” and in fact, no records whatsoever that support the assertion that bikes are not allowed on earthen trails.

The Sunshine request asked for copies of all regulations that prohibit or restrict bicycle riding on paved or un-paved paths and trails in City parks. In response, RPD provided no existing documents related to regulations, rather they provided a letter written in response to the Sunshine request by RPD Operations Manager Dennis Kern. In that he says, “We post signs restricting or prohibiting bicycle riding on trails at specific park sites where we believe that such activity would either be inappropriate (*e.g.*, the trail is too narrow or not constructed to support biking activity) – or – potentially destructive (*e.g.*, creating land erosion conditions, compaction, endangering sensitive natural habitat).” This confirmed the public’s understanding, that cycling is generally allowed, but that RPD might choose to limit cycling in specific areas by posting signs per Park Code 3.02. This is the logical inverse of what Phil Ginsberg wrote.

The SOTF issued Order of Determination 15087 for RPD’s failure to disclose there were no documented regulations. Further, the SOTF issued a second letter to RPD, “Codification of Recreation and Park Department Policies”, admonishing them for failure to follow proper process.

Sunshine Request 2 Tom Borden June 24, 2015 “information request regarding off-road cycling”

A second sunshine request was lodged to find out what sorts of problems trail cyclists were causing, who decided to put “No Bicycles” on the signs and why. RPD was able to produce some emails from gardeners working the west end of Golden Gate Park complaining about rude cyclists riding off trail and a video shot by “outlaw” cyclists from a bike event in 2008 that shows riders skidding alongside a staircase in Glen Canyon. That is all.

RPD was not able to produce any documentation about the decision making process to exclude bicyclists from NAP managed land, other than a document titled “Offroad Mountain Biking on City Parkland Trails” which was written after the signs were installed. This document claims “The language for both signs was vetted through a review process inclusive of staff participation from Operations, Capital and Public Affairs; as well, as review of existing regulatory guiding documents (*i.e.* Park Code, SNRAMP, etc..).” This document is clearly a fabrication. RPD was unable to produce any documents related to this interdepartmental vetting process. The documents produced under the Sunshine request show that staff in Operations, Capital and Public Affairs were unaware the NAP was putting the “No Bicycles” text on their signs. Obviously, the Park Code was not reviewed, or the bicycle references would have been discovered. The SNRAMP does not disclose any plan for the wholesale exclusion of bicycle riders. The paper erroneously claims riding bicycles on earthen trails is not considered a “hazardous recreational activity” under California Government Code 831.7.(a) and (b) and therefore a major liability concern for RPD.

The produced documents show the anti-cycling signage was a unilateral NAP initiative. This was undertaken without public input and without public notice. It was not based on a demonstrated need to prohibit cycling in the NAP areas.

Clearly, RPD is withholding documents related to the decision to post No Bicycles on the signs. Tom filed a complaint with the Sunshine Ordinance Task Force and the task force found RPD to be in violation of the Sunshine Ordinance. See SOTF Order of Determination 15159.

Sunshine Request 3 Alex Aldrich December 2015

In a third Sunshine Request, Alex asks for documents related to several topics.

Question: Please share the document(s) that show who and when the decision was made to put no bikes on the signs erected in February 2015.

Answer: The Department has no documents responsive to this request.

RPD continues their refusal to produce the documents.

Question: Is the recent no off trail bike sign a rule or a regulation?

Answer: It's neither. There are no rules or regulations that restrict or prohibit bikes on earthen trails in all parkland.

RPD finally admits that Phil Ginsberg's assertion was wrong. Why did it take so long?

Violation of BOS Resolution 653-02 and CEQA

Posting of the signs with language "Stay on Designated Trails. No Bicycles." by the Natural Areas Program violates BOS Resolution 653-02 which prohibits the NAP from imposing, "Trail closures, or restrictions on access and recreation" until the BOS has approved the natural areas management plan(SNRAMP). The BOS has not approved the management plan. The EIR for the SNRAMP has not even been released and certified by the Planning Commission. See the sister document, BOS 653-02 violation, for more information.

The closure of NAP controlled park lands to cycling violates the will of the public as expressed in BOS 653-02 and violates CEQA.

On Fri, May 1, 2015 at 4:34 PM, Kern, Dennis (REC) <dennis.kern@sfgov.org> wrote:

Mr. Aldrich,

I am responding on behalf of the Department to the queries in your recent Sunshine Ordinance request regarding bicycle riding on paths and trails in City parks.

Our approach to this issue has been one of park stewardship and land management, which is our mission. We post signs restricting or prohibiting bicycle riding on trails at specific park sites where we believe that such activity would either be inappropriate (*e.g.*, the trail is too narrow or not constructed to support biking activity) – or – potentially destructive (*e.g.*, creating land erosion conditions, compaction, endangering sensitive natural habitat). We have continuously posted such signage since at least 2008 and it has taken various formats. See first two attachments for examples of such signage that preceded our recent revised sign format (which you'll find at the third attachment).

Our authority for the posting of these signs is Park Code 3.02 which states “*No person shall willfully disobey the notices, prohibitions or directions on any sign posted by the Recreation and Park Commission or the Recreation and Park Department.*” This Park Code section was enacted in 1981 and has been in force since then.

We recognize that bicycling and mountain biking are healthy recreational opportunities and we are actively working with SF Urban Riders to expand opportunities for this activity throughout the City.

I hope that this information is helpful.

To: Board of Supervisors, (BOS) <board.of.supervisors@sfgov.org>; SF Public Golf Alliance <info@sfpublicgolf.com>

Subject: PLEASE REJECT THE APPEAL RELATING TO REC & PARK'S SNRAMP EIR

Dear Supervisors:

I fully support the certified EIR prepared for the Significant Natural Resource Area Management Plan (the so-called "SNRAMP") prepared by the Recreation and Park Department. As you know, there is an appeal hearing relating to this EIR, and it will be heard by the Board on February 28th.

I am writing to request that you **REJECT** the appeal.

I have already written to Supervisor Yee about this issue, as I am a District 7 resident. I have attached my detailed letter to Supervisory Yee, asking him to reject this appeal and allow the SNRAMP to move forward.

By way of background, I am a native San Franciscan and a public course golfer. I have played our public golf courses for over 55 years and Sharp Park is the course with the most profound historic roots. It has been loved by generations of players for over 80 years. It should be preserved and this plan allows for that, while also providing for much needed habitat restoration.

This is work that has been endorsed by every public agency – state and federal – to have considered the issue. It is a small group of anti-golf forces who are trying now to scuttle this effort. They are misguided and flat out wrong. Sharp Park was an uninhabitable salt marsh before legendary architect Alister MacKenzie transformed it into a fresh-water oasis. Indeed, it was Dr. MacKenzie's work that created habitat in the first place. The endangered species who occupy the area adjacent to the golf course weren't even documented there until approximately 15 years after the course had opened for public play. This EIR includes steps that will allow this historic asset to be preserved AND allow for habitat enhancement -- a "win-win" situation if ever there was one.

The EIR is well thought out, is based upon two decade of input from diverse voices from throughout San Francisco. There have been many, many public hearings; a multitude of public comments; and rigorous analysis by staff. All of that combined to produce the EIR that is coming before you. This EIR amply satisfies the legal requirements for inclusiveness and careful analysis. Most importantly, it represents responsible stewardship of our precious assets and I hope you will reject the pending appeal and allow this much needed, and well-conceived plan to move forward.

It really is time to move on. Stopping now, or severing out particular elements, would be an irresponsible step backward.

PLEASE REJECT THIS APPEAL.

Thank you for considering my views.

**BY REGULAR MAIL &
EMAIL TO Norman.Yee@sfgov.org**

Supervisor Norman Yee (District 7)
City Hall, Room 244
1 Cr. Carlton B. Goodlett Place
San Francisco, CA 94012-4689

**Re: Approval of Final EIR for Recreation & Parks Department's
Significant Natural Resource Areas Management Plan**

Dear Supervisor Yee:

I live in District 7 resident and am a lifelong resident of San Francisco. I am also an avid golfer and golf-historian, having written extensively on the legacy of our City's treasured public courses, which I have played since 1961. I am also a co-founder (along with my colleague, Richard Harris) of the San Francisco Public Golf Alliance, a non-profit 6,500-member volunteer community organization dedicated to the preservation of the City's public golf courses, which are priceless recreational and historic assets.

I am writing to urge you to support and approve the final EIR for the Significant Natural Resource Areas Management Plan (SNRAMP EIR) that has been prepared by the hard-working and dedicated staff of the Recreation & Parks Department. The SNRAMP EIR recently was approved by the Planning Department and certified by the Recreation and Parks Department. Now is the time to move forward to implement the thoughtful and visionary plan contained in that EIR. It could be that there will be no appeal from the recent certification of the SNRAMP EIR and, if so, it will stand and our local officials will be able to move forward with responsible action to preserve and enhance our local park facilities.

But if there is an appeal and the issue comes before you, we hope we can count on your support. Our 6,500 members, many of whom live in your District, are counting on that. They are looking to you, as our Supervisor, to support the SNRAMP EIR so this much needed (and long planned) work can proceed.

I hasten to add that the SNRAMP EIR represents two decades of tireless effort to embrace responsible stewardship and practical vision, all with an eye to making sure all of our City parklands, large and small, wherever located and whatever particular

constituency they serve, will be here for future generations to love and enjoy just as we have done for all these years.

There is no question that the Sharp Park Golf Course (aptly nicknamed the "Poor Man's Pebble Beach") is a significant historical asset worthy of preservation. Although located in Pacifica, Sharp Park is one of the City's legacy properties—it was gifted to the City a century ago. The golf course has been in place for almost 85 years.

Sharp Park Golf Course is no ordinary golf course. It has been recognized as a prized historic asset, not just here in San Francisco but across the country and around the world. This is a living, breathing masterpiece, created during the "Golden Age" of American golf course architecture by Dr. Alister MacKenzie, a man honored and lauded the world over as perhaps the greatest golf architect who ever lived. He is golf's Frank Lloyd Wright, its Monet, its Michelangelo, if you will. Among MacKenzie's fabled courses—there are many spread around the Globe on four continents—is Augusta National, the home of the Masters Tournament (one of golf's four major championships).

The true miracle here is that most of the courses built by Dr. MacKenzie are private. But Sharp Park is a remarkable and refreshing exception. It has always been public in every sense of the word. Since the day it opened for play in April of 1932, Sharp Park Golf Course has been affordable and accessible to a wide variety of local golfers. No less an icon than the late Ken Venturi, a San Franciscan to his core, a U.S. Open Champion and a Hall of Fame golf commentator, called Sharp Park "Dr. Mackenzie's great gift to the American public golfer."

Sharp Park is beautiful and cries out for restoration, as recognized in the SNRAMP EIR that may come before you. Our organization is dedicated to that restoration and we are raising the philanthropic funds to carry through on that promise.

One thing you should keep in mind is that the creation of this golf course was the brain child of none other than John McLaren—the very man who gave us Golden Gate Park and so many other local parks that San Franciscans have long enjoyed. McLaren was a visionary and in creating Sharp Park with Dr. MacKenzie, he gave us something very, very special.

It also needs be said that Sharp Park is more than just a golf course. It has become home to two endangered species (the California Red-Legged Frog and the San Francisco Garter Snake). But the golf course does not threaten those species. Indeed, it is the golf course and its responsible maintenance that created the very habitat occupied by those very species today, for both the frog and the snake are *fresh-water* creatures. They cannot sustain themselves in salt-infested, brackish environs, which is what Sharp Park was before 1930. Dr. Mackenzie literally transformed a barren salt marsh into a fresh water oasis when he created Sharp Park over eight decades ago.

The SNRAMP EIR represents a remarkable balance of many interests. It should be approved and much needed habitat restoration work should proceed. Approving this EIR is, simply put, the right thing to do.

I am happy to come meet with you to discuss this issue any time. I'm sure you will be hearing from other residents of your District, and from others as well, and I hope that as you listen to those voices, you will bear these thoughts in mind. That said, I hope for and expect your support for the SNRAMP EIR. To cast it aside, or to sever out Sharp Park, is a terrible waste of public funds and the 20-year effort to bring this Master Plan to the point where it can become a reality for our collective benefit.

Thank you for your consideration.

Respectfully,
BO LINKS

Subject: FW: SNRAMP FEIR appeal
Date: Friday, January 27, 2017 10:28:53 AM

From: Stan Zeavin [mailto:margstan@sbcglobal.net]
Sent: Monday, January 16, 2017 9:05 PM
To: Board of Supervisors, (BOS) <board.of.supervisors@sfgov.org>
Subject: SNRAMP FEIR appeal

Honorable Supervisors,

We are writing as residents of Pacifica to appeal the recent approval of the SNRAMP FEIR.

We Pacificans are very concerned about Sea Level Rise (SLR) and the eventual loss of our beaches and homes. The SNRAMP FEIR includes changes to the golf course that also have the potential to cause harm to both the beach and homes.

There is almost nothing in the FEIR addressing SLR. In the last election all nine counties on the Bay passed a tax to increase the size of the wetlands knowing that these wetlands are one of the best ways to control storm-powered flooding from rising seas. Rather than allowing for the Laguna Salada wetland to migrate with sea level rise, the FEIR approves raising the golf course east of the lagoon, which will essentially trap its wetlands between the golf course and the rising ocean. With this plan, the wetlands will shrink and eventually disappear. By raising the height of the fairways, you restrict the lagoon, which then cannot migrate away from the sea as it rises due to climate change. The lagoon will become saltier due to salt intrusion through the berm as the sea rises. The golf redesign approved in this FEIR will permanently limit the lagoon and place it and its inhabitants in mortal danger.

The Sharp Park golf course is definitely NOT a natural area. The changes to the golf course are not within the natural area. Including these changes in the SNRAMP FEIR invalidates the entire plan. This is a cynical manipulation of Natural Areas planning and the FEIR to hide golf changes.

The relationship between the golf course and Laguna Salada wetlands is far too complex to be dumped in with all the other natural areas. The importance of the wetlands as home to endangered and threatened species deserves far more careful consideration than to merely serve as mitigation for golf. The FEIR approves moving habitat closer to the threat of the ocean and invites the endangered species you are trying to protect into an area where they are even more at risk. The long term effect to the lagoon and its endangered and threatened populations will be disastrous.

Another serious consideration for Pacifica is the possibility that by raising the golf course the natural storm drainage into Laguna Salada will be further compromised. With every major storm, Pacifica is currently required to set up pumps to prevent flooding homes on Lakeside Avenue and Clarendon Road. That storm water should naturally drain into the lagoon.

SFRPD talks about protecting the wetlands, but most everything they are planning can be scientifically shown to eventually destroy them. Do the right thing for both Pacifica and the wetlands and remove the golf course from the FEIR.

Sincerely,

Margaret Goodale

Subject: Support the Park and Rec Plan
Date: Friday, January 27, 2017 10:41:52 AM

Dear Supervisors,

I have been a second generation Sharp Park golfer for more than twenty years, and a supporter of the Rec & Park Department's Natural Areas Plan. This plan among other things includes the Department's Laguna Salada Restoration Plan, to improve habitat in the Sharp Park wetlands for frogs and snakes, while maintaining the historic 18-hole golf course.

The Natural Areas Plan was approved December 15 by the Planning and Rec & Park Commissions, following a 20-year process of study, public input, and environmental review. But now the same anti-golf groups that have for years been trying unsuccessfully to close the golf course, have appealed the Commissions' decisions to your Board. Please vote to deny that appeal so we can move forward not backwards.

Sharp Park is a beautiful, historic public course, built by one of history's greatest golf architects, Alister MacKenzie.

Since 1932 it has provided reasonably-priced enjoyment, healthy outdoor exercise and a community gathering-place for tens of thousands of diverse men, women, senior, and junior golfers. It is also convenient—just a 15-minute freeway drive from the City's southern neighborhoods. Please do not allow the anti-golf groups to obstruct the City's plans to improve habitat while maintaining the golf course. Their delaying tactics have been going on for years, and their arguments have been repeatedly rejected -- by the Rec & Park and Planning Departments, as well as the Corps of Engineers, the US Fish & Wildlife Service, the California Coastal Commission, and state and federal trial and appellate courts in San Francisco and San Mateo County.

Please vote to deny the appeal, and approve the Natural Areas Plan. Support your Recreation and Park Department's carefully-developed and balanced plan to recover frog and snake habitat in the Sharp Park wetlands, while saving the beautiful, popular, and historic 18-hole golf course.

Thank you for your service to the community and for considering my request.

Ladies and Gentlemen:

This controversy has gone on far too long, and it is ridiculous. Here in San Francisco we have one of the most unique golf courses in the country, a jewel box sitting by the sea, designed by arguably the game's most reknown architect, and it is loved by the kind of golfing citizens that are the backbone of the city's culture. To take this wonderful golf experience and camaraderie away from its loyal participants would be comparable to taking a kids park or beach away from the children who love it. I say again - how ridiculous and narrow minded.

Let's keep Sharp Park forever as a special destination for all golfers but mostly for the many San Franciscans cherish all that it offers.

Respectfully,

Ted Ward

Subject: The Alister MacKenzie Historical Sharp Park Golf course
Date: Friday, January 27, 2017 11:23:01 AM

Dear Board of Supervisors,

Closing Sharp Park golf course would be a travesty!

It was one of the few golf courses I could afford when I took up the game of golf. Blue collar golfers all over the Bay Area would be denied this jewel of a course that Mr.Mackenzie built. He gave it a personality and feel that encourages middle class people like myself to play one of the most enjoyable games known to man.

Had Sharp Park not been built that land would look like the housing project we know as Daly City...nothing but rows of houses.

The snake and frog situation can be dealt with in other ways. Please don't let an out of state environmental group destroy something that means a lot to so many.

I am an environmentalist (Nature Conservancy, Cal Trout, California Fly fishing Unlimited) and favor saving the environment but I feel that the environmentalists trying to close Sharp Park are misguided. I wonder if they have made attempts to study the flora and fauna at Harding Park, The SF golf Club, or The Olympic Club? I think not.

I live in Sacramento and do not have an opportunity to play Sharp Park much anymore but still feel strongly about this issue and still hold a place in my heart for this sparkling Mackenzie created jewel.

And while I'm at it, if the city would bother putting some money into Lincoln Park, and pair it with the tourist industry, San Francisco could add greatly to it's coffers. I truly believe that vacationing tourists would flock to play the course. (Best to keep the greens fees down for residents)

I truly believe that Lincoln Park could be an incredibly popular golfing destination and suggest that members of the board take a walk around the course and see what it has to offer. You will find that there are no bad views on this course. The Palace of the Legion of Honor and the hiking trail along the cliffs could offer a day package that no other city could ever imagine!

Kindest regards,
George Lazar

Subject: Natural Areas Plan - Sharp Park Golf Course
Date: Friday, January 27, 2017 12:00:13 PM

Dear Supervisors,

It has been brought to my attention that 'The Natural Area Plan' to improve the snake and frog habitat in Sharp Park, while preserving Sharp Park Golf Course, which was approved December 15th, has been appealed by the group who opposes the continued operation of the golf course. I am reached out today to request that you vote to deny that appeal, and move forward with the plan that was approved by the Planning and Rec and Park Commission.

About me;

I was born and raised in Pacifica before moving away for a decade to go to college and start my career in Southern California. I have since moved back and made Pacifica my permanent and future home where I intend to raise my family. One of the greatest parts of living in Pacifica is the available outdoor recreation. From its many hiking trails which I use on a weekly basis, to its beaches and Ocean, which I fish and kayak on a season basis, to the beautiful nature watching enjoyed year round. Among the many outdoor gems that Pacifica has to offer, Sharp Park Golf Course stands out as one of its most attractive and unifying. A historical golf courses, that has managed to maintain many of its famous Alister MacKenzie touches, despite a need to do some shuffling of the course as a result of the changing coast line. A beautiful, affordable, democratic golf course, enjoyed by people of all ages and from all walks of life.

Now, I'm admittedly bias... growing up a young athlete, I played four sports year round from the time I was about eight years old, competition and comradery of team sports was my life. Then I had the type of accident active children sometimes do, and wound up with a fractured c7 vertebrae. I was about to start High School, but could not receive medical clearance to join the sports teams that I had looked forward to being a part of my entire life. It was devastating. I was depressed. I was a born competitor, but wasn't allow to play any sports that had even a chance of contact. I was lost. Then, my grandmother suggested that I give golf a try. She paid for my first lesson and a friend of my parents gave me a set of hand me down clubs. I took to it fairly well, but I couldn't afford regular lessons, and certainly couldn't afford to buy 12 dollar baskets of range balls, or pay the ever increasing prices for greens fees at bay area courses on nearly a regular enough basis to truly improve. For economic reasons alone, golf would not be my salvation. But, one day I was told that the local golf course, Sharp Park, would allow juniors to play for a few hours in the evenings before dark for just one dollar. That I could afford. I had found my outlet, and a path back to my happiness. I ended up spending more time on that golf course over the next four years than I did anywhere else outside of school. I built myself into a two time, first team all-league Peninsula Athletic League award winner, and academic MVP of the Terra Nova Golf Team, mostly on the strength of those one dollar practice rounds at Sharp Park. Fast forward a few decades and I'm still an avid golfer who carries a scratch handicap, and have been lucky enough to play the highest level NCGA events, events on the Pepsi Golf Tour, as well as captain the Canada Colts Golf team, among countless other memories... all of which I owe to the existence of Sharp Park Golf Course, and their public policies.

So again, I'm biased, as I always have and still do love Sharp Park Golf Course, (I was actually the guy on KTVU Fox news June 10th 2015 who was interviewed while out playing a few holes during a segment about Sharp Park), so I still find myself unwinding on the course from time to time. But even if I did not, or was not a local and frequent user, I would still plead for continued operation of the course, if for no other reason than to afford children, not unlike myself, their opportunity to make similar memories and learn analogous life lessons as I was afforded through the courses existence.

Ultimately, I see things this way; golf gives people an outlet to relax, it give young people a sport they can pursue no matter their size or body type. It's a beautiful game that teaches patience, self-discipline, honor, honesty, and countless other life lessons. For these reasons, and countless others, any public golf course with affordable rates should be preserved and maintained. A course with historical implications like Sharp Park deserves even more careful protection. Again, I'm an admitted nature lover, and absolutely understand striving to protect the wetlands adjacent to the golf course, and think that a continued effort to maintain a healthy marriage between the golf course and wet lands is imperative.

Now, this is mostly assumption on my part, but I think it's also important not to overlook why this disputed habitat is even still in existence and is there to protect at all. And it is my assumption, and assertion, that if Sharp Park never existed these wetlands would have been leveled long ago, and there would be additional Sharp Park homes build on every piece of structurally sound ground and there would be no habitat to discuss. Therefore, the golf courses existence has afforded these animals and their habitat protection from development. That union has worked so far, and it is my hope that we will continue to protect not only the wildlife, but the historically significant golf course that has fostered it, and that union will go forward into perpetuity.

Again, I urge you to vote down this attempted appeal, and continue with the plan to maintain and protect the frog and snake habitat while also protecting and allowing the continued operation of historic Sharp Park Golf Course.

Sincerely yours,

clayton fandel

Subject: Sharp Park Golf Course / Feb. 28th, 2017 Board Meeting
Date: Friday, January 27, 2017 12:02:23 PM

City of San Francisco
Board of Supervisors

January 27th, 2017

Dear Board:

Firstly, let me say that I find it nearly incredible that you have yet again been asked to consider your opinion of the preservation and improvement of the overall habitat of the Sharp Park Golf Course, as well as the golf course itself. I find the continual opposition to your previous reasonable and rationale decisions to be a form a badgering. Frankly, the appeal you have been asked to hear next month nearly amounts to an abuse of the legislative process, especially when it gets to the point of arguing points that have been fully testified to, explained, proven and decided upon previously --- and on more than one occasion.

On the matter of the Sharp Park Golf Course not being considered "historic" allow me to, once and for all, set the record straight for your consideration. Dr. Alister MacKenzie was indeed the original golf course architect and his original design remains in many facets.

- 1) The routing of the golf course, which is the anatomy of any golf course, is more than 75% per MacKenzie's earlies plans with the exception being only the holes that had to be re-accommodated due to two events: (i) the very early erosion of the coastline and construction of a levee; and (ii) the c. 1960s work to construct the highway.
- 2) The record of the earlier replacement holes is that MacKenzie and his assistants were well a part of considering where some replacement holes would eventually go. This was due to the fact that it was well known that these ocean holes would very likely be compromised by nature, and this realization became evident not long after the course opened.
- 3) To suggest otherwise -- that the golf facility is not a MacKenzie design -- would be akin to suggesting that work now ongoing to add elevators and disabled access to Grady Gammage Concert Hall in Arizona, a Frank Lloyd Wright design, somehow makes the significant building not Wright's. Absurd.

As I wrote for an early study for you (the City) in 2006:

"The history of Sharp Park begins with Mackenzie's well-intentioned design of an 18-hole course along the dunesy coastline of Pacifica. With Lincoln Park and Harding Park busy on weekends, another course was needed. The City of San Francisco purchased lots in San Mateo County from 1929 to 1930, paving the way for creating another golf course.

Jack Fleming was Mackenzie's assistant at the time. The approach to the Sharp Park site was to dredge material in order to build up fairway grades. This work took a reported 14 months.

In mid 1930, Robert Hunter was appointed to direct construction of Sharp Park Golf Course. Hunter had relocated to California (Oakland to be specific) after a career teaching sociology. Hunter was still teaching occasionally and had, by this time, written several books on sociology. One, Poverty, was a best-seller in America during 1904. Hunter is thought to have a great deal to do with the creation of Sharp Park, assisting Mackenzie and carrying out his design philosophy. Hunter took the lead of field work at many of Mackenzie's northern California projects. Just a few years earlier, in 1926, Hunter authored The Links, still today an acclaimed book on golf course design."

I have spent considerable time studying the work of both MacKenzie and Hunter. Our restoration work in El Cerrito, California at Mira Vista Country Club was to the only sole design effort ever by Hunter. Through this process I researched and have gained a great deal about the work of both golf architects. I relate this so you will know that these are not as much opinions as they are factual recounts of what actually occurred in California golf history.

Without any doubt, the history record shows that Sharp Park is a MacKenzie design and remains among only a very few of his golf courses worldwide that are publicly owned and operated for the benefit of the ordinary golfer. It is an historic golf course regardless of the changes made, and it is my understanding that the plans for its future will restore even more of the original design. This is a proud point to weigh, and it should be a heavy weight indeed.

You have in your archives a very handsome blueprint on linen (dated 1931) that shows work to the course and the pipelines that formed the old irrigation works. By overlaying this to plans from the 1960s you can easily see that a majority of the golf course remains per the MacKenzie design, not only in terms of the footprint, but also the corridor formed by the holes. Golf courses are always evolving -- changing. The key here is that the basis of the golf remains, despite the natural and man-caused changes that were simply unavoidable at various times in its history.

Old buildings are the same. They need to be changed and revised, but this does not diminish their historic roots.

You will do well to look straight into the eyes of those who are now coming before you to argue this silly point and to ask them to simply get on with it. For their argument that Sharp Park is not an Alister MacKenzie design, or that it has been so significantly changed as to not be considered his valuable work, is pure rubbish.

Sincerely,

//s//

Dear Supervisors, I am a San Francisco resident, a Sharp Park golfer, and a supporter of the Rec & Park Department's Natural Areas Plan, which among other things includes the Department's Laguna Salada Restoration Plan, to improve habitat in the Sharp Park wetlands for frogs and snakes, while maintaining the historic 18-hole golf course. The Natural Areas Plan was approved December 15 by the Planning and Rec & Park Commissions, following a 20-year process of study, public input, and environmental review. But now the same anti-golf groups that have for years been trying unsuccessfully to close the golf course, have appealed the Commissions' decisions to your Board. Please vote to deny that appeal. Sharp Park is a beautiful, historic public course, built by one of history's greatest golf architects, Alister MacKenzie. Each year since 1932 it has provided reasonably-priced enjoyment, healthy outdoor exercise and a community gathering-place for tens of thousands of diverse men, women, senior, and junior golfers. It is also convenient—just a 15-minute freeway drive from the City's southern neighborhoods. Please do not allow the anti-golf groups to obstruct the City's plans to improve habitat while maintaining the golf course. Their delaying tactics have been going on for years, and their arguments have been repeatedly rejected -- by the Rec & Park and Planning Departments, as well as the Corps of Engineers, the US Fish & Wildlife Service, the California Coastal Commission, and state and federal trial and appellate courts in San Francisco and San Mateo County. It is time to move forward. Please vote to deny the appeal, and to approve the Natural Areas Plan. Support your Recreation and Park Department's carefully-developed and balanced plan to recover frog and snake habitat in the Sharp Park wetlands, while saving the beautiful, popular, and historic 18-hole golf course. Thank you for your service to the community and for considering my request.

TO: SAN FRANCISCO COUNTY BOARD OF SUPERVISORS

Dear Supervisors,

I was a San Francisco resident for 22 years and continue to work in the City every day; I'm also someone who enjoys golf at Sharp Park and am a supporter of the Rec & Park Department's Natural Areas Plan, which among other things includes the Department's Laguna Salada Restoration Plan, to improve habitat in the Sharp Park wetlands for frogs and snakes, while maintaining the historic 18-hole golf course.

The Natural Areas Plan was approved December 15 by the Planning and Rec & Park Commissions, following a 20-year process of study, public input, and environmental review. But now the same anti-golf groups that have for years been trying unsuccessfully to close the golf course, have appealed the Commissions' decisions to your Board. Please vote to deny that appeal.

Sharp Park is a beautiful, historic public course, built by one of history's greatest golf architects, Alister MacKenzie. Each year since 1932 it has provided reasonably-priced enjoyment, healthy outdoor exercise and a community gathering-place for tens of thousands of diverse men, women, senior, and junior golfers. It is also convenient—just a 15-minute freeway drive from the City's southern neighborhoods. I have been a volunteer Course Rater for the Northern California Golf Association for thirteen years and, during that period, have rated and played dozens of public and private golf courses throughout Northern California. This has made me appreciate even more the spectacular benefits offered to the golfers of Northern California, and San Francisco in particular, of having access to such a wonderful and historic golf course like Sharp Park; one doesn't typically see a public course designed by golf architects like Alister MacKenzie, a highly accomplished historical figure who designed Sharp Park in the early 20th century, along with many other well-known golf courses, including Augusta National, where the Masters is played every spring, and Cypress Point on the Monterey Peninsula, both of which naturally encompass and complement their surroundings.

Please do not allow the anti-golf groups to obstruct the City's plans to improve habitat while maintaining the golf course. Their delaying tactics have been going on for years, and their arguments have been repeatedly rejected -- by the Rec & Park and Planning Departments, as well as the Corps of Engineers, the US Fish & Wildlife Service, the California Coastal

Commission, and state and federal trial and appellate courts in San Francisco and San Mateo County.

It is time to move forward. Please vote to deny the appeal, and to approve the Natural Areas Plan. Support your Recreation and Park Department's carefully-developed and balanced plan to recover frog and snake habitat in the Sharp Park wetlands, while saving the beautiful, popular, and historic 18-hole golf course.

Thank you for your service to the community and for considering my request.

Dear Supervisors,

You all have been successful in winning the election that you ran for to make our city and county a strong and secure place to raise our kids and enjoy the many features of San Francisco.

Among those features is a place called SHARP PARK golf course. SHARP PARK is an historic golf course designed by the legendary Allister MacKenzie and it is available and affordable to every level of player and every age group from school kids to super senior players.

I urge you to REJECT the appeal proposed by the Wild Equity Institute. Sharp Park has gone through years of planning, studies, investigations and conclusions that have proved beyond question that SHARP PARK, The PUBLIC GOLF ALLIANCE, SAN FRANCISCO RECREATION AND PARKS, The SAN FRANCISCO PLANNING COMMISSION, The CORPS OF ENGINEERS, The U.S. FISH AND WILDLIFE SERVICE, The CALIFORNIA COASTAL COMMISSION, STATE AND FEDERAL TRIAL AS WELL AS THE APPELLANTCOURTS have all approved the Natural Areas Plan, The Laguna Salada Restoration Plan and the Sharp Park habitat improvement plan for the Red Legged Frog and the California Garder Snake.

My name is Jack Scott I live at 1200 Gough Street, San Francisco and I believe in low cost family entertainment and the availability of a sensational, locally available, world class golf course for ALL of the San Francisco/San Mateo residents and visitors alike.

Jack Scott, a registered voter.

Subject: Remove Sharp Park Golf Course from the Natural Areas Plan! (File No. 170044)
Date: Monday, January 30, 2017 9:04:23 AM

From: Sherri Elinson [mailto:info@actionnetwork.org]
Sent: Sunday, January 29, 2017 11:58 AM
To: Board of Supervisors, (BOS) <board.of.supervisors@sfgov.org>
Subject: Remove Sharp Park Golf Course from the Natural Areas Plan!

Angela Calvillo,

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal "A18", from the environmental review for San Francisco's Significant Natural Resource Area Management Plan ("SNRAMP"). If you do not, you must reject the entire SNRAMP environmental review.

The environmental review for SNRAMP is inadequate because it contains a golf course redevelopment project that was inserted into the SNRAMP environmental review years after the review of SNRAMP was initiated, and long after several mandatory CEQA steps were completed. Thus the Sharp Park golf course redevelopment project never completed formal environmental scoping, was never subjected to mandatory public hearings, and did not benefit from early, formal oversight by other public agencies with subject matter jurisdiction.

When A18 was originally released in 2009, the Planning Department seemed to understand this procedural concern. The Department explained in the SNRAMP environmental scoping report, also released in 2009, that the golf course redevelopment project could never be incorporated into the SNRAMP environmental review process.

Despite this promise, in 2011 the draft environmental review for SNRAMP included the golf course redevelopment project, and after the draft was rubber-stamped by the planning and recreation and park commissions, the final environmental review does as well.

You cannot complete your job of fully vetting the environmental issues presented by the golf course redevelopment project, because the document before you skipped key steps in the CEQA process for the golf course redevelopment project.

Only if that portion of SNRAMP is removed and put through a separate environmental review process can we all be assured that San Francisco is making the most informed environmental decisions possible. Unless and until that happens, you must reject the final

environmental review document for SNRAMP, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

Subject: Sharp Park Golf Course

Dear SF Board of Supervisors: Please reject the latest of many appeals by the Wild Equity Institute etc., regarding the closure of Sharp Park Course. I personally have played there over 50 years. Golfers respect and protect the environs, not harm them. These are needless tactics. This famous and beautiful course is enjoyment to so many people, especially the elderly, like myself. It keeps us active and healthy. Please reject this appeal. Thank you for your commitment to doing what is right. Respectfully, Homer Hudelson, 2684 Sean Ct. South SF, CA 94080

Subject: Deny the Appeal: Natural Areas Plan

Dear Supervisors,

I am a San Francisco native, resident, retired SF Police officer, and a Sharp Park golfer, and a supporter of the Rec & Park Department's Natural Areas Plan, which among other things includes the Department's Laguna Salada Restoration Plan, to improve habitat in the Sharp Park wetlands for frogs and snakes, while maintaining the historic 18-hole golf course.

The Natural Areas Plan was approved December 15 by the Planning and Rec & Park Commissions, following a 20-year process of study, public input, and environmental review. But now the same anti-golf groups that have for years been trying unsuccessfully to close the golf course, have appealed the Commissions' decisions to your Board. Please vote to deny that appeal.

Sharp Park is a beautiful, historic public course, built by one of history's greatest golf architects, Alister MacKenzie. Each year since 1932 it has provided reasonably-priced enjoyment, healthy outdoor exercise and a community gathering-place for tens of thousands of diverse men, women, senior, and junior golfers. It is also convenient—just a 15-minute freeway drive from the City's southern neighborhoods. Please do not allow the anti-golf groups to obstruct the City's plans to improve habitat while maintaining the golf course. Their delaying tactics have been going on for years, and their arguments have been repeatedly rejected -- by the Rec & Park and Planning Departments, as well as the Corps of Engineers, the US Fish & Wildlife Service, the California Coastal Commission, and state and federal trial and appellate courts in San Francisco and San Mateo County.

It is time to move forward. Please vote to deny the appeal, and to approve the Natural Areas Plan. Support your Recreation and Park Department's carefully-developed and balanced plan to recover frog and snake habitat in the Sharp Park wetlands, while saving the beautiful, popular, and historic 18-hole golf course.

Please keep Sharp Park as a great recreational area for those that love the game, exercise, and the City they served. Golf and nature can and do co-exist at Sharp park!!!

Thank you for your service to the community and for considering my request.

Subject: Email in support of Natural Areas Plan and Sharp Park

Dear Supervisors,

I am a Pacifica resident, a Sharp Park golfer, and a supporter of the Rec & Park Department's Natural Areas Plan, which among other things includes the Department's Laguna Salada Restoration Plan, to improve habitat in the Sharp Park wetlands for frogs and snakes, while maintaining the historic 18-hole golf course.

My husband Jeff's family has a long history of playing and enjoying Sharp Park Golf Course. When we married 10 years ago I was lucky to be introduced to Sharp Park and appreciate that legacy. I am not an old, white, rich guy golfer! I am not the face that anti-golf rhetoric would have you visualize. I am a 59 year old Hispanic female who loves everything about golf and especially at a muni course like Sharp Park. I appreciate that I can walk into Sharp Park for a round of golf and feel unintimidated, pay reasonable rates, and enjoy a beautiful old course with a wonderful variation of men, women and junior golfers. Please do not let anti-golf activists ruin decades of public access to municipal golf at Sharp Park. We are one of the most affordable, welcoming and historic courses in our geographical area. This gem that belongs to SF County is one that should not only be kept alive, but nurtured and protected for SF and San Mateo County residents for years to come. So many resources have already been invested in the prior approval by Planning and Rec & Park, not to mention the time already spent by SF Board of Supervisors in hearing the SAME OLD ARGUMENTS. This is just a repackaging of old, failed anti-golf arguments. It's time to move forward and allow the users of Sharp Park to show that they/we can take care of the animals and environment that surrounds us at the course. As players and users of it, we are the best ones to guard our gem - we want its beauty and environment to survive! We are motivated to care for it - contrary to the false and misleading rhetoric you have heard in the past, and will hear again, by haters of golf and golf courses.

The Natural Areas Plan was approved December 15 by the Planning and Rec & Park Commissions, following a 20-year process of study, public input, and environmental review. But now the same anti-golf groups that have for years been trying unsuccessfully to close the golf course, have appealed the Commissions' decisions to your Board. Please vote to deny that appeal.

Subject: Please Vote to Save Sharp Park Golf Course

Dear San Francisco Supervisors,

I am currently a Pacifica resident, a native San Franciscan born here and attending all my education in San Francisco from Kindergarten through college...attending schools such as Lowell High School, City College of San Francisco, and San Francisco State University, a frequent golfer at Sharp Park Golf Course through all those years and still am today. I'm too am also a lover of nature and the preservation of natural resources. I'm an avid outdoors person who enjoys fly fishing (I'm a member of the Golden Gate Park fly casting ponds), backpacking, camping, and grew up learning to fish locally at Lake Merced and was part of the Friends of Lake Merced preservation effort. Suffice it to say, I love San Francisco and the outdoors.

I'm also a supporter of the Rec & Park Department's Natural Areas Plan, which among other things includes the Department's Laguna Salada Restoration Plan, to improve habitat in the Sharp Park wetlands for frogs and snakes, while maintaining the historic 18-hole golf course. The Natural Areas Plan was approved December 15 by the Planning and Rec Sharp Park is a beautiful, historic public course, built by one of history's greatest golf architects, Alister MacKenzie. Each year since 1932 it has provided reasonably-priced enjoyment, healthy outdoor exercise and a community gathering-place for tens of thousands of diverse men, women, senior, and junior golfers. It is also convenient--just a 15-minute freeway drive from the City's southern neighborhoods. Please do not allow the anti-golf groups to obstruct the City's plans to improve habitat while maintaining the golf course. Their delaying tactics have been going on for years, and their arguments have been repeatedly rejected -- by the Rec & Park and Planning Departments, as well as the Corps of Engineers, the US Fish & Wildlife Service, the California Coastal Commission, and state and federal trial and appellate courts in San Francisco and San Mateo County.

It is time to move forward. Please vote to deny the appeal, and to approve the Natural Areas Plan. Support your Recreation and Park Department's carefully-developed and balanced plan to recover frog and snake habitat in the Sharp Park wetlands, while saving the beautiful, popular, and historic 18-hole golf course.

One additional point I'd like to make is you'd be hard pressed to find such a quaint, affordable, and relaxing setting for beginners and youngsters alike to learn the game and the sportsmanship and life lessons golf can offer. And it also has a huge following of

seniors who come out daily to meet with friends and enjoy a round during the week. As beautiful as this course is, you won't find many courses like this anywhere in the US with this type of following, stature, and beauty. It's truly a gem, let's work to keep it that way.

Thank you for your service and for considering my request.

To the attention of the Board of Supervisors

My name is David Wisnia & I'm a San Francisco native now living in San Bruno.

The constant harassment that environmental activists are continually causing is counterproductive to the operation & revenue that the Sharp Park Golf Course produces for San Francisco. The golfing & other patrons of this long standing public facility are the ones who should be listened to in this battle over the continued use of the Sharp Park Golf Course property. I feel it is more responsible to serve the needs of people that are willing to spend their hard earned dollars to support the course & the wildlife that make it their home. Please continue to keep the public golf course & the environmentally sensitive area contained within it as is, coexisting harmoniously!

Thank you for supporting this Pacifica gem & please keep up the good work.

Sincerely

David Wisnia

Re: Support Natural Areas Program and Golf at Sharp Park and urge Supervisors to deny appeal of Natural Areas Final EIR. Case No. 2005.0912E; Hearing February 28, 2017

Dear Supervisors,

I support the Planning Commission's approval of the FINAL EIR for the Park and Rec Department's Natural Areas Plan. This includes habitat recovery for frogs and snakes while maintaining the historic and important 18 hole Sharp Park Golf Course. I implore you to likewise support this and our ongoing efforts to save this masterpiece for all residents to enjoy for decades to come.

Thank you in advance.

Sincerely,

Dear Supervisors,

I support the Planning Commission's approval of the Final EIR for the Rec & Park Department's Natural Areas Plan, which includes habitat recovery for frogs and snakes, while maintaining the historic 18-hole Sharp Park Golf Course.

I am a proud product of public NorCal golf, growing up in the Santa Cruz mountains. If it weren't for the accessibility and opportunities given via public golf, I wouldn't be where I am today—a proud graduate of and former golfer at UCLA, former LPGA professional and current commentator for Golf Channel.

I continue to play public golf in the San Francisco bay area and support the SF First Tee program, a grassroots junior program based at Harding Park whose kids also play Sharp Park. I firmly believe that Sharp Park should remain open and operating, offering a crucial recreational experience to the everyday person on an exceptional, historic coastal course.

Please deny the appeals from the Commission's decision.

Re: Support Natural Areas Program and Golf at Sharp Park
Urge Supervisors to deny appeal of Natural Areas Final EIR
Case No. 2005.0912E
Hearing: Feb. 28, 2017

Dear Supervisors,

Hear my plea for Sharp Park, one of the great public golf courses in the world.

I am a 65 year-old retiree who lives in Sonoma. I have been a golfer for 54 years—ever since both my grandfathers taught me the history, traditions, rules, etiquette, and *tempermental challenges* of the ancient Scottish seaside game.

I started golf when I was 11. By 12, I could introduce myself to three adult strangers and share 4-5 hours of golf's unique and revealing challenge and communion. I scored my first job on the green. I made scores of friends for a lifetime. I know how golf, the "honorable" game of golf, serves a community's soul.

Fact is, what other sport 1) demands you call penalties on yourself, 2) envelops & involves you for hours in nature's ever-changing beauty, 3) provides physical *and mental* challenges, 4) can be shared—and competed—by players of different skill levels, genders, ages, physiques, handicaps, races, nationalities and even income levels. In my view, golf is the most *revealing, worldly & shared* sport—not soccer, football, baseball, or basketball. (Think how much space is devoted to these pursuits in the city! What percentage of these spaces are busy right now as you read this?)

Since 1963, I estimate I have played over 5,000 times (with 12,000+ people?) in seven countries. **One thing I know, there are few *unforgettable* golf courses by all who play them. Sharp Park is one of them.**

I learned golf on Oakland's billy goat public course: Lake Chabot. The revered master golf professional, Dick Fry, with his sons, managed it. (Every young person, and many did, should have a Mr. Fry—and his lofty expectations—to live up to.) Golf pros teach a game that *reveals more you to yourself* (and others) than any other game. Is this why it's a favorite of so many politicians and businesspeople?

Mr. Fry was a mentor, teacher and patient example to many boys & girls. His eldest son, John Fry, became the famed head pro at San Francisco's exquisite, yet today, *very crowded and expensive* Harding Park. Maybe you remember John Fry and how many fine young golfers he inspired, developed, mentored and employed in your city.

I eventually captained the UC Berkeley golf team. We started to travel and test our mettle on many distant courses. When we played San Francisco State, we discovered seaside Sharp Park. I remember we all regretted that it took so long to discover its beauty and challenge. We soon shared the discovery of Sharp Park with East Bay competitors, friends and relatives and car-pool returned over the years.

This verdant "Scottish" masterpiece, designed by the *Rembrandt* of golf course architects, Alister MacKenzie,* remains one of my all-time favorite golf courses. Its seaside foggy-moist *terroir*, *cypress-forested beauty and chilly, breezy challenge* is truly unique in the world of golf. And so, too, are its always accessible tee times, affordability and welcoming vibe. (The staff there is lean yet efficient, helpful and always friendly.)

A few of my most pleasurable memories of golf are finishing in the goldening light and the quieting afternoon breeze of Sharp Park. A friendly, "yep, still opened!" snack bar and its hot chocolate or beer often warms further conversation, laughs, and recounts of our day-old foursome's competition and adventure. It's akin to fishermen returning from a challenging, brisk day at sea with a full boat and a happy soul.

There is much adventure, communion and good cheer shared in that wonderful place: Sharp Park. Please allow this beauty—and hopefully a relentlessly well-supported junior program—to continue on its storied path in the world of golf and for all who already know it...or will.

YES! I support the Planning Commission's approval of the Final EIR for the Rec & Park Department's Natural Areas Plan, which includes habitat recovery for frogs and snakes, while maintaining the historic 18-hole Sharp Park Golf Course.

Please deny appeals to the Commission's decision. Don't neglect this unique and venerated 85 yr old gem that's so "becoming" to even the finest city in America.

Sincerely,
David Brown
Sonoma, CA

Subject: Send Natural Areas Management EIR (file #170046) back to Planning!

To whom it may concern:

We support the San Francisco Forest Alliance's appeal of the certification of the Environmental Impact Report (EIR) for the Natural Resources Management Plan (NRMP). Please send the biased, inaccurate, and inadequate EIR back to Planning for revision.

The EIR is not objective. It talks about one-to-one tree replacement to make the Plan look better. One-to-one tree replacement *is not* in the plan. The actual language reads, "...the trees in the San Francisco Natural Areas would be replaced with either native trees or other native vegetation, such as native scrub or grassland species."

The EIR is inaccurate. The carbon sequestration numbers are wrong. According to the correct calculations, there will be a net release of over 70,000 metric tons of carbon.

This is not a matter of experts disagreeing. The EIR authors claim to use calculation methodology of CalEEMod, but instead, use their own method, one that fails to account for the carbon released from the felled trees.

They reach the conclusion that grasses and shrubs will sequester more carbon than trees which is wrong also. There are studies concluding that forests store about 10 times more carbon than grasslands. Also, the EIR doesn't account for the carbon released from disturbing the ground and from the machinery and vehicles used in implementation.

In addition, the calculations are based on obsolete assumptions. The EIR claims that trees stop sequestering additional carbon after 20 years, but research now shows the oldest trees are still growing rapidly, and storing increasing amounts of carbon as they age. They sequester more additional carbon than young trees.

The EIR is inadequate. It does not consider the effect of cutting down the saplings – young trees that are less than 15 feet tall. According to the Plan, they can be cut down without any notice, at will. However, small trees account for some 15-30% of San Francisco's trees. There are an estimated 11,000 such trees in "Natural Areas", already established and growing. Left alone, these are the ones that will regenerate our forests and become the carbon-sinks of the decades to come. Instead, the plan is to just cut them down without any notice or consideration, and instead plant at taxpayers expense *other saplings* which will require care for the first few years, have a fairly high mortality rate, and never grow as large as the removed saplings would have.

The EIR is inaccurate. It understates the increased herbicide use. The Natural Resources Division (NRD, formerly Natural Areas Program) had used herbicides every year since 200, possibly since mid 90s, when this environmentally damaging program started. They use Tier I and Tier II herbicides (most hazardous and more hazardous) including Roundup, which was declared a probable carcinogen by the World Health Organization in 2015.

The EIR inaccurately claims that implementing the Plan will not increase herbicide use. This is blatantly inaccurate. The Plan specifically calls for cutting down 18,488 trees and treating the stumps with herbicides. The stumps of uncounted saplings will be treated with herbicides as well. This means a massive increase in herbicide use.

The EIR also understates the impact of removing trees in specific locations. For example, removing trees on Mt. Davidson is likely to lead to flooding, increased wind, failure of remaining trees, increased air pollution, and slope instability. *This will very likely lead to property damage and create a huge potential liability for the City.*

The EIR also uses the wrong definition of biodiversity. All trees and plants, whether they are called native or non-native are part of our local biodiversity, just like people from everywhere are part of our city's population diversity.

Furthermore, the EIR says that native plants are more drought tolerant and require less irrigation than non-native plants. It says that native plants are more adaptable to climate change, more sustainable, than non-native plants. But *no evidence is provided*.

The fact that the Natural Areas program has used the most toxic herbicides to establish native vegetation without success for the last 15 years, clearly demonstrates that these claims are inaccurate.

This program proposes to return our parks to what *might* have been growing here 250 years ago, while the climate and the environment today are completely different today. It requires intensive gardening on one quarter of our park land. It is *not sustainable*.

The EIR for example, claims that eucalyptus is invasive. You only need to look around Mt. Davidson to see that eucalyptus hasn't invaded anything. Even the California Native Plant Society classifies eucalyptus as having only "limited" invasiveness.

Read more here: <http://www.sacbee.com/news/state/california/fires/article74496267.html#storylink=cpy>

Please vote YES on File# 170046 to rescind the certification of this bias, inaccurate, and inadequate EIR for Natural Resource Areas Management Plan.

Subject: Sharp Park

San Francisco Board of Supervisors:
Board.of.Supervisors@sfgov.org

Dear Supervisors,

I am a San Francisco resident, a Sharp Park golfer, and a supporter of the Rec & Park Department's Natural Areas Plan, which among other things includes the Department's Laguna Salada Restoration Plan, to improve habitat in the Sharp Park wetlands for frogs and snakes, while maintaining the historic 18-hole golf course.

The Natural Areas Plan was approved December 15 by the Planning and Rec & Park Commissions, following a 20-year process of study, public input, and environmental review. But now the same anti-golf groups that have for years been trying unsuccessfully to close the golf course, have appealed the Commissions' decisions to your Board. Please vote to deny that appeal.

Sharp Park is a beautiful, historic public course, built by one of history's greatest golf architects, Alister MacKenzie. Each year since 1932 it has provided reasonably-priced enjoyment, healthy outdoor exercise and a community gathering-place for tens of thousands of diverse men, women, senior, and junior golfers. It is also convenient—just a 15-minute freeway drive from the City's southern neighborhoods. Please do not allow the anti-golf groups to obstruct the City's plans to improve habitat while maintaining the golf course. Their delaying tactics have been going on for years, and their arguments have been repeatedly rejected -- by the Rec & Park and Planning Departments, as well as the Corps of Engineers, the US Fish & Wildlife Service, the California Coastal Commission, and state and federal trial and appellate courts in San Francisco and San Mateo County.

It is time to move forward. Please vote to deny the appeal, and to approve the Natural Areas Plan. Support your Recreation and Park Department's carefully-developed and balanced plan to recover frog and snake habitat in the Sharp Park wetlands, while saving the beautiful, popular, and historic 18-hole golf course.

Thank you for your service to the community and for considering my request.

Re: Support Natural Areas Program and Golf at Sharp Park
Urge Supervisors to deny appeal of Natural Areas Final EIR
Case No. 2005.0912E
Hearing: Feb. 28, 2017

Honorable Supervisors,

As a fourth-generation San Franciscan, whose grandfather introduced him to the game of golf on the historic course at Sharp Park, I implore you to recognize the heritage this course represents, and its essential service to so many bay area residents.

I support the Planning Commission's approval of the Final EIR for the Rec & Park Department's Natural Areas Plan, which while providing for the recovery of habitat for frogs and snakes, maintains the historic 18-hole Sharp Park Golf Course.

Please deny the ill-considered appeals to reverse the Commission's decision.

Respectfully submitted,

Gerald W Stratford

Subject: Sharp Park Golf Course Natural Areas Plan

Dear Supervisors,

I am a Pacifica resident, a Sharp Park golfer, and a supporter of the Rec & Park Department's Natural Areas Plan, which among other things includes the Department's Laguna Salada Restoration Plan, to improve habitat in the Sharp Park wetlands for frogs and snakes, while maintaining the historic 18-hole golf course.

I have lived in the Sharp Park neighborhood, 2 blocks from Sharp Park Golf Course for over 40 years. It is an integral part of our neighborhood affording open vistas, recreational use and animal habitat. I am a 65 year old retired Pacifica elementary school teacher, a golfer, a parent of golfers and a grandparent of young golfers. My family and friends all value and enjoy public access to *affordable* municipal golf at Sharp Park. Sharp Park Golf Course hosts golfers of all ethnicities, ages, and economic status. Several high schools in the area use it for their golf teams practice sessions.

The Natural Areas Plan was approved December 15 by the Planning and Rec & Park Commissions, following a 20-year process of study, public input, and environmental review. But now the same anti-golf groups that have for years been trying unsuccessfully to close the golf course, have appealed the Commissions' decisions to your Board. Please vote to deny that appeal.

Sharp Park is a beautiful, historic public course, built by one of history's greatest golf architects, Alister MacKenzie. Board of Supervisors:

I am writing this letter to support the current Natural Areas Program. My request is to Support Natural Areas Program and Golf at Sharp Park.

Please deny appeal Case # 2005.0912E for which hearing will be held on February 28, 2017.

There is more than sufficient ground to a habitat recovery for snakes and frogs and to preserve historic Sharp Park 18-hole golf course. Closing the course would be a double loss: first for many golfers who consider Sharp Park almost a second home and second for the loss of another golf course to create more habitat space when already there seems to be an ample sufficiency.

Voting against the proposed measure would mean a win/win all around.

Sincerely yours,

Anne F. Burgoyne

RE: SHARP PARK GOLF COURSE - PACIFICA

Dear Supervisors:

I am writing to ask that you remove the Sharp Park Golf Course redevelopment from the Natural Resource Areas Management Plan's EIR.

That area is crucial habitat for the endangered San Francisco garter snake and the California red-legged frog, amongst others. Surely their survival needs should take precedent over a money-losing, out-of-town golf course, one which provides little recreational benefit to the residents of San Francisco.

On February 28, please vote to remove the Sharp Park Golf Course redevelopment from the Natural Resource Areas Management Plan's EIR.

Failing that, I ask that you reject the entire EIR.

Thank you for your consideration.

Sincerely,

Eric Mills, coordinator

Dear Supervisors,

My name is Byron Sakamoto, a long time resident , golfer and member of Harding Park Golf Club.

I have lived in San Francisco since 1981 and I'm a home owner.

Dear Supervisors,

I support the Planning Commission's approval of the Final EIR for the Rec & Park Department's Natural Areas Plan, which includes habitat recovery for frogs and snakes, while maintaining the historic 18-hole Sharp Park Golf Course.

Case No. 2005.0912E

Please deny the appeals from the Commission's decision.

you can contact me at E-mail: bts4birdie@aol.com if you need more information from me.

Re: Support Natural Areas Program and Golf at Sharp Park

Urge Supervisors to deny appeal of Natural Areas Final EIR

Case No. 2005.0912E

Hearing: Feb. 28, 2017

Dear Supervisors,

I support the Planning Commission's approval of the Final EIR for the Rec & Park Department's Natural Areas Plan, which includes habitat recovery for frogs and snakes, while maintaining the historic 18-hole Sharp Park Golf Course.

Please deny the appeals from the Commission's decision.

I am a SF resident, and view Sharp Park Golf course as a wonderful resource. It's historic value is maintained by its continued operation, and pays benefits to the community by attracting many people to the area that would otherwise not receive the exposure.

Subject: Approve the Natural Areas Plan
Date: Friday, February 03, 2017 1:38:27 PM

Dear Supervisors,

I am a longtime Sharp Park golfer, former Pacifica homeowner, and a supporter of the Rec & Park Department's Natural Areas Plan, which among other things includes the Department's Laguna Salada Restoration Plan, to improve habitat in the Sharp Park wetlands for frogs and snakes, while maintaining the historic 18-hole golf course.

The Natural Areas Plan was approved December 15 by the Planning and Rec & Park Commissions, following a 20-year process of study, public input, and environmental review. But now the same anti-golf groups that have for years been trying unsuccessfully to close the golf course, have appealed the Commissions' decisions to your Board. Please vote to deny that appeal.

Sharp Park is a beautiful, historic public course, built by one of history's greatest golf architects, Alister MacKenzie. Each year since 1932 it has provided reasonably-priced enjoyment, healthy outdoor exercise and a community gathering-place for tens of thousands of diverse men, women, senior, and junior golfers. It is also convenient—just a 15-minute freeway drive from the City's southern neighborhoods. Please do not allow the anti-golf groups to obstruct the City's plans to improve habitat while maintaining the golf course. Their delaying tactics have been going on for years, and their arguments have been repeatedly rejected -- by the Rec & Park and Planning Departments, as well as the Corps of Engineers, the US Fish & Wildlife Service, the California Coastal Commission, and state and federal trial and appellate courts in San Francisco and San Mateo County.

It is time to move forward. Please vote to deny the appeal, and to approve the Natural Areas Plan. Support your Recreation and Park Department's carefully-developed and balanced plan to recover frog and snake habitat in the Sharp Park wetlands, while saving the beautiful, popular, and historic 18-hole golf course. The Natural Areas Plan is a win-win both for golfers and the frogs and snakes -- habitats will be unspoiled, as golfers (unlike hikers) will want to avoid going into them!

Thank you for your service to the community and for considering my request.

Re: Support Natural Areas Program and Golf at Sharp Park
Urge Supervisors to deny appeal of Natural Areas Final EIR
Case No. 2005.0912E
Hearing: Feb. 28, 2017

Dear Supervisors,

I support the Planning Commission's approval of the Final EIR for the Rec & Park Department's Natural Areas Plan, which includes habitat recovery for frogs and snakes, while maintaining the historic 18-hole Sharp Park Golf Course.

Please deny the appeals from the Commission's decision.

Public, municipal golf is the basis of how golf started back in the 1400s at St Andrews in Scotland. It is owned by the city and brings in millions in tax dollars and is a beacon in a worldwide sport. They recognize the value of the asset and protect it and leverage it for civic gain.

Enlightened, civic minded people know that Sharp Park is a treasure and a gift to not only all citizens of San Francisco, but all who travel here. Sharp Park is unique in its history and importance to American Golf for reasons I'm sure you are aware being involved in this process. We were bestowed this course almost 100 years ago and city leaders then recognized the value the course

would provide to the community for their descendants. I hope that the Supervisors will recognize you made the right decision previously and deny the appeals from misguided groups who don't recognize the importance of affordable public golf and its many uses and value to making San Francisco a worldwide treasure to live, work and play.

Best,

Dear Supervisors,

I support the Planning Commission's approval of the Final EIR for the Rec & Park Department's Natural Areas Plan, which includes habitat recovery for frogs and snakes, while maintaining the historic 18-hole Sharp Park Golf Course.

The frogs and snakes need help from people who know a lot more about environmental statistics than I do; but I do have a clear perception that all such creatures are an important element in the natural community of living things, and that I always come away from a morning at Sharp with an almost ecstatic appreciation for the few hours of direct communing with these sadly shrinking but still vital islands of harmony and sanity.

Golf and golfers are easy prey for ridicule, but so is Yoga and other pursuits of peaceful coexistence with this planet and other human beings. Golf courses are natural peace pockets, and their intrusion into the natural order of things is always outweighed by the benefits to the preservation of scenic harmony and mental health.

Please deny the appeals from the Commission's decision.

Subject: Send the Natural Areas' Management EIR back to Planning (File# 170046)
Date: Saturday, February 04, 2017 11:53:14 PM

Dear Supervisors

Tank Hill Neighbors supports the San Francisco Forest Alliance's appeal against the certification of the Environmental Impact Report (EIR) for the Natural Areas Management Plan. We request you to send the error-filled EIR back to Planning for revision.

The EIR is inaccurate. The carbon sequestration numbers are just plain wrong. This is not a matter of experts disagreeing. The actual calculations are wrong and as a result, understate the net release of carbon dioxide. You would not consider it "expert disagreement" if one expert claimed that $2+2=3$, but this is what is happening with the EIR. Not only that, but the calculations are based on obsolete assumptions: that trees stop sequestering additional carbon after 20 years. Research now shows that bigger trees and older trees actually sequester more additional carbon than young trees. (Study in "Nature" magazine, 2014, quoted in Time magazine: 'An international research group led by Nate Stephenson of the U.S. Geological Survey Western Ecological Research Center reviewed records from forest studies on six continents, involving 673,046 individual trees and more than 400 species, going back as far as 80 years ago. For 97% of the species surveyed, the mass growth rate—literally, the amount of tree in the tree—kept increasing even as the individual tree got older and taller.'")

The EIR understates the increased herbicide use. The Natural Areas Program, now re-named the Natural Resources Department, has used herbicides every year since the public started obtaining the data in 2008.

They use only Tier I and Tier II herbicides (most hazardous and more hazardous) including Roundup, which is a likely carcinogen. The EIR inaccurately claims implementing the Plan will not increase herbicide use beyond current levels, in other words, that the Plan can be implemented without herbicides.

The EIR doesn't properly evaluate the loss of recreation. The Plan calls for closing 95% of the Natural Areas to public access, by prohibiting people from leaving the confines of the "designated" trails and also by closing many miles of trail. This takes away 30% of our total park land and converts it into nature preserves we can only view from a distance.

We ask the Board of Supervisors to send the EIR back for the following actions:

- properly identify significant impacts of the Natural Areas Management Plan for San Francisco Parks;

- require mitigation/accountability measures for the added significant impacts;
- remove the incorrect statements;
- add a mitigation measures that introduce accountability for tree removal and replacement

Thank you.

Sharp Park golf course is the only recreational athletic facility owned by the City that seniors can use. Seniors only have walking as their crucial exercise (most doctors recommend 10,000 steps per day as a complete exercise program for seniors). That means golf is the appropriate sport to accomplish this. The other golf courses owned by the City are not appropriate for seniors to use: Lincoln is beautiful but way too hilly to climb up and down, especially with clubs. As is Gleneagles and Golden Gate (and it and Fleming are only 9 holes). And Harding is a wonderful course, not too hilly, but a senior resident must pay \$38 to play Harding, and that's too expensive for most seniors. Sharp costs less than half of that to play.

Who are these seniors who play Sharp? Go over there sometime...see for yourself. The image of rich white males as golfers is completely not the case. Most players, and there are lots of women playing there, are Asian, Hispanic, Filipino, and all, without exception, are blue collar working people or retired workers on pension or social security. Many are former City and County employees.

I am 73, have lived in San Francisco for 52 years, and play Sharp Park all the time. It is a recreational treasure for everyone my age who wants to get some needed exercise, and enjoy the aspects of sport. Please retain Sharp Park in its current condition.

Dear Members of the San Francisco Board of Supervisors,

I support the San Francisco Forest Alliance's appeal of the certification of the Environmental Impact Report (EIR) for the Natural Resources Management Plan (NRMP). Please send the bias, inaccurate, and inadequate EIR back to Planning for revision.

The EIR is not objective. For example, it discusses one-to-one tree replacement which IS NOT in the plan - to make the plan look better. It needs to discuss what IS in the document.

The actual language: "...the trees in the San Francisco Natural Areas would be replaced with either native trees or other native vegetation, such as native scrub or grassland species..."

The EIR is inaccurate. The carbon sequestration numbers are wrong. **According to the correct calculations, there will be a net release of over 70,000 metric tons of carbon— and that's a conservative figure.**

- The calculations are wrong and grossly understate the net release of carbon dioxide
- this is not a matter of experts disagreeing. The EIR authors claim to use calculation methodology of CalEEMod, but use their own, made up method, one that fails to account for the carbon released from the killed trees.

They reach the conclusion that grasses and shrubs will sequester more carbon than trees. It is obviously false. Plus there are studies concluding that forests store about 10 times more carbon than grasslands. The EIR doesn't account for the carbon released from disturbing the ground and from the machinery and vehicles used in implementation.

- In addition, the calculations are based on obsolete assumptions. The EIR claims that trees stop sequestering additional carbon after 20 years, but research now shows the oldest trees are still growing rapidly, and storing increasing amounts of carbon as they age. They sequester more additional carbon than young trees.

The EIR is inadequate. It does not consider the effect of cutting down the saplings – young trees that are less than 15 feet tall. According to the Plan, they can be cut down without any notice, at will. However, small trees account for some 15-30% of San Francisco's trees. There are an estimated 11,000 such trees in "Natural Areas", already established and growing. Left alone, these are the ones that will regenerate our forests and become the carbon-sinks of the next decades. Instead, the plan is to just cut them down without any notice or consideration, and instead plant at taxpayers expense *other saplings* which will require care for the first few years, have a fairly high mortality rate, and never grow as large as the removed saplings would have.

The EIR is inaccurate. It understates the increased herbicide use. The Natural Resources Division - NRD (former "Natural" Areas Program - NAP) had used herbicides every year - definitely since 2001- most likely since mid 90s, when this environmentally damaging program started.

They use Tier I and Tier II herbicides (most hazardous and more hazardous) including Roundup, which was declared a probable carcinogen by WHO in 2015. The EIR inaccurately claims that implementing the Plan will not increase herbicide use, in other words, that the Plan can be implemented without herbicides. This is impossible: the Plan calls for cutting down 18,488 trees and treating the stumps with herbicides. For the years to come. The stumps of uncounted saplings will be treated with herbicides as well. It would all lead to a massive increase in herbicide use.

The EIR is inaccurate. It understates the impact of removing trees in specific locations. For example, removing trees on Mt. Davidson is likely to lead to flooding, increased wind, failure of remaining trees, increased air pollution, slope instability.

The EIR is inaccurate. It uses the wrong definition of biodiversity. All trees and plants, whether they are called native or non-native are part of our local biodiversity, just like people from everywhere are part of our city's population diversity. Adding the word "native" to "biodiversity", demonizes any non-native species. Our urban forests are historically a part of the totality of plant diversity in San Francisco and have been so for almost 150 years.

The EIR is inaccurate. It says "native" plants are more drought tolerant than "non-native". It says "native" plants are more adaptable to climate change, more sustainable, than "non-native". It says that "native" plants require less irrigation than "non-native". **No evidence is provided.** The fact that the "Natural" Areas program continuously, for at least 15 years, uses the most toxic herbicides to establish "native" vegetation without success shows that none of those claims are true. It tries to return our parks to what **MIGHT** have been growing here 250 years ago while the climate and the environment are different. It requires intensive gardening on one quarter of the park land. It is **NOT SUSTAINABLE**. There are "native" and "non-native" plants which are drought tolerant

The EIR is inaccurate. It claims that eucalyptus is "invasive." You only need to look around (Mt. Davidson is a good example) to see that the trees haven't invaded anything.

Even California Native Plant Society classifies it as having only “**Limited**” invasiveness.

The EIR is inaccurate. It claims that thinning will encourage growth and forest health.

Thinning is a technique used for forest management for LOGGING, and it is done when trees are young. Established forest is a community adjusted to the existing conditions which in all likelihood will be damaged by the change. As was the tree which fell and caused the Butte Fire in 2015. It was determined that a stand of trees surrounding the one that fell and burned was removed by PG&E before the fire. That was poor tree maintenance: it left the remaining tree “exposed to open space” and “prone to failure.” Both Cal Fire and Calaveras County are seeking millions (90M by Cal Fire) from PG&E as reimbursement for damages.

<http://www.sacbee.com/news/state/california/fires/article74496267.html#storylink=cpy>

Please vote YES on File# 170046 to rescind the certification of this bias, inaccurate, and inadequate EIR for Natural Resource Areas Management Plan.

While it is revised, please work on cancelling this environmentally damaging, unnatural "Natural" Areas Program (now "Natural" Resource Division), or at least on the legislation to:

- remove all forested areas from NAP (NRD) control and give management of forested areas to the Recreation and Park Department's Forestry Division's trained arborists for routine maintenance, and prohibit the removal of any trees in NAP-managed areas except for reasons of hazard abatement or construction of buildings (but not habitat restoration);
- restrict NAP to implementing only the ("environmentally superior" according to the EIR itself) Maintenance Alternative identified in the EIR;
- prohibit all Tier 1 and Tier 2 [the most toxic] herbicide use by NAP to ensure public safety in all park areas.

Thank you,

Susanna Klebaner

SUBJECT: Send the Natural Areas' Management EIR back to Planning (File# 170046)

Dear Members of the San Francisco Board of Supervisors,

I support the San Francisco Forest Alliance's appeal of the certification of the Environmental Impact Report (EIR) for the Natural Resources Management Plan (NRMP).

The EIR is inaccurate, inadequate, and not objective.

The EIR is not objective. One-to-one tree replacement IS NOT in the plan - but EIR talks about it as if it IS in the document.

The actual language of the Plan: "...the trees in the San Francisco Natural Areas would be replaced with either native trees or other native vegetation, such as native scrub or grassland species..."

The EIR is inaccurate. The carbon sequestration numbers are wrong. **According to the correct calculations, there will be a net release of over 70,000 metric tons of carbon– and that's a conservative figure.**

- The calculation method is made up by the EIR authors, who claim falsely that they use CalEEMod methodology. They do not account for the carbon released from the killed trees.

They claim that grasses and shrubs will absorb more carbon than tree, while studies show that forests store about 10 times more carbon than grasslands. They don't account for the carbon released from disturbing the ground and from the machinery and vehicles used during tree killing.

The calculations are based on obsolete assumptions. The EIR claims that trees stop sequestering additional carbon after 20 years, but research shows the oldest trees are still growing rapidly, and storing increasing amounts of carbon as they age. They sequester more additional carbon than young trees.

The EIR is inadequate. It does not consider the effect of cutting down young trees that are less than 15 feet tall. According to the Plan, they can be cut down at will.

However, small trees account for some 15-30% of San Francisco's trees. There are an estimated 11,000 such trees in "Natural Areas", already established and growing. Left alone, these are the ones that will regenerate the forests and become the carbon-sinks of the next decades. Instead, the plan is to cut them down without any notice or consideration, and plant other saplings instead, which will require care for the first few years, have a fairly high mortality rate, and never grow as large as the removed saplings would have.

The EIR is inaccurate. It grossly understates the increased herbicide use. The Natural Resources Division - NRD (former "Natural" Areas Program - NAP) had used herbicides every year - definitely since 2001- most likely since mid 90s, when this environmentally damaging program started.

They use Tier I and Tier II herbicides (most hazardous and more hazardous). The EIR inaccurately claims that implementing the Plan will not increase herbicide use, in other words, that the Plan can be implemented without herbicides. This is impossible: the Plan calls for cutting down 18,488 trees and treating the stumps with herbicides for the years to come. The stumps of uncounted saplings will be treated with herbicides too. It would all lead to a massive increase in herbicide use.

The EIR is inaccurate. It uses the wrong definition of biodiversity. All trees and plants, whether they are called native or non-native are part of our local biodiversity, just like people from everywhere are part of our city's diversity. Adding the word "native" to "biodiversity", demonizes any non-native species. Our urban forests are historically a part of plant diversity in San Francisco and have been so for almost 150 years.

The EIR is inaccurate. It says "native" plants are more drought tolerant than "non-native". It says "native" plants are more adaptable to climate change, more sustainable, than "non-native". It says that "native" plants require less irrigation than "non-native". **No evidence is provided.** The fact that the "Natural" Areas program continuously, for at least 15 years, uses the most toxic herbicides to establish "native" vegetation without success shows that none of those claims are true. It tries to return our parks to what **MIGHT** have been growing here 250 years ago while the climate and the environment are now different. It requires intensive gardening on one quarter of our park land. It is **NOT SUSTAINABLE.**

There are both "native" and "non-native" plants which are drought tolerant. NAP often irrigates "native" plantings, but they usually die nevertheless.

The EIR is inaccurate. It claims that eucalyptus is "invasive." You only need to look around Mt. Davidson to see that the trees haven't invaded anything. California Native Plant Society classifies eucalyptus as having only "**Limited**" invasiveness.

The EIR is inaccurate. It claims that thinning will encourage growth and forest health.

Thinning is a technique used for forest management for LOGGING, and it is done when trees are young. Established forest is a community adjusted to the existing conditions which in all likelihood will be damaged by the change. For the tree which fell and caused the Butte Fire in 2015 it was determined that a stand of trees surrounding was removed by PG&E before the fire. That was poor tree maintenance: it left the remaining tree "exposed to open space" and "prone to failure." Both Cal Fire and Calaveras County are seeking millions from PG&E as reimbursement for damages.

Subject: SF Public Golf Alliance Supports Rec & Park Department's Natural Areas Plan, Opposes Appeal; Board of Supervisors Hearing Feb. 28, 3 p.m.

Clerk of the San Francisco Board of Supervisors
Board President London Breed, and Members of the Board,

The San Francisco Public Golf Alliance and its 6,500-plus members support the Rec & Park Department's Natural Areas Plan, and oppose the appeal from the Planning Department's certification of the Final EIR. We ask that our position, and our supporting documentation and letters, including this letter and its attachments, be included in the Board's record in the matter.

An important component of the NAP is the Rec & Park Department's restoration plan for the lagoons and wetlands at Sharp Park, together with maintenance of the popular and historic 18-hole public Sharp Park Golf Course. Opened in 1932, the golf course was built for San Francisco by the preeminent golf architect Alister MacKenzie, and is formally recognized as an historic site by the Pacifica General Plan and Pacifica Historical Society, and as Historic Resource Property under CEQA by the San Francisco Planning Department. Sharp Park is listed as one of the 50 Best Municipal golf courses in America by Golfweek Magazine. And the California Coastal Commission has found that "Sharp Park Golf Course qualifies as sensitive coastal resource area [under Public Resources Code 30000 et seq.] due to its significant recreational value."

San Francisco's effort to balance the interests of habitat recovery, reasonably-priced public recreation, and historic preservation at Sharp Park go back to the early 1990's, with involvement and supervision from the US Fish & Wildlife Service, Army Corps of Engineers, San Francisco Bay Regional Water Quality Control Board, California Coastal Conservancy, and California Coastal Commission. Environmentalist groups led by Wild Equity Institute have in recent years unsuccessfully contested San Francisco's restoration plans for Sharp Park in the state and federal courts. However, the San Francisco and San Mateo County Superior Courts, the US District Court for the Northern District of California, and the US Court of Appeals for the Ninth Circuit have rejected the claims, and dismissed all of these lawsuits. Key issues raised in Wild Equity's current appeal to Your Board from the Planning Commission's December 15, 2016 Order Certifying the Final EIR, have already been considered and decided against Wild Equity and the other appellants in those prior administrative agency and court proceedings. All of this is set forth in detail, with extensive documentation to the public record, in the above-attached letter, dated December 12, 2016, which San Francisco Public Golf Alliance filed with the Planning Commission in advance of its December 15 public hearing on the Final EIR.

We will submit to Your Board an additional comment letter, opposing Wild Equity's appeal of the Planning Commission's Certification of the Final EIR. But in the meantime, we will by separate correspondence deliver to the Clerk of the Board, with copies to the individual supervisors' offices, letters from many of our individual members in support of the Natural Areas Plan and in opposition to the appeal.

We look forward to seeing you at the public hearing on February 28.

Best Regards

Richard Harris

**Re: Natural Areas Plan, Final EIR
Planning and Rec & Park Commissions Joint Hearing, Dec. 15, 2016**

**San Francisco Public Golf Alliance supports the Final EIR,
Including the RPD's 18-hole Sharp Park Conceptual Restoration Plan,
and urges the Commissions not to "sever" Sharp Park.**

Dear Commissioners,

EXECUTIVE SUMMARY

Sharp Park Golf Course, built in the early 1930's by the preeminent architect Alister MacKenzie in collaboration with John McLaren, is one of the best-known and best-loved jewels in San Francisco's parks system. It is known nation- and world-wide as an historic cultural landscape and public golf treasure, and is ranked as one of the 50 Greatest Municipal Courses in America. It is also one of the most reasonably-priced public courses in the Bay Area, beloved by golfers across all gender, age, racial, and economic strata.

Since the issuance of a California Coastal Conservancy-sponsored study in 1992, the Rec & Park Department has pursued a long-term program of renewing and improving the historic golf links, while protecting and enhancing habitat for endangered snakes and frogs that live in the Sharp Park wetlands. The San Francisco Public Golf Alliance supports this balanced program. We are optimistic that under provisions of the Final EIR – with its Revisions to Mitigation Measures M-CP-7 and M-RE-6 requiring consultation with an expert in Alister MacKenzie and historic golf architectural renovation – the city will be able to protect the species, the public recreation, and the historic golf architecture at Sharp Park. These are all very important public resources at Sharp Park, and we must seek the proper balance – as the Coastal Commission did in the case of the Pump House Project.

Your two commissions -- Recreation and Park, and Planning – together with the Public Utilities Commission, have repeatedly since 2000 developed plans, adopted resolutions, and spent millions of dollars in support of the Sharp Park Golf Course. This includes the \$10 Million Pacifica Recycled Water Project, specifically designed to deliver recycled irrigation water to the course. Completed in 2012, that project makes Sharp Park one of the few courses between San Francisco and San Jose with a recycled water source.

Between 2012-2015 these plans have received regulatory approvals from the US Fish & Wildlife Service, US Army Corps of Engineers, California Coastal Commission, and San Francisco Regional Water Quality Control Board. Challenges from anti-golf activists have been rejected, and lawsuits dismissed, by the San Francisco Superior Court, San Mateo County Superior Court, US District Court for the Northern District of California, and the US Court of Appeals for the Ninth Circuit.

Now, the same anti-golf activists whose announced goal is to close the golf course, are asking Your Commissions to “sever” Sharp Park from the Natural Areas Final EIR – and thus delay needed habitat recovery and restoration work at the golf course. This is a bad idea, and we urge you to reject “severance”.

Sharp Park has been part of the Rec & Park Department’s Significant Natural Resource Areas Management Plan since the program’s inception. An earlier attempt by these same anti-golf activists to “sever” Sharp Park from the Natural Areas Program – virtually identical to arguments currently being made to your two Commissions -- died in committee at the San Francisco Board of Supervisors in 2012.

Preserving this precious public resource is our collective duty, and the specific responsibility of our public officials, who are trusted stewards of our parks, recreation, and great public architectural facilities, especially those such as Sharp Park Golf Course that have been loved and enjoyed by millions of people for nearly a century.

For these reasons and more – all of which are thoroughly footnoted to original source documents in the following sections of this letter – the 6,500-plus members of the non-profit, pro-bono San Francisco Public Golf Alliance urge Your Commissions to proceed with the Natural Areas Final EIR, including the 18-hole Sharp Park restoration plan.

II. Background

A. Sharp Park is a Significant Recreational and Historical Resource

Sharp Park Golf Course, opened in 1932 and located adjacent to Salada Beach in Pacifica, is a San Francisco-owned seaside public golf links, designed by preeminent architect Dr. Alister MacKenzie¹, and often called “The Poor Man’s Pebble Beach.” It is: (1) one of the most reasonably-priced golf courses in the Bay Area²; (2) heavily-played³; (3) recognized by the San Francisco Planning Department as an “historic resource” under the California Environmental Quality Act (CEQA)⁴; (4) recognized by the California Coastal Commission as a “sensitive coastal resource area” under the Coastal Act for its seaside public golf recreational values⁵; (5) designated an “historic site” by the City of Pacifica General Plan⁶ and by the Pacifica Historical Society⁷; (6) designated a nationally-significant “At-Risk Cultural Landscape” by the Washington D.C.-based Cultural Landscape Foundation⁸; and (7) recognized (along with Harding Park) as one of America’s 50 Best Municipal Courses by Golfweek Magazine.⁹

¹ Dr. MacKenzie, inducted into the World Golf Hall of Fame, was the architect of several of the world’s most highly-esteemed courses, including Augusta National (home of the annual Masters Tournament) and the Cypress Point Club at Monterey, CA. World Golf Hall of Fame, “Alister MacKenzie” <http://www.worldgolfhalloffame.org/alister-mackenzie/> Sharp Park is one of only a handful of municipal courses in the world built by Dr. MacKenzie, and his only public seaside links.

² A chart compiled by the San Francisco Recreation and Park Department and presented in November, 2009 to the Park, Recreation, and Open Space Advisory Committee – the Department’s citizens’ advisory committee – shows that Sharp Park’s greens fees are among the lowest for 18-hole public courses in the San Francisco Bay Area. San Francisco Recreation & Park Department, Chart: <https://dl.dropboxusercontent.com/u/30028085/SFRPD.Survey.Bay.Area.Golf.Fees.2009.pdf>

³ Annual play figures at Sharp Park vary with the weather. In Fiscal Year 2013-2014, 45,622 18-hole rounds were played at Sharp Park, more than at any of the city’s other municipal courses. See SF Rec & Park Department, Golf Revenue & Expenditure Report, for FY 13-14: <https://dl.dropboxusercontent.com/u/30028085/%2713-%2714%20Actuals.pdf>

⁴ San Francisco Planning Dept., Historic Resource Evaluation Response (“HRER”), February 15, 2011, at Page 2: https://dl.dropboxusercontent.com/u/30028085/SF_Planning_Dept_Historic_2_8_2011.pdf

⁵ California Coastal Commission, Staff Report, April 3, 2015, at pp. 18-19: <http://documents.coastal.ca.gov/reports/2015/4/th8a-4-2015.pdf>. In its April 16, 2015 ruling granting the Permit for the Pump House Project, the Coastal Commission unanimously adopted the Staff Report and its findings. *Id.*, April 3, 2015, at page 5.

⁶ The golf course is designated a Pacifica “Historic Site” in the Pacifica General Plan, Historic Preservation Element and Historic Sites Map, at pages 95 and 95a. <http://www.cityofpacific.org/civica/filebank/blobload.asp?BlobID=3443> .

⁷ The City of Pacifica’s official historian, the Pacifica Historical Society, by Resolution dated June 14, 2011, designated Sharp Park Golf Course a Pacifica “historical and cultural resource”: https://dl.dropboxusercontent.com/u/30028085/Pacific_Historical_Society_Resolution_6-14-11.pdf

⁸ Cultural Landscape Foundation, “Sharp Park Golf Course Threatened With Closure,” About TCLF, At Risk Landscapes: <http://tclf.org/landslides/sharp-park-golf-course-threatened-closure> ; <http://tclf.org/about> ; <http://tclf.org/stewardship/about-landscape?destination=search-results>; <http://tclf.org/landscapes/sharp-park-golf-course>

Congresswoman Jackie Speier¹⁰, the County of San Mateo¹¹, the cities of Pacifica¹² and San Bruno¹³, and the Chambers of Commerce of both San Francisco¹⁴ and Pacifica¹⁵ have all urged that Sharp Park Golf Course be preserved.

Specifically, the City of Pacifica in the current Natural Areas Plan EIR process, has called Sharp Park Golf Course “an important resource that is shared by the two cities [Pacifica and San Francisco] as well as the rest of San Mateo County,” and officially endorsed the Natural Areas Draft EIR, and called upon San Francisco to “. . . mov[e] forward the work called for in the Significant Natural Resources Areas Management Plan and in the preservation of the Sharp Park Golf Course.”¹⁶

1. Sharp Park is the People’s Course, the “Poor Man’s Pebble Beach,” enjoyed by a broad and diverse group of men, women, seniors, and students across the full range of age, gender, race, and income.

Long known as “the poor man’s Pebble Beach,” Sharp Park is a mere 15-minute freeway ride from San Francisco’s southern neighborhoods, and has historically been a favorite of low-income golfers, seniors, students, and racial and ethnic minorities. In 1955, Sharp Park played an important role in the racial integration of public recreation in America, when it hosted the inaugural championship tournament of the Western States Golf Association, one of the country’s oldest and largest African-American golfing societies.¹⁷

¹⁶ Letter, Pacifica Mayor Mary Ann Nihart to San Francisco Planning Department, October 26, 2011 <https://dl.dropboxusercontent.com/u/30028085/Pacifica.ltr.SFPIng.SNRAMP%20EIR.10%2C26%2C11.pdf>

¹⁷ Letter, October 5, 2011. from Nathaniel Jackson, President, Bay Area Golf Club of Northern California,: <https://dl.dropboxusercontent.com/u/30028085/Ltr.Bay.AreaGC%20to%20MayorLee.10.5.11.pdf>

Sharp Park is a favorite venue for several San Francisco and North Peninsula high school boys' and girls' golf teams, as well as Senior and ethnic minority golf associations, including the Bay Area Golf Club of Northern California¹⁸ Mabuhay Golf Club¹⁹, Sons in Retirement²⁰, Mexican American Golf Association²¹, and Golden Hill Golf Club²², all of which have written letters calling for preservation of the 18-hole golf course.

2. With its Alister MacKenzie architecture, seaside location, and great beauty, Sharp Park is widely admired as a national and international golf treasure.

The late Ken Venturi, San Francisco favorite son, US Open Champion, and World Golf Hall of Fame member, called Sharp Park Dr. MacKenzie's "great gift to the American public course golfer."²³ And state, national, and world golf associations, including the United States Golf Association²⁴, Northern California Golf Association²⁵, Southern California Golf Association and Pacific Women's Golf Association²⁶, Golf Course Superintendents Association of America²⁷, Professional Golfers' Association of America²⁸, World Golf Foundation²⁹, and the Alister MacKenzie Society of Great Britain and Ireland³⁰, have called upon San Francisco to save and protect Sharp Park Golf Course.

B. Sharp Park is also home of protected frogs and snakes, which were not found at Sharp Park until years after golf course construction converted the previously-brackish Laguna Salada into a “picturesque freshwater pool.”

Following trial in 2015, San Francisco Superior Court Judge Garrett Wong on May 28, 2015 dismissed a Sharp Park lawsuit brought by anti-golf groups against San Francisco and its agencies, including the Board of Supervisors, Planning Commission and Planning Department. Among other things, Judge Wong found:

“The golf course at Sharp Park was constructed in 1932 . . . The seawall along the western edge of Sharp Park was originally constructed between 1941 and 1952 and eliminated the historic hydrologic connection between the Pacific Ocean and the wetland complex. . . . The first recorded sighting of the California red-legged frog or the San Francisco garter snake at Sharp Park was in 1946, after the seawall was constructed [citation omitted]. Red-legged frogs cannot live in saline conditions [citation omitted], and before the seawall, Laguna Salada was regularly inundated with seawater. . . .”³¹

A contemporaneous newspaper description of John McLaren’s planning and Alister MacKenzie’s design vision for Sharp Park Golf Course that appeared in the February 23, 1930 San Francisco Chronicle reported: “More than half of the holes border on Lake Salada, which John McLaren, superintendent of parks, transformed from a salt water marsh into a picturesque fresh-water pool.”³²

San Francisco’s plan to recover habitat in Sharp Park’s wetlands for the threatened California red-legged frog and its predator the San Francisco garter snake grew out of the California Coastal Conservancy-sponsored “Laguna Salada Resource Enhancement Plan,” a 1992 study authored by Philip Williams & Associates (PWA).³³ The PWA plan called for **“use which is compatible with the natural resource values of the site and with the golf course operation”**³⁴ including habitat enhancement for the frogs and snakes, pumping to manage water levels and quality, dredging tules from ponds and wetlands, maintaining the Sharp Park seawall, continuing the 18-hole golf course, and developing a recycled water irrigation system for the course.³⁵

³⁴ Philip M. Williams Associates, *Id.*, at p. 35.

³⁵ Philip M. Williams Associates, *Id.*, at pp. 37-51

Before construction of the golf course at Sharp Park in the early 1930's, PWA concluded, Laguna Salada "is not likely to have supported the San Francisco garter snake, which feeds on freshwater frogs":

"Prior to development as a golf course in the 1920's and 1930's, the site, referred to as Laguna Salada (Salty Lake), consisted of ranch lands, sand dunes, and a large lagoon. . . the common name of Salt Lake Valley³⁶ suggests that the lagoon was brackish to saline. The absence of trees also suggests a more saline environment. . . . Given the saline nature of the pond, it is not likely to have supported the San Francisco garter snake, which feeds on freshwater frogs. The construction of the golf course modified the hydrologic connection with the ocean. . . tidal exchange was greatly reduced and eventually eliminated. The elimination of saline water during the spring months allowed freshwater vegetation to become established. . . ³⁷

To the same effect are (1) an historic photograph, taken before the golf course was built, showing artichoke fields surrounding Laguna Salada field³⁸, and (2) the October 2, 2012 US Fish and Wildlife Service Biological Opinion, which states:

"Little is known about the history of San Francisco garter snake and California red-legged frog in the action area prior to the completion of Sharp Park Golf Course in 1932. The species were first documented in the action area in 1946."³⁹

³⁶ A copy of an 1892 US Geological Survey map of the area, included as Figure 2 to the Williams Report, shows Laguna Salada located in a valley named "Salt Valley":

<https://dl.dropboxusercontent.com/u/30028085/USFWS%20BiOp.pdf>

The Biological Opinion was the result of a 17-month consultation between San Francisco Rec & Park and the US Fish and Wildlife Service and Corps of Engineers.

III. San Francisco has for years worked to balance the recreational, historical, and environmental values at Sharp Park, and this work has been upheld –over objections from the same anti-golf activists who are today calling for Sharp Park to be “severed” from the Final EIR -- by San Francisco’s Rec & Park, Planning, and PUC commissions, and by the lead Resource Agencies, including US Fish & Wildlife Service, Army Corps of Engineers, Regional Water Quality Control Board, and California Coastal Commission. And these approvals have been upheld by the state and federal courts.

A. In 2009, Rec & Park adopted, and the Commission approved, the Laguna Salada Conceptual Restoration Plan, to enhance wetland habitat at Sharp Park, while retaining the historic 18-hole golf course.

The San Francisco Rec and Park Commission in December, 2009, unanimously approved the Laguna Salada Conceptual Restoration Plan, to recover habitat for the California red-legged frog and the San Francisco garter snake in the Sharp Park wetlands, while preserving the historic 18-hole golf course.⁴⁰ Before the Commission approved it, the 18-hole plan was overwhelmingly endorsed by the Parks, Recreation and Open Space Advisory Committee (PROSAC).⁴¹ The plan was recommended by the Department in November, 2009, based upon a six-month study and report by the environmental consulting firm Tetra-Tech.⁴² Throughout this process, environmental activist groups vigorously but unsuccessfully lobbied to close the golf course.⁴³

B. Anti-golf activists admit that the Sharp Park Plan now before Your Commissions as part of the Natural Areas Plan is “substantially the same plan” as the Pump House Project, approved in October, 2012 by a US Fish & Wildlife Service Biological Opinion.

In its October 31, 2011 Comment letter to the Planning Department on the Natural Areas Plan, the anti-golf activist group Wild Equity Institute admits that “the Fish and Wildlife Service has already reviewed **substantially the same plan** that is proposed in the [RPD’s] preferred alternative for Sharp Park Golf Course.”⁴⁴ (That is to say, the same

Sharp Park Plan which is a component of the Natural Areas Plan, currently before Your Commissions.)

That US Fish and Wildlife Service review resulted in a Biological Opinion and Incidental Take Statement, dated October 2, 2012⁴⁵, for the first phase of the Rec & Park's long-term Sharp Park plan, including partial dredging of the ponds and connecting channel, plus worker safety and other improvements to the golf course's flood-control pumping system.

This project was entitled the Sharp Park Safety, Infrastructure Improvement, and Habitat Enhancement Project ("Pump House Project").^{46, 47} Following a 17-month study, the USFWS on October 2, 2012 concluded that, subject to a set of Conservation Measures designed to minimize the project's potential impacts, the Pump House Project "is not likely to jeopardize the continued existence of the California red-legged frog or San Francisco garter snake" (*Id.*, at page 38).^{48, 49}

C. Federal Trial and Appeals courts dismiss anti-golf lawsuit filed in 2011 by Sierra Club, Wild Equity Institute, Center for Biological Diversity, Sequoia Audubon, Surfrider Foundation, and National Parks Conservation Association.

On March 2, 2011, Wild Equity Institute, Center for Biological Diversity, National Parks Conservation Association, Surfrider Foundation, Sequoia Audubon, and the Sierra Club filed a lawsuit against San Francisco, Mayor Edwin Lee, and Rec & Park General Manager Phil Ginsburg in the US District Court for Northern California, for declaratory and injunctive relief under the Endangered Species Act, based on allegations of "unlawful take" (killing and other damage) of the California red-legged frog and San Francisco Garter Snake at the Sharp Park Golf Course.⁵⁰

⁴⁵ Biological Opinion and Incidental Take Statement, US Fish and Wildlife Service (USFWS), October 2, 2012 <https://dl.dropboxusercontent.com/u/30028085/USFWS%20BiOp.pdf>

⁴⁶ Biological Opinion and Incidental Take Statement, *Id.*, Project Description, at pp. 5-6

⁴⁷ The Pump House Project is discussed in detail below, in Section III.D of this letter.

⁴⁸ Biological Opinion and Incidental Take Statement, *supra* (fn. 46)

⁴⁹ Before reaching its conclusions, the USFWS considered objections and arguments from Wild Equity and Center for Biological Diversity's consultants ESA/PWA and Peter Bayh. This can be seen from the USFWS Biological Opinion. *Id.* Literature Cited at pages 48-49, which includes a lengthy report from consultant ESA-PWA, dated February 9, 2011, entitled "Conceptual Ecosystem Restoration Plan and Feasibility Assessment, Laguna Salada, Pacifica, California. Prepared for Wild Equity Institute and Center for Biological Diversity." <https://dl.dropboxusercontent.com/u/30028085/ESA-PWA.2011.Laguna.Salada.Plan%2C%202.10.11.pdf>

⁵⁰ *Wild Equity Institute, Center for Biological Diversity, et al. vs. City and County of San Francisco*, U.S. Dist.Ct.N.D.Cal., No. C 11-00958 SI, Complaint for Declaratory and Injunctive Relief, filed March 2, 2011: <https://dl.dropboxusercontent.com/u/30028085/WildEq.vs.San%20Fran.USDC.Complaint.3-2-11.pdf>

Following issuance of the USFWS Biological Opinion and Incidental Take Statement on October 2, 2012⁵¹, U.S. District Court Judge Susan Illston on December 6, 2012 ruled that the lawsuit was mooted by the Biological Opinion and Incidental Take Statement, and dismissed the lawsuit.⁵² On March 25, 2015, the U.S. Court of Appeals for the Ninth Circuit dismissed the plaintiffs' appeal.⁵³

D. In 2014, San Francisco Planning and Rec & Park Commissions and Board of Supervisors approved the Sharp Park Pump House Project; the approvals were upheld in 2015 by San Francisco Superior Court.

On January 16, 2014 – and over opposition from anti-golf activists -- the San Francisco Planning Commission unanimously approved a Preliminary Mitigated Negative Declaration for the Sharp Park Pump House Project.⁵⁴ The Rec & Park Commission – again over opposition from anti-golf activists -- approved the Mitigated Negative Declaration and the Pump House Project at its January 23, 2014 meeting.⁵⁵ And the San Francisco Board of Supervisors, after a long public hearing on March, 25, 2014, denied the anti-golf activists' appeal of the Rec & Park and Planning Commissions' decisions, and approved the Pump House Project.⁵⁶

Wild Equity, Save the Frogs, and Sequoia Audubon Society then brought a Writ of Mandamus in San Francisco Superior Court, naming the City and County of San Francisco, and its Board of Supervisors, Planning Commission, Planning Department, and Mayor Edwin Lee as defendants, and alleging that their approvals violated the California Environmental Quality Act.⁵⁷ Following trial, San Francisco Superior Court Judge Garrett

Wong on August 18, 2015 entered an Order Denying Writ of Mandate⁵⁸, and a Judgment in favor of the defendants.⁵⁹ Among other things, Judge Wong found in his Order Denying Writ of Mandate:

“ . . . the Biological Opinion provides an absolute guarantee that the Project will not harm Sharp Park’s red-legged frog population. . . The [US Fish and Wildlife] Service has authorized this Project by issuing the Biological Opinion and the Incidental Take Statement. *Under the Biological Opinion there are no circumstances whereby the Project could possibly “substantially degrade the quality of the environment; substantially reduce the habitat of a fish or wildlife species; cause a fish or wildlife population to drop below self-sustaining levels; threaten to eliminate a plant or animal community; [or] substantially reduce the number or restrict the range of an endangered, rare, or threatened species,” which is the measure of a significant adverse impact on a listed species. [citation omitted] The Service has determined that the take levels it authorized in the Incidental Take Statement are “not likely to jeopardize the continued existence of the California red-legged frog or San Francisco garter snake.” [citation omitted] Under the Biological Opinion and the Incidental Take Statement, the Service has already prohibited the Project from causing any level of take that might harm the frog population at Sharp Park. Before the Project could have a detrimental impact on the frog population, it would lose its authorization under the Biological Opinion.”⁶⁰

E. The US Army Corps of Engineers and San Francisco Bay Regional Water Quality Control Board approved the Pump House Project and rejected the anti-golf arguments.

The Pump House Project required – and received – permits and approvals from (1) the Army Corps of Engineers, which granted a Clean Water Act Section 404 permit on February 5, 2014⁶¹; and (2) the San Francisco Bay Regional Water Quality Control Board, which on June 25, 2014 issued a Clean Water Act Section 401 Certification.^{62, 63}

F. California Coastal Commission finds Sharp Park Golf Course to be a “sensitive coastal resource area” under the Coastal Act because of its recreational – and specifically public golf -- values, and grants a coastal development permit to the Pump House Project, to protect the course from flooding and to “maintain the existing functional capacity of the wetland”.

The California Coastal Commission on April 16, 2015 approved a Coastal Development Permit for the Pump House Project.⁶⁴ ⁶⁵ Significantly, the Commission found that, under the Coastal Act (California Public Resources Code Section 30000, et seq.):

“Sharp Park Golf Course qualifies as **sensitive coastal resource area** due to its significant recreational value and because it is a highly scenic area. (See § 30116(b) and (c)) . . . In particular, Sharp Park Golf Course is open to the public. It is a highly popular course enjoyed by golfers who appreciate its historic architecture, dramatic views, and inexpensive rates.”⁶⁶

Included in the Pump House Project was retroactive approval of new, larger pumps at the pump house. The Commission found that the new pumps are needed to reduce golf course flooding, which would otherwise substantially impact the low-cost public golf “sensitive coastal resource” at Sharp Park.

“In the end, the Commission must determine whether its decision to either deny or approve a project is the decision that is most protective of significant coastal resources. In this case, the Commission finds that the impacts on recreational resources from not constructing the project as conditioned, would be more significant than the project’s potential adverse effects to sensitive EHSA buffer areas and upland habitat. Denying the proposed project because of its inconsistency with Section 30240 would result in the continued flooding of the golf course, which over time may discourage its use and deprive low-income users of the opportunity to play golf with coastal views. In contrast, approving the development as proposed protects and continues recreational uses, and provides some habitat enhancement. . . .

⁶³ Wild Equity Institute on July 25, 2014 filed a Petition for Review and Reconsideration of the Section 401 Certification: http://www.swrcb.ca.gov/public_notices/petitions/water_quality/docs/petitions/a2321petition.pdf ; but according to the California State Water Resources Control Board’s online listing, “Water Quality Petitions” (http://www.swrcb.ca.gov/public_notices/petitions/water_quality/petitions.shtml), as of October 10, 2016 Wild Equity’s Petition (Petition No. A-2321) has not been acted upon by the Water Resources Control Board.

⁶⁴ California Coastal Commission, Permit 2-12-014, June 2, 2015: <https://dl.dropboxusercontent.com/u/30028085/SFPGA.Sh.Pk.Coast.Comm.CDP.6.2.15.pdf>

In its April 16, 2015 ruling granting the Permit for the Pump House Project, the Coastal Commission unanimously adopted the Staff Report and its findings. *Id.*, April 3, 2015, at page 5.

⁶⁶ California Coastal Commission, Staff Report, *Id.* April 3, 2015, at pages 18-19 (emphasis added).

Therefore, the Commission finds that, approving the project, as conditioned, is, on balance, most protective of coastal resources.”⁶⁷

On June 15, 2015, Wild Equity Institute (alone) filed suit in San Mateo Superior Court against the Coastal Commission, seeking a writ of administrative mandamus to require the Commission to vacate its permit for the Pump House Project.⁶⁸ On August 20, 2015, San Mateo County Superior Court Judge George Miram denied Wild Equity’s motion for preliminary injunction to stay the permit pending outcome of the lawsuit. In so ruling, Judge Miram found that Wild Equity “failed to demonstrate a reasonable probability of prevailing on the merits of its Writ Petition.”⁶⁹ Wild Equity then dismissed its lawsuit on October 9, 2015.⁷⁰

San Francisco completed work on the Pump House Project in October, 2015.

**G. San Francisco Public Utilities and Rec & Park Commissions
Approve the Pacifica Recycled Water Project, completed in 2012 at a
cost of \$10 Million (paid 78% by San Francisco), for the express
purpose of providing recycled water to irrigate the golf course.**

At a public hearing on October 28, 2008, with no public opposition testimony, the San Francisco Public Utilities Commission voted unanimously to enter an agreement with Pacifica’s North Coast County Water District to construct the Pacifica Recycled Water Project, designed to deliver 78% of the project’s recycled water from Pacifica’s Calera Creek water treatment plant to irrigate the golf course.⁷¹ At the hearing, the only public comment came from Jennifer Clary of the environmentalist group Clean Water Action, who described “a big environmental backlash. . . around red-legged frogs and Sharp Park”, but nevertheless urged the Commissioners to support the recycled water project for Sharp Park:

“I urge you to vote yes on this. This is a very difficult project. . . There was a big environmental backlash. . . some of the problems around red-legged frogs

and Sharp Park that came up, there was a lot of concern about endangered species. . But I think this is a good project and I urge you to approve it.”⁷²

Initially funded with a planning grant from the State Water Resources Control Board, the \$10 Million project had been in the pipeline since the late 1990’s.^{73, 74} In November, 2010, the Public Utilities Commission again voted unanimously – this time, over objection from environmentalist groups – to amend the Pacifica Recycled Water agreement, and to enter a Memorandum of Understanding to manage the project with San Francisco’s Rec & Park Department.⁷⁵ In turn, the Rec & Park Commission at its January 20, 2011 public meeting voted unanimously to enter the Memorandum of Understanding with the PUC for the Pacifica Recycled Water Project.⁷⁶ Construction of the pipelines, pumps, and storage tank was completed in 2012, and in October, 2014, recycled irrigation water was delivered to the four golf holes lying east of the Coast Highway.⁷⁷ Today, thanks to the Pacifica Recycled Water Project, Sharp Park is one of the few golf courses between San Francisco and San Jose with a dedicated recycled water irrigation source.

III. There are no legitimate grounds to “sever” Sharp Park from Final EIR.

A. Sharp Park was not “added late” to the Natural Areas planning process or EIR but has been part of the Natural Areas program since its inception.

Evolution of a plan between the initial notice of preparation and the draft EIR stage does not invalidate an EIR process. Nothing in the California Environmental Quality Act, or the CEQA Guidelines, requires that the project description in the initial Notice of Preparation of EIR must remain static throughout the remainder of the CEQA process.

Indeed, consistent with the purpose of requiring agency and public input, projects often change during the course of the CEQA process. See Kostka & Zischke,

⁷⁷ Pacifica Tribune, Nov. 4, 2014, “Recycled Water Now Used on Sharp Park...”: http://www.mercurynews.com/pacifica/ci_26864797/recycled-water-now-used-sharp-park-golf-course (Copy attached as **Exhibit 19**.)

Practice Under the California Environmental Quality Act (2d ed., March 2012 update) Section 12.11, citing County of Inyo vs. City of Los Angeles, 71 Cal.App.3d 185, 199 (3rd Dist., 1977) (“The CEQA reporting process is not designed to freeze the ultimate proposal in the precise mold of the initial project; indeed, new and unforeseen insights may emerge during investigation, evoking revision of the original proposal.”); Western Placer Citizens for an Agricultural and Rural Environment vs. County of Placer, 144 Cal.App.4th 890 (3rd Dist., 2006). The fact that aspects of the SNRAMP, including some aspects of the Sharp Park portion, may have changed between the issuance of the Notice of Preparation and the issuance of the Draft EIR, does not invalidate the process.

Sharp Park Golf Course is recognized by the Planning Department to be Historical Resource Property under the California Environmental Quality Act. So any substantial alteration, such as elimination or redesign of the course to a 9-hole format, would require a separate CEQA review. That is not the case with the A-18 Plan and the Final EIR, which retains the historic course and provides for careful work on any changes to the course to accommodate habitat recovery by a golf architect who specializes in historic golf restoration and the work of Alister MacKenzie. Because the Commission did not adopt the “A-9” or “No Golf” alternatives, a separate golf course-centered Environmental Impact Review process was not required.⁷⁸

B. Anti-golf activists made an effort at the San Francisco Board of Supervisors in 2012 to “sever” Sharp Park from the Natural Areas Program, but that effort died in committee in December, 2012.

On June 26, 2012, then-San Francisco Supervisor Christina Olague submitted a draft Resolution to the Board of Supervisors, captioned “Sever Sharp Park Golf Course from the Natural Areas Plan,” with several “whereas” clauses that closely resemble arguments still being made by anti-golf activists in favor of their current campaign to “sever” Sharp Park from the Natural Areas plan.⁷⁹ The matter was assigned to the Board’s Land Use and Economic Development Committee. But when the bill failed to obtain sufficient support to get out of committee, and at the request of the sponsor, then-Supervisor Olague, the matter was tabled at the Committee’s December 3, 2012 public meeting.⁸⁰

⁷⁸ “Because **redesigning or eliminating** the Sharp Park Golf Course is a separate proposal being studied by SFRPD, it will not be included or evaluated as part of the proposed SNRAMP project analyzed in the EIR. Should changes to the Sharp Park Golf Course be proposed, they would undergo a separate regulatory review, including CEQA environmental review.” (emphasis added) Natural Areas Plan Scoping Report, November, 2009 at page 2-5.

⁷⁹ Draft Resolution, June 26, 2012, File No. 120619, “Sever Sharp Park Golf Course from the Natural Areas Plan”: <https://dl.dropboxusercontent.com/u/30028085/Olague%5BDft%5DResol.6.26.12.pdf>

IV. CONCLUSION: Approve the Final EIR. Don't sever Sharp Park.

Sharp Park Golf Course has been there since 1932--predating Pacifica's incorporation by 25 years--and is the eponym for Pacifica's entire Sharp Park District. It is a beautiful and important property, and a vital historic cultural and recreational resource. Sharp Park is an internationally-significant and extraordinary municipal golf course -- one of the very few public courses and the only public seaside links in the world designed by Alister MacKenzie. The golf course is recognized as "Historic Resource Property," protected under the California Environmental Quality Act, and recognized by the California Coastal Commission as "Sensitive Coastal Resource Area" for its scenic, moderately-priced, public golf recreational qualities.

Since the California Coastal Conservancy-sponsored PWA report in 1992, San Francisco's laudable plan to renovate the golf course while recovering habitat for frogs and snakes has been the subject of exhaustive studies, environmental impact reports, public hearings and comment, decisions, orders, and millions of dollars of expenditures, from, among others, the San Francisco PUC and Rec and Park Departments and Board of Supervisors, Pacifica's North Coast County Water District, the US Fish and Wildlife Service, the California Coastal Commission, California Coastal Conservancy, the State Water Resources Control Board, the SF Bay Regional Water Quality Control Board, and the Corps of Engineers.

After all these years, all this study, all these public hearings, and all these decisions by public agencies and courts, it is time to move on with the Natural Areas Program, to certify the Final EIR -- importantly, including the 18-hole Sharp Park restoration plan -- and adopt the Plan. The 6,500-plus members of the San Francisco Public Golf Alliance urge your Commissions to do so.

Respectfully submitted,

Richard Harris

Subject: We Are In Support of the Rec & Park's Areas Plan

Dear Supervisors,

My wife Sharon and I are long-term San Francisco residents, and we vote. The purpose of this e-mail is to urge approval of the Planning and Rec & Park Commissions' decisions regarding Sharp Park. The two Commissions have studied the situation for 20 years, which included public input and environmental review. The appeal of the Commissions' decisions by the anti-golf groups should be denied. The opposition is a misguided effort that will have the effect not only of closing a beautiful golf course, but unnecessarily closing a public course that is reasonably priced and available to those of us who wish to play golf but cannot, or choose not to, pay the high fees of a private course. The fact Sharp Park is easily accessible, serves a diverse clientele, is an historic Alister MacKenzie course, and can be maintained as proposed by the Commissions without adversely affecting the frogs and snakes in the area, means the Commissions' decisions should be approved.

Thank you for your consideration of this issue and our e-mail.

Alan and Sharon Levins

Subject:Re: RPD's Natural Areas Plan

Date:Fri, 27 Jan 2017 11:13:23 -0800

From:Derek Drish <derekdrish@gmail.com>

To:Jeff.Sheehy@sfgov.org

Dear Supervisor Sheehy,

I am a San Francisco resident in your District, a Sharp Park golfer, and a supporter of the Rec & Park Department's Natural Areas Plan, which among other things includes the Department's Laguna Salada Restoration Plan, to improve habitat in the Sharp Park wetlands for frogs and snakes, while maintaining the historic 18-hole golf course.

The Natural Areas Plan was approved December 15 by the Planning and Rec & Park Commissions, following a 20-year process of study, public input, and environmental review. But now the same anti-golf groups that have for years been trying unsuccessfully to close the golf course, have appealed the Commissions' decisions to your Board. Please vote to deny that appeal.

Sharp Park is a beautiful, historic public course, built by one of history's greatest golf architects, Alister MacKenzie. Each year since 1932 it has provided reasonably-priced enjoyment, healthy outdoor exercise and a community gathering-place for tens of thousands of diverse men, women, senior, and junior golfers. It is also convenient—just a 15-minute freeway drive from the City's southern neighborhoods. Please do not allow the anti-golf groups to obstruct the City's plans to improve habitat while maintaining the golf course. Their delaying tactics have been going on for years, and their arguments have been repeatedly rejected -- by the Rec & Park and Planning Departments, as well as the Corps of Engineers, the US Fish & Wildlife Service, the California Coastal Commission, and state and federal trial and appellate courts in San Francisco and San Mateo County.

It is time to move forward. Please vote to deny the appeal, and to approve the Natural Areas Plan on February 28th. Support your Recreation and Park Department's carefully-developed and balanced plan to recover frog and snake habitat in the Sharp Park wetlands, while saving the beautiful, popular, and historic 18-hole golf course. The course, unlike a lot of other park properties, accrues revenue.

Thank you for your service to the community and for considering my request.

Sincerely,

Derek Drish

Re: Support Natural Areas Program and Golf at Sharp Park

Urge Supervisors to deny appeal of Natural Areas Final EIR

Case No. 2005.0912E

Hearing: Feb. 28, 2017

Dear Supervisors,

I support the Planning Commission's approval of the Final EIR for the Rec & Park Department's Natural Areas Plan, which includes habitat recovery for frogs and snakes, while maintaining the historic 18-hole Sharp Park Golf Course.

Please deny the appeals from the Commission's decision.

Sharp Park Golf Course is a fine example of a successful cohesion of recreation, sport, exercise, wonderful views and a vibrant habitat for a variety of frogs, snakes and other creatures. Why fight over something that works well? And has worked well for many, many years.

Subject: Letters Opposing Sharp Park Golf Course Redevelopment in SNRAMP

Dear Ms. Calvillo and Mr. Jalipa,

Please find attached over 330 letters of support for removing the Sharp Park Golf Course redevelopment from the Natural Resource Areas Management Plan's EIR.

We urge the supervisors to vote to remove the multi-million golf course redevelopment that harms endangered species from the EIR. Sharp Park golf course has been losing money for years, and since it's located in Pacifica, it provides little recreational benefit to San Francisco residents.

Thank you for your consideration.

Best,

Angela Calvillo, Clerk, and Board of Supervisors
1 Dr. Carlton B. Goodlett Place
City Hall, Room 244
San Francisco, CA 94102-4689

Dear Ms. Calvillo and Supervisors:

I have read that golf is on the wane in the country. Why in heaven's name would we in San Francisco put precious park and recreation dollars into a golf course now? San Francisco has parks and other recreational areas that need the money for their infrastructure more than our existing golf courses. Please let's not squander our precious funds, particularly after the election of our next president. Also, how many golfers are there in comparison to the residents of the city and county that need scarce and limited recreational resources?

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

Sincerely,

Genevieve Fujimoto

San Francisco, CA 94102-4689

Dear Ms. Calvillo and Supervisors:

I am with the critters on this one!

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

Sincerely,

Susan Williams
1364 47th Ave
San Francisco, CA 94122

Angela Calvillo, Clerk, and Board of Supervisors
1 Dr. Carlton B. Goodlett Place
City Hall, Room 244
San Francisco, CA 94102-4689

Dear Ms. Calvillo and Supervisors:

I often go to Pacifica to walk the hills to enjoy the beauty of nature. I have seen a garter snake slither across the trail. So far the frogs have eluded me! Do not destroy the natural habitat (homes) of the resident garter snakes and frogs. You would not approve the redevelopment project if it destroyed YOUR home and community. A golf course is NOT nature! Sincerely, Karen Malm

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

Sincerely,

Karen Malm
247 Lobos St

San Francisco, CA 94117

Angela Calvillo, Clerk, and Board of Supervisors
1 Dr. Carlton B. Goodlett Place
City Hall, Room 244
San Francisco, CA 94102-4689

Dear Ms. Calvillo and Supervisors:

It's absolutely ridiculous to consider this golf course improvement within this environmental review focused on urban natural environmental resources. I am shocked after all the public support for protecting the two endangered species there that this rebuild for the golf course would be included in the master management plan. This undermines any credibility the plan has.

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

1 Dr. Carlton B. Goodlett Place
City Hall, Room 244
San Francisco, CA 94102-4689

Dear Ms. Calvillo and Supervisors:

San Francisco has given itself a chance to be a leader with the Natural Areas Program. Why are we now shooting ourselves and dirtying our city and areas with useless destruction so a few greedy ignoramuses can play golf. To hell with this. Do the intelligent thing, the more difficult thing (but with more fantastic results) and return this area to its natural magnificence. Less playing and more doing.

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

City Hall, Room 244
San Francisco, CA 94102-4689

Dear Ms. Calvillo and Supervisors:

Shame on you! We need more natural areas for all people to enjoy. A golf course only allows a small group of wealthy people to enjoy a natural area. It also pollutes the land and water because of all the fertilizers and pesticides used to keep the "green" green. People need open spaces. We need to be able to get out into nature where we will all become more healthy, be happier and live longer.

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

San Francisco, CA 94102-4689

Dear Ms. Calvillo and Supervisors:

The City has already destroyed a significant natural area and affected the international migratory bird route with the intrusion of the Beach Chalet Soccer Field, for one. Let's leave these species at Sharp Park alone. They are on the brink of extinction and every species that goes extinct is, among other things, a removal of yet another thread in the vital tapestry of life. Many political leaders and business people don't seem to understand this basic reality. But when enough species are made extinct by "redevelopment" and "park improvements" and "extraction of natural resources," in a terrible moment they will understand it, alright.

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

San Francisco, CA 94102-4689

Dear Ms. Calvillo and Supervisors:

We have plenty of golf courses, but not so many San Francisco garter snakes and the California red-legged frog. Sharp park is a biologically important site and we need to protect it for all time. I am embarrassed and angry that my city has failed to fulfill restoration at Sharp Park. This is a very special place and must be set aside for protection of these highly endangered animals and for the future enjoyment of residents of the northern peninsula. Golf is something for just a relatively small number of individuals who can afford the fees and expenses of playing. A wildlife oasis is something everyone can enjoy and millions can learn from. We must set aside this special place for all people to enjoy. San Francisco must live up to the promises it has made.

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

Sincerely,

Dorothy Varellas

San Fran, CA 94124

Angela Calvillo, Clerk, and Board of Supervisors
1 Dr. Carlton B. Goodlett Place
City Hall, Room 244
San Francisco, CA 94102-4689

Dear Ms. Calvillo and Supervisors:

We have such little open space left in the Bay Area. We need to preserve what we can as habitat for our native wildlife.

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

Sincerely,

Michelle Mackenzie

1 Dr. Carlton B. Goodlett Place
City Hall, Room 244
San Francisco, CA 94102-4689

Dear Ms. Calvillo and Supervisors:

Your responsibility, as part of the City's commitment to achieving climate change goals, is to protect this Ohlone land and promote native plant regeneration, to protect the water and the natural habitat for wildlife, including threatened species like the red legged frog, and to make a bold statement against the Trump administration that San Francisco is really committed to its climate change goals. Trump builds golf courses. San Francisco leads the way in climate change policy. Here's your opportunity to walk your talk. Thank you for doing the right thing and stopping the golf course in Sharp Park.

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

Dear Ms. Calvillo and Supervisors:

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

Sincerely,

Carol Carges

San Francisco, CA 94102-4689

Dear Ms. Calvillo and Supervisors:

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

Sincerely,

Alice Polesky

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Monday, February 20, 2017 3:03:11 PM

**Attention SF
Board of
Supervisors:**

There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:

**1. Public access
restrictions: :**

Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.

**2. Increase in
greenhouse
gases: :**

You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.

**3. Increase in
herbicides: :**

The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.

**4. CEQA
process
violations:**

The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.

**5. Trail
closures: :**

The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.

**6. No required
tree
replacement in
Project area: :**

The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.

**7. Project
implementation
before EIR
violates
CEQA: :**

The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.

**8. Bicyclists
singled out: :**

The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.

**9. Impact of
fencing
ignored: :**

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.

**10. Evidence of
bias: :**

Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

 Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
 Date: Monday, February 20, 2017 3:42:19 PM

Attention SF Board of Supervisors:	There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:
1. Public access restrictions:	Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.
2. Increase in greenhouse gases:	You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.
3. Increase in herbicides:	The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.
4. CEQA process violations:	The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.
5. Trail closures:	The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.
6. No required tree replacement in Project area:	The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.
7. Project implementation before EIR violates CEQA:	The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.
8. Bicyclists singled out:	The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.
9. Impact of fencing ignored:	The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.
10. Evidence of bias:	Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Signed:

Public spaces should be open to the public, and we need more trees, not fewer.

Dear Ms. Calvillo and Supervisors:

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

Sincerely,

Bill Petersen

Dear Ms. Calvillo and Supervisors:

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

Sincerely,

Anne Steele

 Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
 Date: Wednesday, February 22, 2017 6:55:03 AM

Attention SF Board of Supervisors:	There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:
1. Public access restrictions:	Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.
2. Increase in greenhouse gases:	You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.
3. Increase in herbicides:	The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.
4. CEQA process violations:	The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.
5. Trail closures:	The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.
6. No required tree replacement in Project area:	The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.
7. Project implementation before EIR violates CEQA:	The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.
8. Bicyclists singled out:	The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.
9. Impact of fencing ignored:	The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.
10. Evidence of bias:	Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Angela Calvillo, Clerk, and Board of Supervisors
1 Dr. Carlton B. Goodlett Place
City Hall, Room 244
San Francisco, CA 94102-4689

Dear Ms. Calvillo and Supervisors:

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

Sincerely,

Angela Mcallister

Dear Ms. Calvillo and Supervisors:

I urge you to remove the Sharp Park Golf Course redevelopment project, originally known as proposal A18, from the environmental review for San Francisco's Significant Natural Resource Area Management Plan (SNRAMP).

If you do not, you must reject the entire SNRAMP environmental review, because the fiscal, environmental, and recreational consequences of the Sharp Park Golf Course redevelopment project are so grave that it will wipe out any and all environmental benefits proposed in all other areas affected by SNRAMP.

Sincerely,

Jaine Bartlett

Dear San Francisco Board of Supervisors:

I am writing to urge you to reject the Final Environmental Impact Report for the proposed Significant Natural Resource Areas Management Plan, unless and until the Sharp Park Golf Course redevelopment is removed from the plan. Please find my official comment attached, and please do submit it to the public record and ensure all relevant government employees see it.

Thank you for protecting the environment and spending taxpayer dollars wisely.

Kerry Kriger, Ph.D.
SAVE THE FROGS!
Founder, Executive Director, Ecologist
www.savethefrogs.com
www.savethefrogs.com/kerry-kriger
Voicemail: 415-878-6525
kerry@savethefrogs.com

SAVE THE FROGS! is the world's leading amphibian conservation organization. We work in California, across the USA, and around the world to prevent the extinction of amphibians, and to create a better planet for humans and wildlife. Since 2008, SAVE THE FROGS! has educated over three million people about endangered amphibians, and frog enthusiasts from at least 87 countries have participated in our programs. Together we can SAVE THE FROGS!

Dear San Francisco Board of Supervisors:

I am writing to urge you to reject the Final Environmental Impact Report for the proposed Significant Natural Resource Areas Management Plan, unless and until the Sharp Park Golf Course redevelopment is removed from the plan. The Sharp Park Golf Course has been heavily and rightly criticized by scientists, conservation groups, and community park advocates for the past decade, due to its harmful impacts on imperiled wildlife, and its misuse of taxpayer funds that could be more effectively spent on important social and environmental programs.

The vast majority of California's wetlands have been drained, degraded and destroyed. Sharp Park is home to federally protected, endangered California Red-Legged Frogs (*Rana draytonii*), California's official state amphibian. The Board of Supervisors should work to protect, rather than to kill, harm and harass these frogs, which is what happens when the City pumps the Sharp Park Wetlands out to sea, causing the frogs' egg masses to be stranded on dry land.

SAVE THE FROGS! and the vast majority of non-golfers throughout San Francisco and elsewhere are wholeheartedly opposed to any usage of taxpayer funds that results in the destruction of rare wetland ecosystems or the degradation of important wildlife habitat. Using taxpayer dollars to drain wetlands for non-essential purposes is thoroughly unethical. As such, I again request that you not approve any version of a Significant Natural Resource Areas Management Plan that condones or funds such activities.

Please see www.savethefrogs.com/sharp-park for more info, and remember that there are over 1,000 other golf courses in California.

Sincerely,

Kerry Kriger, Ph.D.

Re: Support Natural Areas Program and Golf at Sharp Park
Urge Supervisors to deny appeal of Natural Areas Final EIR
Case No. 2005.0912E
Hearing: Feb. 28, 2017

Dear Supervisors,

I support the Planning Commission's approval of the Final EIR for the Rec & Park Department's Natural Areas Plan, which includes habitat recovery for frogs and snakes, while maintaining the historic 18-hole Sharp Park Golf Course.

Please deny the appeals from the Commission's decision.

Thank you

Jim Krueger

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration. Climate change is here and you can't deny it! And there will be unintended consequences, such as erosion which is already causing rock and mudslides!

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks. In fact, the only way to maintain Natural Areas in this city is with the continued use of tier 1 herbicides.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims. It contains much information that is best described in today's lingo as "alternative facts."

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

I am adding this in addition--Have you thought about recruiting local school children close to Mt. Davidson to remove & clear out weeds & underbrush under the trees that still stand rather than using mass amounts of herbicides? I cannot understand your reasoning as years ago DDT became the lighten-rod to make the USA aware of how unhealthy it was to the environment and to our general health, Please think out of the box & introduce the younger generation the right way to preserve what is still good and also SAVE a vast amount of money too!!!

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Wednesday, February 22, 2017 3:25:32 PM

Attention SF Board of Supervisors:

There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:

1. Public access restrictions:

Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.

2. Increase in greenhouse gases:

You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.

3. Increase in herbicides:

The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.

4. CEQA process violations:

The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.

5. Trail closures:

The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.

6. No required tree replacement in Project area:

The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.

7. Project implementation before EIR violates CEQA:

The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.

8. Bicyclists singled out:

The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.

9. Impact of fencing ignored:

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.

10. Evidence of bias:

Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Thursday, February 23, 2017 9:11:36 AM

Attention SF Board of Supervisors:	There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:
1. Public access restrictions:	Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.
2. Increase in greenhouse gases:	You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.
3. Increase in herbicides:	The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.
4. CEQA process violations:	The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.
5. Trail closures:	The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.
6. No required tree replacement in Project area:	The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.
7. Project implementation before EIR violates CEQA:	The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.
8. Bicyclists singled out:	The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.
9. Impact of fencing ignored:	The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.
10. Evidence of bias:	Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is bad policy. Every day my six year old son asks me, "why are they cutting down all the trees." That is exactly how it looks at Mt. Davidson along Dalewood--like they are cutting down all the trees. And treating them with herbicides, no less, which is a testament to the fact that these are healthy and strong. And what should I tell him? Because somebody with a tree removal company knows somebody on the board of supervisors? There is no viable, scientifically supported reason to destroy all these beautiful trees that predate every house on Dalewood Way. In point of fact, if these trees are so dangerous, why haven't you moved the power lines along Dalewood under ground? And how many fires have ravaged the area in the past 100 years (none)? And how many people have been injured by those trees in the past 100 years (likely none)? And how do those trees impact the undergrowth--that we can now easily see since they cut down the first 50 or so along the street (obviously no impact)?

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims. Moreover, SF Parks employees lied to my face, saying the EIR was only going to cause the removal of diseased trees so they wouldn't pose a risk anymore. The immediate clear cutting along Dalewood Way proves that was false and intended to cause me to abstain from commenting previously.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

Dear SF board of supervisors, as a long term San Francisco resident I am very concerned about these plans to cut down this many trees at once. Native or not trees are an enormous benefit to a city. To add insult to injury, using pesticide to do so seems crazy. These people have lost sight of what is important.

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is reckless and harmful to our community. As the City of San Francisco is working so hard to bring more trees and vegetation to our beautiful city, it is absurd and harmful to consider cutting down trees. Perhaps these trees are immigrants and just like people, they add beauty and diversity that is valued by many.

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Monday, February 20, 2017 7:53:09 PM

Attention SF Board of Supervisors:

There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:

1. Public access restrictions:

Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.

2. Increase in greenhouse gases:

You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.

3. Increase in herbicides:

The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.

4. CEQA process violations:

The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.

5. Trail closures:

The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.

6. No required tree replacement in Project area:

The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.

7. Project implementation before EIR violates CEQA:

The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.

8. Bicyclists singled out:

The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.

9. Impact of fencing ignored:

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.

10. Evidence of bias:

Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is extremely misguided.

Fact 1:

I am very concerned about the effect of cutting down 18,000+ trees. The grass and shrubs they are to be replaced with will not sequester carbon monoxide to the same degree.

Fact 2:

Closing nearly 30% of our City's parkland to public access will obviously adversely impact our recreation. You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 3:

Spraying huge amounts of herbicides, which infiltrate the ground and drain into our water, is not the route to go in our parks.

Fact 4:

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the EIR! Send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Wednesday, February 22, 2017 7:06:53 AM

Attention SF Board of Supervisors:	There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:
1. Public access restrictions:	Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.
2. Increase in greenhouse gases:	You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.
3. Increase in herbicides:	The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.
4. CEQA process violations:	The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.
5. Trail closures:	The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.
6. No required tree replacement in Project area:	The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.
7. Project implementation before EIR violates CEQA:	The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.
8. Bicyclists singled out:	The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.
9. Impact of fencing ignored:	The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.
10. Evidence of bias:	Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks. You cannot claim that herbicides don't affect the health of the people exposed to them, especially children.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims. This certainly sounds like a Trump-Era politician would say.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan. Please don't use alternative facts to get people to accept environmental destruction.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

I don't understand how this organization has usurped most of the input of the community and is planning to implement a plan which is so contrary to the wishes of the citizens of the City.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP should be approved as is.

Fact 1:

Cutting down the trees will open up the park fortress and promote native species to grow.

Fact 2:

Any closure is temporary.

Fact 3:

The use of herbicides will help with reducing invasive species.

Fact 4:

Bicycles should be taken off the pedestrian trails to eliminate hazards to hikers and eliminate erosion.

Fact 5:

Conclusion:

Please approve the certification of the EIR for the SNRAMP and proceed with implementing the Plan.

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration. Nor can you replace the habitat that this clear cutting - let's call it what it is - destroys. Why let natural wildlife die on the vine in the interest of recreating a faux past?

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks. We live right off Glen Canyon, we walk our dog daily and neither she nor we need herbicides in our environment. Particularly now when it's so healthy and lush.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists. We have made SF a haven for bicycles. What is the thinking behind banning them from our parks?

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Signed:

Tod Elkins 25 Craggs Court SF 94131 . FYI, Craggs is a much used access way to Glen Canyon, and by the sheer numbers of people walking in by our house, I can assure you our local park is well loved and well treated.

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Wednesday, February 22, 2017 10:49:45 AM

- | | |
|--|---|
| Attention SF Board of Supervisors: | There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about: |
| 1. Public access restrictions: | Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact. |
| 2. Increase in greenhouse gases: | You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong. |
| 3. Increase in herbicides: | The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use. |
| 4. CEQA process violations: | The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR. |
| 5. Trail closures: | The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address. |
| 6. No required tree replacement in Project area: | The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area. |
| 7. Project implementation before EIR violates CEQA: | The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks. |
| 8. Bicyclists singled out: | The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false. |
| 9. Impact of fencing ignored: | The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP. |
| 10. Evidence of bias: | Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure. |

Attention SF Board of Supervisors:	There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:
1. Public access restrictions:	Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.
2. Increase in greenhouse gases:	You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.
3. Increase in herbicides:	The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.
4. CEQA process violations:	The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.
5. Trail closures:	The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.
6. No required tree replacement in Project area:	The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.
7. Project implementation before EIR violates CEQA:	The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.
8. Bicyclists singled out:	The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.
9. Impact of fencing ignored:	The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.
10. Evidence of bias:	Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

I am writing on the record to express my strong opposition to the the Environmental Impact Report for the SNRAMP. This to be an improper interpretation of public policy and I would like to demand a policy review and an immediate stop to the deforestation, bicycle ban, and use of toxic herbicides in an environmentally sensitive watershed area, particularly Mt. Davidson Park.

a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

The removal of 18,000 trees with replacement of grass and shrubs will cause a huge release of greenhouse gas and a massive net loss of future carbon sequestration.

Fact 2:

Closing 28% of our City's parkland to public access is not an acceptable policy.

Fact 3:

A new plan that is dependent on herbicide use will increase, not decrease, herbicide spraying in our parks.

Fact 4:

Banning bicycles from 1/3 of our park areas has a very damaging effect on bicyclists.

Fact 5:

The EIR claims are not credible when taking into account the actual facts on the ground and in the plan being considered.

Conclusion:

I ask that you reject the certification of the EIR and return to Planning to assess the true impacts of the SNRAMP. IN the meantime, the only prudent action is to halt RPD's premature implementation.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash", to put it mildly.

Here is real facts based WHY:

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists. Even though the bicyclists need to be more disciplined and orderly. That's a different story.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Wednesday, February 22, 2017 11:32:00 AM

Attention SF Board of Supervisors:

There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:

1. Public access restrictions:

Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.

2. Increase in greenhouse gases:

You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.

3. Increase in herbicides:

The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.

4. CEQA process violations:

The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.

5. Trail closures:

The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.

6. No required tree replacement in Project area:

The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.

7. Project implementation before EIR violates CEQA:

The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.

8. Bicyclists singled out:

The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.

9. Impact of fencing ignored:

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.

10. Evidence of bias:

Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

The bias against trees in the SF Bay Area is baffling and seems deliberately intended to wound the deeply felt love and attachment most Bay Area residents have to our urban forests. In the face of global warming which is exacerbated by deforestation, which includes misguided "thinning", it is absolutely wrong and moreover, an act of aggression to cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks. The herbicide regimen will include known carcinogens such as glyphosate.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash." SF does not want this radical, wasteful regressive agenda.

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Signed:

M Klien

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Wednesday, February 22, 2017 9:03:21 AM

Attention SF Board of Supervisors:

There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:

1. Public access restrictions:

Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.

2. Increase in greenhouse gases:

You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.

3. Increase in herbicides:

The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.

4. CEQA process violations:

The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.

5. Trail closures:

The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.

6. No required tree replacement in Project area:

The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.

7. Project implementation before EIR violates CEQA:

The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.

8. Bicyclists singled out:

The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.

9. Impact of fencing ignored:

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.

10. Evidence of bias:

Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

Attention SF Board of Supervisors:	The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"
Fact 1:	You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.
Fact 2:	You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.
Fact 3:	You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.
Fact 4:	You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.
Fact 5:	Yet this is what the EIR claims.
Conclusion:	Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.
Signed:	Jennifer Winograd

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Wednesday, February 22, 2017 11:04:17 AM

Attention SF Board of Supervisors:	There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:
1. Public access restrictions:	Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.
2. Increase in greenhouse gases:	You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.
3. Increase in herbicides:	The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.
4. CEQA process violations:	The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.
5. Trail closures:	The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.
6. No required tree replacement in Project area:	The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.
7. Project implementation before EIR violates CEQA:	The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.
8. Bicyclists singled out:	The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.
9. Impact of fencing ignored:	The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.
10. Evidence of bias:	Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Attention SF Board of Supervisors: The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1: Do you really believe that to cut down 18,500 trees and "replace" them with grass and shrubs can occur without causing a huge release of greenhouse gas and a loss of future carbon sequestration? Not to mention the trees aesthetic value.

Fact 2: You cannot close 28% of our City's parkland to public access and claim that there is no impact on our enjoyment of and recreation in them.

Fact 3: You cannot believe that implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks, and further endanger living creatures, both human and wild/domestic.

Fact 4: A ban of bicycles from 1/3 of our park areas WILL impact bicyclists despite the EIR/SNRAMP assertions.

Fact 5: MAYBE you should take a closer look, and reevaluate the EIR claims, then decide MAYBE you should reevaluate their claims and then determine what is really in the best interests of San Franciscans (who vote here) and visitors (who spend money here).

Conclusion: PLEASE reject the certification of the EIR and send it back to Planning for an HONEST evaluation of the impacts of the SNRAMP. While that is happening, please halt RPD's premature implementation of the Plan, particularly the cutting down trees and pesticide use. portions.

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Monday, February 20, 2017 10:26:06 PM

**Attention SF
Board of
Supervisors:**

There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:

**1. Public access
restrictions:**

Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.

**2. Increase in
greenhouse
gases:**

You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong - it's been proven that older, large trees reduce greenhouse gasses and grasses& shrubs are not nearly as efficient.

**3. Increase in
herbicides:**

The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use. One of the plants most often receiving herbicide treatments is what we call "sourgrass" - something kids pick, put in their mouths, and chew on. Why are we poisoning a plant that attracts children (and bees).

**4. CEQA
process
violations:**

The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.

**5. Trail
closures:**

The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.

**6. No required
tree
replacement in
Project area:**

The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area. It's not possible to replace mature, healthy large trees - it will take decades for newly planted trees to grow big enough to make a difference - to improve air quality, provide sound dampening, and to enhance the landscapes and our overall quality of life.

**7. Project
implementation
before EIR
violates
CEQA:**

The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.

**8. Bicyclists
singled out:**

The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle

use." Signage installed by RPD in 2015 proves this to be false.

**9. Impact of
fencing
ignored:**

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.

**10. Evidence of
bias:**

Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure. Please do what's right for us - the SF citizens who live here -

| 1. Public access restrictions: | Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact. |
| 2. Increase in greenhouse gases: | You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong. |
| 3. Increase in herbicides: | The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use. |
| 4. CEQA process violations: | The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR. |
| 5. Trail closures: | The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address. |
| 6. No required tree replacement in Project area: | The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area. |
| 7. Project implementation before EIR violates CEQA: | The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks. |
| 8. Bicyclists singled out: | The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false. |
| 9. Impact of fencing ignored: | The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP. |
| 10. Evidence of bias: | Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure. |

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a whitewash! You cannot turn back the clock - you cannot create viable, early-1800 nature preserves in the middle of today's urban, climate-changed, residential and industrial city. In trying to do so, you waste money and time that could be used to foster green, welcoming natural environments. San Francisco has a small amount of aging forest cover - it needs management not replacement with small shrubs and barren ground.

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:

1. Public access restrictions:

Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.

2. Increase in greenhouse gases:

You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.

3. Increase in herbicides:

The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.

4. CEQA process violations:

The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.

5. Trail closures:

The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.

6. No required tree replacement in Project area:

The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.

7. Project implementation before EIR violates CEQA:

The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.

8. Bicyclists singled out:

The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.

9. Impact of fencing ignored:

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.

10. Evidence of bias:

Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" lie, like all of the other lies the corrupt public officials push down our throats. Like President Trump, for instance.

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation, unless you are a criminally corrupt public official.

Fact 3:

You cannot say implementing a plan that is totally dependent on tons of cancer causing herbicides and claim it is not there to kill small children, our dogs and wildlife. Ask the state of California.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.
Is this what YOU support?

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP, with actual, open public notice and input. While that is happening, halt RPD's premature implementation of the Plan.

it is so sad what is being done to uglify this beautiful city!! as if visual beauty doesn't count
at all!! - ripping down all the trees on van ness for a gain of a few minutes of time riding the
bus - when our streets are in horrible disrepair and getting worse every year -
HORRIBLE!!
YOU are doing this to our city!!! - YOU are allowing it to happen!!! the night herons,
barn owls,
and other birds have dwindled and all but disappeared from the marina green from your
awful
and unnecessary herbicide spraying - what are you THINKING!??? -

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Monday, February 20, 2017 3:06:29 PM

**Attention SF
Board of
Supervisors:**

There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:

**1. Public access
restrictions: :**

Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.

**2. Increase in
greenhouse
gases: :**

You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.

**3. Increase in
herbicides: :**

The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.

**4. CEQA
process
violations:**

The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.

**5. Trail
closures: :**

The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.

**6. No required
tree
replacement in
Project area: :**

The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.

**7. Project
implementation
before EIR
violates
CEQA: :**

The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.

**8. Bicyclists
singled out: :**

The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.

**9. Impact of
fencing
ignored: :**

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.

**10. Evidence of
bias: :**

Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

While planning corrects the error, please, as a minimum:

- Remove the forested areas of the "Natural" Areas from the NRD management, stop the nonsense of grassland "restoration", let foresters take care of the trees.
- Ban the use of all toxicity category I & II herbicides in our parks; stop poisoning - it hurts "native" species as much as "non-native." It is bad for people, particularly children, pets, and wildlife.

As you know,

- the plan to poison Farallon Islands has been stopped;
- the GGNRA dog management plan has been put on indefinite hold;
- the FEMA funding for destruction of 450,000 "non-native" trees withdrawn because it would actually increase the fire danger according to the US Forest Service.

So, sometimes environmental conscience and common sense prevail.

It's about time to stop wasting taxpayers money on the insanity called "Natural" Resource Management Plan, and place it into where it belongs - into the garbage. It's time to scrap the "Natural" Resource Division as well.

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Monday, February 20, 2017 4:43:53 PM

**Attention SF
Board of
Supervisors:**

There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:

**1. Public access
restrictions:**

Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.

**2. Increase in
greenhouse
gases:**

You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.

**3. Increase in
herbicides:**

The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.

**4. CEQA
process
violations:**

The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.

**5. Trail
closures:**

The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.

**6. No required
tree
replacement in
Project area:**

The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.

**7. Project
implementation
before EIR
violates
CEQA:**

The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.

**8. Bicyclists
singled out:**

The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.

**9. Impact of
fencing
ignored:**

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.

**10. Evidence of
bias:**

Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

Sheesh. Please reject the certification of the EIR and send it back to planning and
DON'T LET RPD CUT DOWN ANY MORE TREES.

Fact 1:

You cannot cut down 18,500 trees and replace them with grass and shrubs without a big impact. It's going to look terrible, feel awful, and once those trees are gone, you can't just change your mind later and have things work out the same.

Fact 2:

I'm still crying about what happened to Hawk Hill!

Fact 3:

Trees provide valuable habitat for birds and other creatures. They provide shade and a depth to the city that grass and shrubs simply cannot.

Fact 4:

So what if all the trees aren't "native"? Neither is Coit Tower, the Golden Gate Bridge, and the Transamerica Pyramid. Are they the next to go?

Fact 5:

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Wednesday, February 22, 2017 7:28:04 AM

Attention SF Board of Supervisors:	There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:
1. Public access restrictions:	Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.
2. Increase in greenhouse gases:	You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.
3. Increase in herbicides:	The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.
4. CEQA process violations:	The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.
5. Trail closures:	The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.
6. No required tree replacement in Project area:	The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.
7. Project implementation before EIR violates CEQA:	The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.
8. Bicyclists singled out:	The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.
9. Impact of fencing ignored:	The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.
10. Evidence of bias:	Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

Concerning the EIR for the SNRAMP: This so called EIR is no EIR and must be sent back in favor of preparing the real thing.

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration. In fact scars from tree removal may never actually become replaced by anything but could continue to erode. You cannot destabilize the hillsides by cutting down 18,500 trees and ignore the costs of landslides, mud, dust and mess you have created. You cannot lose 18,500 trees and the creatures that eat those trees, the creatures that live within those trees and how these losses relate to the other creatures and flora of the environment. Without this understanding you cannot claim no significant environmental impact.

Fact 2:

Fact 3:

You cannot say implementing a plan that is based on herbicides will not increase herbicide spraying in our parks. You cannot ignore the impact of herbicides on the capacity of the soil to support plant life by very long term or even forever restricting the uptake of minerals in the soil. You have no accurate data on the actual content of the herbicides, the longevity of the herbicides and the impact of the herbicides on the people who come near, the workers using them or the public in general. In our work testing the fire resistance of uncontaminated vegetation compared to herbicide contaminated vegetation we showed Roundup significantly decreases the fire resistance of non-target vegetation for several hundred feet around even a minor application. Thus the EIR must account for this significantly increased fire hazard from the use of herbicide.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas, making these areas largely inaccessible to an urban population that desperately needs contact with wildlands and say there is no impact on bicyclists or peoples enjoyment of the parks. On the other hand bicycle paths cause significant erosion unless designed properly and maintained will create a heavy impact, so the details of bicycle access is important to know to understand the environmental impacts.

Fact 5:

Conclusion:

An honest and accurate EIR for SNRAMP is required. Please reject the certification of the EIR and return it to Planning. Implementation of the Plan must be stopped until there is an accurate evaluation. If significant impact is found, a finding of overriding public interest must also be found. This EIR is simply not ready.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Tuesday, February 21, 2017 5:59:23 PM

- | | |
|--|---|
| Attention SF Board of Supervisors: | There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about: |
| 1. Public access restrictions: | Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact. |
| 2. Increase in greenhouse gases: | You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong. |
| 3. Increase in herbicides: | The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use. |
| 4. CEQA process violations: | The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR. |
| 5. Trail closures: | The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address. |
| 6. No required tree replacement in Project area: | The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area. |
| 7. Project implementation before EIR violates CEQA: | The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks. |
| 8. Bicyclists singled out: | The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false. |
| 9. Impact of fencing ignored: | The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP. |
| 10. Evidence of bias: | Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure. |

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration. We already have seen the impacts of tree loss, see the latest large cypress trees along sunset blvd. on the western side of Parkmerced, the storms also have taken down more trees.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation. We are increasing density daily, therefore with the building of increased housing parks are used more, and this impacts the parks we have they cannot be reduced only expanded...

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks. These areas are highly impacted and are often near schools, playgrounds and open space used by children, seniors, and disabled.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is not a serious professional effort and cannot be accepted.

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a loss of future carbon sequestration and habitats for birds and animals.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

I live in the West Portal area where we already have issues with the city agencies extensively cutting down trees for hard to understand reasons. Please reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, you must halt RPD's premature implementation of the Plan or the whole point of sending the Plan for re-evaluation will be lost as the cutting of trees will already have unfortunately been accomplished.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation. The people of San Francisco purchased the park land that is now McLaren Park with the intent of developing it when there were more people in the area. That time is now and soon to be greater. With the development of the Naval shipyard to candlestick point area in the near future have such a large part of that park slated for no use but walking and bird walking is a huge impact on the public that purchased it. The recreation and parks department needs to recognize that there are other recreation activities besides those that include balls. Bicyclist and disc golf need to be recognized as part of our environmental needs.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks. I recently requested that some poison oak that was growing into the pathway in McLaren Park be removed and rather than suiting up and taking it out they snuck in and without posting sprayed something much more than round up. I appreciate the fact they took care of it but they used something that probably would not even be permitted by home gardeners in San Francisco.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Every since proposition 13 the recreation and parks department budget and cut. This has created a sinking ship each administration comes along and put the patch on. When the natural areas program came along and said we can take you to parts of the park department and not bother to hire gardeners or maintain them let's just let them be natural you to peel a great deal to the management. Rather than patch up a sinking ship let's just scuttle it. This is no way to serve the needs of an urban population. There is much natural area within reach for the population of San Francisco. We don't need to take away our recreational areas To save a few native plants that have not been destroyed by grazing or by use of the public.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.
McLaren Park was claimed by natural areas without notification or consultation with either the neighbors or the park staff.

I know this to be true because I was living in the neighborhood and working in the park. There can be no environmental impact report that does not include the way the public is impacted.

Signed:

Michael Sean Smith
Native San Franciscan
479 Naples St. 94112
Retired San Francisco recreation park department gardener
50 year resident of the excess your neighborhood adjacent to McLaren Park

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data". I honestly can't believe that, in this day our federal government slashing EPA regulations that you would systematically take out what's working in exchange for what won't work! Appalling.

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

 Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
 Date: Monday, February 20, 2017 3:23:30 PM

Attention SF Board of Supervisors:	There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:
1. Public access restrictions:	Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.
2. Increase in greenhouse gases:	You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.
3. Increase in herbicides:	The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.
4. CEQA process violations:	The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.
5. Trail closures:	The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.
6. No required tree replacement in Project area:	The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.
7. Project implementation before EIR violates CEQA:	The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.
8. Bicyclists singled out:	The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.
9. Impact of fencing ignored:	The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.
10. Evidence of bias:	Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Monday, February 20, 2017 4:38:59 PM

Attention SF Board of Supervisors:

There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:

1. Public access restrictions:

Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.

2. Increase in greenhouse gases:

You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.

3. Increase in herbicides:

The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.

4. CEQA process violations:

The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.

5. Trail closures:

The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.

6. No required tree replacement in Project area:

The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.

7. Project implementation before EIR violates CEQA:

The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.

8. Bicyclists singled out:

The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.

9. Impact of fencing ignored:

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.

10. Evidence of bias:

Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

The GGNRA has been reducing access to their lands recently too. The board of supervisors in 3 counties have unanimously voted against the restrictive Dog Management plan which reduced access to many trails and acres with and without dogs. This is very similar!!!! You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

Parks are for increasing health in an urban population! You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks. Herbicides are toxic! Recently Round Up has been linked to even more health damage than previously thought. Think of the wildlife that eats the sprayed plants!

Fact 4:

City parks are for recreation and making urbanites healthier. You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

**3. Increase in
herbicides: :**

The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.

**4. CEQA
process
violations:**

The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.

**5. Trail
closures: :**

The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.

**6. No required
tree
replacement in
Project area: :**

The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.

**7. Project
implementation
before EIR
violates
CEQA: :**

The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.

**8. Bicyclists
singled out: :**

The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.

**9. Impact of
fencing
ignored: :**

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.

**10. Evidence of
bias: :**

Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Monday, February 20, 2017 3:04:45 PM

**Attention SF
Board of
Supervisors:**

There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:

**1. Public access
restrictions: :**

Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.

**2. Increase in
greenhouse
gases: :**

You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.

**3. Increase in
herbicides: :**

The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.

**4. CEQA
process
violations:**

The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.

**5. Trail
closures: :**

The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.

**6. No required

Board of
Supervisors:**

There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:

**1. Public access
restrictions: :**

Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.

**2. Increase in
greenhouse
gases: :**

You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.

**3. Increase in
herbicides: :**

The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.

**4. CEQA
process
violations:**

The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.

**5. Trail
closures: :**

The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.

**6. No required
tree
replacement in
Project area: :**

The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.

**7. Project
implementation
before EIR
violates
CEQA: :**

The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.

**8. Bicyclists
singled out: :**

The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.

**9. Impact of
fencing
ignored: :**

The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.

**10. Evidence of
bias: :**

Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Subject: Rescind Certification of EIR for SNRAMP: it is a "whitewash"

**Attention SF
Board of
Supervisors:**

The EIR for the SNRAMP is a "whitewash" From wikipedia: To whitewash is a metaphor meaning "to gloss over or cover up vices, crimes or scandals or to exonerate by means of a perfunctory investigation or through biased presentation of data"

Fact 1:

You cannot cut down 18,500 trees and "replace" them with grass and shrubs without a huge release of greenhouse gas and a loss of future carbon sequestration.

Fact 2:

You cannot close 28% of our City's parkland to public access and claim there is no impact on our recreation.

Fact 3:

You cannot say implementing a plan that is totally dependent on herbicides will not increase herbicide spraying in our parks.

Fact 4:

You cannot ban bicycles from 1/3 of our park areas and say there is no impact on bicyclists.

Fact 5:

Yet this is what the EIR claims.

Conclusion:

Reject the certification of the EIR and send it back to Planning for an honest evaluation of the impacts of the SNRAMP. While that is happening, halt RPD's premature implementation of the Plan.

Subject: EIR DOES NOT identify the impacts of SNRAMP implementation, mitigation needed
Date: Wednesday, February 22, 2017 3:18:59 PM

Attention SF Board of Supervisors:	There are procedural violations of CEQA and SF Admin code involved in bringing the EIR from DEIR to FEIR. There is a question whether the EIR properly identifies the impacts of SNRAMP implementation. Here are 10 issues I am concerned about:
1. Public access restrictions:	Public access will be confined to on-trail only, or less than 5% of the access we currently enjoy. The EIR does not identify this impact.
2. Increase in greenhouse gases:	You do not have to be a scientist to realize that cutting down 18,448 trees and replacing them with grass and shrubs will have the opposite effect. The EIR calculations are wrong.
3. Increase in herbicides:	The SNRAMP is dependent on the use of herbicides to kill the roots of felled trees and unwanted plants. The EIR claims the Plan will not require additional herbicide use.
4. CEQA process violations:	The process utilized by Planning violated CEQA, thereby preventing proper vetting of the EIR.
5. Trail closures:	The SNRAMP plans closure of 26% of our trails. Actually, the NAP has closed more than 50% of the trails in parks where they have executed "trail improvement" projects. This is a significant impact on public recreation the EIR fails to address.
6. No required tree replacement in Project area:	The EIR analysis of impacts on air quality, greenhouse gas emissions, aesthetics, wind and hydrology hinge on a false premise, that every tree removed in the Project area would be replaced with a new tree somewhere in the Project area.
7. Project implementation before EIR violates CEQA:	The EIR claims the SNRAMP is not being implemented ahead of the EIR certification. Yet, we have already had our trails closed and fences strewn across our parks.
8. Bicyclists singled out:	The EIR claims, "The SNRAMP does not single out bicyclists as a concern and does not include actions directed specifically at bicycle use." Signage installed by RPD in 2015 proves this to be false.
9. Impact of fencing ignored:	The NAP's implementation of the SNRAMP in advance of the EIR demonstrates that their use of fences will be much more extensive than what is disclosed in the SNRAMP.
10. Evidence of bias:	Bias in the EIR is demonstrated by the inclusion of "alternate facts", such as the explanation for the bench removal at Mt. Davidson and the Glen Canyon Miraloma trail closure.

Subject: Please protect wetlands and reject a golf course redevelopment
Date: Thursday, February 16, 2017 2:51:23 PM

Dear San Francisco Board of Supervisors:

As a Bay Area resident, I strongly urge you to reject the Final Environmental Impact Report (FEIR) for the proposed Significant Natural Resource Areas Management Plan (SNRAMP), which contains the Sharp Park Golf Course redevelopment. Sadly, most of California's wetlands have been drained, degraded, and destroyed. Fortunately, Sharp Park is home to federally protected, ENDANGERED CALIFORNIA RED-LEGGED FROGS (*Rana draytonii*), California's official state amphibian.

Will the Board of Supervisors work to protect, rather than to kill, harm and harass these frogs, which is what happens when the City pumps the Sharp Park Wetlands out to sea? That pumping will cause the frogs' egg masses to be stuck on dry land and die. I oppose using taxpayer funds in a way that destroys rare wetland ecosystems or degrades important wildlife habitat. Using taxpayer dollars to drain wetlands for non-essential purposes is plain wrong.

Again, I request that you not approve any version of a Significant Natural Resource Areas Management Plan that condones or funds such activities.

Sincerely
Lawrence Thompson

Subject: Please protect wetlands and reject any SNRAMP that includes golf course redevelopment
Date: Thursday, February 16, 2017 2:48:25 PM

Dear San Francisco Board of Supervisors:

I am writing to urge you to reject the Final Environmental Impact Report (FEIR) for the proposed Significant Natural Resource Areas Management Plan (SNRAMP), unless and until the Sharp Park Golf Course redevelopment is removed from the plan. The vast majority of California's wetlands have been drained, degraded and destroyed. Sharp Park is home to federally protected, endangered California Red-Legged Frogs (*Rana draytonii*), California's official state amphibian. The Board of Supervisors should work to protect, rather than to kill, harm and harass these frogs, which is what happens when the City pumps the Sharp Park Wetlands out to sea, causing the frogs' egg masses to be stranded on dry land. I wholeheartedly oppose any usage of taxpayer funds that results in the destruction of rare wetland ecosystems or the degradation of important wildlife habitat. Using taxpayer dollars to drain wetlands for non-essential purposes is thoroughly unethical. As such, I again request that you not approve any version of a Significant Natural Resource Areas Management Plan that condones or funds such activities. Please see www.savethefrogs.com/sharp-park for more info, and remember that there are over 1,000 other golf courses in California.

Best regards
And thanks you for your true understanding,

Subject: Please protect wetlands and reject any SNRAMP that includes golf course redevelopment
Date: Thursday, February 16, 2017 2:29:37 PM

Dear San Francisco Board of Supervisors:

I am writing to urge you to REJECT the Final Environmental Impact Report (FEIR) for the proposed Significant Natural Resource Areas Management Plan (SNRAMP), unless and until the Sharp Park Golf Course redevelopment is removed from the plan. The vast majority of California's wetlands have been drained, degraded and destroyed. Sharp Park is home to federally protected, endangered California Red-Legged Frogs (*Rana draytonii*), California's official state amphibian. The Board of Supervisors should work to protect, rather than to kill, harm and harass these frogs, which is what happens when the City pumps the Sharp Park Wetlands out to sea, causing the frogs' egg masses to be stranded on dry land. I wholeheartedly oppose any usage of taxpayer funds that results in the destruction of rare wetland ecosystems or the degradation of important wildlife habitat. Using taxpayer dollars to drain wetlands for non-essential purposes is thoroughly unethical. As such, I again request that you not approve any version of a Significant Natural Resource Areas Management Plan that condones or funds such activities. Please see www.savethefrogs.com/sharp-park for more info. Remember that there are over 1,000 other golf courses in California, but once we destroy the habitat for Red-Legged Frogs they will be gone forever.

Dear San Francisco Board of Supervisors:

I am writing to urge you to reject the Final Environmental Impact Report (FEIR) for the proposed Significant Natural Resource Areas Management Plan (SNRAMP), unless and until the Sharp Park Golf Course redevelopment is removed from the plan. The vast majority of California's wetlands have been drained, degraded and destroyed. Sharp Park is home to federally protected, endangered California Red-Legged Frogs (*Rana draytonii*), California's official state amphibian. The Board of Supervisors should work to protect, rather than to kill, harm and harass these frogs, which is what happens when the City pumps the Sharp Park Wetlands out to sea, causing the frogs' egg masses to be stranded on dry land. I wholeheartedly oppose any usage of taxpayer funds that results in the destruction of rare wetland ecosystems or the degradation of important wildlife habitat. Using taxpayer dollars to drain wetlands for non-essential purposes is thoroughly unethical. As such, I again request that you not approve any version of a Significant Natural Resource Areas Management Plan that condones or funds such activities. Please see www.savethefrogs.com/sharp-park for more info, and remember that there are over 1,000 other golf courses in California.

Thank you for your time,
Rebecca Powell

Subject: protect wetlands, reject SNRAMP that includes golf course redevelopment
Date: Thursday, February 16, 2017 11:20:33 AM

Dear San Francisco Board of Supervisors:

I am a research ecologist who has studied frogs in the Bay Area for over twenty years and am a Bay Area resident. I am writing to urge you to reject the Final Environmental Impact Report (FEIR) for the proposed Significant Natural Resource Areas Management Plan (SNRAMP) because as it stands the proposal will have detrimental impacts on species protected by the federal and California Endangered Species Act. In particular I request that the Sharp Park Golf Course redevelopment be removed from the plan because there is substantial evidence that the wetland draining will have significant and adverse impacts on special status amphibians and the San Francisco Garter Snakes which rely on amphibian prey. In particular, Sharp Park is home to the federally protected, endangered California Red-Legged Frogs (*Rana draytonii*), California's official state amphibian.

The Board of Supervisors should work to protect, rather than to kill, harm and harass these frogs, which is what happens when the City pumps the Sharp Park Wetlands out to sea. When this action causes the frogs' egg masses to be stranded on dry land, there are negative impacts on the ability of the population to sustain itself in the long term and an important link in the food chain is broken. Tadpoles, by consuming algae and detritus and in turn being eaten by aquatic insects, birds and reptiles, are vital to the functioning of the ecosystem. I wholeheartedly oppose any usage of taxpayer funds that results in the destruction of rare wetland ecosystems, the degradation of important wildlife habitat, and impoverishment of the area's native fauna. Using taxpayer dollars to drain wetlands for non-essential purposes is simply wrong. Using taxpayer dollars to defend this plan through poorly produced EIR's that will be subject to law suits is a further waste of the City's resources. And who benefits? Golfers? There are over 1,000 other golf courses in California. The City should be putting money in urban parks that benefit more of its citizens than the small group that golfs.

For these reasons I again request that you not approve any version of a Significant Natural Resource Areas Management Plan that condones or funds such activities. The vast majority of California's wetlands have been drained, degraded and destroyed. Please do not repeat such past mistakes. You have a responsibility to manage resources in an enlightened way that befits the progressive and environmental ideals of San Francisco and Bay Area residents.

Regards,
Sarah Kupferberg, Ph.D.

February 15, 2017

Dear San Francisco Board of Supervisors:

I am writing to entreat you to reject the Final Environmental Impact Report for the proposed Significant Natural Resource Areas Management Plan **unless and until the Sharp Park Golf Course redevelopment is removed from the plan**. The Sharp Park Golf Course has been heavily and rightly criticized by scientists, conservation groups, and community park advocates for the past decade due to its harmful impacts on imperiled wildlife, as well as its misuse of taxpayer funds, which could be more effectively spent on important social and environmental programs.

The vast majority of California's wetlands have been drained, degraded, and destroyed. Sharp Park is home to federally protected, endangered California Red-Legged Frogs (*Rana draytonii*), **California's official state amphibian**. The Board of Supervisors should work to protect, rather than to kill, harm, and harass these frogs, which is what happens when the City pumps the Sharp Park Wetlands out to sea, causing the frogs' egg masses to be stranded on dry land.

SAVE THE FROGS! and the vast majority of nongolfers throughout San Francisco and elsewhere are wholeheartedly opposed to any usage of taxpayer funds that results in the destruction of rare wetland ecosystems or the degradation of important wildlife habitat. Using taxpayer dollars to drain wetlands for nonessential purposes is wholly unethical. As such, I implore you not to approve any version of a Significant Natural Resource Areas Management Plan that condones or funds such activities.

Please see www.savethefrogs.com/sharp-park for more info. Remember that there are more than 1,000 **other** golf courses in California.

Sincerely,

Carol Hoke

The vast majority of California's wetlands have been drained, degraded and destroyed. Sharp Park is home to federally protected, endangered California Red-Legged Frogs (*Rana draytonii*), California's official state amphibian. The Board of Supervisors should work to protect, rather than to kill, harm and harass these frogs, which is what happens when the City pumps the Sharp Park Wetlands out to sea, causing the frogs' egg masses to be stranded on dry land. I wholeheartedly oppose any usage of taxpayer funds that results in the destruction of rare wetland ecosystems or the degradation of important wildlife habitat. Using taxpayer dollars to drain wetlands for non-essential purposes is thoroughly unethical. As such, I again request that you not approve any version of a Significant Natural Resource Areas Management Plan that condones or funds such activities. Please see www.savethefrogs.com/sharp-park for more info, and remember that there are over 1,000 other golf courses in California.

Dear San Francisco Board of Supervisors:

I am writing to urge you to reject the Final Environmental Impact Report (FEIR) for the proposed Significant Natural Resource Areas Management Plan (SNRAMP), unless and until the Sharp Park Golf Course redevelopment is removed from the plan. The vast majority of California's wetlands have been drained, degraded and destroyed. Sharp Park is home to federally protected, endangered California Red-Legged Frogs (*Rana draytonii*), California's official state amphibian. The Board of Supervisors should work to protect, rather than to kill, harm and harass these frogs, which is what happens when the City pumps the Sharp Park Wetlands out to sea, causing the frogs' egg masses to be stranded on dry land. I wholeheartedly oppose any usage of taxpayer funds that results in the destruction of rare wetland ecosystems or the degradation of important wildlife habitat. Using taxpayer dollars to drain wetlands for non-essential purposes is thoroughly unethical. As such, I again request that you not approve any version of a Significant Natural Resource Areas Management Plan that condones or funds such activities. Please see www.savethefrogs.com/sharp-park for more information, and remember that there are over 1,000 other golf courses in California.

Thank you for your consideration.

Sincerely,

Stephanie E.

Subject: Please protect wetlands and reject any SNRAMP that includes golf course redevelopment
Date: Thursday, February 16, 2017 9:58:52 AM

Dear San Francisco Board of Supervisors:

As an environmental scientist and concerned resident of the Bay Area, I am writing to urge you to reject the Final Environmental Impact Report (FEIR) for the proposed Significant Natural Resource Areas Management Plan (SNRAMP), unless and until the Sharp Park Golf Course redevelopment is removed from the plan. The vast majority of California's wetlands have been drained, degraded and destroyed. Sharp Park is home to federally protected, endangered California Red-Legged Frogs (*Rana draytonii*), California's official state amphibian. The Board of Supervisors should work to protect, rather than to kill, harm and harass these frogs, which is what happens when the City pumps the Sharp Park Wetlands out to sea, causing the frogs' egg masses to be stranded on dry land.

I wholeheartedly oppose any usage of taxpayer funds that results in the destruction of rare wetland ecosystems or the degradation of important wildlife habitat. Using taxpayer dollars to drain wetlands for non-essential purposes is thoroughly unethical. As such, I again request that you not approve any version of a Significant Natural Resource Areas Management Plan that condones or funds such activities. Please see www.savethefrogs.com/sharp-park for more info, and remember that there are over 1,000 other golf courses in California.

Sincerely,

Dashiell Dunkell M.S.
Santa Cruz, CA

U.S. Forest Service, the Center for Wetland & Stream Restoration, the American River Conservancy, the Amphibian & Reptile Conservancy and biologists from several other state and federal agencies, created nine wetlands for California Red-Legged Frogs in or near the El Dorado National Forest. All this time, money and energy spent and you are going to further degrade an existing habitat. California typically sets the bar for conservation efforts. you know your constituents don't want this so vote for them and not for the big money behind this ecological catastrophe of golf course.

Don't we have enough golf courses? Could we start to protect the environment and all the creatures that live in it??? Isn't time we start to think about how destroying our animals will effect out lives in years to come. How many more zika like episodes do we need to happen to understand that killing one thing effects all things???

sincerely,
Denise Stadnik

RE: Please vote to remove the Sharp Park Golf Course redevelopment from the Natural Resource Areas Management Plan's EIR

Dear Board of Supervisors

We are writing to urge you to remove the Sharp Park Golf Course redevelopment from the Natural Resource Areas Management Plan's EIR.

We are concerned that a multi-million dollar redevelopment plan for Sharp Park Golf Course has been inserted into the City's Natural Resource Areas Management Plan. When the scope of the Natural Resource Areas Management Plan's EIR was defined, Recreation and Park Department promised: "Should changes to the Sharp Park Golf Course be proposed, they would undergo a separate regulatory review, including CEQA environmental review."

Despite this promise, the golf course redevelopment project was inserted into the EIR and was not subject to mandatory public hearings or early, formal oversight by regulatory agencies. Moreover, independent scientists have criticized the redevelopment at harming the endangered San Francisco Garter Snake and California Red-legged frog -- proposed changes will destroy and fill parts of the wetland to improve the golf course and will confine snake and frog habitat to the areas most vulnerable to sea level rise.

By approving the plan, the City is committing to spend even more taxpayer dollars on a Pacifica-based golf course that loses several hundred thousand dollars a year, is of little recreational benefit to San Francisco residents, and ultimately harms endangered species. (See attached table)

Please preserve the public trust in City government and ensure that San Francisco is making the most informed environmental decisions possible.

On February 28, please vote to remove the Sharp Park Golf Course redevelopment from the Natural Resource Areas Management Plan's EIR. If you are not able, please reject the entire EIR.

Sincerely,

A handwritten signature in black ink, appearing to read "Amandeep Jawa".

Amandeep Jawa • President

Sharp Park Golf Course Operating Costs

Fiscal Year	RPD Sharp Park Golf Course Losses¹
04/05	– \$110,299.00
05/06	– \$338,025.60
06/07	– \$64,685.80
07/08	– \$119,758.00
08/09	\$29,446.40
09/10	– \$134,699.80

I wholeheartedly oppose any usage of taxpayer funds that results in the destruction of rare wetland ecosystems or the degradation of important wildlife habitat. Using taxpayer dollars to drain wetlands for non-essential purposes is thoroughly unethical. As such, I again request that you not approve any version of a Significant Natural Resource Areas Management Plan that condones or funds such activities. Please see www.savethefrogs.com/sharp-park for more info, and remember that there are over 1,000 other golf courses in California.

Yours sincerely

Dear San Francisco Board of Supervisors:

I am writing to urge you to reject the Final Environmental Impact Report (FEIR) for the proposed Significant Natural Resource Areas Management Plan (SNRAMP), unless and until the Sharp Park Golf Course redevelopment is removed from the plan. The vast majority of California's wetlands have been drained, degraded and destroyed. Sharp Park is home to federally protected, endangered California Red-Legged Frogs (*Rana draytonii*), California's official state amphibian. The Board of Supervisors should work to protect, rather than to kill, harm and harass these frogs, which is what happens when the City pumps the Sharp Park Wetlands out to sea, causing the frogs' egg masses to be stranded on dry land. I wholeheartedly oppose any usage of taxpayer funds that results in the destruction of rare wetland ecosystems or the degradation of important wildlife habitat. Using taxpayer dollars to drain wetlands for non-essential purposes is thoroughly unethical. As such, I again request that you not approve any version of a Significant Natural Resource Areas Management Plan that condones or funds such activities. Please see www.savethefrogs.com/sharp-park for more info, and remember that there are over 1,000 other golf courses in California.

Golf is cool... but destroying wildlife habitat is NOT!

As a wildlife professional here in Israel, I am well aware of the difficulties and conflicts arising from clashes between public & private interests regarding the management of land resources. You must keep in mind that as public leaders, you have responsibility in assuring that natural habitats and the wildlife associated with them are protected for future generations.

Thanks for your attention.
Cheers,
Dr. Boaz Shacham
