CalEEMod Version: CalEEMod.2016.3.2
 3333 CalSF - Phase 2 Variant - Center Building AB - San Francisco County, Annual

Project Characteristics - CO2 intensity factor in 2023 accounting for RPS

Land Use - Phase 2 land uses from Project sponsor

Construction Phase - No construction in this analysis

Grading -

Vehicle Trips - Updated trip rates from traffic memo

Woodstoves - No woodstoves or wood bruining fireplaces

Consumer Products - Updated ROG EF

Energy Use - Not modeling energy sources of operational emissions

Water And Wastewater - Not modeling water and wastewater sources of operational emissions

Solid Waste - Not modeling solid waste sources of operational emissions

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	50.00	1000sqft	1.15	49,999.00	0
Day-Care Center	14.69	1000sqft	0.34	14,690.00	0
Enclosed Parking with Elevator	301.06	1000sqft	6.91	301,060.00	0
Parking Lot	3.82	1000sqft	0.09	3,816.00	0
City Park	2.19	Acre	2.19	95,396.40	0
Apartments Mid Rise	128.00	Dwelling Unit	3.37	138,370.00	366
Strip Mall	49.83	1000sqft	1.14	49,830.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	4.6	Precipitation Freq (Days)	64
Climate Zone	5			Operational Year	2025

Utility Company Pacific Gas & Electric Company

CO2 Intensity (lb/MW/hr)	314.6	CH4 Intensity (lb/MW/hr)	0.029	N2O Intensity (lb/MW/hr)	0.006
-----------------------------	-------	-----------------------------	-------	-----------------------------	-------

1.3 User Entered Comments & Non-Default Data

3333 CalSF - Plaza A/B Walnut Project - San Francisco County, Annual

Project Characteristics - CO2 intensity for 2025 accounting for RPS

Land Use - Phase 3 land uses from project sponsor

Construction Phase - No construction in this analysis

Grading -

Vehicle Trips - Updated trip rates from traffic memo

Woodstoves - No woodstoves or wood burning fireplaces

Consumer Products - Updated ROG factor

Energy Use - Not modeling energy sources of operational emissions.

Water And Wastewater - Not modeling water and wastewater sources of operational emissions

Solid Waste - Not modeling solid waste sources of operational emissions.

1.3 User Entered Comments & Non-Default Data

3333 CalSF - Mayfair Townhouse Project - San Francisco County, Annual

Project Characteristics - Projected intensity factor in 2027

Land Use - Calculated square footage

Construction Phase - Zeroed out construction

Vehicle Trips - updated vehicle trips

Woodstoves - set woodstoves to 0, made all fireplaces gas

Consumer Products - ROG EF changed to 1.51E-5

Energy Use - Not modeling energy sources of operational emissions

Water And Wastewater - Not modeling water and wastewater sources of operational emissions

Solid Waste - Not modeling solid waste sources of operational emissions

APPENDIX 3
ADDITIONAL SUPPORTING INFORMATION

Construction

- **CO-1:** Please provide construction schedule for the new buildings and the renovation schedule for the existing office building and show all overlaps.

Describe demolition, excavation, and construction activities for the new buildings that will occur while the existing office building is still occupied?

Will new buildings on the project site be occupied when demolition of the south wing of the existing building and demolition of portions of the existing buildings' east and west wings (for interior renovations and seismic upgrade work) commences?

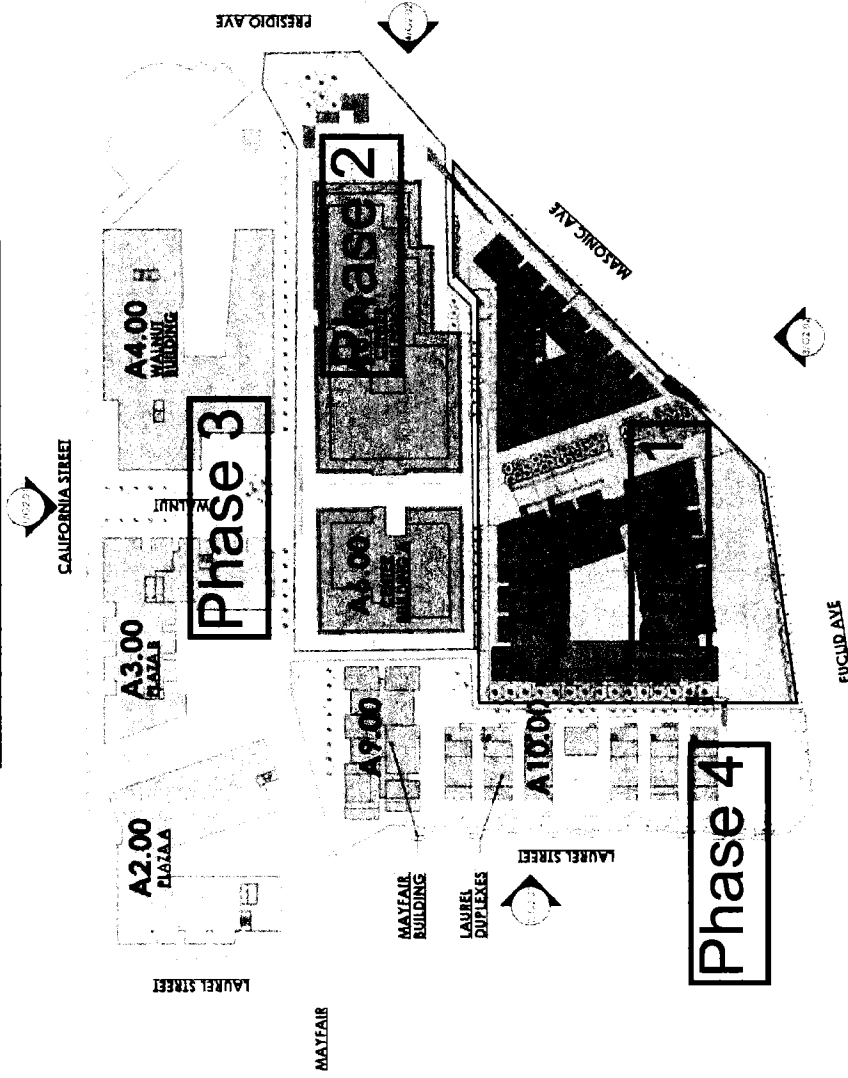

Construction stages are: demolition, excavation, foundations, structure, exterior finishing, interior.

- *Duration (weeks) for each stage*
- *Duration (weeks) of lane closures and sidewalk closures by stage*
- *Timing of shifts*
- *Hours of construction on weekdays and weekends for each stage*

1. **See attached preliminary project schedule showing new buildings (Phases 1, 3 and 4), Renovation (Phase 2) and Overlaps.**
2. From the onset of Phase 1 the entire site will be unoccupied. The existing building demolition will commence in sequence with the Phased construction plan. Interior renovations for the Phase 2 building will be ongoing when the Phase 1 project nears completion and becomes occupied.
3. Project shift times will be weekdays from 7am – 3:30pm with occasional weekend work required.

- **CO-3: Construction workers for each construction stage.**
 - Average number of workers by shift
 - Maximum number of workers by shift
 - Any information on mode of access of construction workers (e.g., car, transit, walking)

1. Project manpower requirements typically follow a bell curve with fewer workers at the beginning and end of a project. The maximum number of workers for each phase will be at their peak from the end of structure through exterior and will taper off at the end of interiors. These 'bell curves' will overlap for the phases as well. We expect half of the workforce to drive and the other half to take alternate means of transportation.

Project Element/Phase	Work Days	Average Number of Workers	Maximum Number of Workers
Masonic/Euclid	645	90	175
Center Buildings A/B	515	75	150
Plaza A/Plaza B/Walnut	773	90	175
Mayfair/T-house/Euclid Park	429	75	175

- **CO-4: Location of parking for construction workers for each construction stage.**
 - Locations and number of spaces at each location
 - If offsite, will worker shuttles be provided? Describe.

Project Element/Phase	Phase Overlap		
	Method/Location	Shuttle Required	Approx # of Spaces Req
Phase 1	Onsite - Phase 3	No	100
Phase 1/Phase 2 Overlap	Onsite - Phase 3	No	200
Phase 2	Onsite - Phase 3	No	100
Phase 2/Phase 3 Overlap	Onsite - Phase 4	No	200
Phase 3	Onsite - Phase 4	No	100
Phase 3/Phase 4 Overlap	Onsite - Phase 3 (new)	No	200
Phase 4	Offsite	Yes	100

1. See map below for the closest three parking garages to the project site. These parking garages will only be required for construction parking during the end of Phase 4. All other phases will utilize onsite parking.

- **CO-5: Construction truck trips for each construction stage.**
 - *Average number of trucks per shift and per day*
 - *Maximum number of trucks per shift and per day (typically during excavation)*
 - *For concrete pours, give separate truck information and description of activities.*
1. **See attached models showing the existing topography compared to the new topography.**
 2. Excavation and demolition will be 1 shift per day with the below table showing the average number of truck trips per day and the possible maximum number of truck trips per day.

Project Element/Phase	Duration of Demo/Excavation	Avg. Trips Per Day During Demo/Excavation	Maximum Trips Per Day	Total # of Trips
Masonic/Euclid	7 months	60	80	8,178

**Re: REVISED Final 3333 California Street Mixed-Use Project Energy Assessment / Case
 No. 2015-014028ENV**

Dear Ms. Moore:

SWCA Environmental Consultants updated minor errors in the April 12, 2018 energy assessment and calculations prepared for the proposed 3333 California Street Mixed-Use Project (proposed project) and project variant pursuant to Appendix F: Energy Conservation of the California Environmental Quality Act (CEQA) Guidelines.

Minor errors were identified by Ramboll during quantification of greenhouse gas emissions pursuant to AB900 requirements. The errors were related to an incorrect conversion factor "1 kBTU=3.412 kWh". In addition, one of the underlying formulas in the attached spreadsheets did not include all cell values.

The changes below are shown in double underline and strikethrough and are called out in the attached REVISED Final Energy Assessment dated July 23, 2018 using a "revision symbol" in the left hand margin of the page.

Last paragraph on p. A-2 in the Energy Assessment should read as follows:

"Two tower cranes (179 kW) each would be used for the tower phase of construction over 1,054 days (8,432 hours), resulting in 3,018,656 kWh of electricity use. Including the additional electric construction equipment, the estimated total energy use during construction may increase to approximately ~~6,000,000~~ 7,170,000 kWh. Electricity use estimates are the same for the proposed project and project variant."

The note in Table 4. Operational Energy Use – Buildings on p. A-4 should read as follows:

"~~1 kBTU kWh~~ = 3.412 ~~kWh-kBTU~~"

Second to last paragraph on p. A-10 should read as follows:

"As shown on Table 10, the estimated renewable energy output is 4,485,641 kBTU/year (~~1,315,626~~ 1,314,666 kWh/year) for PV systems and 2,084,000 kBTU/year (610,786 kWh/year) for solar hot water heaters. The roof area allocated to solar equipment is consistent between the proposed project and the project variant; therefore, the estimated renewable energy production in the proposed case remains the same under the variant."

The calculations attached to the April 12, 2018 energy assessment have been updated. No other changes are needed for the revised energy assessment or calculations. This update replaces the April 12, 2018 version in your Administrative Record files. All Initial Study Administrative Record CDs should be recycled.

The energy assessment provides the basis for the discussion in Section E.16 (Mineral and Energy Resources) of the Initial Study. The updated numbers are not substantially different from those in the original assessment thus conclusions regarding the effects of the construction and operation energy usage will not change. However, minor updates must be made to the Initial Study to update text and numbers (see p. 243 under "Construction" and footnote 318 and p. 244 – first full paragraph). These will be completed as part of staff-initiated text changes when the Response to Comments phase commences.

If there are any questions or concerns, please contact me.

Sincerely,

Peter A. Mye
Senior Planner

Re: 3333 California Street Mixed-Use Project Energy Assessment / Case No. 2015-014028ENV

Dear Ms. Moore:

SWCA Environmental, with input from ARUP and Ramboll, conducted an energy assessment for the proposed 3333 California Street Mixed-Use Project (proposed project) and the Mixed Use Multi-Family Housing Variant (project variant). The energy assessment provides the basis for the discussion in Section E.16 (Mineral and Energy Resources) of the Initial Study and evaluates energy use associated with construction and operation of the proposed project and the project variant.

The analysis was prepared pursuant to Appendix F: Energy Conservation of the California Environmental Quality Act (CEQA) Guidelines. Appendix F of the CEQA Guidelines requires lead agencies to address the construction-related and operational energy impacts of a project, with particular emphasis on avoiding or reducing inefficient, wasteful and unnecessary consumption of energy. Energy conservation is defined as a goal in Appendix F - the wise and efficient use of energy - and the means to achieving this goal are:

- Decreasing overall per capita energy consumption;
- Decreasing reliance on natural gas and oil; and
- Increasing reliance on renewable energy sources.

Sincerely,

A handwritten signature in black ink that reads "Amanda Tyrrell". The signature is written in a cursive, flowing style.

Amanda Tyrrell
Senior Environmental Planner

REVISED ATTACHMENT A. ENERGY ASSESSMENT

EXISTING REGIONAL ENERGY SUPPLY AND DEMAND

This section summarizes the existing energy supply mix from renewable and non-renewable sources and energy demand for the San Francisco Bay Area region.

Pacific Gas and Electric Company (PG&E) primarily supplies power to customers in San Francisco from a variety of renewable and non-renewable sources both within and outside of the State. In 2016, PG&E's resource mix was approximately 33 percent renewables, 24 percent nuclear, 17 percent natural gas, 14 percent unspecified sources, and 12 percent large hydroelectric.¹ The San Francisco Public Utilities Commission (SFPUC) provides clean energy to select local residential and business communities and for public transit. The SFPUC owns and operates the Hetch Hetchy Power System, a clean energy system that draws its power from hydroelectric, solar, and biomass/biowaste sources.

Electrical energy demand is measured by power flow, expressed in kilowatt-hours (kWh) and in gigawatt-hours when describing large-scale uses, such as a city. San Francisco uses about 6,000 gigawatt-hours of electricity per year, and this use is expected to grow at a rate of 1.3 percent per year to about 8,000 gigawatt-hours by 2030.²

Natural gas is measured in cubic feet of gas or by its heat content in British Thermal Units (BTU), or therms. PG&E supplies natural gas to San Francisco from sources in the western United States. Natural gas is commonly used to generate electricity and for heating in California, and compressed and liquefied natural gas is a viable alternative transportation fuel. Natural gas demand is projected to remain relatively flat as energy efficiency measures are expected to continue to reduce demand, but closure of nuclear generating facilities will require some replacement generation from natural gas in California.³

Petroleum-based fuels, including diesel and gasoline, are measured in gallons and consumed almost exclusively by the transportation sector in California. Gasoline is the most used transportation fuel in California, with 97 percent of all gasoline being consumed by light-duty cars, pickup trucks, and sport utility vehicles.⁴ Construction equipment typically uses diesel fuel.

PROPOSED ENERGY DEMAND

This section describes the energy demand associated with construction and operation of the proposed project and the project variant.

Construction Energy Demand

Energy use associated with phased construction of the proposed project or project variant would include electricity usage associated with water consumption for dust control and use of electric equipment, diesel fuel consumption from on-road hauling trips and off-road construction diesel equipment, and gasoline consumption from on-road worker commute and vendor trips. The methodology and estimated energy demands for each category are provided below.

⁴ CEC. "California Gasoline Data, Facts, and Statistics". Available at http://www.energy.ca.gov/almanac/transportation_data/gasoline. Accessed January 18, 2018.

Electricity – Water for Construction Dust Control

Electricity use associated with water for construction dust control is based on the total water consumption and energy intensity for supply, distribution, and treatment of water consumed for dust control over the phased construction. Total gallons of water consumed is based on the estimated acreage of ground disturbance during grading and site preparation.⁵ The California Emissions Estimator Model (CalEEMod) provides the estimated energy intensity per gallon of water for San Francisco County shown in Table 1.

As shown in Table 1, electricity use for construction of the proposed project or the project variant are the same, approximately 1,226 kWh.

Table 1. Construction Electricity Use – Water for Dust Control

	Proposed Project	Project Variant
Ground disturbance (acres per day)*	0.21	0.21
Water consumption rate per acre disturbed (gallons per acre per day)	3,020	3,020
Number of days	354	354
Total water consumption (gallons)	226,500	226,500
Energy intensity per gallon of water (kWh)	0.005411	0.005411
Total electricity use (kWh)	1,226	1,226

*Acreage factors in multiple levels of grading at the site during the excavation phase of construction. To be conservative, a total of 75 acres of ground disturbance is assumed for construction of the proposed project and the project variant based on the CalEEMod defaults for the specified mix of land uses.

Electricity – Construction Equipment⁶

Electricity demand from off-road construction equipment is estimated based on the size and type of the equipment and total hours of usage. Usage information of electric construction equipment was provided for tower cranes (179 kW each). Total hours is equal to the total number of days the tower cranes would be used (i.e., 1,054 days) multiplied by 8 work hours per day. Cutting and chopping saws, saw cutter, tile cutting saws, and dry wall stud impact guns may also be used (approximately 1 to 5 kW each), as well as welders and signal boards (approximately 18 to 20 kW each). Since equipment sizes were not provided except for tower cranes, available information was used to estimate energy use.^{7,8,9}

Two tower cranes (179 kW) each would be used for the tower phase of construction over 1,054 days (8,432 hours), resulting in 3,018,656 kWh of electricity use. Including the additional electric construction equipment, the estimated total energy use during construction may increase to approximately ~~6,000,000~~ 7,170,000 kWh. Electricity use estimates are the same for the proposed project and project variant.

⁵ The water application rate of 3,020 gallons per acre is from the Air & Waste Management Association's Air Pollution Engineering Manual (1992).

Fuel – Off-road Construction Equipment

Diesel fuel usage from off-road construction equipment is estimated based on equipment usages (total equipment horsepower-hours) and is calculated using a fuel usage rate for gallons of diesel per horsepower-hour.¹⁰ Off-road construction equipment fueled by diesel includes aerial lifts, air compressors, excavators, pavers, pumps, rollers, forklifts, tractors, loaders, and backhoes.

Construction of the proposed project or project variant would both use approximately 431,158 gallons of diesel for off-road construction equipment, as shown in Table 2.

Table 2. Construction Diesel Use – Off-road Equipment

	Proposed Project	Project Variant
Total diesel equipment use (horsepower-hours)	8,623,158	8,623,158
Gallons of diesel per horsepower-hour	0.05	0.05
Total diesel use (gallons)	431,158	431,158

Fuel – On-road Construction Trips

Energy demand associated with diesel fuel usage from on-road construction truck trips and fuel usage (such as gasoline or gasoline/hybrid) from worker commute trips is based on Vehicle Miles Traveled (VMT) and projected fuel efficiency in miles per gallon.^{11,12} All vendor trucks are assumed to be medium-heavy duty, all concrete trucks are assumed to be heavy-heavy duty, and all hauling trucks are assumed to be heavy-heavy duty. Worker vehicles are assumed to be 50 percent light-duty auto, 25 percent light-duty auto type 1, and 25 percent light-duty auto type 2. In Table 3, concrete trucks are categorized in the heavy-heavy duty vendor row.

Approximately 149,829 gallons of diesel and 220,202 gallons of gasoline would be used for on-road trips during construction of the proposed project. The estimated fuel use would be the same for the project variant.

Operational Energy Demand

Energy use associated with operation of the proposed project or project variant would include on-site usage associated with buildings; electricity for off-site water treatment and distribution; and fuel from mobile sources. The methodology and estimated energy demands for each category are provided below.

Natural Gas and Electricity – Buildings

Per-building energy use estimates for the proposed project and project variant, including electricity associated with cooling, natural gas use associated with heating, and additional electricity use, were estimated using the proposed square footages and program-specific, California Code of Regulations

¹⁰ The fuel usage rate of 0.05 gallons of diesel per horsepower-hour is based on the South Coast Air Quality Management District CEQA Air Quality Handbook, Table A9-3E.

¹¹ Fuel efficiency miles per gallon for construction is based on EMFAC2011.

¹² Bowie, Ted, Senior Managing Consultant, Ramboll Environ, e-mail correspondence with Amanda Tyrrell, SWCA, regarding vehicle miles traveled by vehicle type for construction of the proposed project and project variant, January 17, 2018.

Title 24 (referred to as “Title 24”) 2013-compliant energy use intensities reported in the PG&E Zero Net Energy Feasibility Study.¹³ The energy use intensities include site end uses, such as outdoor lighting.

As shown in Table 4, the total energy use for on-site buildings would be approximately 37,547,861 kBTU/year for the proposed project. The project variant would have a slightly higher energy use, approximately 40,039,142 kBTU/year.

Table 3. Construction Fuel Use – On-road Trips

Proposed Project and Project Variant			
Vehicle Type	Trip Type	Vehicle Miles Traveled	Miles Per Gallon
Diesel, medium heavy-duty	Vendor	65,100	8.4
Diesel, heavy heavy-duty	Vendor	96,600	5.5
Diesel, heavy heavy-duty	Hauling	684,836	5.5
Total diesel use (gallons)			149,829
Gasoline, light-duty auto	Worker	2,123,094	21.8
Gasoline, light-duty truck type 1	Worker	1,061,547	18.8
Gasoline, light-duty truck type 2	Worker	1,061,547	16.0
Total gasoline use (gallons)			220,202

● **Table 4. Operational Energy Use – Buildings**

	Proposed Project	Project Variant
Natural Gas		
Heating (kBTU/year)	10,854,013	12,104,102
Electricity		
Cooling (kBTU/year)*	1,084,440	1,217,713
Additional Electricity Use (kBTU/year)	25,609,409	26,717,327
Total energy use (kBTU/year)	37,547,861	40,039,142

● * 1 kBTU/kWh = 3.412 kWh/kBTU

Peak energy demand in California occurs on hot summer days when the cooling load is greatest; however, in the cool San Francisco Bay climate, peak demand may occur on a cold winter evening when the heating load is greatest (where electric heat is used). Peak energy demand was estimated for both the proposed project and the project variant. Peak energy demand was estimated using the proposed square footages and program- and climate-specific American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE) Standard 90.1-2013 compliant Department of Energy reference building energy models.

As shown in Table 5, the operational peak energy demand associated with building use for the proposed project is approximately 14.3 MMBTU/hour. The project variant would have a slightly higher operational peak energy demand, approximately 15.1 MMBTU/hour.

¹³ PG&E, “The Technical Feasibility of Zero Net Energy Buildings in California”. December 2012. Available at https://www.energydataweb.com/cpucfiles/pdadoes/904/california_zne_technical_feasibility_report_final.pdf. Accessed January 18, 2018.

Table 5. Operational Peak Energy Use – Buildings

	Proposed Project	Project Variant
Natural Gas		
Heating (MMBTU/hour)	3.9	4.1
Electricity		
Cooling (MMBTU/hour)*	6.3	6.6
Additional Electricity Use (MMBTU/hour)	4.1	4.4
Total peak energy use (MMBTU/hour)	14.3	15.1

* 1 MMBTU = 1 million BTU

Electricity – Water Treatment and Distribution

Project water demand was estimated from square footages and projected occupancy, and code-compliant plumbing fixture types and irrigation levels using the SFPUC's preferred tool for project water use estimation, and is consistent with the Water Supply Assessment for the proposed project and project variant. Indoor and outdoor electricity intensity factors were obtained from the 2006 California Energy Commission (CEC) report, "*Refining Estimates of Water-Related Energy Use in California*".¹⁴ These factors are reported in kWh per million gallons of water used and are specific to northern California. These intensity factors represent the electricity required to: (1) supply and convey water from source to site; (2) treat the water to usable standards; (3) distribute the water to individual users. The indoor intensity factor includes the electricity required to process resultant wastewater.¹⁵

The total electricity use associated with water supply, treatment, and distribution, is shown in Table 6. The proposed project would use approximately 111,430 kWh/year, and the project variant would use approximately 138,915 kWh/year.

Table 6. Operational Electricity Use – Water

	Proposed Project		Project Variant	
Use Type	Water Demand (gallons/year)	Resultant Electricity Use (kWh/year)	Water Demand (gallons/year)	Resultant Electricity Use (kWh/year)
Commercial Fixtures	422,000	2,280	229,000	1,238
Residential Fixtures	17,125,000	92,663	22,398,000	121,194
HVAC/Cooling	1,995,000	10,795	1,995,000	10,795
Landscape Irrigation	1,626,000	5,689	1,626,000	5,689
Total electricity use		111,430		138,915

¹⁴ CEC, "Refining Estimates of Water-Related Energy Use in California". December 2006, CEC-500-2006-118. Available at http://www.energy.ca.gov/pier/project_reports/CEC-500-2006-118.html. Accessed January 18, 2018.

¹⁵ Energy intensity factors may be conservative because they may not fully account for the energy efficiency of San Francisco's water system, which primarily uses gravity flow to convey water from the Hetch Hetchy reservoir to treatment plants in the Bay Area.

Fuel and Electricity – Mobile Sources

Energy use associated with travel demand for the proposed project or project variant includes vehicle trips generated by residents, employees, and visitors to the project site. It also includes energy use from delivery and service vehicle trips that would be generated by the proposed project or project variant. Gasoline, diesel, and natural gas usage from on-road mobile trips during operation is based on total VMT estimated using CalEEMod (used for the proposed project's and project variant's air quality analysis) and fuel efficiency projections.¹⁶ The public transit system in San Francisco also includes electric-powered buses and trains.

All vendor trucks are assumed to be medium-heavy duty and all hauling trucks are assumed to be heavy-heavy duty. Vehicles are assumed to be a mix of light-duty auto, light-duty auto type 1, light-duty auto type 2, medium-duty vehicles, motorcycles, and motor homes. Urban, school, and other buses are assumed to be a mix of gas, diesel, and electric.

As shown in Table 7, mobile sources during operation of the proposed project would use approximately 73,660 gallons of diesel fuel and 416,115 gallons of gasoline per year, based on an estimate of 9,957,096 annual VMT. The project variant would have a slightly higher energy use based on an estimate of 10,133,358 annual VMT, approximately 74,964 gallons of diesel fuel and 423,481 gallons of gasoline per year.

ENERGY CONSERVATION

This section discusses energy conservation features associated with the proposed project and project variant per Appendix F of the CEQA Guidelines. Applicable state and local laws, regulations, and policies that govern energy supply and use are summarized, including incentives that promote energy conservation above that which is required. On-site renewable energy output is also discussed, followed by a description of the energy savings estimates from the energy conservation measures.

Regulatory Framework

At the state level, the Renewable Portfolio Standard (RPS) requires retail sellers of electricity to provide a percentage of their electricity supply from renewable sources by certain years. The CEC, California Public Utilities Commission (CPUC), and PG&E have extensive programs to implement the RPS and otherwise encourage renewable energy.

California Code of Regulations, Title 24 regulates energy efficiency and water efficiency in buildings. The CEC also regulates appliance efficiency and there are California Green Building Standards. The CPUC has required utilities to conduct energy efficiency programs for many years.

San Francisco also has a number of programs to promote energy conservation among residents and businesses. The City has adopted the Electricity Resource Plan and Green Building Code requirements, Stormwater Management and Water Conservation and Irrigation ordinances, and the Energy Conservation Ordinance, which promote energy and water use efficiency. The Environmental Protection Element of the San Francisco General Plan contains goals, objectives, and policies related to energy conservation.

¹⁶ 3333 California Street Mixed-Use Project, Case No. 2015-014028ENV, Draft Environmental Impact Report, Appendix AQ, pdf pp. 54 and 121. Fuel efficiency data for operation is based on EMFAC2014.

Table 7. Operational Energy – Mobile Sources

		Proposed Project		Project Variant	
Vehicle Type	Fleet Mix	Vehicle Miles Traveled (annual)	Miles Per Gallon	Vehicle Miles Traveled (annual)	Miles Per Gallon
Diesel, medium heavy-duty (MHD)	3.3%	330,874	7.9	336,731	7.9
Diesel, heavy heavy-duty (HHD)*	0.9%	94,304	5.3	95,973	5.3

Total diesel use (gallons)			77,660		74,964
Gasoline, light-duty auto (LDA)	60.3%	6,008,918	26.8	6,115,289	26.8
Gasoline, light-duty truck type 1 (LDAT1)	3.7%	368,044	22.7	374,559	22.7
Gasoline, light-duty truck type 2 (LDAT2)	19.3%	1,921,739	20.2	1,955,758	20.2
Gasoline, medium-duty vehicle (MDV)	9.1%	906,653	15.5	922,703	15.5
Gasoline, light-heavy duty truck type 1 (LHD1)	1.3%	128,337	9.6	130,609	9.6
Gasoline, light-heavy duty truck type 2 (LHD2)	0.5%	51,618	8.8	52,531	8.8
Gasoline, motorcycle (MCV)	0.6%	59,265	33.0	60,314	33.0
Gasoline, motor homes (MH)	0.1%	5,586	6.8	5,685	6.8
Total gasoline use (gallons per year)			415,313		423,481

The City's Commuter Benefits Program, Emergency Ride Home Program, transportation demand management programs, Transportation Sustainability Fee, Jobs-Housing Linkage Program, bicycle parking requirements, low-emission car parking requirements, and car sharing requirements reduce energy use by promoting the use of sustainable transportation modes.

To address waste, the City implemented the Recycling and Compositing Ordinance, the Construction and Demolition Debris Recovery Ordinance, and Green Building Code requirements. These regulations reduce the amount of materials sent to a landfill and promote reuse of materials to conserve embodied energy¹⁷ and reduce the energy required to produce new materials.

A component of San Francisco's larger climate strategy as it relates to energy conservation is documented through the Greenhouse Gas Compliance Checklist, which identifies applicable local and state regulations for public and private projects intended to decrease emissions of greenhouse gases and reduce energy use. These components of the City's Greenhouse Gas Reduction Strategy are coordinated at the local level through the adoption and implementation of city agency-specific Climate Action Strategies and integrated with regional efforts in cooperation with the Bay Area Air Quality Management District. The Greenhouse Gas analysis for the proposed project and project variant is provided in Section E.7 of the Initial Study.

Energy Efficiency

Construction of the proposed project and project variant would require the manufacture of new materials requiring the use of energy. The production of these materials would result in consumption of natural resources including fossil fuels. However, the reuse and recycling of existing materials after demolition of buildings would partially offset the energy needed to produce new materials. San Francisco's construction and demolition debris ordinance requires a minimum recovery rate of 65 percent of building waste. Other energy conservation strategies implemented during construction would be to use energy-efficient equipment that would connect to the existing electrical grid when feasible instead of using diesel generators, and to encourage worker carpooling and use of public transit.

During operation, residential and commercial buildings would use energy for cooling, lighting, water heating, and appliances and electronics. In an effort to decrease energy consumption of residential and commercial buildings, energy efficiency measures would be incorporated into the project design. For the proposed project and project variant, the potential energy savings from combinations of twenty different energy conservation measures were assessed using the Snapshot Efficiency tool. The Snapshot Efficiency Tool is a web-based tool for quickly understanding the potential impact of various efficiency measures.¹⁸ The top five most effective energy conservation measures are identified for each space type in Table 8.

The percentage of energy saved after incorporation of the energy conservation measures into the project design is shown in Table 9. The proposed project would save approximately 26 percent of annual building energy use through energy conservation measures, and the project variant would save approximately 25 percent, compared to energy use without these conservation measures.

¹⁷ Embodied energy is the total energy required for the extraction, processing, manufacture and delivery of building materials to the building site.

Renewable Energy

Solar photovoltaic (PV) cells convert sunlight to electricity. PV cells are assembled into a solar module or group of PV cells. Solar modules are placed in an area or added to a larger system to generate and supply electricity for homes and businesses. A system typically includes one or more solar modules (sometimes referred to as an array), equipment to convert direct current electricity to alternating current electricity (i.e., inverters), and connecting wiring.¹⁹ Some systems are designed with batteries to store the generated electricity for later use and/or sun tracking devices to increase the amount of solar energy collected. PV systems can be located on rooftops or mounted on racks on the ground and have a typical life span of approximately 30 years.

Solar water heating systems use energy from the sun to heat water and can replace conventional energy-intensive water heating. Solar water heating systems consist of two main parts: a solar collector and a storage tank.²⁰ The solar collector absorbs the sunlight. Water flows from the storage tank into small metal tubes located in the collector and is warmed by the absorber plates. The heated water then flows back to the storage tank for use. Larger systems generally consist of an array of smaller heating units, connected in parallel, to provide the desired amount of hot water.

For the proposed project and project variant, approximately 35% of the roof area would be used for on-site renewable energy production from rooftop solar. The projected renewable energy output was estimated for both rooftop PV and rooftop solar hot water based on the proposed design. PV Watts²¹ was used to calculate energy production from rooftop solar photovoltaics, assuming SUNPOWER²² panels. The T*SOL²³ tool was used to calculate the solar hot water energy production from rooftop solar tubes, assuming Ritter tubes.²⁴

As shown on Table 10, the estimated renewable energy output is 4,485,641 kBTU/year (1,315,626 ~~1,314,666~~ kWh/year) for PV systems and 2,084,000 kBTU/year (610,786 kWh/year) for solar hot water heaters. The roof area allocated to solar equipment is consistent between the proposed project and the project variant; therefore, the estimated renewable energy production in the proposed case remains the same under the variant.

On-site generation is not included in the building energy use estimates before or after energy conservation measures (see Tables 4 and 9 above). On-site renewable energy generation would further reduce regional energy demand associated with the proposed project or project variant. Table 11 shows that on-site PV renewable electricity generation would save about 17 percent of annual demand on the local electric grid for the proposed project, and 16 percent for the project variant. Solar water heaters would reduce annual natural gas demand by 19 percent for the proposed project and 17 percent for the project variant.

Table 10. Operational Energy – Renewable Generation

Proposed Project and Project Variant			
Building	Proposed Total Solar Equipment Area (square feet)	Estimated PV Energy Output (kBTU/year)	Estimated Solar Hot Water Energy Output (kBTU/year)
Center Building A	0	0	0
Center Building B	2,597	180,864	82,000
Plaza A Building	12,190	795,497	380,000
Plaza B Building	11,812	828,163	384,000
Walnut Building	19,771	1,397,159	635,000
Masonic Building	0	0	0
Euclid Building	9,036	638,342	289,000
Laurel Duplexes	6,384	394,514	207,000
Mayfair Building	3,550	251,107	107,000
Total	65,340	4,485,643	2,084,000

Overall, renewable generation would save about 17 percent of annual operational building energy demand for the proposed project and 16 percent for the project variant. Energy conservation measures would save an additional 26 percent of annual building energy use and the project variant would save approximately 25 percent. The building energy use estimates before conservation measures are assumed to be Title 24-2013 equivalent, and the energy use estimates after conservation represent savings compared to Title 24. With implementation of the energy conservation measures and on-site renewable energy generation, the proposed project and project variant would meet and improve upon the Title 24 Part 6 building energy efficiency standards.

Table 11. Operational Energy – Renewable Generation Energy Savings

Energy Use	Proposed Project			Project Variant		
	Without Energy Conservation Measures (kBTU/year)	Generation Included (kBTU/year)	Estimated Savings (%)	Without Energy Conservation Measures (kBTU/year)	Generation Included (kBTU/year)	Estimated Savings (%)
Natural Gas	10,854,013	8,770,013	19%	12,104,102	10,020,102	17%
Electricity	26,693,849	22,208,208	17%	27,935,040	23,449,399	16%
Total	37,547,862	30,978,221	17%	40,039,142	33,469,501	16%

CONCLUSION

Operation of the project would increase the intensity of existing energy use of the site by introducing new residential, retail/restaurant, office, and child care uses on the site, replacing the current office and child care uses. Under the project variant, there would be slightly more residential use and less retail/restaurant and child care uses and no office use. The proposed project or project variant would contribute to annual long-term increases in energy use as a result of increased vehicle trips (mobile sources) and residential, retail/restaurant, office, and child care operations. Construction activities would also result in temporary increases energy use.

Energy conservation design features to meet state and local goals for energy efficiency and renewable energy have been incorporated into the project design to reduce wasteful, inefficient, and unnecessary consumption of energy during construction and operation. The proposed project or project variant would be required to be built to Leadership in Energy and Environmental Design for Neighborhood Development (LEED-ND Gold Standard)²⁵ thus minimizing the amount of fuel, water, or energy used. Rooftops of the proposed new buildings and the adaptively reused office building would be developed with a mix of green roofs, solar photovoltaic systems, and/or roof-mounted solar hot water systems. The proposed project or project variant would also incorporate transportation demand management measures into its design such as car share parking, and bicycle parking and repair stations that would help to minimize the amount of transportation fuel consumed. Further, the project sponsor would be required to develop and/or reserve up to 8 percent of parking spaces for electric vehicles, which would also minimize the amount of transportation fuel consumed.

Based on compliance with the Title 24 conservation standards of the California Code of Regulations and the assessment of the projected demand for energy resources, operation of the proposed project or project variant would not have a measurable effect on regional energy supplies or on peak energy demand resulting in a need for additional capacity. Natural gas and electric service would be provided to meet the needs of the proposed project or project variant, as required by the CPUC, which obligates PG&E and the SFPUC to provide service to its existing and potential customers. PG&E and the SFPUC, as part of their future service projection planning, have incorporated the demand from the proposed project or project variant and other future development projects to determine the balance of regional energy supply and demand. Energy conservation and production measures in the proposed project would decrease overall energy consumption, decrease reliance on non-renewable energy sources, and increase reliance on renewable energy sources. The proposed project and project variant would also be consistent with San Francisco's greenhouse gas reduction strategy. Furthermore, construction energy consumption would be a temporary energy expenditure and would not occur in an inefficient or wasteful manner.

In summary, construction and operation of the proposed project or project variant would not use energy resources in an inefficient or wasteful manner. Therefore, the proposed project or project variant would have a less-than-significant impact on energy resources, and no mitigation measures are required.

²⁵ Leadership in Energy and Environmental Design (LEED) is a green building rating system that provides independent verification of a building or neighborhood's energy and environmental design features. LEED certification encourages energy and resource-efficient buildings, and savings from decreased utility costs. LEED for Neighborhood Development (LEED-ND) inspires and helps create better, more sustainable, well-connected neighborhoods. Certification is awarded at four levels, Certified, Silver, Gold, Platinum.

Construction Energy

Construction Electricity Use - Water for Dust Control		
	Proposed Project	Project Variant
Ground disturbance (acres per day)*	0.21	0.21
Water consumption rate per acre disturbed (gallons per acre per day)	3,020	3,020
Number of days	354	354
Total water consumption (gallons)	226,500	226,500
Energy intensity per gallon of water (kWh)	0.005411	0.005411
Total electricity use (kWh)	1,264,800	1,264,800

*Acreage factors in multiple levels of grading at the site

Construction Electricity Use - Off-road Equipment					Proposed Project				Project Variant			
Equipment*	kW	Quantity	Total Hours	kWh	kW	Quantity	Total Hours	kWh				
Cutting and chopping saws	5	30	8,432	1,264,800	5	30	8,432	1,264,800				
Tile cutting saws	5	25	8,432	1,054,000	5	25	8,432	1,054,000

1 Energy use estimate

Per-building energy usage, including both electricity and natural gas usage, was estimated using the proposed square footages and program-specific, Title 24 2013-compliant energy use intensities (EUIs) reported in the Pacific Gas and Electric Company Zero Net Energy Feasibility Study.¹ These EUIs include site end uses, such as outdoor lighting. Energy usage was calculated for both the proposed building and the project variant.

Table 1: Estimated energy use of proposed buildings on the project site

Estimated building energy uses include site end uses, such as outdoor lighting.

2 Peak energy demand estimate

Peak energy demand was estimated using the proposed square footages and program- and climate-specific ASHRAE 90.1-2013 compliant DOE reference building energy models. Peak energy use was estimated for both the proposed project and the project variant.

Table 3: Estimated peak energy demand

Peak load (MMBtu/h)	Proposed project	Project variant
Heating	3.9	4.1
Cooling	6.3	6.6
Electric	4.1	4.4
Total	14.3	15.1

3 Energy use from water

Project water demand was estimated from square footages and projected occupancy, and code-compliant plumbing fixture types and irrigation levels using the SFPUC's preferred tool for project water use estimation, and consistent with the Water Supply Assessment for this project. Indoor and outdoor electricity intensity factors were obtained from the 2006 CEC report, "Refining Estimates of Water-Related Energy Use in California"². These factors are reported in the units of kWh per million gallons (MG) of water used and specific to northern California. These intensity factors represent the electricity required to: (1) supply and convey water from source to site; (2) treat the water to usable standards; (3) distribute the water to individual users. The indoor intensity factor includes the electricity required to process resultant wastewater.

Table 4: Estimated energy use from water

Use Type	Water demand (gal/yr)	Resultant electricity use (kWh/yr)
Commercial fixtures	422,000	2,280
Residential fixtures	17,125,000	92,663
HVAC/Cooling	1,995,000	10,795
Landscape Irrigation	1,626,000	5,689
Total	21,167,000	111,430

Table 5: Estimated energy use from water under project variant

Use Type	Water demand (gal/yr)	Resultant electricity use (kWh/yr)
Commercial fixtures	229,000	1,238
Residential fixtures	22,398,000	121,194
HVAC/Cooling	1,995,000	10,795
Landscape Irrigation	1,626,000	5,689

Total	26,247,000	138,915
--------------	-------------------	----------------

4 Waste volume estimates

Residential waste volume was estimated based on the project unit counts, while commercial waste volume was estimated based on program square footages. Program-specific waste generation and diversion rates were then applied to estimate waste volumes. The environmental impacts associated with the project waste generation was estimated using factors consistent with the CalEEMod methodology.³

Table 6: Waste volume estimates - Proposed project

Space type	Waste generated (cu. yds./day)	Total CO₂ (MT/yr)	CH₄ (MT/yr)	N₂O (MT/yr)	CO₂e (MT/yr)
Residential	18.3	5.2	0.3	0	12.9
Commercial	34	9.7	0.6	0	23.9
Total	52.5	14.9	0.9	0	36.8

Table 7: Waste volume estimates – Project variant

Space type	Waste generated (cu. yds./day)	Total CO₂ (MT/yr)	CH₄ (MT/yr)	N₂O (MT/yr)	CO₂e (MT/yr)
Residential	19.8	5.6	0.3	0	13.9
Commercial	25.5	7.2	0.4	0	17.9
Total	45.3	12.8	0.7	0	31.8

5 Projected renewable energy output

The projected energy output was estimated for both rooftop solar photovoltaics and rooftop solar hot water based on the proposed design. PV Watts⁴ was used to calculate energy production from rooftop solar photovoltaics, assuming SUNPOWER panels⁵. The T*SOL⁶ tool was used to calculate the solar hot water energy production from rooftop solar tubes, assuming Ritter tubes.⁷

Table 8: Projected renewable energy production based on proposed design

Building	Proposed total solar equipment area (ft ²)	Estimated PV energy output (kWh/yr)	Estimated solar hot water energy output (MMBtu/yr)
Center Bldg. A	0	0	0
Center Bldg. B	2,597	53,047	82
Plaza A Bldg.	12,190	233,317	380
Plaza B Bldg.	11,812	242,898	384
Walnut Bldg.	19,771	409,783	635
Masonic Bldg.	0	0	0
Euclid Bldg.	9,036	187,224	289
Laurel Dup.	6,384	115,710	207
Mayfair Bldg.	3,550	73,649	107
Total	65,340	1,315,626	2,084
The proposed solar area is roughly 35% of total roof area, with 30% of total roof area photovoltaic and 5% of total roof area solar hot water.			
Potential renewable energy production under the project variant is the same as in the proposed project.			

The roof area allocated to solar equipment is consistent between the proposed project and the project variant; therefore, the estimated renewable energy production in the proposed case remains the same under the variant.

6 Energy savings estimates from energy efficiency

Beginning with the projected energy use estimated above, the Snapshot Efficiency tool was used to assess the potential savings from combinations of twenty different energy conservation measures (ECMs). The top five most impactful ECMs were identified for each space type, as well as the resulting percent energy saved. The percent savings were applied to each of the energy consumption values reported elsewhere in this report.

Table 9: Identified energy conservation measures by space type

Use type	Identified energy conservation measures
Residential	Reduce Domestic Hot Water (DHW) consumption. Reduce equipment power density. Increase residential water heater efficiency. Increase lighting efficacy. Increase cooling efficiency.
Office	Increase lighting efficacy. Increase commercial boiler efficiency. Reduce equipment power density. Reduce DHW consumption. Reduce window SHGC.
Retail	Increase lighting efficacy. Increase commercial boiler efficiency. Reduce equipment power density. Reduce DHW consumption. Integrate natural ventilation strategies.
Child Care	Increase lighting efficacy. Reduce equipment power density. Increase commercial boiler and residential water heater efficiency. Reduce window SHGC. Integrate natural ventilation strategies.
Parking	Increase lighting efficacy.
ECMs are ranked from most to least impactful for each space type.	

Table 10: Total estimated project site annual energy use

Energy Conservation Measures Excluded		Energy Conservation Measures Included	
Energy Use	Site Total (kBtu/yr)	Site Total (kBtu/yr)	Estimated savings (%)

AGENDA ITEM

Public Utilities Commission

City and County of San Francisco

DEPARTMENT Water Enterprise AGENDA NO. 11
 MEETING DATE June 13, 2017

Approve Water Supply Assessment: Regular Calendar
Project Manager: Paula Kehoe

Approve Water Supply Assessment for the 3333 California Street Project

Summary of Proposed Commission Action:	Approve the Water Supply Assessment (WSA) for the proposed 3333 California Street Project, pursuant to the State of California Water Code Section 10910 <i>et seq.</i> and California Environmental Quality Act (CEQA) Section 21151.9 and CEQA Guidelines Section 15155.
Background:	<p>Water Code Sections 10910-10915 provide a nexus between the regional land use planning process and the environmental review process. The law also reflects the growing awareness of the need to incorporate water supply and demand analysis at the earliest possible stage in the land use planning process. The core of this law is the requirement for a public water system to prepare a water supply assessment (WSA) of whether available water supplies are sufficient to serve the demand generated by projects of a specified size (“water demand projects”), as well as the reasonably foreseeable cumulative demand in the region over the next 20 years under a range of hydrologic conditions. The WSA is required within 90 days of the time the public water system receives a request for such assessment from the lead agency preparing an environmental impact report (EIR) or negative declaration under CEQA. The Planning Department, which carries out the City’s lead agency responsibilities under CEQA, is preparing an EIR for the proposed project and has identified the proposed project as a water demand project.</p> <p>The content of a WSA is specified by the Water Code and includes identification of any existing water supply entitlements or contracts, and detailed information about groundwater supplies. It assesses the adequacy of water supplies to serve the proposed project and cumulative demand.</p> <p>The WSA must be completed by the public water supplier that would serve the project and be approved by its governing body at a public meeting. Approval of a WSA is not approval of the development</p>

APPROVAL: _____

COMMISSION
SECRETARY

Donna Hood

Agreement: Approve Water Supply Assessment for the 3333 California Street Project
Commission Meeting Date: June 13, 2017

	<p>project for which the WSA is prepared. A WSA is an informational document required to be prepared for use in the City's environmental review of a project under CEQA.</p> <p>The attached WSA prepared by San Francisco Public Utilities Commission (SFPUC) staff analyzes the sufficiency of long-term water supplies to serve the proposed project and cumulative development and concludes that there are adequate short-term and long-term water supplies to provide water service to the Project in compliance with the State Water Code requirements.</p>
Result of Inaction:	A delay in approving this agenda item will result in the inability of the San Francisco Planning Department to complete the environmental review for the proposed 3333 California Street Project. Under CEQA Guidelines Section 15155, the SFPUC may, within 90 days of the request for the WSA from Planning, request a reasonable extension of time to complete the WSA.
Description of Action:	Approve the WSA for the proposed 3333 California Street Project, pursuant to the State of California Water Code 10910.
Environmental Review:	Approval of the WSA is not a project under CEQA as the WSA is an informational document prepared for the CEQA process and is not an approval of the Project.
Recommendation:	SFPUC staff recommends that the Commission adopt the resolution.
Attachment:	1. Water Supply Assessment for the 3333 California Street Project

PUBLIC UTILITIES COMMISSION

City and County of San Francisco

RESOLUTION NO. _____

WHEREAS, Under the California Environmental Quality Act (CEQA) and State Water Code (Section 10910(g)(1)), the San Francisco Public Utilities Commission (SFPUC) is required to prepare and approve a Water Supply Assessment (WSA) for the 3333 California Street Project's cumulative water demands; and

WHEREAS, A WSA is an informational document that assesses the adequacy of water supplies to serve a project and is required to be prepared as part of the CEQA environmental review process; and

WHEREAS, As an informational document, approval of the WSA is not a project under CEQA and is not an approval of the 3333 California Street Project; and

WHEREAS, A WSA must be approved at a public meeting by the governing body of the public water supplier that would serve the project; and

WHEREAS, The SFPUC staff prepared a WSA for the 3333 California Street Project, which concluded that the SFPUC has adequate water supplies to meet the Project's water demands through 2040; now, therefore, be it

RESOLVED, This Commission approves the Water Supply Assessment for the 3333 California Street Project, pursuant to the State of California Water Code 10910(g).

I hereby certify that the foregoing resolution was adopted by the Public Utilities Commission at its meeting of June 13, 2017.

Secretary, Public Utilities Commission

RE: Water Supply Assessment for the 3333 California Street Project

1.0 Summary

1.1 Introduction

Under the Water Supply Assessment law (Sections 10910 through 10915 of the California Water Code), urban water suppliers like the San Francisco Public Utilities Commission (SFPUC) must furnish a Water Supply Assessment (WSA) to the city or county that has jurisdiction to approve the environmental documentation for certain qualifying projects (as defined in Water Code Section 10912 (a)) subject to the California Environmental Quality Act (CEQA). The WSA process typically relies on information contained in a water supplier's Urban Water Management Plan (UWMP), and involves answering specific questions related to the estimated water demand of the proposed project. This memo serves as the WSA for the proposed 3333 California Street Project ("proposed project"), for use in the preparation of an environmental impact report by the City and County of San Francisco Planning Department (case no. 2015.014028ENV, San Francisco Planning Department).

1.1.1 2015 Urban Water Management Plan

The SFPUC's most current UWMP is the UWMP update for 2015, which was adopted in June 2016. The water demand projections in the UWMP incorporated 2012 Land Use Allocation (LUA 2012) housing and employment growth projections from the San Francisco Planning Department.

The WSA for a qualifying project within the SFPUC's retail service area may use information from the UWMP. Therefore, ***the 2015 UWMP is incorporated via references throughout this WSA shown in bold, italicized text.*** The UWMP may be accessed at www.sfwater.org/uwmp.

1.1.2 Basis for Requiring a WSA for the Proposed Project

The proposed project has not been the subject of a previous WSA, nor has it been part of a larger project for which a WSA was completed. The proposed project qualifies for preparation of a WSA under Water Code Section 10912(a) because it is a mixed-use residential development that includes more than 500 dwelling units. The proposed project is characterized further in Section 1.2.

1.1.3 Conclusion of this WSA

In this WSA, the SFPUC concludes that there are adequate water supplies to serve the proposed project and cumulative retail water demands during normal years, single dry years, and multiple dry years over a 20-year planning horizon from 2020 through 2040. Additional information on supply sufficiency is provided in Section 4.2, Findings.

1.2 Proposed Project Description

The Prado Group, Inc. and SKS Partners, LLC are proposing to redevelop the 10.25-acre parcel at 3333 California Street in the northwest portion of San Francisco from an office and parking use to a mix of residential, retail, commercial office, child care, and parking uses. It is currently used as the University of California San Francisco (UCSF) Laurel Heights Campus and is developed with two structures, three surface parking lots, two circular garage ramp structures, internal roadways and landscaping or landscaped open space.

Overall, the proposed project would entail the removal of approximately 376,000 gross square feet (gsf) of office uses with approximately 49,999 gsf relocated to the proposed Walnut Building. The proposed project would include 558 dwelling units within 818,247 gsf of residential floor area. The proposed project would provide 49,999 gsf of commercial office floor area; 54,967 gsf of retail floor area; and a 14,620-gsf child care center use. Up to 898 vehicle parking spaces, including ten car share spaces, would be provided in multiple garages with up to three subterranean levels totaling approximately 435,767 gsf. Additionally, the proposed project would develop approximately 53 percent of the overall lot area (approximately 236,900 square feet – excluding green roofs) with a combination of public and private open spaces including: Euclid Park, Cypress Square, Mayfair Walk, and Walnut Walk.

The project sponsor is considering a variant to the proposed project, referred to as the Mixed-Use Senior Housing Variant. This variant would allow for the development of 744 dwelling units on the project site; an increase of 186 dwelling units over the number in the proposed project. The approximately 49,999 gsf of commercial office space in the proposed Walnut Building would be changed to a residential use. Overall, approximately 1,473,001 gsf of new and rehabilitated space, comprising approximately 972,167 gsf of residential floor area; approximately 47,407 gsf of ground floor retail spaces; and approximately 14,620 gsf of childcare center space would be developed under the variant. Up to 871 vehicle parking spaces, including ten car share spaces would be provided in multiple garages with up to three subterranean levels totaling approximately 438,807 gsf. Approximately 236,900 square feet of publicly accessible and private open space would be provided throughout the site. Under this variant, the footprints of the other proposed new buildings would not change.

Construction of the proposed project, or its variant, would be phased. The preliminary construction plan would include four overlapping construction phases and is subject to change. Project construction would commence in 2020 and would occur within a maximum development period of 10 years.

Further details on both the proposed project and the Mixed-Use Senior Housing Variant are provided in Attachment B. However, for the purpose of the WSA, only the Mixed-Use Senior Housing Variant is assessed for water supply as it would result in the most conservative water demand estimate and would encompass the demands estimated for the proposed project.

2.0 Water Supply

This section reviews San Francisco's existing and planned water supplies.

2.1 Regional Water System

See **Section 3.1 of the UWMP** for descriptions of the Regional Water System (RWS) and **Section 6.1 of the UWMP** for water rights held by City and County of San Francisco and the SFPUC Water System Improvement Program (WSIP).

2.2 Existing Retail Supplies

Retail water supplies from the RWS are described in **Section 6.1 of the UWMP**.

Local groundwater supplies, including the Westside Groundwater Basin, Central Groundwater Sub Basin, and Sunol Filter Gallery Subsurface Diversions, are described in **Section 6.2.1 of the UWMP**.

Local recycled water supplies, including the Harding Park Recycled Water Project and Pacifica Recycled Water Project, are described in **Section 6.2.1 of the UWMP**.

2.3 Planned Retail Water Supply Sources

The San Francisco Groundwater Supply Project is described in **Section 6.2.2 of the UWMP**.

The proposed Westside and Eastside Recycled Water Projects, as well as non-potable water supplies associated with onsite water systems implemented in compliance with San Francisco's Non-potable Water Ordinance (Health Code Chapter 12C), are also described in **Section 6.2.2 of the UWMP**.

2.4 Summary of Current and Future Retail Water Supplies

A breakdown of water supply sources for meeting SFPUC retail water demand through 2040 in normal years is provided in **Section 6.2.5 of the UWMP**.

2.5 Dry-Year Water Supplies

A description of dry-year supplies developed under WSIP is provided in **Section 7.2 of the UWMP**. Other water supply reliability projects and efforts that are currently underway or completed are described in **Section 7.4 of the UWMP**. A breakdown of water supply sources for meeting SFPUC retail water demand through 2040 in multiple dry years are provided in **Section 7.5 of the UWMP**. For a single dry year, the retail RWS allocation and, thus, the breakdown of water supply sources would be the same as those in a normal year.

3.0 Water Demand

This section reviews the climatic and demographic factors that may affect San Francisco's water use, projected retail water demands, and the demand associated with the proposed project.

3.1 Climate

San Francisco has a Mediterranean climate. Summers are cool and winters are mild with infrequent rainfall. Temperatures in the San Francisco area average 57 degrees Fahrenheit annually, ranging from the mid-40s in winter to the upper 60s in late summer. Strong onshore flow of wind in summer keeps the air cool, generating fog through September. The warmest temperatures generally occur in September and October. Rainfall in the San Francisco area averages about 22 inches per year and is generally confined to the "wet" season from late October to early May. Except for

occasional light drizzles from thick marine stratus clouds, summers are nearly completely dry. A summary of the temperature and rainfall data for the City of San Francisco is included in Table 1.

Table 1: San Francisco Climate Summary

Month	Average Maximum Temperature (°F)	Average Minimum Temperature (°F)	Average Monthly Rainfall (inches)
January	58.0	45.7	4.36
February	60.3	47.3	4.41
March	61.4	48.1	2.98
April	62.3	49.1	1.38
May	63.2	50.9	0.68
June	64.8	52.7	0.18
July	65.6	54.3	0.02
August	66.6	55.3	0.06
September	68.1	55.0	0.19
October	67.8	53.3	1.04
November	61.2	48.1	2.85
December	58.3	45.9	4.33
Annual Average	63.3	50.6	22.45
Source: Western Regional Climate Center (www.wrcc.dri.edu), 1981-2010 data from two San Francisco monitoring stations (Mission Dolores/SF#047772 and Richmond/SF#047767).			

3.2 Projected Growth

Projections of population growth in the retail service area through 2040 are presented in **Section 3.2.2 of the UWMP**. The corresponding LUA 2012 projections for housing and employment in San Francisco, which are incorporated into the projected retail water demands, are provided in **Appendix E of the UWMP**.

3.3 Projected Retail Water Demands

For the 2015 UWMP, the SFPUC developed a new set of models that incorporate socioeconomic factors to project retail demands through 2040. These models incorporate the latest housing and employment projections from LUA 2012. **See Section 4.1 of the UWMP** for tabulated retail water demand projections through 2040 and a description of the model methodology.

3.4 Proposed Project Water Demand

Prado Group, Inc. and SKS Partners, LLC provided a memo describing the methods and assumptions used to estimate the water demand of the proposed project, along with the resulting demand (Attachment B). The SFPUC reviewed the memo to ensure that the methodology is appropriate for the types of proposed water uses, the assumptions are valid and thoroughly documented along with verifiable data sources, and a professional standard of care was used. The SFPUC concluded that the demand estimates are reasonable. Water demand associated with the proposed project over the 20-year planning horizon is shown in the following table.

Table 2: Water Demand Based on Project Phasing

Demand of Proposed Project (mgd)	2020	2025	2030	2035	2040
Potable Demand	–	0.050	0.053	0.053	0.053
Non-potable Demand	–	0.019	0.020	0.020	0.020
Total Demand	–	0.069	0.073	0.073	0.073
mgd = million gallons per day					
Notes: Construction would occur over four overlapping phases commencing in 2020 (subject to change). Phases 1 is estimated to be completed in 2022, Phase 2 in 2023, Phase 3 in 2025, and Phase 4 in 2027. The estimates above reflect the Mixed-Use Senior Housing Variant. Water demand estimates for the proposed project are slightly lower and are provided in Attachment B.					

The San Francisco Planning Department has determined that the proposed project is encompassed within the projections presented in LUA 2012 as indicated in the letter from the Planning Department to the SFPUC (Attachment A). Therefore, the demand of the proposed project is also encompassed within the San Francisco retail water demands that are presented in **Section 4.1 of the UWMP**, which considers retail water demand based on the LUA 2012 projections. The following table shows the demand of the proposed project relative to total retail demand.

Table 3: Proposed Project Demand Relative to Total Retail Demand

	2020	2025	2030	2035	2040
Total Retail Demand (mgd) ¹	77.5	79.0	82.3	85.9	89.9
Total Demand of Proposed Project (mgd)	–	0.069	0.073	0.073	0.073
Portion of Total Retail Demand ²	–	0.09%	0.09%	0.08%	0.08%
Notes: 1. Retail water demands per Table 4-1 of the UWMP . 2. The proposed project is accounted for in the LUA 2012 projections and subsequent retail water demand projections.					

4.0 Conclusion

4.1 Comparison of Projected Supply and Demand

Section 7.5 of the UWMP compares the SFPUC's retail water supplies and demands through 2040 during normal year, single dry-, and multiple dry-year periods. See Table 4, below, which is adapted from the UWMP (Table 7-4). As explained previously in Section 3.4, water demands associated with the proposed project are already captured in the retail demand projections presented in the UWMP. The proposed project is expected to represent up to 0.09 percent of the total retail water demand.

Table 4: Projected Supply and Demand Comparison (mgd)

		Normal Year	Single Dry Year ¹	Multiple Dry Years		
				Year 1 ¹	Year 2 ²	Year 3 ²
2020	Total Retail Demand ³	77.5	77.5	77.5	77.5	77.5
	Total Retail Supply ⁴	77.5	77.5	77.5	77.5	77.5
	Surplus/(Deficit)	0	0	0	0	0
2025	Total Retail Demand ³	79.0	79.0	79.0	79.0	79.0
	Total Retail Supply ⁴	79.0	79.0	79.0	79.0	79.0
	Surplus/(Deficit)	0	0	0	0	0
2030	Total Retail Demand ³	82.3	82.3	82.3	82.3	82.3
	Total Retail Supply ⁴	82.3	82.3	82.3	82.3	82.3
	Surplus/(Deficit)	0	0	0	0	0
2035	Total Retail Demand ³	85.9	85.9	85.9	85.9	85.9
	Total Retail Supply ⁴	85.9	85.9	85.9	85.9	85.9
	Surplus/(Deficit)	0	0	0	0	0
2040	Total Retail Demand ³	89.9	89.9	89.9	89.9	89.9
	Total Retail Supply ⁴	89.9	89.9	89.9	88.8	88.8
	Surplus/(Deficit)	0	0	0	(1.1)	(1.1)

Notes:

- During a single dry year and multiple dry year 1, a system-wide shortage of 10% is in effect. Under the Water Shortage Allocation Plan (WSAP), the retail supply allocation at this stage of shortage is 36.0% of available RWS supply, or 85.9 mgd. However, due to the Phased WSIP Variant, only 81 mgd of RWS supply can be delivered. RWS supply is capped at this amount.
- During multiple dry years 2 and 3, a system-wide shortage of 20% is in effect. Under the WSAP, the retail supply allocation at this stage of shortage is 37.5% of available RWS supply, or 79.5 mgd. RWS supply is capped at this amount.
- Total retail demands correspond to those in **Table 4-1 of the UWMP**, and reflect both passive and active conservation, as well as water loss.
- Total retail supplies correspond to those in **Table 6-7 of the UWMP**. Procedures for RWS allocations and the WSAP are described in **Section 8.3 of the UWMP**. Groundwater and recycled water are assumed to be used before RWS supplies to meet retail demand. However, if groundwater and recycled water supplies are not available, up to 81 mgd, or the corresponding capped amount in dry years, of RWS supply could be used.

The LUA 2012 projections result in a retail demand in 2035 of 85.9 mgd, which represents a 5.0 mgd, or 6 percent, increase over the 2035 demand projected in the 2010 UWMP. The ability to meet the demand of the retail customers is in large part due to development of 10 mgd of local WSIP supplies, including conservation, groundwater, and recycled water. These supplies are anticipated to be fully implemented over the next 10 to 15 years.

If planned future water supply projects (i.e., San Francisco Groundwater Supply Project, Westside Recycled Water Project, Eastside Recycled Water Project, and onsite non-potable supplies) are not implemented, normal-year supplies may not be enough to meet projected retail demands. To balance any water supply deficits during normal years, the SFPUC may import additional water from the RWS beyond the retail allocation of 81 mgd, with mitigation implemented by the SFPUC and potential environmental surcharges if RWS deliveries exceed the 265 mgd interim supply limitation.

If dry-year supply projects (i.e., Calaveras Dam Replacement Project, Lower Crystal Springs Dam Improvements Project, Alameda Creek Recapture, Regional

Memo to Commissioners
WSA for 3333 California Street Project
May 17, 2017
Page 7 of 7

Groundwater Storage and Recovery Project, and water transfers) are not implemented, existing dry year supplies may not be enough to meet projected retail demands. To balance any water supply deficits during dry years, the SFPUC may reduce system deliveries and impose customer rationing.

The SFPUC remains committed to meeting the level of service goals and objectives outlined under WSIP. In addition, the SFPUC continues to explore other future supplies, including:

- Development of additional conservation and recycling.
- Development of additional groundwater supplies.
- Securing of additional water transfer volumes.
- Increasing Tuolumne River supply.

4.2 Findings

Regarding the availability of water supplies to serve the proposed project beginning in 2022, the SFPUC finds, based on the entire record before it, as follows:

- During normal years, single dry years, and multiple dry years, the SFPUC has sufficient water supplies to serve the proposed project.
- With the addition of planned retail supplies, the SFPUC has sufficient water supplies available to serve its retail customers, including the demands of the proposed project, existing customers, and foreseeable future development.

Approval of this WSA by the Commission is not equivalent to approval of the development project for which the WSA is prepared. A WSA is an informational document required to be prepared for use in the City's environmental review of a project under CEQA. It assesses the adequacy of water supplies to serve the proposed project and cumulative demand.

Furthermore, this WSA is not a "will serve" letter and does not verify the adequacy of existing distribution system capacity to serve the proposed project. A "will serve" letter and/or hydraulic analysis must be requested separately from the SFPUC City Distribution Division to verify hydraulic capacity.

If there are any questions or concerns, please contact Steve Ritchie at (415) 934-5736 or SRitchie@sfgwater.org.

Communications from San Francisco Planning Department

SAN FRANCISCO PLANNING DEPARTMENT

MEMO

DATE: June 13, 2013

TO: SF Planning EP Planners & SFPUC Planners

FROM: Scott T. Edmondson, AICP; Aksel Olsen

RE: Project Types Represented in the Land Use Allocation

1650 Mission St.
Suite 400
San Francisco,
CA 94103-2479

Reception:
415.558.6378

Fax:
415.558.6409

Planning
Information:
415.558.6377

This Memorandum explains the Planning Department's Land Use Allocation (LUA) and the types of projects included in the LUA. The 2012 LUA is the most recent update and uses the Association of Bay Area Governments' (ABAG) May 2012 Jobs-Housing Connection Scenario. As this memorandum explains, the Planning Department expects that the LUA will encompass the vast majority of development proposals that project sponsors will present to the Planning Department. This memorandum also identifies possible unusual circumstances under which EP Planners and the SF PUC Planners may want to consult further with the Planning Department's Information and Analysis Group to determine whether a project is encompassed within the LUA.

ABAG's Projections of San Francisco's Economic Growth and the LUA

The LUA takes ABAG's 30-year projections of citywide household and job growth and allocates them to smaller geographic units, in this case, the traffic analysis zones of the SF Transportation Authority's Countywide Transportation Model. Thus, the LUA does not project growth but simply allocates ABAG's growth projections to subarea locations within the city. The current 2012 LUA uses ABAG's Jobs-Housing Connection Scenario projections for San Francisco and covers the period from 2010 to 2040; these projections were released in May 2012 and are represented in five-year increments.

ABAG derives its demographic and economic growth projections from assumptions about long-term demographic and economic growth.¹ ABAG maintains its own set of regional models and develops each forecast with its in-house experts and private economic consultants.² The forecasting is informed by the best information and assumptions available through federal and State agencies, such as the State Department of Finance, and private sources. However, ABAG develops its forecast based on local knowledge from over 50 years of forecasting and develops the forecast to reflect local conditions in contrast to more general forecasting assumptions of State or federal sources. ABAG's estimate of total citywide growth for the 30-year period is expected to best represent actual growth at the end of the 30-year period. However, projected growth for any portion of the projection period, such as growth in a one-year or a five-year period, would be expected to vary from actual growth in such periods. Within the 30-year growth projection period, higher than average growth periods could be followed by lower than average growth periods such that growth over the period would ultimately equal the projected 30-year

total. All projection methodologies make assumptions based on the best available information at the time. To minimize the effects of imprecision intrinsic to any projections methodology when used in for planning decisions, ABAG follows professional best practices and updates its projections every two years. Accordingly, the Planning Department updates its LUA every two years. The planning practice of frequently updating projections and plans allows the incorporation of new information over time to provide for the most up-to-date projections.

The SFPUC updates its Urban Water Management Plan (UWMP) every five years. The UWMP typically relies on LUA projections or similar information. But, because the LUA is updated every two years, the SFPUC may want to review the LUA issued within SFPUC's 5-year UWMP cycle; and if it varies in a significant way from the SFPUC's projections used in its UWMP, discuss with Planning whether it should make any changes in its own water supply needs assessment during an UWMP cycle.

Types of Projects Included in the LUA

The LUA translates ABAG's projected household and job growth into total expected development in San Francisco over a 30-year period. The LUA translates ABAG's household growth into residential housing units and ABAG's job growth into commercial space.³ Thus, the LUA projections of housing units and commercial space include all project types expected from San Francisco growth, such as housing, office, retail, production-distribution-repair (PDR), visitor, and cultural-institutional-educational (CIE). The LUA does not exclude any project type or potential growth. As such, the LUA and the ABAG economic projections upon which it is based contain the best estimates available of reasonably foreseeable growth and development in San Francisco over a 30-year period.

Unusual Circumstances

The LUA can be considered to include all reasonably expected growth and development and it is frequently updated to correct for expected variations. Nevertheless, there are possible unusual circumstances under which the EP Planners or SFPUC Planners may want to request further Planning Department consultation with the Information and Analysis Group to determine if a particular project falls within the LUA. ABAG's projections and the Department's LUA take into account urban economic trends and based on that information capture all reasonably foreseeable growth in San Francisco. Limited capital and aggregate demand of any urban economy constrains growth. However, occasionally the reality or perception may arise that a project lies outside the normal growth constraints of the San Francisco economy for some reason, and therefore lies outside ABAG's projection's and the Department's current spatial allocation in its LUA.

One can envision the rare case of a project arising outside the City's economy (demand and capital) from an organization not located in San Francisco using nonprofit foundation funds or private donations to construct a large institutional project in San Francisco, such as a major hospital, a university, or an office complex. These projects would represent spending and demand beyond that normally active in the San Francisco economy, and therefore represent net additions to projected growth beyond that captured by ABAG's projections and reflected in the Department's LUA. Indicative characteristics of such projects

SF Planning EP Planners & PUC Planners
June 13, 2013

would include those with non-local sponsors, of large size, and for an institutional land use. Alternatively, very large project proposals from local project sponsors active in the SF economy involving a large site, land assembly, a planned unit development (PUDs), master plans, or area plan and rezoning proposals may warrant individual assessment for a range of reasons even though they are likely captured in ABAG's projections and the LUA. Such projects would be similar to recent projects such as Hunters Point/Candlestick, Park Merced, Treasure Island, Pier 70 Master Plan, Eastern Neighborhoods, or the Transit Center District Plan.

The bi-annual update of ABAG's projections and the LUA would be able to capture development associated with such projects. However, should such a project be proposed between updates, the EP Planners and SFPUC could treat its appearance as sufficient cause to request the Planning Department's assistance in determining whether to consider the project outside the latest LUA projections.

¹ Please see ABAG's summary of its research and forecasting on its website: <http://www.abag.ca.gov/planning/research/index.html>

² ABAG describes its current Jobs-Housing Scenario policy-based forecast here:
http://onebayarea.org/pdf/IHCS/May_2012_Jobs_Housing_Connection_Strategy_Appendices_Low_Res.pdf.

³ The LUA citywide totals only differ slightly, up to within one percent of ABAG totals (+/-). The difference is produced by LUA's complex method of translating ABAG projections into development (residential units and commercial space) and allocating total citywide growth to subarea locations. The minor difference between the LUA and ABAG citywide totals is real in absolute terms, but not in the sense that they are different projections. The one percent difference does not constitute a difference of projections. ABAG and MTC consider variation of one percent in citywide totals, plus or minus, as sufficiently representing ABAG's projections for consistency with the MTC regional projections and modeling purposes (congestion management, etc.). Even if a few versions of the LUA must be done to make minor subarea spatial allocation corrections, as long as the LUA's citywide totals are within one percent of ABAG's projections, and ABAG's projections have not changed, the LUA citywide totals have not effectively changed either. Any of those LUA versions' citywide totals fully represent the same unchanged ABAG projection totals.

3333 California Street Project Demand Memo

SAN FRANCISCO PLANNING DEPARTMENT

MEMO

DATE: May 2, 2017
TO: Fan Lau, SFPUC
FROM: Chris Thomas, Environmental Planning
CC: Deborah Dwyer, Environmental Planning
RE: 3333 California Street Project Water Supply Assessment Request
 (Planning Department Case No. 2015-014028ENV)

1650 Mission St.
 Suite 400
 San Francisco,
 CA 94103-2479

Reception:
415.558.6378

Fax:
415.558.6409

Planning
 Information:
415.558.6377

The purpose of this memorandum is to request that the San Francisco Public Utilities Commission (SFPUC) prepare a Water Supply Assessment (WSA) for the proposed 3333 California Street mixed-use residential project, in compliance with CEQA Guidelines Section 15155 and Sections 10910 through 10915 of the California Water Code. As indicated in the attached request for a Water Supply Assessment, two projects are currently under consideration: the proposed project which includes 558 dwelling units and the Senior Housing Variant which includes a total of 744 dwelling units. As indicated, both developments would also include commercial office, retail, day care and open space components.

The project sponsor has provided project information intended to meet the requirements outlined in the SFPUC guidance memo dated September 6, 2016. The project is proposed to be constructed in four phases over a 10 year period. A summary of the project description, proposed average daily water demands, and supporting tables prepared by the project sponsor's consultant (based on the SFPUC Non-Potable Water Calculator Version 5.3), are attached. Non-Potable Water Calculator spreadsheets for both the proposed project and the Senior Housing Variant are also attached.

Should you have questions or need additional information from the Planning Department or the project sponsor, please contact me at 415-575-9036 or christopher.thomas@sfgov.org.

Re: 3333 California Street
Case File No. 2015.014028ENV

Water Supply Assessment

Dear Mr. Thomas,

The proposed redevelopment project at 3333 California Street (Block 1032 and Lot 003) is currently undergoing Environmental Review (Environmental Planner Debra Dwyer). We appreciate your review of the attached submission to ensure that the SFPUC has the necessary supporting documentation for the WSA, and it is in the proper format. We have revised the information herein based on Fan Lau's initial comments.

PROJECT DESCRIPTION

The Proposed Project would redevelop the 10.25-acre parcel at 3333 California Street in the northwest portion of San Francisco from an office and parking use to a mix of residential, retail, commercial office, child care, and parking uses. It is currently used as the University of California San Francisco (UCSF) Laurel Heights Campus and is developed with two structures, three surface parking lots, two circular garage ramp structures, internal roadways and landscaping or landscaped open space.

The Proposed Project would entail the demolition of the existing one-story annex building at the corner of California and Laurel Streets (northwest corner of the site), the demolition of the existing surface parking lots and circular garage ramp structures, and the partial demolition (approximately 49 percent) of the existing office building located at the center of the project site. The remaining portion of the existing office building would be divided into two separate residential buildings, Center Building A and Center Building B, with a two-story addition atop Center Building A and a two- to three-story addition above Center Building

B. The Proposed Project would also include the construction of 13 new buildings along the California Street, Masonic Avenue, Euclid Avenue, and Laurel Street edges:

- Two (2) four- to five-story mixed use residential buildings with ground floor retail along California Street between Laurel and Walnut Streets (the Plaza A and Plaza B Buildings);
- One (1) three-story mixed use (ground floor retail and child care) with commercial office building along California Street east of Walnut Street (the Walnut Building);
- Two (2) four- to six-story mixed use buildings along Masonic and Euclid Avenues (the Masonic and Euclid Buildings);
- Seven (7) three- to four-story townhomes along Laurel Street (the Laurel Duplexes); and
- One (1) four-story residential building near the Laurel Street and Mayfair Drive intersection (the Mayfair Building).

Overall, the Proposed Project would entail the removal of approximately 376,000 gross square feet of office uses with approximately 49,999 gsf relocated to the proposed Walnut Building. Table 1 provides a summary of the proposed changes.¹ As noted below, the Proposed Project would include 558 dwelling units within 818,247 gross square feet of residential floor area. The Proposed Project would provide 49,999 gross square feet of commercial office floor area; 54,967 gross square feet of retail floor area; and a 14,620-gross-square-foot child care center use. Up to 898 vehicle parking spaces, including ten car share spaces, would be provided in multiple garages with up to three subterranean levels totaling approximately 435,767 gsf. Estimated occupancy totals for the proposed uses were calculated using the occupant density defaults from the SFPUC Nonpotable Calculator Spreadsheet, with the exception of Phase 1 and 2 residential, which was estimated at 2.25 people/unit rather than the default value of 2.01 people/unit based on unit type mix. The total estimated occupancy counts are shown in Table 3. Additionally, the Proposed Project would develop approximately 53 percent of the overall lot area (approximately 236,900 square feet – excluding green roofs) with a combination of public and private open spaces including: Euclid Park, Cypress Square, Mayfair Walk, and Walnut Walk. The Proposed Project would also widen the adjacent sidewalks to meet the requirements of the *Better Streets Plan* and include other improvements as part of a series of proposed streetscape changes.

Table 1: Project Summary

Project Features	Existing	Existing to Be Retained	New Construction	Proposed Totals
Dwelling Units	--	--	558	558
Number of Buildings	2	1	13	14
Open Space	Yes	--	236,900 square feet	236,900 square feet
Parking Spaces	543 ^a	543	355	898
Loading Spaces	5	--	6	6
Bicycle Spaces	15	--	659	659

¹ Square footages presented are approximate.

Existing Use	Existing Gross Square Footage	Existing Uses to Be Retained (gsf)	New Construction / Additions (gsf)	Proposed Project Totals (gsf)
Office				
Office to Residential	376,000 ^b	205,356 ^c	612,891 ^d	818,247
Office to Office		--	49,999 ^e	49,999
Retail	--	--	54,967 ^f	54,967
Child Care	--	--	14,620 ^g	14,620
Structured Parking ^h	93,000	93,000	342,767	435,767
Total gsf	469,000	298,356	1,075,244	1,373,600
Notes: ^a Surface (331) and garage (212) parking spaces. ^b Total includes 349,500 gsf of office uses in the existing office building (Floors 1 through 4 and Basement Level 1), 12,500 gsf of non-office uses (storage areas) on Basement Levels 1 through 3 of the existing office building, and the 14,000-gsf annex building. ^c Existing office building would be retained and adaptively reused as two separate residential buildings, and the annex building would be demolished. ^d Includes the additions to the adaptively reused office building and new residential uses along California Street, Masonic Avenue, Euclid Avenue, and Laurel Street. ^e Existing office uses would be relocated to the proposed Walnut Building. ^f New retail uses would be developed at the ground floor of the proposed Plaza A, Plaza B, Walnut, and Euclid Buildings. ^g New child care uses would be developed in the proposed Walnut Building. ^h The existing three-level, partially below-grade parking garage under the eastern portion of the existing office building would be reconstructed as part of the proposed California Street Garage under the proposed Plaza A, Plaza B, and Walnut Buildings as well as the adaptively-reused Center Building B. New below-grade parking would be developed under the proposed Masonic and Euclid Buildings, the proposed Laurel Duplexes, and the proposed Mayfair Building.

Phase 4 (est 2027)	88	0	88
Full Buildout	1,214	918	2,133

PROJECT DESCRIPTION: MIXED USE SENIOR HOUSING VARIANT

The project sponsor is considering a variant to the Proposed Project, referred to as the Mixed-Use Senior Housing Variant (“variant”). This variant would allow for the development of 744 dwelling units on the project site; an increase of 186 dwelling units over the number in the Proposed Project. Under this variant, the approximately 49,999 gsf of commercial office space in the proposed Walnut Building would be changed to a residential use. In this variant, the Walnut Building would be comprised of 153,920 gsf of residential use, 18,800 gsf of retail use, 180,800 gsf of below grade garage and retain the 14,620 gsf of childcare use. The total Walnut Building in the variant would be 368,140 gsf.

Overall, approximately 1,473,001 gsf of new and rehabilitated space, comprising approximately 972,167 gsf of residential floor area; approximately 47,407 gsf of ground floor retail spaces; and approximately 14,620 gsf of childcare center space would be developed under the Mixed-Use Senior Housing Variant. Up to 871 vehicle parking spaces, including ten car share spaces would be provided in multiple garages with up to three subterranean levels totaling approximately 438,807 gsf. Approximately 236,900 square feet of publicly accessible and private open space would be provided throughout the site. Under this variant the footprints of the other proposed new buildings would not change.

Table 4: Variant Project Summary

VARIANT AREAS	Bldg	Residential Gross SF	Retail Gross SF	Commercial Gross SF	Childcare Gross SF	Garage Gross SF	TOTAL GSF

Phase 2 (est 2023)	428	0	428
Phase 3 (est 2025)	631	599	1230
Phase 4 (est 2027)	88	0	88
Full Buildout	1,588	640	2228

PROPOSED INTEGRATED WATER MANAGEMENT APPROACH

The proposed water management approach would be applicable to both the Proposed Project and its variant and is briefly described below. The Proposed Project and its variant would comply with the requirements of City and County of San Francisco ordinances related to water conservation and resources, as applicable, including the San Francisco Green Building Ordinance, the Stormwater Management Ordinance, and the Alternate Water Supplies/Reuse Ordinance, as well as the Water Efficient Irrigation, Residential Water Conservation, and Commercial Water Conservation Ordinances.

Water Conservation

The project site is served by San Francisco's water supply system. To reduce the use of potable water on a per-unit basis, the Proposed Project would provide high-efficiency fixtures and appliances in new and existing buildings. Water wise landscaping will be employed. Nonpotable demands are intended to be met by collected rainwater and greywater treated onsite. The garage is assumed to be washed down quarterly with water-efficient waterbrooms or equivalent. The site is projected to use about 1/3 less water than a comparable development that meets the stringent CALGreen Code.

Stormwater and Wastewater

The project site is served by San Francisco's combined sewer system and is subject to the City's stormwater management requirements. The Proposed Project would reduce loading on the neighborhood stormwater infrastructure by collecting rainwater for reuse. These strategies combined with a site plan targeting over 50 percent planted area, including living roofs, should result in stormwater runoff reductions beyond the 25 percent required by the Stormwater Management Ordinance. No new or enlarged off-site wastewater collection facilities are proposed.

Water + Ecology

A site of this size has the potential to enhance the ecological assets of the neighborhood and city. The Proposed Project would preserve several major trees and greatly increase the total number of trees on the project site and the adjacent sidewalks (replacing over 200 trees including 17 street trees). The proposed landscaping plans would choose native and adapted trees and plants that reduce irrigation demands while managing stormwater.

PROPOSED CONSTRUCTION SCHEDULING AND PHASING

It is the intent of the project sponsor to phase the construction of the Proposed Project or its variant. The preliminary construction plan would include four overlapping construction phases and is subject to change. Project construction would commence in 2020 and would occur within a maximum development period of 10 years as follows:

Phase 1: Masonic and Euclid Buildings

- Duration: 30 month
- Phase would include the demolition of the existing annex building and the construction of 266,015 gsf of residential uses (196 units), 4,287 gsf of retail uses, and 87,977 gsf of garage space totaling 358,279 gsf of new construction.
- Includes Walnut Walk South and eastern portion of Euclid Park (private) and related adjacent public right of way improvements.

Phase 2: Center Buildings A and B (existing office building)

- Duration: 24 months; anticipated to commence on Month 20 of Phase 1
- Phase would include the partial demolition of the existing office building and the construction of 320,393 gsf of residential uses (190 units) and 23,227 gsf of garage space totaling 343,620 gsf of construction.
- Parking for these buildings would be programmed below Center Building B, and in the Masonic/Euclid and California Street Garages. Project sponsor plans to use valet strategies within the constructed garages or within available area on the site should the California Street Garage parking not be available at the time of occupancy.

Phase 3: California Street Buildings (Plaza A, Plaza B, and Walnut Buildings)

- Duration: 36 months; anticipated to commence on Month 15 of Phase 2

- Phase would include the construction of 138,245 gsf of residential uses (128 units), 50,680 gsf of retail uses, 49,999 gsf of office uses, 14,620 gsf of childcare space, and 305,640 gsf of garage space totaling 559,184 gsf of new construction.
- Includes Walnut Walk North, Mayfair Walk, Presidio Overlook, Pine Plaza and related adjacent public right of way improvements.

Phase 4: Mayfair Building and Laurel Duplexes

- Duration: 20 months; anticipated to commence on Month 30 of Phase 3
- Phase would include the construction of 93,594 gsf of residential uses (44 units) and 18,923 gsf of garage space totaling 112,517 gsf of new construction.
- Includes western part of Euclid Park (public) and related adjacent public right of way improvements.

The preliminary construction phasing plan would also be applicable to the variant with the exception of Phase 3. Under the variant, Phase 3 would include the development of 153,920 gsf of residential uses (186 units of senior housing), substituting for 49,999 gsf of commercial office space in the Walnut Building and 7,560 gsf of retail space in the Plaza A, Plaza B, and Walnut Buildings. Under the variant, Phase 3 garage space would increase by 3,040 gsf (from 305,640 gsf for the Proposed Project to 308,680 gsf).

WATER USE ESTIMATES

The following tables summarize the potable and nonpotable water demand estimates for the Proposed Project and the Mixed-Use Senior Housing Variant and are based off the proposed uses and the preliminary construction phasing program. These estimates are preliminary and may be refined at a later time as project designs progress. The estimates include better than code average fixture flowrates (though are conservative in that they do not take the very lowest flowrate available in all cases), and include the maximum potential living roof area contemplated as a conservative case from a water supply perspective (more irrigation, less capturable rainwater). Targeted rainwater and greywater reuse would offset about 30% of the projected use according to the SFPUC calculator tool (see Attachment A for the Proposed Project and Attachment B for the Variant). The portion of nonpotable demands anticipated to be met onsite are broken out separately from potable demand in the below estimates. Estimated water demands for the garage are not large enough to alter the significant figures in the mgd totals below.

Dry year estimates assume that irrigation and hand-watering demands increase, and do not account for additional dry year conservation by residents, though that would most likely occur (and be encouraged). Estimates by year follow calculator estimates for phases complete at the end of each shown calendar year, so the 2025 estimate includes Phases 1-3, and the 2030 and later estimates include full buildout.

Existing Usage

Site water use data provided to the project team from 2012-2014 indicate that existing usage tends to average about 20,000 gpd (0.02 mgd), with peak months averaging around 26,000 gpd (0.026 mgd). It is possible that this data set does not include 100% of the current site water demands, but we believe it does.

Proposed Project**Table 7: Proposed Project Estimated Total Water Demand Based on Water Year Type**

	Normal	Single dry	Multiple 2	Multiple 3	Multiple 4
Total to be met with potable water (mgd)	0.0413	0.0415	0.0417	0.0417	0.0417

	121.7	117.3	90.0	110.1	lbs CO ₂ e/MWh delivered

Notes:

¹ Total CO₂ emission factor from The Climate Registry. Available at: <https://www.theclimateregistry.org/our-members/cris-public-reports/>. Accessed: June 2018.

² Percent of total energy from eligible renewables is from the PGE 2015 Corporate Responsibility Report. Available at: http://www.pgecorp.com/corp_responsibility/reports/2015/PGE_CRSR_2015.pdf.

³ Percent of total energy from eligible renewables is from the PGE 2016 Corporate Responsibility Report. Available at: http://www.pgecorp.com/corp_responsibility/reports/2016/PGE_CRSR_Environment.pdf.

⁴ Percent of total energy from eligible renewables is from the PGE 2017 Corporate Responsibility Report. Available at: http://www.pgecorp.com/corp_responsibility/reports/2017/assets/PGE_CRSR_2017_Environment.pdf.

⁵ This average uses the most recent three years of data.

⁶ The emissions metric presented here is calculated based on the total CO₂ intensity factor divided by the percent of energy delivered from non-renewable sources.

⁷ The intensity factor for total energy delivered is estimated by multiplying the percentage of energy delivered from non-renewable energy by the CO₂ emissions per total non-renewable energy metric calculated above. The estimate provided here and the energy reports issued by PGE assume that renewable energy sources do not result in any CO₂ emissions.

⁸ Global Warming Potentials (GWP) are based on the IPCC Fourth Assessment Report. CH₄ and N₂O emission factors are from the CalEEMod version 2016.3.2 defaults for PGE, and are conservatively assumed not to change from these estimates. As more renewable energy is integrated into the electricity grid, these intensity factors will also decrease.

⁹ Emission factor presented here is 50% projected RPS for 2030 consistent with SB 32 and SB 350. Available at: <http://www.energy.ca.gov/sb350/>.

¹⁰ The projected 2050 RPS target is based on 80% RPS in 2050, consistent with the CARB Final 2017 Scoping Plan, Appendix D PATHWAYS, pg 12 (November, 2017). Available at: https://www.arb.ca.gov/cc/scopingplan/2030sp_appd_pathways_final.pdf

Abbreviations:

CARB - California Air Resources Board

CO₂ - carbon dioxide

GHG - greenhouse gases

IPCC - Intergovernmental Panel on Climate Change

lbs - pounds

MWh - megawatt-hour

RPS - Renewable Portfolio Standards

PGE - Pacific Gas & Electric

SB - Senate Bill

Table Ops-4. Stationary Source Emissions
3333 California St AB900
San Francisco, California

Stationary Source	Engine Tier	HP	Fuel Type	Operation ¹	CO ₂ e Emission Factor ²	CO ₂ e Emissions
				hrs/yr	g/bhp-hr	MT/yr
Existing Generator	None	380	Diesel	20	523.5	4.0
Proposed Generator	Tier 2	1,073	Diesel	50	523.5	28.1

Notes:

¹ Operation of existing generator is 20 hours, based on the existing BAAQMD Permit. Operation of proposed generator is assumed to be 50 hours per year for routine maintenance and testing. This is consistent with the Maximum Allowed Testing Time from the Airborne Toxics Control Measure for Stationary Compression Ignition Engines (17 CCR 93115) for a Tier 2 engine.

² Generator emission factors are from CalEEMod and do not depend on engine tier.

Abbreviations:

BAAQMD - Bay Area Air Quality Management District

bhp - brake-horsepower

CO₂e - carbon dioxide equivalents

g - grams

hrs - hours

MT - metric tons

yr - year

Notes:

- ¹ Uses a linear interpretation between the electricity intensity factors derived in Table Ops-3.
- ² Approximation of the decrease in vehicle emission factors over time, based on San Francisco fleet-average emission factors from 2020-2050. Assumes no change after 2050, since EMFAC2017 does not project past 2050.
- ³ Assume all buildings become operational as soon as phase is constructed, based on percent of operational land uses by Phase as shown in Table Ops-16. The only changes in emissions are due to transportation and electricity becoming cleaner.
- ⁴ Assumes generator operational with phase 2

Dear Kei Sushi, Senior Environmental Planner,
Here are my comments on the Draft EIR for the proposed development at 3333 California Street.

I fully support the Community Full Preservation Residential Alternative for 3333 California.

- It preserves the Historic Characteristics of this wonderful historic site.
- It provides 558 (or 744 in the Variant) housing units.
- It builds them in three years.
- It does not include the massive unneeded and unwanted Retail/Office/Commercial Complex that the Developer continues to insist upon.
- It does not create 8,000 retail auto trips per day.
- It does not generate approximately 15,000 tons of greenhouse gases.
- It preserves both the present childcare center and the existing café.
- It matches the surrounding neighborhoods for character, style, scale and bulk.

1
(AL-2)

I strongly oppose the Developers Destructive Proposal as it brings excessive, unnecessary, unwanted and destructive noise, pollution, traffic and congestion to the neighborhoods surrounding 3333 California; it threatens the quality of life; it poses threats to pedestrian safety; and it contributes to climate change.

2
(ME-1)

The Community Full Preservation Alternative will generate zero retail auto trips to 3333 California as opposed to the 8,000 retail auto trips caused by the Developers Destructive Proposal. The Community Full Preservation Alternative will protect the small, family owned businesses

3
(AL-2)

in Laurel Village, Sacramento St. and Presidio Avenue. A quick walk around these neighborhoods

will clearly show the immense pressure these businesses are experiencing. [More retail is unneeded and unwanted. It will destroy our local businesses. The Neighborhoods are well served by businesses at Laurel Village, Sacramento St., Trader Joe's, City Center, California St., etc.

4
(ME-1)

We do not need the more than 100,000 square feet of Retail, Office, Commercial space that the Developers Destructive Proposal calls for.

Thank you for your consideration.

Sincerely,

Holly Galbrecht

560 Presidio Avenue, Apt. 1

San Francisco, CA 94115

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear planning commission my father and his partners started Cal Mart Supermarket in 1952 so I think I know the neighborhood very well. I support the full preservation alternative for the project as preserving the historic site will be good for the neighborhood as it will provide housing units which we all need in San Francisco. I don't like the idea of adding extra retail as we have enough already in Laurel village and nearby sacramento Street and trader joes and target nearby. There is another project in the making as Children's Hospital will be closing down and there will a large project of just housing being built and they say it will be much faster compilation compared to this project then the 15 years at 3333 California St. I think this timeline of 10 to 15 years is not the way to go it should be must faster. We have fought the rezoning and gathered many signatures so hope that works out for the neighborhood. Laurel village is really a special gem of the city and I hate to see it disrespected with no concern for the neighborhood. Cal Mart is taking care of a lot of third generations of neighborhood customers and we want that to continue.

Thank you for taking time to read my comments Ronald Giampaoli President Cal Mart Supermarket

4
(ME-1)

Good afternoon Commissioners.
I'm Linda Glick, a resident of Laurel Street.
I'd like to explain the history of the restrictions placed on
the site by the Planning Commission and the community
use of the green space as a park.

The same developer who built the Laurel Heights
residential tract and Anza Vista was going to build a
residential tract on this site, but he died.

7
(PP-1)

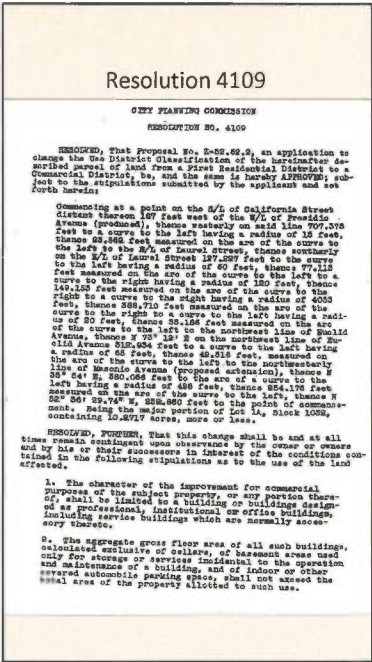

The School District acquired the property for a possible site for Lowell High School but decided to locate that elsewhere and sell this site. The District could get 50% more money from the sale if it could rezone it from First Residential to Commercial.

The District withdrew its first attempt at rezoning due to community opposition.

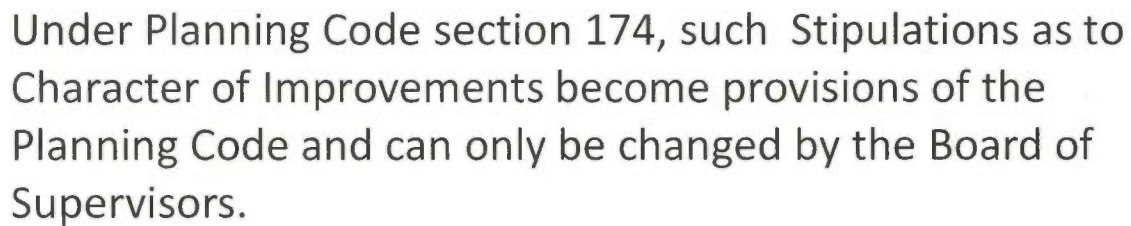

7
(PP-1)
cont'd

Finally a deal was struck with the community that resulted in the restrictions stated in Resolution 4109 that include 100-foot landscaped setbacks along Laurel and Euclid streets and a ban on retail uses of the site.

7
(PP-1)
cont'd
↓

7
(PP-1)
cont'd

Through the years, the community has used the green landscaped spaces for recreational purposes and a lawyer has stated that the public has acquired permanent recreational rights on the green spaces.

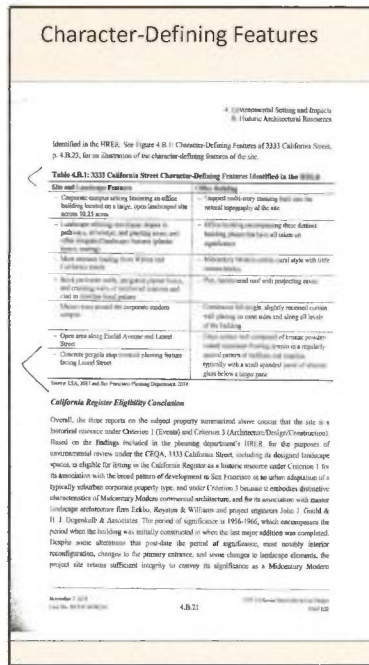

There is a lot of talk about preserving neighborhood character.

Laurel Hill has always been a place where neighbors gather; children learn sports from their parents; and a Community is formed.

These Community bonds will not be formed along meandering concrete paths.

8
(PD-5)

9
(PD-3)

The EIR identifies the concrete pergola atop terraced planting feature facing Laurel Street as a character defining feature of the resource. [DEIR p. 4.B.21]

10
(CR-1)

Laurel St. Historic Landscaping
and Pergola

The EIR explains that as a characteristic of Midcentury Modern design, the use of patios, pergolas and interior courtyards created welcoming, transition areas where the inside and outside merged. [DEIR p. 4.B.12]

10
(CR-1)
cont'd

I, and the entire Community strongly supports our Full Preservation Alternative that protects these cherished Historic features of this important and iconic site.

11
(AL-2)

THANK YOU

**Comments to the Draft Environmental Impact Report for
3333 California St. Mixed Use project**

The developer's request for 15 years to construct the project is suspect. This looks like a plan to sell a new entitlement on an up zoned property. Developers all over town are selling new entitlements rather than build housing. Alternatives analyzed in the Draft EIR would be built in 3 to 5 years. The Community Preservation Alternative would be built within three years.

1
(PD-1)

I fully support the Community Full Preservation Residential Alternative for 3333.

- It preserves the Historic Characteristics of this wonderful historic site.
- It provides 558 (or 744 in the Variant) housing units.
- It builds them in three years.
- It does not include the massive unneeded and unwanted Retail/Office/Commercial Complex that the Developer continues to insist upon.
- It does not create 13,000+ retail auto trips per day.
- It does not generate approx. 15,000 tons of greenhouse gases.
- It preserves both the present childcare center and the existing café.
- It matches the surrounding neighborhoods for character, style, scale and bulk.

2
(AL-2)

I strongly oppose the Developers Proposal as it brings excessive, unnecessary, unwanted and destructive noise, pollution, traffic and congestion to the neighborhoods surrounding 3333. It threatens the quality of life; it poses threats to pedestrian safety; it contributes to climate change.

3
(ME-1)

While there are many impact areas of the Draft Environmental Impact Report that should be challenged as the assumptions used are suspect, I will focus on one:

- **Cumulative Pedestrian Conditions (4.c.112)**

As an avid walker in San Francisco, I appreciate the effort to improve sidewalks and intersections. However improvements that are proposed will do nothing to enhance the pedestrian environment. For example the addition of a crosswalk at the eastern Mayfair/Laurel intersection will not fix today's problem that will only be worsened with the post project increased traffic. Today the crosswalk that runs north /south across the west side of Mayfair at Laurel is a death trap as people using Collins as a pass through routinely fail to stop at the intersection. Increased traffic volume will result in more injuries. The only reason that this crosswalk did not come up as dangerous is that today's residents know to pay attention. Who will warn the new residents of 3333 California?

Also the Euclid Avenue traffic circles have made pedestrian life a nightmare. Drivers cannot see across the traffic circle and are so busy trying to figure out how to navigate that pedestrians are ignored. Again, the assumption that the traffic calming will help with the increased traffic volume is fallacious.

The new bulb out on the NE corner of Euclid and Laurel has not made the intersection any safer. Drivers routinely turn right onto Laurel without coming to a full stop. The addition of one on the NW corner will not change the driving behavior. Again the increased traffic will not be mitigated by these bulb-outs.

Subject: 3333 California Project

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Planning Department,

I am writing to express my concern over the 3333 California project. I recently heard about the project and attended last week's Planning Commission meeting at city hall.

I live about 6 blocks from the site with my wife and daughter, and I am deeply concerned about the size and scale of the project. It looks like the creation of a mini-city in our neighborhood.

The developer has asked for a 7-15 year time frame. I cannot imagine having this important area and intersection under construction for this amount of time. We use the JCC frequently and we transit down California and Presidio streets constantly as well. I have a 5-year-old daughter--will she really be 20 by the time this project is finished? That is mind-boggling to me.

We are not opposed to development of htis site but request a smaller project with a shorter construction timeframe.

We do not see how the currently proposed project, with its duration, size, traffic impact, etc can possibly be in the best interest of the neighborhood. The city's housing shortage needs to be addressed, but it shouldn't be solved by opportunistically adding unreasonable density wherever there is an available site--that is not fair or just. Increases in density need to be distributed fairly amongst the various city neighborhoods.

Again, we are not opposed to developing this site, but the project as it stands is not reasonable and we strongly oppose it and urge you to work with the developer on a version that scales down the number of units, the retail, and the construction timeframe to 3-5 years at most.

Thank you very much.

Sincerely,

David and Zhenya

David Goldbrenner

Subject: Comments on 3333 Project

Date: Friday, January 4, 2019 at 8:15:22 PM Pacific Standard Time

From: David Goldbrenner

To: Zushi, Kei (CPC), richhillissf@gmail.com, Melgar, Myrna (CPC), planning@rodneyfong.com, Johnson, Milicent (CPC), Koppel, Joel (CPC), Moore, Kathrin (CPC), Richards, Dennis (CPC), CPC-Commissions Secretary

CC: Jane Fridlyand, Stefani, Catherine (BOS), Richard Frisbie, LaurelHeights2016@gmail.com

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Mr. Zushi and Commissioners,

1 (GC-1)

I am writing to express my deep concerns over the current proposal for 3333 California, and to express support for the Community Alternative. 2 (AL-1)

I have lived in Pacific Heights for 7 years, the last three at my current address, along with my wife and daughter. We live on Jackson between Baker and Broderick, about six blocks from the corner of California and Presidio, one of the major intersections that would be affected by the project.

We use the JCC frequently, and are constantly using both California, Presidio, Masonic and other streets around the site to get to our destinations, both by car and bus (1, 3 and 43). We also shop at Laurel Village, Trader Joe's and other local destinations.

We are concerned that the proposed project would affect us in numerous ways, the most important of which I outline below:

- The proposed 7-15 year time frame for the project is mind-boggling to us. Will our five year old daughter really be 20 when this is finished? Dealing with construction delays, noise, dust, traffic congestion, diesel smoke, torn up road, and other hindrances for up to 15 years as we visit the JCC, take the 1 bus from California and Presidio, etc, is deeply troubling.
- The long timeframe makes it more likely that in the case of an economic downturn, such as in 2008, the project could halt indefinitely.
- The truck traffic and other construction traffic is a threat to pedestrian safety. The congestion will force cars onto nearby side streets, affecting the whole area.
- The size and scope of the project will have major environmental impact in terms of the amount of GHG released.

3 (PD-1)

4 (TR-8)

5 (GHG-3)

Instead, I strongly support the Community Alternative, which will produce the same amount of much-needed housing. It will increase the density of housing in the area, but will not have the excessive and unneeded retail, office and commercial space. It also can be completed in a reasonable timeframe, thus balancing the needs of the neighborhood and the city as a whole.

6 (AL-1)

I understand that the city needs more housing, but letting developers build small cities on any available site is not a fair or equitable way to solve the problem. I urge the commission to work with the developer to be responsive to community concerns by scaling down the proposal.

7 (ME-1)

Thank you very much for your consideration.

Sincerely,

David Goldbrenner

Subject: Support Housing at 3333 California
Date: Monday, December 10, 2018 5:43:50 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Planning Commissioners, Planner, and Sup. Stefani,

My name is Theo Gordon and I am a resident and voter of San Francisco. I live ten minutes from 3333 California.

I moved to San Francisco because, as so many people before me, I saw an opportunity to further myself. It has become harder and harder for people to seek opportunity in San Francisco because of the dire housing shortage. For every 8 jobs we create in the Bay Area, we build 1 unit of housing. This is why we are in a crisis. We must build more housing so that our neighbors can afford to live and work in this city and so that we are not pushing out vulnerable communities. We have to stop making excuses and we have to build housing now.

The project at 3333 California is a chance to build 700 new units of housing. That's 700 more families and individuals who get the opportunity to live in a great neighborhood in a fantastic city. That's 700 more families and individuals who have access to good schools. 700 more families and individuals who can take the bus to work instead of destroying our environment, driving into the city from far out in the East Bay.

As you know, a small but well connected group of wealthy neighbors are trying to label an office building as historic. No such claim had ever been made about this building until the possibility of new housing came up. Let's call this what it is, a perversion of historic building protections to enrich a few, already very well off, people. It is another example in a shameful history of downzoning and redlining that was used to keep newcomers and diversity out of the northern and western parts of the city. This is NIMBYism at its worst.

Sup. Stefani, I know that you consider yourself a progressive. Please choose the progressive option that will help bring diversity to our schools and neighborhoods, get people out of their cars, and give 700 neighbors the opportunity to call San Francisco home.

Thank you,
Theo Gordon

Subject: 3333 California St. DEIR
Date: Monday, January 07, 2019 10:37:54 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Mr. Zuchi,

As a long time resident and homeowner who lives on the 3300 block of California Street, I wanted to express my opinion on the DEIR done for the 3333 California development.

The developer's request for 15 years to construct the project is suspect. This looks like a plan to sell a new entitlement on an upzoned property. Developers all over town are selling new entitlements rather than build housing. Alternatives analyzed in the Draft EIR would be built in 3 to 5 years. The Community Preservation Alternative would be built within three years.

The DEIR does not address the impact on the neighborhood of a 15 year construction project and all the resulting affects on the surrounding neighborhoods and thus it is incomplete and inaccurate.

I fully support the Community Full Preservation Residential Alternative for 3333

It preserves the Historic Characteristics of this wonderful historic site.
 It provides 558 (or 744 in the Variant) housing units.
 It builds them in three years.
 It does not include the massive unneeded and unwanted
 Retail/Office/Commercial Complex that the Developer continues to insist upon.
 It does not create 13,000+ retail auto trips per day.
 It does not generate approx. 15,000 tons of greenhouse gases.
 It preserves both the present childcare center and the existing café.
 It matches the surrounding neighborhoods for character, style, scale and bulk.

I strongly oppose the Developers Proposal as it brings excessive, unnecessary, unwanted and destructive noise, pollution, traffic and congestion to the neighborhoods surrounding 3333; it threatens the quality of life; it poses threats to pedestrian safety; it contributes to climate change.

The Community Full Preservation Alternative will generate ZERO retail auto trips to 3333 as opposed to the 12,000-15,000 retail caused the Developers Proposal.

The Community Full Preservation Alternative will protect the small, family owned businesses in Laurel Village, Sacramento St. and Presidio Ave. A quick walk around these neighborhoods will clearly show the immense pressure these businesses are experiencing. More retail is unneeded and unwanted. It will destroy our local businesses.

The Neighborhoods are well served by businesses at Laurel Village, Sacramento St., Trader Joe's, City Center, California St. etc. we do not need more, more, more. We do not need the more than 100,000 square feet of Retail, Office, Commercial space that the Developers Proposal calls for. One of the reasons the Developer destroys this historic site is to create enough space for this unneeded and unwanted Retail/Office/Commercial (ROC) nonsense.

1
(PD-1)
 2
(GC-1)
 3
(AL-2)
 4
(ME-1)
 5
(AL-2)
 6
(ME-1)

The CPMC development, a Community supported plan by the way, adds 270 housing units and the Developer and neighbors have agreed to have no Retail. **Why is 3333 being treated differently by forcing unneeded and unwanted ROC (Retail/Office/Commercial) against the overwhelming opposition of the surrounding residents?**

6
(ME-1)
cont'd

Recent studies have shown that the City's method of calculating auto trips, and the resulting chaos and congestion is deeply flawed, to the point of being misleading.

7
(TR-2)

At the time the VMT (Vehicle Miles Travelled) methodology was developed, SF CHAMP last updated Nov. 2014, the Transportation Networking Companies (TNCs) -Uber/Lyft/Chariot etc. were still in their infancy and so the VMT methodology fails to account for their incredibly disruptive impact. The TNCs average, conservatively, in excess of 170,000 trips per day in San Francisco. Studies also show that TNCs increase passenger trips by almost 10%. There are about 2,000 taxi medallions in San Francisco so TNCs do not just replace taxis they overwhelm them by orders of magnitude.

Also, implementation of the VMT methodology is not mandated until 2019 but as Planning and The Developers were unable to explain away the 13,000 Retail Auto trips generated by the existing, and still acceptable, Level of Service methodology, they implemented the VMT methodology with "refinements." In much the same way as they calculated on the "direct" GHG and totally ignored the "indirect" even though required to do so by their own criteria.

Planning calculates the Developers Destructive Proposal using VMT methodology will generate approx. 5,800 total auto trips for 3333 for Retail + Office + Residential which is a very suspect number as it is based on questionable assumptions, such as "The SF Guidelines **do not provide a specific methodology to** assess the number of trips....." Planning has therefore, with no supporting documentation or analyses, applied "appropriate refinements to the standard travel demand...." Rather amazing that these "refinements" all work in the Developers favor. Nowhere in these "refinements" have THC's been taken into account! **All of which renders the Traffic Analysis incorrect, incomplete, inaccurate, invalid.**

The Planning Department proposes to reduce the number of retail parking spaces as a mitigation measure to reduce the significant traffic impact. This is a false assumption and shows the extent to which the Developer and Planning misunderstand, or simply choose not to understand, the impact that the TNCs have.

Planning's mitigation measure is a stone age solution to a digital age problem. How will many people respond to a perceived lack of parking? They'll simply call a TNC and go anyway. **Eliminating parking won't eliminate auto trips it will actually increase auto trips.**

8
(TR-10)

The Developers Proposal surrounds 3333 with five major Loading/unloading zones for TNCs and Freight traffic. Initially the Developers promised that all the unloading would be done underground or on-site and now the site is ringed with these zones! These zones not only eliminate approx. 40 parking spaces but they will create additional traffic congestion and pollution. So we have a ring of loading zones in addition to the inevitable double parking that occurs for deliveries and drop-offs.

I hope that you will take my comments into account when assessing the impact of the 3333 California development as currently proposed. It is unfortunate that after so much efforts at outreach that a) the community's input has been ignored and b) that the developers have presented a proposal with last minute significant and meaningful changes (15 year construction period, street loading zones etc) , which were not shared with the community.

9

Subject: 3333 California Street-URGENT

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I am Anne Harvey and I am writing to you on behalf of my husband, a professor emeritus at the University of San Francisco, and our two sons, physician and an economist to strongly urge the Planning Commission to grant a 15-day extension of the Due Date for comments on the DEIR for 3333 California.

It is a lengthy and complex document. And for some unknown reason, the Planning Department has refused to extend the time limit for written comments. As to stands now the deadline for written response to the Draft EIR is December 24, Christmas Eve. This is ridiculous, Christmas is a time for family and friends.

People should not be rushing around to meet an arbitrary deadline.

1
(GC-3)

We fully support the Community Full Preservation Residential Alternative for 3333 California. and if you examine the matter closely, I think you will too. In any event please let the public have additional time to have input on this matter.

2

Subject: 3333 California Street EIR Insufficiency and Comments
Date: Tuesday, January 08, 2019 5:09:35 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Commissioners,

I am writing to you to strongly urge you to reject the draft EIR as being insufficient. It fails to consider the proposal the community put forward. The community put forward a full preservation residential alternative for 3333 California Street. I strongly believe that the community proposal should be adopted.

1
(AL-2)

My family and I support all the points submitted by Richard Frisbee. My husband and two sons and I have lived in San Francisco since 1978. In fact, my younger son was born today in the hospital just down the street from this project on today's date in 1983. At the time we lived in the Western Addition and since then both of our sons have gone to school here in San Francisco and grew up here and are both young professionals. We are in full support of more housing at 3333 California. But we are aware of the incredible deficiencies of what the developer is proposing.

2
(ME-1)

Please do not rezone this area. Please adopt the neighborhood proposal as it is much better than what the developer is doing. My husband is a retired professor at the University of San Francisco and I was self-employed. One of my sons is a doctor and the other is a young professional. They agree with my position.

Minutes

Received at CPC Hearing

12/13/18

(*)

I urge -- 12/24 DEIR deadline be extended 15 days.

On 12/5, HPC had remaining questions on neighborhood alternative.

I-HILLSON1

Over 4 decades ago, *The Chronicle* described site as having:

"pleasant green lawns and plantings that enhance the handsome low lines of the simple building designed by Edward B. Page."

DEIR doesn't mention that the cultural resource of remnant large mature trees from Laurel Hill Cemetery that were incorporated into the Firemen's Fund Building site as historic character-defining features are workhorses in mitigating GHG emissions. Planting small trees over a span of 15 years as if that would provide equivalent or reduced GHGs from thousands of VMTs associated with *NEW* retail uses to negatively impact everyone's HEALTH is concerning.

5
(GHG-1)

Historically site was designed to have commercial on California only.

6
(ME-1)

The Jordan Park Improvement Association Board opposes retail on Euclid side.

Rose H.

MR. IONIN;

January 8, 2019

Planning Department
Attn: Kei Zushi, Senior Planner
1650 Mission St., Suite 400
San Francisco, CA 94103

Case No. 2015-014028ENV, State Clearinghouse No. 2107092053, 3333 Calif. St. DEIR Comments

Thank you for the opportunity to comment and ask questions on the DEIR.

Volume 1:

Page S.2: In order to develop 558 “dwelling” units under the proposed project or 744 “residential” units on the 10.25-acre site, “...the existing annex building, surface parking lots, and circular garage ramp structures would be demolished.” Why would there need to be 13 new structures to be erected with either proposal?

1
(PD-3)

In the 896 parking spaces that are to be provided in “four below-grade parking garages and in 2-car parking garages serving the duplexes on Laurel, would there be 60 public parking spaces for the “60 existing public parking spaces” that are going to be removed? If not, what would be the total number of public parking spaces on the site at each phase of the development and at full completion?

Page S.6, S.7, S.8: “CR-1: The proposed project or project variant would cause a substantial adverse change in the significance of a historical resource as defined in section 15064.5 of the CEQA Guidelines.”

2
(CR-4)

In re the mitigation measures stated – Documentation of Historic Resource; Measured Drawings; Historic American Buildings/Historic American Landscape Survey-Level Photographs; HABS/HALS Historical Report; Video Recordation; Softcover Book; & Interpretation of the Historical Resource: While members of the public may appreciate the above products to document the tangible items on the property, how will this be done if the project is supposedly to take 5-7 years or even up to 15 years (“...the proposed project or project variant may be developed over a 15-year timeframe” <Page 4.C.45>)? When would the historic resource materials be available considering the multiple phasing of the project? How would the public know when these become available? Who will be responsible party to get these products to the public?

As part of the “interpretative program,” would there be a new plaque for the listing on the CA Register to be placed on the property? If so where? If not, why not? Would the old plaque that marked Landmark #760 be part of the documentation (even though the landmark standards changed since then & maybe that’s why the plaque was removed?)?

For future generations, it would be nice to capture this well-known history of San Francisco’s Laurel Hill Cemetery where the city’s pioneers were once buried along with being one of the “Big Four” cemeteries with Calvary, Masonic and Odd Fellows cemeteries.

If and when any of the larger remnant trees reach the end of their lifespan or are killed by the development, it would be a good gesture to the community to have parts of it available for sale and to earmark the funds to go into the urban forestry fund so that tree plantings in this area where such large trees are removed will be increased for the benefit of the community since there are not many large mature trees and to combat future added pollution in this area where traffic is getting worse and as more pollution causing activity increases.

3
(BR-1)

Also, it may be prudent to have not only other parts of the larger remnant trees donated to scientific study as the trunk of the larger trees will tell a story of the environment in the area since the Laurel Hill Cemetery days and the trunk slice at the largest diameter can be saved as a display somewhere. It would help with botanical genome study, too. This would be better than to just dump the remnants and mulch it with no scientific findings for the future. For the environmental study students, would this not be a great project?

3
(BR-1)

It is especially important to plant and keep large mature trees where there is space in light of the fact that "open space" does not mean *ON THE GROUND* but rather includes green rooftops, walls, and sidewalks where large mature trees could not thrive. Information from these older growth trees would give scientists a lot of information about climate change and other things as they occurred in this area. Rather than toss out tree cuttings as mulch only, would that the mitigation measures also provide for people to obtain samples for future historic purposes and/or scientific studies? One may not know what they have and rather than do harm first, it may be prudent to study such matters as is done under the "Precautionary Principle."

4
(PD-3)5
(BR-1)

In addition, since the Laurel Hill Cemetery contained various rare shrubs like manzanitas, it could be that the area still contains some dormant seeds which may be good to collect for biological study. The range of these rare manzanitas and the conditions could be studied by school children. These seeds accumulate in "seed banks" and would be good to preserve for scientific research.

Page S.10: "TR-2: The proposed project or project variant would cause substantial additional VMT and/or substantially induce automobile travel." ("SIGNIFICANT")

6
(TR-5)

While it is appreciated that Mitigation Measure M-TR-2 proposes to *REDUCE* the retail parking supply as though that would reduce the number of VMTs, any added retail generally, and restaurants in particular, according to prior DEIRs for other development sites, show that retail attracts vehicles to the site such that elimination of a handful of parking spaces will not solve the inundation of vehicles – whether personally owned or for hire (car sharing) – in this area for at least ¾-mile in all directions. The retail use attracts vehicle trips. And with rideshares, there does not have to be parking to have them add to the vehicle trip count.

What formula model does Planning Department use to calculate VMTs? Does it include commercial vehicle miles travelled? What road types are included or excluded from calculations? What about VMTs from carshares? Would one-way carshare trip miles travelled be included in the calculations vs. 2-way carshare trips? Would certain passenger vehicle miles traveled be excluded from calculations? What other models were used besides the one used by Planning? Were the outcomes the same? Was the VMT calculation model used in this DEIR used for all other DEIRs in the last 3 years? If not, why not; and if so, what were the mitigation measures for those DEIRs that could be applied to this site?

7
(TR-2)

The DEIR does *NOT* account for the post-2008/2009 phenomena of TNCs / rideshares causing substantial VMTs in the area. Carshare drivers stop in the middle of the street to load and unload passengers. They drive in from across the bridge to "work" in SF. When they get a customer, they pick up the customer and drive off to another area that could be miles away – especially when the driver drives into the city from outside, the total mileage he has to drive is not included in the VMTs which starts and stops only upon the rider's total ride rather than the miles the TNC driver has racked up. The same customer may want the same driver to drive him/her back so the driver drives back in from miles away potentially to pick up this initial customer at 3333 California who only needs a ride 3 blocks away. The mitigation measure to reduce the VMTs generated by this project would be to eliminate all or much of the *retail* use which in many Planning Department DEIRs show is what generates the most VMTs. In addition, different retail uses generate more VMTs than others. Retail

8
(TR-5)9
(TR-1)

and especially **restaurant type use** generates **a lot more traffic** because they stay open later than another use that is open only 9AM-5PM. Neighbors in this area drive or call a rideshare to get a cup of coffee even if only 2 blocks away.

9
(TR-1)
cont'd
↓

Also, documentation from University of California, Davis, and other sources, indicate that San Francisco is 92% dependent now on carshare mode (e.g. Uber, Lyft, etc.) as opposed to Muni buses. The documentation states that had these carshare modes not existed, they would walk, bike or take Muni or a taxi. The documentation also shows that there are millions of VMTs travelled by these rideshares in SF based on the total amount of fares collected by these companies.

10
(TR-2)

Here is a sample article of the impact from rideshares and VMT count:

https://www.washingtonpost.com/local/trafficandcommuting/as-ride-hailing-booms-in-dc-its-not-just-eating-into-the-taxi-market-its-increasing-vehicle-trips/2018/04/23/d1990fde-4707-11e8-827e-190efaf1f1ee_story.html?utm_term=.1f054949bc7e&noredirect=on

Moreover, here is an additional document about the impact of rideshares on VMTs. There is a statement that VMTs would be 83.5% more miles than had rideshares not existed or used. Here is the link to the September 2018 text by Henao and Marshall:

<https://link.springer.com/article/10.1007%2Fs11116-018-9923-2>

This is the abstract for their work:

“Ride-hailing such as Uber and Lyft are changing the ways people travel. Despite widespread claims that these services help reduce driving, there is little research on this topic. This research paper uses a quasi-natural experiment in the Denver, Colorado, region to analyze basic impacts of ride-hailing on transportation efficiency in terms of deadheading, vehicle occupancy, mode replacement, and vehicle miles traveled (VMT). Realizing the difficulty in obtaining data directly from Uber and Lyft, we designed a quasi-natural experiment—by one of the authors driving for both companies—to collect primary data. This experiment uses an ethnographic and survey-based approach that allows the authors to gain access to exclusive data and real-time passenger feedback. The dataset includes actual travel attributes from 416 ride-hailing rides—Lyft, UberX, LyftLine, and UberPool—and travel behavior and socio-demographics from 311 passenger surveys. For this study, the conservative (lower end) percentage of deadheading miles from ride-hailing is 40.8%. The average vehicle occupancy is 1.4 passengers per ride, while the distance weighted vehicle occupancy is 1.3 without accounting for deadheading and 0.8 when accounting deadheading. When accounting for mode replacement and issues such as driver deadheading, we estimate that ride-hailing leads to approximately 83.5% more VMT than would have been driven had ride-hailing not existed. Although our data collection focused on the Denver region, these results provide insight into the impacts of ride-hailing.”

The rideshares are stated to also impact the ridership of existing Muni buses because they cannot move when the rideshares add to the congestion and automobile delay on the streets. If the retail use was curbed, there would not be as many vehicles in the area to cause the Muni delays as well.

Part of the mitigation measure should be to curb increased vehicle counts on the residential arterial (side) streets within ½-mile of the project that are already taking on the bulk of the traffic. What are the vehicle counts projected for Laurel, Manzanita, Iris, Heather, Spruce, Parker, Commonwealth, Jordan, Palm, Euclid, Geary, and California St. from 2018 each year until the fully built out project? It is hard to say the total number of years the development is projected to take – ranges from 5-7 years (see Table AQ-1 shown later herein & from DEIR) to 15 years so what are the counts based on the time projections?

11 (TR-5)
12
(TR-14)

Page S.10: “TR-3: The proposed project or project variant would not cause major traffic hazards.” (“LESS THAN SIGNIFICANT” (LTS))

13
(TR-7)
↓

Improvement Measure I-TR-3 says there will be parking garage attendants or other queue abatement actions but there will be bad actors who will “only for a minute” park in neighbors’ driveways as they wait for parking in the garage. These queued up drivers will compete now with the rideshares that generally are in the neighborhood parked and waiting or sleeping in their vehicles for their next client. Neighbors will no longer have any street space to park because all the “temporary” parkers are taking up practically every foot of curb space.

13
(TR-7)
cont'd

If double-parkers occurred at the intersection of Euclid and Laurel or farther east, there could be major collisions from being not only blinded by the sun but due to the trifurcation of Pine into Euclid, Presidio, and Masonic. This area is like an accident waiting to happen. I cross there as a pedestrian on the tiny little refuge islands and can get the breeze from cars “flying” by. The time for the signal for pedestrians to cross on a fresh green is very short there. Vehicles do not see the signals well so they continue on their turns even on a red.

14
(TR-8)

There could be major traffic hazards with a new retail on the Euclid corner which may take out people on the pedestrian islands or on the sidewalk. The retail on Euclid side should be taken out because people will spill out onto the dangerous part of the parcel putting them at risk for their safety. Rideshares will be taking up road space and on-street parking for pick-ups and drop-offs so there will be a lot of automobile delay especially with the heavy traffic from Pine (one-way westbound, Masonic (left turn westbound onto Euclid & right turn onto Euclid) and Euclid (from other cross-streets) are combined. Although the report shows the impact at “LESS THAN SIGNIFICANT” (“LTS”), the cumulative traffic issue with Trader Joe’s traffic already bogging down Masonic southbound should not overburden the adjacent neighborhoods with cut-through traffic through Laurel Heights and Jordan Park. In addition, the delivery trucks travel within ½-mile of Laurel Heights to the Laurel Village Shopping Center, to the existing CPMC cafeteria and hospital to add to the overburdening of the street.

15
(TR-12)

When new businesses get to inhabit the City Center at Masonic and Geary, those traffic counts and VMTs will add to the area VMTs which should be much more than it is today. If a grocery store or another restaurant or more is inserted in the City Center, how will the traffic from that impact the Laurel Heights/Jordan Park, Geary and California St. areas? Has this been studied in the DEIR?

This point cannot possibly be considered “LTS”. See **C-TR-1** (Pages S.15-S.16) “Construction of the proposed project or project variant, in combination with reasonably foreseeable future projects, would not result in a cumulatively considerable contribution to cumulative construction-related transportation impacts.” (“LTS,” “None required” for mitigation)

A number of projects including the Lucky Penny, CPMC rebuild into new housing, a Presidio Avenue project, the GearyBRT closing off lanes for construction that will be coming during the same time span as 3333 California Project, the introduction of a potential Whole Foods at City Center at Masonic, the 3300-mid-block demolition-to-housing project on Geary, the new builds and other increases of unit counts on surrounding “nearby streets” are not taken into account.

Page S.11: TR-3 (continued)

Why would the owner/operator of the garage be held accountable for a situation caused by the developer’s design of the project? If the project is going to attract that much vehicular traffic and problems for the garage, then the uses that attract the most vehicles that would use the garage would need to be eliminated from the project.

16
(TR-9)

Page S.12: Unsure that a new Muni line would mitigate much of the traffic or loading demand on buses when many use the rideshares. Muni ridership has declined. Perhaps more people in this area take rideshare. This means more VMTs in the area than other areas where more ridership exists on Muni. There are many lines that go by the 3333 California site but do not stop there (e.g. 38BX, 38AX,

17
(TR-9)

NX, etc.). These existing lines use Masonic to get to Bush to get downtown. Again, with other transportation modes available such as scooters, bikes, rideshares such as Uber, Lyft, Chariot, not sure how this will mitigate the impact of ridership on Muni. Will there be a 43-Masonic line ridership survey to see where they are all going first? Also, if there is less ridership on Muni overall, why not find out where the ride-hailing companies are taking their passengers and from what point to what point before putting in things that may not make any difference? Will such data be analyzed and shared with the public?

This S.12 mitigation proposal appears to be conflict with C-TR-10 on Page S.17 that says the “project will not contribute...passenger loading impact.” If there is no loading impact, again, it does not make sense to run more buses or run a new Muni line. Also, without knowing if all the future residents and users of the site will be taking Muni or using alternate forms of transportation which are now in use since 2009 when the study was done, not clear why this is also labeled “Not required” and “N/A” just like C-CR-1 (above). And if all the future visitors and residents to the site will be taking rideshare or driving – as the statistics for automobile use in the city is still fairly high with Muni ridership declining, it makes less sense to add to the 43-Masonic line or increase the frequency. Just because there are more buses being run on a line does not mean that is the basis to say the demand is there. There is already the 2-Clement line, the 1-California line and the 43-Masonic at the location. The 38-Geary is only up to 2 blocks away. Anybody west of these locations generally takes the 33-Stanyan, 44-O’shaughnessy, 28-19th Avenue or 29-Sunset lines to go in the north-south direction.

Page S.12 (**see also TR-4** comments): The “fair share” contribution is listed not to exceed these amounts:

“Proposed Project – \$182,227

Project Variant – \$218,390”

However, due to the project taking at minimum 5-7 years to be completely built out or as described from the DEIR up to 15 years, these figures would be too low as the cost in future of the Muni operation and purchases increase. There should be a clause in the developer agreement to ensure that the project pays for future increases in cost to mitigate the traffic impacts to the value of the cost of the bus with projected cost of a bus in the future. The \$182,000-\$218,000 is low to mitigate impacts of the transit ridership by full development of this project.

TR-4 (**see also S-12** comments): “The proposed project or project variant would result in an adverse transit capacity utilization impact for Muni route 43 Masonic during the weekday a.m. peak hour under baseline conditions.”

“Mitigation Measure M-TR-4: Monitor and Provide Fair-Share Contribution to Improve 43 Masonic Capacity Based on an evaluation of the transit ridership generated by the proposed project or project variant, monitoring of transit capacity utilization for the 43 Masonic line shall be initiated when the first phase of development has been completed and occupied.”

Where are the extra 3 people mentioned in the DEIR triggering the need to purchase another bus at today’s cost of \$940,000+ coming and going to? Why not find out where most of the 43-Masonic line riders are going to and from? Why is there not an estimation of the need for any 43 Masonic buses for the entire development completion with the purchase price of the bus being paid for those as well including estimated bus purchase cost at end of the development? Otherwise, the taxpayers end up paying for supporting Muni via more ridership fare increases and such. A developer who works in partnership with the city should pay for the additional infrastructure costs into the future if his/her development is going to be delayed for many years. Otherwise, it’s cheaper to put the entire development in at the current costs of infrastructure or it will cost a lot more to the taxpayers and Muni riders in the form of fare increases. If the Muni fare increases are equivalent to the rideshare modes,

there will be even more VMTs as San Francisco is more and more dependent on rideshares especially as fares increase for the municipal bus system (Muni) and travel times increase as more vehicles clog the streets to increase travel time causing major delays so all modes get bogged down and people sit in vehicles and pollute at lower RPMs. The stopping and starting of vehicles as they cannot get around town and as signal timing is contributing to the automobile delay will increase air pollution on many streets around this project for at least ½-mile radius. One can see the automobile increase just from watching and this does not take any \$100,000 “traffic study” to figure out.

17
(TR-9)
cont'd

This point about increase in vehicular travel in this area with nobody really going anywhere efficiently should also be a point under “AIR QUALITY” (**Chapter 4E & AQ**).

18
(AQ-3)

Air Quality Table AQ-1 (shown below): It shows the project being done from 2020-2027. With this timeline, I think the GHGs will not be remedied with the current trees of unknown species being planted even if in greater quantities than the existing number of mature trees. The mature trees are the ones that do the heavy cleaning of the air. There should be some consideration of tree species that also will not cause harm to the existing mature trees in the area to be retained and are in good condition.

19
(GHG-1)

Table AQ-1
Project Construction Phasing
3333 California Street
San Francisco, California

Phase	Phase Name	Start Date	End Date	# of Work Days
1	Masonic/Euclid	3/2/2020	8/19/2022	645
2	Center Building A/B	9/10/2021	8/31/2023	515
3	Plaza A/Plaza B/Walnut	12/4/2022	11/18/2025	773
4	Mayfair/Townhouse/ Euclid Park	5/22/2025	1/12/2027	429

Notes:

1. Project construction schedule provided by the Project Sponsor.

There's a comment (Page 523) that states in **today's** dollar value:
"Cost of a 40-foot electric bus is \$967,132"

20
(TR-9)

The fair-share contribution to even add one bus is not going to be covered per the amounts shown on Page S.12 above because in the future, the bus would cost more. How was this figure calculated? If the project takes years to complete, there should be a figure that would purchase however number of buses to mitigate the impact of not having sufficient number of buses as a result of this project due to the impact to the community in the surrounding area, no?

The trigger for the needed 43-Masonic line is explained as being due to the 3 additional riders on that line. Where are these people on this line going to that it is so heavily skewed to the **northbound** 43-Masonic trips in the AM Peak Hour?

Page 248 shows 43-Masonic ridership NORTHbound & Southbound as below:

Directional Muni Line Analysis												
Route by Direction	Existing Conditions						Project Trips		Existing plus Project Conditions			
	Weekday AM Peak Hour			Weekday PM Peak Hour			AM	PM	Ridership	Utilization	Ridership	Utilization
	Ridership	Capacity	Utilization	MLP	Ridership	Capacity						
Northbound												
43-Masonic	318	378	84%	Geneva/Mission	140	315	15	32	333	88%	172	55%
43-Masonic	318	378	84%	—	140	315	15	32	333	88%	172	55%
Southbound												
43-Masonic	246	378	65%	Geneva/Honda Blvd/Clarend	215	315	37	14	283	75%	229	73%
43-Masonic	246	378	65%	—	215	315	37	14	283	75%	229	73%

Is the same model used for transportation VMTs used for calculating impact or needs for Muni? What is the margin of error to calculate the need for Muni considering the focus is on the 43-Masonic line which is at the boundary of the Census Block or Transportation Analysis Zone (TAZ)? Has any analysis been made as to whether the riders using the 43-Masonic are going across town or milling about just to travel a few blocks to the City Center on Masonic for a cup of coffee? Would it not be more accurate to find out where the riders are going? What about the impacts to the 1-California or the 2-Clement?

Page S.13: "TR-6: The proposed project or project variant would not cause significant impacts on regional transit." ("LTS" & the mitigation = "None required")

When the streets in the area get jammed with more vehicles in the area along with potential new bus line or more Muni buses as stated in this DEIR, more road space is taken up and everybody will be waiting, including the Golden Gate Transit buses on Geary that go to Marin County. How is this analyzed in the DEIR?

S.14: "TR-9: The proposed project's or project variant's freight loading demand would be met during the peak loading hour." ("LTS")

One of the mitigation measures states:

"Requiring deliveries to the retail and restaurant components of the proposed project or project variant to occur during early morning or late evening hours."

If any more trucks are going to weave through the Laurel Heights & Jordan Park neighborhoods during the wee morning hours or late evening, the community will not be able to get quiet enjoyment of their properties.

"Delivery to the retail and restaurant components" of the project is unclear as to when these would occur. Please clarify. Restaurants usually are open late. They would already have deliveries late. Most deliveries should be done on OFF-PEAK, *NON*-WEE-HOURS to not create a nuisance to the neighborhoods.

The DEIR mentions:

"Installing delivery supportive amenities such as lock boxes and unassisted delivery systems to allow delivery personnel access and enable off-peak hour deliveries"

If this is going to create "Amazon-like" lockers (package delivery lockers for mail orders) to be accessed 24/7, there will be a huge impact to more VMTs and other CEQA impacts to the neighborhood that would not ordinarily exist if restricted to when any retail is open for business. Also, should such locations ("Delivery Supportive Amenities," Page 246, "TDM") be identified on the site, they should be kept on the commercial corridor rather than on the Euclid side which is residential in nature.

Page S-15 (TR-10): "...passenger loading demand would be met during the peak loading hour and would not create hazardous conditions or significant delays for transit, bicycles or pedestrians. / "LTS"

Based on the 12,000+ VMT for the project and with all the retail and office space being proposed, there is likely to be delays for transit as more conflicts at the intersections would arise by cutting new streets through the historic property site. There will be automobile delay to the point of gridlock in some areas. Putting retail in the Euclid building and at the corner plaza where the Muni Express buses and commuters travel at a good clip around the Euclid-Masonic intersection at all hours but especially during the AM and PM peak hours with 3-lanes of one-way traffic from Pine heading westbound is compromising safety for everybody. I do not think this should be considered "LTS" if any sort of use

allows people to linger about this area and on the corner of this steep hill area. Also, as more projects will not have parking allowed with units on Presidio Avenue and practically every other street in the city, the rideshares will, along with all the road-dieting, bulb-outs for pedestrian safety, lane marking changes and traffic control devices cause a lot of automobile delay and could be dangerous to get *emergency access and support* into and out of the area for not only this site but for the rest of the nearby community inhabitants.

24
(TR-13)

Related to this above matter about emergency access, see Page S.15, **TR-11**: “The proposed project or project variant would not result in significant impacts on emergency access to the project site or adjacent locations.” (“LTS,” “None required” for mitigation measures)

This also applies to S.13 **TR-7 & TR-8** -- bike lane on Euclid at Masonic heading westbound & to downtown. This is not safe due to slope with multiple vehicular feeders in the area.

25
(TR-8)

Page S.15: The mitigation measure to initiate early morning and late evening deliveries would seem like they would increase noise levels during these hours which are very low per your data (in the 40dBAs). When one adds large commercial truck deliveries during these very early or very late hours, the impact would be greater even if at 75db because everything else around it is so quiet.

26
(NO-3)

Page S.16 (C-TR-2): “The proposed project’s or project variant’s incremental effects on regional VMT would be significant, when viewed in combination with past, present, and reasonably foreseeable future projects. / S”

27
(TR-5)

The “Mitigation Measure M-TR-2: Reduce Retail Parking Supply” will make things worse and more impactful because as stated earlier, even if there is *no* parking anywhere, more rideshares, etc. will use the streets and bicycle lanes to clog up the street so that the automobile delay will be greatly increased up to at least ¾-mile of the area in all directions.

The statements in this part seem as if they should be in the freight-loading section of the study -- C-TR-9, Page S.17 – as well. If one looks at it, it also says, “Not required” and “N/A.”

28
(TR-10)

S.18-S.22: Re noise issues...

The Noise Control Plan should be reviewed and approved by BOTH Planning Department *and* the Department of Building Inspection (DBI) before permit issuance that will show that the daytime and nighttime noise from the project or any variant will not be greater than 10dBAL_{eq}.

29
(NO-1)

This 3333 California DEIR does not have specifics as to how or where the construction-related equipment and vehicles will be handled in the neighborhood. Noise should be attenuated at the closest receptor as part of the mitigation of this “S” Significant Impact category. Developer and contractor may use field-erected temporary noise barriers. Other mitigation measures to employ might be noise control blankets on the buildings as they are worked on, wall off stationary equipment that are noise-makers such as compressors, generators, concrete pumps.

Not only to mitigate noise but also to reduce GHGs in the area, turn off idling vehicles such as dump trucks, delivery trucks, etc.

Staging of concrete pump trucks (they have their concrete spinning while waiting for their turn and thus have a continuous noise) should be determined as to what street and how that will work with the TR (transportation and traffic) category of impact. Who might be responsible would likely be the developer and the construction contractor(s) with notice to Planning and DBI.

Concrete pumping trucks used at night should not increase interior noise levels to surrounding sensitive receptor sites above 45 dBA from 7PM-7AM. Shift noise-making activities to daytime prior to 7PM whenever possible.

29
(NO-1)

If HVAC equipment mitigation is not reached, the Certificate of Occupancy should not be issued for parts of the development where any part of the Noise Ordinance is not met.

30
(NO-3)

The noise-monitoring report should be made available online with a link for the public to access the data to be done daily (every 15 min. or what the neighbors request) rather than on a "weekly basis" (Page S.20).

31
(NO-1)

The hotline number should be posted on a publicly accessible webpage specifically for this construction project as contractors change quickly depending on the phase and change of plans. The hotline number complaints should be handled within 24 hours. Investigational steps should be taken to determine the source of the noise, reduce or abate the noise due to the sound path. Block significant noise makers with non-noise-producing vehicles and equipment so long as they do not create additional hazards for pedestrians, bicyclists and other traffic in the area.

The routes taken (under TR), causes more noise on these residential streets. The routes should be only where large trucks not over 3 tons are allowed. Many streets in the Laurel Heights / Jordan Park area are off-limits for trucks over 3 tons and have many speed humps that would create more vibrations and banging noises when larger vehicles use them. The construction vehicles should not take the restricted streets and stick to commercial streets.

Also, shifting all the noise makers to the early morning or late evening hours will make the noise more discernable since even 70db is heard better during these hours than during the day when other noise is present to "mask" it somewhat.

See also S.15 comments and other areas where noise was brought up as an issue in this document.

Page S.33-S.34: "CR-2: Construction activities of the proposed project or project variant could cause a substantial adverse change in the significance of an archaeological resource." ("SIGNIFICANT," "Mitigation Measure M-CR-2a: Archaeological Testing, Monitoring, Data Recovery and Reporting")

32
(CR-4)

The Mitigation Measure states:

"Once approved by the ERO, copies of the FARR shall be distributed as follows: California Archaeological Site Survey Northwest Information Center (NWIC) shall receive one (1) copy and the ERO shall receive a copy of the transmittal of the FARR to the NWIC. The Environmental Planning division of the Planning Department shall receive one bound, one unbound and one unlocked, searchable PDF copy on CD of the FARR along with copies of any formal site recordation forms (CA Department of Parks and Recreation [DPR] 523 series) and/or documentation for nomination to the National Register of Historic Places (National register)/California Register of Historical Resources (California register). In instances of high public interest in or the high interpretive value of the resource, the ERO may require a different final report content, format, and distribution than that presented above."

Would the public be able to obtain a copy of the CD or access a link to the FARR, etc. as described above? Please advise.

Page S.34: Mitigation states:

"The project sponsor shall implement an approved program for interpretation of significant archaeological resources. The project sponsor shall retain the services of a qualified archaeological

consultant from the rotational qualified archaeological consultant list maintained by the Planning Department archaeologist having expertise in California urban historical and prehistoric archaeology. The archaeological consultant shall develop a feasible, resource-specific program for post-recovery interpretation of resources. The particular program for interpretation of artifacts that are encountered within the project site will depend upon the results of the data recovery program and will be the subject of continued discussion between the ERO, consulting archaeologist, and the project sponsor. Such a program may include, but is not limited to, any of the following (as outlined in the Archaeological Research Design and Treatment Plan): lectures, exhibits, websites, video documentaries, and preservation and display of archaeological materials. To the extent feasible, the interpretive program shall be part of a larger, coordinated public interpretation strategy for the project area."

32
(CR-4)
cont'd

How will the public be informed as to the availability of this program and what would be the timeline?

Page 2.8: Text in Table 2.1 "Project Summary" shows:

"Retail / None / Not Applicable / 54,117 gsf Plaza A, Plaza B, Walnut, and Euclid buildings (new construction)"

33
(ME-1)

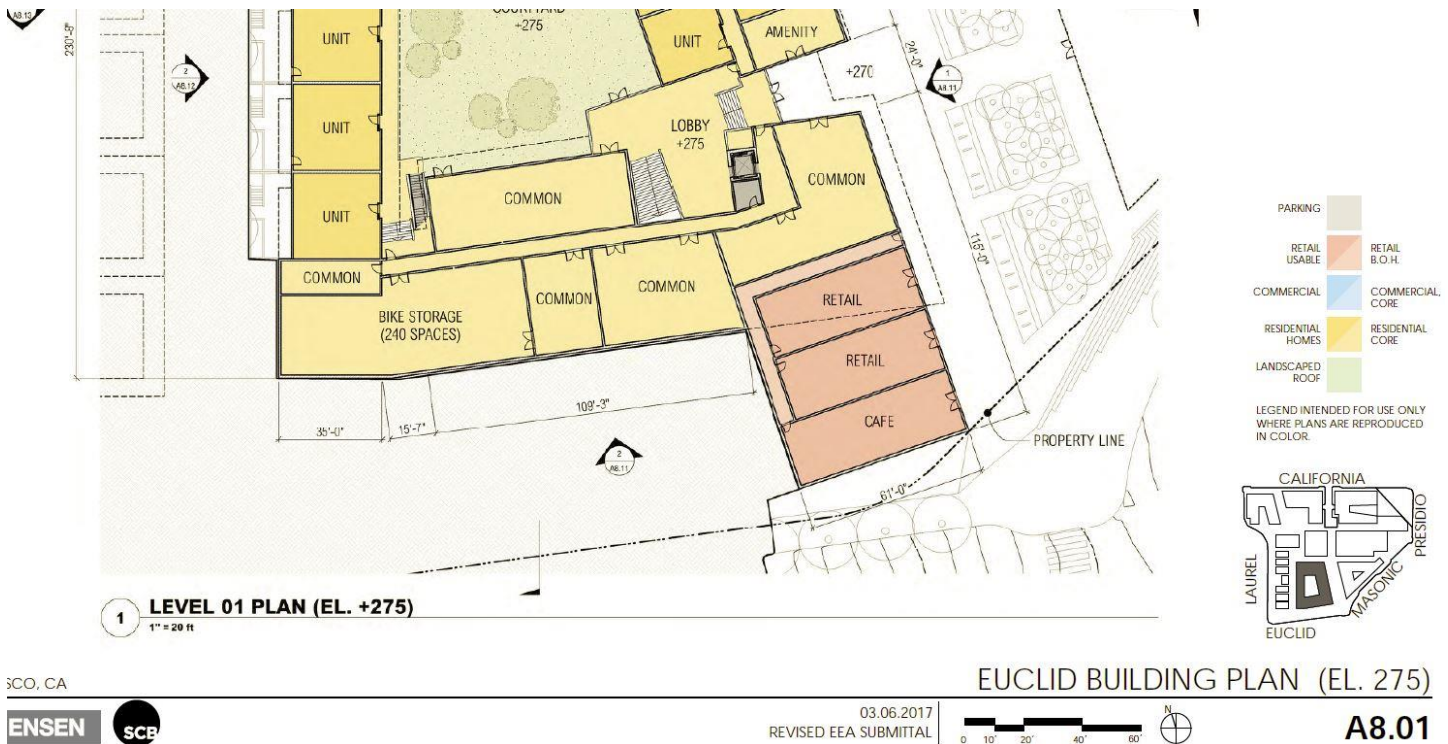

It was stated in one meeting at the Jordan Park Improvement Association Board meeting that there would be no retail on Euclid side near Masonic Avenue but the DEIR still shows it in the plans as on Page 2.82:

MASONIC AND EUCLID AVENUE (PROPOSED)

The red circle says "RETAIL AT GRADE BELOW"

Also, in the Appendix, there is this picture that also still has pink-shaded RETAIL proposed on EUCLID AVE side. This retail use should be eliminated for the traffic issues & safety issues mentioned earlier. The Jordan Park Improvement Association Board opposes the retail on the Euclid Avenue side: ↓

In addition, on Page 2.94, the retail use shows up in Table 2.5 as part of Phase I to start in 2020 per another table that shows the phasing dates (alluded to in my comments document elsewhere):

Table 2.5: Preliminary Construction Phasing Program

Phase	Building(s)	Proposed Construction					
		Residential (gsf / units)	Retail (gsf)	Office (gsf)	Child Care (gsf)	Parking (gsf)	Total (gsf)
Phase 1 (2020-2022)	Masonic and Euclid	266,251 / 196	4,287	--	--	87,977	358,515
Phase 2 (2021-2023)	Center A and Center B	322,888 / 190	--	--	--	19,258	342,146
Phase 3 (2022-2025)	Plaza A, Plaza B, Walnut	138,370 / 128	49,830	49,999	14,690	301,060	553,949
Phase 4 (2025-2027)	Mayfair and Laurel Duplexes	97,182 / 44	--	--	--	20,478	117,660
TOTAL		824,691 / 558	54,117	49,999	14,690	428,773	1,372,270

Source: Laurel Heights Partners, LLC and Webcor, September 2017

As an overall comment, the 49,830 square feet of retail will be a magnet for increased VMTs as indicated in past EIRs in many projects throughout the city with retail and office uses totaling 54,117 sq. ft. of retail and almost 50,000 sq. ft. of office. The city is looking for housing people and not demanding office nor retail. Retail currently exists on Geary, California, Sacramento and parts of Masonic near Geary. Retail is not lacking in this area but quality housing for all income levels may be what the city needs more today. Office "space" can be virtual via technology.

Page 4.C.7: "The project site comprises most of the area in TAZ 709, which is the area generally between Laurel / California streets, Presidio Avenue / California Street, Presidio / Euclid avenues and Laurel Street / Euclid Avenue. The project site is located close to major transit services and facilities, bicycle and pedestrian networks and facilities, and a diversity and density of land uses. A project

located in TAZ 709 would have substantially reduced vehicle trips and shorter vehicle distance, and thus reduced VMT, compared to other areas of the region.”

While the Transportation Analysis Zone (TAZ) 709 is based on census data, it *ignores the other nearby TAZs* which are not functioning in a vacuum. There should be impacts that go at least ¾- to 1-mile away based on the ***land use types*** being proposed at the site for potential workers count & resident counts. The larger TAZ 709 area being compared to a larger geographic area for VMT does not make sense except to make it so that the TAZ 709 is going to be smaller than the larger “Bay Area VMT” and make the result **not** be impactful to a significant level. Where in the DEIR does it state the margin of error for these counts? What is it? If the margin of error were incorporated, how would the results change?

Page 4.C.77: With the conclusion from Page 4.C.7 that the project will not affect TAZ 709 in any way, it is illogical to throw in Table 4.C.19 that takes into account “other nearby TAZs (within three-quarters of a mile based on walking distance)” for the analysis when in all the other tables, ***NO*** “other nearby TAZs” are reflected in that data. How can one way of analysis be applied to one but not in other categories of impact?

Table 4.C.19: Parking Rate Summary

Scenario/Land Use	Size	Vehicle Parking Spaces	Existing Neighborhood Parking Rate	Proposed Parking Rate	Change from Existing
Proposed Project					
Residential	558 units	558	0.9	1	11%
Retail	54,117 gsf	198	1.55	3.66	136%
Other Non-residential (Office & Daycare)	64,689 gsf	129	1.44	1.99	38%
Project Variant					
Residential	744 units	744	0.9	1	11%
Retail	48,593 gsf	188	1.55	3.87	150%
Other Non-residential (Daycare)	14,650 gsf	29	1.44	1.98	37%

Note: The existing parking rate for residential uses reflects data for TAZ 709 and other nearby TAZs (within three-quarters of a mile based on walking distance). The existing parking rate for retail and other non-residential uses reflects data from California and Sacramento streets, as provided by the planning department. The retail land use category for the proposed project and project variant includes the proposed 60 public parking (commercial) spaces on the project site. Car-share spaces are not included in the parking rate calculation as these would be publicly accessible spaces and would not be dedicated to residents or tenants of the proposed project or project variant.

Source: Kittelson and Associates, Inc. 2018; San Francisco Planning Department, 2018

The proposed **parking rate for the Retail Use to increase to 136% or 150%** depending on which alternative is chosen compared to the existing parking rate is severely out of character for this area. It is the RETAIL USE that will *drive* all the vehicles into the area (pun intended). When the parking rate increases by these percentages and there is no parking on the street nor the lots, people will crowd the vehicular lanes to entangle the neighborhood with delayed traffic to push more GHGs in the neighborhood. Also, as more people cannot park, those spaces become more expensive due to “demand” parking pricing. The winners will be the SFMTA (parking meters/parking stickers revenue) and the garage owners to increase their pricing. This will lead to unaffordable pricing in this area except for the well-heeled. Having a 136% - 150% increase in parking rate would almost keep traffic

going to and from this area all day. This cannot be truly environmentally sound and sustainable but with all the parking demand, the price of parking would soar and there could be socio-economic red-lining of the area such that only the well-to-do would be able to park or the TNC count would explode in this area.

As none of the “other nearby TAZs” is enumerated, ***there needs to be an accurate count of all traffic on all streets*** -- within at least 1-mile of this project -- as more units and various uses get settled in the area during the development phase. What are the traffic counts for all the streets between California and Geary from Arguello Blvd on the west to Fillmore on the east side? All of these streets are part of the “other nearby TAZs” not incorporated into the study. If nothing else, there should be counts for Palm to Presidio between and including Geary and California and none of this appears in the DEIR to come to the conclusion that there’s little impact to the Laurel Heights, Jordan Park, Presidio Heights areas. Without study of the “other nearby TAZs” to see the impact on each TAZ, one particular area could be overwhelmed with more VMTs and vehicle trips. Perhaps if the data for the other streets were presented, this project would reveal an immense impact beyond “significant”? The Final EIR should provide all this data that is missing from the “other nearby TAZs” and all streets in each TAZ. It is missing and thus the DEIR is not complete nor the analysis conclusion accurate without this data. Will it be provided?

Page 4.C.102: The DEIR then decides not to mention the “other nearby TAZs” in Table 4.C.32 below and decides to show only *regional* VMTs for certain uses. What this means is that in future, TAZ 709 will start to creep to the “Bay Area VMT” of double digits (12.4-17.1) because there is no chaining of miles in the analysis nor a separate “other TAZs” analysis done. Here is the table:

Table 4.C.23: Projected 2040 Average Daily Vehicle Miles Traveled – Cumulative Conditions

Land Use	Bay Area VMT		TAZ 709
	Regional Average	Regional Average minus 15%	
Households (Residential)	16.1	13.7	6.6
Employment (Office)	17.1	14.5	8.9
Visitors (Retail)	14.6	12.4	7.8

Source: San Francisco Planning Department Transportation Information Map, accessed May 25, 2018

Under other DEIR transportation or traffic analysis, the city used *NOT* the “Bay Area VMT.” Why in this one? Why not do an analysis of the TAZs (I suspect about a dozen of them being impacted by this project) to see in greater detail impacts to those TAZs and calculation of VMTs. Would this be provided?

A major flaw in the DEIR for VMTs and traffic counts and parking needs is the separate unbundling of any data in regards to workers who get to the project site who live outside of San Francisco. It is not only the residents of this city who may be visiting this site. Perhaps an analysis of VMTs, parking, and other analysis to nearby TAZs should be included (only TAZ 709 analyzed in this DEIR).

Also, the traffic analysis does not take into account the time of day impacts. While most heavy traffic is in AM- and PM-peak commute hours, there are other hours of concern such as when school lets out. These periods have more traffic on the road. Where is the hourly traffic volumes for the nearby streets (Arguello to Presidio / Fillmore between California & Geary)? Using only TAZ 709 from the 2000 Census appears to show rather low VMT numbers. I think since 2000, there is higher VMT with TNCs. I also think more of the nearby TAZs should be included in the analysis to see a more accurate picture

of what would impact the “other nearby TAZs” rather than using only TAZ 709 (now called TAZ 100521 (Laurel to Lyon Between California & Sacramento). Traffic flows over a distance and the DEIR admits at least to ¾-mile from the site. There needs to be included the “other nearby TAZs” into the calculations for impacts due to changes since appearance of TNCs, other uses, more people.

Here are the “other nearby TAZs” located from 3333 California. All the streets in these TAZs are not studied for impacts alone with only 3333 California Project *NOR* with the “reasonably foreseeable”** projects the DEIR lists. See also the map below of the TAZs (corresponding TAZ numbers differ but area of TAZs are same):

TAZ 100524 = Parker to Laurel between California & Euclid (NOT* included in the DEIR*)**

TAZ 100521 = Laurel to Baker between California & Euclid/Bush (*TAZ 709 in the DEIR*)

TAZ 100513 = Laurel to Lyon between California & Sacramento (NOT* included in the DEIR*)**

TAZ 100523 = Parker to Presidio between Euclid/Bush to Geary (NOT* included in the DEIR*)**

TAZ 100517 = Maple to Laurel between California & Sacramento (NOT* included in the DEIR*)**

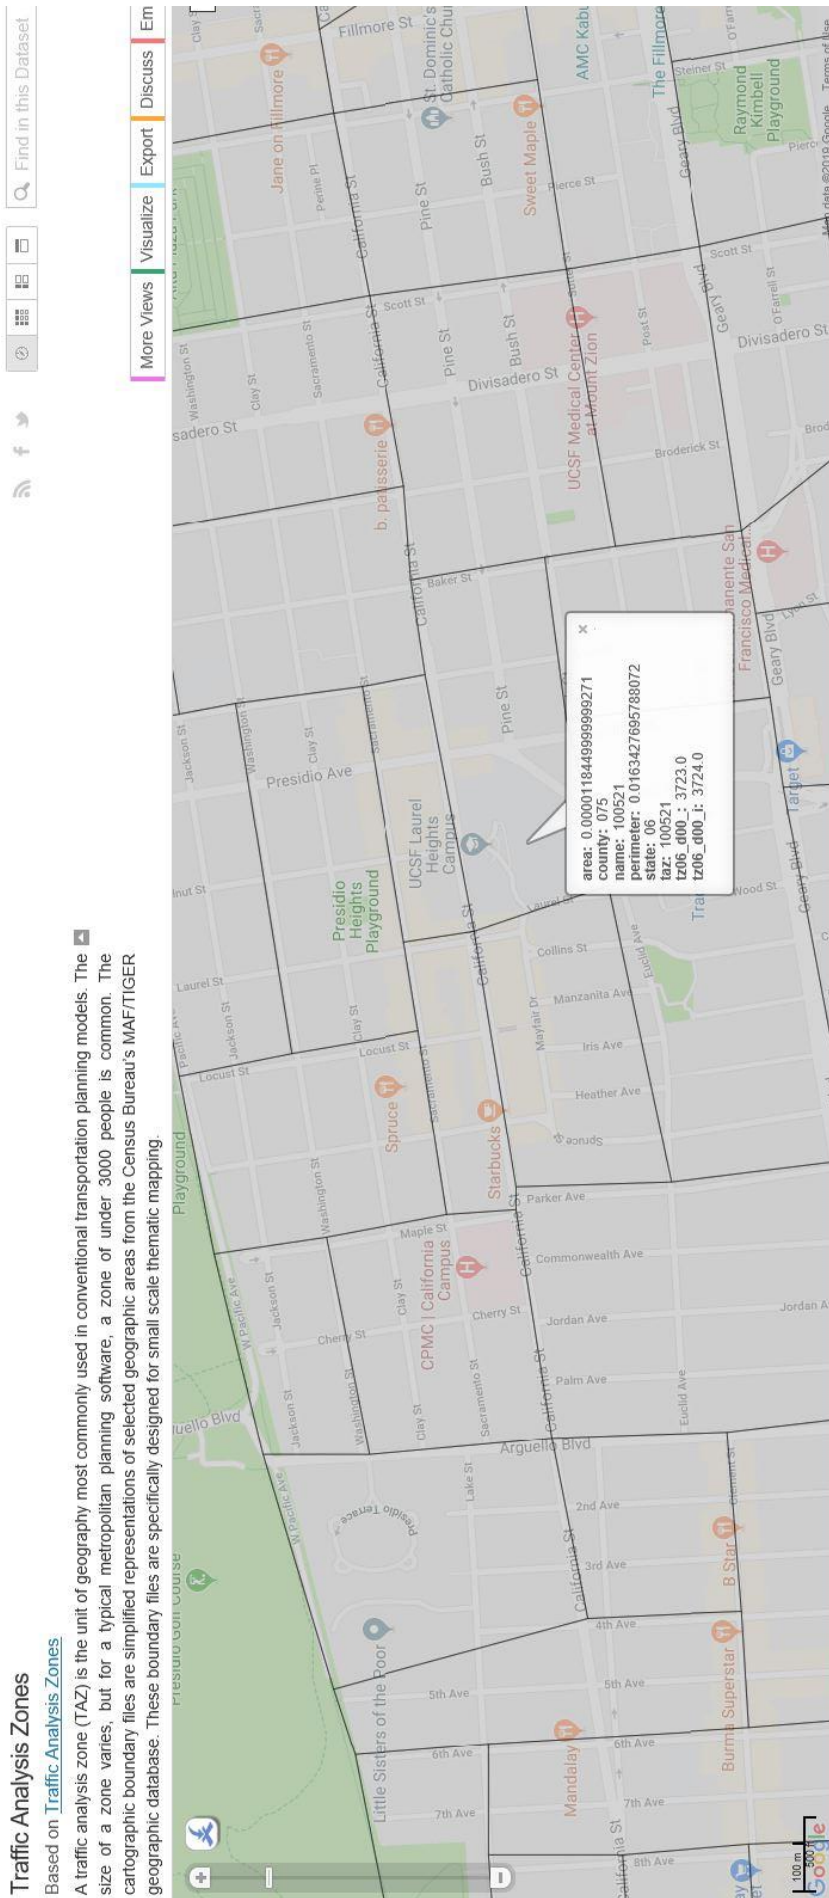

TAZ 100525 = Arguello to Parker between California & Geary (NOT* included in the DEIR*)**

The above TAZs include projects that are reasonably known to happen, has happened or has projects that will happen (e.g. new uses at Target City Center, new buildings on Geary, Presidio Ave, **surrounding “nearby” streets that are *NOT* analyzed for traffic impacts. CEQA categories such as AIR QUALITY, VIBRATIONS, NOISE are also not analyzed for these other “nearby” streets with known projects, upcoming projects as additive to 3333 California. The data does not exist in the DEIR. It is missing.**

Why was only TAZ 709 used and none of the “other nearby TAZs” analyzed for impacts from the proposed project? Look below at *** for the list of **“Projects for cumulative analysis”** & there are many projects that can have impact with this development in “other nearby TAZs” than only TAZ 709. This is not accounted for in this DEIR.

Again, refer to the map of TAZs below that shows **at least 12-13 TAZs that are within ¾-mile** from the proposed development. The streets should all be analyzed for CEQA impacts including traffic or VMTs on these streets. If the **DEIR mentions the known other projects in the area**, every one of those will produce some impact, especially in regards to vehicle travel why are not the streets around them studied in relation to this project?

Not **all counts of vehicles and VMTs be done to the above TAZs listed** are included in the DEIR. Why?

Do the developers of these other up-and-coming nearby projects want their locations to be impacted by any oversights from the 3333 California Project? Streets nearby known and upcoming projects need to be studied for cumulative impacts and it is missing from this DEIR.

Look below at Table 4.C.1 which lists **ONLY** the closest streets in the analysis. When one has a 10+ acre project, the impact with vehicles goes up along with the other projects and the streets surrounding them. NO ANALYSES has been done on the other streets.

The DEIR fails to take into consideration that the listed and other recent foreseeable projects** (and those now completed) and new projects such as that at 2675 Geary or the 3300-block of Geary Project, the new uses going into Masonic City Center, all of which can impact the residential streets “nearby” in the Laurel Heights, Jordan Park and Presidio Heights areas. Only intersections for one “Transportation Analysis Zone” (TAZ) -- No. 709 – has a vehicle count. Traffic flows to and from “other nearby TAZ” streets listed due to the “reasonably foreseeable” projects the DEIR lists and without the analysis for these other streets in the Laurel Heights, Jordan Park & Presidio Heights neighborhoods, this DEIR is not complete and thorough nor does it give an accurate VMT picture by 2040.

Table 4.C.1 Study Intersections

Number	Intersection	Existing Traffic Control
1	Sacramento Street / Walnut Street	All Way Stop Control
2	Sacramento Street / Presidio Avenue	Signal
3	California Street / Spruce Street	Signal
4	California Street / Laurel Street	Signal
5	California Street / Walnut Street	Signal
6	California Street / Presidio Avenue	Signal
7	Mayfair Drive / Laurel Street	All Way Stop Control
8	Presidio Avenue / Masonic Avenue / Pine Street	Signal
9	Euclid Avenue / Laurel Street	All Way Stop Control
10	Masonic Avenue / Euclid Avenue	Signal
11	Presidio Avenue / Euclid Avenue / Bush Street	Signal
12	Geary Boulevard / Masonic Avenue	Signal
13	Geary Boulevard / Presidio Avenue	Signal

Source: Kittelson & Associates, Inc. 2017

Is the TAZ “bar” set to “Bay Area VMT” such that the REGIONAL bar is now the metric rather than anything at the neighborhood level? If so, would that not create a situation such that any and almost all development in future will not have and “Significant” level impacts, especially in the low-density neighborhoods?

NOTE: In Table 4.C.1 above, Number 10 states that the “Existing Traffic Control” is only a “Signal.” This is **NOT** true. There is also an uncontrolled traffic lane going eastbound on Euclid to southbound on Masonic. Pedestrians can get killed here as many vehicles turn that corner near the traffic islands.

Take a look at the below 2 tables – one for 3333 California & the other for 1 South Van Ness:

Table 4.C.23 shows the Average Daily VMTs for **ONLY** TAZ 709 (3333 California site & very close streets):

Table 4.C.23: Projected 2040 Average Daily Vehicle Miles Traveled – Cumulative Conditions

Land Use	Bay Area VMT		TAZ 709
	Regional Average	Regional Average minus 15%	
Households (Residential)	16.1	13.7	6.6
Employment (Office)	17.1	14.5	8.9
Visitors (Retail)	14.6	12.4	7.8

Source: San Francisco Planning Department Transportation Information Map, accessed May 25, 2018

Table 4.2.10 shows the Average Daily VMTs for *ONLY* TAZ 578 (10 S. Van Ness Project & close streets):

Table 4.2.10: Average Daily Vehicle Miles Traveled per Capita—2040 Cumulative Conditions

Land Use	Average Daily VMT per Capita		
	San Francisco Bay Area		TAZ 578
	Regional Average	Regional Average minus 15%	
Residential (per resident)	16.1	13.7	3.1
Retail (per employee)	14.6	12.4	9.0

Notes: TAZ = transportation analysis zone; VMT = vehicle miles traveled

Source: CHS Consulting Group, *10 South Van Ness Avenue Mixed-Use Residential Project Final Transportation Impact Study*, Case No. 2015-004568ENV, December 2017.

Comparing these 2 tables, it shows that SF has, in these last couple of *recent* DEIRs, decided to use a *REGIONAL* number rather than do street-level or neighborhood district level analyses for CEQA traffic analysis to determine level of impact. Would not using a *REGIONAL* figure in most all cases result in minor or no impacts in less populated (whether residents or visitors (retail) or employee counts) areas?

What the above 2 tables compared indicates is that the 3333 California Project and the 10 South Van Ness Project would have the same resulting impact to the neighbors because they *BOTH* fall under the *REGIONAL* average. Is this what this means? Please clarify.

Now, let us consider the 3333 California Project “VMT per capita” in Table 4.C.3 below:

Table 4.C.3: Existing Daily Vehicle Miles Traveled per Capita

Land Use	Bay Area Regional Average	Citywide Average	TAZ 709
Households (Residential)	17.2	7.9	7.3
Employment (Office)	19.1	8.8	10.1
Visitors (Retail)	14.9	5.4	8.3

Source: San Francisco Planning Department Transportation Information Map, accessed May 25, 2018

Compare Table 4.C.3 to the 10 South Van Ness Project “VMT per capita” in Table 4.2.7 below:

Table 4.2.7: Average Daily Vehicle Miles Traveled per Capita—Existing Conditions

Land Use	Average Daily VMT per Capita		
	San Francisco Bay Area		TAZ 578
	Regional Average	Regional Average minus 15%	
Residential (per resident)	17.2	14.6	3.7
Retail (per employee)	14.9	12.6	8.9

Notes: TAZ = transportation analysis zone; VMT = vehicle miles traveled

Source: CHS Consulting Group, *10 South Van Ness Avenue Mixed-Use Residential Project Final Transportation Impact Study*, December 2017, Case No 2015-004568ENV.

While 10 South Van Ness is in a highly dense and commercialized area unlike 3333 California, it appears from the counts shown in their respective TAZs (709 for 3333 California & 578 for 10 S. Van Ness), that ***BOTH*** projects have no impact since their numbers are below the ***REGIONAL*** numbers. Using TAZ would take projects and their VMTs to be analyzed on a ***REGIONAL*** level rather than a local neighborhood level as it was done in the past for many other DEIRs. Who decides which method to use? Why? In what cases? Are the decisions of whether Planning applies TAZ to determine VMTs arbitrary? What would the results for the VMTs be under the older traffic analysis without using TAZ? Would the impact conclusions be different? If so, in what way? If not, why not? Please clarify.

I think using TAZs and saying any particular one TAZ as being less than the “REGIONAL” number is only going to allow for future DEIRs to have “NO IMPACT” in terms of VMTs; but the evidence on the street is that there are many more vehicles milling about and the numbers appear to be lowballed. The additional VMTs not captured outside of any one TAZ could impact “other nearby streets” in every neighborhood district with potentially bad consequences for its residents in terms of AIR QUALITY (more people, more garbage truck trips, more GHGs, more NOISE & VIBRATIONS, and SAFETY.

Now, let us look at another DEIR that was released not too long ago, **Case No. 2013.1543E (State Clearinghouse No. 2015012059), 1979 Mission Street Mixed-Use Project, published May 4, 2016**. In this 1979 Mission DEIR, there is ***NOT*** ONE MENTION OF TAZ.

Although the DEIRs for 1979 Mission, 3333 California, 10 South Van Ness cover *varied* site particulars, the conclusion of all three is that they are **identical** as to having no VMT impact because of the application of a “REGIONAL” threshold. Doing so skews the impact at the neighborhood level.

The city may want to take into account again the “Precautionary Principle” that while one can create a situation that would pass muster due to having to meet a high “REGIONAL” number for VMTs before a project would be deemed having a “SIGNIFICANT” impact in re VMTs. Each project may well be contributing a lot more impacts to the environment in some or all of the CEQA categories than meets the eye. If the city continues on this path, it may be found out by 2040 that there is much more impact than what was written in these DEIRs today. Not only the community near the developments would be negatively impacted, but so might the entire city.

TAZs have been used for some decades already. If some DEIRs use TAZs but others do not, the process of choosing which to use is not transparent to the public nor would the results necessarily to come to some of the conclusions in the DEIRs.

Had the 1979 Mission Street Project DEIR (Sarah Jones, ERO) used TAZ, would the VMT numbers have changed? If so, to what? If they do change, how much of an impact would they be?

The greater number of vehicles and with ***TNCs coming in from *OUTSIDE* the city***, along with other building uses and more units having been completed in the area, there are more vehicles and people than what is being used in this DEIR for TAZ 709 from the 2000 Census as things change over 18-19 years. Why would the other TAZs not be included for each DEIR alternative and perhaps for the neighborhood community alternative in order to have an accurate, thorough and complete DEIR?

39
(TR-4)
cont'd

Even with TAZs, why has Planning not used in recent past DEIRs? Seems like not using the same method for all projects so the impacts can be manipulated. For instance, there exists DEIR Case No. 2013.1543E published on May 4, 2016 for 1979 Mission Street. It does not use TAZ. New metrics for TAZs are not going to be in place until later in 2019 wherein larger zones will be created to minimize concentration of VMT issues in a smaller area not disaggregated from the TAZ being analyzed. Why did Planning decide to use TAZ for the last couple DEIRs and not prior DEIRs? Why is there not a consistent basis of analysis for all projects?

There is also **DEIR Case No. 2015-004568ENV (State Clearinghouse No. 2017072018) published October 17, 2018 for 10 South Van Ness**. The DEIR for this project uses TAZ. It gives a "2040 Average Daily Household VMT per Capita" calculation.

In re school end times, there will be more kids and parents (pedestrians) out so what is the change to pedestrian volume around this area? Has this been factored in to VMTs, GHGs from automobile delay (idling & driving at low RPMs and stop-and-go pollution)?

40
(GHG-1)

With streets clogged with more vehicles, with more pedestrians in the area, the delays can start to impact emergency services. How has the emergency response times changed? Where is the analysis for safety personnel (e.g. ambulance, fire trucks) for the development per phase and at the end of completion?

41
(TR-13)

Page 4.E.17: Under the AIR QUALITY part of the DEIR is this statement: "...The closest non-residential sensitive receptors include Laurel Hill Nursery School, San Francisco University High School – South Campus, Little School, Havurah Youth Center, the Helen Diller Family Preschool at the Jewish Community Center of San Francisco, the Menorah Park Assisted Living Senior Housing Complex, and the Chibi Chan Preschool at the Booker T. Washington Community Center...." What are the comments from these groups on this project?

42
(GC-4)

Page 4.E.30: The map of the Sensitive Receptors has the legend covering up the 150 Parker School that is just as distant as the CPMC sensitive receptor yet it is not shown on the map nor mentioned in the list of sensitive receptors on Page 4.E.17.

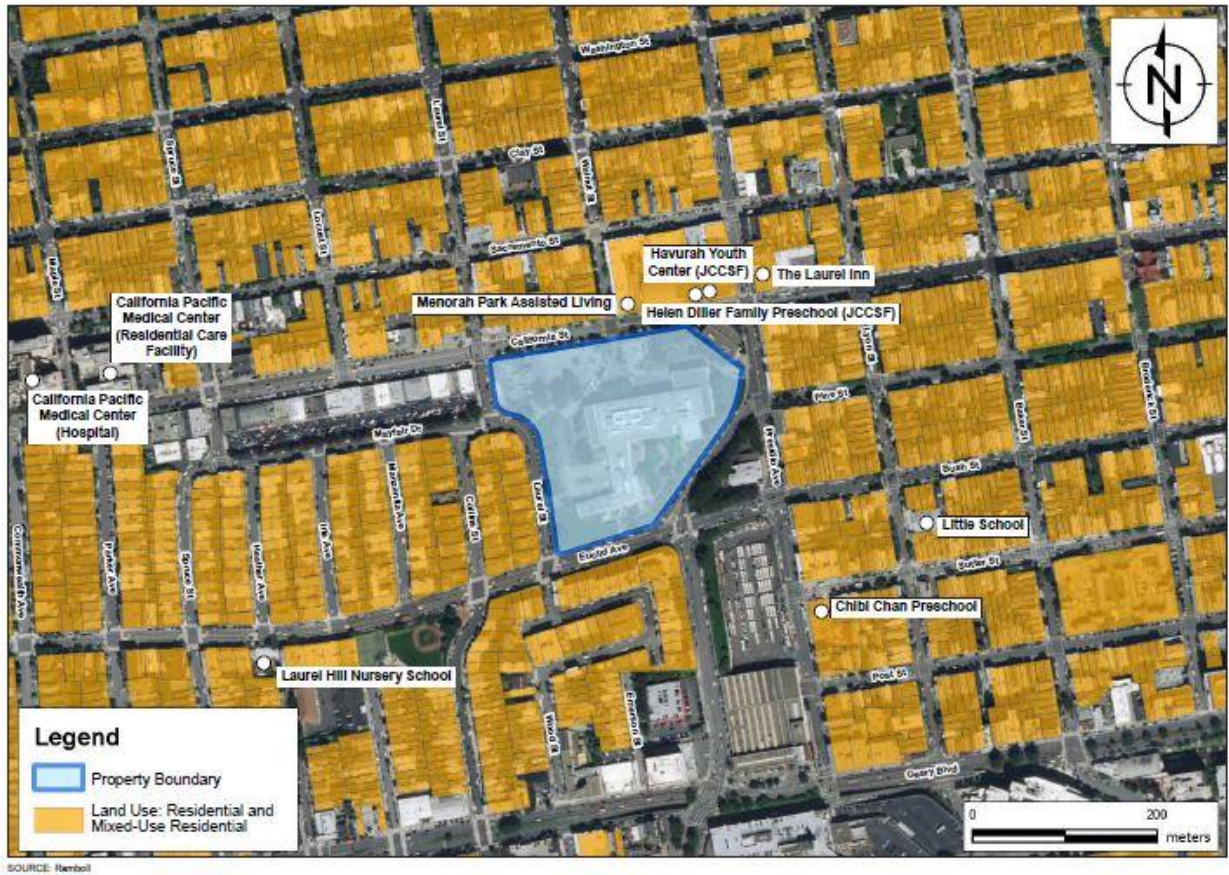

43
(AQ-4)

The area that is occupied by the California Pacific Medical Center (Hospital & Residential Care Facility) buildings (where the new residential replacement project is planned) is shown but not the 150 Parker School. The location of this school is covered by the white legend box.

The young children attending this pre-school would appear to be sensitive receptors. Why is the 150 Parker Avenue School not shown on the map (Page 4.E.30) below?

Volume 2C: Page 267 on the sheet/Page 283 in "read mode" pdf: From the 5/11/2018 "BkF Letter" on a meeting with SFFD on 3333 California St. project.

45
(PS-1)

How would the SFFD fight a fire at the building as it stands today for the main building where the access is and the division in half of the building is proposed for this project? Why would the change be needed if the fire can be extinguished with the whole building as is?

Below is a portion of text from the "BkF Letter" for the Euclid building portion. For whatever reason, there is a hand-written comment. Are these the final specs?

• **EUCLID (Type IIIA)**

- Address shall be off of Euclid Street
- Aerial ladder access staging area provided along Walnut walkway between Euclid and Masonic Buildings.
- A 26 ft. wide, 100-200 ft. long staging area is required at the Lobby
- If the building is Construction Type I or IIIA, then a variance request may be granted to reduce aerial ladder access along the north side.
- Install bollards (specifications to be approved by SFFD) at the end of Walnut Walk and Euclid.
- (Note: Easement via the Laurel duplexes may be required to maintain access to the rear egress windows)

• *Fire access through Walnut to Euclid Avenue shall be provided.*

Captain Mike Patt

Table NO-8, Page 12 by RAMBOLL should say "Bush Street" rather than "Bust (sic) Street." Please correct.

46
(GC-4)

Volume 2A:

(See also under Volume 2C.)

➔ **DEIR LIST OF OTHER FORESEEABLE PROJECTS** (Pages 94-99):**

3700 California Street (2017-003559ENV)

726 Presidio Avenue (2014-001576ENV) – add 4 units, remove 1 on-street parking

2670 Geary Blvd. (2014-002181ENV)

2675 Geary Blvd. (2015-007917ENV)

California Laurel Village Improvement Project

Laurel Heights/Jordan Park Traffic Calming Project

Masonic Ave. Streetscape Project

Geary Bus Rapid Transit Project

47
(TR-4)

With the above cumulative projects listed in this Volume 2A of this DEIR -- of which more than one is now complete -- and with Planning Code allowing new buildings and alterations to occur with no minimum parking requirements especially along California St. and Geary Blvd. and other streets where transit or bike lanes exist, the residents in these newer buildings with more units and fewer or no parking, may be forced to add to VMTs to park their vehicles farther out into neighboring areas and add to VMT calculations. Also, they may resort to ride-sharing. These ride-share drivers are also increasing the VMT calculations as they are often trolling the neighborhoods with no passengers waiting for a call on their app for their next customer or taking up residents' on-street parking. Without

on-street parking for residents currently existing in their units, how are they to get to work or take care of personal business especially when the affordability factor gets thrown into the equation?

47
(TR-4)
cont'd

Retail and office components trigger the most traffic as seen in many DEIRs. It might be best to leave the retail out of this residential area on the Euclid side. Retail is already on California, Sacramento and at the Target City Center at Geary and Masonic only a couple of blocks away. This only adds to VMTs.

With 13,500+ additional vehicle trips from the retail and offices (and some from the residential) use of the proposed project, the increase in automobile delay in the area would be a major impact not only adjacent to the site but even 6 blocks away into Presidio Heights, Jordan Park, Lone Mountain areas. Traffic will eventually reach gridlock as was written in the GearyBRT EIR – and *that* EIR did *not* even have this project in its write-up so any additional heavy traffic such as in the proposal is just going to be BEYOND GRIDLOCK and it is not safe for people to not be able to get to emergencies.

48
(TR-12)

The DEIR states that the proposed project will be designated as a Special Use District (SUD). As one knows, the City has passed ordinance to have no minimum parking requirements for any units. What people fail to recognize is that parking spaces, while they attract vehicles since that is what parking is for, even if removed, with rideshare vehicles in play today as opposed to 2008/2009 when this project was known and TNCs did not exist, that does not mean that less traffic will be in this area of new retail (over 41,000 sq. ft.) and offices (49,999 sq. ft.) proposed. Retail generates significant vehicle traffic whether for deliveries or for visits. If retail is being proposed, it should all be located on California St. With the advent of the rideshares, people will double-park to drop off the visitors and more and more traffic will go through the area regardless of whether retail parking is there or if removed. The automobile delay in this area and the neighborhoods surrounding it will eventually become worse. People may as well walk, but not everybody is going to. In the areas of greater socio-economic status, most drive. This has been documented in the newspapers.

49
(TR-2)

The comparative data should be in this DEIR from 2009-2017 but the DEIR seems to put the base line for analysis at 2020 – possibly because the project is not expected to start until then. Doing so does not make a comparable to what existed from earlier years when the higher number of vehicles did not exist. Using the figures based on the vehicles today when their numbers have *already* increased makes the results of the additional vehicles negligible because the factors for comparison is based on a false comparison of what existed before (no rideshares, e.g.). If the date for the modeling does not use data from when no alternative transportation modes like rideshare existed, then one cannot make an accurate comparison as to the impact of traffic volume on the neighborhood. If one compared the 2009 and earlier years when rideshares (TNCs) did not exist to what is projected for this development, it may indeed become not an insignificant impact but a SIGNIFICANT impact. Why not use the prior years?

50
(TR-14)

Under Prop M, Priority Policy #7 (preservation of landmarks and historic buildings) and the DEIR stating various Standards for historic preservation would not be in conformance (Standards 1, 2, 5, 6, 9 & 10) such that the proposed project and variant would materially alter the historical significance of the building and site.

51
(CR-2)

As a reminder, here are the 10 standards with areas of non-conformance bolded:

1. **A property shall be used for its historic purpose or be placed in a new use that requires minimal change to the defining characteristics of the building and its site and environment.**
2. **The historic character of a property shall be retained and preserved. The removal of historic materials or alteration of features and spaces that characterize a property shall be avoided.**

3. Each property shall be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or architectural elements from other buildings, shall not be undertaken.
4. Most properties change over time; those changes that have acquired historic significance in their own right shall be retained and preserved.
5. **Distinctive features, finishes, and construction techniques or examples of craftsmanship that characterize a historic property shall be preserved.**
6. **Deteriorated historic features shall be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature shall match the old in design, color, texture, and other visual qualities and, where possible, materials. Replacement of missing features shall be substantiated by documentary, physical, or pictorial evidence.**
7. Chemical or physical treatments, such as sandblasting, that cause damage to historic materials shall not be used. The surface cleaning of structures, if appropriate, shall be undertaken using the gentlest means possible.
8. Significant archeological resources affected by a project shall be protected and preserved. If such resources must be disturbed, mitigation measures shall be undertaken.
9. **New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.**
10. **New additions and adjacent or related new construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.**

It seems that many of the above standards would be violated with the project proposal. Would there be some way this state-registered historic resource not lose its "character-defining" features that made it so? Out of all the changes proposed to the existing buildings, the one that cuts the main building in half is the most egregious in my humble opinion.

The historic use of the property after the cemetery bodies were moved and when Mayfair Heights (old name of Laurel Heights) was proposed was for residential except for commercial on California Street when Mayfair Heights was being built. The commercial was never on the tract where UCSF building is. There was no commercial on Euclid Avenue historically and it would seem that historic use should be honored and retained to prevent the additional impacts to the neighborhood from putting retail on Euclid which is the residential side of the property. A Chronicle article states that the residential area be "a high class residential district of homes, flats and apartments." It says a group comprised of "Rusalew, Bennion, Gummere, Goldman and Goldman, Lang Realty Company, Joseph and Jones" will "develop the business district...along California street." Here is the article:

CEMETERY EVACUATED

The cemetery was evacuated more than two years ago.

The purchasing syndicate will develop Laurel Hill after the war into a high class residential district of homes, flats and apartments. A second syndicate will develop the business district for 1000 feet along California street.

The second syndicate comprises Rusalem, Bennion, Gummere, Goldman and Goldman, Lang Realty Company, Joseph and Jones.

54-ACRE TRACT

The 54-acre tract, bounded by Presidio avenue, California street, Parker avenue and extending irregularly nearly to Geary street on the south, is to be developed as a unit.

The new district will be known as Mayfair Heights. The American Trust Company has been named as the principal financing agency.

51
(CR-2)
cont'd

Unfortunately, since the new finished materials and details have not yet been told to the public, and since they are lacking in the DEIR, we cannot comment on them as affecting any of the CEQA categories.

52
(CEQA-3)

Volume 2B:

Page 546 of 776 (pdf page count – would help if the document had page numbers *on* the document) has a DBI violations letter dated 6/19/62 to Edwin & Joanna Roberts, 1149 Dolores St., for the location 3515-1/2 – 3519 24th St. but I do not see the connection to 3333 California St. in this DEIR. I do not understand why it is included. This should have been and be stricken from the DEIR as being irrelevant to 3333 California.

53
(GC-4)

Appendix I, Page 658 of 776 says California Historical Landmark plaque on Northeastern Corner Perimeter Wall is missing. It would be part of the history (even if not a “landmark” under present CEQA law) and may be re-created and hung up somewhere where it will not be so easily removed like when it was removed. Images of it are available on the internet.

54
(CR-4)

Volume 2C:

(See also under Volume 2A.)

The Kittelson & Associates (KIA)’s letter on Page 6 under “Task 4” says the VMT for the project will be the same as what exists today:

55
(TR-4)

“**Vehicle Miles Traveled:** For purposes of the VMT analysis, KIA assumes the baseline (Year 2020)

conditions VMT for the region and the Project's transportation analysis zone for each of the uses proposed by the Project and Variant will be the same as Existing."

55
(TR-4)
cont'd

Do not believe a true impact can be told "assuming" the baseline year of 2020. I think it skews the impact as less impactful because rideshares and alternative modes such as rideshares were not present in 2008/9 and earlier years vs. 2020. The years prior to rideshares is not included in the DEIR so it skews the data and conclusions. Please provide data for vehicles in the area from earlier years starting at 2008 to present in this project area streets. It will likely show that compared to today, there are many more vehicles in this area (Arguello to Laurel, between Geary & California).

Rideshare is everywhere today so it is not like cars have disappeared just because the parking is minimized or removed. It is the type of uses for a project that attract certain number of cars. Again, not clear why the baseline year of 2020 – the year the development is supposedly to start -- is being used as the starting year for the analysis. Why is that?

Today, the 3333 California site is offices with no residential units so there is hardly any use of the site beyond UCSF's use after 5PM. As more projects surrounding the building are built with uses that go beyond 5PM or early evening, there will be increased base level noise on all the streets in the neighborhood where it has not existed before or to a greater extent than it will once such uses get put on the site.

56
(NO-3)

In the November 15, 2018 article at the link below, it states that vehicle mode is still prevalent at over 50%, especially for those in the higher income brackets. The area of the proposed project has a large population of higher income residents and visitors and thus one would reasonably expect more cars in the area.

57
(TR-4)

<http://www.sfexaminer.com/survey-private-auto-use-sf-lower-except-among-wealthier-residents/>

The SF Examiner article references the SFMTA's "Travel Decision Survey" of 2017. This is anecdotal evidence that wealthier areas drive or take rideshare more so the mitigation measure to remove some parking spaces will not necessarily negate the traffic, automobile delay or VMTs and increased GHGs. There must be other mitigation measures, and that may be reduction or removal of non-residential use especially on the residential side of the parcel.

The DEIR states that the VMT will be no different at complete build-out compared to 2009 or any year through 2018. Since 2009, there were new transportation alternatives – e.g. rideshare, shared scooters (Bird, Lime, etc.) and other modes. The analyses in the DEIR is *incomplete* without this new data incorporated. The new rideshares impact all streets in the neighborhood in all directions and are mostly used in retail trips besides commuting to offices/work places. Many of my neighbors use them for these purposes but then hop into their personal automobiles for longer out-of-city trips.

On Page 21 of their letter, it states the vehicle trips estimates for the 3 different scenarios and all three are over 2,236 person-trips per day. If the restaurants were only on the California street side where there are already commercial businesses, there should be less disruption of cars in the residential areas as they can take the Muni bus or alternative modes. Also, in the DEIR, it states there will be **13,500+ automobile trips generated per day from the site**. If every project in the city keeps adding to the overall trips made, the GHGs will increase. Each electric vehicle creates pollution to make and to make the batteries that go in them. Having electric cars replacing gasoline-powered cars does not mean that pollution is going down when the factories making the items that go into making the electric cars and enabling them to run cause pollution. This is not a sustainable practice. How many batteries are needed to keep the cars going for the number of trips that are projected to go to and from this site upon completion? How many tons of pollution come from manufacturing them? Having more cars

58
(GHG-1)

circulating in the area would also increase the chances also for pedestrian safety to be compromised. All of the traffic does not necessarily have to be directed into and around this project site if certain uses are curtailed.

59
(TR-8)
cont'd

How much analysis has been done to see how this project be impacted by the cumulative trips from the new project at CPMC, from the new uses to come to the City Center at Masonic, from increases in TNC (rideshares) in the area as new uses and buildings and more units are created in this ½-mile area near this 3333 California site? Where is this data?

60
(TR-12)

Anecdotally, below are a couple of links to tell you about jammed SF streets and traffic increase – many due to people deciding to use vehicles not available before since the introduction of “Transportation Network Companies (TNCs), aka “rideshares”.

61
(TR-4)

Article re jamming SF's streets:

<https://sf.streetsblog.org/2018/10/17/data-confirms-uber-and-lyft-jam-up-san-francisco/>

Article re traffic increase:

<https://sf.curbed.com/2018/10/16/17984366/tnc-ride-hailing-uber-lyft-sfcta-report>

On Page 27 of the “KIA Letter”, in Table 10, it shows clearly that people in the area are at 60%+ using automobile mode. I do not see this changing any time soon so the VMTs should be more especially with the retail restaurant sit-downs at 63.9%. For whatever reason, there is still a high percentage of automobile use – whether rideshares or privately-owned vehicles. With on-street parking diminishing and off-street parking being eliminated in many zoning districts, vehicles will still be around to circle the area to add to pollution, wear and tear on the roads, need to fix or re-pave roads and features. Even if in Volume 1 above, a new Muni line is proposed for relief of “congestion” in the area or of a bus line, there are still many who continue to drive. Even with “self-driving” cars, the VMTs do not go away.

Ramboll Environ’s pollution counts show emissions based on what kind of equipment? Would not the equipment being used dictate how much pollution is put out? Are all the measurements based on equipment from the 1960s? To be more environmentally friendly, why would not other forms of construction equipment be used to mitigate the emissions? Sadly, the document states that the cancer risks will be essentially the same without and with all the construction equipment emissions coming from this project. It does not make sense as even the fire pollution wafting in from Butte County (the November 2018 “Camp Fire”) incident urges everybody including non-sensitive groups to wear N-95 or better rated masks. Laurel Heights and surrounding area is one with a large population of families with small children in the neighborhood. They will be affected the most. It may be important as this cancer risk has to be mitigated.

62
(AQ-1)

General Comments:

Being that the site was the former location of the Laurel Hill Cemetery, and not all bodies were moved to Colma, would the discoveries be GPS-tagged and located on a map of the development site so that the person’s remains can be identified in case there is a living relative who would like the human remains? This area also has a potential to yield new information depending on what is found so there should be somebody to catalog the findings to match it to the burial maps of the extant cemetery. Even when the bodies were removed the first run through and all were thought to be accounted for, the laborers found 189 more just after combing through the site right after all were accounted for. There are likely more because of the way the bodies were put into some of the plots.

63
(CR-4)

While the DEIR states that since any burials were done years ago, there would not be any concern over communicable diseases. However, the DEIR does *not* mention the potential of noxious odors

64
(AQ-1)

under CULTURAL RESOURCES nor under AIR QUALITY (odors). No mention of mitigation measure to deal with such odors in the DEIR.

Although the bodies were dead for a long time under the ground, the odors were still present even up to 70 years later when exhumed around 1937+, according to the 1950 City Planner's Report at this website <http://www.sfgenealogy.org/sf/history/hcmcpr.htm> :

"Condition of remains disinterred varied from "dust" to almost perfectly embalmed bodies, the latter resulting from filling of cast-iron caskets with groundwater acting as a preservative. The superintendent of the disinterment proceedings told the author that his was an interesting job, but that in some cases it was not "pretty". The smell of death was often present, even though the remains had been laid to rest from thirty to seventy years previously."

The DEIR needs a mitigation measure for this because strong winds in this area may carry the unpleasant odors to affect a substantial number of people in the area.

Also, for HYDROLOGY/WATER, the DEIR does not have any mitigation measure for the potential groundwater contamination from disruption of found bodies which in past were embalmed in toxic chemicals toxic. What would be done if it gets into the aquifer or small underground stream that supposedly fed the Laurel Hill Cemetery and provided very clean drinkable water? It would be good for the city to ensure their "Precautionary Principle" is supported by not having anybody take action to contaminate potential clean drinking water sources for the residents of this city.

Recent studies and peer-reviewed publications state that certain mafic and ultramafic rocks, like serpentinite and peridotite formations would sequester CO₂ via magnesium (Mg) oxides and silicates. Air quality with increased pollution should be one of the highest priorities for the residents of the city. The property may contain certain geologic formations that sequester carbon in the Franciscan type band formation that runs from the NW to the SE of the city. The findings of such geologic formations would be a rare chance for scientists to study this peculiar formation in a large quantity as it exists in the city vs. elsewhere. The ground under the site may well be a jewel in sequestering carbon in considerable quantity. On the "Pre-cautionary Principle," perhaps some geologists should study the site as it may well prove to be a natural carbon-sequestration supersite; and rather than do more harm than good to the environment, perhaps this should be studied well in advance of construction to sort out exactly what rock formations exist under all parts of the site and in what quantities. This would be a great educational discovery to be shared with the community. The DEIR does not state such rocks are present on this property but parcels in this area have these rocks.

Also, the sand in this area may already contain this ultramafic soil that might be useful for propagating plants that thrive on it rather than be dumped into landfill.

Links to articles on geologic formations and their carbon-sequestration potentials:

<https://www.osti.gov/biblio/900485> (This is from the federal **Department of Energy**.)

<https://www.nps.gov/goga/learn/education/geology-resources.htm> (This is from the **National Park Service**.)

HISTORIC RESOURCES portion of DEIR:

Page 4.B.40:

"The proposed project would also retain ten mature existing trees, if viable: two mature Coast Live Oak trees at the western entrance to the proposed Mayfair Walk; two Cypress trees at the proposed Cypress Square; three mature Coast Redwood trees at the eastern end of the proposed Mayfair Walk; one mature Monterey Pine tree at the west end of the proposed Euclid Green; and two mature Coast Live Oak trees

mid-block on Laurel Street between Mayfair Drive and Euclid Avenue.”

Page 4.B.42:

“Overall, the proposed project or project variant would result in substantial changes to the massing and materiality of the office building such that the project site would no longer convey its historic and architectural significance as a Midcentury Modern corporate campus.”

Page 4.B.44:

“For these reasons, including the removal of elements that convey the project site’s history as a corporate campus, the construction of new buildings on formerly open and/or landscaped space at the project site, and the changes to the massing and materiality of the office building, the proposed project and project variant would not be in conformance with Standards 1, 2, 5, 6, 9, and 10, and would materially alter the physical characteristics of 3333 California Street that convey its historic significance and that justify its inclusion in the California Register. As such, the proposed project or project variant would cause a substantial adverse impact on 3333 California Street, a historical resource, and would be considered a significant impact under CEQA.”

Under **AESTHETICS** category of CEQA:

From the above “Page 4.B.44” text, it is evident that the proposed project and its variant would be significant impacts to the California historic site. The site has existing mature trees that lend an aesthetic suburban quality to the neighborhood that is a respite from the highly urbanized downtown core. Though the site was built as a form of corporate campus, there is a park-like feel to this location.

Speaking of parks, this is a report from the Department of City Planning by the City Planner in 1950: “In 1939 and 1940, considerable momentum gathered behind the idea of preserving one-tenth of Laurel Hill Cemetery as a Memorial Pioneers Park, as allowed by the removal ordinances. This was spearheaded by the historical Monuments Committee of the National Recreation Association, and backed by the California Pioneers Society and the Native Sons of the Golden West.”

Back in the late 1930s, newspaper articles appeared as to the new “Memorial Park” use of the cemetery lands. Here is one headline:

Order to Evacuate Cemetery Approved

**Proposal Made to Turn Laurel Hill Into
Memorial Park**

And the text explaining the idea of using a portion as a memorial park to the pioneers that once were buried there:

MEMORIAL PARK PROPOSED

Proposals that Laurel Hill, or a portion of it, be transformed into a memorial park will be considered later separately from the evacuation ordinance, F. P. Deering, representing the Laurel Hill Cemetery Association, was promised.

While no memorial park was created, the neighborhood residents and visitors today use this area of mature trees and open grassy areas as a park for recreation and to take in the views of the more urbanized downtown area to the east. This publicly used open space contributes to the health and well-being of the neighbors and the visitors in this area and is a healthful retreat from the pressures of urban life without having to trek farther to the Presidio National Recreation area nor to travel much farther to the next available designated park.

Small privately-owned-public-open-space (POPOs) behind walls and on rooftops are no substitute for grass on the ground, especially to dog owners who bring their pets there. The community sees this as an asset to their lifestyle in this area.

68
(PD-3)

Many mature trees are not only HISTORIC RESOURCES. They are also part of the AESTHETICS of the site – the building structures *and* the landscaping go hand-in-glove. The trees are rated in the arborist report as poor, fair or good for relocation. Yet, some of the good condition trees are potentially slated for removal. A couple of the trees were from the original Laurel Hill Cemetery and were incorporated into the Firemen's Fund Building landscaping that went with the building structure. The original trees are large and are the workhorses for carbon sequestration and GHG remediation. When large trees are cut down, they release the carbon back into the environment. The smaller tree replacements, though in more quantity than the existing count of trees, would not be sufficient to provide an equivalent environmental benefit in re carbon or GHG sequestration. Smaller trees also do not turn into the lush, mature park-like environment of this site overnight.

69
(CEQA-3)70
(GHG-3)

It would be good to retain and enhance the health of the large Monterey Cypress that is a remnant from the days of the Laurel Hill Cemetery. Different species of trees sequester GHGs differently. The large workhorses do more carbon sequestration than a bunch of smaller trees. The DEIR goes not state what species will be planted but perhaps those that sequester more GHGs can be considered. The Presidio of San Francisco is planting clones of the largest trees from California – the redwoods. They are the giant workhorses to combat climate change. The project sponsors and the city would be sending the wrong message to its inhabitants about the value of such large trees if we keep chopping them down. Chopping down large trees also releases all the carbon back into the environment to pollute. What analyses has been done to calculate the carbon that will be released from those trees planned to be removed?

The Firemen's Fund Building is aesthetically pleasing due to its lines that appear to hug the hill. In fact, over four decades ago in The Chronicle, the reason the building is not so jarring on the slope may have to do with its "low lines":

71
(CR-1)

CONTINUE down Euclid to Presidio to find the fire station where more tangible mementos of that time have endured at its museum. When you have enjoyed its unexpected pleasures, continue north on Presidio to Pine street for a look back uphill at the pleasant green lawns and plantings that enhance the handsome low lines of the simple building designed by Edward B. Page.

Heard about a neighborhood alternative that can give equal number of units as proposed or even as the project variant proposed. However, the neighborhood version has not been made public. Not sure if this neighborhood version would build where the original Monterey Cypress from Laurel Hill Cemetery stands or other larger trees historic to the site are located. Perhaps Planning can review it, have the Historic Preservation Commission review it, and then have the Planning Commission review it. It was not available at the December 5, 2018 Historic Preservation meeting. The alternative may meet the goals and not have such adverse impacts to the historic resource which includes not only the building but also the landscaping as that was the corporate campus use but today is used for public recreation. Today, it is used as a recreational area and childcare and office use with no retail. The retail use will change the ambiance of the existing historical neighborhood open space and non-commercial public use in a quiet residential area.

72
(AL-2)

In regards to a DEVELOPMENT AGREEMENT being entered into for this project, it seems the public cannot find out what are going into these agreements and if the mitigation and community benefits are not included in the publicly accessible DEIR/FEIR documents, then there could be problems down the road for the neighborhood.

73
(PP-1)

While the text on the website states that it exists to “strengthen the public planning process,” it is unclear if the agreements really help the residents with impacts. What was the criteria used to determine what projects and this one in particular to have a development agreement?

Development Agreements – Frequently Asked Questions

What is a Development Agreement and why does the City have them?

Development agreements are contracts approved by the Planning Commission and Board of Supervisors entered into by the City and a developer to expressly define a development project's rules, regulations, commitments, and policies for a specific period of time. The purpose is to strengthen the public planning process by encouraging private participation in the achievement of comprehensive planning goals and reducing the economic costs of development. A development agreement reduces the risks associated with development, thereby enhancing the City's ability to obtain public benefits beyond those achievable through existing ordinances and regulations.

Due to the dissolution of the City's Redevelopment Agency, each agreement is now negotiated on a case-by-case basis by the Office of Economic and Workforce Development and the City Attorney's Office.

How are Development Agreements monitored by the City?

The Planning Department and OEWD are working closely with the Controller's Office City Performance Unit and other City Departments to centralize development agreement requirements and mitigations into a comprehensive system that will encourage proactive monitoring and tracking of developer and City responsibilities. Prior to this project, there was no centralized system that housed all development agreements and their requirements. In addition to this webpage, this project will produce a database that the City will use to track and monitor payments, community commitments, and other important data within the development agreements.

Are there different types of Development Agreements?

California Government Code [Section 65864-65869.5](#) and [Chapter 56](#) of the San Francisco City and County Administrative Code sets forth the procedures by which a development agreement is processed and approved. There are four common categories of agreements:

1. Development Agreements - Voluntary contractual agreements between a landowner and the City concerning provisions of infrastructure, public spaces, and amenities.
2. Disposition and Development Agreements - A contract between a developer and the City that involves the sale of City-owned land to the developer.
3. Lease Disposition and Development Agreements - A contract between a developer and the City that involves the lease of City-owned land or property to the developer.
4. Owner Participation Agreements - A contract between a property owner/developer and the City to allow for development of property owned by an entity other than the City, generally the owner/developer.

This information is here:

<https://oewd.org/development-agreements-%E2%80%93-frequently-asked-questions>

It is best to get some of the mitigation measures lined up in the DEIR which is a ***FULLY*** public document rather than in “Development Agreements”.

In regards to traffic queues that arise from the garage use, why would the onus be put on the operator of the garage when in other DEIRs such as for 1979 Mission, it “shall be the responsibility of the Project Sponsor/property owner to ensure that recurring vehicle queues do not occur...”? The vehicles would be considered to be making a queue if more than one vehicle were lined up to enter the garage or exist the garage in a traffic jam. The queue should also not occur in the public right of way whether private vehicles or carshares for any longer than 3 minutes or the time it takes for the passenger to enter and exit the vehicle, whichever is less. Where the garage becomes full, there should be active management with “Lot Full” signs installed with parking occupancy sensors that show how many spaces are still left. If any queuing occurs, neighbors should contact the Planning Department to notify the property owner of the queuing issues to be abated through support from the developer’s agreement to annually contribute to queue abatement costs as this will impact the neighborhood. If this is not done, the supervisor of the district will have a long line of complainers at her or his door due to the foreseeable situation that would arise with a development built to attract people in vehicles and not accommodating them so as not to jam up the streets or create queuing.

74
(TR-7)

As this project does not seem to be in a hurry to build out fully for possibly as long as 15 years, the construction traffic should be limited during AM and PM rush hours.

75
(TR-6)

In re the light and glare from the proposed windows and their impact to vehicles going and coming to the area would be a safety issue, I have not heard anything as to the remedy.

76
(TR-7)

Although non-reflective glass might be used, the current glass is reflective of the open space and greenery of its surroundings so the building blends in almost in a semi-camouflage manner. is expensive and is unknown as to its appropriateness to the existing historic building. The current building is slung low and hugs the topography but if the building gets too tall, the reflection may become too much. The current windows reflect the skyline of the city and has an effect such that the reflections of the surrounding trees and other landscape elements almost camouflage the building.

77
(PD-3)

In re ***WINDS*** (DEIR Page 1.9 <Pages 151-162 in Topic E.8 in Initial Study; EIR Appendix B)... The wind report by RWDI (Rowan, Williams, Davies & Irwin, Inc., 600 Southgate Drive, Guelph, ON N1G 4P6, Canada) contains only general statements about how winds along Euclid and California may be such that a pedestrian would be “chilled” or that the winds would be “noticeable” but no specific speeds noted for any of the immediately surrounding or “nearby streets.”

78
(WS-1)

Page 4.E.2: "Wind measurements recorded on the San Francisco mainland indicate a prevailing wind direction from the west and an average annual wind speed of 10.1 miles per hour.³" (Footnote #3: Western Regional Climate Center, website query, Prevailing Wind Direction and Average Monthly Wind Speed (2001-2011), https://wrcc.dri.edu/Climate/comp_table_show.php?stype=wind_dir_avg and https://wrcc.dri.edu/Climate/comp_table_show.php?stype=wind_speed_avg.2001-2011, accessed May 25, 2018.)

While the "average" wind speed of 10.1 miles is quoted for the prevailing wind on the "mainland," when buildings are erected, they channel the wind through openings between them in all directions.

In fact, in RWDI's analysis report, it states:

"Winds can also accelerate between two closely spaced buildings and through a passage underneath a building or bridge. If these building/wind combinations occur for prevailing wind directions, there is a greater potential for increased winds."

Also, when the wind is blocked by a large plane that blocks the wind from going east-west, the air ekes outward onto the avenues running north-south. Further wind studies may be necessary. Just historically, this site was given up as a cemetery not only because of the developers in the 1940s and 1950s wanted to build on it but also because the wind was so fierce that the sand was blowing away and the underlying lids to the caskets got blown open – an unpleasant sight.

In addition, the speed of the wind on balconies on the buildings, the street level – public areas – should not be made so that people have a comfortable experience. I believe there is a speed that is generally acceptable as comfortable and that could be around 17 mph. Where is the data to show that the winds will be at "LESS THAN SIGNIFICANT" ("LTS") when the Initial Study and the DEIR does not have any data to back this up?

The consequence of categorizing the WIND IMPACT at "LTS" as stated in the Planning Department Memo that prefaces the DEIR Document, would be that any recommendations under "LTS" categories do not have to have measures that are actionable to remedy unlike "S" (Significant) level impacts. Thus, having the wind portion with no data to back up the claim for potential damaging effects to the neighborhood should be further studied with data for all the "nearby streets" during each phase and at the completion of all phases for the project and any variants. Inclusion of one statement about the wind conditions with reference only to a *citywide* average to say that this and any other project has no wind impact is just a guess without data. One should try to visit this site where historically it has been one of the windiest parts of the city next to Geary and Masonic. If people have a hard time standing in fair weather, this may be unsafe for the pedestrians during inclement weather. Try standing around this site from 3PM on while the "citywide" average wind speed is 10MPH. Again, this is near "regionalization" of a metric that should be local for true impact analysis.

Page 6.57 "Wind":

The statements that since a building is "upwind north" or how wind in certain areas will be "somewhat reduced" does not give specific data on wind speeds. These general statements are not backed by scientific measurements and have no modeling of any sort in the DEIR. Yet, with no scientific data to back up any of the generalized wind statements, the DEIR states that the "Wind" impact category is "LESS THAN SIGNIFICANT" ("LTS"). The consultant's (RDWI's) report also has no scientific data measurements provided) so that this part of the DEIR is not only INCOMPLETE but flawed and the conclusion of the wind impact as being "LTS" INACCURATE. Please provide data for wind analysis. Please provide mitigation measures for the areas where, per RDWI's report, the pedestrians will be "chilled" or have the winds be "noticeable" and include the specific MPH ratings for all streets adjacent and the other nearby streets within at least 1/8-mile of the site. If you had the specific scientific data from when RWDI performed the wind report please provide; also provide for current winter season wind speeds.

The wind issue is important also due to the Child Care Facility. When the children are out on the play area the wind speeds and circulation may make the area unpleasant to take part in activities. It is not only the public areas but also on the site grounds where the children who will be playing.

A November 27, 2018 [Chronicle](#) article talks about the sustained 40-50MPH winds from the ocean. Once the westward winds hit the hills of Laurel Heights on the upslope of Jordan Park to its west, they pick up speed:

“Wind gusts over 60 mph forecast for San Francisco Bay Area”

<picture deleted>

“People check out the Golden Gate Bridge during a storm on Monday, Feb. 20, 2017, in San Francisco, Calif. The National Weather Service announced flood, snow and wind advisories throughout the upper half of California. Photo: Santiago Mejia, **The Chronicle**

After a storm drizzling rain over the San Francisco Bay Area Tuesday moves out of the region, a second system is forecast to sweep in Wednesday night, delivering more rain and breezy conditions. The winds are expected to kick up late Wednesday and will gradually steer more west to northwest into Thursday.

The National Weather Service [issued an advisory](#) warning sustained winds could blow between 40 and 50 mph and isolated gusts could reach in excess of 60 mph.

"These west to northwest winds have the potential to be locally strong and damaging, particularly along the coast on Thursday afternoon and evening," the NWS warns."

What is the San Francisco's wind hazard criterion set at today? Last I heard, it was 26MPH. As Planning Code Sec. 148 for wind speed in certain SUDs (Special Use Districts) do not currently apply to this parcel, given that a SUD is being proposed, perhaps the wind criteria needs to be introduced as being applicable to this site. As taller and more buildings get established nearby, this Code Section 148 may need to be made applicable prior to the establishment of this SUD which is being sought by the developer.

People in public seating areas and in areas where they may frequent shops along California Street would not necessarily be pleased to encounter uncomfortable wind speeds whether sustained or as gusts. In order to minimize the unpleasantness of “uncomfortable” wind speeds there might be a similar adoption of comfortable wind scenarios for the site as is in the CPMC Long-range Development Plan EIR, Case No. 2005.0555E, Page 4.9-15, e.g., wherein several SUDs are mentioned for having Planning Code Sections applicable (e.g. C-3 Downtown Commercial Districts, Van Ness Avenue SUD <Sec. 243(c)(9)>, Folsom-Main Residential/Commercial SUD <Sec. 249.1>, and Downtown Residential District <Sec. 825>). Planning Code Section 148 allows for “comfort levels” such that the wind speeds do not exceed 7MPH for “public seating areas,” and 11MPH for “substantial pedestrian use.” Would this be something to entertain for the 3333 California site – potential SUD?

The project area is very windy not just **sustained wind** but also **gusts** due to the ocean breezes rising up slope as the wind travels eastward from the ocean. Winds should not be so fierce as to create a pedestrian to not be able to walk comfortably on California Street and Euclid Avenue. The DEIR does not have a comprehensive data in the main DEIR nor in the Appendices for the wind measurements on the streets surrounding the site with current conditions at different times of the year such as summer, winter, spring, autumn. Wind speeds per second increase considerably during the stormy season and people may not be able to stand erect without difficulty, especially for the elderly and disabled and children in the area.

When will the data for the above be available for the public?

Thank you again for the opportunity to comment on this DEIR. I look forward to the “Responses to the Comments” document. Please let me know when it is available. Thank you for your time.

Sincerely,
/s
Rose Hillson

Subject: Crucial Housing Opportunity for Families at 3333 California
Date: Monday, December 10, 2018 3:13:25 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Supervisor Stefani and SF Planning Commissioners,

I want to express my excitement for the potential for 500+ new units of housing at 3333 California. I am a SF Native and live/own property in the Richmond District. I strongly support this project because I'm devastated by the fact that our community is so expensive and exclusive! This is a prime example of how SF can help ease the housing crisis and do so with a minimal impact on an existing community. Excessive parking in unnecessary at this location. Many people would be happy to live in such a community and use public transit, bicycles, ride share and their own feet to get around our great city. We have no need to preserve 300 parking spaces and the existing building.

1

Subject: 3333 California
Date: Monday, December 10, 2018 3:21:51 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Hi!

I'm writing about the 700+ housing units for 3333 California. This part of the city desperately needs more housing. I live close to this site (on the other side of Geary) and was very excited when I heard it was going to be replaced with housing. As someone who got lucky and bought a home in 2011 I'm protected from this housing crisis, but my friends have not been so lucky. As they start families my friends start moving away, the high cost of housing and the uncertainty of housing is the main reason they are leaving. While this new housing wouldn't solve this problem it would be a great step in the right direction. Also, because it is so close to so much retail and transportation this site is a perfect place for more housing.

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Planning Commission,

I am writing you to express my opposition to the current development proposal for 3333 California Street, the former Fireman's Fund / UCSF Laurel Campus. I have lived in Presidio and Pacific Heights since 1990. I am a fifth generation resident of San Francisco. I believe that this plan is not consistent with the neighborhood and will have a negative impact on the surrounding area and its residents.

1
(ME-1)

I concur with the following points raised by groups trying to limit the scale of this project:

The developer's request for 15 years to construct the project is suspect. This looks like a plan to sell a new entitlement on an up zoned property. Developers all over town are selling new entitlements rather than build housing. Alternatives analyzed in the draft EIR would be built in 3 to 5 years. The Community Preservation Alternative would be built within three years.

2
(PD-1)
3
(AL-2)

I fully support the Community Full Preservation Residential Alternative for 3333

It preserves the Historic Characteristics of this wonderful historic site.

It provides 558 (or 744 in the Variant) housing units.

It builds them in three years.

It does not include the massive unneeded and unwanted Retail/Office/Commercial Complex that the Developer continues to insist upon.

It does not create 13,000+ retail auto trips per day.

It does not generate approx. 15,000 tons of greenhouse gases.

It preserves both the present childcare center and the existing café.

It matches the surrounding neighborhoods for character, style, scale and bulk.

4
(ME-1)

I strongly oppose the Developers Destructive Proposal as it brings excessive, unnecessary, unwanted and destructive noise, pollution, traffic and congestion to the neighborhoods surrounding 3333; it threatens the quality of life; it poses threats to pedestrian safety.

The Community Full Preservation Alternative will generate ZERO retail auto trips to 3333, as opposed to the 12,000-15,000 retail caused the Developers Destructive Proposal.

5
(AL-2)

In short, I ask that any development of this site be consistent with the existing use and scope of the property, and not expanded as proposed by the current developer, which will have a highly negative impact on the surrounding neighborhoods. Such a project is inappropriate for this location.

6
(ME-1)

Sincerely,

Henry N. Kuechler IV

Subject: 3333 California StreetProject

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Commissioners of the Historic Preservation Commission,

My name is Tina Kwok and I have been a resident in the Laurel Heights/Jordan Park and nearby neighborhoods since 1985. I currently live on Laurel Street, directly across from the 3333 California project site.

With it's "Midcentury Modern" architecture appeal, this area stands out as one of the best kept neighborhoods in San Francisco.

I am in favor of progress and the betterment of neighborhoods. I support the Neighborhood Full Preservation Alternative for the 3333 California Street project for the following reasons:

1. It offers the same number of residential units as the developer's proposal (558 with a 744 variant).
2. It preserves the character-defining features of the historically significant landscaping as well as much of the architecture of the original design. It maintains the majority of the 185 mature trees of various significant and rare species that would continue to absorb greenhouse gases. People from the neighborhood and elsewhere regularly use this green space for recreational purposes and is very important to the community.
3. The Alternative would not have retail that would compete with the merchants at Laurel Village (and also on Sacramento Street). By using all the space for housing, some units would be large enough for middle-income families.
4. It would be built in approximately 3 years instead of the 7-15 years the project applicant wants. I am not sure if there are any neighborhoods in SF that would agree to such a long and drawn out construction timeline. Imagine the noise, pollution, traffic, quality of life for the people not only the immediate neighborhood but those who must travel through this area daily to get to wherever they have to go to.
5. I understand that the new Draft EIR Full Preservation Residential Alternative has 24 less residential units than the project. However, if some of the 44,306 sq ft of retail in this Alternative is used for 24 residential units, the Alternative would offer the same number of residential units as the proposed project. There will be retail along California Street under the Alternative and NO

1
(AL-2)

retail along Euclid. The location of retail shops along Euclid is most unattractive - it is windy, hilly and steep. It is NOT a pleasant strolling area for shoppers.

1
(AL-2)
cont'd

6. The project also proposes to replace the windows and there is new proposed rooftop addition. I am concerned regarding the designs of the windows and rooftops and whether they will become distinguished from the significant Midcentury Modern architectural design of the original building. The proposed buildings appear to be an unattractive mass of glass and concrete crammed into the property in order to maximize highly valued square footage.

2
(ME-1)

7. I am concerned about safety of the residents in the project and the residents and visitors to the area as there are many proposed open spaces inside the project with public access.

3
(PS-1)

Thank you for your attention.

Respectfully,

Tina Kwok

535 Laurel Street
San Francisco, CA 94118

Dear Mr. Zushi

I am a resident of Laurel Heights. I reside at 535 Laurel Street. Below is my response to the DEIR of 3333 California Street project. The response is actually written by Mr. Dick Frisbie and I agree with all of his findings and comments.

Please let it be noted that we are pro increase in housing in SF. The need is now, and not in 7-15 years from now. Our community has supported the Copper Penny and CPMC project, and with the 3333 California project, will be increasing housing by 1000 units in the neighborhood. Some of my concerns, as examples and not comprehensive list, is as follows:

- The amount of excavation of earth, generating air, noise pollution is unimaginable for this long period of construction.
- The lengthy construction period
- The traffic during peak hours from the Inner Richmond to the Financial District and back using California Street as the main route (the Express buses will definitely be affected)
- There is a concern in the community about excavation and the water table under the land - the water table survey was done during one the of the driest periods of SF and may not reflect the true measurement
- Destruction of historical site, virtually with nothing preserved (by cutting through the main building)
- Office space allocation does not really conform to the character of the neighborhood
- Additional retail competes with the already challenged retail situation on Sacramento Street. Euclid side is windy and hilly and not conducive to a pleasant shopping experience. The retailers would be set up to fail...

Dear Mr Zushi,

Attached is the document in PDF format for your view. Thank you so much for reaching out. It is my sincere hope and wish, along with the community of Laurel Heights, that we reach a “win-win” situation for the developers, the city of SF, and the residents of the neighborhood. I just cannot imagine going through 7-15 years of construction (a toddler today would be going to college 15 years from now).

There’s also the possibility of the current developer using the approved plans to “sell” to other developers in the future in order to get out of the high cost of construction in the market place now. And the site can be morphed into an unforeseeable development then.

1

I-KWOK4

**SUMMARY of DEFICIENCIES/INACCURACIES for the 3333
California DEIR**

“Incorrect, Incomplete, Inaccurate”

The developer's request for 15 years to construct the project is suspect. This looks like a plan to sell a new entitlement on an up-zoned property. Developers all over town are selling new entitlements rather than build housing. Alternatives analyzed in the Draft EIR would be built in 3 to 5 years. The Community Preservation Alternative would be built within three years.

8
(PD-1)

I fully support the Community Full Preservation Residential Alternative for 3333

9
(AL-2)

It preserves the Historic Characteristics of this wonderful historic site.
It provides 558 (or 744 in the Variant) housing units.
It builds them in three years.
It does not include the massive unneeded and unwanted Retail/
Office/Commercial Complex that the Developer continues to insist upon.
It does not create 8,000 retail auto trips per day.
It does not generate approx. 15,000 tons of greenhouse gases.
It preserves both the present childcare center and the existing café.
It is compatible with the surrounding neighborhoods for character, style,
scale and bulk.

I strongly oppose the Developers Destructive Proposal as it brings excessive, unnecessary, unwanted and destructive noise, pollution, traffic and congestion to the neighborhoods surrounding 3333; it threatens the quality of life; it poses threats to pedestrian safety; it contributes to climate change.

10
(ME-1)

The Community Full Preservation Alternative will generate ZERO retail auto trips to 3333 as opposed to the 8,000 retail caused the Developers Destructive Proposal.

The Community Full Preservation Alternative Preserves and Protects Small and Family Owned Businesses

The Community Full Preservation Alternative will protect the small, family owned businesses in Laurel Village, Sacramento St. and Presidio Ave. A quick walk around these neighborhoods will clearly show the immense pressure these businesses are experiencing. More retail is unneeded and unwanted. It will destroy our local businesses.

The Neighborhoods are well served by businesses at Laurel Village, Sacramento St., Trader Joe's, City Center, California St. etc. we do not need more, more, more.

We do not need the more than 100,000 square feet of Retail, Office, Commercial space that the Developers Destructive Proposal calls for.

One of the reasons the Developer destroys this historic site is to create enough space for this unneeded and unwanted Retail/Office/Commercial (ROC) nonsense.

The CPMC development, a Community supported plan by the way, adds 270 housing units and the Developer and neighbors have agreed to have no Retail. Why is 3333 being treated differently by forcing unneeded and unwanted ROC (Retail/Office/Commercial) against the overwhelming opposition of the surrounding residents?

The Community Unanimously Opposed the Developers' Massive Retail, Office, Commercial (ROC) Complex.

In a recent Petition Drive at Laurel Village over 800 residents signed the Petition opposing the Developers Full Destruction and Massive ROC plan and supporting the Community's residential Alternative. Three people opposed it the Petition. These signatures were gathered in less than 8 hours.

In the Petition Drive the 800 signatories opposed rezoning 3333 and also opposed revoking Resolution 4109, an agreement between the City and the surrounding neighborhoods.

"A deal is a deal "was how everyone felt.

The Community Full Preservation Alternative will already be more than twice as dense as the surrounding neighborhoods so any rezoning is uncalled for, unneeded and unwanted.

These signatures are in the hands of the District 2 Supervisor.

The Developers Destructive Proposal Generates Excessive Levels of Greenhouse Gases and Even More Destructive Climate Gases.

Based on current estimates, it will generate approx. 15,000 tons of Greenhouse Gases (GHG) and the many associated and far more destructive climate changing gases that accompany the primary Carbon Dioxide gas.

The Community's Full Preservation Alternative will, by comparison, generate approx. 4,100 tons of GHG.

The Community Alternative mitigates the GHG generated by more than 70 percent, providing a dramatic reduction in a time of climate change.

The GHG calculation is our best estimate. Neither Planning nor the Developer will provide the volume of concrete or weight of steel required.

The Developer claims to have built many buildings and many complexes, Planning claims to oversee thousands of such projects and yet no one can even make an educated estimate as to the concrete and steel required.

Could there be something they want to conceal from the public?

Much like they concealed the Historic nature of 3333 for over 4 years?

Planning ignores the GHG generated by the construction materials despite the requirement to address "indirect" GHG. Planning requires the GHG generated in dispensing water to control dust, etc, to be calculated but not the GHG generated in manufacturing the materials used in the construction!

Example: The GHG generated by the diesel fuel burned to deliver a load of concrete is calculated to the decimal point but the GHG generated by the concrete itself is ignored. What do the numbers show?

Assume a 30 mile round trip: the truck burns approx. 10 gallons of diesel and generates 225 lbs. of CO₂. The concrete in the truck generated over 5,000 lbs. of CO₂ during manufacture. So, Planning recognizes the 225lbs. but claims the 5,000lbs. is irrelevant **essentially ignoring 95% of the real GHG!**

And using this logic throughout the Initial Study Planning concludes that GHG are "Less than Significant" and therefore need not be addressed!

Folks, you can't make this stuff up as its beyond one's imagination.

The steel, glass, etc. are all treated similarly.

Apparently if you can't see the GHG actually being emitted into the air it doesn't actually exist so there is no need to consider it. So much for a responsible approach to Climate Change.

As noted above the Community Full Preservation Alternative generates less than one third the GHG, however Planning chooses to calculate them.

NOTE: Over 95% of the cement/concrete used in the Bay Area is totally

manufactured in the Bay Area beginning with the mining process so these GHG are being injected into our air.

The Community Alternative is Superior, Sooner and Safer

We pollute less and protect the environment: the Community Alternative will ALWAYS generate less than one third the GHG generated the Developers Full Destructive Alternative:

We destroy less: we preserve the historic site.

We build less: 4 new buildings versus the Developers' 11 new buildings plus creating two tall towers out of the existing main building.

One single level underground parking garage for 450 spaces versus a complex of parking garages, some of three levels, for 896 spaces;

We excavate less: 90,000 cubic yards (9,000 dump truck loads) versus 288,000 cubic yards (32,000 dump truck loads);

We preserve and protect our local businesses and shops: no added unwanted and unneeded and neighborhood destroying family-owned or small retail or business;

We better protect the health and well being of everyone: no 13,000+ auto trips to pollute the air, generate the noise, put pedestrians at risk, unload trucks on the streets, etc.

The Community's Full Preservation Alternative solution will always be three times More Climate Friendly; Far Less Disruptive; Far More Family Friendly; Far Safer for Pedestrians; Far Healthier Air Quality-wise; and Provide Critical Housing at Least Three Times Faster than Developers' solution.

We fully support housing

The Community has supported the Lucky Penny (95 units), CPMC (270 units) and now 3333 (558) units. It was the Community that spearheaded the effort that led to the approval of the Lucky Penny Project.

Over 1,000 units in a half mile radius.

So please don't offend me and misrepresent the Community's position.

We support housing and history; we oppose unneeded, unwanted and unnecessary Retail and mindless destruction of a historic site.

AND we provide housing in as much as 12 years sooner than the Developers Full Destructive Plan does.

The YIMBYs should be 100% in favor of the Community's Full Preservation plan and if they're not then they are being grossly hypocritical.

The Community Full Preservation Alternative Prevents Excessive Traffic from the Massive ROC Complex, Uber & Lyft. Etc. from Overrunning our Neighborhoods.

16
(TR-2)

Recent studies have shown that the City's method of calculating auto trips, and the resulting chaos and congestion is deeply flawed, to the point of being misleading. At the time the VMT (Vehicle Miles Travelled) methodology was developed, SF CHAMP last updated Nov. 2014, the Transportation Networking Companies (TNCs) -Uber/Lyft/Chariot etc. were still in their infancy and so the VMT methodology fails to account for their incredibly disruptive impact.

The TNCs average, conservatively, in excess of 170,000 trips per day in San Francisco. There are about 2,000 taxi medallions in San Francisco so TNCs do not just replace taxis they overwhelm them by orders of magnitude.

Also, implementation of the VMT methodology is not mandated until 2019 but as Planning and The Developers were unable to explain away the 8,000 Retail Auto trips generated by the existing, and still acceptable, Level of Service methodology, they implemented the VMT methodology with "refinements." Planning calculates the Developers Destructive Proposal using VMT methodology will generate approx. 5,800 total auto trips for 3333 for Retail + Office + Residential which is an entirely bogus number based on questionable assumptions, such as "The SF Guidelines **do not provide a specific methodology** to assess the number of trips...." Planning has therefore, with no supporting documentation or analyses, applied "appropriate refinements to the standard travel demand...."

Rather amazing that these "refinements" all work in the Developers favor. Nowhere in these "refinements" have TNCs been taken into account!

Oh, by the way, the "refinements" used were created for The Mission Rock Project at Seawall Lot 337 and Pier 48 as well as the Pier 70 Mixed Use District Project!

Seawall Lot 337 & Pier 48 summary:

Project type Mixed-use, open space, residential, commercial

Project area Approx. 28 acres

Proposed building area 1.3 - 1.7 million sf commercial; 750,000 - 1.5 million sf residential; 150,000 - 200,000 sf retail, 850,000 sf structured parking

Seawall Lot 337 & Pier 48

Pier 70 summary: “The 35acre waterfront mixed-use neighborhood will provide housing, waterfront parks, artist space, local manufacturing and rehabilitated historic buildings.” Altogether the redevelopment covers 35 acres and up to 3,025 new units of housing—the exact count is still in flux, with a low end of 1,645—and its roots stretch back a decade to a 2007 port plan.

WOW! What remarkably similar projects to 3333. What “refinements” could possibly be comparable? Simply bogus.

The DEIR consistently attempts to misrepresent and mislead the public.

It is incomplete, incorrect, inaccurate and invalid and NOTHING demonstrates this better than the above.

Under their previous, Level of Service, methodology they would have calculated 8,000 retail trips alone.

I think it safe to say that the numbers presented by Planning are simply “Developer friendly!”. Their VMT methodology with “refinements” will generate fewer trips, especially since there are no criteria for calculating the impact of TNCs, but there is nothing in the legislation that remotely suggests it would generate 35% less trips! This entire section is suspect and Planning must explain this profound discrepancy. As noted above, nowhere are the TNCs incorporated into the calculations.

All of which renders the Traffic Analysis incorrect, incomplete, inaccurate, invalid.

The Planning Department proposes to reduce the number of retail parking spaces as a mitigation measure to reduce the significant traffic impact.

This is a false assumption and shows the extent to which the Developer and Planning misunderstand, or simply choose not to understand, the impact that the TNCs have. Planning’s mitigation measure is a stone age solution to a digital age problem.

How will many people respond to a perceived lack of parking?

They’ll simply call a TNC and go anyway.

Eliminating parking won’t eliminate auto trips it will actually increase auto trips.

A UC Davis study shows that people make MORE trips because of TNCs than if they had to use their own cars or take public transit. People now make trips they would never have made in the past - by any mode of transport.

The VMT methodology used by the Planning Department fails to account for the impact of TNCs.

And, the use of TNCs makes the GHG situation worse.

Let's assume I want to go to 3333 by auto. I could personally drive 2 miles to get to the 3333 Retail/Office/Commercial complex, park, then shop or do business, the drive 2 miles home for a total of 4 miles.

Data shows that many people will now use a TNC rather than drive their own cars.

This will be even more pronounced if Parking is reduced!

So now the TNC has to come to me, assume 2 miles, and take me the 2 miles to 3333 for a total of 4 miles.

When I go home the same thing happens or an additional 4 miles for a grand total of 8 miles. Twice the GHG generated per trip!

So, not only do we have 8,000 retail auto trips, excluding the effect of TNCs (not addressed) to deal with we have many of them generating significant more GHG per trip!

Planning needs to do a comprehensive analysis using credible data and a credible methodology so that the public knows the extent of the GHG generated.

We are in a crisis with climate change and the methodology shown in the DEIR fails to address this crisis credibly.

In fact climate change is more of a threat to the future of San Francisco than housing is and it isn't being addressed accurately in the DEIR.

The Community Full Preservation Alternative Protects the Historic Site, Protects the Greenspaces, Maintains the Existing RM-1 Zoning and Resolution 4109, Maintains the Public's Permanent Right-of-Use of the Greenspaces .

The Developers Destructive Proposal first demolishes and destroys the Historic Characteristics and nature of 3333.

Then it virtually destroys all of Laurel Hill itself, with the exception of a small sliver at the southwest corner, by excavating the entire site to depths ranging from 15 to 40 ft.

The only area that isn't excavated is under a portion of the existing building!

Not sure how they missed that opportunity!

Removal of the demolition debris and the excavated soils will require approx. 28,000 dump truck loads, all of which have to pass through and pollute our neighborhoods.

16
(TR-2)
cont'd

17
(GHG-1)

18
(AL-2)

19
(CR-2)

20
(GEO-3)

21
(AQ-1)

By contrast, the Community Full Preservation Alternative generates approx. 9,000 dump truck loads, one quarter as many!

After the demolition the Developer has to then deliver all the new materials required to rebuild what they demolished plus 11 new buildings.

How many large truck loads, concrete truck loads, etc. will this require?

The Community Alternative only builds 4 new buildings so like the GHG and the debris/soil removals the Community Full Preservation Alternative requires far fewer, probably about one third, or less, as many delivery loads.

A quick look at the turning radii of the trucks, ie. SU-30 Circulation Exhibit and WB-40 Circulation Exhibit clearly demonstrates that all the deliveries during destruction, demolition, excavation, construction and long term operations pose significant threats to traffic safety, pedestrian safety, congestion and pollution.

In fact, as WB-40 shows large trucks cannot safely navigate 5 of the 6 major intersections surrounding the site. There are no plans to mitigate this profound situation which will essentially exist from the beginning of the project ad infinitum. Planning and the Developers have simply washed their hands of the problem a la Pontius Pilate.

The Community Full Preservation Alternative will preserve most of the mature trees at 3333, some of which date back to the time of the Laurel Hill cemetery whereas the Developers Destructive Proposal will attempt to spare approx. 4.

The Community Full Preservation Alternative Keeps the Loading and Unloading Traffic Within the Site as Opposed to External to the Site

The Developers Destructive Proposal surrounds 3333 with five major Loading/unloading zones for TNCs and Freight traffic. Initially the Developers promised that all the unloading would be done underground or on-site and now the site is ringed with these zones! These zones not only eliminate approx. 40 parking spaces but they will create additional traffic congestion and pollution. So we have a ring of loading zones in addition to the inevitable double parking that occurs for deliveries and drop-offs. A perfect storm!

Dear Planning Department:

In connection with Laurel Heights Partners, LLC's proposed development at 3333 California St., and based on the Draft Environmental Impact Report, please consider continuing to use the site for higher education, such as an annex for the University of San Francisco. Under a scenario where the building is used for higher education, the historically significant building and its beautiful landscaping would be preserved. Architects, preservationists and developers could update the glass curtain façade and interior to serve students for the 21st century. No changes would be required to the surrounding landscape or the perfectly suitable existing surface parking lots and garage ramp structures. Most importantly, the multitude of concerns raised by nearby residents and citizens set forth in the Draft Environmental Impact Report and listed again below for the Planning Department's reference would be adequately addressed. It appears there are far too many concerns for the Planning Department to proceed with the proposed project. Therefore, please consider continuing to use the site for higher education, such as an annex for the University of San Francisco.

1
(AL-1)

Two concerned nearby residents.

Summary of several concerns raised by nearby residents and citizens of San Francisco:

1. Archaeological concerns from the excavation and other site grading activities under the project and their effect on the topography of Laurel Hill
2. Effects of construction of the project, including excavation of contaminated soils containing petroleum, polychlorinated biphenyls, and other contaminants; excavation and effects of undiscovered human remains and contaminated soils on public health
3. Potential for airborne contamination from office building demolition
4. Effect of ground settlement on adjacent buildings
5. Potential for contamination from leaking underground storage tanks and the use of chemicals for water treatment,
6. Increased population on the project site and effects on infrastructure
7. Construction truck traffic and safety concerns, as well as cumulative construction transportation impacts

Subject: Laurel height development project
Date: Thursday, December 13, 2018 5:14:48 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear City Hall Planning Commission,

I am a resident of Laurel Heights and only heard about the 3333 California development yesterday through concerned neighbors on Nextdoor.com (https://nextdoor.com/post/98516472?init_source=copy_link_share)

I have serious reservations about the develop as it stands.

While more residential housing is needed, I believe it must be done without straining current public neighborhood resources. Increasing dwellings by 744 units as proposed could DOUBLE our neighborhood population and the run on public parks, libraries, and other spaces can be overwhelmed. Currently, we do not even have a public meeting hall or a workable recreation center. The one in Latural Heights park is a small shack - an unusable space for neighborhood and community meetings or deliberations.

If the developers will build that many residential buildings, it must be done by installing more usable public facilities such as libraries, reading rooms / mini-libraries, recreation center, and other spaces which will enhance all of our lives. Already the traffic in this area is heavy, and parking has become a major issue. We do not welcome more development without careful review of the impact on the existing neighborhood quality of life.

Thank you for your consideration. Please review the conversation on the [nextdoor.com](#) feed regarding this issue.

Regards,
Abe Lee

Subject: 3333 Project - concerns and comments
Date: Wednesday, January 02, 2019 8:56:46 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Hi Kei (and Supervisor Stefani),

I am a homeowner in SF, zip 94115. I read a lot of the 3333 project notes and have major concerns.

I strongly oppose this very harmful proposal by the developer. I have no problem with developers making money or building housing in general - but there must be a tradeoff and all things must be considered. In this case, the project is would result in destruvtive and excessive noise, pollution, traffic and congestion to the neighborhoods surrounding 3333. It would greatly hurt the environment of the area and the quality of life.

1
(ME-1)

The developer is trying the same challenge path as the Chase Center stadium. The difference is huge here though - this is in the middle of a residential area effectively, versus the Chase center surrounded by high rise buildings mostly. Every day for 7 years maybe up to 10 years, dozens if not hundreds of construction related heavy trucks would be driving down residential streets in the area. Pine St and Bush St for example, have higher speed limits and are one way - these trucks would be barrelling down these streets, polluting them massively, dirtying all the homes, and creating huge noise pollution - for 7 YEARS or more!! - in areas where the units are mostly dwelling units and many children live and play.

2
(CEQA-4)

3
(PD-1)

I strongly oppose the project as stated. I think the site is historic and a beautiful space in the middle of the city, much like a park is. We need housing, there is no doubt, but this project is using that as a cover for the developer to build parking spaces and a retail complex which is purely for profits - we can build housing only on the existing site in 2 years with far less community and environmental impact.

4
(ME-1)

Thank you,
Ankur

From: [Larry Mathews](#)
To: [CPC.3333CaliforniaEIR](#)
Subject: Comments on Draft EIR -- 3333 California Street
Date: Thursday, December 13, 2018 3:50:52 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

To the Planning Department:

I am writing to express my opposition to and dissatisfaction with the Draft EIR circulated for the proposed project at 3333 California Street. I have owned my home directly across the street (at 3326 California Street) for over 17 years and have always appreciated this quiet street and residential neighborhood. The significant and unavoidable impacts identified in the Draft EIR would severely damage the fabric of this neighborhood and the City of San Francisco:

1. The park-like setting, with mature landscaping and a midcentury-modern building with historical significance, would be destroyed were the project to proceed in its current form. This integration of landscaping and buildings is so important to this unique site and the proposed plan would destroy this setting — all for unnecessary retail and office space. The developers have created negative and permanent impacts by destroying part of the physical beauty and historical significance of this site.

2. There is insufficient transportation and parking to support this project, and the developers have transferred the burden to the neighborhood and neighboring streets. Furthermore, the neighborhood doesn't need and cannot support additional retail, as the significant retail vacancies in the immediate vicinity will attest.

3. The increase in noise and pollution caused by the increased density and changed use of the site would adversely impact the neighborhood. This is a residential neighborhood and the site cannot support the increase in noise or traffic — either during an extended construction period or with the existence of an unnecessary mixed-use project.

The developers have been disingenuous and dishonest as they've presented this project to the community. While claiming to present a conciliatory and cooperative approach with the neighborhood, they have played "bait-and-switch" and continued to ignore our very real and practical concerns. Those of us who live in Laurel Heights welcome the addition of new housing the site — we are **not** NIMBYs — and recognize the shortage of housing in the City of San Francisco. We fully support — and have repeatedly encouraged the developers to consider — an all-residential use of the site. This would allow the developers to deliver the same number of residential units as what's in their current plan but eliminate many of the significant and adverse impacts presented in the Draft EIR. I strongly encourage the Planning Commission to require the developers to pursue an all-residential project that would directly address these negative impacts outlined in the Draft EIR.

Thank you for your consideration.

Larry Mathews

Subject: 3333 California Street Mixed-Use Project
Date: Tuesday, January 08, 2019 3:37:05 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Mr. Zushi:

I am a longtime resident of San Francisco and have owned my home at 3326 California Street for over 18 years. I recognize the need for more housing in San Francisco and appreciate the development opportunity presented by the 10 acre site across the street from me. We bought our apartment because of the park-like setting of the UCSF site, and because of the truly residential feel of the block. After carefully reviewing the Draft EIR for 3333 California Street, and meeting with the developers and with so many of my neighbors, I urge you to reject the Draft EIR and instead encourage the developers to pursue a project more in line with the alternative presented by the Laurel Heights Improvement Association (of which I am not a member). An all-residential project would mitigate — if not completely eliminate — many of the negative issues raised in the EIR and would be a solution that would work for the developers and for the community.

The Community Full Preservation Residential Alternative for 3333 California Street provides the same number of housing units as proposed by the developers, but preserves the integrity and historical significance of the site and better integrates the project into the surrounding neighborhood. The neighborhood does not need additional retail or office (or the traffic or environmental problems office and retail would bring with the increased number of users); San Francisco is already over-retailed and our neighborhood has plenty of vacant commercial spaces. Furthermore, as you know, to add the retail or commercial would require a change in zoning, and I strongly believe the zoning should be kept as it is.

I am not a NIMBY; I'm actually a YIMBY and support the addition of new housing stock in our neighborhood. But I encourage you to reject the Draft EIR and the developers' cynical plans for the neighborhood. Although the developers proclaim to be friends of the neighborhood, I suspect that any retail or office space they build will simply be sold off to other investors who might not be local or share the interests the developers claim to support. I believe the developers can make money on an all-residential project without the negative effects outlined in the Draft EIR. I encourage you to have them come back to the table to work with the community (as opposed to the staged photo-ops they've put on at community meetings) to come up with a project that will truly serve the City of San Francisco and the neighborhood I call home. The Community has presented that opportunity to the developers in the form of an all-residential project that can be efficiently and profitably built; we just need the developers to show more willingness to cooperate.

Thank you for your consideration.

Subject: 3333 California Street DEIR
Date: Monday, January 07, 2019 10:16:41 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Mr. Zushi,

My name is Adam McDonough and I'm a 10-year resident of Laurel Heights. I'm writing to voice my opposition to the developer's proposed project at 3333 California Street, and lend my full support for the community "full preservation" alternative. I believe the DEIR is inadequate in a number of ways, including:

1. It understates the negative impacts of destroying the historical characteristics at the current site;
2. It underestimates the negative impacts of retail, office and commercial space to the local community (traffic, pollution, noise, etc.);
3. It overstates the value of "open space" at the expense of "green space", depriving the neighborhood of a local park in return for paved walkways;
4. It inadequately represents the negative impacts of a potential 15-year construction period to the families living in proximity to the site;
5. It incompletely addresses the damaging effects of greenhouse gases emitted during and after the construction period;

The community alternative provides the same number of housing units without the excessive, bulky, towering, commercialized and paved project proposed by the developer.

Thank you for considering my objections to the developer's proposal, as well as those of a majority of neighborhood residents.

Adam McDonough

1 Dr. Carlton B. Goodlett Place
San Francisco, CA 94102-4689

Re: Case No. 2015-014028ENV
Project Title: 3333 California Street Mixed-Use Project Zoning:
Residential, Mixed, Low Density [RM-1]
Zoning District 40-X Height and Bulk District Block/Lot: Block 1032/Lot 003
Applicant/Agent: Laurel Heights Partners LHP

Dear Planning Commissioners:

The developer has not addressed the historic significance of this property.

I support the Neighborhood Full Preservation Alternative because:

1. It has the same number of residential units as the project (558 with a 744 variant).
2. It would retain the character-defining features of the historically significant landscaping including the beautiful Terrace designed by Eckbo, Royston & Williams, and the majority of the 185 mature trees that would continue to absorb greenhouse gases. People regularly use the green space on the site for recreational purposes and that space is very important to the community.
3. It would not have retail that would compete with the merchants at Laurel Village Shopping Center. By using all the space for housing, some units would be large enough for middle-income families.
4. It would be built in approximately three years rather than the seven to fifteen years the project applicant is proposing.
5. The new Draft EIR Full Preservation Residential Alternative has 24 less residential units than the project. I recommend that some of the 44,306 square feet of retail in this Alternative be used for 24 residential units so the Alternative has the same number of residential units as the proposed project. This Alternative would have retail along California Street but not also at Euclid, which the proposed project would have. The applicant should explain the exact type of replacement windows proposed and why the proposed new rooftop addition would distinguish it from the original building yet be compatible with Midcentury Modern design principles.

Subject: Support for 3333 California
Date: Sunday, December 16, 2018 11:52:31 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Planning Commissioners and City Planners,

I am writing you to present my full support for the 3333 California project.

As a San Francisco resident and one who lives very close to 3333 California, this project is very significant for me. I have lived in San Francisco now for 2 years and love this city. I want to stay here and raise a family but I honestly don't think I can do that with the cost of living, in particular the cost of housing.

This housing project will be a small but important step in reducing pressure on key communities. We as a city need to allow housing in this neighborhoods and ALL neighborhoods in the city. For too long we have allowed richer residents to block all housing to meet their narrow interests.

I hope you show the leadership that San Francisco needs right now on housing to support this issue.

Best Regards,

Kevin Meehan

1
(ME-1)

3333 Draft EIR Comments

I fully support the Community Full Preservation Residential Alternative for 3333 California

It preserves the Historic Characteristics of this wonderful historic site.
 It provides 558 (or 744 in the Variant) housing units.
 It builds them in three years.
 It does not include the massive unneeded and unwanted Retail/Office/Commercial Complex envisioned by the Developer.
 It does not create 8,000 retail auto trips per day.
 It does not generate approx. 15,000 tons of greenhouse gases.
 It preserves both the present childcare center and the existing café.
 It matches the surrounding neighborhoods for character, style, scale and bulk.
 It protects the small, family owned businesses in Laurel Village, Sacramento Street and Presidio Avenue.

1
(AL-2)

I strongly oppose the Developers Destructive Proposal as it brings excessive, unnecessary, unwanted and destructive noise, pollution, traffic and congestion to the neighborhoods surrounding 3333; it threatens the quality of life; it poses threats to pedestrian safety; it contributes to climate change.

2

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Supervisor Stefani, Planning Commissioners, and Planner:

My name is Liz and I want more neighbors.

As a District 2 voter living relatively close to 3333 California St., I would like to voice my strong support for adding 558 to 700+ units of housing on this site. Here in San Francisco, far more jobs are being added than housing. By limiting housing, we continue to make our city unaffordable to working families and young people.

Are parking spaces important? Yes, but they are not more important than solving this housing crisis. Is preserving architectural continuity important? Yes, but not more important than the ability of more working people to live in my neighborhood. I want more folks to be able to live close to where they work and help reduce traffic congestion. I want kids born in San Francisco today to be able to grow up and afford to live here.

This housing will take one small step in reducing pressure on communities of concern. San Francisco should allow more housing in this neighborhood.

Please feel free to contact me at 415 347 9549 or at this email address. Thank you for hearing my concerns about our housing crisis and support for more housing.

Sincerely,
Liz Miller
District 2 Voter

Subject: FW: 3333 California Street

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Sirs/Madams,

In anticipation of your hearings regarding 3333 California Street, I am writing in support of protecting the well-established historical designation of the property, as evidenced by the August 31, 2018 letter from Julianne Polanco, State Historic Preservation Officer to the principals of the Laurel Heights Improvement Association of San Francisco. You have been provided with a copy of that letter.

Any future development at that site should comply and honor the historic property designation in the following areas:

1. Retain the historic significance of the landscaping of the property, which has 185 mature trees. Such care of natural resources has an added environmental benefit and the green space is very important to the surrounding neighborhoods, particularly as San Francisco becomes more urbanized and "Manhattanized."
2. Use space (within the historical designation parameters) solely for housing, which allows for larger units to be built for families, consistent with the use and character of the Laurel Heights and Presidio Heights neighborhood.
3. Consider the environmental impact of increased traffic, parking issues and the overall impact on the quality of life for the existing neighborhood as well as for those people who will eventually occupy any new units at 3333 California Street. This includes elimination or a substantial reduction of any plan to add commercial enterprises on the property.

Finally, a detailed economic study should be conducted to see:

1. The impact on existing commercial areas (Sacramento Street, California Street and Masonic Street, if commercial development is allowed at 3333 California Street. The study should take into account the number of current empty commercial properties in those areas. This neighborhood may not support any further commercial development, especially given the congested corridor of Masonic and Geary (Trader Joes, Target, etc.)

1
(CR-2)

2
(ME-1)

3
(TR-14)

4
(ME-1)

5
(GC-2)

2. Whether the San Francisco economy supports the number of units being proposed by the developer, as it current trends indicate that there is an over supply of housing units, young working people leaving San Francisco (and California) and an eventual downturn in the tech bubble, on which San Francisco over-relies for its economy at present.

6
(GC-1)

Thank you for your time in reading this email and for seriously considering alternative plans put forth by the Laurel Heights Improvement Association.

7

From: [Ed Munnich](#)
To: [Zushi, Kei \(CPC\)](#)
Subject: 3333 California
Date: Thursday, December 13, 2018 11:54:30 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Kei Zushi,

I am writing to oppose the historic designation of the current building at 3333 California, and to support the most ambitious plan, to build 700+ new housing units. It is a tremendous opportunity to make a dent in the housing crisis, and I urge you to do whatever you can to remove obstacles to it.

My wife and I have lived in San Francisco for 14 years, and scrapped and saved to be able buy a condo in 2012. At the time, she worked UCSF's Mt Zion campus, and I work at USF, so we focused our search for housing on the area close to 3333 California, with the plan that we could give up our car and walk or take transit to work. This area was also ideal because of the wide variety of stores and activities available within a short walk, and the excellent transit options that link it to the rest of the city. Unfortunately, even with two professional salaries, and no children, we were unable to afford anything in this area. We ended up in the Inner Richmond District, and are very happy with our neighborhood, but note that we would not be able to afford our current home, or, likely, to buy a home at all in our neighborhood today.

History is very important. But when the history of a building disrupted the city rather than enhanced it, we must not reflexively sustain the disruption. 3333 California was built at a time when San Francisco was moving towards suburban, car-centered planning, which we subsequently rejected, deeming ourselves a "transit-first city", opposing additional freeway construction, and choosing not to rebuild freeways damaged by the 1989 earthquake. The 3333 California site is historic in the sense that the Central or Embarcadero Freeways were historic--it has history, but its history disrupted the city rather than enhancing it. An absurd but relevant example is that a cloud of tobacco smoke was once part of the historic character of bars, clubs, and, indeed, City Hall; but we would not allow smoking in those locations today, merely to preserve their historic character.

Most importantly, the history of the City is in its people. Every day, my wife and I see neighbors pushed out of our neighborhood by the high cost of housing. We are losing the most vital aspect of our history--the lifelong San Franciscans in rent-controlled housing, the young who come to the City with a dream, immigrants, diverse groups from different parts of the US, and creative people from all over who give the City its unique character. All of these people are our history, and all of them are key to a vibrant future. Critically, unlike some other projects that have been proposed, no one would be displaced by new housing at 3333 California, since not a single rent-controlled or otherwise affordable housing unit would be lost. It is a win-win for the *people* of San Francisco.

No amount of housing that could reasonably be built at 3333 California will solve the City's housing shortage, but building housing at this site that is consistent with the density of neighboring Lower Pac Heights would help to make a dent. Since this community is so well-situated for walking and transit, people don't need cars, and not needing a car or a parking space makes otherwise unaffordable housing just a little closer to affordable for many. Moreover, with dense housing and minimal parking on this site, we would get the housing we desperately need, without adding to traffic congestion. I urge you to put the preservation of the human dimension of the City ahead of the preservation of a building that ran counter to the history of San Francisco, and runs counter the sustainable future that we strive for.

Thank you for your consideration!

Sincerely Yours,

Ed Munnich

Subject: Grant a 15 day extension regarding 3333 California St

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

To: SF Planning Commission

From: Anne Neill, neighbor at 3179 California St, CA 94115
annechome@yahoo.com

Date: December 12,

2018 Re: 3333

California St, SF

Dear SF Planning Commission,

I am using my neighbors' letter as a template for a discussion about 3333 California St. However, I am adding my own thoughts as well. I have attended multiple presentations by the developer and I have grave concerns. The project scope is far too big, this neighborhood should not have the type of density that the developer is proposing, and we certainly don't need additional retail. With the historical significance of the building, more time is needed to take these concerns under consideration, thus my request to grant a 15-day extension to January 8, 2019.

Please grant a 15-day extension of the 45-day comment period on the Draft EIR from December 24 to January 8, 2019, because the project construction would last for 7-15 years and there is substantial community opposition to the developer's concept. 60 days are allowed by law and have often been granted for complex projects or projects that are controversial. Last week, the SF Historic Preservation Commission expressed support for an alternative.

Approximately 800 residents signed a petition against the rezoning requested by the developer, and he would not plan the project with the community.

Last week, the San Francisco Historic Preservation Commission stated strong support for preserving this resource by building a residential alternative.

The developer proposes to destroy the historically significant characteristics of the site and create a concrete jungle with three underground levels of garages for 896 parking spaces topped with nondescript buildings crowded onto the site. He wants to change the zoning to allow retail which was banned in Planning Commission Resolution 4109 to avoid adverse impacts to Laurel Village and Sacramento Street.

Also, the developer did not tell the community about the historic significance of the site. The neighborhood learned last year and had the building and landscaping listed on the California Register of Historical Places because they were designed to complement each other in an integrated composition. So, the landscaping is also a historical resource on this site and has been used for recreation by the public for many years.

I support the Community Full Preservation Alternative which would have the same number of housing units as the proposed project (558) with a variant for 744 and would build new buildings on the vast parking lots along California Street in approximately 3 years rather than the 7-15 years requested by the developer. Under the community alternative, the main building would be converted to housing units rather than demolishing half of it, and there would also be a new Mayfair residential building. The existing cafe and childcare center would remain, and there is an existing pathway through the building that opens onto the Terrace and onto Masonic. **Please direct the Planning Department to evaluate this alternative with the same level of detail as they do for the alternatives in the Draft EIR.**

Draft EIR Full Preservation Alternative C was unreasonably configured to have 26 less housing units than the project and 44,306 square feet of retail, which can be converted to housing to match the number of housing units in the proposed project.

(ME-1)

2
(GC-3)

3 (PP-1)

4
(AL-2)

5
(CR-2)

6
(PP-1)

7
(CR-1)

8
(AL-2)

9
(AL-3)

This is a beautiful site that should not be destroyed, and housing can be built sooner in an alternative than in the project. The 15 years the developer is requesting raises a red flag for real estate speculation.

10
(AL-1)

Also, the Draft EIR states that the proposed project would generate 10,057 auto trips per day and would cause substantial additional Vehicle Miles Traveled and/or substantially induce automobile travel. DEIR p. 4.C.74. The DEIR claims that reducing the retail on-site parking supply would mitigate this impact to less than significant. DEIR p. 4.C.80. We think this analysis is bogus.

Mr. Ionin:

Unfortunately due to unforeseen circumstances, we are unable to attend today's Planning Dept's meeting regarding the subject matter.

We are residents and home owners in the Laurel Heights neighborhood and we strongly urge the Planning Commission to grant a 15-day extension of the Due Date for Comments on this DEIR. It is a lengthy and complex document. Thank you.

Subject: DEIR - 3333 California Street
Date: Tuesday, January 08, 2019 1:35:08 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Our comments on the subject DEIR are as follow:

1. We fully support the Community Full Preservation Residential Alternative proposal:

- It preserves the Historic Characteristics of this wonderful historic site.
- It provides 558 (or 744 in the Variant) housing units.
- It builds them in three years.
- It does not include the massive unneeded and unwanted Retail/Office/Commercial Complex that the Developer continues to insist upon.
- It does not create 8,000 retail auto trips per day.
- It does not generate approx. 15,000 tons of greenhouse gases.
- It preserves both the present childcare center and the existing café.
- It is compatible with the surrounding neighborhoods for character, style, scale and bulk.

1
(AL-2)

2. We vehemently oppose the Developers' destructive proposal:

- it brings excessive, unnecessary, unwanted and destructive noise, pollution, traffic and congestion to the neighborhoods surrounding 3333.
- It threatens the quality of life.
- It poses threats to pedestrian safety.
- It contributes to climate change.
- More retail is unneeded and unwanted. It will destroy our local businesses. We do not need the more than 100,000 square feet of retail, office, commercial space that the Developers Destructive Proposal calls for.

Subject: DEIR for 3333 California St.
Date: Monday, January 07, 2019 7:55:13 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Mr. Zuchi,

As a resident and homeowner of over 10 years and on the 3300 block of California St., I would like to express my opinion regarding the recent DEIR produced for the development of 3333 California St.

I am deeply concerned by the developer's request for 15 years to construct the project. This length of time makes me suspect an alternate motive, such as planning a new entitlement on an up-zoned property. Developers all over San Francisco appear to be using this tactic, create entitlements rather than build housing. The draft EIR considered construction in 3 to 5 years. The Community Preservation Alternate would complete construction in 3 years. If they must have 15 years then they need to agree that there can be no entitlement up-zoning trick. 1 (PD-1)

The DEIR really does not consider the impact on the neighborhood and in this aspect is woefully incomplete. Particularly in that no consideration is given to asking the residents to live in a construction zone for 15 years with streets being blocked by cranes and cement trucks, subjected to construction dust and pollutants, with construction noise dawn-to-dusk. Three to five years of this is asking a lot, 15 years is excessive particularity where everything across the street from the site and on all sides is essentially residential housing for families with children.

I fully support the Community Full Preservation Residential Alternative for 3333 California St. I support his plan because: 2 (AL-2)

- It preserves the Historic Characteristics of this unique and wonderful historic site.
- It provides 558 (or 744 in the Variant) housing units.
- It builds these units in three years.
- It does not include the Retail/Office/Commercial Complex (large and unneeded and unwanted but that the Developer continues to insist upon), and in doing so
 - avoids adding another 13,000+ retail auto trips per day to a city already overwhelmed by cars and short of parking
 - avoids forcing traffic and parking demand into the adjacent neighborhoods
 - avoids adding 15 kilotons per year of private transportation-generated pollutants to the cities environment
 - preserves both the present childcare center and the existing café.
 - better matches the character, style and scale of the surrounding residential neighborhoods

I strongly oppose the Developers Proposal as it brings excessive, unnecessary, unwanted and destructive noise, pollution, traffic and congestion to the neighborhoods surrounding the 3333 California site. The 15 year construction plan poses a long-term threat to quality of life in the neighborhood surrounding the site and may well suppress the values of surrounding properties 3 (ME-1)

for over a decade.

3
(ME-1)
cont'd

The Community Full Preservation Alternative will protect the small, family owned businesses in Laurel Village, Sacramento St. and Presidio Ave. A quick walk around these neighborhoods will clearly show the immense pressure these businesses are experiencing. More retail is unneeded and unwanted. It will destroy our local businesses. The Neighborhoods are well served by businesses at Laurel Village, along Sacramento St., Trader Joe's, City Center, along California St. A central reason for the developer to destroy the historic site is to add 100,000 square feet of Retail, Office, Commercial space. We do not need more empty store fronts. The retail world is struggling to survive the rise of the on-line world, adding more retail space will either sit empty or lead to a spiral of failures as the shops compete for a finite number of shoppers.

4
(AL-2)
5
(ME-1)

I fail to see how the CPMC development down the street, a Community supported plan that adds 270 housing units, found a way where the developer and neighbors agreed to have no retail. While at 3333 California, we are told the Retail/Office/Commercial is required against the overwhelming opposition of the surrounding residents.

Several recent studies have questioned the City's method of calculating auto trips, and the resulting chaos and congestion. Some have suggested the methodology is misleading. The methodology is certainly out of date (last updated in 2014) taking no account of how the Uber/Lyft/Chariot swarm alter the traffic landscape. I can see a lane on either side of California street blocked by Ubers double and triple parked. A disaster for those of us when we need to back out of our garages and a disaster for those who need the emergency vehicles that regularly use California St as a fast way across this part of town. This question is easily answered, provide the raw data and the calculations and the defined procedures that were used so that they can be independently verified. At present, the traffic analysis looks like a favor done for the developers where the neighborhood is expected to accept the high-level results blindly and just live with the results.

6
(TR-2)

The Planning Department proposes to reduce the number of retail parking spaces as a mitigation measure to reduce the significant traffic impact. This does not make sense. Are there published studies that support this idea and if so can we have the references? If the business served are to survive, eliminating parking does not eliminate auto trips it will actually increase driving time as cars cruise for a spot and it will push parking into the surrounding neighborhoods, or it will fill the streets with Ubers. All to the detriment of those that live in the neighbor. Whereas if parking is so bad as to drive away shoppers, we get the failure of the businesses. The Developers Proposal surrounds 3333 California with five major Loading/unloading zones for personnel pick-ups and loading. The Developers started by promising that all commercial loading would be done underground or on-site. Now the site is ringed with loading zones. These zones eliminate many parking spaces and create additional traffic congestion and pollution. Simply put, the traffic flow and the parking impacts do not seem to have been considered in a systematic fashion.

7
(TR-4)
8
(TR-10)

I apologize for sending this at the last minute and hope you will be able to take my comments into account when assessing the impact of the 3333 California development on our community

I-PAUL

and neighborhood. The city is changing, my hope is that this change is managed in a smart way that keeps the city a culturally vibrant place, and a fine place to live and raise a family.

with best regards Regards,

Phillip H Paul

Hello,

I am writing in support of allowing commercial development at the 'project'. That said, I am also in support of a smaller, scaled down project, but mainly and briefly - I believe **it is irresponsible to build residential units without the infrastructure needed to support those new residents.** Restaurants, grocery and other stores, laundry, banking, clothing, etc all need to be allowed with the new development. It seems to me, that the argument of traffic caused by the residential development, is lost if I have to get in my car to shop or have dinner.

I was born and raised in Laurel Heights, and I still own a 3 unit building on Mayfair at Laurel that my parents purchased new in 1949. I love the neighborhood, but it must evolve.

Although I am no longer a resident of Laurel Heights proper (west from Presidio/Masonic to Spruce and south from California partway to Geary), I do live nearby on Jackson near Lyon and I would love to see more commercial in our neighborhoods to support us.

Regards
Don Piombo

Hello

I own property in Laurel Heights on Mayfair Dr but live nearby on Jackson and Laurel. I want to voice my concern that I believe building residential units only, with no underlying commercial support for those residents is irresponsible. I cannot imagine building 588 (or 744 alternatively) residential units with no banking, grocery, cleaners, gym, restaurants, café, shops, etc to support those people. The current 'Laurel Village' cannot support that many new residents. Those residents will get in their cars and drive to other neighborhoods - exacerbating traffic congestion. Personally, I think it's irresponsible to build that many units with no support for the residents living in them.]

Regards Don Piombo

Dear Commissioners:

I attended the December 13th meeting regarding the Environmental Impact study regarding the 3333 California Development Project. I was very impressed with the commitment and attention which each of you showed to the study of the various aspects of the proposal, and a someone who lives directly across the proposed project, I am reassured that you will carefully examine all the impacts of the proposed project.

To re-iterate the opinion of many of those who spoke on December 13th,

Intense construction: The construction period should not be allowed to take too long. The developer's estimate of a decade or more of construction is ridiculous. ^{1 (PD-1)}
Traffic: Those of us who live on Presidio Avenue sometimes have to wait up to 5 minutes during morning peak periods before someone is kind enough to allow us to pull out of our garages, and the rush of cars from Pine Street onto Presidio Avenue is dangerous as it presently stands, as cars careen without regard to safety. ^{2 (TR-7)}

Environmental impact: Noise level, increased traffic and pollution. ^{3 (GC-1)} What is the impact on the 560 Presidio Building's structure vibrations and ^{4 (NO-2)} water-table while digging the foundations are dug and concrete poured? ^{5 (GEO-1)}

Greenspace: The loss of what little green space that exists on Presidio Avenue, is a loss to all of us who have come to use it as a mini park and enjoy the views of the redwoods (which the proposed project will hide from public view). ^{6 (PD-3)}

Transportation: There are not enough parking spaces for the proposed number of units provided in the plan. As it now stands, street parking is impossible. ^{7 (TR-11)}

MUNI is not able at this time to guarantee that enough buses will be supplied to take the load of 1,000 residents suddenly appearing in the Laurel Heights area. ^{8 (TR-9)}

If Uber or Lyft cars are used, those cars picking up and dropping passengers will simply add to the already intense traffic on Euclid and Presidio Avenues as well as California Street. ^{9 (TR-2)}

Historical building and design of proposed structures:

The design for the proposed buildings is of the utmost banality and has no relevance to the city's style. It does not reflect the style and character of either the neighborhood or of the city's tradition. One can argue that the present building has no historical value, but it does represent a style of a period which is has gained appreciation in this present century and while not being on a par of a Mies Van Der Rohe building, it makes more of a statement than the proposed ensemble of buildings which do not reflect any style. ^{10 (ME-1)}

For all these above reasons, I urge the Commission to consider I strongly urge the Commission to consider the Community Full Preservation Residential Alternative for 3333 California. The proposed plans submitted by the developers, ^{11 (AL-2)}

Respectfully submitted.

Date: Wednesday, January 02, 2019 8:55:30 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I live behind Laurel Village on Spruce Street and I am very concerned about the scale and characteristics of this project.

1
(ME-1)

I completely understand the desirability of adding additional residential units to the neighborhood and I applaud the conversion to residential. I do not like the way the project looms onto California Street - the set back and brick wall of the current site are very appealing to me. I also wish it didn't cut into any of the green space at Laurel and Euclid as I have spent many a moment up there with neighbors watching Blue Angels and astrological wonders like lunar eclipses. Or just lying on the grass. I do appreciate the idea of public spaces and the walk-through's and overlooks and hope that they live up to feeling public.

However, so much of this project has the potential to really destroy the characteristics of the neighborhood. Do we really need more retail? Is the incredible charm and usefulness of the Laurel Village shopping center going to be destroyed by this? The California Street construction looks more like some of the newer SOut of market neighborhoods than Laurel Heights/Inner Richmond.

2 (PD-1)

The numbers are very concerning. The timeline 7-15 years seems really long. Over 700 new housing units seems high for the neighborhood (isn't there a variant with less?). I really don't like the idea of adding more industry (commercial, offices etc) to a residential neighborhood. The hospital, JCC and small shops that are currently in the area provide a manageable amount of traffic as will new residences. I really don't imagine that the neighborhood can manage more than a few additional services (coffee shop, postal/mail service type amenities) to accommodate the new housing units. I hope to God there is nothing that causes the 5& 10/Ace Hardware, Cal-mart or Bryans to close! These are true neighborhood institutions that have helped create the ambiance of the neighborhood for over half a century.

1
(ME-1)
cont'd

I can hardly bear the idea of a prolonged construction project on that scale depressing the neighborhood. I walk, transit and bike everywhere and cannot imagine a decade of construction to negotiate (I also frequently lock my bike up in the current Walnut street parking lot to use ZipCar that are parked there and I will really miss that!!!)

2
(PD-1)

Scale back! Concentrate on compatible housing and open space! Keep our neighborhoods unique in there character!

1

Lei Sushi
Senior Environmental Planner

Dear Lei Sushi:

I am a longtime resident in the Laurel Heights area.

I strongly support the Community Full Preservation Residential Alternate for 3333 California Street Project.

It preserves the historic characteristics of this wonderful site.

It preserves the outdoor open space frequently enjoyed by residents in the neighborhood.

It includes the 558 residential units.

It can be built in 3 years with only 4 additional new buildings.

It does not add a retail or commercial which is not needed due to the local Laurel Heights Shopping Center (4 banks, 2 supermarkets, 2 clothing stores, 2 coffee shops, a large variety store, 3 restaurants, Walgreen's drugstore). TraderJoe's and Target are one block from the building site.

This plan does not markedly increase the amount of noise, air pollution, and congestion as the Developers' Proposal.

I strongly oppose the Developers' Destructive Proposal.

The proposed additional 11 buildings will be squeezed onto the site resulting in a dense, haphazard, claustrophobic atmosphere not in keeping with the character of the surrounding neighborhood and providing potential opportunity for crime.

The proposed higher stories with heights to 86 feet or more will create shadows to neighboring residents and are out of proportion with the surrounding area.

The proposed 15 year length of construction time is unreasonable and it is unconscionable to expect the neighborhood to be subjected to demolition, noise, construction, air pollution, traffic and congestion for that length of time.

This proposal will create major traffic congestion at the enter/exit, parking and loading locations. Presidio and Masonic Avenues are already bumper to bumper car jams and also at Laurel Street near California Street.

This proposal will destroy Laurel Hill with the excessive demolition and excavation including removal of serpentine rock which has asbestos. There have been no mention. Of plans of management of this toxic substance.

Thank you for considering my comments and suggestions.

Sincerely,
Ann Prato

CC: Stefani, Catherine (BOS), richhillissf@gmail.com, Melgar, Myrna (CPC)

I live in the neighborhood affected by any development at 3333 California Street. I support the Community Full Preservation Residential Alternative for 3333 California because:

- It preserves the Historic Characteristics of this wonderful historic site.
- It provides 558 (or 744 in the Variant) housing units.
- It builds them in three years.
- It does not include the massive unneeded and unwanted Retail/Office/Commercial Complex that the Developer continues to insist upon.
- It does not create 13,000+ retail auto trips per day.
- It does not generate approx. 15,000 tons of greenhouse gases.
- It preserves both the present childcare center and the existing café.
- It matches the surrounding neighborhoods for character, style, scale and bulk.

I strongly oppose the Developers Proposal as it brings excessive, unnecessary, unwanted and destructive noise, pollution, traffic and congestion to the neighborhoods surrounding 3333 California; it threatens the quality of life; it poses threats to pedestrian safety; it contributes to climate change.

The Community Full Preservation Alternative will generate ZERO retail auto trips to 3333 as opposed to the 12,000-15,000 retail caused the Developers Destructive Proposal.

Thank you,
Sandra Price

Subject: IMPORTANCE OF PRESERVING THE HISTORIC PROPERTY AT 3333 CALIFORNIA Street, San Francisco, CA

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

San Francisco Planning Commissioners:

As a concerned citizen of San Francisco and a resident of Laurel Heights we are very concerned about the developers totally ignoring the concerns of people who live in the neighborhood and their NON-RECOGNITION OF THE HISTORIC SIGNIFICANCE OF THIS PROPERTY.

1. In an earlier public meeting the developers **did not even mention that 3333 California Street, San Francisco, CA, is of Historic Significance.**

2. You should support the Neighborhood Full Preservation Alternative because:

A. It has the same number of residential units as the project (558 with a 744 variant).

B. It would retain the character-defining features of the historically significant landscaping including the beautiful Terrace designed by Eckbo, Royston & Williams and the majority of the 185 mature trees that would continue to absorb greenhouse gases.

It is important for you to know that people from our neighborhood and other neighborhoods regularly use the green space on this site for recreation playing with their dogs, having impromptu picnics and simply visit with one another. This **SPACE IS VERY IMPORTANT TO OUR COMMUNITY.**

C. We support using all the space for housing which is affordable and can accommodate the diverse population of our City. By using all the space for housing, some units would be large enough for middle-income families. We do **not need retail** space as that would compete with the merchants at Laurel Village Shopping Center.

D. Any construction to re-formulate this space needs to be built in approximately 3 years rather than the 7-15 years the project applicant wants.

1
(CR-1)

2
(AL-2)

3. We recommend that some of the 44,306 square feet of retail in this Alternative be used for 24 residential units so the Alternative has the same number of residential units as the proposed project. This Alternative would have retail along California Street but not also at Euclid, which the proposed project would have. Additionally, the applicant should explain the exact type of replacement windows proposed and why the proposed "new rooftop addition" that would distinguish it from the original building yet be compatible with Midcentury Modern design principles.

3
(AL-3)

4. The proposed project as designed by the developers is an unattractive mass of nondescript buildings crammed onto the site with concrete pathways and **ALMOST NO GREEN SPACE** which is vital for our City as more and more of it seems to be cement and concrete.

4
(ME-1)

5. There is **no need to destroy this historically significant site** because alternatives are available which will achieve housing production by building on the parking lots.

5
(AL-1)

Thank You!

Zarin E. Randeria
38 Lupine Avenue
San Francisco, CA 94118

From: [Zarin Randeria](#)

Subject: Planning Commission Meeting on Tuesday January 8, 2019
Date: Saturday, January 05, 2019 7:08:07 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

HAPPY NEW YEAR!

The developer's request for 15 years to construct the project is suspect. This looks like a plan to sell a new entitlement on an up-zoned property. Developers all over town are selling new entitlements rather than build housing. Alternatives analyzed in the Draft EIR would be built in 3 to 5 years. The Community Preservation Alternative would be built within three years.

1
(PD-1)

So, the FIRST question to ask at Tuesday's Meeting is WHY. Are they totally incompetent or are they blowing smoke?

I fully support the Community Full Preservation Residential Alternative for 3333 California Street, San Francisco, CA because:

2
(AL-2)

It preserves the Historic Characteristics of this wonderful historic site.

It provides 558 (or 744 in the Variant) housing units.

It builds them in three years.

It does not include the massive *unnneeded* and *unwanted* Retail/Office/Commercial Complex that the Developer continues to insist upon.

It does not create 8,000 retail auto trips per day, and,

It does not generate approx. 15,000 tons of greenhouse gases.

Thank You!

**Sincerely,
Zarin E. Randeria
Community Resident**

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Mr. Ken Zushi,

I hope this note finds you well!

I write in order to express my support for the Community Alternatives which promotes reasonable scale residential development within our quiet Victorian neighborhood and my opposition to the Developer's destructive proposal which has the possibility to allow big box retail the neighborhood where local family businesses are valued rather than undermined by large scale retail. We don't need another big box retailer such as Whole Foods/Amazon with the lovely, family owned Brian's Market and Cal-Mart less than a quarter-mile away. I would think that San Francisco, as a remarkable jewel in the Bay Area crown, would prioritize small scale, historic, and architecturally consistent development over buildings which favor massive, brutalist, concrete, steel, mirrored glass structures commonly found in Houston or Manhattan.

1 (AL-2)
2
(ME-1)

A 15 year construction schedule is equally out of proportion as well. There are three SOMA buildings, with at least 500 apartments, which were completely constructed in less than three years. These are The Paramount building, the Nema building, and the two Rincon towers. All of these projects had much more difficult site access conditions the relatively open site on Laurel Hill. San Francisco has highly competent construction firms willing and able to build 550 apartments in less than three years.

3
(PD-1)

A 15 year development period has practically 0 to do with providing housing for families which might actually need it. I suspect it has much more to do with developers hedging their financial bets over fluctuating market valuations, pro-forma spreadsheets, and the ability to sell future development rights rather than to provide housing for people.

Again, I express my support for the Community Alternatives which promotes reasonable scale residential development and my opposition to the Developer's destructive proposal which could decimating the peaceful Victorian neighborhood where we appreciate the quiet.

4
(AL-2)

Thanks for your time,

Kelly Roberson

To SF-

I strongly oppose the currently proposed project at 3333 California. I live three blocks away and greatly dread the size and scope of this project and the resulting disruption it will cause during the build as well as forever after with the enormous increase in traffic. Not to mention it doesn't at all match the neighborhood; I was actually shocked when I saw the approved design. 1
(ME-1)

I support the Community Preservation Alternative. I believe it addresses my concerns. It will provide new housing and retail but with less negative impact on the surrounding community. 2

Subject: 3333 CALIFORNIA--OPPOSITION AND SUPPORT FOR ALTERNATIVE
Date: Wednesday, January 02, 2019 10:53:25 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Mr. Zushi,

The developer's request for 15 years to construct the project is suspect. This looks like a plan to sell a new entitlement on an upzoned property. Developers all over town are selling new entitlements rather than build housing. Alternatives analyzed in the Draft EIR would be built in 3 to 5 years. The Community Preservation Alternative would be built within three years.

1
(PD-1)

I fully support the Community Full Preservation Residential Alternative for 3333

2
(AL-2)

It preserves the Historic Characteristics of this wonderful historic site.

It provides 558 (or 744 in the Variant) housing units.

It builds them in three years.

It does not include the massive unneeded and unwanted Retail/Office/Commercial Complex that the Developer continues to insist upon.

It does not create 13,000+ retail auto trips per day.

It does not generate approx. 15,000 tons of greenhouse gases.

It preserves both the present childcare center and the existing café.

It matches the surrounding neighborhoods for character, style, scale and bulk.

I strongly oppose the Developers Destructive Proposal as it brings excessive, unnecessary, unwanted and destructive noise, pollution, traffic and congestion to the neighborhoods surrounding 3333; it threatens the quality of life; it poses threats to pedestrian safety; it contributes to climate change.

3
(ME-1)

The Community Full Preservation Alternative will generate ZERO retail auto trips to 3333 as opposed to the 12,000-15,000 retail caused the Developers Destructive Proposal.

4
(AL-2)

The Community Full Preservation Alternative will protect the small, family owned

businesses in Laurel Village, Sacramento St. and Presidio Ave. A quick walk around these neighborhoods will clearly show the immense pressure these businesses are experiencing. More retail is unneeded and unwanted. It will destroy our local businesses.

The Neighborhoods are well served by businesses at Laurel Village, Sacramento St., Trader Joe's, City Center, California St. etc. we do not need more, more, more.

We do not need the more than 100,000 square feet of Retail, Office, Commercial space that the Developers Destructive Proposal call for.

One of the reasons the Developer destroys this historic site is to create enough space for this unneeded and unwanted Retail/Office/Commercial (ROC) nonsense.

The CPMC development, a Community supported plan by the way, adds 270 housing units and the Developer and neighbors have agreed to have no Retail. Why is 3333 being treated differently by forcing unneeded and unwanted ROC (Retail/Office/Commercial) against the overwhelming opposition of the surrounding residents?

In a recent Petition Drive at Laurel Village over 800 residents signed the Petition opposing the Developers Full Destruction and Massive ROC plan and supporting the Community's residential Alternative. Three people opposed it the Petition. These signatures were gathered in less than 8 hours. In the Petition Drive the 800 signatories opposed rezoning 3333 and also opposed revoking Resolution 4109, an agreement between the City and the surrounding neighborhoods. "A deal is a deal" was how everyone felt.

The Community Full Preservation Alternative will already be more than twice as dense as the surrounding neighborhoods so any rezoning is uncalled for, unneeded and unwanted. These signatures are in the hands of the District 2 Supervisor.

The Developers Destructive Proposal is well named. Based on current estimates, it will generate approx. 15,000 tons of Greenhouse Gases (GHG) and the many associated and far more destructive climate changing gases that accompany the primary CO2.

The Community's Full Preservation Alternative will, by comparison, generate approx. 4,000 tons of GHG.

The Community Alternative mitigates the GHG generated by more than 70 percent, providing a dramatic reduction in a time of climate change.

The GHG calculation is our best estimate. Neither Planning nor the Developer will provide the volume of concrete or weight of steel required. The Developer claims to have built many buildings and many complexes, Planning claims to oversee thousands of such projects and yet no one can even make an educated estimate as to the concrete and steel required.

Could there be something they want to conceal from the public?

4
(AL-2)
cont'd

5
(PP-1)

6
(GHG-2)

Much like they concealed the Historic nature of 3333 for over 4 years?

We pollute less and protect the environment: the Community Alternative will ALWAYS generate less than one third the GHG generated the Developers Full Destructive Alternative.

We destroy less: we preserve the historic site.

We build less: 4 new buildings versus the Developers' 11 new buildings plus creating two tall towers out of the existing main building.

One single level underground parking garage for 450 spaces versus a complex of parking garages, some of three levels, for 896 spaces;

We excavate less: 90,000 cubic yards (9,000 dump truck loads) versus 288,000 cubic yards (32,000 dump truck loads);

We preserve and protect our local businesses and shops: no added unwanted and unneeded and neighborhood destroying family-owned or small retail or business;

We better protect the health and well being of everyone: no 13,000+ auto trips to pollute the air, generate the noise, put pedestrians at risk, unload trucks on the streets, etc. **the Community's solution will always be three times better than the Developers solution.**

The Developers Destructive Proposal not only destroys the Historic Site it destroys our climate. Concrete is a major contributor to GHG, in fact the GHG generated by the manufacture of cement and steel equals the GHG generated by traffic. **And, 95% of the cement used in the Bay Area is manufactured in the Bay Area so the GHGs are OUR GHGs.** The cement is not made somewhere else in the country it is made here.

We fully support housing:

The Community has supported the Lucky Penny (95 units), CPMC (270 units) and now 3333 (558) units. Over 1,000 units in a half mile radius.

So please don't offend me and misrepresent the Community's position. We support housing and history; we oppose unneeded, unwanted and unnecessary Retail and mindless destruction of a historic site.

AND we provide housing in as much as 12 years sooner than the Developers Full Destruction Plan does.

7
(AL-2)

8
(ME-1)

The YIMBYs should be 100% in favor of the Community's Full Preservation plan and if they're not then they are being grossly hypocritical.

Recent studies have shown that the City's method of calculating auto trips, and the resulting chaos and congestion is deeply flawed, to the point of being misleading.

At the time the VMT (Vehicle Miles Travelled) methodology was developed, SF CHAMP last updated Nov. 2014, the Transportation Networking Companies (TNCs) -Uber/Lyft/Chariot etc. were still in their infancy and so the VMT methodology fails to account for their incredibly disruptive impact. The TNCs average, conservatively, in excess of 170,000 trips per day in San Francisco. Studies also show that TNCs increase passenger trips by almost 10%.

There are about 2,000 taxi medallions in San Francisco so TNCs do not just replace taxis they overwhelm them by orders of magnitude.

Also, implementation of the VMT methodology is not mandated until 2019 but as Planning and The Developers were unable to explain away the 13,000 Retail Auto trips generated by the existing, and still acceptable, Level of Service methodology, they implemented the VMT methodology with "refinements." In much the same way as they calculated on the "direct" GHG and totally ignored the "indirect" even though required to do so by their own criteria. So, if you don't like the answer, change the question.

Planning calculates the Developers Destructive Proposal using VMT methodology will generate approx. 5,800 total auto trips for 3333 for Retail + Office + Residential which is an entire bogus number based on questionable assumptions, such as "The SF Guidelines **do not provide a specific methodology to** assess the number of trips....." Planning has therefore, with no supporting documentation or analyses, applied "appropriate refinements to the standard travel demand...." Rather amazing that these "refinements" all work in the Developers favor.

Nowhere in these "refinements" have THCs been taken into account!

Oh, by the way, the "refinements" used were created for The Mission Rock Project at Seawall Lot 337 and Pier 48 as well as the Pier 70 Mixed Use District Project!

Seawall Lot 337 & Pier 48 summary:

Project type Mixed-use, open space, residential, commercial

Project area Approx. 28 acres

Proposed building area 1.3 – 1.7 million sf commercial; 750,000 - 1.5 million sf residential; 150,000 – 200,000 sf retail, 850,000 sf structured parking

Pier 70 summary: "The 35acre waterfront mixed-use neighborhood will provide housing, waterfront parks, artist space, local manufacturing and rehabilitated historic buildings." Altogether the redevelopment covers 35 acres and up to 3,025 new units of housing—the exact count is still in flux, with a low end of 1,645—and its roots stretch back a decade to a 2007 port plan.

WOW! What remarkably similar projects to 3333. What “refinements” could possibly be comparable. Simply bogus.

9
(TR-2)
cont'd

The DEIR consistently attempts to misrepresent and mislead the public. It is incomplete, incorrect, inaccurate and invalid and NOTHING demonstrates this better than the above.

Under their previous, Level of Service, methodology they would have calculated 13,000 retail trips alone. Adding Office and Residential would generate a total of approx. 16,000 auto trips. Somehow we have miraculously reduced auto trips by almost 66%!

I think it safe to say that the numbers presented by Planning are simply bogus. VMT will generate fewer trips, especially since there are no criteria for calculating the impact of TNCs, but there is nothing in the legislation that remotely suggests it would generate 66% less trips! This entire section is suspect and Planning must explain this profound discrepancy. As noted above, nowhere are the TNCs incorporated into the calculations.

All of which renders the Traffic Analysis incorrect, incomplete, inaccurate, invalid.

The Planning Department proposes to reduce the number of retail parking spaces as a mitigation measure to reduce the significant traffic impact. This is a false assumption and shows the extent to which the Developer and Planning misunderstand, or simply choose not to understand, the impact that the TNCs have.

Planning’s mitigation measure is a stone age solution to a digital age problem. How will many people respond to a perceived lack of parking? They’ll simply call a TNC and go anyway. **Eliminating parking won’t eliminate auto trips it will actually increase auto trips.** A UC Davis study shows that people make MORE trips because of TNCs than if they had to use their own cars or take public transit. People now make trips they would never have made in the past – by any mode of transport. The VMT methodology used by the Planning Department fails to account for the impact of TNCs.

Not only does Retail, using the LOS methodology, contribute over 80% of the 16,000 total auto trips, all these auto trips generate GHG. And, the use of TNCs makes the GHG situation worse. Lets assume I want to go to 3333 by auto. I could personally drive 2 miles to get to the 3333 Retail/Office/Commercial complex, park, then shop or do business, the drive 2 miles home for a total of 4 miles. That’s a very conservative calculation as the average trip for TAZ 709, 3333 area, states an average trip of 7.9 miles! Data shows that many more people will use a TNC rather than drive their own cars. So now the TNC has to come to me, assume 2 miles, and take me the 2 miles to 3333 for a total of 4 miles. When I go home the same thing happens or an additional 4 miles for a grand total of 8 miles. Twice the GHG generated per trip! So, not only do we have 13,000 retail auto trips to deal with we have many of them generating significant more GHG per trip! Planning needs to do a comprehensive analyses using credible data and a credible methodology so that the public knows the extent of the GHG generated. We are in a crisis with climate change and the methodology shown in the DEIR fails to address this crisis credibly. In fact climate change is more of a threat to the future of San Francisco than housing is and it isn’t being addressed accurately in the DEIR.

10
(GHG-1)

The Developers Destructive Proposal first demolishes and destroys the Historic

11
↓ (CR-2)

Characteristics and nature of 3333. Then it virtually destroys all of Laurel Hill itself, with the exception of a small sliver at the southwest corner, by excavating the entire site to depths ranging from 15 to 40 ft. The only area that isn't excavated is under a portion of the existing building! Not sure how they missed that opportunity! Removal of the demolition debris and the excavated soils will require approx. 32,000 dump truck loads, all of which have to pass through and pollute our neighborhoods. By contrast, the Community Full Preservation Alternative generates approx. 9,000 dump truck loads, one quarter as many! After the demolition the Developer has to then deliver all the new materials required to rebuild what they demolished plus 11 new buildings. How many large truck loads, concrete truck loads, etc. will this require? The Community Alternative only builds 4 new buildings so like the GHG and the debris/soil removals the Community Full Preservation Alternative requires far fewer, probably about one third, or less, as many delivery loads. A quick look at the turning radii of the trucks, ie. SU-30 Circulation Exhibit and WB-40 Circulation Exhibit clearly demonstrates that all the deliveries during destruction, demolition, excavation, construction and long term operations pose significant threats to traffic safety, pedestrian safety, congestion and pollution. In fact, as WB-40 shows large trucks cannot safely navigate 5 of the 6 major intersections surrounding the site. There are no plans to mitigate this profound situation which will essentially exist from the beginning of the project ad infinitum. Planning and the Developers have simply washed their hands of the problem a la Pontius Pilate.

The Community Full Preservation Alternative will preserve most of the mature trees at 3333, some of which date back to the time of the Laurel Hill cemetery whereas the Developers Destructive Proposal will attempt to spare approx. 4.

The Developers Destructive Proposal surrounds 3333 with five major Loading/unloading zones for TNCs and Freight traffic. Initially the Developers promised that all the unloading would be done underground or on-site and now the site is ringed with these zones! These zones not only eliminate approx. 40 parking spaces but they will create additional traffic congestion and pollution. So we have a ring of loading zones in addition to the inevitable double parking that occurs for deliveries and drop-offs.

Thank You,

Laura Rubenstein

Dear Planning Commission,

We are writing as neighbors of 3333 California Street for over 30 years to respectfully request the planning commission consider the Community Full Preservation Alternative as opposed to the developers harsher proposal.

1
(AL-2)

While we support the need for housing and inevitable change, we are convinced a thoughtful approach can benefit everyone. The thought of 15 years of construction, removal of existing beneficial trees and all the ensuing disruption and environmental impacts are a heavy price to pay. We are hopeful that the planning commission can be consensus builders while still fulfilling their mission. The Community Full Preservation Alternative can be completed within 3 years.

2 (ME-1)
3
(PD-1)
4
(AL-2)

As natives of this wonderful city we look forward to this iconic space being utilized in the best possible way.

Sincerely,

Jim, Colleen, Neil, Julia and Seamus Ryan

Date: Tuesday, January 08, 2019 3:13:19 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

I am yet another citizen very concerned about and object to the current developers' development plan. I understand it is currently scheduled to take fifteen (15) years to complete. Apart from the incredibly drawn out length [Even the great wonder of the world, the Great Pyramid in Giza, supposedly took only twenty years. <http://www.unmuseum.org/mob/kpyramid.htm>] of such a project, [the negative effects (such as dust, noise, parking, danger to children, seniors and others), such a development does not fit within the natural, historic, familial, social and aesthetic contours of our community. Not to mention the environmental risks.] Wouldn't such a project be more appropriate for Geary Blvd or similar streets. The increasing closing of retail and office premises due to online shopping and work-at-home jobs makes such proposed uses doubtful even fanciful, perhaps to be replaced by even less human friendly high-tech data or A.I. centers by the time occupancy is permitted. I and other community members propose a smaller development (the "Community Full Preservation Alternative" or CFPA) that will still add lots of needed housing but take only three (3) years to complete. The CFPA does not include the massive unneeded and unwanted retail/office/commercial complex that the Destructive 3333 developer continues to insist upon. It does not create outmoded 13,000+ retail auto trips per day. It does not generate approximately 15,000 tons of greenhouse gases. The CFPA preserves both the present childcare center and the existing café., a source of deep, positive social capital in our community. It matches the surrounding neighborhoods for character, style, scale and bulk. I strongly oppose the Destructive 3333 Project as it brings excessive, long-term, unwanted and destructive noise, dust (on top of the recent lung-damaging smoke from the wildfires), other pollution, traffic and congestion to the neighborhoods surrounding 3333; it threatens the quality of life; it diminishes community members socializing; it poses threats to pedestrian safety, especially the more fragile members of our community; it contributes to climate change; it will leave a bad taste in the mouth of those who remain in the community or are forced to leave due to illness; and worse.] The Community Full Preservation Alternative will generate ZERO retail auto trips to 3333 as opposed to the 12,000-15,000 retail caused the developers' Destructive 3333 Project.

Thank you for your time and consideration of this better alternative that can be done in 12 less years with less destruction, obstruction in and around the area and yet preserve the lifestyles of surrounding neighborhoods.

Thank you, Ms. Dwyer.

I really appreciate you taking the time to write back with the info I requested. Thanks. I only have the Notice of the Public Hearing on December 13th and have not really followed the twists and turns of this project.

So roughly speaking each unit in the 2-unit townhouses could approximately be on average approximately 4,200 square feet....which I guess means that the remaining 544 non-townhouse units could be on average approximately 1,400 square feet?

Please consider this email as Comment on the DEIR if possible.

Have a nice Thanksgiving.

Sincerely,

Georgia Schuttish

Hi Kei, Julie, et al,

I had written Julie last summer with feedback / concerns about pedestrian safety near 3333 California project. I'm writing again because I'm concerned that I haven't heard our comments addressed -- at least not from what I've read in the report. It's possible I've missed it, as it's a long report! So apologies if so. But I didn't see pedestrian safety in the nearby streets as a known area of concern that was addressed, and what I did see mentioned that there was no impact.

1
(TR-8)

Some background: My wife and I live at the top of Pine street across from the proposed project for 3333 California. We're generally supportive of the project (worth noting, given the community groups that oppose it!). We like the extra people it will bring to the neighborhood, and businesses, and think it will help make the community more vibrant. We generally like the proposals' access pathways and retention of some of the park green space / trees and would emphasize this importance to us, and the importance to us of the space being a potentially valuable addition to the community as a gathering point if developed appropriately (today it is like a gated community, with a couple grass areas on the edges). We were unable to attend the EIR feedback process.

2
(ME-1)

We specifically are worried about pedestrian safety in the area. We believe the conditions for pedestrian in this area to already be hazardous. It's important to note that this is NOT the fault of the developer or their proposal! But, given that improvements are to be made, and the project will increase the number of pedestrians, we think it's wrong that the following conclusion was drawn:

3
(TR-8)

"TR-7: The proposed project or project variant would not result in substantial overcrowding on public sidewalks, **create potentially hazardous conditions for pedestrians**, or otherwise interfere with pedestrian accessibility to the site and adjoining areas."

The project won't create worse conditions for pedestrians. However, the conditions *today* are hazardous, specifically at the top of Pine street at Presidio, the intersection of California and Presidio, and the intersection of Euclid/Masonic/Pine alongside the new development. I am regularly almost hit by cars flying through these intersections. Often with a stroller or dogs with me.

Some more specifics:

- (Study area 8) The intersection of Pine and Presidio is one of the most dangerous in the city for cars alone -- but even worse for pedestrians, who try to avoid it right now, as drivers coming up the hill cannot see before turning left. There is no cross walk on the other side,

because it is dangerous, but no barriers and pedestrians regularly cross here still at risk of their lives. This project WILL increase the frequency of pedestrians crossing this intersection and something should be done to improve it. Study area 11 (Bush st) has similar problems but slightly different.

- (Study area 10) The intersection of Euclid/Pine/Masonic is equally hazardous for those crossing in various ways; pedestrians crossing from the complex are blocked from view by parked cars for cars coming up the hill at high speed -- who don't slow down, as the corner is today a yield. Will the project address safety there? This is a KEY walking route to Trader Joes, which the proposed project makes into an even bigger walking path. I've nearly been hit twice in the past two months. For example, the parking should be removed well back from the cross walk so cars have visibility, and it should have speed bumps at a minimum before the yield.

- (Study area 6) The intersection of California and Presidio is WAY too short of a light & cross-walk for pedestrians, and because of the three-way nature of the light is almost impossible to get across safely, as drivers who are not used to the three-way system regularly assume it is a normal 2-way, and turn when pedestrians have a cross walk (because the light is red). The traffic that doesn't stop turning right in front of the credit union through the turn lane is even more dangerous. This should be stop sign, if it isn't removed altogether (Julie Moore told me that the muni buses need it for turning radius). Or implement a 4-way walk with no cars, like exists downtown at very busy intersections. Notably, our son attends school at the JCC, so we along with many families are regularly crossing these intersections with small children. Elderly adults are in the facility next door, and I frequently have to help elderly individuals across the street; it's impossible to get across in time.

These study areas and the pedestrian characteristics were discussed in 4.C.21, but I explicitly do NOT feel like the concerns have been mitigated / addressed. It may not be the developers responsibility to fix them, but someone needs before for the project to make them substantially worse and someone dies!

The Vision Zero studied the areas that *currently* have high risk data for pedestrian injuries. I'm asserting that the pedestrian behavior will SHIFT because of the project, because there will be people living or walking to the new retail locations and pathways, and the intersections they will use are hugely dangerous. So even though they don't have a lot of traffic now, they WILL and it will be dangerous.

* I'll add that one of the high risk areas in Vision Zero is California St between Lyon and Scott; it's high risk because all of the mapping software now routes drivers this way to avoid California and Presidio. And so they come flying through a very residential neighborhood trying to get to Bush or Pine. :(Wasn't a problem a decade ago.

I should note that I provided some details on these concerns to Julie Moore (see thread included below) in the summer -- although some of my notes are new -- so even though I'm late on the comment period, I want to register that I had already provided the input -- and don't feel like I've heard it addressed in this report.

Thanks,
Nathan

Hi Nathan,

I'll share your comments with the team. The sponsor originally proposed changes at the California/Presidio intersection but SFMTA did not agree with the changes due to the turning radius of Muni buses.

Subject: Re: 3333 California pedestrian safety concern/questions

Hi Julie,

Thanks for the fast reply!

I saw the proposed changes for Presidio/Pine/Masonic. I think removing the right turn lane is smart and will slow down traffic in a good way. However, Pine's traffic itself is still incredibly dangerous. The garage egress directly onto Masonic and Presidio will be incredibly dangerous given how traffic flows currently in this area. The proposal also destroys an existing open green space that has been present in the neighborhood for (as my neighbors have expressed, I don't know the exact time frame) decades, if not a half century or more.

Additionally, I think ignoring California and Presidio because they're not part of the direct development is very naive if that's the city's perspective. These new residents will impact ALL nearby intersections with both cars and pedestrian volume, and these are some of the most dangerous intersections in San Francisco. So just because the fire union is it's own building, does not mean the impact should not be considered. I feel similarly about the intersection of Bush and Presidio, which also has incredibly high accident and pedestrian risk today.

5
(TR-7)

6
(ME-1)

7
(TR-8)

I'd like to see the city take STRONG action in these neighboring streets & intersections to assure us as residents that our lives will not be put in danger by the increase in traffic, congestion, and pedestrians. Our families are at stake; we're not safe today, and this project WILL make our lives more at risk.

Nathan,

Thank you for your comments. The Initial Study, with a detailed project description, is available online at:

http://sfmea.sfplanning.org/3333%20California%20Street%20Initial%20Study_4-25-18.pdf

Please refer to p. 64, Figure 28A for proposed changes at the Presidio/Pine/Masonic intersection. The project would remove the right turn lane from Presidio onto Masonic and create a public plaza at that corner. There is a rendering of this on p. 28. No changes are proposed for California and Presidio (the Credit Union building is not part of the project). California and Walnut will continue to be an entrance to the project site.

Transportation impacts of the project will be analyzed in the Draft Environmental Impact Report to be released this fall.

Subject: 3333 California pedestrian safety concern/questions

Hi Julie,

My wife and I live at the top of Pine street with our two children, and we've been watching the proposed project at 3333 California with interest -- general support -- but concerns about pedestrian safety with the likely increase in traffic.

I know we missed the May 25th deadline for formal comments, but I'd like to understand what the project's sponsors and the city intends to do about our already very dangerous intersections at Pine & Presidio, California & Presidio, and California & Walnut. I've been nearly hit multiple times in each intersection, and witness near monthly crashes on Pine and

8
(TR-8)

Presidio, where the steep hill and timed fast lights prevent cars from fully seeing pedestrians and other traffic while gunning for the light or to turn into the cross walk. There is also no cross walk at present across Presidio to the proposed development.

8
(TR-8)
cont'd

We like the idea of more residents in the neighborhood, and the ability to generally add density to support more local businesses, and believe that these buildings and land are under-utilized and would be a boon to the neighborhood. But. The current situation is already dangerous, and with the new garages, cars, and residents and businesses, the situation is poised to be disastrous.

9
(ME-1)
10
(TR-8)

Please please please tell me the city has plans to improve pedestrian safety in enormous ways. I'd love to review any such plans, or provide some constructive input as a local resident.

Thanks in advance!

Best,
Nathan

Kei Zushi, EIR Coordinator
Planning Department
1650 Mission Street , Suite 400
San Francisco, CA 94103

Dear Mr. Kushi,

I have read the EIR and find that almost nowhere does it address the effect on people. People make their homes in the neighborhood, they raise children or retire in the area, they work nearby, and they are ignored in this report. Further, the EIR does not address the cumulative effect on people's everyday lives of all the incremental changes from construction and operation of the Project on their general wellbeing. There is a tipping point when a little more of everything—noise, air pollution, traffic, general congestion and crowding—makes a place substantially less livable. I live 1 ½ blocks east of the Project on the north side of California Street.

1
(GC-1)

- A. Street view greenery and open space. The EIR fails to consider one of the most important attributes of the property and the effect of losing it-- providing a substantially green and calm oasis in an area that is densely developed and congested.

2
(PD-3)

Right now the north edge of the property along California Street is an arcade of greenery, a significant visual resource. Fifteen mature evergreen street trees (New Zealand Christmas trees) arc over the wide sidewalk for two blocks and meet the high shrubs extending above the brick wall along the property. Between the sidewalk and the brick wall (set back from the property) is a row of greenery with flowering azaleas, camellias and dietes. It is a beautiful, calm and event spacious place to walk, unlike most of California Street in the vicinity, where buildings meet the sidewalks and the street trees (pollarded sycamores) are leafless much of the year.

The Project plans to cut down these beautiful street trees and remove all the sidewalk shrubbery as well as much of the other greenery that is now visible from the street. Trees and landscaping are the first items to be removed in construction and the last to be replaced. The California streetscape will be barren for a decade or more, and to be followed eventually by struggling trees on one side of the sidewalk and 4-story buildings with busy ground floor commercial on the other. The ability to walk beneath the trees or view the general greenery of the site will be gone forever.

3
(BR-1)

The property also currently provides a swath of open grassy area along Euclid Avenue and part of Laurel Street, with views into the shrubbery and trees around the current building from Pine Street, Masonic Avenue and Presidio Avenue, as well as from Euclid and Laurel. The Project will remove most of this greenery, replacing it with 3 or 4 story buildings at street side, flanked by a few trees some of which will be planted on what is now public side walk and road. (The Project incorporates 2,000 sq ft of sidewalk and road for "street improvements" p. 176 and uses it to plant trees that otherwise should go on the property.)

The idea that open space in the interior of the Project will compensate for significant changes along the streets is false. One or two plazas surrounded by concrete and glass walls hardly substitutes for the expansiveness of the greenery at Euclid viewed by thousands of people a day or the green archway on California Street enjoyed by pedestrians and passing riders alike. This greenery is a unique visual resource in an area largely devoid of anything green, and contributes to the wellbeing of anyone in the area. (See it with a virtual walk around the site on Google maps using street view.)

4
(PD-3)

Note: There is very little visible greenery nearby or within walking distance of the Project. The closest park is Alta Plaza, 8-9 blocks away. Otherwise, there is only a patch of grass in front of the Presidio Library. The Presidio Heights Playground is fully paved; and the Laurel Hill Playground, also paved and with a ball field, sits out of sight, down a steep walkway below Euclid Avenue. The mini-park on Bush is a dark, narrow lot squeezed between 3-4 story buildings, totally shaded all day long. The Presidio looks close, but it is on the other side of hill surrounded by a wall and the backs of houses. Access is through the Presidio Gate, along a busy and steep thoroughfare with no sidewalks.

- B. Noise. Already street noise is loud and annoying enough to reduce a sense of wellbeing. For Project operations, the methodology of adding noise estimates to current average noise figures is flawed and does not account for unacceptable levels or types of noise throughout the day. The mitigation measures suggested for construction noise, which will be at unacceptable levels, is inadequate.

5
(NO-5)

6
(NO-1)

It is deceptive to look at average noise levels, and then conclude that the additional noise will not be perceptible. Added noises from construction or operation of the Project may occur when ambient noise is low (early morning truck delivery), or the noise may occur when noise levels already are unacceptable (during rush hour.) Noise may be combined with vibration (heavy truck) which calls attention to the noise. Noise may be rhythmic (motor or fan) or unpleasant (car alarm, dog barking) which causes annoyance. Noise at street level may be different than 3-4 stories up, where noise reverberates from buildings across the street and is amplified. On my block the clanging of delivery truck doors and banging of pallets wakes me up at 5:30am; a pulsating motor (HVAC system?) somewhere that is imperceptible during the day keeps me awake at night.

7
(NO-5)

Any rise in average noise levels may be too much. Average means there are times when the noise level is already much higher. We sense the need to talk louder, to strain to hear others. In the 8 years at my present address, I have never used the roof deck due to traffic noise. I do not invite people over open during peak hours due to the noise from California Street and Presidio Avenue, and cannot leave my windows open, even on hot days. The chart on Page D.4.20 says that adding to noise—which this Project will do—when the ambient noise in residential areas is 65bBA or higher should be discouraged. Noise measurements (Table 4.D.2) show that LT noise on California Street (R5) already is over 65dBA on average, and so are higher many time of the day.

The EIR concludes that noise from increased traffic from Project operations will not be significant, and may in fact non-existent. How can adding 10,000 vehicle trips per day not significantly increase noise levels? Ride share vehicles, the ever present UPS and FedEx trucks, and pizza and home delivery services for the new residents will add to the noise, not just through higher traffic levels, but by causing more starting-stopping sounds, doors opening and closing, horns as irritated drivers try to pass them, etc.

Construction period noises will be unacceptable. In many construction projects, dump trucks and other big trucks travel at night, rumbling loudly when ambient noise levels finally are low, adding to the discomfort of residents.

8
(NO-1)

- C. Air pollution. The air in the vicinity of the Project is already dirty and Project operations will add to the problem. Mitigation measures described for construction dust are inadequate.

9
(AQ-4)
10 (AQ-1)

Vehicle emissions may be less today, but brake pads, tires and road wear still generate unhealthy particulates. Ever present neighborhood construction and street repair work add to dust and grime. I live 1 ½ blocks eastward and mostly downwind of the Project, and even now there are quantities of black soot/dust on my windows, window sills and balcony. My balcony, on the east side of the building sheltered from California Street and prevailing winds, cannot be used without wiping all surfaces. Then the wash rag is black. Unless I keep my windows closed and stay inside, I am breathing those same pollutants. However, the EIR concludes that Project operations and related traffic generation will not have a significant impact. I believe the traffic projections understate traffic and pollution levels that will occur when the Project is completed. The delivery vans and ride share services are increasing. This kind of traffic has more idling vehicles, more frequent stops and brake use, and more starts, all of which will increase the amount of emissions per vehicle in the vicinity of the Project.

11
(AQ-4)

12
(AQ-3)

The report recognizes construction dust as a problem, but the proposed mitigation measures will not solve it. Even with dampened dirt, dust will penetrate the neighborhood. It will be blown onto the streets and stirred up again by vehicle traffic; it will be blown off construction trucks leaving the Project and permeate the neighborhood; it will be tracked off the site and into the air on worker's shoes and clothes. A short road repair project in the neighborhood blackened my windows almost immediately, with the rainy season five months away. It will be extremely unpleasant to see and breathe construction grime and dust for seven or more years.

13
(AQ-1)

- D. Conclusion. The EIR is inadequate with many flawed assumptions and analyses.

14
(GC-1)

This Project will bring a more of everything—noise, air pollution, traffic, general congestion and crowding, will reduce street side greenery and open space, and will make the area substantially less livable. The only way to reduce the negative impacts of the Project is to reduce its size, maintain more street side and street view open space, and eliminate most of the office and commercial uses with their related traffic.

Very truly yours,

Michele Stratton

Subject: 500+ homes at 3333 California - SUPPORT
Date: Tuesday, December 11, 2018 6:02:56 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

To the Commissioners:

I am a resident of the Haight Ashbury and a frequent user of the JCC on California Street, and I urge you to reject the proposal to delay housing at 3333 California for historic preservation reasons. This building, while interesting as an example of suburban offices, is not particularly notable in comparison to others like it (e.g. Bell Labs Holmdel), and it is not worth preserving when the alternative is to add 500 or more homes in this wealthy, well-served by transit neighborhood.

This location is a two-block walk from the future Geary Bus Rapid Transit line and is served by the 1, 2, 3, 38/38R, and 43 lines, and it is also walking distance from shopping, jobs, and the JCC - the exact perfect location for new transit-oriented housing. In addition, it is in a wealthy neighborhood that is not at risk of any further gentrification - on the contrary, it will provide housing at a more reasonable cost than any existing property nearby, and take pressure off other neighborhoods where cost pressures continue to increase. This is exactly the type of location that should host apartments as well as green space, as planned.

Please reject all appeals and approve this project!

Thanks,
Andrew Sullivan

Subject: More housing, less parking!
Date: Monday, December 10, 2018 5:29:30 PM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Planning Commissioners, Planner, and Supervisor Stefani,

I am writing to **urge you to support new homes at 3333 California.**

As a renter in the city of San Francisco, currently living in the Sunset, I know how charming it is to live in a quiet neighborhood in the city. I also know first hand how incredibly challenging it is to find housing in this city as a young professional.

We need to do everything we can to create more housing so that people can afford to build their lives and careers in San Francisco over the long term. That starts with building housing in every neighborhood. Prioritizing buildings that don't house people, like parking, is exactly the opposite of what we need.

Thanks for your time and consideration.

Best,
Adrienne

Re: Case No. 2015-014028ENV

Project Title: 3333 California Street Mixed-Use Project Zoning: Residential, Mixed, Low Density [RM-1] Zoning
District 40-X Height and Bulk District Block/Lot: Block 1032/Lot 003

Applicant/Agent: Laurel Heights Partners LHP

Dear Planning Commissioners:

This letter is in direct response to the Draft EIR, Volume2c: Appendices D-G, published November 7, 2018. I have read the report and I have a number of comments and concerns.

The Notice of Public Hearing was posted at the corners of the 3333 California location, but both pages failed to be posted providing informative and critical information to the public.

1. Your name and email contact address and phone number
2. The Planning Department's website address in order to download the Draft EIR document assessment
3. The Notice of a Public Hearing before the Historic Preservation Commission on Wednesday December 5th at 12:30 p.m. at which the Historic Commission is to make its comments on the Draft EIR.
4. Notice to the Public that public comments to the Historic Preservations will be accepted from 11/8/2018 – 12/24/2018.

The Draft EIR states that the project would have a *Significant and Unavoidable with Mitigation* impact on noise because it would "expose people to or generate noise levels in excess of applicable standards or cause a substantial temporary or periodic increase in ambient noise levels." (page 4.D.36) The estimated construction period is 7 to 15 years.

The Draft EIR states that the project would have a *Significant and Unavoidable with Mitigation* impact on historic architectural resources because the project "would demolish portions of the office building... and remove all of the project site's existing designed landscape elements and features, including, but not limited to, the curvilinear shapes in pathways, driveways, and planting areas; integrated landscape features, including planter boxes and seating; brick perimeter walls; and the concrete pergola and terraced planting feature facing Laurel Street." (p. 4.B.41)

The DEIR admits that the project would be expected to generate higher Vehicle Miles Traveled than retail, office or residential average projects in the area. The DEIR compares the project with city average data but not with actually measured traffic conditions in the project area. However, the DEIR concludes that the project would have an impact on traffic that would be *Less Than Significant with Mitigation*. (page 4.C.74) The DEIR claims that reducing the retail parking supply would mitigate the Vehicle Miles Traveled impacts of the project. (page 4.C.80)

The DEIR estimates that the project would generate 10,057 daily automobile trips (page 4.C.58). This is probably an understatement because another EIR for a mixed use project estimated 13,000 automobile trips generated by the retail square footage alone (approximately 54,000 square feet), and the proposed project also has 558 or 744 residential units and a 49,999 square foot new office building that would generate additional vehicle trips.

The EIR Intersection Operations Analysis (Page 9, Task 7.2) has focused on transit timing on California Street. To say that Applicant's Proposed Project will have little or no impact on transit and traffic flow on all surrounding streets, simply is NOT true. As it is currently during the commute, Masonic Avenue is solid cars between Presidio and

To m

1
(CEQA-1)

2
(NO-1)

3
(CR-2)

4
(TR-4)

5
(TR-1)

6
(TR-9)

Euclid during evening commute hours and that is with the right most lane on Presidio with the additional lane to Euclid; both of which are to be removed as part of Applicant's Proposed Project. As it is currently, for every southbound vehicle that stops on Presidio at the Presidio/Pine/Masonic light, three now utilize the right most lane up to Masonic or Euclid. That means that if 3 to 5 cars stop for the traffic light, 9 have driven up Masonic and no are longer sitting waiting to turn right at the light. But, if you eliminate that right most lane, those cars will have to wait for the light to change and back up to the SFFD Credit Union Building at Presidio and California. Additionally, Muni buses have a shift change and buses are coming off California onto Presidio Avenue; add one or two buses and traffic on Presidio will back up to California. The impact for anyone familiar with these intersections is clear. I just have to look out the window. The idea that you can add three total ingress/egress active driveways on Presidio next to the SFFD Credit Union ingress/egress garage driveway and then do the same on Masonic and, not overload all the surrounding streets as the Applicant's Proposed Project does by using criteria from other sites without understanding these major thoroughfares, will be disastrous. You could end up backing traffic all the way down to the financial district.

6
(TR-9)
cont'd

The DEIR claims that project impacts on air quality, geology, hydrology, vegetation and other matters would be less than significant.

7
(GC-1)

During the 15-year construction period the developer is requesting, the developer would be able to apply for changes to make the project bigger, expand the retail and increase the heights and amounts of development. This suggests further entitlements and profiting from real estate speculation on the back of the neighborhoods affected by the proposed Project. The Applicant is trying to make us all believe that their proposed project is for the better good and will address the more immediate issue the City has for additional and affordable housing. It is ludicrous that it would take 15 years of construction to accomplish that. It is clear that anyone who supports the Proposed Project and the proposed construction schedule does not live within the immediate proximity of this site.

8
(PD-1)

I, along with many of my neighbors, have opposed the developer's concept from the beginning. We are in of the need for additional and affordable housing in our neighborhood. We stand against the Applicant's proposed project because it would be destructive to the neighborhood. The developer's proposal is too massive, too commercialized and out of character with the neighborhood and, since we know now about the Historic Preservation Commission's assessment about the value of the existing historic building and landscaping, we continue to wonder how the Applicant has been able to push a plan that would do so much damage to the site and the neighborhood so far down the road.

9
(ME-1)

We have objected to the destruction and removal of the existing green areas. We've asked the Applicant of the Proposed Project for an alternative preservation plan that is consistent with the design and aesthetics of the condominiums directly across the street from the Project on California Street between Laurel and Walnut (for example) without touching any of the green and landscaped areas on Masonic, Euclid or Laurel. The neighborhood has expressed its desire to have the Applicant redesign the proposed Project so preserve as much of the site as possible and complete critically needed residential housing in the shortest time possible. We've written letters to the Applicant, addressed these issues in person with the Applicant at the Developer's poster-board sessions and at the Scoping Meeting at the JCC with the Planning Department but we have yet to see a design that warrants serious consideration by the neighborhood or the City.

10
(AL-1)

I believe the Project, as proposed, will have an enormously, negative impact on the neighborhood and surrounding areas. The proposed uses and high density of the proposed project will increase traffic flow and congestion, increase noise and pollution and increase the loss of parking, etc. The proposed removal of the green spaces and mature trees and plants will unnecessarily impact the local environment and deprive the surrounding area from continued public use.

11
(ME-1)

The increased noise from the Proposed Project, including construction activities, will adversely affect nearby sensitive receptors including existing residential housing units surrounding the 10-acre site, the elderly residential facility at the JCC across the street from the site and child care uses at the JCC. There is no reason or justification for relocating the Child Care Center from its current location on the existing site. We know that the existing zoning limits heights greater than 40 feet at Euclid and Masonic and no retail is permitted.

A Community Alternative Plan (hereinafter referred to as "CAP") is being created to reflect what we believe will preserve the entire Historical Building. The design will include re-purposing of the Historical Building to residential use. The "CAP" will preserve Eckbo Terrace, Children's Childcare Playground, along with the Redwood trees, and preserve all Historic Landscaping. The existing green spaces on Laurel, Euclid, Masonic and Presidio will remain intact in this redesign. The "CAP" will accomplish the Applicant's goal of providing 558-744 housing units (Variant) by a design of three or four, four-story buildings on the existing surface parking lots facing California Street; with no retail or office. As we understand it, the housing units facing California Street in the CAP will be consistent with the design and aesthetics of the condominiums directly across the street as mentioned above. The number of trees and landscaping to be removed will be substantially less in the CAP Plan. We have not seen the fully-designed CAP but we whole heartedly support the draft of a plan that we have seen because it is less destructive and can be completed and on line satisfying the immediate need for additional housing within the timeline of three to five years; not 15 years.

Applicant's Proposed Plan does not serve any of us well. They have had every opportunity to redesign and submit an Alternative Preservation Plan and they have refused to do that. My sincerely hope is the Planning Department will want to consider the CAP which is timely and less impactful to the neighbors and the many neighborhoods and stop the negative impact that will undoubtedly occur by approval of the Applicant's Proposed Plan before this goes any farther.

Thank you.

Re: Case No. 2015- 014028ENV

Project Title: 3333 California Street Mixed- Use Project Zoning: Residential, Mixed, Low Density [RM- 1]
Zoning District 40- X Height and Bulk District Block/Lot: Block 1032/Lot 003
Applicant/Agent: Laurel Heights Partners LHP

Dear Planning Commissioners:

This letter is in follow-up to my letter dated December 4, 2018 which was submitted to the Commission via email prior to the San Francisco Historic Preservation Commission meeting on December 5, 2018.

Last week, the San Francisco Historic Preservation Commission expressed strong support for reviewing an alternative development plan that would not destroy the historic resource of the building by cutting it in half along with the removal of the surrounding landscaping including trees; referred to as the character of the defined feature of the site.

1
(AL-2)

The Commissioners expressed their strong assessment of the interconnection between the building and the landscaping as the important resource and vital to the neighborhood. They believe that this project needs the neighborhood and the developer to come together to create a win-win for all parties as the only way it can be measured as a success. The Commission stated they wished they could have reviewed the Community Full Preservation Alternative Plan which was discussed but not available for review by the S.F. Historic Preservation Commission at the December 5th meeting. The Commissioners expressed their willingness to insure the integrity of the Historic elements are maintained and to get a second look at what will be the “final” alternative development plan supported by the community and the developer when sent back to them from the Planning Commission.

Also, the developer did not tell the community about the historic significance of the site. It was revealed during last week’s hearing by UCSF’s former architect that they were made aware of this back in 2010. The neighborhood learned that last year and had the building and landscaping listed on the California Register of Historical Places because they were designed to complement each other in an integrated composition. So, the landscaping is also a historical resource on this site and has been used for recreation by the public since built.

2
(CR-1)

Under the community alternative, the main building would be converted into housing units rather than demolishing the smaller wing and cut through half of it. There would be, in addition to the residential units on California Street, a new Mayfair residential building. The existing cafe and childcare center would remain, and the existing pathway through the building that opens onto the Terrace and onto Masonic, would remain eliminating the need for additional public pass-through access to be constructed.

3
(AL-2)

It should be noted that the DEIR Full Preservation Alternative C shows 26 fewer housing units than the Project and 44,306 square feet of retail, which we already thought was planned to be converted to housing to match the number of housing units in the proposed project.

4
(AL-3)

I-UNDERWOODV2

The Community has already shown that it supports reasonable and sustainable levels of housing as seen with the CPMC project with 270 units, the Lucky Penny with 95 units. And, now, 3333 California with 558 units.

5
(ME-1)

We urge you to extend the **comment period on the Draft EIR** in order to evaluate this **Community Full Preservation Alternative Plan** and compared it to the **DEIR Full Preservation Alternative C** with the same level of detail as the alternatives in the **DEIR** because it will be less impactful on the surrounding neighborhoods and **will not** destroy the historic resource of the building and the surrounding landscaping. The **Community Full Preservation Alternative Plan** will give the City of San Francisco the housing it desires for the site in 3-5 years and builds 4 new buildings versus 14 new buildings in 7 to 15 years as proposed by the developer.

6
(AL-2)

The developer proposes to destroy the historically significant characteristics of the site and create nondescript buildings crowded onto the site. They look to changing the zoning to allow retail which was banned in **Planning Commission Resolution 4109** to avoid adverse impacts to Laurel Village and Sacramento Street.

7
(ME-1)
8
(PP-1)

We feel that this site deserves respect and that any decision made on how it's redeveloped is important enough to not rush but get right. With that in mind, I would hope that the historical cemetery plaque be returned to the site and a historical plaque with the designers and historical significance of the building and the landscaping be memorialized on the site as well since the building and landscaping are listed on the **California Register of Historical Places**.

9
(CR-4)

Thank you in advance for your time and serious consideration of the **Community Full Preservation Alternative Plan**.

10
(AL-2)

I strongly urge the Planning Commission to grant a 15-day extension of the Due Date for Comments on this DEIR. It is a lengthy and complex document.

11
(GC-3)

Thank you.

Re: Case No. 2015- 014028ENV

Project Title: 3333 California Street Mixed- Use Project Zoning: Residential, Mixed, Low Density [RM- 1]
Zoning District 40- X Height and Bulk District Block/Lot: Block 1032/Lot 003
Applicant/Agent: Laurel Heights Partners LHP

Dear Planning Commissioners:

This letter is in follow-up to my letters dated December 4, 2018 and December 12, 2018. Since I never received a confirmation receipt back from your email system that you even received them, I am including them again along with this transmittal letter (via hard copy).

I attended the Planning Commission Meeting on December 13, 2018 where DEIR comments were heard by the Commission relative to the redevelopment plans for 3333 California Street. After hearing some of the statements made by all, I offer these additional comments.

Thank you for voting for the fifteen-day extension so our plan could be submitted to you for review. Most of us are lay people and there are no classes to help us get through the on-slot of information contained in the report or to help us with understanding the full impact of what is being presented; much less its accuracy. By granting the extension, many of my neighbors who traveled to see their families during this national break have had the welcomed additional time needed to get through the DEIR materials.

We have been working hard, donating our time and money over the last four or five years because we believe what will eventually get built on the site is extremely important for our Community; not only for the future but for those of us living here now.

The Community has been portrayed as opposing additional housing but that has not been the case. The community has supported the CPMC project with 270 residential units, the Lucky Penny site with 95 units, and now 3333 California Street with 558 units. There are also additional housing units getting built in the neighborhood, but they don't get the attention these locations get because of the number of housing units are much smaller but all need to be counted and recognized for their impact on the community at large. Over 1,000 residential units in a half mile radius is a lot of development.

1
(ME-1)

I know for myself, I want to see a common-sense approach to building as we look to the future. Why destroy, remove or create hazardous conditions when you don't need to. With that in mind, "The Community Full Presentation Residential Alternative" for 3333 California Street as it is now called, **would** do the following:

- a) Preserve the Historic characteristics of the building and landscaping.
- b) It would limit construction to the California Street side of the property and to Mayfair
- c) It will match the surrounding architectural design in character and style consistent with those residential condominiums directly across the street on California.
- d) It will allow for the retention of far more of the mature trees and landscaping
- e) It will provide for 558 (or 744 in the Variant) housing units without rezoning and revoking Resolution 4109, the agreement that runs with the site between the City and the surrounding neighbors.
- f) It builds the housing units in three years
- g) It will keep the impact of construction on the community and environmental risks to a minimum.
- h) It will preserve the present childcare center and play area and the community's access to the existing green areas bordering the site on four sides.
- i) It will protect the small, family-owned businesses in Laurel Village, Sacramento Street, Presidio Avenue which are the very fabric of the neighborhood. They are already under immense pressure.

What it **won't** do:

- j) It won't bring excessive, unnecessary, and unwanted traffic and congestion, noise, pollution to the neighborhoods this site touches by turning it into a mini-city and destination
- k) It won't bring unneeded retail/office/commercial spaces as the developer has insisted upon
- l) It won't add unneeded height to a building when we already have six floors to look at on Presidio Avenue.
- m) It won't take 15 years to built and decimate the community and surrounding streets.
- n) It won't be an opportunity to sell a new entitlement on an up-zoned property.

I live on the southeast corner of Presidio Avenue at California Street which provides me with views from Presidio Avenue and California south to Pine and Masonic Avenue up towards Euclid as well as up California towards Walnut. The traffic in these two intersections on any given day much less any commute is overwhelming NOW. Add tech shuttle buses, express buses on California and Pine and a Fire Department Emergency Response calls from Fire Station 10 and it's over the top.

What the developer has proposed for these two intersections is beyond all comprehension. I was glad when one of your colleague Commissioner, Kathrin Moore, described the run up Pine and on Masonic similar to driving on the freeway and that's NOW. Finally, a reality check from someone other than a resident who lives here who experiences it every day. [And, as I've stated now in at least five letters, adding ingress and egress driveways, deletion of the right most lane on to Masonic from Presidio and adding loading zones and driveways on Masonic and Euclid, a crosswalk on Presidio Avenue and bicycles and you have not only a huge traffic mess but an impasse zone and parking lot and a dangerous mess. None of this was addressed in the DEIR.

The traffic noise along with blasting music and honking is unbelievably loud now. As I've mentioned in my prior letter addressing the DEIR, I have addressed the issue of the traffic and what affect the developer's project would do to not only the surrounding streets but our entire neighborhood as traffic unloads on to other side streets in order to alleviate their frustration. The westbound traffic on California between Presidio Avenue and Walnut can be a nightmare as cars line up on Walnut Street, around the

2
(AL-2)

3
(TR-3)

4
(TR-7)

5
(TR-3)

corner and east on the California and from there all the way down to Presidio Avenue. An example of poor design approval and its effect on daily traffic.

The DEIR doesn't reflect the potential conditions that would result if the developer's plan is approved. I leave the auto counts, green-house gas measurements, pollution counts and other technical facts and calculations to the consultants from donations we've made to help us through this.

There are so many downsides to the developer's proposals and I now choose light and positive energy instead. None of the "issues" are issues under our Community Full Presentation Plan. Whether it be too many ingress-egress driveways cutting into traffic on Masonic, Euclid, Presidio Avenue, eliminating the right most lane at Presidio Avenue, introduction of retail on city blocks with almost no pedestrians because it's basically a freeway, the loss of parking and the addition of loading zones that people and mini-buses will have to back into on this "freeway" maze. The tremendous loss of quality of our lives at the advancement of noise, pollution, environment impact, loss of green spaces and trees. All of it, unnecessary and hardly a positive step forward.

When considering the future, please don't forget the neighborhoods that currently thrive and exist around this site. Repurposing isn't a bad thing when the impact is less overall. Everyone says we need more housing and that they think it's a great idea. But when I say back to them, "So you wouldn't mind 558-744 housing units being built across the street from where you live over the course of 15 years? The reply is always the same, "Oh, no I wouldn't like that at all!" We are trying to find something that works and doesn't burden the people who already live in direct proximity and work in nearby small businesses. What is really happening when you drill down past the minutia is taking a single-user site and repurposing it to accept multi-users. Nothing in that description implies destruction. We believe our plan accomplishes that and it has Community support.

The Commission is faced with making a decision on whether to go with the "Community Full Preservation Plan" or to go with some version of the developer's "Destructive Plan". We think our plan makes the most sense for all the right reasons. We believe that our plan can be approved without further studies and delays in construction to bring the needed housing on line.

Thank you for your time and serious consideration of our Community Full Preservation Plan.

Good morning Ms. Moore,

I wanted to reach out in hopes that I can get a status update on this project. I believe it had an environmental meeting last year but I was wondering if this project have move forward at all since then. Just trying to get a grasp on how the application process is for these type of projects.

1

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Hi Mr. Zushi,

I am a renter approximately 3 blocks from the site at 3333 California. Today I noticed a planning department sign at the site.

I have lived in the area for **26 years** at the same apartment on Sutter Street. In that time I have come to admire the beautiful trees as well as the open space at the 3333 California site. The open space and trees are extremely valuable not only for myself but for the residents of the area to provide a break from the mad whirlwind of activity that surrounds the site **on a daily basis**. And there are a pair of glorious pair of Coastal Oaks on Laurel that are probably 100 years old, as well as the towering Monterey Pine at Laurel and Euclid (that is one wise old tree.)

1
(BR-1)

I am also concerned about the livelihood of the grocers and shops in Laurel Village should your proposals be adopted. I would think the last thing they want is more competition. I am also **very concerned** about the level of noise and traffic disturbance caused by a construction project that is planned to last **7 years**.

2
(ME-1)
3
(PD-1)

In short, I do not think it is at all fair to foist this proposed project onto the unsuspecting public and the current businesses.

4
(ME-1)

What I recommend is **Alternative Plan B**. That would be much less disruptive, while providing some residential units which the city needs. We (the people that live here) would also not be subjected to disruption for **7 years**.

5
(AL-1)

Lastly, UCSF in this case showing an utter disregard for the neighborhood by seeking a project that will make them the most money, particularly after they have recently received \$500M **bequest** to build their new hospital at Parnassus.

I will be present at the upcoming hearing on December 13.

Regards,

Steven C. Zeluck

Hello,

I would like to submit comments on the DEIR for 3333 California Street project. I live on Lupine and overlook Euclid Ave. In reviewing the DEIR, I would not be supportive of the current plan. Adding retail space to the area would, in my opinion, not be positive for the neighborhood. The area would benefit by residential units and some office space. No additional underground parking should be added above what is already in existence. The project height should not be increased more than one additional level from current height. Based on the DEIR, neither the planned project nor any of the alternatives satisfy these requirements. Hopefully the Planning Dept. and developer can adjust the proposal to include residential and office space only.

Hello,

I would like to reiterate my comments submitted previously on the DEIR for 3333 California Street project. I live on Lupine and overlook Euclid Ave. In reviewing the DEIR, I would not be supportive of the current plan. Adding retail space to the area would, in my opinion, not be positive for the neighborhood. The area would benefit by residential units and some office space. No additional underground parking should be added above what is already in existence. The project height should not be increased more than one additional level from current height. Based on the DEIR, neither the planned project nor any of the alternatives satisfy these requirements. I understand the local neighborhood association has submitted an alternative plan that I would support AND would be built in approximately three years. Hopefully the Planning Dept. and developer can adjust the proposal to include residential and office space only as detailed by this or one of the other alternative plans.

Thank you for your attention to my comments.

Regards,

John Zlatunich
39 Lupine Ave.

Supervisor Catherine Stefani

1 Dr. Carlton B. Goodlett Place

San Francisco, CA 94102

Dear Supervisor Stefani,

PHRA is writing to state our support for the Prado Group's plan for the 3333 California proposal.

Over several years we have attended many meetings and presentations by the developers, and have participated in discussions between the developers and neighborhood groups. The plan that is currently presented includes alterations made to accommodate neighbors' comments. Throughout the discussions, PHRA has been most concerned about parking and circulation in and around the property. We wish to continue to be involved in discussions with the developers, city agencies, your office, and other neighbors and merchants to help address parking and traffic solutions.

This is clearly a very significant property that will undoubtedly change the neighborhood, but it is very large and strategically located. We do not find the Fireman's Fund building historically significant, or important to the community. If left unused and underdeveloped it will be a magnet for blight and undesirable activity. Conversely, if the property is developed as proposed, it will bring desperately needed housing, appropriate for the setting and the neighborhood, to a significant transit corridor.

PHRA would like to participate in discussions about staging and construction, throughout the process.

PHRA is available to answer any questions, or comment more fully at your convenience.

Thank you.

Terry McGuire

Re: Proposed Project at 3333 California Street, former UCSF Laurel Heights Campus

Dear Supervisor Stefani:

I am the President of the Presidio Heights Association of Neighbors (PHAN) and, on behalf of PHAN, I am writing to convey PHAN's support for the proposed development plan for the former UCSF Laurel Heights Campus site, whose street address is 3333 California Street.

This will certainly be a very significant development project and it is directly adjacent to the southern border of our neighborhood. Our neighborhood is well over a century old and is comprised of 800 residences, most of which (perhaps over 90%) are eligible for inclusion on the State Historic Register. The entire neighborhood is itself eligible for inclusion on the State Historic Register as an historic district, something which few neighborhoods in San Francisco can claim. As you are probably aware, Presidio Heights includes some of the most revered architectural homes in America. None of the other neighborhoods adjacent to the 3333 California Street site are as old or can claim as many architectural treasures. Equally important to the residents of Presidio Heights is the fact that from its inception to the present, against an appalling decline citywide in the number of families with children, it has retained its reputation as a family-oriented neighborhood. Thus, the impact on our neighborhood of any development at 3333 California Street is of critical importance to all our residents. Accordingly, the directors of PHAN have carefully followed the plans for development of 3333 California Street as those plans have evolved during the application process. I am pleased to inform you that the PHAN board of directors has voted in favor of informing you that PHAN supports the current project as proposed by the sponsor in both its original and alternative format.

For the past nearly three years, I and fellow directors of mine have participated in numerous meetings regarding development of 3333 California Street. Likewise, we have met on many occasions to discuss concerns that we and residents of Presidio Heights had regarding various aspects of the project. Fortunately, the developer of 3333 California Street was quick to adopt the same laudable process that was mandated for the development of the CPMC site at 3700 California Street, a process that I personally

Supervisor Catherine Stefani

July 29, 2019

Page 2

worked on with former Mayor/Supervisor Mark Farrell to embed in the City's development agreement for the new CPMC hospital on Van Ness Avenue. I am pleased to report that not only has the developer of 3700 California Street met CPMC's commitment that the purchaser of 3700 California Street would be bound to meet with and listen to neighborhood concerns, but the developer of 3333 California Street has voluntarily adopted the same obligation to meet with and give thoughtful consideration to neighborhood concerns, at least insofar as the PHAN board of directors is concerned.

I want to express our strong support for and appreciation of this proactive and interactive approach to such a significant redevelopment project. We hope that this approach will set an example for future projects in the City and that the Planning Department, Planning Commission and your Board, if necessary, will support the extensive effort that has gone into this process by favorably acting on those plans when presented.

The outreach from the project team has been extensive and the development team has listened to numerous comments from the neighborhood regarding the types of housing, design, parking, and other key project elements in developing the plan which will soon be submitted to the Planning Department as part of the Preliminary Project Assessment. We feel the developer has studied our neighborhood to develop a plan that is respectful of the surrounding community and is consistent with the existing neighborhood pattern. In the process, numerous design changes were made to respond to neighborhood comments in order to develop a plan that has support from as many neighbors and neighborhood groups as possible.

We also thoroughly support the amount of parking requested by the project and would support additional parking consistent with the parking in the surrounding neighborhood if the Planning Department and Planning Commission are willing to support it. We have endured our neighborhood being inundated with high parking demand from the under-parked hospital for too long and want both 3700 and 3333 California Street projects built with an adequate number of parking spaces, particularly given the likelihood that larger units with families will likely require more than one car to manage the challenges of raising multiple children in the City.

Finally, I will take this opportunity to add a personal note. My wife and I have owned an architecturally significant home at The Sea Ranch for over 30 years, William Turnbull's first single family home, known as Experimental House One. It sits adjacent to the well-known Esherick Hedgerow Houses, on the nearly sacred ground for architects where the first few houses at Sea Ranch were constructed. Turnbull redesigned our house for us before his untimely death, so I know from personal experience this one truth about preservation of architecturally significant structures and it is simply this. They cannot and do not survive well with age if left in their original state. They can be, and must be,

Supervisor Catherine Stefani

July 29, 2019

Page 3

repurposed over time if they are to survive at all. The old Firemen's Fund headquarters at 3333 California Street is in serious need of repurposing and I, personally, as well as the majority of my fellow board members support the plans for repurposing it that are before the Planning Department and Commission now.

In closing, we applaud the process that has led to the current development plans for 3333 California Street, and we ask that the Planning Department, the Commission and you provide the same support for the project as we do.

Sincerely,

A handwritten signature in cursive script, reading "Charles Ferguson". The signature is written in black ink and is positioned above the printed name.

Subject: SPUR endorses 3333 California Street (Laurel Heights)
Attachments: SPUR Endorsement of 3333 California.pdf

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisor Stefani and Planning Commissioners,

Laurel Heights Partners, LLC presented the 3333 California Street project in Laurel Heights to SPUR's Project Review Advisory Board at our May 2019 meeting for review and consideration. SPUR is generally focused on policies, plans and codes rather than on individual projects. In order to make infill development easier, we prefer to help set good rules around zoning, fees, housing affordability, sustainability, etc. However, on occasion, SPUR's Project Review Advisory Board will review and endorse development proposals of citywide or regional importance, evaluating their potential to enhance the vitality of the city and region according to the policy priorities and principles of good placemaking supported by SPUR.

The SPUR Project Review Advisory Board finds this development to be an appropriate and welcome use for this site and endorses 3333 California Street.

Please see attached letter for full details. Do not hesitate to reach out if you have any questions.

Best,
Kristy Wang

RE: SPUR Endorsement of 3333 California Street

Dear Supervisor Stefani and Planning Commissioners:

Laurel Heights Partners, LLC presented the 3333 California Street project in Laurel Heights to SPUR's Project Review Advisory Board at our May 2019 meeting for review and consideration. **The SPUR Project Review Advisory Board finds this development to be an appropriate and welcome use for this site and endorses 3333 California Street.**

SPUR is generally focused on policies, plans and codes rather than on individual projects. In order to make infill development easier, we prefer to help set good rules around zoning, fees, housing affordability, sustainability, etc. However, on occasion, SPUR's Project Review Advisory Board will review and endorse development proposals of citywide or regional importance, evaluating their potential to enhance the vitality of the city and region according to the policy priorities and principles of good placemaking supported by SPUR.

3333 California Street is a major mixed-use development project planned for a 10.25-acre parcel in the Presidio Heights neighborhood. The site is currently occupied by UCSF's Laurel Heights campus. The proposed project will transform the site from a corporate campus with office, research, child care and parking uses into an mixed-use neighborhood with residential, retail, office, child care and parking uses. 3333 California Street will include 13 new buildings and the adaptive reuse of the existing office building, which would be split into two residential buildings.

Laurel Heights Partners is considering two variations on the project, one of which includes more housing units instead of office space. The project will include between 558 and 743 residential units, up to 49,999 square feet of office space, 34,000 to 40,000 square feet of retail and 13,000-15,000 square feet of child

care space. **The SPUR Project Review Advisory Board prefers the proposal with higher residential density.**

3333 California Street in Laurel Heights:

- ✓ **Is located at an appropriate location for development**, near transit and infrastructure and not on a greenfield site. This site is located near the future Geary bus rapid transit (BRT) line and several other good bus lines that run frequently. The site has been underutilized to date, with buildings on only 3 of its 10 acres, in spite of being located at the intersection of many neighborhoods and close to many amenities.
- ✓ **Provides an appropriate mix of land uses** of residential and retail, contributing to diverse stock of housing, fostering economic development, providing amenities and services to the surrounding community. The proposed project would bring new housing to a part of the city that has seen little new residential development, and it includes a significant retail component that ties into the existing Laurel Village corridor.
- ✓ **Provides sufficient density at the site** at 54 to 72 dwelling units per acre, supporting adjacent transit and prevents underutilization of land, serving the future needs of Bay Area residents. This project makes good use of this key site, which has been until now a suburban campus walled off from the adjacent neighborhoods.
- ✓ **Creates a good place for people and contributes to a walkable environment** with active ground floor uses. The plan for the site integrates the proposed buildings into the neighborhood, connecting to cross streets and breaking up the superblock into more appropriately scaled street blocks. The retail uses along California Street connect visually and functionally to the existing Laurel Village retail corridor, and the other street frontages have designed to be porous and pedestrian-friendly. The public realm plan, which includes several different kinds of public and open spaces, brings the public into and across the project site.

The SPUR Project Review Advisory Board finds this development to be an appropriate and welcome use for this site and endorses 3333 California Street. The urban design and site plan are particularly thoughtful, especially in dealing with the major grade changes at this location. The quantity, quality and variety of open space are excellent, and we appreciate the project team's decision to protect some of the older trees onsite as well as adapt the existing building to a new use. We also appreciate that the project team includes several different architects and landscape architects, helping to foster the feeling of a neighborhood built over time rather than a single master-planned project.

The potential partnership with the Jewish Community Center is an excellent idea that could help fill retail spaces if there is not sufficient retail demand in the neighborhood. We are also impressed with the neighborhood outreach given the sensitivity and location of this site.

Our only concern with this plan is the amount of parking. While we appreciate that all parking will be tucked out of sight in underground parking garages in order to maximize the useable open space, we feel that the project parking could be further reduced. Given the project's transit-oriented location near many bus lines, the Geary BRT line currently underway, and our city's evolving transportation options, SPUR recommends that the project sponsor consider reducing the number of parking spaces.

Please do not hesitate to contact us or Kristy Wang, SPUR's Community Planning Policy Director, with any questions or clarifications.

Sincerely,

Charmaine Curtis Diane Filippi

Re: 3333 California Street Proposed Development

Dear Supervisor Stefani and Esteemed Members of the Planning Commission:

I am writing to you as a neighbor in support of the proposed development at 3333 California Street. I have lived in the area for the last 30+ years and look forward to seeing the current eyesore at the site razed and replaced with a beautiful, well thought out, addition to our neighborhood. The proposed project would bring much needed housing to San Francisco as well as more retail, restaurants, and open space that our family could easily walk to. In addition to improving our neighborhood and providing housing, this project will generate substantial tax revenue for San Francisco.

The development team has put in a substantial effort to engage with the community and has been responsive and proactive in making changes based on feedback received. I have no doubt they will continue to be good neighbors throughout the development and construction process.

I urge you to support this family-oriented project that will improve our neighborhood and the City.

Respectfully,

William F. Bartlett

Dear Sir or Madam:

I am writing to urge you to support the proposed development at 3333 California Street. This project is a critical step forward in addressing San Francisco's housing crisis by providing much-needed housing for families in a transit-friendly neighborhood.

Over the past 8 years San Francisco has produced jobs 8 times faster than housing--a clear imbalance that makes it hard to live here, build a community, and raise a family. As a longtime resident of the neighborhood, I've seen neighbors and friends move out of the city due to the housing shortage. The combined effects of job creation and slow housing production have created difficult situations for newcomers and longtime San Franciscans alike.

I am glad to see the City government put forward a goal of producing 5,000 residential units annually for the next 20 years. In order to help realize this goal, I hope that you will support the 3333 California project. The development would create 558 or 744 units that will help more people remain in this great city and bring new homes to San Francisco's west side, where very little new housing has been built over the past 40 years. Additionally, this new project will also include affordable housing that will help preserve the diversity of our city and the vibrancy of our neighborhoods.

A family-friendly community like this is desperately needed in a city that has seen a rapid flight of young families. With most units designed with two or more bedrooms, along with five new acres of open space and a vibrant and walkable retail district, the project will be a fantastic place to raise a family and a great asset for everyone who lives in the neighborhood.

San Francisco is an innovative city that values inclusion, diversity, and community. In this moment of crisis, we hope that you will support this project and ensure that the residents of San Francisco have access to housing.

Sincerely,

Suzanne Blumenthal

Dear Supervisor Stefani / Members of the San Francisco Planning Commission

I am writing to urge you to support the proposed development at 3333 California Street. From my perspective, a Presidio Heights neighbor of the project for 70 years, with children and grandchildren in the neighborhood as well, there are three reasons this project should be approved.

- 1) **Provides a positive response to the current housing crisis:** This project is a critical step forward in addressing San Francisco's housing crisis by providing much-needed housing for families in a transit-friendly neighborhood. The proposal will connect the existing site to the greater Laurel Heights community, creating open spaces, community amenities, and homes.
- 2) **Opens up what has been a closed off 5 acres:** In addition to allowing more people to remain in the city and bringing new homes to San Francisco's west side, the proposed development will provide over 5 acres of open space, where kids can play, neighbors can relax, and friends can spend time with one another in this part of the city. I was born on Clay Street between Locust and Spruce in 1947. I have a daughter and grandchildren living near Laurel Village. I live close to the JCC. It would be wonderful to be able to walk from California Street to Euclid or Presidio to Laurel....before I become 100 years old! The proposed pedestrian walkways through the site will make my wish come true. It will connect neighbors in the Laurel Village and surrounding neighborhoods by reimagining the currently walled-off space on the UCSF campus.
- 3) **Expands "shop/dine small business" opportunities:** Our family often walks/shops Fillmore Street, Sacramento Street, and Laurel Village, frequenting the various merchants and restaurants. We would welcome new stores, especially the proposed smaller, non-traditional "big box" variety and new, casual, moderately priced places to eat breakfast/lunch/ dinner

San Francisco is an innovative city that values inclusion, diversity, and community. I sincerely hope that you will support the proposed development at 3333 California Street for the reasons stated above.

Sincerely,
Lynn

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Supervisor Stefani,

As a resident of San Francisco and D2, I want to write and share my student support for the redevelopment plans at the UCSF Laurel Heights Campus. This type of urban infill is just the type of development that San Francisco needs in every corner of the city, and I urge you and the rest of city government to support it and help expedite it.

It'll be well served by improved Muni Service:

It's a lovely old corporate campus, and it's at the hub of several high density transit lines (1 california, 2 clement, 3 jackson, 43 masonic, hell even the 38 Geary).

And it's in a scale appropriate to the neighborhood. I'm super excited by the additional retail space to Laurel Village, and also the improved pedestrian flow to the the site-- I love the two paths through the site.

Please approve this without delay!

Best,

Shanan Delp

As you were not at yesterday's Planning Commission meeting I am attaching my notes concerning 3333 California St. for your consideration.
If you have any questions please let me know.
Thanks,
Richard Frisbie

PROPOSED SUSTAINABILITY FEATURES

The project sponsor has committed to meeting and exceeding the requirements of the San Francisco Green Building Ordinance by achieving Leadership in Energy and Environmental Design (LEED) for Neighborhood Development certification at a minimum Gold level for the full development, targeting Platinum. To meet this goal, the project sponsor intends to pursue compliance strategies that promote increased energy efficiency, renewable energy production, and water conservation. The proposed project would incorporate smart building technologies and materials, such as living (or green) roofs, solar photovoltaic systems, and water smart landscaping. The proposed project would develop 8 percent of parking spaces with electric vehicle charging stations while other spaces would be electric vehicle ready.

The proposed project would provide a network of landscaped publicly accessible open areas and private and common open spaces planted with drought-tolerant species. The project sponsor intends to preserve 10 of the 195 existing onsite trees and would plant approximately 92 street trees along California Street, Presidio Avenue, Masonic Avenue, Euclid Avenue, and Laurel Street and approximately 270 trees (including 20 on each side of the proposed extension of Walnut Street) on the project site to replace the approximately 15 street trees and 185 onsite trees that would be removed (net gain of 85 trees).

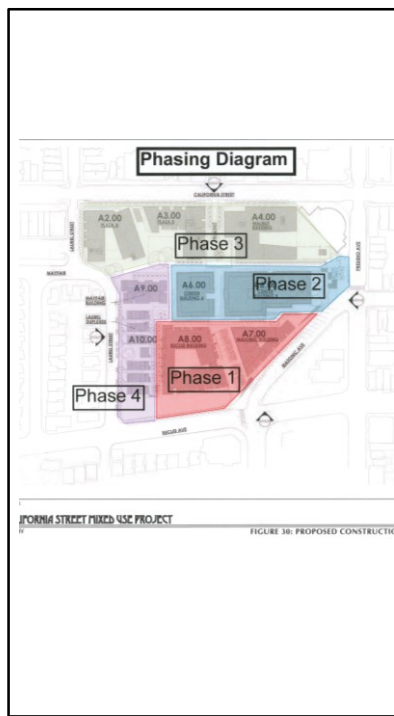

PRELIMINARY CONSTRUCTION SCHEDULE AND PHASING

The proposed project would be constructed in four overlapping development phases, with full build-out expected to occur approximately seven years after project entitlements, if executed from start to finish of the prescribed overlapping development phases (see Figure 2.30: Preliminary Construction Phasing Diagram). The impact analyses are based on an approximately seven-year construction duration and four-phase program that would constitute maximum development on the site; however, the project sponsor may choose to develop the proposed project or project variant over a timeframe of up to 15 years. The project sponsor may also choose to develop the proposed project or project variant in a different order than the preliminary four-phase construction program described below, i.e., the California Street buildings (preliminarily identified as the Phase 3 development program) could be developed as the Phase 1 development program. For purposes of CEQA, an impact analysis under a seven-year timeframe is the most conservative (or worst case) analysis because it assesses continuous construction over a shorter time period (i.e., more concentrated). Under an up-to-15-year construction timeframe, the same development program would be implemented; however, periods of dormancy would be introduced between construction phases, and some construction activities currently assumed as concurrent would occur separately over a longer timeframe. Thus, potential physical

Good afternoon President Melgar and Commissioners.
I am Dick Frisbie.
I'd like to continue the discussion on 3333 California St.

Take a look at the starred item; the Developer is requesting a 15 year entitlement period which is outrageous.

NEXT SLIDE

Can any of you imagine living next to, or actually inside of, a construction site that goes on for up to 15 years?
No one should be exposed to such abuse.

dan saifer <dsaifer@pradogroup.com>

<mjtnf@comcast.net>, Richard Frisbie <rfrbeagle@gmail.com>

Dear John, Kathy, Catherine, M.J., and Dick:

First of all John, thank you for the meeting last week at your home. As we agreed in the meeting, we are responding to your recent questions regarding the project. We have re-arranged your questions slightly to group them according to subject. If we haven't answered any of your questions, please let us know. We very much appreciate your willingness to promptly write back to us with your five outstanding issues on the project that are currently preventing us from obtaining LHIA support for the project. We appreciate your doing this so we can set a follow up meeting to find a mutually workable solution.

LHIA Questions:

Q: You also stated that Prado wants to have a development agreement to lock in entitlements for longer periods of time than would normally be allowed?

A: Yes, we are looking to enter into a development agreement (DA) with the City for a term of approximately 15 years. For large projects with multiple buildings like 3333 California Street, the City generally requires a DA. The DA vests the entitlements, protecting the entitlements from changes in the law in exchange for certain community benefits. This would include the community benefit of certainty of the entitlements during that period. If we did not build the project during the term of the DA, then the DA would expire and we would lose the protections of the DA.

Q: What is the period of time that you anticipate that construction will occur?

A: We anticipate that construction will occur in the spring of 2020.

Q: What is the reason for constructing the project in phases?

A: By allowing for potential phased construction, we would have the ability to complete and occupy portions of the project as each phase is completed. If conditions do not exist to build out the entire project, we can phase construction in order to align with market conditions and financing availability.

Q: How many extensions do you anticipate requesting for the entitlements?

A: None. Any extension of the DA's term would be a material amendment that would require Board of Supervisor's approval.

Q: During those extended periods, would it be possible for Prado to request changes in the project as related specifically to increased height, increased bulk, increased numbers of residential units, increased amounts of retail or office space? What about the possibility of design changes or other changes? Could Prado apply to change any part of the construction to provide the opportunity to have high rise construction?

A: Once the EIR is certified and the project is approved, any material changes to the project would be subject to new environmental review, would require Planning Commission and Board of Supervisor approvals and also an amendment to the DA. Any increase in height over what is entitled in our project would require a revision to the Planning Code and Zoning Maps that would entail Planning Commission and Board of Supervisors approval.

Q: There are genuine concerns about reducing open spaces and reduced on-site parking places.

A: Open space will be part of the entitlements and will likely be considered by the City as one of the public benefits supporting the DA – for that reason alone, reducing the amount of it would be very difficult if not impossible. The open space requirements will be carefully described in the project's approvals and will also be recorded against the property. So, as with any material changes to the approved project, any material change to the open space would be very difficult and would involve a public process and City approval. As to parking spaces, as you know, the City would like to see the number of spaces reduced. We plan to continue advocating for the proposed number of project parking spaces in our application.

Q: During the phased construction could Prado transfer shares in the project to provide for new or additional investors?

A: We have no plan to transfer any shares in the project and construction lenders generally prohibit any changes of ownership by the project developer during construction and stabilization of a project. PSKS, along with our equity partners and lenders, intend to provide all of the capital necessary to construct, own and operate the project. We plan to

Dear John, Kathy, Catherine, M.J., and Dick:

First of all John, thank you for the meeting last week at your home. As we agreed in the meeting, we are responding to your recent questions regarding the project. We have re-arranged your questions slightly to group them according to subject. If we haven't answered any of your questions, please let us know. We very much appreciate your willingness to promptly write back to us with your five outstanding issues on the project that are currently preventing us from obtaining LHIA support for the project. We appreciate your doing this so we can set a follow up meeting to find a mutually workable solution.

LHIA Questions:

 Q: You also stated that Prado wants to have a development agreement to lock in entitlements for longer periods of time than would normally be allowed?

A: Yes, we are looking to enter into a development agreement (DA) with the City for a term of approximately 15 years. For large projects with multiple buildings like 3333 California Street, the City generally requires a DA. The DA vests the entitlements, protecting the entitlements from changes in the law in exchange for certain community benefits. This would include the community benefit of certainty of the entitlements during that period. If we did not build the project during the term of the DA, then the DA would expire and we would lose the protections of the DA.

So we asked the Developer about these issues.

FIRST STARRED ITEM

Q: You also stated that Prado wants to have a Development Agreement to lock in entitlements for longer periods of time than would normally be allowed?

Simple Answer: Yes
15 years

PRETTY SELF EXPLANATORY.

You gotta wonder about a Housing Crisis.

Entitlement Period/Issues

Q: What is the reason for constructing the project in phases?

A: By allowing for potential phased construction, we would have the ability to complete and occupy portions of the project as each phase is completed. If conditions do not exist to build out the entire project, we can phase construction in order to align with market conditions and financing availability.

SECOND STARRED ITEM

Q: What is the reason for constructing the project in phases?

A: "If conditions do not exist to build out the entire project we can phase construction to align with market conditions and financing availability."

"What a powerful, unambiguous commitment to Housing.

Could also mean they want to redo the entitlement, or sell it or.....Pick a reason

We'll speak to this later.

Entitlement Period/Issues

Q: During those extended periods, would it be possible for Prado to request changes in the project as related specifically to increased height, increased bulk, increased numbers of residential units, increased amounts of retail or office space? What about the possibility of design changes or other changes? Could Prado apply to change any part of the construction to provide the opportunity to have high rise construction?

A: Once the EIR is certified and the project is approved, any material changes to the project would be subject to new environmental review, would require Planning Commission and Board of Supervisor approvals and also an amendment to the DA. Any increase in height over what is entitled in our project would require a revision to the Planning Code and Zoning Maps that would entail Planning Commission and Board of Supervisors approval.

THIRD STARRED ITEM:

Q: During those extended periods would it be possible for Prado to request changes in the project as related specifically to increased height, increased bulk, increased number of residential units, increased amounts of retail or office space? Design Changes? Other Changes? High Rise Construction?

Simple answer "Sure."

Nothing prevents us going back to Planning, the Commission and the Board of Supervisors and request such changes.

This opens up an immense opportunity for the Developer to radically redesign and up-zone the site!

This is simply a blank check.

Entitlement Period/Issues

Q: During the phased construction could Prado transfer shares in the project to provide for new or additional investors?

A: We have no plan to transfer any shares in the project and construction lenders generally prohibit any changes of ownership by the project developer during construction and stabilization of a project. PSKS, along with our equity partners and lenders, intend to provide all of the capital necessary to construct, own and operate the project. We plan to

FOURTH STARRED ITEM

Q: During the phased construction could Prado transfer share in the project to provide for new or additional investors?

A: "We have no plans to transfer any shares....."

We'll take a closer look at that answer momentarily as there is considerable information to the contrary.

THIS IS NOT A DEVELOPMENT PLAN ITS AN ENTITLEMENT SCHEME AS WE WILL SEE NEXT.

It is anticipated that the City and the project sponsor would enter into a Development Agreement (which requires approval by the Planning Commission and Board of Supervisors) that, among other terms, could formalize the amount of affordable housing developed as part of the proposed project or project variant, formalize the amount and maintenance of common and private open space, and limit the City's ability to rezone the site for a set period of time.

Read the lower box carefully “limit the City’s ability to rezone the site for a set period of time.”

First, no set period of time is stated which should ALWAYS raise red flags.

Let’s be generous and just put in 5 years.

After 5 years the Developer could request an entirely new set of Zoning criteria for this site Taller, Denser, Retail Focused.....

Bear in mind that after 5 years they haven’t actually created much housing according to their Phasing Plans and that’s assuming they don’t claim “Market conditions” as an excuse.

So the site may get rezoned before much actual work gets done.

Would it, Could it; Might it happen?

Folks, here's reality.

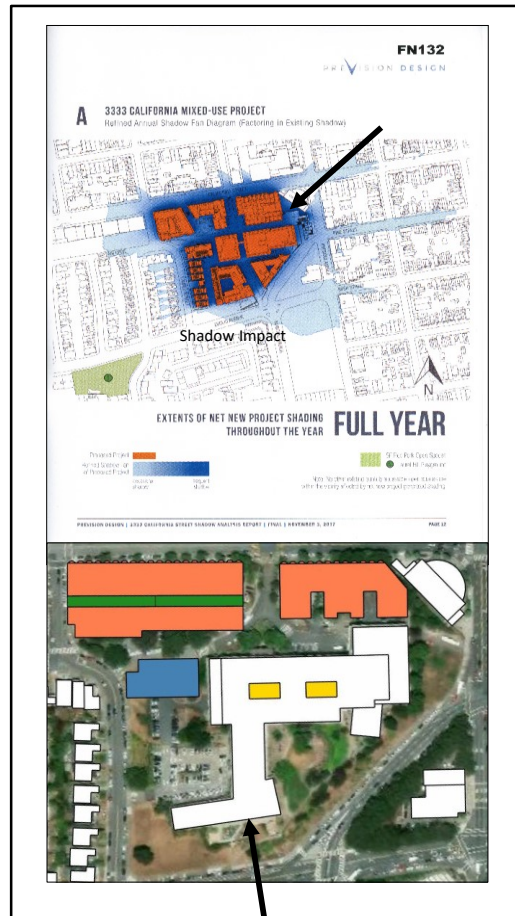

This is the view of a pretty significant Developer in San Francisco.

Every time you sell an entitlement the cost of the housing units go up-the original Developer needs to make his money, the new Developer needs to make his money starting with a higher cost basis.

So, any claims about "no intentions to transfer shares; if market conditions permit; limit the City's ability to rezone the site" need to be taken with the biggest dose of salt one can swallow.

Housing is getting pricier and pricier and a 15 year entitlement guarantees more expensive housing.

BUILD THE HOUSING IN 3 YEARS AND A LOT LESS FINANCIAL ENGINEERING CAN TAKE PLACE.

I call this the Shadow Box Development as shown in the Top View. Lots of dark blue.

Imagine living along those hardscaped concrete canyons?

The Bottom View shows the Community Alternative-pretty stark differences.

Just one quick reference:

The childcare center playground is presently here – ion the sun- here and that's where it will stay in the Community Alternative.

In the Top View the childcare center playground is here in the Deep Blue up against the Credit Union.

I'll leave it to you to decide.

THANK YOU

Zushi, Kei (CPC)

Subject: 3333 California Street

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisor Stefani and Planning Commissioners:

As a resident and small business owner who has lived and worked in the Presidio Heights neighborhood for 15 years, I am writing to express my support for the proposed development at 3333 California Street. The development at 3333 California would provide much needed housing, parking, commercial space, and open areas to the neighborhood.

Additionally, I am very concerned that the ongoing debate on this proposed project (along with the similar debate on the proposed project at the former CPMC hospital site on Cherry Street) will lead to perpetual construction delays and, eventually, result in two gigantic abandoned properties in the Presidio Heights, Laurel Heights and Jordan Park neighborhood that will attract homelessness, public drug use and crime. We have already seen a dramatic increase in vagrants, public drug use, and assaults on residents since these former properties have been vacated a short time ago.

I urge you to support this project so that construction can begin as quickly as possible to minimize the time of transition from one planned use of the space to another.

Sincerely,

Dr. Bella Shen Garnett

Subject: 3333 California

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Kei,

As a neighbor and resident who has lived in the neighborhood for almost forty years, I am writing to express my support for the proposed development at 3333 California Street. This thoughtfully developed project will create housing to help alleviate San Francisco's housing crisis, while better connecting the Laurel Heights neighborhood for families.

The development at 3333 California would create 558 or 744 units, allowing more people to remain in the city and bringing new homes to San Francisco's west side. Additionally, the proposed development will provide over 5 acres of open space where kids can play, neighbors can relax, and friends can spend time with one another in this part of the city. It will help create a family-friendly community environment that is desperately needed in a city that has seen a rapid flight of families leaving San Francisco. The proposed pedestrian walkways through the site will connect neighbors in the Laurel Village and surrounding neighborhoods by reimagining the currently walled-off space on the UCSF campus. And with most units designed for two or more bedrooms, the project will be a fantastic place to raise a family and a great amenity for existing residents and neighbors.

I urge you to support this project that is thoughtfully developed and will create an opportunity for families to stay and thrive in our city. Our city is evolving and we are not addressing the needs of the people who make this city interesting. San Francisco is becoming a city for the 1 % or the homeless and that is simply unacceptable.

Sincerely,

Massimiliana Boyer Glynn

Subject: 3333 California Street City Project

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisor / Planning Commissioner:

I strongly support the proposed development at 3333 California Street. The project has been thoughtfully developed with input from San Francisco residents. The property will address San Francisco's housing crisis. In addition, the proposal will connect the existing site to the greater Laurel Heights community, creating open spaces, community amenities, and homes.

The project has sought community views on design and use. Throughout the design process, the developer held over 125 community meetings, and collaborated with two design-focused community advisory groups. These community leaders provided helpful suggestions that improve the project and enhance the neighborhood, and meet much needed new housing.

The development team changed the design multiple times to continue to improve the project after community input. With most units designed for two or more bedrooms, along with five new acres of open space and a vibrant and walkable retail district, the project will be a place to raise a family and an asset for everyone who lives in the neighborhood.

The project includes retail space to reduce the need to drive outside of the neighborhood. The proposed retail will be designed to fill-in where goods and services are lacking, complementing the existing retail establishments and helping to stitch the neighborhood together. After collaboration with stakeholders, the designs were updated to fit with the neighborhood's 'classic San Francisco' feel. The development fits into the neighborhood's character. To keep the Laurel Heights community family-friendly, the project includes a mix of apartments and townhomes.

I look forward to the contribution of this project to the character of the neighborhood. It is a project that will result in a beneficial relationship of the development, the neighborhood, and the city.

Sincerely,

Subject: Excited for this Housing Project at 3333 Cal

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Supervisor Stefani and Planning Commissioners,

I wanted to express my strong interest in this project at 3333 California Street. These are the types of projects that can revitalize neighborhoods and maximize use of great urban real estate for more housing. I am a 3rd generation SF native and current homeowner, and strongly believe that we need to continue to build responsible housing projects like this! Great open space component, and I love the community that it will build in that area. More walkable streets in that area will create a whole new neighborhood and add vibrancy to what is only a drive-through area. The potential for new restaurants/bars/cafes is really exciting!

Thanks,
Will Holleran

Subject: 3333 California DEIR Comments

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Mr. Zushi,

Thank you for the opportunity to submit my limited comments and the adequacy of UCSF's DEIR for their 3333 California Street project.

I was born and raised in San Francisco. I'm a homeowner / resident of San Francisco, seventy plus years and live in District 7. I all too often shop at the Laurel Village Shopping area and know of this site all too well.

I have reviewed UCSF's DEIR, case 2015-014028ENV and adding my limited comments to this DEIR, a job well done with the DEIR.

Focusing mostly on the Housing part of the DEIR and Project.

Wow, how impressive it is to see the amount of housing that will be developed on this site for a total of 558 units, including adding up to 27 units of four bedroom units, almost the first of its kind! This will definitely help with our current Housing issues. In general, we need this housing as fast as we can get it built. The open space is an exciting proposal. The overall architecture of the buildings, the landscaping and the mixed use of the site has been well thought out. With all that said, in my opinion this DEIR covers most import issues and I fully support UCSF's project and the adequacy of this DEIR.

UCSF continues to add value to the city it serves and is a great asset to the city. As I mentioned we need to approve this all too Wonderful PROJECT.

Finally, in closing I would like to see this project placed on an **expedited process** from now thru the final Certification of the DEIR thru the Permit process. We need this housing. We can not afford to loose this project.

Please consider my full support for this project and the adequacy of the DEIR for this project. Should you have any question, please do not hesitate to reach out to me.

Respectfully,

Dennis H

Dear Supervisor Stefani and San Francisco Planning Commissioners,

I'm writing to you to show my full support of the proposed 3333 California mixed-use residential project. As a Pacific Heights homeowner and parent I welcome this well thought out, and beautiful addition to our neighborhood.

Our family often walks to the Presidio, Fillmore Street, Sacramento Street, and Laurel Village, frequenting the various merchants and restaurants. We would welcome new stores, especially the proposed smaller non-traditional "big box" variety and love to walk to brunch (not an option in Laurel Village besides Noah's) and dinner as family on Sunday evening somewhere close by. Our children will be attending the neighborhood Presidio Hill School starting in the Fall of 2019. We plan to walk there and back, and I can see us walking through the 3333 California walkways and open spaces then.

We also support the much needed additional housing units. As an urban San Francisco family, we want a more diverse and inclusive neighborhood.

Thank you for your support and dedication to making our neighborhood and life in San Francisco safer, greener, and more inviting!

Best regards,
Martine Krumholz

Subject: In support of 3333 California

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisor Stefani,

My name is David Levine and I live on the 3200 block of Washington. I would like you to know I am a neighbor who would love to see more high quality, well designed, family housing in our neighborhood. 3333 California appears to be just that. The planned open space, low-density design works well with the aesthetic of our neighborhood. The unit mix will attract and retain more families in San Francisco.

We are facing a housing crisis and this proposed community will add much needed supply. We are losing too many families because there are simply not enough housing options. I hope you can find a way to make 3333 California a reality. Thank you.

If there is anything I can do as a concerned San Francisco Resident and neighbor to this project, please do not hesitate to let me know what that is.

Thank you.

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

May 14, 2019

Dear Supervisor Stefani and San Francisco Planning Commissioners,

I am writing to you to show my full support of the proposed 3333 California Street mixed-use residential project. As a neighborhood resident, I welcome this addition to the neighborhood.

The plan and design put forth by the developer (Prado Group and SKS) is thoughtful, thorough, environmentally conscious, and inclusive. The developer's plan for 3333 California would turn an under-utilized piece of property into an area accessible to the community, providing much needed housing and businesses to this family-oriented and transit-friendly neighborhood.

As we have seen many young families move outside the City (to Marin, East Bay, and the Peninsula), the 3333 California project will help more people remain in this great city and bring new homes to San Francisco's west side, where has seen very little development in the last few decades.

The project as outlined by Prado Group and SKS deserves all of our support, and I urge you to help push this project forward to approval so that the residents of San Francisco have access to quality housing, green space, and community.

Sincerely,

Daniel S. Mason

Subject: Letter of Support.

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisor / Planning Commissioner:

I am writing to urge you to support the proposed development at 3333 California Street. This project is a critical step forward in addressing San Francisco's housing crisis by providing much-needed housing for families in a transit-friendly neighborhood.

Over the past 8 years San Francisco has produced jobs 8 times faster than housing--a clear imbalance that makes it hard to live here, build a community, and raise a family. As a longtime resident of the neighborhood, I've seen neighbors and friends move out of the city due to the housing shortage. The combined effects of job creation and slow housing production have created difficult situations for newcomers and longtime San Franciscans alike.

I am glad to see the City government put forward a goal of producing 5,000 residential units annually for the next 20 years. In order to help realize this goal, I hope that you will support the 3333 California project. The development would create 558 or 744 units that will help more people remain in this great city and bring new homes to San Francisco's west side, where very little new housing has been built over the past 40 years. Additionally, this new project will also include affordable housing that will help preserve the diversity of our city and the vibrancy of our neighborhoods.

A family-friendly community like this is desperately needed in a city that has seen a rapid flight of young families. With most units designed with two or more bedrooms, along with five new acres of open space and a vibrant and walkable retail district, the project will be a fantastic place to raise a family and a great asset for everyone who lives in the neighborhood.

San Francisco is an innovative city that values inclusion, diversity, and community. In this moment of crisis, we hope that you will support this project and ensure that the residents of San Francisco have access to housing.

Sincerely,

Anna Morfit

Dear Supervisor Stefani and SF Planning Commissioners,

I writing to express my complete support for the proposed development at 3333 California Street. As a current resident of the neighborhood I was interested to review the project upon hearing of the idea; and I couldn't be more impressed with their well thought out, respectful proposal.

Housing is a constant concern within our city and this proposal would immediately address the matter for current/future residents of the area by producing 500+ homes. The project exhibits tremendous respect for the area by proposing a sustainable minded building approach, while "blending into" the neighborhood through community designed tactics; including much needed child care space. My favorite component of the proposal is how it would improve our beautiful community by developing "green area" that includes additional trees, gardens, open space and a public green park. These types of improvements will maintain our neighborhood look and feel while adding innovation to the vicinity.

Finally, please find a PDF copy of this letter attached. I appreciate your time and urge you to strongly consider this special proposal.

Best,

Tyler Norsworthy

Dear Supervisor Stefani and Honorable Members of the San Francisco Planning Commission:

I have lived in District 2 going on 78 years, as did my parents, both sets of grandparents and all of my aunts and uncles, all of whom ran successful business in San Francisco. That is why I am writing to all of you to lend my support to the proposed development of 3333 California Street, which is a well thought out development, which will bring housing and open space to the Laurel Heights area, not to mention the increased tax revenue to the City and County through not only property taxes, but also increased spending at Laurel Village businesses.

I urge you all to support this thoughtfully developed project, which will permit families to stay in San Francisco and which will ensure that our lovely City continues to thrive.

Respectfully yours,

Francis O. Scarpulla

Dear Supervisor Stefani,

I am writing to urge you to support the proposed development at 3333 California Street. This project is a critical step forward in addressing San Francisco's housing crisis by providing much-needed housing for families in a transit-friendly neighborhood.

Over the past 8 years San Francisco has produced jobs 8 times faster than housing--a clear imbalance that makes it hard to live here, build a community, and raise a family. As a native San Franciscan and life-long resident of the neighborhood, I've seen neighbors, friends and family move out of the city due to the housing shortage. The combined effects of job creation and slow housing production have created difficult situations for newcomers and longtime San Franciscans alike.

I am glad to see the City government put forward a goal of producing 5,000 residential units annually for the next 20 years. In order to help realize this goal, I hope that you will support the 3333 California project. The development would create 558 or 744 units that will help more people remain in this great city and bring new homes to San Francisco's west side, where very little new housing has been built over the past 40 years.

Additionally, this new project will also include affordable housing that will help preserve the diversity of our city and the vibrancy of our neighborhoods.

A family-friendly community like this is desperately needed in a city that has seen a rapid flight of young families. With most units designed with two or more bedrooms, along with five new acres of open space and a vibrant and walk-able retail district, the project will be a fantastic place to raise a family and a great asset for everyone who lives in the neighborhood.

Furthermore, the site's transit-rich location will give the new residents access to five different bus lines within walking distance. If the city wants to encourage people to drive less, to both lessen traffic and protect the environment, then projects in transit-rich locations like this need to be built.

San Francisco is an innovative city that values inclusion, diversity, and community. The people opposing this project value preserving the imputed equity of their homes and their views more than ensuring that San Francisco remains an inclusive, diverse community for all income classes.

Please, in this moment of crisis, I hope that you will support this project and ensure that the residents of San Francisco have access to housing, instead of a small group of privileged homeowners with a view they don't want blocked.

Sincerely,

Catherine,

It was great seeing you with your neighbor, Olivia, a couple of weeks ago, your block looks more amazing every day.

Please see our support letter for 3333 California. We are supporting the proposed development because it will provide over 5 acres of open space where kids can play, neighbors can relax, and friends can spend time with one another in this part of the city. It will help create a family-friendly community environment that is desperately needed in a city that has seen a rapid flight of families leaving San Francisco.

we hope that this finds you well.

my best, always,

js

Dear Supervisor Catherine Stefani and Planning Commissioners:

My name is Jeff Schlarb and I have been a resident and small business owner in San Francisco for nearly 20 years. I am writing to express my support for the proposed development at 3333 California Street. I have met with a few of the project managers and developers of this project and I strongly believe this project marks a critical step forward in addressing San Francisco's housing crisis. The development at 3333 California would create 558 or 744 units, allowing more people to remain in the city and bringing new homes to San Francisco's west side. Additionally, the proposed development will provide over 5 acres of open space where kids can play, neighbors can relax, and friends can spend time with one another in this part of the city. It will help create a family-friendly community environment that is desperately needed in a city that has seen a rapid flight of families leaving San Francisco. Furthermore, it will create an environment for employees that work in the neighborhood to frequent and enjoy.

I am glad to see the City government put forward a goal of producing 5,000 residential units annually for the next 20 years. In order to help realize this goal, I hope that you will support the 3333 California project and bring new homes to San Francisco's west side, where very little new housing has been built over the past 40 years. Additionally, this new project will also include affordable housing that will help preserve the diversity of our city and the vibrancy of our neighborhoods. San Francisco is an innovative city that values inclusion, diversity, and community. In this moment of crisis, we hope that you will support this project and ensure that the residents of San Francisco have access to housing.

The development at 3333 has the support of my family, as well as my business Green Couch Staging and Design Inc. which has seen first-hand the impact the housing crisis has had on my employees.

Sincerely,

Jeff Schlarb

Subject: 3333 California Street

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Dear Supervisors and/or Planning Commissioners:

Building more housing in San Francisco is essential to creating a more equitable and vibrant city. New housing in San Francisco must also be sustainable. The 3333 California development in Laurel Heights is not only adding more housing—it's adding sustainable housing. That's why, as a 5th generation San Franciscan and proud Jordan Park neighborhood resident, I support 3333 California.

The 3333 California development team intends to meet or exceed the requirements of the San Francisco Green Building Ordinance by achieving a minimum of LEED Gold for Neighborhood Development Plan certification. The project will also serve as a net positive development for the community and the environment, exceeding code requirements for energy and water. 3333 California also adds density in a smart way. When our cities increase density with in-fill development, we reduce greenhouse gas emissions, and people utilize public transit more. Dense urban environments make a positive impact on community wellness, material and waste management, and our urban ecosystems.

3333 California will be constructed using natural, top-quality materials without sacrificing important view corridors. Efficient and renewable energy systems and waste management will minimize the project's carbon footprint, and the use of green roofs, storm-water capture, and solar panels will improve the eco-friendliness of 3333 California.

The development provides unprecedented sustainability features without compromising San Francisco's natural beauty. Landscaping throughout the site celebrates California's indigenous biodiversity, inspired by a Cypress grove, flowering gardens, a verdant ravine, Oak trees, Walnut trees, Redwood trees and other old-growth trees. A large green park is perched on the southwest corner of the site above the neighborhood to take in scenic vistas, including the Golden Gate Bridge and downtown city views.

3333 California isn't simply just providing 15 new residential buildings with 744 new homes. It's an asset uplifting our community's health today and into the future. I hope you support this critical project.

Sincerely,

Frances Stark

San Francisco

Subject: Support for the 3333 California Street project - PLEASE BUILD!

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Hi, everyone! As a SF resident who lives in D2 by Fort Mason, I wanted to voice my support for 3333 California Street.

The proposed 3333 California mixed-use development in Laurel Heights answers the city's housing needs by providing 744 new housing units. These units aren't just studios—approx. 58% of total homes are family friendly: two, three, and four-bedroom homes.

The City has set an important goal of producing 5,000 new housing units annually for the next 20-years. The 3333 California project alone can help the city meet almost 20% of that important annual goal.

The 3333 California project has been guided by strong public policy and is balanced by community input. Throughout the development process, the Prado Group held over one hundred and sixty community meetings, engaged with the community, city leaders, and collaborated with two design-focused community advisory groups. These community leaders all provided helpful suggestions that will improve the project and enhance the neighborhood while providing much needed new housing.

Based on Community and District Supervisor's feedback, the development team changed the design multiple times and has now added 186 new, on-site affordable housing units, a quarter of all the project's housing, for low-income seniors. In the long term, 3333 California represents the types of solutions our city needs. In the short term, it's an opportunity for more families to stay and thrive in our incredible city. I urge you to support this project.

Thanks,

Zachary

**Re: Independent Peer Review of 3333 California – Proposed Alternative
Planning Department Case No. 2015-014028ENV**

Dear Mr. Zushi,

You have requested that the Department of Public Works, Bureau of Architecture review and evaluate information provided by the Prado Group and SKS (hereafter referred to as the “project sponsor”), the project sponsor of the 3333 California Street project, Planning Department Case No. 2015-014028ENV, regarding the “Community alternative” submitted by the Laurel Heights Improvement Association (LHIA) in response to the Draft Environmental Impact Report (Draft EIR) prepared for the project. We have completed our review and evaluation, and are pleased to submit this report.

In this report, “proposed project” refers to the project proposed by the developer as represented by the “Planning Application Re-Submittal-1,” dated February 22, 2019 and the “Community alternative” refers to the proposed alternative project submitted by LHIA on January 8, 2019. The Community alternative is described in the document entitled “Community Full Preservation Alternative Overview.”

Contained herein is background information, an analysis of the April 2, 2019 letter from Don Bragg to Kei Zushi, regarding “Response to Request for Information regarding 3333 California;” a description of the key findings; and a list of documents reviewed. This report is based on the Public Works staff’s knowledge and professional judgement in the standard practice of the architectural and construction industries; the City’s permitting process and requirements; and applicable codes, regulations, and ordinances.

BACKGROUND AND EXISTING CONDITIONS

The Planning Department is reviewing and responding to public comments submitted on the Draft Environmental Impact Report (DEIR) prepared for the 3333 California Street Mixed-Use Project. As part of the process, staff is responding to comments from LHIA. In a letter dated March 20, 2019, the Planning Department requested information from the sponsor to help the department evaluate the Community alternative with respect to the characteristics of the project site, methods and practice of construction, and physical feasibility. The department received additional information from the sponsor on April 2,

2019. Planning staff has requested that the Bureau of Architecture at Public Works conduct an independent review of the sponsor's evaluation of the LHIA Community alternative.

The subject lot is bounded by California Street, Presidio Avenue, Masonic Avenue, Euclid Avenue, and Laurel Street and has the address 3333 California Street. The lot contains the existing 455,000 square foot (sf) "main building", which is a 4-story office building with a three-story partial basement built in 1954, and subsequent additions. There is also a small annex building located at the northwest corner of the lot, at California and Laurel streets. The site is sloped and features asphalt parking lots on the west and north sides, brick landscape walls, a concrete trellis at the entry court, concrete paving, a large expanse of lawn on the south side at Euclid Avenue, and numerous trees and shrubs primarily on the east and south edges of the existing main building, as the site slopes down to Presidio and Masonic avenues.

The property is considered a historic resource for the purpose of environmental review because it is listed on the California Register of Historical Resources.

SUMMARY OF PROPOSED PROJECT

The proposed project would modify the main building by (1) removing the lower projecting wings, (2) rebuilding the 4th floor, (3) adding a 5th, 6th and partial 7th floors, and (4) renovating all interiors and the entire exterior envelope as required for the new residential use. The proposed project includes removing 217,205 sf of the existing main building and adding 83,607 sf, for a new total area of 321,402 sf in what the proposed project calls Center Building A and Center Building B. The proposed project would remove the annex building (also referred to as the service building in some of the documentation) located at the northwest corner of the site, and all of the site's landscaping except for 10 existing mature trees.¹

The proposed project would construct 13 new buildings, including seven duplexes along Laurel Street, and adaptive reuse of the existing main building, which would be divided into two separate residential buildings. New underground garages would be built below seven of the new buildings. All underground garages except the Laurel duplexes would be interconnected with below-grade access tunnels, thus reducing the number of vehicular access points. Plaza Building A and Plaza Building B, along California Street, would include residential and retail uses, and the Walnut Building (along California Street and the extension of Walnut Avenue), would include retail, office and childcare uses. Center Buildings A and B, and the Masonic, Euclid, Mayfair, and Laurel duplex buildings would include residential uses only.

¹ Two of the retained trees appear to be Monterey Cypress trees located in the proposed Cypress Square, which LHIA claims have existed since the site was used as the Laurel Hill Cemetery based upon Figure 5 found in Exhibit 3 to LHIA's January 8, 2019 letter addressing project alternatives. The Historic Resource Evaluation – Part I, prepared by Michael Hibma with LSA dated December 2017, states that several large onsite Monterey Cypress trees are likely remnant trees from the Lone Mountain/Laurel Hill Cemetery (see pp. 9, 23, and 27 of the Historic Resources Evaluation – Part I).

A variant is also proposed that would differ from the proposed project only in the development of the Walnut Building. Under the variant, the Walnut building would be approximately 67 feet in height, and in total, the variant would provide up to 744 residential units and no office uses.

Plans provided for the proposed project have a sufficient level of architectural information to convey size, areas, and arrangement of uses and to demonstrate substantial compliance with Planning Code requirements and basic life-safety code requirements. Where our analysis leads to a conclusion not specifically stated in the project sponsor's response dated April 2, 2019, the phrase "based on Public Works analysis" is used.

SUMMARY OF LHIA'S "COMMUNITY ALTERNATIVE"

The LHIA Community alternative would keep most of the existing office building and convert it to residential use. The Community alternative would also demolish the circular speed ramps to the existing parking garage; but does not describe how cars can access the proposed basement parking without these ramps. Although not disclosed in the comment, the Community alternative would also likely require the demolition of approximately 50 feet of the northern portion of the three stories of partial basement parking, due to the placement of the proposed Walnut Building, which is proposed to be located very close to the existing main building's northern wing. This analysis is based on comparison of the Community alternative "Site Plan", the aerial photographs in Exhibit 3,² and drawing C2.01 "Existing and Proposed Building Overlay" from the proposed project.

The Community alternative proposes to retain all the site and landscaping work on the south side of the site, including the primary brick landscape walls, the entry court on the west side including concrete trellis, the lawn areas, and much of the landscaping on the south side that has been added over the years as part the Fireman's Fund office building according to the series of aerial photographs in Exhibit 3. It appears that all six of the large trees in the East and West parking lots noted on page 2 of Exhibit 3 would be removed as part of the Community alternative to make way for proposed new residential construction, even though LHIA states that California Back Building would be sculpted around the large Monterey Cypress trees (see p.7 of Appendix A³ of LHIA's January 8, 2019 letter). Denise Bradley Cultural Landscapes states that these trees appear to have been part of the Laurel Hill Cemetery. These six trees are referred to in the Exhibit 3 as #24, #25, #118, #119, #120 and #121.

The Community alternative would demolish the annex building located at the northwest corner of the site, and construct four new buildings. These four buildings include a new Mayfair building very similar to the proposed project but without the below grade parking, a California Front Building,⁴ a California

² Exhibit 3 in this memo refers to Exhibit 3 (April 24, 2018 letter from Denise Bradley Cultural Landscapes to Kathy Devincenzi, Location of Trees that were part of the Laurel Hill Cemetery) to LHIA's January 8, 2019 letter, unless otherwise noted.

³ Appendix A in this memo refers to Appendix A (Community Full Preservation Alternative Overview) of LHIA's January 8, 2019 letter, unless otherwise noted.

⁴ LHIA states that the California Front Building would include 14 new buildings containing 56 units for middle-income families. In contrast, LHIA does not specifically provide the number of buildings that would be included in the

Back Building over a 1-story basement garage, and a Walnut building over a 1-story basement garage. All new buildings would include residential uses only.

LHIA's January 8, 2019 letter includes the "Site Plan" and the "Circulation Plan" which are diagrammatic plan views of the site, and the text-based document, "Appendix A: Community Full Preservation Alternate Overview." These documents do not have a sufficient level of architectural information (e.g., a scaled site plan showing the dimensions of the subject lot and buildings, landscaped areas, and setbacks, floor plans, roof plans, sections and elevations) to convey size, area, arrangement of uses or to demonstrate compliance with Planning Code requirements and basic life-safety code requirements.

METHODOLOGY, ASSUMPTIONS, AND DEFINITIONS

- Within this document we use the term residential to mean multi-family residential buildings that have more than two units or are otherwise required to be designed to the California Building Code (which applies to buildings with two or more residential units) and not the Residential Code (which applies to single-family homes). Public Work's analysis is based on the proposed project and the Community alternative would both be required to comply with the California Building Code.
- For measurement of areas at each floor level, we use the following terms which may differ from how the terms are used by Planning Code, Building Code, or by the Building Owners and Managers Association ("BOMA"):
 - Gross Area is measured at the exterior face of exterior wall such as the exterior face of window wall or exterior face of cladding. Gross area includes structure and all vertical penetrations such as shafts. This gross area also represents the footprint of the building.
 - Usable Area is measured to the exterior walls enclosing occupiable spaces and excludes vertical shafts, stairs, and elevators.
 - Net Area is measured to the interior wall of the enclosing occupiable spaces and includes all areas within this perimeter other than common shafts, stairs or elevators already deducted above. The net areas is the saleable or leasable area.
- To calculate the number and size of units based upon the available footprint, our analysis uses standard metrics such as sizes of typical components such as units, corridors, and parking stalls. These components are arranged into common configurations as much as possible to maximize efficiency. Typical sizes and configurations of these components are not published standards but are developed by each professional through experience. We use the term layout study to describe the architectural process of arranging components into acceptable configurations for the purposes of determining best approaches to solving particular problems.

California Back Building, but states that each building would be approximately 28.5 feet wide. (See Appendix A of LHIA's January 8, 2019 Letter).

- The term efficiency is used herein, and frequently by the project sponsor in their review of the Community alternative. With regard to residential spaces, efficiency is the percentage of usable area to the gross area of a space or building. Typically, multi-family building designers use the term efficiency to describe the percentage of the building that can be marketed, leased and sold as residential units. The project sponsor states that they expect most residential projects to have efficiencies of 70% to 74%. Based on our experience in large multi-family residential and mixed-use projects, we agree with the project sponsor and refer herein to the buildings within the Community alternative as “efficient” or “inefficient” by comparison to the target 70% to 74% efficiency.
- Building areas can be measured in different ways and there are different methods for measurement depending on the different purposes. For example, areas are calculated differently to demonstrate compliance with planning codes, to demonstrate compliance with building codes, to record a deed for condo maps, or to establish areas for commercial leases. While BOMA published a standard for measuring areas of multi-family residential projects in 2010, most developers and architects have had their own methods for many years. We consider it best practice to define the method used for each project’s documentation.
- For projects at an early conceptual level where only block diagrams are used, such as the Community alternative, estimates of the overall footprint of the building is the only measurable area. Without additional floor plans that show and dimension units, corridors, structure, mechanical shafts, etc., efficiency percentages are the only means available to calculate the approximate amount of residential area.
- Once floor plans are complete to the point of showing all rooms, corridors, structure, mechanical shafts, etc., it is possible to tabulate usable area, which excludes vertical shafts, stairs, and elevators. The usable area is very close to the actual net space within one residential unit that is marketed and sold or leased.
- The project sponsor also uses the term efficiency with regard to parking. The project sponsor states, “In the context of parking, efficiency is the total gross area of parking facility divided by the number of parking spaces.” We agree with this definition and the project sponsor’s consideration of 300-325 square feet per stall as a theoretical maximum rate of efficiency, with 400-500 square feet per stall as more typical for underground parking in mixed-use projects, where structural columns and layouts are compromised to meet the needs of residential or retail uses above in addition to cars.
- The term junior 1-bedroom is a bedroom configured to allow the bedroom to have access to light and air through the living area. The bedroom has its own space but must be substantially open to the living area to meet code requirements. Junior 1-bedrooms are smaller than 1-bedroom units.

- The term studio combines the sleeping areas with the living areas within one room. Studios are smaller than junior 1-bedrooms.
- The term double-loaded corridor describes an arrangement of units along both sides of a linear corridor. This arrangement is the most efficient and allows for a minimum number of stairs and elevators. A single-loaded corridor arrangement has units along only one side of a linear corridor and is typically less efficient because only one side of the building has access to required light and air. Single-loaded and double-loaded can also be used to describe arrangement of parking stalls along drive aisles.
- Flats are units that are stacked in a vertical arrangement with all access provided vertically via stairs and elevators; there are no corridors in flats.
- The term window wall is used to describe exterior fenestration, or windows, that are supported by the floor level slab below and the next floor level slab above. Window walls typically occur in continuous sequence such as on all four sides of a building. This term is used by TreanorHL in Exhibit 1,⁵ to describe the existing fenestration system at the existing main building.
- For purposes of this analysis, we assume standard 12-foot planning modules for widths of living rooms and bedrooms. For example, a studio would be 12 feet wide (combined sleeping and living room), a 1-bedroom would be 24 feet wide (living room and bedroom), and a 2-bedroom would be 36 feet wide (living room plus 2 bedrooms). Room widths as narrow as 10 feet are acceptable only for projects focused on small units for second or third bedrooms, and will typically only be used for a small percentage of units in a building. Larger widths are typically less efficient and can result in larger units but without a commensurate increase in the number of bedrooms. This is because to comply with the Building Code, all habitable spaces such as living rooms and bedrooms require access to light and air (e.g., a window). Rooms that do not have required access to light and air could be used for other non-habitable rooms such as bathrooms, closets, or kitchens. The term habitable is defined by the Building Code.
- For purposes of this analysis, we assume standard unit depths of 30 to 35 feet. Deeper units are typically less efficient, as there would be less window area available for bedrooms given the same unit area. We agree with the project sponsor's assumption of average unit sizes: 1-bedrooms of 750 square feet, 2-bedrooms of 1,100 square feet, and 3-bedrooms of 1,350 square feet.
- The project sponsor states that the Community alternative plan for the existing main building would result in the majority of units that range from 16 feet wide by 50 feet deep to 13 feet

⁵ Exhibit 1 in this memo refers to Exhibit 1 (January 7, 2019 memo prepared by Nancy Goldenberg with TreanorHL) to LHIA's January 8, 2019 letter, unless otherwise noted.

wide by 61 feet deep. We agree that such unit configurations are undesirable as they will be long and deep studios or junior 1-bedroom units.

ANALYSIS OF PROJECT SPONSOR'S RESPONSE TO REQUEST FOR INFORMATION REGARDING 3333 CALIFORNIA STREET

This section is an analysis of the project sponsor's response to the Planning Department's request for information to evaluate the Community alternative as contained in the April 2, 2019 letter prepared by Don Bragg, Senior Vice President of the Prado Group. The numbered items correspond to the project sponsor's numbering of their responses. We have summarized the question in bold text followed by our analysis.

1. Is it possible to determine the LHIA Community alternative's dwelling unit mix and unit sizes by type for each proposed structure? If so, calculate this information and state assumptions and sources used.

- a. The project sponsor analyzes the five main building groups in the Community alternative: California Front and Back Buildings, Walnut Building, Mayfair Building and the existing main building. The project sponsor states that the Community alternative could provide 492 units, not the 558 units stated in the comment letter. In a follow-up email dated April 4, 2019, the project sponsor revised this total number to 470 units. Based on Public Works analysis, we estimate that 473 units could be built in the Community alternative scheme. The Table 1 below compares the number of units in the Community alternative that LHIA claims it could provide, with the project sponsor's and Public Works' analysis of what the Community alternative could provide:

TABLE 1: NUMBER OF RESIDENTIAL UNITS

BLDGS IN COMMUNITY ALTERNATIVE	LHIA'S DESCRIPTION OF COMMUNITY ALTERNATIVE	SPONSOR'S REVIEW OF LHIA ALTERNATIVE	PUBLIC WORKS ESTIMATE
EXISTING MAIN BUILDING	292	231	226
CALIFORNIA FRONT	56	56	56
CALIFORNIA BACK	56	40	40
WALNUT	118	107	115
MAYFAIR	36	36	36
TOTAL	558	470	473

- b. At the existing main building, the Community alternative would keep all areas of the building above grade that are usable for residential uses. LHIA does not state how much area of this building would be used, but proposes 292 units at an average of 798 square feet each, resulting in 233,016 square feet of residential area. It is unclear if this is gross or net residential area. In contrast, the project sponsor states that only 231 units are possible due to there being 263,500

sf of gross residential square feet available and 184,450 net residential square feet, or $(263,500 \times 70\% / 798 = 231)$.

- c. In the existing building, we agree with project sponsor's conclusion that the width of the existing building, shown at 144'-8" wide in the proposed project drawings, would create inefficient units. Based upon the Community alternative diagrams and Appendix A description, there would be one residential unit at each side with a light court and two single-loaded corridors in the middle. 798 square foot units at 50-feet deep would result in 16-foot-wide units $(798/50 = 15.96)$. Such narrow units will be restricted to studios or junior 1-bedroom units since there is space for only one room to face the glass (providing required access to light and air). Given the size of the building, this means that the Community alternative would have at least 75% of the project's total units as large studios and junior 1-bedroom units.
- d. Public Works has analyzed the computer-aided drawing (CAD) files of the existing building contained in the file "Building Plans_2017-0726 BDC Areas.dwg." For the existing building, we have determined there is a total of 458,292 gross area of the building, of which after subtracting 130,578 sf for parking; 4,112 sf for the auditorium; 11,500 sf for childcare (stated by LHIA but not shown in CAD); and 1,183 Sf for café (stated by LHIA but not shown in CAD), there is a total of 271,154 SF area for residential area.
- e. Of this 271,154 SF, we subtract 91,090 SF that would be required for corridors or are otherwise unfit for use within residential units. We assumed 6-foot-wide corridors, wider than the typical 5-foot-wide corridors due to the unusually long corridors since some corridors are over 300 feet long. We also deducted areas that are over 50 feet from exterior windows as we consider that space to be unusable within units because they would be too remote from bedrooms or living areas that must have access to light and ventilation per the Building Code. These areas could be amenity spaces such as storage, bike storage, meeting rooms or other communal spaces that do not need windows. As an example, half of the perimeter of Level 1 and twenty percent of the perimeter of Level 2 are below grade, cannot accommodate windows unless large lightwells are created, and are thus unsuitable for residential units.
- f. Based on our calculations, if the units averaged 798 sf (as proposed in the Community alternative), the remaining 180,064 square feet could accommodate 226 units. This 798-sf unit is usable area.
- g. We agree with project sponsor's and LHIA's analysis that the California Front Buildings, composed of fourteen 28.5' by 75' four-story buildings, can accommodate 56 units (with four units (flats) in each of the 14 buildings). We also support the project sponsor's conclusion that these units would be less than the 85% efficiency assumed in LHIA numbers $(1,821 \text{ SF unit} / 2,137.5 \text{ SF footprint} = 85\%)$. An efficiency percentage of 85% is unusually high, and not reasonable. The arrangement of having one elevator, two stairs, corridor, and mechanical shafts within each 28.5' by 75' building (in order to include "direct access" to the parking garage and meet the building code's egress and accessibility requirements) would reduce efficiency below the stated 85% to approximately 65%. At approximately 2,000 square feet, the units would be large enough to fit a mix of 2-bedroom and 3-bedroom units.
- h. For the California Back Buildings, we agree with the project sponsor's conclusion that the 40-foot-deep units are not buildable. Based on Public Work's layout studies, the arrangement of

having one elevator, two stairs, a short corridor and mechanical shafts within each 28.5' by 40' building, would reduce efficiency to 42%. The resulting unit size would average 425 square feet. There are no dimensioned site plans to confirm how many 40-foot deep units would be provided, but upon review of the TreanorHL "Site Diagram", and the figures within the memorandum from Denise Bradley Cultural Landscapes (Exhibit 3), we believe the loss of sixteen units to be a reasonable estimate based on the trees' impact to four of the 28.5-foot-wide buildings.

- i. The project sponsor states that to stay within the 40-foot height limit, the California Back Building would be built at the height of the rear yard of the California Front Building. The massing for the Back Building could still work, but would require the "rear yards" of the Front Buildings to be considered as mostly common open space – not "private" as described in comment - in order to access the Back Buildings through the Front Buildings' "rear yards" (otherwise the first- and second-floor units in the Back Building must be accessed from the south side of the Back Building and this would require a greater amount of excavation). Therefore, Public Works agrees with the project sponsor's conclusion that this is an issue not addressed in the Community alternative.
- j. For the Walnut Building, the project sponsor concludes that only 3-1/2 stories could be built to stay within a 40-foot height limit. Public Works believes that the 'E' configuration of the building footprint will allow for the Walnut Building to have double-loaded corridors with the units on the south side facing inwards towards the courts. Only some of the units on the lowest level of the west side would be buried below grade. Therefore, Public Works believes that only 3 units would be lost, so that 115 units could be provided.
- k. We agree with the project sponsor and LHIA that the Mayfair Building, which is very similar to the proposed project's Mayfair building, can achieve 36 units. In both projects this is a small residential building using a conventional layout with an elevator and two stairs with units arranged along a double loaded corridor. However, in the Community alternative version, the parking would be in the garage below the adjacent California Front and Back Buildings, which would preclude the "direct access" described in the LHIA comment. By "directly accessed," Public Works expects the parking to be within the same building.
- l. In summary, based on our analysis, and our review of the project sponsor's assessment, we believe the Community alternative could provide a maximum of 473 units: 115 units in the Walnut Building, 56 units in the California Front Building; 40 units in the California Back Building, 36 units in the Mayfair Building, and 226 units in the existing building.
- m. The average unit sizes are less than 900 sf in the Walnut Building, and less than 800 sf in the existing main building. Thus, these buildings would have mostly junior 1-bedroom and 1-bedroom units as noted in the table below. Planning Code section 207.7 requires projects to provide a minimum of 25% 2-bedroom units and a minimum of 10% 3-bedroom units. The Community alternative would be required to provide fewer total units in order to meet this required unit mix. We agree with the project sponsor's estimated unit mix that the Community alternative could provide, as shown in Table 2 below.

TABLE 2: UNIT MIX

UNIT TYPE	SPONSOR'S REVIEW OF LHIA ALTERNATIVE	PUBLIC WORKS ESTIMATE
STUDIO OR JR 1-BEDROOM	49%	48%
1-BEDROOM	27%	25%
2-BEDROOM	17%	20%
3-BEDROOM	7%	7%
TOTAL	100%	100%

- n. Based upon the above analysis, we agree with the project sponsor's conclusion that the community alternative would not support 558 units, nor would it comply with the unit mix requirements of Planning Code Section 207.7.
2. **The Community alternative describes site circulation and access points for single-level, underground parking garages with 460 on-site spaces. Please confirm constraints or conditions would allow development of the access points, 460 on-site parking spaces, passenger and commercial loading as shown in the attached Circulation Plan.**
- a. The Community alternative proposes to re-use the existing garage below the existing main building and to provide a one-level below grade parking garage below the Walnut and California Front and Back Buildings, for a total of 460 spaces. In the table below we have summarized the car parking stalls in the Community alternative, the project sponsor's review of the Community alternative, and an estimate based on Public Work's analysis. The following is the Public Works analysis.

TABLE 3: PARKING STALLS

UNDERGROUND GARAGES IN COMMUNITY ALTERNATIVE	COMMUNITY ALTERNATIVE	SPONOR'S REVIEW OF LHIA ALTERNATIVE	PUBLIC WORKS ESTIMATE
CALIFORNIA FRONT AND BACK BLDG	460	183	75
WALNUT BLDG			106
EXIST. MAIN BLDG		154	142
TOTAL PARKING STALLS	460	337	323

- b. The project sponsor states that the one-level below grade parking garage underneath the Walnut Building and California Front and Back Buildings would have a gross area of approximately 110,000 gross square feet (65,000 + 45,000). This is gross area, inclusive of structural components, mechanical equipment, drive aisles for circulation, etc. The project

sponsor states that the inefficiencies of having an elevator and stairway for each of the 28 buildings at the California Front and Back building would result in an inefficient garage and estimates that 600 SF per stall is appropriate, which would result in 183 stalls ($110,000/600=183$ stalls). The project sponsor states an average efficiency of 425 square feet per stall could be used if the design were changed to provide centralized stairs and elevators, resulting in 258 stalls ($110,000/425=258$). However, Table 3 above includes the 183 stalls based on the configuration LHIA describes for the Community alternative on page 7 of Appendix A with a total of 28 buildings with direct access from each building to the basement level garage.

- c. Public Works has analyzed the Walnut Building and California Front and Back Buildings separately due to the complexity of the arrangement of elevators and stairs at the California Buildings. Based on Public Work's analysis, the one-level below grade parking garage underneath the California Front and Back Buildings would have a gross area of 63,840 gross square feet ($160'-0" \times 28'-6" \times 14$) (compared to the 65,000 sf estimated by the project sponsor). However, the 63,840 gross area needs to be reduced by the narrower depth of 40 foot lots at the California Back buildings since the LHIA states that these lot depths would accommodate existing trees. Therefore, the garage would only able to use the narrower dimensions of 399 feet ($28.5' \times 14$) and 140 feet, or 55,860 GSF. At 425 sf per stall, this allows of a maximum of 131 stalls.
- d. We agree with the project sponsor that, to provide "direct access" the California Front and Back Buildings would require 28 elevators and 28 stairs that reached to the garage level. Each of the 28 buildings would require accessible access via elevator due to the grade change and direct stair access. This is a significant loss of space in which two parking stalls would be likely removed for each of the elevators and stairways for each of the 28 buildings, resulting in a total loss of at least 56 stalls. Therefore, Public Works estimates include 75 stalls as shown in Table 3 above ($131-56=75$ stalls).
- e. The Walnut garage, at approximately 45,000 square feet and 425 square feet per stall, could provide approximately 106 parking stalls.
- f. We agree with the project sponsor that the Community alternative would not be able to access most of the existing below-grade garage because the circular access ramps would be removed to build the Walnut Building. The Walnut Building, per the Treanor HL Site Diagram, is shown as being constructed over the area where the circular ramps are and over a portion of the existing garage.
 - 1 The project sponsor concludes that 154 stalls could be retained below the existing main building if internal ramps were constructed displacing 60 stalls. Public Works estimates that a maximum of 142 stalls could be retained based on analysis below.
 - 2 Two minimum 12-foot wide ramps would be required at each level. Due to column layouts, a single aisle of 20 to 24 feet would not fit within the existing column bays.
 - 3 Since the floor to floor height of the existing garage is 10'-6" per the proposed project's drawing sheets A6.02, A6.03, and A6.04, the ramps with top and bottom landings would be about 126 feet in length. The 126 feet includes two 25-foot landings, two 10-foot transition zones at 1:12.5 slope and a 66-foot sloped ramp at 1:6 slope. To accommodate 2 ramps at each level, there would be a loss of about 72 stalls.

- 4 Since all existing drive aisles are needed to access parking, any new ramps would displace parking stalls and not access aisles.
 - 5 For this study, Public Works assumes the new ramps would be straight rather than circular since the configuration of the existing garage lends itself to straight ramps. This study did not take into account the requirements for structural modifications to the existing garage to construct the ramps.
- g. Based on the above discussion, the Community alternative would not be able to include 460 parking spaces in one level below the California Buildings, the Walnut Building and in the existing garage. Either fewer spaces could be provided or additional levels of parking (requiring additional excavation) would be required.
 - h. We agree with the project sponsor's conclusion that due to the sloping site, the garage below the California Front and Back Buildings would effectively require two levels of excavation at this location for one level of parking.
 - i. We agree with the project sponsor's assessment that an additional level of below grade parking would be necessary in the Community alternative to provide 460 spaces described in the comment letter. An additional 123 car spaces would be required if using the project sponsor's estimate of 337 stalls or an additional 137 car spaces would be required if using Public Work's estimate of 323 stalls.
 - j. Any additional levels of parking would require additional excavation. As the Community alternative also provides fewer units and smaller units, any additional residential area added to increase the number of units would require additional increases in parking and excavation, if the Community alternative is to achieve the 460 parking stalls as stated on page 3 of Appendix A.
 - k. With regard to freight loading, we agree with the project sponsor's conclusion that the Community alternative could not include underground freight loading and unloading accessed off Presidio Avenue using the existing garage openings. The height of the existing opening on Presidio Avenue and the height of the existing parking levels are not tall enough to accommodate freight vehicles. Therefore, we agree with the project sponsor that the Community alternative could not physically include underground freight loading or unloading spaces, as described page 8 of Appendix A.
3. **"What is the anticipated amount of excavation that would be needed to construct the LHIA alternative or variant?"** We estimate that one additional level of parking below the Walnut and California Front and Back Buildings would be required to provide the number of parking spaces referenced in the comment (a total of 460 on-site spaces). Due to the slope of the site as discussed above, this would require two levels of excavation plus foundation depth along California Street, and three levels plus foundation depth in other areas (i.e., on the south of the excavation area along California Street) due to the up-slope of the site.
 4. **Pedestrian Pathways:** We agree with the project sponsor's observation that the Community alternative appears to rely on the few existing pedestrian pathways between the north and south sides of the existing main building to provide for a north-south connection between California Street

and Euclid Avenue. These paths do not appear to be accessible per ADA requirements due to the multiple flights of stairs, in particular the path leading through the existing building along the eastern side.

ADDITIONAL PUBLIC WORKS ANALYSIS

This section includes additional information based upon Public Work's analysis of the Community alternative.

- a. The Community alternative does not demonstrate compliance with bulk regulations (Planning Code Section 270), Rear Yard (PC Section 209), open space (PC Section 135), clear area per (PC Section 140), or bicycle parking (PC Section 155). In addition, there is no description of any spaces for trash and recycling access. As noted above, vehicles used for trash and recycling could not be accommodated in the existing garage accessed from Presidio Avenue due to the height of the opening and the height of the levels in the garage.
- b. The Community alternative includes retention of the historic landscapes that surround the existing main building on the east, west, and south sides. Without new private yards or decks adjacent to the existing main building, none of the new units at the existing building would have private open space.
- a. On page 3 of Appendix A, LHIA states the Community alternative would be built in 3 years with concurrent renovation of the main building and new construction of the Walnut and California Front and Back Buildings. A 3-year construction schedule seems challenging given there would be excavation along the entire California Street frontage; approximately 469,000 gross square feet of new construction including garage at the Walnut and California Front and Back buildings; and 458,000 gross square feet of renovation at the existing building. With excavation, construction and renovation occurring across much of the site at the same time, the only areas suitable for construction staging would be the asphalt parking lot of the Entrance Court unless some of the historic landscaped areas would be used.
- b. On page 9 of Appendix A, LHIA describes a variation of the Community alternative we are referring to as the Community alternative variant, or variant. This variant includes 3 additional floors at the Walnut building for a total of 7 stories of residential units. These extra floors would provide 118 additional units and all the units in the building would be reduced from an average of 809 square feet to 732 square feet with 84 studios or junior 1-bedrooms and 134 1-bedroom units. Given the added floors and reduced unit size, the 218 units in the Walnut building, as stated by LHIA, is reasonable and increases public works' estimated overall unit count 473 (Community alternative) to 576 units (Community alternative variant). The overall project unit mix would change from what is shown in Table 2 (48% Studio, 25% 1-bedroom, 20% 2-bedroom, 7% 3-bedroom) to 54% Studio, 30% 1-bedroom, 11% 2-bedroom, 5% 3-bedroom.

SUMMARY OF ANALYSIS

The Community alternative proposes to provide 558 residential units, 460 parking spaces, and required freight loading underground. Public Works agrees with the project sponsor's conclusions that the Community alternative could not be constructed as proposed to provide 558 residential units and 460

parking spaces, and would not meet the unit mix, bicycle parking, and freight loading/unloading requirements of the Planning Code.

DOCUMENTS REVIEWED

We have reviewed the following documentation available as part of the project file:

1. Letter from Don Bragg, Senior Vice President and Director of Development with Prado Group, to Kei Zushi, San Francisco Planning Department, regarding the Response to Request for Information regarding 3333 California Street, dated April 2, 2019.
2. Email from Jing Ng, Development Associate with Prado Group, to 3333 California St Project Team, regarding the Response to Request for Information regarding 3333 California Street, dated April 4, 2019.
3. 3333 California Street Mixed-Use Project EIR (Case No. 2015-014028ENV), Table S.3, Comparison of Characteristics of the Proposed Project, Project Variant, and EIR Alternatives and Table 2.2, Characteristics of Proposed Buildings on the Project Site.
4. Letter from Kathryn R. Devincenzi, Laurel Heights Neighborhood Association, to Kei Zushi Planning Department, regarding “Draft EIR for 3333 California Street, San Francisco, CA 94118 / Planning Department Case No.: 2015-014028ENV / State Clearinghouse No: 2017092053”, dated January 8, 2019, including the following attachments:
 - Exhibit 1, Report by TREANORHL regarding Secretary of the Interior’s Standards Compliancy Evaluation of 3333 California Street, San Francisco, California, dated January 7, 2019.
 - Appendix A, “Community Full Preservation Alternate Overview”, (no date), (no author).
 - Exhibit A, Letter from Julianne Polanco, State Historic Preservation Author, to John Rothman, President, and Kathryn Devincenzi, Vice President, Laurel Heights Improvement Association of San Francisco; dated August 31, 2018.
 - Exhibit B, “Aerial View Looking SE” and “Site Plan”, (prepared by TreanorHL), (no date).
 - Exhibit C, “Circulation Plan”, (prepared by TreanorHL), (no date).
 - Exhibit 2, Letter from Andrew Wolfram, President, Historic Preservation Committee, to Lisa Gibson, Environmental Review Officer, San Francisco Planning Department, dated December 11, 2018.
 - Exhibit 3, Memo from Denise Bradley Cultural Landscapes to Kathryn Devincenzi, Vice President, Laurel Heights Improvement Association of San Francisco, dated 24 April 2018.
5. “Planning Application Re-Submittal-1”, dated February 22, 2019. (268 drawing sheets)
6. Cover Letter from Don Bragg to Nick Foster with the Planning Department regarding, “3333 CalSF – NOPDR #1 Response”, dated March 1, 2019.
7. Letter from BAR Architects to Nick Foster regarding “3333 CalSF – NOPDR #1 Response”, dated March 1, 2019. Presents itemized responses to Planning Department comments.

8. Autocad file named “Building Plans_2017-0726 BDC Areas.dwg”, dated July 26, 2019. This file has partial floor plans drawn for each level of the existing building with dimensions shown at exterior of the building. The levels included in the file are Third Sub-level, Second Sub-level, First Sub-level, First Level, Second Level, Third Level, Fourth Level, and Fifth Level (Roof). These floor plans include structure, core and exterior elements only and exclude non-structural interior partitions and doors.

AUTHOR

This document has been prepared at the request of the San Francisco Planning Department, based upon review and analysis by the following individuals with San Francisco Public Works:

SFPUC Revised Water Supply Assessment, June 11, 2019

PUBLIC UTILITIES COMMISSION

City and County of San Francisco

RESOLUTION NO. 19-0114

WHEREAS, Under the California Environmental Quality Act (CEQA) and State of California Water Code (Section 10910(g)(1)), the San Francisco Public Utilities Commission (SFPUC) is required to prepare and approve a Water Supply Assessment (WSA) for the cumulative water demands presented by the proposed 3333 California Street Project, which would redevelop the existing University of California San Francisco (UCSF) Laurel Heights Campus into a mixed-use residential development; and

WHEREAS, This the 3333 California Street Project is required to comply with the City's Non-potable Water Ordinance, Article 12C of the San Francisco Health Code, and as a result, the Project will offset its potable water use through the use of alternate water sources; and

WHEREAS, A WSA is an informational document that assesses the adequacy of water supplies to serve a proposed project and is required to be prepared as part of the CEQA environmental review process; and

WHEREAS, Approval of a WSA as an informational document is not considered an approval action as defined in Section 15378 of the CEQA Guidelines; and

WHEREAS, A WSA must be approved at a public meeting by the governing body of the public water supplier that would serve the proposed project; and

WHEREAS, On June 13, 2017 by Resolution No. 17-0142, this Commission approved a WSA for the 3333 California Street Project, which concluded that the SFPUC has adequate water supplies to meet the proposed project's water demands through 2040; and

WHEREAS, Following this Commission's approval of the WSA, the water demand estimates for the current proposed project are greater than those provided in the WSA approved on June 13, 2017 due to recent changes in the project description; and

WHEREAS, On December 12, 2018, the State Water Resources Control Board adopted an amendment to the Water Quality Control Plan for the San Francisco Bay/Sacramento-San Joaquin Delta Estuary (i.e., Bay-Delta Plan Amendment), which, if implemented in the future, would affect the Regional Water System supply and the SFPUC's ability to meet the projected demands of existing and future retail customers, including the proposed project; and

WHEREAS, Multiple lawsuits are pending challenging the Bay-Delta Plan Amendment, and the City is a party to one of those suits; and

WHEREAS, In accordance with the State Water Resources Control Board's instruction, on March 1, 2019, the SFPUC, in partnership with other key stakeholders, submitted a proposed "voluntary agreement" (March 1st Proposed Voluntary Agreement) for the State's consideration as a substitute or replacement of the Bay-Delta Plan Amendment; and

WHEREAS, On March 26, 2019 by Resolution No. 19-0057, this Commission endorsed the SFPUC's continued participation in the voluntary agreement negotiation process and stated its intent that the terms of any final voluntary agreement would improve the health of the fisheries and maintain the reliability of its water supply including maintenance of its level of service (LOS) goal of no more than 20% system-wide rationing; and

WHEREAS, Because implementation of the Bay-Delta Plan Amendment or an alternative Voluntary Agreement is uncertain at this time, the SFPUC staff prepared the attached Revised WSA for the proposed 3333 California Street Project, analyzing water supply and demand under three scenarios: (1) No implementation of the Bay-Delta Plan Amendment or the March 1st Proposed Voluntary Agreement ("Scenario 1"), (2) Implementation of the March 1st Proposed Voluntary Agreement ("Scenario 2"), and (3) Implementation of the Bay-Delta Plan Amendment ("Scenario 3"); and

WHEREAS, The Revised WSA concludes that the SFPUC's total projected water supplies through 2040 will (1) meet the demands of the proposed project in normal years under all three scenarios, (2) meet the demands of the proposed project in dry years without rationing beyond the SFPUC's LOS goal of 20% system-wide rationing under Scenario 1, (3) meet the demands of the proposed project in dry years but require rationing closer to the LOS goal under Scenario 2, and (4) not reliably meet the demands of the proposed project without rationing at a level greater than that required to achieve the LOS goal under Scenario 3; now, therefore, be it

RESOLVED, This Commission approves the Revised Water Supply Assessment for the proposed 3333 California Street Project pursuant to the State of California Water Code Section 10910(g).

I hereby certify that the foregoing resolution was adopted by the Public Utilities Commission at its meeting of June 11, 2019.

Secretary, Public Utilities Commission

RE: Revised Water Supply Assessment for the 3333 California Street Project

1.0 Summary

1.1 Introduction

Under the Water Supply Assessment law (Sections 10910 through 10915 of the California Water Code), urban water suppliers like the San Francisco Public Utilities Commission (SFPUC) must furnish a Water Supply Assessment (WSA) to the city or county that has jurisdiction to approve the environmental documentation for certain qualifying projects (as defined in Water Code Section 10912 (a)) subject to the California Environmental Quality Act (CEQA). The WSA process typically relies on information contained in a water supplier's Urban Water Management Plan (UWMP), and involves answering specific questions related to the estimated water demand of the proposed project. This memo serves as the WSA for the proposed 3333 California Street Project ("proposed project"), for use in the preparation of an environmental impact report by the San Francisco Planning Department (case no. 2015.014028ENV, San Francisco Planning Department).

This WSA is a revision to and supersedes the WSA that was previously prepared for the same proposed project dated May 17, 2017 and approved on June 13, 2017 (Resolution No. 17-0142). While the project description has not substantially changed, the WSA was revised to reflect changes to the distribution of residential, retail, child care, and parking uses throughout the site resulting in higher water demands than previously estimated, as well as recent changes to water supply availability under implementation of the Bay-Delta Plan Amendment, described in Section 1.1.2.

1.1.1 2015 Urban Water Management Plan

The SFPUC's most current UWMP is the UWMP update for 2015, which the Commission adopted in June 2016 (Resolution No. 16-0118). The water demand projections in the UWMP incorporated 2012 Land Use Allocation (LUA 2012) housing and employment growth projections from the San Francisco Planning Department. The water demand projections are presented in five-year increments through 2040, meeting Water Code requirements. Growth associated with the proposed project was encompassed within the LUA 2012, and water demand associated with the proposed project was encompassed within the 2015 UWMP water demand projections.

OUR MISSION: To provide our customers with high-quality, efficient and reliable water, power and sewer services in a manner that values environmental and community interests and sustains the resources entrusted to our care.

The WSA for a qualifying project within the SFPUC's retail service area¹ may use information from the UWMP. Therefore, ***the 2015 UWMP is incorporated via references throughout this WSA shown in bold, italicized text.*** The UWMP may be accessed at www.sfwater.org/uwmp.

1.1.2 2018 Bay-Delta Plan Amendment

In December 2018, the State Water Resources Control Board (SWRCB) adopted amendments to the Water Quality Control Plan for the San Francisco Bay/Sacramento-San Joaquin Delta Estuary (Bay-Delta Plan Amendment) to establish water quality objectives to maintain the health of the Bay-Delta ecosystem. The SWRCB is required by law to regularly review this plan. The adopted Bay-Delta Plan Amendment was developed with the stated goal of increasing salmonid populations in three San Joaquin River tributaries (the Stanislaus, Merced, and Tuolumne Rivers) and the Bay-Delta. The Bay-Delta Plan Amendment requires the release of 40% of the “unimpaired flow”² on the three tributaries from February through June in every year type, whether wet, normal, dry, or critically dry.

If the Bay-Delta Plan Amendment is implemented, the SFPUC will be able to meet the projected water demands presented in the 2015 UWMP in normal years but would experience supply shortages in single dry years or multiple dry years. The 2015 UWMP already assumes limited rationing may be needed in multiple dry years to address an anticipated supply shortage by 2040, but implementation of the Bay-Delta Plan Amendment will require rationing in all single dry years and multiple dry years and to a greater degree to address supply shortages not accounted for in the 2015 UWMP.

The SWRCB has stated that it intends to implement the Bay-Delta Plan Amendment on the Tuolumne River by the year 2022, assuming all required approvals are obtained by that time. But implementation of the Plan Amendment is uncertain for several reasons. First, under the Clean Water Act, the United States Environmental Protection Agency (U.S. EPA) must approve the water quality standards identified in the Plan Amendment within 90 days from the date the approval request is received. It is uncertain whether the U.S. EPA will approve or disapprove the water quality standards. Furthermore, the determination could result in litigation.

Second, since adoption of the Bay-Delta Plan Amendment, over a dozen lawsuits have been filed in both state and federal court, challenging the SWRCB's adoption of the Bay-Delta Plan Amendment, including a legal challenge filed by the federal government, at the request of the U.S. Department of Interior, Bureau of Reclamation. That litigation is in the early stage and there have been no dispositive court rulings as of this date.

Third, the Bay-Delta Plan Amendment is not self-implementing and does not allocate responsibility for meeting its new flow requirements to the SFPUC or any other water rights holders. Rather, the Plan Amendment merely provides a regulatory framework for flow allocation, which must be accomplished by other regulatory and/or adjudicatory proceedings, such as a comprehensive water rights adjudication or, in the case of the Tuolumne River, the 401 certification process in the Federal Energy Regulatory Commission's relicensing proceeding for Don Pedro Dam. The license amendment process is currently expected to be completed in the 2022-23 timeframe. This process and the other regulatory and/or adjudicatory proceedings would likely face legal challenges and have lengthy timelines, and quite possibly could result in a different assignment of flow responsibility (and therefore a different water supply impact on the SFPUC).

¹ SFPUC's “retail service area” refers to water customers inside the City and County of San Francisco, as well as select areas outside of the City.

² Unimpaired flow represents the water production of a river basin, unaltered by upstream diversions, storage, or by export or import of water to or from other watersheds. Bay-Delta Plan Amendment, Introduction, p.1-8.

Fourth, in recognition of the obstacles to implementation of the Bay-Delta Plan Amendment, SWRCB Resolution No. 2018-0059 adopting the Bay-Delta Plan Amendment directed staff to help complete a “Delta watershed-wide agreement, including potential flow measures for the Tuolumne River” by March 1, 2019, and to incorporate such agreements as an “alternative” for a future amendment to the Bay-Delta Plan to be presented to the SWRCB “as early as possible after December 1, 2019.” In accordance with the SWRCB’s instruction, on March 1, 2019, SFPUC, in partnership with other key stakeholders, submitted a proposed project description for the Tuolumne River that could be the basis for a voluntary substitute agreement with the SWRCB (“March 1st Proposed Voluntary Agreement”). On March 26, 2019, the Commission adopted Resolution No. 19-0057 to support SFPUC’s participation in the Voluntary Agreement negotiation process. To date, those negotiations are ongoing under the California Natural Resources Agency and the leadership of the Newsom administration.³ The negotiations for a voluntary agreement have made significant progress since an initial framework was presented to the SWRCB on December 12, 2018. The package submitted on March 1, 2019 is the product of renewed discussions since Governor Newsom took office. While significant work remains, the package represents an important step forward in bringing together diverse California water interests.

For all these reasons, whether and when the Bay-Delta Plan Amendment will be implemented, and how those amendments if implemented will affect the SFPUC’s water supply is currently uncertain and possibly speculative. Given this uncertainty, this WSA analyzes water supply and demand through 2040 under three scenarios: (1) No implementation of the Bay-Delta Plan Amendment or the March 1st Proposed Voluntary Agreement (“Scenario 1”), (2) Implementation of the March 1st Proposed Voluntary Agreement (“Scenario 2”), and (3) Implementation of the Bay-Delta Plan Amendment (“Scenario 3”).

1.1.3 Basis for Requiring a WSA for the Proposed Project

Except for the WSA approved on June 13, 2017 (Resolution No. 17-0142), which is superseded by this revised WSA, the proposed project has not been the subject of a previous WSA, nor has it been part of a larger project for which a WSA was completed.

The proposed project qualifies for preparation of a WSA under Water Code Section 10912(a) because it is a mixed-use residential development that includes more than 500 dwelling units. The proposed project is characterized further in Section 1.2.

1.1.4 Conclusion of this WSA

This WSA concludes that under Scenarios 1, 2, and 3, the SFPUC’s total projected water supplies would meet the demands of the proposed project and cumulative retail water demands through 2040 in normal years. Based on historic records of hydrology and reservoir inflow from 1920 to 2017, current delivery and flow obligations, and fully-implemented infrastructure under the 2018 Phased Water System Improvement Program (WSIP) Variant, normal or wet years occurred 85 out of 97 years. This translates into roughly 9 normal or wet years out of every 10 years. Conversely, system-wide rationing is required roughly 1 out of every 10 years. This frequency is expected to increase as climate change intensifies.

Scenario 1 - No Implementation of the Bay-Delta Plan Amendment or the Voluntary Agreement: Under Scenario 1, SFPUC’s total projected water supplies would meet the projected demands of the retail service area in normal years. During dry years, there would be a shortfall of 3.6-6.1 million gallons per day (mgd), or 5-7%. The SFPUC could manage this relatively small shortfall by prohibiting certain discretionary outdoor water uses and/or calling for voluntary rationing among all retail

³ California Natural Resources Agency. “Voluntary Agreements to Improve Habitat and Flow in the Delta and its Watersheds.” <http://resources.ca.gov/voluntary-agreements/>. Accessed April 8, 2019.

customers pursuant to its Retail Water Shortage Allocation Plan (**Appendix L of the UWMP**).

Scenario 2 - Implementation of the Voluntary Agreement: The March 1st Proposed Voluntary Agreement has yet to be accepted by SWRCB as an alternative to the Bay-Delta Plan Amendment and thus the shortages that would occur with its implementation are not known with certainty. An analysis of water supply impacts comparable to the one provided in this WSA for Scenarios 1 and 3 is not available for Scenario 2. However, the flow releases under the Voluntary Agreement, unlike the Bay-Delta Plan Amendment, are not based on an unimpaired flow approach but on a combination of flow and non-flow measures that are designed to benefit fisheries at a lower water cost, particularly during multiple dry years when less flow is required, preserving more of the SFPUC's stored water supply from the Tuolumne River. The resulting RWS supply shortfalls during dry years under the Voluntary Agreement would be less than those under the Bay-Delta Plan Amendment, and therefore would require rationing of a lesser degree and closer in alignment to the SFPUC's adopted level of service (LOS) goal for the RWS of rationing of no more than 20% system-wide during dry years than that which would occur under Scenario 3. Indeed, in Resolution No. 19-0057, the Commission stated its intention that any final voluntary agreement "would allow the SFPUC to maintain the (1) Water Supply Level of Service Goal and Objectives and (2) Sustainability Level of Service Goal and Objectives adopted in Commission Resolution No. 08-0200." Under Scenario 2, if SFPUC's March 1st Proposed Voluntary Agreement were accepted by the SWRCB as an alternative to the Bay-Delta Plan Amendment, SFPUC would still face a shortfall in single dry and multiple dry years, thus requiring rationing across the retail service area, but of a much smaller magnitude. Rationing under Scenario 2, with implementation of the Voluntary Agreement, would be to a lesser degree than that under Scenario 3, with implementation of the Bay-Delta Plan Amendment.

Scenario 3 - Implementation of the Bay-Delta Plan Amendment: Under Scenario 3, during single dry and multiple dry years starting as soon as the year 2022, the estimated year of implementation of the Bay-Delta Plan Amendment, the SFPUC's total projected water supplies cannot meet the demands of the retail service area, including those of the proposed project, without gradually increasing higher levels of water rationing of up to 50% through 2040 across the retail service area. For the proposed project specifically, the SFPUC may impose a lower level of rationing that takes into account the installation of water-efficient plumbing fixtures and non-potable water systems associated with new construction.

The relatively small volume of water demand generated by the proposed project itself would not exacerbate the projected shortfalls resulting from implementation of the Bay-Delta Plan Amendment. Regardless of whether the proposed project is constructed, with implementation of the Bay-Delta Plan Amendment, the SFPUC's existing and planned water supplies will not meet the water demands of its retail service area in dry years without greater rationing than previously projected in the 2015 UWMP.

Refer to Section 4.0, Conclusion, for a tabulated comparison of projected retail water supplies and demands under Scenarios 1 and 3, the resulting shortfalls, and the implications of rationing to the proposed project.

1.2 Proposed Project Description

The proposed project would redevelop the 10.25-acre parcel at 3333 California Street in the northwest portion of San Francisco from an office and parking use to a mix of residential, retail, commercial office, child care, and parking uses. It is currently used as the University of California San Francisco (UCSF) Laurel Heights Campus and is developed with two structures, three surface parking lots, two circular garage ramp structures, internal roadways and landscaping or landscaped open space.

Overall, the proposed project would entail the removal of approximately 376,000 gross square feet (gsf) of office uses with approximately 49,999 gsf relocated to the proposed

Walnut Building. The proposed project would include 558 dwelling units within 829,847 gsf of residential floor area. The proposed project would provide 49,999 gsf of commercial office floor area; 40,261 gsf of retail floor area; and a 13,630-gsf child care center use. Up to 823 vehicle parking spaces, including ten car share spaces, would be provided in multiple garages with up to three subterranean levels totaling approximately 374,809 gsf. Additionally, the proposed project would develop nearly half of the overall lot area (198,198 square feet) with a combination of public and private open spaces including: Euclid Park, Cypress Square, Mayfair Walk, and Walnut Walk. Approximately 234,599 square feet of planted space, including roofs and ground level, would be provided throughout the site.

The project sponsor is considering a variant to the proposed project, referred to as the Walnut Building Variant. This variant would allow for the development of 744 dwelling units on the project site; an increase of 186 dwelling units over the number in the proposed project. The approximately 49,999 gsf of commercial office space in the proposed Walnut Building would be changed to a residential use. Overall, approximately 1,434,098 gsf of new and rehabilitated space, comprising approximately 977,437 gsf of residential floor area; approximately 34,496 gsf of ground floor retail spaces; and approximately 14,665 gsf of childcare center space would be developed under the variant. Up to 919 vehicle parking spaces would be provided in multiple garages with up to three subterranean levels totaling approximately 407,500 gsf. Under this variant the footprints of the other proposed new buildings would not change. Approximately 234,599 square feet of planted space, including roofs and ground level, would be provided throughout the site.

Construction of the proposed project, or its variant, would be phased. The preliminary construction plan would include four overlapping construction phases and is subject to change. Project construction would commence in 2020 and would occur within a maximum development period of 15 years.

Further details on both the proposed project and the Walnut Building Variant are provided in Attachment B. However, for the purpose of the WSA, only the Walnut Building Variant is assessed for water supply as it would result in the most conservative water demand estimate and would encompass the demands estimated for the proposed project. All references to the “proposed project” in this memo refers to the Walnut Building Variant unless otherwise noted.

2.0 Water Supply

This section reviews San Francisco’s existing and planned water supplies.

2.1 Regional Water System

See **Section 3.1 of the UWMP** for descriptions of the RWS and **Section 6.1 of the UWMP** for water rights held by City and County of San Francisco and the SFPUC Water System Improvement Program (WSIP).

2.2 Existing Retail Supplies

Retail water supplies from the RWS are described in **Section 6.1 of the UWMP**.

Local groundwater supplies, including the Westside Groundwater Basin, are described in **Section 6.2.1 of the UWMP**.

Local recycled water supplies, including the Harding Park Recycled Water Project and Pacifica Recycled Water Project, are described in **Section 6.2.1 of the UWMP**.

2.3 Planned Retail Water Supply Sources

The San Francisco Groundwater Supply Project is described in **Section 6.2.2 of the UWMP**. Since adoption of the UWMP, four wells have been completed and the start-up

phase of the project has begun. Starting in April 2017, small amounts of groundwater have been blended with RWS supplies for drinking water. Two remaining wells are under construction as part of the next phase of the project.

The proposed Westside and Eastside Recycled Water Projects, as well as non-potable water supplies associated with onsite water systems implemented in compliance with San Francisco's Non-potable Water Ordinance (Health Code Chapter 12C), are also described in **Section 6.2.2 of the UWMP**.

2.4 Summary of Current and Future Retail Water Supplies

A breakdown of water supply sources for meeting SFPUC retail water demand through 2040 in normal years is provided in **Section 6.2.5 of the UWMP**. For dry years, see the next section.

Based on historic records of hydrology and reservoir inflow from 1920 to 2017, current delivery and flow obligations, and fully-implemented infrastructure under the 2018 Phased Water System Improvement Program (WSIP) Variant, normal or wet years occurred 85 out of 97 years. This translates into roughly 9 normal or wet years out of every 10 years. Conversely, system-wide rationing is required roughly 1 out of every 10 years. This frequency is expected to increase as climate change intensifies.

2.5 Dry-Year Water Supplies

A description of dry-year supplies developed under WSIP is provided in **Section 7.2 of the UWMP**. Other water supply reliability projects and efforts that are currently underway or completed are described in **Section 7.4 of the UWMP**. Since adoption of the UWMP, the following milestones have occurred:

- Calaveras Dam Replacement Project – Construction of the new dam was completed in September 2018, while the remainder of the overall project will be completed in spring 2019.
- Regional Groundwater Storage and Recovery Project – Construction of this project is still underway. Phase 1 of the project, consisting of installation of 13 production wells, will be completed in 2019. Since May/June 2016, the project has been in a storage phase through periodic deliveries of RWS surface water in lieu of groundwater pumping by Daly City, San Bruno, and the California Water Service Company.

2.6 Additional Water Supplies

In light of the adoption of the Bay-Delta Plan Amendment and the resulting potential limitations to RWS supply during dry years, the SFPUC is increasing and accelerating its efforts to acquire additional water supplies and explore other projects that would increase overall water supply resilience. Developing these additional supplies would reduce water supply shortfalls and reduce rationing associated with such shortfalls. In addition to the Daly City Recycled Water Expansion project⁴, which was a potential project identified in the 2015 UWMP and had committed funding at that time, the SFPUC has taken action to fund the study of potential additional water supply projects. Capital projects under consideration to develop additional water supplies include surface water storage expansion, recycled water expansion, water transfers, desalination, and potable reuse. The SFPUC is also considering developing related policies and ordinances, such as funding for innovative water supply and efficiency technologies and requiring potable water offsets for new developments. A more detailed list and descriptions of these efforts are provided below.

⁴ While this potential project was identified in the 2015 UWMP, it has since been approved by Daly City following environmental review and has a higher likelihood of being implemented.

The capital projects that are under consideration would be costly and are still in the early feasibility or conceptual planning stages. Because these water supply projects would take 10 to 30 or more years to implement, and because required environmental permitting negotiations may reduce the amount of water that can be developed, the yield from these projects are not currently incorporated into SFPUC's supply projections. Capital projects would be funded through rates from both Wholesale and Retail Customers based on mutual agreement, as the additional supplies would benefit all customers of the RWS, unless otherwise noted. State and federal grants and other financing opportunities would also be pursued for eligible projects, to the extent feasible, to offset costs borne by ratepayers.

1. Daly City Recycled Water Expansion (Regional, Normal- and Dry-Year Supply, 3 mgd)

Project Description: The SFPUC and North San Mateo County Sanitation District (NSMCSD, or Daly City) have been exploring ways to increase the recycled water treatment capacity in Daly City to serve additional customers and decrease irrigation water withdrawals from the Westside Groundwater Basin, both in San Francisco and further south of Daly City. The majority of the irrigation demand met by groundwater withdrawals, approximately 2 mgd, serves cemeteries in Colma. An initial feasibility study completed in 2010 identified the capital requirements that would be needed to produce additional capacity at the existing treatment plant location. The study demonstrated that a new tertiary treatment facility would be required onsite to produce additional capacity of up to 3.4 mgd. Currently, flows that exceed the capacity of the existing treatment plant are discharged into the Pacific Ocean. With this project, some of that discharge may be treated and used for irrigation. New facilities would include a treatment facility, pump station, distribution pipelines, and storage.

Estimated Costs and Financing: The capital cost is estimated to be \$85 million, which is budgeted for in the SFPUC's 10-year capital planning horizon. The annual operations and maintenance (O&M) cost is estimated to be \$3 million. This project may present regional benefits that would result in cost-sharing with Wholesale Customers because the replacement of groundwater used for irrigation with recycled water will result in a greater volume of groundwater storage that can be used in dry years as part of the SFPUC's existing Groundwater Storage and Recovery project, approved by the SFPUC in 2014 in Resolution no. 14-0127.

Permits and Approvals: Daly City adopted a Final Initial Study/Mitigated Negative Declaration (IS/MND) and Mitigation Monitoring and Reporting Program (MMRP) for the proposed project in September 2017. The SFPUC has not yet approved its participation in the project. Other permits and/or approvals that may be needed for this project include: BART, CAL/OSHA, San Francisco Bay RWQCB, and encroachment permits from Caltrans, Daly City, South San Francisco, SFPUC, San Mateo County, and Colma to construct distribution and storage facilities. Institutional agreements between the project partners for project construction and operation, as well as with the customers whose supplies will change from groundwater to recycled water, will also need to be developed.

Estimated Acquisition: Construction may occur as soon as 2023 with operation beginning in 2027.

2. Alameda County Water District Transfer Partnership (Regional, Normal- and Dry-Year Supply, 5 mgd)

Project Description: Water would be acquired from Contra Costa Water District (CCWD) for delivery to Alameda County Water District (ACWD) through the South Bay Aqueduct utilizing a planned expansion of the Los Vaqueros Reservoir.

Estimated Costs and Financing: The capital cost is estimated to be \$50-150 million, with an annual O&M cost of \$2.5 million.

Permits and Approvals: Planning and environmental review of the Los Vaqueros Reservoir Expansion is underway by CCWD, and has several objectives beyond water deliveries to the SFPUC. CCWD has identified over 15 permits, approvals and consultations that will be necessary such as Dredge and Fill, National Pollutant Discharge Elimination System (NPDES), Streambed Alteration, and Encroachment permits. These permits and approvals will be obtained by CCWD and/or its contractor. To enable a water supply transfer between ACWD and the SFPUC, water right modifications may be necessary and if additional infrastructure is needed, additional permits will be required. As this project is in the conceptual stage, permitting details have not yet been identified.

Estimated Acquisition: Construction may occur as soon as 2028 with operation beginning in 2032.

3. Brackish Water Desalination in Contra Costa County (Regional, Normal- and Dry-Year Supply, 9+ mgd)

Project Description: The Bay Area Brackish Water Treatment (Regional Desalination) Project is a partnership between CCWD, East Bay Municipal Utility District (EBMUD), SFPUC, Santa Clara Valley Water District (SCVWD) and Zone 7 to turn brackish water into a reliable, drought-proof drinking water supply, delivering a total of up to 10-20 mgd in drought and non-drought years (i.e., dry and normal years), throughout the region. A new brackish water treatment plant would be constructed in East Contra Costa and tie into the existing CCWD system for delivery through Los Vaqueros Reservoir and the South Bay Aqueduct, or delivery via a connection with EBMUD.

The SFPUC would rely on existing infrastructure and institutional agreements to receive water transfers from partner agencies. For planning and cost estimation purposes, it was assumed that the SFPUC's share of the regional water supply would be 9 mgd in all year types; however, if additional capacity is available, the SFPUC may secure additional water supply, based on negotiations with partner agencies.

Estimated Costs and Financing: The capital cost is estimated to be \$200-800 million, with an annual O&M cost of \$12-20 million.

Permits and Approvals: To proceed, this concept would require extensive institutional agreements, permitting, and environmental review. Construction of a new desalination plant will require construction and operating permits such as NPDES, Dredge and Fill, consultations with federal and state agencies, and others. In addition, water rights will need to be secured and/or modified. In California, permitting and regulatory approvals of desalination projects has typically taken 10-18 years. In addition, institutional agreements among partner agencies will be needed.

Estimated Acquisition: Construction may occur as soon as 2032 and be phased so that 5-9 mgd would be available to the region by 2035 and a total of 5-11 mgd would be available after 2040.

4. ACWD-USD Purified Water Partnership (Regional, Normal- and Dry-Year Supply, 5 mgd)

Project Description: This may be an indirect or direct potable reuse project that would inject highly-treated water from Union Sanitary District (USD) for groundwater recharge, then recover the water through the ACWD Brackish

Groundwater Desalination Plant. How the water is transferred to the SFPUC remains to be determined.

Estimated Costs and Financing: The capital cost is estimated to be \$200-400 million, with an annual O&M cost of \$2.5 million.

Permits and Approvals: An initial assessment will be underway in 2019, which will identify potential project scenarios. Permitting and approvals for a project will depend on its design and nature, which have not yet been identified.

Estimated Acquisition: Construction may occur as soon as 2038 with operation beginning in 2045.

5. Crystal Springs Purified Water (Regional, Normal- and Dry-Year Supply, 6+ mgd)

Project Description: This is an indirect potable reuse project that would blend wastewater from Silicon Valley Clean Water and possibly San Mateo into Crystal Springs Reservoir and treat the blended water at Harry Tracy Water Treatment Plant for potable reuse.

Estimated Costs and Financing: The capital cost is estimated to be \$400-700 million, with an annual O&M cost of \$18-25 million.

Permits and Approvals: Construction and operating permits would be required for this project. They would likely include NPDES, Encroachment, consultations with state and federal agencies, and others. Surface water augmentation is regulated by the SWRCB, and consultations and public hearings would be required.

Estimated Acquisition: Construction may occur as soon as 2034 and be phased so that 3-5 mgd would be available to the region by 2035 and a total of 3-7 mgd would be available after 2040.

6. Eastside Purified Water (Retail, Normal- and Dry-Year Supply, 5 mgd)

Project Description: A purified water plant would be constructed at the Southeast Treatment Plant to blend wastewater with Regional Water System supplies for potable use.

Estimated Costs and Financing: The capital cost is estimated to be \$220-400 million, with an annual O&M cost of \$5-10 million.

Permits and Approvals: There is currently no regulatory framework in place to enable direct potable reuse. In California, no regulations are anticipated before 2025, but it is anticipated that extensive consultation will be required with the SWRCB. In addition, construction and operating permits and approvals will be required, as identified.

Estimated Acquisition: Construction may occur as soon as 2025 with operation beginning in 2030.

7. San Francisco Eastside Satellite Recycled Water Facility (Retail, Normal- and Dry-Year Supply, < 1 mgd)

Project Description: A centralized recycled water treatment facility would be constructed on the eastern side of San Francisco, along with pipelines and a storage reservoir, to meet demands not addressed by the Non-potable Water Ordinance and Auxiliary Water Supply System (AWSS).

Estimated Costs and Financing: The capital cost is estimated to be \$200 million, with an annual O&M cost of \$2.5 million.

Permits and Approvals: In addition to construction-related permits and approvals, this project would require a permit from the Regional Water Quality Control Board under its General Order for water reuse. Discharges from the recycled water treatment plant to the San Francisco Bay would also require NPDES permitting by the Regional Water Quality Control Board.

Estimated Acquisition: Construction may occur as soon as 2032 with operation beginning in 2037.

8. Additional Storage Capacity in Los Vaqueros Reservoir from Expansion

(Regional)

Project Description: Expansion of storage capacity in Los Vaqueros is to allow the ACWD Transfer Partnership and Brackish Water Desalination in Contra Costa County to be optimized.

Estimated Costs and Financing: The capital cost is estimated to be \$20-50 million. SFPUC's portion of the project yield and cost share are not yet known. The annual O&M cost is yet to be estimated.

Permits and Approvals: Planning and review of the Los Vaqueros Reservoir Expansion is underway by CCWD, and has several objectives beyond water deliveries to the SFPUC. CCWD has identified over 15 permits, approvals and consultations that will be necessary such as Dredge and Fill, NPDES, Streambed Alteration, and Encroachment permits. These permits and approvals will be obtained by CCWD and/or its contractor. To enable a water supply transfer between ACWD and the SFPUC, water rights modifications may be necessary and if additional infrastructure is needed, additional permits will be required. As this project is in the conceptual stage, permitting details have not yet been identified.

Estimated Acquisition: Construction may occur as soon as 2021 with operation beginning in 2027.

9. Calaveras Reservoir Expansion (Regional)

Project Description: Calaveras Reservoir would be expanded to create 289,000 AF additional capacity to store excess Regional Water System supplies or other source water in wet and normal years. In addition to reservoir enlargement, the project would involve infrastructure to pump water to the reservoir, such as pump stations and transmission facilities.

Estimated Costs and Financing: The costs of this project is yet to be determined.

Permits and Approvals: Similar to Los Vaqueros Reservoir Expansion, this project would require numerous permits, approvals and consultations, such as Dredge and Fill, NPDES, Streambed Alteration, Encroachment, possible water right modifications, etc. These permits and approvals will be obtained by SFPUC and/or its contractor. As this project is in the conceptual stage, permitting details have not yet been identified.

Estimated Acquisition: Construction may occur as soon as the early 2040s with operation beginning around 2050.

Even if all the capital projects above are implemented, the total amount of water and storage yielded would not be enough to make up for the dry year shortfall that may result from implementation of the Bay-Delta Plan Amendment as adopted, and would occur years after such shortfalls begin. Thus, the SFPUC continues to proactively

explore opportunities for reuse and innovation, such as the following policies and ordinances:

- **Evaluation of Recycled Water Throughout Service Area** (Regional and Retail)

Wastewater treatment plants throughout the SFPUC service area would be surveyed to identify potential non-potable, indirect potable, and direct potable projects.

- **Innovative Technology Project Funding** (Retail)

SFPUC would award grants for innovative demonstration projects that would increase water efficiency and availability (e.g., fog catchers, heat exchangers in non-potable water systems, rainwater for potable use, breweries treating process water for reuse).

- **New Development Potable Offset Ordinance** (Retail)

The Board of Supervisors could adopt an ordinance requiring certain large development projects, to offset the water demand impacts above historical water consumption averages for the corresponding parcel(s). Developments could be required to achieve a certain offset of potable demands.

3.0 Water Demand

This section reviews the climatic and demographic factors that may affect San Francisco's water use, projected retail water demands, and the demand associated with the proposed project.

3.1 Climate

San Francisco has a Mediterranean climate. Summers are cool and winters are mild with infrequent rainfall. Temperatures in the San Francisco area average 57 degrees Fahrenheit annually, ranging from the mid-40s in winter to the upper 60s in late summer. Strong onshore flow of wind in summer keeps the air cool, generating fog through September. The warmest temperatures generally occur in September and October. Rainfall in the San Francisco area averages about 22 inches per year and is generally confined to the "wet" season from late October to early May. Except for occasional light drizzles from thick marine stratus clouds, summers are nearly completely dry. A summary of the temperature and rainfall data for the City of San Francisco is included in Table 1.

Table 1: San Francisco Climate Summary

Month	Average Maximum Temperature (°F)	Average Minimum Temperature (°F)	Average Monthly Rainfall (inches)
January	58.0	45.7	4.36
February	60.3	47.3	4.41
March	61.4	48.1	2.98
April	62.3	49.1	1.38
May	63.2	50.9	0.68
June	64.8	52.7	0.18
July	65.6	54.3	0.02
August	66.6	55.3	0.06
September	68.1	55.0	0.19
October	67.8	53.3	1.04
November	61.2	48.1	2.85
December	58.3	45.9	4.33
Annual Average	63.3	50.6	22.45
Source: Western Regional Climate Center (www.wrcc.dri.edu), 1981-2010 data from two San Francisco monitoring stations (Mission Dolores/SF#047772 and Richmond/SF#047767).			

3.2 Proposed Project Water Demand

The project sponsor's consultants provided a memo describing the methods and assumptions used to estimate the water demand of the proposed project, along with the resulting demand (Attachment B).

Because the proposed project must comply with San Francisco's Non-potable Water Ordinance (Article 12C of the San Francisco Health Code), estimates for both potable and non-potable demands were submitted as part of the WSA request. The Non-potable Water Ordinance requires new commercial, mixed-use, and multi-family residential development projects with 250,000 square feet or more of gross floor area to install and operate an onsite non-potable water system. Such projects must meet their toilet and urinal flushing and irrigation demands through the collection, treatment, and use of available graywater, rainwater, and foundation drainage. While not required, projects may use treated blackwater or stormwater if desired. Furthermore, projects may choose to apply non-potable water to other non-potable water uses, such as cooling tower blowdown and industrial processes, but are not required to do so under the ordinance. As indicated in the water demand memo provided on behalf of the project sponsor in Attachment B, the proposed project would exceed the minimum requirements of the Non-potable Water Ordinance by using non-potable water for cooling in addition to using graywater and rainwater to meet toilet and urinal flushing and irrigation.

Both potable and non-potable demands for the proposed project were estimated using the SFPUC's Non-potable Water Calculator and supplemented with additional calculations for cooling demands. The SFPUC reviewed the memo to ensure that the methodology is appropriate for the types of proposed water uses, the assumptions are valid and thoroughly documented along with verifiable data sources, and a professional standard of care was used. The SFPUC concluded that the demand estimates provided on behalf of the project sponsor are reasonable. Water demand associated

with the proposed project over the 20-year planning horizon is shown in the following Table 2.

The non-potable demand estimates in Table 2 are based on building uses anticipated at the time the WSA was requested, i.e., during the planning and environmental review stage of the proposed project. It is understood that these estimates will likely change as the proposed project's design progresses, and information submitted for the WSA request is not part of the proposed project's compliance with the Non-potable Water Ordinance. City review and approval of a proposed onsite water system must be performed separately through the Non-potable Water Program. However, the intent of providing a breakdown of potable and non-potable demand estimates in this WSA is to demonstrate that the proposed project will incorporate water reuse per City requirements and the proposed project's sustainability goals, if any. As noted earlier, the total demand of the proposed project, regardless of non-potable use, is already encompassed in the 2015 UWMP water demand projections. Furthermore, total demand represents the most conservative estimate and accounts for back-up potable supplies that must be provided by the SFPUC in the event that non-potable supplies serving the proposed project are unavailable.

Table 2: Water Demand Based on Project Phasing

Demand of Proposed Project (mgd)	2020	2025	2030	2035	2040
Potable Demand	--	0.032	0.064	0.064	0.064
Non-potable Demand	--	0.011	0.020	0.020	0.020
Total Demand	--	0.043	0.084	0.084	0.084
Potential Potable Water Savings as Percentage of Total Demand	--	25.6%	24.3%	24.3%	24.3%
<p><u>Notes:</u> Construction would occur over four overlapping phases commencing in 2020 and within a maximum development period of 15 years (subject to change). While full buildout could occur as late as 2035, full buildout is assumed to occur earlier to provide conservative projections. Phases 1 is estimated to be completed as soon as in 2022, Phase 2 in 2023, Phase 3 in 2025, and Phase 4 in 2027.</p> <p>The estimates above reflect the Walnut Building Variant. The non-potable demand estimates above reflect non-potable water use for cooling (0.005 mgd) Water demand estimates for the proposed project are slightly lower and are provided in Attachment B.</p>					

The San Francisco Planning Department has determined that the proposed project is encompassed within the projections presented in LUA 2012 as indicated in the letter from the Planning Department to the SFPUC (Attachment A). Therefore, the demand of the proposed project is also encompassed within the San Francisco retail water demands that are presented in **Section 4.1 of the UWMP**, which considers retail water demand based on the LUA 2012 projections. The following Table 3 shows the demand of the proposed project relative to total retail demand.

Table 3: Proposed Project Demand Relative to Total Retail Demand

	2020	2025	2030	2035	2040
Total Retail Demand (mgd) ¹	72.1	79.0	82.3	85.9	89.9
Potable Demand of Proposed Project (mgd)	--	0.032	0.064	0.064	0.064
Potable Demand of Proposed Project as Percentage of Total Retail Demand	--	0.04%	0.08%	0.07%	0.07%
Total Demand of Proposed Project (mgd)	--	0.043	0.084	0.084	0.084
Total Demand of Proposed Project as Percentage of Total Retail Demand ³	--	0.05%	0.10%	0.10%	0.09%
Notes: 1. Retail water demands per Table 4-1 of the UWMP , except for the 2020 demand projection, which was re-projected to take into account the lower demands being experienced due to the recent drought and the lag in occupancy of built units. 2. The proposed project is accounted for in the LUA 2012 projections, and subsequently, total demands associated with the proposed project are accounted for in the 2015 UWMP retail water demand projections.					

4.0 Conclusion

4.1 Comparison of Projected Supply and Demand

4.1.1 Scenario 1: No Implementation of the Bay-Delta Plan Amendment or the Voluntary Agreement

Table 4 below is adapted from **Section 7.5 of the UWMP** (Table 7-4) and compares the SFPUC's retail water supplies and demands through 2040 during normal year, single dry-, and multiple dry-year periods under Scenario 1.

Local supplies (i.e., supplies not from the RWS) correspond to those in **Table 6-7 of the UWMP**. Procedures for determining RWS supply availability per the SFPUC's WSA, applicable to all three scenarios, are described in **Section 8.3 of the UWMP**.

The projections shown in Table 4 differ from those in the 2015 UWMP due to two reasons. First, the 2009 Water Supply Agreement between SFPUC and its Wholesale Customers was recently amended and approved by the Commission on December 11, 2018 by Resolution No. 18-0212. Table 4 incorporates the minimum level of 5% rationing during supply shortages as required by the amendment, and therefore, the resulting shortfalls are greater than those previously projected in the 2015 UWMP.

Second, the projections in Table 4 differ from those in the 2015 UWMP because Table 4 reflects SFPUC's full 8.5-year design drought sequence instead of the minimum 3-year sequence required to be provided in the 2015 UWMP. Under legislation adopted in 2018 (S.B. 606) future UWMPs will be required to project water supply availability during a minimum of 5 years of continuous drought (Water Code section 10631(b)(1)).

As explained previously in Section 3.2, water demands associated with the proposed project are already captured in the retail demand projections presented in the UWMP. The proposed project is expected to represent up to 0.10% of the total retail water demand. Total retail demands correspond to those in **Table 4-1 of the UWMP**, and reflect both passive and active conservation, as well as water loss.

As shown in Table 4, under Scenario 1 without implementation of the Bay-Delta Plan Amendment, existing and planned supplies would meet all projected RWS demands in all years except for an approximately 3.6-6.1 mgd, or 5-7%, shortfall during dry years through the year 2040. This relatively small shortfall is primarily due to implementation of the amended 2009 Water Supply Agreement. To manage a small shortfall such as this, the SFPUC may prohibit certain discretionary outdoor water uses and/or call for voluntary rationing by its retail customers pursuant to its Retail Water Shortage Allocation Plan (**Appendix L of the UWMP**). The required level of rationing is well below the SFPUC's RWS LOS goal of limiting rationing to no more than 20% on a system-wide basis (i.e., an average throughout the RWS).

Notes:

1. During a single dry year and multiple dry year 1 (year 2 of SFPUC's design drought sequence), the retail allocation under the WSA is 36.0% of available RWS supply, or 85.9 mgd. However, due to the Phased WSIP Variant, only 81 mgd of RWS supply can be delivered. RWS supply is capped at this amount.
2. During multiple dry years 2-6 (years 3-7 of SFPUC's design drought sequence), the retail allocation under the WSA is 37.5% of available RWS supply, or 79.5 mgd.
3. During multiple dry years 7 and 8 (years 8 and 8.5 of SFPUC's design drought sequence), the retail allocation under the WSA is 37.5% of available RWS supply, or 74.5 mgd.
4. Total retail demands correspond to those in **Table 4-1 of the UWMP**, except for the 2020 demand projection, which was re-projected to take into account the lower demands being experienced due to the recent drought and the lag in occupancy of built units.
5. Local supplies (i.e., supplies not from the RWS, including groundwater, recycled water, and non-potable water) correspond to those in **Table 6-7 of the UWMP**, with an additional 5% reduction in retail water use (incorporated as a reduction in total retail supply) per the amended Water Supply Agreement. Local supplies are assumed to be used before RWS supplies to meet retail demand.

4.1.2 Scenario 2: Implementation of the Voluntary Agreement

As stated earlier, the March 1st Proposed Voluntary Agreement has yet to be accepted by SWRCB as an alternative to the Bay-Delta Plan Amendment and thus the shortages that would occur with its implementation are not known with certainty. However, given that the objectives of the Voluntary Agreement are to provide fishery improvements while protecting water supply through flow and non-flow measures, the RWS supply shortfalls under the Voluntary Agreement would be less than those under the Bay-Delta Plan Amendment, and therefore would require rationing of a lesser degree than that which would occur under Scenario 3. The degree of rationing would also more closely align with the SFPUC's RWS LOS goal of limiting rationing to no more than 20% on a system-wide basis in drought years. This goal was adopted in 2008 by the Commission (Resolution No. 08-0200).

4.1.3 Scenario 3: Implementation of the Bay-Delta Plan Amendment

Table 5 below provides projected supplies and demands under Scenario 3. The RWS is projected to experience significant shortfalls in single dry and multiple dry years starting as soon as 2022 and through 2040, regardless of whether the proposed project is constructed. These significant shortfalls are a result of implementation of the Bay-Delta Plan Amendment and not attributed to the incremental retail demand associated with the proposed project. Shortfalls would range from about 12 to 45 mgd, corresponding to rationing in the retail service area ranging 16-50%, over the next 20 years.

If additional water supplies were not acquired before the Bay-Delta Plan Amendment were implemented, the SFPUC would impose customer rationing to help balance water supply deficits during dry years.

Given the severity of the reduction in RWS supply with implementation of the Bay-Delta Plan Amendment, existing and planned dry-year supplies would not be enough to meet projected retail demands without rationing above the SFPUC's RWS LOS goal of limiting rationing to 20% on a system-wide basis for all dry years starting as soon as 2022. Although the WSAP does not address implications to retail supply during system-wide shortages above 20%, the WSAP indicates that if system-wide shortage greater than 20% were to occur, RWS supply would be allocated between retail and Wholesale Customers per the rules corresponding to a 16-20% system-wide reduction, subject to consultation and negotiation between the SFPUC and its Wholesale Customers to modify the allocation rules. The allocation rules corresponding to the 16-20% system-wide reduction are reflected in Table 5 above for Scenario 3. These allocation rules result in shortfalls of 16-50% across the retail service area as a whole under Scenario 3.

**Table 5: Projected Supply and Demand Comparison Under Scenario 3
(Implementation of the Bay-Delta Plan Amendment) (mgd)**

		Normal Year	Single Dry Year ¹	Multiple Dry Years							
				Year 1 ¹	Year 2 ²	Year 3 ²	Year 4 ²	Year 5 ²	Year 6 ²	Year 7 ³	Year 8 ³
2020	Total Retail Demand ⁴	72.1	72.1	72.1	72.1	72.1	72.1	72.1	72.1	72.1	72.1
	Total Retail Supply ⁵	72.1	68.5	68.5	68.5	68.5	68.5	68.5	68.5	68.5	68.5

	Shortfall as % of Demand	0.0%	16.5%	16.5%	33.4%	33.4%	33.4%	33.4%	33.4%	45.4%	45.4%
2035	Total Retail Demand ⁴	85.9	85.9	85.9	85.9	85.9	85.9	85.9	85.9	85.9	85.9
	Total Retail Supply ⁵	85.9	68.8	68.8	54.9	54.9	54.9	54.9	54.9	45.0	45.0
	Shortfall	0.0	17.1	17.1	31.0	31.0	31.0	31.0	31.0	40.9	40.9
	Shortfall as % of Demand	0.0%	19.9%	19.9%	36.1%	36.1%	36.1%	36.1%	36.1%	47.6%	47.6%
2040	Total Retail Demand ⁴	89.9	89.9	89.9	89.9	89.9	89.9	89.9	89.9	89.9	89.9
	Total Retail Supply ⁵	89.9	68.9	68.9	55.0	55.0	55.0	55.0	55.0	45.1	45.1
	Shortfall	0.0	21.0	21.0	34.9	34.9	34.9	34.9	34.9	44.8	44.8
	Shortfall as % of Demand	0.0%	23.4%	23.4%	38.8%	38.8%	38.8%	38.8%	38.8%	49.8%	49.8%

Notes:

1. During a single dry year and multiple dry year 1 (year 2 of SFPUC's design drought sequence), the retail allocation under the WSA is 37.5% of available RWS supply, or 59.6 mgd.
2. During multiple dry years 2-6 (years 3-7 of SFPUC's design drought sequence), the retail allocation under the WSA is 37.5% of available RWS supply, or 45.7 mgd.
3. During multiple dry years 7 and 8 (years 8 and 8.5 of SFPUC's design drought sequence), the retail allocation under the WSA is 37.5% of available RWS supply, or 35.8 mgd.
4. Total retail demands correspond to those in **Table 4-1 of the UWMP**, except for the 2020 demand projection, which was re-projected to take into account the lower demands being experienced due to the recent drought and the lag in occupancy of built units.
5. Local supplies (i.e., supplies not from the RWS, including groundwater, recycled water, and non-potable water) correspond to those in **Table 6-7 of the UWMP**. Local supplies are assumed to be used before RWS supplies to meet retail demand.

4.2 Rationing Implications to the Proposed Project

While the levels of rationing described above apply to the retail service area as a whole (i.e., 5-7% under Scenario 1, 16-50% under Scenario 3), the SFPUC may allocate different levels of rationing to individual retail customers based on customer type (e.g., dedicated irrigation, single family residential, multi-family residential, commercial, etc.) to achieve the required level of retail system-wide rationing. Allocation methods and processes that have been considered in the past and may be used in future droughts are described in the SFPUC's current Retail Water Shortage Allocation Plan (**Appendix L of the UWMP**). However, additional allocation methods that reflect existing drought-related rules and regulations adopted by the Commission during the recent drought (2015-2016 Drought Program adopted by Resolution 15-0119) are more pertinent to current and foreseeable development and water use in San Francisco and may be included in the SFPUC's update to its Retail Water Shortage Allocation Plan. The updated Retail Water Shortage Allocation Plan will be brought forward to the Commission along with the 2020 Urban Water Management Plan for consideration and adoption through a public hearing process in 2021. It is anticipated that the updated Retail Water Shortage Allocation Plan would include a tiered allocation approach that imposes lower levels of rationing on customers who use less water than similar customers in the same customer class, and would require higher levels of rationing by customers who use more water. This approach aligns with the SWRCB's statewide emergency conservation mandate imposed during the recent drought, in which urban water suppliers who used less water were subject to lower reductions than those who used more water. Imposing lower rationing requirements on customers who already conserve more water is also consistent with the implementation of prior rationing programs based on past water use, in which more efficient customers were allocated more water through an appeal process administered by the General Manager. Staff expects that under a future Retail Water Shortage Allocation Plan adopted by the Commission, the allocation method or combination of methods that would be applied during water shortages caused by drought would similarly be subject to the discretion of the General Manager.

The SFPUC anticipates that, as a worst-case scenario under Scenario 3, a mixed-use residential customer such as the proposed project could be subject to up to 38% rationing during a severe drought.⁵ In accordance with the Retail Water Shortage Allocation Plan, the level of rationing that would be imposed on the proposed project would be determined at the time of a drought or other water shortage and cannot be established with certainty prior to the shortage event. However, newly-constructed buildings, such as the proposed project, have water-efficient fixtures and non-potable water systems that comply with the latest regulations. Thus, if these buildings can demonstrate below-average water use, they would likely be subject to a lower level of rationing than other retail customers that meet or exceed the average water use for the same customer class.

⁵ This worst-case rationing level for San Francisco multi-family residential was estimated for the purpose of preparing comments on behalf of the City and County of San Francisco on the SWRCB's Draft Substitute Environmental Document in Support of Potential Changes to the Bay-Delta Plan, dated March 16, 2017. See comment letter Attachment 1, Appendix 3, Page 5, Table 3. The comment letter and attachments are available on the SWRCB website: https://www.waterboards.ca.gov/public_notices/comments/2016_baydelta_plan_amendment/docs/dennis_herrera.pdf. The rationing estimates prepared for the comment letter apply to the first 6 years of the SFPUC's 8.5-year design drought as they reflect the 1987-92 drought. For the last 2.5 years of the design drought, a corresponding worst-case rationing level for San Francisco multi-family residential customers was not estimated. While the level of rationing imposed on the retail system will be higher for the outer years of the design drought compared to the first 6 years, it is reasonable to assume that multi-family residential customers such as the proposed project would not have to conserve more than 38%.

4.3 Findings

Regarding the availability of water supplies to serve the proposed project beginning in 2022, the SFPUC finds, based on the entire record before it, as follows:

- During normal years, the SFPUC's total projected water supplies will meet the projected demands of its retail customers, including those of the proposed project, existing customers, and foreseeable future development under Scenario 1, Scenario 2, and Scenario 3.
- During single dry years and multiple dry years under Scenario 1—No implementation of the Bay-Delta Plan Amendment or the March 1st Proposed Voluntary Agreement—the SFPUC can meet the projected demands of its retail customers, including those of the proposed project, existing customers, and foreseeable future development without the need for rationing beyond the LOS goal of 20% system-wide rationing. Based on past hydrology, statistically speaking dry years occur roughly once out of every 10 years.
- During single dry years and multiple dry years under Scenario 2—Implementation of the March 1st Proposed Voluntary Agreement—the SFPUC would still face a shortfall in single dry and multiple dry years, thus requiring rationing, but to a lesser degree and in closer alignment to the LOS goal of no more than 20% system-wide rationing compared to that which would occur under Scenario 3.
- During single dry years and multiple dry years under Scenario 3—Implementation of the Bay-Delta Plan Amendment—the SFPUC cannot reliably meet the projected demands of its retail customers, including the proposed project, existing customers, and foreseeable future development, without rationing at a level greater than that required to achieve the LOS goal of a maximum of 20% system-wide average rationing starting as soon as 2022. The SFPUC estimates it would impose up to 50% rationing across the retail service area and up to 38% rationing for mixed-use residential customers such as the proposed project.

Approval of this WSA by the Commission is not equivalent to approval of the development project for which the WSA is prepared. A WSA is an informational document required to be prepared for use in the City's environmental review of a project under CEQA. It assesses the adequacy of water supplies to serve the proposed project and cumulative demand.

Furthermore, this WSA is not a "will serve" letter and does not verify the adequacy of existing distribution system capacity to serve the proposed project. A "will serve" letter and/or hydraulic analysis must be requested separately from the SFPUC City Distribution Division to verify hydraulic capacity.

While this WSA contains information provided by or on behalf of the project sponsor regarding the proposed project's plans for onsite water reuse and demand estimates using the SFPUC's Non-potable Water Calculator, any information submitted to the SFPUC for preparation of this WSA does not fulfill the requirements of the Non-potable Water Ordinance. City review and approval of a proposed onsite water system must be performed separately through the Non-potable Water Program.

If there are any questions or concerns, please contact Steve Ritchie at (415) 934-5736 or SRitchie@sfwater.org.

RE: Project Types Represented in the Land Use Allocation

1650 Mission St.
Suite 400
San Francisco,
CA 94103-2479

Reception:
415.558.6378

Fax:
415.558.6409

Planning
Information:
415.558.6377

This Memorandum explains the Planning Department's Land Use Allocation (LUA) and the types of projects included in the LUA. The 2012 LUA is the most recent update and uses the Association of Bay Area Governments' (ABAG) May 2012 Jobs-Housing Connection Scenario. As this memorandum explains, the Planning Department expects that the LUA will encompass the vast majority of development proposals that project sponsors will present to the Planning Department. This memorandum also identifies possible unusual circumstances under which EP Planners and the SF PUC Planners may want to consult further with the Planning Department's Information and Analysis Group to determine whether a project is encompassed within the LUA.

ABAG's Projections of San Francisco's Economic Growth and the LUA

The LUA takes ABAG's 30-year projections of citywide household and job growth and allocates them to smaller geographic units, in this case, the traffic analysis zones of the SF Transportation Authority's Countywide Transportation Model. Thus, the LUA does not project growth but simply allocates ABAG's growth projections to subarea locations within the city. The current 2012 LUA uses ABAG's Jobs-Housing Connection Scenario projections for San Francisco and covers the period from 2010 to 2040; these projections were released in May 2012 and are represented in five-year increments.

ABAG derives its demographic and economic growth projections from assumptions about long-term demographic and economic growth.¹ ABAG maintains its own set of regional models and develops each forecast with its in-house experts and private economic consultants.² The forecasting is informed by the best information and assumptions available through federal and State agencies, such as the State Department of Finance, and private sources. However, ABAG develops its forecast based on local knowledge from over 50 years of forecasting and develops the forecast to reflect local conditions in contrast to more general forecasting assumptions of State or federal sources. ABAG's estimate of total citywide growth for the 30-year period is expected to best represent actual growth at the end of the 30-year period. However, projected growth for any portion of the projection period, such as growth in a one-year or a five-year period, would be expected to vary from actual growth in such periods. Within the 30-year growth projection period, higher than average growth periods could be followed by lower than average growth periods such that growth over the period would ultimately equal the projected 30-year

total. All projection methodologies make assumptions based on the best available information at the time. To minimize the effects of imprecision intrinsic to any projections methodology when used in for planning decisions, ABAG follows professional best practices and updates its projections every two years. Accordingly, the Planning Department updates its LUA every two years. The planning practice of frequently updating projections and plans allows the incorporation of new information over time to provide for the most up-to-date projections.

The SFPUC updates its Urban Water Management Plan (UWMP) every five years. The UWMP typically relies on LUA projections or similar information. But, because the LUA is updated every two years, the SFPUC may want to review the LUA issued within SFPUC's 5-year UWMP cycle; and if it varies in a significant way from the SFPUC's projections used in its UWMP, discuss with Planning whether it should make any changes in its own water supply needs assessment during an UWMP cycle.

Types of Projects Included in the LUA

The LUA translates ABAG's projected household and job growth into total expected development in San Francisco over a 30-year period. The LUA translates ABAG's household growth into residential housing units and ABAG's job growth into commercial space.³ Thus, the LUA projections of housing units and commercial space include all project types expected from San Francisco growth, such as housing, office, retail, production-distribution-repair (PDR), visitor, and cultural-institutional-educational (CIE). The LUA does not exclude any project type or potential growth. As such, the LUA and the ABAG economic projections upon which it is based contain the best estimates available of reasonably foreseeable growth and development in San Francisco over a 30-year period.

Unusual Circumstances

The LUA can be considered to include all reasonably expected growth and development and it is frequently updated to correct for expected variations. Nevertheless, there are possible unusual circumstances under which the EP Planners or SFPUC Planners may want to request further Planning Department consultation with the Information and Analysis Group to determine if a particular project falls within the LUA. ABAG's projections and the Department's LUA take into account urban economic trends and based on that information capture all reasonably foreseeable growth in San Francisco. Limited capital and aggregate demand of any urban economy constrains growth. However, occasionally the reality or perception may arise that a project lies outside the normal growth constraints of the San Francisco economy for some reason, and therefore lies outside ABAG's projection's and the Department's current spatial allocation in its LUA.

One can envision the rare case of a project arising outside the City's economy (demand and capital) from an organization not located in San Francisco using nonprofit foundation funds or private donations to construct a large institutional project in San Francisco, such as a major hospital, a university, or an office complex. These projects would represent spending and demand beyond that normally active in the San Francisco economy, and therefore represent net additions to projected growth beyond that captured by ABAG's projections and reflected in the Department's LUA. Indicative characteristics of such projects

would include those with non-local sponsors, of large size, and for an institutional land use. Alternatively, very large project proposals from local project sponsors active in the SF economy involving a large site, land assembly, a planned unit development (PUDs), master plans, or area plan and rezoning proposals may warrant individual assessment for a range of reasons even though they are likely captured in ABAG's projections and the LUA. Such projects would be similar to recent projects such as Hunters Point/Candlestick, Park Merced, Treasure Island, Pier 70 Master Plan, Eastern Neighborhoods, or the Transit Center District Plan.

The bi-annual update of ABAG's projections and the LUA would be able to capture development associated with such projects. However, should such a project be proposed between updates, the EP Planners and SFPUC could treat its appearance as sufficient cause to request the Planning Department's assistance in determining whether to consider the project outside the latest LUA projections.

¹ Please see ABAG's summary of its research and forecasting on its website: <http://www.abag.ca.gov/planning/research/index.html>

² ABAG describes its current Jobs-Housing Scenario policy-based forecast here: http://onebayarea.org/pdf/IHCS/May_2012_Jobs_Housing_Connection_Strategy_Appendices_Low_Res.pdf.

³ The LUA citywide totals only differ slightly, up to within one percent of ABAG totals (+/-). The difference is produced by LUA's complex method of translating ABAG projections into development (residential units and commercial space) and allocating total citywide growth to subarea locations. The minor difference between the LUA and ABAG citywide totals is real in absolute terms, but not in the sense that they are different projections. The one percent difference does not constitute a difference of projections. ABAG and MTC consider variation of one percent in citywide totals, plus or minus, as sufficiently representing ABAG's projections for consistency with the MTC regional projections and modeling purposes (congestion management, etc.). Even if a few versions of the LUA must be done to make minor subarea spatial allocation corrections, as long as the LUA's citywide totals are within one percent of ABAG's projections, and ABAG's projections have not changed, the LUA citywide totals have not effectively changed either. Any of those LUA versions' citywide totals fully represent the same unchanged ABAG projection totals.

3333 California Street Project Demand Memo

SAN FRANCISCO PLANNING DEPARTMENT

MEMO

DATE: May 16, 2019
TO: Fan Lau, SFPUC
FROM: Chris Thomas, Environmental Planning
CC: Kei Zushi, Environmental Planning
RE: 3333 California Street Project Revised Water Supply Assessment Request (Planning Department Case No. 2015-014028ENV)

1650 Mission St.
Suite 400
San Francisco,
CA 94103-2479

Reception:
415.558.6378

Fax:
415.558.6409

Planning
Information:
415.558.6377

On June 13, 2017 the San Francisco Public Utilities Commission (SFPUC) approved a Water Supply Assessment (WSA) for the proposed 3333 California Street project (Resolution 17-0142). After this approval, on December 12, 2018, the State Water Resources Control Board (SWRCB) adopted an amendment to the Water Quality Control Plan for the San Francisco Bay/Sacramento-San Joaquin Delta Estuary (Bay-Delta Plan), which establishes water quality objectives to maintain the health of certain rivers and the Bay-Delta ecosystem. Specific requirements for unimpaired flow on the Tuolumne River under the Bay-Delta Plan Amendment, as currently adopted, would have a significant impact to the regional water system supply delivered by the SFPUC.

Certain aspects of the project description of the 3333 California Street project provided with this request has changed somewhat from the project description included with the June 13, 2017 approval. The total number of 13 buildings proposed has remained the same:

- Two (2) four- to five-story mixed use residential buildings with ground floor retail along California Street between Laurel and Walnut Streets (the Plaza A and Plaza B Buildings);
- One (1) three-story mixed use (ground floor retail and child care) with commercial office building along California Street east of Walnut Street (the Walnut Building);
- Two (2) four- to six-story mixed use buildings along Masonic and Euclid Avenues (the Masonic and Euclid Buildings);
- Seven (7) three- to four-story townhomes along Laurel Street (the Laurel Duplexes); and
- One (1) four-story residential building near the Laurel Street and Mayfair Drive intersection (the Mayfair Building).

Both the project proposed in June 2017 and the currently proposed project also include a total of 558 residential units. As indicated in the table below, the combined areas by use have changed somewhat.

Previous and Current Proposed Project Sub-Areas

Existing Use	June 2017 Project Totals (gsf)	Current Project Totals (gsf)
Office	49,999	49,999
Residential	818,247	829,847
Retail	54,967	40,261
Child Care	14,620	13,630
Structured Parking ^a	435,767	374,809
Total gsf	1,373,600	1,308,546

^a Structured parking would have no water demand and is therefore not included in water demand calculations.

As discussed in the project sponsor memo, a variant to the proposed project, referred to as the Walnut Building Variant (“variant”), is also being considered. This variant would allow for the development of 744 dwelling units on the project site; an increase of 186 dwelling units over the number in the proposed project. Under this variant, the approximately 49,999 gsf of commercial office space in the proposed Walnut Building would be changed to a residential use. In this variant, the Walnut Building would be comprised of 147,590 gsf of residential use, 8,500 gsf of retail use, 14,665 gsf of childcare use, and a 172,211 gsf below grade garage. The total Walnut Building in the variant would be 342,966 gsf. Demand estimates are also provided for the variant. Although the total number of units (744) has remained the same, sub-areas by use in the proposed variant have also changed somewhat; however, its total size (1,434,098 gsf) is smaller than the variant proposed in June 2017 (1,473,001 gsf).

The proposed project and the variant would be built in four overlapping construction phases, with a maximum development period of 10 years.

Changes in the areas of use and refinements in some of demand estimates between the project and variant proposed in June 2017 and the current proposal have resulted in changes in demand. The total demand for the June 2017 project at buildout in 2035 was 0.0596 million gallons per day (mgd) while the total demand for the current project is 0.067 mgd. The total demand for the June 2017 variant was 0.0729 mgd while the total demand for the current variant is 0.084 mgd.

The purpose of this memorandum is to request that the SFPUC prepare a revised WSA for the proposed 3333 California Street mixed use project, in recognition of the Bay-Delta Plan Amendment and in compliance with CEQA Guidelines Section 15155 and Sections 10910 through 10915 of the California Water Code. The project description and water demand calculations for the 3333 California Street project have changed from the project considered by the WSA approved on June 13, 2017. The information provided by the project sponsor, intended to meet the requirements outlined in the SFPUC guidance memo dated September 6, 2016, is provided with this request. As indicated in the attached request for a Water Supply Assessment, two projects are currently under consideration: the proposed project which includes 558 dwelling units and the project variant which includes a total of 744 dwelling units. As indicated,

May 16, 2019

3333 California Street Project Revised Water Supply Assessment Request

Page 3

both developments would also include commercial office, retail, day care and open space components.

The project sponsor has provided project information intended to meet the requirements outlined in the SFPUC guidance memo dated September 6, 2016. The project is proposed to be constructed in four phases over a 10-year period. A summary of the project description, proposed average daily water demands, and supporting tables prepared by the project sponsor's consultant (based on the SFPUC District Calculator Version 7), are attached. Non-Potable Water Calculator spreadsheets for both the proposed project and the variant are also attached.

Should you have questions or need additional information from the Planning Department or the project sponsor, please contact me at 415-575-9036 or christopher.thomas@sfgov.org.

Re: 3333 California Street
Case File No. 2015.014028ENV

Revised Water Supply Assessment

Dear Mr. Thomas,

Upon your request, we have rerun the water supply calculations for the proposed redevelopment project at 3333 California Street (Block 1032 and Lot 003). The updates pertain to both minor changes to the proposed project and its variant (the Walnut Building Variant) and the use of the current version of the SFPUC Nonpotable District Scale Calculator Tool (version 7.1).

PROJECT DESCRIPTION

The proposed project would redevelop the 10.25-acre parcel at 3333 California Street in the northwest portion of San Francisco from an office and parking use to a mix of residential, retail, commercial office, child care, and parking uses. It is currently used as the University of California San Francisco (UCSF) Laurel Heights Campus and is developed with two structures, three surface parking lots, two circular garage ramp structures, internal roadways and landscaping or landscaped open space.

The proposed project would entail the demolition of the existing one-story annex building at the corner of California and Laurel Streets (northwest corner of the site), the demolition of the existing surface parking lots and circular garage ramp structures, and the partial demolition (approximately 49 percent) of the existing office building located at the center of the project site. The remaining portion of the existing office building would be divided into two separate residential buildings, Center Building A and Center Building B, with a two-story addition atop Center Building A and a two- to three-story addition above Center Building B. The proposed project would also include the construction of 13 new buildings along the California Street, Masonic Avenue, Euclid Avenue, and Laurel Street edges:

- Two (2) four- to five-story mixed use residential buildings with ground floor retail along California Street between Laurel and Walnut Streets (the Plaza A and Plaza B Buildings);
- One (1) three-story mixed use (ground floor retail and child care) with commercial office building along California Street east of Walnut Street (the Walnut Building);
- Two (2) four- to six-story mixed use buildings along Masonic and Euclid Avenues (the Masonic and Euclid Buildings);
- Seven (7) three- to four-story townhomes along Laurel Street (the Laurel Duplexes); and
- One (1) four-story residential building near the Laurel Street and Mayfair Drive intersection (the Mayfair Building).

Figure 1: Site Plan with Building Names Referenced in this Memorandum

Overall, the proposed project would entail the removal of approximately 376,000 gross square feet (gsf) of office uses with approximately 49,999 gsf relocated to the proposed Walnut Building. Table 1 provides a summary of the proposed changes.¹ As noted below, the proposed project would include 558 dwelling

¹ Square footages presented are approximate.

units within 829,847 gross square feet of residential floor area. The proposed project would provide 49,999 gross square feet of commercial office floor area; 40,261 gross square feet of retail floor area (29,263 of general retail and 12,998 gross square feet of food and beverage retail; and a 13,630-gross-square-foot child care center use. Up to 823 vehicle parking spaces, including ten car share spaces, would be provided in multiple garages with up to three subterranean levels totaling approximately 374,809 gross square feet. Estimated occupancy totals for the proposed uses were calculated using the occupant density defaults from the SFPUC Nonpotable Calculator Spreadsheet, which appear appropriate for the proposed mix of units. Additionally, the proposed project would develop nearly half the overall lot area (198,198sf) with a combination of public and private open spaces including: Euclid Park, Cypress Square, Mayfair Walk, and Walnut Walk. Approximately 234,599 square feet of planted space, including roofs and ground level, would be provided throughout the site. The proposed project would also widen the adjacent sidewalks to meet the requirements of the *Better Streets Plan* and include street trees and other improvements as part of a series of proposed streetscape changes.

Table 1: Proposed Project Summary

Project Features	Existing	Existing to Be Retained ^b	New Construction	Proposed Totals
Dwelling Units	--	--	558	558
Number of Buildings	2	1	13	14
Open Space	165,200 square feet	165,200 square feet	32,998 square feet	198,198 square feet
Parking Spaces	543 ^a	543	280	823
Loading Spaces	5	--	6	6
Bicycle Spaces	15	--	653	653
Use	Existing Gross Square Footage	Existing Uses to Be Retained (gsf) ^b	New Construction / Additions (gsf)	Proposed Project Totals (gsf)
Office	364,500	49,999 ^{c, d}	-- ^d	49,999
Residential	--	--	829,847 ^e	829,847
Retail	--	--	40,261 ^f	40,261
Child Care	11,500	11,500	2,130	13,630^g
Structured Parking ^h	93,000	93,000	281,809	374,809
Total gsf	469,000	154,499	1,154,047	1,308,546

Notes:

^a Surface (331) and garage (212) parking spaces.

^b Retained numbers are use types retained rather than specific elements to be retained (e.g. office and child care use relocations to proposed Walnut Building, new and redeveloped open spaces, or parking count rather than specific parking lots to be retained). In some cases, the actual element is retained but modified from one use type to another (e.g. existing office building).

^c Existing office building would be retained and adaptively reused as two separate residential buildings (proposed Center Buildings A and B), the annex building would be demolished, and new office space would be added in the proposed Walnut Building.

^d Existing office uses would be relocated to the proposed Walnut Building..

^e Includes the adaptively reused office building (proposed Center Buildings A and B) and new residential uses along California Street, Masonic Avenue, Euclid Avenue, and Laurel Street.

^f New retail uses would be developed at the ground floor of the proposed Plaza A, Plaza B and Walnut Buildings.

^g All proposed child care uses would be developed in the proposed Walnut Building.

^h The existing three-level, partially below-grade parking garage under the eastern portion of the existing office building would be reconstructed as part of the proposed California Street Garage under the proposed Plaza A, Plaza B, and Walnut Buildings as well as the adaptively-reused Center Building B. New below-grade parking would be developed under the proposed Masonic and Euclid Buildings, the proposed Laurel Duplexes, and the proposed Mayfair Building.

PROJECT DESCRIPTION: WALNUT BUILDING VARIANT

The project sponsor is considering a variant to the proposed project, referred to as the Walnut Building Variant (“variant”). This variant would allow for the development of 744 dwelling units on the project site; an increase of 186 dwelling units over the number in the proposed project. Under this variant, the approximately 49,999 gsf of commercial office space in the proposed Walnut Building would be changed to a residential use. In this variant, the Walnut Building would be comprised of 147,590 gsf of residential use, 8,500 gsf of retail use, 14,665 gsf of childcare use, and a 172,211 gsf below grade garage.. The total Walnut Building in the variant would be 342,966 gsf.

Under this variant the footprints of the other proposed new buildings would not change. Overall, approximately 1,434,098 gsf of new and rehabilitated space would be developed under the variant, broken down by space type in Table 3. Approximately 234,599 square feet of planted space, including roofs and ground level, would be provided throughout the site.

Table 3: Walnut Building Variant Project Summary

Project Features	Existing	Existing to Be Retained ^b	New Construction	Proposed Totals
Dwelling Units	--	--	744	744
Number of Buildings	2	1	13	14
Open Space	165,200 square feet	165,200 square feet	32,998 square feet	198,198 square feet
Parking Spaces	543 ^a	543	376	919
Loading Spaces	5	--	6	6
Bicycle Spaces	15	--	839	839
Use	Existing Gross Square Footage	Existing Uses to Be Retained (gsf) ^b	New Construction / Additions (gsf)	Proposed Project Totals (gsf)
Office	364,500	-- ^c	--	--
Residential	--	--	977,437 ^d	977,437
Retail	--	--	34,496 ^e	34,496
Child Care	11,500	11,500	3,165	14,665^f
Structured Parking ^g	93,000	93,000	314,500	407,500
Total gsf	469,000	104,500	1,329,598	1,434,098

Notes:

^a Surface (331) and garage (212) parking spaces.

^b Retained numbers are use types retained rather than specific elements to be retained (e.g. office and child care use relocations to proposed Walnut Building, new and redeveloped open spaces, or parking count rather than specific parking lots to be retained). In some cases, the actual element is retained but modified from one use type to another (e.g. existing office building).

^c Existing office building would be retained and adaptively reused as two separate residential buildings (proposed Center Buildings A and B) and the annex building would be demolished.

^d Includes the adaptively reused office building (proposed Center Buildings A and B) and new residential uses along California Street, Masonic Avenue, Euclid Avenue, and Laurel Street.

^e New retail uses would be developed at the ground floor of the proposed Plaza A, Plaza B and Walnut Buildings.

^f All proposed child care uses would be developed in the proposed Walnut Building.

^g The existing three-level, partially below-grade parking garage under the eastern portion of the existing office building would be reconstructed as part of the proposed California Street Garage under the proposed Plaza A, Plaza B, and Walnut Buildings as well as the adaptively-reused Center Building B. New below-grade parking would be developed under the proposed Masonic and Euclid Buildings, the proposed Laurel Duplexes, and the proposed Mayfair Building.

PROPOSED CONSTRUCTION SCHEDULING AND PHASING

It is the intent of the project sponsor to phase the construction of the proposed project or its variant. The preliminary construction plan would include four overlapping construction phases and is subject to change. Project construction would commence in 2020 and would occur within a maximum development period of 15 years as follows:

Phase 1: Masonic and Euclid Buildings

- Duration: 30 month
- Phase would include the demolition of the existing annex building and the construction of residential, retail and garage space, as well as associated landscape area and public right of way improvements.

Phase 2: Center Buildings A and B (existing office building)

- Duration: 24 months; anticipated to commence on Month 20 of Phase 1
- Phase would include the partial demolition of the existing office building and the construction of residential and garage space.

Phase 3: California Street Buildings (Plaza A, Plaza B, and Walnut Buildings)

- Duration: 36 months; anticipated to commence on Month 15 of Phase 2
- Phase would include the construction of residential, retail, office, childcare, and garage space, as well as associated landscape and public right of way improvements (office is removed in the Walnut Variant).

Phase 4: Mayfair Building and Laurel Duplexes

- Duration: 20 months; anticipated to commence on Month 30 of Phase 3
- Phase would include the construction of residential and garage as well as associated landscape and public right of way improvements.

The preliminary construction phasing plan would also be applicable to the Walnut Variant.

Please note that the non-potable calculator has been run for the maximum number of phases it is configured to allow (three), by combining Phases 3 and 4.

Landscape, Roof Totals, and Phasing

The following table summarizes surface properties and areas for ground-level hardscape and planting (this area is actually mostly over subsurface parking) and building roofs.

Table 5: Landscape and roof areas by coverage type

Phase 1	
Hardscape	48,440
Planting Area	40,150
Conventional Roof	13,000
Green Roof	40,000
Total Area	141,590
Phase 2	
Hardscape	16,320
Planting Area	23,170
Conventional Roof	37,365
Green Roof	16,607
Total Area	93,462
Phase 3+4	
Hardscape	52,900
Planting Area	44,160
Conventional Roof	30,688
Green Roof	70,512
Total Area	198,260

PROPOSED INTEGRATED WATER MANAGEMENT APPROACH

The proposed water management approach has not changed since the original application, and it is applicable to both the proposed project and its variant. Through this approach, the proposed project and its variant would comply with the requirements of City and County of San Francisco ordinances related to water conservation and resources, as applicable, including the San Francisco Green Building Ordinance, the Stormwater Management Ordinance and the Alternate Water Supplies/Reuse Ordinance, as well as the Water Efficient Irrigation, Residential Water Conservation, and Commercial Water Conservation Ordinances.

Water Conservation

The project site is served by San Francisco's potable water supply system. To reduce the use of potable water on a per-unit basis, the proposed project would provide high-efficiency fixtures and appliances in new and existing buildings. These savings are not fully represented in the estimates here because the non-potable calculator uses flowrate defaults. Water wise landscaping would be employed. All nonpotable flushing and irrigation demands are intended to be met by collected rainwater and greywater treated onsite. The site is projected to use about 1/3 less potable water than a comparable development that meets the stringent CALGreen Code.

Stormwater and Wastewater

The project site is served by San Francisco's combined sewer system and is subject to the City's stormwater management requirements. The proposed project would reduce loading on the neighborhood stormwater infrastructure by collecting rainwater for reuse and managing stormwater through landscape and storage. These strategies combined with a site plan targeting over 50 percent planted area, including living roofs, should result in runoff reductions beyond the 25 percent required by the Stormwater Management Ordinance. No new or enlarged off-site wastewater collection facilities are proposed.

Water + Ecology

A site of this size has the potential to enhance the ecological assets of the neighborhood and city. The proposed project would preserve several major trees and greatly increase the total number of trees on the project site and the adjacent sidewalks. The proposed landscaping plans would favor native and adapted trees and plants that reduce irrigation demands while managing stormwater and promoting biodiversity.

WATER USE ESTIMATES

The following tables summarize the potable and nonpotable water demand estimates for the proposed project and the Walnut Building Variant and are based on the proposed uses and the preliminary construction phasing program, which has not changed. These estimates are preliminary and may be refined at a later time as project designs progress. The estimates include better than code average fixture flowrates (though are conservative in that they do not take the very lowest flowrate available in all cases), and include the high end of potential living roof area contemplated as a conservative case from a water supply perspective (more irrigation, less capturable rainwater). Targeted rainwater and greywater reuse would offset about 1/4 of the projected use according to the SFPUC calculator tool (see Attachment A for the Proposed Project and Attachment B for the Variant), but nonpotable demand is not subtracted from the below estimates.

Existing Usage

Site water use data provided to the project team from 2012-2014 indicate that existing usage tends to average about 20,000 gpd (0.02 mgd), with peak months averaging around 26,000 gpd (0.026 mgd). It is possible that this data set does not include 100% of the current site water demands.

Proposed Project

Table 6: Proposed Project Estimated Total Water Demand Based on Water Year Type

	Normal	Single dry	Multiple 2	Multiple 3	Multiple 4
Total estimated demand of proposed project (mgd)	0.067	0.068	0.069	0.069	0.069
Potable	0.046	0.046	0.046	0.046	0.046
Nonpotable	0.020	0.022	0.023	0.023	0.023

Note: Relative to the normal year, calculations assume that irrigation demand increases 30% in a single dry year, 40% in Multiple 2, 45% in Multiple 3 and 50% in Multiple 4. The increases are all to be served by nonpotable water, and no change to potable usage is assumed in dry years.

Table 7: Proposed Project Estimated Total Water Demand Based on Project Phasing

Usage at End of Year	2015	2020	2025*	2030	2035
Total estimated demand of proposed project (mgd)	0	0	0.043	0.067	0.067
Potable	0	0	0.032	0.048	0.048
Nonpotable	0	0	0.011	0.018	0.018

*Phase 3 is scheduled for completion in December of 2025, so the 2025 estimate includes only Phases 1 and 2. All phases are included in the estimates for 2030 and 2035, but this is conservative from a water supply perspective because full buildout could occur as late as 2035.

Walnut Building Variant

Table 8: Variant Estimated Total Water Demand Based on Water Year Type

	Normal	Single dry	Multiple 2	Multiple 3	Multiple 4
Total estimated demand of proposed variant (mgd)	0.084	0.086	0.086	0.087	0.087
Potable	0.064	0.064	0.064	0.064	0.064
Nonpotable	0.020	0.022	0.023	0.023	0.023

Note: Relative to the normal year, calculations assume that irrigation demand increases 30% in a single dry year, 40% in Multiple 2, 45% in Multiple 3 and 50% in Multiple 4. The increases are all to be served by nonpotable water, and no change to potable usage is assumed in dry years.

Table 9. Variant Estimated Total Water Demand Based on Project Phasing

	2015	2020	2025*	2030	2035
Total demand of proposed variant (mgd)	0	0	0.043	0.084	0.084
Potable	0	0	0.032	0.064	0.064
Nonpotable	0	0	0.011	0.020	0.020

*Phase 3 is scheduled for completion in December of 2025, so the 2025 estimate includes only Phases 1 and 2. All phases are included in the estimates for 2030 and 2035, but this is conservative from a water supply perspective because full buildout could occur as late as 2035.

Re: Annual Report on Evictions from Subsidized Housing for Fiscal Year 2018-19

To the Honorable Mayor Breed and Members of the Board of Supervisors:

Attached is the report required by Article XIV, the Tenant Eviction Annual Reports Ordinance. The report documents evictions from the subsidized housing programs that were funded by the Department of Homelessness and Supportive Housing for the past fiscal year from July 1, 2018 through June 30, 2019.

The report documents the number of unlawful detainer filings, evictions filed, and evictions completed within the City's permanent supportive housing portfolio. Please note that HSH has improved our reporting on this topic to ensure that each row of data included in the report reflects a unique Permanent Supportive Housing site. This update to the reporting structure means there is a variation in the number of Permanent Supportive Housing (PSH) sites between FY17-18 and FY18-19.

Below is an overview of FY18-19 findings. Additional detail can be found in the attached report.

FY 2018-19

	PSH Sites	Households	# of Unlawful Detainer Filings	# of Evictions	% of Households Evicted
HSH	123	10,267	353	192	1.87%

Additionally, we have included a correction to the FY17-18 report concerning the total number of households served which increased the percentage of households evicted for FY17-18 from 2.13% to 2.25%. Below is an updated overview of FY17-18 findings.

Updated FY 2017-18

	PSH Sites	Households	# of Unlawful Detainer Filings	# of Evictions	% of Households Evicted
HSH	133	9,582	433	216	2.25%

15-Day Continuation Notice
Re: § 132.7 Lost or Abandoned Dungeness Crab
Trap Gear Retrieval Program

August 19, 2019

NOTICE IS HEREBY GIVEN that the Department of Fish and Wildlife has made changes to the Amended Notice (Z-2019-0201-01; and, Z-2019-0430-02) which follow:

The following changes to the addition of Section 132.7, Lost or Abandoned Dungeness Crab Trap Gear Retrieval Program, Title 14, California Code of Regulations, address necessary corrections:

- Subsection (c): the applicant for trap gear retrieval is advised of the required forms and that the forms will be available online at www.wildlife.ca.gov.
 - (c)(1)(B) retrieval permittees must have a formal structure in the form of a written charter or a governing board.
 - (c)(1)(C) "government entity" has been changed to "local agency" and "District" within the meaning of California law.
 - (c)(2) and (3) Form numbers have been added to the text to better clarify which form is to accompany the required fee.
- Corrections made to the text references to form date and on all the forms to clarify the date of amendment.
- Forms: Certification of information provided to the Department must be correct and true under penalty of perjury.

Additional information is provided in the Supplemental Statement of Reasons and all associated documents may be found on the Department of Fish and Wildlife website at: <https://www.wildlife.ca.gov/Notices/Regulations>.

This 15-day continuation period allows for public comments concerning only the proposed amendments to the regulatory language but not on the unchanged aspects of the proposal that were already noticed during the prior 45-day period. All comments,

with Department response, will be published with the Final Statement of Reasons (FSOR). The planned effective date is September 15, 2019.

After consideration of all public comments, objections, and recommendations regarding the proposed action, the Department may adopt the proposed regulations.

Any interested person, or his or her authorized representative, may submit written comments on the proposed changes to the Department. All written comments must be received by the Department via mail, or e-mail, no later than **5:00 p.m. on Tuesday, September 3, 2019**, to:

Submit comments to:

Subject: Issued: SFMTA: Compliance Audits of Lombard Street and Polk Bush Garages
Date: Thursday, August 29, 2019 12:30:11 PM

The Office of the Controller's City Services Auditor (CSA) today issued two audit reports, prepared by Sjoberg Evashenk Consulting, on the Lombard Street and Polk Bush garages for July 1, 2017, through June 30, 2018.

Lombard Street Garage

Imperial Parking (U.S.), LLC, (Impark) operates the Lombard Street Garage (Lombard Garage). Impark reported to SFMTA \$691,973 in operating revenues and \$556,182 in expenses during the audit period. In general, SFMTA ensured that Impark appropriately performed most garage activities, with the goal of achieving optimal operational and financial performance at the Lombard Garage. However, the audit identified some areas in which the San Francisco Municipal Transportation Agency (SFMTA) could improve its oversight of the garage's operations and better monitor compliance with the lease.

To view the report, please visit our website at:
<http://openbook.sfgov.org/webreports/details3.aspx?id=2749>

Polk Bush Garage

Laz Parking, LLC, (LAZ) operates the parking garage at Polk Bush Garage. LAZ reported to SFMTA \$608,653 in operating revenues and \$528,449 in expenses during the audit period. In general, SFMTA ensured that LAZ appropriately performed most garage activities, with the goal of achieving optimal operational and financial performance at the Polk Bush Garage. However, the audit identified some areas in which SFMTA could improve its oversight of the garage's operations and better monitor compliance with the lease.

To view the report, please visit our website at:
<http://openbook.sfgov.org/webreports/details3.aspx?id=2748>

This is a send-only e-mail address. For questions about the report, please contact Acting Chief Audit Executive Mark de la Rosa at mark.p.delarosa@sfgov.org or 415-554-7574 or the CSA Audits Division at 415-554-7469.

Imperial Parking (U.S.), LLC, Needs to Improve Some Controls to Strengthen Its Operations at the Lombard Street Garage

San Francisco Municipal Transportation Agency

August 29, 2019

City & County of San Francisco
Office of the Controller
City Services Auditor

About the Audits Division

The City Services Auditor (CSA) was created in the Office of the Controller through an amendment to the Charter of the City and County of San Francisco (City) that was approved by voters in November 2003. Within CSA, the Audits Division ensures the City's financial integrity and promotes efficient, effective, and accountable government by:

- Conducting performance audits of city departments, contractors, and functions to assess efficiency and effectiveness of service delivery and business processes.
- Investigating reports received through its whistleblower hotline of fraud, waste, and abuse of city resources.
- Providing actionable recommendations to city leaders to promote and enhance accountability and improve the overall performance and efficiency of city government.

Audit Authority

CSA conducted this audit under the authority of the San Francisco Charter, Section 3.105 and Appendix F, which requires that CSA conduct periodic, comprehensive financial and performance audits of city departments, services, and activities.

Statement of Auditing Standards

This performance audit was conducted in accordance with generally accepted government auditing standards. These standards require planning and performing the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for the findings and conclusions based on the audit objectives. CSA believes that the evidence obtained provides a reasonable basis for the findings and conclusions based on the audit objectives.

Mr. Tom Maguire
Acting Director of Transportation
San Francisco Municipal Transportation Agency
1 South Van Ness Avenue, 7th Floor
San Francisco, CA 94103

Dear Board Chairman, Board Members, and Mr. Maguire:

The Office of the Controller's City Services Auditor (CSA), Audits Division, engaged Sjoberg Evashenk Consulting, Inc., (SEC) to audit the lease agreement under which Imperial Parking (U.S.), LLC, (Impark) operates the Lombard Street Garage (Lombard Garage). SEC also reviewed the management and oversight of the lease by the San Francisco Municipal Transportation Agency (SFMTA).

Reporting Period: July 1, 2017, through June 30, 2018

Revenue: \$691,973

Results:

Impark reported to SFMTA \$691,973 in operating revenues and \$556,182 in expenses during the audit period. In general, SFMTA ensured that Impark appropriately performed most garage activities, with the goal of achieving optimal operational and financial performance at the Lombard Garage. However, the audit identified some areas in which SFMTA could improve its oversight of the garage's operations and better monitor compliance with the lease.

The report includes 17 recommendations for SFMTA to improve its oversight of the Lombard Garage lease. SFMTA's response is attached. CSA will work with the department to follow up every six months on the status of the open recommendations made in this report.

CSA appreciates the assistance and cooperation of all staff involved in this audit. For questions about the report, please contact me at mark.p.delarosa@sfgov.org or 415-554-7574 or CSA at 415-554-7469.

Respectfully,

San Francisco Municipal Transportation Agency: Imperial Parking (U.S.), LLC, Needs to Improve Some Controls to Strengthen Its Operations at the Lombard Street Garage

July 2019

455 Capitol Mall • Suite 700 • Sacramento, California • 95814 • Tel 916.443.1300 • Fax 916.443.1350

Executive Summary

Purpose of the Audit

As authorized by the San Francisco Administrative Code, the Office of the Controller's City Services Auditor engaged Sjoberg Evashenk Consulting, Inc., to assess whether Imperial Parking (U.S.), LLC, (Impark) complied with certain provisions in its lease agreement with the City and County of San Francisco (City) to operate the Lombard Street Garage (Lombard Garage). The audit also assessed whether the San Francisco Municipal Transportation Agency (SFMTA) conducted appropriate contract management and oversight activities of the leases.

Highlights

Overall, the audit found that SFMTA ensured Impark appropriately performed most parking garage activities to ensure optimal operational and financial performance at the Lombard Garage.

However, the audit identified the following areas where SFMTA could improve its oversight of garage operations and better monitor compliance with the lease agreement between the City and Impark:

- Certain revenue controls and management practices need improvement.
- Impark needs to improve its documentation of operational expenses, and SFMTA's invoice review processes could be improved.
- Parking rate adjustments were not always implemented in a timely manner.
- Certain aspects of SFMTA regulations appear outdated, and some improvements can be made to SFMTA's internal procedures.
- SFMTA did not adequately document the resolution of issues found during garage inspections.
- A few system access processes were inconsistent with best practices.

Key Recommendations

The report includes 17 recommendations for SFMTA to ensure Impark uses cash-handling best practices and complies with the provisions of the lease agreement, including that SFMTA:

- Require Impark to reconcile monthly parking revenue collected and deposited with active monthly cardholders reflected in the new SKIDATA system.
- Ensure Impark is aware of SFMTA expense reporting requirements and require Impark to submit invoice packages that include adequate supporting documentation, including copies of payroll documents and proof of expenditures payments, for all expenses incurred.
- Not only verify that supporting documents in Impark's invoice packages agree with the invoice summary, but also thoroughly review supporting documentation details to ensure all required support is included and all costs are allowable and appropriate. If its staffing is too limited to enable this, SFMTA should select two garages per month for full invoice package reviews.
- Develop and formalize a process to verify that scheduled daily and monthly parking garage rate adjustments are implemented in a timely manner.

INTRODUCTION

Audit Authority

The lease agreement between the City and County of San Francisco (City) and Imperial Parking (U.S.), LLC, (Impark) authorizes the City and its representatives to audit all accounts and records established under the lease. The San Francisco Administrative Code, Chapter 10.6-2, grants the Office of the Controller (Controller) the authority to audit departments to ensure they are adequately managing their leases for leased property. Also, the City Charter provides the Controller's City Services Auditor (CSA) with broad authority to conduct audits. This audit was conducted under these authorities and pursuant to an audit plan agreed to by the Controller and the San Francisco Municipal Transportation Agency (SFMTA). CSA engaged Sjoberg Evashenk Consulting, Inc., (SEC) to audit the lease agreement between the City and Impark under which Impark operates the Lombard Street Garage (Lombard Garage) and to assess SFMTA's management of the agreement.

Background

The City has a lease agreement with Impark to manage the Lombard Garage, a public parking garage located at 2055 Lombard Street in San Francisco. The lease commenced on July 1, 2014, with Impark as parking garage operator under the previous management company Pacific Park Management (Parking Corporation). An assignment and assumption agreement between the City, the Parking Corporation, and Impark established that the Parking Corporation would no longer have any interest in or manage the Lombard Garage as of July 1, 2014, and that Impark would continue as the parking garage manager and operator through January 31, 2018, the lease termination date. In 2018, the City extended the lease agreement with Impark through July 31, 2019.

In 2016 the SFMTA awarded SKIDATA, Inc., a \$19 million contract to replace aging parking equipment in 22 city-owned parking garages.¹ The newly implemented SKIDATA system allows the garage to automate the payment process. Other technological upgrades include the addition of Automated License Plate Recognition (ALPR), a camera system that converts the image of a license plate to computer-readable data. The ALPR system collects data for the purpose of calculating parking fees, issuing citations, and re-issuing lost tickets. Once all the equipment is replaced at the 22 garages, which is scheduled to occur by

¹ The previous parking control system was known as Datapark.

Summer 2020, SFMTA will be able to streamline operations and enable demand-based pricing from its Central Monitoring Center.

Impark is responsible for supervising and overseeing Lombard Garage operational activities and ensuring revenues and operational expenses generated through the garage are appropriately remitted to the City. Impark remits all Lombard Garage revenues to the City daily and submits monthly requests for reimbursement for operational expenses, including staff salaries and benefits.

SFMTA is tasked with the management and oversight of the City's public, off-street parking garages. The City delegated authority to SFMTA to oversee the activities of the parking garage operators responsible for the daily management and operations of the parking garages. SFMTA is responsible for reviewing and approving parking garage budgets and operational expenses, conducting physical garage inspections, and ensuring the parking garage operators adhere to their lease agreements.

Objectives

The purpose of this audit was to determine whether Impark:

- Reported and correctly submitted to SFMTA all revenues collected from the operation of the Lombard Garage;
- Calculated and correctly reported all of its operating expenses; and,
- Complied with other provisions of its lease agreement with the City.

Also, the audit included evaluating whether SFMTA's contract management practices and procedures adequately ensured that Impark complied with certain lease agreement provisions.

Scope and Methodology

The audit covered July 1, 2017, through June 30, 2018.

To meet the objectives of the audit, the audit team:

- Reviewed the applicable terms of the lease agreement between the City and Impark.
- Assessed Impark's internal controls and procedures over collecting, recording, summarizing, and reporting gross revenues and expenditures, including day-end close-out practices associated with verification of amounts collected and preparing the daily deposit.
- Assessed Impark's process to reconcile monthly parking payments received against active monthly parking passes.

- Evaluated controls associated with the automated parking access and revenue control system, SKIDATA.
- Determined whether Impark submitted complete and accurate monthly statements to report accurate revenues and expenditures and remitted all revenues collected according to the terms of the lease agreement.

**Statement of
Auditing Standards**

We conducted this performance audit in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

AUDIT RESULTS

Summary

From July 1, 2017, through June 30, 2018, Impark reported to SFMTA total operating revenues of \$691,973 and expenses of \$556,182. The exhibit below summarizes Lombard Garage's revenues, expenditures, and operating income for the audit period.

Exhibit Lombard Garage Operating Revenues and Expenses July 1, 2017, Through June 30, 2018			
Reporting Period	Revenues*	Expenses	Operating Income (Revenues less Expenses)
July 1, 2017 – June 30, 2018	\$691,973	\$556,182	\$135,791

* Includes revenues from transient parking, monthly parking, and other garage revenues.

Source: *Lombard Garage Monthly Summary Report (MSR) June 2018.*

The audit found that, in general, Impark appropriately performed most parking garage activities at the Lombard Garage, in accordance with the lease agreement. In addition, the newly implemented parking access and revenue control system, SKIDATA, allowed the garage to automate many of the traditional cash-handling procedures, such as transient revenue collection, physical parking ticket reconciliation, and cashier drawer closeout. However, the audit identified the following areas where SFMTA could improve its oversight:

- Certain revenue controls and management practices need improvement.
- Impark needs to improve its documentation of operational expenses and SFMTA's invoice review processes could be improved.
- Parking rate adjustments were not always implemented in a timely manner.
- Certain aspects of SFMTA regulations appear outdated, and some improvements can be made to SFMTA's internal procedures.
- SFMTA did not adequately document garage inspection issue resolution.
- A few system access processes were inconsistent with best practices.

Finding 1

Certain Revenue Controls and Management Practices Need Improvement

The audit identified several revenue control practices that increase the risk that Impark cannot assure the accuracy of collecting, processing, and remitting parking payments, including inadequate monthly contract parking reconciliation processes, insufficient petty cash/change fund practices, ticket exception documentation processes, and lack of documentation authorizing free monthly parking.

Impark's Processes to Reconcile Monthly Contract Parking Revenue Require Improvement

In addition to parking for transient (daily) customers, the Lombard Garage also offers monthly parking to customers who sign a parking contract for a flat recurring monthly fee. Monthly parkers receive a garage access card. Impark automatically charges monthly parker fees from the customers' credit cards and deposits the funds into its bank account. The funds are then transferred into SFMTA's bank at the beginning and end of the month.

During the audit period, Impark did not have a process to reconcile the active monthly access cardholders listed in SKIDATA—the parking revenue control system that tracks and activates garage access cards—to amounts collected and deposited into the bank. Rather, Impark compared a manual list of active monthly cards maintained by the garage facility manager to a list in Impark's Monthly Parking System (MPS)—a system used to track monthly payments collected.

Because the list of active garage access cardholders in SKIDATA was not compared to monthly parking fees collected and deposited, Impark and SFMTA could not be assured that all monthly parking fees were appropriately collected from every monthly parking customer with access to the garage. Although auditors did not identify any discrepancies, a reconciliation between active cardholders and collections ensures accountability for any overage and shortages and prevents risk that lost or misappropriated collections may go undetected.

Petty Cash/Change Fund Not Sufficiently Tracked and Secured

Impark maintains \$600 in the pay stations with specified bill denominations as a change fund and petty cash for small emergency purchases. A walk through of Impark's revenue collection processes revealed that petty cash activity was not tracked and the funds were not secured in a locked safe or drawer, making the money accessible to any person with authorization to enter the garage office and increasing the risk that money could go missing or inappropriately handled. While the audit found that the \$600 in petty cash/change fund monies was present

at the time of the auditor's site visit, prudent business practices require tracking and safeguarding all cash, including petty cash/change. Further, the City's cash handling guidelines state that cash should be secured in locked drawers.

Although Impark has brief cash handling procedures detailing certain activities, which guide cash handling for pay stations, the procedures do not address petty cash/change fund activities and requirements. Written policies and procedures are essential to ensure staff can effectively and consistently perform duties in accordance with documented guidelines. Not having complete and updated written policies and procedures increases the risk that employees will use inconsistent practices in handling cash. According to Impark, as of February 2019, improvements to petty cash/change fund practices have been implemented as a result of the audit, including formally tracking and securing the monies.

Impark Did Not Document Detailed Explanations for Exceptions to Revenue Generating Parking Activities

Impark uses SKIDATA to track transient (daily) parking revenue. Transient parkers are issued a ticket on entry to the garage. Each ticket details the parker's entry and exit time and calculates the parking fee due based on the amount of time parked and the time of day. Normally, each time a parker enters the garage, a parking ticket is issued and a payment is collected upon exit; however, there are certain exceptions where parking tickets are not generated and fees are not assessed or collected. Key exceptions to normal ticketing processes include manual gate openings, replacement tickets, and voids.

The SKIDATA system generates a daily activity report listing the number of exceptions by type, but Impark did not document the reasons necessitating for the exceptions or require supervisors to review and approve such activities. Impark included some information related to voided transactions on a daily shift report, but the auditors did not find documentations for other types of exceptions.

According to Section 6.9(e) of SFMTA's Parking Facility Operation and Management Regulations (parking regulations), garage managers are required to submit a monthly exception report that analyzes all manual transactions including details of the garage manager's follow-up on any suspicious transactions and/or pattern transactions. According to SFMTA, garages have not been required to submit this report, but were instead required to submit an Unaccounted Parking Ticket (UPT) report. However, the UPT report only provides a count of certain types of exception activities (e.g., grace period allowances, unprocessed tickets, and voided tickets) and does not detail the reasoning for the exceptions or any information related to manual transactions, such as manual arm lifts.

Without detailed documentation of exceptions, Impark and SFMTA cannot ascertain whether exceptions to normal ticketing processes were appropriate. Therefore, SFMTA should require Impark to document the explanations, approve, and report daily exceptions to ticketing processes. According to Impark, improvements related to formally documenting and approving exceptions have been implemented in February 2019 as a result of the audit, including a parking ticket exception log.

Impark Issued Seven Free Monthly Parking Access Cards to Post Office Staff Without SFMTA's Written Approval

The audit found that Impark authorized seven free monthly parking access cards to a local United States Postal Service (Post Office) facility that shares the same building as the garage without SFMTA's formal approval. The value of the seven parking passes during the audit period was \$21,840. Section 3 of SFMTA's parking regulations only allows free parking in city-owned garages under certain circumstances, unless otherwise authorized by SFMTA via formal written approval. Although a lease agreement commenced in May 1989 between SFMTA and the Post Office indicates the seven parking spaces are part of the Post Office's lease agreement, neither SFMTA nor Impark could provide SFMTA's written authorization for the garage operator to allow the free monthly parking, as required by parking regulations. SFMTA explained that the free passes were authorized and issued prior to the current lease agreement.

Recommendations

The San Francisco Municipal Transportation Agency should:

1. Require Impark to reconcile monthly parking revenue collected and deposited with active monthly cardholders reflected in the SKIDATA revenue control system.
2. Require Impark to continue recently implemented efforts to improve and expand current cash handling processes and procedures, such as tracking and logging daily petty cash/change fund transactions, securing petty cash/change fund in a locked safe with limited access, and documenting, approving, and reporting daily exceptions to ticketing processes.
3. Provide the garage operator formal written approval to authorize free parking spaces, including the spaces currently provided to the Post Office.
4. Require and remind the garage operator to maintain documents for all SFMTA authorized free parking.

5. Develop a process to regularly seek information from garage operators related to free parking access passes to ensure SFMTA is aware of all circumstances where free passes are provided and to ensure written authorization has been provided. SFMTA should consider collecting this information as part of the garage inspection process.

Finding 2

Impark Needs to Improve its Documentation of Operational Expenses and SFMTA's Invoice Review Processes Could Be Improved

The master agreement between SFMTA and Impark includes invoicing provisions for the operator to seek reimbursement each month for specific operating expenses, such as payroll costs, utilities, maintenance, supplies, and contracted services. In order for an expense to be reimbursed by SFMTA, complete documentation must be submitted, including a detailed statement listing all operating expenses incurred since the previous invoice, copies of all invoices, receipts or other evidence to support each listed expense, and evidence of payment of all items. The invoiced expenditure amounts are also reflected on the monthly summary reports (MSR), a report submitted by garage operators that summarizes the total monthly revenues and expenditures. Our review of August 2017 and April 2018 invoices submitted by Impark for reimbursement found that Impark did not always provide sufficient documentation, and SFMTA's review processes require improvement as described in detail below.

Garage Operator Did Not Always Provide Adequate Supporting Documentation for Monthly Expenditures Reimbursement

A review of the August 2017 and April 2018 expense reports submitted by Impark revealed that some expenses claimed did not always have sufficient supporting documentation. For example, we found that a reimbursement request for a \$60 cell phone expense submitted in April 2018 was hand-written on a garage reimbursement form without any documentation from the telephone company to substantiate the reimbursement request.

Additionally, a janitorial services expense submitted on the August 2017 invoice did not agree with the supporting documentation. The janitorial services invoice submitted by Impark stated that \$3,899 was due; however, the documentation showed only \$2,097.60 in provided services when multiplying the janitorial staff hours by the hourly rate paid. SFMTA's internal policies and procedures, specifically the monthly invoice review and approval procedures, require a summary sheet detailing the hours worked and rate paid for security and janitorial services, but Impark submitted invoices using a monthly fixed fee.

According to Impark, this discrepancy occurred because the monthly janitorial charge was a fixed monthly rate that assumed twenty hours of services was performed each week during the fiscal year; however, this payment arrangement was not reflected in the invoice documentation and does not allow SFMTA to ensure that all hours of service paid for was provided throughout the year. According to the garage operator, janitorial expenses are now charged based on actual hours worked as a result of the audit.

Further, the audit found that payroll summaries prepared by the garage operator included in the August 2017 and April 2018 expense reports did not include documentation to sufficiently support the amounts claimed for reimbursement, such as a copy of payroll documents. While Impark provided payroll records to auditors to support the amounts invoiced, SFMTA should ensure the garage operator provides a copy of payroll documents with all submitted invoice packages.

Impark Did Not Provide to SFMTA the Required Proof of Payment for Expenditures in its Monthly Reimbursement Request

Section 6.10 of the agreement between SFMTA and Impark requires each invoice submitted to SFMTA for reimbursement be accompanied by proof of payment. However, no such documentation was included in either the August 2017 or April 2018 invoice packets, making it difficult to ascertain whether the expenses had been paid prior to Impark seeking reimbursement from SFMTA. Without evidence of payment, SFMTA cannot be certain that the expenses being reimbursed had been paid by Impark. Although Impark did not submit the required payment records, SFMTA paid Impark the requested amounts for the sampled months and did not request Impark to submit the required proof of payment.

SFMTA Invoice Review Processes Could Be Improved

SFMTA's internal invoice review procedures include a number of steps to guide staff through the invoice review and approval process and generally focused on ensuring the amounts reflected on the invoice matched the numbers reflected on the underlying supporting documentation. However, the procedures did not require SFMTA staff to review the details of supporting documentation for completeness, accuracy, or allowable expenses.

According to SFMTA, because only one staff member is responsible for reviewing the invoices, there is not enough time to perform an in-depth review of each submitted document. Specifically, invoice packets are submitted by Impark to SFMTA's Parking Group, the unit responsible for overseeing parking garage operators, between the 15th and 18th of each month and SFMTA's accounts payable department must process the corresponding reimbursement payments by the 23rd. As a result, parking group staff have only a few days to review and approve the invoices and

documents submitted by 22 city-owned garages. A detailed and complete review of the submitted expenditures helps to ensure SFMTA only pays for appropriate and allowable costs, and all supporting documentation is included.

Lastly, auditors noted that many expenses included in the invoice packets for August 2017 and April 2018 involved costs incurred several months earlier, making it difficult for SFMTA to identify whether those earlier costs had been previously reimbursed. Although SFMTA indicated there is an informal process to research expenses submitted related to earlier months to guard against double payments, there is no process to document that a review had occurred. Therefore, SFMTA should develop a process that minimizes the risk that the same expense can be included in multiple months of invoicing and reimbursed more than once.

Recommendations

The San Francisco Municipal Transportation Agency should:

6. Ensure Impark is aware of SFMTA expense reporting requirements and require Impark to provide adequate supporting documentation for all expenses incurred when submitting the invoice package, including copies of payroll documents and proof of expenditures payments.
7. Require Impark to charge janitorial service providers for actual time spent providing services.
8. Thoroughly review invoice packages submitted by the garage operator beyond verifying that supporting documents agree with the invoice summary. Review supporting documentation details to ensure all required support is included and all costs are allowable and appropriate. If staffing is limited, SFMTA should select two garages each month and fully review their invoice packages.
9. Develop and formalize a process to verify that SFMTA did not previously reimburse garage operator expenses incurred several months earlier.

Finding 3

Parking Rate Adjustments Were Not Always Implemented on Time

SFMTA reviews garage parking rates for both transient and monthly parkers on a quarterly basis and makes adjustments to achieve both efficient and equitable utilization. According to SFMTA's internal procedure that guides staff on how to conduct garage rate analysis and adjustments, there are several factors that are considered to determine whether or not adjustments are warranted, such as consideration of when rates were most recently adjusted, overall garage utilization,

whether or not a wait-list exists, and benchmarking of competing garages rates. SFMTA is responsible for contacting the SKIDATA administrator to adjust the daily transient rates, while Impark is responsible for adjusting monthly parking rates in their monthly parking system and contacting monthly pass holders of the rate change.

During the audit period, two rate adjustments were slated to take effect during the first quarter of 2018—implementation of a new 24-hour daily maximum rate (\$28) in January and an increase in the regular monthly parking (from \$255 to \$265) in March. While SFMTA appropriately implemented the new maximum 24-hour daily rate timely with SKIDATA, Impark did not adjust the regular monthly parking rate until April 2018. Impark could not provide support to justify the delay in the monthly fee adjustment. Because the monthly parking rate adjustment was not implemented on time, SFMTA lost \$1,300 in revenue during the month of March 2018.

Additionally, although SFMTA's internal procedures outline the steps to complete a garage rate change review and adjustment, the procedures do not address steps needed to ensure rate adjustments occurred appropriately and timely. According to SFMTA, once the SKIDATA system is fully upgraded, SFMTA will be able to verify daily parking rate adjustments remotely on a real time basis.

Recommendations

The San Francisco Municipal Transportation Agency should:

10. Develop and formalize a process to verify that scheduled daily and monthly parking garage rate adjustments are implemented in a timely manner.
11. Collect the \$1,300 in lost revenue from Impark for the failure to implement monthly reserved parking rates timely.
12. Update the parking regulations to require the imposition of a monetary penalty for not implementing rates in a timely manner, and consider incorporating similar language in contracts with garage operators and system administrators.

Finding 4

Certain Aspects of SFMTA Regulations Appear Outdated and Some Improvements Can Be Made to SFMTA's Internal Procedures

In addition to the SFMTA's parking regulations that stipulate oversight requirements, SFMTA recently implemented formal policies and procedures to guide its staff in carrying out parking garage lease agreement oversight duties. These policies and procedures include instructions on how to perform garage inspections, review expense and monthly summary reports, and implement parking garage rate

adjustments. However, the audit found that the parking regulations and internal procedures could benefit from some updates.

Certain Aspects of SFMTA's Parking Regulations Appear Outdated Due to New Parking Control System and Some Regulations are not Enforced

The implementation of the new SKIDATA parking revenue control system appears to have rendered certain aspects of SFMTA's parking regulations outdated. For example, Section 3(a) requires Impark to reconcile the number of physical tickets with the amount of revenue collected to ensure the appropriate amount of revenue was received, a process previously necessary because ticket generation was separate from revenue collection. With the implementation of SKIDATA in April 2017, the system generates the tickets and tracks the corresponding amount of revenue due; as a result, the physical ticket reconciliation process required by the parking regulations appears to no longer be necessary.

Further, Section 6.9 of the parking regulations requires SFMTA to impose a late fee of \$100 in liquidated damages for each day the MSR documenting revenue and expenditure activity is submitted after the 10th of the month. Of the two MSRs reviewed as part of the audit, we found that one was submitted on time while the other report was submitted five days late. According to SFMTA staff, this parking regulation requirement was informally adjusted to require MSRs be submitted by the 15th of the month due to the increased invoice detail required to be submitted by the garage. However, this deviation from the parking regulation was not formally memorialized through an amendment to the lease agreement.

SFMTA's Internal Procedures Guiding the review of MSR Submissions Could Be Enhanced

SFMTA recently developed internal procedures to guide many of its oversight responsibilities, including high-level review processes that the Parking Group staff performs related to expenditure and revenue activity reflected in the MSRs submitted by garage operators. While the MSR review procedures include steps to examine budget to actual variances, the procedures do not address review processes needed to validate the monthly revenue activities reflected on the MSR submittals, which could lead to inaccurate reporting. The monthly revenue amounts reflected on the MSRs should be consistent with daily revenue amounts verified by the Financial Reporting Unit to assure the garage revenue is accurately reported and supported. According to SFMTA, reliance is placed on the daily revenue tracking and reconciliation activities performed by staff in the Financial Reporting Unit that involve comparing amounts reflected on daily revenue reports provided by Impark to amounts deposited into SFMTA's bank accounts. Data on the MSR is generally used for management reporting purposes and the auditors did not find

discrepancies between amounts deposited in the bank and reported on the MSRs. However, SFMTA's ability to effectively evaluate and monitor the performance of the garage may be hindered without adequate procedures to verify revenue amounts reported on the MSR.

Recommendations

The San Francisco Municipal Transportation Agency should:

13. Update parking regulations to reflect current business processes and requirements.
14. Expand current procedures to require verification of all amounts reported on Monthly Summary Reports.

Finding 5

SFMTA Did Not Adequately Document Garage Inspection Issue Resolution

SFMTA's Parking Group, staff conducts walk-throughs of each of the 22 city-owned garages at least once per year and complete a garage inspection checklist noting any items that require attention. According to SFMTA's internal policies and procedures related to garage inspections, Parking Group staff responsible for conducting garage inspections must sign a checklist after completion of the inspection. The signed checklist is given to a parking analyst in the Parking Group who is responsible for working with Impark to ensure all improvement areas were addressed adequately and timely. However, our review of the Lombard Garage inspection checklists for August 2017 and May 2018 found that the documentation did not include signatures of the parking analyst confirming that items needing attention were adequately addressed. As a result, SFMTA cannot be assured that garages adequately addressed maintenance and safety needs to the satisfaction of the agency on a timely basis.

Recommendation

15. The San Francisco Municipal Transportation Agency should ensure staff follows internal procedures surrounding garage inspections and require formal verification that items needing attention were adequately addressed.

Finding 6

A Few System Access Processes Were Inconsistent with Best Practices

SFMTA approves access levels in SKIDATA system upon the request of garage management. Access levels for garage employees include roles, such as cashier, chief cashier, facility supervisor, and car park manager, and are assigned based on the job duties of the employee. Additionally, SKIDATA and SFMTA have additional access levels to perform

administrator and troubleshooting duties. According to SFMTA, Impark does not have the ability to add or delete users in the SKIDATA system or modify access levels.

A review of Impark's access levels for its employees revealed that although current access levels in SKIDATA appear appropriate, Impark did not have a process to disable system user access when individuals left employment. Additionally, SFMTA does not have a data glossary to describe SKIDATA system access authorization levels.

Impark Did Not Have a Process in Place to Disable SKIDATA System User Access

While the system access level authorization designations appeared appropriate for current garage employees, the audit determined that there were five former employees with continued system access to SKIDATA. Prudent business practices suggest that only authorized employees should have access to information systems--for the minimum amount of time necessary--to ensure no authorizations more than required to perform required job functions are designated. Granting permissions beyond the scope of the necessary accessibility levels heightens the risk that the user could inappropriately use the system, even if the user is no longer employed with the organization. Furthermore, a user who is no longer employed with the company should have no system access credentials as they have no legitimate job functions. Written procedures to guide employees on disabling user access will mitigate system security risks.

When notified that the five employees still had access to the system, Impark requested that SKIDATA disable system access for the former employees.

SFMTA Did Not Have a Data Glossary to Describe SKIDATA System Access Authorization Levels

To assess whether Impark's system access level designations were appropriate, auditors obtained a SKIDATA report that listed numerous access levels by employee, including "passage permitted", "ext. device login allow", and "allow remote log-on". However, because the listing only provided authorization titles without any description of the associated roles and permitted actions for each level, auditors requested a data dictionary from SKIDATA and SFMTA describing the definition of designated roles and actions. A SFMTA staff member indicated that a SKIDATA data dictionary was not available but verbally provided descriptions of the access levels. While it appeared that current employees had appropriate access based on the descriptions provided by the SFMTA staff member, auditors were unable to formally assess the appropriateness of all authorization actions permitted by each

employee's authorization designation through written system documentation. SFMTA should work with SKIDATA to develop a data dictionary, otherwise known as a metadata repository, to describe the meaning and usage of each of the authorization levels and permitted actions. Without a data dictionary, SFMTA staff tasked with approving access level designations within SKIDATA cannot ensure that the authorization levels requested by Impark are consistent and appropriate.

Recommendations

The San Francisco Municipal Transportation Agency should:

16. Work with Impark to develop a formal process to disable user accounts on a timely basis upon separation from employment.
17. Work with SKIDATA to develop a data glossary that describes the definition and usage of each system access authorization/action.

Subject: Lombard and Polk Bush Garage Audits

Dear Mr. de la Rosa:

We have reviewed the two draft reports, "Imperial Parking (U.S.), LLC, Needs to Improve Some Controls to Strengthen Its Operations at the Lombard Street Garage" and "LAZ Parking, LLC, Needs to Improve Some Controls to Strengthen Its Operations at the Polk Bush Garage," and have included our responses to the recommendations in the attached documents. I would like to thank you and your audit team for the work conducted during these important audits.

If you have any questions or need additional information, please do not hesitate to contact me at (415)701-4720.

Sincerely,

A handwritten signature in black ink that reads "Tom Maguire".

Tom Maguire
Acting Director of Transportation

Recommendations and Responses

For each recommendation, the responsible agency should indicate in the column labeled **Agency Response** whether it concurs, does not concur, or partially concurs and provide a brief explanation. If it concurs with the recommendation, it should indicate the expected implementation date and implementation plan. If the responsible agency does not concur or partially concurs, it should provide an explanation and an alternate plan of action to address the identified issue.

Recommendation	Agency Response	CSA Use Only Status Determination*
The San Francisco Municipal Transportation Agency should:		
1. Require Impark to reconcile monthly parking revenue collected and deposited with active monthly cardholders reflected in the SKIDATA revenue control system.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Staff provided direction to Impark, and the monthly reconciliation process began in June 2019.	<input type="checkbox"/> Open <input checked="" type="checkbox"/> Closed <input type="checkbox"/> Contested
2. Require Impark to continue recently implemented efforts to improve and expand current cash handling processes and procedures, such as tracking and logging daily petty cash/change fund transactions, securing petty cash/change fund in a locked safe with limited access, and documenting, approving, and reporting daily exceptions to ticketing processes.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Staff has consulted with Impark and requested an update to Impark's SOPs [standard operating procedures] to incorporate the suggested procedure updates. Subject: SF CSA Lombard Garage Audit Response Letter

Dear, Mr. de la Rosa,

In response to the SF CSA Lombard Garage Audit - Draft Audit Report August 9, 2019, Imperial Parking concurs with the recommendations and plans to complete and implement those recommendations prior to the dates listed in the report.

Our group has discussed the recommendations and the necessary steps with SFMTA. We have put a plan together to implement the recommendation as a part of our Normal Operation Procedures.

If you have any questions, please do not hesitate to contact me.

Thank you,

Francisco J. Lira Sr.

Francisco J. Lira Sr.
Impark Operations Manager, San Francisco.

City & County of San Francisco
Office of the Controller
City Services Auditor

About the Audits Division

The City Services Auditor (CSA) was created in the Office of the Controller through an amendment to the Charter of the City and County of San Francisco (City) that was approved by voters in November 2003. Within CSA, the Audits Division ensures the City's financial integrity and promotes efficient, effective, and accountable government by:

- Conducting performance audits of city departments, contractors, and functions to assess efficiency and effectiveness of service delivery and business processes.
- Investigating reports received through its whistleblower hotline of fraud, waste, and abuse of city resources.
- Providing actionable recommendations to city leaders to promote and enhance accountability and improve the overall performance and efficiency of city government.

Audit Authority

CSA conducted this audit under the authority of the San Francisco Charter, Section 3.105 and Appendix F, which requires that CSA conduct periodic, comprehensive financial and performance audits of city departments, services, and activities.

Statement of Auditing Standards

This performance audit was conducted in accordance with generally accepted government auditing standards. These standards require planning and performing the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for the findings and conclusions based on the audit objectives. CSA believes that the evidence obtained provides a reasonable basis for the findings and conclusions based on the audit objectives.

Mr. Tom Maguire
Acting Director of Transportation
San Francisco Municipal Transportation Agency
1 South Van Ness Avenue, 7th Floor
San Francisco, CA 94103

Dear Board Chairman, Board Members, and Mr. Maguire:

The Office of the Controller's City Services Auditor (CSA), Audits Division, engaged Sjoberg Evashenk Consulting, Inc., (SEC) to audit the lease agreement under which Laz Parking, LLC, (LAZ) operates the Polk Bush Garage. SEC also reviewed the management and oversight of the lease by the San Francisco Municipal Transportation Agency (SFMTA).

Reporting Period: July 1, 2017, through June 30, 2018

Revenue: \$608,653

Results:

LAZ reported to SFMTA \$608,653 in operating revenues and \$528,449 in expenses during the audit period. In general, SFMTA ensured that LAZ appropriately performed most garage activities, with the goal of achieving optimal operational and financial performance at the Polk Bush Garage. However, the audit identified some areas in which SFMTA could improve its oversight of the garage's operations and better monitor compliance with the lease.

The report includes 13 recommendations for SFMTA to improve its oversight of the Polk Bush Garage lease. SFMTA's response is attached. CSA will work with the department to follow up every six months on the status of the open recommendations made in this report.

CSA appreciates the assistance and cooperation of all staff involved in this audit. For questions about the report, please contact me at mark.p.delarosa@sfgov.org or 415-554-7574 or CSA at 415-554-7469.

Respectfully,

San Francisco Municipal Transportation Agency: LAZ Parking, LLC, Needs to Improve Some Controls to Strengthen Its Operations at the Polk Bush Garage

July 2019

455 Capitol Mall • Suite 700 • Sacramento, California • 95814 • Tel 916.443.1300 • Fax 916.443.1350

Executive Summary

Purpose of the Audit

As authorized by the San Francisco Administrative Code, the Office of the Controller's City Services Auditor engaged Sjoberg Evashenk Consulting, Inc., to assess whether Laz Parking, LLC, (LAZ) complied with certain provisions in its lease agreement with the City and County of San Francisco (City) to operate the Polk Bush Garage. The audit also assessed whether the San Francisco Municipal Transportation Agency (SFMTA) conducted appropriate contract management and oversight activities of the leases.

Highlights

Overall, the audit found that SFMTA ensured LAZ appropriately performed most parking garage activities to ensure optimal operational and financial performance at the Polk Bush Garage.

However, the audit identified the following areas where SFMTA could improve its oversight of garage operations and better monitor compliance with the lease agreement between the City and LAZ:

- Certain revenue controls and management practices need improvement.
- Although garage operator expenses were generally supported, SFMTA's invoice review processes could be improved.
- Parking rate adjustments were not always implemented in a timely manner.
- Certain aspects of SFMTA regulations appear outdated, and some improvements can be made to SFMTA's internal procedures.
- SFMTA did not adequately document garage inspection issue resolution.
- A few system access processes were inconsistent with best practices.

Key Recommendations

The report includes 13 recommendations for SFMTA to ensure LAZ uses cash-handling best practices and complies with the provisions of the lease agreement, including that SFMTA:

- Require LAZ to reconcile monthly parking revenue collected and deposited with active monthly card holders reflected in SKIDATA.
- Not only verify that supporting documents in LAZ's invoice packages agree with the invoice summary, but also thoroughly review supporting documentation details to ensure all required support is included and all costs are allowable and appropriate. If its staffing is too limited to enable this, SFMTA should select two garages per month for full invoice package reviews.
- Develop and formalize a process to verify that SFMTA did not previously reimburse expenses LAZ incurred in earlier months.
- Develop and formalize a process to verify that scheduled daily and monthly parking garage rate adjustments are implemented in a timely manner.

INTRODUCTION

Audit Authority

The lease agreement between the City and County of San Francisco (City) and Laz Parking, LLC, (LAZ) authorizes the City and its representatives to audit all accounts and records established under the lease. The San Francisco Administrative Code, Chapter 10.6-2, grants the Office of the Controller (Controller) the authority to audit departments to ensure they are adequately managing their leases for leased property. Also, the City Charter provides the Controller's City Services Auditor (CSA) with broad authority to conduct audits. This audit was conducted under these authorities and pursuant to an audit plan agreed to by the Controller and the San Francisco Municipal Transportation Agency (SFMTA). CSA engaged Sjoberg Evashenk Consulting, Inc., (SEC) to audit the lease agreement between the City and LAZ under which it operates the Polk Bush Garage, and to assess SFMTA's management of the agreement.

Background

The City has a lease agreement with LAZ to manage the Polk Bush Garage, a public parking garage located at 1399 Bush Street in San Francisco, California. The lease commenced on February 1, 2012 with a contract term of six years, and expired January 31, 2018. In 2018, the City extended the lease agreement with LAZ through July 31, 2019.

In 2016 the SFMTA awarded SKIDATA Inc., a \$19 million contract to replace aging parking equipment in 22 city-owned parking garages.¹ The newly implemented SKIDATA system allows the garage to automate the payment process. Other technological upgrades include the addition of Automated License Plate Recognition (ALPR), a camera system that converts the image of a license plate to computer-readable data. The ALPR system collects data for the purpose of calculating parking fees, issuing citations, and re-issuing lost tickets. Once all the equipment is replaced at the 22 garages, which is scheduled to occur by Summer 2020, SFMTA will be able to streamline operations and enable demand-based pricing from its Central Monitoring Center.

LAZ is responsible for supervising and overseeing Polk Bush Garage operational activities and ensuring revenues and operational expenses generated through the garage are appropriately remitted to the City. LAZ remits all Polk Bush Garage revenues to the City daily and submits monthly requests for reimbursement for operational expenses, including staff salaries and benefits.

¹ The previous parking control system was known as Datapark.

SFMTA is tasked with the management and oversight of the City's public, off-street parking garages. The City delegated authority to SFMTA to oversee the activities of the parking garage operators responsible for the daily management and operations of the parking garages. SFMTA is responsible for reviewing and approving parking garage budgets and operational expenses, conducting physical garage inspections, and ensuring the parking garage operators adhere to their lease agreements.

Objectives

The purpose of this audit was to determine whether LAZ:

- Reported and correctly submitted to SFMTA, all revenues collected from the operation of the Polk Bush Garage;
- Calculated and correctly reported all of its operating expenses; and,
- Complied with other provisions of its lease agreement with the City.

Also, the audit included evaluating whether SFMTA's contract management practices and procedures adequately ensured that LAZ complied with certain lease agreement provisions.

Scope and Methodology

The audit covered July 1, 2017, through June 30, 2018.

To meet the objectives of the audit, the audit team:

- Reviewed the applicable terms of the lease agreement between the City and LAZ.
- Assessed LAZ's internal controls and procedures over collecting, recording, summarizing, and reporting gross revenues and expenditures, including day-end close-out practices associated with verification of amounts collected and preparing the daily deposit.
- Assessed LAZ's process to reconcile monthly parking payments received against active monthly parking passes.
- Evaluated controls associated with the automated parking access and revenue control system, SKIDATA.
- Determined whether LAZ submitted complete and accurate monthly statements to report accurate revenues and expenditures and remitted all revenues collected according to the terms of the lease agreement.

**Statement of
Auditing Standards**

We conducted this performance audit in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

AUDIT RESULTS

Summary

From July 1, 2017, through June 30, 2018, LAZ reported to SFMTA total operating revenues of \$608,653 and expenses of \$528,449. The exhibit below summarizes Polk Bush Garage's revenues, expenditures, and operating income for the audit period.

Exhibit	Polk Bush Garage Operating Revenues and Expenses July 1, 2017, Through June 30, 2018		
Reporting Period	Revenues*	Expenses	Operating Income (Revenues less Expenses)
July 1, 2017 – June 30, 2018	\$608,653	\$528,449	\$80,204

* Includes revenues from transient parking, monthly parking, and other garage revenues.

Source: Polk Bush Garage Monthly Summary Report (MSR) June 2018.

The audit found that, in general, LAZ appropriately performed most parking garage activities at the Polk Bush Garage, in accordance with the lease agreement. In addition, the newly implemented parking access and revenue control system, SKDATA, allowed the garage to automate many traditional cash handling procedures such as transient revenue collection, physical parking ticket reconciliation, and cashier drawer closeout. However, the audit identified the following areas where SFMTA could improve its oversight:

- Certain revenue controls and management practices need improvement.
- While garage operator expenses were generally supported, SFMTA's invoice review processes could be improved.
- Parking rate adjustments were not always implemented in a timely manner.
- Certain aspects of SFMTA regulations appear outdated, and some improvements can be made to SFMTA's internal procedures.
- SFMTA did not adequately document garage inspection issue resolution.
- A few system access processes were not consistent with best practices.

Finding 1

Certain Revenue Controls and Management Practices Need Improvement

The audit identified several revenue control practices that increase the risk that LAZ cannot assure the accuracy of collecting, processing, and remitting parking payments, including inadequate monthly contract parking reconciliation processes, insufficient petty cash/change fund practices, and untimely deposit of non-parking revenue funds.

LAZ's Processes to Reconcile Monthly Contract Parking Revenue Require Improvement

In addition to parking for transient (daily) customers, the Polk Bush Garage also offered monthly parking to customers who signed a parking contract for a flat recurring monthly fee. Monthly parkers receive a garage access card. LAZ automatically charges monthly parker fees from the customer's credit cards and deposits the funds into its LAZ's bank account. The funds are then transferred into SFMTA's bank account on a rolling basis throughout the month.

During the audit period, LAZ did not have a process to reconcile the active monthly access cardholders listed in SKIDATA—the parking revenue control system that tracks and activates garage access cards—to amounts collected and deposited into the bank. According to LAZ, the SKIDATA system did not allow staff to upload the list of monthly parkers into LAZ's keycard audit program, but SKIDATA has this functionality effective June 2019.

Because the list of active garage access cardholders in SKIDATA was not compared to monthly parking fees collected and deposited, LAZ and SFMTA could not be assured that all monthly parking fees were appropriately collected from every monthly contract parking customer with access to the garage. Although auditors did not identify any discrepancies, a reconciliation between active cardholders and collections ensures accountability for any overage and shortages and prevents risk that lost or misappropriated collections may go undetected.

Petty Cash/Change Fund Not Sufficiently Tracked

LAZ maintains \$100 in the pay stations with specified bill denominations as a change fund and petty cash for small emergency purchases. A walk through of LAZ's revenue collection processes revealed that change fund/petty cash activity was not tracked, which increases the risk that monies could go missing or inappropriately handled. While the audit found that \$100 in petty cash/change fund monies was present at the

time of the auditor's site visit, prudent business practices require tracking of all cash, including petty cash/change. LAZ had cash handling procedures detailing certain activities, such as accepting cash payments and preparing and booking deposits, but the procedures did not address petty cash/change fund activities and requirements. Written policies and procedures are essential to ensure staff can effectively and consistently perform duties in accordance with documented guidelines. Not having complete written policies and procedures increases the risk that employees will use inconsistent practices in handling cash.

LAZ Did Not Always Deposit Non-Revenue Funds on Time

During a walk-through of the revenue collection process, auditors discovered there was \$100 in miscellaneous funds collected from a customer who damaged the gate arm at the entry of the garage. Although the garage operator could not provide the exact date the funds were collected, the garage operator acknowledged that the funds had not been deposited within 24-hours, as required by section 6.5 of the parking regulations. The risk of cash being misplaced and stolen increases the longer it is withheld from the bank. Once the issue was identified, garage management instructed staff to deposit the cash immediately.

Recommendations

The San Francisco Municipal Transportation Agency should:

1. Require LAZ to reconcile monthly parking revenue collected and deposited with active monthly cardholders reflected in the SKIDATA revenue control system.
2. Require LAZ to revise and improve current cash-handling processes and procedures, such as tracking and logging daily change fund/petty cash transactions.
3. Require LAZ to ensure all funds collected, including revenue collected from damage to equipment, are deposited to the bank within 24 hours.

Finding 2

While Garage Operator Expenses Were Generally Supported, SFMTA's Invoice Review Processes Could be Improved

The master agreement between SFMTA and LAZ includes invoicing provisions for the operator to seek reimbursement each month for specific operating expenses, such as payroll costs, utilities, maintenance, supplies, and contracted services. In order for an expense

to be reimbursed by SFMTA, complete documentation must be submitted including a detailed statement listing of all operating expenses incurred since the previous invoice, copies of all invoices, receipts or other evidence to support each listed expense, and evidence of payment of all items. The invoiced expenditure amounts are also reflected on the monthly summary reports (MSR), a report submitted by garage operators that summarizes the total monthly revenues and expenditures. Our review of August 2017 and April 2018 invoices submitted by LAZ for reimbursement found that one expense did not include the required support and SFMTA's review processes require improvement.

Garage Operator Did Not Submit the Required Summary Sheet for its Janitorial Expenses

While the audit found that expenses in the August 2017 and April 2018 invoice packages submitted by LAZ were allowable and generally supported, one expense item lacked additional support. Specifically, SFMTA internal procedure 1.1 requires garage operators to submit a janitorial hour summary sheet detailing the hours worked and rate paid for janitorial services; however, the janitorial hour summary sheet was not included in the April 2018 invoice package. According to LAZ, the janitorial hour summary sheet is typically included with the invoice packages, and its exclusion from the April 2018 package was unintentional. Because the janitorial hour summary sheet was not included, SFMTA cannot ensure if the amount invoiced reflected actual services provided.

SFMTA Invoice Review Processes Could Be Improved

SFMTA's internal invoice review procedures include a number of steps to guide staff through the invoice review and approval process and generally focused on ensuring the amounts reflected on the invoice matched the numbers reflected on the underlying supporting documentation. However, the procedures do not require SFMTA staff to review the details of supporting documentation to ensure completeness, accuracy, or allowable expenses.

According to SFMTA, because only one staff member is responsible for reviewing the invoices, there is not enough time to perform an in-depth review of each submitted document. Specifically, invoice packets are submitted by LAZ to SFMTA's Parking Group, the unit responsible for overseeing parking garage operators, between the 15th and 18th of each month and SFMTA's accounts payable department must process the corresponding reimbursement payments by the 23rd. As a result,

Parking Group staff have only a few days to review and approve the invoices and documents submitted by 22 city-owned garages. A detailed and complete review of the submitted expenditures helps ensure SFMTA only pays for appropriate and allowable costs, and all supporting documentation is included.

Lastly, auditors noted that many expenses included in the invoice packets for August 2017 and April 2018 involved costs incurred several months earlier, making it difficult for SFMTA to identify whether those earlier costs had been previously reimbursed. Although SFMTA indicated there is an informal process to research expenses submitted related to earlier months to guard against double payments, there is no process to document that a review had occurred. Therefore, SFMTA should develop a process that minimizes the risk that the same expense can be included in multiple months of invoicing and reimbursed more than once.

Recommendations

The San Francisco Municipal Transportation Agency should:

4. Ensure LAZ is aware of SFMTA's expense reporting requirements and require LAZ to provide adequate supporting documentation for all expenses incurred when submitting invoice packages, including a sheet summarizing janitorial hours.
5. Thoroughly review invoice packages submitted by the garage operator beyond verifying that supporting documents agree with the invoice summary. Review supporting documentation details to ensure all required support is included and all costs are allowable and appropriate. If staffing is limited, SFMTA should select two garages each month and fully review their invoice packages.
6. Develop and formalize a process to verify that SFMTA did not previously reimburse garage operator expenses incurred in earlier months.

Finding 3

Parking Rate Adjustments Were Not Always Implemented on Time

SFMTA reviews garage parking rates for both transient and monthly parkers on a quarterly basis and makes adjustments to achieve both efficient and equitable utilization. According to SFMTA's internal procedure that guides staff on how to conduct garage rate analysis and adjustments, there are several factors that are considered to determine whether or not adjustments are warranted, such as consideration of

when rates were most recently adjusted, overall garage utilization, whether or not a wait-list exists, and benchmarking of competing garages rates. SFMTA is responsible for contacting the SKIDATA administrator to adjust the daily transient rates, while LAZ was responsible for adjusting monthly parking rates in their monthly parking system and contacting monthly pass holders of the rate change.

During the audit period, two rate adjustments were slated to take effect January 2018 including an increase in the daily early bird rate from (\$18 to \$20) and the daily maximum rate (from \$27 to \$28). Based on our review of SKIDATA documentation, neither of these rate adjustments were implemented on time. While the early bird rate adjustment to \$20 was later implemented in July 2018, the daily maximum rate adjustment to \$28 was never implemented. Further, the daily maximum rate is not expected to be adjusted until July 2019 (\$27 to \$36). According to SFMTA, the revised rates were given to SKIDATA, but the change may not have been implemented properly at their end. Because the daily parking rate adjustments were not implemented timely, SFMTA lost approximately \$10,080² in revenue for the audit period.

Also, although SFMTA's internal procedures outline the steps to complete a garage rate change review and adjustment, the procedures do not address steps needed to ensure rate adjustments occurred appropriately and timely. According to SFMTA, once the SKIDATA system is fully upgraded, SFMTA will be able to verify daily parking rate adjustments remotely on a real-time basis.

Recommendation

The San Francisco Municipal Transportation Agency should:

7. Develop and formalize a process to verify that scheduled daily and monthly parking garage rate adjustments are implemented in a timely manner.
8. Update the parking regulations to require the imposition of a monetary penalty for not implementing rates in a timely manner, and consider incorporating similar language in contracts with garage operators and system administrators.

² Lost revenue was estimated using the average monthly tickets multiplied by the daily and early bird rate difference for each month the rates were not adjusted, with actual revenue lost calculated for April 2018 and June 2018. The monthly average tickets were based on volumes reported in the August 2017, April 2018, and June 2018 MSRs.

Finding 4

Certain Aspects of SFMTA Regulations Appear Outdated and Some Improvements Can Be Made to SFMTA's Internal Procedures

In addition to the SFMTA's parking regulations that stipulate oversight requirements, SFMTA recently implemented formal policies and procedures to guide its staff in carrying out parking garage lease agreement oversight duties. These policies and procedures include instructions on how to perform garage inspections, review expense and monthly summary reports, and implement parking garage rate adjustments. However, the audit found that the parking regulations and internal procedures could benefit from some updates.

Certain Aspects of SFMTA's Parking Regulations Appear Outdated Due to New Parking Control System and Some Regulations are not Enforced

The implementation of the new SKIDATA parking revenue control system appears to have rendered certain aspects of SFMTA's parking regulations outdated. For example, Section 3(a) requires LAZ staff to reconcile the number of physical tickets with the amount of revenue collected to ensure the appropriate amount of revenue was received, a process previously necessary because ticket generation was separate from revenue collection. With the implementation of SKIDATA in April 2017, the system generates the tickets and tracks the corresponding amount of revenue due; as a result, the physical ticket reconciliation process required by the parking regulations appears to no longer be necessary.

Further, Section 6.9 of the parking regulations requires SFMTA to impose a late fee of \$100 in liquidated damages for each day the MSR documenting revenue and expenditure activity is submitted after the 10th of the month. Of the two MSRs reviewed as part of the audit, we found that one was submitted on time while the other report was submitted five days late. According to SFMTA staff, this parking regulation requirement was informally adjusted to require MSRs be submitted by the 15th of the month due to the increased invoice detail required to be submitted by the garage. However, this deviation from the parking regulation was not formally memorialized through an amendment to the lease agreement.

SFMTA's Internal Procedures Guiding the review of MSR Submissions Could Be Enhanced

SFMTA recently developed internal procedures to guide many of its oversight responsibilities, including high-level review processes that the Parking Group staff performs related to expenditure and revenue activity reflected in the MSRs submitted by garage operators. While the MSR

review procedures include steps to examine budget to actual variances, the procedures do not address review processes needed to validate the monthly revenue activities reflected on the MSR submittals, which could lead to inaccurate reporting. The monthly revenue amounts reflected on the MSRs should be consistent with daily revenue amounts verified by the Financial Reporting Unit to assure the garage revenue is accurately reported and supported.

We noted discrepancies between revenue amounts deposited in the bank and revenue amounts reflected on the MSR. Specifically, the MSR reported \$18,560 and \$14,700 in monthly pass holder parking revenue for August 2017 and April 2018 respectively, while the amounts deposited into SFMTA's bank statements were \$19,416 and \$14,960. LAZ was unable to explain the differences between the MSRs and deposited amount. According to SFMTA, reliance is placed on the daily revenue tracking and reconciliation activities performed by staff in the Financial Reporting Unit that involve comparing amounts reflected on daily revenue reports provided by LAZ to amounts deposited into SFMTA's bank accounts.

Although data on the MSR is generally used for management reporting purposes, SFMTA's ability to effectively evaluate and monitor the performance of the garage may be hindered without adequate procedures to verify revenue amounts reported on the MSR.

Recommendations

The San Francisco Municipal Transportation Agency should:

9. Update parking regulations to reflect current business processes and requirements.
10. Expand current procedures to require verification of all amounts reported on Monthly Summary Reports.

Finding 5

SFMTA Did Not Adequately Document Garage Inspection Issue Resolution

SFMTA's Parking Group staff conducts walk-throughs of each of the 22 city-owned garages at least once per year and complete a garage inspection checklist noting any items that require attention. According to SFMTA's internal policies and procedures related to garage inspections, Parking Group staff responsible for conducting the garage inspection must sign the checklist after completion of the inspection. The signed checklist is given to a parking analyst in the Parking Group who is responsible for working with LAZ to ensure all improvement areas were

addressed adequately and on time. However, our review of the Polk Bush Garage inspection checklists for July 2017 and February 2018 found that the documentation did not include signatures of the parking analyst confirming that items needing attention were adequately addressed. As a result, SFMTA cannot be assured that garages adequately addressed maintenance and safety needs to the satisfaction of the agency on a timely basis.

Recommendation

11. The San Francisco Municipal Transportation Agency should ensure staff follows internal procedures surrounding garage inspections and require formal verification that items needing attention were adequately addressed.

Finding 6

A Few System Access Processes Were Inconsistent with Best Practices

SFMTA approves access levels in SKIDATA system upon the request of garage management. Access levels for garage employees include roles such as cashier, chief cashier, facility supervisor, and car park manager and are assigned based on the job duties of the employee. Additionally, SKIDATA and SFMTA have additional access levels to perform administrator and troubleshooting duties. According to SFMTA, LAZ does not have the ability to add or delete users in the SKIDATA system or modify access levels.

A review of LAZ's access levels for its employees revealed that although current access levels in SKIDATA appear appropriate, some employees did not have individual system access. Additionally, SFMTA does not have a data glossary to describe SKIDATA system access authorization levels.

LAZ Did Not Have a Process in Place to Create Individual SKIDATA User Access Accounts

While the system access level authorization designations appeared appropriate for current garage employees, the audit determined that LAZ did not have a process in place to create specific SKIDATA system user access accounts. As a result, there were two current employees without individual SKIDATA access accounts. Rather, the two individuals used generic default logins that were not unique to the employee. Prudent practices suggest that employees should have individual specific user accounts so management can adequately monitor and review system activity. Without specific access accounts to track activity, SFMTA and Polk Bush cannot hold employees accountable who deviate from

standard processes or violate organizational policies surrounding SKIDATA usage.

When the auditors notified LAZ that two employees did not have specific individual user accounts in SKIDATA, LAZ requested that SKIDATA provide the new employees with access to the system.

SFMTA Did Not Have a Data Glossary to Describe SKIDATA System Access Authorization Levels

To assess whether LAZ's system access level designations were appropriate, auditors obtained a SKIDATA report that listed numerous access levels by employee, including "passage permitted", "ext. device login allow", and "allow remote log-on". However, because the listing only provided authorization titles without any description of the associated roles and permitted actions for each level, auditors requested a data dictionary from SKIDATA and SFMTA describing the definition of designated roles and actions. A SFMTA staff member indicated that a SKIDATA data dictionary was not available but verbally provided descriptions of the access levels. While it appeared that current employees had appropriate access based on the descriptions provided by the SFMTA staff member, auditors were unable to formally assess the appropriateness of all authorization actions permitted by each employee's authorization designation through written system documentation. SFMTA should work with SKIDATA to develop a data dictionary, otherwise known as a metadata repository, to describe the meaning and usage of each of the authorization levels and permitted actions. Without a data dictionary, SFMTA staff tasked with approving access level designations within SKIDATA cannot ensure that the authorization levels requested by LAZ are consistent and appropriate.

Recommendations

The San Francisco Municipal Transportation Agency should:

12. Work with LAZ to develop a formal process to create individual user accounts for new employees on a timely basis.
13. Work with SKIDATA to develop a data glossary that describes the definition and usage of each system access authorization/action.

Subject: Lombard and Polk Bush Garage Audits

Dear Mr. de la Rosa:

We have reviewed the two draft reports, "Imperial Parking (U.S.), LLC, Needs to Improve Some Controls to Strengthen Its Operations at the Lombard Street Garage" and "LAZ Parking, LLC, Needs to Improve Some Controls to Strengthen Its Operations at the Polk Bush Garage," and have included our responses to the recommendations in the attached documents. I would like to thank you and your audit team for the work conducted during these important audits.

If you have any questions or need additional information, please do not hesitate to contact me at (415)701-4720.

Sincerely,

Tom Maguire

Recommendations and Responses

For each recommendation, the responsible agency should indicate in the column labeled *Agency Response* whether it concurs, does not concur, or partially concurs and provide a brief explanation. If it concurs with the recommendation, it should indicate the expected implementation date and implementation plan. If the responsible agency does not concur or partially concurs, it should provide an explanation and an alternate plan of action to address the identified issue.

Recommendation	Agency Response	CSA Use Only Status Determination*
The San Francisco Municipal Transportation Agency should:		
1. Require LAZ to reconcile monthly parking revenue collected and deposited with active monthly cardholders reflected in the SKIDATA revenue control system.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Staff directed LAZ to complete the reconciliation, and LAZ began the procedure in July 2019.	<input type="checkbox"/> Open <input checked="" type="checkbox"/> Closed <input type="checkbox"/> Contested
2. Require LAZ to revise and improve current cash-handling processes and procedures, such as tracking and logging daily change fund/petty cash transactions.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Staff has consulted with LAZ and requested an update to LAZ's SOPs [standard operating procedures] to incorporate the suggested procedure updates. Staff will review and approve LAZ's updated SOPs by 9/15/2019.	<input checked="" type="checkbox"/> Open <input type="checkbox"/> Closed <input type="checkbox"/> Contested
3. Require LAZ to ensure all funds collected, including revenue collected from damage to equipment, are deposited to the bank within 24 hours.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Staff will direct LAZ to ensure all revenues received are deposited into the location's electronic safe within 24 hours.	<input checked="" type="checkbox"/> Open <input type="checkbox"/> Closed <input type="checkbox"/> Contested
4. Ensure LAZ is aware of SFMTA's expense reporting requirements and require LAZ to provide adequate supporting documentation for all expenses incurred when submitting invoice packages, including a sheet summarizing janitorial hours.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Staff reviewed and confirmed all invoice-submission requirements with LAZ in June 2019.	<input type="checkbox"/> Open <input checked="" type="checkbox"/> Closed <input type="checkbox"/> Contested

* Status Determination based on audit team's review of the agency's response and proposed corrective action.

Recommendation	Agency Response	CSA Use Only Status Determination*
5. Thoroughly review invoice packages submitted by the garage operator beyond verifying that supporting documents agree with the invoice summary. Review supporting documentation details to ensure all required support is included and all costs are allowable and appropriate. If staffing is limited, SFMTA should select two garages each month and fully review their invoice packages.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Staff has been advised by management to ensure that all actions outlined in the unit's written procedures regarding operator-invoice review are followed for every garage invoice package, each and every month.	<input type="checkbox"/> Open <input checked="" type="checkbox"/> Closed <input type="checkbox"/> Contested
6. Develop and formalize a process to verify that SFMTA did not previously reimburse garage operator expenses incurred in earlier months.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Staff has been directed to provide additional scrutiny to any expense items submitted by a parking operator for which the expense occurred during a prior month (e.g., for an expense being billed in June that appears to have been incurred in March) to ensure it doesn't represent a duplicate request for reimbursement by the parking operator.	<input type="checkbox"/> Open <input checked="" type="checkbox"/> Closed <input type="checkbox"/> Contested
7. Develop and formalize a process to verify that scheduled daily and monthly parking garage rate adjustments are implemented in a timely manner.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Effective with the next scheduled set of rate changes in August 2019, staff will require written confirmation from the parking operators and/or SKIDATA to confirm the approved rate changes were actually implemented.	<input checked="" type="checkbox"/> Open <input type="checkbox"/> Closed <input type="checkbox"/> Contested
8. Update the parking regulations to require the imposition of a monetary penalty for not implementing rates in a timely manner, and consider incorporating similar language in contracts with garage operators and system administrators.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Staff will add in such language to the next update of the Parking Regulations, which will be completed by 6/30/2020.	<input checked="" type="checkbox"/> Open <input type="checkbox"/> Closed <input type="checkbox"/> Contested

* Status Determination based on audit team's review of the agency's response and proposed corrective action.

Recommendation	Agency Response	CSA Use Only Status Determination*
9. Update parking regulations to reflect current business processes and requirements.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Staff is in process of reviewing and re-engineering business practices as the new SKIDATA PARCS is fully implemented. A comprehensive update to the Parking Regulations is planned for completion by 6/30/2020.	<input checked="" type="checkbox"/> Open <input type="checkbox"/> Closed <input type="checkbox"/> Contested
10. Expand current procedures to require verification of all amounts reported on Monthly Summary Reports.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Parking staff will coordinate with Financial Reporting staff to ensure the two units' procedures regarding review of garage revenues complement each other and help to ensure any reporting inaccuracy in the MSRs submitted by operators are flagged and followed up on.	<input checked="" type="checkbox"/> Open <input type="checkbox"/> Closed <input type="checkbox"/> Contested
11. Ensure staff follows internal procedures surrounding garage inspections and require formal verification that items needing attention were adequately addressed.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Staff has been directed to submit a monthly report to unit management regarding the disposition of all open items identified during garage inspections.	<input type="checkbox"/> Open <input checked="" type="checkbox"/> Closed <input type="checkbox"/> Contested
12. Work with LAZ to develop a formal process to create individual user accounts for new employees on a timely basis.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Staff has reinforced with LAZ that a procedure is needed to ensure no new employee needs to use any other staff member's log-in credentials.	<input type="checkbox"/> Open <input checked="" type="checkbox"/> Closed <input type="checkbox"/> Contested
13. Work with SKIDATA to develop a data glossary that describes the definition and usage of each system access authorization/action.	<input checked="" type="checkbox"/> Concur <input type="checkbox"/> Do Not Concur <input type="checkbox"/> Partially Concur Staff will request SKIDATA to provide written detail by 12/31/2019 describing the permissions included with each access level.	<input checked="" type="checkbox"/> Open <input type="checkbox"/> Closed <input type="checkbox"/> Contested

* Status Determination based on audit team's review of the agency's response and proposed corrective action.

TITLE 14. Fish and Game Commission Notice of Proposed Changes in Regulations

NOTICE IS HEREBY GIVEN that the Fish and Game Commission (Commission), pursuant to the authority vested by Section 4150, Fish and Game Code and to implement, interpret or make specific Section 473; Title 14, California Code of Regulations, relating to Possession of Nongame Animals: Nutria regulations.

Informative Digest/Policy Statement Overview

This amendment of Section 473 would ban the possession of live nutria to prevent new introductions of nutria in the state. Nutria affect the State's wildlife by damaging wetland habitats, and put waterways, water supplies, water conveyance and flood protection infrastructure, and agriculture at risk from damage through their burrowing and herbivory of aquatic vegetation. The Department has implemented a multimillion-dollar nutria eradication program, and this regulation is an integral part of this effort.

Possession of nutria is only possible under a permit issued by the Department. But the permit denial provisions in California Code of Regulations, Title 14, subsection 671.1(c)(5), sections 670 and 650 have no provisions for banning the possession of live nutria in California.

Section 473 provides exceptions to FGC 4150, allowing for the possession of legally taken non-game birds and mammals, including rodents such as nutria, but not prohibiting the possession of live nutria pursuant to a Department-issued permit. Thus, the Commission proposes an addition to subsection 473(b) stating:

"It is unlawful to possess live nutria (*Myocastor coypus*), and the Department shall not issue any permit authorizing possession of any live nutria."

Goals and Benefits of the Regulation:

The goal of this regulation change is to prevent the possession of live nutria in California. This regulation will benefit the Department, the State, and its resources, by reducing the potential for future, additional introductions via released or escaped nutria. Ultimately, this regulation protects California's wetlands, waterways, infrastructure, water supplies, human health and safety, and agriculture.

Consistency with State Regulations

The Commission and Department have conducted a review of the California Code of Regulations and determined that the proposed regulations are neither inconsistent nor incompatible with existing State regulations. No other State agency has the statutory authority to amend regulations pertaining to the herring fishery.

NOTICE IS GIVEN that any person interested may present statements, orally or in writing, relevant to this action at a hearing to be held in the Rincon Government Center, One Government Center Lane, Valley Center, California, on Wednesday, October 9, 2019, at 8:00 a.m., or as soon thereafter as the matter may be heard.

NOTICE IS ALSO GIVEN that any person interested may present statements, orally or in writing, relevant to this action at a hearing to be held in the Natural Resources Building Auditorium, First Floor, 1416 Ninth Street, Sacramento, California, on Wednesday, December 11, 2019, at 8:00 a.m., or as soon thereafter as the matter may be heard. It is requested, but not required, that written comments be submitted on or before noon December 6, 2019 at the address given below, or by email to FGC@fgc.ca.gov. All comments (both oral and written) must be received no later than December 11, 2019, at the hearing in Sacramento, California. If you would like copies of any modifications to this proposal, please include your name and mailing address. **Mailed comments should be addressed to Fish and Game Commission, P.O. Box 944209, Sacramento, CA 94244-2090.**

Availability of Documents

Copies of the Notice of Proposed Action, the Initial Statement of Reasons, and the text of the regulation in underline and strikeout format can be accessed through the Commission website at www.fgc.ca.gov. The regulations as well as all related documents upon which the proposal is based (rulemaking file), are on file and available for public review from the agency representative, Melissa Miller-Henson, Acting Executive Director, Fish and Game Commission, 1416 Ninth Street, P.O. Box 944209, Sacramento, California 94244-2090, phone (916) 653-4899. Please direct requests for the above-mentioned documents and inquiries concerning the regulatory process to Melissa Miller-Henson or Jon Snellstrom at the preceding address or phone number. **Valerie Cook, Nutria Eradication Incident Commander, telephone at 916-654-4267 or email Valerie.Cook@wildlife.ca.gov, has been designated to respond to questions on the substance of the proposed regulations.**

Availability of Modified Text

If the regulations adopted by the Commission differ from but are sufficiently related to the action proposed, they will be available to the public for at least 15 days prior to the date of adoption. Circumstances beyond the control of the Commission (e.g., timing of Federal regulation adoption, timing of resource data collection, timelines do not allow, etc.) or changes made to be responsive to public recommendation and comments during the regulatory process may preclude full compliance with the 15-day comment period, and the Commission will exercise its powers under Section 265 of the Fish and Game Code. Regulations adopted pursuant to this section are not subject to the time periods for adoption, amendment or repeal of regulations prescribed in Sections 11343.4, 11346.4, 11346.8 and 11347.1 of the Government Code. Any person interested may obtain a copy of said regulations prior to the date of adoption by contacting the agency representative named herein.

If the regulatory proposal is adopted, the final statement of reasons may be obtained from the address above when it has been received from the agency program staff.

Impact of Regulatory Action/Results of the Economic Impact Assessment

The potential for significant statewide adverse economic impacts that might result from the proposed regulatory action has been assessed, and the following initial determinations

relative to the required statutory categories have been made:

- (a) Significant Statewide Adverse Economic Impact Directly Affecting Businesses, Including the Ability of California Businesses to Compete with Businesses in Other States:

The proposed action will not have a significant statewide adverse economic impact directly affecting business, including the ability of California businesses to compete with businesses in other states. The proposed action is an additional component of the state's nutria eradication program that is anticipated to minimize the costly risks to infrastructure and resources that nutria pose. Reducing the potential for the spread of escaped nutria should help protect California's business activities that draw upon well-functioning wetlands, waterways, infrastructure, and water supplies, such as agriculture and associated businesses.

- (b) Impact on the Creation or Elimination of Jobs Within the State, the Creation of New Businesses or the Elimination of Existing Businesses, or the Expansion of Businesses in California; Benefits of the Regulation to the Health and Welfare of California Residents, Worker Safety, and the State's Environment:

The Commission anticipates no impacts on the creation or elimination of jobs within the state and no impact on the creation of new businesses or the elimination of existing businesses because the proposed amendment is anticipated to aid in the preservation of existing water infrastructure with no cost to current business activities. The Commission anticipates benefits to the health and welfare of California residents by the protection of water supplies. The proposed action is not anticipated to directly affect worker safety. The Commission anticipates benefits to the State's environment by supporting strategies that further the control of invasive species.

- (c) Cost Impacts on a Representative Private Person or Business:

The agency is not aware of any cost impacts that a representative private person or business would necessarily incur in reasonable compliance with the proposed action.

- (d) Costs or Savings to State Agencies or Costs/Savings in Federal Funding to the State:

No new costs to the State. Additionally, the proposed action will aid in the prevention of future importations and releases, preventing loss of state agency and/or federal funding to response costs.

- (e) Nondiscretionary Costs/Savings to Local Agencies: None.

- (f) Programs Mandated on Local Agencies or School Districts: None.

- (g) Costs Imposed on Any Local Agency or School District that is Required to be Reimbursed Under Part 7 (commencing with Section 17500) of Division 4, Government Code: None.

(h) Effect on Housing Costs: None.

Effect on Small Business

It has been determined that the adoption of these regulations may affect small business. The Commission has drafted the regulations in Plain English pursuant to Government Code Sections 11342.580 and 11346.2(a)(1).

Consideration of Alternatives

The Commission must determine that no reasonable alternative considered by the Commission, or that has otherwise been identified and brought to the attention of the Commission, would be more effective in carrying out the purpose for which the action is proposed, would be as effective and less burdensome to affected private persons than the proposed action, or would be more cost effective to affected private persons and equally effective in implementing the statutory policy or other provision of law.

Since 1870

CALIFORNIA FISH AND GAME COMMISSION NOTICE OF FINDINGS

San Bernardino Kangaroo Rat
(*Dipodomys merriami parvus*)

NOTICE IS HEREBY GIVEN that, pursuant to the provisions of Section 2074.2 of the Fish and Game Code, the California Fish and Game Commission (Commission), at its August 7, 2019 meeting in Sacramento, California, accepted for consideration the petition submitted to list San Bernardino kangaroo rat (*Dipodomys merriami parvus*) as endangered under the California Endangered Species Act.

Pursuant to subdivision (e)(2) of Section 2074.2 of the Fish and Game Code, the Commission determined that the amount of information contained in the petition, when considered in light of the California Department of Fish and Wildlife's (Department) written evaluation report, the comments received, and the remainder of the administrative record, would lead a reasonable person to conclude there is a substantial possibility the requested listing could occur.

Based on that finding and the acceptance of the petition, the Commission is also providing notice that the San Bernardino kangaroo rat is a candidate species as defined by Section 2068 of the Fish and Game Code.

Within one year of the date of publication of this notice of findings, the Department shall submit a written report, pursuant to Section 2074.6 of the Fish and Game Code, indicating whether the petitioned action is warranted. Copies of the petition, as well as minutes of the August 7, 2019 Commission meeting, are on file and available for public review from Melissa Miller-Henson, Acting Executive Director, Commission, 1416 Ninth Street, Suite 1320, Sacramento, California 95814, phone (916) 653-4899.

Written comments or data related to the petitioned action should be directed to the California Department of Fish and Wildlife, P.O. Box 944209, Sacramento, CA 94244-2090, Attn: Scott Osborn, or email wildlifemgt@wildlife.ca.gov (include "SBKR" in subject line). Submission of information via email is preferred.

TITLE 14. Fish and Game Commission

Notice of Proposed Changes in Regulations

NOTICE IS HEREBY GIVEN that the Fish and Game Commission (Commission), pursuant to the authority vested by Sections 713, 1022, and 1050 of the Fish and Game Code and to implement, interpret or make specific Sections 713, 1022, and 1050 of said Code, proposes to add Chapter 5.6, Section 90, and add Section 704, Title 14, California Code of Regulations, relating to the issuance of experimental fishing permits.

Informative Digest/Policy Statement Overview

The Department of Fish and Wildlife (Department) is proposing to add new Chapter 5.6, Experimental Fishing Permit (EFP) Program, which will contain new Section 90, Issuance of Experimental Fishing Permits, in Title 14 of the California Code of Regulations (CCR). In addition, a new Section 704, Experimental Fishing Permits; Fees and Forms is proposed to be added to Title 14, CCR, relating to fees and forms associated with issuance of EFPs.

The proposed regulations, implement, in part, Assembly Bill (AB) 1573 (also known as the California Fisheries Innovation Act of 2018) which became effective on January 1, 2019. This legislative action repealed the experimental gear permit (EGP) provisions in Section 8606, Fish and Game Code (FGC), and added new FGC Section 1022, providing for an EFP program to facilitate fishery-related exploration and experimentation to inform fishery management.

Following the repeal of FGC Section 8606, new regulations pursuant to FGC Section 1022 need to be established in Title 14, CCR, to support the continuation of an experimental box crab fishery approved by the Commission in December 2018 before the currently issued EGPs expire on March 31, 2020. The proposed regulations will ensure that current research on a potential box crab fishery can continue while a larger programmatic rulemaking can be developed to build out an EFP program pursuant to FGC 1022.

The proposed regulations will establish a new Chapter 5.6, Experimental Fishing Permit Program, containing new Section 90, Issuance of Experimental Fishing Permits; and additionally, establish new Section 704, Experimental Fishing Permits; Fees and Forms, within Title 14, CCR. The proposed regulations in Chapter 5.6, Section 90, Title 14, CCR will primarily describe the overarching strategy to establish the EFP program and provide a coherent framework in regulations to implement the EFP program.

The proposed regulations in new Section 90, Title 14, CCR will establish the process for issuing EFPs to those applicants previously approved by the Commission in 2018 to receive a box crab EGP. Specifically, Section 90 would allow for the following:

- The Commission may authorize the Department to issue experimental fishing permits to any applicant approved by the Commission in the year 2018 to receive an experimental gear permit pursuant to Fish and Game Code 8606 (repealed, 2018).
- The applicant shall submit a written request for issuance of an EFP at least 60 days prior to the expiration date of their current permit.
- No more than eight valid EFPs will be issued at any one time.
- The Commission may establish Standard Terms applicable to all fishery participants.
- The Commission may approve the adoption, amendment, or repeal of Special Conditions

unique to the experimental fishery set forth in form DFW 1085 as it deems necessary for research and the conservation and management of marine resources and the environment.

- The department shall notify a permittee at least 30 days before recommending a change to the Special Conditions of the EFP.
- Access to future permits, if a fishery is developed, is not implied by participation in the EFP program.

The proposed regulations in Section 704 will stipulate the box crab EFP fee pursuant to FGC subdivision 1022(g) that authorizes the Commission to charge a fee as necessary to fully recover, but not exceed, all reasonable implementation and administrative costs of the Department and Commission related to the EFP. The EFP permit fee will be established as \$4,487.75.

Section 704 will also incorporate by reference the Experimental Fishing Permit Terms and Conditions Form DFW 1085 (New 08/01/2019), which identifies the person(s) and vessel authorized to conduct activities under the EFP and specifies the Standard Terms and Special Conditions to which EFP permit holders will be subject.

Benefits of the Regulations:

It is the policy of the State to ensure the conservation, sustainable use, and, where feasible, restoration of California's marine living resources for the benefit of all the citizens of the state. The objectives of this policy include, but are not limited to, supporting and promoting scientific research on marine ecosystems and their components to develop better information on which to base marine living resource management decisions, and managing marine living resources on the basis of the best available scientific information and other relevant information that the Commission or Department possesses or receives.

The benefit of the proposed regulations will ensure that existing box crab permit holders can continue to collect data for management and test the viability of a box crab fishery, which will inform future management strategies for this emerging fishery.

Consistency and Compatibility with Existing Regulations:

The proposed regulations are neither inconsistent nor incompatible with existing State regulations. Section 20, Article IV, of the State Constitution specifies that the Legislature may delegate to the Fish and Game Commission such powers relating to the protection and propagation of fish and game as the Legislature sees fit. The Legislature has delegated to the Commission the power to regulate the review, approval, and issuance of experimental fishing permits that authorize commercial or recreational marine fishing activity that is otherwise prohibited by law (FGC Section 1022). No other State agency has the authority to promulgate experimental fishing permit regulations. The Commission has reviewed its own regulations and finds that the proposed regulations are neither inconsistent nor incompatible with existing State regulations. The Commission has searched the California Code of Regulations for any regulations regarding the review, approval, and issuance of experimental fishing permits and has found no such regulation; therefore, the Commission has concluded that the proposed regulations are neither inconsistent nor incompatible with existing State regulations.

NOTICE IS GIVEN that any person interested may present statements, orally or in writing, relevant to this action at a hearing to be held in the Rincon Government Center, One Government Center Lane, Valley Center, California 92082, on October 10, 2019, at 8:30 a.m., or as soon thereafter as the matter may be heard. It is requested, but not required, that written comments be submitted on or before September 26, 2019 at the address given below, or by email to FGC@fgc.ca.gov. All comments (both oral and written) must be received no later than October 10, 2019, either at the Commission office or at the address given below, by email to FGC@fgc.ca.gov, or at the October 10, 2019 hearing in Valley Center, California. If you would like copies of any modifications to this proposal, please include your name and mailing address.

Mailed comments should be addressed to Fish and Game Commission, P.O. Box 944209, Sacramento, CA 94244-2090.

Availability of Documents

Copies of the Notice of Proposed Action, the Initial Statement of Reasons, and the text of the regulation in underline and strikeout format can be accessed through the Commission website at www.fgc.ca.gov. The regulations as well as all related documents upon which the proposal is based (rulemaking file), are on file and available for public review from the agency representative, Melissa Miller-Henson, Acting Executive Director, Fish and Game Commission, 1416 Ninth Street, Box 944209, Sacramento, California 94244-2090, phone (916) 653-4899. Please direct requests for the above mentioned documents and inquiries concerning the regulatory process to Melissa Miller-Henson or Craig Castleton at the preceding address or phone number. **Tom Mason, Senior Environmental Scientist (Supervisor), Department of Fish and Wildlife, (858) 637-7100 or Tom.Mason@wildlife.ca.gov, has been designated to respond to questions on the substance of the proposed regulations.**

Availability of Modified Text

If the regulations adopted by the Commission differ from but are sufficiently related to the action proposed, they will be available to the public for at least 15 days prior to the date of adoption. Any person interested may obtain a copy of said regulations prior to the date of adoption by contacting the agency representative named herein.

If the regulatory proposal is adopted, the final statement of reasons may be obtained from the address above when it has been received from the agency program staff.

Impact of Regulatory Action/Results of the Economic Impact Assessment

The potential for significant statewide adverse economic impacts that might result from the proposed regulatory action has been assessed, and the following initial determinations relative to the required statutory categories have been made:

- (a) Significant Statewide Adverse Economic Impact Directly Affecting Business, Including the Ability of California Businesses to Compete with Businesses in Other States:

The proposed action will not have a significant statewide adverse economic impact directly affecting business, including the ability of California businesses to compete with businesses in other states.

No businesses are expected to be impacted by the proposed regulations because the regulations proposed implement a process for the Commission to authorize the Department to issue EFPs and establishes the same fee for the EFPs as was established for the EGPs. The economic impact to the state is anticipated to be unchanged with no adverse impacts to California businesses or their ability to compete with businesses in other states.

- (b) Impact on the Creation or Elimination of Jobs Within the State, the Creation of New Businesses or the Elimination of Existing Businesses, or the Expansion of Businesses in California; Benefits of the Regulation to the Health and Welfare of California Residents, Worker Safety, and the State's Environment:

The Commission does not anticipate any impacts on the creation or elimination of jobs, the creation of new business, the elimination of existing businesses or the expansion of businesses in California because the proposed regulatory action will enable the continuation of an existing experimental fishery with no change.

The Commission anticipates indirect benefits to the health and welfare of California residents. Providing opportunities for a potential box crab fishery encourages consumption of a nutritious food. The Commission anticipates benefits to the state's environment as the EFP program would be a proactive approach to fisheries management which will ensure the protection of marine resources and foster sustainable fisheries and a healthy marine environment.

The Commission does not anticipate any benefits to worker safety because the proposed regulations would not have any impact on working conditions.

- (c) Cost Impacts on a Representative Private Person or Business:

The proposed regulations are necessary to establish a process for the issuance of Experimental Fishing Permits to replace previously approved Experimental Gear Permits for the box crab program. The annual fee amount of \$4,487.75 is essentially unchanged from the fee for the experimental gear permits issued in December 2018. Thus, current box crab permit holders will not incur additional compliance costs associated with the proposed permit fee of \$4,487.75. Should a permit become available among the eight allowable at any one time, the new entrant would incur a new annual \$4,487.75 permit fee cost.

- (d) Costs or Savings to State Agencies or Costs/Savings in Federal Funding to the State: None.
- (e) Nondiscretionary Costs/Savings to Local Agencies: None.
- (f) Programs Mandated on Local Agencies or School Districts: None.
- (g) Costs Imposed on any Local Agency or School District that is Required to be Reimbursed Under Part 7 (commencing with Section 17500) of Division 4, Government Code: None.

(h) Effect on Housing Costs: None.

Effect on Small Business

It has been determined that the adoption of these regulations may affect small business. The Commission has drafted the regulations in Plain English pursuant to Government Code Sections 11342.580 and 11346.2(a)(1).

Consideration of Alternatives

The Commission must determine that no reasonable alternative considered by the Commission, or that has otherwise been identified and brought to the attention of the Commission, would be more effective in carrying out the purpose for which the action is proposed, would be as effective and less burdensome to affected private persons than the proposed action, or would be more cost effective to affected private persons and equally effective in implementing the statutory policy or other provision of law.

FISH AND GAME COMMISSION

Subject: Communication regarding Project Labor Agreement Ordinance
Date: Thursday, August 29, 2019 10:33:43 AM
Attachments: [PLA Extension Letter 8-29-19.pdf](#)

Dear Board of Supervisors,

Attached, please find a letter extending the deadline to negotiate a Citywide Project Labor Agreement with the San Francisco Building and Construction Trades Council. This extension is by mutual agreement.

Please direct any questions to Deputy City Administrator Jennifer Johnston at Jennifer.Johnston@sfgov.org or 415-554-4572.

Sincerely,

Office of the City Administrator
City and County of San Francisco
City Hall—Room 362
San Francisco, CA 94102

OFFICE OF THE CITY ADMINISTRATOR

London N. Breed, Mayor
Naomi M. Kelly, City Administrator

August 29, 2019

The Honorable London N. Breed
Mayor, City and County of San Francisco
City Hall—Room 200
San Francisco, CA 94102

The Honorable Norman Yee
President, San Francisco Board of Supervisors
City Hall—Room 244
San Francisco, CA 94102

Dear Mayor Breed and Members of the Board of Supervisors:

Pursuant to Administrative Code Section 6.27 – Citywide Project Labor Agreement (“PLA”) Ordinance, this is to notify you that the City Administrator is extending the time within which to reach agreement with the San Francisco Building and Construction Trades Council (“BCTC”) on the terms of a Citywide PLA, with the BCTC’s concurrence. The parties will continue to diligently meet and negotiate in good faith on the terms of a mutually agreeable PLA as soon as practicable, but no later than December 1, 2019.

For your reference, the applicable Administrative Code provision is as follows:

“(d) Project Labor Agreement Requirement. Not later than September 1, 2019, the City Administrator shall negotiate with the Unions and sign on behalf of the City, a citywide Project Labor Agreement that shall apply to all Covered Projects. In the City Administrator’s discretion, the City Administrator may extend this deadline once for up to three months, to no later than December 1, 2019, by providing written notice to the Unions, the Mayor, and the Board of Supervisors.”

Please contact me with any questions at Jennifer.Johnston@sfgov.org or (415) 554-4572.

Sincerely,

Jennifer Johnston
Deputy City Administrator

Subject: Please approve our San Francisco Housing Cooperative Village
Date: Monday, September 2, 2019 7:15:33 AM

This message is from outside the City email system. Do not open links or attachments from untrusted sources.

Hi San Francisco Supervisors Sandra Fewer, Catherine Stefani, Aaron Peskin, Gordon Mar, Vallie Brown, Matt Haney, Norman Yee, Rafael Mandelman, Hillary Ronen, Shamann Walton and Ahsha Safai,

Please approve our San Francisco Free Housing Cooperative of 50-100 women and men:

Our Tent Village serves as Affordable Housing for the Precariat, Women and Men, Retail Staff, Baristas, Laborers and College Students who cannot afford rooms from For-Profit Landlords. We are a Rainbow Coalition, equal parts of all races, white, black and brown. We are tired of couch-surfing and car-camping. As the 9th Circuit Court Sep 2018 Ruling "Martin v Boise" explains, all cities are now obligated to address your Affordable Housing Crisis.

Our Self-Managed Village works closely with your city administrators and is accountable:

We use your HMIS Homeless Management Information System to report resident progress. Eviction incident reports, daily log and meeting minutes are given to your city administrators.

Our Self-Managed Village enforces rules 24/7: We will never allow paid security here. Residents volunteer a few Security shifts per week. Two Security and one elected Desk Staff police our site 24/7. Our perimeter fence prevents trespassing. We intake all homeless to live here, so long as they volunteer shifts, stay sober and follow rules: No smoking outside of smoking area, no alcohol, no drugs, no weapons, no littering, no noise. Earphones required for all devices. Violators are given temp and perm evictions signed by Desk Staff majority.

We maintain excellent relations with police: Each intake must provide State Photo ID to input into HMIS. We welcome police to review our resident names and walk through our village 24/7. We report and evict all crimes. Police are essential for those rare occasions when police help trespass the evicted.

Our Self-Managed Tent Village stations fire extinguishers every 10 yards and trains residents to use them: Our 24/7 Desk Staff and Volunteer Security are trained to use extinguishers. No propane gas, stoves, burn barrels, candles or flames allowed anywhere. No lit cigarettes beyond smoking area. We cook in our kitchen tent using only microwaves and coffee pots.

From 2009-2016 I was elected to Desk Staff to help run Seattle Tent Cities: I lived in Tent City 4 and Tent City 3, served as security hundreds of times, moved TC4 and TC3 a

dozen times, and helped build Tent City 4 into the best shelter in America.

Tent City 4 Adviser Bruce Thomas 2010:

<http://www.youtube.com/watch?v=Spw-W99dEtE>

We dismiss Lawless Squatter Camps, Tiny Houses and RV Parks as ugly, filthy, chaotic, unsafe fire hazards: We tried to work with homeless advocates including Catholic Charities, HAWG, East Bay Collective, Feed The People, Food Not Bombs, Homeless Action and other Anarchist Nihilists who refuse to enforce rules and evictions, health and safety.

We now refuse to work with such advocates. Their Lawless Model is a proven failure; our Self-Managed Model is a proven success.

Our Village is better than Shelters: Shelters are deliberately humiliating: Prison goons yell, bully, force you to the back of the line if you look at them wrong. Bags and pockets are searched as if you are a prisoner. No showers, no lockers, no kitchen. You barely get sleep on a bedroll on a floor packed with thieves snoring loud all night. Loudspeakers blast you at 5AM, forcing you onto freezing sidewalks holding your bags with nowhere to go hours before buses run.

Our Village is better than Rent Vouchers: Vouchers enrich for-profit landlords who strand you in a slum room surrounded by addicts who stay up all night blasting TV until sunrise. Vouchers only last a few months, yet decrease Affordable Housing stock needed by Precariat who are forced to hand their paycheck to a landlord. Our Village enforces Quiet Hours so is better for baristas who must wake at 5AM to open cafes.

Our Village is better than Tiny Houses: Tiny Houses are hard to relocate and cost thousands, compared to a \$50 tent. Tiny Houses are dark, moldy, freezing in winter, broiling in summer, and if they have electricity then they are too expensive. Forcing you to share a Tiny House with a stranger causes intolerable stress and drama.

Our Village can relocate as needed: Each resident gets one 8x8ft pallet space for a single tent; couples get one 8x12ft pallet space for a doubles tent. Tents allow sunlight and moonlight as a light source. Sunlight and breeze prevent mold in tents. In winter, we sleep in extra blankets. In summer, rain tarps serve as shade. Residents use tents mostly to sleep, spending day hours on jobs, in colleges, libraries and internet cafes.

Our Self-Managed Village enjoys strong Esprit de Corps: My Tent City 4 friend Mr. James Hill tattooed "TC4 Forever" on his bicep. When the homeless are institutionalized into shelters they are not allowed to manage, they soon suffer what Naomi Klein calls "learned helplessness," and devolve into bums who break rules. You cannot enjoy self-esteem while institutionalized. Our residents are proud to manage and care for our village.

\$5 Per Bed-Night Tent Village is most Cost-Effective: Shelters charge taxpayers over \$20 per bed-night yet offer nothing but a bedroll on a noisy crowded basement floor. Our Nonprofit Village costs barely \$5 per bed-night for a quiet private tent. Residents volunteer donations: Estimated Expenses for 50 residents = \$50,000 / year.

Please waive or pay site rent, permit fees and liability insurance: As a Temporary Emergency Shelter, we ask that you waive certain zoning such as minimum parking spaces, as most of our residents ride buses. We do not lower local property value, as we are a Temporary Emergency Shelter with no permanent structures and can easily relocate.

Please help us find a site for our Tent Village of 50-100 women and men to stay for a year at a time, within a half mile from bus stops: We require a quarter acre (200 ft x 50 ft = 10,000 sq ft) paved or unpaved. Site must have sewer drain, freshwater spout and electric outlet for our Spider Box to power shower water heater, refrigerator, microwave, coffee pot, computers, TV, lights. A Privacy Fence lines site perimeter. We rent portable toilets and dumpster. We comply with Health, Safety, Fire, Food and Sanitation Laws.

We are now ready to build and run our Council-Approved Self-Managed Village.

Please review our website and let us know when we may meet with you.

Thanks, Tom Minogue Hastings freehousingcooperative@gmail.com

Board of Supervisors,

The City decimated the
 livelihood of cabbies and let loose
 Uber/lyft on our streets. Cabbies take
 the test, follow the rules and pay deep
 for a — now worthless — medallion.
 What are you going to do to protect
 these men and women?

Lee Benson

(414) 545-1884

TO THE EDITORS:

The City-And-County of San Francisco is waging a *Jihad* against plastic straws, bags and other such products.

In spite of that effort I suggest that visitors to that *once* most wonderful (I have been there as a well-satisfied tourist) city be issued *very*-large packets of plastic booties before they walk the fecal-encrusted sidewalks of your city. The soles of those prophylactic devices must be thick enough to resist the disease-transmitting needles left there by drug addicts OR be equipped with hard soles as can be inserted into them.

Hotels, museums, retail stores restaurants and other such tourist-intense places should have (At entrances) "HazMat" receiving containers; And, courtesy packets of more such booties available to guests and clients. Other places and even private citizens might well follow that example.

Helpfully yours,
James Pawlak

Memorandum

Date: August 5th, 2019

TO: Mr. Manohar Raja, Esq.
San Francisco Public Defender
555 Seventh Street
San Francisco, California 94103
Telephone: (415) 553-9502

From: Scott Emerson Felix
24511 West Jayne Avenue
Coalinga, California 93210
Telephone: (559) 935-3267
Voice Mail: (415) 466-9411

RE: *People v. Scott E. Felix*
Superior Case No.: 109100
Conflict Counsel – DENIED

Dear Mr. Raja:

This missive is meant to request that your office immediately ensure the San Francisco Court not appoint anymore conflict attorneys on my case. This is so the San Francisco Public Defender's Office can be appointed. The purpose of this, is to file for dismissal of my case in light of prior counsel's failure to bring my case to trail for annual review in a timely manner. (See, e.g., *People v. Jones*, (1991) 53 Cal.3d 1115, 1136-1137; *Jones v. Whisenand* (2017) 8 Cal. App. 5th 543-558; *In re Clay Jones on Habeas Corpus*, (2018) Sacramento County Superior Court, Case No. 17HC00267 at pp. 89-91.) See: Writ #7380.

Clearly a civil action for legal malpractice may not be filed in the context of a SVP proceedings unless, and until those proceedings have been terminated in favor of the client on the grounds identified above; the conflict in this case should be obvious. The attorneys appointed for over #12 years have failed to act, and represent me. Thus, the conflict in relation to the delays that have taken place in my case. These conflict attorneys cannot possible continue to represent me in a motion to dismiss, as they are the systemic problem.

Therefore, I am respectfully requesting that your office immediately calendar my case, so that I can make my position clear to the court, and request same for myself. Moreover, if my appearance is required for the purposes of a hearing on this matter, that said hearing may take place via video-conference or telephone. Finally, a trial at this point is not the remedy I am seeking release as the damage has already been done.

Cordially Submitted,

Scott Emerson Felix
